1	Josh, As discussed, attached is a copy of the final version of the LaCaille-Gondola proposal. Wayne and I met with Carlos this afternoon and delivered him a hard copy of the document. Also attached is a cover letter that summarizes our findings. Let me know of any question you or your team may have and thanks for the past input.	Chris McCandless	Email
2	I support the building of a gondola system up LCC (and needed parking/allied infrastructure). Second place is a bus-only lane up the canyon that is a multipurpose pathway in the summer. Increased bus service without an exclusive bus-lane offers zero advantage as the bus(es) will be stuck in the same traffic as always.	MATTHEW SLAWSON	Website
3	The final plan MUST include access and parking for people not visiting ski resorts (backcountry skiers, snowshoers, climbers, etc.) . We have a right to access OUR public lands year round. Thanks kindly, David	David Hoffman	Website
4	According to your own documentation, "visitation into the canyon is equally distributed between winter and summer uses." Please run buses up the canyon in the summer as well as the winter.	David Hoffman	Website
5	I think the GONDOLA is a great option with many many benefits!	Mark Barone	Email
6	Hi, make a tunnel from LCC to BCC and a tunnel from BCC to Kimbal junction. Or alternately open Guardman pass year. Can even run trains in there eventually That will solve the traffic problem by moving the traffic out of the avalanche paths, which is the main cause of the problem. Widening the road in LCC will damage the environment and a gondola is a boondoggle Thanks for listening! If you don't make parking available at the bottom of the gondola, you will literally ruin skiing in Utah.	Andrew Moeller	Website
7	I live in Holladay. I work in Cottonwood heights. I can get to Snowbird from my house in 27 minutes, and from my office in 17 minutes. If I have to park at big cottonwood canyon, wait in line for a bus to take me to a gondola, and then take a gondola to the resort, my commute time will increase from 27/16 minutes to 67/40 minutes. If that happens I won't be able to ski anymore.	Josh Christensen	Website
8	I believe it would be naive and poor planning to widen the road for a bus system up the canyon. Instead, a gondola would make more sense as a means of transportation. By widening the road, not only are we destroying the nature of the canyon, but we are also reinforcing carbon and noise pollution of the canyons. Additionally, the cost to maintain these heavily trafficked and heavily plowed roads would be outrageous. The gondola makes sense, because it puts Utah as the front running innovator of a canyon gondola. This will be a win for the activists that want cleaner air, benefit local communities and wildlife by less traffic, and, again, would put Utah on the map as an innovator; this is something we have been lacking in since the Olympics. I still believe the train/ rail is a better option than both, but if I have to choose, the gondola is the best option. I would like to offer and volunteer my free time as a planner for this at no cost. I am an accountant with an MBA. I have studied planning and putting together plans that will address every persons input. Not only this, but I could be a great resource for analyzing costs and forecasting future cash flows this may cost or generate. Please take this offer to heart, as well as my opinion about the gondola. I would be a great voice of the people, so that they feel heard during this project. I consent to you contacting me via phone for anymore feedback or offers to volunteer my time and knowledge. Thank you.	Christopher Fuoco	Website
9	While I would love to see some sort of fancy gondola, the enhanced bus service plus dedicated bus lane seems to be the best option since it also benefits bicyclists and pedestrians. Ultimately it's the most expensive initial cost, but it feels like the cost per user, both summer and winter, would be the lowest; I could definitely be wrong about that since I haven't done the math, but as a bicyclist I really would appreciate the extra safety as well.	Tony Krezel	Website
10	We live above Wasatch Blvd and the traffic noise is already bad. If you are going to widen the road, please consider traffic noise mitigation. As well as patrolling - cars, motorcycles, and trucks gun their engines and speed on the road consistently on weekends and evenings.	Jessica Yingling	Website
11	Without a third lane for busses (up in the morning and down in the afternoon) there is little incentive and lots of hassle to take the bus. A bus with standing room only in powder traffic will be something to avoid. Also backcountry users would greatly benefit from increased stops at popular trailheads.	Chase Nye	Website
12	I believe 2 fold system makes sense. A Gondola and bus system, unless there will somehow be enough parking for the gondola. But I would use a digital billboard system we have been developing in the cars to run ads and have the gondolas pay for themselves. Maybe turn the old shopko into a massive parking garage too and be the hub.	John Frazier	Website
13	A modern day PRT system is the perfect solution. See Morgantown WV PRT. Stops at trailheads for winter backcountry and summer hiking. Stops could be used for interlodge if needed. Lockers and bathrooms at stops. Large base facilities at canyon base and resorts. Possibly kill Grizzly and link to Sol Bright then to guardsman, PC/DV Use for biking in summer too. Seems way more effective and efficient. Worked for over 50 years in WV...with old technology and materials. Should be considered viable if a gondola is really a thought. BCC is longer, but less avy prone...any thought of following power lines up BCC creek with a track? Be a pretty ride.	Nathan Ezro	Website
14	I am in favor of the gondola. Less pollution.	Wayne Hansen	
15	Please get rid of ikon pass. It is very obviously what makes traffic bad every single weekend. There used to be a few bad days a year. Ikon came and now it's always bad	Chris Thompson	Website
16	Worlds longest best gondola is my vote. Do something great that differentiates us from others. That's competitive advantage. More buses.... lame no one wants to use them. Covering the road at avalanche points... great idea for safety. Do the gondola properly with plenty of parking at the gondola base. Do not do a bus system to the gondola base as priority it will fail. Big parking deck, gondola base on top of it. Put a secure area With affordable ski/snowboard/boot storage at the top so people can leave all there stuff there. Thx and good luck with this project. (Do it right the first time...or when will you ever find the time/\$ to fix it)	Greg Lee	Website
17	why the railroad right-a-way isn't being used? a railroad or monorail going up the canyon takes allot of pressure off the canyon.	Paul van leeuwen	Website
18	I submitted the plan for the gondolas for quite some time now. I read the KSL article today that my idea is going to be used potentially. I would like for my email to be re-read and for me to receive appropriate credit for the idea. I would like credit and reward.	Philip Pascale	Website
19	Please present an OPTION for a rail based system. This is to be a public system paid for by the public, so give the public voice a seat at the table.	Benjamin Marolf	Website
20	Please include a safe walking/ biking path for use during all seasons in the revision of the Wasatch project. It's important for community members and visitors to be able to walk and bike to stores, restaurants, and shopping which will eliminate some of the traffic congestion. This is an ACTIVE community that caters to ACTIVE visitors.	Molly Sparks	Website
21	I am no skier. When I go up the canyon to hike and enjoy the views, last thing I want to see is a gondola stretching up and down canyon ruining the views. What an eyesore. It'll add to the beauty of the mountains just like that hideous restaurant at the top of Snowbird. Horrible idea! The bus idea seems better.	Jason White	Website
22	I am strongly in favor of the creation of a gondola service in Little Cottonwood Canyon. Great work on the study!	Andy Hulka	Website
23	No matter the plan, there must be greatly expanded parking outside the canyon. Otherwise none of this matters.	Matt Rich	Website
24	Another option to consider would be a train system maybe like front-runner.	Michael Price	Website
25	Any transport option that can't operate during avalanche control work should not be considered. More bus transport is a very bad idea, its not a permanent fix. It would be a very expensive band-aid that would be eventually replaced with something else. People do not like riding the bus and usually avoid it whenever possible. Depending on location it can quadruple the time it takes to get up the canyon. If this option is selected I guarantee ridership would not justify the expense. Not to mention UTA does not have a good reputation for managing funds, or taking the needs of its ridership seriously. A gondola would be the best option of those provided. It must be designed in a way that it can operate during avalanche control work. One thing that should be REQUIRED is a multi level parking garage at the BASE of the gondola!!!! Requiring people to take a shuttle from the gravel pit would be a disaster and would be regarded as a colossal blunder in design. Logically if you take in all the challenges this project requires an underground rail as the ultimate conclusion. It's cost would be high, but it would be the best long term option with great expand-ability options. Why this was not strongly considered as the best option is extremely disappointing.	Adam Bates	Website
26	A dedicated bike lane is desperately needed, the road is not wide enough for bike traffic and its a serious hazard during the summer. Resorts need permission to expand parking, or build parking structures over existing parking. It's a serious issue and needs to be addressed.		
26	Please consider limiting traffic in LCC, including bus traffic, by installing a different type of people mover such as a gondola or similar method. The amount of vehicles up the canyon is far too large and as winters have shown buses are prone to traction limits and accidents. The entire way people get to the resorts and canyon areas needs to be addresses in a new mindset.	Sean Harley	Website
27	While I think it would make for a lovely gondola ride it would completely destroy the scenery of nature that is so special about the canyon. I can't back an idea that will forever leave a bad taste in the minds of people there to enjoy nature. Photographs will forever show how man has developed over and taken away from what nature provided us. Please do not take these batular views from us beyond which the roads already make their impact. Also, what about big cottonwood canyon? Y'all forgetting about that?	Travis Roelle	Website
28	I would be more likely to take a bus if there was a bus lane, even if it ended at the mouth of the canyon. If I saw buses going past while I was sitting in my car waiting to turn into big cottonwood or head up to little cottonwood I would be a lot more likely to take the bus.	Dylan Brunjes	Website
29	If the transit system was free, I personally would opt for taking transit. It's a great perk in towns like Park City, Sun Valley and Jackson Hole, and more tourists would opt for enjoying LCC if there was a free transit option.	Trace Page	Website
30	I worry that building a gondola would have severe environmental impacts on the canyon and it's natural, serene aesthetic, and it's wildlife A gondola could be shut down by weather so not a good option for the busy storm days when the canyon is the busiest plus it will not look good. Enhanced bus service with a dedicated shoulder lane is my choice of the three but still not ideal. People want to drive their own cars. I still think the best option is adding the shoulder/third lane and making it two lanes up from 1am to noon and two lanes down from 1pm to midnight. Allow buses and cars that pay a toll to use the third shoulder lane, only allowing buses to use this lane will be a waste.	Scot Chipman	Website
31	I would very much like to see the gondola option. I see so many positives and very few negatives. It would be a remarkable amenity for our state, a tourist magnet and it would be an asset year-round for visitors to the canyon. The scenery in that particular glacier-formed canyon is the most breathtaking in the whole Wasatch Range, and can best be enjoyed while not trying to send your car plunging off the guardrail on the narrow, windy road. Electrically powered (with renewables) it would save a lot of fossil fuels, clean our inversion air and provide a quiet, peaceful mode of travel. Please do it!	Jeff Grover	Website
32	I love the idea of having the largest gondola ride in the world. If you think about iconic travel destinations, they always have a number of things that sets that place apart and that make people feel like they've been somewhere unique. The gondola would be immediately included in tourist guides and websites and people will add it on their list of things to do while in Salt Lake City. When out-of-towners ask me what they should see while they are here, I won't have to say, "Temple Square and...uh..." It's a fantastic idea that will have long-term positive impact.	Steve Burton	Website

	A gondola could be shut down by wind/weather so not a good option for the busy storm days when the canyon is the busiest, plus it will not look good. Enhanced bus service with a dedicated shoulder lane is my choice of the three.		
33	A tweaked version of the enhanced bus service with a dedicated shoulder lane is what I would like to see. Add the shoulder/third lane and make it two lanes up from 1am to noon and two lanes down from 1pm to midnight. Allow buses and cars that pay a toll or carpool to use the third shoulder lane. Only allowing buses to use a third shoulder lane would be a waste of a lane when it will be empty most of the time, allowing cars that pay a toll or that carpool will help fill up the third lane and increase revenue. UDOT could use the same toll system they currently use on I-15 allowing people that pay a toll or carpool to use the toll/carpool lane. In the summer using the third shoulder lane as a bike lane is a great idea! Who can I talk with more about my tweaked version of the enhanced bus service with a dedicated shoulder/third lane? Thanks	Scot Chipman	Email
34	Who rides the bus? Give up on the bus plan. The gondola would be great. BUT what about closing uphill traffic for an hour at 4:30 and letting downhill traffic use both lanes. ALSO make the ski resorts have staggered start and end times. Leave one lift open until 5:30pm. Thank you, Alta season pass holder	Arlo Marsh Poulson	Website
35	I wonder if eliminating locals parking at the resorts would be an option. IE, you can only park there if you have a hotel room or are an employee. Everyone else has to take the bus. It would make riding the bus for 30min or so much more enjoyable because it wouldn't be stuck in traffic. If the option is sit in my car for multiple hours or stand in the bus for multiple hours, I'm going to drive my car. There would obviously have to be a major upgrade in parking infrastructure in the valley. On huge location could be Granite Materials. How long do they plan on quarrying that location?	Michael Krellner	Website
36	I support the gondola. However, there needs to be enough parking to accommodate the number of cars to encourage people to take the gondola.	Todd Hess	Website
37	A Gondola? Is this April Fool's Day???	Elizabeth Sweat	Website
38	Use more UTA buses. DO NOT widen the roads or ruin the canyon with a gondola.	Martina Conner	Website
39	I absolutely live the idea of a gondola or if there was something could be developed similar to Trax that would be amazing. Thank you for looking into this issue. It is definitely an issue that needs to be addressed.	Cami Talamantes	Website
40	When would the construction start and how long would it take?	Stanley Wheatley	Website
41	The only alternative that makes any sense is to charge a huge fee for parking private vehicles up at the resort, \$100 ?? \$200 ? 500? Whatever it takes to get people out of their car and onto the bus. Then all of those fees need to go to UDOT To pay for more buses. During the morning hours, there will only be uphill traffic allowed. Private vehicles going very slowly in the right-hand lane and the buses in an express lane on the left side. there is no need to acquire land and build more parking lots.the county is full of business parking lots that are empty on Saturdays and Sundays when the bulk of the traffic happens. Contract with these business parks to be ski bus staging areas	Kyle Williams	Website
42	Gondola is the way to go. This would actually be a tourist attraction in itself - would probably pay for itself - could charge significant \$\$ to ride this just for the ride itself!!!	David Frisby	Website
43	Short term, the bus solution would work (although there have been a number of bus slide offs in recent years). Long term, I think the gondola is both the coolest and most effective approach.	Harrison Piper	Website
44	Continuous 8 person Gondolas, just like the ones at the Canyons Resort. This way there would be no waiting in line. A 35 person Gondola would be too slow and long waits. You would have continuous movement versus a single tram like Gondola.	Travis Mills	Website
45	Out of the three proposals, I'm most interested in the gondola. A quiet scenic ride up the canyon would be an experience in itself. A gondola has a somewhat small footprint, which is favorable for preserving our canyon.	Chelsey Carhart	Website
46	Remember that many of us use little cottonwood canyon for hiking more than for skiing. Please take our needs into consideration as well in this study.	Vincent Knight	Website
47	More parking !!! More busses, no Disney gondola.	Anthony Martinez	Website
48	I love the idea of a gondola and getting cars off the roads. This has been a great option in many European ski areas.	Matthew Gale	Website
49	I didn't see any parking lot options for those of us coming from north of the mouth of little cottonwood canyon. Does this mean we would have to drive further south to 72nd or 94th to park and take the bus? Sounds a bit roundabout and out of the way. More gas more emissions	Susan Horvath	Website
50	I think the best alternative is to put in a monorail in each direction. 1. it would be less damaging to area. 2. it would move more people per hour and have the ability to expand for future growth. 3 it would be faster and safer in the winter than even a gondola. 4 because it is elevated it would be able to go over the road where necessary and be less prone to avalanches shutting it down or snow depths from having an affect.	LaMarr Taylor	Website
51	Free, every 5 minute bus service; make BCC and LCC toll roads; piloting parking fees at White Pine, Mill B and D; SNOW SHEDS in LCC would help for winter and summer " avalanches"; parking lot at mouth of canyons with a bus depot; make a daily playlist to be streamed on the buses; dedicated bus line with barrier to prevent cars from entering the lane.	Peg Kramer	Website
52	I'm sure this is a waste of time and these comments will be disregarded but as a home owner who lives by the canyon I didn't pay a premium price for my home to live next to a highway. Develop a light rail or a gondola or even two more bus only lanes in the canyon but don't take peoples homes and ruin our area with pollution and noise. Hopefully if this is approved enough of us are willing to file a joint lawsuit for causing our property values to decrease.	Tyson Howard	Website
53	I have often wondered why there has been no discussion of an elevated rail system discussions for all the canyons. Parley's, Big and Little Cottonwood canyons. Parley's could be located in the current median strip. The Cottonwood's could be located just off the current 2 lane traffic roads and since they would be elevated minimize the need for land acquisition. This is for reference. https://ggwash.org/view/67201/why-cities-rarely-build-monorails-explained	Richard Bodkin	Website
54	Enhanced bus service please! I like option one with service every 5 minutes and on a nonstop route to Alta or Snowbird. Anyone in a personal vehicle should pay \$20 per person in the vehicle to deter them. Also there should be a hefty fine for ignoring road restrictions for a vehicle. Thanks for asking.	Andrea Burt	Website
55	I favor a dedicated bus lane and more frequent service rather than building a gondola. Avalanche sheds should be added in areas where road is most frequently closed by control operations. Parking availability should be posted electronically at parking areas in the city and there should be a charge that varies by demand and time of day (i.e. high charge on powder day mornings). The charge should be collected by a meter that people would purchase and have in their vehicles, like toll road charging in the East. No discount for mltiple people in a vehicle as they can share the cost.	Ian Wade	Website
56	I think that you may have missed a very valid and inexpensive alternative. To be blunt, I'm not a fan of the Gondola, Alta and Snowbird currently experience significant lift lines when the canyon is full - 45 minutes or more at times. There's not enough uphill capacity to handle any more people. So how are you going to ensure that you don't create lift lines that are an hour or more in duration? The only good thing about the situation today is that it is self limiting in terms of the amount of people that can be in the canyon at once (due to parking). We can improve the safety of the road with the snow sheds and widening as applicable and that would help the commute for sure. So yes I would support that. You should also consider closing the canyon to downhill traffic on busy days from 7:30 AM until 9:00 AM, and close it to uphill traffic from 3:30 PM until 5 PM, or something like that. At the mouth of LCC the left lane goes to 9400 south and the right lane goes to Wasatch. You would need some traffic signs/lane indicators up the canyon but it's totally doable. Longer-term would be to widen the road and add a lane that could be directional depending upon the time of day - use it for uphill traffic in the morning and for downhill traffic in the afternoon. My main concern is that we do not overwhelm the lift capacity of the areas. As I mentioned, we already are there on busy days, so there has to be a way to limit the number of people in the canyon or the mountain experience will be ruined. Thanks for all of your efforts.	John LaBrie	Website
57	Improving bus service would be helpful and may encourage people to use UTA. As a family with a small child, who skies at Alta, taking the bus has proved extremely inconvenient. We live off Wasatch between the canyons, but thought we would try and be a part of the solution, not the problem. I had my husband drop us at the park and ride lot shortly before the bus arrived. The pick up was ontime and the bus was crowded as expected. With the number of stops the bus had to make at Snowbird, and the excessive time it took for people to get their skis and belongings and get off, it ended up taking us almost an hour to get to the ski school at Alta. The way home was the same process in reverse. Not wanting to give up on UTA, I tried again and it was exactly the same. We were not riding at peak times and on both occasions the traffic in the canyon was not heavy. Perhaps UTA could explore having a dedicated bus for each resort OR only dropping at one location at each resort? We only live 11 miles from Alta and spending an hour sitting on a bus on low traffic days is excessive.	Christine Gore	Website
58	I would like to provide my comments and support of the following: 1. Priority A 1 - GONDOLA OR RAILWAY UP/DOWN LCC. 2. Priority A 2 - TUNNELS OVER AVALANCHE AREAS ALONG ROAD	Gardner Olson	Website
59	The adding more buses option is a non-starter. It creates more air pollution. It also isn't a very pleasant experience riding up a crowded bus in standing room only. Its time for the legislature to treat this world-class canyon with the proper respect and make the experience of travelling up the canyon fun, comfortable and enjoyable. Spend the money and you have a lot of happy campers! and skiers/and boarders.!		
60	Putting in traffic lights (4) between the gravel pit and the mouth of Little Cottonwood (at the entry point where 9400 south meet Little Cottonwood Canyon Road) would be adjustable and control the flow of traffic during the busy season and hours. Also, turning the Big and Little Cottonwood Canyon roads going up into two lanes using cones on the busy ski days (morning only) would increase the flow. They do this in Kauai each morning for the busy commute and it works beautifully.	Allyson Kimball	Website
61	Buses would be a disaster, economically, environmentally and aesthetically. The tram is a much better idea, and proven in Europe. Do the tram!!	SCOTT SABEY	Website
62	A toll is necessary to get fewer people driving personal vehicles. Cost of driving must be higher than the cost of taking the bus or gondola. I strongly support no single occupancy vehicles in the canyon. Wondering what the exact proposal here is for the widening of Wasatch Blvd? I see in the WASATCH BOULEVARD MOBILITY IMPROVEMENTS document: https://littlecottonwoods.udot.utah.gov/wp-content/uploads/2020/05/10265_3_LCC_Public_Factsheets_Wasatch_Blvd_FIN_WEB.pdf there are 1 residential and 9 sites impacted. Do you have a map of exactly what that looks like? And how close to other residences backing up to Wasatch? Will there be a sound barrier built? What other residential accommodations are being made for residences backing up to Wasatch?	Nancy Carter	Website
63	The only option here that will work long term is the gondola with widening Wasatch Blvd., along with adding more trailhead parking and making more parking available at the resorts, whether that is along the roadway, in the parking lots or both. Tolling stations are not going to solve the problem and should be eliminated from the options, they will just be a detriment to the locals who should be able to use these canyons. We need to address Big Cottonwood Canyon at the same time though. Even though traffic might not be as bad as LCC at the moment, it will be there soon, and the parking at trailheads and resorts is already a bigger issue than in LCC. Just look at how many times BCC had to be closed last ski season due to parking at both resorts being full. This makes it impossible for those of us with families who grew up skiing and are trying to pass that on to our kids to be able to do so. Tolls will also make this an activity that local families are unable to do in the future.	Brandon Andersen	Website
64	I support alternative #1: enhanced bus service. I agree with the mobility hubs, which will allow canyon users to park and ride. I also support charging substantial tolls for private vehicles. Please do not do alternative #3. Gondolas are unsightly.	Carolyn Clark	Website
65	YES!!! #1: The gondola, with "Mobility Hubs" at "The Gravel Pit" in Cottonwood Heights; U-209/Highland Drive and a TBD hub in Draper. Seasonally increased bus service between a hub & LCC, together with tolling of individual vehicles should be a major congestion/impact reducer. #2: Widen only that portion of Wasatch Blvd. north of the divergence from U-210 at 8600 S. This has been needed for at least a decade to eliminate the wide-to-narrow 'choke points." The 50 mph speed limit must be retained. #3: Build the snowsheds ASAP! Enhance bus service & reduce roadside parking by adding small parking lots where needed & are feasible; introduce tolling. #4: do NOT widen U-210 east of "The vaults."	Tolford Young	Website
66	Please save money & less destruction to our environment by doing the more busses option with out widening roads.	Georgia Clark	Website
67	Th bus hub at Highland & 9400 is a key mobility hub for transport in bus enhancement, bus expansion or gondola the expansion of HWT 209 to the intersection with HWY 210 must be considered equally with the widening of Wasatch Blvd. There are equal traffic delays for people accessing the canyon along this roadway.	David Hackbarth	Website
68	Option #3 (gondolas) make the most sense to me. It requires no more paving of our canyons and would not degrade air quality as buses might. Initial and annual costs are both projected to be less than option #2. They could eventually be extended into Big C.C. and Park City to provide among other benefits, emergency egress. Gondolas are the obvious choice.	Robert W. Cameron	Website
69	I do not want to see the road widened up Little Cottonwood Canyon. I am the most opposed to that option. It would be detrimental to the watershed. It would also harm Utah residents. It would take out parking for hiking, mountain biking, and rock climbing. I would be most in favor of extra buses without widening the road.	Megan Sieverts	Website
70	On each of your alternative summaries. It states that there is a relocation for a home a residential home. I was wondering if I could get that address from you. I will also text you.	Andrea N/A	Phone Comment
71	I am for widening the road for a bus lane. The problem is traffic. Even with a Gondola, people would probably still want to drive. If the busses had an advantage, they would be the preferred option!	Brett Dudash	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
72	I love the gondola idea; it is the best solution by far. The Europeans understand and use this concept very very well, and we should learn from them. But your current solution falls short in two areas. First, the addition of the bus ride kills the efficiency of the gondola and lengthens the time to the top of LCC. Also, it increases bus traffic on Wasatch Blvd, something the residents will not enjoy. A far better solution is to get on the gondola at the Mobility Hub, or to move the Mobility Hub--nobody wants or needs to have to transfer twice, from the car to the bus to the gondola. Ideally you pull up in your car, get out, and get on the gondola with the next arrival at your destination. Having to take a bus in addition to the gondola really kills the whole benefit of the gondola. A parking structure (underground?) at the mobility hub allows for ample parking, and perhaps even a place to buy lift tickets, use a restroom, and even maybe some retail space for restaurants or otherwise, helping to offset the cost. Second, there needs to be several more stops along the way for people to get on and off. Hikers and backcountry users will be far more inclined to use the system if it gives them more convenient/frequent drops. The gondola solution is used brilliantly this way all over Europe. Eliminate the bus and increase the parking and the stops, even by one or two, and you will have an amazing world-class system. FYI for a great example, see how they do it in Courmayeur, Italy, near Chamonix, France. They have a large, discrete parking structure that you pull into. You get on an elevator and take it to the main level where you buy your ticket and then get on the gondola that takes you to the base of the ski mountain. Voila. You are skiing. Seamless, even kind of fun. Thanks for listening! You are on the right track.	Geoffrey Crockett	Website
73	After reviewing the 3 options I feel that the gondola is the best choice for the following reasons: 1- The gondola can be electric which means it could run on renewables and improve our air quality. 2- The gondola would be a better experience than a bus. Easier to get on and off. 3- Buses would have more of a chance to be stuck in traffic. 4- Snow bridges would have more of a visual impact than gondola towers. 5- The towers would have less environmental impact than snow bridges and expanded highways.	Harold Young	Website
74	Sorry, one final addition to my previous comment. Part of this solution to go gondola only (no bus) could be accomplished by taking a more direct route via gondola up and over the mountains from the mobility hub. Nothing says you have to follow Wasatch Boulevard with the gondola. It can go straight up from the base of BCC and disappear over the top in a more direct route to the top of LCC, keeping in mind the additional stops. This would also provide an option for accessing BCC in the future should this become a necessity as well. Best to you all.	Geoffrey Crockett	Website
75	I live in the Pepperwood Subdivision and often use Wasatch Blvd. to travel to work in downtown SLC. Traffic into the Canyon often makes my commute much longer than it should. I very much favor use of a gondola system to expedite moving skiers. I do not favor widening the road (with or without snow sheds) or creating a constant stream of buses up and down the Canyon. I believe the gondola system will also reduce vehicle emissions that impact our neighborhood.	David Bird	Website
76	My husband and I are long-time Alta skiers and pass holders. We think the bus with a dedicated bus lane is the best option, combined with Avy shelters and tolling for private vehicles at the mouth of the canyon to help fund the bus service.	Dolly Peach	Website
77	one of the draft alternatives that I like is the Gondola alternative because it will take traffic off of the road especially during ski season and tourist season, because traffic backs up on Little Cottonwood Canyon during ski season and tourist season.	Jackson Hurst	Website
78	Why was dual-mode rejected?	Dave Brough	Email
79	I believe the way forward to ease congestion in the cottonwood canyons is more park n ride space on wasatch blvd as well as buses that run to specific resorts (Brighton bus, Alta bus, solitude bus, snowbird bus). I oppose a gondola / tram, I am very concerned how that might affect our limited backcountry space. It's important that we preserve the undeveloped portions of our canyons. We have enough lifts. Expanding the road for a bus line might be a better option.	Ran Yehushua	
80	I think all 3 are legit and viable options. My major concern is public access to the wilderness and backcountry. Any of these that would make it difficult to access ANY of the current routes in both winter and summer, including Lisa Falls, Tanners, Maybird, Little Pine, White Pine, Flagstaff, are a 100% non-starter for me. My preference would be to add buses, force the resorts to have their guests use buses when their parking is full, don't allow resort users to park in trailhead parking. I'm all for a toll that would cover both BCC/LCC and/or BCC/LCC/MC that is paid yearly, on the order of ~\$100 per vehicle, ONLY if it gives them more convenient/frequent drops. The gondola solution is used brilliantly this way all over Europe. Eliminate the bus and increase the parking and the stops, even by one or two, and you will have an amazing world-class system. FYI for a great example, see how they do it in Courmayeur, Italy, near Chamonix, France. They have a large, discrete parking structure that you pull into. You get on an elevator and take it to the main level where you buy your ticket and then get on the gondola that takes you to the base of the ski mountain. Voila. You are skiing. Seamless, even kind of fun. Thanks for listening! You are on the right track.	Mitchell Frankel	Website
81	Option 1 but with separate lines direct to snowbird or alta. Would save significant time and encourage way more people to ride. The #1 reason people don't take the bus to alta is because it stops 3 times at snowbird and adds 15-20min to the trip. Also maybe bus priority lane on Wasatch Blvd for backed up mornings, nothing would encourage people to ride the bus more than watching it skip the red snake. More parking at 6200 S park and ride. Snow sheds in key slide paths	David Baird	Website
82	I have a unique vantage point of having worked midway between the LCC entrance and the ski resorts for 27 years. I've seen what works and what doesn't when UDOT tries to make adjustments with Unified Police in allowing or not allowing cars to line up to access the canyon. I've seen the drastic changes in canyon usage, but I can without a doubt tell you the majority is ski resort visitor related. The vast majority of all canyon traffic in the winter is by far going directly up the canyon to the resorts without any stops. In my mind, that advocates for keeping nearly ALL VEHICLES, that would currently go to the ski resorts... out of the canyon. I believe the gondola would be an innovative and exciting feature that enhances the ski resort experience to these Utah resorts... but NOT without mandating that all ski resort traffic use the ski hubs outside the canyon (some employee exceptions allowed). There is no reason to allow 2499 cars to cause traffic and emit pollution within the canyon when those vehicles never stop within the canyon at all. They drive straight through to their final destination: the parking lots. If all 3300 people were mandated to take the bus/gondola from the hubs at 9800 S. Highland or the proposed Gravel Pit site, AND paid for that bus/gondola ticket, the costs of those improvements could/should be born by those users. This would alleviate any need for extra buses within the canyon, widening the LCC roadway, or building terribly expensive snow sheds. This solution allows for a greater & unique enjoyment to skiers of the entire length of the canyon, reduces vehicle fuel usage, and far reduces the congestion in the canyon. Also, I want to advocate for improvements at the Gate Buttriss & White Pine areas. These areas can support a larger population of visitors and should be expanded. The Bridge & Lisa Falls Trailheads should be left as they are today to reduce over-development and visitor-sprawl within the pristine canyon and watershed.	Mike Goodfellow	Website
83	I favor the gondola for two reasons: 1) it is the only mode that addresses the egress issue for canyon residents and 2) it could enhance our ski industry (Park City-Brighton-Alta), which is in competition with other states. This=jobs. I am a big proponent of the gondola. A similar approach has done wonders for Telluride and other ski resorts. Not only does it minimize fossil fuel use and pollution, but many people (especially younger ones) find it to be an attraction in and of itself. It's a comfortable ride with great views, and people don't get frustrated with the time involved as they would in a bus. It gets everyone into the mood for skiing in the great outdoors, the way no bus or car can. I recommend the following: (1). Ample parking at Gondola Base. There should be ample parking provided at the gondola base station. I live south of 210. The population south of 210 has been growing significantly in recent years and is likely to outpace population growth north of 210. (The attraction of Silicon Slopes that has brought many high tech companies to Utah is focused on Snowbird and Alta. Many of these companies and their employees live in the southern part of Salt Lake County and in Utah County. I do not, and will not, drive to the mobility hub station 2-3 miles north of LCC. I would gladly drive to the gondola base station, if I could park there, and take the gondola to Alta, rather than drive there as I do now. But I will not drive north to go back south in a bus. This, I believe, will hold true for all those who live south of LCC. Expanded parking at the entrance to LCC by the gondola base is a must. (2). Eliminate angle station. Is there a way to eliminate the angle station by installing the gondola somewhat uphill of the road so that there is a straight shot from the base station to the Snowbird station? This would eliminate having an expensive angle station where gondola cars would have to detach from one cable and re-attach onto the next cable. It would also save time and maintenance. (3). Continue Gondola to Mobility Hub. If the gondola line was extended along Wasatch Blvd. to the Mobility Hub, there could be several advantages that would result in cost savings. These include: (a) Eliminate the need to widen Wasatch Blvd. (b) eliminate the need to provide a priority bus lane, (c) reduce the number of buses needed for transport, (d) reduce fossil fuel consumption and pollution, (e) increase the unique feature of gondola transport, (f) preserve the pristine nature of LCC, Alta and Snowbird. I would imagine that the incremental cost of extending the gondola to the Mobility Hub would not be dramatic, and would be somewhat offset by the above considerations. During busy times, empty gondolas could be periodically sent from the Mobility Hub to the current gondola base to allow skiers to board there. (4) Free or Charge? The gondola transport service could be provided free to everyone, as is currently done at Telluride. That is a big inducement for people to not drive to the resort. Alternatively, the gondola could be free to season pass holders and \$1.00 to everyone else, as bus service is now. A third option is to leave it free and ask for contributions at each point (base/Snowbird/Alta) to help defray the cost of operation. Thank you for your consideration, Dan Purjes	Brooklyn Brooke Derr	Website
84	I do not, and will not, drive to the mobility hub station 2-3 miles north of LCC. 85	The plan will create more traffic volume from the Transportation Hub south on Wasatch Boulevard to the mouth of Little Cottonwood Canyon and on up to Snowbird and Alta ski resorts. How will the residents of neighborhoods adjacent to Wasatch Boulevard get in and out of their respective neighborhoods? For example the only entrance/exit into Tree Farm Estates is via 8350 South. Does the Plan include a stoplight at the intersection of Wasatch Boulevard and 8350 South? Did the planners consider the vacant Shopko property located on 9400 South as a potential mobility hub in addition to the current hub across the street on the south side of 9400 South (next to Walgreens)? Is this plan compatible with a plan for Big Cottonwood Canyon? Was a "light rail" option evaluated for either Big or Little Cottonwood Canyon?	Kenneth Petersen	Website
86	I realize there is no perfect solution. Currently, I prefer the Gondola option and restricting vehicles up the canyon. The Gondola should be solar powered electric. Hello, My name is Dan Purjes. I have a home on Wasatch Blvd. south of 210. I am very much in favor of the gondola alternative. It has done wonders for Telluride and other ski resorts. It eliminates fossil fuel usage and pollution in LCC by those who use gondolas rather than buses or cars. It is also a fun and wonderful way to get into the mood of skiing and nature. Questions: 1. Could the gondola be extended to the Mobility Hub on Wasatch Blvd.? This would further reduce fossil fuels and pollution. It would eliminate the need to widen Wasatch Blvd. and provide a priority bus lane. It would have many other advantages, including that of being a major tourist attraction in and of itself. 2. Could a parking lot be provided at the current gondola base for those who live south of 210? Those people will not drive north to the Mobility Hub to then take a bus south to the gondola base. 3. Can the gondola be built slightly uphill of 210 to provide a straight shot between the gondola base and the Snowbird base, thus eliminating the angle station in between? This would save considerable expense and also transport time. Thanks, Dan Purjes	Kevin King	Website
87	I realize there is no perfect solution. Currently, I prefer the Gondola option and restricting vehicles up the canyon. The Gondola should be solar powered electric. Hello, My name is Dan Purjes. 88	Enhanced buses + designated bus lane would be the best alternative plan.	Nathan Ramsay	Website
89	I would support a Gondola as my first preference with parking at the gravel pit or at the base of LCC. My issue with any and all of these alternatives that limit vehicles in the canyon (that are not employees or residents) is dealing with the early and late use cases. I often ski in LCC starting at 4am to be at work by 8 or shoot up for evening skiing in the spring. I don't believe I saw either of those (common) things addressed.	Arthur Debowski	Website

90	build a solar power tram- using the old mining ore cart trail- straight up and back Euro style...	fish Bartlett	Website
91	Gondola	Howarth Boyle	Website
92	All the talk is about transportation. The canyons/resorts can only handle so many people. Quality of experience is being ignored. A gondola is not the best option—still avalanche issues, impact on the canyon, no way to get off unless you want to ski—not everyone does. Where would people park to ride it. Better parking, more busses, do like they do in Oregon and require a parking pass to park at the resorts, fine and/or impound cars that don't have the pass and park illegally. Just don't wait until the last minute to inform people, of The pass requirements. The pass is less than \$75.00.	Karen Meredith	Website
93	It seems to me that the cost/benefit ratio of big infrastructure changes like gondolas and roads is unfavorable. Large expenditures will likely produce only marginal benefits. As well, charging users is not likely to reduce traffic significantly, and simply adds another tax to users who already pay federal taxes to fund the forest service. I believe the real solution lies in simply limiting access to the canyons. This could be done in various ways, but in essence, each person/household might get 'X' days per week/month in the canyons. The days might or might not be made transferable. I can't speak for anyone else, but 1 day per week in the canyons would be adequate for me. Priority should be given to locals over non-residents. There are a lot of things to work out with an access plan, but I believe it could be done. This would be much less expensive than infrastructure, and could possibly be handled with an app and access gates.	Pete Malen	Website
94	Hey! I will make this short and sweet. I really think there should be some parking at the base of the gondola? Why not a few hundred spots there? I really don't like the idea of parking somewhere, and then taking the bus. Give some spots to people who are there early.	Ryan King	Website
95	Please build a gondola with multiple stops a long way for ease of access to different parts of the canyon. I'd buy a season pass or pay by the ride. If you have any left over revenue send it on down the backside to Midway. I could then ride up and over and then take a train to the Airport. It would remove thousands of cars from the roads around the Wasatch Range!	Bryan Silvey	Website
	Thanks Bryan		
96	I am in favor of the gondola plan. This is absolutely the way to alleviate vehicle numbers.	Eric Reische	Website
97	I support the gondola option. The impact on other user groups by roadway widening is unacceptable.	Michael Stearns	Website
98	I do like the bus lane and extended bus ideas. Having ridden the ski bus frequently, I can tell you it is usually packed full to standing room only and the park and rides are also full to capacity. While a gondola is a novel idea in concept, I think one avalanche could bring down the tram for the season. As unlikely as this event might be, this is Utah... expect the unexpected. My 2 cents.	Daytona Sands	Website
99	Start with option 1 while option 3 is being built. More cars isn't going to help. You'll need to figure out the parking at the bottom though.	Kristen Haungs	Website
100	The ideas I support most are increased buses and a dedicated bus lane. I feel that these would be the most effective in our state. While I love the idea of a gondola (and I've lived in Portland so I have experience with them), I'm concerned about two things. First, the cost. Winter sports are such a tourist attraction, we locals can barely afford our lift pass for the season, how much extra would a gondola pass be? If it was made affordable, or tied in to a bus pass, the homeless would overtake it as they have every other form of public transportation. Trax is known as a mobile homeless shelter, and everyone knows to be careful where you sit on a bus. The advantage of riding the ski bus is you're already wearing waterproof pants in case you were to sit in the urine of a previous patron.	Elizabeth Sands	Website
101	Road widening with added bus service seems to make the most sense. It additionally addresses additional space for road bikers. Further it scars the landscape much less than a gondola. I believe its best to consider the year round recreation in LCC and not just winter. The gondola serves no purpose in the summer, however road widening benefits all seasons. Thank you!	Kyle Ticotin	Website
	Hello Josh, This is one massive report, a Herculean effort behind it to be sure. Congratulations on getting this milestone online today. Now, to pour over it all thoroughly with a particularly eye to what you are proposing for the Wasatch Blvd expansion as it fits in with our community needs and WFRC's Vision 2050 regional transit plans for getting southeastern SL Valley commuters (East Sandy and East Draper) into Research Park/U of U/downtown SLC. Save Not Pave still sees those commuters best served utilizing Highland Drive or 1300 East arteries.		
102	Why not BRT north/south on Highland Drive. If bridging Dimple Dell to complete Highland Drive between 11600 South and 9800 South is being stalled due to cost or whatever other pushback, why not run that leg as strictly a commuter BRT access bridge only? East Draper and South Sandy residents could collect at a southerly terminus at 11600 South (Wasatch Blvd) and be speedily delivered straight north over Dimple Dell. They'd continue north on BRT skirting Highland Drive and step off at the northern terminus proximal to U of U, Research Park and just to the east of downtown SLC? Commuters would take transit if it was rapid and direct. We want to be supportive as you bridge what we see as a long standing "UDOT/UTA divide". Save Not Pave would like to see the incorporation of a UDOT "improve not expand" road design mentality with more vibrant and improved UTA transit.	Ellen Birrell	Email
	The LCC Preferred Alternatives report lacks focus on advanced technology to direct commuters and skiers alike to best availability at park and rides/parking lots, transit, and driving routes yielding smarter, more efficient mobility and cleaner air.		
103	I feel that the gondola project is the safest and most economically viable option for a long term solution. I personally find the buses slow and uncomfortable but I would be much more comfortable riding a gondola up the canyon instead of driving.	Ryan Sallee	Website
	I propose you have 3 lanes of traffic in total. 2 lanes going up and one going down the canyon in the AM until noon. At noon switch to two lanes coming down the canyon and one going up. Flip again at midnight. This is a common resolution to traffic issues.		
104	https://en.m.wikipedia.org/wiki/Reversible_lane https://www.citylab.com/solutions/2015/03/its-time-to-reverse-our-thinking-on-reversible-lanes/388207/	Dylan Kielcheski	Website
105	Could a stop be added at the White Pine Trailhead for the gondola or express buses? This is an exceedingly popular destination in both the summer and winter and parking regularly extends for a long distance away from the trailhead on the road. Adding a stop here would make it so much easier for backcountry snowshoers and hikers such as myself to access the area without a car.	Anonymous Salt Lake Resident	Website
106	I am in full support for enhanced bussing and the gondola. I feel that it makes the most logistical sense overall. We will no longer depend on UDOT to get up the canyon plus it will be much better for our clean air!	Caleb Rio-Anderson	Website
107	I vote for the gondola because it would help reduce air pollution significantly as well as congestion! I also think it would be kind of a cool novelty- how many people can say they take the gondola up from town to their home ski resort?? I'm not sure if this would also allow for transportation even avalanche risk, but it would prevent road slides from jamming up the canyon in heavy snow, too.	Sara LoTempio	Website
108	Gondola!!	Courtney Linden	Website
109	I love option #2; enhanced bus with road widening. This option would hopefully encourage an increased use of public transit in the winter, and offer a protected and safe way for cyclist/pedestrians to travel up/down the canyon in the summer. With the current CoVID pandemic and the need for social distancing, a gondola is not a good choice. A gondola would also adversely affect the natural beauty of the rugged skyline of Little Cottonwood Canyon.	THERESA SOFARELLI	
110	I think that the option number one, enhanced bus service, makes the most sense. Lower cost, least environmental impact, still maintaining adequate people transportation numbers.	Steve Hunt	Website
111	The gondola seems like the most environmental friendly option with similar capacity to the other options. I support the gondola.	Brett Michaels	Website
112	I am disappointed to see these proposals leading with more buses, people who don't take them now won't take them even if there are more. Widening the road is a travesty and the environmental implications do not seem worth the trade especially for little additional capacity. The only option that seems semi-viable is the gondola. All proposals seem to be lacking the parking and at resort support to limit driving. If you have a family you must bring additional gear and with little convenient storage the bus just isn't viable.	Heather Van Vranken	Website
113	Whatever you choose to do, the ski resorts MUST be required to pay for the expenses. Snowbird and Alta derive enormous profits from the Wasatch Mountains, and much of the congestion, traffic, and headache in Little Cottonwood Canyon today is fundamentally their fault. They have spent millions of dollars in marketing to attract tourists, they sell too many season passes and too many day tickets, and have done almost nothing to reduce traffic congestion. Snowbird and Alta must be required to be part of the solution to the headaches in Little Cottonwood Canyon, and they MUST pay for those expenses.	Sam Scholes	Website
114	I'm all in favor of the Gondola. Seems to be the lowest environmental impact in the long term. Could eventually be run on solar and battery. I don't support widening the road or additional vehicle traffic.	Jesse Wheeler	Website
115	The key to any plan working is adequate parking near the mouth of the canyon. I think making a massive parking structure at the base of bcc in the south edge of the gravel pit would work. Otherwise the gondola is my favorite because it would be amazing for summer as well and wouldn't be subject to shut down for auto accidents.	Ryan Kapes	Website
116	I do not support the widening of the road to create a sole lane for buses, this will have a negative impact on many of the beautiful trails my family enjoys.	Nicole Holloway	Website
117	I believe that a gondola would be a blight in the canyon. Busses are a reliable alternative and if a bus only lane was added would be an ideal solution to the crowding problems. I also favor the implementation of a toll similar to that in millcreek canyon.	Stephen Peterson	Website
118	As a community member and avid snowboarder, I believe the gondolas would be best for LCC.	Lauren Cabrera	Website
119	I love the idea of a LCC Gondola. Our family of 6 skis several times a week at Alta. Using the bus is very hard and a lot of work for a family with little kids. When we ski at Deer Valley we chose to access the resort via the Gondola near Jordanelle. The Gondola is easy for all ages and is something that I feel most residents would use over the bus.	Elizabeth Shakespear	Website
	Hello Josh, I hope you are the right person to be contacted regarding Cottonwood Canyons development proposals and discussions. Please see my correspondence with the Boring Company below. They are the only innovative tunneling company who can provide inexpensive but effective solution for \$10 million a mile. Tunnels could be a perfect transportation and emergency escape solution that is safe from wildfires, avalanches or any surface emergencies. Because they are inside they are not affecting beauty AND the wildlife of the Canyons. They have huge throughput and are the safest from earthquake events. Other proposals (like gondola or rail or extra road) are not viable, more expensive and not effective. I have Masters degree in transportation engineering and understand this issue well. Please keep me in the loop of the conversation.		
120	Best Regards, Leo Balitskiy	Leo Balitskiy	Email

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
121	I do not believe in widening the road! I grew up in the mouth of the canyon and have enjoyed the beauty and sacredness of the area from a young age. I spent the winters as a teen riding the bus up the canyon almost everyday. I understand that the canyon is busy, especially in the winter, BUT don't ruin the ease of access to enjoy the canyon the rest of the year! I can get behind the alternative plans, but NOT the ones that will leave a huge footprint forever. Please do not do the gondola. It will ruin Backcountry skiing access in the canyon.	Whitney Salisbury	Website
122	The other 2 options I think are fair with making the roads wider. Please think about Backcountry skiers as well. People are proposing no cars with less than 3 people. This heavily impacts Backcountry skiers and locals that buy a pass and ski 2 hours on powder days. These people are not part of the traffic problem. They are out of the canyon by 10:30 am most days.	Don Freeman	Website
123	It is too soon to decide this. Everyone is recovering, we hope, from the pandemic. What will economics and technology and our climate, earthquake activity, and watershed look like in a year? It is a joke that this is being sold to local residents as a measure for 2050 when we cannot predict 3 months ahead. We can be sure that anything we do now will be old, tired, and out of date in 2050. Maybe paid for? A monument to crony capitalism and pro-incumbent gerrymandering. In a year there might be such a thing as a driverless electric car that can follow a magnetized strip embedded smoothly in the existing road. UTA's last mile service might be perfected. Maybe with detector/communication ability for earth shaking or sliding. *****Just saying no. None of the above. ***** Instead, a temporary plan for this fiscal year. Put out some police protection and traffic control. Cap the numbers of cars let in the Canyon. Give residents stickers for their cars, and facilitate their movements around daily living. Post electronic signs giving status well before the cars pull into the neighborhood road. Reduce the speed limit back to 35 mph--realistic for skiers favorite blizzard conditions, and for the families who live in the two lane residential country road leading from Fort Union to Little Cottonwood Canyon Road. Paint some cross walks, stop signs where residents have to come and go from the trapped neighborhood along the road to school, work, the grocery store, church, elder and child care. There is a strong community feeling, that just doesn't understand that this is back again. Finally, enforce the idling ordinance. The pollution off the long line of gridlocked cars is staggering. I read somewhere in a past UDOT proposal that a single car idling for an hour puts off as much pollution as 280 cars passing the point in an hour. It threatens me in my house and heads on up the mountain, dropping black particles on the snow pack, affecting the rate of melt. Those cars need to be limited in number, and directed to off-road parking so the drivers can get warm and go to the bathroom. No wonder they don't carpool if they might have to open the two passenger doors and relieve themselves roadside. And no electric cars will go where they could be held up until they run out. Little Cottonwood Canyon has been presented to the Federal DOT as a blighted and unsafe area deserving of massive emergency funding for health and safety. It really is a beautiful area of nature loving neighbors with homes built by the greatest generation and baby boomers near a unique ski resort. We were in the county and most homes were built with ski apartments in them. Really, what mother in law needs 3 bedrooms, a fireplace, separate laundry, and entrance so private and separate it is completely out of sight? This is not for a big family with teenagers downstairs, or grandma. I took it for an in-law apartment and thought it was unique when I bought it. And was excited to buy such a great house high off the valley floor with beautiful views, because I was born with severe birth defects and birth injuries. My parents were told not to plan on taking me home from the hospital because I was going to live about 3 days. They took me home, and I lived. I was a lawyer coming back from Oktoberfest at Snowbird with a friend when we saw a sign pointing to the open house. I thought it would be fun to check it out--but fell in love with the house and its beautiful views--plus separate, on site accommodations in case I needed live in help as I aged. That was in 1994. I was never steady enough on my feet to ski, but I was forced into early retirement. I haven't walked at all in about 7 years and need a lot of help. I am very attached to my home and neighbors, and would like an official let's wait, because there are so many needs right now. This is not going to get going this year anyway. Please email me a copy of my comment.	Lee Walker	Website
124	Please do not widen the road for a dedicated bus lane!	Callie Neubert	Website
125	bussing doesnt work, it might on paper, but the bus is a rich/poor solution. Wealthy people dont ride the bus. i believe you should look for a solution that is good for both sides. again, wealthy people do not ride the bus	Timothy murphy	Website
126	Gondola is the way to go. Especially now, people are not going to want to take a bus.	Leonard Sperber	Website
127	Please do the extra bus service, without widening the road.	Tamara Renko	Website
128	Enhanced bus service is my preferred alternative. Vehicular traffic (single occupant vehicles especially) going to the ski resorts should have strict limits. Back-country users should be accomodated.	James Kucera	Website
129	Start with option 1 while option 3 is being built. More cars isn't going to help. You'll need to figure out the parking at the bottom though.	Kristen Haungs	Website
130	Please do NOT widen the road! This will do more harm than good. For the MANY of us who enjoy hiking and biking, this will kill our opportunity to enjoy such a beautiful area of Utah. Also affecting the water table and environment. It also seems like a very selfish option for ski resorts and that is NOT the only thing in this canyon!	Christy Madsen	Website
131	Enhanced bus but no widening the shoulder. Less impact on the canyon and the environment	Amanda Best	Website
132	I've thought the gondola idea would work well for years now. As a skier at snowbird, I would use the gondola. I never use the bus and often drove up alone.	James Sherman	Website
133	Gondola please.	Jason Booth	Website
134	I think of the three options proposed, though the most expensive, the wider road with the bus only lane is the best long term solution. Not only will it incentivize people to take the busses (whereas I don't think just increasing the bus count will...) it will allow for bike recreational use in the summer making the solution benefit more than just skiers, and will benefit all seasons. That being said, regardless of what solution is chosen, I don't think any address the issue of getting to the canyon in the first place (half the battle) more parking would need to be created at the mouth of the canyon and park and rides to better allow for usage of busses. Frequently I haven't used the bus b/c I know I won't be able to get a parking spot at the parking lot.	Mallory Reese	Website
135	Is the Gondola option the "cleanest environmental" option? If so, lets go with the Gondola!	Joel Cohen	Website
136	The Gondola option is my favorite because it's infrastructure is lower compared to widening the road, gets people up the canyon fast and would be a great alternative to a toll or forcing more and more vehicles up the road in snowy conditions, even summertime would be improved by the sites, Snowbird and Alta would become even more world renowned setting the stage in my opinion the best way	Jeffrey Alan Larson	Website
137	I like the gondola option.	Scotty John	Website
138	I support the idea of a gondola. I would hope that it is also available for use in the summer.	Nathan Willson	Website
139	Please widen Little Cottonwood Canyon road with a bus lane! That will give people the incentive to actually use the bus! It will cut down on car traffic, pollution, accidents and time! Building a gondola ? will ruin the beautiful aesthetic of our beloved canyon. Please don't do that. Widen the road but only for busses! This is a GREAT idea. Thank you.	Dan Reese	Website
140	Based on the options given, I choose option 3. - Restricting and policing traffic to only local residents and buses will reduce congestion, especially during peak hours. Strategic bus stops will allow access to trail heads. - Tolls for vehicles should be significantly higher than the price of taking the gondola. - Solar-equipped gondolas will curb operating costs.	Tracey Collier	Website
141	Gondola seems to be the best option in regard to the combined capital and O&M costs, plus it would limit the amount of road widening and environmental impacts. It would be great to see Salt Lake City on the global map for innovative transportation options, such as a gondola to nearby ski resorts!	Kayla Kinkead	Website
142	The gondola seems like it would serve all canyon users including skiers and bikers. The gondola ride would be an attraction itself. Impacts to the environment would be minimal, especially once it was up and running.	Amy Kopischke	Website
143	The Gondola alternative is clearly the best, but I think you should have a 4th alternative: Demolish all the McMansions at the mouth of Little Cottonwood and make the parking lot right there. No bus transfers!	Jake Vandenberghe	Website
144	Enhanced buses but enforcement of cars that must contain 4 people on Saturdays and Sundays and avy delay days. Less than 4 people would be a \$20 charge to fund all of the bussing and road improvements. Major growth of parking areas for bus pickup needed, they are full already.	Dina Freedman	Website
145	Please put in a gondola or an express tram. That would be ideal.	Julie Swensen	Website
146	I spend a lot of time both summer and winter in LCC. The gondola suggestion to me makes the most sense. Getting a majority of traffic off the road and up the canyon with a vehicle will make the canyon more accessible and safe for recreation. I prefer the alternative that provides for increased bus service with transportation hubs without widening the highway in the canyon. I believe this will effectively reduce canyon traffic, while minimizing environmental and visual impact. For this system to work, the buses should be free or very low cost, to incentivize people to ride them rather than driving. Any tolls considered should also incentivize car pooling with reduced fare for high occupancy vehicles. I also think it is very important that buses be able to stop on request at all trail heads for backcountry users. Otherwise backcountry users would be forced to drive and pay the toll, without the option of taking the bus instead	karsten bench	Website
147	To whom it may concern,	Brett Carroll	Website
148	Please take this email as an "upvote" for the gondola strategy. Not only will this option be a cleaner solution in terms of operating emissions, it will double as a tourist attraction if marketed during off-season months. Also, it can be retrofitted at a later date if need be if there is an opportunity to use advanced technologies (how it is powered). Adding more lanes and more vehicles to the problem is akin to adding more bandages to a wound and not addressing the cut itself	Correy Selden	Email
149	I support a LCC gondola. Even though some days may be slow getting on I think it is a good idea to get more people off the road	Owen Rouse	Website
150	Get a quote from The Boring Company for tunnels from below Little Cottonwood Canyon with stations at Snowbird and Alta. Boring Company EVs with regenerative braking are very efficient for round trips up and down a grade. It's less than 9 miles. Could easily be much less expensive and immune to avalanches and "dumps". Also much faster to implement and a much faster trip as the tunnels can be straight with autonomous vehicle speeds up to 127 mph. It could also continue on to Brighton, Solitude, Park City, and Deer Valley. With spurs to each terminal so through vehicles wouldn't even slow down. 17.5 miles from Sandy, UT > Snowbird > Alta > Solitude/Brighton > Park City > Deer Valley. Undoubtedly could be done in phases. 17.5 miles at even 100 mph is 10.5 minutes! A half hour from SLC International Airport to the tunnel entrance. Imagine less than an hour from flight arrival to all those ski areas, and with no weather related driving hassles! The 12-passenger EVs (being developed for the below project) could even have lift ticket purchasing kiosks on-board.	David Stein	Website
151	The Boring Company is doing twin tunnels from Rancho Cucamongo, CA to the Ontario CA International Airport. 2.8 miles. \$45-60MM, 4 years vs light rail option would have been \$1-1.5 billion and 10 years. As a longtime skier and visitor of the LCC, the time is now for serious change. When looking at the proposed changes the only one that actually will move us into the future is the gondola. For many years I have suggested putting a train up the canyon similar to resorts in the Alps. If that option is off the table the gondola would provide a similar low impact trip to and from base to mtns. Please don't just add another lane or more busses. These ideas are old and won't do much to reduce the traffic pressure on LCC. Thank you.	Kelsey Hoult	Website
152	The Gondola option is the best. My kids would totally love riding the gondola's up with winter time or the summer time. I'm not going to lie, I think it would be fun too. My wife would love riding the gondola up in the fall. The leaves would be beautiful against the granite rocks. Based on the fact sheet it looks like it is the most cost effective option too. I think the gondola would be a great marketing tool for the state, people traveling would love to ride up a canyon length gondola. It would bring a cool nod to European resorts. I road is great, but nobody plans a day trip to a canyon to see a road. I think the gondola by itself would have some drawing power.	Mike Hansen	Email
153	One thing not considered in the arguments for a Gondola is that not only will it be much faster build than road widening but also serve as a Summer attraction for tourists. The impact as a tourist attraction will be huge for Salt Lake City. This will be one of the most spectacular gondola rides in the US.	Anton Huber	Website
154	Toni I think the gondola option makes the most sense for the long term. Any option that involves accommodating more road traffic seems likely to result in traffic congestion and increased travel times as the population increases.	David Motoki	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
155	<p>The current proposed gondola option seems to imply that there would not be a mobility hub option at 9400S and Highland Drive (the option for a mobility hub at 9400S and Highland Drive is specifically stated in both bus options).</p> <p>In my opinion, it is critical to have several mobility hubs for the gondola option to succeed.</p> <p>If people living south of the gravel pit want to use the gondola, the proposed option implies they will need to travel north past the mouth of LCC, only to then take a bus back down south to the gondola base at the mouth of LCC. In addition to increasing traffic on Wasatch Boulevard and I-215, this will greatly inflate the total travel times to the resorts. Having only one mobility hub also would create major traffic issues at peak times, particularly weekend mornings and evenings.</p> <p>I foresee this being a large obstacle for motivating anyone south of LCC to use the gondola, as driving around looking for a parking spot at several Park and Rides in the southern portion of the valley is not a pleasant experience.</p> <p>I believe that having several mobility hubs, particular having both of the proposed options (and more in the future) is a critical factor for both locals and tourists having a positive experience using the gondola, and choosing to continue to use gondola in the future.</p>	Jared Imm	Website
156	<p>Hi,</p> <p>I am very glad that the government is trying to address this issue as it is very big problem during the winter months. I believe that the enhances bus system with the widened roadway is the best option because it gets more people off the road (and therefore in the bus), creates more room to prevent traffic jams, and does not have too big of an effect on the forest around the road. I believe the enhanced bus without the road widening will not be as effective because it will not address the traffic issue as much. I believe the gondola will create a parking issue at the bottom of the canyon and damage the environment both physically and aesthetically. The extra bus lane will address the traffic issues and provide an incentive to ride the buses. Thanks!</p>	Ethan Romer	Email
157	<p>I believe that the gondola would add the best improvement because it would eliminate cars from the road, and could serve as a tourism site for in the summer as well.</p>	Josh Milford	Website
158	<p>Put the Gondola in. This would allow for cost savings in road services, avalanche issues and can also be funded as a visitor attraction service. You should create a main gondola hub at the gravel quarry near BCC (3 x 5 story car lots) and allow skiers to choose to use the big or little gondola. :) gondolas will be the best way to bring guests and skiers up with less environment impact.</p>	Nicholas Vormle	Website
159	<p>Hello there-</p> <p>Given the incredible growth in traffic in LCC / BCC (year-round, but) at its peak during winter, I wholly support the GONDOLA plan, as it is the better of the two options on the table to resolve transportation plans right now in LCC, with the caveat that I have always maintained rail might be the best long term investment, despite its higher upfront costs. As someone who has traveled this way in Europe to ski in Germany, Austria & Switzerland, it just makes more sense to me to invest in a combo of rail / aerial service. Long term, I would like to see the Gondola operate year round as well.</p> <p>I have long been in favor of a ONE WASATCH connection plan, and this is a good first step in that process, as this will not solely solve the issues BCC will still likely have as well, though I understand LCC has more immediate consideration given avalanche closures.</p> <p>I have owned a home at the intersection of 2000 E & 9400 S for 16 years, which makes it walkable to the the 94th S park & ride to grab a bus to the gondola base. While not terribly convenient, it seems like a workable solution, and I would not want to take up a limited parking spot at the base of LCC.</p> <p>There are going to be many residents who live south of 8600 for whom it does not make sense to park at the BCC mobility hub so my concern is that we may not have fully addressed parking for those coming from Sandy, Draper, S. Jordan, Lehi, etc.</p> <p>FWIW, given the large empty parking lots at the now vacated SHOPKO & Fresh Market retail stores in the 2000 E & 9400 S intersection, there is definitely room for overflow from the PNR in the SE corner.</p> <p>One upside, since it is unlikely these large spaces will be replaced by major retail, I could also envision this neighborhood area as growing into a mixed commercial / residential space, acting as a 'base village' if you will, for LCC; becoming a destination in its own right, with retail, restaurants, hotels, (and many homes in this area serve as short term skier rentals) and Sandy City might want to be more involved with the growth potential for this area.</p> <p>Long term, I also have always supported a TRAX rail extension from State St & 9000 S up state road 209 to the base of LCC, which could also serve as a direct link for visitors coming from hotels served by Trax, both downtown and in the 9000 - 106th stretch of the south valley.</p> <p>thank you for the opportunity to submit public input.</p>	Elizabeth Ostrander	Website
160	<p>I feel it must be pointed out that each of these alternatives completely disregards the needs of non alpine skiers. As such they all are a handout to the ski industry, which is instrumental in causing the problem in the first place. Banning non alpine skier parking at Alta completely disregards the needs of back country users. To force these users to take an expensive tram, or even a bus at today's prices, is unfair. Since the traffic problem is largely caused by users of the resorts, all such users should have to take the public transportation and the roadside parking reserved for back country users. Parking at the White Pine trailhead is not addressed. If none of the alternatives involve a stop at this popular trailhead, users will be forced to drive.</p> <p>Of the three alternatives I think the extra bus lane for express buses makes the most sense and would no doubt be cost the user less than taking a tram. Providing that lane as a bike route in summer gives a positive return the year round.</p> <p>Any consideration of adding a fee booth should allow for year round passes like Millcreek and use of the Senior Citizens park pass like American Fork.</p> <p>Thank you for the opportunity to comment on the Draft Alternatives Summary for transportation in Little Cottonwood Canyon. I hope that my comments will help in the decision-making process.</p> <p>The alternatives presented are all good options for the canyon and the needs that the canyon faces. They all have their pros and cons. However, the fundamental issue with transportation in the canyons is the use of personal vehicles to move around the canyon. The fundamental question that needs to be addressed is the following: how do we reduce/eliminate the use of personal vehicles to move around the canyon? I will address that issue first.</p> <p>There are several ideas that I have to help address that issue. By themselves, with no changes such as those proposed in the Summary, they would help with the transportation issues, but they will not resolve the issue by themselves. However, in order for any of the options discussed in the Summary to work, these ideas must be incorporated into the plan. These ideas are:</p> <ul style="list-style-type: none"> • No single occupancy vehicles allowed up the canyon at any time. • Tolling for vehicles must be required. It must be of a sufficient amount to incentivize people to take an alternate transportation method in place of their personal vehicle. • Graduated tolling to encourage multiple occupancy in vehicles. The levels of graduation must be sufficient to encourage multiple occupancy. • Parking along the canyon road must be disallowed. • Parking fees at the resorts must be implemented. This must be of a sufficient amount to incentivize people to take an alternate transportation method in place of their personal vehicle. <p>I believe that all of these ideas would help to encourage people to get out of their personal vehicle and take an alternate transportation method into the canyon. The tolling and parking fees ideas must be implemented in a different manner than what Solitude Resort did during the 2019-2020 ski season. They had the right idea, but the amounts they charged, both for day parking and for their season parking pass, were not high enough to incentivize people to take the ski bus. That must change in order for tolling and parking fees to work.</p> <p>Moving on to the three options presented, I will comment on each of them individually and then state my preference in rank order.</p>	Richard Steiner	Website
161	<p>First, the option of Enhanced Bus Service. The ski bus has always been a good option to use when heading up the canyon to ski. In order for an Enhanced option to work better than it currently does, I feel that the following ideas need to be in place:</p> <ul style="list-style-type: none"> • The bus must have priority over personal vehicles at all times. One idea is to have bus only traffic in the canyon until 10am. If you want first tracks on a powder day, take the bus. • There must be mobility hubs and parking in place. If the bus is not convenient and easy to take, then people will not take it. • There must be tolling for personal vehicles and parking fees in place. In reality, all of the items I mentioned in my first section above must be in place. <p>Second, the Enhanced Bus Service with additional lanes option. Again the ski bus has always been a good option to use when heading up the canyon to ski. In order for this option to work better than the current bus system, I feel that the following ideas need to be in place:</p> <ul style="list-style-type: none"> • The bus must have priority over personal vehicles at all times. One idea is to have bus only traffic in the canyon until 10am. If you want first tracks on a powder day, take the bus. • There must be mobility hubs and parking in place. If the bus is not convenient and easy to take, then people will not take it. • There must be tolling for personal vehicles and parking fees in place. In reality, all of the items I mentioned in my first section above must be in place. • No cars allowed in the bus lane. Ever. <p>Third, the Gondola option. In order for this option to work better than the current system, I feel that the following ideas need to be in place:</p> <ul style="list-style-type: none"> • All of the items I mentioned in my first section above must be in place. • There must be mobility hubs and parking in place. There must be convenient, reliable bus transportation to the gondola station at the mouth of the canyon. If these items are not in place, people will not use it. • The gondola must be affordable and reliable. If it is not, then people will not use it. <p>In my view, options #2 and # 3 are the only options that have a chance of working. The first option of Enhanced Bus Service is very little different to what we have in place now. There are improvements to the bus service in this option, but they are not enough to make a large difference in the transportation issues facing the canyon. The second option of Enhanced Bus Service with additional lanes is an intriguing option. I do like the idea of a bus-only lane that can only have buses in it. As long as the buses have priority to enter the canyon, both at the beginning of the day and throughout the day, as well as the items that I mentioned above, this idea would work. The third option is very intriguing. I feel that, if it works as outlined, and there is sufficient parking and transportation to and from the mobility hubs, this option would work well.</p> <p>In my view, I would rank these options, in order from most preferred to least preferred, in the following order:</p> <ul style="list-style-type: none"> • The Gondola • Enhanced Bus Service with additional lanes • Enhanced Bus Service <p>That being said, the goal should be to reduce/eliminate the number of personal vehicles in the canyon. I believe that the alternatives proposed can work, but if there are not strong incentives in place to encourage people to use these alternative methods, then I don't believe that any of them will succeed to the level that we all want. It is difficult to change the mindset of people, but that is the fundamental task that we are faced with as it relates to transportation in the canyons.</p> <p>Thank you again for the opportunity to comment on these alternatives. I appreciate all of the work that has gone into coming up with them. I look forward to seeing this process as it moves forward and I hope that we can come up with a system that works for people visiting the canyons and that will help to preserve the canyons that we all love.</p>	Matthew Pruss	Website
162	<p>I believe the Gondola Option is best for the local community and the visitors of the state. The reduction of vehicles (personal and bus) travelling up the road is a must to cut down on air pollution and road fatigue. With the gondola option, the ability to create a continuous stream of people going up and down canyon is a better option than waiting in line for hours at the canyon entrance until avalanche debris is removed. Then the red snake at the end of the day would be no longer an issue with the gondola option. This is also in conjunction with a tolling plan at the mouth (which should happen sooner than later for immediate action). Bus option and road widening creates more of an issue with people not wanting to be affected by buses and their issues. Car slides into the bus lane and the whole system shuts down. Thank you for considering the gondola option as European culture has proven this is viable option.</p>	Robert Langlands	Website

163	<p>Hi,</p> <p>I don't know if the 105 proposals that have been winnowed down to three included this or not. This may have not been considered previously due to no real track record for The Boring Company. Since boring the Las Vegas tunnels is complete (and completed faster than scheduled) and the in-construction stations are on schedule for opening before the 2021 Consumer Electronics Show, this may now be considered totally viable.</p> <p>Get a quote from The Boring Company for tunnels from below Little Cottonwood Canyon with stations at Snowbird and Alta. Boring Company EVs with regenerative braking are very efficient for round trips up and down a grade. It's less than 9 miles. Could easily be much less expensive and immune to avalanches and "dumps". Also much faster to implement and a much faster trip as the tunnels can be straight with vehicle speeds up to 127 mph. It could also continue on to Brighton, Solitude, Park City, and Deer Valley. With spurs to each terminal so through vehicles wouldn't even slow down. 17.5 miles from Sandy, UT > Snowbird > Alta > Solitude/Brighton > Park City > Deer Valley. Undoubtedly could be done in phases. 17.5 miles at even 100 mph is 10.5 minutes! A half hour from SLC International Airport to the tunnel entrance. Imagine less than an hour from flight arrival to all those ski areas, and with no weather related driving hassles! The 12-passenger EVs (being developed for the below project) could even have lift ticket purchasing kiosks on-board. If the system is eventually expanded to the airport, 37 miles or so (see map below) from SLC International to Park City/Deer Valley could be a 20 minute trip in either direction.</p> <p>The Boring Company is proposing to build twin tunnels linking Rancho Cucamongo, CA to the Ontario CA International Airport. 2.8 miles, \$45-60MM, 4 years vs light rail option would have been \$1-1.5 billion and 10 years. https://www.mercurynews.com/2020/06/04/elon-musk-backed-tunnel-to-ontario-airport-gets-go-ahead/</p> <p>The Boring Company's proposal to the City of Chicago for express service between the financial center in Chicago to O'Hare (18.5 miles) was going to be totally funded by The Boring Company (no cost to Chicago or taxpayers)! The Boring Company would receive the income from ticket sales. https://www.boringcompany.com/chicago/</p> <p>Another feature is just adding more AEVs (Autonomous Electric Vehicles) to the fleet increases capacity. All charging could be done at the base (in or near Sandy, UT) where electric infrastructure is relatively easy to expand. Using Tesla Powerpacks or Megapacks could allow that charging to all be baseload on the grid, no peaking. This grid-scale storage infrastructure could also earn income to the owner for providing grid services. Google ""Horsdale Power Reserve"" for more info. Renewable energy (wind and solar) could also be utilized to totally power this system. Southwest of SLC there is a LOT of solar energy potential.</p> <p>Easier parking and driving, faster, way cooler, and cheaper? As a skier (I'm a Mad River Glen shareholder) I wouldn't even think of driving up the canyon.</p> <p>If the capacity of the tunnels becomes insufficient in the future, additional parallel tunnels could be bored (and designed into the station layouts at the beginning). This is a Boring Company talking point.</p> <p>Resort employees and season-ticket holders could get special deals. Fast, weather independent, reliable, inexpensive transportation from inexpensive cost-of-living areas to the resorts much more attractive for both employees and "regulars". It would also greatly alleviate road-side parking issues and much fewer vehicles would drive up. AEVs could have interfaces to resorts' ticket reservation systems to support ticket sale limits. Alternate resort choosing would be greatly expedited. Oh, Alta's sold out but Deer Valley isn't? Change destination on the fly. Good sales point for Utah resorts (Ski Utah campaign?).</p> <p>This could also be a big tourist attraction for SLC and all these resorts. No avalanche delays, no big storm delays (even without avalanches). Tourists wouldn't have to worry about storms making it so they can't get to their resort or make them miss their flights home. Expandable, green,"</p> <p>"saves lots of petroleum usage, less air pollution, invisible except for terminals and even those can be mainly underground. A single expandable system to cover all those ski areas (Snowbird, Alta, Park City, Solitude, Canyons, Deer Valley, Brighton) and could also be expanded for SLC rapid transit, including to SLC International Airport. Could also be tied into TRAX and FrontRunner stations. Could also be expanded to include Ogden and Provo resorts in the future.</p> <p>Best regards,</p> <p>David Stein White Plains Ski Club Lodge Chairman Mad River Glen shareholder Powder hound</p>	David Stein	Email
164	<p>Gondola is the way to go!!!</p>	Jordan Mildner	Website
165	<p>I am concerned with the misleading information about each of these that was published in the summary plan. I am opposed to the idea of a Gondola due to the poor decision to place the parking garage miles away from the base station - and I am hopeful this write-up will help explain why.</p> <p>The summary plan can be found here. It misleads the reader by showing the estimated travel times as being fairly comparable across all 3 options. 46 minutes for Enhanced Bus, 37 minutes for Enhanced Bus+, and 46 minutes for the Gondola.</p> <p>https://littlecottonwoodeis.udot.utah.gov/wp-content/uploads/2020/05/9234_42_LCC_EIS_Alternatives_Project_Factsheet_FIN_WEB.pdf</p> <p>However, UDOT also published detailed documents regarding each option. I'll summarize each of them below:</p> <p>Enhanced Bus.</p> <p>https://littlecottonwoodeis.udot.utah.gov/wp-content/uploads/2020/05/10265_3_LCC_Public_Factsheets_Enhanced_Bus_FIN_WEB.pdf</p> <p>This option puts a large parking structure at the bottom of big cottonwood canyon, and another on highland drive and 9400 South. It widens Wasatch Blvd between Big and Little Cottonwood Canyons, and increases bus availability to 24 buses per hour. Including parking and waiting for a bus, UDOT estimates that this option would take 54 minutes from the Transit Hub to Alta, roughly 20 minutes longer than it takes by car.</p> <p>Enhanced Bus+</p> <p>https://littlecottonwoodeis.udot.utah.gov/wp-content/uploads/2020/05/10265_3_LCC_Public_Factsheets_Enhanced_Bus_PPSL_FIN_WEB.pdf</p> <p>This option puts a large parking structure at the bottom of big cottonwood canyon, and another on highland drive and 9400 South. It widens Wasatch Blvd between Big and Little Cottonwood Canyons, and increases bus availability to 24 buses per hour. It also adds a dedicated uphill bus lane the entire length of Little Cottonwood Canyon, which can be used as a bike lane in the summer. Including parking and waiting for a bus, UDOT estimates that this option would take 36 minutes from the Transit Hub to Alta, roughly 2 minutes longer than it takes by car.</p> <p>Gondola Option:</p> <p>https://littlecottonwoodeis.udot.utah.gov/wp-content/uploads/2020/05/10265_3_LCC_Public_Factsheets_Gondola_FIN_WEB.pdf</p> <p>This option puts a large parking structure at the bottom of big cottonwood canyon, and another on highland drive and 9400 South. It widens Wasatch Blvd between Big and Little Cottonwood Canyons. Skiers are expected to wait in line for a bus, ride that bus to the bottom of Little Cottonwood Canyon, and then wait in line again to get on a Gondola that will take them to Snowbird or Alta.</p> <p>Including parking and waiting for a bus, then waiting in line again for the Gondola, UDOT estimates that this option would take 63 minutes from the Transit Hub to Alta, roughly 30 minutes longer than it takes by car.</p> <p>So a real comparison of all of the options looks more like this:</p> <p>Car: 30-34 minutes Enhanced Bus: 54 minutes Enhanced Bus+: 36 minutes Gondola: 63 minutes</p> <p>To put this in perspective for everyone:</p> <p>If you are the type that can only get away for a couple of hours to ski, whether that is due to family obligations, work obligation, school obligations, etc - Little Cottonwood Canyon has always served you well.</p> <p>The Gondola option could ruin that for you by adding 1 hour to your round trip commute.</p> <p>I am not opposed to a Gondola per se - but the oversight that is causing the parking for the Gondola to be located several miles away from the base station will add roughly 1 hour to your round trip commute.</p> <p>If my commute is lengthened by 1 hour - I will be forced to stop skiing in Little Cottonwood Canyon.</p> <p>I like the Gondola option best, provided it can support the volume / demand required to reduce the vehicle traffic.</p>	Josh Christensen	Website
166	<p>Please do not build a gondola. The gondola does nothing to help families going sledding or snowshoes. The gondola only helps resort skiers and ignores everyone else.</p>	Tyler Robinson	Website
167	<p>The gondola also has the largest impact on the canyon. Construction roads, maintenance vehicles, and land for the towers would destroy sensitive wild places. Thousands of Utahns and people from all over the country who enjoy hiking would have their experiences worsened. Sensitive ecosystems would be even more disrupted.</p> <p>The gondola also does nothing to solve the parking problem. Thousands of parking spaces would need to be built.</p> <p>Increasing buses on the other hand would serve everyone. Buses could be easily built into the transit network in the valley and could stop at trailheads to serve families sledding, backcountry skiers, and people on snowshoes.</p>	Ben LaRiviere	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
168	In favor of the gondola solution. Lowest operating cost. Best for air quality. Build the gondola!!! Extra lanes and snow sheds doesn't eliminate accidents due to icy and snowy roads. One accident shuts down the whole road.	Tristan Schroeder	Website
169	Would love to see a gondola in little cottonwood.	Richard Wood	Email
170	Would love to help out with the project More shuttle buses and parking should be available.	Jenna Pace	Website
171	As a SLC resident and frequent user of LCC's recreation resources, I strongly urge against the gondola alternative. The requisite infrastructure would significantly impact and lessen many of the characteristics of LCC that make the canyon cherished and special. With minimal road widening, increased busing, and carpooling incentives, we can meaningfully fix the issue of congestion in our canyons without permanent, major infrastructure development.	Austin Beck-Doss	Website
172	Interesting solutions to a massive problem we are experiencing. Long term, I believe the widening and Gondola options provide for greater capacity for years to come. The Gondola option seems to be the best solution, with the lower cost, less environmental impact, and aerial traffic out of avalanche zones. Are options being considered to tie-in or do something similar for BCC/SR-1907	Blake Remmick	Website
173	I favor widening the road to enable a dedicated lane for bus service during the winter and safe cycling during other seasons. Running buses allows more flexibility to address changes in customer demand. Bus service to trailheads during the summer would also reduce cars parking in the uphill bike lanes.	Diane Rosenberg	Website
174	What is "Snow sheds" on the summary pdf? I like the middle option - enhanced buss with roadway widening. In the long run it seems like the best option.	Kassandra Rane	Website
175	Regarding transit parking, please let me know a good time to connect - Automated vehicle storage systems (APCpark.com) improves sustainability, congestion, construction time and site efficiency 150 sqft/space for higher use.	Drew McKendry	Website
176	I am a resident of Sandy, Utah, living near the mouth of Little Cottonwood Canyon. I frequently travel on Wasatch Boulevard and SR 210. UDOT's final decision will have tremendous impact on me and my family. I strongly support UDOT's Alternative 1, Enhanced Bus Service. I am confident that enhanced bus service as proposed will alleviate many of the problems in Little Cottonwood Canyon. I also support the use of tolling for vehicles entering the canyon. The best form of tolling would be a traditional fee booth, similar to what is used in a National Park. A fee booth would reduce over crowding within the canyons, and proceeds from the fee booth should be used to enhance the recreational experience in the Canyons. Although the U.S. Forest Service owns most of the land in Little Cottonwood Canyon, they should have no part in the collection of the fee, due to the legal requirements placed on the Forest Service under the Federal Lands Recreation Enhancement Act. This act will likely prevent the USFS from administering a fee effectively. I propose that the fee booth be administered by the State of Utah through the Utah Division of State Park (I realize that Utah State Parks does not own any land in LCC or currently have any presence in LCC). But Utah State Parks is the only state agency with the necessary expertise in recreation management (expertise that UDOT does not possess). I do not believe the Salt Lake County, Salt lake City, the town of Alta, or any other local governmental entity should manage the fee booth, since none of the those entities own SR 210. Of course, the State agency managing the fee booth could partner with the USFS and a local government entity for the proper distribution of fees collected in the fee booth towards programs designed to protect and enhance LCC. In order to speed up bus commuting times, I suggest that passing lanes in the Canyon be eliminated, and that these passing lanes instead be dedicated exclusively to buses. But I do not support the extension of a 3rd land anywhere that a third lane does not already exist. The Canyon is just too narrow. In addition to signal priority for buses on Wasatch Boulevard, UDOT should also consider signal priority for buses on SR 209/9400 S from the Highland Drive Mobility Hub. As the population in Utah County and the south end of Salt Lake County grows, a growing number of skiers will park at the Highland Drive Mobility Hub, thus signal priority for buses on SR 209/9400s will be important. I support the use of a fee booth year round in LCC. However, if that is not workable in the winter do to the high volume of traffic, an automatic system that reads license plates could be used. But a fee booth should be implemented throughout the off season, when the canyon is almost just as crowded.	Jake Garfield	Website
177	The bus system should not run in the summer. Canyon visitation is very dispersed during the off season, to the point that a bus simply will not be effective. The cost of running a bus in the summer will put too much financial pressure on the whole ski bus system, and will not have significant financial returns. The bus should be fairly low cost, but should not be free. Free buses encourage misuse of the canyons. A fee booth would help protect canyon resources in many ways , partly by discouraging graffiti artists and others who willfully damage canyon resources. Use of a fee booth will also give employees staffing the fee booth the opportunity to educate canyon users about proper behavior in the canyons, such as the ban on dogs within the Salt Lake City watershed. When a fee is implemented, there must be a season pass options available, similar to what is available in Millcreek Canyon through Salt Lake County. I do not support Alternative 2, ""Enhanced Bus Service in Peak Season Shoulder Lanes."" simply because LCC is naturally too narrow to construct additional should lanes. Such construction would require significant cuts into the canyon walls. These cuts would likely lead to additional runoff and erosion that would pollute Little Cottonwood Creek. It would also increase the risk of mud slides. Existing passing lanes could be closed to vehicles and dedicated to buses (as well as bikes and pedestrians). But additional passing lanes/shoulder lanes should not be built where they do not currently exist. I do not support Alternative 3, the Gondola. The visual/environmental impact of a Gondola would be devastating. Thousands of trees would likely need to be cut down to install the gondola's cables, leaving an enormous gash through the forest on the canyon floor. This gash would likely remain indefinitely so that maintenance on the Gondola could occur in the future. Having a gondola run the length of the canyon would make the entire canyon feel developed, like one giant ski resort, and destroy the natural, wilderness like settings of the Tanners Flat Campground, the Temple Quarry Trail, the White Pine Trail, Little Cottonwood Trail, and other quiet, non-motorized recreation sites within LCC. A gondola will also be excessively expensive and place an undue burden on tax payers. If UDOT is going to do any sort of widening, it should consider modest widening to enhance the safety of cycling up the canyon. SR 210 should be widened sufficiently for the construction of a protected, two-direction, paved multi-use path running parallel to the road. This widening would be unnecessary where passing lanes currently exist, as the passing lanes should be eliminated and made part of this multi-use path. Thank you.	Mark Allen	Website
178	The Cottonwood Canyons are treasures for the public, but the private enterprises, ie. ski resorts should solve transportation issues to their private businesses. The resorts might consider buying parking areas in the valley and having their own shuttle service. The worst idea is the Gondola with public funding for several reasons. It should not be UDOT's role to put more people into an already overburdened canyon. Second, tax dollars should not be used to take more patrons to private business entity. Third, the resorts have permits for so many skiers, accidents will continue to rise by overcrowding. Its time to promote other areas in the state for recreation, we have a public recreation distribution problem. There are many great mountain ranges to climb, hike and explore but the Central Wasatch is overburdened. Many locals can no longer afford to ski, do not make it a cost factor for those who want to drive up the canyon, park their vehicle and hike in public lands. The canyons are becoming only affordable to the affluent, this is very wrong. Public dollars for transportation could help disburse recreation away from the Central Wasatch.	Holden Wolfenbarger	Website
179	I am in favor of the proposal to expand bus service and create a bus priority lane. The biggest congestion periods in the canyon are during powder days. If the bus can bypass traffic (and get to the resort quicker) that will be a HUGE incentive for people to chose the bus and thus reduce congestion. I am writing today as a resident of the Town of Alta in regards to the LCC EIS. I would like to voice my strong support for the Gondola option. This option is the most effective way to address not only the traffic congestion in the canyon and surrounding valley but also the most effective way to address the avalanche hazard posed by Highway 210. I would like to take a moment to comment further on the flaws of the bus alternatives. It is my experience that buses in this canyon DO NOT ever reduce congestion. They are not the proper tool for a road of this grade and with these driving conditions due to snow. Buses are consistently unable to handle the slick road and end up stuck or off the road in the ditch. This will not be solved with a third lane. During heavy snow everyone is observed to be using a single track. A bus slide off forces people into an even smaller space, third lane or not. Further, due to the avalanche hazard the best way to increase safety is to get people off of the road. Buses only increase the size of the target for the slide. Instead of hitting one car with four people the avalanche now hits a bus with forty people. This has occurred in the canyon many times. Snow sheds are an excellent solution but there are many avalanche paths in the canyon. Shedding the Whitepine area doesn't solve the whole problem.	David Richards	Website
180	Remember those of us that make upper Little Cottonwood our home. You will always need a road for residents and deliveries, but a gondola is by far the best solution presented at this time to address the visitor traffic. Enhanced bus service without road widening is clearly the best choice. Perhaps some additional passing lanes can be added wherever there would be minimal damage to the canyon. Widening the road is too destructive to the canyon, and the gondola idea is just silly. Thanks, Bert Pedersen	Bert Pedersen	Website
181	None of these options go far enough. Buses should be made mandatory for all resort attendees. Build large, multi-level park and rides at the mouth of BCC, LCC, and Wasatch Blvd. The for-profit resorts are generating the bulk of the users driving up the canyon, creating congestion, and causing parking issues. Have the resorts contribute to the cost of resolving the issues they created. Have them create the infrastructure of lockers for patrons to store their travel bags or rent for the season to store skis and boots year round. Have the resorts subsidize the cost of the buses for their season pass holders to deliver the patrons to their businesses that negatively impact the other users and residents of the canyons. Then traffic will be limited to profession drivers with CDLS, in appropriately equipped buses with chains. And a limited amount number of drivers accessing the backcountry terrain. That would be a real solution that would have lasting impact.	Greg Steele	Website
182	It is time to stop spending money and time on studies; please consider implementing a more frequent bus plan NOW! Free bus service, frequent bus service, toll road to relieve congestion; build snow sheds for safety and efficiency of frequent bus service.	Peg Kramer	Website
183	Why choose just one option? How about do all three? However if only one option will be chosen, I say go with the widening of the road so there can be a dedicated bus lane. There's no better way to get people out of their cars and onto a bus if they're stuck in traffic on a powder day and get passed by a bus full of skiers in their own dedicated fast lane. Additionally, there must be much more parking available to bus riders. Every time I tried riding the bus, the park and ride lots were full so I ended up driving anyway.	Jared Hargrave	Website

184	I would prefer to see the Gondola built. I think that the gondola offers a couple of advantages that make it a better option. 1. It adds a second way to get up/down the canyon besides the road. If an avalanche comes down and closes the road, the gondola can continue to run to get people out of the canyon. 2. pollution. The gondola would probably be powered with electricity and would emit less pollution than busses going up and down the canyon. 3. Operating cost. I like that it will cost less to run over time than the Bus options.	Eric Goebel	Website
185	Gondola please!	Blake Tshako	Website
186	I live on Bengal Blvd, just west of Wasatch, and see the effect of heavy traffic on both of these busy roads. Please, please do not turn Wasatch into a new Bangeter. Please do not build a highway through my neighborhood. After reading through all of the proposals, thinking them all over, and discussing with my neighbors, the proposal that seems to have the best appeal is the gondola option. It would actually "improve" our canyon, rather than just mitigate the worst effects of bad traffic. A gondola would be a huge upgrade and source of community pride. It is by far the most forward-thinking, future-proof plan. The absolute worst option, in my opinion, is to increase bus service. This does nothing to solve the root of the problem, and just kicks the ball farther along the road for us to figure out again next year. It is short-sighted to say the least.	Asha Flick	Website
187	I love Cottonwood Heights and plan on staying here for many, many years. My husband and I are raising our kids here, running our business here, and contributing to our community. Please don't force us out by putting a highway through our beautiful neighborhood! I firmly believe that the gondola is the only logical answer. When analyzing the financial maintenance overview on a yearly basis in juxtaposition to the environmental impact the gondola is the one that minimizes overall throughput. On a safety note the gondola is the only one that would be viable in an avalanche.	Jeffrey Woolery	Website
188	A gondola would be amazing!	David Shaw	Website
189	A quiet gondola with just a few posts is a lot less obtrusive than thousands of cars :)	Bryce Mullin	Website
190	Gondola alleviates all concerns on a heavy snow day. Most effective for carbon footprint. Sets up success for future Olympic bid in connecting park city and salt - if future connecting peak gondolas is an option. Reduces churn/issues with tourists not knowing what bus schedules. Brings a unique marketing position for Utah in accessibility over Colorado and all other national resorts.	Zach Decker	Website
191	Please consider the high use of roadside parking along the canyon that hikers and climbers rely on to get safely to the trailheads.	Samantha Marks	Website
192	Gondola! With mountain bike use permitted.	dave jensen	Website
193	Hello, As a frequent winter and occasional summer user, I would much rather see busses and a bus lane be used than a Gondola. While the idea of a Gondola seems nice I am worried about the environmental impact of installing such a large amount of posts and cables throughout a beautiful canyon. Busses that run on clean fuel would make far less changes to a wild, beautiful place.	Luke Richins	Website
194	Thank you for considering the public's view when arriving at your conclusions. I view the bus service with an expanded road to be the best option to allow people to commute up the canyon or chose the public option. Either choice will be faster and less costly than a gondola. I also love the idea of adding some snow sheds in the larger avalanche areas but would encourage you to think about snow sheds that had open sides to the canyon so as to not impair the canyon view as much as practical.	Robert Wheat	Website
195	Increased bussing with no widening of the road would be, at best, an impermanent bandaaid fix. It would still only take 1 accident to almost completely shut down traffic. Either widen the road with increased bussing, or build the gondolas, or both. There is still the issue of where to park for the busses or gondolas at the bottom of the canyon. Are there any plans for increased parking? Thank you for taking the time to listen to the community on this issue.	Lucien rouse	Website
196	A gondola would be nice.	Tom McDermott	Website
197	The highway needs to be wider. It would be much safer for everyone who recreates there. The only question is how long would the entire canyon be closed? I'm sure it would take at least a year for you to dynamite and move rock. I would definitely be willing to wait a year for a much better experience in the future.	Asher Margolies	Website
198	I would be in favor of a gondola to help with transportation in Little Cottonwood. Not only does a gondola provide a scenic and more emotional connection to skiing/hiking experience but it could still be used when the road conditions are not optimal for travel up and down the canyon. It would reduce fuel emissions as well.	Kate Decker	Website
199	UDOT only seems to care about the ski industry not the people who actually live in Cottonwood Heights. Our needs have been thrown in the garbage. 1st the canyons belong to the people of Utah not to the ski resorts. We were told years ago the canyons were at their capacity but the ski resorts for the buck keep expanding. There should be a limit to how many are allowed in the canyons, like at a beach. Why would we want a gondola flying over our heads in a nature area? The canyons are NOT just for the skiers, they are for all to enjoy. You want a gondola not just flying up the canyons at a very high number at times but also down Wasatch Blvd. stealing the view for the rest of us? Having people stare down into our private property? There are requirements in Cottonwood Heights, you cannot block someones view and destroy the natural feel. You obviously could care less. How do you intend to expand the road? This is a sensitive area, with earthquakes, you are putting so many people in jeopardizing and risking lives, you will have to cut into the hills destabilizing the area. Its also required in Cottonwood Heights for every tree you destroy you must replace two, where are the trees going to go? Down the center of the road making it necessary to widen the road even more? Making it more unstable and dangerous. What about the speed limit? The speed limit should be lowered to 35 miles per hour the entire length of Wasatch Blvd. This is a shared us area with access to neighborhoods the entire way. Right now Wasatch Blvd. goes from 40 - 50, why would you EVER take it to 50? below 215 you drop it to 35 & 40 south of 9400 south you drop it to 35. is it we don't have the money that the other areas do? We don't matter like they do? You never answer our questions? You are destroying the beauty of Saly Lake for a few months and greedy people.	Audrey Pines	Website
200	A gondola sounds cool until you realize that each one will only be half full because people don't want to sit in a small enclosed space with strangers for an hour. The line at the bottom would be very long because of that.	Asher Margolies	Website
201	I think the gondola is the best option. In many other places in the city adding lanes does not help congestion. The main issue would be traffic to the gondola station. If the gondola could come into the city a little more, like maybe all the way to Wasatch Blvd, it may help (?). Fewer people are going to want to drive to a bus station, ride bus, then transfer to a gondola. A gondola could also maybe connect to big cottonwood in the future. A gondola could also be less polluting if it really on electricity.	Thomas DeWitt	Website
202	I am I favor of enhanced bus services up Little Cottonwood Canyon. BUSES ONLY! I DO NOT WANT THE ROAD WIDENED.	Kelli Anderson	Website
203	I want enhanced bus service (more buses only) in Little Cottonwood. I do NOT want enhanced bus service in a designated shoulder lane. I do NOT want the road widened. I am in favor of these options. I believe the gondola option to be the better of the two as it reduces the need for avalanche control work. However, I think that in order to make either of these options work, car traffic on LCC road must be greatly restricted. Otherwise people will just drive and skip the transportation options. A toll is not sufficient as skiers tend to be relatively affluent and will easily pay a toll as a price of convenience, particularly those on vacation who will simply consider it a "vacation cost." Cars on the road through the entire winter should be limited to: emergency vehicles, residents, essential employees (ski patrolers, EMS, etc.), hotel guests/ shuttles, or others with a permit of some type. This also reduces the need for parking at the resorts. This newly found space can be used for transit centers, green space, or other environmentally friendly options that contribute to the quality of the canyons' watershed. This is the type of idea that would receive great pushback initially, but will reap the greatest rewards by contributing to the quality of the ski experience while lessening the environmental impact. These canyons need to be preserved as they are being degraded by vehicle emissions, noise, traffic, and construction. Thank you for your time.	Kelli Griffiths	Website
204	I am in favor of these options. I believe the gondola option to be the better of the two as it reduces the need for avalanche control work. 205	Why is there not an increase in the quantity of buses in the Cottonwoods if you chose not to expand the roadway? I'm not sure how that is going to encourage people to use them, or reduce traffic. Are you going to build a bigger park and ride? Also, was a train that goes between both canyons? That would have a larger capacity for skiers, be faster, and less likely to be effected by extreme weather	Alex Radandt	Website
206	As a daily handicapped skier, driving & utilization of handicap parking spaces is critical. I have way too much gear & hardware to cart up on any of the alternatives. Please assure expansion & retention of handicap parking at LCC resorts!	Joseph Kleitman	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
	<p>Hi,</p> <p>I don't know if the 105 proposals for transportation infrastructure improvements to Little Cottonwood Canyon above Salt Lake City that have been winnowed down to three included this or not. This may have not been considered previously due to no real track record for The Boring Company. Since the tunnel boring phase of the Las Vegas tunnels was completed under schedule and the in-construction stations are on schedule for opening before the 2021 Consumer Electronics Show, this may now be considered totally viable. The Encore at Wynn may also tie into the LVCVA (Boring Company constructed) system. Resorts World Las Vegas, the US\$4.3 billion resort scheduled to open in summer 2021, submitted plans for a proposed passenger station and tunnel(s) that would connect to the Las Vegas Convention Center campus via (The Boring Company's) innovative transportation system. ... Convention guests would no longer have to worry about long walks or gridlock traffic around the convention center -- they could take the transportation system to Resorts World Las Vegas for lunch, meetings, or personal appointments, and be back to their conference or expo in minutes. This innovative transportation system is a perfect match for Resorts World Las Vegas as we design our resort to be at the forefront of progressive technology." Electrek speculates that more and more casinos will want to, and pay to, be connected to the system so that they are not left behind. The end result may very well be a city-wide system developed at no cost to the city.</p> <p>Get a quote from The Boring Company for tunnels from below Little Cottonwood Canyon with stations at Snowbird and Alta. Boring Company EVs with regenerative braking are very efficient for round trips up and down a grade. It's less than 9 miles. Could easily be much less expensive and immune to avalanches and "dumps". Also much faster to implement and a much faster trip as the tunnels can be straight with vehicle speeds up to 127 mph. It could also continue on to Brighton, Solitude, Park City, and Deer Valley. With spurs to each terminal so through vehicles wouldn't even slow down. 17.5 miles from Sandy, UT > Snowbird > Alta > Solitude/Brighton > Park City > Deer Valley. Undoubtedly could be done in phases. 17.5 miles at even 100 mph is 10.5 minutes! A half hour from SLC International Airport to the tunnel entrance. Imagine less than an hour from flight arrival to all those ski areas, and with no weather related driving hassles! The 12-passenger Autonomous Electric Vehicles (AEVs) being developed for the below project could even have lift ticket purchasing kiosks on-board. If the system is eventually expanded to the airport, 37 miles or so (see map below) from SLC International to Park City/Deer Valley could be a 20 minute trip in either direction.</p> <p>Comparison with the three current draft alternatives:</p> <ol style="list-style-type: none"> 1. Gondola -- Very limited capacity. Impossible to extend to other resorts. Impossible to extend to airport. Subject to avalanche damage or closure. Very limited expansion capability. No real capacity to transport lodging guests with their luggage. Relatively slow. Expensive. 2. More buses without road widening -- Very limited capacity. Wait times until bus fills up, or underutilization. Limited operation schedule. Subject to storm and avalanche delays or closures. Limited capability for transporting lodging guest belongings. Impossible to extend to other resorts. Increased fleet maintenance and depreciation costs. Still based on fossil fuels unless CNG or EV buses used. Slow. Expensive. 3. More buses with road widening -- Very limited capacity. Wait times until bus fills up, or underutilization. Limited operation schedule. Subject to storm and avalanche delays or closures. Subject to extra lane "poaching" by scofflaws. Poaching would adversely affect time advantage. Anti-poaching capital and operational expenses. Increased road maintenance expense. Increased plowing costs. Environmental costs of expansion project. Limited capability for transporting lodging guest belongings. Impossible to extend to other resorts. Increased fleet maintenance and depreciation costs. Still based on fossil fuels unless CNG or EV buses used. Slow. More expensive and longer construction timeline. <p>The Boring Company is proposing to build twin tunnels linking Rancho Cucamongo, CA to the Ontario CA International Airport. 2.8 miles, \$45-60MM, 4 years vs light rail option would have been \$1-1.5 billion and 10 years. https://www.mercurynews.com/2020/06/04/elon-musk-backed-tunnel-to-ontario-airport-gets-go-ahead/</p> <p>The Boring Company's proposal to the City of Chicago for express service between the financial center in Chicago to O'Hare (18.5 miles) was going to be totally funded by The Boring Company (no cost to Chicago or taxpayers)! The Boring Company would receive the income from ticket sales. https://www.boringcompany.com/chicago/ This may or may not be an option now, but perhaps each resort would fund their station and share common costs. Even if one or more resorts do not opt in now, the tunnels could be routed to simplify a resort adding a station later after seeing results and what they're missing out on.</p> <p>Another feature is simply adding more AEVs to the fleet increases capacity. The Boring Company system "is targeting 4,000 vehicles/hour at 155mph (250km/h) for each Main Artery Tunnel." With 12 passengers per vehicle, this could accommodate 48,000 passengers per hour. All charging could be done at the base (in or near Sandy, UT) where electric infrastructure is relatively easy to expand. Using Tesla Powerpacks or Megapacks could allow that charging to all be baseload on the grid, no peaking. This grid-scale storage infrastructure could also earn income to the owner for providing grid services. Google "Horsdale Power Reserve" for more info. Renewable energy (wind and solar) could also be utilized to totally power this system. Southwest of SLC there is a LOT of solar energy potential.</p> <p>Teslas or other EVs with supported software could possibly utilize the tunnel system. It is probable that only autonomous operation (no manual control option) would be used while in the tunnels to optimize vehicle flow. Only vehicles that verify they are capable (charge state, proper functioning, etc.) would be allowed access. EV delivery vehicles could also potentially be accommodated (Tesla Semi with special trailers?). Emergency electric vehicles (EEVs - police, fire, ambulances) are also a possibility. Stations can be configured with automatic separate entrances and exits for customer EVs and EEVs versus system mass-transit AEVs.</p> <p>"... there is no practical upper limit to" "the number of stations that can be built along the tunnel route, as stations can be as small as two parking spaces. The electric vehicles descend into a "spur" or side tunnel before quickly merging into a Main Artery Tunnel. Since stations require such a small footprint, they can be easily integrated in busy city-centers, parking garages, and residential communities. The high density of stations will help reduce congestion by distributing traffic across many access points and by providing more convenient entry and exit locations. At the same time, larger stations can be built to increase ridership capacity to a specific central location." This could serve trail-heads, developments, tourist attractions, and shopping centers as well. The expansion possibilities are endless.</p> <p>Easier parking and driving, faster, way cooler, and cheaper? As a skier (I'm a Mad River Glen shareholder) I wouldn't even think of driving up the canyon with this available.</p> <p>If the capacity of the tunnels becomes insufficient in the future, additional parallel or stacked tunnels could be bored (and designed into the station layouts at the beginning). This is a Boring Company talking point.</p> <p>Resort employees and season-ticket holders could get special deals. Fast, weather independent, reliable, inexpensive transportation from inexpensive cost-of-living areas to the resorts much more attractive for both employees and "regulars". It would also greatly alleviate road-side parking issues and much fewer vehicles would drive up. UTA TRAX and FrontRunner systems could tie into and serve the base terminal. AEVs could have interfaces to resorts' ticket reservation systems to support ticket sale limits. Alternate resort choosing would be greatly expedited. Oh, Alta's sold out but Deer Valley isn't? Change destination on the fly. Good sales point for Utah resorts (Ski Utah campaign?).</p> <p>This could also be a big tourist attraction for SLC and all these resorts. No avalanche delays, no big storm delays (even without avalanches). Tourists wouldn't have to worry about storms making it so they can't get to their resort or make them miss their flights home. Expandable, green, saves lots of petroleum usage, less air pollution, invisible except for terminals and even those can be mainly underground. Preserve the value of "the Wasatch Mountains. A single expandable system to cover all those ski areas (Snowbird, Alta, Park City, Solitude, Canyons, Deer Valley, Brighton) and could also be expanded for SLC rapid transit, including to SLC International Airport. Could also be expanded to include Ogden and Provo resorts in the future.</p> <p>Best regards,</p> <p>David Stein</p> <p>White Plains Ski Club Lodge Chairman Mad River Glen shareholder Innovator and Inventor Powder hound</p> <p>P.S. Since The Boring Company approached the Encore at Wynn in Las Vegas I CC'ed this email to The Boring Company. I've also CC'ed Powder magazine (I'm a subscriber) as they made me aware of this project.</p> <p>P.P.S. I've also sent an inquiry to The Boring Company to see if high voltage electricity supply lines can be accommodated in the tunnels, above or below the roadway. ... Adding electricity transmission capacity is expensive and time-consuming with right-of-way, avalanche danger, and routing issues.</p>	David Stein	Email
207			
208	I am against the widening of the road to accommodate the bus lane. I know that would negatively impact the natural environment in the base of the canyon, including inducing urban stream syndrome and pollutant runoffs. I am for adding more busses and perhaps the gondola. I would absolutely hate to see the road widened. People go here to find solace not overlook a wide road with traffic noise. Be sure you are doing your best to preserve sense of place. (I am an urban ecologist and land manager and conservationist)	Vincent Gryboski	Website
209	We need the gondola! Please don't cause more pollution by widening the roads	Claybourne Elder	Website
210	<p>I appreciate everyone working together to find solutions. Big concerns of mine include.</p> <ul style="list-style-type: none"> - I feel like summer needs to be considered too. If this plan is slated to help through 2050 I think a summer season should be included. With that in mind, I think the gondola stops should also be reconsidered to possibly include a stop at Tanner camping ground and a stop at White Pine as well as be utilized in the summer. If the gondola doesn't pass I think an additional to the bus services proposed there should be a summer bus concept proposed. It doesn't need to run as frequently in the winter, but have something and alter stops to include places to get off Tanner, Lisa Falls, White Pine and other hiking spots. The canyon is just as busy in the summer and maybe even more in the summer, but the weather is usually better. - The gondola having the base at the base of the canyon doesn't give much room for parking. Is there a way there could be transportation built from the old "Shopko" on 9400s across from the bus lot. Big parking lot and building isn't used. - Furthermore, I think this plan really highlights north of the canyon but what about congestion south of the canyon? If this plan is really looking to the future, the growth in this valley is happening to the south and west of the canyon. So it might be good to look at the 9400 road feeding in and Wasatch Blvd. As the population grows this is where people are heading because it used to be farm land. Really concerning with no mentions of that concept when looking to 2050. - Gondola is great, but what happened to mono-rail or some sort of train concept? It might be able to move more people. - I applaud growing the bus service and adding a lane for bus service, but I think we need to work to educate people about using the busses.... maybe work with ski resorts to provide more local space for locals or start bus service in the summer, so people get accustomed to it when they don't have all their gear and it becomes habit once winter rolls around. -Could that bus lane be utilized on super busy days for 2 lanes up in the am and 2 lanes down in the evening if needed? <p>Thanks, Megan Collins</p>	Megan Collins	Website
211	I vote for the Gondola option!	Jacob Meyer	Website
212	As a avid skier, hiker, and outdoorsmen, I feel that the only 4 season alternative offered on this list is the gondola. The problem is not just a winter problem. So if you are only thinking of winter solutions you are being to one sided. Parking areas in the canyon itself with a tram system could allow for more visitors with less traffic and help with the movement of people from the salt lake valley not just park city.	Pat Hain	Website
213	Nice proposals but you need to start something immediately. There needs to be a fast pass Lane payment system set up at the mouth a little Cottonwood and big Cottonwood Canyons. Purpose would be to charge vehicles that pass in to Little Cottonwood Canyon and big Cottonwood Canyon. It could either be a per day charge of say \$10 per day, or the option to buy a season pass say for \$200. The money could be used for road maintenance Road expansion, snow sheds over roads in avalanche paths, and/ or any other improvements.	Beau Parent	Website
214	If we're looking to improve access in an equitable and cost effective way, alternative 1 is probably the way to go. Of course, a gondola would also be cool and would only take about 20 years to break even based-on O&M. I am most supportive of the Gondola option because long-term it may be the most affordable and also has the benefits of being a more unique experience and potentially emissions- very important to our air quality locally and to climate change. This is assuming that it is just as fast as the bus. If it isn't, let's just go with the improved bus service.	Cody Lutz	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
215	I think the gondola idea is brilliant. As an employee in the canyon, I've noticed buses often create more traffic than they relieve. For example, the bus that jackknifed backwards last winter. A gondola would a safer alternative that would also allow people to leave during interlodge.	Korbin Stapley	Website
216	The gondola is very alluring. Buses often make me carsick, and I would love to see the canyon from up high!!	Josie Nordrum	Website
217	The expansion of the road would be highly detrimental to roadside rock climbing resources. The gondola is an eyesore. Some of us don't care how much money Alta makes.	Tyler Last	Website
218	I personally believe that a solution that requires multiple transfers and a lengthy time of travel will only be utilized during periods of extreme congestion and will not see widespread adoption through out the season.	Andrew Reich	Website
219	I am firmly opposed to the idea of any gondola operations now or ever in the Cottonwood Canyons. I feel this would irrevocably damage the landscape of the canyons and would turn these at-risk natural havens into Disneyland. We can do better than this. I also firmly oppose widening SR 210 to serve more vehicles and buses. Doing this would only further harm wildlife, eliminate habitat, and compromise already threatened ecosystems. The only options I support as a taxpayer, Cottonwood Heights homeowner and season pass holder at Alta are more buses, tolls for vehicles, and no single-use vehicle occupancy in the canyons. We need to prioritize solutions that preserve these valuable ecosystems while providing access to locals AND maintaining our quality of life. A gondola will only serve to funnel more careless tourists into our canyons and clog our valley roads, parking structures, and air with their rental vehicles. I am 79 years old, a longtime Alta passholder, come from Honolulu every year for a 6 week period, stay at Extended Stay America, Union Park, and drive up in a rental car. I am one of the first cars at the Albion base of Alta at around 8 AM and generally leave at 2:30 PM to avoid traffic going down. It normally takes me 40 minutes to drive the 16 mile distance each way, less time than two of the three alternatives, and my trunk is my locker for extra layers and goggle lenses. None of your alternatives, with travel time, included the projected wait time. I might add that I have also ridden the bus from Fort Union Blvd., Walgreens on 9400 S, an Highland Dr., and from the mouth of Little Cottonwood Canyon. Unless you have an overnight locker for your gear at the ski area, the bus can be very inconvenient. There is a fourth alternative not considered: Alta and Snowbird should stop accepting the Ikon pass. This would not solve the avalanche danger issue but would, hopefully, cut down the number of cars coming into and parking in the canyon at the areas. Busses don't solve the avalanche danger issue as they are going to get stuck with road closures, just as cars do. For this reason, snowsheds, below Superior, need to be installed in any case. While a gondola will take care of the road closure issue, the time it will take to convey the patrons of both mountains up and down every day, with the lines which develop, might be a problem as would the necessity to park in a transit hub and take a bus to and from the gondola. Getting to Alta and Snowbird each day might be too much for a lot of people. A long time Alta Skier and friend from New York, whose loyalty to Alta is displayed on his New York vanity plate, has already told me that the necessity to ride the bus and/or bus/gondola will send him to Snow Basin for the season. While I prefer the snow in Little Cottonwood Canyon, if it takes too long and is too much trouble to get up there, I might consider the same.	Tara McGarry	Website
220	These are my thoughts. Mahalo (thank you in Hawaiian) for the opportunity. Aloha Toby Kravet If you do move on one of the two bus alternatives, you need to make it more convenient. Getting on with skis, poles, and bootbag while trying to scan your pass is very awkward. I liked it better in the old days when the skis were lashed to the outside of the bus. If the bus driver has a hand held scanner, that might also make it easier to board. There is another	Toby Kravet	Website
221	A gondola is the only effective way to resolve these ground based transportation issues. The buses are a mess, single occupancy vehicles are way to prominent. You don't need snow sheds, you don't need as long of stoppage during avalanche control if your transportation is on a high-line. Europe's ski destinations have always had a cable car access option because its safe, smart, and eco friendly. Adding an extra lane, though helpful for bus service will be very disruptive and not nearly as effective. That also increases traffic of a very busy section of Wasatch Boulevard.	Thomas Harris	Website
222	I would support Alternative 3 for LCC travel improvements.	Christopher Rockwell	Website
223	hello, wanted to submit my vote for lcc public transportation. I would rather see a gondola than a bus system. Thank you!	Jessica Priano	Website
224	Gondola option is preferred to get the most traffic off the road. However, there needs to be more parking available at the gondola base or have the gondola base extend to a larger parking area. Also, please ensure the gondola option is sized for the future and is comfortable. It won't be used if you're packed in there like the snowbird tram for an hour.	David Ralls	Website
225	Hello, Thank you to everyone involved for their time and commitment and for opening this up for public comments. I am sure everyone that recreates in Little Cottonwood Canyon (especially in the Winter) is ready for a solution to the traffic issues. My personal suggestion is 1) upping the bus services, 2) adding a bus only lane, 3) lengthening the bus schedule and 4) adding incentives. The first incentive is getting there faster with the bus only lane, those that choose public transit will get to the ski areas faster and will get in line faster — all of our goals on powder days. Other incentives could be pass discounts if you take transit over x amount of days, but that of course takes ski area compliance. I also think have buses go down the canyon later would be a great addition. Many times, folks grabbing a beer cannot catch the last bus in time so if that is in their plans they end up driving. This would be most valuable on Saturdays and Sundays as folks want to both ski and celebrate the weekend. That's my two cents from an ex-Alta employee and now Alta skier. Thanks.	Mikayla Rewey	Website
226	Why not simply limit the number of tickets sold for Alta and Snowbird? Simply adding more vehicle pedestrian capacity doesn't solve the problem. The extra capacity will get filled and five years from now wait times will be back up to 85 minutes. Require people to buy or reserve a ski pass the day before. Then require people who want to enter the canyon to have an electronic pass for inside their car. When they buy/reserve their ski ticket online they can sync their canyon pass which gives them permission to enter the canyon. Then have cameras to monitor and give huge fines to people for entering the canyon without a pass. The tech would give you a lot more flexibility later down the road, would have minimal impact on the environment, and would reduce the crowds/congestion on the slopes.	James Kissell	Website
227	Gondola would be incredible.	Nick Van Dine	Website
228	Have you looked at the possibility of a monorail system? This could be built above the road and would not be affected by the weather. If Disneyland can do it, why can't we?	Brian Morris	Website
229	The gondola plan is better than bus. more marketing value and would be a tourist attraction itself recouping investment and support year-around economy. Less environmental impact.	Christopher Quinlivan	Website
230	It is my belief that the gondola will be the most effective and weather appropriate mode of transportation, not to mention fastest! There comes a point when tires+asphalt+ice will ALWAYS fail.	Connor Kuhl	Website
231	As a resident of Cottonwood Heights and someone who grew up hiking and skiing in both Cottonwood Canyons, the increased traffic has been something that has caught my eye in recent years. While the amount lasting environmental impact that widening the road would leave concerns me, I do think that a gondola could offer a reasonable solution to transportation needs while protecting the environment and also enhancing the canyon experience year round.	Scott King	Website
232	Thank you for posting this information. I live in Holladay and am an avid skier, I would be highly be in favor of the gondola running up Little Cottonwood to ease congestion, pollution and it would be a great tourist attraction as well! Sizable investment up front, but I believe it would pay dividends in the long term.	Adam DeMill	Website
233	None of the alternatives appear to address non-resort traffic. Is this a public transportation service or a subsidy provided by the state to 2 private businesses? That should be clarified. If this is a public transportation effort, the vision for access to areas outside resort boundaries should be addressed. Timing should also be addressed - presumably since this a public project both the bus service and the gondola will operate 24 hours per day. Why are snow sheds not considered for the Gondola option? It seems like road access will still be needed for commercial deliveries, employees, residents, and those accessing areas outside the resort base areas. Neglecting snow sheds will not change the need for UDOT avalanche control to protect the road, unless the gondola option includes accepting reduced access for all those not accessing resorts. In general, I would like each of the options if they addressed the needs of the public and were not so obviously intended to simply force the state and citizens of Utah to subsidize Alta and Snowbird business development. Neglecting to address the needs of the non-resort-going public appears to be a fatal flaw in the descriptions presented so far.	Paul Diegel	Website
234	I think that the gondola is the most sustainable idea long term because it gets the most people off the road up to the resorts. I think enhancing the bus system or widening the road will likely not be as lucrative as providing two options instead of a wider road will prevent slowdowns from crashes and such. I'm all for the gondola and I don't think the other ideas would be as effective.	Andy Knoblock	Website
235	No gondola. This will give priority to ski resorts and leave climbers, bikers, backcountry skiers, and other recreational users - who care for the canyon AND already carpool - behind. This will also carve our precious land used for climber's access. Please maintain the beauty of the canyon through offering additional buses at all hours — many of us backcountry ski at 4:00am before work.	Blake De Vries	Website
236	As a local resident who is in the cottonwood canyons 3-4 times a week skiing, climbing, or running. I am highly against the gondola. I spend a large portion of my life in these canyons and never actual go to a ski resort. The gondola caters only to resort skiers.	Matt Palmer	Website
237	The gondola is the only solution and must be implemented as soon as possible. Gondolas like this are implemented the world over and this is the only solution that will actually work for the long term. Don't fall for widening streets! This will only induce more traffic, and the bus will still get caught in avalanche traffic. The gondola is the only solution.	Eric Bogin	Website
238	I strongly support the gondola option. This option would enable no vehicular access to the Canyon, improve local and international air quality, and improve the aesthetic experience of the Canyon. Please pursue this option. Thank you.	Aaron Ray	Website
239	It would be ideal to spend more money up front on the gondola system so that we are not having this same conversation again in 10 years, when we have an even larger population. Let's do it right the first time and save future selves some money, time and frustration.	Heather waldron	Website
240	Year-round gondola	Jaren Lockwood	Website
241	No Train More parking Free bus No tunnels Gondola seems reasonable	Joshua Sanders	Website
242	The roadway expansion w/ enhanced bussing seems like the best choice. The gondola would be fun but since that alternative still requires bussing to the mouth of the canyon and because it adds 20 minutes to the transit trip, it doesn't make sense as the best solution.	Aaron Benson	Website
243	I support the Gondola option.	Meghan Dutton	Website
244	In lieu of the REAL solution, which is rail, I support a mixed solution with a focus on the gondola component.	brian vansteenkiste	Website
245	I like the Gondula option. Does not widen the road, thus having a smaller impact on the surrounding woods. It would provide a different view of the canyon, instead of the inside of a bus.	Jared Blatnick	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
246	Let's focus one expanded parking and additional busses. The gondola will be a huge eyesore, take way too long to address and immediate problem and only be used part of the year. The busses could be used in other locations during off peak times	Matt Swaim	Website
247	Great to see trailhead parking expansion to get cars off of shoulders, however there needs to be collaboration with the USFS on the trails that these parking lots serve -100 additional parking spaces for red and white pine is ridiculous considering the extremely limited trail system. Build more trails to space out users. Everybody wants singletrack, but nobody wants crowded singletrack where you have to step off the trail every 3 minutes. This point is continually ignored in the EIS. The goal should not be to shove more users into the canyon with existing infrastructure. A gondola to only serve the ski resorts is absurd. The ski resorts should pay if that's the case. Build stops to trailheads to disperse users throughout the canyon. Nobody wants to spend an hour commuting 15 miles up the canyon. Widen the road to provide EFFICIENT transportation. People live in Salt Lake for easy access to the canyons. An hour from the transit hub isn't easy access. I also have a hard time believing the gondolas will run when the weather is bad (ie when there's powder / wind and the canyons are most crowded). Will the Gondolas run year-round? The EIS continues to ignore summer activities in the canyons and focuses on the money-fueled ski industry.	Rudy Rutemiller	Website
248	Please ensure protected and separate pedestrian AND bike lanes on Wasatch Blvd. This is a high-traffic recreation corridor, not a highway. Running, walking, or biking on Wasatch is currently so sketchy. Encourage bimodal transportation by providing safe avenues. Please put a gondola. It would create great revenue for udot and provide another wonderful tourist attraction to our great state! We need more world records here in Utah.	Conner Jorgensen	Website
249	Definitely support the gondola. We will need a lot more parking down there. And will this work during the summer? Like are you considering all the traffic during the summer? And are you going to start charging at the bottom of the canyons? That also seems like a good idea.	Sam Wright	Website
250	Gondolas have been proven effective and wonderful ways to travel in mountain areas around the world. Gondola riders would not endanger animals crossing the road, eliminating car/animal collisions for everyone on the Gondola. Gondolas would reduce pollution, especially if the power used is created in a sustainable way. Gondolas create a beautiful ride where we can enjoy the incredible beauty of the canyon. We do need options for stopping at trail heads not accessed from the ski resorts, so we either need more stops or allow vehicle traffic for non-resort traffic. PLEASE NOTE: It is essential to find a way to allow transition from car to Gondola base in the valley to be as efficient as possible. If the ride becomes longer than 60 minutes from car to gondola to resort, people will still try to drive even on days they should not drive. Also, the price must be reasonable, perhaps subsidized by fees to drive up the canyon. Finally, I go up the canyon 40+ times per year and having a season pass for car/bus/gondola would be important to keep from pricing us out of enjoying the public lands near our homes.	Alan Jones	Website
251	I favor increased bus service from Salt Lake Valley locations. I don't favor widening the roads to the resorts because it would be destructive to the canyon environment and would be too expensive. Same for the gondola, and even more so.	Amy Mills	Website
252	I endorse the enhanced buses with extra busses being added. I DO NOT endorse an extra lane going up the canyon. It will effect already established water shed lines and ditches. It also effects several parking areas for hikes and will be a huge additional cost. Busses will cost up front, but they will recoup the cost in fares. Put in a told for those who still drive.	Barbara Hansen	Website
253	I want enhanced bus service (more buses only) in Little Cottonwood. I do NOT want enhanced bus service in a designated shoulder lane. I do NOT want the road widened! I love the canyon and all the hiking and climbing and animal life do not harm this already fragile ecosystem!	Ashley Anderson	Website
254	I want enhanced bus service (more buses only) in Little Cottonwood. I do NOT want enhanced bus service in a designated shoulder lane. I do NOT want a train, I do not want to damage an already deemed fragile area! Hikers And climbers matter too and widening the road will only serve the resorts the canyon means more then skinning!	Ashley Hansen	Website
255	I am not in support of widening the road in Little Cottonwood Canyon. More buses would be fine. No bus lane in the canyon. I am not in favor of any condemnation of private property, that is simply legalized stealing. I live below the mouth of the canyon and deal with the traffic issue, but I think the plans are not to benefit the community but to help the ski resorts make more money. How about limiting the number of skiers that can go to the resorts, it would enhance your experience at the resort and reduce the traffic congestion. This option would help everyone and preserve the natural pristine beauty of Little Cottonwood Canyon, and protect the watershed. A gondola might have smaller impact on the canyon.	Kyle Hansen	Website
256	Enhanced bus, expanded bus only lanes for peak times all the way ?? 1) if the transit hub is going to be at the mouth of BCC, why not run the gondola up BCC to Solitude and then up and over to Alta. While you're at it, turn left and go to Deer Valley, too. Go look at the Flexenbahn between Stuben and Zurs for an example. Re: the snow sheds, do what they do in Austria and leave the downhill side of the shed open. It eliminates it being a "tunnel" so none of the NFPA requirements apply. 12' lanes are too narrow, they should be 14'. Go measure the width of a current F150 or an Expedition/Surburban and you'll see why 12' was a great standard twenty years ago but is an anachronism today (yes, I have designed roads). Also, at 12' in a tunnel, you'll scare the hell out of most drivers going down hill so your 35mph design speed will be 20mph. Uphill won't be an issue because the drivers will drive in the middle of the two lanes, as they do now when the road is snow covered. How are you going to plow these tunnels? There will be snow coming in at both ends that will need to be removed. You need to straighten the alignment as much as you can. A curve leading to the downhill entrance of a snow shed is a nightmare- go look at the south bound side of the Great Bear Snowshed (aka "the smasher") on the Coquihalla Highway in B.C. And watch people navigate that. Scary doesn't begin to describe it when it's snow covered. Do it in LCC and it will be tow truck full employment time. A 30mph design speed is too slow, it's 40 now, why regress? You're moving dirt anyway, do it right and straighten the alignment, fix the sight distances and raise the design speed. One final thought - all this is a total waste unless you address two fundamental issues: first, the UTA cannot be allowed to run the POS busses they currently run. 20 mph uphill is unacceptable as it destroys any road capacity. As for downhill, can we get braking technology that was developed in the twentieth century? Carbon rotors anyone? Using brakes designed for flat city streets in LCC is criminal. Second, you have to plow the road. I mean really plow it, like bare, every time it snows. Scraping the ground with blades isn't good enough. Take a gander at the FAA manual for snow removal at airports. It's time for rotary brooms to be added to the plow trucks. Take a trip to Switzerland and watch what they do. Plow truck with a mid-mounted rotary broom and a sander on the back. Clears the road bare. The moment the road gets that mix of slush and sand on it the speeds drop to 10mph the capacity drops as well. The broom removes the slush that the plow can't. Oh, the cheapest easiest fix of all: ban 2wd vehicles and All Season tires in the winter. Require 4WD/AWD with real snow tires with sufficient tread. Go watch who slides off the road - all season tires, bald tires and the 2wd with chains in the trunk.	Ryan Short	Website
257	257	Peter Cullen	Website
258	I am in favor of option one, enhanced busing without the dedicated lane. I think this should be tried before either of the more invasion options. I think the snow sheds will really help. I have driven over Rogers Pass in BC many times in winter over the last 25 years and it is rarely closed for avalanche control work. And their terrain is much more extreme than LCC. I think the dedicated bus lane with require a lot of road cuts and fills and repack the canyon. The gondola is less impactful but costs a 100 million more and may not get the ridership you want because the necessary bus ride to get to the base. One more thing; could you please add a bus stop at the White Pine Trailhead. This is the main access point for backcountry skiers and allows us to access four different canyons for skiing, White Pine, Red Pine, Maybird, and Hogum. The parking needs to be expanded (doubled) and better and more frequent plowing as well. We really appreciated the plowing of the snow bank west of the entrance last season. It makes exiting the parking lot a whole lot more safer.	Richard Pimentel	Website
259	2050? Sorry but that is ridiculous. With the accelerating rate of technological advancement you have no idea what the transportation options might be in 30 years. We have problems now. What are we going to do to alleviate traffic, parking, public safety and quality of experience issues in the short term? 5 - 10 years?	Scott Mathers	Website
260	There needs to be trains up both big,little and Millcreek canyons.	LANCE WALLACE	Website
261	I do not support the idea of putting in a trim it would destroy so much of Little Cottonwood nor do I support making the lanes wider. Expanding busing is the only option that I am comfortable with. The amount of land the other two would destroy is not worth the gains. There's already limited parking that runs out so why do we need wider lanes. And the thought of making Little Cottonwood parking lot is ridiculous to me	MARisa Cones	Website
262	Yeah.... any of these will have "minimal" at best impact on the # of cars just stuck idling in avalanche paths. And thus any "enhanced" bus service is just going to take a back seat to that traffic. I don't ski at the resorts. Buses that don't stop where I want to go to access the back country don't help me not drive up the canyon. Same with a gondola that only stops at Snowbird and Alta. If the resorts aren't largely funding this.... you are wasting everyone's time and money. They are the problem here, and should be at least partially responsible for solving it, since that is where the money is going. People aren't going to use the bus unless it is "ridiculously" easy and frankly, mandatory, to get to a resort in one of the cottonwood canyons. I don't use the bus because there's no where to park to get on the bus and I live "on" wasatch blvd. There's nothing in this draft about making Wasatch Blvd relatively safe for pedestrians to access any "mobility" hub along wasatch, you just get to schlip it down the shoulder? There needs to be another parking structure at the base of LCC. The resorts need to build multilevel parking structures on their properties if they and UDOT aren't completely disallowing cars in the canyon to access their services. Long and short of it, the primary problem is the # of cars going up the canyon to resorts, and without a large parking structure at the base of LCC, that will 100% not change. You need to cater to the lowest common denominator. People are not going to drive all the way across the valley, or up from utah county or from wherever to park on Highland, and take a bus to LCC, get off and get on the gondola. They are going to do what they normally do, which is drive all the way to the base of LCC, and by the time they have driven for 30 min already, say screw it, and keep driving.	David Haak	Website
263	I would like to express my support for increased bus service without roadway widening in little cottonwood canyon (LCC). As a resident of Cottonwood Heights and an avid skier and climber, I have strong feelings about possible alternatives. Any expansion of the roadway in LCC would likely eliminate certain climbing opportunities. An example of this would be near mile marker 5, where there are current climbing areas directly adjacent to both sides of the road. Another example would be near the "stick boulder" also known as the hill area, where bouldering opportunities are adjacent to the road on the north side, and the river is directly adjacent of the south side. Any expansion of the road would thus reduce recreational opportunities and I would strongly oppose any expansion. I also would not favor the gondola due to the need to build support towers, likely reducing recreational opportunities. Additionally, this would significantly alter the views in the canyon. Finally, this option costs significantly more than the increased bussing alternative and without distinct advantages. This is not a prudent use of government money. Hey there, as a resident of the Wasatch Resort in Little Cottonwood - I'd like to chime in.	Zachary Niemeyer	Website
264	Enhanced bus service, roadway improvements, and more PARKING options are the optimal solution. The gondola will have tremendous visual impacts to one of the most beautiful canyons in the world - and still requires huge improvements to parking and bus options to make feasible.	Sam Grenlie	Website
265	The gondola would be huge mistake - and forever change an amazing place for future generations. No Gondola it would ruin the canyon views no widening some snow sheds minimal and buses every 5 minutes not 10	vince Coley	Website
266	I support the gondola option. However, the buses must be timed to arrive precisely every six minutes, and three gondolas per bus would move people efficiently. Additionally, encouragement for spreading arrivals should be emphasized to avoid long lines on the lower-capacity gondola. I am excited to see how the planning and execution of the project continues.	Andrew Clevenger	Website
267	I believe buses are a short term solution. I think we all need to look at a long-term solution like the gondola or a light rail. There used to be a train going up the canyon.	Vikki Nelson	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
268	<p>What is the expected cost per travel day to the user of the gondola option?</p> <p>Currently ALTA offers the Wasatch benefit for early buyers that gives free access to bus. Will this also be an option for gondola?</p> <p>In general, in our car-centric society, for something to work it needs to be the most convenient option. That is the (unfortunate) reality. If easier for a car of 4 to drive to the top than to offload, get on bus, then to gondola, and if skiing at Alta, then another stop as folks off-load at SB.</p> <p>Has there been an analysis done of the group size (such a family size or companions) jointly taking public transit versus driving?</p> <p>We certainly want whatever solution to be successful, while also not just increasing the load. I could imagine this just results in increased usage of the ski areas and not result in a shift of how people get up the mountain. There has to be an "incentive" to use the alternate of driving from home to the parking lots at Alta or SB. Even with waiting in the snake, people probably find that more convenient to adding two or three stops to their trip.</p> <p>Are the travel time estimates calculated under realistic loads?</p>	Robert Welsh	Website
269	<p>In order to address the traffic issues in little cottonwood canyon, road improvements must be made. This is necessary for safety and versatility. The road is dangerous and even a minor auto accident in the can can lead to sever congestion and more complicated conditions. During adverse conditions, 4x4 or chains must be required and enforced. Increased busing is a good idea in conjunction with road improvements though it will not be effective enough by itself. A gondola should Definitely NOT be pursued. It is a waste of money, it will not solve the problem as it only moves the congestion further down the canyon. A gondola will not see enough use to make it worthwhile and it does not support social distancing. A gondola and its construction would also be very intrusive to the natural landscape and wildlife habitat in addition to being useless for the many reasons that require vehicular access. NO GONDOLA!</p>	Scott Howe	Website
270	<p>I am writing to express my support of the proposed Alternative Site- La Caille Base Gondola system in Little Cottonwood Canyon. I believe it is the most prudent design choice because of it's carbon neutral design, advantageous placement, and land-conscious improvements. The need for an alternate transport systems in LCC has been apparent for some time, and I believe a new system that works together with existing public transportation is the solution.</p> <p>Please do not eliminate all roadside parking in Little Cottonwood Canyon. Doing so would severely reduce access to a number of trailheads and climbing areas that are frequented during the warm months.</p>	Anna Roberts	Website
271	<p>In addition, the Gate Buttress parking area is frequently filled to capacity during climbing and hiking season. Reducing the number of available parking spots from 30 to 21 would only make this issue worse. If roadside parking is also eliminated, not only will the parking issue get even worse, there will be no reasonable way to access the area when the lot is full since the buses will not stop there.</p> <p>One potential solution is to modify the summer bus route to include stops at more popular summer destinations including the Gate Buttress.</p>	Carson Darling	Website
272	<p>I like the Gondola option because the other two just add more vehicles. If you are going to add more buses, then I support widening the road so they can have a dedicated lane. That will make the bus more attractive to folks who might otherwise drive their car. Tolls for single occupancy vehicles would also be a good idea</p>	Amy Urbanek	Website
273	<p>Thanks for the great efforts to resolve the devastating impacts up LCC due to the mass influx of people in the valley, now all wanting to ski. As a born and raised local I have witnessed this wave of impact. My first vote would be Gondola however how will one access climbing areas, and multiple key access points along the road? My second vote is increased bus, assuming they are clean fuel/electric battery (which I don't think they will be). Please clarify these two points on these two options if possible. Thanks again. Chad</p> <p>The draft alternatives document shows a suggested alternative of "Plow trailhead parking." This suggestion was discounted in the column "Does not meet project objectives." The statement of primary objective includes "one primary objective for S.R. 210: to substantially improve safety, reliability, and mobility..." Safety is a primary objective. It is a safety issue to get cars off the side of the road and into an available trailhead parking lot. Plowing those lots is a low-cost, reasonable request to accommodate hikers and snowshoers.</p>	Chad Ambrose	Website
274	<p>Regarding the frequent buses versus the gondola idea, I would favor more frequent buses, and perhaps a bus-only lane. That provides much more flexibility in frequency and stopping places. There needs to be more consideration give to those who frequent the canyons, but their destination is not one of the major resorts. There is too much focus on just access to the ski resorts.</p> <p>Thank you for the continued work to improve transportation in our treasured canyons.</p>	David Lewis	Website
275	<p>It seems you have narrowed to three ideas that will be great when 1978 arrives. I suppose if you completely block all recreational canyon traffic, then Alta and Snowbird would fund the \$400 million (probably \$600 by construction start) for a gondola since it only serves them. Eliminating all recreational traffic would also eliminate trailhead parking issues. Luckily, the more affluent people who live on the benches appreciate large parking structures and larger vehicle traffic, so they will enjoy the buses and concrete.</p> <p>It seems that all options are failures. I will be curious to see what happens in LCC this winter now that Alta and Snowbird have added themselves to the unlimited Ikon that has made a mess at Solitude in BCC. The mess of these canyons has caused me to mostly abandon skiing in the Salt Lake City area and travel to other ski resorts for new experiences, so I will not be renewing Alta-Bird passes. That's one group of travelers off the buses and canyon roads, so it should help.</p>	Joseph Schmidt	Website
276	<p>I think you need to be thinking about canyon usage as more than just ski resorts and the main trailheads. There are climbers, hikers, snowshoers, mountain bikers and backcountry skiers that are also traveling in the canyon and parking in the canyon. To eliminate roadside parking really restricts these activities especially if it is year round. It also will encourage more pedestrians hiking on the road from parking areas to the recreation areas. I also worry about the expanded road option and what it would do to the bouldering areas in the canyon as many of these are near the road.</p> <p>Also- Where would the gondola towers be located? What climbing/hiking impact will those have? What's the load/unload plan for the gondola? And why not have mid stations as more people than just those using the ski resorts might consider riding it.</p>	Amelia Wilson	Website
277	<p>with the third option, i don't like that the major parking lots are so far away. one would have to get on the bus to get to the gondola base station. kinda defeats the purpose. I love the gondola idea but don't think it'll be as amazing. perhaps a parking lot at the base station so one could walk right to the base station would be awesome.</p>	Jim L	Website
278	<p>I am more in favor of the expanded shoulder and enhanced bus approach. Having dedicated space for pedestrians and cyclists during the summer seasons is a huge improvement to the canyon. I also feel a bit like a gondola would put unsightly towers and cables running up the canyon.</p>	Danny Staten	Website
279	<p>I wish you would have Ariel transport between park city and Little cottonwood. If that can't be attained then a gondola from the base of lcc. We need something that doesn't use the road.</p>	Sarah Langridgr	Website
280	<p>Please don't do a gondola, it's so limited in it's function. It will only be useful for a few hours during a dozen powder days each year, and then the rest of the year they will sit empty. The gondola will look terrible and take away from the beauty of the canyon and the money will not be well spent. Between these proposals, only additional busses makes sense. But 1 bus every 10 minutes isn't going to be enough honestly. From 8:15AM to 9:00AM, run a bus every 2 minutes. That's the only way to handle the capacity and actually get people to use the bus. Also, the parking structures have to be 1) big enough and 2) easy to use. In other words, parking and getting in line for the bus should take less than 5 minutes, and exiting at the end of the day can not be difficult or slow.</p>	Eric Johnson	Website
281	<p>How come a train/tram system wasn't proposed?</p> <p>I think the Gondola and extra road space is a great idea. What if two stops were added to the end of the gondola at solitude and brighton so the gondola not only helps LCC but also BCC, if the gondola continued up over the mountain separating the two.</p>	Anthony Hockenberry	Website
282	<p>My husband Clayton and I prefer the option of adding extra buses. It is the most cost effective and has the least negative impact on the canyon's natural landscape.</p>	Sherry Wilkinson	Website
283	<p>Please go with the gondola plan. The canyon is too narrow for cars and buses. And it is definitely too narrow for vehicles and bikers to share the road. Ban cars and bikes on that road altogether.</p>	Lucy Houser	Website
284	<p>I would like to see the gondola option approved. In addition I would recommend that something be done to mitigate traffic coming from the south. There is significant traffic coming from draper and other cities down south that Little Cottonwood Rd is unmanageable and prevents me from getting to my house. If there were also a parking lot and shuttle system down south that would be ideal. Nobody is going to drive to the mouth of BCC to only backtrack on a bus and gondola.</p>	David Tillotson	Website
285	<p>I am strongly in favor of the Gondola option (option 3) It seems the environmentally friendly and a path to a more eco friendly sustainable system.</p>	Alexis Crellin	Website
286	<p>I am in favor of the gondola option. I believe this will reduce noise, be more cost-effective, be a better year round alternative and reduce the traffic the most in the canyon. It will also reduce the air pollution in the canyon significantly more than buses.</p>	Jon Paulding	Website
287	<p>The Gondola option seems to be the best option for high traffic with reduced impact to the canyon. I also think the gondola would be a very interesting addition to the Utah ski experience. A unique thing about skiing in LCC. Maintenance is lower cost, less impact to properties and trailheads, and no snow sheds needed.</p> <p>Thank you for the comprehensive analysis of various alternatives. As a Snowbird Resort employee for the last 15 years, I have watched our canyon become more and more crowded. I have also seen the impacts of a changing climate on our snowpack and the mountains. I am inspired by the collaboration to create these alternative visions and look forward to continuing to contribute to the process through informed commentary. My immediate reaction is that this complex system is going to require ongoing monitoring and adaptation. The depth of research into each proposed alternative shows that it may require a hybrid of these ideas to really create a solution that serves the end goals of reducing single occupancy vehicles and excessive traffic delays, while maintaining access and protecting the natural environment we all come to the Wasatch to enjoy. The proposed gondola seems to be the least compelling option due to the competing interests of convenience, expense, privacy, and land protections. It does not seem to adequately allow for a long term solution that is scalable, as the system is static and presents myriad logistical challenges both in installation and maintenance. The proposed cog railway systems are intriguing, but the cost and potential environmental impact seem too great. It is also a less flexible and more maintenance intensive alternative that could not be easily dismantled if future solutions are presented.</p>	Terra Reilly	Website
288	<p>Therefore, it seems that a combination of snow sheds, managed lane system with overhead signaling, strategically placed PPSSL, and enhanced bus service originating from mobility hubs seems the most reasonable solution. This would be also combined with modified trailhead parking and other methods to reduce single occupancy vehicles (tolls/rideshares). I believe the resorts and town of Alta have a vested interest in this project and need to be willing to contribute financially to the development and implementation of proposed alternatives, as they are direct beneficiaries of improved canyon traffic management. Backcountry and wilderness access are critical components to consider when selecting a transportation alternative. Enhanced bus alternative will have to account for user groups that want to access trailheads on off-peak hours by offering early shuttle service (5-6am). This could be smaller busses perhaps or a large van. There is a growing segment of the population that appreciate unmitigated natural experiences and want to explore under their own power, once they reach a trailhead. Promoting this kind of dispersed use through offering attractive transportation options and reducing vehicles in the canyon is imperative. Along with this would be having peak hour and near-peak hour bus routes that stop at specific trailheads to collect or distribute these users during the daylight hours. Perhaps one bus every hour that diverts to these trailheads would be reasonable. It is also important to consider how these alternatives would be employed in the summer months, as growing hoards of users descend on the canyon. Due to changing climate and user demographic it is reasonable to assume that eventually, non-snow activities may overtake on-snow activities. I will close by saying equitable access to mountains for all communities should be woven through the selection of proposed alternatives. Low income populations need to be able to have reasonable access to the mountains and should not be discouraged due to onerous fees or implicitly exclusive practices of transit alternatives. Thank you again and I look forward to seeing the next steps.</p>	Sean Zimmerman-Wall	Website
289	<p>I am commenting primarily from a backcountry skier perspective and the gondola would be my first choice, by far. After a long day in the mountains, sitting in a gondola vs driving down the canyon would be much preferred—especially if weather is bad.</p>	Gerald Hicks	Website
290	<p>If the Gondola option were extended to a large parking lot, that would be a very attractive solution for both the resorts and skiers alike. Also, consider giving priority access to the Gondola to those arriving by public transit. Also consider reserving time slots for nominal amounts of money (e.g., \$5) on the Gondola to encourage spreading out arrival times. Like Disney FastPass+, the reserved time slots might occupy about 70% of the available travel slots so as to allow the "Standby" line to continue to move. Ditto for any buses that are supplementing the Gondola during peak times. Time slots at "off hours" could be priced lower or free (no charge for the time slot reservation).</p>	Glenn Ricart	Website
291	<p>In order for the gondola to be viable and successful, I recommend that you figure out a way to locate the parking lot closer to the base station.</p>	Kyle Greenberg	Website
292	<p>Why is the policy always "cram more" into parks, canyons, etc.? Consider limiting access to a reasonable number of people.</p>	Merry Lehtinen	Website
293	<p>I am supportive of the option of a gondola in Little Cottonwood Canyon to alleviate traffic.</p>	Kary Christa Smith	Website
294	<p>Out of these 3 options the only one that seems like a helpful situation is to have a dedicated bus lane all the way up LCC. I believe we should also have a scaling toll system with a no stop toll booth that reads a transponder or bill by plate with incentives for carpooling and adjustable base rates for off peak and off season use. Toll Proceeds going to improve, protect and maintain LCC and BCC respectively.</p> <p>A gondola would ruin the canyon in my opinion. And would be nothing but a headache.</p>	matthew rocha	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
295	We have lived at xx East xx South for 21 years. We love Little Cottonwood Canyon and are tremendously interested in addressing the traffic problem and want to see the solution protect in perpetuity the quality of our watershed and the entire ecology of the canyon. The ONLY alternative that makes any sense to us is the Gondola with the LaCaille Base Station option. In the time we have lived here, there have been dozens of instances during the winter when the canyon closes and our neighborhood becomes a parking lot with vehicles waiting to get up to the ski resorts. ACTION must be taken now - we cannot wait. The gondola solution works all over the world. It is very competitive in price, it is far superior regarding environmental impact and in addition to addressing the traffic iss ues, it will become a significant economic benefit. Added nose to nose busses or building a bigger road requiring snow sheds makes NO SENSE to us. Thanks for taking our comments. The Hartmans	R Daniel Hartman	Website
296	Gondola all the way.	Chris Koogler	Website
297	I served as Mayor of Sandy for 24years and took a tour of the differential modes of transportation to the Resorts and canyons	Tom Dolan	Email
298	Gondola seems feasible, bike lane issues still need to be addressed	Craig Powell	Website
299	Please just build a parking garage and then add more busses. Maybe add signs that tell people when the lot is full at the bottom of the canyon instead of at Solitude and snowbird	Alec Quick	Website
300	As someone who lives alone just off Wasatch blvd and grew up in Salt Lake, I don't like the idea of being forced into shared air space for any amount of time during winter which is historically flu season. COVID raises new concerns. UDOT would become liable for illness. I should have the option to travel to the resort without risk of getting sick. Everyone already has cars, let them drive up the road and don't let the resorts over load the roads. More buses won't eliminate private cars which clog the canyons. We already have enough cars per person we don't need buses at all with ride share apps. This is a big taxpayer funded waste. Work on avalanche mitigation improvements to keep LCC open and make both canyons toll roads. Make all cottonwood canyons resorts impose daily capacities and provide plans for handling traffic, without causing delays. Enforce penalties if they do. Post signage at the bottom of the canyons when resorts are at capacity and turn new traffic around. Don't waste millions of dollars of tax payer money on buses or public options. This can and should be managed as a surplus to the tax payer. If you watch Warren Miller ski movies from 40 years ago LCC traffic was just as much of an issue then as now. Some of the folks looking at this are too narrow sighted. Historically keeping LCC road open has been much more of a problem than public transit. Single persons need to be taken further into consideration. I live in Utah for access to recreation. This type of wasteful over reach beyond regard for anyone's health or safety would force me to move somewhere more remote where I still had a sense of freedom.	Jason Shields	Website
301	I am writing in support of the Little Cottonwood Canyon Gondola. I think it would solve many of the transportation issues and be an asset to the community.	Mike Williamson	Email
302	Yes to gondola.	Stephen Spanos	Website
303	I would like to see a rack and pinion train connecting the mouth of the canyon with stops at each of the ski resorts and down into Heber City.	Justin Neville	Website
304	I vote for road widening and a dedicated transit lane.	Dixie Peeler	Website
305	I would select the "enhanced bus with roadway widening" option because it is the fastest time to the resorts. I don't like the gondola because of the long term maintenance costs and it is not any faster. One thing I didn't understand is if the busses would allow backcountry users to get off at their desired stop; or, if the busses would only allow users to get off at the ski resorts.	Diane Whittaker	Website
306	I support Option 1. It is the least invasive and most closely preserves our canyon and local environment the way it is.	Richard Scott	Website
307	This is excellent work on the alternatives. While the study looked at the costs, did you consider the alternative impacts on climate impacts? Also, how would the various alternatives deal with people who desire to travel part way up LCC to go hiking? Would those people be allowed to drive? How would this be monitored? A really big question: What about Big Cottonwood Canyon? Aren't the same issues present? If a change takes place with LCC, would the next project be to look at BCC challenges? Keep up the great work.	Howard Bornstein	Website
308	I am strongly in favor of the gondola option. I don't want to see the road widened in the canyon and want to preserve the creek and watershed. Additionally, the quiet nature of the gondola makes for a nice experience for those within it and a quiet experience for those beneath.	Steven Brophy	Website
309	My thoughts on the challenges that we are facing i LCC SR210 are simple. As a person that has enjoyed the canyon and Snowbird for nearly 20 years, i want to express that i understand the importance of Snowbird being profitable, but I think that during this past winter the IKON pass had a negative effect on both the parking and resort experience and that some kind of forced limits could be constructive. Second, in observance of the traditions of backcountry access for Climbers and Snow Enthusiasts, backcountry access should remain a priority for any canyon plan. And, lastly, I support electric busses and am not enthusiastic about a gondola service.	Ryan Wedemeyer	Website
310	We should not widen the roads or ruin the view of the canyon with a costly and obstructive gondola. This is a waste of taxpayer dollars. The issue of high traffic only occurs on the weekends in the winter when skiers are trying to get to Snowbird and Alta. The ski resorts need to foot the cost of a solution. There are less costly and impactful means that can be explored. For example, skiers can not go to the resorts without a pre-pair designated parking spot for the day or must arrive on resort funded shuttles/busses. Let all others going to enjoy the canyon but not to the ski resort drive or take another designated bus. Do not destroy our canyons. There are better alternatives.	Mindie Emmertson	Website
311	I am for option #3 with Gondola access to little cottonwood canyon. Looking at the report of the alternative it will be the lowest cost and provide the most capacity of the 3 options. I also believe that the gondola transportation would be safer in dangerous snow or storm conditions, provide a more relaxing ride and be a novel mode of transportation for locals and tourists visiting Utah. I would also be in support of increased busses and peak period extra lane use. -Please consider Big Cottonwood canyon and increased parking and services at the initial transportation hubs. These areas could also be invested in by the resorts themselves to provide services at the base of the canyon so that customers could have a more streamline and enjoyable time enjoying themselves.	Nathan Simpson	Website
312	Gondola! Please don't underestimate the increased business to offset the costs. The current road closings and required public transportation are keeping MANY away. We've had terrible experiences even with great skiing.	Steve Liberman	Website
313	Of the alternatives described, the steel-wheel train would be the sexiest, most civilized and would -- intentionally or not -- become a tourist amenity of its own. The rubber-tire, more-buses solution is too inside-the-box, and yet still fairly close to the cost of the gondola. So the gondola solution is the best choice -- less than half the cost of the train, with an acceptable ride time, and would also be its own year-round tourist draw. SR210 either becomes closed to non-resident winter traffic, or has a steep toll for skiers.	Jim Pettegrew	Website
314	I like the Gondola option over the other two. I personally think it would be less disruptive to the road improvements and also has the potential to reduce traffic up the canyon. One suggestion I would have is add a stop for White Pine trailhead so hikers can use the Gondola as well as skiers. It would also make it usable 12 months a year and continue to reduce traffic up the canyon	Steve Slessinger	Website
315	Gondola, no question.	Maile McKain	Website
316	Build a high speed gondola system	Dakota Ruse	Website
317	Snow sheds are a must. It would alleviate closing to canyon every time it snows. Not sure why this wasn't done years ago. More buses and parking for bus riders. The gondola doesn't make sense to me at all. Bottom line is do something now!	Martha Scott	Website
318	I think the gondola is the best plan but the gondola plan laid out here has some major flaws. It needs to go up to both snowbird and Alta and needs to have parking at the base. No one will ride it if you have to take a bus to get there, then get on a gondola, and finally get on another bus to get to Alta. Whatever plan is chosen, that form of transit should continue to run during the summer with as many people as there are in the canyons year round.	Robbie Kosinski	Website
319	As a Salt Lake City resident and skier I strongly support the gondola option as the most sustainable and cost effective.	Adelaide Corey-Disch	Website
320	Hi- Based on the plans for number of people per hour and estimated transit time, it looks like there will probably be more busses. One thing that isn't addressed is the energy source of the busses- diesel, gas, electric. Although it would be more expensive initially, it would be good to have the bus service electric to help the air quality. The electric service infrastructure could be incorporated into the transit hub. What you composed made a bunch of sense. But, think on this, suppose you composed a catcher title? I mean, I don't want to tell you how to run your blog, but suppose you added a title to maybe get a person's attention? I mean Home - Little Cottonwood EIS is a little boring.	r p	Website
321	You should peek at Yahoo's front page and note how they create article headlines to grab people interested. You might add a related video or a related pic or two to grab readers interested about what you've got to say. In my opinion, it might bring your posts a little bit more interesting. I have studied the proposal by Chris McCandless for the La Caille base station option for the proposed gondola in Little Cottonwood Canyon.	Bridgett Abe	Website
322	This optional proposal personally impacts me to a great extent, so I wish to briefly comment. I am one of the managers of the Despain farm at the mouth of the canyon. I live at the farm, along with my sister and brother. We own 5 residences that would be adjacent neighbors to the base station proposal. As a mountaineer, I spend a great amount of time climbing, back-country skiing, hiking, and bicycling in Little Cottonwood Canyon. The opportunity to walk to the base station and ride the gondola to the upper canyon is very appealing to me. I have watched for many years as the traffic in the canyon has exploded. The traffic jams at my house make the road difficult to use many winter mornings. The pollution is terrible. If we could get more people using the gondola and out of cars, we could improve these issues. I studied at the National Avalanche School, where we were trained on, among other things, avalanche hazard to fixed structures such as roads and utilities. Snow sheds such as those I have used at Rodger's Pass in British Columbia and Red Mountain Pass in Colorado can help prevent danger to vehicles and passengers through slide paths, but they also increase danger due to reduced visibility, lighting, and slick surfaces, requiring engineers to trade off and balance this danger to property and life both with and without the snow shed. Widening the road would have an environmental impact as well. The Gondola could operate during periods of high avalanche danger, allowing UDOT more time to safely clear the road for delivery vehicles that can't use the gondola, while keeping the resorts and back country users access open and safe. Good alignment of the towers would be necessary to reduce visual impairment to the beauty of the canyon and avoid avalanche hazard.	Eric Despain	Email
323	I have seen solutions to similar access and safety problems around the world, from climbing Huascaran in the Peruvian Andes using burros for access, to the volcanoes and Alps of Japan, to British Columbia using helicopters to start week long ski traverses, to Colorado's Red Mountain Pass, to more summits that I could list in the European Alps. One good example is the access to the beautiful town of Zermatt. Skiing down the Matterhorn at the end of a week-long tour from Mont Blanc, one is greeted by pedestrian streets full of people walking and perhaps a rare vehicle. People either take the train right into town from anywhere in Europe, or park a few miles down canyon and get on the train there. If you visit, you will find it a jewel to have the traffic jam gone. I took the train back to the airport and didn't need a car. Another example is Grindelwald. Here, the Monch, Eiger, and Jungfrau tower above the valley. To ski tour the Berner Oberland behind them, one takes the Junfraubahn to the pass by the Monch. I skied off for a week of climbing and touring the range, skiing out to the little town of Blatten at the end and taking the train back. In Chamonix, the Aiguille du Midi tram takes thousands of visitors each year high on the Mont Blanc Massif, enabling hiking, climbing, skiing, or just enjoying the view at the top, without the need for a highway up the mountain. I think the gondola, perhaps with a link to the light rail down to the airport and down town, would be the best solution for LCC. As a direct neighbor, I look forward to using it extensively and leaving my car in the garage. Please make an efficient access to the white pine trailhead from the gondola, and you will cover 98% of the back-country users as well. Below white pine, if users can still drive to Lisa Falls and the power house, you cover almost everyone. There are a few tours that can end mid canyon on the highway, where people typically hitchhike out.	Thomas O'Meara III	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
324	I live on the land adjacent to the proposed base station for the gondola and currently co manage the farm on which the base station would be built. I am in favor of the proposed gondola base station and would like to explain some of the reasons for my support. My great great grandfather, Solomon J Despain settled this land under the direction from Brigham Young. His second wife, Susan Dean, (from whom we are descended) lived on the land and raised her family there. Susan's eldest son, my great grandfather Lewis Edgar Despain, "Ed", along with his wife Annie "Butler" Despain, stayed and farmed this land all their lives. Ed ran "the Jitney" (a car that ran on railroad tracks) up and down the canyon for decades. The Jitney was originally pulled by horses and mules. They would drag logs behind the Jitney on the downhill ride to act as brakes. Later the Jitney was motorized. Ed and his sons hauled supplies to Alta and hauled ore out of the canyon. Ed's son Elbert was the first Mailman in Little Cottonwood Canyon. His mail route was called the "Star Route". His descendants still deliver the "Star Route" and it is the longest family run route in the USA. Ed's son Verne, (my Grandfather) was an engineer with the forest service and was instrumental in designing the safety features for ski lifts. The Utah historical Society has a picture of Verne sitting on a ski lift chair at Alta. The picture says it is Al Despain, his brother, but it is actually Verne.	Susan Despain	Email
325	I give you this background because the family connection to Little Cottonwood Canyon runs deep. The family has been involved with transportation and industry in the canyon since the earliest pioneer days. Considering our family history It would be wonderful to be part of the next chapter! Please choose the gondola!	Eric Rosen	Website
326	I moved from Durango Colorado to Holladay Utah in 1976. In 2003 I got the opportunity to build my dream home in a beautiful location right in the mouth of Little Cottonwood Canyon. I have been an avid skier and user of one of the true gems in Utah. Little Cottonwood Canyon has seen changes for good and for bad over my life time. However, with the Little Cottonwood Canyon Transportation proposal for a Gondola, I believe this change will be for the good of the canyon in the long run. Living in the mouth of the Canyon has truly been a blessing and a curse...The convenience most times out weighs the canyon traffic...However, in the winter...That changes from just being able to get from point A to B...and home again...	Gary Napel	Email
327	I have been following the different names of all the Wasatch Accord-meetings from the Wasatch Mt accord ..to the Central Wasatch Commission. I believe the only solution that Checks off all the Boxes for the Environment, Safety, Technical and Public Financing is the Gondola. I would Gladly support this endeavor if and when it is approved. I am aware of the proposal to move the suggested Gondola Base Station from the Park and Ride area to the chain up area to the west. I am in favor of the proposed move to the chain up area. I believe the Gondola approach is by far the best solution. This solution was proposed during the conception of Snowbird Resort and at the beginning of construction of the first lodge at Snowbird. In hind site it is a travesty that those plans didn't reach fruition at the time Snowbird was in its infancy. Had the Gondola been built at that time, Utahns could have built it at a lower cost, experienced less canyon traffic, less pollution from the current modes of transportation going thru the canyon for the last 50 years, and have had less headaches with homeowners who now have homes at the base of the canyon. If we finally get the optimum solution this time around, it will be a really smart decision for the environment and the Gondola will be less expensive to maintain than the other solution. I think the maintenance cost factor is huge benefit over the alternative plans. The Gondola is right in the middle price wise for construction, but the ongoing cost of maintenance should be a priority in this decision. Once the construction costs are satisfied, then its a done deal, but maintenance costs go on into perpetuity and that's a long long time. Obviously the Gondola is the most cost effective approach, the most environmentally approach and the most aesthetic approach. GONDOLA seems the perfect answer to this 50 year old vexing problem.	Bette Richins	Website
328	This would be fantastic!	John Temple	Website
329	I think building a gondola would be an excellent idea. And fully support the construction of a gondola.	Sarah Patton	Website
330	I have followed this process for a number of years because I love using Little Cottonwood Canyon. I grew up snowboarding at Snowbird and love any chance I can to enjoy the Canyon. Little Cottonwood Canyon is getting more and more year round use and the proposed Gondola seems to be the best idea for all parties involved. It has the lowest long term capital requirements, provides safe year round access to the most amount of users and will dramatically reduce winter traffic. I would love to spend time on the Gondola instead of driving to truly capture more of the beauty Little Cottonwood Canyon has to offer.	Patrick Egbert	Website
331	I think the gondola is a great idea. I think it provides safer access for traveling up the canyon on snowy days, less vehicle emissions, and it sounds like a fun and scenic ride!	Matt Blank	Website
332	I'm in favor of the gondola option.	Matt Elsholz	Website
333	I support the gondola for transportation in Little Cottonwood Canyon. It's more environmentally friendly and easily wheelchair accessible.	Kara Eichelberger	Website
334	I grew up at the base of the canyon and love the area. I have a thorough understanding of the challenges that the canyon poses. In the ideal world, we would have the canyon to ourselves with instant and painless transportation to any detestation in the canyon. We need to realize that this is impossible. We need to find a solution, whatever our viewpoint, that maximizes the outcomes of ALL stakeholders. It is very clear to me that the gondola is the clear winner. I understand that the UTA has built its reputation by building roads, but we need to look to the future, not the past. The gondola boasts a longer usability period, operation under all weather conditions, and it achieves this at a realistic cost. This will be a unique undertaking, that will create amazing experiences. This is what us younger generations desire.	Jason Stowell	Website
335	I support the gondola because it's more environmentally friendly. :)	Mila Smith	Website
336	Improvements to S.R. 210 in Little Cottonwood Canyon have been needed for years, primarily for reduced traffic and safety. The Gondola project will alleviate both traffic problems and safety risks in the canyon's current configuration. Adding the gondola will reduce environmental impact and allow for a richer experience for those trying to make their way to Snowbird and Alta, especially on days with icy roads. I support the gondola completely.	Chad Latimer	Website
337	I support the gondola alternative project to help reduce traffic slowdowns and safety risks. I hope this project will be approved!	Cindy Latimer	Website
338	I support a Gondola up Little Cottonwood Canyon	Nick George	Website
339	The gondola makes way more sense when it comes to people per hour, as well as an environmentally friendly stand point. Plus it's just a way cooler experience than a bus.	Cory Stephens	Website
340	Put in a gondola, it'll be slick!!	Lincoln Pearce	Website
341	I believe the gondola is the superior option. It provides greater access to the canyon and eliminates the number of cars and pollution in the canyon. I think there are changes that could further enhance the gondola option.	Matt Ireland	Website
342	I'm in support of the gondola option based on its low impact on the environment and its increased safety and accessibility.	Zach Nash	Website
343	I completely support the Gondola base at La Caille. This will be a great year round experience that will not only help with the horrible congestion up the canyon but will also create a unique destination that will be great for locals and tourists alike.	Jenny Latimer	Website
344	I think the gondola is a great idea! It will provide greater wheelchair/disability access, and is more environmentally friendly. As a frequent Alta/Bird skier, I will definitely utilize a gondola.	Clare Gyorke	Website
345	I have been going to Snowbird for years and I love the idea of a gondola!	Hailey Smith	Website
346	I like the Gondola option best with the road widening second. As a parent trying to get kids to ski classes on times on snowy and busy days I think that could provide a guaranteed way to get to the resorts. I also like the reduced traffic in the canyon. I'd be keen to know if the Gondola could run in all weathers? For the summer, would the Gondola also run? I like to hike, run and bike in Little Cottonwood and less traffic noise would make the place feel more special. It would be great if there could be a hiking/mountain bike trail all the way up the canyon along the Gondola route. Great to see these good ideas.	Donald Hinks	Website
347	I have been a season ticket holder at Snowbird for over 30 years. The last several years have been almost unbearable due to traffic. Some days I just decide not to even try to go to Snowbird knowing what the traffic conditions will be like. That is really frustrating when you purchase a \$1,000 season pass. Gone are the days when skiers and riders can access the canyon by vehicle with any efficiency, park conveniently, or enjoy the canyon on a snow-day without hours of delay both up and down the canyon. There is way too much traffic in Little Cotton Canyon in both winter and summer seasons. This last year I began using public transportation by catching the 192 Bus that accesses the canyon. On many days the bus would drive right by me because it was already full. In addition, the bus would also get in the traffic going up and down, and in order to avoid it coming down, I would have to cut my ski days off early. The traffic is just too much and it takes much of the enjoyment out of the day - and often defeats the purpose as to why we ski in the first place - to get away, relax and enjoy something different. Instead, I find myself often feeling frustrated and wanting a different solution. I am so pleased to learn that plans are being implemented to incorporate a Little Cottonwood Canyon Gondola. An uninterrupted ride to the resorts would be amazing in every way. The safety of the canyon road would be drastically improved, pollution would decrease, resort parking problems would be eliminated and our mountain experiences would be drastically improved. I am very much in favor of using the LaCaille property as a Base Station. There are two very efficient accesses to LaCaille, from the South, and from the North and public transportation could access this location easily, as proven by the canyon transportation that already exists. In addition, it is perfectly aligned to the west of the Little Cottonwood so as to minimize directional transportation stations. The canyon could be accessed even under conditions where the road needs to be closed due to its location at the base of the South facing slopes. The gondola can travel in almost any snow condition. I am already excited to think I can conveniently access the canyon resorts without the frustrating, white knuckle drive and the frustration of the parking situations. Then in the Summer, I can see myself accessing the mountain trails for hiking and biking while at the same time using clean efficient transportation. Also, think about how great it would be for the cycling community to be able to access that incredible mountain road with minimal traffic. These are some of my many reasons I am supportive of the Little Cottonwood Canyon Gondola project. I hope UDOT will get behind this project with 100% of its support. It is the right thing to do for Little Cottonwood Canyon and Utah. Just think about what an Iconic tourist attraction it would be for our State. Someone could get off an airplane at our new world-class airport, jump on our clean and attractive light rail system, transfer to a bus, and be on the gondola in 40 minutes or so. How cool is that? I'm in.	Brent Lange	Email
348	Gondolas are the best option. Better for the environment, longer lasting, and more accessible.	Meagan Downey	Website
349	I support a gondola.	Lisa Hall	Website
350	I support the gondola up little cotton wood canyon.	Gianmarco Pinton	Website
351	I like the gondola option. Gondola to decrease pollution, cheaper.	Kim Goebel	Website
352	We are a group of volunteers and opening a new scheme in our community. Your site provided us with valuable information to work on. You have done an impressive job and our entire community will be grateful to you.	Clarita Holmes	Website
353	Gondola is the best option for the short term and long term. The option to put the base station by LaCaille is the right option.	Colby Rollins	Website

354	I like alternative 2 best. Less cost and impact	Karen Garff	Website
355	We live in a time where protecting our world and environment is of utmost importance. The choice of a Gondola is clearly the better choice. It's non-invasive to our earth and will most likely be an additional opportunity for tourism.	Kristin Bassett	Website
356	I support the gondola!	Laura Rank	Website
357	Honestly, the gondola is the only sensible option here. Not only is it the most environmentally/energetically efficient option, it is the most accessible to all riders (including our handicapped residents and visitors). Moreover, what better way is there to take in the wonder of our beautiful Utah than a gondola ride?	Andy Perault	Website
358	I'm in support of the gondola because it's more environmentally beneficial than the buses!	Jacquelyne Jones	Website
359	I support of the gondola because it's more environmentally friendly than the bus option.	Brett Merritt	Website
360	I support the gondola. My preferences are based on relative cost, benefit to canyon use in the summer, and concern for too many people in the canyons. Given this I think gondola is a horrible idea. It would not help access trailheads away from the resorts and put too many people at one time into the canyon which would diminish significantly LCC's character.	Jenna Beam	Website
361	I think enhanced bus service is the first step noting how beneficial this has already been this past winter for canyon traffic. Important would be fees for driving single use cars in the canyon and robust parking infrastructure close to the base. If this doesn't provide significant improvement we can move on to add a lane for bus only service down the road. No need to spend the extra money if significant benefits are achievable with less money. The thing nobody wants to talk about is that if we put above a certain amount of people in the canyon (number would be different depending on individual) it will cease to retain its character. Gondola makes this dangerous, in my view. Thanks!	Matt Vukin	Website
362	I support the gondola	Lauren Radlinski	Website
363	I like the gondola. It would be draw tourists and has lower O&M costs. And would have use in the summer as bike transit for us downhill riders.	Ian Bailey	Website
364	In my opinion, if we don't take drastic steps now, we will be talking about possible solutions again in 10 years. The gondola option would provide not only the best long term solution, but take so many vehicles off the road. Environmentally, I believe this is the best as well and can be expanded further.	Maurice van der Stuys	Website
365	I'm interested in environmentally-conscious solutions that will reduce Utah pollution. A gondola system is a much better investment.	Trevor Robertson	Website
366	PLEASE MAKE A GONDOLA instead of buses. The gondola is SUCH a better option. It is much more environmentally friendly, accessible, long lasting and we won't have to build a one mile cement tunnel for avalanche preparedness. If you've ever been to Switzerland you KNOW this is the way to go. This will also be a year round experience where the buses will mostly be used during the winter.	Anna Crowe	Website
367	I am in support of the gondola because it's more environmentally friendly than the buses! I also think it should be a year round option instead of seasonal.	Laura Lee Morton	Website
368	The gondola seems like a great idea. It will be an attraction that will generate its own economic activity. It is also a great transportation alternative. The city of Medellin in Colombia has successfully implemented gondolas as a mass transportation solution. We can do the same here.	S Douglas Wismer	Website
369	You need to be a part of a contest for one of the highest quality blogs on the net. I am going to recommend this site!	Hugo Collocoot	Website
370	I think you need to address the resorts adding free Day use lockers in any of these development options. Snowbird currently charges \$15 daily which is crazy. Think of the families with all of their gear, kids need a bunch of extra stuff. That's my main concern, we leave our vehicles with our gear bags, but what do we do with them once we hit the mountain? There needs to be a free or very inexpensive solution for local pass holders. Every family I've talked with that skis LCC voiced the same concerns. Thanks!	Dave Gibson	Website
371	This piece of writing presents clear idea in support of the new visitors of blogging, that really how to do running a blog.	Phillip Yuille	Website
372	I'm seriously concerned that you are proposing only 1000 people per hour with a gondola--a real gondola does 3000-6000 people per hour and could easily serve the needs of the canyon. The gondola is great. But why is it 1000 per hour? What kind of dinky-ass half-rate Chinese-bootleg gondola is this? Have you ever seen wildcat lift at Alta? That's what 1000 people per hour is. It was built in 1959. That is a joke for a public transit system. Please don't install 1959 technology. I propose a gondola, with actual gondola capacity. 3000 people per hour, minimum, please, or it will be a disaster. Do the gondola-but get a real one. Please.	Ariosto Ferro	Website
373	It's awesome in support of me to have a site, which is good in favor of my experience. thanks admin	Norine Shepherd	Website
374	I hope that the council chooses the gondola. It would be a great way to see wildlife, reduce the impact of construction, and be a smarter solution to our mountains.	Daniel Jones	Website
375	I support the expanded bus route and would definitely utilize it rather than driving my personal vehicle.	Phillip Deaney	Website
376	I couldn't refrain from commenting. Very well written!	Melinda Boyce	Website
377	No more buses in the canyon please!!!	Ian Fareis	Website
378	I like the gondola as it would give a unique year round experience. I don't see the extra buses and bus lane doing anything in the summer other than sitting but I could see a lot of people taking a summer ride up the gondola. I don't think it would look as bad as a larger piece of asphalt going up the canyon with giant man made snow sheds. I also don't like that with more buses I think we would still need more parking at the top to run all the buses. For me gondola is the only one that makes sense. Less Asphalt, cheaper annual costs. 1 million points for Gryffindor... I mean gondola.	Wyatt Barrett	Website
379	I support the gondola. While it costs a lot it is proven technology as its already being done in Europe. The impacts are less to the environment and access to the resorts is almost always guaranteed.	Steve Westover	Website
380	was shocked to see how crowded Snowbird became just last season due to the icon pass. the lines were five times longer than I have ever witnessed in 28 years and the canyon traffic mirrored this problem. while efforts are underway to better manage traffic and parking, it only multiplies the problems allowing icon pass holders from multiple states to have access to Snowbird. I think the icon pass participation needs to be canceled for the upcoming ski season. the mountain and the roads and the lifts cannot bear this burden. Once solutions are put into place thanks to this study, plan and EIS, then the icon pass could be revisited.	Susan Thomas	Email
381	I heartily applaud the extensive calculations, proposed route overlays, etc. generated to reach scenarios here presented; specifically the COG RAILWAY options. I am a big railroad fan. But I must here concede that the AERIAL GONDOLA appears to best deal with the avalanches and mudslides prevalent in these canyons. It would also leave open access paths to wild lands for all concerned. FUTURE EXPANSION to Brighton and on to Park City should be considered as highly likely. If possible, please plan for a new bus stop at N. Little Cottonwood Rd and Wasatch Blvd. (H6Q4+CP Cottonwood Heights, Utah).	Bret Olsen	Website
382	There are insufficient bus stops to serve residents and guests who live/stay close to the LCC mouth park and ride. The nearest bus stop in many cases is the opposite direction from the ski resorts and the bus stops along the way are too spread apart with no parking available. I run multiple short-term rentals in the Canyon Place subdivision near the intersection referenced above. In order for our guests to take the bus, they would either need to drive and park at the Cottonwood Heights park and ride near Creek Road or attempt walking to the "Wasatch Blvd @ 8590 S" bus stop. Walking in the winter is dangerous as there are no sidewalks for much of the distance. Both of these options are not practical. Nearly all of our guests rent cars and park at the ski resorts. A bus stop at the intersection of N Little Cottonwood Rd/Wasatch Blvd would get substantial use from the large number of short-term rental units nearby. It would provide a viable alternative to tourists renting cars and would be compatible with any of the proposed solutions for the canyon transit.	Jeffrey Lunt	Website
383	The gondola appears to be the most ideal situation. Pairing it WITH improved bus service And tolls could significantly cut down on individual vehicles, traffic, congestion, and environmental concerns.	Jackie Baker	Website
384	The use of Gondolas would be less of an environmental impact also allowing for an expanding tourism for those who don't have vehicles capable of winter weather travel (local or rented cars).	Alice Johnson	Website
385	I think any of these options would be a big improvement to the traffic problems in LCC. The gondola option looks great for skiing without any improvement to the parking problems at trailheads. The bus option with a dedicated land looks like it would serve the most users and it also has the lowest round-trip travel time. Given unlimited money, both would probably be best.	Nick Jensen	Website
386	All uses considered, I believe the wider roadway with a transit lane and snowsheds offers the best year round solution to reducing the number of cars and getting the road open sooner on powder days in Little Cottonwood Canyon. The gondola towers would degrade the pristine canyon views much more than a wider roadway. Buses would still be needed from the parking areas to the gondola station. Buses could stop at more locations in the canyon for dispersed recreation possibilities.	Richard Thomas	Website
387	I support the adding of a gondola because it seems like a significantly better option environmentally. The air in Utah needs all the help we can give it.	Ben Tichy	Website
388	Wasatch Blvd -- consider putting the shared use path on the west side of Wasatch Blvd. Much of the traffic is coming from inside the valley, not next to the mountains. Putting the path on the west side of Wasatch Blvd decreases the number of pedestrians crossing the street. The 5 lane alternative is marginally more expensive for an enhanced street -- go with the 5 lane alternative!	Rudy Rutemiller	Website
389	I love the gondola and fully support it. I especially love that it's an environmentally friendly option and helps reduce my carbon footprint.	Rebecca Jennejohn	Website
390	I think a gondola would be a more environmentally friendly, safer, and more pleasant way to transport people.	Mathew Djavaherian	Website
391	I would love to see a gondola in our community. It could increase the tourist attraction to the canyon beyond the peak ski season while also reducing the congestion.	Alexis Walters	Website
392	If we look at the solution to the canyon congestion as an opportunity to enhance and excite the community, I believe choosing the gondola is that option.	Cleveland Nicoll	Website
393	I'd strongly suggest the gondola option, due to its minimal cost and environmental impact. Thank you. I am all for the gondola, however for me none of these options will help me. I live between all of the transportation centers and the mouth of the canyon, so I would have to drive AWAY from the canyon, then get on a bus, pass my neighborhood to then get on a gondola. Not going to happen. Now if there was parking at the mouth of the canyon for local residents I might do that... otherwise I'll just drive myself up the canyon. Now what would be great is to have it open in the summer, and build mountain bike trails from top to bottom... then I'll ride my bike to the gondola, take that up and then bike down the new trails.	Justin Loeloff	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
394	I support the "enhanced bus with roadway widening." This proposal offers additional snowbanks and bus lanes to aid in sustainable public transit. A gondola would ruin our views and is not sustainable. Snowbanks are necessary for emergency vehicles and busses to travel safe. Widening the road is ideal for future growth and reducing long-term costs. I'd also like to recommend the following: 1. add a toll at the base of the canyon to encourage carpooling and public transit. Use express tags to ensure it doesn't delay travel time. 2. Consider refinishing the mining train-tracks that go to Alta/Snowbird. An extended light rail option would be ideal. 3. Consider adding a pass from big cottonwood and/or Park City to make traffic easier throughout the canyons.	Jacob George	Website
395	I think there needs to be a toll gate at the mouth of the canyon to provide management and also funds for restrooms, trail heads, parking lot upkeep, trail up keep, and limit number of cars in canyon at given time. Count how many parking spots are in canyon and limit that many cars entering. I support a third lane for bus travel in winter and pedestrian and bike travel in non winter.	Tyler Rice	Website
396	The best plan would be to add a lane along with the Buses. The added infrastructure of a tramway is nice, but in-flexible. There can only be certain stops. Buses provide this flexibility. Added flexible infrastructure that is not dependant or limited by the existing roadway would be best. I would urge investigation into a train/trax type solution, that would not be limited by the road system, and could allow flexibility of stops throughout. Additionally a separate trail system could connect the top to bottom. I do recognize that this would be a large investment, but I think that would be an investment that would be used and maintained indefinitely and encourage a shift in existing habits.	John Erdmann	Website
397	I am an owner up in Alta and I wanted to inquire more about the proposed option #3, the gondola. While I think we all like the idea of an environmentally sound option that reduces road congestion, I am particularly concerned about how the gondola will impact properties in the canyon, specifically coming up through Alta. Exactly where do you propose the terminus by the Wildcat base to be? And do you have any idea of the altitude of the gondola towers and cables to be making it's way across the canyon up at Alta? I can imagine residents and owners alike would be concerned about changes to views. The visuals presented online, while lovely, do not provide the level of detail that many of the homeowners in Alta will require. I so appreciate you sharing what information you do have with me.	Marianna Frame	Email
398	I live about 2 miles west of Little Cottonwood Canyon, off of 9400 S. I feel strongly that we NOT widen the road up Little Cottonwood Canyon and that we simply increase bussing and require a toll on cars going up the canyon on busby ski days. I feel we should discourage car travel both for the sake of our air quality and for the sake of traffic. Whatever we can do to encourage public transit WITHOUT widening the road is clearly the best option to me. The well being of the canyon should be the priority. The gondola idea seems too expensive and unnecessary. Thank you.	Kristina Christopherson	Website
399	I work in the canyon at the Granite Mountain Records Vault, and manage a few dozen employees who also work there. I request that you find fair and adequate solutions for those working in the canyon, recognizing that not everyone is a visitor, tourist, or skier. Having said that, I also go to Iron Blossom every summer as our family are owners of units there, and ask that you find solutions that continue to allow owners to get to the resort, as buses and gondolas would not work for this type of visit to the canyon. While I recognize the Enhanced Bus with PPSL is the most expensive up front cost and the middle project as far as on-going costs, I believe it is the most comprehensive plan proposed, and I recommend it. Additionally, it is the only plan with a reasonable travel time.	Jason Loscher	Website
400	A gondola is the most environmentally-friendly option that takes into account air quality, water quality, and energy efficiency.	Heather Burnett	Website
401	A gondola is the most environmentally-friendly option.	Adrian Burnett	Website
402	Underground is the only option. Anything else is a waste of time and money. Lease the old shopco and fresh market. Go underground from there. Look at the last vegas convention center loop by the boring company. Eventually go all the way to I15 and solitude and Brighton and Park City. 2 tunnels all at high speed and to all the resorts in the area.	Paul Curry	Website
403	I am in full support of a gondola up little cottonwood canyon as an alternative to buses because it is a step to make Utah a greener state and it will help us lower our carbon footprint. In a world where more and more pollutants are affecting our air- we need to take a stand and help the environment instead of hurt it. This is a great step towards that direction.	Mikayla Iverson	Website
404	A gondola would be a perfect solution to reduce the carbon print and traffic up Cottonwood Canyon. Also, what a beautiful way to enjoy the scenery....this could be a real draw to visitors as well.	Korianne Johnson	Website
405	I think the gondola is the best choice.	Jordan Latimer	Website
406	I think a gondola is the best choice.	Jordan Latimer	Website
407	Terrific idea! Would love to see this happen	Adam Daveline	Website
408	More buses and a wider road don't solve the problem. If an accident or avalanche shuts down the canyon, it doesn't matter how many buses or bus lanes you have - everyone has to wait and everyone is stuck in traffic.	Ljubomir Cipris	Website
409	A year round, environmentally friendly way to access Cottonwood Canyon? YES PLEASE GONDOLA!!! Take those giant steps forward, UDOT!	Andrea Daveline	Website
410	I am in support of the gondola.	Sarah Yannarell	Website
411	I favor the expansion of the road. I think Glenwood Canyon in Colorado is a model to copy. UTA has not demonstrated the ability or understanding to operate a public transportation system in the canyons that people want to ride. Also, when I-15 gets busy we add a lane so why would it be different in the canyon? Of course the canyon users that are not skiers want only the skiers to pay for improvements while they get a free ride and usage. All users must share any toll or user fee regardless of whether you are a skier biker hiker picnicher or camper. I am an Alta skier only. If UTA ran an express bus to Alta and back with no snowbird stops, I would ride it. But stopping at Snowbird both ways makes it unuseable for an Alta skier that doesn't want to spend an hour each way on the bus.	David Larson	Website
412	My biggest concern is all about the number of people stuck in the canyon when an avalanche occurs. The gondola is the answer! From a safety standpoint, it makes the most sense. Please consider this option.	Denise Day	Website
413	I fully support the gondola instead of buses for Little Cottonwood Canyon. It's WAY more environmentally friendly and a year round option.	Dani Apple	Website
414	Looking at the environmental impact of the options presented, it's clear that a gondola is the safest, most responsible, and environmentally sustainable solution. Any road option is short-sighted and doesn't solve the problem. Getting people off the road is the best way to protect the canyon and plan for future demand.	Katie Henderson	Website
415	When I lived in Montana - my best friend survived an avalanche. It was a life changing experience for me. After living in Utah the last 6 years, there is nothing that makes more sense than a gondola for Little Cottonwood Canyon.	Josh Watson	Website
416	I'm in complete support of a gondola. It will have less environmental impact, and less danger in case of an avalanche. Building a tunnel and providing access for cars will just cause more traffic and pollution and potential car accidents during the winter seasons. Utah can be ahead of the game on this one instead of a step behind. Go gondolas!	Dave StJulien	Website
417	I support the gondola because it's the only option for a low carbon footprint. If there are avalanches there won't be a ton of buses stuck in the canyon.	Lee Storrow	Website
418	I support the gondolas because they are more environmentally friendly.	Natalie Monreal	Website
419	After reviewing the transportation proposal for Little Cottonwood Canyon, I excited at the prospect of Gondolas through the mountains! It looks like Gondolas will serve the most individuals at an acceptable cost.	Chase Nichter	Website
420	Gondolas would be able to transport more people with lower operating costs than either bus option. Only one bus option is significantly faster than the gondolas, and that comes with significantly higher cost and impact. Gondolas are a much better long term investment and a better fit overall for Little Cottonwood Canyon.	Darby Madewell	Website
421	Please find a way to limit SOV traffic --allow only bus up or employee's who are correctly equipped to drive up. Or CHARGE a good fee to park at all resorts up the canyons--if not fully loaded car. Again that is properly equipped on 4x4 days. Make more places for Park and Ride--even from Park City?!! Or Mt Dell area--some other parking spot for commuters. Keep bus routes fast and cleared...if bus is stuck in line--why use it. The whole point for bus is to MOVE folks faster and show people taking the bus is best! Another option--Make a one way lane up for bus only--? Best of luck and thank you for asking for input! Carri	Carri Wullner	Website
422	I support this. As a fellow Utahn, I support any action to reduce pollution, become more environmentally friendly, reduce Inversion here in Utah, and make the world greener. This is such a great way to reduce the carbon footprint here in Utah and can be useable year round	Josh Valdez	Website
423	I support implementing a gondola into the Cottonwood Canyon's transportation system as a far more environmentally sound alternative to buses. It is a simple, economical, and effective solution.	Lauren Noll	Website
424	I am in support of the Gondola option because it is more environmentally friendly than the buses!!! Thank you for all of the work you have done with these studies.	Carolyn Hartvigsen	Website
425	It seems to make sense to look at the transportation system that would provide the most flexibility in how many people could be transported because of the variability in ridership between the summer and winter months and where their destination is. When comparing a gondola system, that may have a higher initial cost, but costs less operate, it is quite appealing. With a bus transit situation, as we have seen this year (2019-2020) when the ski resorts closed down because of the pandemic. We found out that because of contractual obligations employees still had to be paid, and that buses sat idle and were not being utilized enough to cover their fixed cost. With the prospects that the road access(with a charge imposed) may still be part of the means to access the resorts and communities and other outdoor activities. Who knows how many people may look to the public option of riding the Gondola system vs. actually paying to access the canyon. Obviously if people are going to the ski resorts or close proximity, the gondola makes sense. If they are going to hike, fish, rock climb or access other parts of the canyon, car or bus service may be the choice. Another consideration should be gondola service connecting to Brighton and Solitude from Alta. This would provide emergency egress should we have further situations as was the case in 2019 where intense rain washed out a portion of Little Cottonwood Cyn Road. Or has been more frequently seen in current and prior years of avalanches closing the road. Let alone consider the possibilities of an earthquake or fire that could close off one or both of the Canyons. It is important to consider the safety of all people in the canyons. It has also been short sighted to believe that these kinds of accesses cannot be done to maintain the integrity of the Salt Lake Watershed and to be done in an environmentally sound way. Managing the costs of access or the speed of the transportation system should be the means by which the number of people in the canyons should be disciplined if that is the concern.	Bart Reuling	Website
426	I prefer the enhanced bus lane option Additional Comment: I see external forces as a critical concern. Wind/lightning which can shutdown arial tramways, as well as Avalanche concerns(Not mitigated by adding road way) Original Comment: The best plan would be to add a lane along with the Buses. The added infrastructure of a tramway is nice, but in-flexible. There can only be certain stops. Buses provide this flexibility. Added flexible infrastructure that is not dependant or limited by the existing roadway would be best. I would urge investigation into a train/trax type solution, that would not be limited by the road system, and could allow flexibility of stops throughout. Additionally a separate trail system could connect the top to bottom. I do recognize that this would be a large investment, but I think that would be an investment that would be used and maintained indefinitely and encourage a shift in existing habits.	Carolyn Ancill	Website
427	Please preserve our community! We do not need a wider road for only a handful of days of heavy traffic each year. Please, just run extra buses during this time. We, as residents in this area, can deal with 10-12 days of heavy traffic and actually prefer it as opposed to ruining our environment and budget.	Jessica Mills	Website
428	Gondola or more buses. Toll or paid parking! Not more traffic lanes!	Stefanie Jacobsen	Website
429	What an incredible idea! Living in Utah the last few years after having moved here from living in Southern California, I couldn't help but notice that two things I used to associate with LA seem to be plaguing Utah even more: air pollution and condensed traffic. This seems to be an amazing alternative that can preserve the beauty of the amazing rocky mountains.	TIFFANY NUTTER	Website
430	After lots of consideration I think the gondola is the better option.	Sean McCormack	Website
431	Alternative 1 will be useless. There is little, if any, incentive for people to get out of their cars to take a bus up since the buses will sit in exactly the same line as personal vehicles. Way too much money to spend for little benefit. The only real alternatives are #2 and #3. I prefer the gondola option since people will always want to drive their own cars. If we provide an option that is unique and traffic-free, people will be more likely to use it. Also, gondolas have the advantage of not having to worry about slow downs due to slide offs and accidents, thereby not adding to the congestion that will likely always be present on snowy weekends.	Carol Swenson	Website
432	Please choose the additional buses option. There is nothing lost in adding an additional lane later if the bus only option is not sufficient. It also avoids the environmental damage of adding a lane, which may not be necessary. The gondola is the worst option. It causes environmental damage, visual pollution and does not serve those who stop along the way at trailheads. No gondola!	John Woeste	Website
433	I think this is a great idea! Let's use more eco-friendly resources.	Cy Wood	Website
434	I support the sustainable gondola. It is the only real, responsible solution.	Anne Spezia	Website
435

436	For 393 million dollars, the estimated price of 10 million per mile of the boring company becomes feasible. The short term solution would just involve buying property at the base of the canyons and building large parking garages, which the gondola solution would also require. Then you'd build tunnels from those garages up to each resort. A long-term solution would involve digging tunnels from the SLC airport through to Park City, looping through both the little and big cotton canyons. This would not be affected by the amount of snow, could be powered by electric vehicles and ran cheaply, and would be the ultimate smackdown of any other ski area in the world, where you don't even have to rent a car to get to the mountain. Get off plane, get gear, get on underground transport, arrive at resort, declare victory. Please don't waste your time with a gondola. The future is here, it's in Las Vegas right now. If we want to be the BEST in the world, THIS is the solution, and all your other options suck compared to it.	Ryan Dietrich	Website
437	Wow, I just realized your solution only covered little cottonwood canyon. The idea I'm proposing would solve BOTH canyons for nearly the same price as your single canyon solution. How has the boring company not been considered? I refuse to believe I have an original idea. Major concern about widening Wasatch Blvd -- the increased traffic will cause significant noise pollution for residents living along this roadway. Please incorporate noise mitigation solutions -- see the Federal Noise Control Act of 1972. Please consider the pavement type: https://undark.org/2017/12/27/highway-noise-barrier-science/ http://www.trb.org/Publications/Blurbs/169200.aspx	Jessica Yingling	Website
438	I prefer the Gondola idea. I had always leaned toward a train system, similar to Switzerland and the Alps of Europe, which is so effective. Absent that option, the gondola seems as effective with less impact on the canyon. More buses doesn't seem to solve the problem as effectively and will just further bog down the roadway.	John Curtis	
439	I am in favor of the Enhanced Bus option with no additional roadway capacity. There are a few things that all proposals fail to address: backcountry skiers. This sport has exploded in popularity in recent years and backcountry skiers make up a significant portion of canyon traffic. This can be addressed with additional bus stops in Big and Little Cottonwood Canyons at a few popular backcountry ski trailheads. Also, these proposals fail to incentivize people to take the bus over taking cars. Many people (families especially) prefer to drive their car up canyon for the ease and convenience of having their gear with them and stashed away. There will always be more cars than there are parking spaces during peak times, and this just adds to canyon congestion. There needs to be a monetary incentive to take the bus. Consider making the canyon roads a tollway during peak times, and using the proceeds to fund additional buses. Consider paid parking or season permitting at the resorts (and ACTUALLY ENFORCE it with policing, booting/ticketing, etc). Exceptions could be made for persons carpooling.	Jennifer LaFountain	Website
440	I am in favor of the 1st alternative (buses, no widening of LCC road). However, I think this will only work if bus is less than parking at Alta or Snowbird and is very frequent. Think of Beaver Creek in Colorado. You can park in their underground parking lot, but space is limited and its expensive to park all day. Instead, you can park in their base parking lots and take a FREE bus up to the resort and buses come every 5-10 minutes. If taking the bus is still seen as less convenient or more expensive than parking, adoption of this system will be low IMO.	Becky Lawlor	Website
441	Until and unless we're prepared to enforce a limit on the total number of people/cars in the canyon, attempts to increase traffic in Little Cottonwood Canyon are little more than a transfer of tax dollars to ski resort revenue. The value of the canyon for most non-skiers is directly related to how many people are using the canyon at any moment. More people = less value. Additionally, more people = greater cost for taxpayers, those that use the canyon and those who don't. We can limit the number of people/cars in the canyon at no cost. Please at least consider traffic limits as an alternative to spending half a billion dollars of taxpayer money to increase traffic.	Michael Zaccheo	Website
442	Thank you for allowing public input regarding this important decision. It is high time to address the issue of traffic, emissions and avalanche safety in LCC with a long term solution. I feel that simply increasing bus frequency (even while building a mobility hub) will not encourage or give drivers enough incentive to choose the bus over their car - while I take the bus as often as possible I do hear many riders and friends complain that it is an inconvenience. However, I prefer this option over expanding the road to include a "bus only" (and summer bike/pedestrian) lane. While this would increase the convenience of taking the bus and provide recreation opportunities in the off-season, I do not like the impact widening the road would have on the canyon ecosystem and on properties and trailheads. The gondola seems to me to be the most long term solution - while it may seem a large endeavor now, it falls within the medium price range and will provide alternative transportation for years and years. A gondola would also spearhead this type of transit in Utah and make for a supreme example and test-site to implement in other canyons/recreation areas. My main concern with the gondola are the impacts on the viewshed, however, I believe it will more than make up for that in efficiency. None of the options mention stops at popular backcountry access hubs. I believe this is an important issue to many who recreate in the backcountry but strive to limit their environmental impact. I would like to see all solutions include, at least one, backcountry access stop. An additional comment/question: will there be projected emissions data released regarding the different options? I would be strongly influenced by the solution that has the lowest LONG TERM emission impact. Finally, none of these options will hold teeth unless a limit is placed on cars driving up and down the canyon. I believe building accessible mobility hubs that make using public transportation easier than driving is the most effective way to reduce dangerous congestion in LCC. Thank you for your time, Lydia Keenan, Salt Lake City resident, lifetime LCC skier and hiker.	LYDIA KEENAN	Website
443	The gondola option seems to make the most sense. I'd like to see the environmental impact of the construction, and timeline of start to finish	Janice Rinsky	Website
444	Please implement the use of Gondolas in favor of widening roads. This option is not only the most economical choice but it is also the kindest choice in regards to the environment with numerous and enduring benefits for the community at large.	Mary Bain	Website
445	Not on the EIS but useful in the short term: charge a canyon access fee per vehicle (toll and/or seasonal pass) and post electronic signage before canyon road access that describes whether parking is available (so visitors can switch to park-and-bus instead of entering the canyon.) Give up the gondola concept, unlikely to get the anticipated usage due to the one hour duration of the trip. Bus with canyon road widening seems best if it can be accomplished without ruining the character of the scenic drive. Bus without canyon road widening is my personal preference, least disruptive.	edward chillington	Website
446	My vote is for the gondola as it not only provides a better tourist experience, but is better for the environment and will not get caught in an avalanche. Thank you!	Jennifer Bennett	Website
447	Seems like the gondola would be better for the environment	K Baird	Website
448	The gondola for the Cottonwood canyons is THE ONLY thing that makes sense for the long term. It is eco friendly, aesthetically pleasing, and functional. Let's be responsible and choose this over more pollution from buses.	Natalie Daniel	Website
449	I am in support of the gondola project as it will be better for the environment versus buses; also, it will be safer for passengers in case of an avalanche emergency.	Jesse Gephart	Website
450	Hi ... I would like to bus service extended down Wasatch Blvd for those of us who live in Cottonwood Heights. Many of us who choose to live close to the canyons go up multiple times a week. The only option upon this plan for us right now is to get in the car and drive away from the canyon to turn around and be stuck in traffic. It would be great to walk or ride my bike to a bud stop. Currently the closest stops for me are either a mile away to the north or 8 miles away to the southeast (um yes that would Snowbird). Why wouldn't I drive?	Rebecca Shatles	Website
451	I am writing in support of constructing a gondola in Little Cottonwood Canyon. This option is safer and also much more sustainable than an additional bus service. The gondola system would reduce excessive road traffic, and also provide a safer alternative in the case of avalanches and landslides. It has the least amount of environmental impact both in construction and use, and it provides more financial and physical accessibility, allowing for larger and more diverse tourism opportunities. Of the options introduced by UDOT, I believe the gondola is the best choice.	Emily McGregor	Website
452	Unquestionably believe that which you said. Your favourite justification appeared to be on the internet the easiest factor to bear in mind of. I say to you, I definitely get annoyed while folks consider issues that they just don't know about. You controlled to hit the nail upon the highest and also defined out the entire thing without having side-effects , people can take a signal. Will probably be again to get more. Thanks	Yolanda Benedict	Website
453	I strongly prefer the gondola option and am especially opposed to widening the road in the canyon. I think getting more vehicles out of the canyon as much as possible is the best option for air quality and to preserve the feel of the mountains. Getting more personal vehicles out of the canyons should be the goal. Additionally, I think the gondolas will be even more draw for tourists who are turned off and confused by the snarl of traffic at the mouth of the canyons.	Brett Kennedy	Website
454	It is unfortunate that none of the plans call for reducing the number of personal vehicles to be used for transport to the resorts. This reduction would minimize pollution and increase the speed of public transit options. Perhaps increasing the number of buses in Option 1 (Enhanced Bus with NO additional roadway capacity) would be more desirable if there were no private vehicles, or a drastic reduction in private vehicles, resulting in decreased transit times. Even without the "no-brainer" reduction in private vehicles, I favor the option with the least expensive capital expense, Enhanced Bus with NO additional roadway capacity.	Phil Triolo	Website
455	I support a gondola in Little Cottonwood Canyon --- it's safer, better for the environment, and simply cooler and more fun than traditional buses or other alternatives.	Julie Saunders	Website
456	I would support gondola since that is both [1] practical (considering avalanches) and would be that much more environmentally conscious than bus emissions. It would be a more natural and pleasant alternative, as well.	Jesse Overton	Email
457	Gondola is a natural, pleasant way. It's cleaner compared to fuel usage & emissions of a bus. More practical especially considering avalanches.	Jesse Overton	Website
458	My biggest concern is that the transportation alternatives serves a broad range of user groups year round with minimum cost and that the service can be flexibly updated as new needs arise. The main objective is to get more people in the canyon year round with fewer cars. My problem with the gondola is it serves the ski areas exclusively; whereas other user groups, campers, picnickers, hikers, backcountry skiers/boarders, snowshoers, sledgers, and families, are left underserved. I don't know the exact demographics but I would speculate that the user group best served by the gondola are higher income caucasians who can afford to ski at resorts. Almost surely the gondola ride will be expensive too. When we imagine access we need to ensure that the access is equitable to all taxpayers who are funding this project, not a narrow slice of our state demographic. For this reason I support the bussing + extra lane. BUT, we also need to make sure that the bus serves all, not just the resorts, with many intermediate stops along the way at various trailheads. A rider paying the fair should be able to request a stop where they please. Otherwise, taxpayers are simply subsidizing the ski areas unfairly.	William Nesse	Website
459	The only solution that works is a gondola. The problem is rubber tires vehicles on the road and adding lanes and buses does not fix that. It snows hard on highway 210 and no amount of lanes or snow sheds can fix that. You need to not use the road as a solution. It is the problem that only a gondola can fix. You also vastly under report the usage of a gondola. A 3s in full configuration can handle over 5500 people per hour. At 50% capacity it is still 2250 which is double your report. Also the 3s can run at 19mph or 8.5 m/s. This would make ride time on the 12100 meter lift roughly 24 min to Alta from the base of the canyon and about 19 min to snowbird. Please correct these errors and let people know how efficient a gondola would be. This is a no brainer for this project	Jake Treadwell	Website
460	The snow shed idea is one that I think is critical for many reasons. Avalanche closures seem to really have deep impacts on traffic. People don't reliably know when the canyon will reopen and users who don't live nearby are unable to make it to the canyon prior to the lineup beginning. The extra safety would also be huge. It was concerning to be in the canyon on the day the vehicle was swept off the road by an avalanche. I've been in the Canadian Rockies in areas that use these snow sheds and I was really impressed at how well they worked in such a wild and unforgiving area. I also believe that stricter enforcement of snow tire rules is something that would help manage the number of vehicles and incidents in the canyon. 2 wheel drive rental cars with regular tires shouldn't be clogging up the canyon and parking lots. Revisit the rules and make sure they are being followed to the letter. Maybe make the restrictions tighter. Consider issuing stickers or mirror pendants that show a vehicle has been inspected and has proper tires that season to speed up the check process. Actually issue tickets to drivers who don't follow the snow tire rules. The extra bus lane seems like a great idea too so long as the snow removal crews can safely keep up and the moving buses don't create a danger to stopped cars in cases where there is a mismatch in speed. Some of the steep stretches make me nervous to think of a bus passing along side all of those vehicles while the roads are slippery. The gondola seems like a good idea but I think it would be a mistake to not improve the road conditions along with the gondola as well. In either case, resorts need to provide customers with a better system for lockers (both long term and short term) to provide a space to store street shoes, extra layers, lunches, etc. This normally lives in your car for the day while you ski but if you don't drive, you're left without a place to store it. It's uncomfortable to get on a warm, cramped bus and ride up in all of your cold weather gear and to ride down in the bus with a group of sweaty strangers wearing wet snow gear after a day of skiing. A place to be able to better change into and out of gear and leave items for the day or for the season would be SO helpful. I don't even think it needs to be heated or anything special. Just a dry space with some lockers would be great. I used to ride the UTA bus as a kid and stopped once I got my first car for these reasons.	Sam Despres	Website
461	Why drop the train, the best solution, aesthetically, environmentally and long term. Unlike the gondola, the train can stop along the way and pick up and deliver to and from back-country. It makes sense to eventually connect to Trax and Front Runner, so everyone can join up in the train. It can pass under the canopy or on trusses, it's clean, quiet, energy efficient, dependable in wind and weather and you can sit down... NO back-country skiers is being served with the gondola but the huge towers are intimidating and aesthetically unacceptable.	Beat von Allmen	Website
462	My name is Brighton Hertford and I would like to emphatically express my support of the Little Cottonwood Gondola. Not only is it environmentally friendly, but Too many times people are stuck up the canyon when an avalanche shuts down the road. A gondola takes that problem away entirely. Please choose the Gondola!	Brighton Hertford	Email

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
463	<p>As an employee of Snowbird and an avid weekend skier in Little and Big Cottonwood Canyon, I feel that the best option would be to build a gondola up to Snowbird. I have dozens of firsthand experiences with being trapped up at the resort due to avalanche road closures and I've felt the pressure from understaffed employees and upset guests that comes from not being able to go up or down the road. I don't feel that widening the road or increasing bus frequency will bring reliability or safety to the canyon. The canyon needs a year-round solution and a gondola solves the issue of congestion not only on peak winter days but peak summer Oktoberfest days. A gondola is also the only solution to truly improve Utah air quality. A gondola provides a cleaner solution that protects more forest land than other alternatives.</p> <p>Thanks for creating this forum to provide ideas.</p> <p>Best,</p> <p>Kolton</p>	Kolton Smith	Website
464	My support is for the alternative site using the La Caille Base Station and the Gondola.	Colby Carpenter	Website
465	Gondola support. This seems like the most environmentally friendly way to go. The congestion in the canyons is so terrible.	La Beene	Email
466	<p>***As a resident born and raised in Sandy, UT - grown and groomed on the slopes of Alta from near walking time to over the hill, and a Utah Small Business Owner, I strongly urge UDOT and all involved in this review to forcefully advocate, build, and support this Gondola as the future plan for easing ski traffic in Little Cottonwood Canyon.***</p> <p>This will be the most EFFECTIVE (not cheapest) option, given the impact on traffic up and down the canyon + the environmental impact. It keeps the canyon clean of (more) busses and could reduce vehicle traffic, all of which are noisy and take up space as well as disrupt natural habitat in other ways (direct pollution, maintenance for roads which will be worn down more quickly by heavier vehicles trafficking, etc). City traffic will be constant with or without gondola, so minimizing up canyon traffic is an effective way of preserving canyon ambiance and a nice gesture toward supporting environmentally friendly standards of transport for nature and our canyons' visitors.</p> <p>The gondola could be a further form of revenue year round too, when busses would be out of service (ebb and flow of bus demand) and support year round operator jobs, as mountain bikers, hikers, even tourists from all over would come to ride such a unique up canyon Utah experience. This would further boost the businesses at Alta and Snowbird in this canyon, as well. All in all it would be a unique attraction which itself will generate revenue, provide jobs, and support local businesses and resorts which will in turn provide added tax revenues, support jobs, and enrich the lives of visitors and residence of our great Beehive State even further.</p> <p>***As a resident born and raised in Sandy, UT - grown and groomed on the slopes of Alta from near walking time to over the hill, I strongly urge UDOT and all involved in this review to forcefully advocate, build, and support this Gondola as the future plan for easing ski traffic in Little Cottonwood Canyon.***</p>	Nathaniel Hoffelmeyer	Website
467	Expand UTA bus services to the resorts, then build parking structures along the bus routes wherever you can. Offer to let people buy a "season parking spot" for \$50 or so that guarantees them a place to park in one of the garages. Run busses every five minutes or so, so that it doesn't take much longer to just park in a garage outside of the canyon or wherever along a bus route and then get to the mountain. Season parking spots should also include a guaranteed seat on the bus. Modify ski busses so that everyone is sitting, and has a spot to stash their skis/ board.	Spencer J	Website
468	No Gondola. The canyon's can't handle more pressure. Busses from private ski resorts, yes with their own park n jet lots in the valley. The Gondola is a bad idea. The trip to Switzerland by UTA and elected officials made ties to Dopplemayer and Stadler Rail. Keep an eye on tax dollars potentially being directed to either of these entities. Let private companies figure out how to get clients to their place of business. We have a recreational distribution problem and LCC has plenty of pressure. The boonedoggle called the Central Wasatch Committee has nothing to show for millions spent.	Mark Allen	Website
469	Using the gondola would mean less carbon emissions and less traffic.	Colleen Baum	Website
470	I am for the enhanced bus, no road widening, with some deterrent for cars	Sarah Woolsey	Website
471	I strongly prefer the gondola option.	Alex Ungerman	Website
472	I support the gondola because of how good it will be for the environment!	Jack Shapiro	Website
473	<p>I have thought about this problem for well over a decade and do not see an answer coming from busing or gondola. There are just far, far too many people wanting to go ski between 8-10am every busy weekend. The buses could take them all if there was a bus leaving every 5 minutes or less during those hours. And even if you could find that number of buses, the people who got up there at 10:30 would still be bent that all the powder was gone. In addition, the resorts continue to make infrastructure projects and sales initiatives that increase skier capacity. So if you even could solve the problem for the year 2021, you'll be right back where you started in 2025, 2026, etc. The way I see it, you need to reign in the resorts. They are reason number one that people are in the canyons in the winter. To me there are just a few options: 1. Set capacity limits on resorts, just as you do on restaurants or movie theatres. They would need a card reader at the canyon mouth for passholders to scan (or purchase a ticket) and they would have an allocation of scans per day and then close. 2. Revoke the lease of one resort per canyon - Snowbird, obviously would be excluded since we foolishly sold our public land to Dick Bass years ago. With half the resort capacity, the canyon traffic would quickly thin - although I suspect it would still be congested, possibly making using both options 1&2 more attractive. 3. Levy heavier "use fees" for resorts to stop them from externalizing the cost of damaged infrastructure and environment degradation to the taxpayers. This would be like a special tax on the industry - hopefully enough of a tax to increase the cost to the point to decrease usership. I sort of hate this because skiing is already an elitist sport that is crowding out others from their own public land every winter. I doubt making it more expensive would cha</p>	Dave Eller	Website
474	<p>I am in favor of the gondola to go up in Little Cottonwood Canyon. It is better than buses for the environment and it also won't get trapped in an avalanche. I sort of hate this because skiing is already an elitist sport that is crowding out others from their own public land every winter. I doubt making it more expensive would change much. . . But if we do foolishly decide to spend all our taxpayer money on bigger roads and buses, at least make them pay a huge share of it since it subsidizes their business.</p>	Dave Eller	Website
476	I support this endeavor as I think it will support the long term growth of the area more sustainably.	Kristen Wade	Website
477	If too many cars are the problem we just need to incentivize public transportation and tax those in cars through tolls. Money from the tolls can be used to subsidize public transportation. With a much improved bus system that operates efficiently and at a very reasonable fee the ridership will increase exponentially. It is the most reasonable alternative financially.	David Kliger	Website
478	I am in favor of the enhanced bus lane without widening the road. Please do not widen the road or build a gondola service. This will take parking and space away from an already small canyon. Please use the funds towards hiring more bus drivers and training for those drivers.	Lydia Porter	Website
479	All for it!	Thomas Terteling	Website
480	Buses are an okay solution short term. However, it seems like a wasted opportunity to put in bus lanes when in the long run the lift up the canyon is the solution. (Also, there are individuals who will decide that they can drive in the bus lane.) This moves traffic off the road rather than just changing the type of traffic it is. (Hopefully the carbon emissions with this method would also be reduced.) By installing the lifts there is more total capacity up the canyon. The buses are great but have been overcrowded the past season making it a chore to ride up and down the canyon. People would be more willing to take the lift since it won't be on a winding road. Traffic allowed up the road, for locals or to supplement the system would flow more freely. Buses could then be used to supplement the lift on peak days (spring break season etc.). This would be best executed if there was a provision for the bus station at the lift base.	John Unterhalter	Website
481	The vehicle traffic in both canyons has to be limited to residents and suppliers , the gravel pit needs to become a parking area for both canyons running a rail line up the canyons, moving people by some form of train line it's our watershed it would never take that long to accomplish let's stop putting a band aid on this and spend the money and be done with it	Mark Gassinger	Website
482	I am pro gondola. I see it as both a solution and an attraction. First, a solution for traffic, congestion, ease of access, and is much more environmentally friendly than carving out an official bus lane. I think it also acts as an attraction... who doesn't want to ride up in the air through some of the most beautiful mountains in the world? I also believe that it would encourage less people to take their cars up the canyon. Reducing exhaust pollution and parking issues. I think this would enhance users experience while creating solutions for the above issues (congestion, snow danger, etc.) #gondolautah	Jaxon Stuart	Website
483	I like the gondola option. It seems to be a reasonable balance between the cost and most environmentally friendly. One issue I have with all of the options is the idea that 1500-2000 parking spots at the bottom of big cottonwood canyon is going to be enough. Most of the current parking is full on most weekend days and I don't think the small increase in parking will accommodate much growth for the future. If people are required to take a local bus to the bus that takes you up little cottonwood, I fear that is too many steps and will deter people from using public transportation	Kevin Cummisford	Website
484	The enhanced bus with roadway widening is my preferred option as a recreation enthusiast for LCC. It allows for fast and efficient winter travel while still accounting for summer opportunities. I recently cycled BCC and noted the narrow shoulder in some areas. Widening the road would lessen any friction had with cars in summer months.	Brandon Patterson	Website
485	Thank you for your work on this. I strongly support the 'enhanced bus with roadway widening' option and believe it is the best solution from a majority of angles.	Brian Behle	Website
486	I support the enhanced bus with roadway widening option.	Sarah Behle	Website
487	I strongly prefer the Gondola solution as having the least impact on the canyon while moving the most traffic. The snow sheds required by the other solutions are ugly and "more asphalt" cant be the answer past the canyon mouth.	Brandon Christenen	Website
488	<p>My thought on Cottonwood Canyon Roads is that it is like Democracy; sometimes it gets messy, yet it works. Do little, or maybe do nothing. The days of easy up, easy down are few & far between in this 21st Century. Choose a ski day or a golf day, cause you probably ain't going to do both. Though you might. And when our fellow outdoor enthusiasts now drives up the canyons in their oversized pick up trucks & Sprinter vans, taking up about 1 1/2 parking spaces, and since a 1/2 a parking space is useless, they are taking up 2 parking spaces, what chance is there to get this congestion problem under control. Do little, or nothing to the current road situation, and when it becomes a public safety issue, shut the road down, eventually the problem will take care of itself.</p> <p>To paraphrase Yogi Berra: 'its so crowded, no one goes there any more'. and never a toll. Democracy is messy, & so are those Cottonwood Canyon roads. You can only go as fast as the car in front of you. And rightfully so, we are all in this together, some times problem free, some times red snake. Its our reality, deal with it. And maybe driving a smaller vehicle may be part of a solution.</p>	Edmond OMahoney	Website
489	<p>1. The ski resorts need to pay for this. Not the taxpayers.</p> <p>2. If you have to do something, add more buses and more/bigger park and ride lots.</p> <p>3. This is a lot of whining about something that happens 20/365 days a year.</p>	Michael Springsteen	Website
490	The gondola option seems the best to me--avoids road construction, provides room for more people, less environmental impact, price in the middle. Additionally, a gondola might provide a draw for more business to the area.	Megan Jones	Website
491	As a resident of Utah and a voter who is concerned about the rising pollution in Salt Lake City and the protection of wildlife and land I believe it is imperative for UDOT to explore ways to reduce carbon emissions and protect nature. This can be achieved by implementing a gondola service that goes from the valley into the canyons instead of expanding the roads and increasing bus services. Jobs will still be needed to build and operate the gondola and it is the best option to protect the environment. I understand that this will be a time consuming project that needs funding but as a tax payer in Utah I would much rather my money go towards an environmentally conscious project than one that harms it further. Please choose gondola!	Caroline Jennings	Email
492	I would prefer the option with buses and a widened shoulder lane or a gondola. Without providing a dedicated lane for buses or a gondola unaffected by traffic, I do not see how a bus will be faster on a weekend powder day, wrecks and/or slower vehicles will inevitably happen, which would slow down the buses equally as much. Also, would any of these options also have the ability to add on significant fines for vehicles that block traffic while driving up the canyon if they did not have the required traction devices, minimum of \$1000 per citation.	nathan stuart	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
493	I recently listened to a 99pi podcast that cited several studies that showed how busses could solve most major cities transportation woes, but American culture won't allow for it. We want the hi-tech solution or to be more like Europe. But if we just invested in making using buses more convenient and socially acceptable we could save tens of millions of dollars and limit environmental impact. You could still go high tech with driverless tesla busses eventually to appeal to popular sentiment. It's not an easy challenge to change attitudes and improve service logistics but one that would likely have the biggest impact in the long run.	Jeff Jacobs	Website
494	A gondola in LCC would be a much needed improvement to the transportation issues in the canyon. Improved bus routes or additional lanes does not seem it would have as significant of an impact on the road issues we face. Gondola please.	Christalyn Pottenger	Website
495	Prefer the gondola option due to all weather access.	Erik Berg	Website
496	I am most in favor of the gondola option.	Craig Cramer	Website
497	I fully support the gondola option, which appears to be a cleaner and safer option that is less impacted by weather.	Scott Miller	Website
498	The gondola is going to be an eyesore to our beautiful canyon. Expanding a bus shoulder and having a transportation hub on both 94th and Wasatch/Rock Quarry is beneficial for all. It gives everybody a quicker more sustainable option for the canyons and in the summer allows residents to enjoy the roadway and project safely.	Jake Barman	Website
499	I like the Gondola concept.	steve Keyser	Website
500	Gondola!	Amy Eskind	Website
501	Gondola + the addition of a multi level parking structure would be SICK!!!	Kyle Pearson	Website
502	I strongly support the gondola option. It is much less vulnerable to avalanche conditions than the existing or widened road. It would be great if there were a way to avoid the transfer between the bus and the gondola, but overall an aerial transportation option is clearly superior to road capacity when the road is so avalanche prone.	Karl Tingwald	Website
503	Gondola all the way. Need costs and cost to ride it compared to bus.	Joseph Vargo	Website
504	Making the canyon buses FREE would go a long way to help this. I have been turned away from the canyons on busy days. I tried to take the bus. But at 5+ dollars a person that actually gave me pause and we decided we'd try another day without the bus. If you want to encourage mass transit up a canyon make bus rides free. This not only encourages mass transit but makes it a reality.	Darren Hill	Website
505	I like the gondola option, assuming there is sufficient parking at the base of the gondola. If there isn't, the idea is not viable.	Bruce Kasanoff	Website
506	I would support road widening with a dedicated bus lane with more frequent service. I like that this lane would also be used in summers for pedestrians and cyclists.	kate griffin	Website
507	I am in favor of a gondola but was wondering if it would have seating or would require standing.	Kristin Hauser	Website
508	I am a senior woman who can t ski the entire day and cant walk far carrying my skis. I want to continue to ski. I get up very early so I can have a parking space at ALBion. I also live in the Avenues of SLC and there is no parking lot in the city that I could park and take a direct bus to Alta. If I drive to the Sandy bus stops and take a bus it takes me over 2 hours to get to Alta. Therefor I have to continue to drive. I have skied at ALta for over 38 years and had planned to ski as long as I can. If I can t drive and park at Alta I will start going to another area. You need to do things for seniors skiers. Carol O'Meara	carol Omeara	Website
509	My first and foremost opinion is that we need to scale down conglomerate passes, the Little Cottonwood Canyon resorts are so well ranked internationally they don't need the extra support. I recognize the value of increased tourism, however I think that the more congestion with only a 30-year plan for relief will only drive people away. I would tend to support the roadway widening with increased UTA presence, however I believe we will face huge problems with congestion well before that project is scaled up and finished. My support of the middle option would be conditional on the format of all UTA presence ensuring no one gets left behind or stuck waiting for the ski bus for multiple hours on end because of overfilling at the resorts and still not enough transportation capacity.	Amber Stubbings	Website
510	I like the gondola idea. it seems like a great, clean, sustainable and expandable long term solution. Wouldn't it make more sense to have parking at/near the gondola though, rather than off-site parking?	Judith Warner	Website
511	The gondola option with a parking structure would be amazing	David Palmer	Website
512	The gondola option is by far the best because it will remove more traffic from the access road and provide an environmentally friendly way to access the mountains. However I think the gondola should extend to a parking lot because if people have to park, then take a bus and then a gondola I think too many will opt to drive, thereby defeating the purpose. In contrast a parking lot with direct access to the gondola would almost certainly be used by many and go a very long way to addressing the congestion and environmental issues. We would certainly use the gondola if it were built to go from a parking lot without a bus intermediary.	Paul Berman	Website
513	I agree with Alta on the Gondola option.	Barry Woods	Website
514	widening roads and adding buses are temporary fixes. Gondola is the only long-term solution. But would like to have parking at the base of the gondola. That would be a good investment and will encourage gondola use - even for people arriving early in the morning. The mobility hubs can be for overflow parking. Also, the gondola and parking should be free for paying resort customers.	Nathan Phillips	Website
515	I am 72 years old, and while I applaud the use of more types of transportation into and out of LCC, I am in no condition to ride a bus both ways. I must rely on personal transportation. I like the gondola idea, and it has the best chance of long term success, PROVIDING PARKING at the base is adequate and easily accessed. Things will have to change-just make it 'future proof!' BUSES ARE NOT THE ANSWER!!!	lawrence green	Website
516	Very much in favor of the gondola option. This would cut down on congested traffic in the canyon.	Jeremy Gravell	Website
517	I'm for the gondola with parking at the base of the gondola	Mark Victor	Website
518	I believe the Gondola is the best way to reduce traffic in the canyon, reduce environmental impact from vehicles, and manage the masses of skiers on busy days. Large enough parking lots will be needed. Let's not think about 20 years down the road, let's think about 50 years down the road what the Wasatch will look like!	Dan Bennett	Website
519	I support enhanced bus service Along with the enhanced bus service and road widening. As I usually stay at the Rustler, keeping cars out on a powder day is not such a bad idea. ?	Sue Wimmer	Website
520	Realistically, I agree with your analysis - a gondola would be least affected by snow and IMHO is the preferred choice.	John Hayward	Website
521	I vote for the modified gondola proposal with parking at the gondola base station.	Richard Goodloe	Website
522	A gondola up the canyon is the worst idea I've ever heard. Please just increase busing and maybe widen the road.	Jason Stinsmen	Website
523	I think the most important concern is to implement a solution sooner rather than with further delay. Therefore, perhaps consideration to a phased in series of solutions. If the gondola option is the final solution, then it must include adequate parking structure at the base of the canyon near the loading point for the gondola. Perhaps finding some way to limit car transport up the canyon during whatever time is required to build the gondola and/or designated bus lanes. If the bus lanes are the preferred solution, then to implement that as soon as possible.	Jim Struve	Website
524	Some road improvements, enhanced bus option, bike/ped lanes, tolling, and better trail/parking facilities make sense. It is simply too busy at peak times. This is where I think the alternatives don't address the issue (total capacity doesn't really increase(42 people) with any alternative). The gondola makes sense, only because it removes the transit from the road, but it doesn't look like it removes any of the personal vehicle users. I wouldn't say busses are the biggest problem compared to personal vehicles, why can't we remove some of these from the road as well? Get the gondola to take the transit (1050) and a few hundred of the personal vehicles (2249). People will use it if it is appealing and driving for recreation costs more.	SPENCER TAYLOR	Website
525	Gondola makes the most sense. Buses break down and have issues in weather. The opening day last year for Alta was a 5 hour standing traffic jam because a bus went off the road GOING UPHILL! Take drivers out of the equation and actually make a decision that improves public safety rather than make it worse (i.e. car hit by avalanche last year.) Unavoidable if you fill up canyon with busses. Also the ongoing costs for maintenance and bus drives (and training for adverse weather conditions) would not make economic sense in the long term.	Chris Orino	Website
526	I support the Enhanced Bus with Road Widening alternative the most. Long Gondola rides are unpleasant and put strangers into confined spaces where disease (flu, colds, covid) with spread much easier. Thus, the Gondola is my least favorite alternative. Round trip time the Enhanced Bus with road widening saves almost an hour compared to the Gondola option, thus making it easier for partial day ski trips.	Rob Reiterman	Website
527	Gondola with parking structure on-site is a fantastic solution! Allows us to get on the slopes even when there is avalanche danger on the roads!	Brent Topping	Website
528	Gondola is the best option, IMO. While it's slower than the bus options in theory, that's only true when UDOT isn't pulling spun out cars out of ditches -- which in bad weather is constantly. I've been stuck in LCC traffic for hours on stormy weekends. The beauty of the gondola is that it will be the same speed no matter the conditions. It's also a more social and scenic, and I expect that there are a fair number of tourists who would gladly pay to ride a gondola in the summer.	Scott Fleming	Website
529	I would like to see an alternative Gondola option with better parking built to support to use of Gondola	Dan Mondragon	Website
530	Appreciate the thoughtful work being done. Bottom line: I support and trust the direction of Alta Ski Area's recommendations on LCC transportation enhancements and encourage you to strongly consider their input in final decision-making. Thank you.	Kevin Hirsch	Website
531	I am very interested in the Gondola	Grant Schettler	Website
532	After more than 30+ years of frequently driving this canyon it's about time that additional options are being submitted. I'm in favor of the gondola and road widening.	Andrew Holmes	Website
533	I believe the gondola to be the best option, but an additional parking structure at the base is the best parking method instead of the gravel pit lot. Thank you!	Stevan Thibodeaux	Website
534	After studying the options proposed, I favor the Gondola option as it is less likely impacted by weather, and reduces the traffic caused by buses by completely separating the public transit from the road. Also, the road construction feels to me like it will likely have environmental damage to the canyon to go too much further, so the gondola would have a lower impact.	David Clayton	Website
535	No longer understand what the goal is other than to sell more lift tickets by getting more folks up on the mountain and feathering UDOT's nest by squeezing skiers for fees. Currently, there is massive traffic on 1. Snow days 2. Sunny weekends. On those days, cars go up and once the lots and parking is taken, no more people can drive up (problem sorta solved). On other days, I have not experienced much of a problem going up Little Cottonwood Canyon (and I have recently skied 90 days a year). I am skeptical about environmental arguments since that objective would argue for fewer, not more skiers on the mountain. Perhaps the most reasonable compromise, if you are dead set on spending, is to increase buses (I have tried to use them on those busy days only to be unable to get on the first four that came by). But I would raise the Bus fees (kill my free bus privilege that comes with my lift ticket?). Given Covid, squeezing skiers for more money seems a sure fire way to kill the goose laying the golden egg — the resorts. You might ask yourself what you are trying to achieve. I think most have lost the plot.	Henry Sokolski	Website
536	The obvious solution is the Gondola. Initial cost is higher, however the cost of operations. Is one half the second best proposal. This will make the Gondola the best option. The savings in air pollution makes this the super option	Patrick Cassidy	Website
537	Love the idea of the gondola. Travel time is long but takes improves safety of travel and alleviates the need to time the bus schedule.	Jason Matthews	Website
538	The gondola is the most scenic, and best option to keep the road accessible for emergency vehicles, reduce the amount of car pollution and noise pollution in the canyons. European ski resorts have a long and successful history of gondola use in ski resorts. By no means should the road be widened for more car traffic in the canyons.	Ziva Petrin	Website
539	I support road widening the entire length for the enhanced bus usage. A bus breaks down, more can be sent out, or at least get around the problem. A gondola breaks down (as does happen) - and everyone is stuck / backed up for how long?? (plus an hour (plus wait times in line) on each end of a day - will only encourage people to drive to further away resorts (and the emissions and traffic that creates).	robert simonson	Website
540	Parking is needed at Gondola base station, rather than remote parking & bus to gondola base. Without parking, usage will be impacted - ie, people wont use as much.	ROBERT SHEPRO	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
541	Enhanced bus service is the ONLY option to avoid massive damage to the pristine Little Cottonwood Canyon. In addition to the added bus service, I strongly recommend that NO single passenger vehicles be allowed up the canyon during ski season unless staying at a Lodge or Hotel in the canyon. Mandatory Carpooling, with added parking at the base of the canyon will significantly lower vehicle congestion AND reduce participant pollution from automobile exhaust. Widening the road with cause extensive damage especially in those areas already constrained to 2 lanes. A GONDOLA would horrible both visually AND ecologically. That option should be tossed immediately.	Ernest Berckman	Website
542	Of course, a gondola from the mouth of the canyon would make the most sense thereby limiting the vehicular traffic to essential vehicles.	William Bentley	Website
543	I feel that the gondola is the best option. You need to put the parking lot at the base of the gondola otherwise people won't take a bus to a gondola. They won't want to do that. I won't do that. Otherwise next best option is to widen road. If there is no parking lot at the gondola I'm just going to drive.	Scott Fredrickson	Website
544	I own a condominium at 777 E. S. Temple and go often to Alta Ski Area in the winter. I support improving transportation up Little Cottonwood Canyon. Specifically, I support the Gondola option for transport to Alta, with the strong recommendation that the gondola station be adjacent to a parking area. People are much more apt to use a convenient option than to stagger to a bus with their skis, thence to the gondola, only to repeat the trek on the way back. The gondola option is the best, but it needs an adjacent parking lot. Maybe you could encourage the remote parking and bus option by offering free or reduced price gondola tickets to those who park at a remote bus site.	Marilynn Fairfax	Website
545	I vote for option two, enhanced bus service and roadway widening. The roadway is a major bottleneck to and from the lifts. I would look at making it two lanes each direction from the mouth of the canyon to Alta.	Jeff Wasden	Website
546	Transfers will always be cumbersome and a big deterrent to using a public transport option. Gondola sounds nice, but... drive/bus/gondola? No. This is one reason the trax to the airport is SO GREAT. It goes... to the airport! No secondary bus upon "arrival." Mixed feelings on road widening: nice pedestrian/bike option, but would it encourage more people to drive? Not sure. I also have concerns about enviro impact.	Paula Redinger	Website
547	Clearly the gondola will, in the long run, have the least impact on the environment. But adding in the bus ride to the gondola really muddies the waters. It would be well over an hour to get to Alta from the time you park your car?	Erik Brooks	Website
548	I favor constructing a gondola in Little Cottonwood Canyon with the addition of a parking structure at the gondola base. The addition of the parking structure would help reduce traffic and increase the use of the environmentally preferred gondola.	Dan Richter	Website
549	I support the modified gondola option.	Gregory Fisher	Website
550	I think the gondola idea is a great approach. What a wonderful asset to have in the canyon, for year round use!	Colleen Reilly	Website
551	I like the Gondola option. It looks like the best bang for the buck, especially looking into the future with the operation and maintenance costs, but maybe more importantly, it would make for a much more enjoyable ride with incredible views of the canyon, versus a bus on a winding road. I also like that there would be a gondola every two minutes, which would minimize wait times, and it would be independent of traffic and road conditions in the canyon. This brings me to another important factor. Would the Gondola option be a viable transportation option even when the canyon closes due to avalanche impacts? Because if so, then the Gondola option seems far superior to me, perhaps not even comparable to the bus options. I have been and have known several people who have been stranded due to avalanche or other road conditions and if this gives them a way out, that seems invaluable to me.	Shawn Campbell	Website
552	I suggest you designate separate buses for Alta and Snowbird folks and run more of them during peak times. Having to sit on a bus and go through the snowbird stops to get to and from Alta is what kept me from riding. Plus every time I tried to catch a bus it was always full. No matter which bus stop I went to.	jill bennion	Website
553	The gondola is the best method to provide a safe way and the cleanest method to move the large volume of skiers now in LCC. I have skied here since 1984 and the growth have been overwhelming. We need to improve the vehicular traffic in LCC. I would urge you to modify the proposed gondola alternative by adding a parking structure at the base gondola station rather than requiring all gondola users to park at the gravel pit lot and bus to the gondola station. This will facilitate and encourage use of the gondola and allow more of its capacity to be used. Thank you.	Kathleen Murray	Website
554	As a resident of Salt Lake City, I think the gondola option is the most suitable. We don't need more vehicles in the already overcrowded canyons. Numerous studies show that road widening leads to induced demand and further congestion. The gondola option is less expensive to operate and could run mostly (or completely) on renewable energy. That would also help with air quality during the winter (i.e., inversion).	Alessandro Rigolon	Website
	Alessandro Rigolon Assistant Professor Department of City and Metropolitan Planning The University of Utah		
555	I like the idea of a gondola, but have a parking structure at the base of the gondola. Not at the parking structure at the base of Big Cottonwood Canyon. I feel that more people would use the parking at the gondola base and thus use the gondola. It seems more conducive to the environment. The parking structure at the base of BCC should be used for that canyon.	Nancy Holman	Website
556	I see and hear all the crazy costly plans for The cottonwoods but has anyone given any thought to the fact that from point of mountain to Spanish fork is the fastest growing area in the country and the cottonwoods are the closets resorts .wouldnt it be more feasible to find and build a ski area or two to accommodate the growth in Utah county the only area to Utah county is Sundance.and for the plan for the cottonwoods you had the opportunity to get of hold of the old progressive plant nursery and make a transportation hub but lawyers and developers always win out . There is no room to park 10k vehicles at the mouth.I would say limit the number of passes sold.greed needs to take a back seat to responsible preservation of our canyons	Tim Nee	Website
557	The Goldola option is the only sustainable option to go with. O&M fees also are much lower with this option 1	Parker Scott	Website
558	If you want people to use mass transit your mobility hubs need to be much closer to the proposed Gondola or busses. The average family of four will not take a car, bus and another bus/gondola to ski at Alta or Snowbird. These proposals are not catering to anyone who has a family with kids.	aaron jacobs	Website
559	of the 3 options being given I would like the gondola with a parking structure at or very near it's base I am strongly aligned with Alta Ski Area's vision and request for the "modified gondola" proposal.	Terry Stapley	Website
560	For environmental, aesthetic, user-experience and weather-proof considerations, this is clearly the optimal long term solution. Alta and the state of Utah has a historic opportunity to do this "right" — rather than quick, easy or lowest cost. Let's look to the successful examples of many European resorts which have successfully implemented similar Gondola transport solutions, e.g. Le Chable - Verbier in Switzerland. Sincerely, John Mutterperl	John Mutterperl	Website
	I'm in favor of enhanced bus option.		
561	Also, I think that another way to control the traffic would be to simply charge people to drive up the canyon in the winter months - like Millcreek Canyon. Perhaps the fee is greater if people drive up alone, and less if they carpool? If people are paying \$100/day to ski, they can certainly pay to drive up there. This would encourage carpooling and would cause people to more carefully consider how often they drive up there. Also the money could be spent on canyon maintenance and sustainability measures. I do NOT want to see the road widened, and I do NOT want to see a Gondola added to the canyon. Both of those options with have major negative impact on the canyon in general as they are major construction projects. The canyon would lose some of its natural beauty if you had to look at a gondola going up and down all the time. I also really think that access should be developed from American Fork Canyon. It makes a lot of sense to spread out the traffic impact between two canyons. Plus that might eventually encourage some more sustainable land use in AF canyon and better management of that area so that every single person in the state with a UTV or motorcycle doesn't continue to ruin that area. My thoughts. Jared Meyers 39, avid resort and backcountry skier, and longtime resident of UT (1987)	JARED MEYERS	Website
562	I think that running a Gondola up LCC would be the best option to reduce traffic congestion and improve access to LCC. However, it would be best if there was parking directly at the base of the gondola. If people have to park at a separate garage and then take a bus to the gondola, most people will choose to drive as it would be much more convenient than having to transfer. However, if you can park at the gondola, it becomes a very appealing option to get to Alta or Snowbird in a safe, efficient, and environmentally friendly manner.	Michael Benjamin	Website
563	Thank you for your hard work in improving winter travel in the LCC. I think the Europeans would approach this by finding a way(s) to move large amounts of people in a single vehicle like very large buses or a small elevated rail system. The road widening would be my last choice for reasons that include costs ; destruction of the environment, and a result that would only move more traffic in the canyon but not address the feeder highways.	FRANK BUSELLI	Website
564	I favor the enhanced bus with roadway widening. If possible to add a third lane the length of the canyon, it could be one way up and down at peak times. I do not think people will be willing to park at the gravel pit, bus to a gondola station, then ride the gondola to the resort. The only way the gondola works is if there is a parking structure that is located at the gondola loading station. Thanks	Glen Boynton	Website
565	I support the gondola	Caroline Masters	Website
566	Building a wider road without adding parking is a HUGE PROBLEM. I would recommend increasing the number of buses to incentivize people to park in other areas and ride the bus. The gondola might be helpful for some people...but it just creates another area that people have to drive to. So it's, if anything about increased buses AND adding the gondola, that might work for some people. But I'd start with the buses first, that's the least environmental impact.	Terry Berliner	Website
567	I support Alta's proposal for a modified Gondola option, adding a parking structure at the gondola base station. Then the Fort Union area lot can be used as overflow/backup when the structure fills up. I know it increases the cost, but in the long run the environmental impacts of the gondola option with base parking will be better for the canyon, better for less weather/slide impact on traffic, and more convenient for users to get to Alta and The Bird. Thanks for considering (and hopefully adopting) the gondola with base parking option!	Gerrit Westervelt	Website
568	I'm in favor of the gondola option with a parking garage at the bottom of LCC. It seems like the least impactful on the beautiful terrain while also allowing speedy access. 46 minutes up and down the canyon is a bit, but it can certainly be much longer in traffic or when dealing with inclement weather.	Tayl Moss	Website
569	The gondola seems to be the best option, although adding parking stalls at the gondola base station would be much more effective than at the "mobility hub".	Michael Paskett	Website
570	Its a fantastic idea and brings Alta/Snowbird into the 21st Century regarding transportation and environmental issues. Driving up the hill in a pollution spewing automobile, fighting avalanches and traffic was a great idea in 1975 but we need to move forward with transportation modes that have been in Europe for decades.	TONY SALAY	Website
571	I see the need for a parking structure at the base of the gondola station rather than requiring all gondola users to park at the gravel pit lot and bus to the gondola station. People will not use the gondola if they have to park and take a bus to use the gondola.	Denise Ballard	Website
572	Modified gondola plan just like what Alta wants. Busses suck.	Andrew Law	Website
573	Winter traffic has become too crowded. I have been stuck for several hours, multiple times, the last few years on buses that are stuck going up/down the canyons due to traffic accidents in bad weather. More buses without personal traffic restrictions are not the solution regardless of added lanes. The gondola would have the most impact to relieve the issue - little to no wait time once on the gondola, avoids traffic accidents, comes regularly regardless of traffic/weather. Regardless of what is chosen - parking at the base of the canyon is absolutely needed. Forcing people to take buses to the gondola station simply continues the problem of being at the whim of traffic and city bus delays/availability. Without adequate and easy to use parking (multi-story parking garages near the canyon AT the gondola station), people will continue to be discouraged from using alternate transportation options and this will all be a waste of effort, money, and time.	Taylor Jensen	Website
574	5 lanes on Wasatch. Bus with shoulder lanes and snow sheds up LCC.	Matt Liapis	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
575	I am very supportive of taking actions to improve the accessibility to and from Alta and Snowbird. The options of widening the road and traveling to the resorts by gondola both sound like viable alternatives which would dramatically reduce the time spent traveling to the ski resorts on powder days. I have waited in my car for 3-4 hours on big powder days. Half the time, we skip skiing on the best days of the year because of the hassle of getting to the resorts. This has to be impacting the tourism draw of these resorts. Good luck in your efforts. Great to hear that actions are being considered!	Marty Ostermiller	Website
576	I vote for the Gondola, unless you widen the road to 2 lines both ways, the canyon will still be a mess on big snow days.	William Peterson	Website
577	Support the proposal provided by Alta Ski Area: gondola at entrance to canyon with parking structure.	Joe Coccimiglio	Website
578	I am in favor of the GONDOLA service for 3 main reasons: 1) Reduced traffic-related roadblocks/accidents 2) Environmental Impact due to reduced emissions 3) There is no need for a 4WD/AWD as such increased footfall However, we have to keep in mind: The Gondola service is time-consuming as such having a big parking lot right at the base of the Gondola station will maximize available ski time during the day. Some sort of seasonal Gondola Pass with a reasonable price point will be helpful as well.	Aritra Ghosh	Website
579	Why not close the road and provide skier transportation by rail only. Examples are abound in Europe.	Cameron Chehrizi	Website
580	I think enhanced bus service is the best option and can be modified/improved as technology improves (i.e. emissions). The buses should be the cheapest and fastest way up the canyon and then people will use them. Unfortunately, the gondola seems long and inconvenient for people who are used to just driving up and thinking it only takes 20 minutes (even though it can take hours!).	Donald Reifsnnyder	Website
581	Gondola I would favor a gondola system IF the parking lot at the base of Little Cottonwood Canyon is able to remain available. As a resident of the Granite neighborhood, I would be going 8 minutes out of my way, and adding traffic to Wasatch to park at the Ft Union / Wasatch parking lot. Parking at the LCC parking lot is ideal. If this option is removed, I would prefer driving up the canyon myself. I would be willing to pay an annual fee for access to the LCC lot. Between the Gondola and increased bus service, for me it comes down to whether or not the LCC base lot remains available. If putting in a gondola system means removing that lot, then I would have to come down in favor of increased bus frequency. I already can walk from my front door to the closest canyon bus stop in 3 minutes. My hesitation for using the bus in the past has been the infrequency of the schedule. I would gladly take the bus every time if it simply operated more frequently.	Christin Van Dine	Website
582	Whichever option is chosen, roadside parking at the resorts should be greatly limited. People need to get used to the fact that some form of public transportation is the best option. A few trips up the canyon with no parking available will reinforce the notion that public transport is less hassle. I do not favor widening the road. That's a project that would take years to finish, would destroy natural beauty, and would increase traffic on 94th/98th south. Additionally, increased traffic with nowhere to park at the top will only lead to more frustration, more of a race up the canyon, more accidents. So my vote: If the LCC lower lot can remain, then gondola seems great. If the gondola means removing the LCC entrance parking, then I prefer increased bus service with more parking restrictions at the top, and without widening the road.	David Oswald	Website
583	I would vote for the Gondola first, and the dedicated lane second. After reviewing all of the materials, these feel like the right balance between all of the concerns and pros/cons. Thank you!	Jeff Selander	Website
584	I really like the idea of a gondola, as it will be impacted less by weather than the road surface. However, not including a parking lot at the base of the gondola is a mistake. It will be far less convenient for people to park and take a bus to the base of the gondola. I know I'd think twice about taking it if I could not park right at the gondola.	Charles Rantala	Website
585	I support the gondola option as better for the environment and less impacted by regular traffic than the two bus options would be. A train would also make sense to me. I support enhanced bus service with widening LCC road. I do NOT support a Gondola up to Alta. Besides destroying the beauty of the canyon and what little wilderness remains, it is not a reliable method of transportation. I have skied Snowbird for many years, and their Gondola is frequently down due to weather and mechanical issues. I would not want to be on a Gondola during a blizzard or wind event. I also believe that closing LLC road during a weather event is safer limiting the amount of cars in the canyon	Jason Lozano	Website
586	The gondola is by far the best option in bang for your buck financial terms (with a lower operation and maintenance cost, and moderate initial construction cost) as well as in terms of rider satisfaction and comfort. I think ridership would be higher, thereby giving a better return. A two minute wait for a scenic gondola ride is much better than a 10 minute wait for a curvy bus ride. Which also means the plan should be modified with construction of a new parking lot where you board the gondola, eliminating the need for buses and the ongoing costs associated with the buses. In the grand scheme of a project of this scale, a parking lot cannot be very significant. Nobody wants to wait twice, and have to gather their belongings to board twice. Imagine this with kids. No thank you. Not to mention that a lot of people would have to drive past the canyon, out of their way to get to the bus parking lot. Hands down, the modified gondola is the best approach.	susan squire	Website
587	I am in favor of the Gondola option with parking at the Gondola base	Lara Campbell	Website
588	We support the revised gondola solution proposed.	Stephen Spencer	Website
589	I support the alternative gondola proposal as suggested by Alta Ski area which would include the inclusion of a parking area at the bottom of the gondola instead of the use of a bus from the gravel pit lot to the gondola base. The more the number of transfers, the greater the hassle the lower the utilization and success of the overall project.	Lisa Coburn	Website
590	I don't think that anyone wants to start their ski day with an hour long gondola ride. I know that I would not. I have always thought that the buses should be the fastest and cheapest way up the canyon. Let people in cars wait while the people on buses speed by all the traffic. It won't take long for people in their individual cars to see that the bus is the way to go. Too often the bus is sitting in the same traffic as cars and then people think they are better off in their own car listening to their own music, etc. The bus needs to be the best option and then people will use it more.	Douglas Skyer	Website
591	I strongly support the gondola alternative, but in addition to the gravel pit transit hub would also build a parking structure at the base of Little Cottonwood, so that there is added ability to support transport by gondola when bus service is not operating between the gravel pit and the gondola base station. Overall, the gondola proposal seems to be the most forward-looking and environmentally sound proposal, and is the one that best mitigates the adverse impacts of road closures that affect cars and busses alike.	Lisa Reifsnnyder	Website
592	Snow sheds are a great idea for an avalanche-prone area like LCC and they should be built as part of any plan. Without a way to minimize the road closures due to avalanches, a plan misses the mark. A gondola may bring more issues than its worth as far as how to get to the gondola, parking far away from it and then shuttling to it, and waiting in multiple lines just to get to the resort. As part of the increased bus plan, I'd like to see resort-specific bus routes added from each park and ride lot as well as other areas of the valley like the U of U or other areas that have plenty of open parking during the weekend. Any plan MUST include more parking near the mouth of the canyon and down Wasatch Blvd. Parking garages would use the same footprint and should be considered. A small fee for parking would be worth it to people or could be part of their season pass fees.	Petr Janata	Website
593	A gondola would be very important to have for Little Cottonwood Canyon. It's environmentally friendly and could provide a fun experience for families when they visit. It is best to reduce our carbon emissions because of the issue we have with inversion every year in the summer and winter. Every step helps in creating healthier air for our state and world.	Eric F	Website
594	Gondola with parking structure.	Lucas Stewart	Website
595	I am completely in support of the modified gondola proposal backed by Alta, with the recommended increase for parking at the base of the gondola. I additionally would like to see a toll charged in the little cottonwood canyon (daily / monthly / annual passes) to further incentivize canyon users to use the gondola vs driving.	Jason Smith	Website
596	I'm not sold on the gondola. I sit two blocks off of LCC at 3100 East and have trouble getting to and from home during the winter due to traffic and avoid skiing during the best conditions because of traffic. I would rather see a some sort of bus only lane that only in the rarest of circumstances gets delayed. Perhaps even closing the canyon to car traffic during high times would be fine. You will need to have a robust bussing system in place as the stop by my house has the busses completely full by the time they're at my stop. It's really not a good situation to have car traffic backed up to eastdell which is a pretty common thing in the winter and it causes issues for all of the residents. I'm all for public transportation but I'm not sold on the gondola. I don't see how that will alleviate much of the traffic. One other part that needs to be done to encourage busses is to stop allowing the cats to just park on the roads waiting for the canyon to open. I understand the concern to keep car access but it's not sustainable at its current pace and I don't see how a gondola makes this better. Especially when they want to add a parking structure closer to the canyon. (Alta's idea per their email). Keep the traffic further from the canyon. Please. The last thing I want to do after working all night is macgyver my self a route home through neighborhoods. Which is getting more difficult thanks to the skiers who think they found a short cut who just end up blocking my alternate routes.	Brita Vedejs	Website
597	Gondola is a great idea!	Adam Humpal	Website
598	The gondola is clearly the superior option in terms of operating costs and uptime. The bus options suffer from the same drawbacks as the current bus system - few want to stand in a bus for an hour when you could drive your own car. However, the parking for the gondola option needs to be at the base of the gondola for it to be viable. A bus transfer to the gondola adds too much time and logistic hassle to be at all attractive over a private vehicle, particularly for families. Think of trying to herd three kids + equipment on / off the bus and into the gondola, then do it again when the kids are tired at the end of the day. Just not happening.	Andrew Casey	Website
599	Please revise the gondola proposal either to include a large parking garage at the base of LCC or to extend the gondola along Wasatch Boulevard to the "mobility hub".	Todd Sangster	Website
600	Enhanced Bus	Joseph Edman	Website
601	ROAD WIDENING!!	D H	Website
602	I support the gondola option if we can get parking at the base of the gondola. No one wants to get on a bus, get off the bus, and then get on the gondola. It will take way too much time. If that is not an option, I would support enhanced bussing with increasing the roadway.	Kristen Edwards	Website
603	Gondola would be the reliable option but needs to have more volume than planned for sure or at least be upgradable for more ease way in the future same with the parkade I'm Canadian who loves utha and for sure I be using that option if available not only in winter time!!!	Jacek Miskowski	Website
604	I have already submitted comments in which I didn't really support any of the three alternatives. I would support the amended gondola alternative, as suggested by Alta, with parking at the Gondola base station. Due to the size of the parking lot which would be required for both Little Cottonwood Canyon Ski Areas, I would also suggest an easy access people mover system, such as a sheltered conveyor belt, on both sides or the middle of the lot.	Toby Kravet	Website
605	Improved bus transportation is a viable option to improve canyon traffic congestion, but ONLY if you can get buses in service that can actually go the speed limit up the canyon. Currently the buses just slow everybody down and add considerably to the congestion able only to go up the canyon at 25 MPH in a 40 MPH zone. As a result, they impeded traffic SIGNIFICANTLY, thus adding to the congestion problem, not helping it by moving 100 skiers uphill in a single vehicle. Certainly there must be alternative turbo buses of some type that can go uphill at a reasonable speed...as opposed to adding to the problem. Thanks.	Michael Keough	Website
606	What provisions are being considered for the cabin owners in the Albion Basin?????	Christena O Gates	Website
607	As a frequent skier and employee near the park and ride on Wasatch Blvd I am well aware of the need for improvement in transportation to the Cottonwood resorts. I also travel a great deal and have seen competing resorts around the country and how they handle the congestion. Utah has a chance to truly differentiate itself with this plan. A gondola from the base of each canyon, with parking at the gondola base would make a world of difference as we compete with Colorado for travelers. The current Gondola proposal requiring bussing before reaching the Gondola is not enough. We must deliver a world class experience that stands out among our competitors.	Casey Nelsen	Website
608	I am a regular skier at Alta/Snowbird, where I have been coming for over 20 years. I support the Gondola option, as the mountain road is too congested. The gondola option will be cleaner and more pleasant, more environmentally friendly. But please put a parking lot at the base of the gondola station -- having to park and take a bus to the Gondola is horrible!	Ellen Kendall	Website
609	I have been a local resident skiing Alta for 35 years and I support the gondola. Thanks for taking on this project. -Elizabeth	Elizabeth Tea	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
	We need to do "something", anything. The inaction is going to kill us.		
610	I'd prefer a gondola, per the report it seems like it has low maintenance costs, it has less chance of being disrupted (accidents and avalanches regularly impact the road). It might be worth looking into a tunnel as well. I'd strongly recommend an alternate path to LCC ski resorts through American Fork on top of any of these efforts, access to Alta and Snowbird can be had through Mary Ellen Gulch. It has been studied in the past - It would alleviate all of the local traffic from Utah County coming up and clogging the canyons. I know a vocal minority doesn't like the idea of expansion in this area, but nobody wants to do anything - we need to do something, it's a matter of safety.	Marcus Sorensen	Website
611	My vote is for enhanced bus service.	Tristan Smart	Website
612	I would very much favor the proposed gondola option and enhanced public transit.	Andrew Wagstaff	Website
613	I would like to see enhanced bus service and a gondola. It seems best to me if you could avoid widening SR-210. It's the most beautiful canyon drive I've ever seen, and I would hate to add concrete which necessarily subtracts from the natural character of Little Cottonwood Canyon.	Greg Krakau	Website
614	if the gondola has seats for all then a 63 min ride would work. The bus with widening of road works. As long as there is seating only. Standing on a crowded bus in ski boots with gear in hand doesn't make a pleasant ride. Especially if you are my age 60 yrs old	bruce c hochberg	Website
615	After reading through the proposal I am in favor of a modified Gondola alternative. It will make for cleaner air, be mostly weather resistant, and greatly reduce the impact in the canyons. This is a future facing alternative rather than a patch on an overloaded system.	Sam Wright	Website
616	A large parking structure should be constructed at the base of Little Cottonwood Canyon with a warming room or a small mall in which patrons can get a bite to eat or some coffee. A gondola would not help the canyon traffic significantly and would ruin the natural landscape of Salt Lake's most gorgeous canyon.	Erik Misiak	Website
617	The gondola option, as written, is not something that should be implemented. Parking, unloading, taking everything with you for the day, getting on a shuttle, unloading, getting in line, loading onto a gondola, and then unloading at the resort is a pretty cumbersome process for an individual, if not completely unreasonable for a family of 4+. Adding a significant amount of parking, like 5-6 level parking structure, at the base station of the gondola would make a ton of sense and take quite a bit of hassle out of the process of reaching the resort by gondola.	Eric F	Website
618	The increase in capacity up and down the canyon, with a substantially lower environmental impact than increased bus services, makes the gondola the obvious choice.	Jessie Johnson	Website
619	I feel the gondola is best option but do not support a toll as this will cause an increase in traffic jam & we already are taxed to death in this state. The bus options are bad because they slow traffic and already get backed up at the snowbird center with 4 buses per hour	Steve Stanton	Website
620	Looking at and reading the advantages of each proposed option has been very enlightening. My Top option would be the gondola. Less overall impact on the environment as to traffic and emissions. Yes i know the bus would run on natural gas, but that still puts concern on the canyon. The gondola wouldn't get stuck from icy roads or snow delays. The gondola would be fun to ride no matter the season. It would help October fest. Which I have not gone to for a few years because of traffic and parking. The gondola wouldn't really be affected by avalanche control or natural slides. 2nd option would be the 24 bus running every 6 minutes. The 3rd option dedicated bus lane is starting to get pricey and affect more people on the whole.	timothy dieckmann	Website
	I'm a former SLC resident, frequent visitor, and Alcoholic since 1988.		
	I welcome any improvement measures. All the presented options make measurable additions.		
621	Future measures will almost certainly be required in addition to the current plans. Have you considered next phases? Could you make additional investments now to clear the way for future additions? For example, if you are going to be disrupting properties, spend the extra dollars now to prepare it for the next wave of improvements to be less disruptive in the future. Whether it is 10 years or 50 years the trend of growth is bound to continue. Thanks for improving access to these world class destinations.	Aaron Suzuki	Website
622	Gondola would seem the most logical, from an environmental standpoint, versus clogging the canyon with more buses. A couple things to consider with this is charging \$10 or \$15 to park at Alta lots, which may deter some traffic. Also, have some exemption for seniors as starting out the day standing for an hour on a gondola holding your equipment can take a lot out of you. Thanks for listening. Love Alta!	Craig Karr	Website
623	I love the idea of the Gondola. This would be such a nice and elegant solution. Clean and effective. However, I strongly believe that the Gondola needs to start at a parking lot. Having to park, get on a bus, transfer to a gondola is cumbersome. If I cannot park at the base of the Gondola and jump straight on I would not use it. My family skis Alta. Having to pack kids on and off a bus and then make that transfer would be too burdensome. We would still drive under your current proposals. Buses are antiquated and outdated solutions to traffic problems. Focus should be on an easy on and off Gondola system.	Richard Alley	Website
624	I would put in a gondola and parking deck at the base of the gondola in Little Cottonwood Canyon or run the gondola from the Park City area which would make the most sense.	JEFFREY CHAREN	Website
625	Gondola with a LARGE parking structure at the base is the way to go. Parking is key and will be beneficial for all three solutions. However, gondola is the only way to dramatically increase throughput for years to come.	Rene Kolga	Website
626	My household of two prefers the gondola option with parking lot at base of the gondola. This is the proposed option Alta Ski Area has recommended. Thank you!	Brad Crete	Website
627	I'd like to see the gondola option happen with changes recommended by Alta for parking at gondola base.	Liesl Einerson	Website
628	I support the Gondola alternative, and particularly if the enhancement suggested by Alta is used. Park my vehicle, take bus, transfer to gondola is too messy. We need to park, ride and arrive.	Alan Blackburn	Website
629	Add a gondola to ease traffic pressure and avy issues. But most important still leave 100% personal vehicle road access for all those that still want to drive. Gondola only restrictions will only cause long lift lines waiting for a gondola at bottom of canyon. Let us choose how we want to get up canyon. Just add a gondola as an option	Bob Johnson	Website
630	Long time lover of the canyons here. Buses suck. They are cramped and hot. I want a train like Trax that takes you to the top. If you cannot have a train a gondola would work too. Not a bus. Thanks!!!	Sierra Kurian	Website
631	Enhanced bus service is best. Widening the road will impact the canyon unnecessarily.	Anthony Rice	Website
632	I really like the 'enhanced bus with roadway widening' alternative option. I think the low travel time will be attractive to many riders. I also think the mobility hubs and bus priority lanes on Wasatch Boulevard will be very helpful.	Lauren Swanson	Website
633	My second favorite alternative is the gondola, as this would make for fewer cars and buses on 210 and lower the chances of accidents in bad conditions.	Nichole Vargas	Website
634	Enhanced bus with roadway widening for peak periods!!!! Gondola	Mike Elliott	Website
	Hi, this is a great start, but more information is needed that would be helpful to the end user (i.e., the public). Examples: Will buses be uncomfortably packed like sardines (as they currently are) to make the first 2 options work? What is the estimate of time for each of these to be deployed? What is the estimate of down-time due to winds (for Gondola) and unstable snow conditions (with snow sheds)? What are the details on road toll proposals? Will tolls guarantee that gondola or buses will be used to capacity at all times rather than only at peak times (and hence seen as a boondoggle if viewed as seldom utilized)? I appreciate that the goal is to make this work for 2050, but technology is moving so fast and in an exponential manner, all of these options are likely to be antiquated by 2050. A time line from now to 2050 would be helpful. A gut reaction is the Gondola looks best in terms of cost and maintenance.		
636	I believe that there should be a single parking lot at the base of the canyon. Park and jump on the gondola like many ski resorts in Switzerland and Italy. Asking the skier to park, ride a bus and then the gondola seems prohibitive the goal of providing a streamlined service with convenience.	Jeanne Crockett	Website
637	We need a gondola!!!!!!!	Zoe Flavin	Website
638	Gondola, please!	Aaron Boyce	Website
639	Gondola. Sustainable long term solution	Max Scrimgeour	Website
640	I believe a gondola with a parking structure at the base of it is the best solution.	Bob Dillon	Website
641	I support the gondola. That being said, regardless of what option UDOT proceeds with, I think that additional consideration needs to be given to an Alta-only route. Snowbird is so much busier than Alta, and has multiple bus stops. As it stands now, the snowbird bus stops increase transit time by 50% of what it would be if going straight to Alta. Additionally, at the end of the day, busses are often already packed with snowbird skiers before the bus even reaches Alta. Having an Alta-only route that runs on a more limited time schedule, for either the bus or the gondola, would greatly encourage Alta skiers to take public transit. Additionally, extending the schedule further beyond lift close would allow those skiers who would like to stay and Apres the ability to take public transit (and likely cut down on impaired driving).	Emma James	Website
642	Thanks for all you. I support the modified gondola alternative as proposed by Alta Ski Area.	gabe mickel	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
643	<p>To whoever reads these!</p> <p>Thanks for doing your part in making our community better.</p> <p>What kind of seating will there be for people in the gondolas? 35 people of capacity is great (unless my math is wrong 1050/30 =35) but if people have the option of sitting in a warm car versus standing in a cold gondola, I worry people may not want to deal with being uncomfortable for such a long ride especially after possibly waiting/standing outside for your turn in the gondola.</p> <p>Would make things a lot better if they had small heaters and many fold-down seats (to accommodate peak hours but comfort when available) I think undoubtedly this option would be great.</p> <p>What hours would the gondola run? Is there a pass for the Gondola? Telluride's free gondola operates nearly 24/7 and can be used for recreating like hiking and biking in the summer as well as skiing during the winter.</p> <p>Thanks!</p>	Troy Tully	Email
644	Focusing on environmental protection, ease of access in all-weather environments and just overall scenic beauty--having a gondola solution will be transformational to the skiing experience in cottonwood.	Karl Sjogren	Website
645	Enhanced bus service is the best alternative and is sustainable. Use the older buses that are in-service in the city. A gondola is an amusement ride not to mention it ruins the viewshed of LCC and BCC. Question: why are taxpayers going to pay for a gondola or the like for the benefit of privately held companies to increase their margins? We need an infrastructure that is adaptable and not a static fixture. Please think outside the box here folks.	Marshall Baillie	Website
646	The Gondola proposal seems the best alternative, and one that I've heard echoed from those who ski European destinations. mg.	Michael Gills	Website
647	I think it would be best to enhance the bus system. Building a gondola would destroy the natural environment, and the natural environment is what Utah is known for. It is important to stay true to our values as Utahns, and a gondola is not what is best for our mountains.	Leo Smart	Website
648	Light rail to Gondola base. Gondola over to Brighton / Solitude and to Canyons / Park City / Deer Valley. At Telluride they run the Gondola until Midnight to let people staying on the slopes to go to dinner/bars using the Gondola...awesome!	William Sween	Website
649	I'm an avid skier from out of state writing in support of the gondola option.	Weston Reynolds	Website
650	I'm in favor of the gondola and modifications as requested by Alta.	Gary Allen	Website
651	As a long time Alta skier I support the concept of a gondola system but that would not be practical unless vehicle parking was at the gondola base station. A multi story parking garage that includes some below ground parking would guarantee a major traffic reduction in the canyon. A parking area more than a couple hundred feet from the gondola will doom the goal of the project.	Ken Voytac	Website
652	My preference is the Gondola alternative with a modification to build a parking structure at the bottom of the canyon, to make the trip from car to Gondola easier.	Scott Webb	Website
653	I support the gondola alternative.	Zavis Zavodni	Website
654	I support the Enhanced Bus plus Roadway Widening option. Although I live in Texas, I visit Alta 4-5 times per year for skiing in the winter and hiking in the summer. This enhancement would be most beneficial.	Jeri Karr	Website
655	I think a gondola is a good long term solution. In the near term I think enhanced bus service should be combined with charge on parking at the mountains (same policy as solitude implemented in 2019 - 1 person in car = \$20 charge, 2 = \$15, 3= \$10, 4= \$5, unlike solitude I do NOT think there should be season parking passes made available at a discount) but instead of the resort keeping the money it should subsidize the enhanced bus service/ building of the gondola.	Bryan Gibson	Website
656	I definitely support the Gondola concept. It is the only option that scales while reducing the carbon footprint. It also allows access during extreme weather without risk to people.	Kevin Lynn	Website
657	Alternative 2-good for peak flows but will allow great access in the summer via dedicated bike lanes etc.	Marshall Baillie	Website
658	I support the gondola service	Harland Hayes	Website
659	<p>Question, why not run the Gondola all the way to the "Mobility Hub", reduce transit time and buses?</p> <p>For those of us that have young children and or grandchildren, it would make the Gondola a much more appealing option while we heard rugrats with ski equipment...</p> <p>Thank you for driving the conversation, and allowing us to participate, even if we do not live in the valley.</p> <p>Dave and Susan Bernd Alta Pass Holders Atlanta Georgia</p>	David Bernd	Website
660	Of the 3 options, I really like the bus & road widening. It helps skiers. Its fastest. It helps bikers. Alta resort has said that the Gondola version would suit them best but it would only work if the parking was moved to be next to the Gondola base.	Diane Schnarr	Website
661	I like the Gondola idea	Natalie Miller	Website
662	<p>Wud vote for the gondola with parking at the base of the gondola. We ski Alta with six adults and four children under 12 years of age. Getting all that equipment from car to bus to gondola would be discouraging to say the least.</p> <p>Hello-</p> <p>In My opinion the only option that makes any sense from a cost, community and environmental standpoint is enhanced buses without widening SR 210. I agree congestion is a major problem but like anything else in life it should be more about changing habits then adding major infrastructure. Canyon users should be forced to take buses and buses should be electric-similar to Zion NP.</p>	Frank Puleo	Website
663	<p>I also worry about resorts wanting to increase revenues by adding more and more skiers to our hills. With the past growth we've seen in the Valley the experience, from a local perspective, is/has changed and it is not for the good. I understand the need to make money but enough is enough and local canyon users should think about the long term impacts of more and more people on the trails and the slopes. Widening the road or adding a gondola will create a new infrastructure for future expansion that will load up the canyons with people without any real long term balance considered. This is what governments, developers and people do and its been proven over and over again. We need to speak up and protect our incredible landscapes. Once the damage is done its too late!</p> <p>Thank you, TQ a concerned local</p>	Thomas Quam	Website
664	<p>The gondola sounds like a great option. Issues with it I think should be addressed in order to make it viable include:</p> <ol style="list-style-type: none"> 1) Shorten total time - How long does the gondola ride take if you can park at the gondola base? 2) Can the design plan for future expansion to/from Park City - This would be a MAJOR coup for the entire SLC ski area and would put it on a world class setting beyond what it already is. 3) Do you foresee much gondola stoppage due to high winds - I think you are proposing having the gondola go along the road. I am not aware of high wind issues there but might be wrong. 4) Can the gondola either be extended further into SLC valley or can rail transit be planned for to help - This would also be a major accomplishment. 5) Would you consider a future expansion connecting little and big cottonwood canyons so that skiers do not have to drive once at one or the other ski areas - This would also be really nice 	William Fauntleroy	Website
665	GONDOLA! My family fully supports the gondola option, we wouldn't have to drive up the canyon, we can avoid the wear and tear on our car, keep things safe, be one less car on the road.	Meg Simone	Website
666	The Gondola option is clearly the best, however, there should be parking directly at the gondola base. While I'm from Ohio, I make trips to ski the Cottonwood resorts 2 to 3 times a season (I have close friends in Cottonwood Heights.)	Keith Chelm	Website
667	A parking structure at the base of the canyon would encourage Gondola use. The multiple transfers is undesirable and outfitting. An intermediate exit point at the Tanners flat Gondola angle station would be useful. A completed trail system from the top of the canyon to the base of the canyon would also be useful. I didn't see a discussion on use during high avalanche hazard. The gondola is useless if it cannot operate during high hazard conditions.	hugh boyle	Website
668	<p>Hi - I visit Salt Lake City a couple of times a winter to ski Alta (and sometimes Snowbird). I usually stay in a hotel at the canyon mouth and rent an AWD to get to the lifts. So I'm definitely part of the congestion problem.</p> <p>I've tried taking the bus before from the hotel before and it hasn't been fun. Sometimes the buses are full and oftentimes there is very little room, which is very difficult with a family. I do also have safety concerns (maybe unfounded) about the buses.</p> <p>A gondola up the canyon sounds like an amazing idea and I would definitely use it to get up the canyon and not drive. I think the Alta idea of a large parking lot at the gondola base is probably a good addition, as a tourist I would probably still rent a car but could get a smaller non-AWD car to drive around the valley.</p> <p>Another idea I had after looking at the plan summary was maybe having Snowbird-only and Alta-only gondolas? Just thinking about the unloading experience (and also loading to come back down). I'm sure there's been thought on this and could probably adjust as needed once infrastructure was in place.</p> <p>I really like the gondola idea.</p>	Stephen Napier	Website
669	Hi, I ski at Alta every year and have reviewed your well thought out plan options and I strong recommend Gondola Alternative 2 followed by Gondola Alternative 1 as the best path forward. I think either will be a marked improvement to winter travel in the canyon. Thanks much, Mike	Michael Dugery	Website
670	Gondola, definitely. But nobody is going to use it if they have to park, then bus over to the gondola. You need to build a parking lot right by the gondola loading platform so people can just walk over.	Rober Meyers	Website
671	I support the gondola plan.	Phil Snyder	Website
672	<p>The Gondola alternative seems unworkable if people cannot park at the gondola base. Having to first take a bus, then take the gondola will be VERY annoying to most people, likely causing very low gondola ridership. If that happens, the capital cost is a complete waste. The increased bus service options are prone to heavy crowding at peak times/days if there are few pickup points. I highly recommend that the planners talk to large European resorts that have run bus services for decades (e.g., Chamonix and St. Anton) to get their lessons learned. I have been there many times and their services are excellent - not the complicated patchwork solutions you tend to see in the US. In Europe ski buses are free. The capital and operating costs are paid through tourist taxes. The advantage of this is to not burden skiers with having to fumble for their money or their phone. pickups and dropoffs are super efficient. I can say for sure that if the Cottonwood bus service requires people to drive to one or two lots it will be a loading mess on busy / snowy days. The same is true if each rider has to pay. So much time is wasted with tourists figuring out how to pay and validating payment when boarding the bus. I think whichever alternative is selected, there should be high confidence that it will deliver a VERY PLEASANT AND EFFICIENT skier experience. Long wait times to enter a limited number of parking lots, bus boarding wait times, bus crowding, and fumbling for payment while carrying ski gear will all lead to very bad customer experiences which in turn will negatively impact Utah's standing as a ski destination and depress ridership. My view is that the best combination is a very smooth bus service with many buses, several pick up and dropoff points in the valley, no requirement for individual riders to pay (cover capital and o&m costs through taxes or added lift pass fee) and strong disincentives to driving (e.g., pay to park, small parking lots at Snowbird/Alta). With that combination, road widening is likely not needed - saving a LOT of cost and minimizing environmental impact. Assuming electric, fuel cell, and natural gas technologies continue to improve, buses are likely to have decreasing impact on the canyon environment in the future. Lets do buses - but don't do it slapdash - DO IT RIGHT!</p>	Donald Plotter	Website
673	I support the modified Gondola alternative as proposed by Alta. I come on Wasatch Blvd from the South (from Draper) and I am not going to drive to the gravel pit, find a parking spot, haul my skis, my backpack, and all my other gear to a bus stop, wait for a bus, having to lug it all onto the bus, and then do the same again at the base of the gondola. If this gondola alternative is not feasible, then I am in favor of enhanced bus service - with or without widening the road, subject to 2 modifications from last seasons service. 1. Install ski/board racks on the outside of the ski buses, like we had decades ago. 2. Open up the P&R bus stop at the base of LCC. I realize the issue with the uphill buses being delayed turning left on the road. There are solutions for that. Buses from both routes do not need to stop there when traveling uphill. During previous seasons a UTA supervisor was stationed at that P&R during uphill rush hour and he was in communication with the drivers. When no one is at the bus stop for uphill travel, he can notify the drivers to bypass the stop. As an alternative, this supervisor or UDOT can also do traffic control at the P&R exit - instead of the intersection of 209/210, giving the buses priority. At last resort a traffic light can be installed at the P&R exit, controlled by the bus drivers when needing to go uphill.	John Jonkman	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
674	I drive up Little Cottonwood Canyon almost every weekend during the winter. Looking at the proposal I know that I would not use the enhanced bus service as readily as I would use the gondola. I have also been in 4 hours of traffic in Little Cottonwood Canyon so I think increasing buses wouldn't be ideal. Finally, that road is not very robust to weather conditions and I suspect this would remain true even if it were wider. Therefore I support the gondola option and would like to let you know. I would also recommend considering a reduced ticket price for locals. Thank you.	Anne Marsden	Website
675	gondola would be great but COVID 19 ruins it. More buses put on canyon routes and extra parking at base of the canyon.	Melissa Terrana	Website
676	My objectives: long term sustainability of easy access to summer and winter recreation in the Cottonwood Canyons; balance sustainability against travel time and comfort and cost--reduce travel time and take into account travel comfort; I support the Gondola concept, but 1 hour going from gravel pit parking to Gondola base station to Alta is too long and potentially inconvenient and uncomfortable--create parking structure at Gondola base station to shorten travel time and increase comfort. Enable carpools (4+ people) to still drive up the canyon and pay a reasonable toll	Chris VanDam	Website
677	To ignore the need to efficiently and safely allow for more cars to move up and down the canyons ignores part of the ultimate solution. In addition to your suggestions we need: 1) toll system in the canyons similar to fast pass/easy pass. At the mouth of the canyons have an arch to pass under that automatically charges cars per trip. This could be prorated by the number of people in the car. You should also sell season/annual passes --= \$200/year. The money would go to road improvements and maintenance. 2) Increase the number of passing lanes or increase total number of lanes, even if it is 2 up in the morning, 2 down in the afternoon. 3) Snow sheds over the road in known avalanche paths so that the road can stay open even during mitigation and after slides.	beau parent	Website
678	Gondola makes the most sense because it will reduce car traffic, be safer for drivers and will help lessen avalanche issues. It is not just about providing a new solution, it is about understanding WHY people choose to do X or Y. Often groups and projects like this are not asking the right questions and are thus not taking into account the hidden variables to determine long-term success.	michael guerra	Website
679	Personally I greatly prefer a gondola / train service up the canyon, rather than any other type of bus service. Buses do not run on regular schedules that are predictable and are impacted by road conditions and canyon traffic. So there is really no reason to ride the bus other than you want to make a statement about supporting public transportation. In order for a gondola system to be successful there needs to be significant and ample parking at the station. Further, trains need to run every 2-5 minutes during peak times. I travel all around the world and the cities and mountain passes that have successful systems, have several things in common. We need to do them. If the time it takes to find a place to park, walk, shuttle, or bus to the gondola / train and the travel time up the canyon is significantly more than driving, people will just drive. If the proposed solution is impacted by canyon traffic, weather, or does not run at a frequent enough schedule, people will not use it. Please ask the questions of "what would be needed to take this service" or "what would prevent you from taking this service". Enhanced bus service while a good idea does not address the underlining problems of why people do not take the bus. Not enough parking, added expense, and most importantly they do not run frequently enough. If you show up at the bus stop and the bus is already full, you could be waiting for an hour before you can get another bus, especially when the canyon is already congested. That is just not acceptable nor useable.	Bret Jordan	Website
680	The gondola option certainly is most environmentally sound and least amount of weather slowdowns. There need to be significant parking at the Gondola station or the use will not be high. The access to the gondola station by bus from remote stations is a great idea also. The bus lane to the gondola station also need to be in place from the Highland park and ride also. Not just the Wasatch. The Highland Park and Ride bus should also be expanded. The gondola station needs significant parking at the base. Methods for people to easily transport goods to the gondola station for families should be considered, IE under bus automated bin system. Much like very modern systems at airport security, moving a large bin to a bus hold and auto removal. similar system into gondola cargo hold. The road needs to have avalanche sheds and berms added along with automated avalanche Gazees so the shutdown of the road in the morning is reduced for road and bus traffic even with the gondola option.	David Hackbarth	Website
681	I support a gondola option in the canyon.	Rachael Sharp	Website
682	I really like the gondola option	Kristy Dehlin	Website
683	First off thank you for addressing this issues. I think a substantial enhanced bus system and wider road would be best given the three options. I would be very supportive of the gondola idea as well just am worried about the impact to the wildlife habitat there. Furthermore, with the installation of a gondola you would need to build out much larger park and ride area to facilitate meaningful usage.	Alexander Buller	Website
684	Our family of 5 supports the gondola option to reduce traffic safely.	Kimberly Gooder	Website
685	We live in Boston, but come to Alta often to ski. We usually stay at the mountain, though I have often travelled from down valley and we often leave at the end of a ski day and have seen the congestion that can occur. To alleviate this, I believe the gondola plan is the best option presented. The frequency of service, mid range of cost and the fact it does not add vehicles to the road all make it a superior option. And frankly, it sounds really cool as a way to get to the slopes.	Peter Steinberg	Website
686	The best alternative for Little Cottonwood Canyon, because it would be the cleanest, is to build a parking lot at the base of a gondola that would transport skiers up to the mountain.	Nan Brandenbergerpayne	Website
687	Build the gondola. It's expensive up front but it will reduce the amount of gas burned by cars going up little cottonwood. Also it will allow for skiing on days when avy action closes the road but the mountain is still safe to ski. Make it big enough to support the Foot traffic from both snowbird and Alta. This will make one of the most unique ski areas even more unique.	Thomas Eastwick	Website
688	Enhanced bus with lane widening clearly the best option. Gondola sounds cool, but will inevitably become more complicated and expensive than expected; provides less flexibility for peak loading, such as resort opening and closing. Lines in bad weather will be horrible. And if it breaks down periodically like other gondolas it will all end in tears one blizzardy day.	john smith	Website
689	My preference would be the gondola but with more parking at the gondola base; perhaps a parking structure rather than a parking lot. I would also like to see more bus service with parking structures erected at the existing parking lots since these 2 alternatives seem mutually exclusive.	Donald Jablonski	Website
690	No one can honestly vote for a large investment for widening NatrHighway 210. It is the primary cause of water pollution in the Little Cottonwood Creek. No one can either subscribe to building a gondola considering the aesthetic impact it will have. Sustainability has a lot to do with aesthetics and longevity of an investment that is being considered. Hopefully, Little Cottonwood Canyon can be experienced as a Nature Park without a gondola line resembling a massive power transmission line through it. Can you imagine? - This would not even serve all aspects of users because it will only stop at Snowbird and Alta. - It seems unfair to have eliminate the rail to be an option to stop further highway widening. Making the calculation on a life cycle basis, the return of an Alta Railway on the right side of the canyon, largely running under the canopy, is clean and cheap. Why derail now?	Beat von Allmen	Website
691	the gondola is the right answer here.	Mark Rizzuto	Website
692	GONDOLA	Carl Freedberg	Website
693	Gondola with proper parking at the base of the gondola is the only real option that will serve well for the future of Cottonwood Canyon. I would even pay per use to avoid the hassle of no parking at the top.	Rochelle VanTil	Website
694	The Gondola idea seems like a game changer. It would relieve pressure on the road and afford greater safety. On snowy days the road becomes very difficult to drive and many cars and drivers are not equipped to handle it. I dread getting stuck behind a rear wheel drive without snow tires as many ignore the warning signs.	David Kupperman	Website
695	I am strongly in favor of the gondola option with parking at the base of Little Cottonwood Canyon. Widening the road, which is already poorly built with eroded, unfinished uphill shoulders, would further scar our canyon. And we really don't need more buses, particularly diesel buses. An electrically powered gondola would be in-keeping with future energy modalities, consistent with the skiing experience, and would provide visitors with a scenic appreciation for Alta's natural habitat. Thank you.	Paul Maeder	Website
696	I feel that the best alternative is the Gondola.	Brooke Boone	Website
697	I support the gondola for reduced traffic and cleaner air.	GRANT GOODER	Website
698	I believe a gondola or train is the best option. Widening the road would help but would need to be accompanied by significant increases in parking options as well.	Spencer Amundsen	Website
699	The gondola alternative should not be pursued any further. Its visual impact and disruption of the canyon's environment & wildlife would be a disaster. Parking associated with the base station would create tremendous congestion issues around the base station. The improved bus service, with car pooling, and road widening would be a much better alternative. It could serve to distribute the traffic much better than the concentration that would result from the gondola alternative. Perhaps some lessons learned from European avalanche protection of roads would be helpful as well.	RK Stewart FAIA	Website
700	either enhanced bus service option acceptable - gondola option NOT acceptable	JANE BOWMAN	Website
701	The solution to the Cottonwoods problem is not to make it easier for more people to get up the canyon, as the ski resorts and some others seem to think. Thanks to the IKON pass (promoted by the ski resorts), among other things, canyon capacity has been maxed out and the canyons simply cannot handle the traffic. A better solution, I believe, is to devise some approaches to limit access up the canyons (possibly with a pass or some other method that would enable people to take turns). Speaking only for myself, I would rather be limited to 1 day per week in LCC (for example) and have a pleasant, uncrowded experience, than have unlimited access to LCC and have to constantly fight crowds and traffic. Limiting access would result in a better experience for those whose turn it was to be in the canyon, and would avoid the time and huge expense that would inevitably be involved with infrastructure approaches like gondolas, extra lanes, and parking structures. I realize this approach may not be popular with the ski resorts, but the canyons aren't solely for the use and benefit of the ski resorts. If we continue to increase the number of people traveling in the Cottonwoods, we'll end up killing the goose that laid the golden egg. Thanks for your consideration.	Pete Malen	Website
702	I am strongly in favor of the gondola option with parking at the base of Little Cottonwood Canyon. Widening the road, which is already poorly built with eroded, unfinished uphill shoulders, would further scar our canyon. And we really don't need more buses, particularly diesel buses. An electrically powered gondola would be in-keeping with future energy modalities, consistent with the skiing experience, and would provide visitors with a scenic appreciation for Alta's natural habitat. Thank you.	Gwill York	Website
703	1) I really do like gondola option. My only thought would be that if we go done that rout may as well connect both canyons & Park City. 2) I like busing options. The only thing I would advocate for is that Alta & Snowbird have resort specific buses. As an Alta skier I feel as though those extra 3 Snowbird stops add 20+ minutes 3) Since both of those proposals are years & dollars to coming to fruition I think in the meantime I would advocate for 2 lanes going up the canyon from 7-10 AM and 2 lanes going down 2-5. I would love to find a way to require 2+ people in car but I think that would be hard to enforce. Hello,	Bret Christoffersen	Website
704	My name is Chris Dudis. I am a Senior in the Parks, Recreation and Tourism Department at the University of Utah, life long state resident and long time LCC recreationalist. I believe public access should be the number one consideration when addressing our outdoor areas. Our state depends on those spaces and our tourist deeply. I fully support the construction of a gondola system in the canyon. Not only is it more sustainable in operation and longevity, I believe the ecological damage from the construction will outweigh the damage caused by road widening and continual increases in canyon traffic. I also believe road access needs to remain open but enforced in the winter for our backcountry users. I believe that is a growing tourism sector for this great state as well. I believe the road should operate like Millcreek Canyon with a small fee or annual pass with exceptions for first responders, employees and private property owners within the canyon. During the winter all vehicles driving up must be capable of entering and exiting the canyon under the current tractions laws. Perhaps DOT could have an approved window sticker for pre-approved vehicles. All collected fees would support the gondola, road and the canyon ecology for future users.	Chris Dudis	Website
705	As an annual, out-of-state visitor to Alta, Snowbird, and the local ski backcountry, my family will prefer to use the gondola option. I urge UDOT to consider a gondola parking solution that does not require busing to the gondola loading area.	Christian Cobaugh	Website
706	Enhanced bus options from SLC is the best idea by far. Anyone with prepaid ticket for the day or season pass should ride for no cost on ski bus.	Barbara Snyder	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
707	As an out of state visitor who stays within the town of Alta to ski for about 1 week each year I have rented a car which then sat parked at Alta for that week, and I have used a shuttle service from SLC to Alta. I would have liked to have used the UTA, however traveling as a family of 3 for a multi-week ski vacation we felt we had too much luggage to bring aboard the bus unless we sacrificed part of a ski day to travel during a period of low traveler volume on the buses. For us the best way to help illuminate an unnecessary car driving the canyon and sitting in a parking lot at Alta is one that can accommodate more than a boot bag and pair of skis per person. The reality for us was that the shuttle, though I searched for the most affordable I could find, did not save money versus renting a car for the week and leaving it parked; and probably produced a larger carbon impact than a rental car would have. We have skied in Alberta at Sunshine Village where the only way to the resort is by gondola, and liked it very much. The one item I would add for the Gondola option to make it the most enticing it can be is to provide parking at the base station, and for that base station to be easily accessed by visitors such as us using local ground transportation to include Bus, Taxi, shuttle, Uber; and of course be able to accommodate the luggage required to travel up canyon for a week, not just day trippers. As someone with experience planning for contingencies, either a gondola, or snow sheds in critical parts of the road, would add to the egress options in the event of avalanches like we saw this past season 19/20 which produced extended road closures.	Thornton Ring	Website
708	I work at Alta as a mechanic year round and strongly believe a gondola would be the best option! Less environmental damage and let's face it seems like 60% of the time the road is closed during a storm is because a buss slid off the road. I can't imagine what it would be like with more busses.	Hunter Todd	Website
709	I fully support the gondola option as a first choice. Widening the roads also makes sense and you should do that as well since it's long overdue, but the snow sheds will ruin the views (that doesn't mean there a bad idea or that I'm against snow sheds) and will not solve the overall problem of having too many people on that road. The gondola would be an excellent experience that I would pay for. I appreciate the bus service, but the last time I was skiing at Alta, it took 3.25 hours to get down the mountain due to traffic instead of the planned 1 hour, and as a result, I narrowly missed my flight. The gondola would be more efficient, better in all weather, reduces traffic congestion, and would be a memorable, delightful experience. If you can take the gondola all the way to SLC, that would be even better. I would pay for a gondola direct from the airport to Alta. Thank you.	Ateve Scharf	Website
710	I support the gondola alternative with a suitable parking structure and bus stops at the base.	Ron Hilton	Website
711	I ski Alta every year!! This is such a good idea - I think gondola alternative 2 is the best idea	Megan Dugery	Website
712	I want to petition for a system that is safer and better for the environment as well.	Brianna Meikle	Website
713	Gondola with parking structure	David Semel	Website
714	I vote for the gondola option!! The bus to town at Taos Ski Valley sucks and can't properly accommodate folks. Thanks for considering.	Kitty Adams	Website
715	I believe the Gondola is the most environmentally friendly option and the lowest overall ongoing cost, has more capacity but that needs to be adjusted. Having people park at the gravel site will discourage use. there is space to have parking at the base of the canyon and while that will increase cost on the front end it will decrease ongoing operating costs. That would be a much better solution.	Tom Swapp	Website
716	I do not believe more busing will solve the problem, seems a large portion of the local ski population are averse to public buses. The gondola option seems like a good idea, however forcing busing to the gondola will have the same problems as just buses. Best option I see is to add a large parking area at the gondola base for those averse to busing. With many going to the gondola base parking lot, existing bus schedules from the hubs to the gondola base would be probably be sufficient and would not require additional buses or road widening on wasatch.	Jacob McEntire	Website
717	I vote for a gondola system. It is environmentally more friendly and I've seen it work well in other ski areas (Banff/Sunshine).	Elizabeth Allen	Website
718	Paid for parking. Free if car has 4 skiers in it.	Peter Foehl	Website
719	I would really like to see a ski train going up the canyon but a gondola is a good second as long as the parking structure is built with it. Parking structures at the resorts would be a good solution as well. 1) There also needs to be an "all of the above" alternative to include both bus and gondola and road widening on SR-210. Growth in the Salt Lake City area is happening rapidly and needs to be accommodated. Adding a reversible lane is easy and quick to implement compared to a gondola system, so it needs to be built now, even while the gondola is being engineered and financed. 2) There is no reason to eliminate roadside parking next to the ski areas. That only makes parking capacity problems worse, unless parking lots are expanded or multi-level parking structures are constructed. 3) Buses and gondolas would be a lot more attractive if they are combined with more user friendly options for ski and clothing storage at the ski areas. Nobody is going to want to haul their skis and boots up and down every day. A season locker rental for a tiny locker at Alta is very expensive and it would take 2 lockers to hold the stuff a regular skier really needs. The ski areas can offer to help encourage the use of transit options by building out more locker storage and offering lockers at much lower cost for regular skiers. 4) The current buses have traction problems. If you are going to rely on buses, get buses that are designed for mountain service, instead of trying to use regular buses. Suggest all wheel drive buses with lockable differentials, retarders for downhill, and better drivers put on the mountain routes. 5) For the gondola option, I think you need to look at having two mobility hubs. One at the base of BCC at the existing gravel quarry as per gondola Scenario 3, and another at or near the base of LCC such as in Gondola Scenarios 1 or 2.. The facility at BCC should primarily serve another gondola going up BCC, with a cross feed by bus to the hub at or near the base of LCC and another gondola system interconnection between Alta and Brighton at the top of the canyons. 6) Both Brighton and Alta need to encourage development of a town center at each location and substantially more hotel and condominium bed base. That will help alleviate transportation issues for the destination skiers, who are some of the worst problems when it comes to drivers who are unprepared for winter driving and who frequently are driving rental cars which are not well suited to icy canyon roads. The "head in the sand", unrealistic anti-development attitude of the watershed authority and towns is actually making the problem worse for the environment.	Stephanie Altice	Website
720	1) There also needs to be an "all of the above" alternative to include both bus and gondola and road widening on SR-210. Growth in the Salt Lake City area is happening rapidly and needs to be accommodated. 721	Gondola!	Thomas Kolanko	Website
722	Hello, I've been skiing alta for 30 years. Would prefer the gondola option plus parking structure at the gondola base. Preserving the environment is very important and this option seems to minimize the impact. The parking structure will alleviate stress on the buss system. My typical path to Alta is to take the ski bus. So I would definitely continue doing that.	harrison leong	Website
723	I am in Strong support of putting in a gondola. I believe that it will accomplish reduced traffic and air pollution and add a uniqueness to Little Cottonwood Canyon that will set it apart from other North American ski destinations.	Suzanne Winslow	Website
724	Really like the gondola idea. Seems more people likely to use this option Gentleman:	David Nacht	Website
725	I think a Gondola is a great idea IF you could find away to build a parking structure at the base of the Gondola. It is not a good idea to have to take a bus and a Gondola. Widening the road in order to have a bus lane is also a very workable plan and would be great. Thank you	Gary Larsen	Website
726	I support the gondola option.	Jenny Owens	Website
727	Would strongly support the gondola solution, particularly if sufficient parking is made available at its base. This is the ONLY solution that makes sense in this most avalanche prone canyon.	Steven Lewis	Website
728	I'm a big supporter of the revised Gondola plan. I.e. the one with a parking area at the base of the gondola. I would hands down always opt for this option. If I had to take a bus to the gondola station, that just seems more complicated and I'd be less willing.	Tori Allison	Website
729	This sounds incredible. It would really help congestion in the canyons!	Elizabeth Knight	Website
730	My goal is to preserve this unique and magnificent canyon, so the least disruption the better. There are so many other areas in the immediate region to develop. Let's save one historic experience.	susan shultz	Website
731	If the gondola option is approved you should provide additional parking at the mouth of Little Cottonwood Canyon or south of it for the considerable number of skiers that live or stay south of the canyon	John Anderson	Website
732	I strongly support a gondola or tram option for LCC. Wile additional busses and widening the road may help, it will not make near enough of an impact to a rather desperate situation. Some sort of an aerial solution is also the most environmentally benign option, critically important to an area like LCC.	Nicholas Goodman	Website
733	Gondola is the way to go. Lowest environmental impact and best fit with current recreational profile of LCC	Mark Shatz	Website
734	I would absolutely love the gondola system to be implemented in the canyons. I think it is by far the best solution. More people would be willing to take a gondola that ran consistently than a bus that ran on a schedule. I think that there does need to be a parking structure built directly at the base of the gondola (enough to accommodate at least 50% of the current number of cars that travel up to the ski resorts). The gondola would cut traffic down without needing as much invasive infrastructure as the road expansion would require. The bus is clearly not the right solution. The parking lot at Solitude was still full, and traffic was just as bad in that canyon when they changed to a pay-to-park system to try to reduce traffic. I found that waiting for the bus still took a long time, and standing in ski boots in traffic up to the resorts is a lot less comfortable than just driving your own car. People were more willing to pay to park than they were to take a bus. (Granted, I don't think making people pay for parking is the correct solution either). The gondola would bypass any traffic, and would theoretically be a faster and safer way to move more people up the mountains. Fewer cars in winter conditions = fewer accidents. I will not take a bus, but if I can park my car at the base of the canyon and access a gondola by walking from the parking structure, I will take the gondola every time- particularly if it is included with an active ski pass.	Allison Conner	Website
735	Gondola with parking at base of lift. I live in Cottonwood Heights in the winter and it makes no sense for me to drive away from LCC to catch a bus to the lift.	Charles Keeney Jr	Website
736	The only solution that makes financial as well as logistical sense is enhanced bus service with increased parking. Then charge cars that don't have at least 3 people to add incentive to ride the extra busses. Simply adding buses to the current winter travel situation is not sufficient. I have ridden the bus to Alta and find it a long, crowded ride that is too expensive if I have family members skiing with me. Many of the cars will continue to be on the road, plus the addition of more buses will simply crowd the road even more.	Ira zuckerman	Website
737	The option of adding buses plus a bus lane is better, if the bus fare is more reasonable than driving. However, if there are more than two people in a car the current bus fare is too high to make the typical person convert to the bus from the convenience and flexibility of driving. The gondola is a good option but the current plan for the skier to go to a park and ride lot miles from the gondola base will not encourage people to use the gondola. The gondola base must have sufficient parking to make the gondola convenient. In addition the fare must be set at a rate that will encourage a carload of 2, 3 or 4 to give up the convenience of the car for another transportation source.	Galen Ewer	Website
738	Along with increased parking and bus service build snow sheds. (Long over due)	Ira zuckerman	Website
739	I prefer the Gondola option. It environmental cleaner and is not impacted as much by the weather.	Randy Alexander	Website
740	Hello, I am a 30 year skier in all the Utah areas and strongly support the gondola option. Look at Telluride Mountain Village as a successful model. Dear UDOT,	john rielly	Website
741	Thank you for looking into how best to manage traffic between the valley floor and Alta. It is important to manage this problem. I would like to suggest that you seriously consider the gondola option with the following suggestions: 1) The valley parking lot is close enough to walk to the gondola rather than using busses. 2) The bus system be expanded and the individual automobiles be restricted to a large degree. I think the combination of the gondola and increased frequency of busses will be the best option and very importantly it will protect the fragile eco and watershed system we all love. I agree, the traffic situation in LCC needs to change. Frequently I am riding the bus as much as possible or carpooling with friends.	Luke Wardle	Website
742	One subject that I do not see addressed in the three proposed plans is a fee to drive up the canyon. Until that is included, skier and hikers alike won't change and will continue to travel by car. The last couple of years the out of state cars in Alta's parking lots outnumbered Utah plates. I see that as something that will not change under these proposals. In order for anything to work to alleviate congestion on this road everyone must comply and use alternate means of transport. Charge everyone who drives a daily fee. Provide locals with the ability to purchase a windshield pass that can be read electronically as a toll charge. Really everyone has to change.	Kathryn Handy	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
743	Zion National Park had/has a similar problem and their solution has been to bus park visitors up and down the canyon. It has worked beautifully. I think we should do the same here. Buses already drive up and down the canyon, we don't have to change the beauty of the canyon to start using buses (putting up tall and invasive structures for a gondola), it can start ASAP and not 5-10 years down the road. As a hiker I don't want to see big poles and large gondolas going up and down the canyon while I am trying to get lost in nature. While hiking around Snowbird you can hear the tram go up and down the mountain, it would be noticed and is not natural. Buses can be run with natural gas and remain idol free to reduce emissions and the burden of travel on our environment. This solution is cost efficient, quick, and we know the solution works as we have seen the proof of that in our national parks. Buses have my vote.	Rachel Johnson	Website
744	Hi Josh and others it may concern, Please see the attached letter voicing our company support the LCC gondola. We look forward to collaborating and supporting your efforts in the matter. Please feel free to contact me anytime with questions or concerns.	Shawn Marquardt	Email
745	I favor an alternative to the road up the canyon, i.e. the gondola. I have been skiing in little cottonwood canyon for more than 30 years. The road is the limiting factor at the most desirable times to go up the canyon (when it is snowing or after a storm), as well as more dangerous for both skiers and udot employees. It seems to be the better environmental choice as well.	mark conolly	Website
746	I favor a high speed gondola with parking both remotely and about 300 stalls at the gondola station, as well as a drop-off for both cars and busses. When the parking at the gondola station is full (actually about 90% to allow for people in transit) a notice is posted on 9400 and Fort Union to divert traffic to the bus lots. Make UT 210 from the gondola lot to the resorts a toll road in ski season and adjust the toll daily to shift the skier load to the gondola; permanent residents have a free pass. Transit time from the gondola station to Alta needs to be 25 minutes or less (9 m/sec. gondola speed or greater and about 2500 passengers per hour).	Robert Phillips	Website
747	Hello, I am writing to express my support for the "enhanced bus with roadway widening" option, and to say that I oppose the construction of a gondola in Little Cottonwood Canyon. I spend about 80 days per winter in either Little Cottonwood or Big Cottonwood Canyons, mostly skiing either Snowbird, Alta, or the backcountry. It's clear to me that something needs to be done about the traffic problems that happen on winter days when there is new snow combined with inclement weather, especially on the weekends. I am frustrated that to this point, there has been a very limited effort to attempt to solve the problem by increasing bus service. Before building another expensive and unsightly infrastructure project, I think it is essential to appropriately fund a bus option. Lots of other ski towns have bus services that operate on steep snowy roads, follow efficient routes, and are packed with traffic. Salt Lake City should be able to figure out how to do the same. An effective bus service should be efficient and easy to use with skis. It should make frequent passes (ideally a bus comes every 15 min during peak hours), have an outside ski rack, start in a large lot with plenty of parking, and take a direct route straight to the ski resorts. I think it would be ideal to have separate buses going straight to Alta and straight to Snowbird, so that someone trying to get to Alta doesn't have to stop at all the Snowbird stops (although the Snowbird bus could also make stops at Alta at the end.) There should be appropriate incentives for using the bus: a dedicated bus lane, where it is feasible, will ensure that the bus gets there faster than cars. Other resorts (like Jackson) require that you pay for parking or carpool in order to park at the resort, which makes the bus much more attractive. In recent years, the buses have gotten less frequent and less convenient, not more. The ski rack inside the bus was terrible and worse than just holding your skis on your lap (I appreciate that it was removed this season). Ski area pass holders get a free bus pass, but since the buses are stuck in the same traffic as all the cars, there's no real incentive to go out of your way to take it.	Kate Bowman	Website
748	I don't think that a gondola is a reasonable solution to the current traffic problem. I can't imagine that anyone would use it except for some tourists and people who don't have vehicles with 4WD or snow tires. While that might be enough use to make a dent in the traffic problem, these user groups would also benefit from increased bus service. A 63 minute trip (each way) quadruples the amount of time it takes to make the trip on dry roads. The lack of stops along the way means that a gondola would be useless to backcountry skiers. Personally, I think I might use an option like the gondola once or twice a year, only on powder days when the roads are in bad shape, traffic or accidents are slowing the route up the canyons such that it takes longer than 60 minutes to drive, and I have friends or family visiting who want to go to the resorts. Every other day of the winter, I'd probably just get up really early to drive up LCC or backcountry ski in BCC. Realistically, there is so much traffic on those days that the parking lot required to hold everyone trying to take the gondola would need to be a massive eyesore. I especially oppose Alta's request to relocate the parking lot to within LCC. I also can't imagine that a gondola with towers would be a safer option from an avalanche perspective, considering several avalanche paths took out large trees and even parts of houses this winter. There is enough development in our canyons already, and I would not like to see more structures built without exhausting all of the less impactful options. While widening the roadway will also have an impact, I think that it's a more appropriate solution to a terrible traffic problem that is acute only during very specific windows and times of the year. Thank you for your time working to address this issue and your willingness to consider public input.		
749	Best, Kate Bowman 84105		
748	I support the enhanced bus with roadway widening. I think this is the most practical solution for increasing the capacity of LCC to handle SLC's expanding population	Nicholas Walker	Website
749	I like the idea of the gondola as it would cut down on pollution, be safe and able to get people up the canyon even when road conditions inhibit it.	DANA JOSLYN	Website
750	I like the gondola option. I live on Wasatch and we need to curtail the cars blocking the streets leading up the canyon. Very dangerous.	Sam Circo	Website
751	I really liked the gondola idea, but as soon as I heard we would have to park elsewhere and be bused to the gondola station I was turned off. You have the inconvenience of not having your car, plus the hassle of taking a bus, PLUS a long gondola trip. I'm all for making transportation into and out of the canyon easier, but I really think the idea of having to bus from your car to the gondola will annoy a lot of people and encourage them to just drive themselves. I would. If I could just park and hop on a gondola, I would be much more likely to leave my car behind and accept the inconvenience of taking a public transit option. One question I haven't seen a clear answer to is where the unload stations will be. I hike Red Pine a lot even in winter. Would the gondola be an option for busy trailheads in Little Cottonwood (specifically White Pine) as well as ski traffic?	Caralyn Anderson	Website
752	I am writing to comment on the proposed gondola. If you do not put a parking structure in at the base of the gondola, it defeats the purpose of the gondola in the first place. The process needs to be easy or people WILL NOT use it. We are a lazy people. Also, why spend the money to put in a gondola if you don't go all the way and do it right, which is adding the parking structure at the base of the gondola. Let's show the world we know how to do this and do it right please.	Jason Frederick	Website
753	Hi I'd live to see better access to the canyons during the winter but I'm afraid that most of the proportions given are very flawed Let's start at looking at the gondola. Besides the immense cost of building a gondola of such scale and magnitude, by working in the ski resort industry I can think of countless things that could go wrong and make travel time even longer Just one would be a rescue. Imagine gusty winds that require the emergency extraction of guests. A gondola this tall would require a massive and dangerous rescue effort that would further slow down traffic and risk lives. I like the idea of concrete structures over the critical avalanche paths. It's been done in Europe and south america with great success. My concern would be access to climbing and hiking areas along the road. The same can be said for the widening of the road for a bus specific lane, how will this affect access to climber and hikers which make up also a big part of the population that frequent the cottonwoods. I urge you to think about the repercussions that these measures would cause to other interests groups besides skier and PLEASE do not build an ugly and dangerous go dela going up the canyon, it's just a stupid and expensive idea Thank you kindly	Santiago Vega	Website
754	A gondola would be an incredible year-round attraction and boon for the entire Salt Lake Valley! Buses generally suck. The choice seems clear.	David Kent	Website
755	I am writing to express my interest in the continued access for rock climbers in the summer months. I hope that none of the three plans would limit or prohibit access at any of the popular locations to climb	Travis Kale	Website
756	The gondola with a parking lot at the bottom would be awesome. Cleaner air, a beautiful trip and who cares if the road is snow covered. Hi,	paul laker	Website
757	Have y'all considered what a gondola or increased bus lane will do to the climbing areas in LCC? The majority of the bouldering areas in LCC are just off the road and a road expansion would cut into these areas destroying classic climbs forever. The addition of a gondola would also disrupt the climbing community because construction of gondola towers and their presence would get in the way of many climbs. One reason why I climb is because I like getting away from modern civilization and getting into the outdoors. If a gondola was implemented the aesthetic of LCC would be lost and would be detrimental to LCC's world class climbing. Do we really want LCC to turn into another Colorado canyon or European canyon that has gondolas heading up every high peak?	James Kowalski	Website
758	I like the gondola version, but want to be able to park at the base of the gondola rather than be bused to the gondola.	Brittany Jensen	Website
759	I'd like anything but the Gondola thank you..	Nancy Davis	Website
760	Loving the idea of a gondola instead of buses for travel up the canyon! It's incredibly environmentally friendly (to keep our waterways and our air clean and fresh), beats everything else in terms of longevity and upkeep expense, it can be used year-round, AND you can dress the operators in stripes, just like Venice! :)	Brittany Petruzzi	Website
761	I think enhanced bus option 1 with no additional road capacity is the best option for Little Cottonwood Canyon. Trying to widen the road can impact a lot of the minor parking pullouts commonly used by climbers and would be detrimental to even more pristine land in LCC. The environmental impacts of widening the road are too great and all it would lead to is even more traffic and then we'd be back to square one. The gondola would be the second best option as it would have less impact compared to widening the roadway, but it could also decrease privacy when climbing along the road or wherever the gondola ends up being erected. Thank you for your consideration.	Tanner Rozier	Website
762	Gondola!!	Paul Hancock	Website
763	I do not understand why we are going to so much expense when car pooling of 3 or more riders is free. Two riders is \$20 and no single riders in cars. Enlarge parking at base of the canyon and at the mouth of Big Cottonwood canyon for car pooling. See how this works and then look at doing a gondola system. In my calculations the car pooling will reduce cars in LCC by adopt 40%.	Jim Dreyfous	Website
764	I support the gondola option.	Lance Newman	Website
765	I believe the most effective option would be a gondola. The road options do not resolve the issues of accidents or ill equipped vehicles blocking the road for hours.	Dan Crooker	Website
766	I select the Gondola option.	Roland Sicard	Website
767	I support the modified gondola plan offered up by the folks at Alta. Asking consumers to drive to a location and then take a bus to a gondola to the resort will limit the use of this option. Being able to park at the base of the gondola will make it a significantly more attractive option.	Art Valletta	Website
768	I support Alta's desires to create a gondola for transportation up the canyon IF the cost is not prohibitive. I've skied at Alta for 45+ years and almost always with a handful of family members carpooling up the canyon together. If individuals have to pay too much for the gondola, that would be disappointing. And, would the gondola only run during the winter months? I see a need for road widening and improvements anyway to better accomodate the numerous users of the canyon. (And with the road widening option, I support the enhanced bus system.)	Rochelle Baugh	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
769	A gondola is a very inflexible tool and it will be totally dependent on enhanced bus service anyway. Buses flex to required capacity. The buses have alternate uses during the week when the canyon traffic is down. The buses are flexible in their points of origin. so the mouth of the canyon does not become a transfer point. With buses, school parking lots can become staging areas on weekends. Perhaps some of the revenue from the buses can go back to the schools. I would think snow sheds at the key avalanche points would be a priority over road widening at this point. Buses could be given priority between 8am and 9:30am on weekends. An immediate fix needs to be made on roads in the vicinity getting completely blocked by traffic waiting to get up the canyon on powder days. Neighborhoods in that area are impossible to access due to the backed up traffic on all the feeder roads. One option would be to designate certain parking lots as feeder locations for cars to wait for the opening. When the canyon opens, those parking lots get a police escort to the mouth of the canyon and priority. Or something else needs to be done, but shutting down access to hundreds of homes each powder day is untenable and a safety issue.	Rick Spedden	Website
770	Gondola?	Alex Hines	Website
771	In favor of the Gondola.	Boris Palkin	Website
772	Hello, I am a sandy resident and perennial skier. I feel that the gondola alternative is a great option. Seems to be the best option with it's moderate up front capital costs and lower long-term cost. This is definitely well worth the sight of a gondola in the canyon. This is also something I can see myself utilizing. Thanks, Andrew	Andrew Lengyel	Website
773	1. In the Wasatch Blvd. enhancements I see that the LOS for the intersection at Wasatch and North Little Cottonwood Rd. actually decreases in each improvement scheme, that seems to need a lot more thought. 2. With the two mobility hubs I see enhanced bussing to the base of the canyon or up the canyon only from the Fort Union and Wasatch hub, not the Highland Drive and 9400 South hub. This seems imbalanced as a way to mitigate traffic congestion on Wasatch Blvd. and eliminates ties to existing transit options from the valley or the airport rather than enhancing them. Growth on the Wasatch front is shifting to the south and west, considering this the hub at Highland should have better ties to the last mile bus connection. 3. Snow sheds should be a considered alternate in all scenarios. 4. Finding ways to remove commuter traffic from the corridor will ultimately enhance the travel experience for those accessing the canyons. All options should be on the table, including taking Highland Drive through to accommodate the growth in the south and west parts of the Salt Lake Valley. This ultimately removes a large factor in the congestion seen at the base of the canyons and to I-215 access.	Christine Coutts	Website
774	Another option would be to ban all personal vehicles up the canyon Fri-Sun during peak ski season (Thanksgiving - Spring Break/Mid March) and only allow buses (think Zion National Park). Create temporary parking at the mouth of the canyon/shuttle service from nearby bus stops/train stops. Another option would be to only allow personal vehicles with 4 or persons in the vehicle up the canyon.	JOHN ALLISON	Website
775	Also, more greatly enforce snow tires up the canyon. 4x4 doesn't really help unless a vehicle has snow tires.		
776	The gondola seems like a very good long term solution. This option also frees the roadway for busses, shuttle vans and other high occupancy solutions. It gives access for skiers, those working in the canyons and I would think would be more reliable in all weather conditions.	Christine Coutts	Website
777	Charge \$10-20+ for each car that goes up the canyon on winter weekend / peak use days, and use it to make the buses free to everyone. That will quickly solve the traffic problem. In the summer traffic isn't much of an issue. We don't need to spend hundreds of millions to solve a problem that only lasts a few days a week for a few months of the year.	Trent Heiner	Website
778	As a skier who greatly enjoys visiting Alta, convenient from parking to the ski slopes (as exists now) is a major draw. The gondola is the most reasonable of the three options presented, but requiring visitors who tend to travel with heavy, bulky gear to take three forms of transportation (a car or bus to the gravel lot, transfer to a bus, then transfer again to gondola) to get to Alta is absurd and inefficient. A parking structure should be built adjacent to the gondola base for it to have any utility and must included in the decision.	Kevin McDonald	Website
779	I support the gondola plan. I would like to see a drop off option at the gondola base and improved parking at the top.	Chris Sontag	Website
780	Leave Little Cottonwood alone and stop trying to make the wealthy wealthier. Who needs more skiers, riders, and traffic in such a beautiful canyon. You are ruining the experience. I understand you need to keep up with demands and inflation, but figure it out. Listen to the people who have spent most of their days in and around LCC. By making those people frustrated, you are demolishing the footprint of what makes the place special. You are driving out the very people that make sacrifices to be canyon employees. Figure it out, please.	Ralph Engen	Website
781	Gondola is definitely the way to go. Due to the current air issues our state suffers, as well as the exorbitant costs of upkeep for buses and potential environmental impacts of road widening etc. The gondola is by far the better choice for the future of our state and where Utah wants to go. Lets continue to lead the nation to where it should go rather than implement an immediately outdated and costly bus solution.	Jared Haddock	Website
782	I support the modified gondola proposal. My wife and I are long-time AltaBird season pass holders who own a home in Murray. In our seventies, taking the bus (with our skis, since lockers are not available) is too cumbersome. Many European resorts have gondolas and chairlifts that run up the mountain from the valley floor. Utah should do the same.	Stephen McQuide	Website
783	We desperately need more buses serving Little Cottonwood Canyon in the SUMMER!!! Snowbird Octoberfest creates an enormous traffic problem! I believe that given the opportunity to ride a bus in summer, people would do it... well maybe not during a pandemic, but let's plan for the future! Thank you for your attention to this growing out of control situation!	Julie Willis	Website
784	Please consider climbing access throughout the canyon during these infrastructure changes! Rock climbing is a very popular activity, as a less commercial way to enjoy the outdoors. Climbing in Little Cottonwood occurs from March through December, though is often done on sunny days mid-winter as well. From a climbers perspective, the ask would be: - Trailhead parking is needed throughout the lower canyon independent of bus routes - No above-treeline infrastructure, towers, or cables affecting the view and ambiance of the canyon - General input of users beyond the ski resorts. The ski resorts have significant economic impact bringing out-of-state users, but maybe local residents participate as much, if not more, in non commercial recreation types (hiking, climbing, mountain biking)	Brent Barghahn	Website
785	The congestion in the canyon needs a gondola. The gondola is the best option. It's accessible and durable and beautiful. This is the best answer.	Josh Tenney	Website
786	I support the gondola option, as it appears to be most cost-effective, time-efficient, and environmentally friendly. Even though transport time from base to Alta and Snowbird is slower than other options, the wait time is nearly non-existent.	Jill Tuicillo	Website
787	Let's make this happen! I want to ski more with my family but road conditions and safety keep us away-not to mention the environmental impact.	Angela King	Website
788	I have been using LCC regularly for 15 years and love that canyon in all four seasons. I'm well familiar with the driving problems in winter and use issues in summer. Please note that I HATE the idea of a gondola. It would massively impact the canyon for ever in a hugely negative way and would not meet the needs! The projected ride times sound completely insane- park, wait, take a bus, wait, take a gondola, and then do it all in reverse at the end of the day? I honestly can't believe it is even being considered and cannot imagine ever using such a crazy system. It would be better to do nothing than to put in a gondola. However, I strongly support a bus only lane and increased bus service; add a parking structure and direct busses to only Alta and only Snowbird every 5-10 minutes morning and afternoon, and you'd have a great solution that would actually function. It has worked very well in Zion, except they need more busses during the busy times. If you could make sure there were plenty of busses, that option would be far and away the best and have the lowest impact as well.	Ben Beasley	Website
789	I am writing to support the gondola up Little Cottonwood Canyon!	Ben Apple	Website
790	I am in favor of the gondola option. Thank you!	Kira Dunn	Website
791	can you do buses on a widened road. no standing room with a gondola no standing room. with parking structures at the canyon mouth or close by? this way if the weather or jack knife bus blocks the road at least the gondola can run. Has closing the road to everyone and just doing buses only unless by permit up the canyon been considered? The canyon road could be closed year round and we could even run the buses in the summer. There could be express buses and local buses. The local buses could stop anywhere along the highway to pick up and drop off. Express buses would service resorts major trail heads and events depending on the time of year/ day. Permits for other vehicles could be allowed for residents and vehicles needed to go up for maintenance, etc.? Obviously a good transportation hub in the Gravel pit would be necessary. Team up with a developer for the gravel pit and put in some nice mixed use apres ski/ hike type-resort style area. Also the buses could be electric. This would save on fuel and maintenance costs. And one day maybe we would see autonomous buses. This would further save on operation costs. I don't think autonomous buses would be far off especially with a route like this that would be done over and over again.	bruce hochberg	Website
792	Something similar could be done for BCC	Brian Summers	Website
793	I strongly support Alta's Gondola with parking structure option for the best skier experience and lowest impact on the environment.	Casey McClellan	Website
794	I am impressed seeing a Gondola from the Base Station. I think I like that. Do I read it right that they want to add another line, a bus-only line during peak periods? Would that not require mayor construction, cutting another line out of the mountain? How often is the canyon going to be closed during the construction?	Michael Albrecht	Website
795	Right now it takes me 20 minutes to drive from Sandy up to the Albion lot at Alta. It previously took 35 minutes by bus from the bottom of Little Cottonwood Canyon. It seems that all of these alternatives substantially increase travel time, except for have just having the Gondola at the bottom of Little Cottonwood Canyon and a large parking structure there. This of course does not help homeowners at the bottom of the canyon with neighborhood access. But, the problem is if you have a big parking area at the entrance of Big Cottonwood Canyon to then transport people to the Gondola Station at the bottom of Little Cottonwood Canyon, no one from South of 209/98th South are going to use that method of transportation and you will therefore have the same or similar traffic problems. So, I would opt for one Gondola station and one big parking garages at the bottom of Little Cottonwood Canyon. I am glad I do not have your jobs, this is an incredible complex and difficult decision.	Bruce McLeod	Website
796	I support the modified gondola idea put forth by Alta. While on my 19/20 annual trip to little cottonwood / snowbird alita I arrived at the ski bus stop to find signs plastered everywhere saying this was no longer a stop. Upon inquiring to locals about why, they all responded because the buses can not make the left hand turn out of the parking lot up the valley due to oncoming traffic. To those in power - do realize the near zero cost of installing a traffic light that activates when the bus needs to make that turn. Fire departments have been using this "tech" forever. If funding is your excuse then start a gofundme page - I guarantee you will have your funding. I will add that seeing the articles about reducing traffic in the canyon, while the bus stop sits empty is beyond laughable. Now you're holding town halls to come up with solutions? Traffic light folks. You're wasting everyone's time and effort. You have your solution, you have your funding, if you need extra funding contact me directly, in christ - jereI lorenzo	Gordon Orloff	Website
797	I agree with Alta Ski Resort that you should modify the proposed gondola alternative by adding a parking structure at the base gondola station rather than requiring all gondola users to park at the gravel pit lot and bus to the gondola station. I also think that you should charge a fee to enter Little Cottonwood Canyon (like Millcreek). People would 100% pay to access the canyon and we should all help maintain it if we are going to use it.	Jerel Lorenzo	Website
798	I support a gondola system for transit up the canyon	Katie Rowley	Website
799	I am pro gondola.	JD Ramey	Website
800	I would like to vote for gondola service as the alternative route to cut down traffic and pollutants.	Alexander Koch	Website
801	Enhanced bus with road widening. 36 minutes. NOBODY wants to take an hour from canyon base.	Alan Carr	Website
802	I am an avid user of this canyon year round, and in the winters I have had the displeasure of being held hostage in this canyon or on the road for more hours than I would like to admit. The gondola is the only option proposed that provides badly needed additional ingress/egress for the Town of Alta and is impacted less by weather conditions than the other alternatives. I believe widening the road and adding avalanche tunnels would be an important step to do as well as implementing the gondola. It is environmentally cleaner than vehicle options, will have less impact on our natural resources to implement and will provide a more comfortable, convenient and scenic trip than the other alternatives. The other alternatives do not address the parking issues we have. Why widen the road to allow for more cars if there is no where for them to park/go? The proposed gondola alternative solves this problem, but it needs to be modified by adding a parking structure at the base gondola station rather than requiring all gondola users to park at the gravel pit lot and bus to the gondola station. I believe this change will facilitate and encourage use of the gondola and allow more of its capacity to be used. This problem can no longer be ignored, and these solutions have been long overdue.	Dean Bird	Website
		AURIE DURHAM	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
803	I agree with a modified version of the Gondola option for improved access to Alta and Snowbird in Little Cottonwood Canyon. The recommended modification would add a parking structure at the base gondola station. This would result in increased usage of the gondola, and a corresponding reduction in vehicular traffic, by making the gondola option quicker and easier to use. Thank you, Andrew	Andrew Stoness	Website
804	I would support the read widening and enhanced buss service, however, you need to add sufficient number of buses and have buses up and down the canyon specifically for Alta and Snowbird, with one stop for each. The current service has multiple stops for each resort and the ride take well over an hour if you are the last stop, which is crazy. You should modify the bus service this coming ski season to reflect one stop per resort. More people would take the bus if you had a shorter trip time, Given the current route. I would never take the bus again. The Gondola is pipe dream and would NOT speed up getting up the mountain. I live at the mouth of the Canyon and live this every season. Don't make an executive board room decision, listen to the residents who live and breathe this daily and weekly	Joe Masi	Website
805	I support gondola option!	Ashley Turner	Website
806	Please install a gondola. This will be better for the environment by reducing emissions from vehicles. It would also allow flow of people if the road is blocked due to snow. It will be a fun attraction in the summer as well.	Jeffrey Martin	Website
807	Gondola with a parking lot would be ideal. Busing to the gondola adds time and hassle. Greetings,	Cem Poyraz	Website
808	My browser wouldn't allow me to submit my comment through the website due to a missing security certificate at https://crm.zoho.com/crm/WebToLeadForm, so here are my comments on the current transit options: Having reviewed the current options, as a Wasatch resident and frequent LCC visitor, I would strongly prefer a gondola solution in the canyon. Reliance on vehicles including buses is not sustainable in the fragile LCC environment at the contemplated volume, and we already know that the user experience is poor. With whatever solution is ultimately adopted, a massive expansion of ski/boot lockers at Alta & Snowbird would do a great deal to ease transit stress.	Bob Hunt	Email
809	All three are great alternatives to the current situation. The idea of having to park, then wait for a bus to take you to the gondola, then wait to get on the gondola is not very appetizing. Can a parking garage be built at the base of the gondola? Can there be a combination of the three? Snow sheds would be a huge improvement over what we have now. Avalanche closure and clean up are what really pushes traffic back. If snow sheds help alleviate closures, or closure time that would really help. I like increased buses, if the current amount of buses is not enough, and I like the idea of widening the road. Thanks for doing something.	Ian McPherson	Website
810	I like the option of enhanced bus service with widening of the roadway. Not sure if any of the options address avalanche issues. The gondola - taking over an hour would be cool but would put people in close proximity and doesn't address the road.	Adrienne Ruderman	Website
811	I would propose that parking structures are created near the base of the canyon and no-one except for locals, people staying in hotels, or non-skiers/snowboarders be allowed up the canyon except by transit. If that is not available then the gondola would be a great option.	Jack Hamilton	Website
812	Gondola looks like the best option in my opinion.	Sebastian Tomaszewski	Website
813	i so want to say gondola. with salt lake's air pollution it's important we stop building bigger and bigger roads. but i'm afraid if people have to drive to a parking lot then take a bus just to get to the gondola it's too long and all the transferring of ski gear will make the experience too poor. SO, i think you should go back to the drawing board and figure out how to get a big parking lot right by the gondola. after that my favorite option is definitely a dedicated bus lane. people should be rewarded for doing the right thing and taking public transportation!!! and btw i hope all options are free with a ski pass... heck maybe just free for all. i think doing what's right for the long term is more important than saving some money on the front end.	josh stewart	Website
814	I supply the modified Gondola option that Alta ski resort has proposed. by having an on site parking lot it will encourage use and reduce traffic. It is cleaner for the environment in the longer term and less affected by weather.	Brett Backman	Website
815	I believe alternative 3 (gondola) will have less of an overall environmental impact and will be less dependent on road conditions (e.g. avalanche mitigation) and dangerously slippery roads.	Austin Frick	Website
816	A gondola is insane. Besides being an eye sore, it would be ridiculously expensive to construct.	Melissa Ladakis	Website
817	Sitting in the canyon for 2 hours on idle or in a bus for hours idling isn't good for business or the environment. Neither is widening the roads.	Nick Glover	Website
818	I strongly support Alternative 3 (Gondola) with the parking modification proposed by Alta. I am a resident of Salt Lake and have skied in Little Cottonwood Canyon since the mid '60's. The traffic and the pollution it causes in LCC over the past decade has become horrendous, and is only getting worse. It has come to the point that I now ski elsewhere. The only true solution is to remove cars from LCC altogether. A gondola is the most environmentally sound option. I also believe a gondola will have a much, much higher usage adoption rate than increased buses. It also has the added benefit of eliminating issues related to weather and avalanches.	Flynn Justice	Website
819	Has a UTA Trax line with a connection to the existing line(s) been evaluated and determined not feasible vs the gondola option ?	Robert N Caswell	Website
820	I support Alta ski resort position. A gondola system but no bussing to the gondola. Instead build parking structures to handle parking by the valley gondola station. Gondola and parking should be free (but ski resorts cover part of the cost. They could make this back in their lift ticket pricing.	George Karlsvn	Website
821	I think a gondola is the way to go. Not only would locals love it but tourists who slow down traffic in the canyons with rental cars not fit for snow would see the gondola as an attraction and be more inclined to use it.	Tyler Deane	Website
822	The gondola with a substantial parking structure at the base makes the greatest sense. A similar arrangement exists at Pila in Italy's Aosta Valley This approach moves large numbers of people with minimal environmental impact.	Jon Weisberg	Website
823	More bus services, year round Widen road.	Nathaniel Hamlett	Website
824	Gondola please	Mirosław Owczarek	Website
825	I support the modified gondola with parking increased at gondola stAtion	TJ Nagy	Website
826	I support a modified version of the Gondola alternative. I think it is the only alternative that provides badly needed access to the canyon and is impacted less by weather conditions than the other alternatives. It is environmentally cleaner than vehicle options and will have less impact on our natural resources. If a parking lot were available at the Gondola sight (in lieu of busing to the gondola), that would be ideal.	Briana Kelley	Website
827	If I cannot drive to ALTA, as I have since 1969, I will ski Park City. How about enforcing the 4x4 or actual snow tires rules?	Mike Dunn	Website
828	Gondola. Run it year round -would be a great thing to see in the summer too. Really think a White Pine station would make it more appealing to the BC users too (and summer hikers).	Brian Harris	Website
829	Would prefer Gondola, but not if it takes over 1 hour!!	Fritz Hoeckner	Website
830	More busses equals more busses off the road and more backups. Bus drivers need more snowy condition training.	Jackson White	Website
831	I love the option of a gondola as an alternative form of transportation. However the capacity needs to be increased for it to be viable. I feel if it takes longer to travel by gondola people will be less inclined to use it over driving a personal vehicle.	Henry Krichbaum	Website
832	More bus service. Including earlier start times and later times as well as more parking either the mouth or close to the mouth	Tofer Moran	Website
833	I have been a regular user of Alta ski area for 42 years and strongly support the development of a modified Gondola approach to the user traffic problems	KEVIN WHEELAN	Website
834	I am in favor of the Gondola idea. Keeping buses out of the canyon will reduce traffic and make the canyon as a whole much safer. The Gondola would also add another element to visiting during the summer.	Greg Palmer	Website
835	Enhanced bus service with widening of the road is the best option I would take the bus all the time !!	Susan Bennett	Website
836	-I like the idea of a Gondola but parking needs to be at the base of the gondola. It would be the best solution if we can figure out that issue. -Something else that should be looked at is American Fork Canyon. If Snowbird can expand into that area adding some infrastructure and parking it would help the load in LCC quite a bit. -To be honest, we need to be looking at areas that could possibly become another resort. Long term, the Cottonwoods won't suffice with population growth.	Jake Neerings	Website
837	I am in full support of the proposal that Alta Ski Area suggested. This would be a modified version of the gondola alternative. To have a parking structure at the base of the gondola instead of the gravel pit. This would entice FAR MORE people to use the gondola instead of drive up the canyon. If the parking lot was down in the quarry pit, few people would drive there to use the shuttle to bus up to the gondola.	Andrew Herrin	Website
838	I support the expanded bus service + road widening proposal. More buses could be added right away, before and during the construction of widened lanes and avalanche mitigating structures on the canyon walls. I would also urge the construction of a large parking area at the base of the canyon in the area best suited for bus loading and added parking near the ski resort base areas.	Charles Putnik	Website
839	I'm actually the field guy doing the boundary survey that this project will be based on. Having been all up and down the canyon now, I really think the gondola idea seems a little far fetched. It'll be expensive, require construction in otherwise natural areas, and still be prone to breakage or overcrowding during the winter months. Also the gondola will be slower than driving or taking the bus on low traffic days. I think the best solution is the dedicated, reversible bus lane. Construction will stay near the existing road, the extra lane will serve multiple purposes depending on the season, and this will really encourage bus ridership. Watching the bus fly by while folks sit in traffic will definitely encourage bus usage. Adding more busses and increasing frequency will only increase the functionality of an extra bus lane. I think the bus lane option would be much more effective in the long run than installing an expensive, relatively fragile, gondola system. It could also be slightly less invasive in the canyon, improving already paved areas instead of putting the gondola towers everywhere. Thanks	Myles Sykes	Website
840	Traffic problem surfaced when resorts accepted IKON pass. Cease accepting IKON, do not saturate mountain with income producing skiers. Determine mountain load and limit skiers.	Tom Bailey	Website
841	Gondola with enhanced parking or bus to the gondola. Area to shelter while waiting	Jill Harris	Website
842	I would propose widening the road as well as enhanced bus service. A gondola would be cool but may be an eyesore for the canyon! A snow shelter for the road in places that slide frequently may also be a great idea (like Tanners Flat) - they've done that in the Alps. Cautioning the resorts to charge for parking may also lead to more frequent carpooling.	Nathan Hansen	Website

843	<p>First off, I want to say I am very pleased this process is moving forward and one way or another, will lead to an improvement in Hwy 210 transportation.</p> <p>With regard to the plans, I would immediately throw out "enhanced bus/no additional roadway capacity" option. LCC needs better access overall, and this plan does not achieve that goal. The extra lane for winter bus and pedestrian/bike access in summer would be a huge value add to the community and economy.</p> <p>The most ideal solution from an environmental impact and protection from storms would be a gondola. I prefer a gondola to all other solutions BUT not in the form shown in this proposal. It is ridiculous to expect people to board a bus to get to the gondola loading station. There needs to be a parking hub with gondola loading at one location. I was lucky enough to visit Switzerland where there is a multi-stage gondola leading from the town Le Chable with a very large car park at the bottom of the valley up to the town of Verbier, and then on and up to the ski resort of Verbier. It was a smooth and wonderful experience, and there was zero need to use a vehicle. We need to mirror that experience with Hwy 210. Further, the bus-to-gondola plan at 63 minutes one way removes one of the best parts of living in the Salt Lake City area: the quick easy access to the resorts for partial ski days. At over an hour each way, this would mean an entire day skiing or nothing at all. And for too many people that would mean: nothing at all. I want to retain the ability to zip up to Snowbird for a few tram laps and be home within 2-4 hours.</p> <p>If a way to directly board the gondola from a parking area simply cannot be done, then I favor option 2: enhanced bus with roadway widening. And please be sure there are enough snow sheds built to ensure uninterrupted service during storms. Note that this option (and any other with private vehicles) also requires enhanced monitoring to ensure ill-equipped motorists aren't venturing into the canyon in snowy roadway conditions, such as all the rental cars with "all season tires."</p> <p>This would be further improved by allowing loading/unloading at the angle station for backcountry winter recreation and summer recreation (biking and hiking).</p> <p>Thank you, Josh Rhea</p>	Joshua Rhea	Website
844	As an avid Alta skier and season pass holder, I've very excited about the idea of a gondola. I'd even be willing to pay a bit more for my pass in order to be able to use the gondola and not have to sit in my car. Particularly on days with heavy snow storms, the traffic can be extremely bad and I have sat in my car for up to 5 hours just trying to get down the mountain to get back home.	William Downing	Website
845	I support the Gondola but think there needs to be a parking structure at the base of little cottonwood canyon. Parking to wait for a bus, only to be dropped of and wait in another line for a gondola does not sound like a reasonable solution.	Christalyn Pottenger	Website
846	Gondola	Benjamin Gilchrist	Website
847	I think widening the road is the best option, just adding more buses would create more problems. The gondola is cool but impractical, a TRAX would be more practical.	Rex Nelson	Website
848	Difficult situation for locals such as myself. I first came to ski Snowbird and Alta in 1981 and ended up making our home at the base of Little Cottonwood Canyon, just 10 miles door to door from the Driveway to Entry 1 at Snowbird. The canyon is a great year around location for families and outdoor enjoyment and I understand the draw, the issues and the concerns. I don't know the fairest way to determine all the agendas folks have, but I would sure like to find a way for locals who have supported the area by living here some benefit for making the area our home and not burdening those within 20 minutes the full brunt of measures peanut buttered at everyone. I like the ideas of a gondola set up and know this is costly and will take time, but it would be great to just load at the base of the Canyon and not deal with all the vehicles. My wish would be three ways in concert 1.) buses, 2.) train and 3.) gondolas	James Suel	Website
849	Would like to see road widened and more buses.	John Landrigan	Website
850	I support the gondola alternative- ideally with a parking structure at the base of Little Cottonwood Canyon. I have been skiing at Alta for 30 years and have watched the traffic grow over that time period. The gondola is way more environmentally friendly.	Caroline McBride	Website
851	With the State budget in deficit territory due to covid-19, are these options realistic for the near term? Issue even and odd numbered, bar coded passes, on-line, for private vehicle canyon goes to be used on even and odd calendar days in public parking. Display passes on the dash of the vehicle. Enforce compliance in public parking areas with issued citations (parking tickets).	David Petersen	Website
852	Of the choices provided for transportation to the Alta ski base area I favor the tram option.	Mark Payne	Website
853	I think the gondola plan makes the most sense as it is the only option allowing continuous travel even during storms and road closures, which are when the biggest red snakes occur. More buses just add to the traffic in the canyon especially during storms, and with any plan it will be important to limit car traffic, whether by charging a toll and/or incentivizing carpooling. Thank you for the time put into improving this.	Sofia Tuttle	Website
854	I prefer the bus ideas. A gondola is a huge permanent expense. Bus service can be expanded and contracted somewhat based on demand. Bus service can also stop at various trailheads along the canyon.	Stephen Hales	Website
855	Of the three options being considered only the gondola would be reliable in storm conditions. I also think that building a gondola without parking would be short sighted and would result in much lower usage	Mike Musica	Website
856	I believe the best option for canyon traffic is enhanced bus service and a designated bus lane. I have been a LCC skier for 40 years and the traffic has become unbearable. The only reason my family of four does not regularly use ski bus service is because of the stops at Snowbird, as an Alta skier we have been stuck in the downhill bus at Snowbird for literally hours. Busing needs to be direct to each resort and ridership would increase if riding the ski bus were a time saver instead of a way to get "stuck" in the canyon.	Kim Watson	Website
857	The Gondola with enlarged parking area at the base is the most appealing option to me. The opportunity to park my car at the base of Little Cottonwood Canyon and ride the gondola would be scenic, stressfree, and relaxing. Also, getting onto a gondola would much easier than going up and down stairs on a bus. I have seen a number of people slip and fall on wet floors or the steps themselves.	mike murphy	Website
858	Sign me up for the gondola! Thanks, Mike Murphy	Angie Staheli	Website
859	This sounds like an excellent solution! Thank you.	Rob Reinfurt	Website
860	Since most of the traffic comes before the mouth in between BCC and LCC on wastach blvd, will you be adding lanes there? Also, since the bus has a bad reputation for sliding off the road, it may be difficult to change the minds and attitudes of the consumer. Last year alone, I've seen a bus off the road around 6x and I only go up LCC 2-3x a week during the winter. I know people talk about this all the time. So, my concern is that even if more buses are available, people may be reluctant to ride them. I'd hate to see so much time and money invested in a project and not get utilized. Have you considered a train option? If there is a faster solution, people will adopt it. If it's slower or just as fast, people may not adopt. I do love the snow shed idea and think that's a great way to keep the traffic flowing during storms/high avy danger. With these new options, will there be added parking at the mount of LCC? I think the area across the street from the current park n ride would make a great hub and not disturb the uphill flow of traffic (being on the south side of the road).	John D Coburn	Website
861	Gondola sounds great.	John Sperry	Website
862	I like the Gondola option. Its the best long term solution and it reduces cars in the canyon. But please put the base of the gondola in a mixed use center center. The traffic to the mouth of the canyon will kill this. It takes an hour to get to the mouth. Wanna sit on a bus for an hour to "Save time". Just extend it down the street to the park and ride on 9400south and 2000 east. Add more parking if needed. People would totally use it and it can benefit the community.	Dani Day	Website
863	I love the idea of the gondola because it would provide a less stressful & more scenic way up the canyon. I'm already prepared not to be in any rush going up the canyon in winter because of weather/traffic so an hour doesn't sound bad to me. I think a cool addition would be bus routes for snow shoers to places like Donut so they wouldn't have to drive either.	Linda Caston	Website
864	Enhanced bus with widening road and underground parking	Mark Gardiner	Website
865	While it is unusual that I am entirely in agreement with Alt Ski Lifts, I think that their preference summarized below is the correct alternative. "[Alta] supports a modified version of the Gondola alternative. It is the only alternative that provides badly needed additional ingress/egress for the Town of Alta and is impacted less by weather conditions than the other alternatives. It is environmentally cleaner than vehicle options, will have less impact on our natural resources to implement and will provide a more comfortable, convenient and scenic trip than the other alternatives."	Bryce Johnson	Website
866	One question to ask is which alternative will have the most appeal to the public. Driving in LCC in winter is hazardous as well as crowded.	Chris Latimer	Website
867	Expanded use of bus service might be preferable to automobile gridlock, but who gets excited at the prospect of riding a bus? I have been fortunate enough to have visited Sunshine Village in Banff, which is accessed by a scenic gondola with a huge parking capacity at the base and an intermediate station at Goat Mountain as would be necessary to serve Snowbird. Also I have read that a 7.5 mile gondola connects the towns of Telluride and Mountain Village, in Colorado. A scenic gondola is a forward looking solution that would permit visitors to take in the big views without worrying about keeping their car on the road. My knowledge of European and South American gondolas is limited, save to say that a gondola in LCC would not be an untested alternative.	Paul Henry	Website
868	One drawback to the gondola is that people wishing to disembark part way up the canyon would not be served. This is a small percentage of people compared with the number of resort visitors. Perhaps shuttle service would be the best option for people headed to White Pine Trailhead, Tanners, and Lisa Falls.	Colette Casper	Website
869	The idea of expanding the road will not address the primary problem with the road which is keeping it safe for travel, nor can the road be expanded and maintained well enough to address continual population growth, and increased use due to multi-mountain ski passes. A gondola, would be an attraction in itself, usable year round except for maintenance closures.	Melissa Brown	Website
870	That is my two cents. Thank you.	Margaret Grzybowski	Website
871	Please put in a Gondola.	Jeff Wooster	Website
872	Wider road, expanded (safer in snow) bus options. I feel like I always want to take the bus but own a 4x4 and invest a lot into proper winter tires to ensure safe travel for myself.	Wendy Broom	Website
873	Put in the gondola it will make Utah truly unique and is good for locals, traffic, and the economy	Scott Ceasar	Website
874	I support the Gondola option 100%.	Nick Fadden	Website
875	I love the gondola option the most. Then hopefully we avoid having to close for avalanche. I also think having a bus only lane would help a lot... bus only up in the morning and bus only down in evening. You also need a lot more parking for people at bottom of canyon. We drive from Wasatch back and as that gets more and more crowded a gondola from the Wasatch back makes an excellent option. Please consider this.	Eric Hansen	Website
876	My preference, hands down, is the Enhanced Bus with Roadway Widening. I live in Sandy and my family and we ski at Alta. We use the canyon much more in the winter than in the summer. I would also love some sort of easy reservation system for parking so I know before I went up the canyon what the % of parking will be available once I get up there. Maybe each driver punches a "destination" button before they go up the canyon.	Richard Edgerly	Website
877	Please provide gondola service from a parking location. Requiring a bus to get to the gondola makes no sense and will result in poor utilization. Please provide a parking garage at the proposed lower gondola station OR extend the gondola to the proposed parking area.		
878	Gondola looks by far the best option. Need to take all traffic out of the canyon and have more control over closing down the canyon. Really support all efforts to get cars out of the canyon!		
879	How about Gondola with parking at base station? Could the mobility hub be moved to the base of LCC or does this result in issues on Wasatch Blvd?		
880	There needs to be a gondola to make it safer and less congested up the little cottonwood		
881	I support the Gondola alternative if we include sufficient parking at the base station that will incentivize and maximize its use.		
882	I really hope you people realize that SLC is growing faster than any other city in US. Busses will never work. Ever. You need to build parking garages (plural) at both Snowbird and Alta. You need to charge \$25-\$40 per day to cover the cost of the structures and create a gondola or funicular. Tourists are NEVER TAKING A BUS. EVER. For free or not. Its not realistic. We want our stuff in our vehicles. Additional coats, hats, facemask, skis etc. I land at SLC at 10:00 am and change in the parking lot and skiing by noon.		
883	You have to stop thinking local and remember, whatever decision you make on the choice before you today is a TOTAL WASTE OF TIME and obsolete the day its complete. You have to embrace the change and the growth from locals and tourists and until you realize that resorts around the world have solved these problems with trams, funiculars and parking. Have you ever been to a concert or sporting event and did not pay to park? The locals are hostile about cars and paying to park. They have gotten off cheap for too long. The additional issue really is the Ikon pass (and Epic) is destroying the mountains and industry. The passes are EAY TOO CHEAP, and the window is WAY TOO EXPENSIVE.		
884	I ski 20+ days a year at Snowbird and Alta and 20 others around the world. THINK BIGGER.		
885	The gondola plan is far superior to environmental impacts. But making it convenient to skiers/riders is critical to get users to switch from driving the canyon. I believe the gondola will NOT be effective if the parking isn't within walking distance to the gondola base area.	craig philkill	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
878	I write in support of the enhanced bus option, as it by far the shortest travel time. I believe it should be paired with heavy parking fees at the resorts and carpool requirements during periods of high congestion. I would also encourage more frequent buses, with an option every 5 minutes during peak periods being most preferable.	Alexander Sahn	Website
879	This is Brynn Palmer. I like the enhanced bus program for 36 minutes, but would it be for everybody or just a peak times? Cuz I usually go up for the 3:00 time on Mondays at Alta wage. I don't and I have a bug some grandchildren that I take up there. I prefer not to use the bus, but if that would be the only the only choice that I guess I had to do that, but just call me back. Thank you.	Brynn Palmer	Phone Comment
880	GONDOLA	Ashley Pallarito	Website
881	I support a modified Gondola alternative with the addition of a parking structure at the base of the Gondola Station.	Bonnie Williamson	Website
882	the only "real" long term solution is a tram, even though it has been deemed too expensive. Buses and a gondola are silly jokes	Martin Cole	Website
883	Hi, I am very excited about Little Cottonwood Canyon traffic improvements, especially the Gondola. However I do not want to take a bus to the Gondola. I would prefer to park there at the Gondola. I have several kids with all their ski gear to keep track of and the bus just adds more confusion. I want this to work out as going up and down the canyon is hard on our car and on the environment. I vote Gondola with parking structure!!	Laura Goodman	Website
884	Will the gondolas be crowded like the Tram at Snowbird or smaller and with seating (like Jackson Hole)? I really like the idea of widening the road and having the benefit of summer use. Also, it would encourage people to use the bus since the commute time would beat that of cars.	Stacey Closser	Website
885	A gondola would fit the bill, seems like Europe has it figured out.	Chris Geissler	Website
886	I like the "enhanced" bus schedule of every 36 minutes. Would everyone have to use the bus, or could I still take my car up. I usually plan to go up on Mondays for the 3:00 skiing at Alta with my grandchildren. It would be extremely difficult to put them all on the bus with all of their equipment since they are young and want me to carry their stuff, plus my own stuff. Or, is this voluntary? Also, if the road were widened, how long would it take? 2 or 3 years?	Brynn Palmer	Website
887	Begin with enhanced bus service with an evaluation of it and if needed move to enhanced bus service with road widening	Michael Ott	Website
888	Gondola is the best option. All other options will at some point be adversely affected by weather. Barriers for the additional bus lane will restrict wildlife movement and restrict emergency vehicles from reaching people In need.	Adrien Covington	Website
889	As a resident of Utah over 50 yrs and a part-time employee at Alta, for 19yrs. I feel the Gondola has the most potential to move people regardless of the weather/road conditions. Parking should be expanded at the base of LCC to maximize the use of a gondola.	Brent McCormick	Website
890	I would love to see a Gondola and parking hub. As a lifelong skier at Alta (50+ years) I have been frustrated with LLC traffic situation for years. People will not take the bus up the canyon unless forced aka close the canyon the personal use vehicles. However, the Gondola gives pathway that would be beautiful and environmental friendly. PLEASE LISTEN AND PUT IN A GONDOLA!	Jeff Justice	Website
891	Gondola is the preferred option	Russell Pixton	Website
892	Gondola	SUZANNE MCCALL	Website
893	I would be most likely to use the gondola option. The parking lot should be adjacent to the gondola; a bus ride adds too much time. A one hour transit time to Alta is a big psychological barrier to use.	David Wortham	Website
894	I have been a 6-8 time a season visitor to LCC during ski season for more than 27 years as well as an of time summer visitor. The only way to preserve the natural beauty is the Gondola idea, which will not only be more weather efficient, more ecological but may be less costly to implement and cleaner to run	Peter Wodinsky	Website
895	Have you looked into the boring company? They just finished digging a tunnel under vegas!	Renea Dietrich	Website
896	A gondola is a waist of resources and does not serve all users of the canyon. Saying that hikers and backcountry skiers will be able to drive up the canyon will just invite resort skiers to avoid the time and cost of the gondola by parking on the highway and fill up the trailhead parking. Also, if people have to take a bus to the gondola, why not just keep driving the bus up the canyon? Why go to the trouble of unloading people (and their gear) off the bus, making them stand in another line and then load themselves (and their gear) onto a gondola. It doesn't take an industrial engineer to see the inefficiency of this. I would like to see extremely frequent Electric bus service (every 2-5 min at peak times), and no personal vehicles in the canyon during the winter. Each bus would either go directly to Alta, directly to Snowbird, or only serve trailheads/backcountry access points. Only delivery vehicles and buses would be allowed on the road (perhaps also Full Time canyon residents). This means all skiers, staff, and people staying at the resorts/rental properties taking the bus. This is an equal system for all and allows maximum efficiency.	Jordan Bernhardt	Website
897	The Gondola seems like the best option on all fronts! Scenic, unique, avalanche proof, and utilitarian! Let's make it happen!	Alec Gonos	Website
898	Enhanced bus with road widening and avalanche sheds!	Kathryn Szczotka	Website
899	I think the bus system with extra lane makes the most sense because it is scalable based on demand and the extra lane will not only alleviate traffic but will make the canyon safer for hikers and cyclists during the summer. It provides more access to the whole mountain vs the gondola that only solves a winter problem and cannot scale the way a bus system can.	Melissa Derby	Website
900	Gondola would be the best option	Jesse Reid	Website
901	Gondollllllaaaaaa!!!!!!	Adam Jenkins	Website
902	I support gondola but instead of having to buss to the gondola, build a parking structure at the base of the gondola. Initial cost may be higher, but in preparation for growth with have the biggest impact on reducing traffic in dangerous road conditions.	Christian Sorensen	Website
903	I need more information on the gondola. What is the capacity per gondola? In the era of COVID and other airborne illnesses we need to adjust our thinking to smaller groups of people. As a resident I enjoy driving my own car and enjoy my own space when getting to and from ski resorts. The only option that I would consider is the gondola. Again, only if it is for a small group such as my immediate family or friends. I think that this could be a fun adventure to add to the skiing experience. The one part that I don't like about the current plan is the bus ride from Wasatch gravel pit to the gondola station. This seems like it would add extra travel time for my family that is unnecessary. And public transportation is not a healthy option unless you can guarantee air quality standards. I can just see people pushing and shoving to get on these buses to get back to their cars. A parking structure near the gondola seems like a much better option and would encourage people to use the gondola with one less transfer.	Arden Clarke	Website
904	I support a gondola. Nothing else will work.	Kalen Thorien	Website
905	I strongly support the gondola or enhanced bus proposal. However, moving a parking structure closer to the gondola terminal will be crucial. People will still drive if a 2 stage journey is required. Any bus addition that does not include dedicated lanes will do little to reduce traffic demand. Buses need to be guaranteed to be faster than a car in order to be successful alternatives.	James Sullivan	Website
906	Thank you for presenting these alternatives. I am highly in favor of enhanced bus service with PPSL, which is the best solution addressing year-round needs. As one of thousands of avid cyclists who have biked in LCC, I see a great need for a safer way to share the road. And as an avid skier, I have experienced extremely long delays in buses and when carpooling because traffic has been slowed and obstructed by incidents in the current single lane. Snow sheds and dedicated bus or HOV 4 lanes would benefit air quality, time saved in traffic and safety. In January of this year, I sat and inched along among idling cars for 5 hours with my family slowly making my way down the canyon after a snow day. I would be very interested in using express bus, 4 or more person carpooling, and paying a toll for safer, faster traffic with less air pollution. Thank you for considering my opinion. Brad Briscoe	Brad Briscoe	Website
907	The analysis surprised me in that the gondola option will cost less than an additional bus lane. Also, I am surprised by the closeness of capacity per hour transit. With that, I support the gondola option to best serve the Canyon traffic needs.	Annie Studer	Website
908	The gondola with a parking structure at the base is a great idea!	Emma Strongin	Website
909	Gondola!! An extra bus lane is not going to make more people ride the bus. A Gondola also has an option for possible revenue from summer visitors and Oktoberfest crowds.	Elizabeth Shakespear	Website
910	Gondola network, high-capacity and wind resistance, with high capacity parking and bus connection to light rail at canyon entrance. My vote is for the gondola. It is safer, more relaxing, more scenic, more comfortable, and can likely run when busses could not since avalanche closures may not affect it.	Michael McBride	Website
911	On weekends or other peak periods, busses could be combined with busses to increase capacity. A scenic gondola ride could also be a revenue generator outside of ski season whereas a bus would not offer that option.	Adsm Jewell	Website
912	I love the idea of a gondola or another people mover (see PRT @WVU or an electric light rail). Make LCC a toll road to encourage use. More buses or widening the highway is just ugly. I do like the gondola idea the best as I feel it adds to the beauty and experience of the canyon.	Matthew Masterson	Website
913	I've seen the alternatives for advancing access/traffic solutions for Alta/Snowbird - Little Cottonwood Canyon. I strongly favor the gondola solution as effective, efficient, weather resilient and environmentally most sound. This is a well used solution I've used in ski resort areas elsewhere, with Verbier, Suisse the first that comes to mind - a gondola from the valley (and train station) saving the long, winding and often crowded drive up to the resort base. Perfect. Thanks for your consideration.	PHILLIP TAYLOR	Website
914	The alternatives summary makes a persuasive case for the Gondola option given it's relative capital costs, O&M costs, and peak people capacity if options like trains and tunnels aren't in the picture. But please stop talking about this and start taking action.	Nathaniel Volk	Website
915	I am for any of these three options! Just make it happen!	John Blocker	Website
916	By adding a lane for bus use only will provide incentive and possibly up UTA riders. As of now, there is no benefit to take the bus if the bus is sitting in traffic with all other vehicles and the bus reaches capacity because of queuing at stops.	Joe Summers	Website
917	Strongly support a bus option with road widening. A gondola would be a visible and environmental mar on the landscape, and would not be as efficient in getting skiers to resorts with the planned stops. To aid with the environmental impact, electric buses should be considered. Widening roads will provide a huge boost for congestion while increasing access for skiers, hikers, bikers, and anyone looking to access the nearby outdoors that the canyons offer	Tyler Colbrie	Website
918	Is there not a rail option?	Chelsea Mayans	Website
919	Gondola! Do it right the first time.	Zach Moore	Website
920	I would prefer the expanded capacity bus option. The bus is the best option to skier, hikers and you need more capacity to get to the mountain top. Thanks you for reaching out!!	Patti Jaeggi	Website
921	The Gondola option seems the best fit.	Paul Romnes	Website
922	We would like to support the plan for a gondola. It is the most environmentally friendly option, and will be great for property value and increase tourism revenue. Supported with the addition of a parking structure at the bottom of the canyon.	Kristi Kircher	Website
923	Gondola! Nobody likes to take the buses already what days people will take them now. Gondola seems like a better experience than the bus	Regina Smith	Website
924	The gondola would be the best way to transport skiers up hill. It can run when road is snow covered, also would run if road is closed due to avalanche danger. A multi level parking garage could be built at the bottom of the canyon, possibly in different locations with bus shuttles running continuously during peak hours. The current buses are expensive and do not hold enough people to make a difference. Also the schedule makes it hard for ridership. The parking lots are not adequate.	Lisa Lewis	Website
925	I support a gondola in principle, as long as the wait time for a gondola can be kept below 15 min at peak times going up AND going down!! The gondola should also be time efficient! If it takes twice as long as with a car - big problem!! Also, I would not want the gondola to be mandatory. There should still be a choice between a bus, car or the gondola! The gondola needs to be such an attractive option that everyone will want to use it!! Also, the gondola can be used intermittently! There are many "slow" skiing days on which traffic congestion is not a problem! I suppose intermittent use may cause problems with employees!??? However, and I could be wrong about this, but it appears that congestion only happens on Powder Days and/or weekends/holidays. I see no need for a gondola on the other days!!! Please consider what will happen at the end of a busy day, if the gondola should break down?? Please also consider what the price would be for the gondola and the parking at the base! If it's too pricey, people will not take it!! They will drive!! Also, where would the gondola stations be to service all areas of Snowbird and Alta? How many will be needed?? I am sure there are many other issues to consider, but that's all I can think of for now! Thanks for asking!!!:-)	Annette MacIntyre	Website
926	As a skier accessing little cottonwood 20+ ski days per year from out of Utah, I would gladly support the gondola option being proposed. However, my willingness to utilize the gondola is greatly decreased if a bus option is required to board the gondola.	Bryan Stiltz	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
927	Definitely no gondola- it would ruin the view. A dedicated bus lane with a wider road with one additional lane, then 2 lanes up and 1 down 6am-2pm and then 2 lanes down and one up 2pm through 6am. Also make the bus free and subsidize that by having paid parking.	Stephanie Siegel	Website
928	The gondola is the best option better driving is not the solution	Peter Landry	Website
929	The gondola idea is by far the best and longest lasting alternative. Might cost more but in the long run will be well worth the investment.	John Schiefer	Website
930	A gondola with a parking lot at its base will clearly yield the least detrimental environmental impact and afford the greatest ease of access and resultant use.	Jerry Abajian, MD	Website
931	I have driven the canyon 4 times a day year round as an employee of snowbird. I commute in the winter via uta vanshare, I drive the supply truck to the valley and back once a day five days a week. I don't have faith that more busses nor widening the road will help at all. I am in strong favor of building the gondola. Thank you	Robert Reynolds	Website
932	Gondola is the only way to go!	Barbara Marsh	Website
933	Enhanced bus system with road widening	Beau Sovinsky	Website
934	Just put in a toll. It's a congested canyon and will encourage people to ride a bus.	Steven Rekuc	Website
935	Did you consider a train of some sorts. Wouldn't that be faster then a gondola?	Charlie Rinehart	Website
936	Gondola would be a nice alternative to buses and should definitely be utilized.	Jacob Larson	Website
937	Am out of state skier, Mtn Collective Pass, annual visit to ski Arla-SBird. Would like more bus options from SLC city, single person hostel like affordablestays, then would never rent a car	Steven Thompson	Website
938	Closing the passing lanes makes a huge difference, a lot of the traffic is stemmed from those choke points and people trying to get 3 cars ahead	Trey Inman	Website
939	Gondola	Kennedy North	Website
940	My Vote is for the Gondola. Easy parking at the base. Reduce Traffic in the Canyon	Caleb Cook	Website
941	Gondola	Meghan Bridges	Website
942	I would love to see a monorail, but since that isn't an option I like a modified version of the gondola. There needs to be a parking structure at the mouth of LCC for the gondola. Bussing to the gondola is a horrible idea.	Devon Gibby	Website
943	Driving to park to take a bus to a gondola is absolutely ridiculous and I will never do that. I might drive to a bus or gondola if its super convenient to get to Alta without multiple Snowbird stops.	Jim Kanaley	Website
944	I am a former Alta resident, so I strongly prefer the gondola option. Middle ground as far as capital, lowest as far as operating, and preserves more of the mountain character of Little Cottonwood. Seems like a clear choice.	Sean Miller	Website
945	As a Lift Operator I may be somewhat bias however. I think you should do both • Enhanced bus service with road widening • Gondola but I agree with Alta that modify the proposed gondola alternative by adding a parking structure at the base gondola station rather than requiring all gondola users to park at the gravel pit lot and bus to the gondola station	Bill Schwartz	Website
946	I would prefer to see a gondola in the canyon. I believe the environmental impact will be less. If you have ever been to Telluride they're a perfect example. Increasing bus service as well.	Jean-Paul Giudici	Website
947	Expand bus system. Offer more on the hill incentives for those carpooling and let the buses skip the line when the canyon is closed(which has been done at times in the past). Don't expand the road please, that'll just exacerbate the problem with single occupancy. A Gondola is inefficient and expensive idea. It would be an eye sore on the canyon. Add pick up and drop off spots for popular backcountry trailheads. This is definitely the most cost effective. Thanks for all you do.	Brett McWilliams	Website
948	Gondola best option due to canyon closures for road clearing.	Brian Macdonald	Website
949	I would like to endorse the gondola option	Cory Studebaker	Website
950	I vote for the gondola	Nick Rieger	Website
951	Increased bus service and require all vehicles to have a minimum of 2 people. Also buses can't be city buses. I think to really get people to use them they need to have "captain chairs", like le bus. Difficulty finding seating, overheating and motion sickness all dissuade people from riding the bus up the canyon. If guaranteed a seat and comfort, I think more people, myself included, would take the bus up.	Sheila Willson	Website
952	Gondola is vastly preferred.	Tamara Gaffney	Website
953	I believe a gondola system with 500-1000 car parking available. I believe the key to solving the LCC congestion issue is less vehicles. All it takes to ruin the commute is one ahole.	Conor Carrigan	Website
954	I think a gondola is the right move it will help cut down emissions in the canyon. I think that if you are a season pass holder it should be free. Please stop with the epic pass no one likes all the crowds up here it wasnt this bad before the epic pass.	Blake Reuter	Website
955	As a frequent visitor to Little Cottonwood Canyon I think a progressive approach is needed. An incline railway or high capacity gondolas/ Trams as well as high capacity shuttles. A road expansion including lane switching to accomodate higher traffic volumes. Charge a fee for annual canyon vehicle access.	Chris Gonzalez	Website
956	I support increased bus capacity with lane widening; there is no place for a gondola in the Cottonwood Canyons.	Elliot Davis	Website
957	In favor of Gondola to reduce high impact of busses. The biggest issue right now is there is not enough parking at the bus stop. We need to address that issue in any of the proposals. Mobility center must be big enough.	Travis Giguere	Website
958	I want to get to Alta as quickly as possible. Wider roads with more passing lanes would be great!	Parker Stohiton	Website
959	I like the idea of the gondola. I picture it like the peak to peak in whistler. Those gondola boxes fit almost 30 skiers per box. In regards to parking at the bottom. I think you need a large garage. One that has access from both the roads merging so it doesn't create a log jam at the bottom. You enter from the bottom and then exit through the top which allows flow through the garage. And each road access would have two or three entrances to the garage to again create less wait time getting into the garage. The whole point is to reduce traffic. We don't want to just create more chaos at the bottom of the canyon. There has to be a way to design it so that the traffic can flow easily in and out of the garage. If we can do that I think this makes the gondola a great option.	Matt Raymond	Website
960	I am absolutely in support for Gondolas for Little CottonWood Canyon. Gondolas are much better for the environment, cheaper, more efficient, and a wonderful travel experience during all times of the year.	Adam Poole	Website
961	Gondola	Zach Powers	Website
962	Gondola	Emily Wood	Website
963	I like the idea of a gondola-it would improve the ease of getting up the canyon. But on a downside, out of the three options, this one might take a longer time to install and get going. I also think that an enhanced bus service is a great way for a college kid, like myself, to get up the canyon easier without a car.	Addy Nygard	Website
964	Modified version of the gondola idea that Alta proposed. Please consider the environment.	Oliver Liston	Website
965	The gondola would provide the most eco-friendly transportation and keep the roads clear for emergency and service vehicles. A much larger (free) parking area at the mouth of the canyon, frequent service, and a steep parking charge at the mountain (\$50?) would get people onto the gondola.	Joseph Shrawder	Website
966	I am strongly against widening the road as it will negatively effect the wildlife and sense of nature in LLC. In my opinion enhanced bus services is the correct option at hand as it will not take away from the nature of LLC. If the road is widened it will detract from the main reason people ski at Alta: sharing skiing together in solitude away from the busy cities and truly enjoy simple, pure skiing. Widening the road will create a tourist atmosphere similar to park cities which IS NOT what LLC is. Therefore I strongly suggest an enhanced bus service and if that cannot be achieved than put in a gondola. Thanks for all you do keeping skiing transportation safe for us all!	Ty Smith	Website
967	Seems strange to me the environmental impact isnt taken into account. Moire global warming and we wont have any snow. The "Impact" column reflects properties affected and doent seem to have journeys in cars saved, if the new buses are electric, hydrogen or old school diesel. The last time I took the current bus set up you had to pay. I assume the new proposals are free or people wont be incentivised to get out their cars	Donald Porteous	Website
968	The gondola is the best option	Michael Naughton	Website
969	I think the gondola would be the best idea. I would even go a step further to say that with a Gondola, the canyon road should be closed to non-essential or day-use-only traffic during the ski season. A Gondola system would allow for more access for people taking public transportation as buses would only need to meet at the base of the canyon. There is a great example of ski resorts operating this way in Sunshine Village in Alberta, Canada. A Gondola would also be an excellent option in the eventuality that trax or other light rail systems are expanded to serve Highland Dr., Wasatch Dr., or 9000/9400 S.	Brady Groves	Website
970	Traffic is destroying the Wasatch. Gondola all the way!	Amy Rust	Website
971	We for sure want the Gondola alternate plan the Alta has suggested. I would be nice to do all three. Widen Road, Add UTA Buses and do the Gondola. Ultimately, the Gondola is the "best" solution. Best environmentally and ware on the canyon.	Clark LOWDER	Website
972	My first concern is the environmental impact- I support whichever option is not going to destroy more of the canyon. I think a gondola would be great- I'm curious if it would be open in avalanche closures? That would be great if essential people could still get up/down if the road is closed. Will it be free? Need to show season pass? Regardless, gondola sounds like the way to go.	Stefanie McWilliams	Website
973	Gondola..	Colton Thompson	Website
974	I vote for enhance bus service with road widening	Enrique Feria	Website
975	Let's learn from the Swiss. Anyone who has skied at Lauderbreunen has experienced the efficiency and effectiveness of Train/tram access to these highly sensitive areas. A large parking garage at the base of the canyon with highly restrictive auto travel regulations to diminish and eventually eliminate all but commercial traffic up the canyon in winter months would be the ideal solution. Please include an exhaustive review of how Switzerland has managed their sensitive access areas and learn from what they have done so well as a part of the decision making process. This solution also prepares the way for interconnecting our world's best ski resorts some day while preventing harm to our fragile environment that all other solutions would cause. Strongly endorse the tram model. Jake Nichol	Jake Nichol	Website
976	I'm born and raised in Utah and I'm proud of it. I'm grateful for what Little Cottonwood Canyon has to offer and I've been skiing it for a while now. I feel like the gondola will be the most affective way to solve the canyon traffic flow. I think it'll be better on the environment and it'll be an amazing way to view the canyon. What a great idea. Let me know how I can help.	Garett Garcia	Website
977	I support the gondola alternative with a parking lot at the base of the gondola loading area. In order for the alternative to be appealing to the canyon users, it needs to be convenient as well as cost effective to use. With the gondola being electric, it will help by keeping the air cleaner especially on high inversion days.	Mark Hays	Website
978	I support the Gondola because it's a cheaper option while being environmentally friendly both to the canyon and the vehicles.	Alex Mietchen	Website
979	As the roads to Alta/Snowbird have become more and more packed over the last few years, I believe the best answers are either widening the road or building a Gondola. With a typical wait time of over 1 hour to exit LCC this past season, it would be a waste of resources and money to ONLY enhance bus services. With plenty of tourism skiing and increased volume due to ICON pass. People are not likely to use the enhances bus service if they will still be in the same traffic.	Oliver Peloso	Website
	The gondola is a great idea, dependent on how LCC residents feel about seeing it.		

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
980	I have tried the buses and find them uncomfortable, closed in with no view and inconvenient. Enjoying the awesome view going up the canyon is a big part of the experience. I enjoy the gondola in Telluride and Europe do would use one in Utah. I prefer gondola to bus option. Seems like the solution in the Alps where there is a long tradition of solving mountain transportation issues. Regardless, the parking at the base of the needs to be enlarged so one can depend on getting a spot plus the security needs to be enhanced at all lots because I have seen vehicles that have been broken into. Concerns about damage to my vehicle would be a deterrent to using the parking lots.	Scott Carr	Website
981	As a skier, the Gondola sounds great. However, it would be nice if there were a parking area at the base Gondola station at the entrance to the canyon. I'd leave my car there and stay off of the canyon road.	Bob Ashmore	Website
982	I support fewer cars on the road by any means. And wider lanes would allow for more defined bike paths. And keep cyclists safe during the non snow months.	Dylan O'Neill	Website
983	I like the first Options, We dont want to deal with utah construction anymore!	Leeya Christensen	Website
984	Not sure how much time you all have spent in Europe, if not much, go check out their transportation systems to their ski areas. I don't believe expanded bus services will help...Utahns don't ride buses. Perhaps a monorail system	Stephan Knubel	Website
985	I like the gondola option	Jonathan Olin	Website
986	I support the gondola alternative but it must have a large parking structure at the base; or it needs to be extended to the transportation center. A shuttle bus to a gondola is not a solution.	Robert Dubil	Website
987	Personally, I would hate to see construction in little cottonwood as it would set back transportation and enhance the impact of the road system on the canyon biosphere and scenery. For this same reason, I would also dislike the gondola proposition. I think that the enhanced bus system and increased encouragement from resorts to ride UTA would be effective. However, there is a much needed increase in parking at the bus stops near the base of both canyons. With this construction in adding parking, perhaps consider making the parking lot of more comfort for the patrons. Maybe a coffee shop, and a bigger shelter for when the weather turns worse, which it usually does in the winter. Also, I think increased comfort on the buses would drastically increase patrons' willingness to ride the buses. This would include aspects like handling of skis and other gear, the steep steps and slick floor inside the buses, etc. Ultimately, I think that enhanced comfort and timing of buses would ultimately solve most, if not all, of the cottonwood traffic issues.	sara cochella	Website
988	Gondola with a parking lot structure at the base or extend the gondola to the gravel pit parking	Jonathan Olin	Website
989	Please just increase bus service that's the right thing to do.	Doug Simpson	Website
990	I appreciate the process of forming and finalizing a plan for LLC is public and we have the opportunity to voice our opinion. I personally believe the gondola would be the best choice based on budget, capacity and preserving the canyon.	Claire Stout	Website
991	Gondola that you can drive at base of canyon	Scott Silver	Website
992	I usually ski with small children, and the thought of cramming them into a gondola or a bus for >60 minutes is unfathomable. I would never use the gondola if it were an option, however it might work best for single riders. I would suggest a toll or parking fee for single riders and an exemption for families or cars with multiple riders	Derek Storrs	Website
993	I'm in favor of the Gondola ... just with a parking structure at the base station! Thanks!	Eric Schoeller	Website
994	I am a native Utah skier who uses the Cottonwood Canyons about 20 times a ski season. I'm extremely frustrated with the congestion, which was never an issue when I was young. I support The gondola option because it will have a lower environmental impact and remove cars from the canyons. I also support the change suggested by Alta to the gondola plan whereby a parking structure would be built at the base of the gondola rather than having skiers park at the gravel pit and bus to the gondola.	Ann Lambert	Website
995	All three would be helpful!	Alixandra Schwartz	Website
996	The gondola appears to be the best option possible due to the simple fact that it can get people down the canyon quickly even when the road is taking on heavy snowfall. The bus oriented options still run into the same issues as before.	Ryan Boekholder	Website
997	I strongly prefer the increased frequency bus service. It is the most flexible in that it can serve more than resort users, like hikers, snowshoers, at multiple locations.	James Keener	Website
998	I'm sure the Gondola will be the most expensive but that's what should be built for the future. I vote for the Gondola unless you can get Musk to build a Hyperloop.	John Maerzke	Website
999	Traffic backups/parking issues are caused by increased resort travel. Either they should be limited in guests per day or pay entirely for expanded county/state services for their profit. Backcountry skiers and climbers already pay taxes for the roads and forest land and get stuck in traffic if you don't avoid certain days. I don't believe making resorts have more people and profit makes them better. They can submit a payment plan for any upgrades before they add more ticketholders or expand anywhere. Thanks!	Luke Smith	Website
1000	Please widen the road, expand bus service and maybe enforce carpooling. Thank you	Chad Meyring	Website
1001	Parking needs to be at the base of the gondola, possibly at the top of Dimple Dale Park, including Granite Park area	craig christopherson	Website
1002	We highly support the gondola option with modifications. We have children and we ski as a family. Any added steps to arriving at the resort is a lot of work considering eight people skis and equipment and all of the above. We would be more likely to ride the gondola if the parking for the gondola was at the base of the gondola. If we have to take a bus to the gondola we would be much less likely to ride it. It needs to be simple it needs to make sense to be fully successful. To be honest, adding that one more transition is not ideal. Thanks! We hope something works out because we enjoy recreating in the beautiful mountains and hope there's a simple way to make that possible, as well as environmentally safe.	Elisabeth and Tyler Fish	Website
1003	Gondola is a must for the future . The other options are simply short term as top gaps.	Vera Wood	Website
1004	I worry a little about the gondola and wind. I'm super curious to know impact because that will definitely be an expensive option and I worry it would get shut down all the time. I feel like widening the road may be one of the easier options and it would also make it safer for cyclists. The busses need to be more reliable if we go that route. Maybe the trax to bus? It would have to run on Sunday though.	Rosemary Nicholson	Website
1005	I recommend all options await the future impact Covid 19 will have. If there is an effective vaccine, then I would recommend a modified gondola option by extending the gondola route to wherever the parking will be instead of requiring an extra mode of transportation. Keep it simple. Plus, a gondola will minimize the affect of slides, avalanches, and snow removal on people movement.	jim mcgrath	Website
1006	GONDOLA!!!	Tasha Woolley	Website
1007	IF there can be sufficient public parking at the gondola base station. that would be my preferred alternative. Perhaps this could be a second parking area, one that would accommodate skiers coming from the south, whereas the gravel pit lot could serve those coming from SLC and the north.	Douglas Johnstone	Website
1008	Bus and widening! Carpool incentives at Alta and Snowbird. All lots	John Bridges	Website
1009	What accommodations will be made for residents who live at the mouth of the canyons and east of Wasatch? It's rather ridiculous to have to drive all the way up Wasatch or down into the valley when you otherwise wouldn't drive on or cross Wasatch Blvd to get up Rt 210. It doesn't help anyone if these residents are forced to be a part of the Wasatch Blvd traffic.	Ken Ringsen	Website
1010	I am so excited that a gondola is being considered. Anyone who has visited a country like Switzerland knows how amazingly efficient gondolas are in winter/mountainous terrain. Additionally I think gondolas are way more appealing than buses for locals and tourists alike (consider that buses are currently available and so many people still prefer to drive up). They are also (somewhat) avalanche immune in comparison to buses...no more tires spinning out or stuck buses due to conditions...which equals more ski time and more revenue for resorts!	Cynthia Wallace-Clarke	Website
1011	Modify the proposed gondola alternative by adding a parking structure at the base gondola station rather than requiring all gondola users to park at the gravel pit lot and bus to the gondola station.	Ralph Perlberger	Website
1012	Hi, I think widening the road with an express lane for busses and people with canyon passes that can be purchased after your car passes an inspection of tires and 4 wheel capability. There should be a booth at the bottom of the canyon that checks EVERY car if there is snow in the forecast, and the people with the canyon pass, busses and canyon transport can take the express lane around. There should also be heavy fines for cars in the canyon that are not equipped for the conditions. I also think canyon employees should not be able to store their car up in Alta all winter. There are many cars that just sit there and are never moved, only shoveled out. Lastly the busses need to run later, at least on the hour until 10pm to allow canyon employees a chance to ride up and down. Thanks	Jeff Withey	Website
1013	I am highly in support of the gondola. I care deeply about the air quality here in Utah and I believe this is a great step forward to help that growing problem. I also think the gondola sounds like a safer option. I have slid off the roads many times in the winter and it's scary to go up a canyon in that weather. I would much rather prefer a safer option that inclines me to use the canyon for various activities.	Matthew Davies	Website
1014	Enhance bus service and widen road. Also look at free shuttle service similar to what Squaw Valley has implemented. A gondola would take forever and create lines /traffic at the base of the canyon and people would end up just driving instead taking us back to where we are now.	William Frantz	Website
1015	We are from the East and are in our 70's and have Alta senior citizen passes. We want to take our car and our "stuff" to the ski area. I guess I will be 100 by the time the gondola is built but please continue to allow automobiles up the mountain.	Diane Goldberg	Website
1016	I like the idea of a gondola.	Judy Schiefer	Website
1017	Enhanced bus service... like MANY more buses. Charge for parking unless you have 3+ people. If there are buses running more frequently people will have more incentive to take them. I took the buses all last season and it really blows when you're waiting in the freezing cold to get down the canyon and the bus is full.	Tova Goldstein	Website
1018	Gondola would be great but Eurotrain system would be much better	Anthony Nelson	Website
1019	Enhanced bus service will not be enough to solve this problem long term. I think the gondola would be the best option based on the inform available.	Whit Zordan	Website
1020	I find the gondola concept very interesting with excellent potential; however I think the travel time of 63 minutes would deter many potential users.	June McQuide	Website
1021	I fully support the Gondola and bus	Elizabeth Enos	Website
1022	Vehicle technology continues to improve and we are not far from a world of mostly electric and self-driving cars. The environmental impact of exhaust caused by vehicles will fall dramatically over the next few years. As regulations allow self-driving cars on the road, the dangers imposed by drivers in Little Cottonwood Canyon will be reduced substantially. These improvements require zero investment in a gondola nor in widening the road. The road will need to be maintained regardless, so the investment impact is negligible as it wears out due to adverse weather faster than the impact of vehicle traffic. The gondola will cost millions and have an adverse impact on the natural environment. My recommendation is to embrace the electric and self-driving car evolution rather than cause further negative environmental and economic impact by taking another measure. In the interim, encouraging skiers to use the bus system already in place and perhaps increasing the frequency of direct-to-Alta buses (and separate direct-to-Snowbird buses), will incentivize more skiers to take the bus.	Steve Affleck	Website
1023	I prefer the Gondola option with a large transportation hub at the bottom of the cayon to alleviate ALL traffic in the area. The gondola must run year round and service multiple stations up Little Cottonwood	Trent Parker	Website
1024	I think the gondola idea is the best but the parking should be at the gondola station. Also the cost to ride the gondola has to be less than \$10 or it won't make sense to use it.	Steven Goldstein	Website
1025	I would support the gondola option for several reasons. It would remain in operation in most kinds of weather. I would imagine that it would not have to be closed for avalanche control. Canyon closures present a great interruption and inconvenience to both skiers and businesses. The canyon road can be treacherous during snowstorms and many accidents occur every year. The gondola would allow more people to use the canyons without the impact of so much car and bus traffic. It would also create an additional tourist attraction by providing a scenic access to the canyons.	Meg Pratt	Website
1026	The Gondola idea sounds ridiculous. It would be slow, crowded and uncomfortable, and it would only service the ski resorts, nothing else in the canyon. A dedicated bus lane, and/or bus-only days (kind of like Zion National Park) seem the most practical to me.	Bryan Murdock	Website
1027	I think a gondola is the best option. If transit exists that can actually get around the traffic problems in the canyon it can really get people to view it as a superior alternative.	Sam Feldman	Website
1028	Love the gondola idea, I would definitely rather use that than drive more of that dangerous road	Macklin Morgan	Website
1029	The key here is to eliminate more personal vehicles in the canyon. The Gondola in the long run seems most cost effective and less impactful to the natural surroundings. Widening to road for a bus lanes creates a huge impact to the canyon, and eventually we will grow out of that. Gondolas can limited the vehicles accessing the canyon, and could bring the resort more clientele without creating more congestion on the roads and parking. Not to mention the experience the Gondola would add to a skiers' day.	Scott B Starley	Website
1030	more buses and the road widening	Nick DeForest	Website
1031	I would love to see the gondola option. I feel like that would be safer for traveling up and down the canyon and wouldn't be as affected by bad traffic. If the connection to it is easy, I'd take it when I'm in town. Thanks!	Jeremy Lukensmeyer	Website
1032	I agree with the position of Michael Maughn, General Manager and President of Alta Ski resort. A gondola with a parking structure near where the gondola begins is the best option for the reasons mentioned by Alta. It may be expensive, but will be worth the expense in the long run. Thanks, George	George Ramjoue	Website
1033	The gondola sounds nice in practice and moves away from fossil-fuel based transport options. Why is the transit time so much longer? The benefit here is it would not be slowed down by traffic on the road as well when there are backups (which happen often).	Zach Berzolla	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1034	The gondola is the most environmentally sound option and (assuming there's a parking lot at the base of the gondola at the bottom) would easily be the most used. Most people don't like taking windy bus rides up mountains. Plus the additional buses will make driving up in cars a very slow process as the average traffic will slow to a crawl with slow buses clogging up the streets.	Dan Levine	Website
1035	I am voting for the Gondola option. I believe more people will adopt the Gondola vs bus use because of a couple factors- 1. Less wait time = perceived faster value even if the bus is actually faster 2. Gondolas are smaller so less exposure as many people	Aliza Taylor	Website
1036	I would love to see a gondola or a light rail up the canyon. I've always thought an elevated light rail system would be awesome!	Jed Easterbrook	Website
1037	Be braver! Eliminate personal vehicles. go all busses. see Beaver Creek. people will adjust in one season. more capacity and less hassle.	Brian Porter	Website
1038	1. Gondola	Hannah McBrayer	Website
1039	Enhanced bus service with adequate convenient parking makes the most sense fiscally. The gondola would provide a world class experience but only if the parking solution encouraged folks to use it Option 3: Gondola. Modify option to have parking at the gondola base station (parkade-style to minimize footprint). This would reduce bus requirement and time from grave pit and add more convince to encourage use of gondola. Increase number of parking stalls. Partner with ski resorts to have payment associated with ski passes (seasonal and day passes). Gondola option reduces risk for all vehicles on roadway and ensures people don't risk driving in poor conditions and also reduces risk for emergency workers. Avalanche sheds should be built in known and high risk areas regardless of this project to reduce risk for all vehicles and emergency workers.	Mike Feldman	Website
1040		Brian McEwan	Website
1041	DO THE GONDOLA. I go skiing 20+ times a year and PLEASE DO THE GONDOLA	Mark Greenwood	Website
1042	I think the gondola option provides the best, most weather resistant option that is environmentally responsible as well. If that is to be the option, I think you need a parking structure at the base of it instead of gravel pit and shuttle service. More people will use it with the parking garage option.	Kennan Vance	Website
1043	Of the three plans, the additional bus lane and widening the road is the best solution. This allows for two main additional resources. 1. The bus will become an equal if not better option on busy days. 2. An area where cars stuck in uphill traffic who are behind a vehicle which can not make it up, could be avoided with snow tire checks, an area to move around the car/truck without heightening the risk of downhill traffic head on collisions. Thank you for all your hard work.	Matthew Nolan	Website
1044	I like the gondola alternative as it reduces carbon based travel on the road and can stay open when the road closes due to an avalanche. I do agree with Alta that there needs to be a large parking lot/garage at the gondola base. It would be silly to bus people to the gondola. That makes the travel time too long and I think people would think it is too much of a hassle. I would like to see the travel times, construction costs, and operating costs without the need for busing. I would guess it is significantly lower.	David Barth	Website
1045	I support the gondola!!!!!!	Bailee Morris	Website
1046	The study seems to ignore the option of banning single-occupancy vehicles in the canyon during peak hours and requiring 3 or 4+ folks depending on how busy it is. Add more electric buses, allow for independent shuttles and other high occupancy alternatives and the travel times for option 1 will drop to those of option 2 with much lower expenditure. Also, the snow sheds are included without question and cost a minimum of \$72M. That is \$160k per hour of closure over 10 years (not including upkeep). This seems excessive and a way to make the gondola option look better than it is. Buses are flexible - they can be deployed elsewhere when not needed. A gondola will only be used when traffic is horrendous (~250 hrs per year max) given that it takes 2x as long as driving or taking the bus. This is approximately \$335,000 per hour of use over 10 years (not accounting for inflation/time value of money). Per person cost (covered by tickets or subsidized) would need to cost ~\$47 at peak usage to cover the cost. Don't think you'll get many takers on that. Please check my math and include it in your report. I am torn on whether an additional lane up the canyon would be worthwhile. The bonus of it being used in the summer for biking would be a boon to active transport and safety, but more lanes always beget more traffic, which means the same time waiting in traffic but even longer lift lines. At the end of the day, the canyon only can handle so many people. You either wait on the way up or in the lift line. I'd rather not do both.	Evan Chenoweth	Website
1047	I'd vote gondola. I think it needs to be something major. A dedicated bus lane and route would be my next choice. Something that motivates people to try out the parking lot rather than drive. For me, I think a gondola would be that motivation.	Conner Ludlow	Website
1048	GONDOLA	katie wood	Website
1049	Gondola!	James Shoemaker	Website
1050	I strongly support Gondola option for little cottonwood canyon. In this way, we can reduce traffic and preserve the environment.	Max Tang	Website
1051	The gondola seems to be the most sensible alternative, if steps are taken to reduce private car traffic. Greenhouse gas emissions and contributions to air pollution should also be taken into account in this study, but I would assume that a gondola would also be the best alternative on these counts.	John Davidson	Website
1052	The gondola seems like an excellent idea that can decrease Little Cottonwood traffic while being greener than widening roads. Riding the bus is good but sitting in a jam packed bus with hundreds of other people for 2-3 hours on a Saturday evening is not fun. Why not just go over the avalanche terrain? Gondolas can move a lot of people fast with less people per vehicle than a bus.	Andrew Odenwald	Website
1053	I believe the gondola would be the best decision to balance environmental issues and ski experience. We need a progressive solution that will make the canyon better for everyone.	Justin May-West	Website
1054	These are all bad ideas. I do like placing European style style coverings to help keep road open during snow. Expanding buses in these times along with adding a gondola is plain crazy. Save my crayons would never go for that.	Chris Poepping	Website
1055	Resident of SLC, family in Sandy. I support the gondola to minimize car traffic and environmental impact to the canyons over the long term. Additionally this would minimize delays and safety concerns due to winter road conditions/ avalanche related closures! The transit times don't account for this.	Rachel Brenner	Website
1056	Of the 3 options (bus service, dedicated bus lane, and gondola), I believe the gondola is the best. It will be most effective at removing traffic on the road, increasing road safety, and improving air quality. I also believe it is the most inviting option for mountain goers and will be used over buses by the public. Who wouldn't want to ride up a gondola!	Kathryn Carpenter	Website
1057	I support the gondola!	Dillon Wheelock	Website
1058	I support the idea of installing a gondola to bring skiers up the canyon. To me this is all around the best idea for reducing the amount of vehicles in the canyon. My family would ride the gondola all the time.	Lance Welker	Website
1059	Gondola would be my first choice. But would only handle day skiers and destination skiers going between Alta & Snowbird (very important). However, it does not solve the problem of overnight visitors. So while I see the gondola as vital, there still needs to be a Plan B down the line in the future to accommodate transporting out of town visitors from SLC to Alta & Snowbird.	Jeffrey Doppelt	Website
1060	I do like that the gondola is more environmentally friendly and would alleviate some of the road traffic, and help people travel during snow storms safely down the canyon. T	Erika Klenk	Website
1061	As a local to SLC, my preference is the gondola option, as it balances air quality concerns, motorized traffic, accidents and 4x4 considerations while providing greater access. If possible, I think that whatever option chosen should be free transportation. The cost of the current bus system is a major factor in how many people currently choose this option of transportation up LCC. Also, most other towns containing major ski resorts offer free bus transportation.	Beccah Chapman	Website
1062	I prefer alternative 2: enhanced buses plus road widening.	Brian Greeff	Website
1063	Very much in favor of the gondola with parking at the gondola base instead of in the valley with a bus service to the gondola base.	Sydney Garcia	Website
1064	I think the gondola would be the best option with the least amount of environmental impact. It would be the safest option in terms of roadway traffic considering weather. It will also be a nice and relaxing ride up the canyon, enjoying the scenery too. It has the passenger highest capacity and only a two minute wait is worth it.	Shannon Melchior	Website
1065	I like the wider roads and buses	Robert Erhardt	Website
1066	Hello, I live above Wasatch Blvd and South of Fort Union. We have 10 pass ski passes to Alta and go 5-6 times per season. A gondola would be a wonderful option for our area. This would be a safer alternative along with being not as noisy or polluted as buses. I highly recommend the gondola for skiers & outdoor enthusiasts. Riding a gondola would be fun for families who want to take their kids up to the resorts. Also, it would be a convenient way for older adults or the disabled to enjoy our canyons. Taking a bus is more difficult for many people in our community. I'm against any type of road expansion including the removal of homes to make the road wider. A wider road and more buses are not needed. The residents of Cottonwood Heights and others who enjoy the beautiful canyons like the look and feel of our area as it is. We sincerely hope you will consider the gondolas for our area. Thank you, Chris Coombs	Chris Coombs	Website
1067	Widening and enhancing bus/public trans options is the most practical/effective strategy long term. Gondola is impractical. Lane widening should be used for prioritized access for bus options and incentivize increased used while still giving people an option for private vehicle usage. This will strike the best balance.	Jason Beasley	Website
1068	Please PLEASE don't add a gondola to LCC. I don't think we should do anything that will damage to canyon, the environment, or it's amazing views just because of a traffic problem that happens in winter. No gondolas, no road widening, no ruining the canyon. There should be a TOLL for the canyon, along w better and enhanced bus schedules. Also, there should be a park and ride Bus stop on the SOUTH side of the road. There is already a parking lot there, this could be expanded and turned into a park and ride. (Last season was ridiculous w no bus pickup at the mouth of the canyon.) The money from the toll booth could help pay for road repairs and other maintenance. Let employees and residents get passes for the road for free, but the rest of the cars should pay a fee based on the number of cars already in the canyon. If it's not busy, the toll would be really cheap or free. If the canyon is packed, it'd be more expensive. Furthermore, if you have 5 people in the car or are clearly carpooling, you should get a steep discount. This would discourage people from driving in the canyon, would encourage carpooling and more bus riding. Adding more lanes would make the drive more dangerous, as people aren't safe driving in the canyon already. A gondola would be detrimental to the beauty of the canyon. Do the obvious thing that will make money for UDOT, be relatively easy to implement, and won't damage the canyon. Put in a toll booth!	Alexandria Cantrell	Website
1069	The gondola option just makes more sense. It would accommodate a growing population while reducing emissions in a sensitive environment. And that is important because of the high usage during inversion periods. It will be used. It also would be a great attraction in and of itself. So there would be an economic benefit as well.	Scott Hansen	Website
1070	Gondola is the only way to solve the long term issue anything else is a short term bandaid	Andrew Ray	Website
1071	Widening the road or adding bus service will not fix the congestion issue, unless significant parking garage infrastructure is conveniently placed at the bottom of each canyon. You must incentivize the convenience of alternative modes of transportation or all you will be doing is opening the canyon for additional vehicles and traffic by widening the road. Widening the road only gives the illusion of less traffic, when in reality you are increasing capacity with no parking plans at the resorts. This will increase congestion. I think the best option is a mix of additional parking structures, additional bus service and a gondola type service. I do not support widening the road.	Alexandra White	Website
1072	I am in favor of the gondola option. But it must be convenient for skiers to use, with all our equipment. So please consider a parking garage option at the gondola base. I'd use it regularly! I'm a season-pass Frequent skier.	Colleen Davidson	Website
1073	Gondola! Anything involving buses will not work. Locals aren't going to load up all their gear on a bus to go ski for a couple hours and tourist won't do it with their families on vacation either. However a gondola would be part of the experience and fun for people.	Mike Coyle	Website
1074	The gondola probably has the least environmental impact however I would like to know how the ticketing would be implemented. Would it be a public utility, owned by the state like the busses, and therefore affordable to (poor) locals / students - just like the busses are now? If the gondola's are privatized and merely encourage rich out-of-towners to use them, then I'd prefer we invest solely in improved bus service - and a generous public education campaign to USE the busses - perhaps forbidding private cars up the canyons at all (like they do in Aspen and elsewhere). The proposed "54 minute transit time" is hogwash.	Alexandra Karl	Website
1075	The gondola with a parking structure would create the greatest use of the system. This has already been effective in many other resort areas.	Mike Howard	Website
1076	I advocate for the option to improve the transit. The gondola would be quite an eye sore. Expanding the road and not allowing parking will be limited to recreators during non peak traffic (i.e climbing and backcountry skiing). Expanding the road would also infringe upon current outdoor recreation (i.e. bouldering and climbing access). A better public transit system with ample parking will encourage more users.	Luke O'Connor	Website
1077	I vote for the lcc gondola!	Gaby Kingery	Website
1078	Seems like the gondola makes sense from a financial standpoint both short and long term. It also provides a unique marketing feature. The gondola has my vote.	Ryan Pelo	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1079	We should know by now that widening the road will not solve the problem. Cars and traffic behave like a gas -- give them space and they will fill it. The solution to all of this traffic is either increasing bus services, adding a gondola, or a combination of the two.	Anna Schlehuber	Website
1080	The enhanced Bus system with road widening is the preferable, most timely & efficient option here. The gondola in it's current state has too many stops to be of value. However, rather than widening the road on both sides, I would suggest a center bus only lane that goes uphill only in the morning and downhill starting in the afternoon.	Scott Morham	Website
1081	In favor of the gondola! Best option!	Adrienne Martin	Website
1082	Build the Gondola!!	Kevin Kay	Website
1083	Skiing involves a lot of gear. It is really hard to load my family of six into a bus with all our gear. I live at the base and it's frustrating when Wasatch is locked up and I can't get home. A gondola sounds fun and enjoyable but it will only work with ample parking. I don't know the cost to build trains but the mountain trains in Europe are amazing. Are tunnels or a monorail a possibility? It just seems as though the three options offered are not really game changers.	Chris Lambert	Website
1084	I am local. And when I say that I live just off of Danish , just west of Wasatch. I am cottonwood heights. I am a life long skier of snowbird, and my family is and will be directly affected by all of these decisions so far I haven't heard of any good ones. The only traffic problem that I see is not during rush hour. It is strictly powder days. And udot does not in any suggestions help the local homeowners travel to and from their homes when the powder day traffic occurs. The best solution I have heard is a tunnel for ski traffic up Wasatch but knowing the price tag is high. I would like to see more sensitive toward our local neighborhoods that are paying these tax dollars and yet being pushed to the side. Parking garages, more buses, a tunnel, I don't know the best scenario but I do feel as though our great little city of CH is being pushed around and completely walked on. We want to stay small, we want to be taken care of and expanding a freeway like street into the middle of our neighborhood is not the way to do it. My vote is parking garages, tunnel, gondola, but keep our neighborhood and community still feeling like just that, a neighborhood. Not a freeway.	Alexandria Lambert	Website
1085	Gondola, limits, tube train, some type of ORDER AT THE BOTTOM OF THE CANYON WHEN ITS CLOSED. There's like legit violent road rage incidents because of anarchist lineups along the roads.	Bradley Donalds	Website
1086	The only reasonable choice is to widen the road way. Wind and weather will too frequently stall or prohibit gondola operation. Utah deserves a predictable, and reliable improvement to sustain access to the canyon in the years to come. If we don't facilitate open access to our public resources, we don't deserve them. And our public lands shouldn't become something enjoyed only by the rich elite. Expanding the road allows all who like to come.	Ryan White	Website
1087	Gondola	Rebecka Winberg	Website
1088	Gondola would take the resort to another level.	Alex Zini	Website
1089	I believe we need better bus service with a designated bus lane.	Tom Kehl	Website
1090	We support the proposed gondola plan with the parking structure at the gondola pick up	Kristen Mickelson	Website
1091	The gondola proposal is the only one that makes sense. More traffic on the ground doesn't work. Bad weather will close the roads more easily than the gondola.	Craig Rosenman	Website
1092	Gondola with parking access.	Gil Wilcox	Website
1093	Widening the road with more busses and more stops early departure to the Mt. For a lift the parking would be costly or a bus system would be difficult arriving and leaving not to mention capacity for a lift.	Kurt Reichelt	Website
1094	I believe a gondola would provide a huge net benefit. The reduction of cars and their emissions in the canyon would be so beneficial.	David Fausz	Website
1095	I believe the Gondola option is by far the best. Adding this optional transportation method will not only reduce traffic but will also reduce accidents and other issues. Additionally, I believe that this method would be essential on days with roadway restrictions providing a safer way for people to access the mountain without making the trek is sketchy weather to the resorts. I also believe that this adds an additional source of revenue during summer months when tourists may use this gondola for scenic rides. Gondola is by far the best idea!	Collin Brown	Website
1096	thank you for the opportunity to share my thoughts. As a Utah resident my entire life, I have personally experienced the massive changes in Little & Big Cottonwood canyons. I am an avid hiker, snow skier and snow shoe person and enjoy these canyons year round. We need to do something as my concerns are that the over population of our canyons will lead to the degradation of the wildlife and environmental conditions that make Utah such a special place to live in. My strong recommendation is to go with the 1st option of the enhanced bus schedule and NOT widen the canyon road. Please feel free to reach out to me if you want or have any questions. Sincerely, Tony Coletti.	Tony Coletti	Website
1097	The Gondola is very attractive, but NOT if a bus ride is required prior to the gondola. The parking and Gondola need to be together. If I am to get on a bus, I prefer to ride it to the resort. I would also think about a gondola to BCC. When you get on the gondola, you have "arrived" at the ski area.	Gary Stolt	Website
1098	I favor the expanded bus service and roadway improvements. The travel time for patrons should be the driver in the decision. The additional capital cost are justified by the increased flexibility of the improvements As a lifelong Utah skier and mother of two young Utah skiers, I have watched in dismay as Little Cottonwood traffic has grown to unsafe and unsustainable levels.	CHRISTOPHER MULHERN	Website
1099	I support Alta's proposed modified version of the Gondola alternative. It is the only alternative that provides badly needed additional ingress/egress for the Town of Alta and is impacted less by weather conditions than the other alternatives. It is environmentally cleaner than vehicle options, will have less impact on our natural resources to implement and will provide a more comfortable, convenient and scenic trip than the other alternatives.	Kim Hofmann	Website
1100	Gondola, # 1. It seems travel time for the average visitors is a compelling consideration. Having said that, all are about the same. Then I look at cost to build and operate. Lastly overall environmental impact. Seemingly the gondola is best and that is my choice.	Craig Sturm	Website
1101	I like the gondola option. But, auto traffic must also be restricted in the canyons. I think more buses would be a good thing, too. The MOST	Leah Sanford	Website
1102	I like the gondola option. But, auto traffic must also be restricted in the canyons. I think more buses would be a good thing, too. The MOST important thing however, is to have greatly expanded facilities with larger lockers for skiers who use alternatives to driving their cars. I found it very difficult to manage my belongings without the option of leaving them in my car. Especially for switching from ski boots to snow boots: very few of the existing lockers accommodate my Sorels, and my backpack. So, whether expanded bus service, or gondola; expanding on-site services must be an absolute priority.	Leah Sanford	Email
1103	As a resident of Salt Lake City who travels to Europe and Asia monthly, I would urge the group to consider that there are better solutions to simply widening the roads. alternatives like the gondola proposed provide meaningful improvements to the experience	James Wright	Website
1104	The gondola option is fantastic! The more we can do to mitigate less vehicle traffic, the safer and cleaner our canyons become. Thank you!	Lori Flygare	Website
1105	Get rid of IKON and the problem is fixed. do not ruin the environment to "fix" a problem you caused. This was not a problem till you became sellouts.	Jack O'Donoghue	Website
1106	Any option which involves increased use of the roadway should not be adopted. We cannot expand 210 infinitely, but population can grow unchecked. We need a solution that addresses congestion, timeliness, ease of access, avalanche hazard, but above all SAFETY. Any solution that doesn't aim to get people off the road should not be accepted. Cars can't slide off the road if they aren't there in the first place. Environmentally, a gondola eliminates emissions for the canyon drive. A gondola is a superior option in literally every aspect, besides maybe cost. However it is not too far off. It's time UDOT, Utah, and Congress look to the future, stop enabling vehicle traffic, and build alternative transportation!! One change I would make is to have a parking structure at LCC parkride. For anyone travelling from Cottonwood Heights and south, why would they drive to the gravel pit and then go back the way they came? You need to make it simpler for people to make the right choice... When it comes down to it, people are lazy or just don't have the time for public transport. That's why we see so many people driving up by themselves.	Scott Chamberlin	Website
1107	More lanes are not the answer. Did y'all forget about the purpose of Mtn Accord?? What do we do in 30 years when the population doubles.. build more lanes?? We need a PROGRESSIVE solution, not a bandaid. Gondola all the way!!! People will flock to Utah just to experience our amazing progressive transportation!!	Scott Chamberlin	Website
1108	Don't we all agree that in an ideal world, there would be NO passenger vehicles in LCC? Let's take a step in the right direction please. Gondola for sure!	alexander wheeler	Website
1109	My vote is for road widening with bus specific lanes. Its unfortunate that it has come to this but I think for avy safety this will be the best option. Thank you for your hard work this last winter, it was quite the perfect storm.	Nick Mougey	Website
1110	Favor the gondola option. Keeps more cars out of the canyon, reduces risk of closure due weather or slides.	John Thomas	Website
1111	Where I do see the gondola being an attraction- itself, for families and tourist, I do not see myself using this (as a local) as often as the bus transport with additional widening of the road, for bus lanes being the fastest/most effective direct route to the resorts. The length of time to travel to the resort and back would not fit my needs. Yet, off setting those that are coming for the experience, so others can ski may be a fair option. Therefore, I am undecided, but if have to choose, my vote would be for #2- cost and efficiency. Then #3 and #1	Lynn Fuller	Website
1112	I am a frequent visitor to Salt Lake City during ski season. I support the alternative of a gondola to ease traffic congestion and facilitate access to the upper portions of Little Cottonwood Canyon even during inclement weather.	Michael Bernays	Website
1113	I support a modification to the proposed gondola alternative by adding a parking structure at the base gondola station rather than requiring all gondola users to park at the gravel pit lot and bus to the gondola station. this change will facilitate and encourage use of the gondola and allow more of its capacity to be used. having to get on a bus and THEN a gondals would seriously dissuade me, my friends, and my family from taking advantage of public transit.	Celeste Ingersoll	Website
1114	The intermodal plan is the only alternative. Without a mass transit solution(Gondola/Parking) the other solutions are ineffective. Any ground transport is a waste of effort. There are thousands of examples around the world. If we do not follow other countries solutions, we will fail once again.	Mark Mylar	Website
1115	Gondola with parking structure	Jeray Burgess	Website
1116	Thank you to all for their hard work and dedication to making this improvement as good as it can possibly be. my concern is around user experience vs. capital cost and life expectancy of project. as the world moves to a increasingly more efficient transportation systems, the most infrastructure leverage comes from widening the road to its maximum to increase capacity throughout the system. i recognize that it is \$77mm more expensive but as car efficiency increases (traffic assisted driving) and bus emissions drop due to hydrogen and battery, it'll be the best possible system for future needs. the gondola is a great idea and potentially a game changer for park city resort and DV over to the cottonwoods but may seem outdated in short order. also - 63 minutes in a box w/ strangers is a long time in ski gear. planes are a good proxy but still not the same as being suspended from a cable w/o a bathroom in the wilderness.	Haynes Gallagher	Website
1117	I would like to see the gondola implemented in Little Cottonwood Canyon. From the options offered, the gondola is the most promising for reducing traffic on the roads. Thank you!	Kacey Davis	Website
1118	I support Enhanced bus with Roadway Widening! Love Skiing and Recreating in Little Cottonwood Canyon.	John Hill	Website
1119	A GONDOLA is the only choice! The canyons don't need more congestion, i.e. buses and larger road ways for more vehicles. My family and I avoided skiing altogether on "pow" days and weekends the last few years because of the congestion. It has made our skiing experience not that much fun. And we all love to ski.	Molly Justice	Website
1120	I am a native Utahn and have skied Alta since I was a little boy. I have seen the development and growth that has stifled the canyon. Money and greed have turned a once-great local resource into an asset for the rich. I support the gondola idea because it will enhance our appreciation of the beauty of the canyon, but feel the rich will find a way to "pay the tax" to drive their own cars and circumnavigate the rules. Besides the "not in my back yard" lawsuits would tie up the project for years. The locals will once again bear the burden of this decision. I am against widening the road, this would only bring more visitors to an already burdened natural resource. I am in favor of a "cog-wheel train". Little Cottonwood used to be a pristine mountain valley, now it is filled with high rises hotels and homes for people who do not live here. I find myself frustrated that I am wasting my time writing this note because it will not make any difference. This decision will ultimately be made with money from outside our state. I guess all natural resources are at the expense of the highest bidder. Alta has become a meeting place for seniors to gather with old friends, I see that era coming to an end. I feel sorry for the "three pinners" and those of us who just wanted to go up the mountain for a few hours of skiing. It appears that a few hours will turn into an all-day affair. My solution would be to outlaw all private cars in the canyon. The canyon roads could only be used by service, food, or emergency personal. All guests regardless of "economic class" would have to transport via Cogwheel train. Assess all out of state skiers a \$100.00 per adult and \$50.00 per child yearly Utah skiing or train pass that covers the use of all canyons. This fee goes on top of their ticket passes. Purchase the old Shopco store and covert it into a multiple parking center train station. Maybe at some future time, there could be a connector with the dysfunctional Trax system. The tracks could run up the center of the road until it entered the canyon and then run along suspended tracks away from avalanche debris fields. I would like to see someone other than UDOT design the project, after living through the numerous UDOT renovations on 1-15 and a never-ending debacle of freeway of ramp rebuilds since the Olympic games. I do not trust their vision, they seem to never be able to complete anything.	Laney Nelson	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1121	As a resident in Provo who skis LCC everyweekend, I think widening the road to the future parking lot is key. Then do the gondola from the base. Sufficient parking is the key.	Kavan Hess	Website
1122	Thank you for taking this problem on! I feel enhanced bus service with road widening would be best. Thank you	Steve Nickman	Website
1123	We live in the canyon (Wildcreek Rd) and have had to deal with the winter traffic firsthand. It's been frustrating, and we manage our inconvenience with the fact that we live in the most beautiful canyon in Utah! I believe widening the road to allow more cars to pass through is doing a great disservice to one of our most precious natural beauties! The environmental impact is not worth the mitigation results. If all snowbird and Alta employees were required to park at the gravel parking lot and take busses, tolls were in place to motivate people to carpool or take the busses, and the road was covered the primary avalanche areas, this problem would be solved. It would be better for the watershed, environmental impact and MUCH less expensive! Win, win, win!	Trina Sheraanian	Website
1124	I support the proposal for a gondola"... *but please include a parking lot where one would enter the gondola at the base of the mountain(s).... make it convenient for people to drive, park, and take a gondola from where they park their car.	Jill Riley	Website
1125	I support the Gondola option, both for its minimal environmental impact and the year round ability to enjoy the experience of seeing the canyon from up high.	JOEL WALLIN	Website
1126	Gondola is my vote	Jared Holindrake	Website
1127	I would like to comment against the gondola proposal, and in support of the enhanced bus with roadway widening proposal. The gondola proposal is inadequate to the needs of a larger number, perhaps a plurality of year-round canyon recreationalists. While a gondola as designed would help move skier traffic to and from the resorts on days where storms would otherwise snarl road traffic, they would not serve those using the trailheads identified in other documents (Gate Buttriss, Bridge, Lisa Falls, Tanner's, White Pine). Backcountry skiing continues to explode in popularity, while rock climbers fill every space in the Gate parking lot most days of the spring, summer and fall. A gondola would do nothing for these populations and furthermore would add a major visual impediment to recreationalists in the canyon. The enhanced bus proposal with roadway widening seems the wisest course of action. I have stopped using the UTA buses during the past two winters due to two problems: lack of parking at the pickup spots, and negative experiences being stuck in traffic on the bus with no place to sit for an hour or even two hours at a time. The mobility centers as described seem to alleviate the first problem, and the roadway widening with dedicated bus lanes the latter. However, my concern above about parking for backcountry skiing, rock climbing, and other recreation remains. The Alternative A parking for the Gate, Bridge, Lisa Falls, and White Pine zones seems best to me: more parking, bathrooms, and fewer cars on the side of the road all seem wise. However, can these Alternative A lots be accomplished while still adding additional bus-only lanes? I hope so. In summary: please do not underestimate the needs of canyon users outside of the Alta and Snowbird ski areas.	Mark Davenport	Website
1128	My vote is Gondola. There is less potential for slow downs due to road hazards and the environmental hazards (e.g. leaking oil into the watershed, gas, etc.) appears less possible to me.	Travis Morrison	Website
1129	I believe the Gondola and bus with priority lane are the only alternatives that will have a chance of improving congestion in the canyon. I prefer the Gondola option as it will be the least impactful environmentally to the canyon and the most likely to get used. I would like you to further investigate options to provide parking at the base of the gondola instead of requiring a bus transit from the gravel pit hub.	Cris Barbero	Website
1130	I like the Enhanced bus service with roadway widening. But a few comments: - a bike lane should still be preserved during the winter time. Will the bus lane take up all the dedicated bike lane? - the bus should make stops at popular backcountry destinations. Perhaps there could be a backcountry dedicated bus (i.e. stopping more frequently and thus slower)? - roadway widening should take extreme measures to ensure no water quality issues and protect world-class bouldering rocks near the road. I fear more information is need on the total implications of widen the roadway. - improvements should include a toll for SOVs to recoup some money. Carpoolers should get in free to incentivize. - perhaps a trail (paved or non paved) adjacent to the creek could be built at this time. Much like the quarry trail all the way to snowbird and Alta. Imagine biking on a trail from the mouth of the canyon to your destination on a trail! - lastly, as you know, riding the bus needs to be more convenient than driving. What are we doing to disincentive cars (i.e. make it a hassle)? Are there more options thus route? Tolls, education, etc.? This needs to be a comprehensive effort.	Brian Tonetti	Website
1131	I live in the Atlas Hills above Wasatch Blvd. I like the tram system proposal. I also think the bus lane is a good idea. I would absolutely love it if a bike lane was added on Wasatch Blvd between Big and Little Cottonwood Canyon. If that bike lane continued up both canyons then even better (and safer). Thank you for your efforts to reduce traffic congestion and improve our great community.	David Schmutz	Website
1132	Enhanced bus service makes the most sense here, with a widening of Wasatch Blvd, and priority lane for public transit. This, along with parking and other incentive to carpool could clean up the traffic flow without the costly eyesore of a gondola.	Robert Stinogle	Website
1133	As a climber, skier and outdoors person, I want to make sure that the access of the back country is still available to the residents of SLC area. So many of us depend on this for our mental health and prioritize our lives around being in nature with our loved ones. It seems like regular scheduled buses would be the most simple solution. As a Alta/Snowbird season pass holder with a family, I've tried to take the bus several time. But it was completely full every time we tried. Maybe increasing the amount of canyon buses would be good during the mornings afternoons when traffic is the highest. Also, having dedicated Alta or Snowbird buses would be nice. Just to stay more efficient during peak hours.	Casey Hyer	Website
1134	I think the gondola would be a great option because it is carbon neutral and doesn't require us to carve out more of our beautiful mountains to create space for a road. I am concerned about the impact on nature that would come from expanding the road. The gondola is also the safest option on very snowy days when the LCC roads are very slick. I hope you closely consider this option!!	Haley Dees	Website
1135	Enhanced bus service is the way to go! Make them EV buses, so they are emission free. Gondola is a ridiculous idea - costly, environmentally destructive (not much different than building a high voltage transmission line -- costly, highly destructive to natural resources, and an aesthetic bight. How would people feel about a T-Line destroying the beauty of the canyon - it's ludicrous. Gondola is same thing). Road widening is simply "kicking the can down the road" and encouraging single use POV's and exacerbating the problem. Thanks for taking my comments!	John Stamatov	Website
1136	Definitely do the gondola It's the only real option to help alleviate the existing road problems I am in LCC every year as I have a timeshare at Iron Blossom. I support the bus service with added lane as it reduces travel time the most. Travel time is the basis that most people use to make their transportation decisions.	William Hybsa	Website
1137	I have concerns that gondola towers could be damaged in a large avalanche. The gondola is a very poor idea if people are required to take a bus to it. That costs additional time. Few people will use that gondola unless they can drive to its base station. That would mean building a large enough parking structure at the base of LCC.	Anthony Crocker	Website
1138	Whatever you do it should be hi-speed, not some slow-poke gondola, bus or tram. Use the latest technology.	Scott Kennedy	Website
1139	I would prefer a gondola for numerous reasons. Firstly, during storms, it would be more effective to transport people without having to deal with winter driving and avalanche hazards. Secondly, it would limit using the road all together because it would only be a matter of time before the extra bus lane isn't enough as well. Having the gondola seems like a good long term step, extra busses can be added later once even the gondola is not enough. Lastly, I think people would choose to ride the gondola over busses and cars because it would be a more comfortable and scenic journey.	Otto Lang	Website
1140	A gondola is not a practical idea and very few will use it: 1. It's too slow 2. There won't be enough parking at the bottom station, hence you need to take the bus to the station. Do you have to get all your ski gear from the car to the bus, then from the bus to the gondola. At both points you have to wait for boarding. 3. We have many high wind days where the gondola won't run. I am from Europe, and have been taking public transportation all my life. I ski every day during the season and live between LCC and BCC on Wasatch. The only way you can entice people to use public transportation is if it's faster than using a car. So bus service needs to be increased and a separate bus lane installed as outlined in option 2. HOWEVER, widening Wasatch is going completely against all logic. More lanes will mean more traffic, especially commuting traffic. Slowing down traffic is the correct solution, as it is the case on Wasatch in Sandy. Thank you.	Marrian Klokah	Website
1141	The gondola, if working and with a base station parking lot, would get SLC skiers up on a "powder snow day" real easily. It may solve overcrowding in the Goldminer's parking lot but would fill the mountain over-abundantly on snow days when the highway closures otherwise would prevent skiers from coming up. That would be a sad outcome for those from more distant locations who are already staying at the Alta lodges/ condos.	John J Gleysteen	Website
1142	I live off of Wasatch Blvd between the canyons and this present another layer of safe issues and complexity. I'm a skier that hates to be in traffic BUT I also have a near impossible time even getting out of my neighborhood on powder days because of the traffic in the morning. THEN in the afternoon the road is packed with traffic coming down from LCC all going 60+ MPH. this is a huge safety problem. Please don't widen the road without reducing the speed limit to 40 or lower on Wasatch.. and build in more stop lights so we can get out of the neighbors and return safely!	Dain Craig	Website
1143	Thank you for proposing these alternative! Based on 23 years experience of traveling the canyon, enhanced bus service is not a viable alternative without dedicated bus only lanes in the canyon. There has never been enough incentive to ride the bus and there will not be an incentive until buses can move more freely than the automobile traffic in the canyon. Until there is sufficient motivation to change our behavior, our behavior will not change.	Stephen Helfenbein	Website
1144	The gondola appears to be the best option from the standpoint of improving transportation of visitors up and down the canyon, safety during periods of high avalanche danger and mitigating the environmental impacts of vehicular traffic. Let's make it happen! I like the idea of a parking lot for bus and a parking lot for gondola. Having to take a bus to the gondola station would be difficult - carrying skis and boots to transfer twice rather than once. Two transfers would discourage people, especially families with kids who can't carry their own stuff	Julie Fox	Website
1145	The Little/Big Cottonwood Canyon transportation issue is not an easy one to solve. I think the gondola option by far makes the most sense on multiple fronts. 1) Cost - the upfront capital cost is cheaper than widening the road and adding avalanche sheds, and is competitive with the cost of simply adding more bus service up the canyon. 2) Environment - reducing the number of vehicles up the canyon, and not widening the road are both significant environmental positives for the gondola option. The ground disruption of a gondola is far smaller than the addition of an entire lane to the canyon road and avalanche sheds. 3) Safety - avalanches cause road closures and trap people at the top of the canyon. There are often avalanches in areas where avalanche sheds are not proposed. A gondola would provide uninterrupted travel up and down the canyon, keeping people out of the path of avalanches and allowing them exit the canyon despite inclement weather. My primary concern of any canyon transportation solution is the cost of use for people in the valley. For a family to afford skiing you already have to be creative on purchasing used equipment and children working side jobs to pay for a pass. Adding \$15/person to get up and down the canyon each time makes the experience unobtainable for most.	Craig Jeppson	Website
1146	After reviewing the proposal, I personally feel that the "Gondola" option makes the most sense both monetarily and environmentally. It will aid it the parking situation as well. Limiting the road access to buses, shuttles, and supply transport, & employees possibly with a permit system for access and parking would cut the volume of traffic and create a safer passage. I think that it also offer a unique attraction to the area with it's beautiful views. To be able to relax both at the start and end your ski day instead of frustration being stuck in traffic on the road for hours seems to be a no brainer to me. Thank you for giving me the opportunity to have an opinion in shaping an area that is close to my heart.	Jacinda Isabay	Website
1147	Did the report look at simply starting to charge people to drive up the canyon via some toll mechanism? With a particular emphasis on charging people more if they were alone? I can't help but wonder if these are expensive solutions and it could be more easily solved by pushing more people to carpool.	Jeremy Noring	Website
1148	I like the idea of the gondola best, but would prefer to see an option where parking is at the base of the gondola, not a bus ride away. Also, and importantly, since the timeframe of getting up the canyon is longer, I think it would be critical for gondola ridership to have extended operating hours to take advantage of getting first tracks and still be able to enjoy an apres ski community after the lifts close. Gondola running very early in the morning to very late at night would be super important. The gondola option seems to be the most environmentally friendly as well. Can it use partial hydro power from the hydro plant at the bottom of the canyon? Will the gondolas be heated?	Eric Zann	Website
1149	In the Trailheads section, a Gate lot is detailed at 21 parking spots. This seems especially limited to service all climbing areas between Grist Mill and Bridge Lots. There is significant usage of the roadside pullouts for bouldering access in addition to the current size of the gravel lot - I'd think peak season evenings have 25-50 cars for these areas (All the Gate lease roped climbing, plus 5 Mile, Riverside, Gate, The Hill, The Swamp, and Far Side bouldering) in addition to the many day hikers exploring the creek area. This lot is also on private property leased by the Salt Lake Climber's Alliance. If the lot is of limited size, summer bus times and a drop off at this location would need to be considered. This canyon is used and loved as much during the summer as the winter.	Brent Barghahn	Website
1150	I support a modified version of the gondola proposal. I believe that the gondola proposal will have less of an impact on the environment than the other options. The gondolas will also provide safe service to the resorts during inclement weather. Riding in the gondolas would be scenic and enjoyable. I would suggest putting a parking structure at the base of the gondolas for convenience, to save time, and to increase usage. Our beautiful canyons are one of the reasons that living in Northern Utah is so wonderful. Thank you for investigating options to keep our canyons safe and accessible!	David Owen	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1151	No matter which solution you pick you have a parking problem, whether at the resorts or at the base of the gondola. Can the resorts handle all the people that might want to go? I am not so sure they can. I would recommend that a reservation system be used and that way you can control the number of cars and/or people. I play racquetball and there are only so many courts, so we have to make a reservation. That is what one does when the resources are fewer than the demand.	Hartley Fredrickson	Website
1152	Please do not widen LCCI Gondola and enhanced bus service will significantly decrease the traffic and environmental impact on the canyon!	Michael Moody	Website
1153	I strongly support the alternative outlined by Alta. A gondola in combination with additional parking would be outstanding for reducing congestion in the canyon and making access less weather dependent.	Tom Stockham	Website
1154	I believe the combinations of avalanche tunnels, widening the roads, additional parking at the mouth of the canyon and more designated (ie canyon only) buses would do it.	Thomas Lindsay	Website
1155	NO GONDOLA. It looks like the gondola would be going over prime climbing areas, impeding on their views and solitude. I would like to see more buses, and the prioritizing of buses going up canyon. As a person who works up canyon as well, I dont see how the gondola would help with that over buses. As a backcountry skier, again, would not like to have to look at a huge gondola traversing over beautiful habitat. With the harsh conditions of the canyons, it also seems not possible to run a gondola through it all. Please do not build a gondola as a person who has worked and lived for about 5 years in and around Little Cottonwood.	Chanont Alvord	Website
1156	Why no Gondola you ask? Have you ever been on a broken lift? Have you ever been downloaded from a lift? Have you seen lifts closed for weather? Let's get Elon Musk and his Boring Company to build us an underground train or highway up the canyon! No snow underground & it doesn't effect the views, if he can build a tunnel, he can build underground parking too!	Evan Tobin	Website
1157	I love the idea of a gondola, but you need parking access at the gondola and gondola bus access from the Highland Blvd side else you're discouraging huge portions of the people who would want to use the gondola. Parking/Access passholders for driving up the canyon could be an interesting combo with "required" bus access. Residents and employees could have personal vehicle passes while everyone else is required to ride a bus.	Brenton Williamson	Website
1158	I am in favor of putting in a gondola or tram system of some kind to alleviate traffic congestion. I understand the geography of LCC make this difficult. Having more buses is also an option but I feel people would be more motivated with gondola's or a tram system. Also, where are people going to park with new public transportation options?	Jeremy Footer	Website
1159	I would support the modified gondola plan, or a light rail alternative taking vehicles out of the canyon and enhancing clean alternatives would be the best option.	Ryan McMullin	Website
1160	My husband and I have been driving this canyon for many years. We want to offer a suggestion which we first experienced in the Seattle area freeway system. They took the middle lane of the road and switched road traffic direction depending on the time of day for the rush hour traffic. So picture three lanes up the whole canyon road. In the am two lanes are open to uphill traffic. In the evening the gate is switched and changed to two lanes down the canyon for people leaving. It was a system that worked very well on Interstate 5 in Seattle and I think a viable option for Hwy 210. If you would like to discuss this idea in more detail please feel free to give me a call. This could be a more economical way to take care of a very big problem. Thanks for your time.	Cindy Wilson	Website
1161	Of all the alternatives, I think that the Enhanced Bus with roadway widening would be the best option. I also think that avalanche shelters over the road would be beneficial as well. I don't think that people will elect to use the gondola if there's no parking at the base of the gondola. Having to do interchanges from one transit system to another, I think, will greatly discourage people from using it. In addition, not everyone will want to go to the same location. With a gondola, it is inflexible about where people are transported to, and not everyone who rides it will want to go to Alta/Snowbird. With a bus, you could theoretically have bus stops at locations that backcountry skiers and hikers would use, like White Pine and Spruces. I think that the roadway widening with a dedicated lane would be a great asset in the summer as well allowing bicyclists and hikers to travel the canyon without worrying about car traffic.	Felix Leung	Website
1162	Thank you for giving us all a chance to comment on these plans. Here are my concerns: - none of the options seem to allow for stops anywhere other than Snowbird and Alta, so how do any of these solutions work for someone who is going out adventuring in any of the places between the mouth of the canyon and the ski resorts? - I see that tolling options are mentioned on the plans, I'm guessing that's for cars that still want to drive up? If so, will that toll both be open 24/7 for those of us who hunt, hike, climb, and ski, starting well before sun-up? - You have a huge parking structure in the place where the gravel pit is, but I'd rather not have to take 2 forms of transport and I think more folks would be likely to use the public transport if it was a simple "park and ride" setup rather than "park, ride, transfer, ride"	Kate Galliett	Website
1163	UDOT, I appreciate the opportunity to provide feedback on the proposed environmental impact statement for transportation proposals on SR-210 LCC. 1) I would support the Gondola option ONLY IF the proposal included a parking structure at the base of the gondola at the mouth of LCC. Having mobility hubs is not a viable option for myself and I would not use the mobility hub. I have a family of small children and it is too cumbersome to haul all their gear from a bus to a gondola to the hill. I am much more likely to continue to drive if that were the case. 2) I would support enhanced bus with roadway widening ONLY IF UDOT were able to allow peak flow lane direction changes (similar to 5400 South in Taylorsville but WITHOUT the hideous signage. Who's dumb idea was that?). Movable roadway barriers and entry gates would be challenging with the snow, but there are other ways to do it that could make sense. Dedicated paths for travelers UP to Snowbird or Alta, dedicated lanes DOWN for SR 209 or Wasatch SR-210 are some other ideas. Thank you,	Kimball High	Email
1164	As a regular user of Little Cottonwood Canyon, skiing in the winter and hiking in the summer, I strongly support the addition of a gondola in the canyon with a great deal of parking available at the base of the canyon. With better roads and busing along with more parking at the resorts the addition of gondola service would help to make our canyon a model for the world and create a much better experience for all of us! I was disappointed to hear they had removed the idea of adding train service up the canyon. That model has worked well in Europe and while initial cost is certainly high it probably offers the best long term solution to the problem. Ultimately, better roads, more parking, more buses, a gondola and a train may all be needed for both the crowds and the environment!	CHARLES HANSEL	Website
1165	How about reducing numbers by eliminating the Ikon pass and capping the number of skiers each day (see Powder Mt.).	Garth Barrett	Website
1166	Please choose the gondola option coupled with a toll for cars.	Mark Parkinson	Website
1167	I am not a UT resident, but I do visit Alta/Snowbird each year. I like the idea of having a gondola replace bus service up and down the valley. As an out-of-state visitor, I often drive a rental car to base of the valley and take a bus the rest of the way. It would be nice to have sufficient parking at the gondola base station to allow visitors like me to park next to the gondola rather than having to part in a remote lot, take a shuttle bus to the gondola station, and then ride the gondola. A gondola would also make me more likely to visit in the summer months!	Kyle Fennell	Website
1168	Gondola! Environmentally responsible, responsible and able to transport large numbers of travelers and locals alike. Scenic tickets could be sold.	Kathryn Josephs	Website
1169	Buses aren't necessarily family friendly. I am in favor of a gondola, considerations that would need to be included are: parking, road still available? will it cost money to take it up? It costing money would defeat the purpose. People would just drive up road should be widen anyways	Sophia Ochoa	Website
1170	Widen the road. It's a win win for traffic and increases safety by a large margin for the massive amount of bikers that use the road in the summer.	Matt McClung	Website
1171	Hi, Before I can comment on the 3 alternatives I need some more information about the proposals and also how it interacts with Big Cottonwood access. My current situation My friends and myself stay at Midvale near Midvale Fort Union station for about 2 weeks each winter and catch the UTA snow bus to the 4 resorts in the 2 Cottonwood Canyons. On the return journey from Alta if we just miss a 953 we will catch the 994 to Sandy and then the Trax to Midvale Fort Union My Questions about the 3 proposals are 1. Does the proposed Mobility Hub at 9400 South/Highland Drive Park and Ride mean that there will be no stop at Midvale Fort Union Station? 2. If there will still be a stop at Midvale Fort Union will it be before or after 9400 South/Highland Drive Park and Ride? 3. Will the proposed mobility hub at 9400 South/Highland Drive Park and Ride affect the Ski Bus to Brighton & Solitude? If so how? 4. I have found the capital and operating cost forecasts but I cannot find the forecast fares for the three alternatives. Could you please provide some indication of the level and differences in likely fares for the three alternatives. 5. How do you expect travel with the Ski Super Pass will be affected by the three proposals? 6. How do you expect travel with the Ikon Ski Pass will be affected by the three proposals? I look forward to your response to better understand the effect of the proposals and so I can make a more informed comment Regards, David Walsh	David Walsh	Email
1172	I love the idea of improving our canyon traffic congestion. I would like to see a train option involved in the plan. I would imagine a train would be on the same level of complexity as a gondola, but allow greater potential in the future for this issue to not be revisited in another 10 years.	Nicholas Schumacher	Website
1173	I don't see the bus as a solution due to the SARS-2 pandemic which will be ongoing along with influenza - at least for the next few years. Plus it will create long lines at the bus boarding locations, as well as at the proposed trams. Of the three proposals the bus plus widening the lanes seems most helpful but probably results in the same amount of, or an increase in private vehicle usage. While I road the bus system to ski both Cottonwoods last and previous seasons, as well as using my own vehicle, I would probably avoid the bus during the next few seasons as much as possible. I think you face a very difficult problem given the congestion. It is to the point where it seems access has to be limited (capped) such as at Deer Valley (recognizing of course that the Cottonwoods are used by others than those going to the "established" ski areas. On Powder Days and weekends the Cottonwoods are overcapacity (in my opinion) and I (we) have on numerous occasions simply turned around upon finally reaching the intended ski area due to the great crush of vehicles and people. I don't think any of the three proposals will solve the overcrowding and transportation "crush" as people come from all over the World to ski the Cottonwoods - only limiting access somehow will, which many would certainly oppose.	Richard H	Website
1174	Given the comparative cost/benefit ratios: option one seems like a poor choice compared with options 2 and 3. Option 3 may be a non-starter if the gravel yard parking lot is the starting point. There needs to be a significant parking option at the base of Little Cottonwood Canyon in order for this to work well. Finally, given that the average income level for an out of state skier is over \$300,000 per year and that of a local skier is over \$100,000 per year, a significant part of the cost could be offset by a lift ticket/season pass surcharge added over a 15-30 year time period.	Osman Sanyer	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
	I do not think any of the options are practical, efficient or a good investment. Bus service is inherently inefficient as demand varies based on weekday vs weekends, snow quality/ days with big snowfalls and holidays. What is required to move people on a big snow day over Christmas or Presidents weekend far exceeds what is needed during the week in early January when there are few tourists. So far UTA has never provided more service during busy periods and as a result when snow conditions are poor or it is not busy buses are driving up the canyon with few passengers, a waste of money. Riding the bus on a snowy day when the canyon closed at 5:30 AM, not opening until 8:30 or 9:00 is not pleasant. Buses have not gone up the canyon meaning that buses are not returning to the park & rides to pick up skiers / riders. So lets for this example say I got on the bus at 7:45 AM, standing as there are only about 25 seats. So I stand for over an hour with skis in hand as there are no corral/s or racks on the outside to hold skis while the bus sits at 3000E on 9400 S. waiting for traffic to start moving. We arrive at Alta after another hour getting up the canyon. 2 hr and 15 minutes after getting on the bus. Now of course one of the issues with the bus is after boarding you are pretty much trapped as if you get off no buses will be coming back down to pick you up to get back to the P&R because the buses are all stuck. God help you if you need to use restroom facilities. Even worse is if you are skiing and the road closes at 1:30 for control work and does not get open until late afternoon or God help you interlodge is called you are stuck waiting for buses that can't get to you, that is one long day. Bus lanes while worthwhile will make no difference on a snowy day when nothing is moving.		
1175	As far as the gondola is concerned that is a terrible investment, \$400 million dollars to fix a problem that occurs on maybe 20 days per ski season. We ski up LCC almost everyday and with the exception of the three day interlodge in February we had an issue about 10 days. Sure some days are busy and slow going but is it any worse than being on I-15 on a snowy day with accidents turning a commute into a two hour ride. The Salt Lake valley is facing huge transportation issues as it quickly grows. I-15 is a parking lot both directions twice a day. The intersection of I-15 & I-80 averages 240,000 vehicles each and every day. Spending \$400 million for a a couple or few thousand cars during the winter makes no sense. UTA / UDOT has plenty of more pressing projects that can use taxpayer money. Lastly this amount of money to help essentially two private companies so they can sell more lift tickets borders on insanity. The issue with the gondola is that it is projected to take 63 minutes from the ""hub"" to arrival at the ski resorts. This number is under perfect conditions, ie not having to wait for a shuttle bus and walking on to the gondola. If I arrive at the hub just as a bus leaves that will add 10 minutes to the transit time. If I get off the bus and there are people waiting to load that will also add to the time. With 35 people per cabin having just 150 people waiting would add another 10 minutes to the commute. Not 63 minutes but an hour and a half. The capacity of 1050 per hour is woefully low when you have thousands of skiers most wanting to arrive at the resorts between 8:30 and 10:30. I understand that this is not meant to replace all vehicle traffic but if it is going to take 60 minutes plus when I can drive from 9400 S in less than half the time on 90% of the ski days why would I do it. The LCC resorts better be careful what they wish for. Make the commute expensive by charging tolls or inconvenient by doubling the transit time and they might find out that skiers have other options. Lastly the projection of skiers doubling by 2050 is ridiculous. While the number of people wanting to ski may double but there is not nearly enough terrain at SB & Alta to support a big increase in volume. Currently when the parking lots are full that becomes the ski area capacity. On those days the crowds are terrible, lift lines are long and honestly the crowded slopes are dangerous. There is not enough room to increase capacity 20% much less 100%.	Michael Belt	Website
1176	I support the Gondola Alternative as Modified by the Alta Ski Resort to add a parking structure at the lowest station on the gondola. Without such a parking structure, the added bus time would attract very few people.	Allen Jones	Website
1177	Hi : We are wondering about some details of the gondola alternative . - Where will the Alta station be located ? - Will there still be some transit to move within the Canyon ? For example if someone took the gondola and wanted to go to White Pine or Grizzly to backcountry? - We live in Alta, will private vehicles still be allowed ? - Any chance of a parking structure for the gondola at the base of LCC? Thanks	Dan Colangelo	Email
1178	Rail is a good option to be added, why not take a serious approach so to include rail.	Michel Reznik	Website
1179	I'd also like to propose transportation via train up the canyon as an effective alternative to those mentioned here.	Campbell McGavin	Website
1180	While the Enhanced Bus option is the most cost-effective in the short-term, the roadway widening makes the most sense for the long-term. Passenger capacity could be scaled up in future years with more buses, both on the express breakdown lane and regular lane (if need be). This model is similar to what NYC commuters use in NJ and the greatly reduced travel time and stop-and-go aggravation are very effective incentives that ensure high participation rates. Although the gondola sounds sexy from a tourism marketing perspective, it very likely would have major cost overruns, would not be scalable (unlike buses), and lead to long lift lines that discourage usage. Its major unique advantage is reduced impact by road closures, but since that occurs only a handful of times per year the huge cost would be better spent making some road infrastructure changes (e.g. tunnels or overpasses at specific avalanche-prone spots) that benefit bus, car, delivery and emergency vehicles in both directions.	Edmund Gish	Website
1181	For people to use the transit option it has to be convenient and provide a quicker option to get up the canyon compared to a car. 1) For the enhanced bus with no additional roadway capacity. The bus will fight the same traffic as a car and will be as slow going up the canyon. This will discourage ridership. 2) The gondola option requires the transit rider to load/unload twice going up the canyon which is very inconvenient especially for a family with smaller kids. This will discourage ridership. However if the mobility hub could be moved to the mouth of LCC this would be a the most viable alternative. 3) The enhanced bus with roadway widening is the only alternative that will provide a quick and convenient transit alternative that will encourage ridership.	Jan Franzen	Website
1182	Totally support expanding busing services or adding a gondola to reduce the congestion - a challenge with using public transportation is managing the amount of equipment, clothing layers, etc. needed for skiing and snowboarding - the number of lockers currently available that are of adequate size/shape for ski/snowboard gear is inadequate in relation to the number of people needed to use public transport to truly make a difference - Are options being looked at to support the need for lockers? This would greatly reduce the challenges and promote the use of public transportation instead of driving. Thanks!	Geoffrey Harding	Website
1183	Gondola!	Neah Bois	Website
1184	I travel to the Canyon at all times of the year mostly to ski over 70 days of the winter. Discussions concerning transportation in the canyon have been ongoing for years. I appreciate all the work required to provide the proposals for input. I drive to the canyon for one reason. Convenience and speed. Buses, even with designated lanes are not efficient. The trip just takes too long. The best solution considered is the gondola. Parking and bus transit from a Quarry lot is also inefficient. A underground parking structure must be built at the mouth of the canyon with convenient access to the gondola. Serious consideration should be given to the cost to users. Can the gondola be free? free with a pass as UTA is?	David Kambic	Website
1185	I agree we need more than more buses and wider roads. I trust that a gondola will increase uphill capacity and decrease pollution. Definitely need a parking structure at the bottom! Also need to charge drivers a toll to drive up the canyon. Or close the road to all but residents and employees.	Jay Hansen	Website
1186	If we could park our car somewhere at the base and get straight onto the gondola our family would definitely use the gondola. If we would have to get on a bus to get to the gondola we would definitely take our car up to Alta instead. We have never taken the bus and are not planning to do so in future.	Thomas Witt	Website
1187	I live at XX Daneborg Drive, just 3 houses to the west of Wasatch Blvd. I am in favor of widening 210 ONLY to support a dedicated bus lane (with buses that would run every 10-15 min) AND which would facilitate easier access onto Wasatch from Daneborg Drive (which is improperly used as a through street and is nearly impossible to get onto 210 when traffic is backed up). I am NOT in favor of widening Wasatch Blvd to increase car traffic flow on 210. I am also in favor of the gondola option but only if parking facilities are significantly increased (with bus service) from the mouths of Little and Big Cottonwood canyons, as well as the parking lot where 3500E hits 210. I am also in favor of requiring non-homeowners of Salt Lake County (or any rental car) be required to pay an added parking fee or even restrict those cars to having to use bus service up the canyons (this would require local homeowners the need to get a sticker for their cars to allow them up into the canyon, would generate revenue to pay for bus/gondola service, and could be limited to certain days/weekends). I am vehemently opposed to any road work on 210 that reduces property values for the homeowners who have invested so much in their homes living close to 210.	Gery Vanderviet	Website
1188	The gondola makes the most sense and apparently causes the smallest environmental impact. Plus, it sounds fun and reminds me of ski towns in the EU. Please consider the gondola option.	Emily Allen	Website
1189	You are doing this for why nothing is going to change less talk more action doing something anything is better then let's have another meeting and talk about	D T	Website
1190	I think a gondola is the only truly environmentally responsible solution to canyon traffic. Its have a much lower impact on the environment than putting more cars and buses on the road.	James McCormick	Website
1191	Please add a gondola to Little Cottonwood Canyon with a parking lot at the base of the gondola. This will lead to better air quality in the canyon with ease of use of the gondola.	Lauren Florence	Website
1192	Large 8-10 passenger gondola up LCC like they use between villages in Europe! Great summertime trip for tourist (limited hours to save money). Keep road for local, business and permit drivers. Let the ski resorts manage their own bus pick ups. Gondola makes sense given the avie danger to road, congestion etc.	Jim Clarke	Website
1193	Gondola	Donnie Ozenne	Website
1194	Please consider having a fee station at the mouth similar to Millcreek immediately. A season ski pass could be used as toll. Next develop more car parking at bus transit stations along Wasatch Blvd. Use the gravel pit as a parking area and bus station. Use e-buses like Park City. This service should be free all year. Think about adding a snow shed in the most critical area soon. Do not expand the road or add parking along it. Finally build the Gondola, sooner than 2050. This should be done in the next 10 years. Get some European help; it works there. Nice to have include senior passes for travel, individual vehicle passes for canyon property owners, employee passes for those working in the canyon, enforce non-compliance with hefty fines, Doug	Douglas Dickey	Website
1195	Please do not widen the road! There is still a major issue of parking at the resorts and widening the road would not help! I love the idea of a high speed gondola. If it is electric, easy to use and free/affordable it would be the best, cheapest and most environmentally friendly option. I also agree that no matter what traffic should be tolled in some way. Most other canyons with public access along the Wasatch have fee stations. And the cottonwoods should be no exception!	Isabelle Powell	Website
1196	I would vote for the Gondola alternative. Only option that offers a transit option up canyon during avalanche periods.	Matthew Caron	Website
1197	I support the enhanced bus service with an additional lane reserved for buses during peak traffic. That extra lane incentivizes use of the bus. Please add only one lane to minimize impact. The direction that gets to use the added lane would change between the start (morning) and the end of the ski day. I also like that the lane is reserved for bikers and pedestrians in summer. I do not like the gondola because I believe its visual impact would destroy the beauty, and it is slow such that people would still choose cars. Even if stuck in traffic I enjoy looking at the mountains and would hate to see a gondola. If you choose the gondola, please put it directly above the road to minimize visual impact.	Robert Parker	Website
1198	I am in support of a Gondola in Little Cottonwood Canyon. It is important for people to take in Utah's natural beauty but we must make strides to ensure we are not destroying it at the same time.	Drew Thomas	Website
1199	I fully support the gondola. Enough with the road widenings in Utah.	Dustin Bolt	Website
1200	In understanding the proposals more, I think the gondola alternative would be a good option if the parking structure was built at the base station rather than requiring all gondola users to park at the gravel pit lot and bus to the gondola station.	Brandon Patterson	Website
1201	Gondolas seem like a safer and more efficient transportation option.	Erika Gunn	Website
1202	Gondola. Let's keep as many vehicles out of the canyon. If I'm going to travel in a group to the top, I'd rather look down and enjoy the view than turn green winding up and down the road. Awesome tourist attraction! So much so that people would ride up, have lunch and ride down. Won't do that on a bus!	ANNA BARBIERI	Website
1203	I think a gondola is a perfect solution. Eco-friendly, fun and unique, it is the perfect way to transport people and take in the beautiful scenery. I fully support the funding of a gondola.	Elneeta Timmons	Website
1204	Please don't widen the roads!!! Enhance bus service!!!!	Baile Turnbull	Website
1205	The gondola and the enhanced bus with roadway widening would be preferred options. I would take the bus if it had a shorter time than driving (which just enhanced bus service doesn't offer) - it's more comfortable to sit in traffic in my car than a bus). I would take the gondola even with the time length because it would be a prettier view and a more consistent time expectation. Honestly (and unfortunately), anything that reduces traffic and means it would easier for me to drive would be awesome.	C M	Website
1206	All three of these options don't seem like great answers. What's the point of the gondola if there is no parking and you have to take a bus to get there? You might as well just stay in the bus. Plus, gondolas are susceptible to wind closures. The shoulder lane is an ok idea I guess, but on heavy snow days it will be tough to keep safe and open. Keep in mind that when you reach the passing lane on a snow day it's rarely open because the plows can't cover that much road. But... it still might be the best idea of the 3. Maybe if you also heavily restrict vehicles that have poor tires and make them ride the bus. Or better yet, make people buy a license to enter the canyon in winter. But first have to take a course on snow driving and have the correct vehicle and tires. It seems like similar actions are being taken with watercraft in the summer where out of state watercraft have to take a course on mussel infestation And how to properly transport your watercraft. Plus pay a \$20 fee. I would be happy to pay a seasonal fee for the canyon if it means less traffic. Or more importantly less people on the road that don't know how to drive in snow or have poor tires. I cringe every time I see a California plate struggling up the canyon road. Of course the mega perfect solution would be an underground bullet train from Sandy to Park City via Bird,alta, Brighton. Thanks	Tyler Peterson	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1207	I am adding to the comment I submitted earlier today using this site. In that comment, I supported the expanded bus with one added lane. Please also plan that 1/2 the buses go to Snowbird (and not to Alta) and the other 1/2 go to Alta but not Snowbird. Whether going to or from Alta (my destination), I would rather wait a few extra minutes to board a bus but then not have to wait for all the Snowbird stops.	Robert Parker	Website
1208	I would love to see the Gondola be the answer to transportation!! I looked at the 45 min time, it is always more than that with the traffic going up and down the mountain at peak times. Hoping to see the Gondola as the new option!!	Tamera Perkins	Website
1209	I do not take the bus to Snowbird because there is no place to store a lunch without paying an expensive locker fee. Therefore, many people store their lunches in their cars. Deer Valley will store your lunch for a nominal fee. If there was a place to store my lunch, I would be much more inclined to take the bus or a gondola.	Paul Harris	Website
1210	Gondola! After skiing in Italy, I think the gondola would be very efficient!	Keinan Gaylord	Website
1211	I favor the gondola with a parking structure at the gondola base station	Tim Alley	Website
1212	Best choice - Gondola	Leshla Hall	Website
1213	I have lived in SLC off and on for 32 years. As an avid skier, I have seen the population and transportation demand on the canyons grow exponentially over these decades. Here, I am simply putting in my vote to wholeheartedly agree with a recently released statement by Alta Ski Area (here I quote). In other words, I "support a modified version of the Gondola alternative. It is the only alternative that provides badly needed additional ingress/egress for the Town of Alta [as well as Brighton and communities between base and top of navigable canyons] and is impacted less by weather conditions than the other alternatives. It is environmentally cleaner than vehicle options, will have less impact on our natural resources to implement and will provide a more comfortable, convenient and scenic trip than the other alternatives." I further agree with the idea of "adding a parking structure at the base gondola station rather than requiring all gondola users to park at the gravel pit lot and bus to the gondola station." I too "believe this change will facilitate and encourage use of the gondola and allow more of its capacity to be used." Thank you for considering.	Marc Levy	Website
1214	It seems clear that the gondola alternative is the one that would be best. It would allow people to park at the bottom of the canyon instead of the top, eliminate traffic disruptions and safety issues from avalanches, minimize environmental impacts on air and water quality, and reduce travel times at peak periods. The key is to put in a gondola that actually has enough capacity to handle peak hour crowds without long waiting times. A gondola should not be accompanied by mandatory restrictions on the use of the road however: if people prefer to drive they should be allowed to do so unhindered. The way to limit road traffic is by providing a genuinely better alternative, not by administrative diktat. Charging for parking at the top would be OK as an additional incentive to take the gondola and to help equalize (or even slightly tilt) consumer costs relative to whatever the tolls would be on the gondola and for the related parking facility at its base.	George Klopfer	Website
1215	Increase the # of ski storage lockers to alleviate bus congestion. Additional ski lockers could possibly promote a substantial increase in hitch hiking to / from the mountain resulting in a car pooling preferred parking situation.	Brian Cardello	Website
1216	The gondola seems like a sensible idea - low impact in every way while still servicing over 3,000 people. Will car traffic be limited? How does it get funded? When does construction begin and how long to complete?	Andrew Menke	Website
1217	I have been skiing Little Cottonwood Canyon many times since 1983. Usually I stay for a week at Snowbird. I understand the need to revise canyon access. I simply ask that any alternative that is selected consider that people spend an entire week in the canyon and buy a weeks worth of groceries in Sandy or Cottonwood Heights before coming up the canyon. You need to make sure that those of us that do that can still have private vehicle access to the resorts. If you make us take a weeks worth of groceries on a tram or bus, we'll take our business elsewhere. Thank you for considering my opinion.	Dave Boboltz	Website
1218	Would love to see a gondola to lower carbon emissions within the canyon.	Jamie McAllister	Website
1219	The gondola has been a suggestion for years. I think it's your best current choice. Minimal environmental impact. Plus it's the only solution you have when an avalanche closes the road. You can still get people out of the canyon. Be smart and leave room for road expansion in the future.	Dave Altman	Website
1220	I like the gondola option. Just make sure easy access to the gondola. Riding the bus to the gondola sounds like a pain.	Jeremy Rigby	Website
1221	This does not take into consideration of summer users. Specifically, creating appropriate parking capacity to compensate for all informal parking being removed. Please take this into account for the people that recreate down canyon.	PATRICK CALDER	Website
1222	gondola is my first choice if there is parking available at the gondola. The canyon is getting crowded, and something definitely needs to be done	michael stevens	Website
1223	I agree with Alta that the Gondola would be a great option, especially when roads are closed due to snow. I am sure this is not a new idea, but it is not mentioned. what about certain times of the day for 30-90 min the canyon is only one way? This could be utilized as needed to relieve the flow going up or coming down. It would require signage and police and cones to manage the flow, but it could be flexible to when it was needed at a comparatively low cost. The upper and lower sections could be handled separately. It seems silly to be stuck in a traffic for 1/2 hour, when the other lane is almost not being used. It doesn't solve parking challenges, but investments in parking garages instead of buses could help solve that challenge. One of the challenges of skiing, is the conditions change and energy expended during the day. It's nice to have a place close by to drop off and pickup gear as needed. And when you are beat the last thing you want to do is hop on a crowded bus and stand all the way to the bottom with all your gear...	Jared Neilson	Website
1224	I think we need a gondola	Julio Gonzalez	Website
1225	I believe the gondola would be the best choice to limit traffic in LCC	Katherine Speed	Website
1226	Hello- I am from California but am a very frequent visitor, several times per year, to Snowbird and Alta resorts. Mostly in the wintertime. I strongly support the gondola option and would also suggest that parking for this be made available at the gondola base as this would vastly simplify the process and increase usage a great deal, IMO.	Stan Knight	Website
1227	Thanks for listening. I believe Alta-Snowbird to be one of the nicest ski destinations in the world, but the drive up the canyon is getting ugly.		
1227	You should get rail system	Misty Glines	Website
1228	Seems the gondola would solve the problem. Seems the others are just bandaids on the situation.	JAMES WILLIAMS	Website
1229	Let's use the money to construct a 12ft high dam, "Bonneville #1" on the North side of the valley, Magna to Capitol Hill. This storage of water ontop of existing neighborhoods and downtown metro areas will reduce the number of people who overcrowd Little Cottonwood, slow down airport access, and provide hydroelectric power to the grid.	Bernhard T. Manning ESQ	Website
1230	#1. Gondola #2 increased bus, no road widening	Willem Schott	Website
1231	I agree with the modified gondola proposal including a large parking structure at the canyon mouth. However enhanced bus service along with widened roads would also enhance the transportation situation.	Steven Princiotta	Website
1232	I have been seeing these proposals in the news and all sound good BUT the news reports have neglected to point out all the proposals include a toll in the canyon. Make the mass transit self supporting, do not do it by adding taxes and tolls. This taints the project as revenue generating. I pay plenty in taxes and fees, PLEASE, no more!!	Richard Hosie	Website
1233	We absolutely need roadside parking for summer activities. These parking areas are crucial for climbers and hikers and the proposed parking areas are no where near sufficient. There is no need to make summer users suffer because of issues during the winter.	Lethen Crider	Website
1234	As a mother who frequently uses the Cottonwood Canyons with her family, I would like to provide input on the proposed transportation options for S.R. 210 and Little Cottonwood Canyon. I really think the 3rd option (Gondola) is the superior option. It has less environmental impact and the most family friendly. HOWEVER, I think it makes much more sense to just make a bigger parking lot at the gondola base station then expect people to park at a bus station, get on a bus, then get back off and get on a gondola. Personally speaking as a mother- I would find all of that loading/unloading to be a burden and possibly hinder my willingness to use the system. If you could drive straight to the gondola and park there, I think the solution would be perfect!	Heather McEntire	Website
1235	The gondola seems like a silly and very expensive option. The enhanced bus with the road widening seems like the best way to do it. Also, it would be nice to add some extra stops to cater to backcountry skiers. I know that may increase travel times slightly, but not all busses would have back county riders. With back country use in the Wasatch increasing every year, the small pull offs on the road will become overcrowded and will need to be enlarged or you could add some bus stops to them. Also, with the shoulder lane would there be a barrier between the regular lanes and it in most areas? If it is just an extra lane without this barrier I am sure people will still end up driving cars up with poor tires during the winter and will slide out and block both the car lanes and bus lanes. I would highly recommend if you are extending the road to put barriers between the lanes, and just increase the number of pull out points for people to be able to stop at different sections of the canyon during summer.	Mark Bilbow	Website
1236	I choose gondola proposal	rich genz	Website
1237	I am an employee at Alta ski area and I have a degree in environmental sustainability. I support the gondola plan because the gondola would consume less energy than buses and would harm less resources. It would also be much safer and more reliable than buses. This plan would also significantly reduce traffic which would be better and safer for the environment as well as for the residents of the town of Alta.	Ryan Green	Website
1238	Two of these will make most of the canyon unavailable to backcountry skiers. I find it disheartening that this plan is biased for businesses.	Richard Petty	Website
1239	The only option that makes sense is the gondola service with adequate base parking.	David Ekins	Website
1240	As a lifelong resident of Sandy and Salt Lake I feel the Gondola is the best solution. Widening the road would cut further into the wildlife in the canyon. That road is about as wide as it can possibly be as it is. The Gondola not only seems like the more ethical option, but it sounds like fun as well!	Austin Archer	Website
1241	Hey, Gonna try to be brief. My brother lives in the area so I've been fortunate to enjoy this unbelievable canyon. I own a cabin in Tahoe, CA. Squaw and Alpine struggle with the same traffic issues. I'm not interested in arguing which plan is better because they are all bad. Always, bad. We live in a culture that always deals with issues/problems by putting the onus on the individual. This is why voter registration is low and bad. This is why recycling has never and will never work. There are millions of examples. It's basic if you really want to solve something - put the responsibility on the much smaller, extremely well organized, and easier to regulate and enforce entity. Not on the whole population of the country. The ski resorts need to limit daily entrance and be ok with the profit that brings in. Traffic problem solved, no need to throw unbelievable sums of money at it. The federal government automatically registers its own citizens to vote we have all the voters. Whatever company uses packaging is responsible for it all the way to the end. Basically, in a nutshell-you're taking the same old tired approach and it's going to be very expensive and it's not going to work. And you might want to pay attention to the subway and bus system of N.Y. The only mass transit system that has ever truly worked in this country is no longer an option.	Gonzalo Rioseco	Website
1242	My fiancé skis every day in the winter at Alta. He rides the bike bus, hitchhikes, or carpools. He doesn't drive.	Alexis Marsden	Website
1243	I like the Gondola option best. It is the cleanest option as far as air quality and would be a beautiful ride in the Summertime. My second choice would be dedicated fast bus lanes which could be used by cyclist in the Summer.	Robert Bagley	Website
1244	It would be great to have a Gondola with lots of parking at the Gondola (large, multi-level parking garages) so that we could drive directly to the Gondola without having to get on a bus first. That would make it feel like we were driving to the resort like we do today. (Hopefully the Gondola is fast and frequent during morning and end-of-day)	Bob Spencer	Website
1245	What about a rail system? Too expensive? That would be perfect. I really dislike buses. I'm also a biker so a wider road would be great in the summer but seems costly.	Bob Spencer	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1246	I think widening the road and adding buses is your best option even with the gondola you are connecting it to your smallest parking lot at the mouth. It will not be convenient enough for people to be willing to use it. Having to take a bus to the gondola is counter productive why get off the bus if its going up the canyon anyway and will be faster then the gondola? The parking lot at the mouth can easily fill in a matter of hours especially if there was a gondola. Widening the road giving a bus only lane. And adding to the schedule to include civilian and canyon employees schedules and wants, please let me emphasize employee schedules and convenience there are a huge number of employees driving up every day, these employees like myself who work at snowbird or alta want more than anything to be able to use public trasport. But year after year cthe bus schedule seems to forget about a lot of us. A large majority of employees at the resort have to be there fairly early. Now im not saying run a bus at 6 am but being able to be to work by 7 using the bus. Would decrease a gige number of vehicles traveling up the canyon. Also i was very impressed by the time and effort this year put towards keeping vehicles unfit for winter conditions out of the canyon. And to be honest im willinh to bet most the cars turned away from driving up the canyon were rentals. These people would have been more than happy to not rent a car and use public transport but with the super limited and terrible off schedule uta buses , note that is not just ski buses but all of them are not very convenient or efficient. Little cottonwood is a very dangerous canyon in the winter and i think uta needs to one the fact that they are not doing enough to support the canyons and the communities tied to them and the resorts. This could simply been fixed years ago as you saw these problems arise over the last 10 years. With uta just adding buses its honestly a little funny and kinda sad the its taken this long for the problem to really see its light. I would love to say that UDOT as a whole has been anazing the last 2 seasons in the canyon especially this season i can full heartedly say that you guys saved lives this last winter and i felt unbelievably safe whenever i was on the road. Thankyou for listening to what the people have to say it means a lot to me if not many more. More buses longer schedule. Please do not just add buses to the current schedule it is counter productive please extend the hours on both ends and run them every 15 minutes and i promise you traffic will never get this bad again	Kemron Sorenson	Website
1247	I think there should be a gondola because it would reduce air pollution and would be able to be ridden no matter the avalanche danger	Ian Skelton	Website
1248	I fully support the modified gondola option and am thrilled this action is being seriously considered. Thank you!	Dana Ostermiller	Website
1249	Gondola, or a Funicular. We Can Do This!	Jared Richmond	Website
1250	The gondola seems like an excellent option to help those who come by the day to ski or hike. My husband and I come to stay, so it would impact us less. Road widening seems the least of the options as avalanches care very little how wide a swath they cover.	Felicity Hoyt	Website
1251	I would love to see the gondola. I would recommend some type of parking structure at the base of the gondola/canyon so that one could park at the very bottom of the canyon and jump right on the gondola though. Thanks for your efforts on this needed and important project.	Drake Bloebaum	Website
1252	As a canyon employee of over 10 years, I see the gondola approach as the best solution.	Patrick Sayers	Website
1253	I think that they should make LCC a toll road. This will be a revenue source to fund the long term solution to the traffic problem, whatever that is. I don't believe that non skiers should bear any cost (taxes) to fix the traffic problem skiers have created. I could see charging \$20 per day for single rider vehicles and sell annual passes. I live in Hood River, Oregon in the summer and we have a toll bridge. We buy a sticker to put on our windshield called Breeze By and automatically reads the sticker at the gate and charges our credit card on file. I bet many, many skiers would be willing to pay \$20/day to drive up. 3 people per car should get a reduced rate of \$10. Of the 3 solutions on the table right now, I would be in favor of the gondola. It is a Euro solution and that would add a unique flavor to LCC. Buses on big snow days is still a problem. the gondola could run non stop during storms. Get the traffic off the road!!!!	Gene Arnold	Website
1254	Bus with road widening makes the most sense. Adding buses without giving them a special lane won't entice people to sit on a bus in traffic. They would rather sit in their car. The bus needs to get them there faster since there will be less comfort and convenience. The gondola would be the coolest.	Mike Darukie	Website
1255	I commend your work on the big problems in Little Cottonwood canyon. I think that all the options are good ones, but I feel that the option to have a designated bus lane is by far the best. The trouble with taking the bus is that the ride is always longer than taking your car. To make riding the bus more incentivised one would need to make it convenient and as fast, if not faster of a ride up the canyon. I think the only way that would work would be to have a designated bus lane. People need to see the bus passing cars up the canyon to make it look like this is a better way up! I wonder if you could just do with a designated uphill lane, since downhill is not usually as pressing of a time constraint for most people and the morning is always the rush time. Or could have a designated up hill lane in the am and then have that be a designated downhill lane in the pm. I also don't think you have gone far enough. Has anyone thought about putting in a downhill toll in to pay for all this stuff??? I think people would be willing to add a 5-10 \$ fee to use the canyon. You have a perfect place at the bottom of the canyon in the park and ride lot at the bottom. Divert cars into this to pay a fee or better yet have multiple "fast pass" areas that cars need to drive thru to pay. Have a free fast pass for employees or residents. So many ski areas now are charging high prices for parking- this is a similar thing. It has worked for years in Millcreek and people still go up there. You would have to make it very efficient so as not to bottleneck at the bottom of the canyon, but that could be done. Make users pay a bit - it is only fair! Thanks for considering and good luck!	sandra phillips	Website
1256	What is presented only shows the estimated travel time, what is missing is a simulation of people queuing for the bus or gondola! I think the queuing time will greatly impact people using these options. No one is going to want to wait 40 minutes for a gondola during peak periods.	Mark Dimond	Website
1257	Gondola!!!	Jason Adlesperger	Website
1258	I support the shoulder widening proposal and increased bus service.	John Dunlea	Website
1259	I think a gondola is the optimal solution. Increasing the speed and capacity would be great, as well as providing parking options at the base. Winter and summer gondola operations would be a great asset to the state of Utah for enjoyment of Little Cottonwood.	Ian Russell	Website
1260	The best option and only solution in my opinion is widening the road with the bus enhancement. Nobody wants to go up and back for an hour each way and bring only the bare necessities to ski for a day. The only people that will Benefit from the gondola is the people who live or have a second home up there and the option for just bus enhancement is basically just doing nothing. Also keep in mind epidemics that are going to become a normal !	Dean Bachman	Website
1261	The biggest problem with Little Cottonwood Canyon is the avalanche danger and treacherous roads on powder days. The gondola partially solves this problem, but the travel time to get from my house to the ski slopes would be double the current travel time! And it would be more expensive and inconvenient...especially with 4 children. The bus "solutions" are a joke. How many times has the canyon been closed because a bus slid off the road?! Also, the proposed mobility hubs would need A LOT more parking capacity I would like it if a tunnel were built and a train installed that connected with the rest of the train system. It seems obvious that the solution that eventually gets implemented has got to give incentive for people to use the public transportation option over using their personal vehicles. If I can drive my car to Alta and get there faster and as cheaply as taking a bus, then I would almost always opt to drive my own car. A 3rd lane for public buses only would allow those buses to cruise up to Alta pretty quickly. Anyone stuck sitting in traffic on Little Cottonwood Road watching the buses go by on their way (to a powder day!) is going to seriously consider hopping on the bus for their next ski day.	Allen Kenney	Website
1262	Of course, this would also mean you would have to address adequate parking, and have enough buses and frequency to ensure a quick trip. The parking issue is a big one, and I haven't seen anything yet that truly addresses that issue. The gondola idea on the surface seems almost whimsical -- I mean, at least it would be a fun way up to the mountain. But can you really provide enough uphill capacity to make a dent? And with the parking, shuttle, etc., can you get people from their car to the mountain quickly? Again, the biggest issue for a lot of skiers is getting from their home to the base of the ski area as quickly as possible.	Bob Kirschner	Website
1263	I have concerns regarding the proposed Gondola. First, I believe that the cost estimates developed for this alternative are artificially low (both capital and O&M). Second, I think that the fact that the rider throughput of this alternative is overly optimistic. This alternative requires patrons to make two transfers (car to bus, then bus to gondola). I believe that this will impact winter ridership as you are asking skiers to 'schlep' their gear in potentially bad weather (and perhaps to wait in that same bad weather). My fear is that when first time riders experience this multiple transfer transit to the resorts they will quickly abandon it for the convenience of their car.	Ronald Sawdey	Website
1264	Whatever is less impacting even if it's resurrecting the train. The gondola sounds intriguing but how? The cars have become untenable.	tom gallagher	Website
1265	The gondola is the best option to move people and avoid weather issues on snowy roads. Set up lift ticket stations at the hubs to include the gondola ride. Season tickets would also include the gondola. Locker rooms at the base stations with security.	Thomas Brock	Website
1266	In my opinion Widening the roads is the best and only option, together with bus enhancement. The cost to do this will be worth it. It benefits everyone now and in the long run. If the gondola is put in, it seems to benefit only the local residents in the canyon. Not to mention they will be unsightly to look at, for everyone. Gondolas seems to be an expensive alternative that benefits only a few. Heavy maintenance, could be a lot of down time, cost a lot of money now and a lot down the road, (parts replacement, obsolescence etc). Has anyone studied what kind of problems a gondola this long could have in the long run? Exposure continually to all outdoor elements? Not to mention it could be dangerous if heavy winds came up when people were already in it (over 1 hour ride each way) BTW - How would it be determined who gets to use the canyon roads? No one what's to wait in line to get on and off, (how long could that take?) ride for over an hour each way. What if someone gets sick or needs to use the restroom, especially if it breaks down? How will (our new norm) virus exposures - be addressed? (Limited numbers per gondola, wipe down completely each time? (Factor in that extra time, because you have less people per gondola and extra cost to sanitize each one every time). It will take forever to get up the canyon!	Debbie Bachman	Website
1267	The gondola is the way to go.	Wesley Greaves	Website
1268	I support gondola with added parking area at the gondola base. Also, please begin the 9400 pick up for the big Cottonwood solitude run.	Laura Jablonski	Website
1269	The gondola will be destructive to environment. Do not build this!	Kevin Bouldin	Website
1270	The alternatives selected for "further study" consist of an unworkable re-hash of alternatives that have been around for years. In the age of social distancing during a pandemic, few will want to risk being crowded together on buses or on a gondola. It would be useful to consider how the future of transportation is evolving. This future includes autonomous or semi-autonomous electric vehicles that can move small groups of people from central parking areas in the basin to their destinations in the canyons. An important aspect of this approach is that traffic movement could be coordinated to minimize congestion in the canyons without the need for major roadway infrastructure changes. Of course, it will be important to install avalanche sheds in appropriate areas to eliminate road blockage.	Christopher Biltoft	Website
1271	I haven't read everything through but I don't see bus capacity for the Draper Alpine and then out to Daybreak Corridor. I live off of Wasatch Boulevard and I believe you underestimate the numbers that come from that part of the valley. I have lived here since 1991 on this corridor and the traffic on a powder day used to be non existent and now it backs up from 9400 to about 10000 south and so it has also increased. This is a corridor that people use to go to work and school and people block it up on powder days and it has worsened. You need to add bus service from Draper and the hotels out there as well and that would also help and I don't see thus far that you have addressed the booming internet economy at point of the mountain and they are the skiers and boarders coming to this canyon.	Allene Lemons	Website
1272	As a patroller in LCC I don't see a lot of traffic on the road as I'm up earlier than most people and down well after people have left. Having said that, there is no more room to shove cars into at the dead end of the canyon. A bigger road will only lead to more gridlock and a longer, larger red snake. We need to increase parking in the valley and work on a transit system that can shuttle people efficiently to the resorts. Busses will not solve the problem, they don't work well in the snow. They are not reliable. I know this sounds crazy today, but what seems insurmountable in the present often seems inadequate in hindsight. Investing in some kind of rail system should be considered. The road isn't going anywhere. You could use the existing grade to run some kind of train up the canyon. It would be more reliable than any bus or car and could be run often. The gondola idea is nice but incredibly expensive. And wind plays a huge factor in its ability or inability to run. Start investing in the future. We will look back in 20 years and say, "why didn't we start earlier," no matter what the end result is. It's only going to get more expensive so suck up the cost now and pay it off over the next 30 years. It's not as flashy as a gondola but trains or reliable and efficient. Just think about the future! Tourists could fly into SLC and take transit all the way to the great new lodges at Alta (or the cement dungeons at the Bird) all without having to take a single car or bus. It's smart, it's energy efficient, and it's a great selling point to tourists (which is what the canyon economy is built on). It's time to leap into the future!	Sean Mullany	Website
1273	who is paying for all of this ? It seems to me that the resorts are the ones who profit the most from getting people up the canyon. Being a backcountry rider that does not go to the resorts, it would leave a bad taste in my mouth if my tax dollars were spent to get people to the resorts so they can profit. I think making more buses available is a great idea only if people have no other option or are charged a fee to drive up or park, which would make them ride a bus to a resort. All of these plans seem to favor the resorts and not the human powered community. How about some plans for more trailhead parking, and mountain bike trails ? Bottom line, the resorts should buck up the cash if they want to exploit their product to the world.	Joe Day	Website
1274	I have a couple thoughts that I will present. First I think of the 3 options the most clear one is to implement a gondola system. (I am unclear on the plan, but I assume with the gondola the road would still be open to traffic? If someone has time to email me to clarify this I would love to hear from them). I think the fact that the gondola system would have the least environmental impact on Little Cottonwood Canyon is really important to me and many other visitors to the watershed. However, financially it is the cheapest and it will also negate the issue of avalanches across the road allowing greater mobility for employees and visitors. I think many visitors to the ski resorts have shown they are willing to put in a lot of time to get turns in on the busiest days so the increase in commute time should not be a concern. My second thought is I would like to ask if anyone has considered this as a possibility that could fall under the enhanced bus system. Instead of widening the road, during the winter the road should be closed to public traffic. Additional bus stops and parking lots (perhaps even an underground structure) would be added near the mouth of the canyon and buses would run between the structures and the resorts every 10-15 minutes. This would drop the use of single use vehicles in the canyon to nearly zero. The only vehicles allowed would be udot public transit and permitted employee and resort vehicles. The benefits to this would be not having to widen the road and impact the environment and A reduction to traffic and pollution in the canyon. Thank you for reading my comment and I would love to hear from whomever reads this. Good luck with making the decision and I appreciate all of the work put into improving the access to our beloved Wasatch. -Ari	Ari Marks	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1275	I support a new gondola format - not more road & bus expenditures. People should be able to drive & then park or just take TRAX system ! DIRECTLY to new gondola. Driving private vehicles up to Alta to then park should be heavily discouraged. Sunshine Village, Banff Canada has a long enjoyable gondola. So almost no cars in the village ! People can drive & then park or take bus DIRECTLY to bottom of gondola!	Bill Landry	Website
1276	Regarding proposed transportation alternatives for Little Cottonwood Canyon, I believe the modified gondola alternative proposed by Alta Ski Area to be the best choice. That is, have two parking options for gondola users by adding a parking structure at the base gondola station in addition to the option to park at the proposed gravel pit lot and bus to the gondola station. Digital signage could update canyon travelers to "number of available spaces" remaining in each lot.	Nancy Allen	Website
1277	To start, I'm against road widening initiatives in LCC. Any road widening will undoubtedly have negative environmental impacts and unwelcome impacts to the climbing community who climb on roadside boulders scattered all through the canyon. In my opinion, the Gondola would be the preferred method for winter ascents of the canyon to access Alta and Snowbird. My only questions regarding the use of the Gondola is where the cable towers will be located, and how does UDOT enforce the use of this system. This is America after all, and unless there is a strict moratorium on vehicular traffic entering the canyon from a specific time in the morning till a specific time in the evening, people will continuously try to go up canyon in their own vehicles. This can be seen on high traffic days where people drive up canyon, get turned around due to full parking lots, and have to drive all the way back down to then hop on a bus to go back up. Having additional live parking info for the resort/vehicular traffic already in the canyon would be a beneficial way of assessing how to allow vehicles to go up canyon. I.E. Having a gate at the mouth of the canyon with a roundabout to quickly turn away traffic if the gate is closed or a red light is present indicating that lots are full...	Craig Tomon	Website
1278	I'm for adding more bus service (with additional parking as far west at 2000 E and having a bus lane built. It could serve as additional up/down traffic in the non ski season. I think a tram/gondola would be a massive expense and not be used at all in the off season. Would it go only to Snowbird?? Would it go only to Alta?? Would it go both places?? in my opinion NOT PRACTICAL	Keila Siciliano	Website
1279	Please attempt to charge for parking before you put more buses on the road, widen the road and put more buses on it, or build a gondola. Many ski resorts charge for parking and it absolutely drives the right behaviors - reduced traffic, car pooling, using alternate transportation. \$20 for one person vehicle, \$15 for two person vehicle, etc...	Jay Perrette	Website
1280	I am in favor of the gondola plan. Less view obstruction and once operating should be effective and efficient.	Michael Adams	Website
1281	I support enhanced bus service with bus lanes and sufficient parking down canyon for bus riders.	Beth Blattenberger	Website
1282	While busing seems a good idea, it is not ideal for many skiers. Consider families with several small children who have to carry skis boots poles, helmets lunches, extra clothing, some entertainment for the kids if they are tired of skiing etc etc. Same for senior citizens for whom a changing from a vehicle to a bus and carrying all the required gear may be difficult. Using a gondola is a terrible option. It would require parking in a multi level parking structure, carrying all required gear to a bus, wait to board the bus then disembark, carry gear to gondola line, wait for gondola, then ride for approximately one hour to the top then retrieve gear and walk to changing area at the mountain. A daunting process for families and seniors. Maybe not for young single skiers/boarders, however, even for them it seems that the time to get to the mountain from the mobility center of as much as 1.5 to 2 hours would discourage the use of the gondola by most skiers/ boarders. Consider having to drive to the mobility center, having to find a parking space, perhaps several levels up, carrying all the gear to the bus stop, waiting for the bus, just boarding a bus with 30-40 person capacity will take 5-10 minutes, then the 10 minute ride to the gondola, 5-10 minutes to disembark, then stand in line for the gondola for a 1 hour ride up the mountain and a subsequent walk to changing/dressing areas. Not a pleasant thought. Now add 3-5 screaming kids per family into the mix and the whole scenario does not work. The best solution would be to widen the road from Big Cottonwood Canyon all the way to Alta and add "snow sheds" in all possible avalanche locations. This combined with extended bus service would be the best solution for all concerned. The roadways all over the European Alps use concrete structures to cover the roadway in avalanche hazard locations. These are solid structures with openings on the canyon sides and with dirt and grass on top that blends into the mountain vegetation during spring summer and fall. These have been in service in Europe for many years and keep traffic flowing without the need for road closures.	Norbert Kornyei	Website
1283	I prefer the gondola option because it will actually address the full problem of future canyon suggestion. I have been to Zermatt, Switzerland where they have banned all cars and buses and required everyone to take a dedicated train to the resort town. It works very well and I think a train or large gondola would work well in Little Cottonwood. Thank you	Steven Christiansen	Website
1284	My husband, Bert Kornyei, replied and I agree with his opinions that the gondola is a terrible option, and just more buses is almost as bad. For those of us who are retired and have the luxury of going mid-week, the gondola is far too time consuming and cumbersome, especially as many of us old folks just want to ski for a couple of hours, maybe several days in a row if the conditions are good. So widening the road for more car and bus occupancy is the best of these options.	CATHERINE KORNYEI	Website
1285	Gondola would expedite people without avalanche risk	Gwen Hays	Website
1286	After further looking at this issue. I prefer the widening the road with a bus only lane. The gondola is slower up the canyon, does not have snow shed costs included, or adequate parking at its base.	Jonathan Olin	Website
1287	The gondola proposal makes the most sense, is the most efficient, and is the best option for the environment. Please elect to use implement this proposal.	Kelsey Lefley	Website
1288	Realtor.com now has a category of rating homes on sound levels. Areas of Cottonwood Heights currently hold a level medium. If you put in your freeway to no where on Wasatch Blvd without lowering the speed limit, where they currently go up to 60-80MPH, you are virtually stealing money from people as their property values drop. Cottonwood Height & UDOT officials owe it to the citizens not to destroy our area, just to save people a few minutes commute time on a few days a year. The higher the speed limit the more the noise. Drivers currently go up to 60-80 mph. It seems UDOT doesn't care what the city of Cottonwood Heights cares about. The Cottonwood Heights plan has always been to lower the speed limit, UDOT is ignoring this.	Audrey Pines	Website
1289	We support Alta's position that the gondola with a parking structure at the base of the gondola would be the best alternative. I reviewed the draft alternatives for LCC. https://littlecottonwoodeis.udot.utah.gov/wp-content/uploads/2020/06/LCC-EIS-Alternative-Screening-Report-2020-05-21_Full.pdf	Jennifer Squire	Website
1290	I could not find anywhere UDOT lists the number of vehicles that daily use this canyon. Can you please provide this information? Thanks, Jim	james catlin	Website
1291	It seems UDOT is being short sighted in their plans. The center of the city is not into the down town area anymore. Also the way people are going to be commenting is not being taken into account. We need safer areas for biking. The speed of 50 is too fast, you have numerous areas where you lower it to 40. The 6200 south/ Wasatch corridor, they go up to 80. You have got to slow this down. The area between 6200 south corridor & 4500 south should ALL be 35 to make it safe for bikers, walkers & sight seers. There is a freeway a block away they can go on to speed. Why is the speed limit 35 south bound Wasatch Blvd after 9400 south? This is used for commuting and ski traffic. The area between 9400 south and Union Park is a mix of residential and business and shared roads and should be no more than 35	Audrey Pines	Website
1292	I am highly in support of the gondola. As a grandmother to 12, I am always looking for activities to do year-round with my grandchildren. The gondola sounds like a perfect and safe option to enjoy the beautiful canyon.	Shelley Davies	Website
1293	I support the gondola option	Auston Call	Website
1294	I like the idea of increased public transportation. I believe it is important to include emphasis on transportation for Canyon recreators beyond just those who use the ski resort.	Katie Burbank	Website
1295	Gondolas sound like a great way to get people to the mountains, without filling parking lots! Those able to drive or bus still can, but the gondola is a great, and fun sounding, alternative! Also, I enjoy the small road, I believe it's a part of the charm that makes the areas special!	Nick Warren	Website
1296	Please put in a gondola up little cottonwood as it is far and away better than the bussing alternatives. Thanks!	trey Roeseler	Website
1297	Gondola	Kirk Wilcox	Website
1298	I care deeply about the environment and I love that the gondola has the lowest carbon footprint and effect on the surrounding wildlife. Please strongly consider this option.	Johnny Link	Website
1299	As a mother of a newborn baby, driving up the canyon makes me nervous about potential car accidents and sliding off the road in the winter. I am strongly in support of the gondola for ease of transportation and to really take in the beautiful scenery.	Danica Richards	Website
1300	Gondola!	Bryn Simmons	Website
1301	I think this would be an excellent option that the UDT needs to give further thought to. I am intrigued and in full support of a no-emission transport option that will still allow for Utah's natural beauty to flourish.	Taylor Stanger	Website
1302	Enhanced bus services	Andrew Conover	Website
1303	My first choice would be a train that connected little, big, and pk city/deer valley resorts. Would eliminate a lot of carbon producing travel and the most beneficial for the consumer. The Europeans do it best If that is not an option, gondola would be the best choice as nobody wants to ride an uncomfortable bus on a curvy road especially if they are possibly standing up.	Andrew Fedoravicius	Website
1304	Please no gondola!	Kathleen Klage	Website
1305	I believe a gondola is the best solution. A widened road would be a great addition to help manage traffic even more than the gondola.	Ezra Shilling Rabin	Website
1306	How about studying the feasibility of a cogwheel electricity powered train like serve some European resorts.	John Williams	Website
1307	I am in support of the gondola.	Brinnah Schmidt	Website
1308	I've used that canyon for decades. It's overrun and needs a new form of transportation. I vote for the gondola.	Ryan Maxwell	Website
1309	I think a gondola would be beneficial for safety, efficiency, and the environment!	Shalee Schmidt	Website
1310	Little Cottonwood Canyon has definitely gotten much busier over the years. As a Sandy native all my life, I first hand have seen it happen. However, I feel that widening the road or adding a gondola will adversely effect the canyon. For example, how will all of the canyon's world famous bouldering and rock climbing be affected? Will boulders near the road be removed or assess denied? What will happen to the roadside parking that is currently available near these sites and other recreation areas such as hiking trails throughout the canyon. I feel like adding a toll booth at the base and improving the bus system should be sufficient. Unless all of the measures have been exhausted, these extremes should not be put in place so hastily. A bigger road does not mean less traffic (look at I-15) and a gondola would be an eyesore on the canyon's natural beauty. Thank you for trying to help the problem, because it is one and something does need to be done, but not some of the things you are suggesting. Thank you for your time and consideration.	Amber Stratford	Website
1311	I would love to take a gondola up to Oktoberfest.	David Schmidt	Website
1312	How about the monorail option? A gondola is not the my preference. What if it stops mid stream more than once or for extended durations. Who gets powder first turns? Keep the damn small cars w/o snow tires of 4x4 OFF the road!!!! Getting on at snowbird to go down, you must leave space. Widening rd may be okay but can this be done for all sections???	Andrew Lovegrove	Website
1313	The drive up the canyon is too daunting with the traffic and difficulty to find parking. If there was a gondola I would absolutely frequent the area more.	Joseph Branca	Website
1314	Please don't expand the roads. I don't want to drive through concrete tunnels (snow sheds) and want to protect the environment. The gondola is the best option.	Krista Davies	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
	I am the son of a 25+ year Alta ski instructor, and have been motivated to spend an exceptional amount of time studying the issues at hand after commuting to and from SLC to Alta many times every winter. Having had to deal with the same traffic troubles as every other Wasatch recreator, I have developed a well backed scheme for what needs to be changed to allow the commutes to and from the Cottonwood canyons.		
	First and foremost, in my opinion the best option presented is the first and simplest to build up to, where the quantity of buses lapping the canyon is increased. The only modifications that should be made to the roadways is the provision of additional safe, easily accessed parking in the SLC valley. However, this should be done with the mind of incrementally increasing the amount of people in the canyon at a time, if at all. Eventually, the limited capacity of the Wasatch range and the Cottonwood Canyons needs to be acknowledged, especially due to their "box canyon" layout. It is naive to state that "there will always be more room", or that our mountain access is unlimited. The very resources and environment that the locals and tourists alike are seeking to enjoy will become overrun if caution is not taken to preserve the appeal of entering the canyon's wilderness.		
1315	Second, cars should still be allowed as an option to get up and down the canyons. The traffic issue here can be dealt with significantly when drivers are heavily incentivized to carpool. For example, priority and the closest parking spots at the resorts can be given to those with multiple people in their vehicle, at an increased rate relative to what he resorts have currently implemented. The parking can remain free for those driving with at least 3 people/vehicle, versus charging those driving with < 2 passengers.	CALEB NORMAN	Website
	And finally, a word regarding the Gondola option. It sounds aesthetically appealing, especially for the long term, but it loses out heavily on the activity flexibility that Little Cottonwood offers. Additionally, it should be viewed as a last resort option, due to its heavy cost. In the short term, it would be somewhat meeting the capacity goals sought by this project but would still have its drawbacks just like each of the other development options. However, at least a brief glance at the ski industry's economic outlook is necessary, considering the resorts will be the primary receivers of the benefits of installing a Gondola. Across the board, ski areas worldwide have been losing cash, due to the sport's high cost and family emphasis, which younger people are gradually turning away from. When examined with the financial complexities that the Covid-19 pandemic also brought to the table and the reduced profits that ski resorts have been making due to the influx of the resort multi-passes, it is not necessarily a guarantee that the resorts will be around indefinitely. Yes, Alta and Snowbird have been blessed with a great many number of skiers on the slopes through the years, but the quantity of people on the snow is not telling the full story. It would be a shame to have a great many resources invested in a Gondola system, only to have it regarded as overkill and drawing from the relatively untouched nature of the Little Cottonwood.		
1316	I am highly in favor of the gondola. I would be very interested in the exploration of a LaCaille station and seems like a great expansion for our community.	Megan Larsen	Website
1317	A gondola would be such a great way to keep people safely off snowy roads and would be such a big tourist attraction!	Haeleigh Royall	Website
1318	What an excellent option for safety and clean air!	Jessa Brock	Website
1319	There is no planet B; as we go forward all infrastructure must be environmentally conscious, and on this case the clear choice is the construction of a gondola. Also, they're just good old fashioned fun!	Rhiannon Smith	Website
1320	While the gondola is an appealing option, widening the road for bus lanes and enhanced bus service, which also will provide a bike/hike lane in the summer is probably the most practical, long term approach.	George Schabes	Website
1321	This is the most sustainable solution if any work is going to be done in LCC! Please consider!	Caleb Bost	Website
	I have a number of comments and concerns. But first, I'd like to comment on your inclusion of Enhanced Bus as an Alternative. This is ridiculous. How did it pass your screening? Your expectation of the buses actually having riders is preposterous. Who in their right mind would take a bus to have to wait in the same traffic as in their own car? People need incentives to get out of their cars, so ignoring established social behaviour to come up with pipe dream models that look good for comparison sake is offensive to all the residents who care deeply about this issue and are passionately trying to participate in finding a solution. This should have been dismissed out of hand as not meeting criteria, and if you wanted to include it to show how much better the other alternatives are, then it should be stated as such. Likewise, acting as though a gondola is a realistic competitor is just as ridiculous. People park at a gravel pit, then take a bus to the base of the gondola, then load the gondola, then get out and walk to the resort, all in a snow storm, on a powder day, when they could just drive their own car all the way up? No way! Furthermore, please elaborate on the transit center idea. What's included? Can you buy lift tickets there? Would there be lockers? Can I buy a breakfast burrito? Would the vision be to one day run TRAX there, especially by 2050, your supposed timeline? This document is woefully sparse on details that are extremely important to the actual realization of any of this. Now, on to the actual issues.		
	1. Would there be any "whistle stop" bus service for backcountry skiers? Right now, the plan only allows for backcountry skiers to bus to Snowbird (which is mostly useless), or to Alta (which would require a long walk or skin up the road to the North side of the road). White Pine is a very popular spot, and plenty of people go off on random adventures all the way up the canyon. Is there any plan to cater to this need? Or do backcountry skiers only have the option of driving? It seems like having every 3rd bus in the AM as a whistle stop would easily allow skiers to get off wherever they need while still allowing for the bulk of bus passengers to get to the resort, perhaps as little as 5 minutes slower. Buses coming downhill would all stop as space was available. And if that wasn't working, you could run a bus every 30 minutes that started out empty at the top and collected non resort skiers on the way down. Or some other timing that made sense...		
1322	2. Why was the option of BUS ONLY, with restricted cars for the mornings never seriously considered? This has many benefits, massively decreased cost in not requiring road expansion (easily offsetting the increased cost of many more buses), and would offer fast transit by having essentially empty roads. It would be busier in the afternoons, but not drastically so if those wanting to get after it all had to take buses. This omission is very disappointing, and I think, irresponsible. If you're looking at realistic, cost effective options, this should absolutely be considered. Think outside the box! It would work! It would be amazing! Please refer to my earlier comment about behaviour - if no one could drive, the buses would be just fine.	Stephen Rideout	Website
	3. What about a check for tire/chain/4WD restrictions? Is this assumed? Most assumed things were mentioned - this wasn't. This also seems like a considerable omission. Slide offs are a huge source of delays, so why not make funding for tire checks permanent on weather days and part of the funding for the project? This is an opportunity to actually fix things - please think this through. Or mention why it isn't included.		
	3. Why would the toll be in the "Upper Canyon"? This seems like a bad idea. How many skiers only go part way up? A few BC skiers, sure, but a minuscule amount when compared to the bulk of resort skiers. This seems like a way to cause a cluster half way up, and require traffic to back up on steep, slippery slopes instead of in the relative flats at the mouth of the canyon. It could also be combined with a tire/chain/4WD check and make the process smoother and safer for everyone. Some cars would get up there and be surprised by the toll. Some would want to not pay. Some would yell. Some would make a scene. Some would turn around. It would cause mayhem at times, almost certainly. Most of the mayhem could be avoided by locating the toll at the bottom of the canyon, where every other toll I've ever had to pay anywhere in the world is located. People EXPECT to pay tolls at the start of things, not halfway through.		
	4. What about plowing? This is a serious issue - right now the plowing is woefully undermanned. I've been at the intersection of Fort Union and Big Cottonwood at 7 am on a powder day with 12+'' of fresh snow across the entire intersection, cars spinning everywhere, and nary a plow to be seen. It's irresponsible and unacceptable, and this document doesn't have a single comment about this issue. This, by the way, is something that can be fixed RIGHT NOW, and doesn't need an EIS to determine. Ask the state for more funding. Reference ski tourism income and I suspect the legislature would be willing to provide more money... Again, mentioning these things in some capacity in this document would go a long ways towards getting public buy in.		
	Thanks for your hard work. I know this is challenging. Keep up the hard work. And be true to the process, not the politics.		
1323	I support gondolas as the best option for everyone	Caitlin Moushall	Website
1324	The gondola is the most environmentally friendly while also being efficient and comfortable. I think that would be your best option. I think a parking structure at the base of the gondola would be a good modification to the plan, though. It will encourage more people to take the gondola option rather than trying to drive.	Story Picard	Website
1325	I live in SLC and I'm an Alta skier and frequently hike/run at Alta in the summer. I strongly prefer the proposal for a gondola up Little Cottonwood Canyon. Not only would this solve our congestion issues in LCC, it would be an impressive ride that would attract a lot of attention in the ski community worldwide. I feel that individuals would be more likely to actually choose a scenic gondola ride vs a bus ride up the canyon. As an alternative to the gondola, I would certainly also support adding an additional lane for buses and increasing frequency of busing up the canyon.	Holly Gurgle	Website
1326	I think the gondola is the best option - but there needs to be a parking area at the base or there will not be incentive to use it. I think it fits within the skiing ambience. I think people are more likely to ride a gondola than they are a bus because gondolas have a better reputation as being a nicer way to travel.	Brandon Rock	Website
1327	I favor the option that would expand bus service along with existing roads. It would cost more, but I think people would be more willing to use this option over the others since it would only take about 30 minutes to get to the ski areas versus an hour. In my opinion, it does not make sense to build out a less expensive option if better people would use it.	Mark Thuesen	Website
1328	I support the Gondola option with an addition of better parking so access is direct to the gondola- thus increasing ridership. These canyons are Utah's precious resource of natural beauty and needed tourist revenue. I want to keep these canyons a wonderful experience for generations to come and a gondola seems like the the most lasting and lowest impact on environment. Additionally it is less likely to be affected by weather conditions which the canyons experience (and need for good skiing!).	Jamie Covington	Website
1329	I have been riding the UTA bus to Alta for 10 years. I see Car after Car after Car with one passenger going to the resorts. I am FOR enhanced bus service, not widening the road which just allows for more single passenger cars!!!. Widening the road and a gondola are environmental disasters, the canyons are pristine environments, I can only imagine what either of the two options will do to both big and little Cottonwood Rivers. How about more lockers for people who want to ride the bus but find ski boots and skis a difficult maneuver on the bus. Find ways to encourage bus ridership, rather than destroying our canyons with a gondola and widening the road. Once our Canyon TREASURES are gone they are gone forever. Every person from out of town I ride up with on the Alta lift tells me how lucky I am to live so close to these treasures, lets do everything we can to preserve them, Profit and development should not rule the day!!	Ann Hoagland	Website
1330	Yes	Jack Wiley	Website
1331	do it	Josh Cox	Website
1332	Being a life long Utah resident and recreational user of both canyons, I agree with Alta Ski resorts recommendation - We have requested UDOT to modify the proposed gondola alternative by adding a parking structure at the base gondola station rather than requiring all gondola users to park at the gravel pit lot and bus to the gondola station. We believe this change will facilitate and encourage use of the gondola and allow more of its capacity to be used.	Shay Wyatt	Website
	I think all the options have merit and that the lowest cost solution will be selected. The most important thing is that property need to be purchased to make any of the alternatives happen. The sooner these purchases happen the better. People need to be able to make decisions about what they are going to do based on what the plan is. People are not going to buy property in the area until they know how they are going to be impacted.		
1333	The parking facility at the hub of all of these system is going to be a big investment. Please don't underestimate the size needed. Security also need to be addressed. The study need to be more encompassing. Do not leave outstanding costs like power, water, fuel sources out of the study. We don't need another prison relocation study that underestimates the need and omits the significant elements for the completion of the system.	Craig Hawe	Website
	I think there is an omission in the study. All plans need better bus service to and from the new transportation system or parking facility. It also need to identify how much longer (or shorter?) the commute will be.		
1334	Of the three options, the gondola is easily the best. Widening the road will only serve to encourage more people to drive their own vehicles, and simply adding busses to the existing infrastructure will only add to congestion. The gondola is creative and would have the least impact on the surrounding area	Christopher Johnstone	Website
1335	Please do not widen the roads! Enhance bus services without damaging the environment and endangering the watershed!	Emily Phippen	Website
1336	I would love to see a report on what weather conditions would put the gondola on wind hold, or not run the gondola at all. What a gondola rescue would look like. Also would the gondola run during the not peak season, summer, etc.	Charles Jones	Website
1337	I find the gondola concept to be the most intriguing. Its benefits seem to be the most far-reaching and hold the most potential for reducing automobile traffic in the canyon as well as limiting environmental impacts. While it is not the least expensive option, it isn't the most expensive either, and it could be the most impactful in achieving the desired transportation and environmental goals.	Cyndi Sharkey	Website
1338	The gondola system appears to be the best alternative. Separate gondolas going to Alta, Snowbird, and white pine should be considered. Having parking at the gondola lots is necessary. It would also be good to have gondolas going up big cottonwood canyon to multiple spots. The gondola systems should be available at each canyon (ie. gondolas going to the resorts in little cottonwood be at the base of big cottonwood and little cottonwood and vice versa). Widening of the road would help but only if parking lots are widened. Avalanche control and snow sheds are a must. I realize all of this is expensive, but planning for the future now will be worth the extra costs and taxes. Out of state visitors should also be required to pay a VAT to supplement the projects.	Mike Jenson	Website
1339	State of the art high speed bullet trains from the west desert parking structure another b train from the university to the base of the Cottenwoods and another from the airport with no stops in between to the gondola at the mouth of little Cottenwood. Little Cottonwood road would make an amazing ski run into the city , how's that for out of the box thinking??you could also add a HSBT from the airport to Ogden That takes people up to Snowbasin from downtown Ogden!	Steve Klein	Email
1340	I feel a gondola would be an appropriate fix to the problem	Britain Bashore	Website
1341	Gondola! Less crashes in the canyon, less of a need for snow tires. Probably a more expensive option, but far safer!	Madeline Afualo	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1342	<p>Thank you for being so thoughtful in the different ways you have approached the topic of traffic up SR 210 and SR 209. I was born and raised in Utah and continue to live here because of access to big and little cottonwood canyons. It is apparent that the current state of traffic in the winters is unsustainable.</p> <p>A few thoughts:</p> <ol style="list-style-type: none"> If you put in a Gondola, it HAS to be easily accessible OR it has to be mandatory. Making us park miles away to take a bus to get on the gondola while we are watching our neighbors jump in their cars and "beat" us up the canyon in their private vehicle by 30 minutes isn't going to work. If you close the canyon to all vehicle traffic except for employee traffic and bus traffic, you force the rest of us to either take buses or gondolas and then you have a steady stream of traffic that can then access the canyon. Enhanced bus system. Again, this doesn't work in the current environment. I don't take the bus because the bus gets stuck behind all the cars going up. So what's the point?? If I knew by taking the bus I could get up quicker than I could in car, I would take the bus. You must control the private vehicle traffic going up the canyon in the winter. How have you proposed to do that? it's not apparent to me in the materials I've studied online. There has to be a limitation on private vehicular traffic in the winter. Maybe that's a lottery system. Maybe it's season pass holders. But if you put a gate in at the bottom and limit buses and those w/ access, then everyone else is forced to use gondola or buses. And if you do this, buses need to leave every 5 minutes during peak hours. We can make this work here. They do it in Europe. We just have to change our mindset, we all can't have our cars up there. <p>Finally, I am a huge cyclist. So please please conserve the biking lanes and biking access to our mountains and wasatch blvd as you make your final plans.</p> <p>I would be in favor of the proposal with enhanced bus access with roadway widening, mostly because as I mentioned I am a cyclist and hiker and would love to have that access available in the summer.</p> <p>I would not be opposed to a gondola, I just don't want us to waste millions of dollars on a gondola that nobody uses because they can still just drive up and you can't even access the gondola because the traffic is backed up to stand still for hours on wasatch so you can't even GET to the gondola.</p> <p>Thank you, anne perry md</p>	Anne Perry	Website
1343	The gondola may be the most environmentally friendly but who will pay for it and will the riders have to pay for each ride? The UTA already has buses and the fare is part of the season ticket. I think the road should have a designated bus lane and more parking before entering the canyon. Perhaps the road can be made into 3 lanes with one a bus lane. As the day progresses, the bus lane either is upbound or downbound.	Janet Rozelle	Website
1344	I support a gondola. The road should be closed to all public traffic except essential services, employees and residents of the canyon	John Kestle	Website
1345	I fully support this project. This will bring transportation options to the community that are environmentally safe.	Nick McNeil	Website
1346	I am a fan of the gondola option. Thank you.	Kristin Burrows	Website
1347	Summer bus service with stops at the major trailheads would be important. Also there needs to be a deterrent/incentive to not drive your car into the canyon.	Lance Baxter	Website
1348	I would prefer enhanced bus service option. I think the Gondola would be too devastating to the environment and the watershed.	Mimi Levitt	Website
1349	I support the enhanced bus service with road widening option. I have been an Alta season pass holder for the past several years. I have skied at Alta for nearly 50 years. It is my opinion that the automobile traffic in Little Cottonwood Canyon became a HUGE PROBLEM due to the IKON and Mountain Collective pass holders. Perhaps Alta should consider a parking area for Alta ONLY season pass holders. Time and time again I observed issues with automobiles which are not 4 wheel drive or equipped with chains which seem to be at the root of traffic congestion. Once last year it took nearly 2 hours from Alta to drive through the bypass road because of automobiles which were not 4 wheel drive and not equipped with chains - they could not get up the incline. It appears to me that these bad behaving folks are never ticketed and I believe ticketing would be a very good start (allocative planning - RIGHT NOW) while you work towards an innovative plan.	Steven Panter	Website
1350	A gondola sounds like a lot of fun!	Emmalee Larsen	Website
1351	Going to school in Utah I was always looking for great date night options. A gondola up the mountain sounds like a really fun, safe, and affordable option.	Seth Taylor	Website
1352	Utah's air quality is bad. We need a good solution to help as much as possible. It seems the gondola does just that.	Libby Lloyd	Website
1353	I love gondolas! It would be a great addition to our state.	Izzy Arrieta	Website
1354	As an avid skier, I would love a gondola option to get up the canyon with ease. It's always a hassle trying to find parking and lugging my ski's. A gondola would ease that a lot!	Jacob Tonks	Website
1355	Frequently when clients come to town they ask for fun outdoor activities that aren't too strenuous. I think they would be impressed by a gondola.	Rob Kuttner	Website
1356	Please don't widen the roads in Little Cottonwood Canyon. That wildlife is such a great part of our state. The gondola would do much less damage to the area.	Cassie Austin	Website
1357	With such a large family it takes multiple cars to get us anywhere. A gondola would be a really fun transportation option for a family activity.	Bill Davies	Website
1358	Please choose the gondola :)	Dallas Lloyd	Website
1359	Taking a bus up and down the canyon can be really stressful with it being so crowded. I would much prefer a gondola as an option.	Sarah Evans	Website
1360	I haven't skied in years because of the hassle to get to Snowbird and Alta with traffic. If there was a gondola I would definitely go.	Greg Larsen	Website
1361	I grew up right next to Little Cottonwood Canyon. It would always take forever to get up the canyon resulting in an unhappy mother and father. I wish we had had a better option to get up the mountain that would have enhanced our family outings. As I become a father in the future I would appreciate the steps forward to help my family make the most of our time. I believe a gondola would do that.	Tanner DeWaal	Website
1362	My favorite part of going up the canyon is nature. I would be so enthralled to see it from a new perspective in the sky like a gondola would offer.	Cici DeWaal	Website
1363	Our world is heavily affected by carbon emissions. If we can do anything to help reduce our impact on our environment, we should. Please pick the gondola!	Ben Liljenquist	Website
1364	As the wife of a former Utah senator, I have paid close attention to issues in Utah. I believe our economy would see a great impact from the gondola and the revenue it would create. Particularly if it was connected to LaCaille as a base station.	Brooke Liljenquist	Website
1365	Air quality is important to me. I support the gondola.	Michael Milkanin	Website
1366	A wider road doesn't solve the problem. If an accident or avalanche shuts down the canyon, it doesn't matter how many buses or bus lanes you have, everyone is stuck in traffic.	Eiiza Summerhays	Website
1367	Too many times people get stuck up the canyon when an avalanche shuts down the road. A gondola takes that problem away entirely.	Kaydee Bair	Website
1368	I love Utah. I call it my own since my parents moved here and I go to school at BYU. I want it to be the cleanest it can be and for me, that means great air quality. I am a performer and I really notice when our inversion gets so bad that it heavily affects my abilities. Let's not add to the problems we already have. Choose the gondola.	Luke Rands	Website
1369	I love my trips up the canyon. Recently I have sustained a shoulder injury that makes driving long distances painful. I would appreciate the gondola as it would let me tend to my shoulder pain with easier adjustments and standing than a car does.	Nancy Reeves	Website
1370	Gondola all the way. It would be so cool!	Brayden Newby	Website
1371	I love the outdoors and the beauty Utah offers but sometimes I don't have time for all the activities because of traffic so I don't even attempt to do those activities anymore. I think the gondola would eliminate a lot of time constraints with its consistent schedule which would allow me better planning for activities.	Iida Mason	Website
1372	I support the gondola as a form of transportation in the canyon.	Ann Williams	Website
1373	I am in favor of the Gondola for Little Cottonwood Canyon, but like Alta, I want to modify the plan to include a parking structure at the base of the gondola station. I would have to drive way out of my way to park in the gravel pit lot and therefore would not take the gondola. But if the parking was at the base of the gondola I would definitely take the gondola. No matter which of the 3 plans is adapted I feel these changes need to be. If it is snowing OR GOING TO SNOW THAT DAY, the 4 X 4 sign should be on EARLY. 2. If it is snowing or GOING TO SNOW THAT DAY, the police should be at the mouth of the canyon checking for SNOW TIRES. 3. If it is snowing or GOING TO SNOW THAT DAY UDOT should assign 2 snowplows to CONSTANTLY go up and down the canyon road ONLY. Not plow and then come back later. Sometimes when it just starts snowing the road is VERY slick and if they were right there ready it would prevent many bad drives!!!! 4. Everyone should be allowed to have their car inspected and get a sticker showing they have the proper tires. 5. Local Rental Car Companies should be required to have snowtires on the cars they rent to skiers.	Joyce Sanford	Website
1374	As a Cottonwood Heights resident, we support Alta's position. The gondola option seems best. However making people bus from the gravel pit seriously degrades the attractiveness of that option. If parking cannot be accomplished at the base of the gondola, I fear the money spent per passenger would end up making this the most uneconomical option by far.	R J Clark	Website
1375	Our second choice would be the enhanced bus service with a widened road.		
1376	The gondola is the most environmentally conscious option. I also believe that the gondola will have the greatest reduction in traffic up the canyon by vehicle. This is important because it only takes one car accident to cause delays and ruin everyone's ski day. Thank you.	Dennis Morgan	Website
1377	Do not support the gondola! What an eyesore, it will ruin the magic of the mountains	Anastasia Fullerton	Website
1378	I am in favor of using a sustainable Gondola system in little cottonwood canyon. As someone who lives nearby, I recognize that us Utahns are blessed with our surrounding landscapes. Public transportation is obviously better than individual, but allowing the wide roads to encroach into the natural areas, even for buses, only moves us humans toward an ugly industrial world. It's time to be environmentally conscious.	Ben Smith	Website
1379	I'm a frequent user of the canyon in all seasons, including holding Alta season passes. I prefer option 3, the gondola system, for increased speed at relatively reduced cost. Option 1 strikes me as pointless, as having more buses is useless if the buses just get stuck in traffic. Option 2 is better than Option 1, but costs more than Option 3 and would be more disruptive to the canyon to build.	Benjamin DeMoux	Website
1380	As a frequent visitor from out of town (been coming for decades). I like the gondola for day use but would be concerned about it when bringing bags for a week stay. Maybe allow hotel transport and buses on existing road with the gondola for day passengers? Or would gondola have luggage space?	Bruce Savett	Website
1381	I highly prefer and recommend the enhanced bus service with road widening. Enhanced bus service alone will not help because once the roads become clogged, then the buses can't move either. The gondola is a ridiculous idea that would ruin the skyline, not too mention be extremely expensive. Plus, how would you get enough people up the canyon to make a real difference. However, enhanced bus service with a dedicated lane could make a helpful difference so although even this idea is not perfect, I believe it to be the best option presented at this time. Thank you	Brian Perkes	Website
1382	I would love to see a gondola placed in the canyon it would be so awesome	Tanner Hart	Website
1383	I support a modified Gondola option similar to Alta Ski Resort's recommendation. Build a parking structure at the base gondola station. I am a resident of a cabin in the Albion Basin and want to protect this great resource of LLC.	Scott Muir	Website
1384	I support the gondola option.	Kara Peters	Website
1385	We greatly prefer the gondola option with parking at the base gondola station. It will be more convenient, operate in a wider variety of weather conditions, and is better for the environment.	Heath Watkin	Website
1386	I think the committee should consider the gondola option with addition of a parking station at the base. Ultimately, we have to be thinking about user experience. Are people going to stop driving if they have to wait for a bus AND THEN a gondola?	Garrett Brucia	Website
1387	I know that there really isn't a good solution to the issue at Little Cottonwood, however I do prefer the gondola system over the others because it limits traffic in the area, which makes it safer for people to walk.	Adnan Uzeirbegovic	Website
1388	a gondola option would allow a constant flow of resort users up and down the canyon without creating bigger bottleneck in the parking situation. additional parking could be built at the base of the canyon without serious construction where space is limited	Rannon Byington	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1388	I like the Gondola option however you will need to figure out a parking structure at the gondola base to get people to ride it. Particularly locals on a powder day. On a powder day having to get on a bus and then the gondola I believe will be a disincentive to the local powder hounds. I would really use the gondola as most of my winter travel up LCC is to get to the White Pine trail head which needs to be enlarged and have a safer way to exit.	Scott Paine	Website
1389	I love the gondola proposal, but only if there's parking at the gondola station. If the gondola also requires a 10-minute bus ride, it's too much additional time and many people would end up just driving all the way up the canyon anyway.	Joe Swindler	Website
1390	A gondola would be a beautiful idea and it sounds effective for controlling traffic and reducing pollution in the canyons. Parking would need to be added of course!	Brittany Bates	Website
1391	The gondola option is, by far, the best option as it is both economically and ecologically sound. It also presents a uniquely reliable transportation solution given the oftentimes dangerous road conditions. However, there must be on-site parking at the base station. This will be a bold solution to a difficult problem that will enhance LCC for decades to come. Nice work.	John Furton	Website
1392	<p>There are many issues with the proposed solutions, growth for future capacity, cost of maintenance, reducing traffic, and efficiency. The current options may work for the current load of passengers going up the canyon or number of passengers in the next few years. However, they have no ability to expand capacity to handle an increase in the number of people wanting to go up this canyon. Gondolas are limited on their capacity, buses are limited to the number of buses you can drive on a road at a time. A train however, with double tracks has significant amount of ability for growing for future capacity. Problems just like this have been solved in Switzerland using trains, not buses and gondolas because these solutions cannot grow for future capacity.</p> <p>The cost of maintenance for the buses is high in comparison for the gondola and according to Increasing the Capacities of Cable Cars for Use in Public Transport article in Journal of Public Transportation, Vol. 19, No. 1, 2016, there is extensive maintenance and controls that needs to be planned for the gondolas. I don't think this maintenance cost has been apparently planned for in the proposal based off this journal and according to this article, https://www.telluridenews.com/news/article_b8ec1825-c8bd-57ea-9a95-10330e9a5803.html#:~:text=The%203%2Dmille%20long%20gondola,million%20for%20maintenance%20and%20employees. UTA plans to install about a 8 mile long gondola which is over twice the length of this gondola in this article. The number of employees is would need to be more to operate the increased amount of travel and the length is longer. Thus the maintenance cost in the factsheet is a low estimate, maybe closer to \$6-9 million/year. There are other limitations with the gondola: Speed limited to 43.2 km/h, capacity of people is limited, suitable only for distances up to 7 km, wind resistance normally up to 18 m/s (65 km/h), difficult to rescue people from aerial cable cars, expensive infrastructure, no heating or air conditioning in cabins, and potential negative visual impacts of cable cars (Increasing the Capacities of Cable Cars for Use in Public Transport article in Journal of Public Transportation, Vol. 19, No. 1, 2016). The proposed gondola line is longer the the suitable distance for gondolas, how will UTA address this? Has special technology been developed to address this issue? The line proposed is almost 13 km. Buses are affected by weather and also have a high maintenance cost. Trains are not affected by speed limitations if the track is built correctly, the capacity of people is solved by adding more cars or coupling another train, trains do not have a limitation on suitable distance, are not affected much by winds, are not difficult to rescue people from trains, the cabin is air conditioned and heated, and the trains can offer a great view of the mountains and great looking trains are not negative visual impacts.</p> <p>All of the options presented require a busing system. This thus pushes the traffic else where, or down the canyon into the city, rather than putting the traffic on UTA public transit system. Connecting a train from TRAX or Frontrunner up to Alta and Snowbird would remove this traffic on roads close to the canyon, thus freeing up the congestion close to the canyon. This train could even eventually be connected up to Park City and thus a lot of congestion up to the ski resorts could be pulled off all roads close the mountains and people could drive to the near by Frontrunner station, TRAX, or take a bus to the new train line that would go up the canyon.</p> <p>It has been already shown that train travel is more efficient than car, bus or airplane. Here is a resource for starters. http://www.bayrailalliance.org/why_trains/ At first glance, my preference would be for the gondola. Simply, it removes cars from Little Cottonwood Canyon. Alta's recommendation for a parking garage at the base of the gondola sounds good, but I need to do more research on the subject. I have visited Telluride, Colorado, to my knowledge the only other gondola serving a ski area similar to what is being proposed. It is an excellent solution to the problem of removing cars from a mountain highway. Dave</p>	BENJIMAN POTTER	Website
1393	Having skied at Alta with family for nearly 60 years I support the modified gondola proposal. Bus service is not enough, and widening the road for traffic would destroy the magnificent canyon.	David Spencer	Website
1394	Please, please don't widen the road. It's already busy enough up there and it would disrupt a lot of beautiful and classic climbing, hiking and biking areas.	Pam Tanner	Website
1395	Gondola is the best option for little cottonwood canyon.	Natalie Millgate	Website
1396	Hi Josh and others it may concern,	Lukr Kingskey	Website
1397	Please see the attached letter voicing our company support the LCC gondola. We look forward to collaborating and supporting your efforts in the matter. Please feel free to contact me anytime with questions or concerns.	Shawn Marquardt	Email
1398	I strongly agree with and support the Town of Alta's proposed modification to the Gondola proposal. That is, add a parking lot at the Gondola base station. Taking the mandatory bus ride out of the equation removes a, doubtless, long line in addition the long line that will ensue for the Gondola. Furthermore, packing skis and equipment once, from car to Gondola, rather than twice, from car to bus to Gondola will considerable ease the burden on the public, especially seniors and families with young children. Thank you for your consideration and for finally getting to the difficult step of implementing a solution to LCC's congestion dilemma.	ANDREW WALKER	Website
1399	UDOT's Imbalanced-lane and Five-lane Alternatives are unacceptable because they are based on encouraging high-speed through a residential area which includes eleven residential intersecting streets. 12-foot wide lanes and straightening of roadway are the wrong measures to take as they will create higher speeds, more air/light/noise pollution along with higher danger and fractionalizing of the Cottonwood Heights community. A desirable roadway through residential strip includes no more than one lane in each direction with either one REVERSE LANE or two additional lanes for BUS TRANSIT/HOV ONLY. Current and foreseeable future vehicular use does not warrant an expansion based on new commuter trends driven by Covid-19 pandemic, virtual office, incentives for workers to live near where they work, projected housing growth focused on the west and central valley, and a projected new business epi-center located at the south/central valley area replacing previous prison space. More analysis is needed regarding traffic calming design and whether that will fit into existing space without removing houses within the road section that includes eleven-residential streets within the Cottonwood Heights city boundaries	Davis Phillips	Website
1400	UDOT's Imbalanced-lane and Five-lane Alternatives are unacceptable because they are based on encouraging high-speed through a residential area which includes eleven residential intersecting streets. 12-foot wide lanes and straightening of roadway are the wrong measures to take as they will create higher speeds, more air/light/noise pollution along with higher danger and fractionalizing of the Cottonwood Heights community. A desirable roadway through residential strip includes no more than one lane in each direction with either one REVERSE LANE or two additional lanes for BUS TRANSIT/HOV ONLY. Current and foreseeable future vehicular use does not warrant an expansion based on new commuter trends driven by Covid-19 pandemic, virtual office, incentives for workers to live near where they work, projected housing growth focused on the west and central valley, and a projected new business epi-center located at the south/central valley area replacing previous prison space. More analysis is needed regarding heightened vehicular-sourced oil, other toxic lubricants, tire rubber and other airborne particulate matter to the water sources of Big Willow and Little Cottonwood Canyon streams. See Salt Lake Water District regulations.	Chantal Papillon	Website
1401	as a skier, the gondola is an appealing option as it will hopefully allow for skiing on deep, avalanche days! but what are towers going to do to surrounding wilderness and how will they be engineered to withstand the avalanches of LCC?	Alexis Kerr	Website
1402	thank you UDOT for all the work you guys do!	Jim Stout	Website
1403	I think the gondola is the best idea. Anything to keep the traffic to a minimum and still provide access to all.	Brittney Elison	Website
1404	I as a resident of cottonwood heights do not approve and am not in favor of widening Wasatch Blvd.	Grant Nickle	Website
1405	The gondola and bus system seems great to me but it would be a mistake to erase all public parking areas in the canyon. Perhaps a limited vehicle capacity during the offseason would work best, that way climbers, bikers, hikers, and trail runners could still be a part of their community and enjoy LCC but in limited numbers. I see this as allowing passionate individuals to continue doing what they love but traffic from car-meets and people just looking to "go for a drive" for the sights would decrease. The sightseers could pay to use the gondola and people who don't actually want to participate in the outdoor community can find another place to take instagram photos.	LINDSAY DRACH	Website
1406	As a resident of Cottonwood Heights, a passholder for many year at Alta, and frequent user of the canyon year round I think its key the encourage consolidation of people BEFORE we get to the canyon. I prefer the Gondola option.	Leo Epstein	Website
1407	I'm 23 years old, and a large concern of mine is this: Assuming the Gondola is chosen as the option to move forward with, what types of permits will it use to be put into place, and would these permits allow for expedited investment from Vail or Alterra to connect the Wasatch to Park city. I personally do not want to see more giant Gondolas moving people into the Wasatch from the Park City area.	Brad Dickter	Website
1408	Utah and UDOT must be committed to minimizing private passenger vehicle traffic. Therefore the only proposal that drives behavior change is enhancing bus service WITHOUT roadway widening. If you build enhanced lanes for buses, that doesn't dissuade private passenger vehicles, cars just get their own lanes without being stuck behind buses. If you build a gondola, people will want to bypass the "slower" process and drive themselves up canyon (even if driving isn't actually faster). Buses (without private passenger cars) are scalable and can be updated much more easily than additional roadways or a gondola system. Please proceed with enhanced buses with no roadway enhancements.	Fraser Nelson	Website
1409	Please add a gondola to Alta and Snowbird but add a parking lot at the base where the gondola starts. A bus to the gondola makes no sense and I dont think people will use it.	Spencer Dirats	Website
1410	Dear UDOT folks, To be completely upfront, I'm not more attached to any one of these three proposals than another. More than anything, I'm just excited that we (as a city) are having a serious conversation about addressing the traffic congestion in the Cottonwood Canyons. No matter what, I think that the additional Mobility Hubs will be tremendously helpful and will address a significant part of the problem. That strikes me as an important place to start. I'm a little bit nervous about the environmental impact of the proposed road-widening, but I also trust that you're taking advice from people who know more than me regarding that. If you widen the road with a bus lane for peak winter season, would it be possible to designate that lane for cyclists in the summer? As someone who works up BCC, I have had incredibly positive experiences with the UDOT Cottonwoods team. I literally couldn't do my job if you all didn't do yours as well as you do. I also participated in your pilot sticker program this winter for storm days and thought it was excellent. I seriously cannot emphasize enough how appreciative I am for all of the good work and hard work you guys do. I totally trust that you'll come up with a plan that will make a hugely positive difference in our experience of these canyons. THANK YOU!!! Sincerely, Spencer	William Parrett	Website
1411	Overall I'm excited by the proposals to help winter access up the canyon, but reading deeper into the Alternative Components Tab, I think it would be a mistake to remove all roadside pull offs thus limiting parking to paved lots. As an avid skier and climber these pulloffs provide the some of the best access to climbing and skiing lower in the canyon particularly Gate lease roped climbing, plus 5 Mile, Riverside, Gate, The Hill, The Swamp, and Far Side bouldering.	Brian Stillman	Website
1412	I am worried that this proposal does not provide adequate parking/access for summer users and urge the committee to re-consider these options.	Wayne Johnson	Website
1413	I would like to think that buses alone will solve the growing problem but it seems more likely that a Gondola is going to be needed. That's going to require some extensive parking so as much as can be done now to widen the roads to what will be the new destination/parking lot's I see is underway in planning and will be necessary. The reality of widening the shoulder knowing much about what it would take to retain a roadway on the creek side is not a realistic concept to pursue.	Jason Shumaker	Website
1414	No more band aids time for a gondola buses are often overloaded or empty very difficult to transport skis a d dangerous impossible with small children Enhancing a resource we already have (buses) is a good start. A real issue is parking. More responsibility should be placed on the resorts since they are benefiting from people travelling in the canyons. The resorts need to produce more parking on the hill and at the base of the canyons. Without proper parking space these solutions will only solve part of the problem.	Josh Rieders	Website
1415	This is an easy and inexpensive solution that works out best for everyone. Simply run both lanes in the same direction during the peak hour or two in the morning. So what if a couple cant come down. If its a medical emergency have a protocol on place. There is no need to spend money and ruin the natural beauty to widen the road. Add some buses and build a large parking lot in Sandy where people can park and use it as a hub for the buses.	Craig Hatton	Website
1416	A gondola will look bad and wont help more than the buses. If people are concerned about Covid type situation I can help direct you to companies that have air and surface solutions that will make buses and trams safe. The key here is change as little as possible and improve the situation. I have been in that traffic and I know its a mess but just run both lanes up at the same time. More parking with a bus terminal is the cheapest and best solution while preserving the beauty of the area.	Elise Heath	Website
1417	Gondola!		
1418	Whatever solution is adopted, I believe the public transportation needs options to stop at the trailheads on the way. A tram straight to the resort would not solve the problem of trailhead congestion (especially in the summer)		

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1417	Please increase bus capacity and either high-speed toll for private cars or even outright ban private cars at peak hours. It is impossible to get up the canyon many days. The gondola is a boondoggle. It would take forever between the parking for the bus and the transfers, and won't run in the summer anyhow. Make the bus free, make cars expensive, and make it so people can get off the road.	John Harrison	Website
1418	I agree that overall there should be an update to Little Cottonwood Canyon due to congestion. My only addition is that I agree that the modified gondola alternative with addition of a parking structure at the base is important (agree that would allow for more of its capacity to be used), I would just emphasize that the enhanced bus service would also benefit from a parking structure at the base of the canyon. While this will inhibit some of the amazing views this city has to offer I think the benefits outweigh the downsides. Thanks for looking into all of this to update activities our wonderful state has to offer!	Jonathan Harrison	Website
1419	I think there needs to be more study's on the impact of climbers and bikers for the current proposals	Marisa Cones	Website
1420	I work and ski in little cottonwood canyon and as someone who rides the bus most days of the week, I would LOVE to see increased bus service. I think widening the road would do very little to solve the traffic woes of the canyon. We need more buses and less cars. A gondola in the future would be great but I think increased bus service until gondola plans can be worked out is the way to go. Thanks for all you do!	Madeline Casey	Website
1421	RE Wasatch Blvd Expansion: UDOT's Imbalance-lane and Five-lane Alternatives are unacceptable because they are based on encouraging high-speed through a residential area which includes eleven residential intersecting streets. 12-foot wide lanes and straightening of roadway are the wrong measures to take as they will create higher speeds, more air/light/noise pollution along with higher danger and fractionalizing of the Cottonwood Heights community. A desirable roadway through residential strip includes no more than one lane in each direction with either one REVERSE LANE or two additional lanes for BUS TRANSIT/HOV ONLY. Current and foreseeable future vehicular use does not warrant an expansion based on new commuter trends driven by Covid-19 pandemic, virtual officing, incentives for workers to live near where they work, projected housing growth focused on the west and central valley, and a projected new business epi-center located at the south/central valley area replacing previous prison space. More analysis is needed regarding effect of fracturing of approximately 8,000 resident Cottonwood Heights community with a high-speed highway.	Maia Ermakova	Website
1422	I am in favor of the Bus Only option. I feel that the road widening and the tram/gondola options will only serve to impact the beauty of the canyon. The ski areas are already at capacity several times during the season and therefore, more people in the canyon is not what is needed. The towers of a gondola system would ruin the views of the canyon 24/7/365. Not an option. Widening the road only creates more private vehicle usage. Buses only keeps the canyon pristine, as possible, yet allows for a cleaner environmental impact.	Roger Davis	Website
1423	Gondola for the future. Extra lane for buses for now. The gondola should have a stop White Pine lot and then Snowbird and Alta. Extra lane for buses should be put in place when possible. I hate to say this, but a gondola over Twin Lakes pass and through Guard Road to Park City for the future. I would gladly give it all up if respect for one another would return' and 'care for the Wasatch old trees', otherwise I hope the economy will turn upward and we find a vaccination for sars-covid.	Deborah Read	Website
1424	I am in favor of plan one or plan two. If we go with plan 2 then in the summer the cyclists would have a place to ride rather than in the traffic lane. Not in favor of the gondola.	Leslie Woods	Website
1425	I vote for the gondola option. That shows the best expansion option to serve both canyons in the future and anchor them to parking garages on the bench.	Brian Bradley	Website
1426	Gondola for the people!	Katie Larsen	Website
1427	I support a third lane that acts as a flex lane. It adds a second lane up in the morning and changes to a down canyon lane in the afternoon. The lane is monitored and only open to buses and carpools of 4+	Ben Anderson	Website
1428	A gondola is a waste of money and will only move the congestion to a different location. I fully support increased lanes, avalanche tunnels, increased busses and valley parking.	Perry Hall	Website
1429	I believe option 2 the roadway widening will be have to most impact and be utilized for the future. The Gondola would be 2nd but the cost and congestion to get to he Gondola will cause issues	Taylor Miller	Website
1430	I'd like to support the Gondola option, more specifically the alternative site using the La Caille Base Station to help solve transportation issues for Little Cottonwood Canyon. The canyon needs a safe a reliable solution for transportation into and out of the canyon especially during winter.	Robert Rousselle	Website
1431	Thank you for the opportunity to continue to be involved in the process of the Little Cottonwood Canyon Environmental Impact Statement. I think that UDOT and its partners have outdone themselves in ensuring that the public has every opportunity to provide their input. I have recently been briefed on the proposal to run the gondola up LCC, not from the base of the canyon, where it would tend to exacerbate already distressing traffic congestion, but from a location on SR-210 (N. Little Cottonwood Rd), just east of the Granite Oaks subdivision. As a former chair of the Granite Community Council, I have heard and read endless complaints from residents in and around the triangle who can't get in/out of their homes during canyon closures, which seem to become more frequent and longer-lasting. In your statement of purpose for improvements to LCC and the communities which lead to it, you write about an "integrated transportation system that improves the reliability, mobility, and safety for residents, visitors, and commuters...while preserving the value of the Wasatch Mountains." While in the past, I have supported the concept of snow sheds in the canyon, the fact that there are actually 64 avalanche paths, and many others than the three main ones that would get sheds have been responsible for significant avalanche problems (particularly in the last year), has made me rethink that logic. I don't think the costs outweigh the benefits on this proposal and that many organizations and people who want to preserve the canyon are vehemently opposed to this concept. This doesn't seem to 'preserve value.' I think that, given recent winter episodes with buses in the canyons creating more severe traffic and safety problems, and the reality that expanding the number of lanes will likely be even more expensive than predicted and again fought by environmentalists and other canyon lovers, I'd like to see more, and more effective, bus service outside the canyon leading to the gondola. This relates to preserving mobility and safety. I do like the idea of having more, smallish, paved parking lots in the canyons for hikers and climbers, to keep their cars out of the way of vehicle and bicycle traffic. A parking structure does not belong at the mouth of the canyon. One that is basically hidden from most views and located close enough to the canyon to make the gondola design still work, can keep most buses out of the canyon. The one proposed by CW Management Corp. would seem to fit these needs. In listening to/discussing this proposal with Chris McCandless, he spoke to both a mobility hub at the gravel pit (apparently sale still pending) and at the Highland Dr./9400 S. lot (owned by UTA), which will be quite effective in keeping many cars from the mouth of the canyon. My husband, Tod, also suggested the consideration of an additional hub site (unknown location) in Draper, that could bring traffic up Wasatch Blvd (or possibly up the future Highland Dr. extension). Other benefits of the gondola are that it can be black/grey? in color, which can make it nearly invisible from afar (more palatable to those who love the natural canyon); it can provide emergency egress (which is becoming a greater issue with the global and local threats of increased numbers of wildfire, not to mention earthquakes); and that it moves a great number of people in a short time. Both ski resorts favor the CW Mgt proposal and will pay to use it for employees and season ticket holders. Also, the canyon will be so beautifully seen from a gondola that both locals and tourists will tend to use it frequently. Combined with a reasonable toll on vehicles based on vehicle occupancy, this should help us make canyon transportation serve our future increased population. The cost of tolls might also take into consideration how much pollution a vehicle creates: electric w/HOV gets lowest, hybrid medium, etc. Use of electric buses to the gondola station is strongly supported to help reduce air pollution. Chris also spoke about the possibility of having a single free bus, at least during non-ski season, that keeps making a loop from the gondola station up the canyon, stopping at all the hiking and climbing locations only. This seems another great idea. Both the initial cost and O&M annual costs of the gondola seem preferable to widening the canyon, as is long-term replacement costs (gondolas apparently last 40 years). Other issues: I know that many residents in Cottonwood Heights, along Wasatch Blvd, are already upset about traffic (especially speeders). If we do some sort of lane widening, I'd prefer to see minimal widening, preferably either for bus service/HOV or a reversible lane. [we had these in Puerto Rico 40+ years ago, called "Gentleman's Agreement Lanes," with no signage, lights, nothing...maybe a few accidents, however]. I strongly recommend that to reduce speeding, UDOT make the signals along Wasatch Blvd more synchronized and place frequent signage saying "Signals Set for 40 (or 50?) MPH." This has worked elsewhere in the country. And UDOT might suggest that CH get their police out to write tickets for a while. Thanks for the opportunity to have input. Mary Young	Mary Young	Website
1432	For me there are only a few things that matter in this decision: 1) Cost 2) Speed 3) Environmental impact 4) User experience / tourism draw When factoring in all four criteria, the Gondola is the clear choice. Below, I describe how the gondola compares to the two bus options. Gondola against bus option one 1) Price: The gondola is significantly more expensive in initial costs; however, in maintenance costs, it is twice as cheap. I calculate that the gondola reaches cost parity (without applying a discount rate) with bus option one in twenty-five years. So while bus option one is cheaper, its advantage is not as great as it is initially appears. Over the span of the entire project, it may actually be more expensive. 2) Speed: The gondola is slower than bus option one by ten minutes. While significant, I don't consider this a major disadvantage. 3) Environmental Impact: Both the gondola and bus option one offer minimal intrusion into the LCC environment beyond what is currently present. I view them on roughly equal grounds. 4) User Experience: Lastly, there is the user experience and tourism draw. I personally find the idea of riding a gondola much more scenic, novel, and appealing for those who are prone to motion sickness (no road curves in the back of a bus, just a straight line). The gondola's advantage in user experience is so large that it may entice tourists to choose the LCC over other ski areas to which they have to drive including those in other states. To conclude, I view bus option one as slightly better or equal to the gondola in criteria one through three, but the gondola as far superior in criteria four. On the whole, the gondola is superior to bus option one. Gondola against bus option two 1) Price: The gondola beats bus option two in both upfront costs and maintenance costs by a large margin. 2) Speed: Bus option two is significantly faster than the gondola option. 3) Environmental Impact: Bus option two seems to be far more intrusive than the gondola as it requires substantial habitat alteration by widening the road. 4) User Experience: Speed does improve the user experience; however, for the same reasons I prefer the gondola over bus option one. I view the gondola as superior to bus option two. In summary, the gondola beats bus option two in user experience, environmental impact, and price. I do not think the reduced transit time offered by bus option two offsets its weaknesses in the other areas.	Sam Clark	Website
1433	Your focus needs to be on "LESS CARS", not wider roads. This is our states water shed, and there is an easy solution to the traffic conundrum. #1. Fix the avalanche prone areas. #2. Require all ski resort employees to TAKE THE BUS! I am one of the first patrons at Snowbird most Saturday mornings and a good portion of the parking lot is already full with non-carpooling employees. #3. Charge a larger than usual toll during peak hours to encourage bus riding and car pooling. Thank you for being an advocate for our Canyon. PLEASE PLEASE PLEASE do not destroy one of our most beautiful natural wonders. Please don't poison our watershed with increased traffic. Please don't add more noise pollution for people trying to escape into the tranquility of the mountains. I am not a tree-hugging-hippie in any way, I am just a common resident who loves and cares for this canyon and want to preserve it's quaint beauty for future generations while saving the state millions of dollars. This is a logical solution that will work! Thank you.	Trina Sheranian	Website
1434	Gondola. Least destructive to the environment. I believe. What about Big Cottonwood Canyon?	Gary Fields	Website
1435	I think the Gondola option is the most meaningful, cost effective, and caters to visitors and "green" conscious commuters. The devil is in the details, though. proximity of parking to the Gondola, and predictable time windows to Gondola base from parking are key. E.g., if the bus is stuck in traffic getting to Gondola base, people will not use it.	Scott Langenecker	Website
1436	Installation of Gondola.	Art Hendrickson	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1437	1. How do you subsidize the falling home values, due to the excessive noise increase, when you widen the road multiple lanes. As a resident near Wasatch 4+ lanes near Bengal Blvd, the sound noise is SIGNIFICANT since that construction. Home values all the way from Big Cottonwood to Little Cottonwood will be affected by the noise. We are 300 yards away and the noise is SIGNIFICANT! 2. How do you widen the road, including excavating hillsides, without destabilizing same land/hillsides since that land lies directly on top of, or below the Wasatch fault line? Likewise how do you subsidize for home values which will be devalued by destabilized hillsides all the way from Big Cottonwood to Little Cottonwood. Some residents in that area have already had to pay north of \$70,000 to stabilize their hillsides overlooking Wasatch where you intend to excavate and widen. And of course the houses you will tear down (at now decreased value) due to widening or the destabilized land/hillsides their foundations are built on. 3. How is UDOT planning to circumvent the "Sensitive Lands" designation of the much of the surrounding Wasatch Blvd land, that they want to excavate or pave? As detailed on the salt lake county appraiser parcel maps.	Tony Pines	Website
1438	Been working in this canyon for 12 years now, we need an alternative route for when avalanches come across the road. More lanes will NOT help when this happens, it just means more lanes to clear. A gondola is the clear solution, allowing people who are trapped by avalanches a way down canyon. Also wouldn't be surprised if it ended up becoming somewhat of an attraction itself, much like the Roosevelt Island Tramway in New York.	David Fleming	Website
1439	I think a gondola is a fantastic idea for the canyon. It would add to its beauty while being an environmentally friendly choice for transportation.	Whitney Hatch	Website
1440	I visit slc a couple times a year, and rent a car to drive up the canyon. The gondola idea is an experience not just a mode of transport. I would take it just for the novelty.	Eliza Schuett	Website
1441	Road widening with a bus only lane is the smartest move by far.	Ethan Crispell	Website
1442	Busses should be running just up and down canyon. Not cross the whole county. The park and rides need to be bigger and the buss frequency needs to be more with better reliability. As well as extra busses during peak hrs and and snow days. Also buss fair should be free up and down canyon to encourage less traffic driving up.	Chris Lass	Website
1443	I guess I prefer the second option. With the wider corridor and buses running the the shoulder. Its seems like the best option.	Thomas McMurtry	Website
1444	This seems like a no-brainer! Time to limit GHG emissions and save our beautiful canyons!	Jonah Hirshorn	Website
1445	My vote would definitely be for road widening !	Katherine Shields	Website
1446	Widen the road. Make it a divided highway. Put the road on risers where there are slides/avalanches so the avalanches go underneath. Provo Canyon is a great example of this. Local environmentalists, including Mr. Redford, opposed changing the 2 lane road to a divided highway and fought it for years. Once it was built it changed the dangerous quiet 2 lane road into a safe high speed corridor that beautified the canyon immensely. Whereas there were horrible accidents with entire families dying, now there is rarely an accident there. Make Little Cottonwood Canyon safe and beautiful by building a gorgeous divided highway.	Daina Pettit	Website
1447	The gondola is the best solution. Minimize cars and pollution. Please leave 210 alone. Don't widen our country/mountain road. It is part of the charm of Cottonwood Heights. Thank you!	Amelia Ortega	Website
1448	(1) The gondola time seems very long--too long to be a viable option. (2) The current bus takes 54 minutes? Seems long. (3) Issue with bus is comfort.	Scott Mishara	Website
1449	I support the Gondola 100% with the parking at the Gondola station, please remove the idea of having to get on a bus. This gondola concept as a main access to the ski area is all throughout the Alps. United States lags tremendously with these concepts. Make the villages car less. This would be charming and better for all. Please know this is a proven concept.	Robert Waal	Website
1450	Please please please consider putting in the gondola, it is easily the best option. Sincerely, a concerned BCC skier. Considering switching to LCC.	Shayne Cashin	Email
1451	I think we should try the increase in buses first, and the designated bus lane. I think the gondola is an intriguing idea, but not well-suited for little cottonwood canyon. I like having the view of the North facing mountains as I drive up the canyon. The gondola would add more noise, and it would be an eyesore. The gondola would not work in a pandemic or in high winds. We need a transportation idea that works under all conditions.	Callie Martens	Website
1452	I think widening the road for bus service would be fantastic. It also would be great for bikers in the summer. We need more parking for bus service! I still like to drive up the canyon and would hate to see that option disappear. I think a gondola would take too long to build and take too long to get to Alta. In the mean time we run more buses while the road is widened.	Kelly Pack	Website
1453	Widen the road a make a bus lane. Buses need easy and quick parking (underground and huge so no log jam at parking) and make the buses free. No way a group of three people will take a bus if it cost \$30 round trip. If it faster and cheaper people will use it. Electric buses would be a bonus extra. Good luck with all this. I stay in the valley when I visit and right now we are considering other places to ski/buy a retirement hone because it takes so long to drive up from cottonwood heights. But we LOVE alta!	Susan Wilks	Website
1454	Hi there, though I can fully understand the need to improve access to the upper canyons, and the massive revenue that skiers/buyers bring, mainly in winter, the proposed draft is definitely centered around just that - upper canyon users. The details of reducing the Gate lot to 21 spaces, as well as removing roadside pull offs will greatly affect the lower canyon/non winter canyon users (ie. hikers, climbers, etc). Please remember that Utah is a climbing mecca and lots of SLCs residents are here for just that... the climbing, and to jeopardize or reduce the access would be detrimental to the lifeblood of why so many of us are here in the first place. Thanks for your time - Kolin & Ellen Powick (climbers that are here for the access to climbing).	Kolin Powick	Website
1455	I am 100% in favor of the gondola up the canyon; the other 2 options still deal with traffic up the canyon, not necessarily reducing traffic...	Nancy CARLSON-GOTTS	Website
1456	Hello -- we appreciate the opportunity to comment. We are absolutely against widening Wasatch as this does not solve the issue. We support enhanced bus service (with no widening of Wasatch) or a gondola (with no widening of Wasatch). We also support the mobility hub and increased bus service from SLC to the mobility hub.	Jessica Yingling	Website
1457	Since user safety is part of the Forest Service directive why hasn't limiting pass sales been considered as a proposal seeing as crowding on the mountains is already often a problem?	Phil Sampinos	Website
1458	After listening to the presentation today (6/22), it's frustrating that recreational activities that do not involve the ski resorts seem to have been completely ignored in the analysis so far. A number of options have already been eliminated without looking at the impact on recreation in the lower half of the canyon. Reduction in available parking for non-resort activities will have a negative impact on an already crowded canyon. Resort skiing may account for the majority of non-local tourists in the canyon, but planning only for resort skiing leaves the actual residents of the area sorely underrepresented. With the current parking plans, there would be a reduction in total available parking in the canyon. During the summer, there is already a parking issue for climbing access, and the climbing population is growing significantly more quickly than the skiing population. Given that there are already parking issues in 2020, reducing the parking will only make the situation that much worse in 2050. Please, consider the impacts of these changes on the canyon as a whole, not just for those who are visiting ski resorts.	Carson Darling	Website
1459	The gondola would make skiing up little cottonwood canyon a much more enjoyable experience!	Alexa Weight	Website
1460	This is a great idea! The gondola would be a far superior option than the Bus services.	Jessie Burbank	Website
1461	Single occupancy vehicles are an understandable concern however many individuals rely on that convenience and relatively quick travel time compared to the bus or proposed gondola in order to ski/ride before work. How would you address this legitimate concern seeing as a 4 hr commute doesn't allow for a viable ski day when you need to be to work by 2-3 PM	Sam Sampinos	Website
1462	Thanks for the informative presentation. For the gondola, could you add bus service from the Highland drive hub. Thanks	Herb Whiteley	Website
1463	I support the avalanche shed and road widening. I do not support the gondola. How are we not addressing the IKON pass and its effects on traffic? The pass has created and made the existing traffic problem worse. We as the public are now tasked with solving a problem the resorts have created.	Jeff Pauline	Email
1464	With as little truly environmental investigation done so far - why are you calling it an "environmental impact statement" rather than an "economic development statement"	Danielle Mariott	Website
1465	Which trails/summits would the gondola be visible from?	Danielle Mariott	Website
1466	There seems to be little consideration of the natural beauty of said "scenic byway" that is LCC. Please consider climbers, Backcountry skiers/boarders, hikers, and people that want to experience the raw beauty and nature of the canyon. I know it is a smaller percentage than those who want to take in the vistas via gondola, but please, for heaven's sake, consider why it's beautiful in the first place. It's not because it's just a nice drive.	Danielle Mariott	Website
1467	I suggest a toll be required for the canyon. The could be similar to Millcreek Canyon, where an annual pass could be purchased. This would help reduce traffic and encourage public transit and ride-share. Perhaps the toll would fluctuate: no toll on slow days, toll on busy weekend or holidays.	Mike Kimball	Website
1468	None of these options are going to solve the traffic problem. I live in the canyon and the traffic wasn't bad, except on avalanche days, until Snowbird became part of the Icon Pass. Snowbird and Alta need to limit the number of people at their resort. It is affecting us all! I know that this department cannot influence this issue, but spending millions of dollars to accommodate Snowbirds net gain is not a reasonable solution. Widening the canyon road and ruining our watershed is not reasonable. Thank you.	Zada Sheranian	Website
1469	I support the Gondola alternative	Sheryl Facktor	Website
1470	Any transportation plan that involves multiple stages is impractical and will not get people out of cars. For example, I'd be happy to take the gondola, both for convenience and environmental reasons. However, if it involves first taking a bus to the gondola, then taking the gondola, it's too impractical when juggling kids and their gear as well as my own gear. As long sufficient land is purchased to build a parking garage next to the gondola, that seems like it would be bar far the best solution and the one most likely to get people out of their cars.	Jessica Brown	Website
1471	Could we have gondolas in Little and Big Cottonwood Canyons and require every vehicle to have a parking place pass for their destination(s) in the canyons. Thank you for all who are working on these issues.	Don Gren	Website
1472	I think the gondola will be a great addition. Our family would use it and I imagine it would be a great tourist attraction to travel up the canyons using it.	Shaida Brandon	Website
1473	For overall congestion considerations as well as true long-term economic impact and environmental impact the gondola proposal seems to be an ideal choice. As well as offers safer alternative to transportation of it on the canyon.	TJ Hartridge	Website
1474	Gondola! Anything we can do to preserve our canyons, with our urban areas ever encroaching, we need to find a way to prevent the cantons from being over used and abused. Expanding the roadway will only create more abuse and give access to those who knowingly or unknowingly have no reverence for these places. The growing amount of graffiti, trash, theft, etc. are case and point.	David Kamp	Website
1475	I think having A gondola at the bottom of little Cottonwood Canyon gondola going up to the top of little Cottonwood Canyon would be a fabulous idea No one is addressing our issues! The speed from Big Cottonwood Canyon to Little Cottonwood Canyon is too fast, this is a residential area, UDOT removed the residential markings between Big Cottonwood to Bengal Blvd illegally. This speed limit needs to be dropped to at least 40mph. In all the canyons the speed limit is 35 - 40 mph. Wasatch blvd goes up and down from 40 - 50 so UDOT knows the 50mph is a threat. This speed encourages speeding and road rage, we ALL know this. There are virtually no roads like this going up to 50 mph on the east side of the valley. UDOT has ruined the west side by creating such dangerous highways and they are trying to do it to Cottonwood Heights destroying our lifestyle and property values. You are putting people and homes in danger with the sensitive area from Big Cottonwood Canyon to Bengal, it's dangerous to expand this area anymore. The speed makes it ridiculous and very dangerous for walkers and bikers There is no need to expand Wasatch Blvd to 4 or 7 lanes, its ridiculous, ugly, out of touch with the direction the world is developing, it's out of date. Lower the speed limit, stick to 3 lanes, get people out of their cars and onto busses. Expanding in an earthquake zone, raising the speed limit to dangerous levels, destroying the natural beauty in a sensitive area, selling out to line a few developers pockets and one ski resort. UDOT is obviously in the pocket of a few disregarding the needs and desires of a community. While stomping on the plans Cottonwood Heights has had for years. The lan has always been to lower the speed limit, no more expansion bent Big Cottonwood & Bengal Blvd. NO to a gondola in our beautiful canyons. Very Sad	Terry Covington	Website

1478	Gondola	David Lundquist	Website
1479	I utilize LCC year round and love it. Thanks for working to make it better. I support widening the road and improving the bus system. I feel this would be best to address the winter crowding issues while keeping canyon use and access flexible for the many different ways people utilize it. It would also improve off season use and safety of pedestrians and cyclists. Thanks again! Matt Johnson	Matthew Johnson	Website
1480	I support the Gondola option as it likely has more headroom for future growth than the other two options. Also, it will not be as adversely affected by inclement weather. And, as a bonus, will be more in keeping with the alpine skiing atmosphere of the canyon.	Daniel Lunt	Website
1481	The gondola option is a good one and works well in other areas/countries. However, I am concerned that the need to first board a bus (often with winter sports gear) before boarding the gondola will make this a less attractive option. It would be great to be able to park at a mobility center / parking facility and directly board a gondola to the resorts. Thanks!	Scott Bratsman	Website
1482	3 Automobile lanes from near the "Swamp Lot" to Alta. Center lane is for Buses, Carpools and Snowplows only! No passing allowed and 20 MPH speed limit...3rd lane is for bikes and pedestrians during the Summer AND add a bike only lane... "Wasatch Bike Boulevard" Safe, offset from the main road starts near 3300 S and ends at the mouth of LCC...Mouth of LCC should be a large no parking zone; "Snow Tire install and remove zone" Lite up at night with a new "Wasatch Welcome Center" This will provide information from all principles... Ski resorts, Forest service, Water people, Salt Lake Co and the Cities of Salt Lake, Sandy, Cottonwood and Granite township... Bonus is there should be plenty of room for UTA Buses to stop here again, (Mouth of LCC) Add Heated Dog Kennels, Day Ski lockers and Pedestrian only Bridges to get you safely back to your bike... No Parking only Pedestrian Drop off and giant Bike parking area here at the Mouth of LCC... (Combine the park-n-ride and Quarry trail head into one big area for Peds and Bikes only) Another bonus is a safe spot for Canyon Patrol to park safely... "Wasatch Welcome Center" should be just like this.... Thank you for your consideration, Burke Weir https://www.visitmammoth.com/adventure/mammoth-lakes-welcome-center-designated-california-welcome-center	Burke Weir	Website
1483	I far prefer the option of widening the road (option 2). This seems to provide the most flexibility for a diverse user base in the winter and summer. Enhanced bus access also makes sense. A wider road and a lane that can switch from continuous up to continuous down would make a huge difference. It may be necessary to make these lanes bus-only lanes, but that decision can be made later. Our canyons are one of our most important Utah assets. Maintaining public access to these canyons is very important to me. Thank you for requesting public comment. David Nielsen	David Nielsen	Website
1484	I'm supporting the Enhanced bus with NO additional roadway capacity. Both the other options will be catastrophic for the ecosystem and the beautiful landscapes of little cottonwood. What about world class climbing areas like 5 Mile Boulders, Gate Boulders, and Secret Garden? What about hiking areas? Those will pretty much be destroyed. Plus more space on the road or a gondola will create more traffic. There are many studies out there that show adding lanes does not reduce congestion or improve safety! or the gondola will be crowded with skiers and others tourists that now they can just go up, the waiting lines will be insane!! What about the engineering plans for the impact and locations of the towers required for the gondola? You have to keep in mind all the climbing areas and wildlife will be affected from that. You guys need to build a better solution with more parking lots (with EV stations) outside of the canyon and buses running from all around town and more regular. With a better bus schedule and more affordable tickets you can limit traffic and impact.	Maria Nas	Website
1485	The scope of this should be expanded to think a bit more comprehensively. A study should consider an alternative as follows: The gondola system would have its main branch going up Big Cottonwood from a major hub at the gravel mine property north of the BCC canyon mouth, from which it goes to a major hub developed at the vacant flat USFS land in the Brighton Loop area, plus buy out some private cabin lots to get the required area. (will require some wetlands mitigation) From there, another series of gondolas or lifts goes to Solitude, Park City, Alta/Snowbird. The main hub at the north of BCC would be developed with a direct rail line to the SLC airport, have 30,000+ parking spaces, hotels, shops, restaurants, etc. all oriented toward skiing, mountain biking, other year round mountain recreation. Gondolas would run until probably 10 PM weeknights and 12 PM Friday and Saturday, and possibly at no cost, as at Mountain Village in Telluride. Bus service would also run up LCC and BCC. Private auto traffic up LCC and BCC would be restricted to landowners, registered guests, employees, deliveries, and other authorized purposes, without any tolling or other preference for the wealthy. The hub at Brighton would be developed with condos, hotel rooms, retail and restaurants to provide a bed base, and tax base, as well as the main upper transit hub to the other areas. This concept makes sense due to the geography - Brighton is the approximate centroid of the ski resort cluster and the base of BCC is closest to the largest number of people in the SLC valley and the airport. This would solve the traffic problems for BOTH canyons with not much more cost than the proposed gondola system for LCC alone. Growth is inevitable, and will need to be accommodated. It can be done tastefully with good design and in an intelligent manner.	Mark Levin	Website
1486	I support the revised gondola option suggested by Alta. As a person who has worked/lived/skied in LCC for the last 25 years it has become overwhelming and stressful to travel in the canyon over the past few years (with the acceptance of the IKON pass it seems the traffic has increased exponentially). The gondola option supports the need for additional transportation improvements that will reduce congestion, accommodate growth, and improve safety, reliability and access to recreational opportunities in Little Cottonwood Canyon. I have reviewed the three proposed alternatives and support a modified version of the Gondola alternative. It is the only alternative that provides badly needed additional ingress/egress for the Town of Alta and is impacted less by weather conditions than the other alternatives. It is environmentally cleaner than vehicle options, will have less impact on our natural resources to implement and will provide a more comfortable, convenient and scenic trip than the other alternatives. I support Alta's suggestion to modify the proposed gondola alternative by adding a parking structure at the base gondola station rather than requiring all gondola users to park at the gravel pit lot and bus to the gondola station. Thank you for allowing input from stakeholders. Sincerely, Lisa Kolanko	LISA KOLANKO	Website
1487	A gondola is highly advisable, as the only solution that will make a serious reduction in traffic, road noise, pollution, and overall impact upon wildlife and the delicate environmental balance of the area. It will also draw considerable tourist use, which will aid the economy while reducing impact on the beautiful natural setting.	Barrett Ogden	Website
1488	I believe we should have a gondola up little cottonwood canyon. I would feel more safe in my travels up the canyon, and more secure ethically in the impact I am having on the environment. As a bonus, I think it would be beautiful to see the canyon from that view.	Courtney Poulos	Website
1489	I think the gondola is the best option due to the sustainability and preservation of nature it will provide. There are many other benefits that are immediately visible, but these are the two most important duties I feel should be taken into factor since these mountains are irreplaceable and are the defining features of the region. It is our responsibility to be cognizant of how we can improve our own experience but at the same time preserve their natural beauty as much as possible.	Daniel Anderson	Website
1490	The Gondola alternative is preferred as it is less susceptible to inclement weather and is easily the most environmentally friendly. The best case scenario would be pursuing the Gondola alternative with the addition of the parking area at the Gondola base.	Matt Lipper	Website
1491	After looking through the information provided, I support the plan for the gondola. It has less impact on the environment, is a more practical solution for transportation, can operate at any time of year and in any conditions, and it would be an amazing ride! I'd definitely use it, even if it was just to take my family on a ride, have a picnic, and ride back. It would be such a cool thing to have in the area. I'd take friends and family on it when they visited from out of town. Plus, you can't get in a car crash when you're going up the mountain in a gondola! Thanks, Josh Richardson Utah Resident and Avid Voter	JOSH RICHARDSON	Website
1492	I support the enhanced bus service with snow sheds and road widening. A gondola would be both an additional eye sore, and wouldn't facilitate access to backcountry access points. Given that this is being undertaken at significant cost to the public, it should serve all users, not just those going to patronize the resorts. Buses should stop as requested at Lisa Falls, Tanner's Flat, and White Pine in addition to stops at the resorts. The additional benefit of pedestrian/cyclist lanes in the summer cannot be overstated as a benefit of this plan.	Patrickq Fink	Website
1493	I support the gondola because it's better for the environment!	Joanna Li	Website
1494	Gondola would be the best option to alleviate road pressure. But we need enough parking near the gondola base. A required bus ride just to get to the gondola base, seems like an unnecessary step. My vote is gondola with a parking structure. Thanks!	Jonnie Merrill	Website
1495	• RE Wasatch Blvd Expansion: UDOT's Imbalanced-lane and Five-lane Alternatives are unacceptable because they are based on encouraging high-speed through a residential area which includes eleven residential intersecting streets. 12-foot wide lanes and straightening of roadway are the wrong measures to take as they will create higher speeds, more air/light/noise pollution along with higher danger and fractionalizing of the Cottonwood Heights community. A desirable roadway through residential strip includes no more than one lane in each direction with either one REVERSE LANE or two additional lanes for BUS TRANSIT/HOV ONLY. Current and foreseeable future vehicular use does not warrant an expansion based on new commuter trends driven by Covid-19 pandemic, virtual officing, incentives for workers to live near where they work, projected housing growth focused on the west and central valley, and a projected new business epi-center located at the south/central valley area replacing previous prison space. More analysis is needed regarding traffic calming design and whether that will fit into existing space without removing houses within the road section that includes eleven-residential streets within the Cottonwood Heights city boundaries.	BC Bawden	Website
1496	I understand that a gondola would be a romantic solution, but I think it's extremely impractical, and would likely be a total boondoggle and still fail to address the issue. I think expanded bus service is a good solution, "especially" if it is supplemented by a third, buses-only lane so they don't get caught in the traffic. I'd think that the lane could be directional based on the time of day, and buses going against the dominant flow of traffic could just use the regular lane. However, expanded busing will only work if there is adequate parking at the pickup locations. So it would require expanded lots or garages at/near the base of the canyon, and good capacity management there.	Max McClorey	Website
1497	• RE Wasatch Blvd Expansion: UDOT's Imbalanced-lane and Five-lane Alternatives are unacceptable because they are based on encouraging high-speed through a residential area which includes eleven residential intersecting streets. 12-foot wide lanes and straightening of roadway are the wrong measures to take as they will create higher speeds, more air/light/noise pollution along with higher danger and fractionalizing of the Cottonwood Heights community. A desirable roadway through residential strip includes no more than one lane in each direction with either one REVERSE LANE or two additional lanes for BUS TRANSIT/HOV ONLY. Current and foreseeable future vehicular use does not warrant an expansion based on new commuter trends driven by Covid-19 pandemic, virtual officing, incentives for workers to live near where they work, projected housing growth focused on the west and central valley, and a projected new business epi-center located at the south/central valley area replacing previous prison space. More analysis is needed regarding effect of fracturing of approximately 8,000 resident Cottonwood Heights community with a high-speed highway.	Beverly Bawden	Website
1498	First off, thank you for evaluating alternatives. In my opinion the best alternative is an enhanced bus/widening with dedicated bus lane option. As a backcountry skier, rock climber, and ice climber, the gondola option does not necessarily allow for continued access to the many parts of the canyon that I currently frequent that are not necessarily as popular. This option also significantly impacts travel times, which will be a detriment to workers and volunteers who volunteer or work up canyon in the winter like myself. Long term, pushing more traffic on to public transportation is likely the only solution for the bulk of traffic. If we are implementing enhanced bus traffic, it would be awesome to see backcountry bus stops at various locations like the white pine trailhead or tanners gulch in Little cottonwood or mill B/Argentina in big cottonwood, with possible early morning bussing options to help alleviate dawn patrol traffic. Given the option of taking public transportation or driving up, I would generally opt for public transport if it got me to where I was trying to go.	Sean Tropas	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1499	<p>#1. The title of this project limiting the scope to HWY 210 doesn't make sense as there are items which include Hwy 209. Attention to solve this problem needs to include solutions to the traffic backup on HWY 209 as the Highland/9400 Park and ride is a critical part of the solutions in all proposals. Equal amount of efforts are proposed to be spent on expanding the parking at the park and ride at "highland" to those at the gravel pit.</p> <p>If the 9400/Hwy 209 road is in gridlock due to traffic buses will not be able to access the enhancements to Hwy 210 in either the gondolas or both options under bus service. So addition of a up BUS Lane on Hwy 209 from highland park and ride to 210 must be included.</p> <p>#2. Where is the improved Hwy 209/210 Merging proposal in all this? Clearly the current poor merge pattern has to be replaced. There could be substantial and rapid improvements with just a temporary signal at this intersection to allow pulsing of traffic to avoid the delays of weave merge.</p> <p>#3. While direct Bus service is a great idea to the ski areas. There is significant bus traffic that is local from Snowbird center and cliff lodge two Alta and vice versa. How will this be handled?</p> <p>#4. Tolling. I support tolling. I believe that tolling should be variable based on volume of cars. I support tolling season round.</p> <p>#5. I believe that there would be significant interests to running the gondola in the summer and fall perhaps just on weekends.</p> <p>#6. Bus service in the summer peak times with some options for greater on/off stops at trail heads would be positive.</p> <p>#7. Starting direct bus service to ski areas in a limited way now is a good idea.</p> <p>#8. On Canyon shutdown days police escorts of the bus to the canyon from Wasatch lot and Highland 209 would increase ridership substantially.</p>	David Hackbarth	Website
1500	<p>After reviewing the three options currently under consideration, I would like to offer my support for the gondola solution. The Cottonwoods are one of Utah's finest gems and are especially important to the Wasatch Front. They provide locals with valuable recreation opportunities (astoundingly nearby) that are a key factor in why many of us choose to live here, and significantly improve the quality of our lives. They drive tourism that supports our economy and they appropriately shine a positive light on our state. Implementing the right solution is critical so that we can protect one of our most valuable and irreplaceable resources. Below are a few reasons I support the gondola solution:</p> <ol style="list-style-type: none"> 1. Experience – gondolas would provide a unique experience in and of themselves and would add to the character and class of LCC, along with any trip up the canyon. Buses on the other hand tend to detract from the experience and seem to be the "price to pay" in order to get up the canyon. 2. Environment – I believe this solution is least damaging to the present condition of the canyon and will do more to preserve it than the other options. 3. Scenery – gondolas would allow for greater enjoyment of the canyon and the beauty it provides. 4. Cost – while not the cheapest capital option, gondolas provide a much lower capital expenditure cost than widening the road, which seems to be the other most viable option, additionally their O&M cost is more attractive than the other options. 5. Traffic – I would rather invest dollars to lessen the people needing the road for transportation in the canyon, thus leaving it for "necessary" road travel. 	Matthew Nelson	Website
1501	I'm all for a TRAM that goes up the canyon, or Bus only. I don't support widening lanes in any way	Zack Adams	Website
1502	I would like to enthusiastically support the gondola option. It would be environmentally friendly and reduce polluting traffic that is increasing at an unsustainable level in the LCC. Please make the LCC road a toll road to help pay for the gondola.	Hernant Hegde	Website
1503	The elimination of roadside parking on S.R. 210 will have enormous impact on public access to rock climbing areas in Little Cottonwood Canyon. There is currently no other option for accessing these areas, as bus service only exists during winter season and doesn't include stops at these sites. I envision a transportation solution for Little Cottonwood Canyon similar to that of Yosemite or Zion national park. Why not offer bus service on S.R. 210 year-round and add additional stops in consideration of popular rock climbing, mountain biking and hiking areas? A gondola is a very ski-centric solution to the problem of traffic of S.R. 210. Sure, it may ease congestion in the canyon on 50 or so peak days during the winter, but then what becomes of it in the summer? It is unlikely that summer canyon users will use a gondola if it only stops at Snowbird and Alta, resulting in it sitting unused for much of the year. We need to use and improve the infrastructure that is already available to us by increasing bus service and perhaps adding additional stops for non-winter users.	Kyle Daly	Website
1504	I believe the enhanced bus & road widening option would have the widest impact. Summer & winter users of canyon roads would benefit from the road widening & it has the fastest commute time. If the gondola has a 60+ minute commute time, people are just going to drive still.	Carsen Damon	Website
1505	Dear Sir/Madam I would like to enthusiastically support the gondola option. It would be environmentally friendly and reduce polluting traffic that is increasing at an unsustainable level in the LCC. Please make the LCC road a toll road to help pay for the gondola. Thank You Hemant	Hernant Hedge	Email
1506	I think the gondola is the better option. More environmentally friendly, awesome views and can be used year round	Brady Bills	Website
1507	I highly support the Aerial Tram option. Buses are a ridiculous idea and have proven already to be more of a problem than a solution. Please take this chance to make real change.	Greg Norrander	Website
1508	As a climber, I hope to access shoulder parking on both the north and south sides of little cottonwood. Cliffs and boulders of interest are scattered throughout the canyon. Parking and walking is often influenced by river crossing options. On rare occasions, I've ice climbed in little cottonwood and I have not been caught by the ski traffic, but I'm aware that its a HUGE issue for most users. Thanks!	David Morison	Website
1509	I used to live in UT for many years, and miss the beautiful mountains. However I do not miss the air quality. In fact, it is a significant mark against us ever moving back to UT due to my health concerns. Anything that would help lower pollution is incredibly important for both the health of the environment and the health of the people living there.	Laurel Armstrong	Website
1510	Hello! I support the enhanced bus with roadway widening as the solution for LCC. The gondola option seems "glamorous" but both takes more time than enhanced busing (which would then encourage me to just drive up the canyon...) and also is more rigid in that once the gondola is built there is little opportunity to enhance or change the route/stops/etc. The bus on the other hand is significantly faster with the option to fine tune as the canyon evolves (i.e. changing the stops, adding/subtracting stops, etc.). I think both the time & the flexibility of the enhanced bus service (with the road widening) make it the best solution. Thanks for your time!	Greta Sommerfeld	Website
1511	I am a lifelong resident of this great valley, and have enjoyed skiing in Little Cottonwood Canyon since 1972. I am highly in favor of constructing a Doppelmayr 3S gondola to alleviate the horrible travel conditions we are now seeing up there. Let's do this!	Bradley Hardy	Website
1512	Gondola is the way to go. It's a statement piece for the state and it's better for the environment	Nathan Copier	Website
1513	Please, PLEASE do not widen the roads. The economical impact is not worth the "convenience" of getting more cars up the canyon. The gondola is far and away the best option	Laurel Lowe	Website
1514	I believe that the 'Enhanced bus with roadway widening' would be the most effective solution that better meets the volume of people needing to get up and down the canyon. It would provide infrastructure to protect a highway that people will continue to drive private and commercial vehicles up, regardless of a gondola. As a year-round Alta summer road resident, having the snow sheds in place offers another layer of protection for myself and all of the LCC residents who commute under numerous avalanche slide paths every day. Public transportation needs to become more streamlined and easy for people to use; having to take a bus, then disembark and slog gear over to another transport area (gondola) is not appealing.	Johanna Wilson	Website
1515	I back this decision. It would be highly beneficial for our environment in Utah	Joshua Thain	Website
1516	Seems to me that a gondola would be the smart way to go here.	Dan Wilson	Website
1517	From North Carolina, I support the construction of a gondola alternative in order to enhance the transportation systems for Little Cottonwood Canyon. This alternative would be the most eco-friendly and pioneer progressive transportation alternatives for communities around the country.	Anna Longenecker	Website
1518	In favor of the gondola	Brian King	Website
1519	I want the gondola because it is more environmentally friendly.	Alisha Latimer	Website
1520	I am writing today to urge you to move forward with the construction of a gondola in Little Cottonwood Canyon. This alternative is cost-efficient and, more importantly, the only alternative that is environmentally-friendly. You must do everything you can to protect our environment in order to maintain the beauty and integrity of Little Cottonwood Canyon. You must do your part in ensuring generations to come will be able to enjoy everything our Utah mountains have to offer and this begins with choosing the gondola alternative; any other option is irresponsible and deadly.	Madison Hall	Website
1521	Gondola because it's more environmentally friendly.	Jared Darrington	Website
1522	The gondola is the best with the addition proposed by Alta of a parking garage at the base of the gondola. Otherwise the Godndola would definitely not work	Gary Jacobson	Website
1523	I am commenting in support of a gondola for Little Cottonwood Canyon. I believe this is by far the best option to experience the beauty of the canyon and protect the environment. Thank you!	Sarah Keyes	Website
1524	I believe the Gondola would be the best option. Less traffic/pollution and offers sight-seeing during the travel. Easier evacuation of the resorts if an avalanche closes the road. Road maintenance would be lessened too.	John Carlson	Website
1525	The gondola is my top choice. People will be willing to ride it because they see it coming, a bus they have to wait and hope it's coming. A gondola doesn't get stuck in traffic this is perfect for the ski industry.	Merilee Rieley	Website
1526	As a long time resident of Cottonwood Heights City, I am worried that adding lanes to Wasatch boulevard will result in more traffic not less. I support the improved bus plan without the Wasatch expansion.	Diana Arensman	Website
1527	I am a huge fan of the gondola and tolling automobiles in Little Cottonwood Canyon. Over the past twenty years the secret has gotten out and the amount of vehicular traffic that is plaguing Little Cottonwood and Big Cottonwood canyons both in winter and summer is getting to a point of critical mass. The best way forward is to take inspiration from our European counterparts and invest heavily in mass transit for our canyons. Relying on automobiles will only further detract from the purpose of the canyons and contribute to more congestion, pollution, and unnecessary development that focuses on cars and not the people using the canyon. Additionally, as a cyclist, I look forward to using the canyon even more when automobile traffic is greatly reduced through alternative transport means and tolling.	Bryan Hull	Website
1528	As a local Sandy resident, and an annual pass holder, I feel it is very important to explore options to make the "Cottonwood Resorts" more accessible and reduce congestion in Big and Little Cottonwood Canyons. And I appreciate the effort that UDOT, UTA, and The Forest Service are making to make these treasured ski resorts more sustainable and accessible. My first choice would be the gondola, WITH MODIFICATIONS, because I believe it has the lowest environmental impact, the highest capacity for moving people, and has the advantage of being completely independent from traffic issues. I was also surprised to see that it costs less to build and maintain than the option of additional bus service+adding lanes, which would be my number two choice. The gondola solution is going to help alleviate traffic, but I believe this plan is still catering to the "out of towners" by only improving road access from the North side of the Cottonwood canyons. The locals who live on the South side of the canyons will still have issues getting to LCC Rd and the gondola loading station, via 9400 S, since they will still have to merge with traffic from Wasatch Blvd and N LCC Rd. I believe there needs to be a parking area at the gondola loading station, and there needs to be a bus lane added to the gondola loading station from the parking area at 9400 S/Highland Dr. There are still going to be major traffic issues/backups coming up 9400 S, with currently no proposed way to alleviate traffic from that direction. Because I would still have to get on a bus that will definitely get stuck in traffic, it makes the 1000 parking spaces on that end practically useless. It will force everyone to park at the Wasatch/6400 S which will fill up extremely quickly since it is for both canyons. If you are trying to convince people to take public transit, it has to be practical, and if I'm going to be stuck in traffic, I'd rather sit in my own car than sit, or worse, stand (while holding all my gear), on the bus. I would also support a canyon "pass system", where only residents or people with reservations at the top of the canyons would have access at certain times of the day, or a toll system to drive up the canyons. This would encourage many more people to take public transit, but if this was the case there would need to be significantly expanded bus service and parking options.	Francine Garcia	Website
1529	As someone who cares about improving the environment and lowering the CO2 output not just in the world but in Utah, where our air quality is consistently some of the worst in the country, we should be looking for no carbon solutions like this anywhere we possibly can. This is a no brainer, and will save the area a lot of money long term.	Eric Phillips	Website
1530	A gondola lift in Cottonwood Canyon may be ambitious, but seems to me like a sustainable 21st-century solution to a problem that can't just be solved by roads and vehicles. I wholeheartedly support the creativity at work in coming up with this idea.A	Ted Bushman	Website
1531	The gondola seems to be the best scenario of the 3- with the caveat that there is substantial parking at the base. I see there would be bussing down from up north, but for those of us coming from the south- I would not want to drive past Little Cottonwood Canyon only to turn around and have to bus back down to the base of the gondola. Thank you.	Katie Groberg	Website
1532	To whom it may concern, I looked through the little cottonwood canyon proposals and would like to see the Gondola concept get realized! It's not listed in the table, but I assume it would produce less pollution and smaller environmental impact than running more cars and buses up and down the canyon. It also seems like a good solution for transportation through the canyon during periods of avalanche danger. Thanks, Matt Gulini Cottonwood Heights, UT	Matt Gulini	Website
1533	Please put the gondola in! The gondola access at silver mountain is amazing and I can only imagine how good it will be up little cottonwood! 4,000 riders per hour! So much better for the environment than buses	Brett Dodson	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1534	Gondola of the 3 choices listed. Or a train. Enhanced Bus service seems stupid they already have that and people don't want to use it so come up with better new ideas.	Jody DeLisis	Website
1535	Hello, my name is Casey Ryan and I am a middle school teacher in Salt Lake City. As a teacher my primary focus is geared towards the benefit of children. After viewing the three options I see the GONDOLA as the safest, easiest option for more individuals, especially children, to safely access the canyon in all seasons. A gondola would require little interaction between pedestrians and high traffic areas in inclement weather and low light. I do believe that for the safety and convenience of our community a gondola would be an excellent addition to this space.	Casey Ryan	Website
1536	Let's get the gondola! It's by far the most environmentally intelligent decision and would be a great attraction.	Vanessa Goertzen	Website
1537	I'm in favor of the gondola option with a better parking option and pickup station at the base of Little Cottonwood Canyon. I with my family from Draper so it doesn't make much sense to pass the mouth of the canyon only to backtrack via bus. The gondola option would be a dream!	Brandon Bodell	Website
1538	All for a gondola. That would have the lowest environmental impact. Mass transit, low foot print, none to very little Emissions. I and all my buddies would love a gondola.	Chase Meredith	Website
1539	After sitting through a presentation given by Chris McCandless I strongly believe that the gondola proposal is the best option for LCC. This is a similar system to what is widely used in Europe. This will provide another option to get up to Snowbird and Alta and will help alleviate the amount of traffic moving through the canyon. Although I believe that that widening the road and adding more buses could also be a good option, I feel like it doesn't make a big enough of an impact to be THE solution that we're looking for.	Al Kenworthy	Website
1540	Regardless of the public transportation method we use to get people up and down Big and Little Cottonwood Canyons, the success of the program depends on the base infrastructure. It has to be in a convenient location, easy to drive up to, park and access the public transportation. This is also an opportunity to collaborate and build our community. Salt Lake City is what all 4 resorts and the backcountry has in common. So, I believe we should build up a base infrastructure at the soon to be retired gravel pit. This could include but not be limited to a parking structure, a "ski village" with ski lockers, a coffee shop, a ski shop, restaurants, apres ski gathering, and ideally a hotel or other housing depending on space limitations. Locals and visitors should feel that they have arrived at the "resort" once they park at the village and the customer service for all 4 Cottonwood Canyon resorts should start here. I imagine myself parking, accessing my ski locker, putting on my ski gear, and hopping on public transport that is frequent, reliable and there is room enough to sit while traveling. I believe incentives to use the public transportation need to be in place, but just as important is the draw of this new base ski village. So, ski lockers and other amenities are important factors in the success. This is an exciting time to impact our future and I appreciate the hard work put into this and the considerations taken of the community opinions. Thank you.	Tricia Petzold	Website
1541	Gondola is the way to go! They are very practical and will protect our beautiful mountains.	Jaymie Lambson	Website
1542	I support the alternatives that include snow sheds. Road closures for necessary avalanche control work is a big contributor to traffic back-up. Allowing traffic flow to continue regardless of avalanche danger, along with snow tires / chains monitoring, will greatly increase the flow of traffic up the canyon. Adding dedicated bus lanes will encourage ridership, but as it is now people would rather sit in traffic in their own vehicle than on a bus that is stuck in the same traffic jam. Last season I saw multiple bus slide-offs that caused lane closures and massive traffic back-ups. Giving buses their own lane will definitely help with more consistent traffic flow. I don't think many people would use a gondola. The gondola would run mostly empty and the same traffic and congestion problems would remain. This is mostly due to inconvenience and lack of parking at the base. Parking miles away then having to take a bus to the gondola is not a good option and will discourage most people from using it.	Jeremiah Wangsgard	Website
1543	the gondola is a much better option !!!!! MUCH BETTER	Brett Alan Nelson	Website
1544	A big vote for the gondola and a toll for the canyon rdl! It would be the most beautiful scenic aerial ride in the US, with revenue generation to maintain both the gondola and the rd. Also, it's the most environmentally sustainable solution of the three. We know from years of experience that avalanche danger and hazardous rd conditions are the problems. More lanes and sheds will not fix these problems. It will be a sad 6 hr drive home when we've spent millions and we still have busses and cars sliding off the rd, and concrete sheds that will be a future maintenance nightmare. As Salt Lake grows, UDOT/UTA could solve other traffic issues with this successful gondola installation. Think Foothill Blvd. Utah can be an innovator: Gondola, Gondola, Gondola!!	Timothy Nima Mahak	Website
1545	I prefer the gondola, with Alta's requests.	Roy Murphy	Website
1546	I am adding my vote to build a gondola. This is the more sensible decision and a more environmentally conscious option.	Alexandra Wille	Website
1547	As a resident of Utah, I fully support the gondola option. I feel that it would be better for the environment than alternatives, and that it would hopefully alleviate some of the traffic congestion instead of adding to it. It would also be less at-risk for being caught in avalanches.	Jeremy Showgren	Website
1548	The gondola is a great idea so I fully support the gondola option. They are very environmentally friendly and a great means of transit. Unfortunately, this proposal in any form seems dedicated to putting the needs of the businesses that exist in the canyon (Alta and Snowbird) above the needs of the surrounding environment and its users. By increasing access to the resorts, this project will overburden the canyon with users and any tolls that will be paid by users will be, no doubt used to further that end by making the canyon more and more accessible until it turns into the playground that is Arches National Park. Stop developing. Do not add a gondola and do not widen the road, furthering the environmental toll that is already taken on the canyon, both of which would affect valuable climbing, skiing, and hiking areas that exist outside of the resorts. Further, there is no need to eliminate roadside parking near ski resorts, which again provide valuable access to skiing that exists outside of the resorts and help to spread out skiers in Little Cottonwood. Instead of listening to the demands of ski resorts and those who crowd the resorts every winter, please consider how the changes will affect those of us who live here, who care about the canyon, and care about the environmental impacts that any one of these actions will have on the canyon. By further stuffing the canyon full of people, you increase exponentially the impact that humans will have on the natural resources and space in the canyon. Stop LCC from turning into a zoo. Stop what you're doing.	Edward Fogarty	Website
1549	Unfortunately, this proposal in any form seems dedicated to putting the needs of the businesses that exist in the canyon (Alta and Snowbird) above the needs of the surrounding environment and its users. By increasing access to the resorts, this project will overburden the canyon with users and any tolls that will be paid by users will be, no doubt used to further that end by making the canyon more and more accessible until it turns into the playground that is Arches National Park. 1550	I think the gondola is an excellent idea! Please choose this much needed option!	Jenni Barber	Website
1551	I heard there's news of a gondola option. That sounds like such a great idea. Please choose to move forward with it. So cool!!!	Jayson Sites	Website
1552	Please - the gondola is an amazing option!! Let's be safer for the planet.	Jill Sites	Website
1553	LOVE the gondola option. Have always loved gondola options found elsewhere - their efficiency and low environmental impact impossible to beat.	Kyle Dean Massey	Website
1554	The Gondola options is bad. Drive to a parking lot, wait for a bus, get off the bus, wait for the gondola. 3 steps each way. 3 layers of "risk" to travel time. Gondola towers are a visual impact and subject to the same threats (avy) as the road, and UDOT knows how to take care of the road. The bus with road expansion has the future option of adding more busses/reducing cars, using that road space for future non-car transit mode (hyperlink?). Added value of added lane = wider bike/e-bike/hike/skate lanes in summer and shoulder seasons which are the best for cyclists. As much as an additional lane in LCC seems intrusive to the LCC experience, it is the best current option and provides future opportunities.	Jim Deschenes	Website
1555	i believe that the enhanced bus + roadway expansion is the only legitimate option that people will actually utilize. that option gets my vote!	mark guffey	Website
1556	I think the gondola is a great idea.	Seth Howard	Website
1557	Would like to see rail transportation. To view all the views	Josh Christensen	Website
1558	Thankful to learn specific solutions are coming together to address congestion, safety and access issues in LCC. I was excited to read about the gondola alternative, which strikes me as the most compelling option. Weather conditions make any ground-based transportation options unreliable. Buses contribute to more traffic and congestion on the road, even if the lanes are expanded. I believe the gondola would attract people away from driving their car more than buses because of the reliability, safety, and scenic journey. However, if one needs to park at a different location than the gondola station and take a bus to the gondola this will be a big obstacle to ridership. It also has a negative environmental impact because buses are necessary. I believe offering parking at the gondola station is essential.	Daniel Meyer	Website
1559	The gondola is by far the best option. It's superior for accessibility for disabled people, it's safer in bad weather conditions, and it's healthier for the environment.	Carson Tueller	Website
1560	I was at the public meeting last night and watched the presentation. The cost estimates for the three options looked really high. The I-15 NB phase I project is \$90M for construction and \$40M for right of way. There are extensive right of way needs. With the LCC three option estimates at over \$400M each and only 1 house take, I am struggling to imagine the estimate justifications. Would you please provide a breakdown so that I can understand this better? Thank you.	Britney Ward	Website
1561	I see you kept the gondola option just to see if anyone is still paying attention. Too costly, inflexible on capacity, inflexible on destination, not inclusive to all users. Enhanced bus with no additional roadway capacity has already been demonstrated to be unworkable. I guess we're done, then. Too bad we had to spend so much to come to a conclusion we already knew. We cannot separate ourselves from the internal combustion engine and we cannot reduce demand. Martin Neunzert Ogden, Utah	Martin Neunzert	Website/Email
1562	We need a rail system in cottonwood canyon. The traffic is fucking ridiculous and a rail system would take many folks off the road to free up traffic. WE NEED A RAIL SYSTEM!	Jayden leitet	Website
1563	I think that your proposed ideas are good but a rail system would eliminate a lot of travel time. It would be a bit pricier but in the long run would be better than disrupting traffic just to widen a road for busses only which btw isn't going to help with traffic. You think of how many people go up those canyons and how many would rather just ride in their own cars versus a bus. I would rather my own car than a bus which would be faster to me. Busses are slow and heavy and produce emissions. I think an all electric rail way would be the way to go. Think smarter not harder. Cause in the long run you will still have to deal with the increased amount of people crowding the state and that brings more people to the canyons which you will have to account for and in the end you'll have the same issue	JAYDEN LEITER	Website
1564	I really like the Gondola idea. I think it is a responsible and investment environmentally and financially, and also would be really fun and cool.	Lee Hansen	Website
1565	Please build the Gondola. It will be an effective way to get many people up and down the canyon. During the summer it could be a tourist attraction. I would suggest selling passes to the handily with season passes for the ski resorts.	Isaac Richardson	Website
1566	I would love to see the Gondola move forward! Such a great environmentally friendly option!	Hannah Laine	Website
1567	I like both option 2 and 3. I think more buses and widening the road would definitely help the traffic issues but there is remains the parking issue at the resorts. I am a backcountry skier so I usually go early before the crowds but weather is always a challenge. I think the gondola could be a good option as well but parking at the gravel pit makes it much less desirable--also would it have stops at any of the backcountry trailheads? All things considered I feel option 2 is probably the best for the most people.	MICHAEL JOHNSON	Website
1568	The traffic problems in LCC are only 10 days a year for a few hours. We should not put in additional lanes for that. Encourage more car pooling. Most Ski Resort Employees should ride the bus. UTA needs to adjust the bus schedules to accommodate for the shifts of Employees.	Susie Albertson	Website
1569	I 100% support the gondola. Better for the environment, better for the community, and safer than the bus.	Andrew Rosen	Website
1570	I fully support the gondola. It is much better for the environment than buses and won't get caught in an avalanche. Also, way more fun to ride in.	Caroline Browne	Website
1571	I was enhanced bus service with no additional lane capacity.	Megan Sieverts	Website
1572	The most successful, maybe even ONLY successful, example of solving this problem is Zion Canyon. I was a regular in Zion before and after the shuttle system and can testify that it made a huge improvement. Most of the benefit came from eliminating private vehicles from the canyon. There remain the shuttle bus and a handful of other vehicles, which makes the canyon far more pleasant. To get the needed improvement in LCC we would need to do the same, although there is private property which needs to be addressed. The limit to people on the Zion shuttle is parking at the bottom. When I'm in Springdale I leave my car at the motel or campground and walk to the park entrance. The lot at the visitor center fills early. Parking at the bottom of LCC is already the limit on bus riders. I and most of my friends would be happy to take the bus if there were anywhere to park. Another limit on LCC bus use at present is that it is much less frequent than the Zion shuttle, so if you don't want to wait around for a long time you need to drive yourself. This affects me and my friends particularly since we ski the backcountry and our schedule doesn't match the lift times. That issue must be addressed to be successful.	Walter Haas	Website
1573	How many cars now park in LCC on a busy day? We will need at least that many spaces at the bottom. This kills the tram alternative because of the difficulty and expense of providing the necessary parking at the lower tram terminal. the gondola option would be a staple of the east side	Jake Pope	Website
1574	As someone who averages 100 days skiing a year in little cottonwood, primarily Alta but also Snowbird. I really believe we should abandon the road/parking lot model in the canyon and embrace multiple high speed gondola's with a road overflow only as back up. We should consider linking to Park City , we would literally not only be the premier ski location in the world but have a infrastructure to support it. No one wants to come visit and sit in a 3 hour traffic jam. Do this!	MARK HIGGINBOTTOM	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1575	Please choose the gondola option!	Steffi Garrard	Website
1576	With the proposed 3 options, I believe the first option to increase bus coverage won't have as much of an impact on transit up LCC, as not too many people use the bus in the first place. I like the idea of road way widening, mostly for the proposed addition of bike lanes. The gondola sound like an environmentally good idea from an emissions standpoint, but it seems to me like it would be a big "scar" on the mountainside and not aesthetically pleasing. Of all of the proposals, as much as I hate to say it, I do think making Hwy 210 a toll road would decrease some traffic and shuttle more people away to taking the bus.	Geoffrey Wood	Website
1577	I visit this beautiful part of Utah every year. I LOVE the skiing. This Gondola would change the game- I'd be able to get so many more of my friends to come enjoy with me if the Gondola was an option. Also it's just better for our environment. Just do it!	Steven Mailhack	Website
1578	dont think #1 will help. other 2 are toss up. I think enforcement of snow tire rule ALL the time will cut down on vehicles. Maybe even a sticker for cars with snow tires. Rental cars wouldnt be in the canyon either. I do like the minimum of 2 people/car- maybe even 3 on big traffic days.	robert huebner	Website
1579	I greatly appreciate the time and effort put forth into deciding what to do about the transportation issues within Little Cottonwood Canyon. There is no easy one decision with each having their own benefits and costs to the overall experience within the canyon. However, a decision must be made in order to preserve the canyon for future generations. In my opinion, the course of action that needs to be taken is to one that gets the most people up the canyon while preserving the natural environment. Implementing tolling for single ride vehicles, increasing bus service with minimal road widening, making bus service more reliable and attractive, and avalanche protection are all good first steps into protecting the canyon and those that use it. Other recommendations I encourage are expanding of trailhead parking lots to eliminate pedestrians on the road and elimination of roadside parking for vehicles in dangerous sections of the road next to ski resorts. I would encourage UDOT to consider the travel times and experiences of those using the canyon when they are reaching a final decision. Again, thank you for spending your time and energy to implement change in this canyon.	Justin Andrews	Website
1580	A second mobility hub for the gondola option should absolutely be included for people coming from the south or west. Also one hub seems like it would create a traffic problem by just having everybody going to the same place.	Matthew Rocha	Website
1581	I am in support of this.	Laicey Gibby-Brown	Website
1582	I am very concerned that climbers are not adequately being considered for these projects. 1. Eliminating rode side parking precludes many of the climbers from parking at climbing spots along the canyon. People climb in LCC nearly year round. What will be done to ensure climbers are still able to access these climbs? 2. Expansion of the roads will likely jeopardize many of the boulders that are roadside currently and destroy them. Again this is not taken into consideration.	Audie Espinoza	Website
1583	Hi, While this plan is being developed, please provide me the link that outlines the current traffic policy and procedures for snow days/closure for the next season. thanks	buc buchanan	Website
1584	Any transportation alternative that is selected needs to address potential traffic back ups on Wasatch and 9400 s. I live at the mouth of the canyon and can't reach my house on days when traffic backs up from the canyon on powder days or busy weekends. This is a safety hazard as well as a logistical challenge for my entire neighborhood. A potential gondola or extra bus lanes still does not address the grid locked cars situation when a back up does occur.	James Jensen	Website
1585	Do a train!	Wilson Meek	Website
1586	I think building a canyon gondola is cost effective as well as a long term solution, without the same major alterations as widening the road. This would also reduce air pollution whereas simply adding more busses would not. Even though it would take longer to get up the canyon, it would take stress off of drivers and decrease road fatalities.	Erin Williams	Website
1587	PLEASE choose the Gondola option!	Matt Doyle	Website
1588	I am 100 percent against any more permanent alterations to LCC. It is a finite resource. Please don't carve up our canyon.	Landon Schoenmann	Website
1589	I'd love to see a gondola in little cottonwood because it's so environmentally friendly!	Erin Morton	Website
1590	I'm in support of the gondola option. It will help our environment and will be more safe from avalanche danger.	Collin Barkdull	Website
1591	It seems that most of the focus here is on ski traffic, which is clearly a problem, but some other user groups must also be considered. In some of the proposals there is a reduction of roadside parking. Roadside parking is essential for rock climbing activities. There are many climbing areas along 201 that need to have parking. Climbing is growing and with it now in the Olympics, expect it to be an even larger user group. The pull outs today are already full at any peak time, we need to find ways to expand those parking areas to accommodate summer activities as well as winter ones. Also, we just made this awesome trail network through LCC, give people access points to it in the summer at various locations.	jeremy steck	Website
1592	Love the gondola solution!!!!!! It's the most efficient long term and most sustainable!!!!!! Yes! Yes! Yes!!!	Emily Gretsky	Website
1593	I support the plan for a gondola. It's much more environmentally friendly and uses funds to address the needs of people more directly.	Preston Sadleir	Website
1594	My vote is for the gondola. It makes the most sense to alleviate traffic and congestion in the canyons	Andreea Radu	Website
1595	Charge a fee for every vehicle using the canyons. Use fees to build train access in LC canyon. Construct tunnel to access BC canyon. Connect train to PC side. Just get it done!	Greg Ferrell	Website
1596	I drive up little cottonwood 1-3 times a week in the winter and I'm sick of the traffic let's fix it and it will keep the mountains more beautiful	Cole Leroy	Website
1597	I believe the gondola solution is the most efficient and environmentally responsible solution for Little Cottonwood Canyon.	Jim Grewe	Website
1598	After attending both zoom meetings and absorbing the questions and concerns of commenters, the one that stood out to me the most was concerning tolls. If the average car traveling up the canyon carries 1.6 people, a toll during peak hours to encourage car pooling or public transit would fix this problem. This would not allow "only rich people to use the Canyon"! It would encourage people to carpool, saving on gas money and sharing the toll cost. It would encourage people to take the bus! The toll would only be issued during peak ski traffic hours. If people can afford a ski ticket, gear and a 4 wheel drive car and gas to get them up the canyon, they can afford a toll! If resolving that "this would exclude poor people" is the total thought and discussion that has gone into this simple solution, I am incredibly dissatisfied with the EIS's process. This is the best option for the canyon, residents and environment.	Trina Sheraanian	Website
1599	The gondola option would be the clear best choice - it provides the least environmental impact and the most significant improvement to the transportation experience. It would help with the issues of snow-packed roads (and avalanche closures) and the difficulties that cars have driving on them, and none of the other alternatives would help with that problem.	Peter Williams	Website
1600	Great work on the study and alternative options. The best option is the gondola, which meets the needs of the community while preserving the value of our amazing Wasatch Mountains.	Lori Williams	Website
1601	I support Enhanced Bus with roadway widening for peak period.	Henry Gifford	Website
1602	I strongly support the enhanced bus service proposal. This is the cheapest option and quickest to implement. The current climate crisis is an urgent emergency that requires immediate action. There is no time to wait for funding and construction needed for the other proposals. The enhanced bus service should be accompanied by a toll to drive up LCC for all non-electric vehicles. The toll revenue would fund the enhanced bus service, additional charging stations in ski area parking lots, and other vital sustainability improvements so desperately needed. The toll would also discourage driving, which would protect the fragile LCC environment, encourage increased bus ridership, and ease congestion on LCC road. I have spent countless days in LCC for many decades and have analyzed this issue extensively, and I believe this is by far the best compromise to protect LCC while still empowering people to responsibly enjoy the myriad recreational opportunities and benefits that go along with them. The road widening and gondola proposals would permanently damage the LCC ecosystem and be an unsightly scar on one of the most unique and beautiful landscapes in the world.	L S	Website
1603	As the General Manager of another Utah Ski Resort I need so voice my complete support for a Gondola solution to the Cottonwood Canyon travel issues. Gondolas are incredibly sophisticated mode of travel. They can move mass amounts of people efficiently, smoothly and with little down time. This is the future. It's been done all over the world to brilliant effect. Please consider those that know that this is necessary in our state. The Cottonwoods need it and other areas do to. Thank you!	Davy Ratchford	Website
1604	Maintaining the Wasatch Front's unique characteristics, while accommodating the growing demands for people to use this beautiful part of the world is a challenging problem. I hope the decision that will prevail is the enhanced bus solution with road widening for priority lanes. If you give people incentive (i.e. a quick ride up LCC), they'll definitely take it. The Gondola solution is just as cumbersome for LCC users (e.g. skiers still need to move skis from individual vehicle to a mass transit vehicle) but doesn't meet the needs for as many users. In addition, there are year-round benefits for the road-widening solution.	Harrison Jenkins	Website
1605	As a recreational user who accesses Little Cottonwood Canyon nearly every day of the week, every week of the year, I strongly support the enhanced bus solution. I believe this solution will leave a minimal environmental impact on the canyon, and will provide the best return for efficiency, access, and time.	Jimmy Godin	Website
1606	I would prefer the gondola out of the Park City area and to the tops of the Cottonwood Canyons. We had heard this was an option earlier - what happened to it? Having the gondola on the backside eliminates two issues: 1) the transportation issue is somewhat resolved with I-80 and 2) the issue of egress out of the canyon is also resolved; there are 2 ways of getting out of there in case of fire or other disaster - the gondola and down the canyon road.	Nancy CARLSON-GOTTS	Website
1607	Hello, I would have liked to see a maximum number of allowed people in the canyons as an option for transportation. I also saw that the changing cost in maintenance was not considered as part of the gondola alternative. This could significantly change the cost of this option and thus should be included. Carrying capacity of Little Cottonwood canyon should also be considered as a factor when considering transportation options. It is understood that this contains a lot of variables and will be difficult to measure the confounding effects but an attempt will go a long ways for helping everyone select the best option. Generally, this EIS seems to be heavily geared towards trying to get as many individuals up the canyon as possible in the near-term (and the long-term to a lesser degree). There is less emphasis on the long-term cultural impact and impact to the allure and draw to the canyons if it is crammed with millions of people. This is an important consideration to make and if it isn't already on most peoples minds, it will be if isn't accounted for in future plans. If we are not dealing with it now, we will be and it will be much more of an issue. EIS's are intended to be comprehensive and without including these described factors you cannot say you were diligent in selecting the best option. Thanks, -Kain K.	Kain Kutz	Website
1608	I do not favor the Gondola. Enhanced Bus service makes more sense for many reasons. Gondola con: Biggest environmental impact Gondola con: not direct - bus from hub to station? will take too long Gondola con: doesn't service any trailheads Gondola con: not a year round solution for traffic/trailheads Gondola con: actual costs Gondola con: foot in the door for connecting the canyons. Gondola con: its a "cool" solution that "sells" the canyons - not the best solution.	Shane Kemp	Website
1609	I do think for Buses to work we might need to consider some avalanche sheds - that biggest con for buses is that when the canyon closes, they don't work. but did anyone say it was an inalienable right to access the canyons all the time?!	Rob Sergent	Website
1610	Future generations will thank current leadership for the decision to reduce vehicular traffic and put in a Gondola infrastructure in Little Cottonwood. I would prefer to have a gondola through Little Cotton Wood because it would not only be cheaper (no cost of busses or constant road maintenance) but it would also be less air pollution and it would be a shame to lose a nice area because of pollution.	Ryan Shields	Website
1611	PLEASE BUILD THE GONDOLA. I am a life long resident of Cottonwood Heights... I love Little Cottonwood canyon and everything our mountains and resorts represent. A gondola system is WITHOUT DOUBT, the most obvious method to resolve the congestion and allow for better acces/expansion and of course REDUCED EMISSIONS. From my perspective is there needs to be 3 to 5 routes, not just 1 into the canyon via Gondola, from multiple directions (Heber Valley, Park City, Utah County, SLC & Big Cottonwood Canyon. By creating that connected network, you will relieve the pressure on 1 proposed bottleneck junction in Sandy, Cottonwood Heights, Granite etc... 1 track isn't going to solve the problem, but it will certainly help. ALSO-> make sure your design expands to allow future exits at the Forrest Service lots and hiking trails mid-canyon... maybe only allow exits by permit... but you need to allow for that and don't react to fix that after the Construction is done. Gondolas can have midway stations... do it once, do it right and TRULY eliminate the traffic.	Mark McGill	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1612	<p>MY RECOMMENDED OPTION IS: Enhanced Bus (no widening of Hwy 210 in LCC). Lowest Environmental Impact. I favor using low- or zero-emission buses and vans on the current LCC road, and solutions that minimize any additional construction in LCC. Expanding the road or installing a gondola will have a larger environmental footprint - the gondola towers are rumored to be over 150' tall - including the regular lift-tower maintenance along our watershed.</p> <p>Inclusive Transportation that Serves Dispersed Users. Buses and vans can provide transportation to trailheads, serving dispersed users. The gondola will not stop for you at the backcountry trailheads and as proposed will not be a year-round solution.</p> <p>Fastest Time to Solution. I strongly believe we have solutions that exist today that can have an immediate impact. Why wait? Let's do a better job with the infrastructure we have in place today.</p> <p>Lowest Cost. Enhanced Bus Service: \$283M.</p>	Igor Baveda	Website
1613	The gondola option is far superior in every way, including impact on the environment	Brian Seaman	Website
1614	The option to use busses with no additional lane seems best. The canyon is so narrow.	C Wong	Website
1615	I support Enhanced bus. Least costly. Best for the environment. Most convenient for backcountry access. 25 year LCC skier. Sandy local.	kathryn torello	Website
1616	"I support the enhanced bus service with road widening option. I have skied at Alta for nearly 50 years. It is my opinion that the automobile traffic in Little Cottonwood Canyon became a problem due to the IKON and Mountain Collective pass holders. Perhaps Alta should consider a parking area for Alta ONLY season pass holders. Time and time again I observed issues with automobiles which are not 4 wheel drive or equipped with chains - they could not get up the incline. It appears to me that these bad behaving folks are never ticketed and I believe ticketing would be a very good start while you work towards an innovative plan. Additionally, I would like to see cars with one person and not carpooling be required to take public transportation.	Doug Bingham	Website
1617	<p>As a homeowner in Cottonwood Heights I feel very strongly against the widening of Wasach Blvd. into a 7 lane highway. It was explained to me at a meeting that one of the reasons to widen to 7 lanes was to accommodate traffic heading to the highway from points as far away as Draper. This makes NO sense to me as there are much more direct routes to the 215 (Highland Blvd) that would be MUCH less of a negative impact on an entire neighborhood.</p> <p>I WOULD support a bus lane ONLY to support the effort to minimize the car traffic up Little Cottonwood in the winter. This could be done by adding one lane, which could change during the morning and afternoon commutes. NOT 7, which would truly destroy the whole neighborhood.</p> <p>Again, widening Wasach to 7 lanes, with or without enhanced bus service, seems like would only allow MORE cars to line up on Wasach, to be stopped at the merge at the base of the road.</p> <p>In terms of the proposed solutions to the car traffic, I can tell you as a skier that very few people will leave their cars to take a 1 hour bus ride. I love the idea of a transportation hub, I understand the location is not ideal for Little Cottonwood Canyon in terms of distance, but an hour is way too long to entice people to take it. IF that ride could be shortened, by using a bus lane all the way to the ski areas and minimal stops, it has more potential to succeed.</p> <p>Alta ski resort proposed a modification to the gondola option, which I agree with. Again, the transit time must be shortened.</p>	Abby Rehkugler	Website
1618	I would love to see the gondola. Will there be any public voting on this or public referendums	Patrick Kintz	Website
1619	<p>I SUPPORT the Enhanced Bus (no widening of Hwy 210 in LCC) option for access to LCC. I have used the bus many times and would use it more if it was made to function properly. This would involve:</p> <ol style="list-style-type: none"> 1. Lots more parking at the canyon mouths for both LCC & BCC. I have seen cars parked 1/2 mile away from the Wasatch Blvd Park&Ride because there is NOT enough parking for those who WANT to take the bus. 2. Lots more buses with ski/board racks on the outside of the bus to facilitate the riders experience with the bus ride. This means more buses to create a continuous stream of buses throughout the day to avoid overcrowding. 3. I DO NOT support a gondola option or any option links LCC or BCC to Park City. Not only do these destroy the canyons, but invites MORE car travel to drive to Park City to avoid the canyons thus causing more pollution. 	Scott Simpson	Website
1620	<p>Driving a car in the canyon just sucks!</p> <p>Not only would better bus service be the cheapest, fastest, and cleanest YEAR ROUND option; it would be the least harmful to the canyon.</p> <p>I am in support of the gondola up Little Cottonwood Canyon. It is way better for the environment than buses and it also won't get trapped in an avalanche.</p>	Ryan Radebaugh	Website
1621	I prefer the gondola with modifications. Have the parking lot at the base of the gondola rather than requiring a bus ride to the gondola. If there is parking at the base of the gondola, it's much easier to transfer all ski equipment once rather than twice with a bus ride. I feel the gondola would be much less susceptible to avalanches than the road.	Sharon Sabin	Website
1622	<p>I am for the 3rd option Gondola. Best for the environment and it would have less impact on our roadways. I believe it would also improve the tourist revenue. I rarely ski but if we had a gondola system I could see myself using that for a date night going up for a date night or to sightsee I'm the summer.</p> <p>Please do not expand the roads</p>	Fred Lee	Website
1623	Please make sure that any segment of the canyon remains available for other uses, particularly climbing. My other concern is that any solution would only move the traffic and parking problem lower, in the valley. I would like to see a much more detailed plan on that.	Melanie Marier	Website
1624	I support the gondola option	Charlie Fuller	Website
1625	A safer, more environmentally friendly form of transportation is what the people want. Please provide us with a way to get where we need to go while preserving the beauty of the mountains.	Cooper Howell	Website
1626	Enhanced bus service only is enough.	Gayle Mahler	Website
1627	I believe building a gondola in Little Cottonwood Canyon would result in obstructed views and decrease the beauty of the canyon itself. Rather than disrupt the canyonscape, adding a shoulder for a priority bus lane would encourage people to take public transit and maintain the beautiful unobstructed views of the canyon.	Chloe Garner	Website
1628	I am in favor of improved bus services without widening the canyon road! This option provides the most accessibility for all outdoor enthusiasts and also has the least amount of environmental impact. Our canyons are unique in their beauty and crucial for healthy ecosystems. We need to protect them so future generations can appreciate their majesty!	Annie Record	Website
1629	The gondola looks like a good option.	Carol Garner	Website
1630	I vote for enhanced bus systems.	Shyla Sparks	Website
1631	I like the gondola option. I think the alternate station at La Caille is promising as well. I would like to look at options for running the gondola year round. I think it would be a great option in the summer and would be great for events like Oktoberfest that are held in the canyon.	Aimee Baarz	Website
1632	I like the gondola option and would like to see a study for it to be year round for all the events.	Bryan Baarz	Website
1633	I like the gondola approach. I think it is the best alternate option.	Justin Gord	Website
1634	Have tickets for the resorts go on sale up until the same day. Reduce and limit ticket sales. What literally drives people to the canyon in the winter?? Skiing. If this canyon did not have skiing we would not have the problem. REDUCE TICKET SALES AT THE RESORT. Any other change will just congest the canyon even more because not everyone is going to want to be on board. So maybe even privatize the road, that way its not a public road. So if you want to travel up private LCC, you need to hop on a provided vehicle from the State. Or even build a bigger parking garage in Little Cottonwood park and ride so people can park there and take the private transportation up.	Marcus Polli	Website
1635	I support a gondola being the main means of transportation in Little Cottonwood Canyon. Thanks for taking my comment.	Randy Keisker	Website
1636	I am in favor of a gondola	Jill Lackey	Website
1637	<p>I support the enhanced bus service without additional roadway construction. Given that each alternative supports roughly the same number of people transported during peak hours, I will not address that issue. This alternative has relatively quick estimated transit times, the lowest environmental impact, and the lowest cost of the proposed alternatives. In order for any of the alternatives to be successful, carpooling regulations for private vehicles need to be implemented. Additionally, the enhanced bus service should support trailhead access. Loading/unloading times at the few trailheads in LCC should be relatively small, as there are few trailheads and only a small fraction of riders would be utilizing them. This alternative is also easily modified in the future given uncertainties due to climate impacts and population growth. It would be possible to consider all the proposed alternatives in the future under the enhanced bus with no roadway construction alternative. However, the other alternatives leave little room for future changes. Once the roadway is widened, it will stay widened. Once a gondola is installed, the infrastructure and environmental impacts will remain. The other two alternatives are simply not adaptable to future uncertainties. The enhanced bus with no additional roadway construction is the only alternative that does not jeopardize one of the primary drinking water sources for the Salt Lake Valley. While water quality impacts can be minimized with careful planning under the other two alternatives, they will still lead to increased bank erosion and sedimentation problems in Little Cottonwood Creek, as well as decreasing the buffer between the creek and human altered landscapes. The costs for the other two alternatives are simply too much of a burden to put on taxpayers, many of whom do not have the financial resources available to utilize ski recreation resources. In summary, the cost and environmental impacts (both known and unknown) of the other two alternatives (gondola and increased bus service with additional roadway construction) are too great to make them viable options. The only acceptable alternative is enhanced bus service, with no additional roadway construction, in combination with carpooling regulations for private vehicles. Thank you for your consideration.</p>	Logan Jamison	Website
1638	Hello! I am fully supportive of a gondola to help with canyon congestion. Thank you!	Katie Johnson	Website
1639	In favor of Gondola	Alexander Buller	Website
1640	I would like to see a Gondola built, safer all around and more reliable and effective for everyone and less impact on the environment.	Sau Lavatai	Website
1641	I am in favor of the gondola. However, I want 24 hours a day road access for hiking and backcountry skiing, camping, hunting, biking. I don't want a gondola that only serves ski resorts only.	Hayden Gardner	Website
1642	I think the Gondola will be the best option for LCC both for daily guests and employees. plus it is the most environmentally safe option.	Jessica Leblanc	Website
1643	I vote for a Gondola for LCC. For environmental and safety reasons.	Julie Dansie	Website
1644	The Gondola is the best option for LCC	Jessica Breitting	Website
1645	I think the gondola is the best option. Too many people still drive up the canyon without proper tires/traction causing accidents. Busses can also slide off the road so an added bus lane could just add to more slides/congestion. A gondola would also alleviate the large amount of emissions from the many, many cars moving at a snails pace up the canyon.	Breanna Escobar	Website
1646	<p>Working in LCC for 20 years. Gondola is the only viable option.</p> <p>Look at I 15. They keep adding lanes and as soon as they are done there is traffic again and need for more. Same thing will happen in the canyon. All it takes is one car to slide off the road to block traffic.</p>	Paul Derderian	Website
1647	I like the gondola option. I would like it to be year round service so that we could use it in the summer and fall as well.	Tiffani Hardy	Website
1648	I'm interested in the gondola, but concerned about the environmental impacts of building it.	Chrissy Scavezze	Website
1649	I think the gondola option is the best.	Clint Hardy	Website
1650	Hi, thank you for the EIS and work done so far. I love the plan for expanding UTA bus service with more stops, parking and the carpool lane. All of these solutions are relatively immediate and cost-effective. The gondola in my mind, is less so. The faff involved in accessing the gondola itself will likely be a major disincentive to families. Direct buses to each resort are a better solution along with direct buses to popular back country trailheads (eg White Pine, Spruces, Alta town etc). The bus service as it exists currently is horrendous (crowded, expensive, slow) and there is tremendous room for improvement (eg. re-establishing service from 3900 S/Wasatch park and ride and perhaps another stop high on 3300S, adding more buses at peak hours, being able to buy tickets online, better equipment storage solutions etc). Thank you, Anna	Anna Keeling	Website
1651	Gondola please for lcc	George Kolbenshlag	Website
1652	Gondola is the only option. We must remove the rubber and white knuckles from the road.	Bryauna Alderin	Website
1653	I am in favor of option 3, the gondola. Effective, economic, and I feel there are other benefits such as tourism.	Mary Lee	Website
1654	Whilst I support the gondola option, more parking should be added at the base to accommodate skiers.	Mary Blunt	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1655	According to the data, gondola is the most cost effective and has the lowest carbon footprint. The attraction of a gondola ride seems to provide something new for tourists and locals. Only downside is some people may consider it an eye sore. Although I don't share this same sentiment.	Dawson Jenkins	Website
1656	I prefer the gondola option. That would take care of the canyon but then you have to decide the best way to get to the Gondola (parking????)	Kathleen Suzanne Fisher	Website
1657	Gondola would be best for carbon footprint in the canyon and also safest for everyone.	Alex Ruhnke	Website
1658	GONDOLA!!! Let's be smart and make a sustainable change that would have a positive impact on the mountain we're trying to conserve, not one that would create more accidents/cars/pollution/congestion etc.	Christina Niemann	Website
1659	This is ABSOLUTELY NEEDED! Last winter all the buses kept getting stuck and made for difficult transit. Not only will this be easier for skiers and mountain employees, this will keep our mountain clean, lessen the stress on the roads, thus lessening avalanches. I cannot stress how much this is wanted and needed.	Somerville Hosier	Website
1660	I am overall in favor of the gondola to provide long-term sustainability and infrastructure. It would be my hope that instead of being all or nothing, there would be implementation of a gondola as well as decreased access for private vehicles and focus on electric buses. Thank You	Sean Slack	Website
1661	The gondola/tram is a brilliant idea! It would save the environment and be safer for all who patronize the canyon.	Darla Alsop Davis	Website

1663	I am in favor of the Gondola solution to traffic issues in Little and Big Cottonwood Canyons.	Michael Krause	Website
1664	I support the Gondola!	Shelby Jackson	Website
1665	After working/driving in Little Cottonwood Canyon for the last 25 years I see no better alternative than the gondola. More buses won't work, it never has. Expanding the road and/or a dedicated bus lane will help sometimes, but not when it snows, which also happens to be when the most people want to come up the canyon. An example of this already exists where the road has two uphill lanes from the White Pine Chutes to Snowbird and every time it snows this section of the road becomes one lane. The gondola won't slow down when it snows like most drivers do. You won't need to check that the gondola has four wheel drive and snow tires. Also, I believe a gondola will attract sightseers in both summer and winter. What a relaxing and safe way to visit our beautiful canyon!	Brian Buse	Website
1666	I'm concerned about construction of a gondola ruining the natural beauty of the canyon. I would much rather see some kind of toll system and charging people for use of canyon or limiting the number of people that can go to each resort on a daily basis, like at Deer Valley. A bus/shuttle system is another alternative, that I think would be a better solution than the destruction of forest land. As far as avalanches go, it happens and the canyon will be backed up, that is one of the factors people take into consideration when choosing between skiing in little versus big cottonwood canyon. There can be more blasting that happens to have controlled avalanches with set times that the road will be closed for those events.	Selma Moric	Website
1667	I am in favor of the Gondola approach to solving the many problems associated with vehicles in Little Cottonwood Canyon.	Jack Thompson	Website
1668	I support the gondola - it's a much better choice!	Justin Peacock	Website
1669	I'm in favor of the gondola project for many reasons#1 being the reduced emissions IF ALL people are mad to take the gondola. They only vehicles that are allowed up the canyon would be emergency, delivery, construction etc. No exceptions for those that think they are to good for public transportation and need to drive their own vehicles. This goes for ALL people in all seasons. Plus the gondola can run in any weather and if the road should be blocked by avalanche some essentials such as food can still be transported by gondola. The more vehicles in the canyon the more likely there will be accidents, thus it should be limited to those mentioned above.	Heather Coleman	Website
1670	A gondola would truly transform Little Cottonwood Canyon into a world class ski destination!	Warren Crummett	Website
1671	I support the gondola. The gondola is the better choice!	Kalani Dreimanis	Website
1672	I support the gondola as a solution to LCC traffic congestion problems.	Jim Dixon	Website
1673	I support the gondola	Joan Berrett	Website
1674	The gondola sounds like the best long-term solution. However I'm concerned with the costs of parking at the base location and the gondola trips. These costs could easily push people back into their cars. Based on this report, I think the most effective option is the enhanced buses with a dedicated lane. A bus needs it's own dedicated lane so that it doesn't have to sit in traffic, that shorter time will incentive people to take the bus rather than taking their own cars.	Jon Goebel	Website
1675	Lastly, will this only run in the winter? I could see a bus system with more stops being very beneficial in the summer as well	Andrea Gaither	Website
	the gondola option		
	sorry this is hard to do on a phone and my comment was cut off		
1676	To reiterate, I think the bus with the dedicated lane is the best option. The gondola seems flashy and fun, however it's impractical. You have to take both a bus and the gondola and there's no option to add stops along the route after the project is completed. It also takes longer than a bus without a dedicated lane.	Andrea Gaither	Website
1677	I support the gondola.	Lindsay Warner	Website
1678	The gondola is the better choice. I support the Gondola!	Devon O'Kane	Website
1679	I support the gondola!	Jenny Kim	Website
1680	In support of the gondola.	Darren Holiday	Website
1681	I vote for the Gondola. Living in Europe, the hills with Goldola services were the most efficient. The environment impact is greatly reduced over other options as well	Jennifer Cottam	Website
1682	I join with the others in my community and add my full support!	Jared Young	Website
1683	I am very supportive of a Gondola method of travel to and from the ski resorts. It is good for the environment as well as practical during inclement weather. I am happy to see Utah looking at alternative methods. I'd like to submit a vote for Gondola. For the following reasons Riding a gondola is much safer than driving up and down LCC, both in terms of avalanches but also accidents; -Gondola is the cleanest transportation system under consideration. Taking cars, buses and vans off the road reduces emissions helping with Wasatch Front air quality issues ; -Gondola requires far less construction impact on the canyon; -Gondola addresses one of the biggest causes of traffic congestion; traction during snow storms. 3S gondolas run in almost all weather conditions; -Gondola is not impacted by the 64 avalanche paths in Little Cottonwood Canyon; -Snow sheds, which is one of the alternatives, addresses only three of the 64 slide paths that affect the canyon; -Construction of 3,100 feet of concrete snow sheds would be hugely impactful to the canyon and leave massive cement bunkers and tunnels; -As we saw last winter, buses get stuck on slippery roads just like cars; -Snowbird supports tolling to incentivize carpooling and using mass transit in conjunction with a real transit solution; -Snowbird has offered to put more than 1,000 acres of private land owned by Snowbird, including Mt. Superior, along the north side of LCC and in Big Cottonwood Canyon, into a conservation easement if gondola is chosen as a transportation solution. We feel this is a serious solution to a generational problem.	Jason Evans	Website
1685	I would like to officially submit on record my support for the Gondola option as a solution to this problem. As someone who has over 10 years of intimate experience with the aerial transportation industry, this is essentially the only solution that is remotely viable in this application. I also feel that the figures given for capacities and speeds are quite dated and do not reflect the capability of current technology. The other options proposed would either be not nearly as effective or be cost prohibitive and environmentally disastrous in LCC. Please seriously consider the Gondola option as your best option for this problem.	Edward DiRosa	Website
1686	I entirely support the option of more, more, more buses. The gondola is one of the stupidest ideas I've ever heard. So is widening the road. We're not there yet. Let's start with buses, particularly since it's going to be years before our nation recovers emotionally and financially enough to travel to ski.	Amy Ross	Website
1687	I strongly support gondolas. Thank you!	Barbara Barnett	Website
1688	I am in favor of the gondola. Some of the big challenges we face in our department is having our employees drive up in heavy snow storms. Several employees have driven off the road or been in accidents while coming up for their shift. I have also had many new hires quit the first day they drive up because they feel anxious and afraid when driving during heavy snow storms. I think the gondola is the best remedy for guests, canyon employees, and our canyon.	Paula Whitlock	Website
1689	I am against the gondola proposals and support (with WBA) enhanced bus service.	David Mastroianni	Website
1690	I saw the proposal review of the "reasonable" options. I am sure that term was used due to frustration on all sides and wild commentary. I saw a very intelligent option in the snow tunnels at common avalanche points. However, I am concerned about road widening so close to the creek. Just a thought... what about a light rail ski train that takes up one lane of the current road, with snow tunnels at key points. The other lane can be controlled by udot or law enforcement and can be directionally controlled for emergency vehicles, or residents, as needed. All skiers must take the train. Rail Cars can be added or removed based on anticipated volume. I have ridden trains in many countries that handle such curves and steepness with ease. Adding the volume of buses proposed seems would be more expensive, high maintenance cost, and impactful to the canyon. I am late to the discussion, so this may have already been discussed. Just a thought. The snow tunnels would make it viable. Thanks for working to save our canyon!	Peter Sherwin	Website
1691	I support Gondola alternative with perhaps better base parking connecting with gondola.	Robert Schumacker	Website
1692	Totally in favor of a gondola system- it would be least environmental impact compared to other suggestions, a way for multi-abled people to enjoy our canyons and I've had great experiences in Telluride. Buses and cars contribute to the poor valley air quality and risk in the canyon.	MARY NESS	Website
1693	Gondolas would be better for the environment	Greg Bateson	Website
	Thank you for putting this proposal together. I would like to voice my support in favor of the expanded bus service. This is clearly the most accessible option with the least impact on the canyons. I think a key aspect will be building out better terminals and parking at the base of the canyons or in town -- it doesn't matter exactly where it is, what's key is that you can actually find a place to park, get to the bus, and ideally have a sheltered spot to wait. Taking over that gravel mine at the base of Big Cottonwood, for instance, would be a place to start.		
1694	I think it's wise to study the potential of adding a dedicated bus lane if it's possible to expand the road without too much impact on the surrounding area. To be clear, any expansion of the road should be to accommodate public transit (or be for pedestrian and bicycle use as suggested). The last thing we need in the canyons is more cars. The other proposals around switching lanes seem unmanageable: they're confusing, require maintenance & signs, and don't serve locals and backcountry skiers and others who just go up for couple hours and come back down. I strongly oppose the gondola proposal. The Wasatch is more than just a giant ski area. For many of us, the beauty of the canyons is that they serve as a quasi-wilderness in our backyard. Turning the entire canyon system into a Vail or European resort style setting would be a travesty. The ski areas already have a tremendous impact on the area, let's not further expand that.	Jamie Henn	Website
	Thank you for your work. This is such an important resource that we should take changes one step at a time. It's clear that the expanded bus service is the right place to start.		
1695	Gondolas break and are wind effected. Widen road and charge cars. Use money to mitigate avalanche terrain and improve the road	Gary Jones	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1696	As a Utah based skier typically going in big and mostly little cottonwood canyon I believe the gondola should not be constructed along the canyon road. Most of the local ski community believe that simply more busses would make for a better system, if electric busses are available and in the budget that would be a much better start than going to the gondola. The bus system has already worked well with moving people, adding more will likely keep people from wanting to deal with bus traffic and will just hop on. A gondola system may take big loads of people however when crowds arrive the lines will get heavy at the station while an enhanced bus system can allow for constant movement of people, preferably busses with one resort as a destination to keep everything moving. Also as a backcountry skier I can see the construction playing a part in planning to ski certain areas, if massive towers are in the way of the safest route possible or pose a threat to a skier caught in an avalanche could be very problematic. Please consider the bus system being enhanced over the gondola system, we aren't in the Alps it's a 14 mile drive, please suggest to resorts to end contracts with the ikon pass as Utah already is growing in tourism and it is an essential reason the traffic issue is so bad right now. Collin	Coll Titus	Website
1697	While reading each solution, I did not feel the comparisons made sense. It is impossible that each of these solution take the same amount of time as they do not all conflict with traffic. Anyway, while I liked the train idea similar to Europe, it has its down sides including taking a lot of land. Adding busses or cars is just a 'bandaid' to the problem; we must look at the big picture for today and tomorrow, future generations. - Riding a gondola is much safer than driving up and down LCC, both in terms of avalanches but also accidents; -Gondola is the cleanest transportation system under consideration. Taking cars, buses and vans off the road reduces emissions helping with Wasatch Front air quality issues ; This is considering the future of my children. -Gondola requires far less construction impact on the canyon, which unfortunately the train takes; -Gondola addresses one of the biggest causes of traffic congestion: traction during snow storms. 3S gondolas run in almost all weather conditions; -Gondola is not impacted by the 64 avalanche paths in Little Cottonwood Canyon; -Snow sheds address only three of the 64 slide paths that affect the canyon; -Construction of 3,100 feet of concrete snow sheds would be hugely impactful to the canyon and leave massive cement bunkers and tunnels; -As we saw last winter, when UTA increased buses, which was good, busses get stuck on slippery roads just like cars; -Toll to incentivize carpooling and using mass transit in conjunction with a real transit solution is fair; - take in consideration that Snowbird has offered to put more than 1,000 acres of private land owned by Snowbird, including Mt. Superior, along the north side of LCC and in Big Cottonwood Canyon, into a conservation easement if gondola is chosen as a transportation solution. I feel, like others, this is a serious solution to a generational problem. Thank you.	Lucette Barbier	Website
1698	I support the enhanced bus service option ASSUMING: (1) use of electric powered buses; (2) prohibiting vehicular access on SR 210 during the ski season unless the vehicle or its owner / driver is equipped with a non-transferable pass issued to (a) Alta / Snowbird permanent or seasonal residents, (b) non- resident employees working at the ski resorts or in the town of Alta, (c) public service vehicles (i.e. police, fire, ambulance, etc.) and (d) tourists staying at least one night at one of the lodges or condos; and (3) adequate parking structures / facilities are built at the bus transfer / terminals at the base of LCC.	David Leta	Website
1699	Enhanced bus!	Matt Chen	Website
1700	Our home back's Wasatch Blvd, we absolutely do not want the road widened. That won't solve the problem. Not closing the road is the only way to not have traffic backed up in the winter. We have been in our home 23 years. If you want to know about the back ups on Wasatch please give us a call.	Jan Brewer	Website
1701	I support the gondola	Riley Rearden	Website
1702	Will the Gondola have a cost for users? Thanks, Rob	Rob Ricks	Website
1703	First, I live about a mile or so from the mouth of Big Cottonwood Canyon, in Mill Hollow area. Simply stating this as I am a 'local'. A suggestion of '5-10 seasons' has been made on timeline to build a Gondola, do things only get worse between now and then? I would be concerned of the environmental impact of construction of a gondola. Also, what about days when the weather may force closure of a Gondola, high winds, storms, etc? Gondola will likely only stop at resorts, not other destinations in the canyon. The pay for parking (Solitude model) combined with more low cost bus fare options seems basically immediately able to be implemented. Seems like it could make a dent right away if the resorts agreed to the parking cost model. It is money they don't make now, and user demand for product seems to be only growing. The inconvenience is easily handled through mobile payment applications, or a some lot located payment kiosks. The parking costs could possibly be used to help pay for ongoing bus expense as well? The goal being to basically keep the lift ticket costs relatively family affordable, make bus fare affordable, and make parking costs at the resorts painful enough that people use public transit instead. It sounds like the La Cai grounds are being considered for part of a solution. Could building a park and ride lot and bus terminal there be an option? Busses then run from that terminal up BCC and LCC? Maybe eventually even consider street level Trax (similar to 400 S) from the main valley line at Sandy Station along 9000S / Little Cottonwood Rd to the La Cai area bus terminal? While I'm sure expensive, it would allow access to the canyon bus systems from as far away as any Trax/Front Runner station.	ross karcher	Website
1704	Hi. I have reviewed the options, and I strongly prefer a combination of expanded busing, and using tolls. I don't want to expand the roadway, and I definitely don't want a gondola. The tolls will allow those who want to privilege of recreating in the canyon and driving a car, to pay for it. Pay for privilege. When I use a service, I expect to pay for it, and it shouldn't be any different for our canyons.	Jared Rich	Website
1705	Thank you for giving the public the opportunity to make comments on the EIS for Little Cottonwood Canyon. LCC has been my home for the past sixteen years and I love living here. I am totally against the Gondola Alternative 3. I prefer Alternative 1 and 2. I am in favor of the snow sheds but I am not in favor of the Alternative Components for the trail head and road side parking. I would happily pay a toll if necessary.	Elizabeth Kinne	Website
1706	The best part of the canyon is the ride to the top and back. Snow sheds may help keep snow off the road, but I don't want to spend my ride in a concrete tunnel.	Emily Lyons	Website
1707	Gondola is the only solution that addresses all issues. Busses and extra road are still subject to avalanche and traction problems. Also gondola is the cleanest solution.	Jason Ostler	Website
1708	I support the gondola for transport up the canyon	DeGrey Christensen	Website
1709	I would greatly appreciate a gondola as it a better choice for the environment.	Tanner Pfluger	Website
1710	If I am going out for the night, I don't want to spend \$60+ to take an Uber up the canyon and back. A gondola would allow me to go out and enjoy myself fully and safely.	Chloe Fox	Website
1711	I am in favor of the option of the Gondola however, I am not in favor of widening Wasatch Blvd. because I would like UDOT to find a better solution that does not hurt the Cottonwood Heights community. The hubs need to just a little further away from the mouth of the canyon and closer to freeways exits. If Little Cottonwood Canyon problems are solved in any of the three options and At the same time if Big Cottonwood Canyon is not addressed the impact on Big Cottonwood Canyon will be HUGE! The two canyons traffic issues needs to be addressed and solved together as they affect each other.	Carolyn Keigley	Website
1712	I would love to be able to enjoy time with my new baby going up the canyon. A gondola would allow that memory building instead of me having to focus on the road.	Sean Quinn	Website
1713	No to widening the road and yes of a gondola	jacqueline Wheeler	Website
1714	I love the idea of a Gondola! It's way more environmentally friendly and would be great to have year -round.	John Nielsen	Website
1715	Hello Utah Department of Transportation, I am writing to you as a climber who recreates on the boulders in Little Cottonwood Canyon. I am writing to you to advocate for the gondola option outlined in the EIS at all costs. Road widening will not solve the problem of increased traffic congestion coming from the Salt Lake valley as the city grows exponentially. Choosing a road widening will only cause more people to enter the canyon at already busy times overloading and creating larger vehicular pollutant loads, the very reason why we escape the Salt Lake valley during a bad inversion (summer ozone or winter industry/vehicle smog). A gondola system will cost less to build and establish, provide a scenic view of the canyon and it's recreation and intrinsic beauty, and have the minimal impact on the canyon itself. I beg you to choose the gondola option as adding more roads does nothing to adapt to the problem of increasing growth in Salt Lake City. I would also like to add that increasing bus services as well as the gondola can help lower traffic volume up the canyon during peak seasons. Thank you for taking the time to read my comments.	Michael Jarzin Jr	Website
1716	I support the gondola	Perri Rossi	Website
1717	I support the expanded bus service with no road widening. The impact on non-winter recreation activities in LCC seems too high with the other two options.	Eddie Morillas	Website
1718	Prefer Enhanced Bus with No Road Wideing. I rode the 994 all last season to Alta. When I rode at 10:40 up from 9400S 2000E, and the 2-59 down from Alta, usually, only seven to @10 passengers going up and coming down. My feeling is the Ski Bus is under utilized.	Michael Vahle	Website
1719	An increase in the number of buses servicing the canyons without addition of an extra lane is the least expensive option and would be the most expeditious as well. Additionally, an increase in buses (particularly zero emission vehicles) would have the lowest environmental impact and is the most practical. An expectation that people would park, take a bus, and then take a gondola is unrealistic. Finally, the other options, especially the gondola, cost more and would take much longer to implement. Should the enhanced bus service fail to produce the expected results, the alternative options could be entertained at a future date.	Fernando Rodriguez	Website
1720	No gondola!!!!	Tim LaPointe	Website
1721	As someone who doesn't drive very often, I get nervous driving up the canyon. I would feel much more comfortable with the gondola option. Please consider the gondola!	David Wright	Website
1722	Too many times people get stuck up the canyon when an avalanche shuts down the road. A gondola takes that problem away entirely.	Taylor Daniels	Website
1723	Widening the road and building snow sheds does more harm to landscape that is already at risk of being damaged and lost. The gondola has less of an impact on the environment! The gondola is a much better choice.	Caylie Newcom	Website
1724	I support the Gondola in little cottonwood and encouraging people to get out and see Utah's beauty. I don't support the addition of more busses which will pollute Utah's AIT quality more.	Sarah Evans	Website
1725	Please choose the Gondola!	Mike Santo	Website
1726	YASSSSS GONDOLA	Allan Nguyen	Website
1727	Yes environment! Love a ganda!!	Aaron Munar	Website
1728	Let's reduce our carbon footprint together!	Adam Perez	Website
1729	Selena Gondolas	Jonathan Hughes	Website
1730	I am definitely against this proposal as a frequent visitor.	Kathryn Hayward	Website
1731	Any road option is short-sighted and doesn't solve the problem. Getting people off the road is the best way we can protect the canyon and plan for future demand.	Myles Woolstenhume	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1732	<p>Thank you for sharing the LCC ESI and soliciting our feedback. I am impressed by the thought and care that went into detailing and studying these options. I am impressed by the focus on public transportation, because (as evidenced by your results) it's clear that public transportation must be a core part of a solution that addresses delays and preserves LCC.</p> <p>In my travels in and around LCC, I've found that delays on Wasatch Blvd and the mouth of the canyon are a key component of travel delay on busses. I think that both of the bus-focused alternatives could be viable options, but I think they should do more to alleviate bus delays along Wasatch Blvd. In particular, I think that expanded roadway capacity on Wasatch Blvd should echo plans in LCC - in particular, extra lanes on Wasatch Blvd should be reserved as bus-only lanes during peak hours, and retained as a wider shoulder for bikes and pedestrians in the summer.</p> <p>Critically, the accuracy of the rider metrics presented in the EIS, and the overall success of the plan, depend on many people choosing to take the bus up LCC. For this to be the case, the bus needs to offer an improved service over driving - increased bus speeds, and tolls on the LCC road, are the best way to achieve this. The current plan - for signal priority on Wasatch Blvd - is insufficient. This is clear because the estimated bus travel times are no lower than the estimated car travel times during peak hours. Please consider an alternative that provides bus lanes on Wasatch Blvd.</p> <p>Thank you,</p>	Ian Schneider	Email
1733	<p>Please do not expand the road in LCC. As an avid rock climber I would hate to see the road encroach any further onto, or even destroy, the boulders in the canyon.</p> <p>More bus services or install a gondola if minimal impact is possible.</p> <p>Thank you</p>	Justin Wood	Website
1734	We need to do more for our environment. The gondola is the best option. Let's fight for our wildlife and the protection they deserve.	Ryan Lambert	Website
1735	As a teacher here in Utah it is hard to have these discussions with my students about what is happening financially and environmentally. It would bring me so much joy to share with them that the state is thinking about their future and good activities for them that are good for the economy and earth. Take more time to consider the gondola.	Jenny Barlow	Website
1736	Too many times people are stuck up the canyon when an avalanche shuts down the road. A gondola takes that problem away entirely.	Carter Thompson	Website
1737	A gondola sounds like a great option - creating more accessibility for summer and winter activities.	Carter Thompson	Website
1738	No road widening resulting in destruction of rock climbing, specifically bouldering areas. We need more information on road access under the Gondola and Enhanced Bus (no road widening) plans. Will it be only busses in winter? Closed in winter when gondola is in use? Also, do not restrict roadside parking as this will take away alot of access for backcountry skiing, climbing and hiking. Please update us with further information. Thank you!	Kipp Schorr	Website
1739	I'd vote for option #2 (Enhanced Bus Service in Peak Period Shoulder Lanes). The "mobility hub" should be a parking deck with other amenities. Lockers, bathrooms and restaurants would encourage use of the hub. Put in the bus only lane as outlined in option #2. Charge cars a toll to go up the canyon (using a system like EZPass to make it faster than a manual toll). Then use the toll revenue to pay for the mobility hub/parking deck.	Lauren Kugler	Website
1740	<p>After years visiting Europe in all sizes of ski areas, we are nuts to rely on parking lots and highways to support Little Cottonwood and the traffic is destroying the community. A gondola or funicular train are by far the best solutions and there needs to be a huge parking complex at the base because people simply won't ride a bus- ski equipment is heavy and difficult to move, they simply won't do it twice. Also, ONLY allow for two stops- one for Snowbird and one for Alta. Don't accommodate minority interests who own property, etc. because it will drive up costs. In addition ition, adding more buses for Trax to the gondola site would help. What cannot happen is this dim-witted planning currently going on that just accelerates people to the choke-point (which is a two-lane steep canyon road that cannot be widened).</p> <p>And, get everyone to pay- have resorts kick in from season pass and day sales, have a fair use fee, have a parking fee and use money that would have been spent on dumb expansion projects. Build a massive garage structure at old Shopko site on Little Cottonwood and run the gondola right up from there.</p>	Kris Altice	Website
1741	Definitely in favor of the gondola solution. The lower cost road proposal does not address the traffic issues substantially enough to make a long term solution. The higher cost road improvements cost more than the gondola, have a much bigger environmental and aesthetic impact, and still risk issues with accidents, many avalanche paths, and stuck vehicles. For many reasons, the gondola solution is the way to go.	Chris Calhoun	Website
1742	Say YES to the environment!	Nelson Hung	Website
1743	Have you considered turning the canyon (both lanes) into one way up only service from 7 am - 9:30 am daily with a break to let traffic come down occasionally, then do the same thing in the afternoon from 3 pm - 6 pm? It would have to be under some type of police / highway patrol escort to manage it. Also have highway patrol manage the mouth of the canyon on powder days - if you don't have AWD, 4WD or chains you can't go up the canyon.	Joe Steffan	Website
1744	The Gondola would be beneficial for both guests and EMPLOYEES of Snowbird. For safety, expense, and carbon footprint. I Support.	Makayla Fitzgerald	Website
1745	Love this project! Especially the gondola!	David Cruz	Website
1746	<p>I am opposed to the addition of any gondola within the central Wasatch mountains for the following reasons:</p> <p>It costs taxpayer money, but only benefits ski resort patrons</p> <p>Busses are more efficient in cost, and will not add more "tourist attraction" patrons like the gondola will.</p> <p>Busses have the opportunity to be used year round, and for all parts of the canyon (not just resorts)</p> <p>We already have about 90 lifts in the central Wasatch alone - any further development will undoubtedly infringe upon the undisturbed land we have left.</p> <p>I am in full support of large transportation hubs with multi-level parking garages along the 9400 s and Fort Union lines with increased, more consistent, cleaner busses.</p>	Douglas Tolman	Website
1747	<p>As a long-time Utah resident, I am an advocate for the lowest impact solutions in the Wasatch. Enhanced bus service, without road widening, is a clear winner in this case. In addition to being the lowest impact option, I believe it will serve the most diverse population of users.</p> <p>As someone who frequents the Little Cottonwood backcountry, having flexible access to a variety of trailheads is important to me, and I don't believe a Gondola will effectively serve this need. Additionally, grand infrastructure is the opposite of why I go to the Wasatch. To be able to walk for an hour or two and feel like I'm truly in the wild is a beautiful thing, and building additional infrastructure into the viewshed will create a ski resort feel for the entire canyon. I don't want to feel like the cottonwoods are just one big resort. Retaining the character of the wild so close to home is incredibly important. It's what makes Salt Lake City a worthy home.</p>	Bridger Layton	Website
1748	i would like to see the roads widened and more parking for cars to drive up to Alta. Snowbird has lots more parking than Alta. Couldn't another parking lot be created somewhere and even have a shuttle service to bring skiers to the resort lifts?	Kathee Gabriel	Website
1749	Not a fan of the bus, but I love the gondola! I can't wait to ride it!	Emma Fitts	Website
1750	My vote is for the gondola option!	pedro rodriguez	Website
1751	The gondola is the better choice!	Adrienne Halvorson	Website
1752	Much better environmentally friendly option.	Case Spaulding	Website
1753	YES YES YES!!	Liz Corona	Website
1754	<p>Hi,</p> <p>After reading the 3 proposed options I think that a large number of any snow sheds and tunnels should be built on the road (Euro style) with electric buses used to transport individuals up/down. Additionally, multi story parking garages could be constructed at the current parking locations to house a much larger quantity of vehicles and serve as transport hubs.</p> <p>The gondola idea has a kitschy sight seeing uniqueness to it, but ultimately isn't a strong solution.</p> <p>Thanks for taking time to read, and consider these thoughts.</p>	Alex Hunt	Email
1755	The gondola is a cost-effective, long-term solution to problems we've been trying to tackle for years. I am strongly in support of the gondola.	Delaney Westfall	Website
1756	Support the bus plan. WASATCH BACKCOUNTRY ALLIANCE has the right plan.	Emily Berriochoa	Website
1757	As my parents get older I worry about their vision and safe driving. I know the canyon can be scary and hard to navigate, especially in the winter and at night. It would bring me a lot of comfort if they had an option where they wouldn't have to drive. The gondola is a great solution.	Brian Carey	Website
1758	Please choose the Gondola! It would make a great activity for date nights and outings with friends.	Noah Hartwell	Website
1759	I love the canyon. It is so beautiful. I fear a lot of that wildlife and beauty would be ruined with the snow shed. A gondola would be a beautiful way to enjoy the canyon from a whole new perspective.	Dalinn Halls	Website
1760	Widening the road and building snow sheds does more harm to landscape that is already at risk of being damaged and lost.	Whitney Uland	Website
1761	My husband and I love to go skiing but it can be such a hassle with traffic. We would feel more inclined if we could go with more ease. The gondola seems like a cool option!	Jayme Wappel	Website
1762	Please, please make this a reality!	Megan Heaps	Website
1763	Air quality is important to me and I support the gondola.	Greg Liles	Website
1764	Being an avid snowboarder I think a gondola would greatly improve the experience of going up to Snowbird.	Jackson Waetchler	Website
1765	Utah's air quality is terrible. In 2017 we were ranked number 1 in worst air quality in the nation. We need a solution that cuts down on carbon emissions. The gondola is clearly the least impactful on the environment.	Maddie Hall	Website
1766	Being stuck in a car for hours in traffic is super difficult for someone who struggles with claustrophobia like me. The gondola seems like the most practical and consistent schedule which would ease my anxiety.	Tanner Forbes	Website
1767	As an individual with a disability, transportation is difficult. Buses are cramped and crowded, cars are uncomfortable when they get stuck or delayed in the canyon. It's clear that the gondola is the most consistent with its schedule, long life, and very low if any environmental impact. The gondola is the choice, hands down.	Carson Tueller	Website
1768	Please choose the Gondola!	Megan Haley	Website
1769	The gondola would provide a great activity for my family to enjoy during the summer and winter. With such a large family, car trips can be difficult. Any relief from that drive would be such a blessing.	Terica English	Website
1770	The gondola sounds awesome.	Caleb Jenson	Website
1771	As a mom of two young girls, I CANNOT get stuck in the canyon. If either of them were to have medical needs I wouldn't be able to get them the help they needed with canyon closures and traffic. I would prefer the gondola choice.	Lauren Wilcox	Website
1772	I support the gondola and the additional option it provides for transportation in a new way.	Shelby Tagge	Website
1773	The gondola is the best choice for the environment. With little to no carbon emission and the lowest effect on wildlife, it is the best choice.	Ryan Armstrong	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1774	I am in support of the gondola. I love the sustainability and environmentally friendly option. It will help to not increase the bad air quality in Utah.	Alex McDermott	Website
1775	I am tired of traffic in the canyon. The gondola at least provides an alternative transportation method without having to be on the roads.	Cassie Green	Website
1776	A gondola is the best way to see the canyon. I would greatly appreciate this being taken into consideration.	Keith Goodrich	Website
1777	I want the gondola. For ease of transportation for me, my kids, and my grandkids. Please build the gondola in Little Cottonwood Canyon. I think it would be the safest and most efficient way to address the traffic on powder days and all days for that matter. more buses and cars and lanes and snowsheds just will not do justice to the beauty of the canyon. A gondola system is the best option. Just be sure it operates early and late enough for employees. Also, please build it in my lifetime. I am 64 yo now. thanks. More reasons: -Riding a gondola is much safer than driving up and down LCC, both in terms of avalanches but also accidents; -Gondola is the cleanest transportation system under consideration. Taking cars, buses and vans off the road reduces emissions helping with Wasatch Front air quality issues ; -Gondola requires far less construction impact on the canyon; -Gondola addresses one of the biggest causes of traffic congestion: traction during snow storms. 3S gondolas run in almost all weather conditions; -Gondola is not impacted by the 64 avalanche paths in Little Cottonwood Canyon; -Snow sheds, which is one of the alternatives, addresses only three of the 64 slide paths that affect the canyon; -Construction of 3,100 feet of concrete snow sheds would be hugely impactful to the canyon and leave massive cement bunkers and tunnels; -As we saw last winter, buses get stuck on slippery roads just like cars; -Snowbird supports tolling to incentivize carpooling and using mass transit in conjunction with a real transit solution; -Snowbird has offered to put more than 1,000 acres of private land owned by Snowbird, including Mt. Superior, along the north side of LCC and in Big Cottonwood Canyon, into a conservation easement if gondola is chosen as a transportation solution. We feel this is a serious solution to a generational problem.-Riding a gondola is much safer than driving up and down LCC, both in terms of avalanches but also accidents; -Gondola is the cleanest transportation system under consideration. 1778	In favor of gondola to access Snriwbird Thanks for putting this together. I love the gondola idea but it seems like a double edge sword when you have to park somewhere else and take a bus. Especially on busy days when the traffic is already jacked. Could add to the problem. The infrastructure in the canyon might also be an eye sore. I also like the idea of more busses with snowsheds. But as great of an idea that is, snow and weather will always play a factor causing buses to have issues regardless. To compound the affect people are stubborn and always want to do there own thing. Hence people driving up by themselves. We need a mandatory toll to enter with a pass option like millcreek. Also need to strictly enforce carpooling. 3+ or you can't come up in your personal rig and must resort to a bus. Might be a pain for some but it's not that hard to think ahead. This can be regulated easily at the toll booth. Person just checks your car and mines well look at snow tires. This will also spread out cars in then canyon. That's a good thing because people drive like maniacs. Overall my vote is for the gondola and a toll booth at the base with mandatory carpooling if you're going to use the canyon. (Special circumstances for employees) And if you can't go up because of the carpool issue you can take the existing bus system or the gondola. Thanks. Having grown up at the base of Little Cottonwood canyon (and being an avid skier), I recognize the great need to help the traffic congestion that has plagued this area for as long as I can remember. After reading the different proposals, I am most in favor of the tri-cable gondola system. Specifically scenario 3B - the bus to gondola option. Not only are gondolas a unique and beautiful way to travel but they are the far more environmentally friendly option to help keep our canyons the beautiful escape that they are. Gondolas will also be safer from avalanche danger and will negate the need to widen the roads up to the ski resorts. The bus to gondola option is not only cheaper than some other options offered, it will be met with less resistance from the surrounding residential areas; my childhood home. Also, from a personal standpoint, I have never wanted to take the bus that is currently offered. Simply offering more buses and widening the canyon road (in my opinion) is the worst way to go; environmentally and option wise. For me and many others I know, despite the transfer from car to bus to gondola, I would pay for a gondola ticket long before I would pay for a bus ticket. If we are wanting to give people a positive alternative to driving, the gondola option is one that would actually convince me not to drive my car. Thank you for your time.	Richard May	Website

1780	I am a resident of Alta, and in reviewing the 3 options I believe the 2nd option is the best. I believe widening the shoulder and creating overpasses for avalanches would help solve more than just the issue of road congestion in the winter. It also is estimated to be the fastest option which I believe will translate into being the most effective and enticing for LLC visitors. I believe by widening the roadway and dedicating the extra lane to pedestrians and bikers in the summers, would be a tremendous upgrade for the safety of pedestrians and bikers. Driving this road everyday in the summer is stressful due to the many winding/blind corners with popular hiking trail parking just off the side of the road. Since I drive this road often I am aware of which places are commonly congested, but I worry about those who are less familiar with the canyon road and may take these corners too fast not realizing there may a family with young children around that sharp turn, on or just off the road. Sharing the road when there is no shoulder is difficult especially in the downhill lane when bikers are also traveling downhill with space to be off to the side. I have seen a biker hit by a car this year in what I would consider one of the safer places on the road due to visibility. It exemplified to me why we also need to make the safety of pedestrians and bikers a priority while we consider these modifications for travel in LLC. I also hope that the avalanche bypasses would serve as wildlife crossing areas in the summer for the safety of drivers as well as animals, which is important considering we are in a national forest with acres of land that are inaccessible to humans and therefore seems to be a refuge for a large amount of wildlife. I also believe widening the road would help with congestion in the winters by allowing more people on the road at any give time. I support the use of tolls and I hope you will consider an option for locals/employees to have a special pass.	Matt Neborsky	Website
1781	Regardless of the new transport means that will happen, there will always be a need for cars. My kids train at 6:30am. I need to go by car. If it's not the case, then the route of public transportation is only valid if you are planning on having something going up and down every 5 minutes at certain times a day. I don't think anyone wants to get crammed inside anything any more. If you have to space people out, you also need to offer frequency.	Kristin Montgomery	Website
1782	I am a resident of Alta, and in reviewing the 3 options I believe the 2nd option is the best. I believe widening the shoulder and creating overpasses for avalanches would help solve more than just the issue of road congestion in the winter. It also is estimated to be the fastest option which I believe will translate into being the most effective and enticing for LLC visitors. I believe by widening the roadway and dedicating the extra lane to pedestrians and bikers in the summers, would be a tremendous upgrade for the safety of pedestrians and bikers. Driving this road everyday in the summer is stressful due to the many winding/blind corners with popular hiking trail parking just off the side of the road. I also believe widening the road would help with congestion in the winters by allowing more people on the road at any give time. I support the use of tolls and I hope you will consider an option for locals/employees to have a special pass.	Anne Sullivan	Website
1783	I work at Snowbird, and the road has always been the worst part of my job. Im in favor of the gondola option as it is the only option that actually addresses the full extent of the problem. Busses get stuck in the snow just like cars do. The gondola would not. The gondola is also the most environmentally friendly option. I believe that the gondola should run year-round as well. It's hard for me to understand how we can say we support green and climate change actions if we only promote and run busses in the winter. The same would apply to the gondola. It would also be safer for those coming up to Oktoberfest to have a transportation option down the canyon other than driving. This will also alleviate parking in the canyon, but ONLY if there are adequate parking hubs built at the gondola station. I appreciated the increase in busses this winter, but there was not enough parking at any of the stops, so please over-prepare and create more parking spaces than anticipated. If you build spaces just for the current demand, there will not be enough spaces by the time the hubs are actually built.	Kara Doane	Website
1784	I also believe widening the road would help with congestion in the winters by allowing more people on the road at any give time. I support the use of tolls and I hope you will consider an option for locals/employees to have a special pass. Having a gondola would hurt the beauty and preservation of the canyon. A large wire running through the canyon would take away from the canyon itself. I think the best option would be enhanced bus services with a bus only lane during busy times. Allowing the bus to travel faster than cars would be a good way to incentivize people to use the bus. Additionally, a bus only lane should be added at the mouth of the canyon so the bus does not get stuck in the same traffic as everyone else. There is no point in taking the bus if it is not quicker than driving.	Emma van Beuningen	Website
1785	I am a father of 6 kids. We ski almost every Saturday at Snowbird. We never go up the canyon with less than 4 people in the car. My priority is to minimize the time that my little kids have to stand on the side of the road waiting for service, and minimize the number of times we have to transfer equipment. We can't haul equipment 500 yards and then have a long wait. The kids will all be crying.	Stan Pugsley	Website
1786	Enhanced busing is the best and least-invasive solution.	Jason Taylor	Website
1787	Gondola please	Linda Beecher	Website
1788	I comment those involved for providing these very interesting options for transportation in LCC. My preferred alternative is the Enhanced Bus Option. This option will provide the quickest travel times. The optics of a fast-moving bus lane next to cars stuck in traffic will likely encourage even more people to take the buses. This option is also easily scalable in the future with higher frequency buses and more parking infrastructure down valley. In theory, a wider road would allow for light rail in the future. Though this option has the highest capital costs, it not only addresses the immediate transportation needs but provides the capacity for future enhancements My second preference is the gondola but am concerned both by the slower travel times and visual impacts in the valley. support your idea of continued bus service and modified gondola	Lindsey Steed	Website
1789	skierd be patient & drive up the mountain ,single lane. I would like to see the road widened with extra buses if there is an orderly way to implement it and room for everyone. (I like the idea of getting up there in half the time it would take to ride a gondola or bus in the car lane). I rode the UTA bus one time four years ago and it was miserable!!! I parked at the base of Big Cottonwood canyon early around 7:30am. I waited in the freezing cold with my two children for over an hour. (We couldn't wait in the hut because we would lose our place in line). A couple buses came through but they were already full and kept on going. Another bus came and we were shoved to the side by pushy people. My toes were in pain on their way to frostbite. Finally, I got a little more aggressive and made sure my kids and I could get on the fourth bus that came by. Once on the bus, we were packed like sardines - not a chance of getting a seat. It was a stretch to find a pole to hang on to! I stood body to body with strangers. It was all I could do to protect my kids from suffocating in the crowd or getting hit in the head with someone's skis or boards as the bus turned up the canyon curves. Once at Brighton, it took another hour or two to warm my toes and relax before I actually skied. After that experience, I never wanted to attempt a UTA bus ride up Big OR Little Cottonwood Canyon.	Chris Apicella	Website
1790	support your idea of continued bus service and modified gondola	barbara reineke	Website
1791	skierd be patient & drive up the mountain ,single lane. I would like to see the road widened with extra buses if there is an orderly way to implement it and room for everyone. (I like the idea of getting up there in half the time it would take to ride a gondola or bus in the car lane). I rode the UTA bus one time four years ago and it was miserable!!! Once at Brighton, it took another hour or two to warm my toes and relax before I actually skied. After that experience, I never wanted to attempt a UTA bus ride up Big OR Little Cottonwood Canyon.	Luke Rahn	Website
1792	Even with my previous traumatic experience, I would still consider riding a UTA bus up Little Cottonwood if there was an orderly way to save your place in line so you don't have to fight for it. Maybe online reservations or take a ticket like the DMW. Also, having a limit to number of people who can be in the bus would help. Can UT road department add rails to the side of the road up Little Cottonwood? It is so scary on those turns when it is icy and cars slip around almost falling off the edge.	Mary Williams	Website
1793	I do not support widening Wasatch Blvd which would only get saturated with cars as our city population grows. I would instead incentivize HOV lanes, bus lanes. This will have the impact of decreasing property values in proximate areas and increasing air pollution in our valley - especially during the sensitive winter inversion season. This is a short sighted move. Instead we need to incentivize clean energy and not overpopulating our mountains with even more people which fundamentally changes the nature of our resources.	Matt Vukin	Website
1794	After reviewing all three alternatives, I believe that the Gondola would be best choice. Thank you	scott carson	Website
1795	Please no gondola. Increased bus service and or road widening is my vote. Not sure how else to voice my option. Salt Lake City local here the and Alta-Bird passholder.	Aidan McCarthy	Website
1796	After reviewing all three alternatives, I believe that the Gondola would be best choice. I think the Gondola would be the best alternative to preserve the natural beauty and ecosystem of little cottonwood canyon. In addition, the gondola would reduce auto admissions and alleviate traffic and parking issues. Thank you	scott carson	Website
1797	I am highly interested in the gondola alternative, but believe that a parking structure at the gondola station should be made as opposed to a park and bus to the station. If I could park at the station and ride the gondola, I would use it. If I have to get on a bus to then go to the gondola station, the unload and reload, I wouldn't use it. Please remember that we will be hauling gear for adults and children. Thus, every exchange is highly involved and you are carrying equipment from place to place. I would prefer one exchange to the gondola and then one exchange getting off at Alta or Snowbird. I think the Gondola would also be used year round - again, only if parking is at the gondola station. Please make this alternative to the plan.	John Stringham	Website
1798	Having looked over the various options, I am 100% in favor of investing in the Gondola system. Not only is it cost competitive, it is safer than freeway travel (especially during the winter), AND it's an attraction in itself. The journey almost more fun than the destination.	Chris Bentley	Website

1799	<p>Adding more buses is not a bad idea, but I doubt it will work. This works in theory, but I would say it will not achieve the overall goal of reducing traffic in the canyons. I live at the base and the biggest problem you are not looking at is that the canyons are NOT always crowded. They are mostly only crowded on holidays, weekends, or powder days!</p> <p>Things to look at:</p> <ol style="list-style-type: none"> 1. are the buses currently at max capacity? 2. what are the incentives to riding the bus vs driving a car. Or what would the incentives be? 3. other reasons canyon is crowded <ol style="list-style-type: none"> 3a. (buses/cars sliding off the road 3b. cars getting stuck. 3c. road closures <p>On a powder day no one is rational, we are all trying to get up the mountain and some only have time for a run or two. Others are on vacation and have kids, they are not willing to give up mobility they are usually the ones who don't know you need 4wd or are not used to icy conditions and slow up/completely stop the road. And lastly, if the snow is falling too hard WE HAVE TO SHUT THE CANYON DOWN ALL TOGETHER!!!! We can have all the buses in the world, it won't matter if people don't use them or can't use them.</p> <p>Reasons a gondola is a better idea.</p> <ol style="list-style-type: none"> 1. it is fun, people will want to use it. it could be more scenic and if done properly will have minimal impact on the habitat. 2. it wouldn't be subjected to road closures. If done properly we would no longer have to worry about road closures up or down the mountain. We can get there earlier and stay later. 3. Will be more stable. if a family of 4 spends thousands of dollars to ride the best snow on earth and then can't because the conditions are "too good" to get up the mountain, they probably aren't coming back. 4. it would be it's own destination, people would come for it! no one is coming to Utah for the buses. 5. it could possibly pay for itself, and over time would be less impact on the environment. Using solar credits could even make it carbon negative. <p>I strongly suggest looking into a gondola system in more detail. It will create a steady flow in and out, will still allow people to drive. Will wind up being less of an impact on the environment. And will be a draw rather than a hassle. I have some ideas for how best to setup a station as well, but will go into more detail if the gondola proposal passes.</p>	Jack Frazier	Website
1800	I support the gondola because it is better for the environment!!!!	Jessica Grove	Website
1801	<p>I am for the enhanced bus option WITHOUT roadway widening. This option is the most cost-effective and has the least environmental impact. Widening the road would not only increase the environmental impact in LCC, but it may encroach on popular bouldering areas down low in the canyon. The gondola is the worst option as it will have a massive impact on wildlife. Land development practices, like installing a gondola, have been shown to have negative impacts to animal movement behavior by simply being a new, foreign object as well as causing direct habitat loss, increasing non-natural sounds and smells that interfere with wildlife perceptual abilities (i.e. the ability to locate both high quality forage and mates). LCC is home to moose, mule deer, black bears, porcupines, and other wildlife. All of these creatures are already having to alter their movement behavior to respond to traffic in the canyon, back country skiers, and ski resort development.....they don't need another disruptive and destructive piece of development in their habitat. Additionally, installing a gondola in the backcountry would diminish the experience backcountry skiers in the Wasatch. We already have two massive ski resorts in this canyon, those two resorts should be the only place for a gondola. If people want to ride a gondola, go to Snowbird.</p> <p>Once again, I am for the enhanced bus option only.</p> <p>Thank you.</p>	Mallory Sandoval Lambert	Website
1802	like the enhanced bus the best. Major tie up is avalanche control which none of the items address.	david smith	Website
1803	Of the three options presented, gondolas are the clear choice. Buses will contaminate the air at a much higher rate, and gondolas are far less likely to be affected by natural disasters like avalanches. In addition, while the initial costs may not be the least of the three options, more importantly, the operating and maintenance costs are the most reasonable in the long term.	Leona Taylor	Website
1804	<p>Gondolas are both the most environmentally and fiscally responsible choice!</p> <p>The gondola is an amazing idea!! Go with that option, please!!</p>	Kellen Whaley	Website
1805	<p>I am in favor of the gondola option for the following reasons:</p> <p>It will help guests and staff access the resort on demand; It will reduce vehicle traffic in the canyon which is good for safety AND for access AND the environment -- it will help predictability for canyon access on snow days which helps the businesses AND the guests who have invested in passes and programs. It will eliminate roadway parking and congestion that leads to safety hazards. Finally, it will help with watershed issues, avoid building 'sheds' over the highway or widening the road which are both environmental issues that COST MORE and don't produce enough result.</p>	Margaret Loring	Website
1806	I support the idea of expanding our bus line system as a resolution to better transportation within the canyons. I want to protect our watershed, protect undeveloped land within the canyons, and keep as low of an environmental impact as possible.	Natalie Montañez	Website
1807	I think the gondola would be great! I would much prefer the sound of a gondola than the smell of burning car brakes !	Cory Dupey	Website
1808	Please build the cable car, or Lift to Alta	Axel Grabowski	Website
1809	<p>I am a big proponent of the gondola plan. It is green, clean, efficient, and less prone to avalanche and other natural events. It would be a signature piece of infrastructure that signals to the world that we take our canyons seriously and are making an effort to keep vehicles of all types (including buses) out of our pristine wilderness. And while a bus system might perform fine financially in the winter, there would be almost no demand for such service in the summer. A gondola, on the other hand, would be a revenue-driving necessity in the winter, and an attraction in its own right during the summer and fall. It would allow people to take a scenic tour of our mountains, without car pollution, while at the same time generating revenue. It sounds like a obvious solution to me.</p> <p>Furthermore, imagine a world in the future where a similar gondola connects Alta to Brighton and Park City! Suddenly you can take green transportation all the way from Sandy to all of Utah's major ski resorts -- Sandy becomes a viable starting point for Park City skiers. It would be the jewel of North American skiing -- and the world.</p> <p>My only concern would be placing the parking facilities at the base of the canyon so far away from the gondola. I would like to see some parking available at the gondola's base, even if that is closed/limited in the winter. I don't see people loving having to park, wait, take a bus, wait, and then get on the gondola, especially in the summer/fall when there would be fewer cars and therefore a smaller lot/garage at the gondola would make sense.</p> <p>In the end, I see the gondola approach as a year-round revenue driver (parking, tickets, etc.), much more than bus service could ever provide -- all while lowering hazard risk and being more beneficial to the beautiful environment of Little Cottonwood canyon. This is an investment we should make in Utah's future! Thanks!</p>	Taylor Acton	Website
1810	I'm all for the enhanced bus service. Parking is a problem. But I am primarily a backcountry skier and need access to backcountry trailheads.	Richard Whitson	Website
1811	The gondola option is the best solution to address canyon traffic based on a number of considerations - clean energy, less impact on the canyon than avalanche sheds, can move people more effectively during storms. This could also be a tourist attraction during the non-ski seasons which could help support the cost.	Margelia Jones	Website
1812	Send ittttt	Thomas Banks	Website
1813	This would be a good idea	Hunter Conley	Website
1814	This is a good idea	Hunter Conley	Website
1815	Sounds great to me.	Bob Bailey	Website
1816	<p>I recommend enhanced buses and no widening of Highway 210 in LCC. This option has the lowest environmental impact, serves dispersed users, is currently the fastest solution, and lowest cost.</p> <p>The solution has to be convenient for all users. The current gondola proposal would require users to park at a hub near the mouth of BCC or on 9400 South, put on their ski gear, take a bus to the gondola station at the mouth of LCC, grab their ski gear (for the 2nd time) and make a transfer along the gondola ride. I can't imagine a family with a couple children would be willing to take the gondola. In contrast hoping on a bus to take you to a trailhead or resort will be an easier option, especially if more buses and parking are established.</p> <p>Additionally, if the gondola option were put into effect, the bus system would be cut back, thereby making it necessary to drive to get to most dispersed use trailheads in the canyon.</p>	Darren Balls	Website
1817	Send it, great idea	Will Trice	Website
1818	While the gondola idea sounds interesting I wonder if there will be ample parking for the 7,000 cars per day visiting the canyon. Wouldn't an avalanche cover with a wider road for a designated bus lane be better even though it may be more expensive?	Tom Cross	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1819	<p>General Comments:</p> <ul style="list-style-type: none"> -Thanks much to the sponsoring partners for allowing us to comment on these very important issues! -Has anyone calculated what a reasonable 'recreational carrying capacity' of LCC (and BCC,MCC) are, and should that also be a focus for control? -How will the decisions made here impact the other two canyons? -Has anyone thought about the alternatives' impacts on climate change, and how climate change will impact the project (ie after the snow is feasibly gone), and the impact the post fossil fuel age will have on the project? -Any Wasatch Blvd alternative should include 'traffic calming' measures where possible. -To reduce road width can reversible lanes be used on Wasatch Blvd? More southbound in the AM, and more northbound in the PM? -Tolling should include reasonable annual rates, and reduced senior rates as well. -Please no extensions in transport beyond or between the canyons. (Yes, none seem to be proposed so far.) <p>Preferred Alternative - "Enhanced Buses with LCC express lane widening"</p> <ul style="list-style-type: none"> -Expense of the alt is justified by the long-term effects of this project. -Like: Extra bus (winter) and bike/ped (summer) lanes' idea in LCC. -If some folks don't like the term 'bus', then call them 'shuttles' -This alt is infinitely more flexible in scheduling (daily, weekly, seasonally) and routing than the Gondola alternative, and somewhat more than the plain enhanced bus alternative. -Like: trail head parking upgrades. But certain shuttles should stop at these, as well, depending upon seasonal use. (ie maybe only White Pine in winter, but all trailheads in the summer.) -All buses should eventually be electrified. -Like: Snowshed alternatives. No matter what, we should have the snowsheds. <p>Least Preferred Alternative: Gondola</p> <ul style="list-style-type: none"> -Worst alternative on so many levels! -Canyon is too narrow to accommodate another transport right of way. The view shed would be ruined. If people want more gondolas, can they please go to Europe. -This alt is severely limited in flexibility for seasonal routing, it does not serve the trailheads, and emphasizes only the two ski resorts. This would render it very limited in positive effect in the summer. -The road overhead gondola route would be an annoyance and distraction to drivers and ruin the view for them. -It won't be fully utilized. If folks have to do two transfers from a distance away (car to bus, and bus to gondola) people will regard this as too burdensome, a last resort transport mode. There is no feasible location for a transport hub and bottom tram terminal together. -The proposed lower tram terminal will consume the use of the present park n ride area. That area should have expanded parking and mostly dedicated to encouraging car pooling (which would be effect the tolling structure) with slug lanes and other pooling accommodations. The proposed "Lower Canyon" location should be utilized for this purpose. -No snow sheds are in this alt. We need snow sheds no matter what. Including them would greatly increase the cost of this alternative. -How will the Gondola alt enhance trail head access? <p>-Thank you very much, again, for allowing us to comment!</p>	John Kennington	Website
1820	I'd love to see a gondola built instead of any additional road space.	Melissa Robison	Website
1821	I support the gondola option. I'm concerned that the other options do not solve the biggest problem that I have encountered. That problem is not getting up the canyon on powder days; it's getting down the canyon if there is snow in the afternoon. Right now one vehicle that doesn't have snow tires or has an inexperienced driver can bring all traffic exiting the canyon to a stop. We have had 2 experiences where the trip from Alta to the fork at the entry to LCC took over 4 hours. A gondola would solve this problem. From what I can tell, the other options would not.	Christian Ahrens	Website
1822	I'm in favor of the gondola option with the modification of adding a parking structure at the base station to encourage use.	Robert Kidd	Website
1823	I love the idea of a gondola. If I had a safer, more reliable alternative to driving up the canyon, it would take a huge chunk of the stress off of getting up there with my family in the winter. And having more cars off the road can't do any harm to the air in the valley, either.	Ben Hess	Website
1824	Is there going to be widening of Old Wasatch between 210 and 9400?	Cheryl Altman	Website
1825	Now it takes me 20 minus to drive to Snowbird, because I go late morning. The Gondola would take me twice that long, which for me, is quite a detraction. And another question is, how much will be the cost per person for the Gondola? Would it be subsidized by Snowbird and Alta as are the bus tickets? I look forward to your response.	Steve McQuide	Website
1826	Yes to the gondola!	Marquet Call	Website
1827	We need a parking structure at the gondola base. Bus from distant lot to gondola too cumbersome, time consuming.	Daniel Johnson	Website
1828	Gondola or the option that is best on the environment.	Jerirae Reynolds	Website
1829	I would prefer the increased bus proposal with widening of the road up to the alta bypass turnout. Thanks for all of your hard work on this!	Raelene Davis	Website
1830	I support the Gondola!! It is a better long term solution for the environment and tourism and will keep our canyon from being over-congested!	Christine Garrett	Website
1831	As a frequent skier and user of Little Cottonwood Canyon, I support the idea of a gondola up LCC and the idea of a parking hub near the current La Caille. I have traveled extensively throughout Switzerland and have found their alternative transportation options to be both efficient and enjoyable. A gondola would eliminate the traffic congestion that currently plagues the canyon and it would allow for a more pleasant and stress-free ride up the canyon.	David Tillotson	Website
1832	During heavy snowfall periods when the canyon is prone to avalanches, skiers (and resort employees) could still get up and down the canyon.	Leanne Thompson	Website
1833	The gondola would also be a great PR/marketing tool for Utah as it would be the first of its kind in the United States.	Fred Cottle	Website
1834	We need to fix the congestion problem in LCC sooner than later and moving forward with the installation of a gondola is the best solution.	Becky Mackintosh	Website
1835	I'm not sure why the end goal is more people up the canyon. If the plan is to develop so much of this landscape it will no longer be the wilderness that attracts so many.	Stephen Fotis	Website
1836	People still flock to Zions even though they have to access it by bus.	Teresa Taylor	Website
1837	People understand road closures due to avalanche risk and are willing to wait until it is safer.	Jeannie Savas	Website
1838	Adding more vehicle access will only pollute our air and water. We have to stop resisting the need to change our behaviors and start living more sustainably. It's worth a little inconvenience.	Amanda Bearden	Website
1839	I don't support widening the road or gondolas. People need to carpool, 4 per car, tolls and buses.	Shaydar Edelmann	Website
1840	Or a lottery system needs to be implemented for access with priority for locals.	Patrick Carey	Website
1841	I am in favor of the gondola option.	Amelia Williams	Website
1842	With that said, I'M ABSOLUTELY OPPOSED to the la caille station concept!!!	Erin Davis	Website
1843	Moving the base of the gondola further west would put countless homes on display and infringe on our privacy (mine included).	Victoria Schlaepfer	Website
1844	I support the ENHANCED BUS WITH ROADWAY WIDENING FOR PEAK PERIOD (SHOULDER LANE) option because it had the shortest transit time and creates support for summer use in addition to winter use.	Dylan Alexander	Website
1833	Thanks.		
1834	I give my support to the transportation system that improves the reliability, mobility, and safety for residents, visitors, and commuters who use S.R. 210.		
1835	I am long-time skier at Alta. I live in Washington, D.C. and have been coming to Alta for over 20 years-skiing with my family. We generally ski for about 20 days per season. I support the option of constructing a Gondola. This option is the best long-term solution for making the resort accessible, while minimizing the environmental impacts and providing the greatest safety for traveling the road. The road access should be limited to residents, commercial vans and shuttles, and other appropriate pre-approved special uses.		
1836	no gondola please. Widen the road.		
1837	Prefer gondola option if parking lot or garage could be made at gondola base (rather than taking bus to gondola); 2nd best option add bus lane.		
1838	I support the gondola. After having a season pass and getting stuck in numerous lines of cars idling, I knew there had to be a better way for the environment to still get up to enjoy the resorts. The amount of cars is atrocious.		
1839	I strongly support the gondola option to improve consistent travel ability and remove vehicle miles traveled.		
1840	Similar to Zion National Park run a shuttle bus system every 15 minutes. Make the buses environmentally friendly. Certain cars are allowed up like employees, local residents, special events, etc which will require a permit displayed. Or if you must drive you can purchase a day pass for \$30. Parking at the bottom where the shuttle picks up will be an issue so you'll have to build a parking garage but allow free parking or nobody will use it.		
1841	I support the gondola		
1842	As a homeowner in Cottonwood Heights and a 5 year season pass holder at Alta and Snowbird, I support the enhanced bus system with no road widening. This is the cheapest option with the least impact to the environment. Zion's example has shown that this solution can be greatly successful for users without compromising the environment. After all - it's not just our land, and nature is what makes our canyons such great areas to recreate. Not to mention this area is a watershed providing a majority of the valleys water throughout the year! Widening the road is an absolute no-go, completely disrespectful to our wild lands for solely human gain. The gondola is a short sighted, expensive solution that does not consider all use cases - summer recreaters, tourists, and multiple trailheads throughout the canyon.		
1843	I believe that the best way to address congestion in Little Cottonwood Canyon is through increased bus service with widened lanes. People are more likely to take the bus if they are going to get to their destination faster than if they drove themselves. I also think that making Little Cottonwood bus only should be something to strongly consider. This would take investment in Park and Rides and more buses, however it would not require the lanes to be widened. I think if you were to let up only buses and employees that had essential jobs and are driving the canyon every day, you would be able to significantly reduce traffic. The issues arise when people don't know how to drive in the snow or are in cars that are not equipped to do so. If you eliminate the option to drive yourself up, this problem is eliminated as well. If this is not something that can be considered, then buses with dedicated lanes is the obvious best choice as buses will be able to travel faster and make more sense for people that are trying to get up/down the canyon.		
1844	I am in favor of the gondola option for the reduced environmental impact both from road widening and increased bus traffic. The need to take a bus from a hub to the base of the gondola plus the estimated travel time for this option of 63 minutes will be a huge deterrent for most. It would make the most sense to route the gondola in such a way to have a large parking structure at the base of the gondola both to cut down on total travel time and eliminate the need for busses which will undoubtedly still have timing issues with weather and traffic. I think the option of being able to park at the gondola base and eliminate the need to take a bus in any way would be the most well received and well utilized by visitors. This option would not be totally dissimilar from skiing at the Canyons, just a longer more scenic and comfortable gondola ride and guests are more likely to view this travel time as "we're already at the resort" and not lost time on a cramped, crowded and slow bus.		

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1845	<p>Hello! First of all, thank you for trying to improve this roadway system to the places we love. Upon reviewing the alternatives, supporting material, driving these canyons for over a decade, being a professional skier in the canyon and a mechanical engineer, these are my thoughts to improve the current system in a timely, cost effective manner while disturbing nature the least and providing the most flexibility.</p> <p>1. What must be achieved. The new system in place must allow the flexibility for those to enjoy the outdoors whether it is ski touring, hiking, climbing, going to alta, or to snowbird. So the new system must allow multiple stops. If a gondola were put in, it would require multiple stops with gear hubs/lockers for enthusiasts to store equipment as they will no longer have a vehicle. As the canyon can be windy, I believe a gondola will create backups when running slower due to conditions. A gondola also requires that everyone park, of which there is no room for all of this mandatory parking. So a gondola is not practical.</p> <p>2. Avalanches One of the greatest haunts to canyon traffic is avalanches. Between 6am and 8am, these potential closures build massive snakes of traffic in the canyon. Constructing avalanche tunnels at key locations will minimize the chances of a canyon shutdown, even during mitigation periods so we can have a smooth flow. The key to maintaining traffic and an enjoyable experience is smooth, consistent flow.</p> <p>3. One way traffic during peak conditions. Without building any roads, maximum flow can be achieved by closing the road to downhill travel from 7:30am to 9:30am (about this). The road will be closed to uphill travel from 3pm to 5pm. This allows for an express Bus roadway on the 2nd lane so that people are rewarded with truly faster travel by taking the bus. To accommodate more people riding buses, resorts should build better locker storage areas.</p> <p>Electric buses will eventually be incorporated.</p> <p>4. Parking garage at wasatch blvd lot. For the increase in volume of people going up the canyon, this lot will be made into a multi story parking garage. This can be used for bus travel or carpooling. Reducing traffic for everyone is a perk to the environment and your enjoyment. You need not pay to park at this lot as you will pay to take the bus, and see further details below.</p> <p>5. Canyons Driving Pass Every canyon driver is required to have a pass. To get this pass, you purchase it through the website of Snowbird or Alta with your seasons pass or your day tickets/hotel reservation. These places are setup to handle online sales. You MUST submit a photo of your snow tires to get approved. A scanning system may be placed at the mouth of the canyon just like driving the HOV highway lane or FASTPASS. It can scan your windshield going 70 mph so this is feasible. If you do not have a pass, a photo of your plate is taken and you are FINED. These fines pay for the infrastructure. The canyons driving pass also is used to pay for the infrastructure.</p> <p>The key to this pass to drive pass is CREDITS. People need reward systems to keep doing good actions, and this will be no different. Every time you ride the bus, scan your driving pass or seasons pass. You will get credited money back towards the purchase of your driving pass. So if you never ride the bus, you paid \$100 for a canyon driving pass. If you ride the bus 20x times (this number is flexible), you may receive enough credits that you reached the maximum credit giveback where you only paid \$20 towards a canyons driving/usage pass. This \$20 will go towards infrastructure/bus fees.</p> <p>6. Rental cars are not allowed up the canyon Rental cars do not come with true snow tires. Unless rental services begin equipping with true snow tires, driving up is not an option. This can be enforced by rental services by saying insurance does not cover the canyon, and without a pass they will be fined. They cannot get a pass because the system (where you take a pic and enter your snow tire type) will deny them a pass. Renters can park and take the bus (fee included in your lift ticket etc.)</p> <p>By following these steps, the only thing necessary to build is avalanche barriers and a larger parking garage in a space that is already owned by the state. A simple system of uploading images and checking snow tires in that system will be put in place, along with a basic highway FASTPASS or EXPRESS PASS system which is decades old. We have effectively kept traffic moving with avalanche safety, while discouraging driving through the faster option of buses and charging people to drive. Maximum flow capacity within the roads have increased dramatically with the fast bus lane transporting thousands of people an hour in unprecedented timing, all while maintaining the current flexibility to park where you want for skitouring.</p> <p>Thank you for reading, and I hope you consider this as a possible action plan to minimize cost, maximize flex, safety, and enjoyment while monetizing to pay for better infrastructure .</p> <p>Giray Dadali</p>	Giray Dadali	Website/Email
1846	Against any gondola/tram type mechanism transiting LCC. Permanent and ugly solution to a problem that is fluid. Dynamic and robust bus service that is capable of flexing above a set daily schedule. Buses stop at bottom of LCC for transfers. Requires equipment and man power in reserve. Paid for by Alta/Snowbird? Well designed snow sheds to reduce reliance on road shootings. Limit canyon capacity. Bigger roads result in bigger crowds? Our own little Colorado I-70. Gondola runs 30, 90, 300 days/year? Alta/Snowbird parking lot capacity is now where in the valley?	William Good	Website
1847	I think the gondola is the better choice.	Becca Gardner	Website
1848	I think that employing a train or trolley up the canyon is a better alternative to a gondola. A gondola will hold less people, it also will make one feel as if they are in less wilderness. the point of little cottonwood canyon is not to contribute to the profit of ski resorts, the point of LCC is to preserve the wilderness and allow the public to experience it. A gondola, especially one eith it's only stops at resorts will defeat the wilderness feeling.	JAKOB EGGERT	Website
1849	Listen I really dont like how short sited America Is. Bottom line. The canyons are being over pooped by people. More people not in designated areas next to bathrooms is bad. Water we drink come from these canyons. I missed the zoom meetings. I just found out. I dont like any of the options. My idea would lower the impact. In the long run be less expensive and not reduce snowbirds need to bring tons of people to events. We need a fee booth for cars at the bottom. 5 \$ a day. That needs to happen now for all canyons. It does reduce numbers. If it doesnt then raise it til it does. If people can buy a 10\$ beer at snowbird they can afford to pay to go up the canyon. Secondly put a tram up the road. Buses will only fowl up the air. UTAH needs to clean up its air!!! Charge 3\$ a tram ride to designated resorts that have bathrooms and trails. Not the big box trams. Like 12 seater ones for speed. You wont have to clear the road to get people out of the canyon with an avalanche or wait to clear the road to get people to and from work. Maybe just maybe we can be more like Canada in our perception of not over pooping our watersheds. By reducing our numbers in the wilderness. I see a future where all people are required to carry their waste out. We can plan better as a city. More bathrooms and less people away from them. Buses are not an efficient option because icy roads and pollution. Everyone Ive spoke to agrees. Please consider waste management on our water sheds.	Delena Nielsen	Website
1850	I had some issues looking at the plans electronically. Finally was able to pull it up. So glad there is a Gondola option but smaller ones would be more year round efficient that can carry bikes. Another thought is this needs to be a year round option. With drop offs for climbers early on. And for goodness sakes more bathrooms. Just a ton more at the stops. The idea people will just hold it on all the trails is sad. My other concern is the road being widened for buses. Im a biker. Biking lanes hello??? Less buses. Gondolas yes!! If the road gets widened at all it should be for bikers which is a very low pollution option. Just saying.	Delena Nielsen	Website
1851	I am all in in support of the gondola system, the other solutions are old school.	Peter Caceres	Website
1852	Gondolas are a better choice.	Valerie Brown	Website
1853	The gondola is a brilliant, innovative solution. We have the technology and ability to change the way humans impact the mountains. We should not support a "solution" that means digging into the canyon; we need to lessen our impact on the earth as much as possible. We should always support any solution that refrains from further destruction to the canyon.	Sarah Hall	Website
1854	Widening the road would 1) create further negative human impact to the canyon 2) increase the amount of vehicles in the canyon 3) would not lessen the issue with air quality 4) lack of parking and 5) avalanches, road slides and drivers not qualified/experienced in the snow would still be a huge issue.		
1854	I support the Gondola!! Please make it happen!!	Taya Lee	Website
1855	I would support the Gondola option best. All of the options have specific pluses and minuses, but not only does the Gondola fit a sweet spot from a financial standpoint, but would augment the whole LCC experience - potentially year-round	Jeffrey Rose	Website
1856	Of the three options, I believe the gondola to be the most responsible choice, both fiscally and environmentally. Also, I believe summer operation should be included in the plan.	Alison Johnsen	Website
1857	Please go with the gondola option! This choice is more accessible, safe, and better for our environment. It makes so much more sense, especially considering Utahs winters and the risk for avalanches.	Chelsey Reynolds	Website
1858	I am for this! I think that it is a great idea for both employees and guests!!	Emily Andrezzi	Website
1859	I strongly recommend UDOT proceed further with a Managed-lane Concept. No movable barrier is required. Advanced signage integrated with gantry design for a smart 21st century canyon is all that is needed. Three vehicle lanes utilizing two-lanes-up in the the AM transition to two-lanes down in the PM. Improved shoulders with a bike are also a good idea. Canyon drivers can be trained, and 5G connectivity will soon be here to be deployed on signage -gantries. The Peak-period Shoulder Concept fails the reality check test. If this concept works why isn't UDOT implementing everywhere at other locations with peak periods? When ever the traffic backs up on I-15 why not just open up shoulders? If UDOT/UTA cannot afford a new bus fleet for the tri-Canyons , how could they afford new rail that would be only used part of the year realistically. NO NO NO snow sheds, they are not needed. I have skied at Alta for 58 years, and back-country skied in the Tri-Canyons for 45 years, when the avalanche conditions dictate a road closure, then close the road. You do not want cars sheltering in-place beneath the snow sheds. The snow sheds would not reduce any of the current avalanche safety operations. If Alta or Snowbird are in inter-lodge then a snowshed does nothing, you still do not want vehicles in LCC. Keep cost low, less is more. Snow sheds are unsightly. New snow removal equipment with good operators is all that is needed. - its not the 1960s. A new smart highway with minimal new pavement but the best high- tech signage will be the best approach for LCC. The only transit hub that need to be considered is at the mouth of LCC. A transit hub at LCC needs to incorporate a multi-lane round-about of significant diameter to facilitate the Managed -lane Concept - only three vehicle lanes, bike lanes each way, and improved shoulders; is all that is needed. NO movable barrier is needed with the most advanced signage-gantry design. Gantries with smart signage will really help UDOT operations and maintenance with improved driver communication, thus safety, on a "connected 21st century canyon road".	John Berry	Website
1860	In passing, just leave aerial transit systems to the ski-resorts. ATS systems do not have the capacity and introduce an immense number of new problems not mentioned in the DEIS. One final comment please allow some parking where big safe shoulder areas exist on nonsnow days. Please do not punish canyon people who want to park around the White Pine trailhead or back-country ski around Alta, or climbing areas for instance. Most the time there is plenty of pavement for all. Further a discussion of parking has to include the USFS. The Manage-lane Concept that I recommend leaves parking as is to promote safety and keep costs down. After all lets be honest with ourselves, the ski resorts (and I am a die-hard Alta pass holder) cause the problem. When the ski resorts are closed (during every the summer and pandemics) for skiing, the canyon roadway infrastructure is just fine as it is and UDOT has bigger problems to solve around the state. Less is more in LCC, and it is always going to be crowded at home U of U football game on a beautiful fall day, and it is always going to be a bit crowded on a "POWDER DAY". This year the people checking for snow tires did an amazing job at showing how traffic flow/operations can be improved with simple solutions and good management.		
1860	This is by far the best option. Expanding the road to allow for a bus lane will not reduce the number of cars heading up the canyon nor will increasing the bus service. Buses are inconvenient and crowded, and people do not enjoy riding them. Adding a Gondola with a parking structure will allow people to park and ride up with more comfort then a bus, and it will prevent hundreds of cars from sitting and idling with stormy weather is present, all of which are still concern when increasing the road or adding more bus options.	Thomas Burbank	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1861	<p>This public comment period and subsequent study are concerning the feasibility of a project. When studying the feasibility of a project, it is essential to explore the best alternatives. The expansion of bus routes and construction of a gondola system are good alternatives, but rail is also a good alternative that is not being considered. Rail lacks attention for use in the canyons due to short term considerations i.e., initial cost. When choosing alternatives, more factors should be taken into consideration than the initial cost. Additionally, the \$1 billion cost of rail quoted is a projection; more research should go into that number so we can make a more informed decision.</p> <p>While rail may prove to be more expensive, there are reasons rail should still be studied. Rail has a lot of benefits the other proposed transportation methods do not have. Rail gives the option to connect both canyons through one continuous route, federal money is available to railroads, long-term efficiency is higher with a railroad, rail could be a competitive advantage Utah could gain over other states, etc.</p> <p>This project is going to last for generations, and the initial studies should plan for a long-term solution. As public officials, you hold a fiduciary duty when it comes to investing public funds. This duty requires you must make the best decision for the community; this community includes future generations. A bus lane and gondola would carry a fraction of what rail could. Rail simply has a better capacity, and it is easier to add capacity to rail than a gondola or bus. When the busses or gondolas reach capacity we are likely to have congestion issues again. However, if rail reaches capacity, another train can be added to the line or more cars can be added to the train consist.</p> <p>Rail may not be the ultimate answer in this case, but it is used all over the world to solve congestion issues, and it is considered to be one of the most efficient long-term solutions. The initial cost is a draw-back, but there are many reasons why rail should be considered here. Utah already has an impressive rail and light rail network; we should continue to expand the use of rail in Utah as it has already proven effective and efficient. I would encourage the decision-makers not to let a large initial cost detract them from at least studying rail as an alternative.</p>	Brady Hewitson	Website
1862	<p>The proposal talks about improving by 2050???? What about 2025? Sr210 in the canyon is clearly not capable of handling the traffic load now. Build the gondola, it can happen in under 24 months, build parking garages at the base of it not 5 miles away, give it capacity to carry everyone up, employees and visitors. Only vehicle traffic on the road is trucks bringing supplies, ambulances and police. Look at Zermatt and many other euro resorts where there are no cars in ski towns...think of the environmental benefits. Save the money on providing the busses that very few people use. Riding the gondolas up can be marketed as part of the charm of the Wasatch, Alta and Snowbird. It would also be a good idea to have a stop at White Pine for the backcountry folks or they will raise a big stink and delay progress.</p> <p>Alta Resident: XX Powder Run RD, Alta UT 84902.</p>	Jon Burke	Website
1863	<p>The Gondola Option is the only realistic solution for LC Canyon. To implement, it must be both financially viable, be consistently utilized in the winter season and enhance the quality of life and environment within the Snowbird and Alta communities. To this end the following suggestions are forwarded:</p> <ol style="list-style-type: none"> Rider Utilization and Convenience <ol style="list-style-type: none"> The Alta Gondola Station should be located near the Albion Base and not at Wildcat/Collins Base. Albion Base station will make it more convenient for families, children and intermediate skiers to want to utilize the Gondola system. This is the focal point for families, children activities and ski school. Placing the station at Wild Cat base area will add an unnecessary inconvenience and delay in being able to reach the Albion Base. It will discourage families for wanting to use the Gondola on a routine basis (especially on most days when canyon roads are clear). The goal should make it very easy to off load and prepare for skiing without having to carry bags/skis, etc. a significant distance or wait for another shuttle to take the family to the next location. It should try to rival the Whistler experience. (Presumably, the gondola station at Snowbird will be near the Center and/or Cliff to make the experience as easy as possible). Albion Base is the preferred location for future connection to Solitude/Brighton or Park City. Albion Base will avoid loss of parking in the Wild Cat Base (see below). Albion Base is a safer location for avalanche mitigation and will avoid delays in getting skiers back down the canyon during storms. Alta Pedestrian Zone and Restricted Parking <p>The UDOT plan is to no longer permit parking along the roads and areas that are at high risk for avalanche exposure. The Town of Alta and UDOT can maximize the environment and visitor experience by converting the Town of Alta into a Pedestrian Zone. In so doing, this will severely reduce the number of parking slots and incentivize visitors to routinely take the Gondola to Alta for skiing. The only parking that should be left for ski visitors should be in the Wildcat Base area. Parking above Wildcat Base up to Albion Base should be restricted only for hotel guests, Alta employees and town staff. This section should be converted into a Pedestrian Zone. The reclaimed area can be rezoned for future commercial development, park land, etc. as so deemed by the Town and Alta Resort. As the Gondola becomes widely expected, additional restrictions on parking in the Wildcat Base area can be considered.</p> Storage Facilities <p>For skiers, and in particular families, to want to routinely take the Gondola there needs to be an affordable and convenient way to store belongings for both short term and long-term over the season. It will not be convenient for families in particular to have to bring up on the Gondola all of their equipment and supplies each time. There needs to be a nearby storage facility to allow long term storage (e.g. skis, boots, etc) and short term storage. UDOT needs to convince the rider that it is much easier and more convenient to take the Gondola than to take a bus or to drive a car up to the resort.</p> <p>These three above suggestions will result in consistent utilization of the Gondola during the winter season, and will not discourage families from choosing Alta as their preferred ski resort. The latter is a critical factor for the Alta Resort/Town of Alta. Once a family selects a ski resort, the parents and their children are unlikely to change their allegiance over the subsequent decades. As an example, if a family finds it is easier to use the Snowbird Gondola Station over the Alta Station, they will choose Snowbird as their primary ski resort even if the parents grew up skiing at Alta. Or, they will prefer to go to another resort in BCC or to Park City where they can drive due to the perceived convenience.</p> <p>What makes Alta a special and unique place is the generation of families that have chosen to come back each year and share their experience with both their children and friends. Every effort needs to be taken to make sure that families remain the priority in the location of the Gondola Station, the ease to which families can access the Albion Base area, ability to provide affordable on-site storage facilities (short term and long term), and ease of loading and unloading from the Gondola Station with children.</p> <p>The Gondola Station will give Alta an opportunity to both reclaim its past and provide a opportunity to reshape its future.</p> 	Henry Holland, M.D.	Website
1864	After reviewing the different options I wish to express my support of the Gondola option, with the alternative site using the La Caille Base Station and NOT at the mouth of LCC.	Jeff Nord	Website
1865	Would like to see the gondola installed as it is the most long-term, environmentally friendly option. Concerned about where the route would be, including the pick-up/parking location at the bottom of the canyon.	Tess Matina	Website
1866	<p>Regarding the gondola option...I live on 3652 Little Cottonwood Lane, 0.9 miles west of the gondola base station. While I cannot be more enthusiastic about the potential to decrease traffic and reduce pollution with the gondola (as well as having the base station so close to my house), I am frankly terrified of the possible parking nightmare my neighbors and I would go through. I have no doubt that skiers/boarders would take advantage of the proximity of our road to the base station, and the problems it would cause the homeowners and our families would be tremendous.</p> <p>Little Cottonwood Lane is not a wide road, so if skiers/boarders parked on both sides, it would kill the ability if the road to handle 2-way traffic. Along with the inevitable increase in traffic in our small community, snow removal would be greatly hindered, if not totally impossible. And it should be pointed out that snow removal is typically performed the day of a storm, when the traffic/parking in our community would be at a maximum. And let's not forget about people driving/parking in our neighborhood in 2-wheel drive sedans. Sure, they'll avoid getting stuck on LCC Road, but they will inevitably get stuck on our unplowed road after their ski day up canyon, making a rough traffic situation unbearable.</p> <p>Please, if you are seriously going to consider the gondola option, you must address the traffic/parking in our community. A suggestion would be that all Little Cottonwood Lane residents get street-parking permits, and all violators are ticketed/fined heavily (with increased fines on powder days). Whatever you do, please look out for us. Thanks.</p> <p>-Christian Davidson</p>	Christian Davidson	Website
1867	The gondola is the better choice - better for the environment and less avalanche risk.	Erin Lunsford	Website
1868	I support the gondola	Tiffani Mills	Website
1869	<p>The Little Cotton Wood Canyon , the Wasatch Front, the Salt Lake Valley are they important to the economy, the longevity of the life style we enjoy and our future ? Yes of course.</p> <p>How do we leverage the time we have before we can not reverse the course we are on? In review of the options we have to preserve all we have to set a positive course for the future we have but one option.</p> <ul style="list-style-type: none"> - The Gondola is the cleanest transportation system under consideration. Taking cars, buses and vans off the road reduces emissions helping with Wasatch Front air quality issues ; -Riding a gondola is much safer than driving up and down LCC, both in terms of avalanches but also accidents; - -Gondola requires far less construction impact on the canyon; -Gondola addresses one of the biggest causes of traffic congestion: traction during snow storms. -Gondola is not impacted by the 64 avalanche paths in Little Cottonwood Canyon; -Construction of 3,100 feet of concrete snow sheds would be hugely impactful to the canyon and leave massive cement bunkers and tunnels; -As we saw last winter, buses get stuck on slippery roads just like cars; -The preservation of land and and proposed contribution to reduce development with the Gondola is critical. -Snowbird has offered to put more than 1,000 acres of private land owned by Snowbird, including Mt. Superior, along the north side of LCC and in Big Cottonwood Canyon, into a conservation easement if gondola is chosen as a transportation solution. We feel this is a serious solution to a generational problem. <p>Please move forward with this proposed plan.</p> <p>thanks</p>	Tom Hofmann	Website
1870	I am in full support of the Little Cottonwood Canyon gondola. It is better for the environment. Salt Lake City already deals with so much air pollution, it is part of what makes the inversions we get so terrible. If we can reduce that pollution I think we absolutely should!	Rachael Harned	Website
1871	Snow sheds below avalanche paths must be part of the solution so that the canyon does not have to close as often. These closures will continue to create traffic nightmares no matter what types of road/bus/lane/gondola improvements happen.	Jesse Malman	Website
1872	The gondola is a better choice!	Adam Daly	Website
1873	This is 2020 - why are we prioritizing ANYTHING above the environment?? I support the gondola.	Jon Scott	Website
1874	I think a gondola up the canyon will be more environmentally friendly, and while initially costly, most people would be willing to pay a fee if they can go up the canyon in half the time.	Gladyris Larsen	Website

1880	I frequently go up the canyon, and would LOVE to be able to be more environmentally friendly and efficient by taking a gondola. I think this is a wonderful idea.	Jason Wild	Website
1881	I'm a Cottonwood Heights resident along Wasatch Blvd. I don't have any problem with the road being widened (as many do), however I would really like a paved path along the road. So many people use it for exercise, and if speeds are increased along the corridor then it will become even more dangerous. I think that is happening regardless, but I just wanted to add my voice that the path would be an important asset to the Cottonwood Heights community.		
1881	Also, in terms of safety, I think we need the lighted intersection at Kings Hill Dr. Turning out of the neighborhood can be pretty scary.	Trent Rolf	Website
1881	In terms of the canyon travel, I think the Gondola would be the way to go. It seems less practical at first, but the more I think about it, I like it. Even though it's a little slower, I think it would add an extra element of fun to the canyon visit. It would be almost like a landmark attraction, while simultaneously reducing vehicles in the canyon.

1888	go gondola!!	Joe Finkelstein	Website
1889	I support the Gondola	Heather Steineckert	Website
1890	I have to first say that none of these 3 alternatives are totally worth supporting, since they don't really solve the problem of too many people trying to get up Little Cottonwood Canyon in a period of about 3 morning hours during the peak winter months, especially on weekends or holidays. Since about 20,000 people want to get up to the resorts, the proposed gondola alternative would only get about 3000 people during a typical winter day, leaving 17,000 on the road in cars—which having no other option, the car people would be even more inconvenienced than today. Plus, the gondola would never serve the recreationists not going to the resorts. And since there's not a Gondola hub at the mouth of Little Cottonwood, the would-be users from Draper, Sandy, or Cottonwood Heights are not likely to take the Gondola if they have to go to the mouth of Big Cottonwood Canyon. While the other two alternatives are a little better, they both seem to require massive construction—e.g. snow sheds, berms, widening of roads, huge mobility hubs, or larger trailhead parking lots (even though I like the idea of more outdoor pit toilets at the trailheads), etc.. Anyway, the first bus alternative without snowsheds, berms, or road widening, seems to cause the least amount of environmental impacts—and so why not put the money requested for those big construction projects toward dramatically more frequent transit on the infrastructure we already have? By more transit, yes buses (and hopefully someday electric buses), but also smaller shuttle buses or vans to serve the non-resort people hoping to go into the backcountry to cross-country ski, split snowboard, or snowshoeing (under safe conditions, obviously). And not just dramatically increasing the number of buses going up the canyons but also those that come from around the valley getting people to the canyon mouths—especially those on the east side, including most importantly Foothill & Wasatch Boulevards. If the major purpose of proposing these alternatives is to significantly reduce the number of private cars going up Little Canyon, then I think the super-increased bussing/shuttle services needs consideration. Finally, I really think looking at one canyon in isolation, fails to look at the complex network we have with all of the Central Wasatch Canyons (i.e. Parley's, Millcreek, Big & Little Cottonwood). As you might know, for example, currently 70% of Big Cottonwood's winter visitation does not go to the resorts, only 30%—and obviously, nearly 100% of Millcreek's winter users are not resort-destination oriented—and Parley's yes, could benefit from a light-rail system extending to the Summit County resort/recreation/city complexes of Park City, Deer Valley, and the Canyons, but that aspect also needs attention. The Central Wasatch (including the Summit County side) represents a relatively small land area that indeed offers outstanding recreational opportunities—but we can't just let it be loved to death and trying to accommodate increasingly large crowds. Thank you for your attention.	James Thompson	Website
1891	An extra lane for buses the entire length of the canyon doesn't seem realistic in the short term. A gondola with enhanced bus service and an efficient parking and shuttle system would provide a system that allows growth in the future by expanding bus and trax service to the gondola station	Tyler Smith	Website
1892	I support the gondola. It'll ease congestion and will be good for air quality	Clint Erekson	Website

1903	This is a perfect opportunity to add to our current commuter rail system in the Salt Lake Valley. Stadler rail is now manufacturing state of the art passenger rail engines and passenger cars at I-80 and 5600W. They are more cost effective than autos or buses, and more environmentally friendly. Plus, commute times would be a fraction of other modes of transportation, probably resulting in very positive press and increased business. Finished products can be seen from the I-80 freeway between 5600W and 7200W or by visiting the Stadler US site. Call them at 801 854-7771 to schedule a meeting with managers at the facility to explain what they can do for not only this project, but for future Wasatch front transportation!	ROBERT BRUNNER	Website
1904	To Whomever it may concern, I think the best option is a train up the canyon, above ground like in the Alps or below ground (think Boring Company). Though these may not be financially feasible and even though a gondola sounds cool, it would need multiple stations for folks to enjoy the BC. I think 3 lanes with the middle lane switching directions around 1pm plus avy barriers/ tunnels would immediately help the issue without costing a trillion dollars. Combine that with a fleet of designated electric buses and multiple-level parking garages wherever there are bus lots. Then provide season pass credits for those who take the bus which go towards discounting the fee you paid to have a driver's pass for the canyon. This driver's pass helps fund the project. You must upload a pic of your snow tires on the car to get a driver's pass to allow you in the canyon. You get a ticket if you do not have a driver's pass displayed at the resort. Also, do not allow rental cars up the canyon – Hertz and rental services can say that the insurance does not cover the cottonwoods. Bus only for those with rental cars. Charge locals \$25/ year for a pass to go up either of the canyons. Then charge everyone else \$1/ inch of snow received in the last 24 hours. Locals benefit, tourists are encouraged to take the bus, funds are raised to pay for buses and garages. I think Snowbird and Alta need to foot a large portion of this bill as they're the ones profiting off all this. Increased taxes to residents shouldn't be an option. Happy to elaborate further, as something has to be done.	Kyle Yu	Email
1905	GO, GO, GO Gondola!!!!	Gene Winchester	Website
1906	I enjoy skiing and summer hiking in LCC. The gondola is a great option and helps with congestion and provides tourism options. You are crazy though if you think many of us will want to get into a parking structure just to ride a bus to another structure to get on a gondola trying to carry my equipment. Many will still just go direct to the gondola base station and get dropped off lane or no lane. There is no way I'm doing that transfer. The only good option for the gondola is a parking/bus transfer at its base. If I could go directly to the gondola base I would use it with almost every trip otherwise not at all. I would go somewhere else. The bus option with an additional lane is the only other option that I see myself using, otherwise even with a toll I'm paying that for the convenience of my own private transportation. I would venture to guess I'm not alone in that sentiment. Public transportation needs to be at least as convenient and faster than my private vehicle. Time is too important and limited resource. As stated previously the gondola with parking and loading direct at its base would be my preferred choice otherwise bus with additional lanes.	Dustin Wise	Website
1907	I frequent Little Cottonwood Canyon often for skiing, bouldering, biking, hiking and camping. It feels like a second home to me. I have thought a lot about the three proposed options and think increased busses without road widening and a toll during peak hours is the best option for the canyon. I don't think people are going to be willing to drive past the canyon to park at a bus hub, then wait in line for a bus that will drop them off at another line for a gondola. It will be too many steps for people hauling gear and wearing hot layers. The return trip would be even worse. The gondola line will be huge and people waiting at snowbird will be faced with full gondolas from Alta or have to wait for the snowbird specified gondola. They will be dropped off at a middle of nowhere bus line, surrounded by canyon day-end traffic. If it were me, I would head to the road and try to hitch hike home, it would be faster than waiting for the gondola buses. Then with 100's of people being dropped off at the bus station at the same time, the line to exit the covered parking structure would be huge. It all sounds like a headache to me. If the gondola left from the parking structure, more people would be willing to ride it, but that's not practical. Widening the road seems like a logical solution for traffic, but it will completely change the landscape of the canyon and construction and increased carbon emissions would poison our water source. Also, the noise in the canyon would double with that many busses. The noise already echoes off the canyon walls and it really hard to escape. You can hear the cars on every hike before Alta and this would make it much worse. I hope you seriously consider our concerns and make your choice for the people who love this natural resource and don't want to see it ruined. I read once that there is traffic in the canyon only 28 days of the 360. Please consider the 332 days a year that the canyon works perfectly for everyone when making your decision. Try to solve this 28 day inconvenience with the least amount of tax dollars and the least amount of environmental impact.	Jason Anderson	Website
1908	as a snowbird employee that has worked multiple seasons and have been in those situations I am in high support of the gondola for its safety and eco benefits, and will preserve more of the beautiful wildlife on the mountain	abel hernandez	Website
1909	The gondola is a better choice!	Marissa McCoy	Website
1910	I have left a few comments concerning the canyon well-being, but I would like to address a personal matter. I have lived in LCC for 19 years. We love it so much that we decided to buy the 2 lots adjacent to us. We own 4126, 4124 and 4122 Wildcreek Rd. Our only complaint about living in the canyon is the noise from the 2 lane road above our home. With Sandy City's approval, we build a privacy wall that cost us over \$100,000 to retain. It didn't eliminate the noise, but helped it and it stopped strangers from being able to see children playing in our neighborhood. I was so disheartened to see UDOT was planning to see UDOT was planning to tear out the wall and privacy fence and a good portion of the property that we have worked so hard for. We have dreams of building our dream home on that property, but the road widening will devastate that plan. The mountain on the opposite side of the road is undeveloped. Why would you plan to tear out our neighborhoods privacy over moving the road to hug the mountain? It feels like a complete disregard for personal property and our right to privacy. In the past, Sandy City has been lovely to work with! We worked together to fix a crumbling retaining wall in front of our house in 2016. They were accommodating and concerned with our satisfaction. They treated us like they would hope to be treated if they were in our shoes. If 4126, 4124 and 4122 belonged to you, would you make the same choices for the road widening? I will do everything in my power to sway EIS not to widen LCC... but if our efforts fail, PLEASE reconsider destroying the work we have done to quiet our neighborhood and protect our children. Please think of these homes as your own property and make decisions that work for residents while still accomplishing UDOT's objective. Thank you! Trina	Trina Sheranian	Website

1920	As a person who has made Little Cottonwood Canyon a part of my life for the past almost eight decades, I am very aware of the absolute necessity to address the traffic issues which have been a concern for many years. As I look at the options, I think the plan presented by Snowbird has considerable merit and I certainly support the overall concept... for the reasons they have outlined. My only additional concern would be how to handle the parking issue at the bottom of the canyon. Space is extremely limited and I would anticipate that at prime periods during the year, handling the vast multitude of skiers with vehicles coming to onboard the gondola would present a significant challenge. Just my thoughts as an old senior citizen.	Alan Engen	Website
1921	I think the gondola is a great idea and will help so much with the traffic impacts in the canyon .	Madison Wallgren	Website
1922	I support the gondola. It is clearly the better choice.	Erik Ball	Website
1923	I am in favor of the gondola option	Sherrie Mckenna	Website

1925	I support the gondola.	Richard Wade	Website
1926	I am in favor of enhanced bus service. I do believe that if the buses could move faster than the rest of the traffic in the upper canyon it would be an incentive to use the bus system. I feel like the Gondola would only add people to the canyon and would not help alleviate the traffic situation.	Hugh Ferguson	Website
1927	<p>The bigger problem is how to handle access to parking at the proposed LaCaille station. Will the LaCaille station really be big enough to handle the thousands of cars to go up the canyon on a busy day? Don't count on people taking a bus to the LaCaille station from wherever. Limited road access to the LaCaille area is likely going to create a new set of traffic issues.</p> <p>Out of curiosity, are all those million dollar home owners in the LaCaille area going to be happy have thousands of cars parking in their back yards?!</p> <p>What is going to be the fare? Many ski instructors make \$100 a day or less. Show up pay is about \$35. There are probably many other employees at the ski areas that make much less than \$100 a day.</p> <p>Where is the Alta terminal? For those who have their equipment at Alta (Albion or GMD), or are renting equipment, how do you get from the terminal to your equipment?</p> <p>A 37 minute ride from LaCaille to Alta seems acceptable. However, waiting in line, loading and unloading at the base, at Snowbird, and at Alta I wonder about 37 minutes and 9 miles of uphill travel. Somewhere recently I saw a formal-looking chart that suggested 63 minutes to Alta, which would just not work.</p> <p>How many passengers per hour on a gondola? Keep in mind the majority of skiers are going up between 8 and 10 and down between 3 and 5. Will there really be capacity to handle thousands of skiers in those time slots?</p> <p>In the inevitability that the gondola breaks down (it most certainly will), how will evacuation happen and over what span of time?</p> <p>You may know that these uphill transport issues have been under study at least since the early 1970s--50 years ago!! I personally saw formal engineering plans in the mid 1970s when visiting an acquaintance in Park City. It was a monorail system that went up LCC, across the ridge to BCC, across to the Park City area.</p> <p>FYI, I drove LCC for 28 years as a weekend/holiday instructor at Alta. If I got into the canyon by 8 am and left Alta by 4 pm, there was rarely a hold up. It would be about a 20 minute drive. I would estimate that I had an average of two bad days a year, even on heavy snow days. (No counting days when the canyon was delayed or closed.)</p> <p>The other question is, how much of this travel crisis is caused by the influx of ICON skiers and other highly discounted ticket skiers (obviously not referring to season pass skiers)? Alta seems inundated with ICON pass skiers. Is it worth \$390 million to transport skiers who are paying a fraction of the lift ticket price?</p> <p>As with anything having to do with government and committees, this whole issue would have been better resolved (at a fraction of the price) half a century ago when it was a hot topic even then.</p>	Tom Beggs	Website
1928	This canyon has reached capacity. No more pavement. Electric buses only; Seasonal and annual passes need to be issued, sorry Utahans, your wishes are now your nightmares. Time for SKI BINGHAM!	John Winn	Website
1929	<p>The gondola idea is ludicrous.</p> <p>Two transfers for most people from parking via the bus to the gondola. From a skiers perspective, do you put on your ski boots at the car? That's 2+ hours more per day in the boots and a lot of walking. How would families with little kids lug all their stuff up the Mountain? The gondola ride is way too long compared to a car/bus ride. This option would definitely eliminate the fewest cars compared to the other options. How do people living off Wasatch Blvd. between BCC and LCC get to a mobility center? Right now a bus stop is in walking distance from our house.</p> <p>A gondola is a nice tourist attraction for one day out of their ski vacation.</p> <p>How would a gondola eliminate the issues of parking at the other trailheads like White Pine? It's easy for a bus to stop there.</p> <p>The gondola capacity cannot be increased on powder and weekends. The biggest issue is how you will get all the skiers DOWN the Mountain after skiing. The lines and wait times will be hours long.</p> <p>With busses the service interval can be increased and adjusted based on the number if people in the Canyon.</p> <p>I ski either LCC or BCC every day during the winter season. Enforcing cars to have SNOW tires would eliminate most of the slide offs and backups during the ski season.</p> <p>Also, when it's supposed to start snowing during the day, restricting the road in the morning and not after it started snowing would reduce the number of backups significantly!!! Thank you!</p>	Sandra Tiller	Website
1930	I like the option of a gondola or enhanced bus service with dedicated lane, but also believe it's not feasible to continue increasing the amount of traffic in the cottonwoods. We must fight back against burdens on the infrastructure like ikon pass, for instance.	Andrew Adkins	Website
1931	It is clear that we need a solution as soon as possible to the transportation problems in LCC and BCC. The cheapest and fastest solution is enhanced bus service. Enhanced bus service has the least environmental impact and is the most efficient way to get the most people up the canyon to their various destinations, be them resorts or BC trailheads.	Joe Neilson	Website
1932	In terms of safety and impact to the area, I support the gondola.	Rosalie Miletich	Website
1933	This is a no brainer. Added revenue and environmentally neutral. Dozens of European communities have solved this same problem with gondolas. Let's do this!	Jeff Albuher	Website
1934	In favor of enhanced bus and road widening, Not in favor of reducing parking along the road near ski areas as we need more not less until the resorts limit sales. I can only ski 1/2 day and yes, I need to drive so I can work half day. It is very difficult for me to ride the bus (Its not efficient) and hold and carry all my stuff for 2 hours. The gondola is a horrible idea, too slow, inefficient, long ride. Too many hotels and tourist preferences are making it really difficult on locals, skiing is becoming more and more elitist and difficult for people who have normal jobs.	Marty Bryant	Website
1935	It's a bad idea to increase the number of people going to LCC. Just fix the Avy paths put in some snow sheds and enforce some traction rules . Expending lots of money on expanding the road and gondola just increases the number of people in LCC far beyond its capacity. Just a Avy path solution and buses is the best method. Seen if and enormous amount of money on expanding the road or gondola is a huge mistake for the environment	David Hackbarth	Website
1936	I support the gondola! It is the better choice!	Brendan Jordan	Website
1937	I support the gondola! Help the environment one step at a time! Every decision counts!	Coco Rigbye	Website
1938	I support the gondola. We need to limit pollution.	Brigid Kelly	Website
1939	I support the gondola	Beth Dandy	Website
1940	I am in favor of the Gondola option with an alternative parking location at the base of the canyon. I was trained as a ski bus operator. I don't feel that busses are a safe or long term solution to the increased traffic in the canyon.	Reggie Lewis	Website
1941	Why don't you create parking passes for cars in the canyon. Similar to lift tickets: day pass; 10 day; annual. Price them to force carpooling and UTA usage.	Michael Hargrove	Website
1942	We need to keep our neighborhood a neighborhood. The noise and destruction from road widening would leave an irreversible scar on our land. Enhanced bussing during peak season is the best option.	Bonnie Pace	Website
1943	Gondola!	Nathaniel Hamlett	Website
1944	The gondola is the safest and best choice - financially (over the long term), technically, and environmentally.	Jennifer Kelly	Website
1945	I favor the gondola proposal. Season pass holder at Alta for 15 years. Always drive to Albion daily. Public transportation too crowded and slow with the Snowbird stops. At my age lack of restroom facilities on buses a deal breaker. The gondola would be quick enough to solve the time problem.	Donald Mackay	Website
1946	As an owner at the Lodge at Snowbird, I support the gondola proposed solution.	Chris Markham	Website
1947	I am an avid back country user and need access to the backcountry terrain. It would also be nice to have more parking at the common trailheads, bathrooms, and unrestricted road access.	DAVID RASMUSON	Website
1948	I support the use of the gondola and don't support the use of the buses. My reasons are 1) the gondola has a better impact on the environment and 2) the gondola could likely operate better in the event of an avalanche than buses. Thank you.	Lindsey Judd	Website
1949	After review of the options and having suffered from the traffic congestion, I support the extended bus system. It will be the fastest and most cost efficient way to alleviate the congestion. The impact of the gondola on the environment and it would deface the canyon, in addition to being more expensive and inconvenient to use. Adding a third lane could help with the congestion and emergency vehicles, while leaving more room for road bikes I the summer (a bike lane would help) and the enlarged trailhead parkings are also needed. Thank you Magali Lequient	Magali Lequient	Website
1950	Do all of these projects take the same amount of time? What is access like during construction of any of the alternatives? What specifically is the environmental impact of each and how do you rate each?	Megan Deppen	Website
1951	I would like to see the ENHANCED BUS WITH ROADWAY WIDENING alternative implemented, because it would have the shortest travel time and because having the bike/pedestrian lanes in the summer would be a great benefit. Bus service without a dedicated bus lane would be pointless - nobody would take the bus because it would still take as long as driving. And not sure a gondola is a great idea in the days of coronavirus - seems like you could space a little farther apart in a bus than in a small gondola.	Mike Cannon	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
1952	The current situation for residents that exit King's Hill drive onto Wasatch now is perilous. Northbound traffic is supposed to slow to 40 mph but that does not happen. Traffic northbound is well in excess of 50 mph. A driver has only a fraction of a second to make a decision to exit. I now do not even try to turn south on Wasatch during certain times. Having two lanes of high speed oncoming traffic heading north will only compound an existing dangerous situation.	Brian Derouin	Email
	I think you need to try the expanded bus option first without widening Wasatch Boulevard. Doubling the number of cars going into an existing bottleneck in the canyon will only create a bigger problem. It also assumes that Wasatch Boulevard will not become the route of choice for residents that live south of Little Cottonwood Canyon.		
1953	A gondola please! Anything to keep cars and pollution out of our beloved canyon!	Fay Losser	Website
1954	I support the gondola.	Kristy Macellaro	Website
1955	I fully support the "Enhanced Bus with Roadway Widening" as the ONLY alternative that is feasible from a skier's perspective. The other alternatives take way too much time to get to and from the resorts. If the goal is to get cars out of the canyon and reduce traffic. Ease of use and time are the most important factors to consider. There also needs to be plenty of parking at both mobility hubs and a reasonable fare to use busses. I also would suggest the use of CNG busses. UPS, and others, have been very successful in deployment of CNG vehicles with significant environmental benefit and reduced operating costs.	David Brugger	Website
1956	I support the widen the road. Increases buses	Aaron Ogden	Website
1957	Yes to the Gondola!	Wendy Markham	Website
1958	Please don't waste our taxes on widening Wasatch Blvd. Please don't ruin the environment by widening the road up the canyons. Just use more buses or develop a train line to Highland for people to catch buses up Canyon.	Georgia Clark	Website
1959	I support the gondola.	Tiffany Thomas	Website
1960	The Gondola looks like a great idea! It seems safer for those winter months when I normally avoid it at all costs because of the traffic and weather risks. I would love to see this happen.	Ariel Hortin	Website
1961	I urge you to choose the gondola as a responsible alternative for the environment and our safety. Thank you.	Leslie Peterson	Website
1962	Please don't expand Wasatch Blvd. This is a concern if the residents here. We do not want a highway (which this would essentially become if it extends more) running right through the place we live. Part of the winter traffic problem is due to lack of space at the resorts themselves - please don't create a highway thinking you'll alleviate that. More frequent buses and things like that may be helpful, but the biggest concern is that the proposed changes would just create even more of a crowded atmosphere. This is where we live, and we don't want to feel swarmed by people, especially as speed limits tend to rise with wider roads. If a lane MUST be added despite residents' concerns, please close the lane the majority of the time and only have it open during certain times for buses only. The concern with a gondola is that there doesn't seem to be a layout of where it would start. Would it be visible from outside the canyon? Please don't ruin the view of our beautiful mountains. If there could even be a bus that took people back and forth from the parking lots to the gondola which would be inside the mouth of the canyon, that would be better.	Brianna Beck	Website
1963	I would very much appreciate having a safer method of transportation up the canyon in the winter!	Nicholas Cromar	Website
1964	The list that Snowbird put together seems way out biased. One area in particular that is not at all clear is the Tram trip up and down LCC, how much time the trip takes, the wait time (has to be considerable!) both going up and going down, how one gets from the parking lot near La Caille (sp?) to the Tram, the cost of parking, Tram, etc., the possibility of driving the LCC, if justified. I know from experience that the wait time for the tram at the Bird can be onerous. Seems to me that if the Tram choice prevails that the extra lane for buses in LCC should be included as well as the use of cars if warranted. I presume the Tram towers (there would have to be several) would be located away from any possible avalanche path. I can drive from my condo in the valley to Alta in about 40 minutes during the week. If the new Tram time doubles, for example, a lot of skiers may choose other venues, especially on weekends.	Kenneth Castleton	Website
1965	The Gondola is better for the environment, and will preserve the natural beauty of the canyon.	Nathalia Alvarez	Website
1966	First, DO NOT IGNORE OUR INPUT. We are the people living here and our community is being affected by your potential projects. These alternative DO NOT solve the problem. Use more buses and have buses go further into our communities to pick people up. Reduce the number of cars needed to even get near the canyons. Don't make it possible for MORE cars to get to the canyons. That defeats the purpose. Do not expand Wasatch Blvd or the roads going up the cottonwoods - this ruins the residential community it resides in as well as ruining the canyons it leads into. LISTEN TO US. 2. I agree wholly with Save Our Canyons on this topic. "If we can get more people on transit and increase vehicular occupancy (from 1.8 to say 4) there will be less cars in the canyon. Less cars means less need for parking and less need for a lane. Less cars also means less lining up at the mouth. So forward the buses, but without the sheds and the lanes and make these buses penetrate further into our communities in the valley giving more people, better access. You could even run articulated buses from the communities to the mouth (though that would indeed force a transfer). Express buses where Alta patrons don't have to ride through Snowbird, for example, is a great idea and should be pursued. It should be noted that you shouldn't need an EIS to just run more buses on the roadway." * If we simply invested less than a quarter than is being proposed in some of these options, \$50 million to \$100 million in buses, transitioning 50-70% of the people out of their vehicles and onto transit well before the mouths of the canyons; if we altered behaviors by not allowing cars to line up, implemented a toll for cars with less than 4 people, ticketed vehicles for having ill equipped tires, and enforced no roadside parking as should have been done years ago -- we could make a bigger dent in the dreadful traffic woes caused by cars and would have to build nothing more in our canyons. Give it an earnest 5 -10 years, actually funding it like you want to solve the problem. We can continue to investigate long term solutions in the interim. All we know for sure is that the options before us right now, completely fail the users and the environments in the Wasatch, destroying the values that make this place special."	Brianna Beck	Website
1967	Enhanced bus service to each resort—Alta and Snowbird—should be the only alternative. Busses should go to and return ONLY from each resort! Parking must be made available to riders near the mouth of the canyon and SR 210 or bus routes must be made available from the parking areas. SR 210 should not be widened to prevent erosion and destruction of this beautiful place on earth. Once it is destroyed it will remain destroyed forever!	Shannon Gordon	Website
1968	I see rail is not being considered for this study. As this is a preliminary study rail should at least be considered. I have lived near the mouth of this canyon nearly all my life and would love to see rail considered. Rail is a long term solution and should be considered as this project will be around for a long time. The cost seems to be a limiting factor but as this project will last for a long time investing more could be the right answer as we could get a better product. The study should at least consider rail. Thank you	Audrey Huo	Website
1969	I support the gondola as a safe, sustainable, fiscally responsible, and environmentally conscious solution for Little Cottonwood Canyon.	London Reynolds	Website
1970	I support the building of a gondola as safer means of getting up the canyon!	Rachel Cromar	Website
1971	A gondola is a cleaner, safer and life experience method of transportation over all	Scott Childs	Website
1972	I really like the Gondola idea. Seems the most feasible long-term and appears to be the best option for the environment in the canyon. Thanks.	Robert Stephenson	Website
1973	1. Train below ground 2. Train above ground 3. 3 lanes with tunnels with Snowbird and Alta fronting the bill plus more electric buses and parking garages 4. Tram	Kyle Yu	Website
1974	After reviewing the multiple options being discussed, my opinion is that the enhanced bus with road widening is the best option. While the costs are significant, the improved traffic flow will help ease traffic issues in negative weather conditions, and improve the bus utilization through quicker access to the resorts. I do not believe that a gondola is warranted at this time. Thank you for the consideration and work to improve traffic in LCC	Chris Fry	Website
1975	I would like to see a tunnel in the Cottonwood canyons to prevent closure due to avalanche. Bike paths from ALTA down, and volunteer maintained trail system. No dogs ever. Also special pass for residents that live in the mile radius of the canyon.	Ali Yazdian	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
	<p>I grew up in Sandy. I live in Utah County now. I lived in Pittsburgh for 10 years, but otherwise, I have lived my whole life in Utah. I'm now in my late 40's, and have used the Cottonwood Canyons since I was a child, including annual ski trips during my time in Pittsburgh. I ski 40-50 days a year. The way the Cottonwood Canyons are being loved to death is heart-breaking to me. Believe me, I get it. Why wouldn't you love being in these two canyons, any time of year, but especially in the winter if you're a skier? They are amazing gems, but sadly, I try to avoid them nowadays, especially on busy ski days.</p> <p>I know that your current request for comments is about Little Cottonwood Canyon, so I'll try to focus appropriately, but Big Cottonwood Canyon has gotten just as bad and needs help every bit as much. I hope you all will keep that in mind as you try to decide what to do. I am grateful you're trying to address the problem.</p> <p>I am strongly opposed to any sort of gondola system. It doesn't make logistical or financial sense. I admit that I do not have access to the data that you all do. But as a professor of data analytics, I certainly understand how data improves decision making, and for the life of me I cannot understand how the gondola concept is even in the final running. From my perspective, it makes absolutely no sense, and I can't imagine any data that would say otherwise.</p> <p>Based upon the articles I read, the proposed gondola in Little Cottonwood Canyon would have an uphill capacity of 1,000 people per hour. I've further read that on peak ski days, 7,000 cars per day head up to Snowbird and Alta. Assuming that each of those cars only has one person in it (which is unrealistically low), that means it would take the gondola seven hours to get all the people up the canyon. If you start sending people up at 6 AM, then you get the last of the people up to the resorts at 1 PM, just 2-3 hours before the lifts start shutting down for the day. If people start leaving the resorts at 2 PM, the last of them don't get down until 9 PM. And this of course is based on a very low estimate of 7,000 people. People aren't going to (literally) stand for that.</p> <p>Now, you could make the argument that some people can go on the road and others can go on the gondola, so 100% of the uphill traffic shouldn't be assigned to the gondola. But if people are looking at a 1-2 hour wait to get onto the gondola, or even a 30 minute wait, what do you think they're going to do? They're going to get back in their cars and drive up the canyon, so you haven't really significantly reduced traffic loads on the canyon road, and you have fewer people paying for gondola tickets to offset to cost of construction, maintenance and operation. The fewer people who opt to use the gondola, the longer it's going to take to pay the \$300 - \$500 million I've read it's going to cost. (And please remember that \$300-\$500M for Little turns into \$600-\$1B to also help Big)</p> <p>Let's stay on cost for a moment. We must also consider that the gondola is really only going to get used on peak days. Assume a 22 week ski season. This is realistic but generous for the Cottonwoods, going from Thanksgiving to mid-April. Many years, there isn't enough snow to really be up and running at Thanksgiving, but let's start there. 22 full weeks gives us 154 ski days. We'll assume five full holiday weeks - Thanksgiving, Christmas, New Year's, MLK, and President's Day. That's 35 peak days. Throw in a week for Spring Break, that's 42. Then let's assume every Saturday and Sunday not already included in the holiday weeks are also peak days. That's 32, bringing use to 74 peak days. 154 total ski days minus 74 peak days leaves us with 80 non-peak days. Thus, demand for the gondola will exist on less than half of the days every ski season. I admit you've got access to better data than what I've given here, but I think even using my rough estimates, there's evidence that the gondola isn't going to get used most of the time. During the Summer and Fall months, it will be lightly used by curious tourists or joyriders, but I can't imagine it generating enough revenue to even be self-sustaining during those months. I ski every day of spring break every March (including this year just before COVID closures), and it is very generous to call every weekday during a week in March a "peak" day. Most March weekdays I can get from Alta to Wasatch Blvd. in 20 minutes or less.</p> <p>You're talking about spending hundreds of millions of dollars to build something that is needed less than half of the time the ski resorts are open. It doesn't make sense. But let's talk about logistics. There's nowhere to park at the mouth of Little Cottonwood Canyon. So you've got to find space to put in a gondola base terminal, and then you've got to shuttle people from a feasible park-and-ride area somewhere in Sandy to the base terminal. You might be able to use the parking lot at Brighton High, or build a parking structure on the old Shopko site on 94th south. But then you have to get people on shuttle busses, up to the mouth of the canyon, off the shuttle busses and onto the gondola--all while carrying ski gear, possibly in ski boots. As a father of three I can tell you, I'll just drive. Or stay home. This is what I already do on peak days. The prospect of: in the car, out of the car, onto the bus, off of the bus, wait for the gondola, onto the gondola... it's just not worth it. The gondola makes skiing on peak days more of a hassle, not less. You're already talking about building the longest gondola in the world. Are you going to extend it over the top of several neighborhoods so that it can go all the way to suitable parking area? That's not going to happen. Busses up the canyon make sense if they go from the parking area to the resort as quickly as possible, otherwise, no.</p>		
1976	<p>Then you've got breakdowns to consider. This year our family took a ski vacation to Squaw Valley. In our five day trip, both the aerial tram and the Funitel (one of the most advanced gondolas in the world) broke down—the latter closed for a day and half before it was back up and running, even with Squaw's considerable financial resources. Last year, we ski tripped to Big Sky. Their Six Shooter lift broke down, stranding more than 2,000 skiers in Moonlight Basin. You see, the Six Shooter lift is the only way to get out if you ski down into Moonlight Basin. Without it, you've got a single point of failure. We ended up standing around in the snow for hours with thousands of other people, waiting to be bussed, skis and all, 45 people at a time, back over to the main Big Sky base area. Even with Big Sky's significant financial resources, one broken lift left them with a huge mess and thousands of angry people. The proposed Little Cottonwood Canyon gondola represents a single point of failure. If you build a long-term, permanent transportation solution around it, when it breaks down on a peak day, and it will, you're going to have a tremendous mess on your hands. Once stranded by the gondola, people are going to think twice about using it the next time. After all this, here is what I think is the absolutely most important reason not to build the gondola. The Cottonwoods have a finite loading capacity. No matter what you do to address the current transportation problems, you can only cram so many people into these canyons. They simply cannot support every single person who wants to go up whenever they want. Building a gondola that jams more and more people into a space that cannot grow to accommodate them will only exacerbate the problem, by blowing through mountains of cash and diminishing the personal experience for each person who does go. PLEASE, recognize the finite capacity of the Cottonwoods. Please. I am in favor of improving the canyon road for enhanced bussing, which must become mandatory on peak days, but not with the intent that an unlimited number of people can use the Cottonwoods any time they want. Any solution MUST include limiting the total concurrent load. It may well be that a lottery/permit system will need to be imposed on peak days. It should not be toll based, as this disenfranchises lower income skiers in favor of the rich. That is morally wrong.</p> <p>I would propose a different solution. We have burgeoning populations in Utah and Tooele Counties, and in west Salt Lake County. Given the obvious demand for skiing in Utah and its importance to our state's economy, why not explore the construction of new resorts along the Wasatch Front? These could be constructed as private-public partnerships, perhaps as part of the State Parks system. Using the creation of Cherry Peak in Cache County as a baseline, new resorts could be constructed for anywhere from \$25 to \$100 million each, making it possible to build three, five or even more new resorts for the cost of one gondola up an already beleaguered Little Cottonwood Canyon. Locals will create less driving pollution if they drive from Tooele or Herriman to, say, Farnsworth Peak or Butterfield Canyon. Can we get with the right people at Kennecott Land to explore the possibility of one or two resorts in the Quirrhills? These would also be appealing to people coming and going from Salt Lake International Airport, and hotels in the valley would reduce the need for expansive base-area developments that would drive up the cost of resort creation. What about day-trip focused resorts in Farmington Canyon, the Wallsburg area, or Spanish Fork or Payson Canyons?</p> <p>These resorts don't have to be Snowbird or Park City. According to skiresort.info, Cherry Peak has an uphill capacity of more than 5,000 skiers per hour. Assuming a skier takes five runs per hour, that means the resort can accommodate at least 1,000 skiers per day with no lift lines. This is a resort with zero high speed lifts. Bogus Basin, just above Boise, is perhaps an even better example of a basic day trip resort. With its four high speed quads, it serves over 11,000 uphill trips per hour. Our proximity to suitable areas in the Quirrhills or the Wasatch near Bountiful/Farmington, Orem/Provo and Spanish Fork could make Bogus-type resorts possible without the winding drive Bogus requires. Four or five of these types of resorts along the Wasatch core mountain area would take a huge burden off the Cottonwoods. These resorts could even be run as non-profits like Bogus is, diffusing the demand across a larger area, while serving the population, fulfilling the mission of the State Parks department, and enhancing the local economy.</p> <p>If I have any say in how taxpayer dollars are spent on this enterprise, I'd much rather see the construction of several regional ski areas with limited amenities that reduce demand on the Cottonwoods, than on a single gondola that will only further stress the canyon. I don't think taxpayer dollars should be spent to shore up for-profit companies that make millions every year. But if we're going to spend those taxpayer dollars anyway, doing so on resorts that make skiing more affordable and more accessible while also reducing demand on the Cottonwoods is a much more palatable choice.</p> <p>If you've reached this point, thank you for taking me seriously enough to read my entire comment.</p> <p>Kind regards,</p> <p>Matt North Vineyard, UT</p>	Matt North	Website
1977	Please don't ruin the cycling routes up the canyon.	Gunnar Jeannette	Website
1978	I support the gondola	Emily Stam	Website
1979	I support the gondola	Rob Stam	Website
1980	<p>As a long-time local season pass holder at Alta, I would have to support the gondola option of the current options presented. However I believe there needs to be significant more study and ideation to determine how to avoid a bottleneck of bussing to the gondola hub at the base of the canyon (perhaps parking at the hub, extending the gondola to existing park n' rides, etc). I also think the current capacity per hour of the gondolas should be reviewed. I believe the design could be improved to increase this capacity. Additionally consideration should be given to use of the gondola in the summer and potentially adding a mid-way stop in the canyon that while not used in the winter months, would be used by hikers and climbers in the summer. I would also urge there to be more transparency around plans for what entity bears the burden of cost. Alta and Snowbird - private companies - will be benefiting from these projects and therefore should cover a significant portion of the cost. We must remember that without these resorts, there would be no need for this transportation project. I would also urge serious discussion around the simple solution of a pilot project where Alta and Snowbird must limit skiers and boarders. This would reduce traffic and congestion in the traffic as well as environmental impact.</p>	Allyson Dugan	Website
1981	Enact a toll for all non-resident and non-employee (those groups can buy a season pass) to pay for a gondola with stops at white pine, snowbird and Alta. Maintain the road for emergency vehicles and summer access.	Sam Barlitt	Website
1982	<p>I like the gondola approach with the alternative of either expanding the parking at the gondola hub and/or taking the gondola all the way from the gravel pit. We want people to use the gondola so the 63 min travel time reduces the incentive to use the gondola. Financially, Alta and Snowbird should also pay for at least 50% of the project. In addition, whatever the new mode, the cost should be free for riders with a charge for personal vehicles.</p> <p>Concerns--</p> <p>How often will buses depart the gravel pit to the gondola? The flow assumes 30 riders are dropped off at the gondola every 2mins. Will normal winter traffic allow this? If the canyon road has a delay for avalanches/accidents and Wasatch is blocked with traffic, how do the buses get the gondola station? I am assuming the gondola avoids the avalanche pathways.</p> <p>Will the gondola run year round with reduced frequency during the summer months?</p>	Daniel Dugan	Website
1983	I support the Gondola option. I've lived here all my life.	Spencer Vargo	Website
	Hey, i appreciate all the hard work thats going into improving our canyons!		
	I really like the idea of adding a dedicated 3rd lane for busses only and having it time directional. So busses only going up in the mornings and in the afternoon it switches to busses only going down..		
1984	<p>If you lower the travel time with a dedicated bus lane for the average resort users they will actually ride the bus. Everyone hates sitting in the red snake when the canyon is slow.. If there is an option for a faster transport people will use it.. (The key is to make the busses a faster option during peak times).. That being said additional parking for busses is a must!</p> <p>Although I don't like the look or added infrastructure of Avy sheds they are a bit of a must at this time.. Just make them replaceable and removable. Although rare, the sheds themselves can cause road closures through improper vehicle heights and natural phenomenon.</p> <p>FOR THE FUTURE! We need to take a hard long look at connecting all of our ski resorts via Hyperloop.. Underground tunneling can solve all of the current problems with road traffic and provide the guaranteed fastest way to any of our resorts.. imagine being downtown sic and jumping into a hyperloop and arriving at a hub in between alta and snowbird in under 10 mins. next stop PC or brighton/solitude.. Zero Avy danger and the fastest travel option. This might not be totally possible right now but tunneling tech has been around for ages and is currently making leaps and bounds.. One thing i ask you to remember is people will always dismiss this idea with "The cost will be to high".... When you really dive into the idea there are many ways to pay for it and it only gets better. so yeah! Where there is a will there is a way and human effort is the only real cost of anything.. thanks for you time and taking comments, have a great day! , James</p>	James Buehler	Website
1985	<p>Please don't spend \$500 million simply to move the bottleneck from the mouth of the canyon into the lift lines. It's only a few days a year that traffic is bad. If the resorts want to pay \$500 million to get more skier visits, that should be on them.</p> <p>The goal of reducing the need to do avalanche control work is a legit goal, and thus I would support snow-sheds over the road. No gondola, no special bus lanes. Therefore, option 1 with mobility hubs + snow sheds seems to be the best option and the lowest price tag.</p> <p>Has tolling been explored to pay for this? How much are the resorts contributing, as they are the ones benefiting?</p>	Michael Zangrilli	Website
1986	I support the gondola. My only concern would be parking in the valley for said gondola.	Jamie Terry	Website

1987	After reading through and understanding the alternatives i am in strong support of the Gondola alternative with the option of moving the base to the West at the La Caille base location with the parking structure. This is a better alternative the just adding a buses which will still be dangerous in the winter and subject to road closures. the Gondola will provide another way to get up and down the canyon and enjoy the beauty of it. it will have a lot less impact on the environment.	David Jenkins	Website
1988	We support bus transport. Our entire family, three generations, ski and use the bus system frequently. We even use it if we have snow bunnies along who don't ski. It works fine for us and would for others if it were encouraged, perhaps even no charge to ride as is the way in some other ski areas. We've used Uber/Lyft to pickup areas when it's very busy. That works too. We think the gondola and road widening are idiotic ideas. The cost and invasion of both shows little foresight. Tolls would help. They a way of life in many areas of the country. Pay to use is fair.	Sharelynn Williams	Website
1989	This is a bad idea because it further stratifies class in skiing, increases negative traffic up the canyon resulting in litter and the erosion of landscape, potentially destroys climbing areas, pollutes the view of the mountains with big ugly towers, and is quite frankly absurd to do a project like this in a time of potential economic scarcity. I get that this could generate jobs but what if we built a train instead or increased funding and incentivized public transportation.	Charlie Dean	Website
1990	I think the gondola is the best option with the least amount of impact on the surrounding terrain and less pollution.	Benjamin Robison	Website
1991	Gondola is the only answer. The road does not work. Rubber tires vehicles slip on the road and won't be fixed with any of these other options. Gondola is the only low impact and environmental friendly solution.	Tracey Treadwell	Website
1992	Telluride, CO and Mountain Village, CO have a free gondola as their city's public transit system, and I've appreciated the gondola for an easy way to reach many destinations across the mountain, including the bike park and music events. While the LCC gondola wouldn't necessarily be the same, it would be a great way to keep traffic moving uphill and downhill more continuously than occasional buses. The ability to access transit with a minimal wait from the parking lot would encourage folks to take transit up the canyon. I think the gondola could be great for LCC.	Jen Lopez	Website
1993	I support the gondola	Jon Tate	Website
1994	I support the gondola	Zach Robison	Website
1995	I'd love a gondola	Jouce Forsgren	Website
1996	Yes to the gondola!!	Valerie Pahl	Website
1997	A gondola is a GREAT idea! It doesn't have the weather restrictions like busses and has less environmental impact.	Jessica Dalton	Website
1998	The gondola is a better choice!	Ry'lee Scott	Website
1999	I have a hard time supporting a gondola. It will detract from the beauty of the canyon and comes at a high cost. Improving bus routes and creating incentives to use them would be my preferred first option to implement. Ideas similar to Solitude's tiered parking rates structure have merit as would tolling the road. Start with low cost, relatively simple options to implement prior to spending big dollars on road expansion or a gondola.	Robert Schnitzler	Website
2000	In either of the bus options, give all of the travel priority to buses, give them the right of way, make their travel lanes the central part of the canyon transportation solution, keep private vehicles, but relegate them to secondary status, basically, plan the road, stops, circulation for an awesome bus service, then what's ever left over goes to vehicles, do not fit buses around private vehicles and expect anyone to ride the bus. the buses need to be the best option, get people out of their single-occupancy vehicles by making the bus option distinctly better than driving their own vehicle.	Bradley Kraushaar	Website
2001	Hello- I am grateful that there is action being taken to alleviate the congestion in the canyons. I am an avid skier and love living at the base of Little Cottonwood Canyon. Here are my comments: I am 100% for the snow sheds and making the canyon a toll road. For the Gondola- I think this is a great idea, but I don't think many will use the mobility hub on Wasatch, bus to the gondola and then ride the gondola up. If there is a way to create more parking at the base of the gondola this would be an ideal scenario. I think the parking at the base of the Gondola would warrant a traffic flow re-work where 209 and 210 meet. Maybe a roundabout? If the parking structure at the base of the canyon cannot be built, then the next alternative would be buses. There needs to be buses that go directly to Alta and other buses that go directly to Snowbird. They need to leave with high frequency and start early to spread out traffic. I think that "peak ski days" (weekends, holidays) must be bus only days. No cars should be allowed up the canyon on those days. A proposed other alternative would be to put a train station in. You can put the train tracks into the current road and have train stations at 9400 south and highland and at the mobility hub. Still have train only days for weekends and holidays with no cars allowed up the canyon. They do this in Europe and I think we should be able to do it here. I also strongly urge UDOT to create a plan for the route from 9400 south and Highland up the canyon. This area gets extremely congested and needs to be taken care of. If the hope is to have these commuters go to the mobility hub at the rock quarry, it will substantially increase the traffic for big cottonwood canyon. For any plan to be successful, the 9400 south route needs to be worked through as well. Thank you!	Ashley Anderson	Website
2002	A trax line along foothill Blvd and Wasatch Blvd along the bench to corner canyon. Another trax line on 700 East and van winkle. More buses in the canyon. Charge for cars in the canyons.	Wes Alder	Website
2003	My recommendation is to run a train/tracks up the canyon. Zermatt resort uses this method. You cannot drive to the resort. You have to park and ride a train in. The train could make two stops. Alta and Snowbird. It would be clean air. Salt Lake has experience running this type of program with current tracks and front runner projects. Makes sens right?!!?	Jeff Kjar	Website
2004	what's the reasoning behind no train? That's how everything was in Switzerland. Seems like it could be a cheaper option than a gondola. I'm sure you've thought of it but curious why this option didn't make the cut. I did hear in the video that a tunnel the whole way up would be really expensive. Love to know the whole outline. Thanks! Let's do this!	Skyler Anderson	Website
2005	I support the gondola, traffic in the canyon was a nightmare last year, the busses are always full. Plus a gondola is better for the environment.	Kristina Stromness	Website
2006	While there are several options to alleviate the traffic in Little Cottonwood Canyon, passenger rail is a perfect, long-term alternative transportation. A rack-and-pinion train, similar to that at Pikes Peak in Colorado, would cut way down on the number of cars in the canyon, create less emissions, provide a scenic ride for passengers year-round and draw tourists driving more revenue to this small mountain resort.	Sandy Gormley	Website
2007	There is a new passenger rail manufacturer right here in Utah, off of I-80 west of Salt Lake International Airport, where we can get more information on building such a system. I like a Gondola or light rail option. Those seem to be safe and better than anyone driving with slippery roads, even busses. Plus, if that doesn't work and you need more capacity, you can always later on widen the road.	Ryan Kirkham	Website
2008	Hello. Thank you for providing a non-gas powered option. The gondola seems like a great option, given the traffic issues and the amount of exhaust emitted into Little Cottonwood Canyon. It is also important to note that the O&M costs for the gondola are lower than the other proposed alternatives. I think the route along the road is also important, as it won't significantly impair the view shed, which I know is a legitimate concern.	Ayrel Clark-Proffitt	Website
2009	I believe that for the immediate future, the focus on transportation in LCC needs to be on increased bus service and at the same time, working toward the gondola solution. Unless these 2 methods are not started simultaneously, the issues will not be solved. The increased bus service can be done immediately with funding for the issues that have prevented this as a solution in the past. The gondola, while not a viable solution for all summer activities in the canyon, is a very viable solution as the wintertime access in and out of the canyon when the road is closed.	Kim Mayhew	Website
2010	Lets work on the gondola, seems as if the road is going to be full of cars, busses, and snow. The alt route to go up and over the masses might just be the way of the future. Summer attraction, fall leaf viewing, and a tourist attraction to promote year round visits. Winter game changer with capacity to allow for less road pressure.	James Williams	Website
2011	Has any consideration been given to a light rail line such as TRAX or Front Runner? That would seem to me to make the most sense.	Lisa Halversen	Website
2012	As an avid UTA bus rider/carpooler, I like the Gondola idea.	Misty Clark	Website
2013	I am in favor of the gondola.	Jami Moysch	Website

2015	I support the gondola.	Trish Ackley	Website
2016	I support the gondola.	tracy Water	Website
2017	I support the gondola	Julia Mortimer	Website
2018	I support the gondola	Nikki Synder	Website
2019	I support the gondola	Jeff Counts	Website
2020	I support the gondola	Hillary Hahn	Website
2021	I support the gondola	Ali Snow	Website
2022	I believe the gondola is the best solution.	Andrew Razuvayev	Website
2023	Wasatch Blvd from Fort Union to N Little Cottonwood Rd should not be widened and engineered for significant increased personal vehicle use and commuting traffic. The vision should be focused on achieving mobility needs of the future through dramatically increased public transportation use and safe bicycling/e-cycle usage in the area between the canyons. In this project, Wasatch Blvd should be improved based on this objective. The project should also serve to improve the character of Cottonwood Heights between the canyons for the future. The current plan of creating a major arterial road through the community between the canyons is the wrong approach and will significantly detract from one of the true treasures of the Salt Lake area.	Pieter Blauvelt	Website
2024	Prefer the gondola option, with addition of parking structure at mouth of canyon. Also, first come, first on gondola with no one holding a place for others. The current bus lines, or lack of lines, is a joke.	Peter Witt	Website
2025	Yes to improvements to little cottonwood canyon! Yes to snow sheds, yes to mobility hubs and more bus service, yes to adding a lane for buses only with more frequent buses, yes to widening Wasatch Blvd, yes to better trailhead parking. I know people are freaking out about creating more traffic and I honestly believe we already have increased traffic and it is only going to get worse as the population rises. Better to make improvements now so we can all enjoy the canyon together.	Cristina Miller	Website
2026	Please do not radically change the character of this nationally significant resource.	Richard Tingey	Website
2027	I prefer the gondola alternative. It fits sic's character well. It's also a unique solution to traffic congestion while still respecting the land. More buses is not the solution to the traffic because people don't like taking buses. They are hot, humid, unattractive and uncomfortable. I'd rather build something that we will be proud of.	Jared Gabaldon	Website
2028	we vote for the gondola!!!	Brenda Forest	
2029	Any other transportation other than a gondola is a band aid to the problem! People that live at the mouths of the canyon will still be unable to leave or enter their homes or neighborhoods with cars and buses still backing up Wasatch blvd	Matthew Kasner	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2030	I am an avid skier/hiker/trail runner and utilize both the Cottonwood Canyons all year. I'm happy to see the options being explored and all the solutions would be beneficial. In my opinion, the best option is the enhanced bus service with road widening. I think this is an optimal balance of required infrastructure, increasing access, while maintaining flexibility for people. I also like the gondola option but find the need to bus from Big Cottonwood Canyon to be excessively laborious. Parking at BCC, loading my family onto a bus with our gear, then unloading at LCC, then having to reload on a gondola sounds like a very significant challenge. I'm certainly in support of a toll system as well which would encourage carpooling and potentially decrease some of the traffic.	Ben Johnson	Website
2031	I tend to favor the enhanced bus option. But this assumes that the 'gravel pit' hub: 1) puts in the maximum parking spaces, 2) that there are areas for each resort (Alta Snowbird etc), and 3) that the busses are direct to those areas.	Sam Johnson	Website
2032	I am very much against the running of additional busses in the canyons. All they do is crash off the road and cause worse traffic jams. I am in full support of a gondola solution	Kyle Hierlmeier	Website
2033	I utilize Little Cottonwood Canyon as an avid hiker, snowbird season pass holder and cyclist. I support the Gondola solution.	Marie White	Website
2034	Enhanced bus service without road widening is the most logical choice for this very tough decision. The other two options have two large of economic and environmental costs. Road widening would be catastrophic, and gondolas would be unsightly and annoying with all of the transfers. Not to mention the lack of adequate stops up the canyon. I can't even show remain as pristine as possible.	Nolan Ingersoll	Website
2035	I like option 3 with the construction of the gondola as it limits car traffic in the canyon and does not require widening of SR 210. The gondola will be able to move many people through the canyon in an orderly fashion without people having trouble driving up the canyon road causing inefficient backups.	Andrew Michalik	Website
2036	I support the gondola. The gondola is the better choice.	Jennifer Andrews	Website
2037	Enhanced bus with lane widening	Mike Cannon	Website
2038	Best option is a parking structure near base of canyon with gondola. Parking structure seems fraught with traffic problems WHERE IT IS CURRENTLY BEING CONSIDERED. Initial cost should be less important than long term cost and maintenance. Purchase a piece of land more accessible further out from the mouth of canyon that can be accessed from multiple larger roadways. Maybe between wasatch blvd and little cottonwood canyon road and provide access from both streets. This would remove congestion at the junction in the mouth of the canyon, and give you a large area for parking and maybe gondola would have to have one additional angle station, but maybe could even cut straight over the lower elevation of the mountain at the mouth of canyon. I see putting a parking structure where the park and ride at the mouth of the canyon as a horrible choice and will be seen as a wasted opportunity to fix the traffic problem. Putting someone on a bus and transporting them to the gondola, also stupid, why not just keep going on the bus... being in ski boots and carrying equipment, probably waiting in line twice - that will never be something I would want to do. Gondola from Gravel pit by BCC to LCC, what?!! That is moronic... ugly towers all along the mountain covering a distance not necessary to cover. Get a piece of land close to LCC mouth and can be accessed by multiple roads. Otherwise abandon the gondola. It must solve traffic issue and ease of use/ time to destination issue better than what you have proposed, otherwise it is a wasted opportunity. Gondola is sexy, bus is not. People will take a gondola, but not if it requires too much effort. And people don't want to wait all this time and finally get a solution in place only to find traffic is still awful. Don't waste this opportunity, and taxpayer money please. I have had a season pass at Alta for the last 5 years and have lived in Utah for 42 years. I love to ski with my family and go about 20x annually to Alta. I have hiked and fished in the canyon throughout my life, but frankly, that canyon must be considered a ski resort as a whole. Focus on getting skiers up and down and you will be doing what is right for Utah and its interests.	Rory Van Buskirk	Website
2039	I do not want expanded lanes on wasatch Blvd. approaching big or little cottonwood canyons. They will decimate my property value with unwanted trafficking and will turn our community into an industrial area which will also hurt the community.	Henrique De Agostini	Website
2040	As a resident in Big Cottonwood Canyon, (Silver Fork Community), I support increased bus service (for LCC and BCC). Along with this, increased parking (for thousands of cars) at the soon to be retired gravel pit would be essential for bus success. Buses are needed year round. Traffic and parking at trailheads are getting increasing out of control in summer/fall. A Gondola system would not address these summer/fall problems because of limited stops. It would help with winter ski resort traffic, but not with summer/fall. (especially in BCC). Tolling both canyons, (especially in summer/fall) would also reduce traffic and promote busing.	THOMAS LOKEN	Website
2041	I am disappointed that the alternatives presented by UDOT in this EIS are so disconnected from a larger transit context. Unfortunately, it is clear that UDOT is only concerned about future impacts on vehicle flow and is unable to think of transportation in a greater context and its effect on environmental, economic, and social sustainability.	Mike Christensen	Website
2042	More busses up the canyon is not a good solution. That is thinking too short term. Nobody likes the bus especially when there isn't room for gear and after a long day of skiing the last thing that you want is to stand in your ski boots all the way down the canyon. Busses won't work if the plows haven't hit the roads and the canyon is closed. Busses are also prone to slide off the roads. A train or gondola system is much better suited.	Mike Jenson	Website
2043	GONDOLA	Marquet Call	
2044	In my opinion, alternative 3 (gondola) has one major drawback, the length of the commute. Parking close to the gondola base station would reduce this problem and make this option comparable to alternative 2 in terms of travel time. I also like alternative 2 because the added lanes could be used in the summer (biking and running). However, this could be accomplished by creating bike lanes at lower cost. In my opinion, option 1 is the least desirable. Also, management of vehicle occupancy will have to take into account parents driving up or down the canyon as single occupants of a vehicle simply because they dropped off or picked up children.	Paolo Moretti	Website
2045	Of the three options proposed (enhanced bus, enhance bus with roadway stuff, gondola) I would like to support the gondola option, but with comments. I think the gondola is much needed as long as it can be done: Without a required bus shuttle. We should be able to park our car, and walk (or have elevator/moving sidewalk access) to the gondola loading area In a fast manner (46 min is ok, but think it should be faster) In a way that would allow access to major trailheads (White Pine in particular, but maybe also the town of Alta) Year round access Bicycle access would be a big plus	JD Ethington	Website
2046	Don't know if this will get to anyone in a way that will clarify, but when I said "bicycle access would be a plus" in my comment, I meant "having the ability for the gondola to transport bicycles would be a plus."		
2047	A gondola is the way to go! Please create a parking option closer to the base terminal to improve user experience. Requiring a bus transfer to the gondola adds time and strain; ski gear is bulky.	James Laughlin	Website
2048	A gondola is the way to go! Please create a parking option closer to the base terminal to improve user experience.	Paige Bailey Laughlin	Website
2049	Go with the Gondola solution. Also consider road widening and add road avalanche shed covers.	Greg Bailey	Website
2050	I live SilverFork "Brighton" and would like to see the long-term projections on how a tram would impact my community?	Kirk McMullin	Website
2051	The gondola would be a great choice.	Tom Fendler	Website
2052	Love the idea of the LaCaille base station for the gondola. Would make accessing the canyon so easy	Whitney Bassett	Website
2053	Hello, I support the idea to build a gondola up cottonwood canyon. It would alleviate traffic, parking issues, and the need for busses to drive up in snowy weather. It is better for the environment and a safe choice.	Mike Williams	Website
2054	I support the gondola.	Bridget Steadman	Website
2055	All 3 have pros and cons, but no clear choice. As much as I would like to see fewer cars and busses, reliability of access is a priority. Option 2 seems to offer the most consistent alternative.	Carl Rick Richter	Website
2056	Folks, thanks for all your hard work on this. It is an epic task and, I'd imagine, impossible to please all parties. I strongly advocate for the least disruptive solution at this time, which is Enhanced Bus (with no widening). What we need to change is behavior. The best way to do this is make the unsustainable choice (driving low-occupancy) undesirable and make the more sustainable choice (bus) more so. A way forward, which would be easy to prototype, would be a toll for drivers and a bus that was cheaper than that toll. Go for it!	Erik Kish-Trier	Website
2057	As a life-long LCC skier, I believe that your going to have to disincentivize driving up the canyon on busy days. Whether it's a mid-week powder day or weekend storm day, you need to give people a carrot to get them to ditch their car, schlep all their gear and kids onto a crowded, slow-moving bus (while watching cars flying by them). Give the bus riders a discount on tickets, food and give them a safe, accessible place to keep their gear. As a parent, its quiet difficult to spend a day at the resort without the proverbial "crash kit" handy, i.e. food, dry clothes, backup goggles, ect. Also, the burden of convenience should be put on the Resorts, not the Taxpayers!	GARY FULLER	Website
2058	I am in support of the gondola option. It is cheaper than widening the roadway, as well as the cheapest to operate and maintain long term. I feel like having a gondola gives an additional attractive option for travelers instead of just increasing options we already have. Most of all, I support this option because it is the best environmentally.	David Horan	Website
2059	Gondola option makes the most sense. Clean, Quiet , scalable, expandable, connectable, modern, relieves congestion on the road, fun, inspiring, the best option.	Brian Martain	Website
2060	I've been skiing at Snowbird since I've been 3 years old and I've been employed with Snowbird for the last 4 years. With that being said I have been driving up this canyon for the last 20 years through rain, snow, or sunshine. I think the gondola would be a great idea and a huge improvement to the overall quality and convenience of the resort for both guests and employees.	Alyssa Kolan	Website
2061	I think the ENHANCED BUS WITH ROADWAY WIDENING FOR PEAK PERIOD(SHOULDER LANE)in LCC will be the best option since there needs to be an incentive to getting people on the bus and decreasing ride times to the resorts and that will be the major impetus to get people to do that. plus this option also allows for the adding of buses up big cottonwood canyon which at present needs attention too. If not now it will be needed within the next few years. The only addition to this proposal I see is the adding a mobility hub to highland drive to help aid getting people from the south on the buses as well. The gondola is a terrible idea since that only helps the ski resorts at peak times but does not take into account the rest of the user group population that loves and plays in the LCC and it does support future population growth.	eric bunce	Website
2062	In looking at the three options, I would simply rate my personal preferences as Gondola > Enhanced bus service w/ widened roads > Enhanced bus service w/no changes.		
2063	Having said that, what I am most concerned about is the affects of each of these plans on our air quality and how each helps reduce our carbon expenditure to reduce our impact on climate change. In practice, that means getting more cars off the road.		
2064	To that end, the gondola makes the most sense. Make it reliable and make it free to ride (or at the very least, notably cheaper than the tolls imposed on vehicles in the canyon). Incentivize it so that almost everyone who is going to either ski resort finds it worth their while to ride the gondola versus driving themselves.		
2065	If the gondola is not chosen and busses are the way it's going to be, it makes the most sense to add lanes so that the buses can drive independent of cars. Having their own lanes would 1. reduce the amount of congestion on the canyon roads, reducing the effect of bumper-to-bumper traffic in terms of both time and emissions, and 2. Incentivize people to use mass transit over their own vehicles, due to the aforementioned reasons.	Terry Seemann	Website
2066	More importantly, though, if either of the bus options are chosen, FULLY ELECTRIC BUSES ARE MANDATORY. It would be disastrous to do all this work, coordinate all this planning, and spend all this money only to pollute our air and planet even more than we already are!		
2067	P.S. I would like to note a big disparity in your report. Appendix B "Little Cottonwood Canyon Alternatives and Climate Change" talks about what the possible affects of climate change are on the canyons. What it does NOT do is address how the various proposals affect climate change. These are not independent considerations, and it's a sham that you addressed one view but not the other.		
2068	The 3rd alternative is an interesting solution with long term options to extend it to Big Cottonwood canyon and even to Park City. I prefer the second alternative. It will cost more, but in the long term it will allow more flexibility for tolls and alternating traffic during peak flows.	Jim Baker	Website
2069	New gondola option by La Calle is the best yet. It solves the parking and speed issues. Fantastic, go with that one!	Matt Lapiis	Website
2070	I am in favor of adding a large capacity gondola like a 3s model to Little Cottonwood Canyon. Not only to offer a new beautiful way to get up the canyon, but to offer an additional mode of canyon travel. Both on the green side (operationally less CO2) but also on the traffic side. The biggest part to the approach is going to be ensuring there are "no stop" drop off routes to ensure the gondola parking/drop-off does not impede Wasatch traveling vehicles, a large expense, but one that puts the pieces together. It would be a shame to add a gondola where's own traffic causes more traffic in the canyon.	Luke Ratto	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2065	As a resident of Sandy close to the mouth of Little Cottonwood Canyon, I'm dismayed by the fact UDOT seems to be unable to think outside the box. The solutions considered in this EIS reflect no real solutions to the ever-present traffic backed into my neighborhood most winter weekends. Traffic congestion in canyons is not a new problem, nor is it a problem unique to Utah. Much in a way that to a person with a hammer everything seems to be a nail, to Utah's Department of Transportation every solution seems to require roads. Rather than trying to cram more traffic onto a hopelessly crammed roadway, UDOT should strongly consider a (cog-) rail based solution. Rail-based systems have proven to be far more capable of carrying large groups of people and could operate in the confines of the canyon, even with steep inclines, well. In addition, this solution would be an innovative approach that could finally help with the pollution in the valley and canyons, and could allow for truly limited road-based access. The reduced maintenance costs (repairs and snow removal), reduction in canyon rescues of stranded drivers, reductions in accidents due to driving under the influence, should be considered in any calculations that would have excluded this option. There is a reason many European towns have implemented this type of system- because they work!	Michael Franz	Website
2066	As a visitor to the resorts of the Little Cottonwood Canyon, I fully support further exploration of the gondola transit alternative. A proven model at European resorts, Gondolas provide seamless, attractive transport from accessible parking directly to the slopes and base area facilities. I see a gondola as the only viable solution to get visitors out of their personal vehicles and onto a low emissions transportation system.	Benjamin Bartz	Website
2067	electric buses running in high frequency, very steep fee for personal autos (residents exempt, with guidelines and appropriate monitoring), the fee to aid to help offset buses. Gondola seems very high cost, long time to complete, and w/expected reduced snow, will serve fewer people.	nick burns	Website
2068	I'm a resident of Park City, and a student Urban Planner at Cornell University. I grew up skiing at Alta and still trek over to Snowbird to ski on occasion. I support the addition of the CW/LaCaille gondola alignment to the EIS alternatives study. Rarely in my studies do I encounter a situation in which the needs and interests of several parties align with so few downsides as with this proposal. Every user of the canyon would benefit from the faster gondola speeds and from having parking available at the gondola station. UDOT will benefit through the further reduction of road wear and traffic. Alta and Snowbird will benefit through increased canyon capacity, and LaCaille gives land in return for the benefits of quick access to the canyon for their customers and guests.	Liah Rosenfield	Website
2069	I urge, in the strongest terms, for UDOT to consider the LaCaille proposal as the primary gondola-based alternative.		
2070	Taking the bus during weekends last season was a terrible experience. There's no order when boarding and the only thing worse than watching full busses leave to go up the canyon without you, is watching full busses leave to down the canyon without you after a full day of riding. I was in a total panic when I was alone at Solitude last year and waiting hours for a bus. I ended up hitchhiking down. Unless the rider experience improves drastically, I'll be driving.	Brooke Lowrie	Website
2071	I support having a clean, safe, alternative for access to Little Cottonwood Canyon. I support installing a gondola.	McKay Wilson	Website
2072	Where can I find information about the 4(f) properties in the alternatives? I'm a resident of Park City, an avid skier and an urban planning student at Cornell University. I recently submitted a comment online in support of switching the consideration of the gondola alternative to the LaCaille / CW Management alignment (discussed here). Feasibility and cost aside, I'm wondering if the study process would admit such a shift in one of the alternatives (or the addition of a new alternative) at this point in the timeline, or if, because preliminary scoping and alternative screening have already been completed such a change or late-coming addition would be inadmissible as part of the EIS alternative process.	Dina Blaes	Website
2073	While, on a personal level I support the LaCaille / CW Management plan, I'm curious about UDOT's EIS procedure in a somewhat more professional sense. As an aspiring urban planner, I'm interested in the flexibility (or lack thereof) available to planners, engineers and the public throughout the EIS process. I'd appreciate any response available on this procedural question. I would like to point out that the large majority of winter traffic in LCC is heading to the ski areas. Therefore it seems to me that the patrons of the ski areas should bear the brunt of the 30% reduction in traffic that is the stated goal of all the alternatives presented at the meetings. With that in mind placing the toll booths above the White Pine TH would, in my opinion, be the most equitable. The relatively few "down canyon" users would not be "taxed" to support the ski areas. The concept of variable tolls depending on demand is very desirable. Weekend tolls should be higher than weekday tolls. Tolls varying by vehicle occupancy should also be considered. As I passed into the "senior citizen" category I have found it harder to find compatible back country ski partners. Therefore I lobby for special consideration for seniors with respect to single occupancy vehicle. Eliminating road side parking below Snowbird entry 1 is only equitable if the proposed expanded TH parking is incorporated. The separate entry/exit at White Pine is an excellent idea. I was also very pleased to hear at the meeting that parking providing access to Grizzly gulch is not included in the road side parking ban. Thank you	Liah Rosenfield	Email
2074	The gondola makes the most sense to me. It provides an alternative to driving up the canyon, especially when the road is closed for avalanche control work. The gondola will make a significant impact on reducing LCC vehicle traffic. It has a relatively small footprint in the canyon while providing a unique experience traveling through the canyon.	Richard Steiner	Email
2075	Would prefer the Gondola option	Chris Pearson	Website
2076	Hey, I know that I already submitted a comment earlier in the comment period, but thought that I would add this. I 100% believe a gondola is the way to go to relieve congestion in Little Cottonwood canyon. My biggest complaint was not having parking at the base station of the gondola. I was just made aware of a plan envisioned by private developers to locate the gondola further down the canyon, that includes a parking structure. This would allow people to access the gondola without having to take a shuttle. I think UDOT should highly consider this new option.	mark reese	Website
2077	I strongly support the enhanced bus (no road widening) over the other two alternatives. While I love the ski resorts in LCC (I am an Alta season pass holder), and I am strongly against further development in the canyon. Constructing a gondola with large towers would deteriorate the wilderness experience in the canyon, whether one is driving up the road or looking down from the backcountry. Widening the road also makes me nervous in that I fear it will infringe on wildlife habitat and/or the watershed. I also worry that the logistics of the gondola would not incentivize people to take it. One would have to wait for a bus, board the bus, get off a bus, wait for a gondola, load the gondola, and then get off the gondola...it just seems like hassle. People are going to get sick of it. I've always felt that I would be happy to take the bus now if it ran directly to Alta or Snowbird and if they left like every 5-10 minutes. I think a lot of people would. I am also concerned that the gondola will likely be promoted by the City and/or the resorts as a tourist attraction, further congesting the canyon. Our ski resorts do enough marketing to get people to come to the canyon; let's not hand them another opportunity to make money and make the canyon even more crowded. I like the idea of an enhanced bus system, especially if it involves some sort of weighted tolling. In particular, I think tolling only above Entry 1 is a great idea in that backcountry users wishing to access lower trailheads would not need to pay the toll, or maybe only when the canyon is expected to be very busy. We need to keep the canyon assessable to all walks of life, so I don't think that backcountry users should necessarily be required to pay for a problem that is mostly attributed to the resorts. However, I understand that on holiday weekends, it may be necessary to toll the entire canyon to keep things under control. I will be very interested to see the results of the EIS. If the gondola and road widening are estimated to have a larger negative impact on the natural environment in the canyon, it seems like a no-brainer to go with the enhanced bus system without widening.	Ryan King	Website
2078	I am a 14 year local and live in the 9400S and Highland area. I 100% support the gondola option as a transportation solution for LCC. I especially support the LaCaille transportation hub option.	Donovan Lynch	Website
2079	I am in support of the gondola option with the hub/parking being located at La Caille. I believe it will be the least obstructive to the canyon and will provide a safe and comfortable ride year-round. I also believe it will become a destination for many tourists and provide yet another amazing reason to visit Utah during all months of the year, not just winter.	Chris Balun	Website
2080	I 100% support the gondola option as a transportation solution for LCC. I especially support the LaCaille transportation hub option.	Hailey Klotz	Website
2081	I 100% support the gondola option as a transportation solution for LCC. I especially support the LaCaille transportation hub option.	TJ McNulty	Website
2082	I 100% support the gondola option as a transportation solution for LCC. I especially support the LaCaille transportation hub option.	Delina McCann	Website
2083	I 100% support the gondola option as a transportation solution for LCC. I especially support the LaCaille transportation hub option.	Kristen S	Website
2084	I strongly urge the enhanced bus option with minimal or no road widening. The gondola option in LCC especially as proposed by LaCaille 1) creates another premier parking Lot all skiers will try for first, hence congesting wasatch road and encouraging the long lines we now see 2) they claim some local property owners favor this commercial intrusion into residential space. The only ones I'm aware of in favor are the family members selling the property and making millions off of it. 3) their proposal, in an effort to advertise quicker transport times for the resort clientele do not stop at any trailheads. It seems like public money for private enterprise gain. Where is the service for canyon lovers who prefer a non resort setting? 4) such an intrusion and taxpayer expense should require limits on ski parking at the resorts if they are claiming a reduction in emissions.	Brad Bern	Website
2085	The gondola seems like a good choice	Victoria Schmidt	Website
2086	There appears to be no other option than to widen Wasatch Blvd. I am disappointed by this. Widening Wasatch will only lead to a larger parking lot on Watasch Blvd on powder days (peak usage days in the winter). My preferred alternative would be to build the gondola and uses busses from two transport hubs without modifying Wasatch.	Rebekah Richmond	Website
2087	I like the proposal of the La Caille station that the CW Developers have put together. It addresses the needs on a much higher level and can provide more space for additional parking and access for cars and busses to drop off passengers. If the gondola station is placed higher in the mouth of the canyon, it will make it harder for people to gain access and use the gondola. The La Caille Station Proposal allows for local access, day parking, car drop off, and bus drop off. While the gondola proposal will be an access point for daily skiers and snowboarders, it will be a legitimate attraction on its own. It will provide a revenue source from both Winter and Summer visitors. You must consider parking alongside the gondola for people in the Winter, Summer, and off-peak times who just want to ride the gondola. I also like the gondola proposal as it leaves the existing road infrastructure in place and only adds onto that access while talking additional cars and busses out of the canyon. While towers will be visible along the canyon corridor, it will allow for amazing views for the riders in both directions. It will be protected from avalanche slide paths, thus providing egress in and out of the canyon when the road is impassible. The La Caille Station Proposal seems to provide the best solution to Little Cottonwood Canyon access for the lowest cost. It allows for future growth and builds a real connection with the Salt Lake community and the Little Cottonwood Canyon assets. As a life long resident of Salt Lake City and winter enthusiast of Little Cottonwood Canyon for over 45 years, I fully support this development. I hope this proposal can become a reality.	Mark Nuetzel	Website
2088	Understanding we MUST act now in order to protect all aspects of Little Cottonwood Canyon and the interests of all stakeholders, I reviewed the various proposals and fully support the La Caille-based gondola option as it appears to be one of the most cost-effective and least-impactful of the various options, one of which must be implemented sooner rather than later. Please consider adopting this option as it will benefit the majority of all interested parties with the least amount of impact, in my opinion. Thank you.	James Eric Thompson	Website
2089	The gondola is the obvious choice for a variety of reasons, ranging from less people driving in dangerous road conditions to a positive environmental impact. It must be the option chosen.	Shawn Stinson	Website
2090	I am a frequent visitor to Utah having skied the last several winters. Little Cottonwood Canyon has become so traffic jammed, parking so limited and then impassible during avalanche control periods that many days I go elsewhere for skiing. The Gondola option does several positive things: 1) takes traffic off the road 2) provides an alternative that is less weather impacted 3) provides an alternative both on and off the mountain. 4) time is equal to a car or bus trip or only slightly more.	Nathan Fastenberg	Website
2091	While we all certainly hope that Sars-Cov2 is gone soon, the Gondola could provide social distancing issues and that should be considered by health experts and contrasted with bussing. Other than the amount of time to project completion as compared to increasing busses, this almost seems a no-brainer.	Michael Sojka	Website
2092	Please choose the gondola option. This will be the least impactful in our already fragile environment. Thank you.	Pahoran Silva	Website
2093	Hello! I would like to give my support to the gondola works. Because it seems like the best way to accommodate the crazy traffic we get and the least affected to the environment. Thank you	Vy Pham	Website
2094	I support a gondola system. Don't widen the road or increase bus service.	Christopher Thresher	Website
2095	I would like to voice my support for the option to implement Gondola travel in LCC. I feel based on observations in areas such as Telluride that people are much more apt to utilize gondola transportation rather than bus transportation. It would be an asset to the resorts, community and environment to work towards gondola transportation within LCC.	Carolyn Lewis	Website
2096	Gondola is the choice to protect a canyon we love.	Josh Ohliger	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
	Hi,		
2096	After reading the 3 proposed options I think that a large number of avy snow sheds and tunnels should be built on the road (Euro style) with electric buses used to transport individuals up/down. Additionally, multi story parking garages could be constructed at the current parking locations to house a much larger quantity of vehicles and serve as transport hubs. The gondola idea has a kitschy sight seeing uniqueness to it, but ultimately isn't a strong solution. Thanks for taking time to read, and consider these thoughts.	Alex Hunt	Website
2097	Save the environment!	Breanna Gillan	Website
2098	Gondola all the way...safer, cleaner than any dirty bus system that crams in way to many people especially in these times! Long term results will prove right. But logic seems to be a dying trait...Gondola all the way!! And no more people being stuck due to avalanches!	Austin B	Website
2099	i believe up canyon personal cars should be for employees and residents only. The Gondola would seemingly be the most efficient functional plan to male a cleaner transportation option for all recreators.	Rob Harrison	Website
2100	Please choose gondola option. As a resident of LCC, environmental impact of road widening or snow shelters far outweighs benefit. Increased vehicle traffic is not the answer. Thanks for listening.	Ryan Argenta	Website
2101	I support the gondola	Ligia Frangello	Website
2102	Light rail or flex overflow lane would be safer for longer distances like this	Ashley O'Brien	Website
2103	Why do you keeping doing the same study and coming up with the same results for the last 70 years and spending millions of dollars on these studies. pick a solution that makes Utah the great outdoor destination it can be by making access easy, supporting the increasing number of visitors and keeping all the special interest groups out of the equation	Kyle d	Website
2104	I love this! I work at solitude and this would be a game changer	Alexandra Fine	Website
2105	I fully support the development of a Gondola through LCC. A choice to build a Gondola signals to the rest of the world that Utah continues to be a leader in transportation, technology and infrastructure. Choosing to build a Gondola in LCC is a principled long term fiscal decision and a pro environment decision that will make a significant impact for decades. Not only is a Gondola the rational fiscal, environmental, and logistical choice for moving the masses it is the exciting choice that our community can rally behind and visitors to the state can get excited about. I can already imagine the wonder in the eyes of the young and the old as they soar above LCC, a ride that will never cease to amaze.	Amanda Pouchot	Website
2106	With each review I am impressed with the amount of energy and resources put into this project. Thanks for a job well done. I do think this is an important study and worth the effort involved. I have a few comments for your consideration. I think Alternative 2 is the hands-down winner for the following reasons. It allows for the shortest travel time and least logistics to get up the canyon. The additional capital cost for Alt. 2 can be defrayed by re-locating the extra buses in the off-season to support other events throughout the valley and not just sit idle during summer months. It is more economically scalable. The gondola is going to run during the summer with far less ridership/limited rider revenue or fees, yet still require the same level of maintenance even with several gondola cars removed. I also think the snow sheds can be modified as wildlife crossing if later decided that is necessary, and even with the gondola, having a passable road still makes sense. A couple minor observations on your preliminary diagrams: 1)the vegetated roof at the Mobility Hub looks like a disaster waiting to happen when we get a deep, heavy snowpack and it structurally can't handle it or needs to be removed. The snow shed over hang ends directly over the bike path, perhaps lengthening or shortening would eliminate bikers getting dripped on when it rains or during a melt. Regards, Guin Cummings	Guinevere Cummings	Website
2107	Gondola all the way!!!	Paul Flanagan	Website

2113	I think the gondola would be the most efficient option	Christian Call	Website
2114	Please vote for the gondola as it will greatly reduce traffic up the canyons, the construction creates jobs, and it ensures that emergency vehicles will be able to get both up and down the canyons.	Pauline Kneller	Website
2115	Fully in support of gondola. I as a skier or LCC on a regular basis could 100% see myself using this service seeing as how it alleviates parking, traffic, and even those who had a couple drinks a safe alternative to getting down the canyon.	Joe Lagasse	Website
2116	I live on the corner of Daneborg Drive and Wasatch Blvd, so I'm "very" well aware of the traffic situation in the winter along Wasatch and going up the canyon. It's pretty obnoxious, to be quite honest, and can make navigating our way out of our neighborhood tricky, especially on a "pow" day. This past winter (before resorts were forced to close down early), I actually recorded a time lapse of traffic passing by our house and was astounded. In the time I recorded, I saw only a couple of buses, and hundreds of cars, most with only a single occupant. But we knew what we were signing up for when we bought a house here, coming from West Jordan. We moved here to be close to the mountains and because even in spite of the crazy traffic during ski season, it's worth it to us. That said, I cannot FATHOM why we are considering spending billions of tax dollars to build a gondola or widening the road, thus reducing the amount of forest and increasing our impact on the environment to accommodate Alta and Snowbird, both private corporations. I recognize that there has been a dramatic increase in usage over the years and I do see the value in increasing public transit access (more buses, more parking at park and ride locations), we should also be implementing a toll system in the canyons, which would encourage folks to utilize public transit. It also needs to be made reasonable for people to use. I have a family, including two children. Hauling kids, gear, snacks, etc up the canyon for a day of snowboarding is stressful and overwhelming as a parent. There needs to be some thoughtful consideration that goes into making it easier for people to take advantage of this - along the lines of utilizing buses similar to those you find on airport shuttles, with built in areas for people to stow gear while riding the bus. In conjunction with this, ski resorts need to also provide accommodations like locker room facilities where families could stash the things they need to bring with them, i.e. diapers, snacks, lunch, extra clothing - all the types of things you would bring with you and keep in the car should you need it. If these kinds of things were addressed and considered when revamping public transit, I would 100% be on board for taking a bus every time I go to a resort to ski. But the resorts should be footing some of the bill for this, seeing how they are the ones who stand to gain the most from any changes that are made. While my own home/property would not be impacted by any of the alternatives, there are many who would be and that's simply unacceptable. We can do better, and we must.	Michelle Martineau	Website
2117	I support the gondola option due to the environmental impact of the other options.	Brent Christiansen	Website
2118	the gondola would be an amazing attraction and would be so beneficial for our environment	Heather Boland	Website
2119	Gondola please. Bring it all the way to LaCaille station!!	Stewart Lawson	Website
2120	I support the construction of a gondola to alleviate traffic and reduce environmental impacts in Little Cottonwood Canyon.	Chris Francis	Website
2121	I would like to voice my support for option #3 - Gondola, with the recent updates to the location near La Caille. This is the optimal long-term solution and does not require additional buses (which I hope are electric if other options are chosen). I would also suggests that ski resorts follow Solitude's example and charge for parking, using that funding for canyon clean-up and other initiatives that benefit the area. Really looking forward to any option that helps resolve the excessive congestion in our canyons! If #3 is chosen, please add parking at the base of LCC for the gondola. If #1 or 2 are chosen, please add a bus stop for 2 busses/hour at LCC P+R.	Andrew Webb	Website
2122	Questions: I ride the bus for more than 2 hours roundtrip between Trax to Alta every day. Will riders be willing to add at least another hour, plus wait time to their daily trip? Will people choose an hour gondola ride as opposed to a 20 min drive on a normal day? How much will wind and storms affect the gondola? What about avalanche safety for all gondola towers? What about a hybrid plan to include #1and #3? My Vote: Reliability#2	Carl Rick Richter	Website
2123	Save the planet	Richard Suarez	Website
2124	I support the Little Cottonwood Canyon gondola proposal as a low carbon approach to easing congestion in the canyon. These systems work beautifully in European ski towns that serve much denser populations.	Jennie Peterson	Website
2125	Hello, I would like to voice my support for the increased bus service alternative without widening roadways. I believe that this alternative has the lowest environmental impact to our canyon, as well as, the highest likelihood of being effective in the 2020/2021 season. I would like an incentive to take the bus to be added to this proposal. I propose this is done by charging a fee for vehicles parking at Snowbird or Alta lots. I believe a program like Solitude implemented last season where cost for parking is influenced by the number of people in a vehicle will incentivize taking the bus and carpooling. I would also like to voice support for a bus route that runs not only from the mouth of the canyon, but all the way to and from Salt Lake. I believe this would encourage locals, especially students to take the bus more often. I also believe that with increased traffic in the backcountry and to backcountry trailheads should be considered when planning the bus route and additional stops to trailheads should be considered along with the usual resort parking lot stops. I believe that these suggestions will make the bus more effective in reducing traffic in little cottonwood canyon.	Margaux Klingensmith	Website
2126	Save the environment and let us shred. Gondola please! Take it to Heber to allow access from the East as well.	Derek Droeger	Website
2127	The gondola is the way to go. Last thing we need is more vehicle traffic in the canyons be it bus or car. Gondola also has the economic benefits of being an attraction for tourism itself thanks to the beauty of traveling up the canyons alone. Gondola is the best option in the big picture.	Carson Barber	Website
2128	I am fully in favor of the gondola-focused transportation solution for Little Cottonwood Canyon. More buses in the canyon will not solve congestion issues and buses are subject to the same delays related to avalanche work, traffic accidents, or general congestion. As a friend once said "I'd rather be stuck in traffic in my car than on a bus." The gondola based solution will provide a constant, dependable method of transportation that isn't subject to the delays of the road, which I believe will result in a much higher "take" rate among skiers & boarders. The gondola is the way forward!	Keane Horner	Website
2129	This is a great idea	Hannah Robinson	Website
2130	I have worked at Snowbird for 24 years. I have experience with the canyon road and agree that the gondola is the best option for safety, access for all, least environmental impact, better air quality, cost effectiveness and is a long term solution.	Crystal Bartlett	Website
2131	I support the gondola.	Logan Allred	Website
2132	LOVE this idea! But maybe more busses in the meantime while it gets built??	Sophie Harlam	Website
2133	I have lived in the valley for 3 years, and each winter we enter a smog-like inversion - adding MORE cars into the canyon will only make this worse! I support the gondola project.	Becca T	Website
2134	UDOT should consider the gondola project. In terms of environmental equity, accessibility, and fiscal responsibility for the community, the gondolas provide a solution to all our issues across the valley. The incorporate our majestic mountains and provide surreal scenic attractions. It will take our city and valley into the future of ski city's. Do not widen the roads, this will only temporarily alleviate access. Its time to use imagination and creativity to create a once in a lifetime experience skiing the Wasatch Mountains.	Eva Lopez	Website
2135	a perfect way to reduce traffic and a better mode of transportation for the environment!	chelsea horner	Website
2136	Best option presented.	Greg Deweese	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2137	As an employee at Alta, I am very interested in seeing improvements to travel in Little Cottonwood Canyon. The alternative that I support and would like to see implemented is enhanced bus service (w/o road widening). I believe this is the best alternative because it increases the availability of public transportation within the canyon while causing the least environmental impact, with the least cost, of all the alternatives. While I am attracted to the idea of a shoulder lane for buses, I think the added cost and environmental impact to construction does not justify the outcome. Furthermore, if the enhanced bus only option were to be selected, this would be the quickest alternative to implement. Finally, I do not support the gondola alternative because I think the construction of new, costly infrastructure is unnecessary when the goal of improving traffic flow in the canyon can be accomplished without doing so.	Hannah Peters	Website
2138	Gondola makes absolutely the most sense. It will take much of the strain off udot and allow tourists to enjoy great views.	Isaac Buckland	Website
2139	The congestion issue in our canyons was not nearly as big a problem until the Ikon/Epic Pass type passes came into existence. Stop the sale of these passes so the locals have the best access to the resorts.	Shaye Powers	Website
2140	Please, any solution that removes cars from the canyon! A gondola would be amazing!	Sarah Hall	Website
2141	We want the gondola!	Jordan Larsen	Website
2142	While no solution is without drawbacks I believe the gondola solution is by far the best for the following reasons: 1. provides an alternative form of transportation that does not require tire on roadways 2. Provides year round scenic transport up the canyon thus enticing year round tourism 3. Provides alternative transport up the canyon in the likely event of future road widenings, improvements, etc.	Andrew Stewart	Website
2143	I support option #1, Enhanced Bus with no additional changes. Little Cottonwood Canyon would only be damaged by widening the road or adding a gondola. Users of the canyon who want a more urban experience can use BCC or go to Park City.	David Allred	Website
2144	Please choose the La Caille site for a garage, transport center and gondola. It makes no sense to park at BCC and ride a bus to transfer to the gondola at LCC... if you're pushing the bus transfer, then why wouldn't you just stay on the bus to get up LCC? The private-public partnership makes the most sense.	GREG PRIEST	Website
2145	Please choose the gondola option as it is the most viable environmentally friendly long term option. A steep toll up The canyons for personal combustion engine vehicles would help.	Patrick Carter	Website
2146	We need clean air	Nicole Sperry	Website
2147	I think the gondola option is the best long-term choice. It would be the least impact to the surrounding area (I am considering emissions, wildlife, weather, traffic) and would be a really cool addition and asset to our already world-famous slopes. The bus options are plainly more expensive and detrimental on many fronts. Lets choose the most proactive solution, which by many factors seems to me to be the gondolas. Also, they would be super fun to ride!!	Dyani Wood	Website
2148	NO, NO, NO, NO, NO, NO GONDOLAS!! (I wish I had a bigger point size to use here.) My husband and I have lived in this area for 30+ yrs. and the environmental impact it would take to build the gondolas (not to mention expanding the canyon roads to accommodate ppl so they can USE the gondolas) is UNACCEPTABLE!! This is all about GREED and LINING the POCKETS of a FEW at the expense of the earth and all who truly appreciate it. Again, JUST SAY 'NO' to the DEVELOPERS!	Glenda Galbraith	Website
2149	I support the gondola! I grew up in Switzerland and I KNOW how effective they are. Traffic is devastating in every way. Build the gondola, PLEASE!	Marcus Weiss	Website
2150	I am in favor of the gondola with the La Caille base station. Better parking expansion and a way to actually enter and exit the canyon when the road is closed are clearly big perks to this. Adding snow sheds and more buses is a temporary fix that won't be sustainable for the inevitable increase in traffic, and the snow sheds will be much more visually terrible for our canyon than a gondola.	Anelise Bergin	Website
2151	The gondola would be a great contribution to Utah.	Adante Carter	Website
2152	I am in support of the gondola. It is truly unique and would attract a lot of people to the area.	Leslie Hobson	Website
2153	I support the gondola. Please don't infringe any more on the wildlife.	Nick Eibler	Website
2154	I feel it is a wonderful and necessary thing to have a gondola run in Little Cottonwood Canyon. The positive effect it will have on air quality alone in Utah is enough of a reason to make this happen. On top of better air quality, it is much more cost-effective, there will be a reduction of vehicle accidents in the canyon and we wouldn't have to intrude upon the wildlife or ruin the beautiful nature by putting in snow sheds that are required for cards and buses. I look forward to riding the Gondola myself and seeing the beauty fo Utah from a whole new angle.	Devin Neilson	Website
2155	I support the gondola. It would be great	Roland Martinez	Website
2156	The gondola is a cost-effective, long-term solution to problems we've been trying to tackle for a long time now. It is also something that would be treasured by the community for activities and safety.	Haley Beckstrand	Website
2157	More buses and a wider road don't solve the problem. If an accident or avalanche shuts down the canyon, it doesn't matter how many buses or bus lanes you have – everyone has to wait and everyone is stuck in traffic.	Tim Malboef	Website
2158	I highly support the gondola and the carbon-neutral emission it will create. It provides better transportation options and safety. It's a win-win!	Daniel Maldonado	Website
2159	I love Utah. It has been my home for my entire life and a gondola seems like a great addition for the people in Utah. We deserve safe and reliable travel that doesn't add to the smog and bad air quality we already endure.	Casey Nichols	Website
2160	I love going to Snowbird and Alta during the winter for snowboarding but I could deal without the traffic and immense waste of time getting up the canyon. A gondola is more reliable and just as quick, I support it. I hope you will truly consider this option.	Max Higbee	Website
2161	I love the canyon but don't get to experience it as much as I would like because of the time commitment it takes and my limit to one car in the household. It would be wonderful to be able to use a gondola and take my grandbabies up to see Utah's beauty.	Shirley Flandro	Website
2162	A gondola is the most environmentally-friendly option that takes into account air quality, water quality, and energy efficiency.	Alicia Flandro	Website
2163	Please consider using gondolas instead of busses or bus lines. I believe a gondola service will be much better than busses!	avery spencer	Website
2164	In favor of the gondola.	Samantha Mansfield	Website
2165	Air quality is important to me, the gondola is the best option to preserve what air quality we do have without making it worse. I support the gondola!	Coulson Bingham	Website
2166	Gindola!	Martin TREATY TRADER OR INVESTOR Irwin	Website
2167	we should be taking measures to help preserve our beautiful canyons rather than widening the roads to allow for more traffic+pollution.	Laural Lancaster	Website

2181	I support the gondola.	Josh Wall	Website
2182	I support the gondola :)	Andrew Wilson	Website
2183	I'd use the hell Out of a gondola	Nina Starling	Website
2184	The nature of the transportation problem at Little Cottonwood Canyon seems tailor made for the benefits of an aerial cable car system. However, the two stage bus/gondola alternative seems to be designed intentionally to ensure it does not get selected. Who is going to want to lug all their equipment out of a car into a bus, then out of the bus into a gondola cabin? Such a gondola will only be useful on peak winter ski days,because when the traffic is anything other than terrible, nobody will want to take it. If the gondola was a one-seat ride from a park and ride/transit hub to Snowbird, however, you would have a year round attraction preferable over driving up the canyon for a wide variety of trip types.	Ben Lytle	Website
2185	In conclusion, if these alternatives are the only thing that can ever be done here, enhanced high frequency bus service is the best choice because it is a one-seat ride from parking. But the true best alternative would be to extend the gondola to the parking/transit hub.		
2186	The gondola is the best option!	Melissa Parrish	Website
2187	Why can't increased bussing, tolling, and carpool incentives be put in place to see if that would get us to 30% reduction inncars without drastic impacts to the canyon.	Matthew Rocha	Website
2188	I support the gondola for little cottonwood canyon None of the three Draft Alternatives meet all the CWC Staff recommended Attributes and Objectives. The linked proposal meets ALL the recommended Attributes and Objectives, and includes a proposed method to fund it privately using a Joint LLC formed by the ski resorts involved. Others could also participate and invest. https://www.dropbox.com/s/hhnb3n7o1ye2i6g/Little%20Cottonwood%20Canyon%20-%20Boring%20Company%20tunnels%20proposal%20V2.1.pdf?dl=0	David Stein	Website
2189	If built, this will be a world class Mountain Transportation System and will permanently solve transportation issues in LCC, BCC, Mill Creek Canyon, and Parley's Canyon as well as providing Mass Transit in the Wasatch Back. Renewable energy powered, non-polluting, effectively invisible, unaffected by avalanches, heavy snowstorms, road closures, wildfires, etc. Effective emergency egress, efficient, fast, and a blast to use! It will draw people to use it instead of drive, with no tolls, free, equitable, convenient transportation. I'm in communication with Tesla Energy right now, and will be in contact with The Boring Company as well as Tesla Automotive. Next we approach the ski areas that are signatories to the Mountain Accord Charter.

2193	I would support the Gondola option. It would be great to add a parking structure feature at the Gondola base to accommodate car pool parking	David Rowberry	Website
2194	Yes!	Hanna Vance	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2194	The gondola sounds like a great idea. How long would you anticipate the wait to get on the gondola be? Is the 45 minutes travel time or dies that include wait time? How long would construction period be? What are next steps and when do you think it would start? In the meantime could the canyons require 3 or more people for carpool during peak times in all seasons. Also require a canyon pass like millcreek canyon with a booth. This won't happen but could the resorts stop accepting Epic, Ikon, and Mountain Collective Passes.	Benjamn Lowry	Email
2195	I support the gondola initiative. I worked for Alta Ski Area for 44 years, retiring in 2018. I watched the growth over time of skiers and worked hard with Onno Wieringa to try solutions that had outcomes. This seems to be the next step.	Connie Marshall	Website
2196	Considering the ecological impact the emissions from an increased bus amount, the Gondola is clearly the better option.	Isabelle J	Website
2197	Gondola would be the coolest. I would love to take a gondola over a bus. It's also environmentally friendly, maintaining the nature in Little Cottonwood and cutting down on emissions!	Taylor Jacobson	Website
2198	As a frequent local skier in both Little and Big CC there needs to be a gondola up the canyon from a parking structure at the mouth of the canyon. If you have to park then take a bus to the gondola it will not get used. Either a cog train or a gondola line they have all over in other countries. It's time to make a drastic change. A lot of European ski resorts you have to park and take a gondola to the base of the resort.	Sean Lodge	Website
2199	Hello and thank you for allowing the public to share their thoughts and opinions on matters like this. I believe that utilizing a Gondola to access upper LCC is the solution in which offers the most long term solution. It will undoubtedly keep people safe from avalanches, while also reducing (hopefully) the congestion and traffic traveling up SR 210 in winter and summer. It will bring an attraction and possibly new opportunities for businesses utilizing our great outdoor spaces for employing and contributing to the local economy. I would also like to think that when looking at Europe the reality and use of Gondolas and Ariel tramways are incredibly useful and have been for nearly a century, we can bring that mentality here to the US to keep people safe and perhaps open opportunities for a diverse group of users. Thank you.	Devon Hummer	Website
2200	We should seriously look to the future for access to Little and Big Cottonwood Canyons. Building bigger roads and creating more parking in the canyons will ruin the natural environment we so cherish. We must pursue mass transportation. I strongly believe the GONDOLA is the best option of the three proposals. The advantages are: The smallest footprint and least impact to the environment Alleviate danger and frustration of driving up and down snowy / icy canyon roads Being above the road, Avalanche would not be a safety concern Less exhaust pollution from cars and busses CLEANER: -less road pollution from salt and automobile chemicals. Would actually be a FUN experience for visitors I feel it's Critical to the success of a Gondola to have PARKING AT THE GONDOLA BASE STATION rather than requiring users to park at a distant lot and bus to the gondola station. Parking at the base and boarding the Gondola would give the feeling of "Already Being There" Considering time for the 3 options this makes it feel the quickest! A FUN SCENIC RIDE UP THE CANYON TO START YOUR DAY IN THE MOUNTAINS !	Mark Barone	Website
2201	The Gondola would be a great solution for traffic, safety, and environmental issues. I would love to see this project happen.	Kai Dude	Website
2202	Sick of traffic	Tanner Saxey	Website
2203	I believe building a gondola system is the best option for long term traffic and tourist management in LCC. Not only can a gondola system be scaled and enhanced over time to align capacity with demand, it also provides comfortable and safe transportation to tourists with the least knowledge of driving in the canyon while minimizing the amount of slow bus traffic on the road. It is frequently the busses that slow traffic the most during trips up the canyon and I believe adding more busses to the traffic pattern will further slow average traffic speed.	Dan Doverspike	Website
2204	Waits in the canyon are long and it's a sketchy drive	Eric Mecham	Website
2205	We rent an apartment off of Kings hill drive and would rather deal with ski season traffic then build a "Bangertter highway" type expansion of wasatch Blvd. If you want to limit the traffic, work with the ski resorts to implement preferred parking for carpools, a gondola, and/or additional public transport. The major problem is car congestion for single riders from out of state or those with the epic pass. Those that live in the area know how to get around the traffic by getting up earlier. There's a reason people live here. It's to get away from urban sprawl and pollution.	Tyler Hatch	Website
2206	I support the road widening for buses in winter and hikers/bicycling in the summer. While not ideal, I believe it is the safest and most efficient option.I've come close to hitting bicyclists in these canyon riding in the narrow shoulder.	Jeff Schindewolf	Website
2207	Definitely in favor of increased buses or a shuttle like system. Widening the roads/gondola/train are too unrealistic, difficult, and expensive. -BCC resident, + Alta and Snowbird skier	Nels Nichols	Website
2208	Support for the gondola!	Sharon Adams	Website
2209	Part of the canyon experience is the ride to the top and back. I understand snow sheds may help keep snow off the road, but they would severely affect my reason for going up the canyon for the view. I really don't want to spend a portion of my ride in a concrete tunnel and would even consider going to a different resort for skiing.	Grace Cheeney	Website
2210	Please don't widen the roads in Little Cottonwood Canyon! I don't see it as a long term solution and will end up costing more than the gondola in the long term. The gondola is a much better choice.	Nate Lijenquist	Website
2211	I would love a gondola for fun activities in the summer and winter. It would be a really cool way to see the canyon.	Grace Lijenquist	Website
2212	Air quality is important to me and I support the gondola. It will have an immensely long life and impact generations to come for the better.	Trevor Schmidt	Website
2213	The gondola sounds so rad for snowboarding. It will be awesome to get up the canyon and focus on my fun day instead of worrying about the trip.	Spencer Schmidt	Website
2214	I treasure nature so much. We have such great access to the beauty that surrounds our city and I would hate to see any of that lost to extended roads. Instead, choose the gondola which has a minimum impact and will provide a beautiful new way to appreciate the beauty of the canyon.	Maxwell Eddington	Website
2215	Too many times people get stuck up the canyon when an avalanche shuts down the road. This seriously affects people's plans and days, not to mention a lack of safety. A gondola takes that problem away entirely.	Connor Schwantes	Website
2216	Taking a bus up and down the canyon is stressful, uncomfortable, crowded and unreliable. A gondola is a much more enjoyable experience and allows me and my guests to see Utah's beauty from a new perspective.	Calvin Cooper	Website
2217	More buses and a wider road don't solve the problem. If an accident or avalanche shuts down the canyon, it won't matter how many buses or bus lanes you have - everyone has to wait and everyone is stuck in traffic.	Bryce Romney	Website
2218	I care about our environment. Not only here in Utah but the earth and its atmosphere. If we can do anything to aid the only world we have we should absolutely do that. The gondola is the best option.	Jessie Peltier	Website
2219	Parking is huge turn off for heading up the canyon. An alternative way to get there without the parking hassle and dangerous roadside conditions would make it so much easier.	Molly Buonforte	Website
2220	This issue is too important to not act accordingly. Yes, it is about public transportation but it's also about safety, cost efficiency, and the environment. It's a no brainer, the gondola is the best choice by far.	Sally Glaze	Website
2221	Far too often I think Utah's take the nature that surrounds the city for granted. Not being from here originally it is such a blessing to have around. The problem I have is accessibility. I know the gondola would add so much accessibility for myself and others in need who don't get to experience nature with ease.	Tim Cooper	Website
2222	I would love to take my little girls on a gondola and have them experience the world from a new view.	Sarah Cooper	Website

2244	Thank you for addressing the congestion of the traffic in Little Cottonwood Canyon. We have over the years used the busses to access the ski resorts during ski season, but as children learned to drive they want to go on their own. It has been a great concern as a parent knowing how congested the canyon is and the availability of close parking to the resorts so we have not allowed them to ski at the resorts. I would encourage and ask that a Gondola be put in with parking close by that would allow for families and youth to access the canyon and resorts with less traffic and environmental damage. We agree this would be a beautiful way to enjoy the start and end of a day in the canyon! Thanks so much!	Shellie Slade	Website
2245	Just look at the comparison chart. The cost alone makes it worth it along with all of the other benefits and less environmental impact. Gondola 100%	Samuel Mason	Website
2246	I have already expressed my opinion that a gondola is the right choice, but this 'alternate' gondola is WAY BETTER. My biggest issue with the current gondola proposal is the lack of parking and low skier per hour lift rate. This alternate solves both. Additionally it is a much greater use of the land for the greater good of the public, versus just a couple of private homes. This would also be great for summertime activities at Snowbird and Alta. I would 100% ride this in the winter and the summer. Currently as it is proposed, I wouldn't drive away from the canyon, to then get on a bus, and go past my house to a slow gondola. DO THIS OPTION! https://lifblog.com/2020/06/30/landowner-proposes-alternate-little-cottonwood-canyon-gondola/	Justin Loeffl	Website
2247	Hello, I am writing today in support of the gondola option for LCC. The lifespan of a gondola will much outlast the articulated buses, have a smaller ecological footprint, and be more cost effective in the long term. Plus, having an emergency exist option in the event of avalanches closing the canyon is a benefit that cannot be overlooked. Thank you for your efforts and for allowing public comment.	Heleena Sideris	Website
2248	Building a gondola up little cottonwood canyon will cost hundreds of millions of dollars and paired with the massive parking garage to be built near the mouth of Big Cottonwood canyon will not solve our snow day driving issues. Instead of a Gondola UDOT should partner with UTA to provide world class Bus Rapid Transit that provides service to multiple locations in the valley. That paired with tolls in Little for non-local traffic would change people behavior for a much lower cost than a gondola. The cottonwood canyons would be national parks if they were in any other state. We cannot damage these pristine canyons with heavy infrastructure like gondolas. Well funded buses, paired with strategic avalanche sheds and tolling in little would be more than sufficient to meet the needs of skiers for decades to come.	Chris Jackson-Jordan	Website
2249	A gondola is a great option for the traffic issues. It's instrumental to better flow of traffic at many resorts I've visited with similar challenges. Utah has the best skiing in the world but it's only as good as its accessible. I'd like something similar reviewed for access to Big Cottonwood as well, or for other options that can also make sense to access Brighton / Solitude (and even PC / DV from the Cottonwoods side). These could run year-round and be great for hikers, bikers and to minimize Parleys Canyon traffic as well between resort areas.	Chris Neumann	Website
2250	I support the gondola!	Anthony Alfaro	Website
2251	I support the gondola!	Roger Dawley	Website
2252	I have been driving up LCC to recreate in the mountains for years, all seasons. My strong opinion is that it would be a huge mistake to build a permanent structure all along the canyon as the solution for busy winter weekends and holidays. For 345 days in a year, this is just not an issue so an eyesore in the wilderness is an unfair solution. Rather, I think there should be a free, reliable, and frequent bus system. As a mom who brings her kids up, I would love to just take a bus and not worry about the traffic; however as the system is currently, it becomes really expensive when you talk about all four of us buying tickets each way every time. Additionally, if buses somehow had their own lane so they had preferential treatment going up the canyon...that would be the ideal situation. Thank you for your consideration.	Jane Tanner	Website
2253	Enhanced bus with dedicated lane PLEASE. No parking in canyons Or pay dearly to park	Cindy Crass	Website
2254	I am in favor of a gondola transportation solution. It will be a great and very forward looking method of transporting people up canyon. It will enhance the experience of visitors and residences alike. I think there are some issues that need to be refined with the current gondola proposal, and I believe that the proposal of a parking/base station at the site close to La Caille as provided by CW Man. should be considered	JEFFREY STEVENS	Website
2255	I support the gondola option with the La Caille station - but it must be in conjunction with fees for driving the canyon to resorts (not to backcountry) or for parking. It is an elegant solution - easy to access, quick, clean, and gets CARS OUT OF THE CANYON!	Kirstie Rosenfield	Website
2256	The gondola is a better choice.	Corey Mosello	Website
2257	This is an incredible idea! The gondola would help immensely with traffic going up the canyon.	Paige Clark	Website
2258	Heck yes!	Kat Pressler	Website
2259	I support the gondola system! It will make a huge impact on lowering emissions and increase availability to skiers from all over the world! I support Option 2 (Enhanced Bus with roadway widening in LCC).	August McCann	Website
2260	The key to good bus transportation is low wait times. More people will take the bus if they only have to wait 5-10 minutes. Plus this option has the lowest predicted travel time, one of the big reasons why Salt Lake is well known for skiing. We don't have the 2-hour drive that people in Denver deal with. More busses will reduce car traffic and pollution in the canyon. Snow sheds over the road are long overdue. This will reduce the need for UDOT to shut down the road as well as the backcountry in the morning with new snow. New bus purchases should examine electric options from Gillig and other manufactures for further noise and pollution reduction. Finally, a lane that is dedicated to buses in the winter and cyclists in the summer is a great idea since LCC is a world class cycling canyon and is typically featured in the Tour of Utah. We are long-time (25+ years) out of state visitors to Alta 2-3 times per winter. We travel by van service, or occasionally by personal car if on extended ski trip. We are not daily users. We are enthusiastic about the gondola alternative. It seems to win on environmental grounds, cost to build and operate, and reliability. The Gondola alternative would be greatly enhance by expanded parking at the base gondola station. The two-step process of parking at the gravel pit and boarding a bus will decrease usage significantly.	Kevin Lockwood	Website
2261	Please choose the gondola.	Mead Montgomery	Email
2262	I think the best solution is enhanced bus with roadway widening. I think if you have a dedicated lane for the bus, and people see the bus heading up the canyon past them while they are stuck in traffic, they will be more likely to actually take the bus.	Matthew Marvin	Website
2263	The gondola is a long term solution to lots of construction and traffic.	Jessica Stevens	Website
2264	I believe that the "Enhanced Bus with Roadway Widening" option would be the most effective. Buses will be more flexible, more timely, and faster than a gondola. While a gondola seem like it could offer great promise, it is a slow option for transportation. I don't feel as if it would be highly utilized and may end up attracting additional users specifically for the gondola site-seeing aspect. Although the gondola itself is a cleaner solution with today's technology, electric busses will be available in the future. The gondola will not be a cleaner solution if it is underutilized. Thanks for letting me voice my opinion.	Josh Larson	Website
2265	Please consider this proposal - https://lifblog.com/2020/06/30/landowner-proposes-alternate-little-cottonwood-canyon-gondola/#comments	Andrew Reich	Website
2266	The Gondola plan seem to be the best LT option that is cohesive with outdoor recreation as it has the least environmental impact and will provide the safest transit up the canyon	Spencer Ferguson	Website
2267	I think the Gondola concept is a good one, and am much happier about the one being proposed by CW Management is a much more viable option, so parking or bus transfer can be available at the departure station, and more people can be transported, diminishing road traffic even more	Charles Hansen	Website
2268	I think the Gondola is a great alternative in every way.	Carolyn Chase	Website
2269	My name is Henry Hartzler and I am a resident of Sandy, UT. I am an avid climber and snowboarder and recreate in the Cottonwood Canyons year-round. I advocate for the option of increasing buses, and also to have ALL resorts charge for parking, as Solitude did this past season. Without a monetary incentive to take the bus, people will still not fully utilize this resource that is the only way to truly manage the traffic problem (see Zion National Park's Shuttle Service). I do NOT support widening the road because of its impact on climbing areas located close to the road such as 5 mile bouldering area and other boulders that are right off the road. These spaces need to be preserved, not bulldozed. Also, a gondola would impact climbing locations and would be incredibly unsightly and expensive. Please focus on improving our current bus system by increasing the amount of buses and the monetary incentive to utilize them by having ski resorts charge for parking, similar to Solitude's model. Eliminate parking on the road next to the ski resorts. Do not expand the road or permanently alter the Little Cottonwood landscape with a gondola. Thank you.	Samantha Beck	Website
2270	I think a gondola is exactly what is needed, and offer my support to move in that direction or at the very least, a hybrid gondola/bus system. Widening the road will not solve the problem. Lets please take a note from the Europeans for once, they got COVID right and have been at this for way longer than we have. Thank you.	HENRY HARTZLER	Website
2271	I prefer the Enhanced Bus with roadway widening	Matthew Paul	Website
2272	I did not see any details in the proposals regarding who would be allowed to drive up the canyon and who would be required to take public transportation.	John Bowden	Website
2273	I think the travel time for the gondola option is too long, especially for skiers going to Alta. Buses always sound like a good option, but I do not see any plan to address the variation in skiers each day which can vary greatly depending on conditions, season and events taking place.	Steven Rozelle	Website
2274	Fines should be much higher for cars that enter the canyon unprepared. Every year this seems to be a cause for major backups in the canyon.	Cameron Cooper	Website
2275	Build the gondola	David Klein	Website
2276	A gondola or train system is long overdue for the canyons as well as hiking/biking systems that allow passage the length of the Tri-canyon area I cannot overstate how strongly I am opposed to the gondola option. The estimated per person travel time (63 minutes, per the EIS fact sheet infographic) is the longest of all the proposed alternatives and almost twice as long as the Enhanced Bus/Roadway Widening option (36 minutes, per the EIS fact sheet infographic), all without being significantly cheaper than Enhanced Bus/Roadway Widening and it permanently destroys the LCC viewshed. I truly hope the gondola is not actually under serious consideration by UDOT.	Daniel Dean	Website
2277	Having already commented twice, I apologize for "hogging the lectern," but I feel it important to support the newer proposal for having a combined gondola base and parking lot/structure in the La-Caille area. Having to ride a bus to the gondola base and then a gondola up the canyon, as would be necessary with the current three proposals under consideration, may be too time consuming and involved than many skiers are willing to endure, especially when there are so many alternatives, which will be more readily accessible, in the general Salt Lake City area. Although the La Caille proposal is late, it looks like a game-changer and should be considered.	Toby Kravet	Website
2278	Hi - I like gondola the best of the 3 options.	mike rogge	Website
2279	I think that Season Pass holders should be allowed to drive up. Since I work full time, having the drive up option makes it possible to ski the weekdays after work from 1-2pm up until closing. Please note that during these hours there is tons of parking (even on the weekends). All the fair weather - pow only - day skiers are gone. The tourists are tired and off the slope. Thank you, Mike	Jake Draper	Website
2280	I always hated gondolas, but we have to choose the lesser of 2 evils. Busses destroy the air and bus lanes destroy the planet. Let's go gondola! Less congestion in the canyon and limiting cars is essential. This to me means more budget to public/busing and gondola. For those that drive personal cars, I think the resorts need to prioritize parking/driving access to resort pass holders. They should have priority to help keep personal driver congestion down. If that means designated parking lots for pass holders it will limit the amount of space thus drivers up the canyons.	Patrick Shields	Website
2281	I support the gondola!	Mitchell Florence	Website
2282	if there is traffic on lcc road then there need to be snow sheds whether there is a gondola or not. the goal should be to have less traffic on wasatch from fort union south. there should be a gondola base with plenty of parking for all to due away with repeated bus transfers. valley travelers should be able to get to the base station without using wasatch blvd and busses from all over key locations in the valley could bring people to the base station without using wasatch blvd as well. further lanes and widening on wasatch from fort union south would be avoided. people will not use the public transportation if it is inconvenient and slow. close traffic up lcc? charge a fee to drive up?	titus case	Website

2286	Looks like a great way to minimize traffic and protect the people in the canyon from avalanches and road accidents	Taylor Owens	Website
2287	I had a thought about this whole widening the road/gondola/more busses thing. I was thinking it would be a lot easier to just make convenient and timely options for people to be able take busses from close to there house and get to the ski resort. Then you wouldn't have to think about bus lot parking and expanding that, and people wouldn't even be getting in there cars to go skiing. I mean for starters I feel as though if there simply was a bus that ran from the Millcreek bus station to the 6200 s bus stop on Wasatch Blvd that would enable everyone who lives on 3300 s 3900 s and 4500 s to have a simple 2 bus transfer to go skiing. Then if you had a straight line bus that took people from the U to that Millcreek station on Wasatch Blvd, you would then have another major part of town have access to skiing without having to drive. The reason I thought of this is because I had to figure out how to go skiing without a car for a short period of time last winter, not only to ski, but to get to work as well, and if I were to take the bus from near my house and stayed on busses it would make do 2 different exchanges and take 2 and half hours to get up there. I live on 3300 s 2300 e and it takes me 30-40 min to get to Alta on a normal day, 2 and half hours is not a reasonable compromise to take the bus. If I wanted to take a bus all the way from 3300 s 2300 e to Alta, the route says I must take a bus going west on 3300 s, (which is the exact opposite direction of where I need to go) all the way down to 900 e to finally catch a bus that goes to fort union, then I have to wait for another bus to take me up to skiing after going miles farther away from the ski resort than I started. How does that even make sense? All you'd have to do is have the 33rd, 39th, and 45th south busses run down Wasatch Blvd to the 6200 s station, even if just one of the 3 busses went to 6200 s instead of terminating at the Millcreek station that would be major move in giving people an actually convenient way to get to the canyons without even driving a car. If you went all in and made convenient ski busses come from all around town and got people up to the resort with only a minor difference in drive time people would for sure use it!	Campbell	Email
2288	Hi, I am a skier who goes up to Snowbird and Alta around 5 times a week and was wondering how the line is going to stay down on popular days for the gondola?	Ben Shuckra	Email
2289	Do the gandola! Save the protected areas!	Harrison Morford	Website
2290	<p>Little Cottonwood Canyon EIS c/o HDR 2825 E Cottonwood Parkway, Suite 200 Salt Lake City, UT 84121</p> <p>I am 68 years old, a lifetime resident of the east bench of the Salt Lake Valley. I have been a season pass holder (until recently) at Alta for over 50 years. In past decades, my practice has been to the LCC road between 25-50 times each winter, and 10-15 times each summer for hiking. I began skiing at Alta in 1962. I am very familiar with the canyon, and each of its side canyons.</p> <p>My first priority is to protect the LCC ecological environment in the decades to come. I believe that the draft EIS is seriously deficient for failing to specify, according to the best scientific evidence, the actual ecological "carrying capacity" of LCC, in terms of human use. That capacity should have been determined, and all the alternatives should have been framed so as to accommodate that capacity. Lacking this information, it is not possible to respond in a sensible way to the described alternatives, as each would have a substantial impact on the canyon environment. Given this deficiency, it is my recommendation that the final planning process be held in abeyance, with the understanding that the adoption of a permanent transportation plan be postponed until strong scientific "carrying capacity" information is available.</p> <p>What to do in the meantime?</p> <p>A temporary solution, relatively low cost, and low impact, should be identified and implemented, in a context that accepts that no additional growth in winter use will be allowed under its terms. Within that constraint, the following alternatives make sense:</p> <ol style="list-style-type: none"> 1. Roadway improvements on Wasatch Blvd, from the 6200 S. Park and Wait lot the mouth of LCC. These improvements would include new shoulder lanes that would permit the passage of express busses from improved parking facilities. My experience is that the vast majority of traffic congestions happens along this section of the roadway. 2. Increased bus frequency, with separate busses for Alta and Snowbird. 3. The installation of an automatic system for identifying and diverting private vehicles without snow tires before entering the canyon, to be paid for by the ski resorts. 4. The installation of an automatic "toll" system (similar to bridge toll systems in other states) charging each private vehicle that enters the canyon during the winter season, in the interest of encouraging bus use. The "toll" system should include a "congestion pricing" component, increasing the toll rate on traditional "heavy use" days, to reduce vehicle use on such days, and perhaps on big "powder" days. 5. Mandatory charging for private vehicle parking at each resort, reduced or eliminated for multiple passenger vehicles. 6. The installation of a vehicle counting technology before the mouth of LCC that would result in automatic closure of the road to additional private vehicles after a specified number have entered the canyon. The permitted number would be adjusted frequently based on both parking capacity, and current road and weather conditions. <p>Relatively speaking, the steps described above could be implemented quickly and at a fairly low cost. Each step would be considered experimental, framed by an approach that planned on evaluating the effectiveness of each step and making future changes to manage existing users and to prohibit an increase in use until reliable ecological carrying capacity information is available.</p> <p>The financial foundation for the steps suggested should incorporate the principle that "every stakeholder contributes" according to benefits received; ski resorts, public users, local governments, and the State of Utah. No one gets a free ride. All share as a first priority an equal responsibility to preserve and protect the ecology and environment of LCC.</p> <p>I believe it would soon become apparent to canyon users that taking the bus would be the preferred method to access the canyon, with the consequence the more expensive alternatives described in the draft EIS would not be necessary.</p> <p>Thank you. Please include these comments "in full" in the official public comment record for the EIS.</p> <p>Raymond Berry</p>	Raymond Berry	Website
2291	Gondola is by far the best option	Kirsten Heaton	Website
2292	A gondola provides the safest way to get up and down the canyon in winter weather. The idea of being able to get up to ski without worrying about sliding off the road is extremely valuable.	Kyle Samuel	Website
2293	I love the idea of a gondola. Sounds like a great family activity.	Amanda Denning	Website
2294	Please don't widen the roads in the Little Cottonwood Canyon. The gondola is a better choice.	Alex Denning	Website
2295	I think the enhanced bus option provides the most sensible solution moving ahead. It would have the lowest environmental impact, be easiest to implement and efficiently get people up and down the canyons.	Grant Sperry	Website
2296	I would feel so much safer traveling up the canyon with kids in a gondola. Especially if it was more reliable without canyon closures and accidents.	Kayla Bagshaw	Website
2297	I care deeply about the environment and air quality in Utah. The gondola is a best choice to protect the watershed, not expand into more wildlife area, and will not contribute any carbon emission.	Emilie Renier	Website
2298	Please choose the Gondola!	Ross Thompson	Website
2299	The gondola is ideal on peak snow days, but it also provides another activity that I could share with out of town visitors for a day outing in the summer.	Nathan Keen	Website
2300	The gondolas are the best option to get up LCC, buses will not be adequate on snow days. They always have a problem getting up the canyon when it's dumping snow and/or when the road is covered in ice and snow. The bus drivers scare me to death, I don't trust them, they don't have enough experience to drive the canyons! It's got to be really hard to drive a bus up that narrow road in winter conditions. Buses will not work, must go with the gondolas! Thanks so much. Renee Schmid	Renee Schmid	Website
2301	Utah's air quality is suffering as it is. We do not need any more contribution to our smog and inversion. We need a solution that takes cars off the road and is appealing to not only the local population but tourists also. A crowded bus doesn't do that.	Caitlin Belcik	Website
2302	I've been talking about a Gondola up the cottonwoods for years now! I LOVE THIS!!	Jason Struhs	Website
2303	The gondola option is a terrible option for environmental, cost, and throughput perspective. Either the bus or the bus with expanded roadway is the best bet	Dane Harrington	Website
2304	I support the gondola! Less congestion and less pollution!	Sophie Benson	Website
2305	Please pursue the gondola AND road widening. Projects like this almost always underestimate future need, so we should choose whichever option will be easiest to expand upon in a few years. Most likely the extra lane will be necessary at some point if private vehicles are still allowed to drive up the canyon.	Robert Brickley	Website
2306	Gondola is way better than buses. Period. Hope this gets approved!!	Spencer Simons	Website
2307	Gondola! During inclement weather, traffic is too slow.	Chris Gleason	Website
2308	I'll be the first to admit there needs to be change in regards to transportation up the cottonwoods. But, please don't jeopardize the rock climbing access. I access the canyon at least 60 days in the summer to go rock climbing. I park on the shoulder to access climbing areas from the lower park and ride lot all the way up to snowbird. The option to shut down the shoulder to anyone but bicyclists and pedestrians, would make it extremely difficult to access a majority of the canyon's rockclimbing. LCC attracts thousands of rock climbers every year that not only enjoy the canyon but are also stewards, where we are constantly improving trails, cleaning garbage up after others, and removing graffiti. This canyon has provided world class climbing for nearly 100 years. Please consider us when you develop the LCC transportation plan.	Brandon Hammid	Website
2309	I support the gondola	Corie Kellerman	Website
2310	Road congestion and incidents are a major problem for HWY 210, best addressed by the Gondola option with the least impact to the environment.	Susan Hagen	Website
2311	Please don't ruin the little cottonwood river trail that runs from mouth of canyon to tanners. Leave the road as is. PLEASE!!!!	Jason Ollis	Website
2312	Has the idea been brought up to do a monorail up and down the canyon instead of gondolas or buses?	Dave Louise Jensen	Website
2313	I would like to support the gondola option.	Connor Ottosen	Website
2314	I like the Gondola option. I think we should study it for year round use.	Carolynn Clement	Website
2315	I like the gondola option. I think it should be studied for year round use.	Jason Clement	Website
2316	I support the gondola proposal with the addition of parking. https://iftblog.com/2020/06/30/landowner-proposes-alternate-little-cottonwood-canyon-gondola/	Peter Halverson	Website
2317	I support the gondola!	John Lyles	Website
2318	Yes for gondolas	Tanner Laub	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2319	I am against adding another lane for only buses. This lane will be just as easily blocked as one lane during avalanche closures, and there will still be personal vehicle traffic due to accidents. These are the main causes of a line of cars heading up LCC on wasatch blvd backing up all the way to I-215 and idling for hours, making it impossible for residents who live off wasatch blvd to exit their neighborhoods without playing chicken with pissed off local and tourist skiers. I have lived off of Wasatch blvd in between big and little cottonwood canyon my whole life and I can say there are already trains going up big and little cottonwood, trains of cars, bumper to bumper sometimes, moving slower than a sit on lawn mower. I understand that an actual train is not an option so I approve increased bus services and a gondola. I also think adding a designated bike lane would save lives and could be used by back country skiers to access terrain in the winter months. I think UDOT should acquire the gravel quarry site on wasatch blvd and use it as a hub for a canyon transportation. I would also like to see a toll inacted for big and little cottonwood to encourage use of public transportation and the money used to subsidize gondola and bus fares as well as pay canyon care takers in charge of removing the ridiculous amounts of trash and graffiti that accumulate in the canyons. A yearly pass for the canyon tolls should be to Utah residents. It's time for Salt Lake to join the modern world in terms of efficient and ecologically friendly mountain transportation. Switzerland, and Japan have had mt. trains and other mountain mass transit for over 50 years!!	Patrick Campana	Website
2320	The Gondola sounds incredible. Would love to see this work in Big Cottonwood Canyon as well!!	Ava Anderson	Website
2321	Yes to the Gondola!	David Sandak	Email
2322	As a skier, I love Little Cottonwood Canyon, however, the ski resorts are not the only element of value. For this reason, I am strongly opposed to the gondola alternative. Requiring numerous transfers is the kiss of death for transit ridership. 3 transfers to access Alta will make the gondola a less competitive mode than driving or taking the bus unless there is a HEAVY toll to drive up the canyon. Unless a transit route directly accesses the base of the gondola, it adds additional transfers for transit riders. An Alta skier would be required to make a total of SIX transfers in a day. The canyon mouth to Snowbird gondola will act as a bottleneck. Does the travel time incorporate the time spent queuing for a seat on the gondola? What is the market and user base for each transportation mode in the canyon? A gondola creates a year-round, massive visual impact for all canyon users to primarily improve convenience for resort day-users and workforce during the wintertime. Our winters are becoming shorter. Does the peak surge in use during the winter justify the year-round expense of the gondola? What is the per user cost associated with each improvement? Enhanced bus with widening provides a solution that can be scaled according to seasonal need. It is visually lower in impact and can provide access to other destinations in the canyon such as trailheads. Furthermore this alternative appears to be the most multi-modal by providing active transportation access during the warmer months. Its higher capital expense will be justified when considered alongside other potential active transportation improvements being necessary in the future. Will the bus be able to shoulder run on Wasatch to bypass traffic similar to PC Transit on SR-224 during Sundance? Making the bus the faster option will make it more appealing over sitting in traffic. During peak use winter mornings, is it possible to further incentivize bus use by having transit be the only means to access the resorts for several hours in the morning before opening the canyon to vehicle traffic? Count this comment as supporting the enhanced bus with widening and opposed to the gondola. Thank you.	Michael Baker	Website
2323	In favor of gondola , especially since it can be used for transportation when there's road closures . There's a lot of safety in that	Andrew Merget	Website
2324	The gondola is the only choice.	Danny Marin	Website
2325	I support the gondola as a better choice!!	Allison Griffith	Website
2326	The gondola is a better choice	Dillon Feldman	Website
2327	I prefer the Gondola!	Diane Griffith	Website
2328	I support the gondola	Jennifer Reed	Website
2329	I support the gondola option	Tori Steely	Website
2330	Yes, to the gondola	Meredith Searight	Website
2331	I dont feel comfortable riding a gondola in the resort. I would never ride one up the canyon. It sounds like a disaster waiting to happen. Too many people in one spot with no escape. I believe the gondola idea is just profit generating concept for the gondola company and some stake holders. Enhanced bus service is easier, more cost effective and most importantly safer for the public. Not everyone feels comfortable in a gondola.	Anthony Cummins	Website
2332	I prefer the gondola over any of the other proposed alternatives.	Brian Hanks	Website
2333	The gondola sounds like a great solution	James Leonard	Website
2334	I think the gondola is the best decision!!!	Michael Canar	Website
2335	Very much in favor of the gondola with the alternative La Caille base station! The ability to have a parking garage is huge, and the environmental impact of having that many fewer cars going up and down the canyon is a significant factor for me. As a mother of a two year old who is an Alta pass holder most years, I would absolutely ride the gondola with him. However, I would be unlikely to ride a bus that doesn't have guarantee of seats (or seats together) and is harder to manage the amount of equipment and bags we need to bring to the resort with us. If the option were a bus, I would likely continue to drive my car up the canyon. But would absolutely take the gondola if I could park right at the loading station!	Evin Catlett	Website
2336	I think the gondola is a great option as 1. You could still expand bussing as they could run simultaneously 2. The experience and views could entice people to try it vs. a "bus" increasing participation. 3. It could still run if they needed to plow roads or do avalanche control!	James Strayer	Website
2337	I am writing in support of the gondola option that is being presented for consideration. Rather than a quick "bandaid" approach of buses, a system that is sustainable, long-term, better for our environment is the best option, not to mention the benefits of operation in case of avalanche or other extreme weather conditions.	Alexie Baugh	Website
2338	Please make this happen. Ideally a shuttle every 30 minutes during rush, and an hour maybe at night. Ideally with a bicycle rack on it as well to allow bikers to come up! (Also please post on bus what time last bus back down will be, often information that gets lost!).	Chris Saylor	Website
2339	I really think the gondola idea is fantastic too. Great way to attract more people and put more folks on the mountain!		
2340	I got a season pass to Alta but on the majority of new powder days, the canyon was closed. How would the gondola get us to Alta during a canyon closure?	Mark McOmber	Website
2341	Providing a gondola along side LCC Road will transform canyon access without needing to pave additional ground. This is by far the most sustainable, exciting and beautiful solution to the troubles faced by the communities living and accessing the top of the mountain. If I could vote, I'd vote Gondola!	Louis Lipson	Website
2342	I support building of a gondola in LCC	Jim Forrest	Website
2343	I support the gondola	Lily Wahlen	Website
2344	I would start with the gondola and no roadway changes initially. Trying to do it all at once would create a terrible situation trying to get to the resorts while roadwork begins. Get the gondola up and running which would give customers a way to get to the resorts if roadway construction is deemed necessary-I hope not necessary and the gondola would solve my greatest frustration which is getting a season pass only to see most powder days cancelled with canyon closure which has happened many times to me despite checking udot facebook site which said the canyon was open.	Mark McOmber	Website
2345	Initially I was in favor of an additional lane however as I have read more and learn more about the gondola option that is the option I would prefer	Tyler Rice	Website
2346	The gondola is clearly a solution for the future. Act now and get it done! Definitely the most logical solution and environmentally friendly.	Alex Daines	Website
2347	I believe this to be the best and most environmentally friendly option. I support this option!	Rachel Mize	Website
2348	The gondola seems like the best plan, cause awesome.	Susan Strayer	Website
2349	I fully support the LaCaille base station option. It would create Lots of parking and immediate access to the Gondola. The gondola seems like the best long term option. It would be accessible during peak season and even in avalanche conditions! Please put in a gondola!	Spencer Beaudette	Website
2350	The Gondola is the obvious choice. Lowest impact and maintenance costs, similar timeline as the others, highest capacity, plus it's cool and could be a destination in itself! Do it!!!	MICHAEL ELLIOTT	Website
2351	I'm in favor of the gondola with the Lacaille base station	Charles Hansen	Website
2352	I've been working at snowbird for 6 years! This is the best idea ever! Lets make a Gondola and have less cars in the canyon. If the road closes I still have a way home and to work!	Thomas Whalen	Website
2353	I think the gondola solution is the most effective way to deal with the amount of people going up the canyon!	Ray Wagner	Website
2354	The la caille gondola option looks great. Build two!	Jack Gonzalez	Website
2355	Gondala at the LaCaille Base Station	Kim Halamiczek	Website
2356	With the Gondola being the most environmentally friendly option, I think we need to make sure the canyons STAY beautiful by having less cars/busses up and down the canyon. The Gondola also offers less accidents, and no problems due to avalanches covering roads	David Nord	Website
2357	Writing in support of the Gondola. It is forward thinking in every way- for residents, for the canyon, for the environment, for the watershed, for safety Please do it! You must be leaders in building the right infrastructure for a growing region. The problem will only get worse.	Kimberly Girard	Website
2358	Instead of La Caille, as that's a business. How bout name it, Quail Run. It's slightly less business specific, but really uses that same inspiration.	Mony Ty	Website
2359	Gondola please. Europe figured this out decades ago perhaps centuries. Let's do it.	Travis Tomczak	Website
2360	I support the proposed gondola starting at the base of LCC! Less cars in the canyon and greener travel for everyone!	Jordan Monroe	Website
2361	I am most in favor of the enhanced bus with road widening option. Gondola would be my second choice, but only if it can be done with minimal impact to the rock climbing access on the north side of the lower part of LCC.	Emily Heinz	Website
2362	I think this is the best option out of all of them.	Michael Durrant	Website
2363	I'm in we have a timeshare at iron blossom since the opened and have been stuck up there a few times. So getter done ??	Michael Johnson	Website
2364	I support the gondola with base station and parking garage at the La Caille area. I would love to use this option traveling up and down the canyon to ski and hike!	Cody Boche	Website
2365	Please do the gondola for both cottonwood canyons. Locals want access to their resorts again.	Jesse Lugenbeel	Website
2366	I support the gondola option with the proposed base area at lacaille with the addition of parking garage	Lauren Cook	Website
2367	La Caille base station makes the most sense. Please don't force us to bus to another form of transit. Thanks for considering	Mackenzie Viau	Website
2368	I've reviewed the proposal and it by far seems to be the best option. I like the idea of a base area at Lacaille as it serves several purposes. It also seems to have the least environmental impact. Lacaille all the way!	Blair Jones	Website
2369	I support utilizing current road ways and implementing more efficient electric buses in the canyons. I appose a gondola as its environmental impact and cost outweighs the benefits. The gondola appears to be a great idea! Considering that it is more environmentally friendly and snow closure proof, I think, provides more economic benefit than widening the road or using more bus services. As a local, Little Cottonwood canyon is dear to my heart because it is home to the best snow on earth, but the canyon is dangerous on snow days and I sadly forfeit many ski days for the sake of safety. The gondola would not only reduce road related accidents, but also keep the always open which would encourage more locals and enthusiasts to experience what Utah has to offer. People from out of state would be less weary about planning their trips to Utah and we would see an increase in ski tourism. Many of us skiers value the conservation of our environment as well which would prove the gondola to be the best option for Little Cottonwood in the long run as the beauty of the canyon is preserved and nasty pollution causing Utah's infamous inversion is reduced. If Utah were to win any upcoming bid for the Olympics, the gondola would be a no brainer in preparation for the influx ski enthusiasts from around the world.	Anthony Pavliantos	Website
2370	I Use the canyon over 150 days per year and support the gondola plan with the lacaille alternative	Andrew Grewe	Website
2371	I am in favor of the gondola. It sounds like the best option.	Madelyn Blanchard	Website
2372	I think the gondola would be an amazing installment	Lauryn Bryan	Website
2373	Put in the gondola?	Kevin Williams	Website
2374	I'm in favor of the gondola due to its ability to operate at a consistent pace and not be affected by traffic on busy days. As long as the bus can make quick loops between the base station and the parking structure, the gondola would help reduce those days of 2 hour traffic dramatically.	Austin Smith	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2375	I'd say a gondola sounds like a much better option than more lanes and more buses. It's hard to see a downside to it!	Joshua Matheson	Website
2376	I think that a gondola would be a more fun way to get to the resorts plus more attractive for tourists and car drivers than a bus. I only ask that we make the gondola state of the art!	Daniel Butters	Website
2377	Gondola at alternate lacaille location	Preston Lyman	Website
2378	I love the gondola idea.	Patti Bruffey	Website
2379	So excited about the Gondola and La Caille base!	Kate Childers	Website
2380	The gondola solution seems like the best option here. And a potentially iconic addition to the salt lake valley. However Not expanding roads and parking leading to the gondola station would defeat the purpose of the project as many of these park and rides are already heavily utilized. I'd also like to see UDOT address issues when traveling from the south including traffic buildup on Wasatch Blvd.	James Pearson	Website
2381	Gondola! Make it happen!	Eric Razzi	Website
2382	Choose the gondola!	Chris Latimer	Website
2383	I support the project for construction of the gondola. I feel much safer traveling by gondola instead of the road in winter.	Alina Smith	Website
2384	I vote for the gondola option to go up little cottonwood canyon!	Kate Leach	Website
2385	Please choose the gondola option. It makes the best sense for our environment.	Steven Dentone	Website
2386	I don't have a particular opinion on which method to use. They all have pros and cons, but as someone who hasn't really gone to the ski resorts for years because of traffic the most important thing to me is access for climbing and backcountry skiing. Parking for both of those activities are important to me and I'd hate to see them lessened or removed completely. None of the proposed solutions seem like they are going to drop me off 1/3 or 1/2 up the canyon so I'll still be forced to drive.	Allen Rogers	Website
2387	Yay gondola.	Lauren Heiningner	Website
2388	I'm a Alta employee and driving up and down LCC everyday is a absolute pain. I've sometimes been in traffic for 6hours. I definitely think the gondola is a great idea.	Lauren Heiningner	Website
2389	The gondola seems to be a highly efficient, reliable, environmentally friendly way to transport people across the canyon. It could even LOWER the emissions through less cars traveling in the canyon. Once again, I say choose the gondola.	Isaac Austad	Website
2390	I support the gondola	Eric Krupnik	Website
2391	I prefer the gondola system rather than road widening/bus transportation. It will be more environmentally friendly and efficient for those trying to make it up the canyon.	Emily Wood	Website
2392	Very interesting concept. I own Vacation timeshare weeks at The Cliff Lodge at Snowbird. Considering moving to Cottonwood Canyon.	Terry Greenhalgh	Website
2393	The gondola system is the only option that would help us now and in the future, the other two solutions are just very expensive temporary solutions. The gondola is the best option for the environment, public safety and the local economy. I hope you choose the gondola to provide the best solution for our state. Thanks, Zach	Zach Roskelley	Website
2394	I support the gondola	Garret Stirland	Website
2395	What is going to keep people from driving personal vehicles to the trailhead? How will the enhanced bus service be appealing. People don't use the bus services that much right now because its not as convenient. If a fee was applied to each personal vehicle using SR210 then people may see the bus system as a better alternative. Given the current health crisis, how will UTA make their bases safe and clean? Can changes be implemented earlier? LCC is having a traffic crisis now, what can you fix to make the 2021 ski season less hassle?	Lisa Krussow	Website
2396	Go gondola. It is the best option for environment and the fastest.	Leslie Snavelly	Website
2397	The Gondola Is by far the best option. More cars and busses and and extensive roadworks in our watershed is not the right direction for a sustainable future.	Duvan Durand	Website
2398	Writing in favor of the gondola option for LCC! It's the most environmentally friendly and cost effective, and would be completed in the most timely manner.	Katy Gardner	Website
2399	The gondola seems like the most viable and environmental option	Kai Bjorkman	Website
2400	Carbon neutral gondola is the attraction Utah needs.	Vincie Spero	Website
2401	Yes to the LaCaille Base Station Gondola	Haley Cleary	Website
2402	I am in support of the two enhanced bus options. The gondola would negatively affect the experience in the canyon, from top to bottom.	George Stevens	Website
2403	I support the gondola option for little cottonwood canyon. I would like to see small environmental impact with maximum getting people to the resorts.	Heather Blakley	Website
2404	I just feel that our busses run empty as it is... a bus lane would help but would seriously disrupt traffic for a few years... however, I don't see it minimizing traffic in the canyon. I see it creating two lanes of traffic instead of one... I like the idea of less pollution in the canyon. I think this gondola idea could fix these problems. It would give our city a very iconic look as well	Susan Wojtalewicz	Website
2405	I support the gondola.	Maia Sepulveda	Website
2406	Please let this go forward! Then build one from PC to Alta!	Matt Baydala	Website
2407	This is my second set of comments based on some new information. While the Gondola option appears appealing, there is some missing information. 1. What is the proposed schedule? Summer use? Hours of operation? If a gondola system operates only in the winter or only during resort operating hours, it is a transportation system, it is a (subsidized) ski lift, a give away to 2 private businesses. 2. What would happen to bus operations if a gondola system is built? If bus service would decline, this proposal would be unacceptable, providing just a ski lift, and not serve as a general public transportation option by failing to address trailhead parking and traffic conditions. 3. What would be the cost of riding the gondola? Key to making the gondola successful will be making it affordable. If it is combined with a road toll, the gondola must be cost-competitive with the toll and the toll must be fair to those who go to a trailhead or other destination that isn't served by the gondola. In other words, if the toll is high to push people towards using the gondola, there should be a reduced toll for those who can't use the gondola, like hikers, backcountry skiers, etc. Or a toll should be combined with or limited to a parking fee for the resorts serviced by the gondola. 4. Likewise, access to a gondola must be convenient. Parking and taking a bus to the gondola station creates a logistics challenge that would discourage gondola use. 5. What it is the relative time to implementation of each of these options? Planning a system for 20 to 50 years out is a great goal, especially if you assume (probably incorrectly) that snow sports growth will increase linearly and not be influenced by changing economic or climate factors, but what is the UDOT 1, 5, and 10 year plan to manage transportation challenges? Ignoring the short term is not acceptable. One huge advantage of a bus-related system is that it can be quickly implemented and scaled. 6. Why are snow sheds not incorporated into the gondola plan? Don't you need to consider resident, non-resort, commercial delivery, and employee transportation needs? We are told by resort and UDOT representatives that a transportation plan is needed to mitigate the constant threat of avalanche-related road closures and a gondola alone does not adequately address that need. 7. Non-resort related transportation must be addressed Unless these issues can be resolved, some form of bus-related transportation system that can be accommodated with minimal infrastructure construction appears to be the only defensible choice.	Paul Diegel	Website
2408	The gondola alternative is certainly preferable over the other two alternatives. However the lack of parking at the gondola base, requiring a bus ride to the gondola, plus the slow speed/load capacity as currently configured would lead me to continue driving except under unusual circumstances. The latest proposal by a private landowner that would allow parking at the base seems a much better alternative. If the stated load capacity and speed are accurate in the private proposal, I would be much more inclined to use the gondola.	Carolyn Beverly	Website
2409	After learning more about the gondola solution from Ski Utah, it sounds like the best option (of the ones presented). However, my concern is that it won't be as effective as we expect, since Americans are conditioned to prefer convenience. I've lived in Park City for 5 years — the free shuttles are not utilized as much/as well as they should. When I lived in the Prospector neighborhood, I took a bus to PCMR every Saturday and Sunday, and always got a seat. People will use it as an absolute last resort, and would even rather pay to park at PCMR than take the bus. Locals and tourists alike also complain about the Cabriolet and/or the Cabriolet to Red Pine Gondola all the time — "ugh it takes so long to get up on the mountain!" So I'm concerned that we will build this huge infrastructure, then have people not use it as expected. We have to make sure the non-car option is as convenient as possible — even more convenient than a car, if possible. Also, I am VERY against tolling the canyon. That is gatekeeping (Google "gatekeeping" if you aren't familiar with the term) and pushes people out who aren't rich and white. I'm pro-diversity in the ski and outdoor industry, and tolling would continue policing the industry and making sure only affluent white people have access to skiing, hiking, climbing, etc. I STRONGLY advise you NOT to toll the road. I get that that's a way to help ensure people choose the gondola (or whatever the alternative is), but it's extremely destructive to the diversity of our outdoor community. I think if you "add" benefits to the gondola versus making driving more difficult/expensive, then you won't need to toll it. Like people who take the gondola get to go in a special express lane for the Snowbird tram, so they can get up to the mountain faster, or they get discounts on food or discounts on their pass, and the gondola should be free with a ski pass. We need to make it like a "no brainer" option.	Alisha Aravena	Website
2410	Very much in support of the gondola.	Robert Taylor	Website
2411	Besides roadway widening and bus options, I want to see a gondola be put in because it would solve all problems and the disadvantages of the other 2 options. When LCC is closed because of avalanches and/or extreme congestion it can create more air emissions. The gondola is far less likely to be effected by avalanches and can be used as a backup way to get out of the canyon when it is closed.	Erik Sahlin	Website
2412	I'm pro-gondola. I think it would be a great way to reduce traffic in the canyon and help our states air quality.	Katelyn Dean	Website
2413	I agree with the Alta suggestion: "We have requested UDOT to modify the proposed gondola alternative by adding a parking structure at the base gondola station rather than requiring all gondola users to park at the gravel pit lot and bus to the gondola station." This would make a huge difference in terms of utilization and speed. And that would make this the superior alternative on several dimensions.	Jon Shapiro	Website
2414	Enhanced bus service without an extra lane is the best future-proof option. Changing fuels and technologies for bus travel will far outpace the gondola, and more roads just means more cars... Which is not accurately reflected in the travel times proposed in the study. Also not reflected in the study is the permanent loss of climbing and watershed impacts. If Cortina can find balance and income potential I think the Wasatch can as well. Bus it!	Bryce Weber	Website
2415	I like to ski	Tyler Roberts	Website
2416	I would like the gondola option with a parking structure at the gondola base in order to eliminate the bus from the gravel pit.	ronald gilroy	Website
2417	I am fully on board with the gondola plus La Caille base station!	Spencer Vriens	Website
2418	I am in total favor of the gondola and the less impact it has on LCC. I don't believe a toll booth or extra busses will solve the problem at hand.	Brett Thompson	Website
2419	I'd love to see the gondola. It's a good way to alleviate traffic on the roads without making a huge environmental impact. And could potentially pay for itself over the years.	Jared Bovee	Website
2420	I support the gondola in little cottonwood canyon	Ryan Cook	Website
2421	Widening the road would seem like a better option, also additional parking at the top, near the resorts, if possible.. Parking at the bottom then taking the Gondola is just a time killer. Just put your self in this position, wouldn't you rather be in your personal vehicle and park closer to the resort even if you had to walk a bit.	CARLOS MATAMOROS	Website
2422	A gondola would be such a great solution! I totally support it. I would like to address the increase in noise from motorcycles and small cars that have very loud mufflers. A lot of us live not far off the main canyon road and when they decide to rally the noise wakes everyone up at night or naps in the afternoon.	Marissa Miller	Website
2423	I would also like to ask what is to be done about the speeding at the top of Storm mountain slid area, in front of the Maxfield lodge and on up, the motorcycles, bullet bikes, and cars speed along there, it is very lucky no one has been killed pulling out of the parking areas or driveways Thank you, Mike Jager, Maxfield lodge Caretaker	Mike Jager	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2424	It seems the options 1 and 2 are the only viable options. The snow sheds seem to be essential in providing a safe commute to all those who work in and visit lcc. Given the increase in visitation the road widening seems like a good additional option to keep the canyon safe and an enjoyable place to visit as our valley continues to grow at such a rapid rate. The idea of a gondola seems absolutely frivolous. Please please please do not put a gondola up the canyon. Although little cottonwood canyon is full of amusement it should not be transformed into Disneyland. That would be a damn shame. Thank you for taking time to hear comments from the public.	Sarah Scott	Website
2425	Preserving Utah's natural beauty and providing proper transit infrastructure is key to continuing to support tourism in Utah. The Gondola provides the best of both worlds.	Madalene Caldwell	Website
2426	I think the Gondola is a great option. Better for traveling in the canyon during the winter, better for the environment, and it's fun and aesthetically pleasing as well!	Hillary Straga	Website
2427	My vote is for the ENHANCED BUS WITH ROADWAY WIDENING FOR PEAK PERIOD Even though it costs the most. I think it has the most benefit in the long run.	Jessica Van Norman	Website
2428	My vote is for the ENHANCED BUS WITH ROADWAY WIDENING FOR PEAK PERIOD.	Owen Van Norman	Website
2429	I do not see how this will not create a huge impact on the canyon. It will only allow more people at the same time. People will still travel by car and now they will have the ability to get even more people in. It will overcrowd the already crowded spaces.	Gretchen Fuller	Website
2430	The enhanced bus service with road widening is the best option. If you do not widen the roads and create a priority bus lane there will continue to be significant traffic delays for the buses, blunting their effectiveness as a transit option. If I knew a bus was coming that would get me onto the hill in ~30min I would take that every day! But if I knew I had to sit in traffic in a sweaty box full of strangers for an hour or potentially longer NO WAY! Also the Gondola thing is a joke. Please don't do that.	Koby Elias	Website
2431	What a wonderful way to preserve the canyon & reduce emissions/ traffic!	Jordan Killilay	Website
2432	The gondola option is by far the best option environmentally, time to completion, overall convenience, amount other things. Expanding the roads will only make the issues in the canyon worse and force canyon capacity earlier in the day.	Thomas Budd	Website
2433	This would save zo many accidents, time, & the air quality would be much better!! As a frequent snowboarder pls make this happen!!	Sarah Waugh	Website
2434	Gondola! Let's stop congestion in the canyon	Sam Naatz	Website
2435	Is there a reason that a tunnel up and down from the Boring Company by Elon Musk hasn't even been considered? It would solve a lot of the issues the road creates, and be incredibly efficient as well as completely electric. There was a very well written facebook post about this that I saw just recently.	Leo Epstein	Website
2436	Gondola all the way! This is what Utah needs for the crazy traffic	Ryan Cronin	Website
2437	I support the gondola. It is the best solution!	Madison Cronin	Website
2438	I support the enhanced busing options. I believe the goal should be to minimize environmental impact, and to that end, I believe the gondola idea should not be pursued whatsoever. Either busing option looks to be an improvement to the current situation, but either way there needs to be other mechanisms introduced to increase bus ridership and decrease car traffic. All personal motorized vehicles should be charged a toll to drive up the canyons, and efforts need to be taken to make taking the bus more convenient, easier, faster, and cheaper than driving your car. If the busses are not more convenient and driving is still a viable option, people will not use the buses, even if they run more often. In order to truly reduce vehicle traffic, more needs to be done to discourage this and encourage bus use. Simply offering more buses will not alone encourage their use.	Morgan Millar	Website
2439	A gondola up little cotton wood would not only be an asset during the winter to off set traffic, it could also have positive climate impacts, and may attract more tourism. It would be epic!!	Belle Weed	Website
2440	I prefer the gondola option with a large parking structure at the base of the canyon. It will be a wonderful scenic ride to Snowbird and Alta with the least impact on the canyon. It is the best option per dollar spent as well. Thank you!	David Montgomery	Website
2441	I support the proposed gondola. This will allow for safer and cleaner travel in our canyons and will provide a model for other mountain communities facing similar problems.	Tim Kofeod	Website
2442	Please choose the gondola option as an attractive solution to the avalanches and traffic! Most people, especially infrequent weekend skiers view busses negatively and increased road size would produce a negative environmental impact	Nathaniel Shepherd	Website
2443	I'd like to voice my support for the gondola option!	Michelle Wood	Website
2444	The gondola option with the developer proposed La Caille terminus really seems like the best solution. Additional busses without dedicated lanes offer little to no incentive to ride the bus. The dedicated lane idea is too expensive. The gondola as proposed by UDOT would be a failure. No one wants to park somewhere far away, then ride a bus to the gondola.	Shad Pulley	Website
2445	For 16 years I have lived in our home two blocks east of Wasatch smack between both canyons . Getting onto Wasatch blvd during ski season is problematic [and dangerous] as things stand now . I am not in favor of a 4 or 5 lane road with greatly increased traffic , pollution and noise . Environmental issues also need to be addressed . Surely there can be other options for busses without making room for more cars and trucks . Also consideration for loss of residential homes and decreased property values for many . Hopefully good minds can consider better alternatives to bigger roads .	Don Swaby	Website
2446	First of all, to use any of the three options, as seniors, it would be difficult for us to carry all of our ski equipment on to busses and/or gondolas and then have to walk to the Albion Lodge carrying all of it. However, of the three options, I believe the enhanced bus with roadway widening would be the better option. The other two options would almost double the time to get up the canyon at this time. From our house it takes 20 minutes to get to Alta Albion lodge by car. With the other options, it would take much longer and would probably drop us off at the far end of the lot. I would hope that some cars would still be allowed to drive up the canyon, at least early in the morning.	Pamela Wims	Website
2447	A gondola using private and public lands to allow the parking and mobility of the workforce and providing tourists the options they need to utilize the area. If I can drive easier than "ride" nobody is choosing riding in our fast paced society. I work full time in the industry and premium parking and enough parking to make the difference is the only viable option. When I worked at Snowbird over 25 years ago there were issues... skier visitation is up significantly in the 25 years. Save the canyon, provide the community of SLC a true ski in ski out option and let them park and ride to the resorts. Canyons Village at Park City Mountain is using this concept at their cabriolet... riding those few minutes to then enjoy the rest of your day, leaving parking nexus of frustration and rage behind. Partnering with the private sector to have the perfect scenario is the only way the gondola works. Very few will bus to gondola?... the regular work force possibly but not a lot of tourists who spend tens of thousands on their mountain vacation are going to park and ride to another park and ride... the canyon will continue to be abused. Find enough private land to allow ample parking, ease and a lifestyle we've all been dreaming about since we were kids... thanks for the efforts and consideration.	Corby Egan	Website
2448	Snowbird is grateful for the efforts of the Utah Department of Transportation in finding a solution to the transportation challenges of Little Cottonwood Canyon. Snowbird is supportive of gondola, and specifically the Gondola Plus La Caille Base Station option, as a means to safely and efficiently move people in Little Cottonwood Canyon. While the Cottonwood canyon ski resorts have utilized ski bus for decades and continue to invest in this means of transportation, the bus is vulnerable to all of the same weather-related issues that inhibit travel for personal vehicles. Gondola is the safest, least-polluting, least-impactful, highest-capacity, revenue-generating transportation solution under consideration in the UDOT Little Cottonwood Canyon Environmental Impact Study. The Gondola Plus La Caille Base Station proposal also reduces traffic on Wasatch Blvd., includes important parking at the gondola base station and will better accommodate bus travel between transit hubs. Snowbird believes we need to set more aggressive goals for vehicle reduction in Little Cottonwood Canyon and has stated publicly many times that we do not believe cars are the transportation answer in a canyon with 64 avalanche paths, averages 500 inches of snow per winter and receives 2 to 3 inches of snow per hour during big storms rendering the road impassable for many vehicles. Recent vehicle travel reductions related to COVID-19 have illustrated the immediate impacts less driving can have on the Wasatch Front air quality. The Carbon dioxide (CO2) emissions generated from transportation up Little Cottonwood Canyon are significantly reduced by using the Gondola. Carbon dioxide emissions are reduced by 56% or 47,000 pounds from the Gondola running 12 hours a day, as compared to 3,500 cars per day traveling the canyon. For local air quality issues and associated pollutants, the gondola option greatly reduces the amount of Nitrogen Gas (NOx), Particulate Matter 2.5 (PM 2.5) and Volatile Organic Compounds (VOC). As the energy from Rocky Mountain Power to run the Gondola is consumed outside of the Wasatch Front, there are zero pollutants generated locally from the gondola, and therefore NOx, PM 2.5 and VOCs are removed from the atmosphere, as compared to the daily pollutants that are generated locally from the tailpipe of the thousands of cars that travel the canyon. Constructing an additional lane on SR 210 would have major impacts to the environment of Little Cottonwood Canyon. Similarly, while we do not dispute the safety implications of building snow sheds at three of the major slide paths, we remain concerned with the remaining 61 avalanche paths in the canyon and the construction implications and permanent impact of building massive concrete structures in the canyon. Gondola results in fewer vehicles in the canyon and on Wasatch Blvd, thus reducing the incidences of multi-hour traffic delays resulting from vehicle traction issues. The last two winters we have seen countless occasions of traffic halting completely in Little Cottonwood Canyon due to improperly equipped vehicles sliding off the road and stopping traffic. Buses are susceptible to these same traffic issues. Whether it's the July 2019 land slide that trapped guests and employees in the canyon or this past winter's 2.5-day road closure that forced guests to miss flights and remain interlodged for two days with approximately 300 Snowbird employees sleeping on the floor for two nights, SR 210 operates at the whim of Mother Nature. Current gondola technology functions in high winds and accommodates large spans with towers placed where there are no avalanche risks. Safe ingress and egress, regardless of weather conditions, is paramount in the solution for Little Cottonwood Canyon transportation. The need for year-round utility of the transportation solution picked by UDOT is critical. Hundreds of vehicles are parked on the roadside at every trailhead this summer. Utah's growing population is increasingly turning to nature and we need to provide transportation that doesn't involve private vehicles. UDOT should give careful consideration to the alternative Gondola Plus La Caille Base Station gondola proposal featuring a parking structure west of SR 210 that is at grade and an articulating bus circulation proposal ferrying passengers between major parking centers at the Gravel Pit and 9400 S. and Wasatch Blvd. This proposal would dramatically reduce the amount of private vehicle traffic on Wasatch Blvd and in Little Cottonwood Canyon. Thousands of people take scenic rides with no ski equipment on the Snowbird Tram. This would be true with a Little Cottonwood Canyon gondola as well and generate important operating revenue when combined with tolling. Gondola is a long-term transportation solution that is cost-effective, clean and efficient. It is the best means to provide safe transportation to year-round visitors while having the least physical impact on Little Cottonwood Canyon. Snowbird is committed to improving the environment, safety, and healthy recreation in Little Cottonwood Canyon. The gondola solution achieves all of these objectives. As a company partner, Snowbird is evaluating a conservation easement on the north side of the canyon, including Mt. Superior, as a public amenity to demonstrate our commitment to the gondola solution.	David Fields	Website
	Sincerely, Dave Fields President/GM Snowbird		
2449	I support the gondola and widening wasatch.	Bryn Jorgensen	Website
2450	Gondola, Gondola, Gondola. the best alternative!!!!!!	Mark Paterson	Website
2451	Gondola is the best option.	Shawna Paterson	Website
2452	Gondola	Sam Peters	Website
2453	I am a resident of Top Of The World Development in Cottonwood Heights and I support the gondola solution.	Erica Moore	Website
2454	I support the gondola for little cottonwood Canyon.	Andrew Poulos	Website
2455	I support the gondola option as it would have the least impact on the existing infrastructure and clear up the road way for other winter travel than just to the ski areas - alternatively a rail link to the ski area would be a good option.	matthew morriss	Website
2456	My opinion is that the proposed gondola up Little Cottonwood Canyon is the best option. It would have far less environmental impact. It would make the canyon assessable and safe, eliminating so much potential for traffic accidents. I feel it would add value, convenience and safety to the overall canyon Experience. Tourist and locals will love it!	James Lokey	Website
2457	I have been skiing LCC since 1956. I recommend the LaLaille Gondola option.	Richard Marriott	Website
2458	Do not increase the number of traffic lanes at this time. Don't do anything to increase vehicle capacity on the roads. The resorts in Big and Little Cottonwood Canyon do not have the capacity for more parking. Until the resorts can handle more people and vehicles, increasing vehicle capacity on the roads will only create a more drastic bottleneck to the resorts.	Brian Merrell	Website
2459	I am an employee of Snowbird. I feel as if the gondola would make my job and life easier as far as commuting to and from work five days a week, sometimes more. In peak traffic I've waited two hours in line trying to get home. I feel like the gondola overall would have less impact on the environment and over time make things better, more enjoyable and safer in Little Cottonwood Canyon. Thank you for considering my comments and everyone else's as well.	Scott Croft	Website
2460	My vote is for the gondola system. Several additional issues should be addressed at the same time: The two parking areas are too small. Security at the parking areas. Mass transit access to trailheads. Summertime use. Big Cottonwood Canyon needs to be included - alot of traffic will come to BBC as LLC becomes more personal vehicle unfriendly. Tolling system for both canyons. Thank you	Ulrich Brunhart	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2461	We live in a world renowned ski destination. Let's put in a world renowned gondola. Busses will have traction issue and just will add more cars the the canyon. Gondola option would be amazing!	Alex Falkenstein	Website
2462	I support the gondola project. I am resident nearby in Millcreek and visit the both canyons year around. During the study period and construction period I would support mandatory 3 or more car pooling during peak times, small parking fees at resorts, and a canyon fee like Millcreek canyon has.	Ben Lowry	Website
2463	I support the gondola and the La Caille base station to improve transportation in LCC. Thanks!	Nikki Gillies	Website
2464	Great solution to help reduce congestion in the canyon . Will the parking garages be large enough ? Or is this supplemental parking	Kevin Boyle	Website
2465	Yes for the gondola	Kevin Boyle	Website
2466	I am submitting a comment that I am strongly in favor of the proposed Gondola Plus La Caille Base Station as a solution to the traffic and environmental problems associated with SR210. I work for a HVAC company that serves Snowbird and frequently travels SR210 for both business and pleasure. Over the last 18 months, I have made dozens of trips in all kinds of weather conditions. During the ski season it is a nightmare getting to and from Snowbird because of the heavy traffic and road conditions. It is my opinion the Gondola will provide not only easier, safer travel, but also improved air quality across the Wasatch front.	Mack Moulton	Website
2467	I think the gondola option is preferred, especially if the new lacaille facility is approved. The road is busy even on days with no avy work and if widened we just create more cars going up and requiring more land at the resorts for parking, shifting parking to the base at the canyon and riding the gondola is much preferred, and less visibly intrusive compared to sheds and wide roads.	Tyler Carlton	Website
2468	As a member of the Big Cottonwood Community Council and the Mountainous Planning Commission, I will not support any plan that does not include both canyons (LCC and BCC), allow in BCC for as much or more summer traffic as winter traffic (it's not just about skiing) and stop at trailheads in the summer. Thanks for listening.	Brooke Derr	Website
2469	I strongly support the idea of an overhead gondola. Thanks	Peter Schory	Email
2470	I don't think a gondola would help the problems LCC has. It would add waste to our drinking water while building it. A better solution would be to run more buses and more frequent. As for a toll, maybe for the cars less than two I can see.	James Wilson	Website
2471	As LCC employee for over 40 years, this gondola is the best solution to this long time problem. We need this to happen, it's way overdue! Thank you	Annamarie Borgione	Website
2472	All for it!!	Matthew Gillies	Website
2473	I am not in favor of the gondola option. It is to focused on getting people to the resorts and not on whole canyon use. I am in favor of the long Snowsheds without berms and increased bus options. As well as the Alternating lane wasatch blv option The gondola will bring more people to the canyon just because it will be an attraction in itself. Adding another tourist attraction to the canyon seems to be not in line with dealing with crowding. Lets start with buses and snowsheds. If a gondola is needed it should be put up between Snowbird and Alta. A gondola starting at Creekside and going to Alta would allow people to park and or get off the bus at more option once they get into the canyon	Jason Malczyk	Website
2474	I feel a gondola is a great solution to the traffic congestion in Little Cottonwood Canyon. I have been driving this canyon for over 25 years and it has gotten considerable bad over the past few years. I gondola will help in not having so many cars traveling a challenging canyon.	Kyle Quinn	Website
2475	Gondola is the only way to go, more bus in this new world doesn't cut it, and they go off the road every time it snows anyway. Gondola running year round, with parking by La Caille.	Frederic Barbier	Website
2476	I support both the gondola and enhanced bus option with widened shoulder for bus only traffic.	Joseph Biskupiak	Website
2477	I am opposed to widening Wasatch Blvd. I have lived in this area for 40 years and we all need to SLOW DOWN. UDOT needs to lower the speed limit not widen the road with promotes increased traffic, speed and congestion. Stop the Madness! The beauty of both Big & Little Cottonwood canyons needs to be protected for everyone, now and in the future. We need common sense to prevail in making decisions that cannot be undone. Jill & Woody Blevins	Jill Blevins	Website
2478	I support the gondola and have heard about the la Caille base station.	Marc Liebmann	Website
2479	I am in favor and I like the lacaille option	Barbara Fields	Website
2480	I have lived here on Top of the World Drive for 10 years almost. It was a pleasure when we first moved in but over the past few years the traffic has gotten to be out of control. These are neighborhoods that this road goes through and I think it would be surprising if 10% of the residence that live near this road want any widening, addition to or increased speed on this road. The ski resorts should be funding this project themselves and since there are options to leave the roads residential and slow speed with Gondola's or bus lane.	W David Meiling	Website
	Support the Enhanced Bus option with a shoulder lane for buses.		
	Very strongly oppose the Gondola option!		
2481	Enacting the gondola option would begin the end of Alta. Alta and Little Cottonwood Canyon is a very unique environment. There is no reason to destroy it for the sake of what. There are many large ski areas for those who find them desirable. There are precious few if any other Atlas.	Norm Harris	Website
	Thank you for listening.		
2482	Please choose the gondola option for improving access and decreasing traffic in little cottonwood canyon.	Ladd Tanner	Website
2483	This would be amazing!!	Lucio Oliva	Website
2484	Do the gondola! Save the canyon and help emissions!!	Dagny Brickson	Website
2485	Gondola would be amazing	Cj Call	Website
2486	I support the gondola answer	Charles Fields	Website
2487	The gondola approach is such a breath of fresh air!!! I'm very excited that UDOT would entertain a sustainable long term solution for all of us that use and enjoy the canyon. This is such a forward thinking approach for all of that live in SLC and look towards reducing carbon emissions-Great job!	John Paulsen	Website
2488	the gondola option would be best to minimize impact on the environment and reduce buses and cars getting stuck or sliding off the road.	John Arslanian	Website
2489	Gondola option best to reduce environmental impact.	John Arslanian	Website
2490	Build the gondola!	Jeff Allen	Website
2491	The La Caille seems to be the best option. Please implement this as more cars are not the solution!	Kathryn Szczotka	Website
2492	I support enhanced bus service	Ira Mitchell	Website
2493	Please consider the gondola as a good solution for little cottonwood. It will help with the increased traffic that I have seen in my 30 years of going up to Alta. Would be great to have a second parking spot gather up the canyon from the bottom so that everyone does not need to take the bus to the gondola, it will encourage more gondola riders.	Mike Katz	Website
	I propose that any wedding planner/photographer whose party is off-trail lose privileges for 2 years.		
2494	Planner/photographer should buy a permit and submit a photo of self.	Ira Mitchell	Email
	Encourage your followers to photograph such parties seen off-trail trampling flowers and submit to you.		
2495	Utilize the busses. They are the flexible alternative. dHow many skiers and how long a season? Maybe make a deal with the parks in southern Utah to use them during their high season. Last year COVID cut the season short. Will climate change make that happen slowly over the next decade or so? A high capacity arial tram would then be an overbuilt solution; a lot pf expensive technology way under used, but still a debt to be paid.	andy White	Website
	A gondola line through the heart of the approach would be a detractor from the "natural beauty" experience that is being touted by Alta and the resorts for summer visitors.		
2496	I support gondola and I have heard of the LA Caille base station	Hayley Smith	Website
2497	I have very mixed feelings. I think the best long term option is probably the Gondola, especially if it incorporates the La Caille base station. I think it might be the thing that is most likely to get people out of their cars. However, I also wonder if, in the next 15-20 years we will finally see driverless cars truly become a thing. Then this "wireless gondola" might be able to use the improved road/snow shed option and have the same impact. We would still want the high quality base/La Caille parking to eliminate private vehicles/transfer into the wireless gondola car.	Marta Heilbrun	Website
2498	I support the Gondola	Bernard Pierson	Website
2499	We think the gondola is the best option, and hope that handicapped access will be taken into consideration, both in access to gondola at base station and ease of getting to slopes from the gondola. Thank you for all the info.	Gail and Eugene Farkas	Website
2500	I support the gondola! I've been saying it for years. Especially as an employee that needs to get up there to do my job.	Heather Warnock	Website
2501	Very much in favor of the gondola. I feel that the environmental impact on the canyon on a daily basis would be so much less than the buses. I also feel that it is emblematic of a progressive approach to transit. The skier would feel that their ski day would actually start the minute they board the gondola	Sean Hansen	Website
2502	I am writing in SUPPORT of the gondola project for Little Cottonwood Canyon and would like to know more about the proposed La Caille base station. A gondola project is much better for the long-term health of the canyon.	Sean O'Brien	Website
2503	I would like to express my support for Enhanced bus with roadway widening. I believe this best meets the needs of LCC (faster time for us to get up the canyon, better stop options). To have a gondola I believe will cause permanent harm to the LCC I have enjoyed for 40 years, and opens a door to a path that will result in the destruction of what makes LCC so special.	W Harris	Website
2504	Great idea! All weather solution.	Stephan Habif	Website
2505	Radical problems take radical solutions. Non-residents/workers all pay a toll when going up LCC, but have access to electric busses/trolleys at not additional cost.	Nick coletti Coletti	Website
2506	Way behind the times should have installed mass transport up canyon 30 years ago	Tina Bovine	Website
2507	Yes!	Breann Christopherson	Website
2508	Sounds great!	Nathan Thompson	Website
2509	Love this idea!	Alyson Jewell	Website
2510	Yes!	Larry Taylor	Website
2511	Great idea!	Gary Christopherson	Website
2512	Having recently traveled in Switzerland, I was so impressed with their transit solutions to their ski resorts. Given the geography of our canyons, I strongly favor the gondola option. I am a skier, a hiker, and very environmentally-minded, and I really think the gondola is the most forward thinking (and environmentally sound) approach. Enhanced bus service just seems like a bandaid, and I suspect has a much bigger carbon footprint. I am just so glad this is being addressed, and I hope Big Cottonwood is not far behind!	Robert Orme	Website
2513	A gondola in Little Cottonwood Canyon will solve traffic issues, protect air quality and could be an attraction for residents and visitors to enjoy one of Utah's most scenic areas year-round. I do support combining expanded bus service along with a gondola, that will allow more local access to trailheads throughout the canyon including the Grit Mill and White Pine.	Melissa Fields	Website
2514	I prefer the gondola option. They are a very safe, modestly inexpensive, environmentally conscious, fun, and enjoyable way to move a lot of people. I'll just drive if you add more busses.	Brent Carmichael	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2515	I agree with position of Friends of Alta that the Gondola will only increase overuse of LCC and therefore is not the correct solution to the traffic problem. I agree with designated bus lane as the best alternative - and also perhaps the most expedient and quickest solution to implement	Jim Struve	Website
2516	There are places at the base of Little Cottonwood Canyon where the gondola could start and you can have parking lots. Multiple large Open Fields are available. You can see them if you hike Bell Canyon and look down at the base of Little Cottonwood Canyon not to mention the huge hill that used to be owned by one man and I think the county bought it right at the base of Bell Canyon. It doesn't make sense the bus people all the way over from Big Cottonwood to Little Cottonwood.	Michael Christopherson	Website
2517	I do not believe that more car lanes will help reduce traffic, rather it will bring more cars and congestion. These six lanes planned near the Gravel Pit still have to condense to two lane roads. Creating a highway will bring highway traffic. Roundabouts in high traffic areas are not helpful, the focus should be on reducing individual vehicles and thus improving accessibility! Keeping a focus on individual vehicles is unsustainable and environmentally devastating. Rather than having bus lanes, cut out bus STOPS to reduce more traffic and pavement. I do believe that slower speeds (30-35) are extremely important and that the area south of Fort Union should be designed like south Wasatch in Sandy with slow speeds and natural curves which improve safety for residents and allow for safe pedestrian and bike use. There is just no reason for high speeds in this area. Please, Please, Please focus on CLEAN public transportation that is affordable and truly thought out to decrease congestion and that people Want to take.	Leah Tosches	Website
2518	Thank you so much for your attention to peoples comments, I hope that you take them into consideration. I think the gondola would be the best choice.	Ben Roger Allen	Website
2519	I "grew up" at Alta in the 1960's and have made return visits over the years. The volume of traffic on the road and on the hill has become unpleasant. Watching the red snake of tail lights leaving Alta at night has apparently become the norm. The pressures that the volume of outdoor enthusiasts have put on the canyon will continue, regardless of the mode of transport used to get them there. Busses could reduce the number of cars, if there were to be a policy to keep personal vehicles out of the canyon. Maybe create a new revenue source by implementing hefty parking fees at the area for personal vehicles. Busses can be removed from the road at the end of the day. Gondola towers would mar the view for a long time to come.	Mercedes Gotwald	Website
2520	Such a unique, environmentally friendly ideal!	Andi Vuksinick	Website
2521	I think the Gondola is the only clean alternative. More road equals more cars. Keeping the road clear for service, and emergency vehicles, maybe busses, and residents is preferable to any other alternative	Steve Shlansky	Website
2522	As an avid skier, I am so happy to see the efforts to improve canyon traffic. I would prefer the option of expanding the lanes in the canyon and adding enhanced buses. It will cost a bit more money than the gondola option but it takes the same amount of people up the canyon. I also really think it would be helpful for the bikers who enjoy biking the canyon in the summer. Right now the shoulder of the road is very dangerous.	Michelle Bushnell	Website
2523	It seems like a train that stops at trailheads on the way up is the best option	Scott Livingstone	Website
2524	As a longtime, seasonal resident of LCC, it is abundantly clear that a gondola would be the best, cleanest and most efficient long term solution to the current congestion crisis. While it may seem radical to some, this is the moment when we must recognize that the canyon cannot support increased vehicular traffic. The gondola is an elegant solution to an intractable problem.	Judith Klinger	Website
2525	Before any transportation system is selected, there must be a thorough analysis of the carrying capacity of Little Cottonwood Canyon. This will help establish the volume of people that need to be moved up and down the canyon, which will invariably help determine which transportation system best fits that purpose and need. And the EIS really should consider LCC and BCC given the close relationship between the two. Considering LCC alone will undoubtedly lead to unintended consequences in BCC. I like the concept of expanded bus service without widening LCC road the most out of the current options, but still think that without a proper capacity study, we cannot truly choose the right alternative. I think the EIS has a number of short-comings that also need to be discussed more before any decisions are made. These include: <ul style="list-style-type: none"> • The current EIS does not address the concept of multiple Mobility Hubs other than the one on 9400 South and the one at the Gravel Pit. A truly efficient, usable transit system needs to originate at locations around the valley (ie. U of U/Foothill, downtown, airport, WVC, Draper, West Jordan and points farther south, etc.) so that people can access the bus where they live, rather than drive their car to a mobility hub to catch the bus. • There is very little discussion of the needs of non-ski resort, dispersed users and how they will get to trailheads, including the very busy White Pine. • What are the annual costs of operating any of these options? • There is no mention of any interim solutions, and according to a UDOT spokesperson, UDOT has "no idea" what to do in the interim, nor are there any approximate timelines to actually identify what the "interim" is. LCC is facing an acute problem now that will only worsen, and the lack of timelines is a major missing component of the EIS. • There is only token consideration given to the effects of each of the options on the vital LCC watershed, either by construction or ongoing use. • There is very little/no mention of tolling – or paid parking – on vehicles, though the Utah legislature specifically allocated considerable monies to UDOT to consider tolling. • The EIS provides no rationale for UDOT's winnowing of 35 different options to these three. • Volume – the alternatives in the EIS will only carry about 1/3 of those people heading up LCC. This means that 2/3 will still be on the LCC road, so how do these solutions make any sense if they will not help alleviate the traffic issue currently plaguing LCC and the surrounding Sandy and Cottonwood Heights communities? • With regard to the gondola, which seems to have a lot of support despite this being an "objective" process, there is also a lack of detail regarding summer use, fees, schedule, how LCC road will be used (tolls?) and improved (snowsheds?), if buses would still run, not to mention ignoring the inconvenience of using the gondola (which will be at least a three-step process for getting up the canyon that will undoubtedly discourage many people/families), congestion at the mouth of LCC, timeline for implementation and the concept of it being a tourist attraction/marketing gimmick. <p>UDOT is faced with an opportunity to make a major, once in a generation decision regarding the use of Little Cottonwood Canyon. I think the process as currently laid out has a number of issues that must be addressed before any informed decisions can be made.</p>	Chris Adams	Website
2526	As a longtime, seasonal resident of LCC, it is abundantly clear that a gondola would be the best, cleanest and most efficient long term solution to the current congestion crisis. While it may seem radical to some, this is the moment when we must recognize that the canyon cannot support increased vehicular traffic. The gondola is an elegant solution to an intractable problem.	Judith Klinger	Email
2527	Thank you, Judith Klinger The Lodge at Snowbird The key to any transportation is public acceptance. The cost of simple bus transportation at present keeps people from riding the bus in numbers that would reduce congestion. Further, the gondola would only be utilized on days when road traffic is difficult because of the cost. At max that is only about 20 or so days a year. Unless parking would be almost free, people would park elsewhere and ride the bus to the gondola. The loading/unloading from a car to a bus inhibits most people from riding the bus at present. Adding an additional load/unload cycle would discourage most from riding on any other than critical snow days. Finally, there are other uses of the road in LCC. Those users would not find the gondola useful in any situation. In summary, I support the increased really low cost enhanced bus transportation option rather than a gondola based solution. Bus fees need to be reduced to almost zero to encourage ridership and parking fees need to be instated at the resorts. The result will lead to increased ridership on buses reducing canyon traffic. Larry Swanson	lawrence swanson	Website
2528	The primary objective should safety: of the people driving on Wasatch Boulevard as commuters, and of course safety of the skiers traveling to the ski resorts in Little Cottonwood Canyon during the winter. Decrease the speed limit, there is no reason to increase the speed limit once cars exit Little Cottonwood Canyon. Widening the road as proposed does nothing to improve safety when the canyon is closed. I think your idea of widening the road is asinine. Close the canyons to cars in the morning except for handicapped individuals and require the skiers to bus to their chosen resort just like they do in other states where traffic is an issue. The traffic is not an issue in the summer.	Ross Hinman	Website
2529	Expanding the roadway will ruin the area. More road space does not fix traffic, and another alternative should be considered.	Maygen Richardson	Website
2530	Please consider using buses only for canyon transportation in the winter. ("Enhanced bus service" is the term I keep seeing.) Any chance the ski resorts can pay for part of this instead of just from us, the local taxpayers? Also, please consider a bus only service in the summer in both LCC and BCC for the immediate future or a toll booth.	MaryEllen Johnson	Website
2531	Gondola is a much needed transportation system for Little Cottonwood Cyn. totally in support of the Gondola plan. This has been needed for several years to save energy and reduce pollution. This project would also give greater access to people not able to access the canyon by cars.	Jerry Giles	Website
2532	There is a huge gravel pit at the mouth of the canyon. Why don't we obtain the gravel pit, use it as a massive parking lot, and only allow buses up the canyon for ski season. There is no reason to create a freeway and destroy our small community when this is an option. Make the resorts pay for the upkeep and maintenance. It's not fair that citizens should pay Do resorts can make money off of our of town visitors. My taxes go up every year and it's getting crazy.	Virginia Prowse	Website
2533	I think the gondola plan is a great idea that will have minimal impact on the canyon yet still move a great number of people up the canyon to their ski destinations much quicker.	Christina Simmons	Website
2534	To whom it may concern: I am writing to share my support of the LaCaille Base Station. My family and I travel to little Cottonwood Canyon multiple time a year from Michigan. Anything that can be done to help ease the traffic pressure on the canyon would be extremely helpful. From the research I have done, the LaCaille Base Station is by far the best option. Best Regards Tim O'Brien CertainTeed Corp.	Tim O'Brien	Email
2535	The longer-term and, in my view, more thoughtful solution is a train or light rail. Absent that option, gondola is the more prudent, thoughtful option. It gets cars, buses and people off the road and over the long-term has less carbon footprint.	Shawn McMillen	Website
2536	I support the La Caille based Gondola options for the environmental impact current traffic has and for a safer commute. Paving LCC is not good stewardship of this already delicate canyon.	Tyler Phillips	Website
2537	I support the gondola / La Caille base station. Many studies have shown that more highways equal more traffic. This phenomenon is known as induced demand. See The Fundamental Law of Road Congestion: Evidence from US Cities: https://www.aeaweb.org/articles?id=10.1257/aer.101.6.2616	Jeremy Levy	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2538	<p>Thank you for allowing for comments to the plans. I have the following comments for your consideration: Enhanced Bus - No additional Roadway Capacity in LCC - 1) I would like to understand the Highland Drive Mobility Hub better and what impact it would have on 9400 south above Wasatch Blvd. It appears to me that busses coming up from Highland drive would need to continue up 9400 to the mouth of the canyon. Would this require widening of South Little Cottonwood Road, now or in the future. Frankly I don't see how you could improve the flow of bus traffic without widening the road. Enhanced Bus with Road widening for peak Period - 1) It would appear that the only real difference between the first and the second is the addition of road widening. Given that I am still wondering about the access up the canyon from the mobility hub at highland and the need to widen the road on South Little Cottonwood. I do not see how the times would basically be cut in half without widening that road as well. What provisions are being made for that if any? Gondola with bus from mobility hub. - 1) if I understand correctly you would only be using one Mobility hub the one to the north at the Gravel pit - Why? Why not use both. I understand that your argument is that you want traffic to use I-215 and the gravel pit. However, many come from Utah County and get off the freeway starting at the point of the mountain and then hit every exit between there and 9200 south. I think that unless you include the ability for a mobility hub at highland you are not completely solving the problem for neighborhood south of 9400 south. 2) why not increase the size of the gondola to carry a high capacity to the resorts that would improve the response and delivery time. 3) do you not understand why you would not spend the additional 75 million for snow sheds in the canyon with the Gondola. 4) Have you considered additional sites for the location of the Gondola such as the tree farm that is accessible to Wasatch and north little cottonwood and would hold several thousand cars. It would also have good access to both highways.</p> <p>Finally some additional questions: 1. Why not put a gondola at the mouth of Big Cottonwood Canyon, run a line up to Solitude, Brighton and the do an interconnect to Park City and to Alta and Snowbird. This seems to be the most logical approach. It would solve several issues. a) it would eliminate traffic on Wasatch Blvd. b) it would reduce and or eliminate traffic from Park City (which I have heard accounts for between 20 and 30 percent of the cars in the canyon) c. it would provide alternatives for skiers who have been asking for an interconnect for years.</p> <p>My final comment, while it appears that we now have three alternatives it is unfortunate that we have only focused the attention on the access to little cottonwood canyon and have not looked at the bigger picture. I feel that we are ignoring opportunities that if the study area was more realistic and considered the larger problem overall we would have had additional options that would have solved many more problems than just the traffic congestion in cottonwood heights and along Wasatch Blvd. For example I do not see the traffic congestion problem being solved on South little cottonwood road, SR 209 in any of these options. Traffic in the winter backs up from the intersection to the past Wasatch Blvd. So I would like to see a more comprehensive look at the ski traffic congestion within our canons so that we can achieve a unified and comprehensive solution vs. the one an done approach that is being studied.</p> <p>I support the Enhanced Bus no additional roadway capacity in LCC over the Enhanced Bus with roadway widening. My concern with the widening of the roadway is the long term damage we will do to the canyon (note I am fine with widening Wasatch Blvd. and North little Cottonwood. Where I am concerned is past the electronic sign or mouth of the Canyon) and the environment. Based upon that I would support the Gondola at the mouth of the canyon or anywhere along the North Little cottonwood given that traffic congestion can be resolved and that snow sheds are added to the canyon. I frankly do not believe that we should proceed forward with any option that does not include snow sheds.</p> <p>Finally I do like the idea of reducing and eliminating traffic congestion on Wasatch Blvd. I also like the idea of removing as much traffic from SR210 or North Little Cottonwood. It would be nice to see some ideas for how to reduce traffic on South Little Cottonwood.</p> <p>Thank you.</p>	David Hart	Website
2539	I vote for the gondola option.	Stacie Skelton	Website
2540	I would vote to choose the first bus alternative. It's a shame that Ted Johnson's vision for cog railway wasn't accepted back when he proposed it in the early 1970s.	Ilona Fasselin	Website
2541	I support the gondola option for LCC. No matter what you do with the road in the canyon once it snows it becomes a parking lot. Buses still have issues with snowy roads or accidents on the road. The gondola would be effective snow or shine. I guarantee people don't want to come on a ski vacation and ride the bus, they probably would ride a gondola to the mountain though.	Kasey Carpenter	Website
2542	Love the gondola idea. Do it!	Greg Evans	Website
2543	<p>I had commented earlier, against a gondola. But I recently heard that there could be a 4th option, for a gondola starting near La Caille, with onsite parking. This would be vastly better! My main reason for not wanting a gondola before was because it would mean parking, catching a bus, driving to the gondola, then finally riding that gondola. That's too much, and since it involved a bus I figured why not just take that bus right up the canyon. But—if this new option is feasible—then I say we should do that!</p> <p>And as far as busses go, I figure we still need more incentives for riding, such as: - Provide free bus service. - Implement a tolling system for cars that would encourage people to take the bus. - Eliminate roadside parking in the canyon. - Maintain bus stops year around at key backcountry trailheads. - Find ways to give buses traffic priority.</p>	Chad Smith	Website
2544	I believe there would be much greater public acceptance of any of these alternatives if there were low cost lockers available at the resorts so that extra gear could be securely stored.	Fred Gruter	Website
2545	First of all, I am absolutely sure something must be done. In the only 12 + years I've been in Utah I've seen the traffic in the Canyons increase exponentially. The parking along roads - especially on weekends - is frightening. My preference is the bus service option without shoulder widening (except perhaps in designated stopping points.) I would definitely use this service if available. My second preference is bus service with shoulder widening. I am opposed to a gondola - that's too expensive and would also add more intrusive infrastructure to an area that should stay natural to the extent possible.	Anne Mitchell	Website
2546	I'm concerned that any road expansion work would destroy the roadside and Riverside bouldering areas that have made LCC bouldering world famous. Hopefully a plan can be put together that preserves these areas and maximizes traffic efficiency.	Andrew Butts	Website
2547	<p>Dear LCC EIS Team,</p> <p>Attached please find our formal comments regarding the LCC EIS Draft Alternatives Development and Screening Report.</p> <p>Sincerely,</p> <p>Laura Briefer</p> <p>SLCPU Director</p>	Laura Briefer	Email
2548	<p>I have been traveling on little cotton wood canyon for over 60 years, and I have been an owner of a condo at the Lodge at Snowbird since 1974. I have reviewed the alternative suggestions for relieving the serious congestion problems during the ski season, and I firmly support the gondola option, but not the one currently under consideration. More recently an alternative, referred as the LaCaille plan appears to offer many advantages over the current department of transportation gondola plan The LaCaille plan makes parking more convenient and it has a higher capacity. Please give this new alternate your consideration.</p> <p>Sincerely yours, George a Jedenoff</p>	George Jedenoff	Email
2549	<p>During the 2019/20 ski season while using UTA bus transit there were several low cost improvements I felt could be easily incorporated that would make bus transit a more desirable option. First I was appalled to see that external ski racks had been removed from the busses. This meant each rider had to board with their gear and hang onto it for the duration of the ride. This makes it difficult for elderly people. Second was that the loading station at the bottom of the canyon is no longer a stop. To take a bus up the canyon means you have to board back at the Fort Union shopping center. This makes for a long ride and should you be unfamiliar with the UTA system as a vacationer would be, you're left searching. Third, a small investment in lockers at each facility where a skier could leave their gear (with locker rental fee) for the day, week, or season. Current lockers are only open to season pass holders from what I was told. This would allow people to leave their boots and skies on the hill and busses less crowded with gear. Preferential parking for carpools and a carpool pickup point at the base of the canyon. The incentive of front lot parking may be enough to bring people together as well as the smart phone app that was in development last year to connect people to rides. Another carpool idea would be to hand out discount coupons or points to those arriving as a carpool and can be redeemed when making future lift pass purchases. I feel these above ideas in conjunction with expanded bus and road widening ideas could assist in alleviating some of the canyon congestion. Thanks</p>	Craig Adam	Email
2550	I love this idea. I would do this over driving.	Kenon Dohmen	Website
2551	I live in Sandy, south of Little Cottonwood and I use this part of Wasatch very often. I have been frustrated with the bottleneck with ski traffic many times. That said, what I am mostly concerned with is the safety of this area particularly to cyclists. Wasatch Blvd. is a destination ride for many road bikers and it is used by mountain bikers as well to get access to LCC. A large 50 MPH highway is not conducive to this unless protected bike lanes are put in place. Nothing in your fact sheets or story map speaks to bicycle safety which makes me think this was not a primary concern in the plans, especially considering the 50 MPH speed limit. Having more lanes is great, by why does the limit need to be set to 50 MPH and not 35 MPH? Again, I live close by and I drive this street frequently and I would much prefer to have the lower speed limit than to put cyclists in danger.	Ben Mabey	Website
2552	Build the gondola	Jeannette Singleton	Website
2553	I support the gondola	Stephanie Hyde	Website
2554	I support the gondola	Leslie Brimhall	Website
2555	A gondola would be a wonderful addition to our community	Brandon Porter	Website
2556	I think if you are raising the speed on the road it would be very appreciated from the cycling community to do a protected bike lane.	Michelle Conover	Website
2557	I'm concerned that your are only focused on increasing speed on the canyons at the expense of cyclists' safety. Drivers hitting cyclists is canyons is already a large issue.	Tia Dillman	Website
2558	I suggest having a protected bike lane on wasatch and large bike lanes in the canyons.	Sam Page	Website
2559	Please be more considerate of cyclists safety when redoing this road.	Devin Vernick	Website
2560	I'm a staunch proponent and advocate of alternative means of transportation up LCC. For the sake of the integrity of our beautiful Wasatch mountains, and the health of the present in the future it is imperative that this remains a top priority. I appreciate the effort that is going into this project, and I hope to see these transportation alternatives being proposed come to fruition in 2021. I support the full entirety of this proposal as it currently is.	Zac Barlett	Website
2561	The gondola is the best proposal, it is the safest, will have the least impact on the environment, and will help clear the air by reducing carbon emissions. It will give guests and employees a safe option for traveling to and from Snowbird and will eliminate snow nights or days with no in or out access because the road is closed.	Katrina Jensen	Website
	I like the Snowbird president idea of gondola from la Caille		

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2562	<p>UDOT Leaders, Thank you for the very extensive work you have done in an effort to resolve the challenge of heightened traffic congestion during peak snow days at the Salt Lake Wasatch Front ski resorts!</p> <p>If I understand correctly, that congestion occurs about 30 days each season – probably 6-8 weekends or long weekends and the winter break for schools.</p> <p>I was not involved in the earlier stages of your deliberations, but I believe that UTA and the Forest Service were involved.</p> <p>1- I am very pleased that there is no plan to make either Little or Big Cottonwood Canyon a toll venue.</p> <p>2- I am very pleased that there is no plan to allow helicopters in either canyon, except possibly for air-lifting of severely injured people.</p> <p>3- The desire to ski at the four resorts will only increase over time, perhaps exponentially.</p> <p>4- It appears that there is no current or planned driver-friendly access road through the south end of Salt Lake Valley which leads easily, speedily and directly to Little Cottonwood Canyon, e.g., another East-West Interstate Freeway like I-80 or a Bangerter Highway. Do we need such a thoroughfare? But then the needed Park-n-Rides near the mouth of the canyon will wipe out entire residential neighborhoods and transform negatively the Little Cottonwood Canyon experience.</p> <p>5- In time – a decade or two – there will most certainly be a TRAX extension running east from the current major North-South Trax line to the mouth of Little Cottonwood Canyon. Of course, that's billions of dollars - all, one might say, for those 30 high intensity days of skiing. Has such a possibility been considered? Summer usage would likely also increase. ("If you build it, they will come.") Transportation once in the canyon will be by bus, either UTA or a private entity.</p> <p>6- I am perplexed that greatly expanded UTA or private bus service from a variety of locations in the valley is not among the options. Some current TRAX Park-n-Rides might need to be enlarged to serve as a hub. These UTA buses could transport skiers and others all the way to the various resorts in both canyons. Some of the buses would likely travel along Wasatch Blvd; others could come from major arteries in the Draper-Sandy area.</p> <p>7- I was greatly impressed at the effectiveness of the interplay between the University of Utah and UTA when I attended a football game two years ago. I picture greatly expanded UTA bus service and the ski resorts working similarly.</p> <p>8- Widening Wasatch Blvd. seems simply to exacerbate the problem of way too many vehicles in the canyons, along with their emissions, the likelihood of higher speeds and increased accidents, and the negative effects on the many neighborhoods and residents above and below the Blvd.</p> <p>Thank you for considering these idea.</p> <p>Respectfully, Craig Paxman Resident, Cottonwood Heights, Utah</p>	Craig Paxman	Website
2563	<p>Thank you for all your hard work to produce the LCC EIS Transportation Alternatives report! And thank you for taking my comments and answering my questions. I generally agree with and support your analysis and conclusions, but I see serious logistical problems with solving the mobility problems with bus service.</p> <p>1) There are many more aspects to reliability and safety than avalanches, trailhead parking, and winter roadside parking. While you may want your 'definition' to be artificially set and constrained, it does not make good sense to the layman. Other safety and reliability issues are traffic accidents, timeliness of public transit, lack of designated bike lanes, and road driving conditions. Car accidents are a common safety concern in LCC as the steep curvy road is often snow or ice-covered, or visibility is impaired by the weather. Can you show and analyze data on private vehicle, bus, bike, and pedestrian accidents on S.R. 210 in LCC? Why did you limit the reliability and safety definition and criteria to those few issues?</p> <p>2) Mobility in LCC is limited by many factors. There are many days when the weather turns bad in the afternoon and travel down the canyon takes hours even when there was no avalanche issue or mitigation. Mobility can be limited on the way up the canyon just by the process of checking vehicles for proper tires and 4 wheel drive. Vehicle backups are not just caused by congestion, as a single car or bus stuck in the lane of traffic will back up traffic. In my 2,000 trips up and down LCC to ski, what I often see are slowdowns due to unprepared vehicles, bad drivers, driving mistakes, spinouts due to excessive speed, mechanical breakdowns, poor visibility, icy roads, and snow-covered roads. The many causes of limited mobility do not appear to be addressed fully in the report. Can you show data on the number of days with decreased mobility in LCC broken down by root cause?</p> <p>3) It only takes one driver mistake, ill-equipped vehicle, or mechanical problem to completely shutdown the road to all vehicles for hours, or one white-knuckled driver in a blinding snowstorm to severely slow traffic down to a stop and go crawl. Don't you believe that all road-based alternatives on this steep curvy road, often with bad weather and road conditions, are unreliable and can limit mobility? Would emergency egress from the canyon be improved by having a gondola that is not limited to road conditions and accidents on the road?</p> <p>4) The concept of increasing bus transit by adding a bus-only third lane is fatally flawed. The LCC road is just too steep and curvy to have side by side traffic in bad weather. What I see happen is when there is snow on the road or bad visibility due to snow, the existing areas with three lanes turn into only two lanes. The white lines on the road become invisible in the snow. Most drivers are cautious and form a single lane of traffic. Trying to drive two abreast on a curvy mountain road is very dangerous when the road is snow-covered, icy, or has bad visibility. How can a separate bus lane in the canyon be made to be reliably useable in all weather and road conditions?</p> <p>5) Why does the report say 1,050 people per hour would ride the gondola when the manufacturer rated capacity is 5,000 people per hour? Couldn't a gondola can get all of the skiers up to (or down from) Alta and Snowbird in a two-hour window? This would minimize cars on the road except for some backcountry skiers and service vehicles. Can't shuttle buses from many various areas in the valley bring more riders to the gondola base, such as a bus from Sugarhouse or the University of Utah?</p> <p>6) Please include information about seating versus standing room in buses and gondolas. Doppelmayr 3S gondola cars hold 36 people with seating for 24. Can a normal full cable of gondola cars be used, (rather than just the 30 cars as indicated in the report), to minimize people having to stand? The bus capacity of 1080 people per hour is only with a packed full bus which includes 23 seated and 21 standing in full ski gear and holding skis on a steep curvy mountain road. Please include that standing in the bus is very unpleasant and is a serious limiting factor in attracting ridership. Only seated passengers should be counted in calculating bus capacity. What is the bus capacity of people per hour if only seated passengers are counted?</p> <p>7) Can you include 'Additional Benefits' in the analysis? A significant additional benefit of a gondola is the relatively small cost to provide summer transit for Octoberfest, resort focused hiking and biking, and for the Wildflower Festival. A gondola is a low pollution option that is smooth and quiet with beautiful views in the canyon that is always available whenever you want to go up or come down. An additional gondola line could connect from Alta to Brighton if that is supported by the businesses and communities in the future.</p> <p>8) Cars and buses in the canyon not only cause air and noise pollution, but also vehicle oil drips, tire wear, and brake pad wear all goes into the watershed degrading water quality. Stream water quality can also be impacted by the occasional vehicle accident or vehicle major fluid leak that ends up in the creek. How is motor vehicle pollution included in the environmental impact study analysis?</p> <p>9) Is it true that initial capital costs will likely be paid significantly by Federal Highway grant money, while operating costs will be paid by Utah? Might the ski resorts may be able to provide the gondola operators?</p> <p>10) A Mountain Accord desired outcome was to provide transit and recreation focused at 'nodes', with the major nodes being the ski resorts in LCC. The main issue of limited mobility up LCC is not from two hundred cars at dispersed backcountry sites, rather the large traffic congestion is due to the thousands of vehicles going to the ski resorts. Shouldn't transit focused on the ski resorts be the primary objective?</p> <p>Thanks for all your hard work!</p>	John Knoblock	Email
2564	<p>Hm, interesting solution. But having lived in the French Alps and used gondolas extensively , one also have to realize they are no panacea. Gondola sort of puts all eggs in one basket (just like "one" road does) and in case of a breakdown or mechanical failure, one does have a massive issue at hand to solve (yes, working rescue from pods is neither fun or low on resources). Per hour capacity is often lower for a gondola than a road (albeit not a congested one). How many pods are planned? Spacing, speed?</p> <p>LCC Road should maybe be blocked off for private vehicles and only have bus service allowed during "day time" hours. With a proper parking in the valley, it'd remove all private cars during peak congestion hours, provide some flexibility as buses can be used elsewhere and assets would not be "locked up" and "fixed" (literally cemented in place).</p> <p>But access to Alta and Snowbird has always been challenging. That is sort of the allure of the area. One wants to be up before the snow closes the road and get as much of the heavenly powder untouched.</p> <p>All that said, a gondola is an interesting idea, but I fear it will not be as successful in real numbers as these charts portray, but only one more option to get up the canyon. And will gondola close once the resorts are full, when the mountain can't handle more skiers or visitors? Will a gondola run at 3 AM when I'm too drunk to drive home from a night out?</p>	Per-Ola Selander	Website
2565	I am strongly against the extra lane. It would be intrusive on the beautiful environment of the canyon. I do think the Gondola would be fun but the extra buses would be nice as well.	Andrew Gee	Website
2566	I support the gondola and lacaille base station. Only option that will take cars and buses off the road and is more cost effective than avalanche sheds	Ann Bonar	Website
2567	Strongly oppose widening Wasatch Blvd. for all of the reasons presented by savenotpave including: increased pollution of air, noise, light, water. Air pollution is key especially in this area of Salt Lake County. Winter inversion will be one unbearable with highly increased traffic. Lane reversal has always helped traffic flow in crowded cities with bridge and tunnel traffic. For example, after a specific time of day both lanes of CR 210 become one-way out of the canyon for non-emergency vehicles. Similar option for early morning traffic into LC Canyon.	Thomas McKenna	Website
2568	Based on what I saw presented on the summary and story map the enhanced bus with roadway widening is the least attractive option. The financial cost and environmental impact is not worth the decrease in travel time for me. The Gondola or the enhanced bus with no additional roadway capacity both seem like viable options to me. Thank you for your consideration.	Carly Scofield	Website

2569	<p>I have been skiing Alta/Snowbird since 1973 on 1-2 week ski trips until my retirement a few years ago, and now as what I would refer to myself as a seasonal local, December thru March. What drew me to these mountains was the sheer beauty, the two great ski resorts, and of course the magical snow conditions. Through the years I have seen Alta/Snowbird transform from a not so secret ski destination to a mainstream high volume one. Long gone are the untracked powder days that lasted a few hours. Below are a few comments for your consideration:</p> <ol style="list-style-type: none"> 1. Of all the proposed options I am strongly opposed to the gondola option. The last thing LCC needs is more concrete and steel to spoil it's magnificent viewscape. There will be unintended consequences of a gondola. This is too radical of a "solution" and once begun, there is little chance of turning back. 2. The bus option(s) in either case offers the ability to incrementally add capacity and improvements of a proven method to move skiers up and down the mountain. In my years as a seasonal local I routinely ride the bus and have seen how small improvements such as eliminating the middle of the bus ski coral and eliminating the stop at the base of the canyon has done to reduce the travel time on the 9400 bus. Simply changing from an Alta/Snowbird bus to a dedicated Alta, dedicated Snowbird bus will be a significant improvement in travel time. 3. To encourage bus usage you need to make it better than travelling by car. One pet peeve of mine is the lack of FREE storage once I get to the mountain. Getting on a bus in your ski boots and helmet is a royal pain, not to mention wearing your boots for a few more hours each day. Alta got it right with their day skier bag storage, just give skiers a place to store a boot bag along with their "walking" shoes for free. I not even think of going to Solitude anymore where it costs \$20/day for a locker and you can't even put your boot bag under a bench anymore without the staff snagging it. <p>People will ride a bus if you make it work for them. Quick and easy up the mountain, a free place to store your boot bag, a (mostly) on time schedule, plenty of buses to eliminate the bus sardine effect.</p> <ol style="list-style-type: none"> 4. Give priority to the buses and penalize single driver cars, it is very frustrating to see so many people going up the mountain alone. Have you studied the reductions that would occur simply by banning single drivers up LCC? 5. Have you considered working with the car rental companies to eliminate two wheel drive vehicles traveling LCC? It's almost a given that if a car is off the side of the road on LCC, you can bet it is someone who flew in, didn't want to pay the exorbitant 4 wheel drive rental costs and now is stuck on the side of the road with a 2 wheel drive car. Many times there are no early restrictions only to get a snowfall that traps the unknowing driver. This is not a road to be driven with two wheel drive vehicles with weather. Make it less expensive to rent 4x4's, completely disallow 2 wheel drive vehicles, (ubiquitous vehicle tracking software can make this happen). 6. Consider bus redesign. The current layout seems to waste alot of space and makes it difficult to hold onto your skis. A 2x2 row, face forward seating would seem to work better. You should experiment with a better bus seating arrangement. <p>Thank you for the opportunity to comment. I can see a lot of hard work went into these proposals. LCC is beloved by so many and with increasing demand we are all concerned what will come in the future. The A/SB skiing experience has been degraded through the years with the increased number of skier visits. Unfortunately it will only get worse.</p>	julius klimowicz	Website
2570	I support the gondola and La Caille development proposal. This is the ONLY option that provides a much needed transportation solution, makes highway transit safer, lowers the avalanche hazard index, does not require expensive, ugly avalanche sheds, is environmentally friendly and takes cars and buses off the canyon road, ALL at an affordable price. This proposal does not require adding additional lanes to Wasatch Boulevard which as a Cottonwood Heights resident, I am opposed to. Thanks you for listening! Bob Bonar	Bob Bonar	Website
2571	I believe that the Gondola is the BEST solution to the transportation problem in LCC. It is the only option that provides a long term solution to all of the problems related to this issue.	PATRICE REILLY	Website
2572	The Gondola is the only real and right choice	Timothy Burris	Website
2573	I support the Little Cottonwood Cannon gondola with the La Caille Base Station	Evan Strat	Website
2574	<p>#1 The gondola option is a huge mistake. This option will be tied up in litigation for YEARS. It will pose enormous damage to the esthetics of Little Cottonwood canyon. As presented it offers little benefit at HUGE price tag. Due to the need to ride a bus to the DOT proposed base station. As proposed by the La Caille owners it is aHUGE mistake, giving a big taxpayer payout to large corporate interests. It will lead to over massive overuse of the LCC and eventually encourage a gondola connection through BCC and to Park City. This is a certain way to ruin a largely pristine nature reserve into a future amusement park. The gondola is a fantasy driven by \$ greed by the ski areas and commercial interests.</p> <p>#2. The best cost effective option and quickest to get done is to fix the slide path dangers on the roadway by berms or snow sheds. Put in Gas Eze equipment so the canyon can be cleared at any time. Fix the road excessive turns and areas where traffic problems occur. You can easily buy more plows to keep the road in better condition in storms and station them in a couple locations not in remote locations. If the road is open more the need to enlarge Wasatch blvd goes away. Focus on what can be done easily to fix the reason the canyon closes and creates backup.</p> <p>Do NOT create an unlimited capacity Gondola to the heart of a pristine location and overload it beyond the capability to please commercial interests.</p> <p>My choice is Enhanced Bus Service, Alternative 1. I like this because it is the least invasive, and carries the same number of people up the hill in winter as Alternative 2 without the road widening. I am STRONGLY OPPOSED to the gondola alternative. Visually intrusive, time-consuming, does not serve backcountry skiers, and could lead to further mechanized recreation.</p> <p>My further comment is that the canyons are already full to the bursting point. Should we really be considering adding to this load? Let's do the enhanced bus service, but LIMIT the number of cars in the canyon, especially in summer. How to limit? DO NOT allow parking along roadway shoulders in summer—very dangerous for cyclists. When a particular lot and nearby pullouts are full, drivers must hike elsewhere or go home. The Cottonwoods have myriad wonderful and under-utilized trails. In winter, charge a toll with a sliding scale for number of passengers. Cap the number of cars in various time slots, ie, between 7-9; 9-11; 11-2; 2-4. Employees with proof of employ are exempted.</p> <p>And while we're at it, let's do 12 buses/hour at peak winter times, and make those buses all electric! If we're planning for the future, let's plan for the future. Too pricey? Float some local bonds. Ten-to-one regional voters would be happy to pass them.</p> <p>Have we considered a trebuchet and pool filled with pillows as an alternative means of ski resort access?</p> <p>In all seriousness, I don't think I have the skill set to comment on what plan is best but as a citizen and frequent user of our canyons I do want to pose the question, which plan provides the most new long term jobs with the least environmental impact?</p> <p>I live in Cottonwood Heights between the canyons and a mile from Wasatch Blvd and have for the past 10 years. I am firmly against any widening of Wasatch Blvd. I would prefer that Wasatch be configured with one lane only each way and designed to allow more space and safety for bicycles. This should have the effect of causing even slower traffic during ski season and thus will act as a more natural way of limiting traffic in the Canyons. If we combine that with the gondala, better bus service etc... the combination should result in far less auto traffic in the Canyons. The goal should be to limit the total number of people who can access either canyon in a way that is fair and natural—extreme inconvenience.</p> <p>This will save so much wear and tear on the mountainside. I hope it can get done.</p> <p>Either of the bus alternatives are the only ones that I could support. Buses are the most cost efficient and user friendly options. I also think that option 2 with a bus lane which could also used for bikes or other uses other than auto transportation is a good idea. At least some of the buses should allow for stops at the White Pine trail head and other places if there is a demand for it. Along with increased buses, there needs to be a suitable bus stop at White Pine constructed and a great increase in the size of the parking lot to accommodate people that want to carpool and park. It is common to see this parking lot full and cars parked for a mile on both sides of the road. The buses used for winter transport can also be used in the city during the rest of the year and are not just a costly item that has a limited season of use. Many more people could afford to ride a bus than a gondola and would require a lot less taxpayer subsidy. It currently cost \$15.00 for a short ride on the Snowbird tram in the summer. It would have to cost a lot more than this to ride all the way up the canyon and would discourage enough use that it would not do much to minimize private auto use in the canyon. The gondola would require a bus ride to a gondola base then another wait for the gondola. This would greatly increase the amount of time to get to the ski areas and most of the skiers would not want to have this delay and would rather ride a bus or drive. The gondola does not provide for multiple stops along the way which would be an option with bus service. The gondola base would take away the carpool or bus parking lot which is important to decrease the amount of cars in the canyon. Thank you for the opportunity to make my comments.</p>	David Hackbarth	Website

2580	I wrote before in support of the gondola solution to LLC traffic with support for Snowbird's suggestion to have the base and parking at the mouth of LLC. Now that I have seen this new proposal by the private company CW Management I am for that. It provides more convenient parking, is MUCH FASTER and MORE people per hour. The only suggestion I have is that it continue all the way up to ALTA. I do not want to get off the tram at Snowbird, WAIT IN LINE AGAIN for a small tram to ALTA. The same would be true but worse coming down the canyon. OR A have a special entrance to the tram at Snowbird for Alta passenger to put them ahead of the Snowbird riders, as they have already waited up at ALTA- FOR YEARS I HAVE SAT IN MY CAR IN THE ALTA PARKING LOT (For 1 1/2 hours at times) WAITING TO COME DOWN THE CANYON AS SNOWBIRD CARS WERE ALLOWED OUT FIRST. After 1 1/2 hours you drive by SNowbird and their parking lots are empty. Lets avoid this situation in setting up the gondola. If you got on the tram up at Alta, you do not have to wait behind all the Snowbird people.	Joyce Sanford	Website
2581	I live here no thank you we don't need anymore cars or people NO	robbie evans	Website
2582	<p>I support a 4th alternative road plan to consider.</p> <p>This would be an alternative to consider reducing private vehicle traffic over time that can travel up the Cottonwood Canyons. After these gradual reductions, private vehicles may be reduced by, say, 90% by 2050, but allowing for local canyon traffic to continue use of the road. This would have the effect of needing less intense additional road capacity on Hwys. 190 and 21 from the Fort Union intersection up both canyons.</p> <p>At that point maybe only 1 traffic lane in each direction, with one additional bus/alt transport lane would be needed in each direction, reducing construction costs, all still w/o the need for a gondola. This would reduce noise and pollution through Cottonwood Heights, and allow room for parkway/traffic calming features to be incorporated through Cottonwood Heights.</p> <p>A parallel project to consider would be to connect 20th East with a bridge across Dimple Dell Park, thus further reducing commuter and ski traffic on Wasatch Blvd.</p> <p>I am also against the Gondola alternative for reasons I have elucidated previously, even if the bottom station were to be moved from the present LCC Park n' Ride location to one further down the canyon in the area south of the present Hi-T intersection. This would further exacerbate the traffic load on Wasatch. The LCC is too narrow to fit in another transportation corridor, and it will ruin the viewscape for residents at the canyon mouth and for drivers going up and down the canyons, distract the drivers, and only serve the two resorts and no trailheads (ie much less flexible in daily, weekly and seasonal schedule and routing changes than a shuttle/bus alternative). After having to make two mass transit transfers the Gondola will be seen as a last resort alternative, and will be underutilized.</p> <p>Thank you very much for accepting these comments.</p>	John Kennington	Website
2583	Now is the time. Be a world's first!	Jamie Kanzler	Website
2584	I agree with the increase to buses and expanding the road. I also like that the extra lane will be a bike lane in the summer, which I feel is needed. My family rides the bus about half the time we go up to Alta. Our experience is that there is not enough parking North of the canyon, we end up driving just as far to the 94th park and ride as we would just driving up the canyon.	Catherine Spuhl	Website
2585	I support the gondola option with the La Caille base station. This seems to make way more sense than the gondola plan in the current options. If the process needs to take a step back to include La Caille, it should to evaluate it.	Geoff Smith	Website
2586	I live along Wasatch and fully support both widening the road and the gondola project. Simply increasing bus capacity is not enough to handle the amount of traffic up the canyons in my opinion. I am also worried that the funding for the buses (routes, drivers, converting to fully electric, etc) could change by 2050 or after, where implementing a permanent infrastructure change would provide a long lasting solution that provides more access for everyone to enjoy canyon.	Justin Monell	Website
2587	Why do you have the gondola with such small capacity? It seems that thing should be 5x the projected number. I think the gondola seems to be the best option with the least impact.	Matt Simons	Website
2588	I have lived in the Granite Oaks subdivision for twelve years, and worked at Snow Bird for 4 years every sunday. I have attended many meeting during this time with regards to this issue. In order to meet your stated goals the Enhanced Bus 36 minuet option is the only one that will help. The gravel pit hub is the only option for parking large numbers of vehicles, any more cars in the triangle would be a disaster. snow sheds a must to keep traffic moving 24 hrs a day. If a gondola is a must it would have to be placed in the gravel pit, it could also be done at a later time.	Michael Day	Website
2589	Let's leave this area so that my kids can continue to enjoy it.	David Sandberg	Website
2590	I love Little Cottonwood Canyon and while I agree that there needs to be a better bus system up the canyon, I do not want the road widened or a gondola put there. I spent a lot of time there as I grew up and as an adult. If the road were to be widened some of those places I loved would be destroyed including the house my grandma lived in. I ask that the road stay as it is.	Kassidy Hall	Website
2591	As a canyon employee I support the Gondola alternative in an effort to reduce the number of vehicles going up the canyon, this is the safest way to reduce traffic, however having a parking structure at the base of the gondola would encourage riding of the gondola, I think it will be a much harder sell to get people to park their car, get on a bus, to get on a gondola, to get up the mountain. Cutting out one of those steps will make it much easier to swallow for guests who want to get up the canyon. This would also limit the usage to Little Cottonwood guests, which is the intention of this EIS, of course I would support a parking structure at 6200 as well, however not for the purpose of shuttling people to the mouth of Little Cottonwood.	Jeremy Moore	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2592	As a resident of the Kings Hill neighborhood - I am keenly interested in any development along Wasatch as it will directly affect my daily routine. Currently - with the speeds at 50 MPH, it is somewhat difficult and potentially dangerous to turn on to Kings Hill from Wasatch, turn on to Wasatch from Kings hill (both north and south) and also turning South onto Wasatch from Golden Hills. I have studied both of the proposals listed in this Draft and neither seem to address these issues. It appears the widening of Wasatch north of the High T will serve one purpose only - to increase traffic flow to the south of the High T on Wasatch , not State Route 210. As 210 bottlenecks to 1 lane immediately after the High T neither of these two proposals will change the root issue : too many cars trying to go up LCC. In my opinion- slowing traffic down between the Swamp Lot and the High T would allow for more residential utilization of the neighborhoods, creating connection opportunities with the other residents of Cottonwood Heights. More traffic / higher speeds will lead to neighborhood isolation in the Kings Hill / Top of the World area. Please consider other alternatives - such as slowing traffic down on the existing roadway - and making the current layout more pedestrian friendly. Any expansion should also be focused around public transportation as well. Thank you for considering my comments in your final decision.	Andy Agardy	Website
2593	I support a gondola in Little Cottonwood Canyon. UDOT should find a solution that does not require passengers to first ride a bus to get on the gondola. The base station should located somewhere with enough room for ample where there can also be ample parking and bus turnarounds. A gondola provides the best solution because people will actually want to ride it over the convenience of a personal vehicle. A gondola can also continue operating when the road is congested or closed due to crashes.	Peter Landsman	Website
2594	I prefer increased bus transportation. Gondola transportation puts way too many people up the canyon. Buses are best and are more economical.	Lori Donnester	Website
2595	All of the currently listed options for Wasatch Blvd. extension exclude any considerations for the neighborhood east of the Blvd. As a resident of Kings Hill Dr, it is already a challenge to get onto Wasatch from the bottom of Kings Hill Dr, as well as Golden Hills Dr. Cars are going 50 mph an hour and it requires a big gap for residents to safely merge onto Wasatch. This will get increasingly more difficult with increased traffic throughput and potentially higher speeds. The plans should consider the fact that a wider road with more lanes will further isolate the neighborhood and increase difficulty for residents to enter and leave their houses. If widening the road, it should include a merge lane for residents going North from Kings Hill Dr onto Wasatch Blvd. Getting onto the South bound lane from Golden Hill Dr South onto Wasatch should consider a center merge lane.	Joachim Meyer	Website
2596	These all seem geared only to SLC local residents. None would serve the needs of hotel guests arriving by airport. None would serve the needs of day trippers who have been encouraged by the mountain-destroying Ikon pass programs (they bring inexperience and idiocy to the mountain but they all want valet parking, from what we've witnessed at SB). The plan does not address the need for vastly enlarged day lockers for all these people. Neither SB nor Alta has adequate day locker and changing facilities for all those people nor the land to create them close to lift base (think about families with so much gear or day guests who would like to use other resort facilities after skiing - change of clothes and gear storage required). All of the plans would spoil the natural beauty of the Canyon. The best plan: Keep the slopes less crowded rather than more crowded. [25 year Canyon skier.]	andrea korval fabbri	Website
2597	I am really glad that this discussion is moving forward. As I have attended several meetings about this topic I have to say that the only long term viable solution is a Gondola. All the other concepts will underserve our communities now and in the future. The right step is a GONDOLA.	Jeffrey Lewis	Website
2598	Thank you for some well researched and documented alternatives and including the public. As an avid skier and snow sports employee, as well as, a timeshare owner in Little Cottonwood my feeling is enhanced bus service with a dedicated lane is the way to go with the least visual impact.	Mark Borba	Website
2599	Definitely in favor of increased bussing options without road construction in the actual canyon. However I'm interested to see what all constraints are put on personal vehicles. Without tolls or some sort of limit I don't think people will actually use the bus My preference among the three alternatives in Table S-1 of the draft EIS is the Gondola. Compared to the two other alternatives it would be preferable from an environmental perspective: less impact on the natural environment, and less noise & air pollution. It would have the lowest O&M costs and median capital cost. And the potential for transportation up and down the canyon when the road is closed, or very slow, would be a huge advantage.	Rono Srimani	Website
2600	I believe, nevertheless, that gondola scenario 3B chosen in the draft, is not the best. The requirement to reach the gondola base station via shuttle bus from the gravel pit would exclude gondola use for many people in the valley. In addition to the fact that shuttle use adds to travel time, for people who live south of 8000 South, it just does not make sense to drive north to the gravel pit in order to board a shuttle heading south. And projected population growth from 8000 South on through Provo is greater than projected growth to the north. As a result, I believe that the best solution would be to co-locate a parking structure with the gondola base station, within a mile or so of the entrance to LCC, as proposed in gondola scenarios 1 and 2. The current problem with traffic congestion in the residential areas near the base of the canyon results largely from the use of SR 209 & SR 210 as linear parking lots when the canyon road is closed or slow; a parking structure at the gondola base station would be a much better place for these cars! Gondola scenarios 1 or 2 would provide immensely popular public transportation in LCC without excessive cost or environmental impact.	Jeffrey Gishen	Website
2601	Each winter my wife and I fly into Salt Lake City the week before Christmas to ski. We take Canyon Transportation to the Alta Peruvian Lodge and stay there the entire week. When we are ready to leave the Peruvian, we contact Canyon and they pick us up, take us to the Salt Lake Airport and we fly home. We have been doing this for probably 30 years and it has worked great for us. If modifications are made to getting up into Little Cottonwood Canyon I would hope that whatever is decided should have the following capabilities: 1) Pick up at the Salt Lake airport 2) Ability to take us, our skis and luggage up to the Peruvian 3) When we are ready to leave from the Peruvian, be able to be picked up at the Peruvian and dropped off at the Salt Lake airport with our skis and luggage. Hopefully this input is helpful. Steve and Mickey Klinger	Steve and Mickey Klinger	Website
2602	As a frequent user of the canyons in both summer and winter I would like to go on record in favor of enhanced bussing with frequent service not only to resorts, but to trailheads. I strongly object to the gondola alternative due to its visual impact and inability to service trail heads Morton Pellatt MD	morton pellatt	Website
2603	As a resident who lives directly below Wasatch Blvd. I'm STRONGLY opposed to the widening of the highway!!! Wasatch is already insanely busy and dangerous. Adding extra lanes will just invite more traffic and danger to this popular roadway. I don't see how adding extra lanes will help with the ski traffic. The reason the traffic gets backed up in the winter is b/c they close Little Cottonwood Canyon due to avalanche control. Adding extra lanes will NOT solve the problem. Plus, these extra lanes will create a traffic jam once the roadway narrows again when it reaches the canyon.	Chris Kirk	Website
2604	I would like to see UDOT add snow sheds over known avalanche areas (thus preventing canyon closures and traffic buildup), more bus service, a canyon toll booth (similar to Millcreek Canyon. With an option to buy a yearly pass for locals), and more Park & Ride options for canyon visitors. Given the three options I would choose option 1. All you had to do was charge for parking. By the day, week, month, or season. Buy in advance.	Robert Topham	Website
2605	I favor Alternative 2 because it is a measured step towards resolving the problem without a huge financial burden. That said, I think it could be improved by considering additional alternative elements and doing more to address backcountry skier use. For example, these alternatives are tailored for the ski resort users, but do little to address congestion experienced by other canyon users. The additional 36 parking spaces is nice, but inadequate and it is disappointing that there are no improvements planned for the White Pine trailhead parking area which is often overfilled beyond capacity in the winter. Also, parking should continue to be allowed for backcountry users above the Our Lady of Snows church and near the Summer Road despite rumblings that Alta may stop allowing this use. Finally and most importantly, increased enforcement of the traction law, needs to be considered as part of traffic demand management. More specifically, regular presence by highway patrol to inhibit non-4wd vehicles + a pre-paid vehicle ID system (stickers, electronic toll card, etc) should be considered. This is key given that traffic accidents on snow days create the most horrendous traffic logjams (severe decrease in LOS) which increase the safety hazard if avalanches were to cross the road. Thank you	David Brown	Website
2606	I find the gondola and enhanced public transit solution the most promising, as it will be more enticing for people to leave their car at the bottom of the canyon. Unfortunately, even with increased parking fees, riding the bus up the canyon has been rather unpopular and might therefore not motivate behavioral change. I also like the gondola option as a summer traffic solution. Also here I see an attraction in riding the gondola as a fun activity, which will more likely get people to leave their car out of the canyon. A similar solution would be great for Big Cottonwood Canyon as well. While winter traffic here is similar to LCC, summer traffic seems to be even worse in BCC than LCC. I do see a necessity to enhance public transportation to the mobility hubs, without which we will merely shift the problem to a different area. I would definitely vote against a widening of the road, as it will worsen the issue overtime (growing traffic), unless parking fees will be raised exponentially to keep cars out of the canyon. If the latter is the case, there won't be any need for a wider road. Also, widening the road have a worse impact on the ecosystem in the canyon.	Heidrun Kubiessa	Website
2607	All of the proposed alternatives involve widening of Wasatch Boulevard. This will not help with the congestion problem. More lanes = more cars. I have lived in UT for 30 years. In that time the UTA buses only run sporadically up/down the canyons mid-day. To avoid getting stranded, people drive. The solution is to provide reliable bus service (ex. every half hr all day long during winter months). Widening the road will destroy the neighborhoods that line Wasatch Blvd (which are older established residential areas). You will remove the character of the area and replace it with a highway (that leads to a congested canyon). In addition, the congestion on Wasatch Blvd occurs approx 30 days out of your year. Your plan will destroy the area for those of us that live along Wasatch to make way for those that are here for only a few days. Notes: I have lived near Wasatch Blvd for 15 years. I am a former Snowbird employee. For 30+ years I have been an environmental consultant (and a UT Licensed Professional Geologist).	Holly Welsh	Website
2608	As a long time resident and commuter in Little Cottonwood Canyon I am in favor of the Gondola alternative. One of the goals of this entire effort has been to reduce vehicle traffic in the canyon. Also stated in this EIS process is an effort to look to 2050. The gondola would be an innovative long term improvement and with canyon users buy in would reduce the number of vehicles. This alternative would also be a year round solution. The issue that still need to be resolved would be access to the gondola loading. The bus access from the 2 hub locations, although very practical would increase the total travel time and could reduce the willingness of those residing between the hub and the mouth of the canyon to use the gondola. The parking lot at the base of the gondola is important. As this moves forward we need to address the congestion that would be created at the base of the canyon and it's impact on the residents in that area. As this process moves forward we can't stop any of the improvements that are currently in the process. An improved avalanche mitigation program is critical to the transportation function and the reduction of canyon closures. https://littlecottonwoodeis.udot.utah.gov/wp-content/uploads/2020/06/LCC-EIS-Alternative-Screening-Report-2020-05-21_AppendixC.pdf During snow events, it would be necessary to remove snow before moving the barrier. If the barriers are damaged, the road needs to be closed while the barriers are replaced.	Thomas Pollard	Website
2609	pdf page 12 The moveable barrier systems does not appear to be a viable option. The first statement on removing snow before moving the barrier does not seem possible unless a snowplow is directly ahead of vehicle that is moving the barrier. What happens is the barrier becomes stuck or frozen due to weather? Will the road need to be closed to fix, thaw or adjust the barrier? Damaged barriers seem like a high likelihood whether that be from traffic accidents, snowplows or avalanches. The statement on closing the road for a damaged barrier appears to be opposite of improving mobility as it introduces a new system that can breakdown or become damaged.	Justin Sikonia	Website
2610	https://littlecottonwoodeis.udot.utah.gov/wp-content/uploads/2020/06/LCC-EIS-Alternative-Screening-Report-2020-05-21_AppendixJ.pdf pdf page 15 Concept 2: Earthen Berms Dynamic recommended using earthen guiding berms at Little Pine and White Pine as a way to reduce the required length of the snow shed and potentially reduce costs. I agree 100%. Earthen berms help direct avalanche flow and can be constructed to be blend into the surrounding area. Seems like a low cost solution to reduce tunnel length.	Justin Sikonia	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2611	Greetings. Big Cottonwood Canyon has become so overcrowded that living up in Brighton is nearly impossible. Indeed a Gondola and/or Bus-Service are truly needed. The canyon (like Zion) should be closed to most vehicles and only the gondola and/or bus transport should be offered. Guests of the hotels and locals living or renting in Brighton/Solitude/Silverfork need to be allowed to get home. Access to all trails in the summer and access to the resorts as well as back country skiing and snow showing must be offered. An electric or NG powered bus fleet could offer access to all sites AS LONG as there is enough parking at the bottom of the canyon and as long as there are enough busses - visitors accept it in ZION and should accept it here as well. The Gondola is a great option especially in the winter or maybe both - Gondola to get to Brighton and Solitude and busses for trailheads? Something needs to change ASAP as the canyon is no longer safe as too overcrowded. We must protect our natural resource while we still can. Michael Sossenheimer	Michael Sossenheimer	Website
2612	here are my comments 1. Need to keep all large parking lot or parking structures away from the mouth of the canyons. We need to limit the majority of traffic to the main roads. The gravel pit and 9400 south and highland drive are great locations. 2. Wasatch Blvd - DO NOT make a 5 lane road. I drive this road every day and the majority of the days traffic is not an issue. On a busy powder day the 5 lane road still would narrow down at the canyon. So now you have a 5 lane parking lot. DO NOT widen this road 3. you need to address the number of cars on SR210. First things is prohibit single occupancy cars on powder days. Create an app that shows a red light day which would prohibit single occupant cars. Similar to the brighton stop light which allows uphill skiing. 4. Backcountry traffic needs to be considered in developing a plan. Bus service will not work for backcountry traffic. 5. I like Alternative 2 - this would allow buses to go up the canyon and not have to be in the regular traffic. This would encourage people to use the bus since the time needed to get to resort would be less. Resorts need to be a partner in this and provide more lockers. 6. Consider having the resorts apply parking fees similar to Solitude. Then the money they collect should be used to help manage the traffic. If they want to allow private vehicle still drive to their resort then don't allow on street parking anymore, which would force them to build a parking structure at the resort base. Upper SR210 will be a challenge because of the backcountry traffic parks there for multiple trailheads. 7. Mobility hubs are great idea to pick up the rapid bus system. The hubs located in the triangle area of LCC need to be eliminated. This would further surface street backups and grid lock 8. Wasatch Blvd - I like the imbalanced lane alternative. There are no more than a dozen days a year that you need increased southbound traffic. This would address that. Don't make it a 5 lane road. 9. I support the improved Trailhead parking	Jason gabler	Website
2613	https://littlecottonwoodeis.udot.utah.gov/wp-content/uploads/2020/06/LCC-EIS-Alternative-Screening-Report-2020-05-21_AppendixJ.pdf pdf page 16 This option sounds expensive with many unknowns and a low return on investment by only increasing the speed limit by 5 mph. In addition, it seems that a significant amount of material would need to be cut away from the mountain to realign the road.	Justin Sikonia	Website
2614	Concept 3 would, however, require UDOT to fully reconstruct the roadway cross-section and potentially relocate all utilities in the project area, including between the sheds and along the roadway leading up to the snow shed zone. Wasatch Blvd from Big Cottonwood Canyon to 9400 should be improved for safety including a median and traffic calming design much like the road from 9400 south with a 35 mph speed limit. There are three traffic signals currently as well as many neighborhood roads that necessitate turning onto Wasatch safely. There is also a park and fire department adjacent to this road that require crosswalks and safe access that would not be feasible with a 50 mph highway especially on the portion from Bengal Blvd to the high T light. All of the proposals have shown a shared use path parallel to the road and this is a great idea, however, safe crosswalks from both ends would be needed along with slower speed limits in order to accommodate safe usage and access to the trail. This section of roadway is highly used by bicyclists in both directions and another bicycle lane would serve that recreational use as well. I would like to see a bigger picture plan whereby this road is not considered a commuter arterial for areas south to get to downtown. Areas South of 9400 should be heading west to Highland Blvd to access 215, as this road is much more appropriate in size and usage for commuting and does not have to compete with the recreational uses and access that Wasatch Blvd does. South of 9400 on Wasatch there are safe bicycle lanes, traffic calming medians, turning cutouts, and safe trailhead parking and access and this should be continued north until Bengal Blvd at least. Reducing the number of cars with a toll and increasing busses would help to keep the number of cars in the canyons down. A gondola could accomplish this as well, but keeping the pristine nature of the areas and neighborhoods should be considered. Since 15% of skiers are coming from Park City, future plans could include connecting both canyon resorts to Park City resorts with a gondola system that would service skiers in winter and bikers and hikers in summer without cars. There is a real problem in both canyons in the summer months with trail head parking, cyclists and pedestrians with some very dangerous sections for driving so some improved trailhead parking with bus drop-off areas would help. This area of the Wasatch is a real asset to the greater Salt Lake City area in terms of tourist dollars and recreation as well as the natural beauty it has to offer. Having a nicer and safer entry that would encourage all of the uses year round would be a better solution in the long run than just endless widening and higher speeds that will only encourage more vehicular traffic and unsafe conditions.	Elizabeth Blauvelt	Website
2615	1. Both alternatives for adding lanes to Wasatch Blvd are fatally flawed. This is because both southbound lanes are allowed to travel southbound through the intersection of Wasatch Blvd and Little Cottonwood Canyon Road. This will only encourage more backup of traffic as skiers will still idle/park in both lanes while waiting for their turn up the canyon. If a second lane is added (which is not the correct solution in my opinion) it must be a right turn only lane that continues along Wasatch with no option to head up Little Cottonwood Canyon Road. This will encourage backup to occur only along the left hand lane with the right hand lane being for through traffic. 2. The Gondola, while it seems novel, is the WORST idea UDOT has ever come up with. Who in their right mind is going to drive PAST Little Cottonwood Canyon, get stuck in traffic that is backed up for Big Cottonwood, park their car after FINALLY getting past the mouth of Big, get on a bus to come back the way they came and get stuck in car traffic that is backed up on Wasatch and then get in line AGAIN to get on a Gondola. All buses coming from the North will get stuck in backed-up traffic on Wasatch Blvd. The Gondola will run empty for hours while people are sitting in line not able to get within miles of the mouth of Little Cottonwood Canyon. 3. The ONLY solution is to make riding the bus the FASTEST and MOST CONVENIENT way to get up the canyon. The only way that I can see this happening, while minimizing impact to Wasatch Blvd and the Canyons, is to have ONE dedicated and barricaded bus lane that runs all the way from both mobility centers and continues up the canyons. The buses run UP the dedicated lane in the AM and DOWN in the PM and use the regular road for the off-hour route. This allows the bus to bypass all traffic and makes it the fastest way up the canyon. It must also run every 10 minutes to make it the most convenient route. If nobody has to check a schedule to know that the bus is on it's way, they won't hesitate to park in the garage on Highland and get zipped up the canyon in a dedicated bus lane. ONE dedicated/switchable bus lane for both canyons is the best way to move PEOPLE NOT CARS up the canyon. In the summer months, the dedicated bus lane could potentially be used for biking as well. A switchable bus lane will also keep Wasatch Blvd from becoming a 5-lane monstrosity and leaves room for the mixed use paths and bike lanes that have been proposed and are MUCH needed. Please contact me to discuss the viability of this alternative that has not been considered by UDOT.	Alex Crawford	Website
2616	We are totally against making Wasatch Boulevard wider. There would be more noise, pollution and would have an adverse effect on the adjoining neighborhoods. We are for keeping Wasatch Boulevard the same and making better use of additional parking lots and transit buses.	Marjorie Willardson	Website
2617	While I like these proposals, the best option is definitely the La Caille proposal. Fewer transfers is more efficient and ultimately cost-effective.	Philip Keeve	Website
2618	I'd like to express my support for the gondola option, as I believe it would be the best for sustainable, convenient, safe, and environmentally-friendly growth for the Alta area. Other alternatives encourage more car use or continue to require visitors to drive a dangerous mountain road in often snowy conditions.	Jared Getzoff	Website
2619	I believe a modified version that allows for people to park directly at the gondola without a bus would get the most use. Please go with the Gondola. We would want to ride it just for the view of it	Felix Rauscher	Website
2620	I believe the estimated transit time for the gondola is misleading because it does not account for travel time to the base of the gondola, given that the parking structure is located miles away and requires a bus connection. This is inefficient. I am opposed to the gondola. I believe that the bus option with the quickest possible transit time is the one that is most likely to succeed. However, I have several significant concerns that are not addressed in the available documents: -What is the estimated bus fare? At this time, it costs \$5 one way to take the bus up canyon unless you're a season pass holder. As a result, I've seen many families of four from out of town driving their ill-equipped rental cars up canyon because the bus would cost them \$40 round trip. If you want people to take the bus, it needs to be affordable. It also needs to be accessible to people who aren't season pass holders. - Buses need to stop at backcountry trailheads along the canyon, particularly if there are to be further restrictions on roadside parking. - How does tolling figure into any of these plans?	Adam Laurenzo	Website
2621	I write to support enhanced bus service in Little Cottonwood Canyon. I also support road widening, but only if the use of any expanded road areas is strictly limited to buses in the winter and to pedestrians and cyclists in the summer. We should be limiting the number of cars in the canyon--this makes it more accessible, and faster to access, but would also help limit the noise and air pollution caused by cars.	Eric Johnson	Website
2622	Hi The Gondola to Snowbird/Alta sounds interesting, but I wonder what the cost to park and ride will be. I am guessing it won't be free. Any forecast on that?	David Malpas	Email
2623	Thanks gondola is a fantastic idea to help with road control and traffic issues. would love to see this project be a success	simone nixon	Website
2624	I support the Gondola+ solution completely, seems like a great idea. Will be a huge asset in promoting SLC over other regional competitors.	Oliver Gorst	Website
2625	Gondola Please!	gabriel legorburu	Website
2626	As a 34 year resident and user of Little Cottonwood Canyon I would like to thank the UTA for action on the transportation issues on Wasatch Boulevard and in the Little Cottonwood Canyon. I would like to express my support for the Gondola plus LaCaille Base Station option of the proposal. Reading through the three options provided, those involving personal vehicles continuing up the canyons, or increased bus service up the canyon, do not fundamentally address the problems associated with crowding or avalanche issues/road conditions. The only viable long-term solution would be the Transportation Hub, with the Gondola/LaCaille Base station. This option would change the transportation habits of those who use the canyon both summer and winter resulting in a cleaner air option with less interrupted flow. These types of coordinated transportation systems have proven to be effective in other parts of the world and would work well for Little Cottonwood Canyon. Thank you again for this option Rob Sogard	Robert Sogard	Website
2627	I support the Gondola Option. It's super-important to me that if you are going to Snowbird or Alta that people must use the gondola and that there is not an option to drive your private vehicle. However having trailhead access via your private vehicle is needed for those of us that are climbers and back country skiers. Resort users must use the gondola.	Chad Ambrose	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2628	I believe the best option is to install an gondola either as proposed from the Park and Ride lot at the mouth of LCC WITH A LARGE PARKING STRUCTURE or the alternate proposal from the 37 acre site further away from the mouth of the canyon. In case there is a power outage what source of alternate power will be used, such as a generator(s), and what provisions will be made if the gondola cannot operate due to inclement weather or maintenance? With either proposal modifications at the mouth of the canyon need to be made to safely accommodate traffic. I am not in favor of widening the road in the canyon because of the environmental impacts and disruption of the construction period to summer traffic except as necessary for safety improvements. Tomorrow you should be starting to enlarge the White Pine Parking Lot as proposed in 2019 making the egress point from the lot further up the canyon where there are much better and safer sight lines for cars exiting the lot. You also might add a right turn lane into the lot at the entry point. Traffic on the road is fast here, surprising a lot more accidents don't happen here. I actually rode the bus several times this past season because it did not stop at the Park n Ride lot at the mouth of the canyon. I am primarily an Alta skier accessing the canyon from 9400 and Little Cottonwood Road.	Ducie Chads	Website
2629	Strongly oppose widening or expanding Wasatch Blvd which would drastically change Cottonwood community & increase pollution. Support gondola and base station at La Caille as most logical option. Please do not add more car traffic up Littlewood Canyon.	Francine Forney	Website
2630	The gondola concept is the least environmentally impactful solution with the ability to move the most people. The capacity stated in the proposal seems to be quite low considering that current 3S Gondola technology has the ability to transport up to 5500 people per hour in each direction. Having to park at a remote location and take a bus to the Gondola is not ideal. Having parking capacity at the Gondola base terminal would be a better solution. The biggest thing is to reduce or eliminate vehicle traffic on highway 210 at peak times. The proposed Gondola has the ability to operate in most weather conditions reliably and efficiently. Pairing bus service to trailheads and other points of interest in the canyon could eliminate the need for cars in the canyon and keep the road for emergency response and deliveries. some plan would have to be put in place to accommodate canyon residents. This kind of solution has worked well in Europe for years.	Rich Taxwood	Website
2631	Is there a plan to improve public transit options to get to the canyon particularly from the south west side of the valley. It is difficult to easily get to and up the canyons from say south Jordan, Riverton, herriman area. Basicly requiring a drive to at least sandy. Without having to go 20 mins north out of the way on Trax to then transfer to come back back south to then transfer to a bus to be able to get up the canyon an easy east/west corridor to get across the valley would be amazing!	Matthew Rocha	Website
2632	I support the Gondola Plus La Caille Base Station proposal. This option is the most environmentally positive solution for transportation in Little Cottonwood Canyon, and it significantly reduces traffic on Wasatch Blvd., while including parking at the gondola base station. This solution will better accommodate bus travel between transit hubs, and provide a long-term solution to the issues facing the canyon. I do not believe the snowsheds or added lanes will alleviate the problems in the canyon, as heavy snowfall, unprepared drivers and cars without adequate snow tires will continue to hinder on-the-ground travel in the canyon. Additionally, the Gondola solution will greatly reduce the tailpipe emissions from cars, improving air quality in Salt Lake Valley.	Hilary Arens	Website
2633	I am in support of enhanced bus with roadway widening. The widened road will have benefits all year long as it will protect cyclists who routinely use the road.	Clint Hansen	Website
2634	I agree with this plan and would support it	katrina jensen	Website
2635	I support the Gondola!	Chris Rowe	Website
2636	Support this. Makes sense and cuts traffic, accidents and frustration.	Corbin Wade	Website
2637	I vote yes for the change	Mike McDaniel	Website
2638	The gondola seems to me like the best option depending on how avi launches would effect its operations.	Jonah Adeson	Website
2639	I would support the LaCaille Gondola	Drew Butler	Website
2640	Please do anything ASAP!!! The canyon is a nightmare and i miss so many days do to not wanting to deal with Little Cottonwood Canyon. The Gondola @ La Caille Base Station sounds like a feasible option.	Kevin Clyde	Website
2641	This is a great solution and if a train is not an option, then I fully support this. I think a train with snow sheds may be the best long term option though.	Rob Reinfurt	Website
2642	The Gondola Plus La Caille Base Station is a way to get cars out of the canyon and off Wasatch Blvd.	Megan Totorica	Website
2643	How long will it take to build?	Diana Brixner	Website
2644	Please study the gondola. I am in favor of that option.	Bart Johnsen	Website
2645	Dave Fields, President of Snowbird was spot on for recommending the gondola as by far the best alternative for improving transportation in Little Cottonwood Canyon. No need to go through his reasoning here, but it clearly demonstrates the gondola is the best choice. Critical decision making requires detailed analysis and VISION for the long term future of this area. The gondola is the only alternative that works.	Stephen Trover	Website
2646	As someone who has driven these canyons all my life for both work and fun I am in favor of the gondola for the following reasons: -Riding a gondola is much safer than driving up and down LCC, both in terms of avalanches but also accidents; -Gondola is the cleanest transportation system under consideration. Taking cars, buses and vans off the road reduces emissions helping with Wasatch Front air quality issues ; -Gondola requires far less construction impact on the canyon; -Gondola addresses one of the biggest causes of traffic congestion: traction during snow storms. 3S gondolas run in almost all weather conditions; -Gondola is not impacted by the 64 avalanche paths in Little Cottonwood Canyon; -Snow sheds, which is one of the alternatives, addresses only three of the 64 slide paths that affect the canyon; -Construction of 3,100 feet of concrete snow sheds would be hugely impactful to the canyon and leave massive cement bunkers and tunnels; -As we saw last winter, buses get stuck on slippery roads just like cars; -Snowbird supports tolling to incentivize carpooling and using mass transit in conjunction with a real transit solution; -Snowbird has offered to put more than 1,000 acres of private land owned by Snowbird, including Mt. Superior, along the north side of LCC and in Big Cottonwood Canyon, into a conservation easement if gondola is chosen as a transportation solution. We feel this is a serious solution to a generational problem.	Gray Simmonds	Website
2647	I support the Gondola Plus La Caille Base Station.	Brian Jones	Website
2648	Im concerned that a gondola will only service ski areas and that this plan doesn't take Big Cottonwood canyon into consideration as well.	Brooks Mason	Website
2649	Bus-only traffic similar to Zion seems to be the way to go.	Hadley Lucas	Website
2650	This plan mitigates congestion caused by traffic and creates a better solution to the many problems caused by only two lane road access.	Hadley Lucas	Website
2651	I think we should strongly consider the gondola option however I worry that there will not be enough parking at the base. This option is ideal because it takes cars out of the canyon and hopefully would reduce canyon pollution. We also need to consider that it's more convenient to drive up so there needs to be some incentive to get people to use alternative transport options. I think multiple Bus routes to the gondola and ample parking will be key. Please also consider bringing back the downtown To ski resort bus route	Ivana Grbelja	Website
2652	Please dont widen the road or turn it into a tunnel. Little cottonwood is a treasure and one of a kind. I have worked in this wonderful canyon and grew up skiing/hiking these beautiful mountains. A gondola is the best of both worlds.	Lucas Korbanka	Website
2653	Let's look at the lacaille gondola option	Jay Elliott	Website
2654	As someone who travels from Boston to Utah for skiing as often as possible, having this as an option would increase my travel to Utah as the canyon traffic and avalanche controls often make travel to skiing a risking vacation to plan.	Ethan Wood	Website
2655	the gondola is the only solution that will work in little cottonwood canyon	robyn Seldin	Website
2656	Let's get this built	Andrew Ashton	Website
2657	I fully support the Gondola Plus LaCaille Base Station to alleviate the traffic in LCC. This is the best solution and brings an element of intrigue to an already beautiful canyon that will allow visitors to view the canyon in all its splendor!!	Patrick Bodnar	Website
2658	It's at least worth studying a gondola, right now we don't have any other solution. Dear UDOT, I am in favor of the gondola option for little Cottonwood Canyon. As a once per year visitor I fell the gondola is the best option. Sincerely, Stephen Coyle	Eric Bennett	Website
2659	Great idea, the gondola. I usually stay at the Cliff Lodge but always meet locals who complain about the drive and minimal parking. Plus. It will be like a European resort.	Stephen Coyle	Email
2660	As a long time visitor to LCC I am fully in favor of a gondola plus base station to allow better access to the upper canyon. Please don't widen the road and create more an environmental impact. I would positively leave my car behind and take the gondola. I have visited Utah to ski in LCC every year for the last 35 years and plan to continue as long as I am able. My children will continue to visit and ski long after I cannot. It is our favorite place to ski. Please protect it. Thanks.	Craig Alexander	Website
2661	Please consider the gondola plus la caille base station as an alternative.	Paul Alberti	Website
2662	I support the Lacaya gondola proposal to Snowbird as a resident of over 40 years near the bottom of Little Cottonwood Canyon.	Robert Kirchenheiter	Website
2663	I think the gondola is a bad idea.	Suzanne Mahre	Website
2664	I support the sustainable gondola option for LCC	BRet de St Jeor	Website
2665	Gondola please. Elevated people mover is the best option.	Natasha Plett	Website
2666	Sounds like a great solution. We need to decrease traffic!	Brian Reed	Website
2667	I support the gondola!	Sara Feilbach	Website
2668	My Daughter lives in Midvale and I visit to ski. It is very frustrating to become locked in those long lines on both Little and Big Cottonwood Canyons. Consequently our alternatives for skiing are Park City and Deer Valley. Others may be driven to do that as well. We would prefer to ski locally.	Nick Ptaschinski	Website
2669	I support the gondola project. I do not support widening the road.	SAMUEL PELCHAR	Website
2670	do the gondola	Jen Mijangos	Website
2671	Please pursue the gondola option prior to constructing concrete structures and widening the road.	larry bienenfeld	Website
2672	Support for the Gondola	Lincoln Hoffman	Website
2673	I favor public transit only in little cottonwood	Tyler Klein	Website
2674	support	Aaron Kobernick	Website
2675	We support the gondola solution for Little Cottonwood Canyon!	Jennifer Anzures	Website
2676	I believe that a Gondola would be an excellent and modern way to alleviate the traffic in the Canyon.	Steve Metcalf	Website
		Nate Morgan	Website

2677	Greetings! I support the gondola/LaCaille option.	Jerry Moos	Website
2678	I feel that a canyon pass would be the best thing, so that those that use the canyon can support the maintenance of it. But, since that is not on your list of options, I think more busses would be the key. However, if those busses are only to support the ski resorts, then the resorts should pay the cost for making a bus lane and the additional busses. I use the canyons for other activities along the canyon road; such as, hiking, biking and snowshoeing and would support the taxpayer helping to fund this IF the busses would drop off and pick up along the route. As this does not happen, I am forced to drive my own vehicle and do not feel I should pay for 'skiers only' transportation.	Connie Bain	Website
2679	Build the Gondola plus the proposed LA CAILLE BASE STATION!	Carl Johnson	Website
2680	I support the gondola option.	Caressa Binion	Website

2707	In strong support of Gondola solution . Fragile ecosystem of Little Cottonwood Canyon cannot support more motor vehicle traffic.	Alex LePage	Website
2708	Love the idea of a monorail, gondola, or train being used to limit traffic in the canyon.	Matthew Bennett	Website
2709	All for the gondola with base station. Little Cottonwood Canyon needs to be preserved as much as possible.	Kirk Moyer	Website
2710	Screw this last minute bs insider la crap gondola garbage. Should not even be considered.	mike springsteen	Website
2711	Please consider the gondola option for improving the current road issues in little cottonwood canyon. Less cars sliding down an icy hill can only be a good thing.	Becky Johnson	Website
2712	All for the gondola. My family has had passes to Alta for years and haven't used them very often because of parking!	Rachel Morton	Website
2713	a gondola/tram/train/monorail is the only thing that makes sense long term. It is inevitable at some point. Cars slip of the road. It doesn't matter what kind of car, but the tires they use. The landslides/avalanches also make a mass transportation system more obvious. Think of how many people get turned down when the canyon closes, parking is at a max and people don't want to deal with traffic.	david krauser	Website
2714	This is a great idea	Dorothy Calo	Website
2715	I made this suggestion 15 years ago not long after moving to Utah. Why has it taken so long to get it done? Also need to restrict the private cars going up & down LCC with limited # of passes that can be purchased from the state via lottery. So many other ways to fix this problem (round trip underground light rail starting & ending at quarry at bottom of BCC).	William CHAPMAN	Website
2716	Please consider this zero emission alternative!	Jeffery Warriner	Website
2717	As a visitor to Salt lake city I was overwhelmed with the traffic issues in accessing Little Cottonwood Canyon. While I rode the bus, the number of personal vehicles was astounding and not sustainable. I recommend that you investigate more environmentally sustainable options for moving guests to and from the canyon. Perhaps electric buses or the Gondola plus La Caille Base station are options that would help traffic and the environment.	Eric Vincent	Website
2718	Look at world class resorts everywhere - this is the best solve - we also need the interconnect from the Wasatch back!	Denis Stewart	Website
2719	I support the solution of building the gondola 100%. There is no better solution. It's safer and more reliable and it saves the environment and the beauty of the canyon!	Amanda Baker	Website
2720	We need to act boldly to preserve the canyons as the incredible assets to our community that they are. The gondola + La Caille Base Station to me is the best way forward. If you widen the road, you'll just get more cars; Utah's population is growing and so is the interest in outdoor activities. Preserving the beauty and natural state of the canyons, reducing air pollution, and reducing avalanche danger are all in the best interest of the public and private enterprises.	Alex Burton	Website
2721	I hope options for families are being considered as although I love the Gondola option, moving multiple children from Bus to Gondola could be difficult.	Jake Stevens	Website
2722	We are in support of the Gondola and LaCaille transfer plan.	Jim Cheryl Fillman	Website
2723	The car approach to Snowbird and Alta and the parking demand are unsustainable and always frustrating. I am completely in favor of the gondola access and base station hubs that will take cars out of the canyon. This is the smart way to do better for all recreation enthusiasts. It preserves a precious natural asset. Please do this!	Charles Pigg	Website
2724	We need a solution. The La Caille base with a gondola would be a great solution!	Charlotte Gonzalez	Website
2725	I support the LCC Gondola + LaCaille Base station solution. As a resident of Cottonwood Heights and one who recreates and works in the canyon, this will have a tremendous benefit to the canyon, associated businesses and community as a whole.	Paul Harmon	Website
2726	The Gondola idea needs to be looked at as a solution to the increased traffic in little cottonwood canyon.	Tracy Anderson-Dawson	Website
2727	I support the gondola option	william fusco	Website
2728	I fully support the gondola!	Kate Crooker	Website
2729	Gondola is the way to go.	Leonard Sperber	Website
2730	Having worked at Snowbird for 12yrs, I have seen the lack of transportation changes. Buses work, I'm in the parking lot with the people tired, sick of UTA not having a simple dispatch desk in the Portico, can't find a @#@\$ bus, AND the drivers refuse to communicate nor get out of their seats. We lost the fight about 7yrs ago when rich people bought 50k cars, gained control, and the bus system didn't react. You will never get wealthy control freak skiers out of those cars, the bus is ugly when UTA 'gets paid by the pound' and stuffs 60 skiers in a bus, talk about social distancing, NOT! People love the bus if it's fast, I ride it all the time and note the attitude. 9400 S to Snowbird in 14 mins mid week is amazing. UTA should have highway priority at ALL times, all turns, the hell with cars that you can't park at the top. The gondola's time was 35yrs ago, and face it, no one skis after April 15. Simple works, always has and only 5% of Utah residents ski as it is!	John Dubock	Website
2731	Please review the option presented by snow bird to help ease the traffic up little cotton wood canyon.	Tess Peterson	Website
2732	I support the gondola concept	Alan Regal	Website
2733	The Gondola Plus La Caille Base Station is a way to get cars out of the canyon and off Wasatch Blvd.	Preaton Regehr	Website

2752	I SUPPORT THE GONDOLA UP LITTLE COTTONWOOD CANYON	JIM SCHALLHEIM	Website
2753	I think not only will it help with congestion but during the winter much safer than driving up the Canyon.	Thomas Parry	Website
2754	Have owned and lived at snowbird since 1985, this is the best idea to solve this problem!	Doug Blake	Website
2755	Gondola all the way!!	TJ Hartridge	Website
2756	I support the gondolaworks proposal. The bus system is too slow and inconvenient.	Katherine Yi	Website
2757	Helo, I am a native Utahn and grew up enjoying the beauty of Little Cottonwood Canyon. I now live in Arizona, but still have a passion for skiing Snowbird and Alta and make frequent visits to Utah to continue to enjoy the natural amenities. I would greatly support a gondola plus La Caille base station, especially since I'm not particularly fond of the dangerous road conditions typically experienced during the winter. This seems like a great idea. Thanks for your consideration.	Cynthia Clark	Email
2758	I am all for a gondola. There's nothing worse than an accident in LCC. The fewer vehicles the safer. Plus it's the cheapest over time!	Eric Christensen	Website
2759	as a snowbird pass holder for many years, the snowbird gondola has been shut down many, many times due to weather. (high wind). i Do not think a gondola going up the canyon would work. I would not take the gondola for fear of being stuck on it , in a blizzard or high wind situation.	susan squire	Website
2760	A gondola is the only way to truly reduce traffic and allow skiers to access the mountains with ease.	Will DeLany	Website
2761	I support the Little Cottonwood Gondola w/ the LaCaille Base station!!! Save our canyon!	Michelle Loomis	Website
2762	I am an avid skier and Utah resident since 1992. In recent years, LCC has turned into an absolute disaster. Traffic has ruined the winter experience. The best option on the table now is a gondola service that includes the La Caille Base Station. Not backing up and reconsidering the La Caille Base Station proposal would be a huge mistake made due to purely bureaucratic reasons. A gondola without the La Caille Base Station won't get us ahead by the time it's finished, when accounting for growth. Please consider the La Caille Base Station! It's very clear this is what residents want.	Tim Weber	Website
2763	The traffic to Snowbird/Alta is a huge problem. We often couldn't get on the bus because it was too full, and the backup on the roads were hours long.	Sharon Borglin	Website
2764	I support the gondola station at la Caille. Please don't jam more cars and busses up the road!	Amy Eichner	Website
2765	I support the Gondola plan.	Aprii Zane	Website
2766	I am in favor of the enhanced buses w/ no road widening. This will only work if there are sufficient parking options outside of the canyons.	Michelle Morse	Website
2767	I support the Gondola Plus La Caille base station option	Debra Glidden	Website
2768	Have a bigger parking in the bottom and encourage people to take a public transportation to preserve the nature as much as we can.	Kailana Han	Website
2769	I support the Gondola Plus La Caille Base Station over any other alternative solution to reducing congestion up Little Cottonwood Canyon.	Chris Candilora	Website
2770	I support La Caille gondola. It makes environmental sense for the canyon.	Richard Hafets	Website
2771	I have been thinking for years that a high capacity lcc gondola would be an incredible option and am very excited to hear now that this option is on the table. I believe that a quiet and off-the-ground transportation option would be extremely beneficial the the lcc ecosystem, the broader climate, and peoples safety. Widening the road is only bringing more disturbance, unrest, and danger to an already problematic road.	raif carestia	Website
2772	Our family would love a gondola that went up the canyon. If there was a gondola, we would take it all the time just to see the scenery.	Dave Allbee	Website
2773	I am in favor of the gondola!	Mark Bloch	Website
2774	I think this is a perfect idea!	Jude Zaugg	Website
2775	Keep Little Cottonwood Canyon free from more pollution and traffic. Study and consider all alternatives. Not only for us but for generations to come.	Elizabeth Lippert	Website
2776	With a growing in state population, and tourism playing such an essential role in Utah's economy, UDOT needs to seek out innovative and sustainable solutions to moving people up and down Little Cottonwood Canyon. Cars and Buses are not a viable solution. Please count my as a vote in support of a gondola to efficiently move from the valley to canyon resorts.	James Roberts	Website
2777	I am in favor of the gondola to reduce traffic in the canyon and think only essential vehicles should be allowed up. No day skiers need to have their cars.	Brent Vanni	Website
2778	I support building the gondola, the traffic has gotten out of control and has to be terrible for the environment to have all of those cars idling as they sit stuck for hours at a time!	aaron mason	Website
2779	I support the Gondola and the La Caille Base Station	Spencer King	Website
2780	I support the Gondola Plus La Caille Base Station! Would be an elegant solution that reduces traffic and environmental impacts!	Dan Chow	Website
2781	Gondola! Make it happen	James Scarcelli	Website
2782	great alternative to help decrease raid traffic and keep Little Cottonwood Canyon preserved	brent nixon	Website
2783	I find it crazy that you would would want to have more cars and buses through Little Cottonwood Canyon than gondolas. Why on earth would you want to add so much more congestion to that road??	Kristin Rorapough	Website
2784	Support the gondola!	Marci Kelley	Website
2785	It's a great idea to avoid traffic, snow and lines	Ángel Pérez	Website
2786	Please consider the gondola option! The less cars that we have going up and down the canyon, the better. This will give people who don't wish to drive up in the mess a chance to experience skiing as well, plus less impact on the environment	emily johnson	Website
2787	The gondola option is the best long term and will be a tourist attraction in the summer.	Jorie Colbert-Getz	Website
2788	The Goldola and base station solution for LCC is a terrific solution - less pollution, less impact on the natural beauty and a scenic way to travel. I highly recommend the Gondola idea, I have been thinking of it for years! Please get it done ASAP! I'm a huge fan of all the Utah Canyons! Imagine the view of Little Cottonwood from the sky! Breath taking!	kathryn love	Website
2789	Peace and love! Brandon Bickmore	Brandon Bickmore	Website
2790	Building a cost effective, sustainable, environmentally friendly and safe means to get to the mountain should be first and foremost on everybody's mind. Traffic has become a nightmare.	Jake Doran	Website
2791	I support the gondola plan!	Mark Parry	Website
2792	I like option 2 because a rider road will make it safer year round for cyclists and help during ski season as well	Brooke O'Farrell	Website
2793	Stop expanding roads and increasing our footprint. We need innovative solutions, Gondola Plus La Caille Base Station is possible and a better long term option.	Kellyann Nielsen	Website
2794	I am highly in favor of plans to construct a gondola up S.R. 210 to Alta and Snowbird to reduce congestion, delays due to avalanches, mud slides and car wrecks, and for reduction of auto emissions harmful to the environment. The mountains represent a necessary outlet for the physical, emotional and social well-being of citizens of the Salt Lake City area, Utah and the nation. As more people move to the Salt Lake area for work and quality of life, the importance of the mountains for personal well-being and an efficient and environmentally friendly mode of transport up Little Cottonwood Canyon are crucial.	Bonnie Smith	Website
2795	Gondola Plus La Camille base station sounds like by far the best option. I would use it instead of driving.	Charles Rosett	Website
2796	Gondola Plus with the base station is the sensible solution to Little Cottonwood Canyon's traffic.	Bruce Pohlig	Website
2797	please support the gondola	Kevin walsh	Website
2798	I strongly support the Gondola Plus the La Caille Base Station. This will assist UDOT reach its ESG and sustainability goals. The environment is our only bequest to future generations. Let's do the right thing. Respectfully submitted.	Jose Moran	Website
2799	The Gondola is a much needed solution to the pollution and danger caused by heavy car traffic. Please build the Gondola for a lower environmental footprint, safer travel, and an all around better experience	Kyle Hintz	Website
2800	I support the Gondola. Widening the road would ruin our canyon.	Jon Posey	Website
2801	The gondola plus plan makes tremendous sense as a long-term and more sustainable, eco-responsible way to preserve the Canyon's beauty and health. I support it whole-heartedly.	David Sherman	Website
2802	Road is dangerous and harmful to area. Gondola would make little cottonwood more accesible and environmental	Alec Roslin	Website

2804	I support the gondola plan vs. other alternatives to address the traffic congestion and safety.	Liam Thornton	Website
2805	For years I have been screaming about a light rail system up Little and Big Cottonwood Canyons. Now that the Valley has Traks it is a NO BRAINER!!!	Arthur D LEIGH	Website
2806	Sounds like a win win solution !!!	Matt Davin	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2807	I support the gondola plus with the Lacaille base station. The accessibility and the below grade parking make this a very good option, and keeping combustion engine driven vehicles out of the canyon, and out of avalanche paths is a very good idea. Adding buses, and bus lanes only scars the canyon more, and doesn't mitigate avalanche concerns. Building sheds only reduces the avalanche danger in a few select paths. The dangers of icy roads in the sheds, and the reduced light and air quality make sheds undesirable. Increased buses, and dedicated lanes don't alleviate the canyon weather and road conditions, and avalanche danger, And you still need to upgrade parking facilities.	Alan Leekoff	Website
2808	I have been on MANY scary bus rides up and down the canyon, and would feel much safer in a gondola! I SUPPORT THE GONDOLA PLUS LA CAILLE BASE STATION.	Chris Pedicone	Website
2809	I vote for the gondola. Please do not widen the roads to facilitate still more private vehicles and buses; we need to be proactive about reducing our dependency on fossil fuels. The gondola addresses this concern and provides insurance for the future against climate change. We can make these changes now while we have time or in the future when it may be to late and climate change has eliminated the ski industry entirely.	William Catt	Website
2810	please do that Gondola	Becky Johnson	Website
2811	Keep Little Cottonwood Canyon with less cars!	Hartman Nissle	Website
2812	I agree that you need to improve the parking and transportation situation on Little Cottonwood Canyon road. The idea of a transit/car to the bus run to then transfer to a Gondola is not attractive. Either expand the Gondola run to the parking structure or add parking to the Gondola site. If possible, expand the parking at the Gondola base station with a stacked parking or hillside parking to make the process more efficient.	Chris Williamson	Website
2813	I like the Gondola idea for several reason, 1) it is a scenic ride up to Snowbird and I believe would help summer tourism, 2) less enviromental impact, 3) will allow more alternatives to get up to Snowbird.	Anthony Mitropoulos	Website
2814	I believe selecting the gondola option is significantly better for the long-term impact of the canyon.	Kim Wittman	Website
2815	Do!!!!	Stuart Smith	Website
2816	I have been a passholder at Snowbird for 14 straight years and have watched as our beloved canyon continues to get more and more congested with each passing season. What we have come to know and love as one of the greatest ski destinations on earth has become a huge burden on the environment, locals who have lived and played in these mountains for their entire lives and the ski economy in Utah when resorts can't even run to capacity because the canyon road doesn't service the needs of the community or ski tourism. While I can appreciate all the proposed solutions, I don't think any of the options but one will truly cut down significantly on congestion which is particularly bad during weather events when buses would struggle to increase capacity and a widened road wouldn't help much during snow events when the traffic is at it's worst. The gondola seems to be the best possible solution that has been proposed. cutting down significantly on traffic, parking at the resort and pollution. There are gondolas all over europe connecting local towns to the hill and while there is an economic impact of building and maintaining the gondola, over the long run it will cut emissions significantly and clear up traffic. It's also by far the safest way to get up canyon and will not be impacted by the weather in the same way other solutions will. We've been trying to get people to use public transit for many years and while increasing buses might seem like the way to do that, it won't get people to use them just because they are available. My vote goes to the gondola solution.	Ben Givens	Website
2817	I support the gondola option with the lacaille base station. And I support the gondola option overall regardless of final base station options . This is a must to preserve the canyon for the future.	Russ Elbel	Website
2818	I have reviewed the transportation options for LCC and am in strong favor of the Gondola Works option. I would vote to have the Gondola PLUS La Caille Base Station for LCC.	Cristine Tuttle	Website
2819	I have a strong preference for the gondola plus La Caille base station plan. Thank you.	Peter Taylor	Website
2820	There is plenty of road space for travel up and down the canyon. The Gandola Plus with the La Caille Base would be best to reduce vehicles and busses from the canyon and Wasatch Blvd.	Brian Hansen	Website
2821	Please consider the gondola option. Thank you	Maggie Noonan	Website
2822	Gondola works. Make canyon parking a premium.	Scott Carpenter	Website
2823	A gondola sounds like a great plan with multiple benefits.	Scott White	Website
2824	In full support of the Gondola. An investment in the area that will ensure future generations enjoy the land is the responsible investment.	John Keenan	Website
2825	I support the lacaille to snowbird tram	Jim Metcalf	Website
2826	Road widening is a band aid for a problem that will only get worse. It will invite more cars, and degrade the quality of the experience in the canyon. Enabling more traffic is not the answer. Gondolas are a step in the right direction and would provide an actual solution to the problem. Innovation should be sought and gondolas fulfill that.	William Royer	Website
2827	Please study theGondola Plus La Caille Base Station. This seems like a logical solution.	Jesse Crowne	Website
2828	This option is less evasive than the construction of more roads. This with tunnel could E a better option	Mark Schaeffer	Website
2829	Build the gondola!	SAm Evers	Website
2830	I suggest a parking structure down outside of the canyon. And have free shuttles/busses run very frequently. Make it busses only during peak hours and charge cars like \$50 to park if they choose to drive. See how Jackson hole does it-works very well. Needs to be more of a reason for us to not drive up. With the busses the way they are, I and everyone else chooses to drive.	Eric Linett	Website
2831	I support the gondola	Michael Hartlaub	Website
2832	I support the option that gives the canyon more buses and has the least environmental impact and serves dispersed users to the many destinations in the canyon. I believe any solution moving forward should be one that seeks to be ahead of the curve of growth for the coming years. It should also be a solution that seeks to lower people driving in the canyon year round. Buses are the best place to start. They can be used to transport people to many destinations in the canyon and not just the ski resorts. I do not support a gondola that only serves the elite few who are able to ski in the winter and only drops people off to the resorts. Such use of taxpayer money is disenfranchising low income families and does not provide a year round solution to the impact and traffic the canyons are seeing.	Matt Bongard	Website
2833	more lanes on wasatch blv is not the answer. I support the La caille gondala plan	keith parietti	Website
2834	The gondola connection would be a huge increase to overall visitor safety by eliminating vehicles off the road to the resorts. Additionally the gondola would be a better benefit to the environment by reducing the carbon footprint in the canyon.	Joseph Yuhas	Website
2835	I would like to support the idea of a gondola with a base station and parking garage. Most ethical, most environmental friendly, most local friendly. Please do not widen the canyon roads. I have lived all my 30 years of life in this valley. Gondola is the answer.	Andrew Herrin	Website
2836	In support of the Gondola	Kylee Maxfield	Website
2837	As a long-time Alta skier, from personal experience it seems that one of the root causes of congestion is the merge where 209 and 210 meet by the LCC Park and Ride lot. I've anecdotally confirmed this using traffic data from Google. Using these data, it is easy to see that traffic speeds are greatly reduced after this merge point. To alleviate this, I would propose amending the enhanced bus proposals by including the following: close 209 between the light at the intersection of Wasatch Blvd. and Little Cottonwood Rd. to the 209/210 merge allowing only buses and local traffic through on busy ski days. Buses would get to bypass congestion on 210 and essentially "skip to the head of the line". At the merge of 209/210, buses would re-integrate with traffic through LCC to Alta/Snowbird. This will have a two-fold effect of eliminating the congestion bottle-neck of the merge and incentivizing bus ridership. It seems that this would be a cost-effective solution as it involves no construction and only UPD officers to close the small section of road.	Joshua Spuhl	Website
2838	To whom this may concern, We must create better and more sustainable transportation system to Cottonwood Canyon, that would be to build a gondola. This transportation would create less emissions then building a larger road for more cars to travel up the canyon. We want to create a transportation system that for generations will allow patrons to enjoy the great outdoors without hindering the beauty of it. We must do all we can to protect our forests for the future of Utah. Thank you, Caroline Kliss	Caroline Kliss	Website
2839	Anything that keeps commuting cars, except employees, out of the environmentally protected Wasatch mountains is a good thing.	Vinca Jarrett	Website
2840	I agree I would love a gondola having worked for a shuttle service it was a nightmare getting to and from the resorts	Andrew Griffin	Website
2841	The gondola is the best option for canyon traffic.	Spencer Bierman	Website
2842	Salt Lake City has long been known for its commitment to sustainability and incredible public transit for a city of its size. The Gondola proposal in LCC would continue/improve upon both of these-it is the best option for the environment and for anyone trying to access LCC, especially during the winter. It is also the safest option, since it would allow access to the canyon even during severe winter weather.	Brooke Sinnen	Website
2843	This is horrible, we live here to get away from people not put in a highway to allow more. The canyons are already overcrowded, this has led to graffiti and trashing the place. We don't need more people, we don't need more lanes!!!!!!	Gediminas Grazulis	Website
2844	Little Cottonwood Canyon is a unique geographic and geological asset for the County and State. Skiing is a wonderful benefit for all to enjoy. Driving cars on roads consumes enormous space, dramatically degrades the very beauty that brings people to the Canyon and by widening the road system will only encourage more people to drive. The only long-term visionary solution is a gondola from the base of the Canyon. Let the special journey begin at the base of the Canyon.	Carter Bravmann	Website
2845	Please implement the gondola system for little cottonwood canyon	Dean Ellis	Website
2846	I ski at snowbird/alta, and have for many year. I live in Sandy Ut. I support the Gondola with base at LaCaille. It would be a very welcome alternative to the traffic. I would appreciate serious consideration of this idea.	Julie Maxwell	Website
2847	As a Utah resident and skier for my entire life of 22 years, seeing the traffic increase has been hard to watch. More than easy access to the ski areas, myself and locals alike think that preserving the natural beauty and habitats of our home should be the number one priority. With that said I am in strong support of the gondola option. Widening the road only means one thing, more cars . If anything it will make the traffic problem worse. I ask that you please consider the option that is best suited for the environment, for that is why we are all going up the canyon in the first place. Thank you for hearing me!	Jack Anderson	Website
2848	Cottonwood is too much of a resource to loose by lack of action and bad planning.	Frederick Zimmer	Website
2849	Please build the gondola	Monica Balogh	Website
2850	Gondola works!!	Hatty Ostrowski	Website
2851	I support serious consideration by UDOT and interested parties of the LCC gondola option. As an IKON pass holder and regular user of LCC , I would use the gondola.	Richard Fugate	Website
2852	Please consider the LaCaille option. Resorts in Europe have similar working solutions. I've personally experienced and loved them.	Sherry Keene	Website
2853	We need mass transportation in the Canyons; nonpolluting vehicles; and metered access to lessen the impact from too many users at one time. Of the three you have proposed the gondola is the best option. But better than all of these is a train: Close the canyons down to Cars Build a train that runs on Electricity Run the train in a loop going both ways from the Airport, up Little Cottonwood, through the Solitude mine Tunnel, over Guardsmans, Through Park City, Back to the airport. This would connect all of the Wasatch resorts + Park City. The train line could be buried to avoid avalanche issues. Would create more Backcountry skiing. By using electricity it would become a greener solution as the grid gets greener. Allows for massive parking lots in the valley away from the canyons. Allows for people to utilize lodging and nightlife in Park City while still being able to ski the cottonwoods.	Barry Nash	Website
2854	Run the train in a loop going both ways from the Airport, up Little Cottonwood, through the Solitude mine Tunnel, over Guardsmans, Through Park City, Back to the airport. This would connect all of the Wasatch resorts + Park City. The train line could be buried to avoid avalanche issues. Would create more Backcountry skiing. By using electricity it would become a greener solution as the grid gets greener. Allows for massive parking lots in the valley away from the canyons. Allows for people to utilize lodging and nightlife in Park City while still being able to ski the cottonwoods.	Cynthia Yeo	Website
2855	I think the gondola is better than widening the road. Less traffic on the road, more environmentally sound, and less susceptible to avalanches. Folks do not have to have as many 4 wheel drives and SUVs.	Michael Torres	Website
2856	i am a frequent visitor from out of state to ski. even though i now only use public transportation, i see the need for more help - it is horrible to try to get to a destination and be dead in traffic for hours, even when sitting (or standing) on a bus.	tobin kent	Website
2857	The gondola plan is better in every way. It preserves one of the gems of the Wasatch front, reduces pollution, and is much safer than driving up the canyon. Not only is a gondola the right thing to do, it is the smart thing to do.	Kade Lovelridge	Website
2858	This innovative option should be studied!	Jonathan Allen	Website
2859	I think the gondola is a great idea	Marissa Feigley	Website

2873	This needs to be done	Daniel Thorne	Website
2874	The best long term solution seems to be option 2, widening the road in LCC with enhanced bus service. That would be my vote. Regardless what is ultimately chosen, snow sheds are a must as many of the delays in the canyon are caused by road closures. Even if the tram option is chosen, food trucks and other services need to access the canyon. Initially I was thinking the tram option up the canyon would be ideal, but after looking at the travel time, and thinking about carrying my 4 & 6 yr kids and ski gear to and from the tram, I figured I would never use this option. It may service adults, but is not a good option for family's with small kids.	Jonathan Hintze	Website
2875	Save Little Cottonwood!!!	Jeff Cooper	Website
2876	I support the addition of a gondola to reduce the amount of vehicular traffic and the need to spend millions more on roadway expansion. It's the economic right decision.	Ed Ireson	Website
2877	Enhanced bus seems better. The gondola option, use still have to get on a bus.	Joe Hiti	Website
2878	Good long term solution. Should start by charging none Sandy City residents to enter canyon	Cort Hutton	Website
2879	The gondola is much more beneficial to the environment and can help eliminate canyon closures. This is the solution!!	Ella Thomas	Website
2880	A electric-powered gondola makes it possible to use renewable energy for access to the canyon. This is a forward-thinking project using appropriate technology to remove cars and buses from beautiful Little Cottonwood.	hugh mcernan	Website
2881	It would be in everyone's interest to minimize impact to the environment, reduce traffic, and provide a safer travel alternative. The gondola makes sense to accomplish all of these goals.	Eli Gruber	Website
2882	I vote gondola	Dylan Cray-Kaden	Website
2883	The gondola is clearly the best option for the environment. The base station should have a parking garage.	Ty Leverty	Website
2884	The gondola is a way better option than adding more lanes. It is possible to love a place to death. Lets keep the cars out and maintain the cozy feel of our canyons.	Gediminas Grazulis	Website
2885	I think the Gondola is a great solution to the traffic issue at the most effective cost. It will also create a more tranquil experience with a lot less cars and traffic in the canyon.	Ben Jenkinson	Website
2886	I support a gondola concept way more than a larger road... Multiple studies in traffic flow note that more options, rather than more lanes on an existing thoroughfare is better for increasing flow, rather than just congesting even more traffic into a single route. Plus, the smog and pollution of more cars in the valley isn't good for anyone.	Brian Shinnick	Website
2887	The Gondola Plus La Caille Base Station is overwhelming the best solution to this issue.	Steve Mann	Website
2888	Get cars out of the canyon!	Joe Gotshall	Website
2889	I 100% support the La Calle gondola base station plan. It has a lot of costs up front but will be SO worth it for the community, the skiers/riders, the resorts and the environment.	David Lean	Website
2890	I am in full support of the Gondola versus road widening bus lanes. I believe that road widening will only lead to more car and pollution.	John Esposito	Website
2891	I support the gondola over the road	Connor Doyle	Website
2892	Please study alternatives to the current road situation up Little Cottonwood Canyon. The current situation is not safe.	heather may	Website
2893	This gondola will improve the lives of everyone in the salt lake valley!	Tyler Ho	Website
2894	Great idea	Carol Wrenn	Website
2895	I'm for the gondola!	Brian Shaw	Website
2896	I support LaCaille base station and gondola project. Please preserve Little Cottonwood Canyon.	Kae Erickson	Website
2897	I think both a gondola and more buses is the solution. For now, if you doubled buses and started earlier in the day it could cover your needs until the gondola is built. The auto traffic is getting untenable as you know.	Casey Poe	Website
2898	DO NOT DO THIS>>>!! NO to the GONDOLA!!	Jody Jacobs	Website
2899	Its by far the best solution and lowest cost solution. Anything that produces more cars in the canyon is the opposite of the goal. I think this will be seen as a unique, fun and exciting of which the skiing in Utah will become known for.	Kevin Reynolds	Website
2900	It's time to reduce canyon congestion and start thinking about the environment long term. Close the canyons to cars.	Patrick Quinn	Website
2901	Gondola!	Katie Park	Website
2902	I am a long-time Snowbird skier and fully support the gondola plan! Little Cottonwood traffic has become unbearable to the point I am going elsewhere to ski.	JJ Haglund	Website
2903	This canyon along with big cottonwood are impossible to get up to on weekends during the winter, a gondola would allow much better travel and a much more eco friendly efficient way to get up the canyon	Koby Cutler	Website
2904	The gondola option is the best option because the gondola can run in harsh weather. During harsh weather the buses will be stuck in line with all the other cars.	Brodie Reid	Website
2905	I like the idea of lower environmental impact, however I'm uncertain the claims of the LaCaille gondola are making in suggesting this is the lowest impact option. A gondola would reduce the visual beauty of the Canyon far more than a wider road. Incorporate electric buses, free EV charging and free EV premium parking spots at Alta and Snowbird. Please do not add tolls to use the Canyon, or parking fees at either resort. This nickel and diming approach is unappealing and will drive tourists elsewhere. Focus on efficient and diverse transit options, many of us enjoy driving our own cars up the Canyon! Thank you.	Geoff Lay	Website
2906	Gondola. Only reasonable option.	Ben Poirier	Website
2907	I moved to Utah from Southern California a few years ago, for many reasons. One of the main reasons is the memories I had skiing Snowbird and Alta annually with family. It would be unfair not to make this gift as wide as possible. Utah needs to aggressively improve access to the mountains and this is a permanent way of getting it done.	Clifton Cates	Website
2908	The idea to build a gondola to go up little cottonwood is an incredible idea. The traffic going up and down is awful especially when the weather is bad. This is a great alternative!	Alena Han	Website
2909	Great idea do it thank you	Davis Factor	Website
2910	I support the la caille base station and parking proposal as well.	Andrew Herrin	Website
2911	I've seen this system used all throughout Europe, especially the Swiss Alps. It's a win, win for all involved.	Camela Hall	Website
2912	Why would we make room for more cars when the resorts are already packed with our current situation?	Henrique De Agostini	Website
2913	Gondola! Gondola! Gondola!	William Yocom	Website
2914	I support the GONDOLA PLUS LA CAILLE BASE STATION option	Frederick Eisenbiegler	Website
2915	i think the gondola is a great sustainable way to improve traffic in the canyon.	gabriel sherman	Website
2916	Hi we ski at Snowbird every year. We love the resort and this canyon. We feel the gondola is the safest and most affordable way to ensure we can safely get up and down the canyon. Even in bad weather	Emily Fisher	Website
2917	I support the gondola! It's the best long term solution. The other solutions will need to be re-examined in 10 years and the gondola will be inevitably built anyways because of this. Just build it now.	Paul Vatterott	Website
2918	This would be great, both in terms of traffic and in terms of safety. Thank you for considering it!	Jason Miller	Website
2919	I am I'm support of the Gondola Plus the proposed LA CAILLE BASE STATION.	Joshua Lander	Website
2920	I think it's a great idea! Of course, the thought of losing the privacy, flexibility, and individuality of driving up in my own car or with a friend makes me question the gondola. But due to changing times and what's best for the canyon and safest for all is to probably put the gondola in.	Jason Kurant	Website
2921	Gondola	David Lee	Website
2922	I am a student at the University of Utah, and skiing has always helped my mental space and made me a better student. The logistics of skiing in the SLC area get tricky primarily because of transportation. Traffic makes skiing a much greater time commitment. Because of the logistical and environmental advantages, I fully support and encourage a gondola that goes up the canyon.	Isaac Morris	Website
2923	I am opposed to a gondola in LCC. It's too slow, has too few stops and is too costly. Locals won't ride it; only tourists. I am in favor of added UTA bus service and adding one additional dedicated bus lane (flex for up/down hill traffic) between the mouth and Alta; and that can be possibly used in the summer by bicycles and pedestrians. That is all.	Ron Barness	Website
2924	I support the Gondola plus La Caille Base plan. I have been traveling to Snowbird/Alta for over 40 years. Little Cottonwood Canyon has a special place in my heart. It is where I bring my family to recreate and recharge. It is clear that something needs to be done to preserve the Canyon from increased damage due to high level of car and bus utilization. The Gondola+La Caille Base seems to be the least damaging, most positively impacting and in the long run most economical solution. Please vote to move forward with the Gondola+La Caille Base proposal.	Rick Franz	Website
2925	Support gondola	Anne Rassiga	Website
2926	Hello! I would like to voice my thoughts and support for the The Gondola Plus la Caille Base Station. Little Cottonwood Canyon needs to be preserved for future generations and I believe by minimizing the amount of cars in the canyon is safer for patrons and the environment. I'm excited to see this project come to fruition! Thanks and stay safe!	Lo Jones	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
2927	We got lucky this year when, in early March, traffic was light. Normally, coming up the canyon is a frustrating experience, like driving the 405 freeway in LA during rush hour. The gondola will be an enhanced experience and a clean solution vs thousands of motorized vehicles polluting the canyon air.	Nick Shauer	Website
2928	I am in support of building the base station. No more Little Cottonwood road and tunnel development please, it's not worth the environmental tradeoff.	Michael Young	Website
2929	The UDOT gondola option PLUS the proposed LA CAILLE BASE STATION is the best option.	Ronald Renz	Website
2930	Please consider the alternative transportation: bus for hiking and skiing, or a gondola to alleviate the traffic in Little Cottonwood Canyon. Thank you.	Lauren McKeever	Website
2931	I support the gondola plus La Caille base station as another alternative as well as Alta's proposal for gondola plus expanded parking at the bottom of LCC.	Nancy Allen	Website
2932	Please find some alternative to more traffic in the canyon. If a gondola is the best option, do that.	Joel Reeder	Website
2933	I am in support of the gondola alternative, especially with the La Caille base station option added. As a frequent user of the canyons in Utah in both summer and winter, it would be great to have this type of alternative option to reduce the number of cars and buses up the canyons. We would use the gondola to take family, friends, and visitors up to see our beautiful canyons. We are really opposed to widening the road as that option would take away from the scenic option and provide the most destruction of the mountains, greatest impact on watershed, and just increase the demand for cars to go up the mountain. We also support adding a toll for cars to encourage the use of the gondola as a more environmentally friendly option.	Gregory Murphy	Website
2934	I fully support the gondola up little cottonwood canyon. I believe this is the best long term solution to help with traffic and congestion. More busses will honestly just create more congestion especially on heavy snow days!	Kelly Carpenter	Website
2935	As a visitor only, and not a permanent resident, I can say the beauty and other unique qualities offered in Cottonwood Canyon will be negatively impacted by either road widenings or tunnels to alleviate traffic and access. Please address these concerns and true issues through the execution of a large gondola plan, which in itself will draw visitors and further make the region a unique blend of the outdoors with urban proximity.	Kevin Smith	Email
	Best regards, Kevin Smith		
2936	I am writing in strong support of a gondola system with increased bus service. I believe strongly that the gondola system will be the most safe and efficient way to move patrons up and down the canyons year round. The gondola system also is the most environmentally friendly options, and it will reduce emission omitted from vehicles. If, and its a strong if, the bus system needs to be expanded, please make the busses more environmentally friendly (electric or natural gas).	Zach Robinson	Website
2937	I think ticket sales should be limited. More people in the Canyon isn't the answer. I don't like a Gondola, this doesn't address traffic issues at the mouth of the Canyon. The La Caille option is as traffic blocked as the current park-and-ride that is not longer in use because buses couldn't keep a schedule due to traffic jams.	Brandie Arko	Website
2938	I support the initiative for the gondola and base station as a way of helping traffic congestion in LCC.	Ryan Johnson	Website
2939	I love little cottonwood canyon and want to protect it. I support.	Wendy Williams	Website
2940	This last ski season I was a season pass holder at Brighton Ski Resort. At the beginning of the season, I was turned around once as I apparently didn't have proper tires (I did), and several times I couldn't find parking at the resort. The trip up and down the canyon was treacherous, to say the least. I'm sure the situation was similar in the Little Cottonwood Canyon. I think a gondola would be if not the perfect solution but at least a step in the right direction towards improving the ski experience. The additional environmental benefit is just a bonus. Please, at least take time to explore this option.	Aladin Hadzikadunic	Website
	Thanks.		
2941	I FULLY support the widening of the Little Cottonwood Canyon road as well as the widening of Wasatch Blvd. The cost, inconvenience, and unsightly cable system of the proposed Gondola system would make it a much less than ideal solution. PLEASE widen the road to resolve the problem and build additional parking structures at Snowbird and Alta. Thanks!	Robert Whittle	Website
2942	I support the Gondola Plus LaCaille Base Station rather than expanding roadways up the canyon and Wasatch blvd.	Jemmy Buchanan	Website
2943	This is a great idea to reduce traffic congestion and improve the already rather ugly air quality that is Salt Lake City. I support the creation of the gondola for Skier accessibility and traffic reduction thru little cottonwood canyon, as well as for summer activities!	Hilary Merz	Website
2944	Problems are not solved with repeatedly approaching the issue with the same solution. Problems are resolved with an innovated approach. The Gondola solution is necessary per the solution focuses on removing the bottleneck entirely.	Peter Waldo	Website
2945	Support gondola	Mary Jo Grant	Website
2946	As a Snowbird ski enthusiast and part-time employee of the resort, I wholeheartedly support the proposal to create a parking alternative and gondola transportation option to mitigate the archaic transportation system currently in place. Having witnessed the congestion and natural delays, simply adding UDOT routes and / or widening the road does a long-term disservice to proactively addressing the next decade plus and the obvious growth which the area is going to incur. While the proposal may have a higher economic cost today, I believe the investment in our transportation infrastructure and our quality of life will be the most economically sound alternative. It should be enacted and move forward as quickly as possible.	John Thomas Nelson III	Website
2947	I'm not opposed but think we need to see how this pandemic has truly effected the industry before we pour this much money into this big job. It is a huge expense that needs to be carefully considered and fit the budget not exceed it.	Margo Cowley	Website
2948	We support the gondola!	Kristen Blain	Website
2949	PLEASE!!! We have skied up LCC for 20 years. The last 3 years have become UNBEARABLE with the traffic, increased people, and lack of parking. We don't need MORE cars up there!!!! PLEASE. The Tram not only makes sense for the traffic, but would it not serve as a viable evacuation plan in the event of fire? And it would not be effected when an avalanche crosses the road. It works for the rest of the world.	Michele Bergman	Website
2950	I support the gondola.	MARIE MARSTON	Website
2951	what a great idea to diminish traffic congestion and save the canyon	mark rosen	Website
2952	I fully support the Gondola Plus La Caille Base Station solution. I am a local resident who lives off Wasatch Blvd, and ski around 50 days per year, and would love a better way to get up to Alta and Snowbird.	Robert Kirschner	Website
2953	Please consider the Gondola option over widening the road.	Scott VanVoorhees	Website
2954	I think the gondola could be a effective way to cut down on car traffic/pollution. Another way would be making cars pay to park either for the season or daily rates. This would encourage carpooling and would incentivize actually using the gondola. Secondly, riding the gondola should be affordable. Not a way to make more money but a way to get more cars off the road and minimize congestion and environmental impact. Pricing to ride the gondola should be included in season pass, or give people annual pass option. Or even reasonable day rates like bus fair not like ridiculous overpriced scenic gondola rides. Locals aren't going to pay too much.	Gabriel Herr	Website
2955	This is critical to alleviate the traffic and to preserve the best location in the world!	Jake Horstman	Website
2956	As a frequent visitor to the Salt Lake City area, I cannot even begin to describe how wonderful it would be to have access to Little Cottonwood Canyon ski areas via a Gondola. It would provide extra incentive to keep cars off the roads, resulting in fewer emissions, less traffic, and a decrease in car-related accidents. Both visitors, locals, and the planet would greatly benefit from this addition, and Little Cottonwood Canyon would be a leader in the country for sustainable solutions in ski travel. I am in complete support for this project and hope to see it come to life.	ERICA AARONS	Website
	I strongly advocate for the gondola plan. I believe it will have the greatest long-term benefit for the community, the health of the canyon, and the people who access LCC for recreation.		
2957	By definition, a gondola will reduce traffic, pollution, and congestion. It can be installed along the existing roadway, limiting negative environmental impact and reducing the amount of new construction required. It can be safely operated in any weather condition (except extreme winds) and will not be impacted by avalanches, heavy snows, or other factors that currently close the road.	Dotti Gallagher	Website
	Once the gondola is installed, the LCC highway can remain open as-is for emergency and public safety traffic, residents, or employees.		
	Finally, adding gondolas up LCC would demonstrate to other communities that innovative public transportation options are the most responsible choice for the future. LCC's gondola would create one more reason for locals and visitors to enjoy all our canyon has to offer.		
2958	Would rather use this than drive myself.	Tony Qamar	Website
2959	Support the gondola!	Daniel van der Merwe	Website
2960	Good idea	wilson harrell	Website
2961	eliminate the traffic up Little Cottonwood Canyon.	Greg Mainis	Website
2962	I support the Gondola option because it is the most forward-thinking solution that allows ready access and protects the ecosystem of the canyon. It would set apart the region's creativity and commitment to long-term solutions. thanks for this forum to express opinions.	Jay Riley	Website
2963	After reviewing the summary of options, I believe the best option for all Utah's is the gondola. The key is less pollution, less cars. The gondola makes the most sense.	Tom Kurilich	Website
2964	I support the gondola option in Little Cottonwood Canyon and increased bs service until the gondola is complete.	Leandra Bitterfeld	Website
2965	I support the LCC gondola option for environmental and efficiency reasons.	Troy Murphy	Website
2966	I support the gondola idea.	Dan Winegar	Website
2967	I support relieving congestion with a gondola and parking hubs	DENNIS THURMAN	Website
2968	Please adopt and pass the gondola option for Little Cottonwood canyon. I visit LCC w/ my family a few times per month, all year long. Traffic is out of hand and it prevents some from even visiting the resorts up there. The gondola would not only relieve traffic and congestion, continue operation during an avalanche (rather than a total, complete canyon shutdown!) but would also be an attraction to bring more skiers and visitors to the resorts! Be bold and lead. Lead the world in showing how we are willing to do big, innovative things to solve problems here.	Dustin Brohm	Website
2969	I support of the Gondola Plus the proposed LA CAILLE BASE STATION to improve reliability, mobility, access and safety while also protecting the natural beauty of the Wasatch Mountains and our climate. Let's do it!	Michael Mell	Website
2970	As a frequent LCC user, I think that an enhanced bus system without a road opening is the best choice to help alleviate traffic congestion in and around the canyon. This option will benefit people traveling to resorts and those backcountry recreating.	Anna Deleray	Website
2971	Please study this and find a solution to the nearly impossible combination of weather/traffic that plagues LCC every year. I've lived here for 25 years and the situation has gone from hassle to challenging to what is now virtually impossible. There has to be a better solution than all those cars idling as they crawl up the mountain in difficult weather.	Todd Wilcox	Website
2972	I'm highly supportive of this. The morning traffic in LCC is not workable	Joel Katz	Website
2973	Please build a gondola. This is the most effective way to resolve this problem	Jason Chandler	Website
2974	Let's research the gondola option!	Patrick Kunkel	Website
2975	Build new long Tram from bottom to Snowbird.	Philippe Montalette	Website
2976	Any alternative than more gas emitting vehicles going up and down the canyon should be evaluated and not discounted out of hand. Neither, however, should it be accepted just because it offers "hope." Whatever remedial action is taken, it needs to work and work holistically not across one dynamic. We should be in no hurry to make a mistake. Thank you.	DEAN MACOMBER	Website
2977	Keep little cottonwood canyon preserved.	Jennie Williams	Website
2978	We support the Gondola Plus La Caille Base Station!	Jacqueline Lunt	Website
2979	I am in favor of a Gondola to take skiers up the canyon.	Richard Service	Website

2980	A free, high-speed gondola is a brilliant idea that is long overdue. Towns all over the Alps of Europe have used this to great success. Utah can too.	Jared Zaugg	Website
2981	Gondola FTW	Kyle Fujikawa	Website
2982	As a tourist from Canada, I spend 10-14 days a year skiing Utah and love every minute of it. A combination of traditional motor transport with the gondola project seems a great solution to LCC congestion. Beyond the reduction of vehicles on a tricky mountain road, you'd have an increase in employment during the construction and after, yet another reason for people like me to visit the canyon in all seasons and provide a means of egress in all weathers for people whose down-canyon life requires them to be out during inter lodge conditions.	Mark Duncan	Website
2983	I support the gondola project	Tracy Burton	Website
2984	I'd like to advocate for the Gondola option. I believe it's the best overall option with the least impact to the canyon and smallest long term maintenance cost.	Jared Draper	Website
2985	I'm in favor of the gondola solution for LCC traffic problem to solve ...	Kirk McMullin	Website
2986	Hard no. This is a total waste of money and effort. There are better ways to address two businesses needs. Get ride of Ikon pass at these resorts for a start.	Leslie Kovach	Website
2987	Difficult to support gondola option without more info. related to what will incentivize it's use. Will there be long lines at peak times that will discourage use and people still end up using the road to avoid. Apologize if I missed it, but what is the capacity of the proposed gondola per hour. Has the option of increased bus usage with significant parking fees at the two ski areas been modeled to reduce the carbon footprint. Has what Solitude done with parking been taken into consideration. How about the reduction in CO2 from converting buses to CNG? Prior to investing millions in a gondola and still ending up with significant up canyon vehicle traffic would be a mistake.	Robert Schnitzler	Website
2988	Need to get cars off the road	Tyler Aldous	Website
2989	Do the gondola!	Sam Staten	Website
2990	I think this a great idea, not only helping local residents but allowing tourists an alternative to take in the canyon and view.	DOUG TURNER	Website
2991	Would love this idea as long as we have plenty of parking at the bottom. Maybe multiple sites with little people movers bringing everyone to the base gondola	Greg Rodgers	Website
2992	Gondola Plus La Caille Base Station is a great solution to current and future traffic congestion in Little Cottonwood Canyon.	Tom Morgan	Website
2993	All around win!	Robert Wantowski	Website
2994	Please consider the Gondola plus option.	Tammer Attallah	Website
2995	I am in favor of the Gondola with parking at a base station near La Caille.	John Dabler	Website
2996	We don't need a tunnel, more traffic, and other intrusive ways of destroying this beautiful country! Enough of this!!	David Semenov	Website
2997	Please give serious consideration to the Le Caille gondola station solution to LCC traffic. I for one skied less this past winter (prior to three pandemic) because the traffic was such a hassle. And I already take the ski bus. Thank you.	Robin Richards	Website
2998	I would prefer to see lane widening to 3 lanes that are directional, i.e. 2 lanes up in the morning, switched to 2 lanes down in the afternoon. Better enforcement of chain law further down the valley would help. Gondola is definitely out. Go to Sunshine Village in Banff, it sucks because of the gondola.	Daniel Pierce	Website
2999	A free, high-speed gondola in Little Cottonwood Canyon is a brilliant idea that is long overdue. Towns all over the Alps of Europe have done this to great success and Utah can too. Not only is it more cost efficient in the long run, it will greatly reduce pollution and congestion, and even bring in additional revenue to local and county businesses because it will be a tourist draw in itself. I say "yes!"	Jared Zaugg	Email
3000	I support the gondola PLUS La Caille station option for Little Cottonwood Canyon.	Brandon Schelin	Website
3001	I think it will help reduce traffic without having to make the road different	Ashton O'Farrell	Website
3002	I support the Gondola initiative as an alternate solution to reducing traffic in Little Cottonwood Canyon.	Greg Dowling	Website
3003	Put in the gondola please	Dan Garringer	Website
3004	The gondola option looks great and more cost effective and will protect the canyon. Seems like an excellent choice for the skiers of Utah.	Mary GALLAGHER	Website
3005	The Gondola / La Caille station has my support	Dale Munoz	Website
3006	Make skiing fun again! Locals shouldn't have to stress about getting to and from the hill. Plus, getting more cars off the road means safer roads!	KELSEY MIREHOUSE	Website
3007	I support the gondola project	Tracy Burton	Website
3008	In support of gondola.	Emily Speicher	Website
3009	After studying the proposals I believe the gondola with the la cais makes the best choice both economically and esthetically and urge its consideration.	CHARLES PARKER	Website
3010	I fully support the new gondola and LaCaille transit center option for reducing traffic in the canyon.	Sarah Metcalf	Website
3011	Gondola all the way - it has capacity and wow factor which will probably get riders on. Reducing parking capacity is an excellent idea. As long as people know that they can park on road or other potential areas, they will always choose car over bus or gondola or whatever. Until we restrict parking capacity, reward carpools, and enforce parking restrictions, people will continue to roll the dice on finding a parking space. There also needs to be better communication and notification to the public about canyon closures - either due to weather OR capacity issues, way way before people hit exit 6 on I215.	Erica Reifenberg	Website
3012	Gondola Plus La Caille Base Station is the best solution to preserve Little Cottonwood Canyon and offload traffic and parking issues during winter (but also summer) season! Thanks!!	Anna Maslach-Hubbard	Website
3013	Sounds like a fantastic option and I'm ready for less traffic in the canyon!	Taylor Howe	Website
3014	I believe a gondola in little cottonwood canyon in the only way to help protect the canyon, provide access and ensure people's safety. Thank you.	Ryan Williams	Website
3015	I like to drive my vehicle. have 2 lanes in the morning going up and 2 lanes in the evening going down.	scott fakler	Website
3016	I support the gondola alternative. It would be an attraction to Utah skiing rather than more paving of LCC or putting drivers in one of our prettiest places into a tunnel.	Jon Liddle	Website
3017	Further, I would be inclined to take a gondola as a positive part of the days experience but would not likely take a bus to the top.		
3017	I think these are all lackluster options determined to keep greedy pockets lined while the experience of the guests continues to deteriorate. Very sad that more money is being valued over people. Notice I said more money, because I understand money is a necessity for a business and a community to thrive, however, there is a tipping point when it comes to greed, and sadly the organizations involved have passed that point.	Dan Candidi	Website
3018	Strongly support the gondola option. Least environmental damage, economical, probably fastest to implement, keeps more polluting vehicles out of canyon, safer, and more flexible. Hands down best option.	Tom U Hannigan	Website
3019	As an out of state visitor I regularly stay at one of the properties at the resort to avoid canyon traffic, limited parking and road closures. However, with a gondola I would likely stay down in the valley or even downtown SLC and utilize the gondola which seem to work great in Europe and Canada	Steven Moore	Website
3020	After studying the proposals I believe the gondola with the la cais makes the best choice both economically and esthetically and urge its consideration.	CHARLES PARKER	Website
3021	Let's keep our canyons cleaner with the least environmentally impactful solution	Callee Markosian	Website
3022	Having reviewed the options, I want to show support for the gondola/base parking structure option.	Andrew Keeve	Website
3023	I strongly support the gondola option for Little Cottonwood Canyon. A) It minimizes impact on the canyon itself (both roadway and parking); B) It provides safe, reliable transport in a wide range of weather conditions; C) It minimizes pollution from burning fossil fuels and minimizes noise pollution. Ideally this would be fast-tracked to complete the EIR this year!	Cliff Reader	Website
3024	I am in favor of widening the road and adding a dedicated bus lane with protective snow sheds. The gondola option doesn't serve backcountry users of the canyon and would be a issue during storms while limiting future capacity from the onset. A dedicated bus lane provides the option to add additional service while hopefully expanding where you can access the canyon from without having to drive and park.	Garrett English	Website
3025	Please choose the la caille base station plus gondola option! The less cars in the canyon and on the roads in general, the better.	jordan Monroe	Website
3026	I support the Gondola Plus La Caille Base Station. Not only is it sustainable, it is an improvement that future generations will be able to enjoy.	Kevin Li	Website
3027	Please focus on enhancing bus use without widening the road. A gondola is not preserving the canyon, has a massive impact on the environment and experience for others in and around the canyon. This is expensive and will likely be underused due to inconvenience of a 6-8 mile gondola ride up to the resorts. Little cottonwood canyon is not Europe let's stop acting like gondolas and trams will fix the problems. Our canyons ultimately have a carrying capacity and enhancing bus use could be a sustainable way to reduce traffic and car use. Add fees, dent people the ability to drive solo up canyons any time they want. This is not a right it should be a privilege and something we have to consider and appreciate every time we head up canyon	Anna Ratliff	Website
3028	Heck NO to the Gondola Alternative !!! Heck NO to more lanes on Wasatch Blvd. If we want to make decisions that are Sustainable into the next decade and beyond, we need to limit unfettered growth just to feed 2 businesses up the canyon. I am ALL FOR increased buses running on existing roads with high frequency schedules. That way people can unplug from their cars and relax up the canyon. For those who are intent on using their cars, they should pay tolls (systems are available to collect w/out stopping traffic). We have plenty of places in Cottonwood Hts to links buses up canyon with park-n-ride lots and potentially our rail system. We need to preserve our environment and water !!! Also, if we really want to solve the traffic problem, then BAN the IKON Pass !!!	Daniel Kovach	Website
3029	I support the construction of a gondola in little cottonwood canyon	Joe Korth	Website
3030	I like the gondola idea. It's much better for the environment. It will attract tourism, and if I remember correct it will costs less than widening the road. People can also still get up if the road is closed. It also gives you another alternative than bus or car.	Alexander Mitropoulos	Website
3031	On Busy days, powder days and Holidays, Close the road to down hill traffic in the morning and uphill traffic in the afternoon/evening for 1 1/2 hours, RUN @ LANES of up or down and evacuate the canyon twice as fast...2 Lanes 2 Times Faster. Ticket vehicles without snow tires. \$750.00 for going off the road and needing assistance.	Greg SHERRY	Website
3032	I support more busses running to LCC from multiple locations, its less invasive, it will probably needed only for 4 months out of the year. gondola you will still need more buses and parking to the gondola base, more maintenance and not reach it use capacity in the summer.	badiya aldujaili	Website
3033	thank you		
3033	I am in favor of a gondola up Little Cottonwood canyon.	David O Heaps	Website
3034	I grew up at the mouth of Little Cottonwood and my parents still live there so I'm still in the area frequently. Additionally, I am an avid skier, with numerous ski/snowboard friends who visits Snowbird and Alta a lot each year. I am in strong support of the La Caille base station option. It makes so much more sense from a congestion and aesthetic viewpoint. Please help us keep more cars out of the canyon and reduce GHG emissions from cars who will surely be backed up trying to get a parking spot mid canyon.	Megan Bettilyon	Website
3035	Please consider the gondola option and not widening the road and increasing buses	Nancy Simson	Website
3036	Something has to be done. How would building a gondola on Wasatch Blvd lesson traffic. It all sounds good but not sure what is best. How about limiting ski ticket sales	Bryce Lyons	Website
3037	This is an excellent idea	Eric Markley	Website
3038	The gondola really seems like the best transportation option to preserve the canyon and accommodate the masses of people.	Ahdena Clark	Website
3039	I support the a gondola in Little Cottonwood Canyon as a way to improve access and reduce air pollution from bus and car traffic.	Steve Neu	Website
3040	I support the Gandola Plus La Caille Base Station!	Jonathan Petrocelli	Website

3043	I highly support GONDOLA PLUS LA CAILLE BASE STATION	Aaron Johnson	Website
3044	Hi, I thought may be closing the road to downhill traffic in the morning uphill traffic in the evening for an hour and a half on powder days and holidays, run two lanes of uphill in the morning to Lane to downhill in the evening evacuate the canyon twice as fast. Ticket vehicles without snow tires. Issue fines For \$750 for going off the road and needing assistance, define should create a good deterrent and reason to buy snow tires. Thank you Greg Sherry	Greg Sherry	Phone Comment
3045	Gondola or limit number of cars allowed in canyon at bottom.	Matt Phillipps	Website
3046	Gondola Option looks like the best option for protecting the environment and access to recreation in the canyon while preserving it's natural beauty. We support the Gondola option. Jack and Libby Leary, 736 Eagle Pass, North Salt Lake	John Leary	Website
3047	Gondola option seems to be the best way to solve traffic issues in Little Cottonwood Canyon.	Roman Nagorkin	Website
3048	I support the Gondola PLUS the proposed La Caille Base Station as it will significantly reduce the amount of cars on Wasatch Blvd and the bottle neck of traffic every day. Five hour traffic jams during the holidays would be eliminated and the gondola will help with air quality control. As a resident who lives directly at the base of Little Cottonwood Canyon, my vote is the La Caille Base Station.	Kim DenAdel	Website
3049	Gondola or limit number of cars allowed in canyon at bottom.	Matt Phillipps	Website
3050	As a lifelong resident of Salt Lake County, I support this environmentally friendly approach to solving the transportation problem in the canyon. I've also been on the "Teleferico" in Bolivia, and witnessed first hand how well and effeciently it moves people. It is located in La Paz, at an altitude of 13,000 feet. I support and would also support bonding for the construction of it!	Cortlund Ashton	Website
3051	I avoid LLC because of all the congestion. I am in favor of widening the road for bus lanes (& bikes in the summer because some their behavior is a major traffic hazard) AND the gondola. Plan for all so the future is assured for all. If only one option is available now, do the widening 1st. The gondola should be financed by the resorts with the widening done with the gondola incorporated into the widening plan.	Gregory Djurovich	Website
3052	I support the gondola option, as it has the most longevity, least environmental impact and eliminates safety issues driving up the canyon.	trish Coughlin	Website
3053	I support the gondola and La Caille Base Station. Please do not widen the Little Cottonwood Canyon road.	Lisa Doyle	Website
3054	I support the gondola plus la caille option.	Robert Boyer	Website
3055	How often will the buses be running to transport people to the base station? Also how often are the gondolas running are they constant? Like the high spdd chair lifts? how many people per gondola? It looks like I missed the alternatives development section, but I wanted to ask: was there any consideration to closing the canyon to cars? Similar to Zion National Park. And having many more buses, like every 3 minutes or something during peak times, and every 10 or 20 minutes during non peak times? Buses would have to run 24/7.	Suzanne Wheaton	Email
3056	In my mind, we could potentially reduce impact (by cars), and still get people out in the mountains. I don't like the idea of expanding infrastructure up the canyon, for example, the gondola. That seems like a big construction impact to the canyon that doesn't have much room for new infrastructure. Thanks for your time.	Courtney Hamer	Website
3057	My preference as a Salt Lake City resident who travels for skiing and bicycling up Little Cottonwood is for the widened road for peak ski season busing. An increase in busing -- combined with better parking at the canyon base -- would alleviate traffic up the canyon, the parking situation at the resorts, and pollution from passenger cars. In the summertime, with reduced demand up the canyon, those lanes could be used as bicycle only, creating a safe space for bicyclists. The buses could be repurposed for commuter busing in the summer time, expanding public transportation options in the valley. A gondola, while innovative and unique, is not stable in windy conditions which are typical, and would see very little use in the summer, while not addressing the bicycle safety conditions in the canyon. Regardless of choice, improvements in parking lots at the base of the canyons to incentivize carpooling, busing, or gondola riding is a good thing for the valley.	Joel Salem	Website
3058	Leave it as is improve the roads, open early, and get a life that is the beauty of snowbird that makes it unique! Don't fall for that liberal state of mind to change everything!	mauricio albornoz	Website
3059	I love the idea of a Gondola, please move forward with this project.	Matthew Richard Gale	Website
3060	To combat traffic in Little Cottonwood Canyon while being considerate of our environmental impact, I believe that the gondola option is the most beneficial. People can access skiing and hiking without having to take the crowded buses or a personal vehicle, both of which impact our air quality. Inversion is bad enough in Salt Lake, and it is in the best interest of all residents to reduce air pollution.	Kara Bard	Website
3061	I would like to comment in favor of building snow sheds and in disapproval of the gondola option. The gondola just adds another tourist attraction to the canyons and does not help with the issue of over crowding	James Stanley	Website
3062	My initial thought is that a gondola fo some sort would be the ideal solution: It would have to be built high enough off the surface, and with enough protection, to be stable in avalanches. And have enough capacity. The big downside is that it could not have many mid stations. I still think its the best solution.	John silverman	Website
3063	I support the gondola.	Anna Testa	Website
3064	I believe the Gondola Plus the La Caille Base Station is the best way to alleviate traffic while simultaneously reducing pollution.	Bobby Bruggeman	Website
3065	The gonadal is the best options and I support it!	Jeremy Sorenson	Website
3066	I love the Gondola ideal! I think it would make sense to have a stop at the turn at Tanners so that people interested in hiking in that area can do so. It would be also nice if it could be running at night to take night time employees safely down the canyon during snowy nights.	Becky Peterson	Website

3091	Gondola is best way to go. Keeps the traffic off the road, better in heavy snow conditions and is a scenic and relaxing way to enjoy the canyon. Out of state visitors will like it better as well.	Kent Kohlhase	Website
3092	I think the gondola , plus increased bus service is the answer to the traffic problem. Plus a fee to get up canyon	Caroline Bates	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3093	<p>Traffic has killed little cottonwood canyon. A gondola is the correct solution. All deliveries and supplies then do not need the road and an be completed even with avalanche control operations underway. Cleaner, safer, less intrusive, the gondola, with a base village for parking, bathrooms, food and some services is the correct answer. Keep the road, but it won't be a parking lot anymore. Add a few avalanche tunnels if you like, but rely on the gondola.</p> <p>Relying on the road and buses is a problem. If an employee misses their bus by 5 min, they end up being an hour late to work waiting for the next bus. If an employee is 5 min late to the gondola, they are still only 5 min late when exiting the gondola.</p> <p>High speed gondola with Snowbird and Alta stations makes the most sense. A station at the campground does not make sense as it will just be a waste of time for most passengers, for the majority of the year. But add one there if you think you must...</p> <p>Imagine if garbage trucks and delivery trucks no longer needed to use the road because all the supplies can be delivered to and trash removed from the canyon with service cars on the cables.</p> <p>A continues loop, high speed gondola makes all the sense in the world. A full village at the base of the gondola will make it an attractive option to people taking their own automobiles up the road.</p> <p>Do the right thing. Save Little Cottonwood Canyon with a gondola and base village</p>	Tai Robinson	Website
3094	I think enhanced bus service would be the most cost-effective solution. Congestion is really only a problem on weekends, holidays, and powder days. I would like any plan to include vehicle metering (similar to the covered parking garage at SLC airport) that monitored the number of cars in the canyon and estimated travel time to the resorts and provided this information to skiers on mobile app, at mobility hubs, etc. Selling season parking passes (similar to Solitude) might also help persuade people to using public transportation.	Jeffrey DeLong	Website
3095	Build the gondola!	Aaron Sorge	Website
3096	I support the gondola 100% please do what's right for the future of our canyon	Sarah Bell	Website
3097	I think the gondola system is a great alternative to adding more busses and widening the existing canyon road. It will be more environmentally friendly and cheaper in the long run. One problem that I see would be weather, the team would have to be sturdy enough to run during storms or in high winds.	Brad Scott	Website
3098	I have lived in Salt Lake City my whole life and use the canyons frequently. I think the gondola would be the best option.	Jake Trevino	Website
3099	I would like to hear more about any alternative to the hour and a half to two hour wait going up Little Cottonwood Canyon. I think it is one of the most beautiful places on the planet. I'm all ears.	Jake Davis	Website

3115	I support the LCC gondola plan. Thanks!	Judy Pruett	Website
3116	Gondola access is a must for little Cottonwood Canyon. Anything else only encourages more traffic, more accidents, & more uncertainty going forward. Thank you.	Charles Lusk	Website
3117	Coming from Germany and knowing the ski resorts in Austria and Switzerland this makes so much sense to me. Just a bit late. :)	Birger Friedrichs	Website
3118	I support!	VyVy Dang	Website
3119	I support the Gondola plus La Caille Base Station option	gerared meszaros	Website
3120	I support the gondola	Chris Lorenzon	Website
3121	I fully support the gondola option. Road widening is a never-ending rat race. Plenty of studies show that road-widening only temporarily reduces congestion because it leads to more usage later. I grew up in LA, which is a concrete wasteland. Keep the cars in the valley by adding a gondola.	Rob Crockett	Website
3122	At the very least this option should be studied before it is dismissed out of hand. Once a more intrusive transportation option is installed it will forever change the canyon. An option like this should present a minimal impact to the canyon in the long and short term. Please make a gondola part of your plans.	Jeff Harris	Website
3123	I'm in full support for the gondola and La Caille Base station in lieu of the other alternatives. LCC is beautiful and we don't need to be destroying the beauty of the canyon just to be able to service the ski resorts at the top when there's a better solution like the gondola. I'm also a rock climber that climbs heavily in LCC and widening the road and building tunnels worries me about the efficacy of how some people may begin to treat the canyon as well as whether or not well-established climbs may get destroyed in the pursuit of building tunnels and a wider road. The gondola would also be a way to not only transport people and create a safer egress/ingress, but it would be such a wonderful ride with magnificent views of the canyon that many have never seen before, especially since people won't be having to focus on the road. Thanks! Let's keep this canyon beautiful for many, many more generations!	Tanner Forrest	Website
3124	<p>As a resident of Little Cottonwood Canyon, I highly support the proposal for a gondola in the canyon. I support this not only because I think it is the best solution for both the traffic and avalanche problems the ski areas and UDOT face each winter, but also because I am adamantly against the other proposals of bringing more buses into the canyon or widening the roadway.</p> <p>That being said, it should be obvious that even if a gondola is built and used for skier traffic in the winter and hiker traffic in the summer, the road will still need to exist, for limited (ideally pass-permitted) driver traffic. I would expect this to include residents, delivery vehicles, lodge shuttles, and emergency vehicles. All other traffic could and should be directed to use the parking at the proposed gondola base station and take the gondola up the canyon.</p> <p>Last winter, we saw more buses brought into the canyon in the hopes that skier traffic would be diminished by more skiers taking advantage of the increased public transportation option. However, this problem was only half addressed last winter, as the parking for skier traffic at bus stops in the valley was not increased as well. So, instead, we just saw more empty buses without enough weight to gain traction in the snow, sliding off the road and causing backups, and ultimately causing more harm than good.</p> <p>I see an additional problem with bringing more buses into the canyon, which is purely the fact that even with chains, these vehicles are not capable of navigating the canyon road at the current speed limit of 40 MPH. This inherently causes backups. I work in Salt Lake, and therefore my commute goes against canyon traffic each morning and afternoon. I have been privy to situations like this almost daily throughout the winter: uphill traffic is moving along smoothly, with all cars moving at the speed limit. I then pass a ski bus, and from then on down the canyon, pass bumper to bumper skier traffic, all held up because the UTA bus is moving extremely slowly. I understand the need for UTA bus drivers to travel slowly in the canyon to make sure their passengers are safe, but again, this goes against the problem we are trying to solve. If safety and efficiency do not go hand in hand, we still have a problem.</p> <p>Widening the roadway may help bring more skiers up to Alta/Snowbird in the beginning of the day and get more skiers out of the canyon in the afternoon, but it does nothing to solve the avalanche problem that UDOT faces daily throughout the winter. In fact, it increases the hazard level of the road and allows for more cars stacked up below avalanche paths, increasing the probability that an avalanche hitting the road will push those cars filled with skiers into the creek. I think this proposed solution is by far the least thought-through and while it may help the businesses in Little Cottonwood Canyon bring in more profits, it puts more skier lives in danger. I do see that along with this solution would come snow sheds over the most hazardous avalanche paths along the canyon road. However, this does not protect the entirety of the road and therefore still allows room for error in smaller paths that may hit the road less frequently, but may hit the road nonetheless. This is not the direction in which we need to be looking.</p> <p>In summary, of the solutions proposed, I believe a gondola would be the most efficient, safest way to get skiers to and from Alta and Snowbird throughout the winter months.</p>	Natalie St. Denis	Website

3125	I support the gondola and any and all public transportation alternatives to decrease traffic and congestion in the canyon.	Annette Lee	Website
3126	As a Little Cottonwood skier for 40 years and former SLC resident, I strongly support the gondola and La Caille station. I know both Dick Bass and James Laughlin and believe they would have supported this environmentally sound option.	David Rothman	Website
3127	I have spent my 50 years as a local who visits little cottonwood canyon several times a week. I have watched as the crowds have grown to uncontrollable amount of vehicle traffic and people using the canyon areas. I support the gondola plan as this would alleviate the massive amount of vehicle traffic that uses the canyon. This will also maintain the pristine nature of the beautiful canyon for years to come.	Jason Petersen	Website
3128	This makes so much sense. I have seen similar efforts in Europe. Please support this initiative	Neal Hesler	Website
3129	Is there any data on how much lower the overall environmental impact of the gondola would be compared to increased vehicle traffic (public and city)? What hours will the gondola run? We all know lifts face mechanical issues - what action plans will be put into place to deal with any lengthy shutdowns of the Gondola? It still seems like additional parking is needed to accommodate any of these options.	John O	Website
3130	I support the gondola option. Having worked in LCC this is the best solution	Hollis Hunnewell	Website
3131	I agree with and support the position taken by Snowbird and many other concerned individuals and organizations 100%: "Now is the time to preserve Little Cottonwood Canyon for future generations. More cars, more buses, more lanes and massive concrete tunnels are not the solution to transportation in Little Cottonwood Canyon. The Gondola Plus La Caille Base Station is a way to get cars out of the canyon and off Wasatch Blvd." Let's do this right!	Seth Mott	Website
3132	Support gondola plan	Mary Silverman	Website
3133	The gondola is not the option. As a year round BCC resident, I experience both winter and summer traffic in the canyon. A gondola only benefits the ski resorts in the winter. What happens in the summer? How will all hiking trail heads be accessed? That will cause for pick up/drop off stations along the canyon increasing ride time and creating more infrastructure. Will lower income families/residents be able to afford the price of a gondola ride to access trails in the summer or to ski a few times a year in the winter? Does this solution allow wide access for all people? Or just those who can afford to ski. A solution for the Wasatch canyons is a UTA hub at the base of the canyon. This space must provide enough car spaces for parking. Then, direct busses can be taken to Snowbird, Alta, Solitude, and Brighton. By creating a parking space in the valley, it eliminates any need for parking in the canyons, and can be connected well with pre-existing bus routes in SLC. More buses can drop off at that station, meaning people can hop on the bus outside their home - eliminating the need for cars. By providing adequate bus options, and restricting cars in the canyon, people will use the public transportation. This option will require not widening or changing of the canyon roads. It will only require more busses, and a Bus/UTA station near the mouth of the canyons. Eco-friendly buses can be used and overall will reduce emissions with cars being eliminated. Possible areas for parking are the gravel pit at the mouth of BCC, along with the UTA parking by Walgreens on 9400 S as well as the old Shopko building/lot adjacent on 9400 S. Other areas for parking in the SLC valley can and should be explored. While the gondola seems shiny and nice, it does not seem to efficiently solve the year round problem and still allow affordable and efficient transportation for all people enjoying the Wasatch! Please do not consider the gondola.	Kamiya Peterson	Website
3134	I am in full support of the Gondola Plus La Caille Base Station. I've been in support of this idea for years. As a sales rep in the ski industry for 10 years covering Utah, Colorado, Idaho, Wyoming and Montana I have seen a lot of options. I feel the Gondola is the way to go. Thank you,	Alex Goyzueta	Website
3135	I fully support the gondola for Little Cottonwood canyon. We need to cut down on any additional car or bus traffic whatsoever	Bryan Osborn	Website
3136	The gondola and base station make the most sense both short term and long term.	Linda Talling	Website
3137	As a visitor to the Canyon for the last 40+ years, I've seen the congestion grow to the current over stressed numbers. I think the gondola is a great idea and should be considered.	Bruce Kafenbaum	Website
3138	The use of long distance gondola transport from a village to a ski area base is common throughout Europe. The Valley of Meribel in France's Trois Vallees is one such location. The gondola transports visitors from villages down valley to the Meribel ski center, eliminating auto traffic, pollution and crowding at the base. Little Cottonwood and its areas would be perfect for just such a project, which should have been done years ago. We missed days skiing there due to the traffic and access problems, and we only visit over holidays. The one problem that I have is that La Caille is my favorite restaurant in the US, and I hope this project does not result in my inability to dine there due to overcrowding.	Maurice Mandel	Website
3139	I support the Gondola option.	tara spalding	Website
3140	I think this is the right thing to do for a number of reasons.	Paul Loewenstein	Website
3141	Please consider the gondola option to resolve the traffic problem in Little Cottonwood Canyon. I am an owner at The Lodge at Snowbird and I would like to see the traffic problem solved but maintain the beautiful mountain road.	North Cunningham	Website
3142	I vote for the Gondola for LCC. Plus it might be able to extend out to BCC one day. It's a better investment all around.	Chanakya Duggineni	Website
3143	I think a gondola option, solar powered preferably, is the best option. Cleaner and better for the beauty of our canyon. Telluride does an excellent job with this, we should take note.	Mindy Torman	Website
3144	The gondola idea makes perfect sense to me, but how will it be funded?	Margaret Anderson	Website
3145	I am in support of taking a look at the gondola and road widening solutions	Everett Knauss	Website
3146	Strong proponent of the Gondola Plus plan. Seeing very similar plans in numerous European mountain resorts for over 30 years it's about time we realize the benefits of implementing this proven project.	Mark Shanbrun	Website
3147	I work up at snow bird so I'm in LCC a lot and I'd be one of the first to say that when there is a lot of traffic it is definitely horrible to deal with. I think the gondola system would be a great aid to the traffic problems in LCC. The expansion of the road in my eyes will cause just as many problems as it solves if ask me. In the winter the road already takes forever to plow and it doesn't stay safe for long if there is heavy snow and widening the road is only going to make this a more daunting task. Not to mention the landslide potential after this year's avalanches and the time the road would have to be down to build said tuneless. The gondola would just be better in my opinion	Jacob Braun	Website
3148	leaving LC as pristine as possible is the ultimate goal. subsidizing and expanding the resorts (especially ones that keep trying to close forest service roads in AF Canyon) are unsustainable, there should be a limited number of passes available and leave it up to the resorts to get their customers up the canyon in the fewest number of cars or buses.	michael devries	Website
3149	I am for the gondola	Chelsea Seifers	Website
3150	I support the gondola option. Less concrete, cars, and pollution.	Tyler Rice Rice	Website
3151	I support the gondola, though would more strongly support a La Caille base station as a part of it.	Stefan Brems	Website
3152	Please consider putting in the gondola and base station to reduce traffic in LCC.	Hyrum Mortensen	Website
3153	This will effect many animals and will take away from the amazing view of little cottonwood	Naomie Phillips	Website
3154	Having grown up in Sandy, I have spent hundreds of hours up Little Cottonwood Canyon. I support the gondola and La Caille Base option.	Spencer Odom	Website
3155	I support the gondola, more cars would deteriorate Utah's natural beauty	Daniel Tang	Website
3156	I am writing to say that I am in favor of the Gondola. However, I believe that if there is a way to allow private enterprise to pay for and operate the gondola instead of using government funds that would be a much better solution. Just let the ski resorts build the Gondola and charge what they will for the service. And if people don't like it they can always opt to drive up the miserably traffic ridden canyon.	Cody Harris	Website
3157	Gondola for the win!	BJ Emery	Website
3158	Gondola from base is a great, long-term solution to a problem that is only going to get worse with traffic up a 2 lane road to 2 popular winter destinations. I am a 15 year season pass holder at Snowbird. The Ikon pass has crushed the canyons and solutions are needed as skiing will only become more popular.	Michael Ayre	Website
3159	I already submitted prior to the new gondola base. I am in support of the La-Caille base for the gondola. I do think we need to be thinking summer still, so building a gondola that could do stops at Tanners and White Pine could be worth it to look. The La Caille base seems to offer the most parking and best option to get the most amount of people off the roads.	Megan Collins	Website
3160	I support the Gondola and La Caille base station options. It would be great to see our community come together to solve the congestion problem in the Cottonwood canyons with an environmentally progressive solution.	Scott Selman	Website
3161	If you build a gondola use a United states based chair lift company!! And vail has a gondola that you could put cargo cars on to get food and such up the hill. I would look into that option for long storm cycles when the road is closed.	Mike Wandrie	Website
3162	Hi I'm writing in support of the Gondola Plus the La Caille Base Station as the preferred option. I think this sounds like the best and most efficient option. Without the La Caille Base Station, I think the gondola would be underutilized as tourists already don't utilize the current bus solutions. From my experience, taking the UTA buses in the past mostly consisted of other locals. Add in the need to take a bus to the base station first, and I think a lot of people would just rather drive than take the gondola. I think the convenience of onsite parking at La Caille would make it a much more attractive option for people to use. It'd definitely be the option I'd use most regularly if available. Without onsite parking for a gondola, I think widening the road and improving the bus system would be the next best option. However, I am concerned with the environmental impacts of this option.	Chase Austin	Website
3163	Please don't pave more of the canyon and ruin it! Gondolas are the best solution.	Heather Wybrow	Website
3164	Little cottonwood needs to be preserved however possible. Let the experts decide what will be best but please do what's going to be best for the environment as well as the canyon and NOT what will generate the most money.	Jordan Marrott	Website
3165	Love the gondola proposal. Also, can we connect Solitude or Brighton to Snowbird or Alta via a ski lift?	Eileen Elam	Website
3166	Hey ya'll, this gondola idea I've been reading about sounds like it would be the perfect solution to the high traffic and congestion problem facing little cottonwood canyon. I hope you really consider this option as it would substantially decrease traffic, improve air quality during the rough winter months and preserve the beauty of little cottonwood. I could see an additional bus lane being beneficial but no tunnels. Come on guys. Best of luck with the decision making!	Joseph Pace	Website
3167	Please make the gondolas happen. Less pollution, and less accidents, less fatalities	Duri Arquishc	Website
3168	Reducing emissions and making travel to and from ski areas easier seems like a no-brainer	Ilya Gershgorin	Website
3169	The gondola would be a massive eyesore. Towers and lines going all the way up the canyon is not what we need. Please just widen the road. A tunnel going through the mountain is a lot nicer to look at than metal towers. Please please please just widen the road	Danielle Rosett	Website
3170	GREAT idea. hits all the buttons and preserves a beautiful area from encroaching growth with it's related ills. YES PLEASE	Joanna Hansen	Website
3171	Do not make Little Cottonwood into a freeway like road. The choke point for the canyons is the roads off of Little Cottonwood. It will make traffic worse to have more lanes going into to 2 lane roads. There will be more and longer back ups. You could make a lane where cars going up the canyons have to pull into to let regular traffic flow. Or when there is avalanche control going on issue time slots to go up the canyon via text message alerts.	Jennie Altice	Website
3172	No gondolas. Keep LCC the way it is. Get rid of Ikon pass and the traffic issue will also follow.	L Nguyen	Website
3173	Hello, As California-based skier who visits to SLC and Snowbird/Alta every year, I strongly support the gondola + La Caille base station option for Little Cottonwood Canyon. I support this for three reasons: 1/ I care about our environment and this plan diverts car and bus trips to gondola trips. Those gondola trips can be zero emission. 2/ It improves the quality of the commute and de-stresses riders. As someone who's been stuck in LCC traffic jams many times, I can attest to how frustrating the experience is. Sitting on a bus isn't much better than driving. Being able to glide above it all is a great way to start my day and will frankly make me more likely to pick Snowbird/Alta over other ski destinations in the future with sub-par transit options. 3/ It is most multi-modal friendly. La Caille specifically will make riding the gondola very attractive given the shorter travel time and no need to transfer twice (car->bus->gondola) in order to reach the mountain. This is a no-brainer, just ask any city commuter about their preference for direct commutes with fewer transfers. Thank you for your consideration.	Stephen Lambe	Website

3174	Do not make Little Cottonwood into a freeway like road. The choke point for the canyons is the roads off of Little Cottonwood. It will make traffic worse to have more lanes going into to 2 lane roads. There will be more and longer back ups. You could make a lane where cars going up the canyons have to pull into to let regular traffic flow. Or when there is avalanche control going on issue time slots to go up the canyon via text message alerts.	Jennie Altice	Website
3175	In favor of Gondola Plus La Caille Base Station	Lance Manning	Website
3176	I think the gondola is a much better, more sustainable solution for Cottonwood Canyon. Already the parking lots at Snowbird and Alta are jammed packed during peak season and eliminating cars is a great way to keep the mountain more accessible and eliminate emissions in order to protect our winters!	Madeline Hoover	Website
3177	Gondolas are way cooler than roads.	Gavin Sultz	Website
3178	This proposal appears to be at least one effective method for addressing the issues of traffic and crowded areas. It would even a nice, scenic ride year-round.	Donald Leach	Website
3179	I support the gondola	Phillippe Visintainer	Website
3180	We have been skiing Little Cottonwood Canyon for over 40 years of winters, as well as visiting the Canyon at other times of the year. Adding more lanes, more traffic, and inevitably more pollution to the Canyon would be a disaster equivalent to building an Interstate into Yosemite and paving over the floor of that valley into a smog-filled parking lot. Our recent 2019 trip to Zermatt, Switzerland confirms the value of strictly limiting vehicular traffic access to an absolute minimum in favor of the proposed Gondola and La Caille Base Station plan. Little Cottonwood Canyon is a fantastic resource for Utah and the Mountain West. Please, protect this uniquely Alpine destination, rather than turning it into a parking lot fed by traffic jams. The dividends will be enormous and last forever.	Thomas Patch	Website
3181	I am supportive of the idea of a gondola in LCC	James Burritt	Website
3182	I support the idea of a Gondola in Little Cottonwood Canyon. It seems like the best option for a clean air transport system to access Snowbird and Alta	Tomí McCarthy	Website
3183	i support the gondola approach	Greg Young	Website
3184	The Gondola Plus the La Caille Base Station is a great idea. It's a sustainable solution that eliminates polluting vehicles. Please consider this option.	Shane Moreno	Website
3185	When will this be completed?	Peter Clark	Website
3186	I urge you to choose the La Caille Base Station and Gondola option to preserve Cottonwood Canyon.	Douglas Caputo	Website
3187	Vote for gondola	David England	Website
3188	No more traffic up LCC please. Go with the sustainable gondola.	Charles Felzer	Website
3189	NO GONDOLA!	Steven Jacobson	Website
3190	This is the best option currently for transporting people and goods to the resort. I am sure many of us would use this service.	Robert McCowan	Website
3191	I had not seen the map when I submitted the first comment. The Gondola plan does not go far enough. IMO. The Gondola base should be located at the Juncture of the 209 and Wasatch Blvd, at least, if not located at the Transportation hub on Ft. Union. It does not make any sense to require Gondola users to drive any distance up LCC, or to take a bus to the Gondola base station. Putting the Gondola base station defeats much of the purpose of providing the Gondola in the first place.	Maurice Mandel	Website
3192	I support the gondola alternative. This seems to be the safest option due fact that extra busses are at risk of avalanches and sliding off the road during snowstorms. This also seems to be the least expensive, least destructive option as snow sheds and an extra bus lane seems like a massive project that it seems would displace a lot of land next to the current road.	Aaron Wilson	Website
3193	I vote Gondola	Jonathan Gal	Website
3194	I support the gondola and base station option for reducing congestion while expanding access to the beautiful Little Cottonwood Canyon. This proposal makes the most sense given the other options and I hope it is adopted for implementation. Respectfully, Eric Pomerantz	Eric Pomerantz	Website
3195	More cars, more buses, more lanes and massive concrete tunnels are not the solution to transportation in Little Cottonwood Canyon. The Gondola Plus La Caille Base Station is a way to get cars out of the canyon and off Wasatch Blvd.	Robyn Arzate	Website
3196	I'm in fully support of less cars in the canyon. A system must be in place to prohibit buying yourself a "permit" to use your car for skiing. Like a special club etc	Lars Friberg	Website
3197	I support the development of a gondola + La Caille base station in Little Cottonwood Canyon. I believe that this option will provide the greatest long term benefit, both in terms of convenience for outdoor recreation as well as watershed and environmental preservation in the face of an ever growing Wasatch Front population.	Reuben Watkins	Website
3198	Hill I support the gondola plus La Caille base station because it's safer, clearer, and smarter. This would be an added bonus for our winter ski trips!	Kristen Lewis	Website
3199	As a neighbor of La Caille and Little Cottonwood neighborhood resident, I fully, 100% support this solution. It is the ONLY way to deal with the horrific overcrowding in LCC.	Matt Craven	Website
3200	This is an excellent idea.	David Kambic	Website
3201	I believe the Gondola project would be the most effective use of long-term resources for this project.	Andrew Cottrell	Website
3202	I am old and have handicapped parking due to 4 hip surgeries. It is getting harder and harder for me to get around in ski boots. I cannot use steps in ski boots nor can I walk very far. I don't have a problem once I get on the snow with my skis. I don't know which option is best, probably the Gondola, but I need close parking at the resort. I usually go up early so I can park right at the snows edge, otherwise I will not be able to ski.	Mark Spencer	Website
3203	As a lifelong visitor to Little Cottonwood Canyon, I strongly urge UDOT to consider the Gondola Plus La Caille Base Station option for transportation up and down Little Cottonwood Canyon. A gondola is an ideal method to avoid increased car and bus pollution, decrease traffic and increase safety during adverse weather. I have certainly had my share of scary drives up and down that canyon in and after big snowstorms! A wider road and more cars and buses are not the answer. Rather, the gondola would provide a safer and less polluting option. The La Caille base station option would further reduce congestion with ample parking. Thank you for considering this option.	Olivia Lucas	Website
3204	Enhanced bus service is the best option in my opinion. While having the lowest average travel time, this will decrease congestion in the canyon which is already a drawback to the current bus service. Gondolas will create an eye sore both at the top and bottom of the canyon	Zach Clauss	Website
3205	Go with the Gondola. Make a lot of sense!	Robert Britton	Website
3206	great idea with the gondola - go for it.	Matt Hayes	Website
3207	The gondola is the way to go!	Eric McClain	Website
3208	With the air quality only getting worse by the year in SLC and the parking issue I am highly in favor of this gondola project!	Michelle Regner	Website
3209	When will this be completed?	Peter Clark	Website
3210	I support!	Kimberly Fox	Website
3211	As an annual visitor from Boston in winter, I am fully supportive of this project. The inconvenience of a bus and gondola would not discourage me from visiting in the future - particularly given the environmental benefits.	Brian Day	Website
3212	No traffic	Linda Ruonavaara	Website
3213	Yes to the gondola!	Matt Hotsinpiller	Website
3214	Gondola would be great up LCC!	Denitza Blagev	Website
3215	Build a model similar to what they do in Zion NPS. Busses only. No cars. No need to widen the road or build snow tunnels because if avalanches block the road it's too dangerous to ski anyways.	Sarah Kuntz	Website
3216	Please continue to study this option and perhaps a gondola from Midway to Alta from the East.	Matthew Medura	Website
3217	I totally support the gondola for Little Cottonwood Canyon. It's the right thing to do.	elisa templeton	Website
3218	I grew up in Sugar House and have been enjoying Little Cottonwood for the past 60 year. The increased traffic has become unacceptable. A new Gondola project is the way to go. The right solution with the lowest cost of long term operation. Now I live in Draper and would like to see the Gondola project seleted.	Martin Mates	Website
3219	Please, please reconsider any transportation plans that would maintain the status quo and negatively impact current and future generations. Don't be swayed by commercial interests that refuse to accept the impact of traffic in Cottonwood Canyon. Take this opportunity to consider alternative innovative approaches to this problem.	Victoria Gladstone	Website
3220	I think it would be a great option and help tourism, as long as it is affordable so people use it.	Natalee Lance	Website
3221	I think that gondola idea is awesome. I would fully support building a gondola going up the canyon. For me, that would be the best option As an avid cyclist that option that personally benefits me the most would be the peak period shoulder lanes that can be used by cyclists in the summer. That being said, the gondola option seems like it would be the best option for all parties. So long as operation of the gondola continued year round and not just in the winter.	Adam Brady	Website
3222	A gondola does significantly cut down on the total amount of gas traffic up the canyon improving the air quality, and would become a landmark that could draw people to Utah. I could very much see my family just taking the gondola up and down for the view with no intention of stopping at either resort during no peak days. In general I would support anything that makes the road safer for cyclists I do worry that most drivers will abuse the shoulder lanes in the same by either driving in them when they aren't supposed to or parking in them. Because of those concerns my preference would be for the gondola system.	Burton Hohman	Website
3223	We are residents in the neighborhood above wasatch Blvd. we oppose anything that is a disruption to the health and safety of neighborhoods in this area. Including expansion of wasatch Blvd. and rail systems going up and down our states beautiful Little and Big Cottonwood Canyons The preservation of big and little Cottonwood canyons are critical for the state of Utah. Nothing should be allowed but a gondola at the bottom of the canyons and a limit to the number of cars allowed in the canyons. Railways and more traffic in this area will devastate and pollute this Wasatch area Forever. Let's Find a way to Open new ski resorts in other mountain areas of Utah.	Shawna Blackhurst	Website
3224	I support the gondola concept as a long term solution to the traffic congestion in Little Cottonwood Canyon, as well as expanded parking in the immediate vicinity. UDOT should also be improving both Routes 190 and 210 into both Little and Big Cottonwood Canyons, widening where possible and providing "shed" or other avalanche protections. Every vehicle entering the canyons during the winter season should be required to go through an inspection process and obtain a pass to insure they can safely operate. An annual fee for such inspection should be charged by UDOT to help defray the cost of monitoring compliance and road improvements.	John Drew	Website
3225	I live on Little Cottonwood Road - without taking more of my property, please fix the canyon winter traffic issue. Too many vehicles still make it up with improper tires and don't know how to drive in snow besides the avalanche conditions.	Carol Hoban	Website
3226	Gondola Plus La Caille Base Station seems to be the only realistic long term solution. Please seriously consider this options. Thank you.	George Schmidt	Website
3227	I think the gondola is the best long term solution. I think buses should be increased but they aren't a good long term solution and we will have the same problem in a couple of years. The gondolas are a cool forward thinking idea that will add more than just traffic to the canyon.	Katherine Mikula	Website
3228	Please do it!	Spencer Ivy	Website
3229	I support the gondola! I think all options are great, but the gondola seems to be the most environmentally friendly.	Rose kirkendall	Website

3230	My vote is for the ? gondola!	Sarah Fillmore	Website
3231	I believe the gondola for LCC should be studied and seriously considered.	Frank Puleo	Website
3232	Please consider a ropeway for the canyon. It makes logical, financial and environmental sense. The advantages far exceed that of all the other options. Thank you	Ray Gardner	Website
3233	The gondola option would take way too long to get to the resorts and no one would use it! The enhanced bus plus is the only option that will reduce cars in the canyon.	Melissa Stringham	Website
3234	In the gondola draft, the transportation hubs are noted near commercial developments which makes sense due to the density of traffic that will surround these hubs. There are many people who propose this could be a viable solution, however, it has recently made known that a parking garage/ transportation hub has been recommended at the base of the canyon near residential area, which will continue to back up traffic on Wasatch Blvd while people wait to access the garage just as they have waited to access the canyons. And during the off season, this section of Wasatch would become a high speed commuter highway. I understand the resorts are backing this proposal and money talks. How has UDOT considered the thousands of children that cross Wasatch Blvd to access schools, parks, etc., and all of the residents that live in the area? Why was a gondola parking structure in this area never addressed in the virtual meetings and draft alternative plans?	Molly Sparks	Phone Comment
3235	I support the gondola option for access to the canyon	Bruce Dew	Website
3236	I am a Snowbird season pass holder who lives off Little Cottonwood Rd. I strongly support the La Caille Base Station Gondola for 3 reasons: 1) the only effective solution to traffic congestion; 2) efficient and safe transport to/from skiing in snowy weather; 3) environmentally friendly.	Alex Puchner	Website
3237	No to the gondola! It will take way too long for people to want to use it. Enhanced bus plus is the only option that will take cars out of the canyon. I also urge you to reconsider trax as an option. Let's invest the money now for the best possible solution.	Jack Stringham	Website
3238	I believe the gondola to be the best solution to LCC's congestion problem. As a sales representative within the ski industry, the increased participation and use of LCC has been good for business. However, congestion in LCC is a problem for the tourism and can be a poor experience for those visiting from out of state, in addition to our local season pass holders. Increasing vehicle traffic capacity in the canyon will only generate additional pollution. I hope to see UDOT make a progressive, responsible decision and move forward with the gondola and the LaCaille Base Station solution.	Stephen Sramek	Website
3239	Adding a gondola at the way up lcc would look so ugly I not to mention the huge parking lot no gondola more buses add a lane gondola will cost tax payer way to much get rid of th ikon pass in lcc that will also help	Aaron Arnold	Website
3240	I support the tram. I travel to Snowbird/Alta every winter from CO, park at the base, and take the bus. Increasing buses helps but doesn't address the long term usage of LCC. Look at how the addition of a bus/no car system in Zion or Yosemite has drastically help increase the user experience of these parks by minimizing the number of cars in the canyon. Adding more lanes will just increase the number of cars in the canyon and does not address long term usage. My vote is for the tram! Leave your cars at the base! Take an existing bus if you care climbing or hiking lower down in the canyon than Snowbird. Great idea!	Eric Mayhew	Website
3241	I live in Sandy off of Highland Dr and 9400, and I support enhanced bus service and am opposed to the gondola. A gondola is not going to resolve the traffic problem in our neighborhood with every single car funneling into a single parking lot. A gondola is also useless in the time of COVID, and people will have to wait in long lines for the gondola just like they sit in traffic. I believe an enhanced bus system similar to Zion national Park is the best solution. I believe there should be busses running constantly and direct to each resort from multiple pick up stations in the valley. The road should only be open to private vehicles with Alta/Snowbird residents and employees and those carpooling with 3+ people. Everyone else should ride the bus. People would have more incentive to ride the bus if there were more lockers available at the resorts so they don't have to carry their skis and gear up and down the canyon everyday. Installing more lockers and running more buses should be tested before spending so much money on the gondola.	Kristen Bor	Website
3242	Let go 100% on this gondola babay	Ian Pawlak	Website
3243	I would support the Gondola option. Safer, Cleaner and more sustainable	Ryan Boyack	Website
3244	I think any proposal that limits the traffic up LCC and gets us there faster is definitely worth pursuing. Environmental concerns are very important to me.	Mark Brown	Website
3245	This would provide for a greater experience for tourists as well! Traffic issues resolves and less worry during unsafe driving conditions.	Spencer Stites	Website
3246	The gondola is finally an opportunity to try something else. More busses will be more of the same. The gondola will be nice for locals and tourists and has a real potential to look to the future.	John Canner	Website
3247	By expanding the road and blasting tunnels you will be ruining hundreds of acres of recreation areas and diminishing what we as utahns love about our mountains	Dallas Weaver	Website
3248	Please save our canyons. I support this gondola	Andrea Page	Website
3249	Our family supports the gondola plus the la Caille base station.	Julianne Bateman	Website
3250	Go for the gondola! Transport solutions , not more traffic!!!!	Kathleen Hazard	Website
3251	As a life long user of Little Cottonwood canyon, I've watched with interest the various plans to alleviate traffic in the canyon, which is sorely needed. For the gondola option to be viable, I agree with the gondola plus La Caille base station. I think the disjointed solution of placing a parking garage a distance from the base station that requires an extra bus or shuttle is misguided and results in a cumbersome experience. Move the gondola base station to the proposed parking lot and I think you have a good solution.	Adam McFarland	Website
3252	Enhanced bus with roadway widening.	Lucas Bush	Website
3253	I am a long-time timeshare owner at the IB (over 20 years). I have been coming to Snowbird for over 30 years (usually 1 to 1.5 weeks a year). I do believe that traffic in the canyon has become a problem, however I do not believe that additional bus service is the answer. I believe that the best of the three proposals would be to install a gondola, which is the only option for taking vehicles completely off the canyon road. Thank you for allowing me to voice my opinion. Regards Larry	Larry Tabb	Website
3254	I support and will use the Gondola. I ski approx 20 days per year at Snowbird mainly mid week	Tom Uttley	Website
3255	Please help us to preserve the canyons, I support the Gondola project.	Gloria Arriaga	Website
3256	I have been skiing Alta resort at least once per year & many times more for the last 25 years. Based on this experience I believe the best option is to have a gondola with parking at the gondola base. And expandedBus service with increased frequency and longer hours than presently exist.	Joseph Vaughn	Website
3257	We support the gondola plus the la caille base station.	Bryan Ganz	Website
3258	I am a property owning resident of Holiaday and find the gondola to be the most sensible option. If you've spent anytime in the Alps you'll find this will work better and have the least environmental impact.	Christopher Kawchak	Website
3259	I totally support the Gondola plus Station. With the growth in Utah, we need a transportation system that does not make the air dirtier up little cottonwood. The Gondola seems to be the most logical especially with an increase in tourism. Increasing the size of the road will allow more cars to pass but there will be more traffic with more cars, only making the pollution worse. Let's do the Gondola!	Tyran Heaton	Website
3260	Gondola	JANE Aune	Website
3261	Please take a long term, holistic, and international view of this issue and the alternatives. Little Cottonwood provides some the best ski terrain in the world and absolutely the best quality snow, rivaling or surpassing other North American and European ski areas by those measures. The canyon dramatically lags other areas in transportation infrastructure and even the "leaders" in this category have not implemented truly environmental responsible transportation systems for the most part. Installing a gondola is Utah's opportunity truly to attain skiing's best of class by all measures.	Rodney Willett	Website
3262	We support the gondola plus the la caille base station.	Eugene Weymouth	Website
3263	I support the GONDOLA PLUS LA CAILLE BASE STATION option as it is the most efficient, long term and environmentally green option.	Kaushal Jarriwala	Website
3264	I'm not local, but I've been doing at least one trip a year to ski in SLC with a group of friends for the past 20 years. Our group likes to stay in Sandy and drives to a different ski area each day. At first I thought the gondola idea sounded pretty cool and something we would use, but then I read a bit more and the fact that you need to park and then take a bus to the gondola station kind of killed it for me. Seems like not having the parking and gondola base station together is just doing half a job. If there's going to be a gondola, it really needs to go all the way to the parking structure.	Forrest Brown	Website
3265	We support the gondola plus the la caille base station.	Bradley Ganz	Website
3266	Please don't allow more cars and more roads to ruin our beautiful land. Now is the time to move towards a more car-free society. This proposal sends a powerful message that we are actually doing something.	Nicholas Love	Website
3267	We support the gondola plus the la caille base station.	Brenda Biesinger	Website
3268	I support the gondola	Ian Percy	Website
3269	Good idea	Vernon Borgeson	Website
3270	Please consider the La Caille gondola base station idea! This seems like a very reasonable solution that has little impact on the canyon overall and could be a much more enjoyable way to get up the canyon in both summer and winter.	Tyler Hooper	Website
3271	I support the gondola plus a base station with plentiful parking. I don't support remote parking lots that require busing to a gondola base station to transfer to the gondola. People will resist having to park, haul their gear to the bus, get in line for the bus, get off the bus and haul their gear to a line to get on the gondola. Spending the extra money on parking facilities at the gondola base station will be well worth the benefits in getting people out of their vehicles and onto a gondola. Having mainly covered parking will be perceived as a benefit in inclement weather. The parking structure should be carefully designed to consider the unique criteria to successfully support ski parking. It is very different than parking for an office building or retail mall. The vehicles are typically larger and occupants typically spend time with doors and tailgates open to unload and load gear, put on and take off boots and clothing, and unload and dress children. These actions require space to safely accommodate adjacent parking and to not impede the flow of vehicles in drive aisles. Therefore parking space width should be adequate for larger vehicles, parking spaces should be double striped to allow room between vehicles for opening doors, and drive aisles should be widened to safely allow vehicles in drive aisles to safely pass parked vehicles with persons standing behind open tailgates and wide enough to allow larger vehicles to park without multiple turning movements in the drive aisle. The turning radius for drive aisles should be larger than typical to comfortably allow larger vehicles to pass and should avoid blind corners. The parking structure should have good lighting and blue light emergency phones. Elevators should be oversized to accommodate skiers and boarders with gear, families with strollers, etc. and spaced as to minimize distances that people have to walk in drive aisles. Don't cheap out on the parking structure! There will be alternatives presented that will show more parking spaces for a lower cost, but they will not function appropriately or safely for skier and boarder parking. I support the gondola alternative with the addition of an enhanced parking structure designed to special criteria to safely and successfully support use by skiers and boarders. Eric Tolles	Eric Tolles	Website
3272	I think that the gondola option should be implemented, I think it will do the most to reduce congestion in the canyon and is the most effective long-term. I grew up in Denver, and I've seen how bad I-70 has become with ski traffic. Colorado has tried to add another lane but it hasn't helped the traffic at all, if anything it has made it worse because the road feels tighter with 3 lanes instead of two. I think if the road up LCC is widened it won't reduce congestions by very much, and in a few years it will be just as bad if not worse than it already is. A gondola should be built, along with restrictions for letting people only drive up on weekends if they are carpooling.	Tanner Lewis	Website
3273	The gondola makes the most sense. I also think the cool/wow/fun factor of it would make it more attractive to guests, raising the usage of it and lowering congestion of the canyon. One of the things people dislike about buses is they can get cramped and smelly, but a gondola is a bit better with seating, spacing, and interior materials used.	Erin Coleman	Website
3274	I support solutions that encourage the use of public transportation in the canyons and discourages personal transportation. In addition to a gondola or tram system, a use fee should be implemented for vehicles traveling in the canyon. Even with the current busses there are still too many people who don't use them because it is simply more "convenient" for them. Until it becomes less convenient the problem will continue	Mark Nischalke	Website
3275	I support the Gondola option.	Jeff Kirschenmann	Website
3276	I think that the Gondola Plus La Caille Base Station is the best way to keep cars out of LCC and improve the canyon experience for all visitors. A gondola will make it so that weather issues are much less likely to impact traffic.	Eric Brandolini	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
	UDOT - I am an avid Utah skier for nearly a decade now and try to spend an average of 18 days per season in the Cottonwoods. I primarily ski Snowbird and Alta for the quality of the resorts, the stunning scenery and the unparalleled experience.		
3277	I have been following the discussion around what to do about the growing popularity of LCC and the litany of growth problems that accompany such increases. After reviewing the Gondola proposal, I urge you to support this direction. Coming from New Jersey, I have invested considerable monies in Utah vacations over the last decade. Lately, that investment has been increasingly affected by rising traffic, lack of resort parking and closed roads resulting from avalanche conditions affected by extreme weather patterns. The Gondola solution to me seems to be the only solution on the table that would resolve most of the pain points above while also preserving the exceptional environmental and adventure qualities LCC offers. It would also make my investment in travel to the area more predictable - knowing that I will almost always have a way to get the on-mountain experience I and many others around the world flock to LCC seeking. Regardless of this issue, thank you for your hard work in maintaining LCC. I know it is a monumental task. I sincerely appreciate the work, risk and enthusiasm put forward so we can enjoy our sport. Go Gondola!	Steve Sost	Website
3278	I'd like to submit a comment in favor of the gondola proposal.	DANIELLE DEBOER	Website
3279	I am a Little Cottonwood Canyon resident. I strongly OPPOSE widening the road or adding tunnels. The entire basin is a natural resource, not simply a transit area to reach the resorts. Full environmental impacts to the entire canyon — including view shed, traffic, construction impacts — of any work must be evaluated.	Edward Sondey	Website
3280	This sounds like an interesting solution!	Micha Jeppsen	Website
3281	I strongly support the gondola alternative.	Eric Reische	Website
3282	We need help with the congestion and this seems like the most workable plan with the least impact	Ron Thrapp	Website
3283	I'm a Utah native and have been skiing Little Cottonwood for 40 years. I support the gondola plus La Caille base station as a good solution for traffic congestion. I would be more likely to use it versus taking a bus. And I prefer its moderate visual pollution to the actual emissions-based pollution of the other options.	Patrick Griffin	Website
3284	I prefer the gondola to any other choice for Little Cottonwood Canyon	Ingrid Schmidt	Website
3285	Gondola is a great idea	LINDA CARRUTHERS	Website
3286	As someone who uses SR-210 about 100 times per year, I believe we desperately need to consider new options to improve access. Ultimately the best option is going to be a gondola. This will relieve pressure on the highway by providing a superior, weather-resistant alternative for traveling to and from the ski resorts while preserving down-canyon access for backcountry users. Furthermore, while I don't understand all of the financial details, the La Caille option seems like a much better configuration than attempting to place a gondola station at the mouth of the canyon.	Benjamin Stokes	Website
3287	I've been skiing in the Little Cottonwood Canyon for 30 years, since I was 3 years old. Some of my best memories have been there - in fact most people who know me know this is my favorite place in all the world. Please vote to help protect this area for future generations. By building a gondola, we can reduce carbon emissions, while giving more people access to this wonderful terrain. More time on the mountain, less time in your car in traffic. Win, win. Gondola, gondola, gondola!	Maya Ripecky	Website
3288	While I am not an Utah resident, I have enjoyed skiing at Alta and Sunbird and believe the Gondola would be a very practical solution to traffic in the Little Cotton Canyon. BUILD THE GONDOLA! Stop trying to push cars and buses up the canyon.	Roger Dellinger	Website
3289	The current situation is unsustainable. The current level of traffic for skiing is ruining the Cottonwood Canyon experience. We've known about the problem for years and now that we're at a crisis level we should act!	Coleman Barney	Website
3290	I definitely support the gondola option.	Paul Petersen	Website
3291	I am in support of the gondola from the base of little cottonwood canyon. The traffic has become unbearable.	Matt Alcone	Website
3292	I don't live in SLC area, but visit two or three times a year. I stay in the Cottonwood Heights area and have encountered the traffic to Snowbird and Alta. It is pretty bad for the most part. I believe that an alternative method to get people to those areas is needed and that the gondola may be a method to do that. It would also be a very interesting tourist attraction and could prevent accidents at times.	Mark Dunn	Website
3293	Little Cottonwood Canyon is a precious natural area that needs to be kept wild. More tunnels and lanes always equal more traffic congestion, it does not clear up the problem and will destroy our wild lands in the process. A gondola is a solution that minimizes pollution and traffic while maintaining the gorgeous vista. I have been skiing Alta and Snowbird for 12 years and even just seeing this road/tunnel "improvement" project is really disheartening. We cannot keep destroying our wild places because more humans want to drive in cars to get to them... let's maintain our sensitive natural habitats and use a gondola solution instead!	Vanessa Roscoe	Website
3294	I support a rail system up the canyon as that would quickly move large groups of people up the mountain. A gondola system is far too slow and would produce a massive bottleneck waiting to board the gondola to head up the canyon and to return back down the canyon. Then the trip up the canyon, while aboard the gondola, would also be too slow. Widening the road is the next best option to a rail system. However, if the road is widened, the additional width should be available to all traffic, not only buses. This would allow more people up the canyon quicker, reducing congestion. I oppose restricting parking on the roadway near resorts or elsewhere. Parking on the roadway should be available and legal wherever road width permits. This allows people to park at various locations throughout the canyon and recreate throughout the length of the canyon. There needs to be a large parking structure, or multiple structures built to increase parking AT THE RESORTS. There is no reason to widen the road to get people up the canyon faster if there is nowhere for them to park. Don't invest in parking structures at the bottom of the canyon-- widen the road, and provide for people to park at their final destination.	Taylor Briggs	Website
3295	I love little cottonwood canyon, but it has been crazy the past couple years with the traffic. It would be nice to have this so that we can travel safely and help the environment.	Karsten Lewis	Website
3296	Less cars in the canon. I don't care if we get there by train, trolley, or T-bar. Less cars in the canon (including busses). If the gondola can make it happen, let's make it happen. And it's scenic!	Nathaniel Binversie	Website
3297	I strongly favor enhanced bus service and no widening of the LCC road. This plan can be implemented quickly and affordably to a wide variety of users with the lowest environmental impact. I think minimizing traffic up and down LCC would be good for the environment and our personal outdoor experiences. I'm tired of smelling burning brakes!	Stephen Brown	Website
3298	I have a few concerns/questions: 1. For all three proposals – How do you get people to change their behavior and actually take public transit? For the #1 (enhanced bus) and #3 (gondola), those times are double what it would take a personal car. For all of these proposals, about a 1/3 of people are still driving. Let's do better! These proposals don't solve congestion. 2. In theory, I like the idea of an added bus and bike lane (#2 enhanced bus with lane expansion); however, there are several roadside boulders that contain world-class climbing (e.g. Cabbage Patch, Secret Garden, Five Mile, the Hill, & White Pine). These climbing areas must be preserved. I don't think you can widen the road and maintain these recreational assets. 3. What will be the associated costs to take public transit? Can locals at/below poverty line enjoy LCC or just the rich out-of-state tourists/skiers? Why not change the driving & public transit paradigm? Let's do free buses and pay to drive (exceptions could be made for residents who live FULL time in LCC). 4. Express and frequent stop bus options should be considered. Personally, I climb lower in the canyon in the winter, so I'd benefit from more public transit stops; however, that would madden a resort skier (and they'd just take their personal car... leading to more congestion, pollution, etc.). Also, are you planning additional bus stops or just ones the ski resorts? There's more than just ski resort recreation in LCC!	Tailie Casucci	Website
3299	Let's keep Utah active	Greg Holzkamp	Website
3300	The Gondola solution only makes perfect sense as highway traffic will only get worse as it has since the world finally discovered Utah skiing.	Larry Siglin	Website
3301	Great solution. Environmentally friendly. More flexible in case of future changes. I will be bummed because more people will get top the mountain on days when the road is closed, but this is better for UT and the world.	Steven Levy	Website
3302	I believe that a gondola going up LCC would be beneficial for most.	Cod Mays	Website
3303	I think the La Caille gondola option should be considered as an alternative to widening roads and building tunnels. Please don't pave more of the canyon and encourage even more cars up in our pristine and irreplaceable canyons! If the roads are widened instead of putting in a gondola, then more cars will go up the canyon which will just cause a parking problem at the top, requiring either fees to park, or building more parking structures up top, or both. Moreover, with more traffic able to get up the canyon, whose to say we won't be having this same discussion about needing even wider roads and more construction in the canyon in another 5-10 years? It's a cycle of fixing a symptom instead of solving the root of the problem in my opinion.	Andrea Hooper	Website
3304	I vote for the long term sustainable option to build a Gondola.	Martin Johansson	Website
3305	I support going with the gondola option, to keep traffic down in Little Cottonwood Canyon.	Clint Hanni	Website
3306	Please choose the gondola! Preserve cottonwood canyon for future generations! Less automotive traffic is inherently better.	Alec Gonos	Website
3307	I strongly support the gondola option. It is best to preserve as much of the Canyon for future generations and to slow everything down there—instead of ramping up the activity and making the Canyon less attractive to visitors.	Theodore Schatzki	Website
3308	I would like to voice my support for the gondola option. Adding more buses and pavement in the canyon will not preserve it like it should be. Please choose the gondola.	Katie Greene	Website
3309	Fully support the Gondola idea for LCC!!! We need to build innovative solutions to protect the beauty of our sacred land and clean air. Please do this and set an example for others to follow.	Mike McConnell	Website
3310	I vote for the gondola	Eric Bloland	Website
3311	Gondola transport in/out of Little Cottonwood Canyon is a very good idea. Once gone (e.g. wider roads, more traffic & buses, etc), the beauty of the canyon can't be replaced. Public road access should not be prohibited, however. Keep both means of transport available.	Tom Livingston	Website
3312	Make the La Caille gondola	Carter Allen	Website
3313	I support the Gondola and think that's the best option to preserve our canyon.	Amanda Romualdo	Website
3314	I support the Gondola	Mauro Romualdo	Website
3315	I wholeheartedly support the proposed Gondola as by far the best way to provide enhanced access to Little Cottonwood Canyon while preserving its beauty and avoiding the enormous pollution that already exists and would be very greatly increased and exacerbated by the other alternatives.	James Wavle	Website
3316	I would support the gondola if the base and parking were at the mouth of little cottonwood - otherwise a gondola makes ZERO sense	Josh Christensen	Website
3317	I fully support the Gondola idea as it's the only real viable solution. We don't need more buses on the road.... we need to get cars OFF the road and implement more innovative, clean air solutions that set an example for other towns to follow. Please create the Gondola for LCC!!	Belinda McConnell	Website

3318	<p>Dear Sirs:</p> <p>I think UDOT should adopt the Gondola option PLUS the proposed LA CAILLE BASE STATION to solve the Little Cottonwood Canyon transportation problem.</p> <p>https://gondolaworks.com/</p> <p>Having the gondola option during the winter with parking at the gondola base is especially enticing. I would also take the gondola during the summer to get to the condo at Iron Blossam Lodge, enjoying the scenic ride instead of having to concentrate on driving.</p> <p>Thank you,</p> <p>Mel Fullmer Salt Lake City</p>	Mel Fullmer	Email/Website
3319	Let's goooooo!!!!	Gavin Piva	Website
3320	The gondola option is the best one to alleviate traffic congestion and accompanying pollution in LCC. For any of the above options, a toll booth that charges single occupant, noncommercial/nonresident drivers a fee that would be higher than that for a multi-occupant car, would help. Additionally, it would be great for a shuttle to be available at Alta and Snowbird during the summer months that can take gondola riders to & from popular trailheads in LCC to alleviate parking congestion.	Tara McKee	Website
3321	<p>I support the gondola plus the La Caille base station. The systems we put in place now need to be systems designed to service the future. Sustainability is key in every decision made today for this reason. Additionally, as traffic is projected to increase to snowbird and Alta, the addition of extra cars and extra lanes will only be a bandaaid, a short term solution. It will create a heavier burden on snowbird and Alta to pave more paradise to accommodate more cars, and will discourage more patrons from making the trip because the "traffic is horrendous". What Utah Skiing has over other ski hubs in the US is accessibility. Get out of the plane, or walk out of your home, and be on the mountain in 20 minutes. This is what I brag about to non-Utahns. Traffic hasn't allowed for this at snowbird/Alta even if you live at the base. The gondola will solve this problem. It would be a win for locals, tourists, the resorts, and the environment.</p> <p>Thank you, Isha Varma</p> <p>Ps- I will be getting married at snowbird next summer. I wish this would be an option for my guests so they don't have to worry about drinking and driving up and down the canyon. Too many accidents have happened on that road, a gondola would easily prevent accidents and save lives.</p>	Isha Varma	Website
3322	I fully support the gondola idea!! As long as operational time started early in the morning for employees of the resorts and for people to start lining up at the top rather than the bottom. We dont want to see more bottlenecks like the gondola at snowbird	Alec Wodowski	Website
3323	I support the Gondola Plus La Caille base station. Please don't pave over LCC.	Matthew Morgan	Website
3324	I like the idea of the Gondola but fell option 2 is the best mix of public bus transit, getting families up there in their cars and a huge win for cyclists during the non-ski months. For me time to resort from home to chair is what we are aiming for. The gondola route takes too long with too many steps. It will fall flat because of that. I have a family of 7 and none of this makes sense for us to take any of the public options. But if there are only a couple of us, I'd take an expedited direct bus ride to Alta.	Kevin Pferdner	Website
3325	The gondola would be a great solution provided it has enough capacity I. The mornings and opens early enough. This important to backcountry skiers as well as resort skiers.	Pete Stone	Website
3326	I would love to see a gondola go up Little Cottonwood Canyon. The traffic is taking the joy out of skiing. Our family is affected greatly. I can only image our tourism will be affected as well. Soorya Louder	Soorya Louder	Website
3327	I support the gondola solution with the terminal near the mouth of LCC. Sunshine Village in Banff has a similar solution that works efficiently. Additionally, I support the construction of a parking garage at the mouth of BCC to replace the existing parking lot and encourage more people to bus up both canyons in the summer and winter.	Conner Callahan	Website
3328	Please build the Gondola!	Stan Freeman	Website
3329	Outstanding proposal!Please make this happen!!! Been vacationing at Snowbird/Alta almost every year since 1979. Truly believe plan is exactly what's required to take your "skiing magic kingdom" into the next 50 to 100 years!	Jim Merriman	Website
3330	Gondola Option is the best solution for L.C.C. transportation.	Chip Robinson	Email
3331	I am a cottonwood heights resident. Why have we become the parking lot for the ski resorts? Every decision made in our community is for the ski resorts. I would like my tax dollars to go to resurfacing tennis courts, more open space for my kids to play.... not more traffic and parking lots!!! This is awful, our beautiful city is being destroyed by city planners, UDOT and the ski resorts.	Michelle Cowan	Website
3332	So the issue with a couple of the better options- like the gondola and the bus service increase are- that doesn't solve the traffic issue. Where are people supposed to park to get on the bus or the gondola? If there is no where to park, there is no incentive to use either of those options so you are back to the same problem with have now. A junk show getting to the base of the canyons- let alone up to the resorts.	Holly Ricker	Website
3333	Gondola La Callie option!	Libby Jacobs	Website
3334	The gondola sounds like the best long term option.	Michael Ball	Website
3335	I support a low emission solution to resolve the traffic situation on Little Cottonwood Canyon , and also one that doesn't include road widening, tunnels, etc. The latter would destroy the beauty of the Canyon.	Serge Papasergiou	Website
3336	I am in support of the gondola and LaCaille base station options. I do not think that expanding the road or increasing vehicular bus traffic is a sustainable option for Little Cottonwood. This gondola/base station option is consistent with a long-term acion plan that ties nicely into the city/area's transportation master plan. It is a leading best-practice that will grow nicely with future connections to Park City ski resorts and the airport. Not a great answer if you are a car rental company – but as a 'weekend communitier' that skis SLC all season long from Texas, I can tell you that nothing would make me happier than to not use a car when in SLC. Doubling-down on cars and roads just seems like a really, really bad option. Thank you.	Kenneth Martin	Website
3337	We need something different that big roads..We need to work for the nature ..We need green solutions..Thank you!!	Claudiu Tataru	Website
3338	The gondola seems like a no-brainer! The initial cost in excess the enhanced bus service without road widening will pay for itself in 25 years. And the lower environmental impact is well worth the additional travel time! I look forward to a scenic ride in a gondola up the canyon, rather than sitting in traffic in a packed bus.	Axel Estable	Website
3339	The gondola option is the best option for L.C.C. travel.	Donald ROBINSON	Website
3340	<p>I am a 61 yo female resident, now living in Millcreek, previously in the Avenues. I've lived in SLC for 33 years. I am a frequent and persistent canyon recreation enthusiast, in all seasons. Thanks for the opportunity to comment on this information. First, I see no information related to the environmental impact of any of the transportation options or the current traffic patterns. Please do not even suggest this is an Environmental Impact Survey (EIS) that is being conducted. This is a Transportation Plan and a Corporate Plan that is being presented by UDOT. The issue of LCC congestion is NOT just a winter problem and impacts much more than the ski resorts. Catering to the resorts is the wrong reason for investigating and proposing changes to transportation in LCC. The reason for change is to improve the air and access quality, minimize unfettered growth and expansion, and PROTECT THE ENVIRONMENT.</p> <p>I am in disagreement with each option as presented at this time.</p> <p>I believe a staged plan for reducing private vehicles and harmful emissions must be enacted, and the goal needs to be much more visionary than a reduction of 30% of vehicles in the canyon. This is incredibly short-sighted for the millions of dollars being "spent". Spending millions of dollars for each plan is unnecessary and will not likely be supported by the taxpayers, as much as they want to recreate in the canyons.</p> <p>1. I oppose the widening of the LCC road for any reason.</p> <p>2. Charge a toll to drive up the canyon - for every vehicle. Charge more for less passengers. Enact season pass pricing (weekly, winter, summer only, etc)</p> <p>3. If you charge a toll, traffic will reduce. Investigate this and report back to us. What is the effect of Millcreek Canyon toll? Other ski resorts? Where is your research and data?</p> <p>4. Identify the maximum number of parking spots in the canyon and restrict cars from getting onto LCC road at all when that number is met. (Tally must be prior to the LCC road to prevent congestion). This is a year-round system.</p> <p>5. Increase bus service year-round, all day, into evening. Investigate and report on the increased/ type of emissions this adds to the air in the canyon. Plan to steadily introduce smaller electric vans that car-pool folks from parking lots and hotel locations.</p> <p>6. Do not build snow sheds. It is much cheaper to plow the road and restrict road travel if/when a slide occurs. Unless you can present data that shows the most common locations of slides and the number we have had in those locations each winter season for the past 20 years.</p> <p>7. That data exists - please present it as rationale.</p> <p>Essentially, these plans are premature. There needs to be more extensive study and collection of data that supports each plan from an environmental basis.</p> <p>Try 1-2 changes, then monitor the effects, and better determine the root issues of traffic congestion.</p> <p>We all understand the amount of revenue that Tourism brings to Utah, and specifically the winter revenue due to our fantastic ski resorts. But tourists visit and leave this area and residents stay here. Do not patronize us by suggesting this is an EIS when it is actually a state of UT tourism advancement proposal. State the issue. And the ski resorts need to participate in funding a plan as it benefits them directly. Do not make LCC changes that only benefit the ski resorts. It is only 1 aspect of canyon life. Folks snowshoe, hike, backcountry ski, picnic, camp and live in the canyon and all deserve healthy air, healthy water, and pristine vistas.</p> <p>Respectfully submitted, by a hiker/skier/ snowshoer/ photographer and resident of SLC.</p>	Denise Keenan	Website
3341	Please approve gondola plus La Caille station. It is the only truly viable option without losing the world class beauty and location of LCC. Please don't pander to the developers who we know have ruined so many other pristine Utah gems in the veil of secrecy and desire to make money. Most of our government and city people don't even ski...just ask them. You should put this out to people who use this canyon - from all over the world. Be a trend setter - not a flock sheep adding more asphalt and eyesores to our mountain landscapes. Thank you for listening and acting courageously. May God's will and way be accomplished.	Lynda Krause	Website
3342	Let's make it cleaner and safer getting up Little Cottonwoods!!!	Les Moretti	Website
3343	Added to the long list of benefits is the predictable travel time up the canyon vs. driving and there could be an accident causing huge delays.	James Judeikis	Website
3344	Gondola makes a lot of sense. Especially with the La caille base camp and the parking structure that can be built there	David Urry	Website
3345	Please build a gondola	Robert Hutchins	Website
3346	Dave Fields, President of Snowbird was spot on for recommending the gondola as by far the best alternative for improving transportation in Little Cottonwood Canyon. No need to go through his reasoning here, but it clearly demonstrates the gondola is the best choice. Critical decision making requires detailed analysis and VISION for the long term future of this area. The gondola is the only alternative that works.	Stephen Trover	Website
3347	Please consider the Gondola alternative. I don't think adding lanes to a crowded canyon is the answer. That will only make the parking situation and air pollution impact even worse.	Bryan Christensen	Website
3348	Implement Gondola!	Christie Marinari	Website
3349	Please go with the gondola and base station to preserve the Little Cottonwood Canyon and reduce auto and bus traffic to the ski areas	David Hasbrook	Website
3350	As a resident northeast Sandy near the mouth of Little Cottonwood Canyon I support the LaCaille Gondola project as opposed to increasing private vehicle capacity in the canyon.	Ronald Rogers	Website
3351	Keep the mountains beautiful and save this planet!	David Gluckman	Website
3352	Why ruin a beautiful canyon when there is an alternative option? Preservation of our state or make more room for cars? Which by the way would only increase pollution and accident rates.	Hailey Roberson	Website

3353	I am a recurring season pass holder at Snowbird and Alta and I support the Gondola + LaCaille parking lot solution	Carolyn Rice	Website
3354	I think the gondola is the best option for little cottonwood. Please put the gondola plan into action!	Chad Anderson	Website
3355	I am for the building of the gondola, as long as the rest of the mountain is preserved from future development for commercial use, to preserve the natural beauty and allure in the first place. Wildlife and plantlife are invaluable to the culture of Utah, and this is on the cusp of crossing a line. It does seem less destructive than any road extension would be, and a potential improvement for emissions. That is why I am for this change.	Hanna Kinder	Website
3356	We need a gondola, not half assed "solutions" that will keep cars clogging up the canyon	Peter Peterson	Website
3357	We can't keep driving cars and buses up the canyons and/or making it so expensive to drive and park that the normal family can't afford to ski. Gondolas are used all over Europe to ferry skiers and save the environment. Now is the time for us to do the same for the Cottonwood Canyons.	Dale Sanders	Website
3358	Please consider the environmental impact of adding more lanes and more vehicles to the canyon. The gondola plan will remove vehicles and traffic from the canyon, not increase it. If you can set the precedence that the gondola system will be successful, others will follow.	Elise Brimhall	Website
3359	The gondola would be great! I highly approve! Please consider this as the BEST OPTION — GONDOLA PLUS LA CAILLE BASE STATION	Paul Jacobs	Website
3360	BETTER MOBILITY Reduces traffic congestion in the canyon Long-term solution – 50-year horizon Proven and tested system Safety – Eliminates risks from avalanches and landslides closing canyon GOOD HEALTH Least environmental impact Air quality benefits Carbon neutral Stays out of protected areas CONNECTED COMMUNITIES Keeps cars and buses as partners in the solution Connected by bus to intermodal hubs Expanded parking at proposed La Caille station STRONG ECONOMY Increases tourism assets and economic opportunities Lower cost than alternatives No road widening required Year-round operation SUPPORT THE GONDOLA	Jon Burke	Website
3361	GONDOLA!!!! Europeans have been using this technology for years. Buses don't work - avalanches are too common and cause massive backup. Gondola seems like a winning option. Reduced traffic, avoid avalanche issues that cause congestion and cars idling for hours. Just make sure there is plenty of PARKING at the base of the Gondola and not have some confusing bus system to get to the gondola that people will never use.	Ann Futch	Website
3362	Please study Gondola Plus La Caille Base Station as a way to get cars out of the canyon and off Wasatch Blvd.	Erin Tiedens	Website
3363	This sounds like the best alternative, much better than destroying the canyon with more construction of roads!	Carl Merino	Website
3364	Please make the gondola! I work up at the resorts and I hate the fact that it takes me 4 hours to get home after my shift! And people are crashing and wrecking every day	Kendall MacSparran	Website
3365	Gondola. I have worked in Little Cottonwood Canyon over 40 years. I have spent many days and nights stranded in or out of the canyon because the road has been closed. If the road is closed due to avalanche danger, mud slides, rock slides or vehicle accidents there isn't an alternate way to get in/out of the canyon. Increasing buses, putting snow sheds, adding more lanes or charging a toll might help decrease the amount of traffic in the canyon, but if the road is closed for any of the above mentioned reasons you still can't get up or down the canyon. So, I like the idea of a Gondola or alternative to the road. "Thank You" for trying to do something!	Jay Jensen	Website
3366	Having enjoyed the canyon for almost 50 years I see the need for an improved way to get folks up and down the canyon with less impact on the canyon. Just skied in Switzerland where we walked to the train, took the train to the ski area, and had a great day. This would make it a very similar experience. The only downside I see is having to carry everything needed for the day with you and not being able to go to the car to get something or drop something off. Would make sense to increase the number of ski lockers at the resorts to avoid carrying so much stuff back and forth.	Arthur Henry	Website
3367	Please implement the gondola solution, it's the best for LCC!	Evan Caldwell	Website
3368	Please don't widen the road! We need to be smarter with out money and world! Let's keep Utah BeaUtahful!!	Christopher Yanez	Website

3372	As a season pass holder at Snowbird, I travel LCC every week throughout the ski season. I support the gondola option for LCC. It's the best of all possible solutions.	Suzanne Carasso	Website
3373	The gondola should be studied as I am for it.	Steve Linane	Website
3374	Looks like the best option	Edward Hasslock	Website
3375	I support the Gondola & La Caille Base projects for Little Cottonwood Canyon.	Jennifer Carey	Website
3376	Save our wilderness	Allison Cole	Website
3377	I fully support adding a gondola. The road is a terrifying prospect, avalanches and rocks falling. Not to mention the horrid bus system. I can recall more than 10 bus rides where I witnessed people faint due to overcrowding. And with Covid-19 becoming more permanent, the bus just will not cut it. This is good for the environment and good for our sanity.	Travis Suite	Website
3378	I support the more environmentally sustainable option of a gondola vs widening the road	Erin Mortensen	Website
3379	Keep cars out of little cotton canyon - build gondola	Patty Broda	Website
3380	Please do not widen the roads in LCC. Consider other options such as the gondola or a limited number of cars up each day	Trey Kettering	Website
3381	This looks like a good idea and would protect the beauty of Little Cottonwood Canyon while providing transportation for hundreds of people up and down canyon daily.	Phyllis McGihon	Website
3382	Im for the Gondola plus solution.	Lael Holm	Website
3383	Our current situation is horrific in every way. There's no turning back the clock to how it was. All options need to be considered and acted upon quickly. At first blush I'd throw up my arms and say do all three immediately.	Jeffrey Anderson	Website
3384	I think the long term solution is a gondola. Remember that the cost is important. I have a family of 6. Currently I drive because the cost of the bus for my family is too high. \$60 bucks might not seem like much skiing. But, my fuel cost is about \$6.	daniel broyles	Website
3385	Yes for gondola	James Stockstad	Website
3386	I have travelled from Philadelphia to SLC at least once every year since 2002 to ski in Little Cottonwood Canyon, and I strongly support the proposed gondola. Sadly, the regularity of traffic jams in the canyon and overcrowded UTA buses are becoming reasons to think twice about travelling to Utah to ski. At the same time, we all know that increasing vehicular capacity is at best a stopgap measure, and is environmentally destructive in the long term. As a regular visitor to Utah, I can say that the introduction of a sustainable alternative to car or bus transit would only enhance my love of Utah and would make me even more eager to spend more of my vacation dollars in the state! Let's make this happen!	james Loveman	Website
3387	i would like to see a gondola up little cottonwood canyon to reduce congestion, pollution, and make a safer way to get up the canyon.	matt maley	Website
3388	GONDOLA PLUS LA CAILLE BASE STATION is by far the best option.	John Rose	Website
3389	I support the gondola. Do not destroy the canyon by widening the road and adding unnecessary carbon emissions	Sophia Paradis	Website
3390	Love the idea of a tram for little Cottonwood canyon!	Jenna Powers	Website
3391	I support the La Caille Gondola decision.	Gerald Breeze	Website
3392	I have skied at Alta off and on since 1970 and this past winter, we had a nightmare of a time because of the traffic. It is long past time to install the gondola.	Kyle Wheeler	Website
3393	I live on Wasatch (3573 E. Greenhills) and am VERY effected by the traffic. The best solution is a Gondola and parking garage, even though it will bring traffic by my house, this makes the most sense, keep cars, pollution and wasted gas to a minimum. Dick Bass's original vision was a Mono Rail up the canyon but an air tram with back up for busing from a main parking terminal makes much more sense.	Steve Mayer	Website
3394	If they can do this sustainably in Europe, then we can do it here. Be bold and innovative Utah.	Troy Lindquist	Website
3395	I support options that provide a viable alternative to cars cluttering up the road. The The Gondola Plus La Caille Base Station looks like a good way forward.	Michael Sieverts	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3396	Please carefully consider the benefits of the proposed La Caille Gondola lift option. I would like to see such options seriously considered rather than merely just widening roads and enabling more motor traffic. The congestion of cars and buses distracts from the natural beauty and serenity outdoor lovers are seeking.	Erik Ericksen	Website
3397	yes	Erik Krupka	Website
3398	The traffic is only get worse as we move into the future. This will cause more vehicle accidents, pollution, trash, and congestion, to name a few. The gondola will alleviate much of that as well as keep people safe.	David Griffith	Website
3399	Thank you for reading my comments.		
3399	I support a gondola for the Cotton canyons. It is a better long-term solution than relying in cars or buses.	Julie Maughan	Website
3400	Of all the potential solutions to the traffic problems in Little Cottonwood , the gondola seem to be by far the best approach.	Robert Webster	Website

3420	Sound like a good solution	Robert Gallo	Website
3421	We need a gondola!!!!!!!!!!!!!!!	JOE CHAVEZ	Website
3422	The gondala with La Caille Base station makes the most sense. Let's fix the the problem from the beginning and not put a temporary bandaid on the situation.	Joseph Toney	Website
3423	A gondola would be a great solution to get cars out of the canyon .	Jesse Kirvan	Website
3424	I am in FULL support of the Little Cottonwood Canyon Gondola & La Caille Base Station. I've lived in Sandy Utah my whole life and I love Little Cottonwood Canyon. I want to share it's beauty with everyone, and I believe this is the most responsible way to do so. I want to keep the right of local resident's ability to drive up to the canyon in the winter, but the overload of out-of-towners and new Utah residents are making this difficult. This project would be a great solution to the issue.	Jacob Chavez	Website
3425	Gondola is the way to go to alleviate traffic in canyon. Hello,	Mike De soua	Website
3426	I am very enthused to the idea of the proposed gondola as a long term solution to our transportation needs and air quality issues. That being said, I have a couple of questions. 1. Is there an analysis of the expected/anticipated time the gondola could be shutdown due to winds? My thought is the canyon is a pretty good wind protector already and the wind would run parallel to the lift line, however gondola closures if any is a concern. 2. The proposed bus traffic, is currently running diesel or electric buses? Is there an estimated cost built in to offset CO2 emissions by switching to electric buses only? Thanks for your time, Matt Voltja	Matt Voltja	Email
3427	With the gondola alternative—is it possible to include a drop-off lane at the Gondola station for Lyft/Uber's and cars to drop-off people? Also, with the Gondola plan, will you also be increasing the bus service as well? And would the buses be switching to be electric?	Nicholas Carpenter	Website
3428	I support Gondola Plus La Caille Base Station plan.	Simon Paquet	Website
3429	Gondola is the right plan!!	Scott Hagen	Website
3430	I am a vacationing skier (who hopes to live near the base of LCC someday), and I certainly think a gondola will be better than the current traffic jam. But I honestly might consider driving up the canyon if I had to park somewhere and then wait for a shuttle bus to the gondola. If those shuttle buses are on 5 - 10 minute headways, then it might be OK, otherwise the possibility of a long wait isn't worth the risk when precious ski time is ticking away.	Anthony Russo	Website
3431	We need to focus on getting more reliable bus service from the communities up the canyon without altering the beauty of this majestic canyon with construction. Please spend some time and money in implementing services that can make an impact now.	Ryan Pilstl	Website
3432	Thanks I think a gondola from the base is a great idea!	Paul Wasserstein	Website
3433	I've been skiing in the Cottonwood Canyons for over 30 years and travel globally to ski as well. The traffic, avalanche danger and inclement weather road conditions are huge problems I face getting to Snowbird and Alta that I never face in other ski destinations. I recognize Little Cottonwood Canyon is unique in its canyon access so, therefore, think a Gondola with La Caille Base Station would be the best option for resolving the current traffic mess and safety risks year round.	Scott Kolb	Website
3434	what's the fee to ride the Gondola?	billy bohnholdt	Website
3435	Buses work fine. Gondolas are ridiculous	Scott Ballard	Website
3436	I strongly support the gondola solution and am against solutions that widen the road or put more car and bus traffic in little cottonwood canyon.	Jeff Feldgoise	Website
3437	Please consider the gondola option. As a resident that lives right on wasatch blvd this would be a great option. We don't need more cars going up and down the canyon. The gondola would fix that issue and be very sustainable. Thanks	Dan Obrien	Website
3438	How does impact the entire mental aspect of the canyon? Will Snowbird still or do they plan to cap off the number of scares since this option would allow more people on the mountain? Those are my concerns	Karen Richardson	Website
3439	Please please please do the gondola! Fastest, cheapest, lowest-impact environmentally, plus a tourist attraction in itself!	Mike Elliott	Website
3440	I am a timeshare owner at Snowbird. The gondola proposal should be pursued to protect Little Cottonwood Canyon as much as possible.	victor McPhee	Website
3441	People don't like taking buses, period. Regardless of how quick and reliable they are, skiers and riders want don't want to deal with them. Adding a gondola or adding another lane will be the best option. Gondolas will also provide the "scenic ride" in the summer, and adding an additional lane will allow bike and runner traffic a safer alternative. The Gondola Plus La Caille Base Station option is the best, with ample amount of parking at the base.	Ben Fleming	Website
3442	I support the gondola option. I do not think widening the roads and allowing more access to vehicles is the best option. The most eco-friendly which is what the mountains are all about would be the gondola option.	Cody Sabey	Website
3443	I support the gondola option heavily over expanding the roads for more vehicles	Cody Sabey	Website
3444	I support the gondola.?	Jen Edmondson	Website
3445	I support the Caille gondola!	Matthew Rusling	Website

3447	I support the gondola plus La Caille base station proposal.	Levi Blackstone	Website
3448	I support the gondola. Please save Little Cottonwood Canyon	Mike Ferry	Website
3449	I'm all in favor of getting people off the roads and into the gondola for their adventures. What a great tourist attraction too.	Julie O'Neill	Website
3450	Do it! Relieve that pressure on the canyons	Matt McArdle	Website
3451	I support the gondola and La Caille base center, over the other recommendations.	Rob Greener	Website
3452	I would love to see a combined plan that included the gondola with an increase in buses, and only adding electric buses to the fleet—then slowly transition the remaining normal buses with electric.	Nicholas Carpenter	Website
3453	My vote in order of preference: 1. Enhanced bus and widened road 2. Gondola 3. other bus	Ken Timboe	Website
3454	Please consider the gondola as the preferred solution to the traffic issues in Little Cottonwood Canyon. It is a 21st century concept that generations to come will hail as a forward thinking project. Thank You!	Chris Olafson	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3455	I support the Gondola Plus La Caille Base Station option!	Tracy Engel	Website
3456	Please explore the LCC Gondola plus La Caille Base Station proposal. It makes sense to not expand Wasatch BLVD or the canyon road in there are other equally effective solutions. Long term, fewer cars and traffic in the canyon is better for all stake holders.	Eric Mercer	Website
3457	Yes gondola or light rail	Bikki Nelson	Website
3458	I don't like the gondola, I also don't like expanding the roadway. Think about making it bus only, or permit parking only, or pay to park, or a toll road, etc	Meredith Ackerson	Website
3459	I have skied at Alta and snowbird for my whole life and it is time to fix the canyon. We need a gondola. While making the road wider will make people go up the canyon it still does not mean a bad driver or car will hold up the traffic. It is also a problem when the parking lots get full and people Park on the highway. If Europe can make a gondola over large mountains why can't we make one in a canyon.	Dalton Mylar	Website
3460	I am in favor of the gondola solution as it allows for the most safe and constant access to the resorts. I also view it as a unique solution to this complex problem. No solution will fully satisfy all who value usage of this canyon. This solution however provides for an approach that removes cars and stigmas associated with other mass transit solutions.	Michael Nielsen	Website
3461	Resident of Holladay. I support the Gondola option PLUS the proposed LA CAILLE BASE STATION.	Kellie Betancourt	Website
3462	Gondola is the way to go. Best for everyone	Robin Marahatta	Website
3463	While I still maintain rail is the best long-term solution for both LCC & BCC, I wholly support these gondola plans over added traffic and bus lanes. Busses still will struggle in bad road conditions. It's not practical.	Elizabeth Ostrander	Website
3464	Please, let's rethink this proposed solution.	Ryan Hamblin	Website
3465	I strongly feel that the solutions presented will not alleviate congestion enough. They will simply move the congestion. A gondola will only concentrate significant congestion to one spot and does not create a solution for both canyons. The bus frequency and the number of park n rides directly served should be increased substantially. Currently, the parking lot serviced by the ski busses fill up and do not serve the demand as is. If you do not allow private cars to go up the canyons to the ski resorts and force people to park at park n rides throughout the city, you alleviate traffic at the 6200s exit and buses can travel faster up the canyon. Having buses make minimal stops and go direct from park n ride around the city and make it free, would alleviate congestion, force people to use the bus, and make the experience more pleasant for all parties. The bus needs to stop at trail heads for backcountry skiing or allow for certain permits to drive up for the purpose of hiking and backcountry skiing. A gondola is expensive, does not alleviate congestion at the base and poses risks of breaking down or having to shut down from wind, etc. Buses are far more reliable.	Sarah Waugaman	Website
3466	preference: 1) constructing a sustainable gondola 2) road widening with additional bus transit	Josef Prchal	Website
3467	Gondola would be a great way to help locals still access the mountains on great snow days as well as holidays when people from out of town are flooding our resorts. Also think that it would be a great experience for people who are traveling to utah to make it so that they dont have to sit in traffic and give them an unpleasent experience.	Reilly Kelly	Website
3468	I support continued investigations into the gondola alternative to relieve traffic congestion and pollution in the Little Cottonwood Canyon.	Norm Nicholls	Website
3469	That gondola would make a world of difference	Eric Lepkowski	Website
3470	The gondo seems like the best choice far and away.	Vince Clemens	Website
3471	The gondola alternative should be investigated to preserve LCC and decrease the danger and emissions related to higher vehicle traffic in LCC.	Jonathan Jurgatis	Website
3472	Of the three options, I strongly favor the gondola option. It seems to me that it permanently alters the canyon far less than erecting snow sheds and berms with or without widening the road. It also seems to me that the gondola option would require far less total road closure during construction than would road widening and snow shed construction. The snow sheds option without peak bus shoulder lanes makes the least sense to me as it improves trip time very little. I know little about the recently proposed LaCaille gondola option, but given its support among people I respect, I do believe it is worth examination. I also believe that the gondola can and should be run during "off season." Traffic volume and lack of resort parking, especially if road side parking is eliminated, during Octoberfest, holidays, and, increasing, on weekends is such that mitigation by means of the gondola is, I believe, warranted. Summer season gondola rides could also become a popular tourist attraction. I have no objection to bikes being allowed on the gondola except during peak ski season.	Nycha Schlegel	Website
3473	I remained troubled by tolling and am absolutely opposed to disallowing single occupancy vehicles. Perhaps tolling could be eliminated during off peak hours and for vehicles with four or more occupants at all times.		
3474	Large vehicles dramatically slow traffic, sometimes to as little as 15mph. Frequently cars pass such vehicles even in road sections with double yellow lines, creating a truly unsafe situation. It seems to me that during peak hours large vehicles except for snowplows, buses, and emergency vehicles should be eliminated uphill during morning peak and downhill during the afternoon peak.		
3475	Get r done	Brett Rose	Website
3476	Definitely want to study the la caille gondola option	Chris Haleua	Website
3477	I support the gondola 100%	lisa schwartz	Website
3478	Please consider the gondola option for Little Cottonwood Canyon. It seems like a great alternative to wider roads and more traffic.	Lee Reed	Website
3479	I agree a gondola would be a wonderful option. Much more predictable.	Steve Duke	Website
3480	I prefer option 3, the gondola. It is the most forward looking as there is a clear limit on the roadway options so non-roadway options need to be seriously considered.	Zachary Segraves	Website
3481	The carbon output considerations of the gondola coupled with the secondary & emergency viable egress make this solution both the environmentally-friendly and operationally favorable choice.	Jacob Graham	Website
3482	Thanks	S Draper	Website
3483	Go for the Gondola option. Please don't ruin Little Cottonwood Canyon!	Michael Cooke	Website
3484	Condo owner votes for gondola. Much less carbon footprint. Don't widen road.	Greg Feld	Website
3485	Widening the road would only increase the amount of idling vehicles sitting in traffic on a powder day, thus increasing air pollution. A zero emission gondola is a better option.	Nathan Ferrara	Website
3486	Widening the road into Little Cottonwood Canyon would destroy the natural beauty of this special Utah treasure. Please keep Utah beautiful, it is the reason we visit season after season!	Jeanne Blasberg	Website
3487	Please make a gondola, traffic is absolutely insane and it gets worse every year because of the ikon pass	John Ziouras	Website
3488	I would like to see UDOT get a quote from the Boring Company for a tunnel due to their low costs and enormous benefits!	Leo Epstein	Website
3489	I am a non resident that has been skiing the greater Salt Lake City area since the early 1980s. This is a win-win solution for all factors involved.	Daniel Ross	Website
3490	I support the gondola, but I think the plan should be slightly reworked to allow for a drop off area at the gondola base.	Conor Bolich	Website
3491	I support the expanded bus services without road expansion. I think we need bus service to the canyons YEAR round, not just during ski season. We could make the canyons, safe for hikers, skiers and bike riders by only allowing busses access up the canyons and keeping ALL the cars from entering the canyons all together. We should look at a model that has been successful like in Zion National Park. We need to have many more than 24 busses going up the canyons in an hour at peak times. If you think it is just a ski resort/ ski season problem, just note the 3/4 mile parking along the highway to access the white pine trail head up LCC right now. We cannot build parking lots big enough to contain the ever growing numbers of people who want to recreate in these canyons year round. You will Ruin what people are coming to enjoy.		
3492	Please don't be so short sighted as to think this is only a problem for 4 months of the year. We need to have a bus system that has ability to stop at all trail heads (not just the ski resorts) to address the congestion. I am a year round user of the canyons, enjoy the resorts but also like to hike up the canyons and hike and all of this is very dangerous with all the cars whipping by so that you must use extreme caution to cross the road by foot anytime of year. This problem gets exponentially worse each year. With the desire to double the population of SLC in the next 30 years. We need to keep the traffic out of the canyon and expand bus services that people are paying for by head count. I definitely would NOT support using my taxes for a gondola that just runs to the ski resorts. It just would not take enough cars off the road.		
3493	Expanding the bus services (more than 24/hr at peak times) is the only answer. This way no more parking lots would need to be built. the road would not need to be expanded, our drinking water would stay clean, the canyon would be safer for hikers, skiers, bikers needing to cross or ride on the roads. Allowing MORE traffic is NOT the answer. Gondolas to the two ski resorts does NOT address the year round traffic issues. Just look at the overflowing parking lots at all the trailheads right now. Drive to the S curve and try to park to walk up to Lake Blanche. Drive to White Pine and to try to hike to red pine, drive to Mill D to try to hike to Desolation Lake and tell me this is not a year round environmental and safety issue. Just charge people day access to ride a bus up the canyon. Use electric buses to keep pollution low. Build parking structures at the base of canyons as well as at current UTA parking lots around the valley that are specifically for accessing the Cottonwood Canyons so people don't have to transfer buses. You may only need to service the "Cottonwood Canyon" buses from the extended sites during the winter season.	Christine Miller	Website
3494	Please look at this transportation issue for what it is. A year long watershed, environmental, personal safety issue, not just an issue for the ski resorts.		
3495	Thank you,		
3496	Christine Miller SLC, UT 84108		
3497	I'm for it as long as we can take provisions for our timeshare!	Frank Wilson	Website
3498	I'm interested in learning about the proposed restrictions for day skiers who in the past had been able to drive up and down the canyon in their private car.	Charles Fillmore	Website
3499	I like the project propose to preserve little cottonwood by gondolaworks.	Wilfredo Mendez	Website
3500	This gondola would also help loads and loads with traffic, if executed properly. ? not to mention how cool it would be. What an awesome experience to ride the gondola to the resort from the city, please take this into consideration	Benson Weeks	Website
3501	As a local resident living at the mouth of the canyon I ask that you consider the Gondola Plus the La Caille Base Station to help limit traffic and environmental impact of getting up the canyon.	Lori Fulmer	Website
3502	Gondola!!	Kimberly Simmons	Website
3503	Let's makenhis gondola happen. It isn't great solution to a problem that is only going to get worst.	Paul Stratford	Website
3504	I support the Gondola.	Audrey Bielefeld	Website
3505	All about the Gondola! It will a make not only Going up the mountain easier but going down easier with less traffic.	Parker Acosta	Website
3506	All proposed plans are bad. widening the road is unnecessary tunnels are unnecessary. a gondola is a year round eye sore for every view down the canyon and suffers from the difficulty of running when winds are high on top of being undesirable and only having limited stops. we need to be following the lead that Zion national park has established. forbid cars that do not belong to residents of the canyon. dramatically increase the investment in electric busses and have many stops that change with the seasons so that people do not have a choice. if given the choice to use public transit or to drive their own car not enough people will use the transit. forbidding cars in the canyon that don't live there will stop the problems of people driving cars that are not properly equipped for the snow. if there is an avalanche on the road this route makes sure there is less traffic so it is significantly easier to clear the snow.	Jerome Kuntz	Website
3507	this plan would be cheaper and only lower the environmental impact on the canyon.		
3508	Most snowsports enthusiasts that I know are willing to pay an annual fee to ride the gondola to Snowbird and Alta. The annual pass needs to be digitized for easy scan and recognition. A case-by-case digital pass would also be acceptable. It could be tied to a bank account and automatically debited for each ride. Since I work at Snowbird, it would be nice to have an annual employee pass at a reduced rate, or better yet, free to employees.	Ray Anderson	Website
3509	How loud would the gondola be compared to traffic from the road? Curious about any sound pollution, and if there are ways to make them more silent.	Nicholas Carpenter	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3502	I have three kids and when I go skiing with them I have lots of gear, lunches, and clothing. The gondola/La Caille base station option is a non-starter for me since it would be impossible for me to carry--let alone store--all the stuff I need at the resort. I need a vehicle when I go skiing and I think most Utahns do too. Please, expand the road, install the tunnels, and create better parking. It's the most economical option to get in and out of the canyon quickly. Using a gondola would take forever and wouldn't be nearly as convenient for families.	Sam Allen	Website
3503	I support the gondola option as a means of preserving the canyon and alleviate traffic congestion.	Ken Wilson	Website
3504	I support the Gondola plus la Caille Base Station. I am a Snowbird pass holder and believe this option makes the most sense as we move into more crowding in the future!	Jane Arhart	Website
3505	I support the Gondola Plus La Caille Base Station in LCC.	Scott Schmutz	Website
3506	Fully support the gondola and La Caille base station proposal! The traffic up into the canyon is unsupportable.	Bruce Wilkinson	Website
3507	This is a much better solution and I would like to see this come into fruition.	Rohun Hundal	Website
3508	I support the Gondola and enhanced bus service. Last year was a nightmare and we, locals, are ready to ski elsewhere. Only real change will produce the right result.	Craig Paller	Website
3509	go for it.	mike rogge	Website
3510	Gondola, sadly, is the only and best solution	Garth Driggs	Website
3511	Gondola makes sense.	Paul Spranklin	Website
3512	I am in favor of the gondola.	Detgen Greeff	Website
3513	I am a Snowbird timeshare owner, and have had the privilege to ski and hike in Little Cottonwood Canyon for 25 years, I strongly support further study of the Gondola Plus La Caille Base Station option.	Elizabeth Taylor	Website
3514	I Vote Gondola.	Mary Kellogg	Website
3515	I support the la coille tram	Tyler Davies	Website
3516	Best idea yet!	Maria Ravarino	Website

3519	I also think a stop at White Pine Trailhead is important. Especially to get hikers off the road during the summer.	Nicholas Carpenter	Website
3520	I support the gondola!	Jason Hawkins	Website
3521	Please help keep Utah clean and support the gondola instead of increasing traffic.	Gabriel Ruffin	Website
3522	I strongly oppose adding traffic lanes and building tunnels in and around Little Cottonwood Canyon. A gondola or improved public transit system would be better alternatives. I've suffered through hours of freeway traffic between Denver and the front range mountains; adding vehicle capacity is the last thing Little Cottonwood canyon needs, and likely would not solve the congestion issues.	John Forbes	Website
3523	I love the idea of a gondola to get up the canyon!	Lori Broadbent	Website
3524	I support the base station and gondola option.	Kim Smart	Website
3525	I think the root of the problem is the ikon, and so snowbird doesn't wanna lose money so they won't drop the ikon. but a gondola would be 1. very unsightly, and look so ugly going all the way from La Caille to the top of LCC, more unsightly than road tunnels. 2. Snowbird can't keep the tram open during a storm or in high winds, what days are the canyons most crowded? during huge storms. so we would have this gondola thats useless to controlling crowds on the busiest days because of the weather. 3. it would likely resort in crazy taxing, while i think snowbird and alta should chip in to find a solution for their canyon. 4. it really won't change much. you either wait in traffic or wait for the gondola.	Parker Pogue	Website
3526	As someone who travels to Salt Lake City from Maine each winter season several times I would like to let you know that the gondola solution to the traffic problem seems like the most responsible solution available and I hope that you decide to do what's right for the area and the air we breathe.	Jim Mccalsky	Email
3527	Great idea I support the plan	Terry Bybee	Website
3528	I support Gondola development	Dorothy Ainsworth	Website
3529	I am in full support of adding a lane for bus traffic only during the winter season, and then using it as a bike lane in the summer. I think adding a big parking structure at the base of the canyons is important, with a bus depot, a place to buy lift tickets, a cafe, etc. People can hang out there, wait for the bus, store gear/dry clothes in rentable lockers, etc. This option allows for increased accessibility during winter and summer, making the canyons safer for recreationalists all year round. Thanks for receiving my comment.	Abby Rideout	Website
3530	We need this!	Ethan Kelley	Website
3531	I would like to have input on the transportation solution to the cottonwood canyons.	Paul McKee	Website
3532	I very strongly support & highly recommend CW Mgmt's "LaCaille gondola station proposal to be the best UDOT LLC EIS transportation alternative. It would provide year-round (high volume when necessary) safe visitor transportation between the base & top end of the Canyon. It would eliminate the seasonal traffic overloads which affect not only the visitor, but the residents of the communities of Alta, Granite, Sandy & Cottonwood Heights. It would do so by eliminating the necessity of closing the Canyon for avalanche control. LCC has the most road-closing avalanches in North America! It would also be capable of providing emergency egress from the Canyon should SR-210 be closed for any lengthy period of time. It would significantly reduce the upper Canyon and roadside vehicle parking requirements. The use of remote Transit Hubs is essential.	Tolford Young	Website
3533	Sounds like the best environmental plan. Just don't know how long the wait would to to get on	Robert Kapust	Website
3534	The gondola looks like the best option!	Ida E Ling	Website
3535	I support gondola and LaCaille Base station	Shawna Blackhurst	Website
3536	I support the GONDOLA PLUS LA CAILLE BASE STATION project. It seems like a great alternative both ecologically and economically. Please consider it. I would also be great for tourism Please no gondola!	Juan Pablo Capdevila	Website
3537	Increase bus service and distribute bus pickups throughout the valley so as not to need so many cars at the canyons! Distributed bus pickups will increase accessibility to the canyons throughout the valley. Distributed LCC and BCC bus routes throughout the Salt Lake Valley would be a direction that can better address racial and income disparities regarding access and inclusion in outdoor recreational spaces, and move us all towards environmental justice.	Jory Lerback	Website
3538	Please build the gondola. Charge for gondola per ride or season pass gondola.	Lance Waldo	Website
3539	Road widening is NOT the way to go if we want to preserve Little Cottonwood Canyon. To protect the landscape and future of LCC the best alternative is the Gondola Plus La Caille Base Station. For years people that care about LCC have been looking into ways to reduce traffic going into LCC, so why would it make sense to widen the road and increase traffic? It simply doesn't make sense at all. The Gondola Plus La Caille Base Station is the only option to keep recreation going and preserve the canyon that we love.	Claire Dobrzanski	Website
3540	We have to solve the traffic issue. A gondola seems like a great option.	Dan Housley	Website
3541	I'm happy that UDOT is exploring alternatives to help relieve congestion in LCC. But I believe that wider lanes and more cars moving faster is not the answer. Southeastern SL Valley needs a REGIONAL transit system. Express, cleaner transit is the answer to growing population & its associated mobility issues. Simply put, car-centric transportation is not sustainable as the population continues to grow. We need public transit	Dirk Lamb	Website
3542	I support this proposal. A gondola would provide a safer and more sustainable alternative mode of transportation for visitors and employees alike to the Snowbird and Alta ski resorts.	Philip Tobiasz	Website
3543	This is a great Project I live on little cottonwood road have skied the Canyon over 60 years we need this project.	Ernest Nak	Website
3544	The gondola project from the mouth of Little Cottonwood Canyon to Snowbird & Alta should definitely be considered to reduce traffic. I have used a number of excellent gondola systems in St. Anton, Austria. They can move a lot of people. I am not a resident of Utah, but I do try to visit the Wasatch Mountains whenever I can. I am an engineering student at the Colorado School of Mines with a special interest in the ropeway (ski lift) industry. I wanted to comment that UDOT has a unique opportunity to create a world class transportation network with the LeCaille base station 3S Gondola ropeway.	Ed Mineau	Website
3545	Innovation in technology have meant that ropeway systems are safer, faster, and have a higher capacity than ever before. They have also meant that they have transitioned from only being at ski resorts to being heavily used in urban location such as La Paz, Bolivia, Medellin, Columbia, and Hong Kong. 3S technology, which is what's proposed for use in Little Cottonwood Canyon, is at the forefront of this movement. Building a 3S gondola for public transport purposes in LCC would make Utah a worldwide model for sustainable urban transport in the 21st century. The LeCaille base station option uses a much higher capacity system of 4,000 people per hour compared to the original gondola option, which really flexes the muscle of 3S technology.	William Beasley	Website
3546	My background experience in the industry is several years as a lift operator and lift mechanic assistant, as well as three years of ropeway research in college at Information Center for Ropeway Studies. To be clear, my interest in the ropeway industry is independent of the manufacturers and I in no way stand to gain financially if the gondola is approved. I simply am excited about the potential this proposal has. I sincerely hope UDOT takes the bold and brave step to create a truly cutting edge piece of transportation infrastructure by approving the LeCaille base station option for the Little Cottonwood Canyon 3S gondola.		
3547	Please carefully consider all plans for SR 210 and Little Cottonwood Canyon.	steven angerbauer	Website
3548	support and prefer the gondola but other options as well	stephan REJTO	Website
3549	I think that the gondola is expensive, but a reasonable way to get traffic out of the canyon, and to get skiers onto the hill.	Scott Hansen	Website
3550	Gondola - All the way. They have trams and gondolas all over the alps region of Europe. I don't know why we don't have more here. Make riding public transit less expensive than parking at the resort too. It would be nice if there was a parking lot at the first gondola stop... This would be a great thing to have for the summer as well to get people up and down the canyon. Parking for hiking is becoming a nightmare.	Dallin Lewis	Website
3551	I drive daily because the bus ride to Alta is intolerably tedious and crowded. I would ride a gondola if uphill capacity warrants.	Donald Mackay	Website
3552	I would love to see this. Little cottonwood is where my family and I have spent generations and I wish the best for it and this is it	James Pooler	Website
3553	I support the gondola + option with the gondola base at LaCaille. It is the most practical alternative with parking directly at the gondola base. Thank you.	Howard Grossman	Website
3554	I support the gondola!	Jessica Cohen	Website
3555	Please make this happen!	Ana Sahagun	Website
3556	I have skied Alta and Snowbird 2x each. During powder days, the roads to go up are horrendous and I 100% support a sustainable gondola plan!	John Warren	Website
3557	Best idea. Shud have happened 10 yrs ago. But. I easily go up canyon 150 to 200 days a yr to hike, bike, run, and snowboard. What stop options will there b? Can u bring bikes on it? Can I still drive for the days I want to hike? Can u still drive up for winter if you wanted? Thnx	Greg davis	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3557	Please adopt the enhanced bus with road widening option. Travel time needs to be prioritized to maintain the ease of access quality of life expected.	THOMAS WADSWORTH	Website
3558	Something needs to be done about the high volume of traffic and idiots who don't put on snow tires. Etc	Katalina Dean	Website
3559	I support the Gondola option to Snowbird and Alta and NOT the widening of roads, extra cars and extra buses	Brendan Hegarty	Website
3560	Been skiing in Little Cottonwood since 1969. Get rid of the Ikon pass, whatever you do will only create more chaos. Gondola, Buses, helicopter, whatever will never solve the problem. Leave it alone. Get better at announcing when the canyon is closed so one drives up there for nothing. The problem is not the cars its the million dollar homes the city has allowed to be built at the mouth and they complain all the time so now its a problem. Never heard of a problem before the homes were built.	John Schuhmacher	Website
3561	Seems to me that the problem started when the ski areas decided to join together and issue Ikon/Mt. Collective passes. Hint--- why not ban them?	Jeffrey Farkas	Website
3562	I am in favor of the LaCaille base station proposal and adamantly OPPOSED to any road improvements other than what may be needed to accommodate the LaCaille base station.	Mark Bloom	Website
3563	Gondola sounds like a great idea!	shannon whitlow	Website
3564	Makes totally good sense to run an environmentally and energy efficient solution in the form of a gondola system from the base of little cotton wood to Alta and Snowbird. The idea of Gondola is interesting but in practice it will turn into something like the Snowbird tram, long lines to get to it, stand for a long time in ski boots while holding your skis and packed with tons of riders. I love snowbird but avoid the Tram since it just takes too long to get to the top, much easier to take Gad chairs and then little cloud. I oppose the idea of gondola and propose following the idea of van biking shuttles with dedicated FAST lanes up/down the canyon.	peter wilson	Website
3565	Just get a bunch of vans, skiers hop on at the bottom, van fills quickly, van takes the fast dedicated lane up the canyon. This will be much much faster and cheaper. You can also use EV vans once it's out. For dedicated lanes, you can just allow vans up the canyon from 8-10am, you can also avoid the initial cost of buying vans, and have 3rd party business to invest. Hope we all make LCC more sustainable for everyone!	Ali Shah	Website
3566	I support the gondola and think one should also be built up Big Cottonwood Canyon	Westley Wood	Website
3567	Do the GONDOLA!	Tyler Brawley	Website
3568	I am in support of the gondola, because no matter how wide the road is, it will always shut down during significant snow storms. It's much more attractive that wider roads, and will help with tourism.	Tyler Morton	Website
3569	I support the gondola.	Rebecca Heller	Website
3570	I am for the gondola over all other alternatives!	Samuel Pressprich	Website
3571	I support the Gondola plus LaCaille station plan. Hopefully it will also address summer activity as well. Thanks!	Kitty Swenson	Website
3572	I am in total support for the Gondola La Caille project to be discussed. Of the three alternatives to consider, I favor the gondola to have the least impact on the canyon footprint. The problem with the gondola presented within the UDOT analysis is that the park-bus-gondola solution has two components. As an architect and planner, a two stop park-bus-gondola transportation solution does not work as effectively as a park-get on the gondola solution. Please consider the single stop gondola La Caille option.	Louis Ulrich	Website
3573	This seems to be the best solution. If the cost per round trip is equal to the cost of driving round trip, this opportunity will be hard to beat.	Ron Wagner	Website
3574	I support the gondola plan. This will get cars out of the canyon and help greatly reduce traffic. I'm a resident of Holladay and ski Snowbird many times a year, but I also work in Cottonwood Heights and often face traffic during my commute in the winter time, which can back all the way up onto the 6200 S freeway exit. The gondola would be a great alternative. Trams and gondolas are used to great effect in other countries with alpine terrain, like Switzerland. It would be terrific to see our great city adopt something similar.	Daniel Findley	Website
3575	The gondola would be a great plan	Tom Safran	Website
3576	Time to limit vehicle access to the canyon. The watershed and protection of the canyon are more important than private enterprise.	Steve Day	Website
3577	I have been using this canyon for 30 years and I'm in favor of the gondola option. Thanks	Mark Leppard	Website
3578	The proposed UDOT road "improvement" option is insane. Clean up the canyon with the Gondola Plus solution. Thank you.	David Voorhies	Website
3579	I believe the gondola option would be the least harmful to the environment. Also, huge parking areas in the canyon make an ugly dent in the views and having more car traffic in the canyon would only increase the demand for more parking space. I vote for gondola.	Katerina Merrill	Website
3580	I support the gondola Gondola Plus La Caille Base Station	Jason Flower	Website
3581	Build the gondola. Long term, it is a much better option, safer and better for the environment.	Gretchen Connor	Website
3582	Gondola is a great idea! Very functional way of protecting the canyon. Enough parking in the valley is needed though as well as public transport to reach it.	Sophie Gaillardon	Website
3583	Please preserve the beauty of our canyons and decrease traffic in the winter. And make it easy for locals to get around! Please limit (or eliminate) vehicles up the canyon in the winter and require buses. I support the plan for the gondola. It would be a much more pleasant way to ride up the canyon. People dislike the bus because of how crowded it gets and having bus drivers yell at people to continue to move back and further squish themselves against strangers. Aspen ski transportation is the best I have seen. They transfer people in spacious buses (little need to stand) and also shuttle people to area restaurants and shops. It would be great if the shuttles would also stop near Alta restaurants are even restaurants near the new parking areas. Maybe develop shops and restaurants with ski resort support and sponsors in the new shuttle areas to further encourage people to use the buses or gondola. I also think the buses need to be closer than 10 minutes apart. 10 minutes is an estimate and I know from experience that you sometimes have to wait 30-45 minutes for a bus that may or may not have room. A small usage fee or trailhead parking fee could go towards increased bus service.	Amanda Fulton	Website
3584	I support the plan for the gondola. It would be a much more pleasant way to ride up the canyon. A small usage fee or trailhead parking fee could go towards increased bus service.	Steven Mullanley	Website
3585	Build gondola	Doug Lennon	Website
3586	I love the Wasatch. We need to get the cars out of the canyons.	Linda Leigh	Website
3587	Please don't widen the roads. We don't have enough nature to enjoy as is, don't take more away, there are much better options.	Avery Webster	Website
3588	Gondola is the answer	Emanuel Celestino	Website
3589	Please make it easier to get to Snowbird during the winter months.	Tracy Oliveto	Website
3590	Great idea! Big cottonwood needs the same thing very soon..	Nicholas Edwards	Website
3591	I love the Wasatch. We need to get the cars out of the canyons.	Linda Leigh	Website
3592	Wake Up and get smart like the Swiss. Cable cars are dangerous and subject to wind and weather. Do like Grindlewald and Lauterbrunnen the two most beautiful valleys in the world and they are narrower than Little Cottonwood Canyon by far! They have a very neat mountain train. It goes from the lake 10 miles away to the top of the Jungfrau. Unsurpassed beauty. Just take this up to Alta with a stop(s) at Snowbird It can go right up the old pipeline Track.	Wallace Fetzer	Website
3593	The gondola is the only true option to ensure we can all benefit!	David Diaz	Website
3594	I support the Gondola Plus La Caille Base Station	Devin Harrigan	Website
3595	Gondola from La Camille makes sense. Please continue research in this direction	Debra Lanning	Website
3596	1) For the Gondola alternative the Summary indicates 63 min travel time and the Report indicates 46 minutes. Which is correct? 2) Considering lane lines are covered during snow storms the reversible lanes with signs would be difficult. 3) Reversible lanes with sign is far too cluttered. 4) It seems all alternative, except Gondola will eliminate the ability for Rock climbers to park. 5) The roundabout does not provide any significant benefit. 6) How does the Gondola address trail head parking, when the only place you can disembark is at Snowbird or Alta? 7) It appears all Alternatives will institute a toll, What will be the toll amount. 8) Will there be a toll with the Gondola and what will the Gondola cost/rider be? 9) The toll and Gondola cost/rider cannot be enough to fund the O&M, so where will the additional funds come from?	John Van Hoff	Website
3597	Hands down the gondola idea is best.	Mary Murphy	Website
3598	Thank you for investigating options to reduce traffic & pollution in LLC. I prefer the option with garage parking at the La Caille gondola station with drop off at the ski mountains, w/ @ 4000 ppl/hr. Seems like the most efficient and most likely to be utilized.	Barb Siegel	Website
3599	I support the Gondola plus project.	Roger Osmun	Website
3600	Lets get the goNdola going	Dan Dan	Website
3601	I'm not in support of gondola or tunnels, at most I'd agree with widening the Little Cottonwood Canyon road in certain areas for buses to let other cars go by. Also, I would reopen the bus stop at bottom of the LCC road; not for all the busses but for some. Lastly, I believe that it is the Resorts that are making the jump toward the ICON passes that are hurting LLC the most.	Peter Anders	Website
3602	Like the idea of the gondola with embarkation/disembarkation not only at the gravel pit but also at the mouth of the canyon and perhaps at some point from the park/ride in Sandy. If UTA would stop at the mouth of the canyon a person could change over to the gondola there. Also like increasing the frequency of UTA bus service up the canyon. Hopefully, the cost of these services will be included in season passes. Thank you.	Joe Gatti	Website
3603	I believe the proposed gondola is clearly the best alternative for Little Cottonwood Canyon.	Elizabeth Wavle	Website
3604	I am writing to oppose any widening of Wasatch Blvd. as I believe it will become a safety and environmental hazard in an area prized for its outdoor riches. The developer of the land at the base of Big Cottonwood Canyon (previously occupied by Canyon Racquet Club) received a tax break from the school district with the promise that they would be providing free parking on weekends for skiers and other mountain enthusiasts. This parking, coupled with other strategically-located parking areas and a system of buses should adequately handle the canyon traffic. As for residential traffic, please consider extending Highland Drive past 9000 South across Dimple Dell park. I realize this would entail building a bridge, which would cost more than widening Wasatch. But so much of the vehicle traffic along Wasatch is from commuters needing to reach eastern parts of Sandy and Draper. There is already a right-of-way along which Highland could be built.	Kirsten Stewart	Website
3605	Traffic has reached the point of failure and something must be done to continue enjoying our wonderful ski resorts and canyons.	Sara Colosimo	Website
3606	PLEASE BUILD THE HIGH SPEED GONDOLA. WE AS UTAHNS ARE PROUD OF OUR BEAUTIFUL SCENERY AND WOULD HATE FOR IT TO BE DAMAGED OR DEFACED BY MORE CONSTRUCTION. IF THERE IS ONE AREA WE WOULD LIKE TO PRESERVE ITS OUR CANYONS AND FORESTED AREAS. IF THERES ANYWAY TO PRESERVE THAT WE ARE IN FULL SUPPORT OF IT. Please consider a cleaner and more conservative option for preserving our ecosystem and beautiful landscape. Thanks, from a Utahn with pride.	Jamen Rivera	Website
3607	Snowbird and Alta should consider extending their lift hours to allow more flexibility to skiers/snowboarders using public transit. I think part of the reason people are against using public transit is the lack of time elasticity. They want as much time on the mountain as possible, and buses or gondolas will take that away. Giving them an extra hour in the evening or morning might help with this.	Nicholas Carpenter	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3608	Please choose the Gondola.	Jordan Calhoun	Website
3609	Gondola please! (With the station). Widening the road is a backwards notion.	Bea Boccalandro	Website
3610	The Gondola Plus La Caille Base Station is a way to get cars out of the canyon and off Wasatch Blvd. I prefer this option and hope we pursue it.	Lindsay Regehr	Website
3611	I support an enhanced bus system, with Transit only flex lane during peak time. I am a skier that skis at Snowbird 40 days a season, and the backcountry 15 to 20 days a season. I really think something needs to be done, and believe the enhance bus system makes the most sense. We can also put a gondola in 25 years later. Bus lane first.	Brady Larsen	Website
3612	Don't add lanes and tunnels, look at the models established in Europe and other places and learn from them. More lanes, bigger roads isn't the answer.	Brian Johnson	Website
3613	Please stop with road and parking expansion in and around canyon's. There is no way to preserve the canyons if we continue to shovel more and more people in to the area. Most recently there was parking lot expansion and overflow created for the little cottonwood trailhead and bells canyon trails. It has resulted in destruction of the surrounding land, property and trails. Individuals have now created their own trails and short cuts which are destroying natural vegetation, painting the granite boulders, trudging on to private property and crime has increased in the surrounding residential area. Bringing in widened roads and more parking only destroys the local community. The only consideration for increased hiking/skiing to the resorts should be the Gondola option. This allows the residents of the canyon to still enjoy our beloved canyon without creating a concrete jungle. I live in the area because of its beauty and accessibility to the residents, but creating a widened roadway to increase tourism is counter to why the canyon draws millions already.	ELIZABETH SEXTON	Website
3614	Gondola only, if you must increase the capacity. We should really be considering what the canyon can realistically support as opposed to how many vehicles we can cram in it. I am writing to oppose any widening of Wasatch Blvd. Not only are Big and Little Cottonwood Canyons previous watersheds, they are valuable community assets and recreational centers that add to our tax base. We need to preserve what makes these areas valuable. More cars and more traffic is not the answer. Please consider the gondola option paired with regional transit hubs at the bases of both canyons and throughout the valley. To ease residential traffic, please also consider extending Highland Drive past 9000 South in Sandy. Cottonwood Heights already adds a great deal of value to our community -- we don't need to become the city that everyone visits but where no one wants to live.	James Stewart	Website
3615	Please consider the Gondola from Lacaille station. Reduce the Impact on our canyons by decreasing car traffic.	Scott E Stewart	Website
3616	Totally for this!	KEITH DONNELLY	Website
3617	For now it stays the same. With covid things will change.	Linda Mason	Website
3618	Go Gondola! Less impact, less maintenance, steady & reliable - more weather tolerant.	Mark Gorman	Website
3619	I support the gondola plus base station proposal. Having traveled to many large ski resorts, I believe the gondola alternative is the best way to transport people while being least disruptive to the canyon.	KEVIN HUTCHISON	Website
3620	Widening the road should be a LAST resort. I support the save our canyons plan to expand using.	John Harper	Website
3621	I grew up in Salt Lake City and I am an avid skier. The amount of cars that drive up the cottonwood canyons is very problematic considering the pollution that is generated so close to drinking water. Cars, buses etc need to be limited if not reduced significantly. A gondola to access the ski resorts is long over due. I support the gondola option. This option will keep the canyons the most clean from car pollution and obscene traffic in such a fragile and unique resource to Salt Lake Valley.	Andrew Fitzgerald	Website
3622	We want the Gondola	Parker Hagen	Website
3623	I fully support the Gondola Plus The Caille Base Station because it is a forward thinking, innovative solution that can inspire other cities to prioritize efficient mass transit over more cars/buses. It is the least environmentally damaging solution, and we should invest in a project that will protect and preserve Little Cottonwood Canyon. The Gondola would enhance SLC's image nationally and abroad. There are just a few skiing destinations that can be reached only by mass transit, all in Europe, and I fully support SLC working towards an environmentally sound solution to the congestion problem. The worst thing would be the further invasion of the natural areas in order to make room for more cars. Outdoor enthusiasts should/would embrace mass transit as a way to get 'some fresh air' and hit the slopes!	Carlos Rioseco	Website
3624	The bus solution will not work. Currently there is not enough parking for bus users. Bypassing the road would make the resorts available during avalanche weather. Parking & tram/gondola make much more sense.	Matthew Wilkin	Website
3625	We need avoid expanding Wasatch Blvd beyond 2 lanes in each direction. Implement the Gondola to limit traffic in Little Cottonwood Canyon. As a resident and taxpayer of Sandy, I am greatly opposed to all 3 Alternatives. We moved to our current home 10 years ago to be close to the precious natural resource that is Little Cottonwood Canyon. Little Cottonwood Canyon is part of a National Forest, as well as the source of our drinking water, and needs to be protected as the treasure that it is! I feel like these plans ask us to sacrifice the environment and give our money to ensure the continued success of the corporate run ski resorts. With over 20,000 already trying to get up the canyons on a good ski day, we do not need to find ways to cram more people up the canyons. We do NOT want the Wasatch canyons to look like Park City, or some of the overdeveloped Colorado resort areas.	Woody Blevins	Website
3626	The gondola is the wort idea ever. NO ONE is going to drive to park, load their ski gear onto a bus, then unload it and reload it onto a gondola, especially if we live in Sandy or suburbs south! Not to mention the entire drive/bus/gondola time is completely prohibitive to getting to your destination in a reasonable amount of time. What if one is only planning a half day ski due to time constraints, as we do, and many other locals do? Not going to happen. In addition, the initial construction of a gondola would make it easier in the future to push to connect the canyons together, something that most Utahns are opposed tot!! What is desperately needed, is better public transportation. Period. Just the addition of more busses could solve some of the problems! Especially the additions of express busses that would run directly to Snowbird or directly to Alta. Implementing other simple less costly measures could help, like adding a toll that encouraged 4 people per vehicle (although a toll booth could REALLY back traffic up), ticketing vehicles for not having chains or snow tires, and enforcing no roadside parking.	Leslie Hugo	Website
3627	Please look at new alternatives that do not further destroy the pristine scenery of this canyon. Get rid of the IKON pass. Keep it local. Use more public transportation and do not allow cars to drive up. Please do not clog up the canyon with construction and damage it with a gondola or a train.	Heather Dillon	Website
3628	Please avoid at all costs widening Wasatch Blvd. More cars and more traffic is not a solution to the congestion problem we face with weekend traffic up Big and Little Cottonwood Canyons. The proposed gondola project is a smarter, more environmentally friendly alternative that will protect our precious canyons for generations to come. What's more, it's the only solution that will make it possible for mountain enthusiasts to reach their destinations during avalanche season.	Asher Stewart	Website
3629	As a regular visitor to Little Cottonwood canyon for skiing, I think the Gondola and LaCaille station is a wonderful solution to preserving the Canyon. I fully support necessary fees for the development and operation.	Dexter Wang	Website
3630	If it were possible to station the gondola around 94th and Highland it would be more accessible. However a gondola to each resort base is needed and it needs to be free with your ski pass.	Gregory Rogers	Website
3631	I like the road widening and the bus stuff but I think the Gondola is a bad thing to spend money on	Zach Nielson	Website
3632	Gondola is the only smart way to go. More cars/buses in the canyon are completely unnecessary. The gondola approach is being used with great success in many parts of the country. Many resorts use gondolas to mitigate impacts of automobiles. Why not do this in Little Cottonwood Canyon? Let's keep this beautiful canyon beautiful. Thanks for listening. This from a Long-time skier who has been enjoying the canyon since I was a seven-year-old in 1962.	Brad Segal	Website
3633	I like the gondola option when considering the long-term impact. Please study this option more.	Jeremy Knight	Website
3634	I would like to vote for the gondola in Little Cottonwood Canyon. As a 12 year Snowbird employee I have seen first hand how dangerous driving in the canyon is. I have seen avalanches bury cars and incredibly horrible congestion with large numbers of skiers driving up the canyon, which increases the danger when you are stuck bumper to bumper hardly moving on high avalanche danger days. The gondola will also be the most environmentally friendly transportation option, reducing our collective carbon footprint. Thank you!	Cecile Buse	Website
3635	The only option that is a positive contribution for the canyon is the gondola. It's environmentally friendly, encourages users to use it and opens the canyon to users who couldn't otherwise utilize such an amazing location.	Maddy Hansen	Website
3636	I am writing to oppose any widening of Wasatch Blvd. as I believe it will become a safety and environmental hazard in an area prized for its outdoor riches. The developer of the land at the base of Big Cottonwood Canyon (previously occupied by Canyon Racquet Club) received a tax break from the school district with the promise that they would be providing free parking on weekends for skiers and other mountain enthusiasts. This parking, coupled with other strategically-located parking areas and a system of buses should adequately handle the canyon traffic. As for residential traffic, please consider extending Highland Drive past 9000 South across Dimple Dell park. I realize this would entail building a bridge, which would cost more than widening Wasatch. But so much of the vehicle traffic along Wasatch is from commuters needing to reach eastern parts of Sandy and Draper. There is already a right-of-way along which Highland could be built.	Megan Thibaudeau	Website
3637	Seems that the Gondola and Calle Substation combined would resolve situation for the long term with the least impact on the environment and on the residents. It is a forward thinking solution which goes a long way to preserve the beauty, peace and safety of the Canyon.	Francine Loper	Website
3638	Gondola support	Abigail Nelson	Website
3639	Please support the gondola plus La Caille Base Station option when making your decision for the future of Little Cottonwood Canyon. While we live close to Park City, your setting the precedent for an intelligent, economic, and ecological solution for this common problem of every canyon leading to ski slopes will show Park City the right solution for their future. Thank you, Nancy J May	Nancy May	Email
3640	Salt Lake City is growing fast and part of that reason is the beauty of our mountains. A gondola is not only a better solution then all the vehicles going up the canyon, but a feature. A Gondola through our canyon is a much better way to see the beauty of our mountains then a bus ride! This creates a safer canyon with less accidents, and a more enjoyable way to get up into the mountains we all love.	Jaden Holladay	Website
3641	This is definitely an innovative option that should be studied and hopefully installed! What a great way to reduce traffic in the Canyon while doing it in an environmentally friendly way. Looking forward to hearing more about it.	Jennifer Janssen	Website
3642	Wonderful idea. I love it. Salt Lake resident since 2001 and spend 40 days/year in LCC	Jeffrey Rosenbluth	Website
3643	Get rid of ICON pass	Aaron S	Website
3644	I failed to note in my last submission that the Gondola has my vote. Environmentally friendly and sounds like a really great option. Hope it will be considered!	Jennifer Janssen	Website
3645	Please put a gondola or chairlift from the bottom of little cottonwood to the resorts. it will save time, money, and peoples lives. thanks	Walter Heisenberg	Website
3646	I strongly support the gondola option WITH a different base station- the "La Caille" base station. This would allow many people to park directly at the base of the gondola and avoid the congested throat at the beginning of LCC. Also a gondola seems like the best option for the long term future needs of the canyon.	Gregory Ducker	Website
3647	I think the la Caille gondola is a great idea!	Katie Guido	Website
3648	Please do this	Jodi Taylor	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
	Hello,		
	I am very enthused to the idea of the proposed gondola as a long term solution to our transportation needs and air quality issues. That being said, I have a couple of questions.		
3649	<p>1. Is there an analysis of the expected/anticipated amount of time the gondola could be shutdown due to winds? My thought is the canyon is a pretty good wind protector already and the wind would run parallel to the lift line, however gondola closures if any is a concern.</p> <p>2. Will the Snowbird stop be an unloading zone and then continue to Alta or will it require an additional gondola?</p> <p>3. The proposed bus traffic, is currently running diesel or electric buses? Is there an estimated cost built in to offset CO2 emissions by switching to electric buses only?</p> <p>Thanks for your time, Matt Vojta</p>	Matt Vojta	Website
3650	For the consumer the two key issues are convenience and cost. Driving up the canyon and parking for free will always win unless the consumer perceives there won't be any parking left, the bus or gondola fee is less than a fee charged for parking or a storm is occurring. Pricing for any of the options will need to keep this in mind. How the total price to access the ski resorts in the winter is set will drive the consumer in whichever direction you want them to go assuming you put a price on the inconvenience of having to transfer to a bus or gondola. Pricing should be less on weekdays that aren't holidays. Skiing is already a fairly expensive sport, if transportation and parking get too expensive in Big Cottonwood some will stop skiing or go elsewhere. Maybe that is the unspoken part of what you want to happen?	John D'Arcy	Website
3651	Please use the gondola! No more buses!	Maile Durst	Website
3652	Traffic through Little Cottonwood Canyon is bad and adding expanding traffic capacity will not solve the issue. A rapid transit solution will be more effective at transporting people (by cost, congestion reduction and environmental impact) than an option that requires continually adding more lanes over the years and decades to come.	Ignatius Hsu	Website
3653	I support this.	John Yoon	Website
3654	I support the Gondola plus La Caille Base Station option to alleviate traffic in Little Cottonwood Canyon. The gondola will have much less environmental impact than widening the roadway and increasing bus traffic. The gondola will decrease the number of cars and buses in the canyon. The addition of a parking structure at the base station is essential to the success of this project. It adds too much to the inconvenience and travel time to park at a commuter lot then take a shuttle to the gondola base. To make this traffic mitigation plan successful the alternative to driving up the canyon must be as convenient and simple as possible. The parking structure eliminates the need for any reliance on bus schedules. Just park at the gondola and hop on. Road closures should also theoretically not impact gondola service.	Dylan Alexander	Website
3655	I fully support a gondola system to reduce traffic in the canyon. My family and I have been skiers in the canyon for many years. Now that I have teenagers I regularly have 2-3 cars in the canyon on a given weekend. The bus system is slow and on heavy snow days access to the canyon is delayed many hours due to avalanche control. Having a high speed/high capacity gondola seems like the right choice for LCC.	Trent Gundersen	Website
3656	I vote for Option 1, so Enhanced bus service with some route improvements & snow sheds mitigating the worst avalanche areas. A useful widening of 210 as proposed as Option 2 would really gouge into the canyon & is probably the alternative most vulnerable to cost overruns - so just no. The Gondola Option 3 sounds nice, but unless the lowest station is moved further down into the valley it is slower and with that extra bus transfer pretty obviously a gear schlepping pain. Modified thus it remains a future option, but the simple fact is that the road needs improvement at least to the Option 1 level no matter what else is done, but it probably doesn't need to be an Option 2 superhighway.	William Hamilton	Website
3657	The gondola plan with the La Caille base station is the best solution for all Utahns, visitors and the environment!!!	Christena Buonforte	Website
3658	In favor of the gondola	Mario Janssen	Website
3659	Gondola plus Lacaille base station is the best solution	Tristan Schroeder	Website
3660	I support the enhanced bus plan with widened roads. However, I say that with several caveats. As I'm sure you know, the problem isn't merely getting up the canyon, but getting to the canyon. In years past, I have not wanted to take the bus or have not been able to take the bus because I cannot find space at a park and ride. Taking another bus service to the park and ride locations is way too time-intensive and is impractical with all of your gear. I would love to see it become easier to take the bus which includes additional services, more space so you aren't crammed into them like sardines, and some sort of locker or storage system at the resorts which is included with your bus pass (or season pass if you take the bus) so you can store extra layers, food, boots, etc. I would like to also express my opposition to the gondola. So much of the canyon is used by backcountry skiers or by other outdoor enthusiasts in the summer months. By installing a gondola, you fail to solve the problem of getting up the canyon (instead, moving the wait times from within the canyon to the proposed transit hub) and severely limit the accessible space within the canyon.	Molly Wheeler	Website
3661	The Gondola Plus La Caille Base Station is an option that should be explored for allowing more people to access the canyon. It seems to me like there would be fewer cars and traffic in the canyon, making less pollution and fewer frustrated people. It seems like it would also be safer than making more room for cars: fewer cars, fewer accidents.	Nicolas Pace	Website
3662	Please rethink adding more temporary solutions to a problem that obviously needs a more permanent solution	Hunter Patterson	Website
3663	Gondola is the best possible option, no question!	Ronald Blackhurst	Website
3664	Busses and tunnels exacerbate the problem in the canyon. Please consider the gondolas as a better alternative.	Kevin Durst	Website
3665	I love the concept of the Gondola Plus for Little Cottonwood Canyon. It won't replace cars but would be a really logical way to minimize ecological impact, while presenting a nice, safe voyage to the resorts.	David Lucas	Website
3666	I am in full support of the LaQuaille gondola project proposal. Absolutely and unequivocally in full support.	Alex Wheeler	Website
3667	We should investigate a gondola plus La Caille Base Station	Jaxon Roller	Website
3668	I am an active user of the canyon. I ski more than 20 days a year and use the canyon for hiking and cycling in the warmer months. I prefer the plan to enhance bus service and add dedicated bus lanes that could be used by cyclists in the summer months. Enhanced bus service seems to have the most flexibility to meet increased use and the flexibility to provide multiple stops within the canyon. Making these lanes available for cyclists makes it a much safer place to ride. I have not used the current bus system but would do so with more buses and reduced times because of the dedicated lanes.	Ross Hansen	Website
3669	I support the gondola project.	Tiffany Kawasaki	Website
3670	I support the GONDOLA PLUS LA CAILLE BASE STATION option.	Ed DeSimone	Website
3671	I support the Gondola with base station at La Caille proposed by Snowbird.	Trent Rolf	Website
3672	Yes the gondola Camille base is a fantastic	Mary Vodisek	Website
3673	Gondola is the only option that makes sense for relieving congestion in the canyon. Especially on a powder day when everyone is trying to get up and people keep sliding off the road. A gondola wouldn't be affected by snow conditions.	Ryan Gallegos	Website
3674	Please do everything in your power to preserve the beauty of this area.	Charlie Blasberg	Website
3675	Proceed with the La Caille Base Station and gondola	David Biblo	Website
3676	As a cottonwood height homeowner I'm all for the Gondola Idea.	Jared Winkler	Website
3677	I agree w/ Mr. Carl Fisher in that the 3 proposals all fall short. A road building entity should not be trying to inform the process on transportation alternatives. The Gondola is a sham and will not help. Less cars is the answer. Personally, I maintain banning all private vehicles from the canyon on high traffic days is the only solution. Possible banning cars altogether. "Visitors", both local and from afar, have proven unable to successfully utilize the road. A rail system would be a much better solution than any of the 3 proposals, as would a system of private enterprise shuttles and car pools. I agree with all of Carl's comments that can be found HERE : https://saveourcanyons.org/the-latest/save-our-canyons-blog/ikon-t-believe-how-udot-s-environmental-impact-study-epically-fails-the-wasatch?eType=EmailBlastContent&eid=32b6ef5-3332-4c3d-aa4e-e51e38a24ce8	Brian Vansteenkiste	Website
3678	I support the gondola	Kevin Castell	Website
3679	Gondola option seems like the best option for everyone.	Josh Summers	Website
3680	I support the Gondola! After 40 years of visiting the alta lodge and snowbird, this is a great longterm solution.	Frederick Horowitz	Website
3681	I am absolutely in favor of the revised gondola plan. The private land alternative where there is a multi level parking garage just up the mouth of the canyon. It's cheaper than expanding the roads and it doesn't sacrifice travel time and convenience the way the original gondola w/ busing plan does. I'm of the opinion that if huge expenditures are to be made, the smartest and most efficient solution needs to come out on top — We don't really know what that is yet, I believe. The gondola solution I'm referencing was posted on liftblog.	Daniel Arthur	Website
3682	Another perspective to consider is usage. If strict bus only options appear most efficient on paper, I think it's worth entertaining that they won't be used to capacity. I don't have numbers in terms of average capacity on the existing bus routes, but it's reasonable to compare on a nation-wide scale: bus systems aren't glamorous and are disappointingly under utilized! It's only speculation, but I have a feeling the gondolas will be used to capacity more more frequently than the buses.		
3682	My last point (again no numbers to back) is the environmental foot print. It seems like the gondola has the least...but I don't actually know that. Let's keep LCC happy and healthy :)		
3682	Better transportation for little cottonwood	Brooke Green	Website
3683	Hello, I am writing to advocate for increased/enhanced bus service on highway 210 in LCC. The other options, gondola installation and road widening, will considerably hinder the responsibility we have to preserve and protect the natural state of our lands. In addition to the natural habitats that would be put in danger by such invasive construction, there are simply too many recreational activities that would be significantly negatively impacted with such aggressive manipulation of the canyon. Although Alta and Snowbird are powerful companies, do not forget they LEASE this land from the federal government, they do not OWN it. The people do. Don't get bullied by big corporations, and please consider enhanced bus service as a more practical, respectful, and achievable solution.	Ian Griffith	Website
3684	Better transportation for little cottonwood	Brooke Green	Website
3685	The gondola is clearly the best, lowest cost, safest option for Little Cottonwood Canyon	Lily Zelov	Website
3686	Definitely need this gondola!	Mark Billeter	Website
3687	Please make the bus the way to go. Build large parking lots outside the canyon and give buses their own lane. Have them come every 5 mins or so. Bus. For. The. Win!	David Doty	Website
3688	As an avid skier and long term season pass holder at Snowbird and also Alta as well as backcountry, I accept the impact I have on this canyon. I strongly favor improving the bus system as well as the snowshed proposal. A gondola will not stop at backcountry trail heads. It will have serious backlog issues during peak times. Summer options are very limited. Costs are significantly higher. Special interests might favor a gondola as a means for catchy marketing, but it will not serve the greater needs of local residents. I would also like to see a graduated toll for vehicles at the bottom relative to number of passengers in cars.	Brighton Bigler	Website
3689	As an avid outdoor enthusiast and Utah local, I fully support the Gondola with LaCaille base station and parking as the best solution to Little Cottonwood Traffic. We don't have to destroy more of our gorgeous canyon with additional roads and more traffic. Traffic and air pollution is the problem! We can drastically reduce the need for the road, improve air quality, protect our watershed, and leave the wilderness untouched by building a safe and efficient tram system. Please use this option!!!!	Christopher Farmer	Website
3690	The La Caille gondola base station appears to be the most practical and most beneficial option to solving traffic and parking issues in Little Cottonwood Canyon. I support this sustainable option.	Kyle Greenberg	Website
3691	Please don't build more roads! Gondola is the way!	Andy Rebne	Website
3692	The gondola and La Caille base station option is the best option to fix traffic constraints in the canyon, while protecting the environment and beauty of the canyon. I also think it would be an amazing opportunity for Utah to pioneer such an innovative solution, and would display how much we value our local canyons.	Brandon Francom	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3693	I believe the enhanced bus option is the best option as this has the least impact on the environment and the beautiful scenery of little cottonwood canyon. Since I was young I have been traveling up little cottonwood for recreation and outdoor time and I have always loved how wild and beautiful it is. I would hate to see something take away those beautiful memories and the ability for my future children to share the same memories. Protect the Wasatch! Don't widen the road and especially don't add the large eyesore of a gondola.	Madison Stratton	Website
3694	We cannot widen Wasatch Blvd. All that will do is pile more cars up at the bottom of the canyon idling and polluting, plus we cannot take peoples homes. Wasatch Blvd. needs improvements, like lower speeds, better egress outgress, safe bike lanes where cars are not honking and speeding 60 mph by you as you ride. Walking and crossing areas to safely cross with young children and a redesign of Ft union intersection with turning arrows right off Ft. Union to improve safety onto Wasatch Blvd. by 7-11. Slower speeds and NOT making this a commuter thoroughfare need to be priority. The Gondola sounds like a better alternative to buses, but must be able to stop at other trail heads besides Alta and Snowbird. (White Pine)..We have tons of empty parking stalls at Old Mill business Park that should be investigated for use on weekends as a short term solution. Run buses through teh Old mill and pick people up for canyon transport NOW! Make weekend deals with private building owners to use the sports on weekends and people parking there will pay to make the \$. These spots sit empty all weekend and could be shared for more bus availability. I'm begging you not to widen Wasatch Blvd.	jamie fendler	Website
3695	I have a friend who has spent time in multiple resorts across the world: France, Switzerland, Germany, Chile, Italy, New Zealand and Australia and he has seen some amazing examples of vehicle mitigation by installing large gondola systems and it works very well. It also allows for amazing year-round tourist experiences without hindering the local participant activities. Not to mention it would be a new, highly targeted revenue stream to protect the canyon. Because of his endorsement of this system, I support the gondola option with a base station at La Caille as the best transportation solution for Little Cottonwood Canyon!	Brenda Hollingsworth	Website
3696	I support the Gondola	Metta Driscoll	Website
3697	Please save our beautiful canyon. It would break my heart and many others to see it industrialized, taking away the beauty and nature.	Laurel Nielson	Website
3698	As a citizen of the valley, and an avid skier in little cottonwood canyon, I feel that a gondola is a great compromise to reducing traffic in the canyon.	Asher Petersen	Website
3699	I am in support of the gondola.	Ben Draper	Website
3700	I think the aerial tram/gondola solution for travel up and down Little Cottonwood Canyon would be efficient, reliable, and would address the traffic and air pollution without as high of environmental impact as the other options. I would love to see this be implemented.	Luke Bennink	Website
3701	I'm in full support of the Gondola option with supporting mobility hubs. This is the most forward thinking, customer focused of all the alternatives something that locals can be proud of and tourists can admire. It has the lowest environmental impact in its construction and operationally and is the most flexible option for the future. The other alternatives seem to make safety improvements but say "look we can move more cars in the canyon now, and faster too". The widening will mean that any problems vehicles have on snow days may be easier to fix and not cause as many delays - but essentially its the same problem on a short term view: we wont have reduced vehicles in the canyon. When predicted numbers increase again, with a growing valley population and healthy tourist numbers there's nowhere else to go, we cant widen the road again. The potential perception of the Gondola solution, locally and internationally is immense - a real wow factor. Something we can champion, advertise and be proud of - "Look what we did!". That cant be said for widening the road etc which whilst practical doesn't sound like a selling point, unlike the Gondola.	Simon Carter	Website
3702	Please choose the gondola plus la Caille base station option. Lessen car traffic and safety issues in the canyon!	Maria Groves	Website
3703	Please consider la caille base station	Alex Pachnanda	Website
3704	I want the gondola. There's already too much car traffic	Stewart T	Website
3705	I support!	Igor Birioukov	Website
3706	Please do not move forward with the Gondola project. It will deface the canyons I love. I'm an avid climber and hiker and being able to leave the bustle of the city within 15 minutes is what I cherish about living here. LCC has become one of the noisiest canyons as a climber, the gondola will only bring more sight seers and more buildings and more transportation, in turn making it all even noisier. The resorts in the winter are not a priority when it comes to respecting nature. If resort goers want easier access they can pay a toll to the canyon that can then be used for on going maintenance. I am willing to pay a toll to use these canyons to avoid an eyesore gondola.	Steph Ruesch	Website
3707	I have skied/recreated in Little Cottonwood for 23 years. I live in Cottonwood Heights and I support the Gondola!	Doug Wismer	Website
3708	Please consider the gondola as I feel it would benefit the canyon greatly. Telluride Colorado is a great example of how a gondola system can impact a community for the good.	Zach Hansen	Website
3709	I think this is a great idea. Too many cars up the canyon.	Max Wood	Website
3710	Love this plan! I think this would be spectacular. Brilliant!	LORI MINER	Website
3711	Build the Gondola! Best idea and option!	Jim Clarke	Website
3712	I am a regular LCC user and I support the option for the Gondola with LaCaille station.	Pete Van Slooten	Website
3713	For the safety, health and consideration of all of Utah, please support the Gondola to help the environment and dangers presented in Little Cottonwood.	Isaac Anderson	Website
3714	As a weekly user of LCC I support the gondola option plus the la caille base station	Jim Jackson	Website
3715	strongly support the La Caille/Gondola as an option to reduce congestion in Little Cottonwood.	Clark Libenson	Website
3716	Gondola is the best way to go!	Carter Louchheim	Website
3717	I fully support the Gondola proposal as a much safer and more environmentally-friendly option to get people up and down canyon. There are plenty of similar examples throughout Europe that work. There is no other sensible way in my opinion.	Janet Deisley	Website
3718	Please make progress on LCC traffic and road safety by instituting with gondola and at same time, improve the road while protecting the watershed.	Jennifer Riffle	Website
3719	I think the proposed gondola up little cottonwood canyon will be great at reducing traffic in and out of the canyon. I will use it.	James O'Donnell	Website
3720	I believe that the team is a phenomenal idea. The amount of emissions already is outrageous, and the tram would have zero emotion to begin with. The amount of accidents prevented, the consistency of getting workers up during storms and avalanche control is beneficial, less busses for better traffic flow. Not to mention how much less traffic there would be!	Benjamin Nielsen	Website
3721	I support a Gondola system. Thanks!	Schaffor Clawson	Website
3722	Full support	John F. O'Leary	Website
3723	We need the GONDOLA PLUS LA CAILLE BASE STATION!! It is the best option for the LCC!!	Robert Tomsy	Website
3724	I think we need to install the gondola going up little cottonwood canyon. It would help the city reduce pollution and the inversion in the winter. It will also be cheaper in the long run because it will save gas money and road work due to heavy traffic.	Josh Kaelberer	Website
3725	In favor of the gondola!!	Sydney Szabo	Website
3726	I like the Gondola and extra parking at La Caille station. I cycle the road in the summer and would like to see car traffic reduced. Widening the bike lane on the downhill side would be a big improvement.	PAUL CARTER	Website
3727	Please consider the option of Gondola Plus La Caille Base Station as an alternative to reducing congestion in Little Cottonwood Canyon. Thanks	Mike Obendorf	Website
3728	I support the Gondola plus La Caille station option. If we think and invest strategically now, we will create a sustainable solution that lasts for many decades. Thanks for your consideration.	Michael Clarke	Website
3729	Been skiing at the Bird since its opening. Most of the years with a seasons pass or 40 rolling tickets plan. I vote for the gondola. It is the best way to keep the canyon pristine for the next 50 years.	John Bradshaw	Website
3730	Living on Wasatch, I would like to see a focus on buses. Buses that are able to pass cars so that people want to ride the bus. Buses that are the priority and the first ones to get to go when the road opens. If they are stuck in traffic there is no purpose for them. There is limited parking anyway and getting more people up there faster will only create the need for more parking. I would rather see dealing with that parking in the valley, not in the mountains.	JENNIFER WELDING	Website
3731	Build the Gondola!	Gunnar Gustafson	Website
3732	I support the Gondola option with or without the LaCaille Base station.	David Robinson	Website
3733	The Gondola is a great idea. It reduces traffic, is novel and would generate headlines and tourism to the area.	Dustin HOlstein	Website
3734	I think the gondola is a great idea depending on the cost to the user	Jeff Stephenson	Website
3735	I think you should consider making the road a toll road. I also think the bus service should run more frequently and be more accessible i.e. better parking lots to encourage more ridership. I ride the Park City buses all the time and try to ride the buses when going to ski in the canyons but have found them to be difficult to catch at times based on my schedule and lack of decent parking.	Elizabeth Fellows	Website
3736	I am in favor of either of the two bus-based alternatives. I am very opposed to the gondola alternative. The visual impact of a gondola traversing the length of the canyon will irreparably damage the visual quality of the canyon from anywhere within the main or side canyons of Little Cottonwood. Buses will follow the existing road. Even if the road is widened, the visual impact will be an incremental one from what already exists. From the side canyons, there are places where significant stretches of road are visible, but for the most part one can only see sections of the road from any particular vantage point. The gondola, with vertical towers, lines, and gondola cars, will extend above most surrounding trees, and will be very visible for its entire length. I believe that many people use the canyon because of its outstanding visual qualities, and that the gondola alternative would have a substantial negative impact on those qualities. In addition to the visual impact, there would be a large amount of construction necessary for gondola terminals outside of the current existing road transportation corridor, with inevitable environmental damage to currently undamaged areas. Because of the visual impact of the gondola, and the accompanying environmental damage, I strongly oppose the gondola alternative.	John Mason	Website
3737	I support the gondola option for Little Cottonwood Canyon	Candice Gagnon	Website
3738	Bus service best idea. Gondolas from bottom to top 2nd idea.	Jim Rauchen	Website
3739	I meant to conclude the comment I just submitted with I am not in favor of widening the road (to either canyon.)	Elizabeth Fellows	Website
3740	I am a resident of Cottonwood Heights and have skied in Little Cottonwood Canyon for the last 25 years. I support a Gondola and La Caille Bus Stop, not widening roads or adding buses. Thank you	Stacey Dobkins	Website
3741	The gondola option seems great in that it gives a second 'roadway', where currently there is just the one road. One example where this could help besides the more obvious road traffic issues is with landslides due to heavy rainfall. Sometimes these affect the road in areas that aren't necessarily the main avalanche paths.	Jennifer Spacek	Website
3742	Udot please explore the gondola proposal for little cottonwood canyon. When presented with an opportunity to be extraordinary, to choose ordinary. Be the environmental change this country needs.	Gregory Santollo	Website
3743	Sounds like a good solution to the traffic problems in Little Cottonwood canyon! Please do NOT put a gondola in Little Cottonwood Canyon. It would ruin the beauty of the canyon and create even more congestion in Cottonwood Heights and Wasatch Blvd with busses transporting even more passengers to the mouth of the canyon than there already are now. Please, PLEASE add bus-only lanes to the road instead. You could even add just one bus lane that is used for uphill travel in the AM and downhill travel in the PM. A bus-only lane will incentivize people to take the bus instead of driving and it will preserve the beauty of our wonderful canyon. Thank you.	RaMona Bootes	Website
3744		Dan Reese	Website
3745	Gondola and not widening wasatch Blvd!!!!	Shawna Blackhurst	Website
3746	Looks like a great opportunity	Annalee Brunt	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3747	<p>As an Iron Blossam owner who relies on either a shuttle or private car to enter and depart Little Cottonwood Canyon and who primarily skies Alta Ski Resort by taking a bus there and back from Iron Blossam, I am most in favor of an alternative that does not hinder my ski choices: 1) by forcing me to ski Mineral Basin to and from Alta when I am not prepared to do so (50% of the time); 2) by dictating my travel choices and times to and from Alta; and 3) by eliminating my choice of using a private vehicle to transport me to and from Iron Blossam on my arrival/departure.</p> <p>A gondola will never be my choice of a good alternative since it effectively eliminates buses from the Canyon, unless I am not reading it correctly. The unsightly tower constructs and lack of privacy of land/homeowners would negatively impact outdoor recreational activity. For tens of thousands of dollars more, you project moving only an additional 42 people in a peak hour.</p> <p>A cog rail would have the same avalanche issues that the roadway currently has, notwithstanding the construction that needs to occur on the roadbed and the roadway lane expansion. And, again, people movement at peak hour is only 3 additional people with extensive capital outlay.</p> <p>Both gondola and cog rail alternatives leave unsightly structures that would be underutilized for a substantial part of the year (mid-April to mid-December).</p> <p>Enhanced bus service is easier to adapt to changing conditions in ridership and weather conditions. Who can even guess if, given our current paranoid panic environment, skiing will again attract participants and return to its prominence as an outdoor sporting activity? The industry may just price themselves out of reach if they have to abide by mask and social distancing mandates to limit participant numbers that have been foisted upon them.</p>	Sandy Remson	Website
3748	I'm near retirement. I intend to retire soon and relocate to where there is good skiing. The SLC area is a strong contender. Your management of this issue will have a major impact on my choice. Accepting a "more of the same solution" will definitely turn me away.	Steven Mandel	Website
3749	Hello, I love skiing LLC, bower I believe that a gondola is the best option here. Already too many cars in the canyon, don't add an incentive for more.	Karl Bromfield	Website
3750	<p>I do think the gondola plus La Caille base station option is worth considering. Figuring out how we are going to reduce traffic congestion in Little Cottonwood Canyon is a tough nut to crack, we've collectively been trying to find a solution for years. Given the staggering congestion we now experience on powder days it is imperative that a solution be developed and implemented. The current situation is certainly untenable and unsustainable.</p> <p>Having grown up here in Salt Lake County and being used to getting from my house to Alta or Snowbird and being on the hill within 45 minutes has spoiled me and the rest of us. It will be a change and a pain-in-the-butt for us to have to park then get on a bus, get on the gondola, get to Snowbird gondola terminal then transfer if going to Alta. Like I say, we're spoiled. However, on a powder day we have to spend sometimes an hour or two or more waiting in line on the road, so from a time perspective maybe it would be faster which would be a good thing. (I say all of that just to acknowledge one of the challenges to attaining public buy-in to any solution beyond the present take a bus or drive our cars up to Alta or Snowbird.)</p> <p>On the question of is the gondola with La Caille base station "the" solution, I don't know. It sounds like the best one to come along so far, and I know interested parties have been working on solutions for quite a while. Certainly costs of implementing any solution will be considerable. Obviously we need to maximize return on investment in terms of maximum utility for each dollar spent. I see this as a public works project and bonding or other funding/investment mechanisms will be necessary. I don't think it's equitable to increase general taxes for such a project as the project doesn't serve the public-at-large but rather serves those who use Little Cottonwood Canyon. So user fees would make sense as part of the means of paying for the project.</p> <p>I don't have a problem with snow-sheds on roadways. I also am not opposed to tunnels, although they seem like a rather expensive proposition and I'm not sure where they would go that would really help the situation. I do see that parking in the canyon is limited and so car traffic in the canyon has to be reduced. Same with traffic on Wasatch Blvd which is untenable on powder days, especially for those who live along that stretch of that road. Parking cars at the proposed La Caille paring garage will not solve that part of the traffic problem, only the portion going up canyon. Of course incentivizing parking at the bus station closer to I-215 can help with traffic between Big and Little Cottonwood Canyons. Likewise with parking down in Sandy on 9000 South or further east on Little Cottonwood Road.</p> <p>So yes, I do think the proposed gondola with base station is a viable alternative and worth serious consideration. Although, I'm not well versed in all of the alternatives that are presently on the table so I can't say that I think it is "the" best alternative. It is certainly a good alternative.</p> <p>Thank you for the opportunity to provide my input.</p>	Matthew Wallace	Website
3751	A solution to the transportation problem in Little Cottonwood Canyon should seek to minimize more development and construction intrusion into what is left of the natural environment. The gondola idea is inefficient and obtrusive. It may serve the resorts, but will not solve the wider traffic problem. I am in favor of increasing availability and ease of public transportation up the canyons. It seems it would be wise to take a step back and focus on a solution to year-round transportation problems in both Big and Little Cottonwood rather than just one canyon at a time as they are so close to each other. Focus on increasing incentive and ease of bus transportation and carpooling without expensive road modifications. Hubs for canyon bus transit should be made more available through the valley rather than a single lot at the mouth of BCC to decrease traffic and increase practicality of relying on a bus. I'm in support of express buses that run straight to a resort of your choice (at least during ski season), but separate buses that stop at trailheads lower in the canyon should also be considered. Tolls should be charged for passenger cars with fewer than four people. The parking lot expansions are needed, but a broader solution to minimize traffic in the canyon should be focused on. Use of the canyons will continue to increase, and eventually even the larger parking lots will become inadequate. A complete overhaul of public transportation in the canyons while discouraging passenger car traffic would markedly improve the transport issues without destroying more of the canyons with expensive construction problems.	Paul Steinman	Website
3752	my family and I travel to Utah from NYC every year. We would much rather travel by bus and gondola to the slopes than by private car.	Elizabeth Ernish	Website
3753	I support the Gondola option. It is a better long-term solution. It's less destructive to the canyon, will not increase vehicle numbers which is needed for our already poor air quality, and it's a safer option than putting more people on the road. It's high time we caught up with our	Charlotte Holbein	Website
3754	European friends who have been using this type of solution for decades already.	Nikki Welsh	Website
3755	I am in favor of steps to minimize the number of cars traveling on S.R. 210.	Ed Gallacher	Website
3756	More Buses us the road stop all car traffic after Thanksgiving Holiday. No to a tram will destroy the canyon.	Jack Spicer	Website
3757	I support the gondola option. As a new Salt Lake City resident I was very surprised by the traffic in Little Cottonwood Canyon this winter. I believe that the gondola would be the best option to avoid this while preserving Little Cottonwood Canyon.	Scott Brady	Website
3758	I would love to see a gondola here to minimize traffic congestion even if it means waiting in longer lines to get up the canyon. I'm a snowbird season pass holder for 20+ years and take my wife and 3 kids there every weekend in the winter. Thanks.	Brandon Beebe	Website
3759	The gondola would be an asking addition!!	Jackson Hallett	Website
3760	Good idea	ALTON WINKELMAN	Website
3761	I'm against a gondola, widening of roads to accommodate more vehicles, and any plan that doesn't include BCC. I agree with SOC conclusions: 1) Get people out of their cars and into transit at multiple locations well before mouths of the canyons. 2) Start a toll road system at the mouths of the canyons. 3) Ticket vehicles in the canyons not equipped for winter driving. 4) Make all on-road parking at all locations in the canyons illegal. 5) Return to a comprehensive approach to the EIS.	Robert Ivy	Website
3762	I travel from out of state almost every year to ski little cottonwood and have done so for over 30 years. Lately, I have started to consider other destinations because of the always increasing difficulty in getting up and down the pass (and getting stuck from time to time). The gondola project would make sure I spend my dollars in Utah—and I am sure there are thousands more like me.	Michael Devin	Website
3763	I support the gondola.	Sarah Terry	Website
3764	Utah has a lot of work to do structurally and this is a great start!	Phil Broadbent	Website
3765	I think this is great that we're coming up with solutions. Gondola or enhanced bus would be fantastic. Gondola would be great to utilize during summer as well for mountain biking.	jere gimbel	Website

3781	Gondola is the only way. Adding more lanes and vehicles doesn't solve the avalanche, road closure and one of the most dangerous roads anyplace problem. I hope there is limits put on lift ticket sales at some point to ensure LCC does find a way to maintain the high quality experience for winter guests. Thank you!	Marla Slider	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3782	The gondola La Caille station option would make LCC accessible year round. My family currently lives in 84093 and we drive an hour north to Snowbasin resort for skiing, because LCC is so difficult to navigate. I would prefer to be able to ski up LCC and this option would make that possible. We also Mtn bike all over Utah, but rarely up LCC because the roads are too treacherous for Mtn biking with traffic. I would love the opportunity to shuttle with the gondola and ride the canyon year round! This option would be amazing for carbon emission reduction.	Jennifer Bachman	Website
3783	I DO NOT support a gondola, stations, or any other structures to be built. I DO NOT support the widening of LCC road. I do however support the idea of an electric bus system that runs frequently to encourage riding the new bus system. Snowbird and Alta can foot their own bill to build parking structures on their own properties to help the parking problem.	Ethan Wilcox	Website
3784	well so far this is the best option I've heard about, if you make getting to the station easy and hassle free...heck yeah I'm in. Also cutting the amount of time it would take getting up and down the canyon, winner winner chicken dinner.	jeffrey parriott	Website
3785	Gondola and La Caille is a great idea. It will be a huge undertaking, but the canyon already has a 4 hour wait to get up and down during peak times. Working in the canyon is awful, it makes me hate my job that I love so much. I would love to see less cars (safer for animals, canyon-hikers, and carbon emissions... Imagine the amount of inversion that could be decreased with the less cars sitting idle waiting for the canyon to open, or sitting still during a snow day. Snow day = Gondola riders = no deaths or crashes on major roadways!	Jayme Trojan	Website
3786	Hello... this is a brilliant idea		
3786	This is an amazing proposal!	Joshua Velasquez	Website
3787	I agree with the gondola solution for Little Cottonwood Canyon. Would also like to see a solution for congestion in Big Cottonwood Canyon. We need to keep the canyons alive for future generations to enjoy.	Stephen Silder	Website
3788	What a great idea. My wife and I come from Perth, Western Australia most years to ski Alta. We were thinking a train would be better than driving, but never imagined a gondola. Wonderful. We're looking forward to it.	Nolan Penning	Website
3789	I strongly support the gondola alternative for Little Cottonwood Canyon. I feel this is the best balance for both economic and environmental sustainability.	Jon Hennington	Website
3790	I am in favor of the gondola option because of its safety and environmental advantages. I think the Plus La Caille Base Station should also be considered and studied. Thank you.	Mary Jo OConnell	Website
3791	We need to consider the Gondola option.	Justin Albrecht	Website
3792	Don't touch the canyon. Just limit the amount of people allowed up each day.	Tom Shepard	Website
3793	I like the alternative plan snowbird suggested. It would be a lot more effective for transportation, and would reduce carbon emissions in the canyon. Too often, American infrastructure is built using methods that are standard across the board to save costs and keep certain demographics in work traditionally. Do it right the first time.	Henry Gansert	Website
3794	Look at the gondola, please	William W Parker	Website
3795	I am an avid skier. I fully support the gondola access to Little Cottonwood Canyon. It's the best option that I have read about on your EIS study. And what a beautiful ride that would be!	Elaine Frame	Website
	Hello, and thank you for your work to preserve and improve access to LCC.		
	I write to support a modified version of Option 1: Modified Bus Service (without lane widening). The only long-term solution is to have more busses and fewer cars in the canyon. Improved bus service (at least DOUBLE the proposed 24 departures/hr), combined with stricter metering of in-canyon car traffic (well below the proposed 2,249) would provide an equitable, efficient, and scalable solution for access to LCC (and BCC, as this issue is coming there as well.)		
	A successful solution must: - Not include transfers. The car-to-bus-to-gondola transfer is inefficient, unaesthetic, and places an undue burden on families. People should arrive at a transit hub and have one mode of transport to the ski areas. - Not add lanes. More lanes will only maintain traffic on the roads, causing bottlenecks at ski resort entrances. Adding lanes is kicking the can down the road on this issue. We must significantly reduce the number of cars in LCC. -Be scalable over time. You can't add cars to a gondola, but you can add busses. Busses can drive other routes as seasonal needs dictate. -Reduce the number of cars in the canyon. Cars are the problem—full stop. During peak hours, only residents and those with a reservation should be allowed above the White Pine trailhead.	Alex Hamlin	Website
3796	The Alternative Summary as presented unfairly discount the benefits Enhanced Bus Service. Taking bolder action to reduce car traffic in the canyon would eliminate the need for extra lanes, reducing travel time from 54 min to 36 min and saving \$184 Million (compared to option 2, Enhanced Bus w/ Lane Widening.) Spend that \$184 Million on more (and more frequent) busses, and you can have a world-class transportation system that's scalable, sustainable, and that will solve this issue for generations.		
	Thank you. Alex Hamlin Salt Lake City, UT		
3797	THIS IS A MUST! So excited!	Kyle Mercier	Website
3798	Keep the road the same! Increasing access will only destroy little cottonwood canyon. No matter what is done (buses, gondolas, more lanes) will never alleviate congestion but only increase the maximum of people. Congestion will be the same. I recommend a toll road	Judd Partridge	Website
3799	I support the gondola option with La Caille base station over more cars & buses.	Joan Dykstra	Website
3800	I have driven this canyon for many years and am worried about how much traffic it handles!	Natalie Harvey	Website
3801	Don't pave, I support the Gondola!	Aidan Ross	Website
3802	More cars, more buses, more lanes and massive concrete tunnels are not the solution to transportation in Little Cottonwood Canyon. The Gondola Plus La Caille Base Station is a way to get cars out of the canyon and off Wasatch Blvd.	Stefanie Thorpe	Website
3803	I support the use of a Gondola in little cottonwood	Travis Fisher	Website
3804	I have analyzed the 3 options for traffic solutions for Little Cottonwood Canyon and it seems to e that the Gondola is the way to go. The cost and environmental analysis as well as it clearly being a welcome revenue stream and year round tourist attraction makes this a no brainer. And Snowbird's generous offer of their private lands makes all parties invested in its success. The La Caille base station also makes total sense. Let's do this!!	Jeff Albucher	Website
3805	Gondola will ruin the natural beauty and make more of an environmental impact than proposed. Mandatory electric busses without road expansion with exceptions for employees, homeowners, and overnight guests	Sam Schultz	Website
3806	The simple enhanced bus service has to be the first thing to try to reduce traffic. We should try to minimize the impact to Little Cottonwood Canyon as a recreation area to all those who use it, including the hikers, rock climbers and mountain bikers. The gondola will be an eyesore to the beauty of LCC and will undoubtedly take away from the canyon recreation experience. The shoulder lane should only be undertaken if the simple enhanced bus service does not work. However, steps need to be taken to incentivize travelers to actually take the buses or reduce single or dual occupancy cars. Single or dual occupancy cars should be charged a parking fee during peak hours (8 am - 2 pm), while 3+ occupancy and buses are free. That revenue could be used to improve bus service and put towards future LCC projects. Please don't commit to a bloated project before we try simpler alternatives!	Dennis Pruzan	Website
3807	Yes! Gondola	Cristan Cris L. Ellison	Website
3808	ENHANCED BUS WITH ROADWAY WIDENING FOR PEAK PERIOD (SHOULDER LANE)in LCC. This seems like it would be the best option. The roadway should be widened anyway as the lanes are so narrow in the canyon, and not very safe if someone veers out of their lane, which normally happens. This seems to be the best alternative, covering all the bases.	Sarina Seitz	Website
3809	Little Cottonwood is SLC's greatest resource. preserving this resource should be top priority.	Brian DiLoreto	Website
3810	I think that the gondola is the best long term solution. With it impacting the environment the least. No tunnels, widens roads for more cars or busses. The gondola can easily be upgraded to supply the needed amount of gondolas over time. Electricity ran. Cheaper maintenance and upkeep. And I mean come on, can you imagine how absolutely breath taking that gondola ride will be?! I mean seriously. It will be breathtaking.	Steven Van Slooten	Website
3811	I support a gondola, road widening for express buses, adding a parking fee to season passes with a dedicated spot for the pass holder.	mike newberry	Website
3812	Support the Gondola	Susan Szabo	Website
3813	While I think the advertisement for the gondola is a bit disingenuous to claim zero emissions, I do think it is a much better option than widening the road and boring out tunnels. Any form of transportation generates emissions, either out the tailpipe of the vehicle, at the power plant that generates the electricity, or in the fabrication of the steel, fiberglass, plastic, and other components to fabricate the mode of transportation. Power generated by the power plants (coal fired, natural gas fired, solar, hydroelectric) are all much more efficient than gasoline and diesel powered automobiles. So the gondola is clearly the better environmental option. The gondola is also less invasive on the wild habitat and offers much better views for people as they transit the canyon. For these reasons, I believe UDOT should pursue the gondola option for improving mobility to Little Cottonwood Canyon.	Chad Texter	Website
3814	Please explore using a train. It would add so much value to the canyon, be a unique way of viewing the canyon. No one wants more buses in the canyon. Home owners like me would actually take the train. Please review zermatt Switzerland where they actively use trains to get all over the mountains. They are incredibly efficient and a value add to the mountains.	Peter Coats	Website
3815	I would like to voice my primary support for the gondola option. However, I have two concerns. First, with the increased utilization of the Cottonwoods for backcountry access, I would like to see unloading stations at least at Tanners and preferably at other trailheads as well. Otherwise, ad backcountry recreation continues to increase in popularity amid rising lift ticket costs, this will do nothing to mitigate traffic from cars seeking to access those trailheads. Second, I would hope that the gondola would run return trips until at least 8 or 9 PM. This would allow for late season individuals accessing the backcountry gates around Alta and Snowbird to enjoy a full day and not have to cut their recreation short. It would also allow Alta and Snowbird resort guests to enjoy amenities such as food, drink, spa, etc. before making their return trip. Without a late return option, such establishments could be hurt financially. Additionally, their employees would not have a means of commuting via public transit and would be forced to drive up the canyon road.	John Hickey	Website
3816	I support the gondola	Paul C. McDonald	Website
3817	I support it to preserve the canyon and make it safer for everyone.	JEANIE WESTOVER	Website
3818	Easy access to Snowbird/Alta from SLC is the reason I come from CA for skiing and I know I'm not alone.	Christian LaRoe	Website
3819	After reviewing the proposed options, I feel that the road widening and dedicated bus lane is the most appropriate solution. I worry about the gondola causing additional bottlenecks at the base of the canyon near parking structures, and the ability to operate in poor conditions. Also, I think it will damage the aesthetic and appearance of LCC in a major way.	Collin Hintze	Website
3820	The increased bus carbon footprints could be offset by using electric buses. While it is more expensive in the short term, I believe this is the best solution long-term. People will be incentivized to take public transport, and ultimately reduce the number of vehicles on our roads.	Anthony Finn	Website
3821	Build it Gondola all the way!!! Except, it should be envisioned and built in anticipation of exponential growth. Bring it to a trax station, or the freeway and build it to go all the way to park city.	Randy Ostman	Website
	My 2 cents		
3822	This model works in Europe...why not here? This is the only reasonable proposal that I have seen that would reduce canyon traffic...it would also keep tourists with FWD rental cars off of the road.	Jeremy Irwin	Website
3823	I fully support the gondola. it would solve many problems and is an investment in the area's future.	Maria Sarfi	Website
3824	As a local resort supporter and native of Salt Lake City, I support the Gondola System!	Latigo Liuzzi	Website
3825	Hope the gondola gets past	Ken Korndra	Website
3826	I support the gondola. But you'd better build some easily accessible huge parking lots. If you are going to run buses from parking lots to gondola base, they need to be many and often. No 10 minute waits between buses while crowds accumulate. This is especially important on powder days.	William Kuentzel	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3827	Over many years I have enjoyed opportunities to recreate in the Little Cottonwood Canyon. Though increasingly I find it no longer an enjoyable experience due primarily to traffic congestion. While congestion could be reduced with added roadway capacity, this is not without a substantial environmental impact, and ever greater numbers of vehicles vying for limited parking resources within the canyon. The proposed Gondola Plus La Callie Base Station appears an intelligent alternative to increased roadway capacity. Its reduced environmental impact is compelling, both short and long term. Its increased safety over winter driving conditions is also an advantage. And, as many who recreate in the canyon know all to well, when you most want to get up the canyon, conditions force its closure. A thoughtfully engineered Gondola could provide uninterrupted access. Please give the proposed Gondola the focused study it deserves. I believe many generations to come will be grateful to see this innovative and environmental sound alternative was chosen over the brute force 20th century alternative of increased roadway capacity.	Paul Welker	Website
3828	Only bus tspn. should be used.	Jim Judd	Website
3829	Either Gondola or Expand HWY 209 leading to Alta and Snowbird is critical to success of this project. My vote is to expand HWY 209 MAJOR CONCERN IF OPTION IS EXECUTED THAT DOESN'T FULLY ADDRESS BACKLOG OF traffic on 209 leading up to 210 as it will continue to be backlogged on peak ski days and weekends as it is now.....	Gregory Smith	Website
3830	Please build the gondola in little cottonwood!	Suz Masley-Thomas	Website
3831	Only bus transportation should be used.	Jim Judd	Website
3832	the only issue is see (because it is not clear) is that if you have to park and then take a shuttle to the base of the gondola that would make people not use it. if the parking is at the gondola base that would be a great solution.	Robert Brashear	Website
3833	Please consider the Gondola and LaCaille station, as a UT resident my whole life I would be devastated to see this canyon destroyed or in danger.	Laura Mekkelson	Website
3834	I support the gondola! I think that this a great and cleaner option	Alexandria Cooley	Website
3835	Do not burden the taxpayers with an expensive to build an expensive to operate gondola system. This only benefits Snowbird, and to a lesser extent, Alta, and shifts to the costs for their customers to access the resorts to the public. It is a classic case of concentrated benefits for a few with costs diffused over all the citizens of Utah, the vast majority of whom will never use the Gondola. Why aren't tolls an option under consideration? A demand based toll system on cars will get people out of their cars and into the buses. Why is parking free at the ski resorts? If a resource is being over used, it is under-priced. It is simple supply and demand. Make the price of the resource equal to its true cost.	Bryant Howe	Website
3836	Expanding Wasatch would irreparably fracture the community of Cottonwood Heights with a high-speed highway. UDOT's Imbalanced-lane and Five-lane Alternatives are unacceptable because they are based on encouraging high-speed through a residential area which includes eleven residential intersecting streets. 12- foot wide lanes and straightening of roadway are the wrong measures to take as they will create higher speeds, more air/light/noise pollution along with higher danger and fractionalizing of the Cottonwood Heights community. A desirable roadway through residential strip includes no more than one lane in each direction with either one REVERSE LANE or two additional lanes for BUS TRANSIT/HOV ONLY. Current and foreseeable future vehicular use does not warrant an expansion based on new commuter trends driven by Covid-19 pandemic, virtual officing, incentives for workers to live near where they work, projected housing growth focused on the west and central valley, and a projected new business epi-center located at the south/central valley area replacing previous prison space. More analysis is needed regarding effect of fracturing of approximately 8,000 resident Cottonwood Heights community with a high-speed highway.	Anna McNamer	Website
3837	Allow us residents to continue pursuing our master plan of enjoying the "small town" feel of our community. Gondola too expensive and complicated and would bring too many skiers, a disadvantage to local skiers.	Jeff Stevens	Website
3838	As a young skier, I support the gondola as it is the most environmentally friendly option for transport to snowbird/alta.	Chance Gordon	Website
3839	Gondolas have proven to be an effective means of transportation in many mountainous regions of Europe, including Switzerland, Germany, and France. They provide a sustainable means of accessing hard to reach terrain while preserving the surrounding ecosystems. Widening canyon roads will damage the terrain in an irrevocable way along with exposing the ecosystems of both LCC and Salt Lake Valley to more harmful pollution. In an area already prone to inversion effects any solution that would increase the number of cars on the road is unacceptable. Consider the gondola if not for the environmental advantages, then do it to avoid destroying LCC with years of harmful rock-blasting, tunneling, and construction on unsightly roads and tunnels that will only increase traffic in the canyon.	Daiven Chawan	Website
3840	A gondola should be our preferred solution, lets keep the road as is, reduce trips on it and reduce tailpipe emissions and vehicles in the canyon full stop!	Montane Hamilton	Website
3841	I'm in favor of a train. Also, why no hub on 9400? I live in Sandy.	Megan Furman	Website
3842	I support the gondola option. Less traffic, better air and beautiful mountains are all worth preserving! Please don't add more roads and tunnels!	Cynthia Wilsted	Website
3843	There has been a lot of discussion about the proposed bus, bus+, and gondola services up Little Cottonwood Canyon. I am concerned with the misleading information about each of these that was published in the summary plan. I am opposed to the idea of a Gondola due to the poor decision to place the parking garage miles away from the base station - and I am hopeful this write-up will help explain why. If you agree with me, please share. Before I start, people need to understand that under all 3 scenarios cars will still be allowed in the canyon, under a new tolling system. More parking will be added at Gate Buttriss, Bridge, Lisa Falls, and White Pine - so please don't confound the issue by complaining about the fact that a Gondola only stops at the resorts, the buses would also only stop at the resorts. Nobody is taking away your backcountry skiing access. All roadside parking would be removed at the resorts. The combination of the tolls and restricted parking are believed to be sufficient to cause 1/3-1/2 of skiers to take the bus/gondola. The summary plan can be found here. It misleads the reader by showing the estimated travel times as being fairly comparable across all 3 options. 46 minutes for Enhanced Bus, 37 minutes for Enhanced Bus+, and 46 minutes for the Gondola. https://littlecottonwoodeis.udot.utah.gov/wp-content/uploads/2020/05/9234_42_LCC_EIS_Alternatives_Project_Factsheet_FIN_WEB.pdf However, UDOT also published detailed documents regarding each option. I'll summarize each of them below: Enhanced Bus: https://littlecottonwoodeis.udot.utah.gov/wp-content/uploads/2020/05/10265_3_LCC_Public_Factsheets_Enhanced_Bus_FIN_WEB.pdf This option puts a large parking structure at the bottom of big cottonwood canyon, and another on highland drive and 9400 South. It widens Wasatch Blvd between Big and Little Cottonwood Canyons, and increases bus availability to 24 buses per hour. Including parking and waiting for a bus, UDOT estimates that this option would take 54 minutes from the Transit Hub to Alta, roughly 20 minutes longer than it takes by car. Enhanced Bus+: https://littlecottonwoodeis.udot.utah.gov/wp-content/uploads/2020/05/10265_3_LCC_Public_Factsheets_Enhanced_Bus_PPSL_FIN_WEB.pdf This option puts a large parking structure at the bottom of big cottonwood canyon, and another on highland drive and 9400 South. It widens Wasatch Blvd between Big and Little Cottonwood Canyons, and increases bus availability to 24 buses per hour. It also adds a dedicated uphill bus lane the entire length of Little Cottonwood Canyon, which can be used as a bike lane in the summer. Including parking and waiting for a bus, UDOT estimates that this option would take 36 minutes from the Transit Hub to Alta, roughly 2 minutes longer than it takes by car. Gondola Option: https://littlecottonwoodeis.udot.utah.gov/wp-content/uploads/2020/05/10265_3_LCC_Public_Factsheets_Gondola_FIN_WEB.pdf This option puts a large parking structure at the bottom of big cottonwood canyon, and another on highland drive and 9400 South. It widens Wasatch Blvd between Big and Little Cottonwood Canyons. Skiers are expected to wait in line for a bus, ride that bus to the bottom of Little Cottonwood Canyon, and then wait in line again to get on a Gondola that will take them to Snowbird or Alta. Including parking and waiting for a bus, then waiting in line again for the Gondola, UDOT estimates that this option would take 63 minutes from the Transit Hub to Alta, roughly 30 minutes longer than it takes by car. So a real comparison of all of the options looks more like this: Car: 30-34 minutes Enhanced Bus: 54 minutes Enhanced Bus+: 36 minutes Gondola: 63 minutes To put this in perspective for everyone: If you are the type that can only get away for a couple of hours to ski, whether that is due to family obligations, work obligation, school obligations, etc - Little Cottonwood Canyon has always served you well. The Gondola option could ruin that for you by adding 1 hour to your round trip commute. I am not opposed to a Gondola per se - but the oversight that is causing the parking for the Gondola to be located several miles away from the base station will add roughly 1 hour to your round trip commute.	Scott Knudson	Website
3844	I support this plan.	Jon Murray	Website
3845	Please do not expand the road. There will still be a bottle neck w very high speeds. Please improve w better bicycle lanes safer and not as close to speeding cars. Ways to cross safely and walk. The plan for little cottonwood will be fine if we can make transit hubs in the valley and prevent piles of cars from Driving to the base. Speeds should be dropped and hopefully we can avoid this corridor as a main commuter thoroughfare.	Higinio Gonzalez	Website
3846	Our canyons are too narrow to accommodate the current flow of automobiles. Mass transit is the only solution coupled with reservations. Not only in the cottonwoods; but most of our state and national parks. The herds are massive but can be managed by thoughtful people.	Jeffrey Lucas	Website
3847	I support a bus solution to provide year round access to all citizens with flexibility. Gondola looks pretty neat but big question is who gets to ride it and what does it cost? Gondola does not do anything to address White Pine Trailhead issues in layout I saw. These mountains belong to all not just ski area patrons and deserve excellent year round access. If the gondola is available to all it seems like it would attract many more people just going for scenic ride. (Pretty sure the developers don't have that in mind) I was surprised to see all proposals still show many private vehicles in canyon which only puts more importance on the need for snow sheds to make highway more reliable in winter. Like the ideas that would prioritize hov traffic including jump or dedicated lane. The idea of gondola with no snow sheds would seem to leave UDOT holding the bag as it still seems like functioning highway would be critical. From what I have learned about the 3S systems they have a rope speed of 8.5 m/s or 30kph(19 mph) so travel times may be optimistic. I do ride the bus all the time and found it to be for the most part and enjoyable and efficient experience. That is only scratching the surface of what is could be. Thank you Ritchie Taylor	Ritchie Taylor	Website
3848	A solution is needed and has been for some time. I am all for this well thought our solution.	Ryland Hosenfeld	Website
3849	This is not a hard decision, what is the most sustainable and least impact on the canyon solution. The gondola option offers the ability to avoid cars driving up the canyon completely. Widening the the canyon road will only add to the problems that currently cause so many issues in the canyon. The gondola is the only solution that allows for future generations to move past the automobile and move in a direction that is sustainable.	Connor Stephens	Website
3850	please do not put the road through a gondola is way cooler and way less ugly please utah do not bend to the influx of new residents	Madelaine Sueltz	Website
3851	I support the gondola and la Callie station	Jacob Sims	Website
3852	I support the Little Cottonwood Gondola Plus the proposed LA CAILLE BASE STATION. Let's reduce vehicle traffic in the canyon as much as possible. This seems like the best solution for year round access and least environmental impact. Widening the roads is a short term solution with long term negative impact.	William Day	Website
3853	I encourage you to consider the gondola option! Let's shoot for low/no emissions and save the planet.	Kent Williams	Website
3854	Please approve the Gondola. It's a better option for skiers and the environment, and if one was built I would use it instead of my car because it would be faster than the bus service and more eco friendly.	Braxton Vranes	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3855	<p>As a summary, I support the Enhanced Bus with Roadway Widening, with the "Enhanced Bus" with no roadway widening as a 2nd place quicker immediate option for Little Cottonwood Canyon. I support the gondola the least for many reasons stated below. I also support tolling the road (with no tolling at lower canyon, and some tolling based on peak periods on the upper canyon).</p> <p>Canyon Options</p> <p>Let's start with the basics. Little Cottonwood Canyon (LCC) gets 12,000 to 14,000 visitors on a normal winter weekend. The plans laid out mean to only remove 30% of the cars from the road. While these are the rules the Environmental Impact Study (EIS) is set to follow, if their goal is truly to build something that can handle traffic in 2050 (30 years from now), we will need much more than 30% of the cars off the road. And with just 30% of the cars off the road, traffic could pretty terrible at peak times, and the wildlife impact would also remain. Below I considered all 3 options, strange trends I found in the Environmental Impact Statement, key issues with some of the proposals and where I think we can get the most benefit for the most people.</p> <p>Strange EIS Study Trends</p> <p>The biggest issue historically (in previous analysis for these plans) was that the gondola couldn't handle a lot of people per hour + it was expensive. Somehow in the final analysis both of those concerns have disappeared, which I do not understand.</p> <p>Specifically, because the EIS was only looking to analyze reducing car traffic by 30%, the EIS team fully admits (in their video conference public meetings in late June) that they "limited the capacity" of each transit option to reach that 30% level. That, in turn, makes each option look like it's on a relatively even playing field when it comes to how many people each option can handle per hour. However, this is not helpful to the public. We need to see what "max capacity" looks like for any of these proposals. For example, how many people can we get up an hour if we were running gondolas at their max capacity (or had the max number of gondola cars on the route)? What speed would they run at? What does that look like in terms of capacity per hour?</p> <p>Similarly, if we were to double or triple buses per hour, is that A) possible and B) what is the estimated amount of people?</p> <p>In this same June meeting, it was mentioned multiple times that the group is looking at building something that will work till 2050. So why then is the EIS only proposing solutions that handle around 10% of the weekend visitation to the canyon? Their answer is "this is what we were tasked to do" but then in the same breath they use an argument around future-proofing the canyon until 2050 to argue against alternative proposals.</p> <p>The Gondola</p> <p>To that end, at one point it was mentioned (in previous discussions in years past) that the Gondola could hold 10,000 people an hour. The latest proposal, backed by private landowners, a massive gondola company (Doppelmayr), and the ski resorts themselves, is pushing the "la Caille" proposal which notably drops the gondola further down the canyon, builds a parking lot at the gondola station, and suggests it can get multiple thousands of people up in the peak 3-hour transit window on weekends (typically 7 AM - 10AMish?). However, this is not an official proposal from EIS, and seems to have been previously eliminated.</p> <p>Furthermore, it appears the main appeal here, beyond removing the bus to gondola inconvenience, is that it says this proposal can handle higher capacity, but again, it is my understanding that the EIS purposely handcuffed each of 3 official proposals based on the rules they were given.</p> <p>Without the actual max capacity numbers available to public commenters, the 3 proposals seem relatively unfinished. While I acknowledge that an environmental impact study (and implementation time) come in the next phase of the EIS, it seems almost disingenuous to not have this info included now while you collect public opinion (and then, therefore, use that public opinion to help drive your future decision making), when the public arguably didn't receive all the info it needed.</p> <p>Taking the EIS at their word, the gondola can hold 1,000 people an hour. It also has to travel at a speed limit lower than that of the road due to that capacity (the EIS staff claims 17 MPH). Gondola proponents mention it can handle winds up to 78 MPH, but there is no mention of what speed the gondola must go in those winds. Guess what? It will go slower. Much slower. Slower than 17 MPH.</p> <p>Taking that into account plus the full gondola trip taking an estimated 46 minutes (vs. 36 mins with the "enhanced bus" option), the gondola seems like the slowest option.</p> <p>It's also the least flexible. We can't scale up the gondola at peak times (with a bus system, you could easily double or triple the buses going up the canyon per hour). You can't take the gondolas down easily when they are not needed. It doesn't fluctuate with seasons or rush hours. It will be built and we are stuck with it. If better tech exists in 2050, or climate change makes skiing LCC obsolete (I hope not!), we still have the gondola.</p> <p>While I don't know the full capacity of the gondola (because of the limitations of the EIS), I can do some quick math on what it would mean to double or even triple bus capacity on Little Cottonwood Canyon, from the proposed 6 per resort per hour up to 12 or even 18 per resort per hour. If 6 per hour can handle 1,008 an hour, 12 per hour could handle 2,016 per hour, and 18 could handle 3,024 per hour.</p> <p>If we're truly looking to build something sustainable for 2050, we have to consider which one of these options scales up the easiest? Adding additional gondola cars is likely not possible, and 2xing the speed of the gondola is also likely not possible. However, UTA operates a fleet of hundreds, maybe thousands of buses, and continues to add more, so our ability to move more buses into the canyon (and reduce them when not needed) is much easier. We have buses already. In lighter seasons, those same ski buses can be used to move people around the city.</p> <p>As the years go on and traffic increases, you also can imagine a (smart) shift in strategy in 5 or 10 years, where the road goes to bus-only during rush hours. A gondola doesn't allow for that, and wouldn't seem to allow for the same massive amount of capacity a bus-only road could handle. Not to mention reducing traffic means fewer emissions and safer roads. On the issue of safety, the EIS's manager, Josh Van Jura, mentioned himself that while not a core part of the EIS, an additional lane up the canyon is safer (if not the safest of the 3 options) for bikers, motorists and pedestrians in the canyon.</p> <p>On scaling this operation down come spring and summer, where we do not face the same peak flow issues we do in the winter, a bus system scales down much easier, as mentioned.</p> <p>A bus also allows us to be flexible in the future with what stops to make. The Gondola only handles traffic to Alta and Snowbird, 70% of the traffic in the canyon are people that are "not going" to the resorts. It's for hikers, bikers, snowshoers, backcountry skiers. Building stops along the way on the Gondola is not part of the plan and would dramatically increase costs and time. But being able to build additional bus stops (that are seasonal) is a far easier proposition down the line if it is needed.</p> <p>Don't worry - there's more! :) I have a few more concerns:</p> <p>FULL COMMENT AVAILABLE ON PAGE XXX</p>	Taylor Dankmyer	Website
3856	A big factor for individuals and families will be the cost of parking and riding the gondola. I am guessing it won't be free. Any comment on proposed fees and charges to use the gondola?	David Malpas	Website
3857	This is a no brainer from an environmental and safety standpoint.	Ryan Bostrup	Website
3858	A gondola would be a game changer. I would definitely cost more often. Be a leader!!!	John Kohnke	Website
3859	Buy All the property on the north side of 210/ Wastach Blvd. starting at the park and ride at mouth of the canyon then to west where the road goes north approx. two miles. Then build large retaining wall the full length. Make a large parking lot with mega-people haulers. Hence on canyon traffic.	Blake Jemison	Website
3860	Thank you for organizing! The Gondola is certainly the most forward thinking proposed solution to the Cottonwood traffic.	David Sneeringer	Website
3861	dont destroy the beauty of the canyon with a large paved road.	paul calame	Website
3862	Our family has a house in Cottonwood Heights, which was purchased in 2004. We love Snowbird and have ridden and skied the mountain every year since 2000. We come from Perth in Western Australia, so we are seriously committed to LCC and everything SLC has to offer. Its a long way to come! I also race road bicycles, and come in summer to ride and train the canyon climbs. The dilemma of increased popularity of the mountains is clearly causing increasing issues with congestion and pollution which are unsustainable in the long term. Tunnels and trains by definition will be horrendously expensive, and their construction and maintenance will impact the environment more profoundly than a gondola system. Whilst the gondola will have a greater negative visual impact, the real impact on the environment will be more limited. What a wonderful idea. Snowbird has consistently upgraded its resort in a responsible manner of a long period of time, and I have no doubt that this latest development would be done in the same fashion. I couldn't support it more. I'll still ride my bike up that canyon road, but in winter I'll be the first one in the queue for the gondola.	Craig Smith-Gander	Website
3863	difficulty of bringing up equipment to the hotels in the canyon	chris smale	Website
3864	This strategic plan is essential is planning for the future of Little Cottonwood canyon resorts and activities. As population grows we must address the inadequacy of the road that continues to pose danger to skiers, staff, and outdoor enthusiasts. Now is the time to implement this bold plan to ensure a safe and prosperous future.	Patricia Brill	Website
3865	difficulty of bringing up equipment to the hotels in the canyon with a gondola	chris smale	Website
3866	Any of the bus options will just create more of the current situation. Some people flat out refuse to ride the bus, even if a toll is enacted. I have many friends in this camp. But the gondola option is "sexy" and will absolutely win the snobs over! It's innovative, and we should not shy away from it just because it's new	Louise McGowin	Website
3867	I think one crucial factor to consider when deciding the best alternative to solving the LCC traffic situation and environmental impact is that unless there is a benefit to utilizing the public transit etc. people will not do it unless forced. So, this being said by simply adding buses to the canyon I don't think people will feel compelled to ride them. If the buses have their own lane that lets bus riders bypass any traffic I think this would be great and highly utilized. The main reason I choose to not take the bus is because I almost always carpool so there is no upside to standing on a crowded bus and sitting in the same traffic. The gondola would certainly provide a great upside as it would run constantly and so long as the access to the gondola was expedited it would be effective. If I have to sit in traffic on a bus to get to the gondola I'm not sure how compelled I would be to ride it. Granted the gondola would be faster than slow moving traffic and you wouldn't need to park but the access to the gondola would still need to be an incentivizing thing.	Nicholas Hofmann	Website
3868	I support the gondola project to relieve the canyon from congestion and pollution.	Randall L Romrell	Website
3869	Let's do it if not this let's figure out something	Coulson Tucker	Website
3870	While watching the recording of the Zoom talk, I was surprised by the number of time the presenter talked about tolling on the road as an environmental justice issue. I understand the tolls can be a barrier to access, but how does Millcreek Canyon have a toll? He mentioned there is no other way to get up the canyon and their is currently ski busses in the winter that will stop at other places than resorts if you ask. This is an alternative that Millcreek does not have, but Millcreek Canyon still has a toll. A toll if you have 1 or 2 people in your car could reduce lots of congestion but allow equitable access to the outdoors. A lot of people that drive up by themselves are the resort season pass holders and would be able to pay the toll or take the bus. Building a gondola does not address the environmental justice issue if they are just going to resorts where day tickets and passes are absurdly expensive. If people couldn't pay a small toll for going up the road, do you think they will be paying to ski at Snowbird or Alta? I don't.	Ashley Lodmell	Website
3871	As for the gondola, if it is only stopping at Snowbird and Alta why would the state pay for it at all? If they need the gondola to get people to their resorts, why wouldn't they cover all the costs? I understand that tourism brings money to the state, but in the summer when a lot of people recreate outside there is not the same traffic issue. The snow makes it worse, but there are ways to mitigate that through tolling and busses without major costs.	Joseph Taylor	Website
3872	We need a Gondola!	Beth Armstrong	Email
3873	Why aren't trains being considered? Use existing road and only allow bikes, motorcycles and walking/jogging and force the masses to take a train?? We already have a good system in the valley that can be utilized with existing parking?	Anthony Bruno	Website
3873	Build the Gondola, Little Cottonwood Canyon is a disaster on weekends and snowy days		

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3874	I am a season ski pass holder at Alta and Snowbird. I like the gondola option best but do not want to ride a bus to get to the gondola station. I like the option of parking at the base then taking the gondola straight to the resorts. Since I live in Utah county I also love the option of getting to snowbird via American fork canyon- which would eliminate many vehicles coming from Utah county to salt lake to access the canyon. Thanks!	Steve Sabin	Website
3875	Yes Make improvement	Gary Danisch	Website
3876	go gondola!	WILLIAM MESA	Website
3877	Please vote in favor of the gondola. It is the better choice because it is less expensive, more attractive and will attract visitors to the area.\	Barbara Davis	Email
3878	I plan to ski at Alta for years to come. Although I don't like that the Gondola would take almost an hour to get to Alta from the base, I like that it is has the lowest operating costs and also would help to cut down on emissions from cars and trucks driving up and down the canyon. I assume that you would also have to charge cars that do drive the canyon a fee that is higher than the cost of the gondola to encourage people to use the gondola. I would also suggest that any handicapped skier that uses a wheelchair routinely would be exempted from having to pay the fee or riding the gondola since they have to have special ski equipment. I am thinking of the kind of ski equipment that these people sit in to ski. I am not thinking of anyone who has a handicapped tag in their car since I have know at least a dozen people in the last 10 years that have gotten these and don't need them and do not want to give up these tags because of the benefit they get. I also think that you could use the gondola in the summer as well and advertise it to tourists. I would use it in the summer as well. I usually do several hikes in Alta and Snowbird every summer. And events like Octoberfest would be great if you didn't have to find and pay for parking - although Snowbird might not like it, but they get enough money from that event with what they charge for the beers which is about \$12 last I checked, could be \$15 now, haven't been in a couple of years. Is the Gondola convenient, not really, but it does help to save the environment and our lungs. And may actually save lives as there wouldn't be as many accidents from people driving on the road in icy or snow-packed conditions.	Jean Pfoutz	Website
3879	Enhanced bus services with bus lane	RICHARD Douglas	Website
3880	I would love to see this opinion considering the traffic is horrible	Cash Serdar	Website
3881	the gondola is without a doubt the best solution, both as an extra tourist attraction (who doesn't love gondolas) and the best for the environment	jacob haertel	Website
3882	I am in favor of the Gondola project. I think the amount of traffic in the Canyon and on the approach roads to the Canyon has become unsustainable on the busiest days. I also support the idea that Canyon homeowners be allowed to drive in the Canyon at all times the road is not closed for safety reasons. Thank you!	Kevin O'Rourke	Website
3883	Gondola would be safer during winter and carbon emmissions would be lower!	Michael Worhatch	Website
3884	The Gondola Plus La Caille Base Station seems like the best option.	Maggie Walker	Website
3885	I would like to let you know that I am in support of the Gondola Plus La Caille Base Station. I would like this option to be studied further.	Carlte DiBella	Website
3886	Heading in the right direction with the gondola!	Michael Sweeney	Website
3887	I am in favor of the gondola. I live in the community at the mouth of Little Cottonwood Canyon. I do not want an expansion of Wasatch nor additional buses. It's too much traffic already.	Anastasia Lamb	Website
3888	In support of ways to preserve our mountains and minimize the traffic!	Linda Muhlhauser	Website
3889	Please don't expand the little cottonwood road and watach blvd. The gondola option or a rail train up the canyon and no cars is what I would rather see. Like Europe, we need to be smart and preserve the natural beauty of our canyons and the wildlife there.	Lisa Stewart	Website
3890	I support The Gondola Plus La Caille Base Station as a way to get cars out of the canyon and off Wasatch Blvd.	Susan Nowell	Website
3891	vote	CHRISTOPHER PITCHER	Website
3892	I support the gondola with a viable parking plan.	Mark Robinson	Website
3893	I support the enhanced bus service option WITHOUT road widening. Not only is this the cheapest option but will improve travels in the canyon immediately with less carbon footprint. It's a nightmare using the bus currently with its limited hours and would help businesses improve access to the canyon ie. Apres ski	Allyson Armstrong	Website
3894	I have skied at Snowbird/Alta every year since 1995- it is a treasure of great snow and snow starches- however to widen the road & build tunnels as opposed to the tram option seems to me costly and more environ,emntaly abusive. I hope environ,entail concerns, costs, and land management will enter into the decision. The drive up little contonwood canyon is a delight, PLease do not spoil it. Thank you for considering all the aspects of the proposals. Linda s.	Linda Segalini	Website
3895	I'm writing to voice my support for the newly proposed la caille station with gondola. It eliminates the need for widening wasatch blvd and encroaching on private property In that area. Which could potentially involve imintent domain conflicts. It also would help protect the watershed by taking cars off the road. The chemical compound in brake pads is nasty stuff. It would dramatically improve canyon access and exiting plus be an economic benefit for the area. I imagine it would become a great attraction for local families during the summer months. Also it could potentially improve Utah's chances of landing the winter Olympic again. In addition it is a good public/private infrastructure project. Please consider this option as I think it is much better than those proses in the EIS. How many studies have been done and nothing accomplished? This is a great opportunity to work for the best solution instead of half steps that just shift the problem around.	Travis Bauer	Website
3896	My vote would be for the Enhanced Bus WITH Roadway Widening. Utah has a bad habit of investing in infrastructure with limited foresight (meaning that decisions which are made are only viable for 2-5 years out. Utah is growing faster than most locations, so we need to keep that in context). I think this option is the best option for the foreseeable future. It will allow for the increased peak season capacity and will allow users faster access to our mountains. No one wants to travel from whatever distances they may come from, only to have to board and bus at the Mobility Hub, then get off that bus to board a gondola, ride that gondola for 40+ mins, to finally get to the mountain over an hour later. The point is greater access at a faster pace!	Damon Christensen	Website
3897	PS. the first option (Enhanced Bus)is a waste of time and will result in the need for option 2 or 3 within a few year, if not sooner.	Ian Pradhan	Website
3898	I love the idea of a gondola that goes up the canyon, especially if it is able to run while the road is getting avalanche control work done. The only better thing could be a train line that services the canyons.	Harper Cobb	Website
3899	I'd love to see the Gondola going up LCC.	MARK FREDERICK	Website
3899	As a resident of Greenhills dr at the mouth of the canyon this is clearly the best option regardless of costs.	Todd Graham	Website
3900	Full support	Elisabeth Toft	Website
3901	Please consider the gondola plus	Anna Germanov	Website
3902	I'm supporting the gondola!! Please do it !!!	Amanda Johnson	Website
3903	Yes I support the gondola initiative! This is a great idea on many levels!		
3904	Thank you for the opportunity to provide input on this incredibly important topic. Out of the three options presented, it is my opinion that providing enhanced bus service with no additional roadway capacity is the best option. Adding another lane would have massive impacts on recreation in the area, climbing in particular. The lower capital costs required for the enhanced bus service with no additional roadway capacity would allow flexibility in funding for increasing bus service in the future. This is also the most flexible option that keeps the most users in mind. The ski season is important to serve, but there are many other activities that take place throughout the canyon that should not be sacrificed in order to expand the roadway. A gondola, while perhaps less impactful than additional lanes, would also impact the climbing and hiking experience, and it is an inflexible option that could not be easily modified in the future. This is why I believe enhanced bus service without additional roadway capacity is the best option for all users, the most fiscally responsible option, and the wisest option for the future of LCC. Thank you for your time.	Lara Handwerker	Website
3905	Please do not expand the roads in the Cottonwood Canyons at great expense and irreparable damage to these unique gems. These canyons are truly gifts for the residents of the Wasatch Front and its visitors. Please consider the more prudent option of limiting traffic along the roads with mass transit, fines, etc. Let's fund these for the next decade and modify the implementation with a focus on making it work. This is the is cost-effective, prudent option. Thank you.	Chris Morgan	Website
3906	The gondola solution using 3S technology is an absolutely superior option to buses or widening the roadway. My sincere hope is that this solution can be realized. I have ridden lifts using this technology in Whistler and Zermatt and they are the most comfortable way to travel in the mountains, not to mention they are green. The biggest positive impact they have over the long term however is in the types of walkable developments they spur for both visitors and residents alike. People like taking these types of lifts and people will be willing to live in more walkable connected communities without a car if this lift is constructed. This has long-term substantial benefits of keeping Salt Lake City an attractive place to live that keeps up with changing lifestyle preferences and attracts talent to the economy. The 3S gondola is the way to go!	Brian Tyler	Website
3907	Gondola is a smart idea.	Daniel McCooey	Website

	<p>1. First, In the broadest of views, not yet getting to the details, the alternatives offered by U-DOT are inadequate to meet the spirit of NEPA (read the introduction to NEPA) or the CEQ regulations for NEPA.</p> <p>The CEQ regulations offer general guidance to agencies in 40 C.F.R. 1508.25, which requires consideration of three types of actions, three types of impacts, and three types of alternatives in determining the scope of an EIS.</p> <p>ACTIONS include (1)Connected, (2)Cumulative, and (3)Similar Actions.</p> <p>IMPACTS may be (1)Direct, (2) Indirect, or (3) Cumulative.</p> <p>ALTERNATIVES include (1)Primary, (2)Secondary, (3)No Action.</p> <p>The action of this LCC-EIS is to plan and execute one of the alternatives to solve transportation problems in LCC. U-DOT is trying to say that only delivery of clients to the ski resorts solves their definition of the transportation problems in LCC. The U-DOT LCC-EIS neglects all the foreseeable connected, cumulative, and similar extant problems or the foreseeable affects that their alternatives will create. Actions such as alterations in parking lots, changes in roadside parking, imposing a fee are all connected and unaddressed actions that NEPA requires to be studied. U-DOT has not addressed the foreseeable impacts of their transportation solution of delivering clients to the resorts such as impacts on trails, vegetation, and wildlife. Everything U-DOT does in LCC, more busses, more pavement, more transportation systems and altered pathways will have year-round, full canyon direct, indirect, or cumulative impacts at the trailheads and parking and cyclists along the length of the roadway. These are not addressed in their alternatives nor in their purpose and goal statement. This negligence is across all three alternatives. Summer season vehicles are transportation and a problem in LCC and these are blatantly rejected as problems in the U-DOT LCC-EIS.</p> <p>U-DOT neglecting connected, cumulative, and similar actions is what caused the Legacy Highway at immense tax payer expense. Let's avoid the delays here.</p> <p>An EIS is required by Congress to be developed by an interdisciplinary team, U-DOT has developed this EIS unilaterally.</p> <p>2. Now a few details quoted from the LCC-EIS. Quotes are in added italics: "P.IV: Table S-1, Alternatives and Options To Be Evaluated in the Draft EIS" In a Draft EIS the preferred alternative must be disclosed, it is not. In a Draft EIS a "No Action" alternative must be studied and discussed at the level of all alternatives, it is not in the LCC-EIS.</p> <p>"b The purpose of the project is to improve winter mobility. Screening criteria did not evaluate the performance of summer service." Winter mobility is not the only transportation issue connected to Little Cottonwood Canyon, all season transportation problems are connected. Therefore, all connected transportation issues must be studied in one EIS. The U-DOT LCC-EIS appears to be segmenting the LCC issues; please look at the CEQ Regulations"</p> <p>1. Connected actions</p> <p>The CEQ regulations require ""connected actions"" to be considered together in a single EIS. See 40 C.F.R. § 1508.25(a)(1) (1984). ""Connected actions"" are defined, in a somewhat redundant fashion, as actions that</p> <p>""(i) Automatically trigger other actions which may require environmental impact statements.</p> <p>(ii) Cannot or will not proceed unless other actions are taken previously or simultaneously.</p> <p>(iii) Are interdependent parts of a larger action and depend on the larger action for their justification.""</p> <p>"Winter point-to-point bus service from mobility hub directly to the ski resort"</p> <p>Studying only the point-to-point resort traffic is inadequate to address all the year-round and connected transportation issues and actions needing to be resolved in the LCC-EIS.</p> <p>"Tolling or other management strategies such as no single occupant vehicles during peak periods"</p> <p>Tolling and management strategies are year-round and connected issues that must be studied year-round in an adequate EIS.</p> <p>"Winter gondola service starting at the gondola platform at the entrance of Little Cottonwood Canyon with stops at Snowbird ski resort and Alta ski resort only"</p> <p>Stopping only at commercial ski resorts should be paid for by the ski resorts, not the general public.</p> <p>"The transportation needs in the study area are related primarily to traffic during peak periods, avalanche risk and avalanche control in Little Cottonwood Canyon, multiple roadside users in constrained areas, and anticipated future increases in visitation to Little Cottonwood Canyon as a result of population growth in Utah."</p> <p>This EIS completely misses the hard look required to evaluate the latent demand, people in the valley who currently reduce or curtail their trips to the canyons due to the congestion. This summer's congestion in the local canyons due to of COVID-19 gives us hint of the latent demand for local canyon use. U-DOT is using only future growth in its projections when latent demand might be greater.</p> <p>"Reduced mobility on S.R. 210 near trailheads and at ski areas. Loss of shoulder area for cyclists and pedestrians, which forces them into the roadway travel lane and creates a safety concern. Creation of informal trailheads that contribute to erosion, mineral soil loss, the spread of invasive weeds, watershed degradation, and loss of native vegetation in the canyon. Damage to the pavement along the roadway edge, which causes increased soil erosion, runoff into nearby streams, and watershed degradation"</p> <p>In the U-DOT LCC-EIS, UDOT is recognizing all the above, four season problems but are negligent in addressing the greater traffic that does not involve the ski resorts.</p> <p>FULL COMMENT AVAILABLE ON PAGE XXX</p>

3923	Great concept. Will make the area more enjoyable for all.	JOHN MORRISSEY	Website
3924	I support the gondola.	Tim Fuller	Website
3925	I support the Gondola as someone who drives 210 on average 6 days a week year round. https://gondolaworks.com/	Derek Cutler	Website
3926	I vote for the gondola!!!	Andy Lamoreaux	Website
3927	I saw gondola work great in dt Portland OR and other places. It's great solution	Nataliya Bryant	Website
3928	I would support the road widening with enhanced bus traffic. Both Time up and down the canyon should Be considered. Adding An hour per visit to ride a gondola or do very little improvements is too much time based on an average 4-hour visit. If 1/3 of the. Is it is getting there and back it's hardly worth it. Imagine going to watch a 2 hour movie. Do you show up 1/2 hour early and stay 1/2 hour late plus the original travel from wherever you live ? 1 hour in a gondola plus 1/2 hour to drive, park, walk/bus to the gondola is far too much time. Charge users a fee or annual pass to help UDOT defray the cost. It works in Mill Creek and American Fork canyons.	Cameron Treat	Website
3929	My vote is for enhanced bus traffic, NO widening of existing roads, NO gondola please!	Amy Dall	Website
3930	I believe the gondola solution is the best option and the least weather dependent way of getting through the canyon	Pamela Basch	Website
3931	I support the Enhanced Bus option, with roadway widening in the Canyon and snow shed areas to improve safety. I strongly feel buses need their own lane to go past traffic, which will result in more people wanting to ride the bus. The park and ride areas in the valley will be of the utmost importance.	Steve Issowits	Website
3932	I see many issues with the Gondola proposal and am not in support of that option (not to mention emergency evac, maintenance routes/access needed, wind hold/inability to operate, etc.). I also feel the "enhanced bus" without the snow shed and road widening will end up being an ineffective waste of time and money.	Ryan Evans	Website
3933	I support a gondola in Little Cottonwood Canyon to reduce the number of cars driving to the resorts.	Victoria Williams	Website
3934	I propose that UDOT implement the enhanced bus without road widening for LCC. I believe this will help with congestion while utilizing an already established system.		
3934	Dear Madam or Sir, Little Cottonwood Canyon is a truly wonderful place. I've spent thousands of days playing there. Please save this unique treasure. I support a gondola. Long term it is the best solution I see. Sincerely, Dick Griffin	Dick Griffin	Website
3935	I support the rapid bus system. This must be accompanied by better infrastructure near the mouth of LCC. The gondola is a definite no and not part of a solution.	David Kizer	Website
3936	As a local Utahn, I love the beauty of our state and hope that we can keep it this. Expanding the road up little cottonwood canyon would be an act that directly contradicts this effort. The main attraction for tourists coming to Utah is the outdoors here. It is skiing our fluffy, perfect snow in the winters; it is the beautiful hiking and biking that our mountains offer in the summer. This expansion plan would not only detract from the beauty of LCC, but it would further the negative effects of climate change that will burn our magnificent state to the ground. If we, as Utahns want tourists to keep coming here—those who allow for such a strong economy in our state—then we must act properly. Deciding to build the gondola that goes up the canyon is the only clear and logical option at this point and I hope that you can see this.	Jackson Baglino	Website
3937	Gondola is that best option	Marc Graves	Website
3938	The gondola is the best, cleanest option.	Brittany Rose	Website
3939	We have been skiing the little Cottonwood Canyon and more specifically Alta for 30+ years. We always enjoyed me feel of Alta. I didn't notice much difference in traffic until the introduction Icon and Epic Pass. In my opinion but took so much away from the mountain now is a huge contributor to the traffic problem. Leave the mountain and road as is and do away with those two passes! It has change the culture of the resort and the moutain?	Lucretia Brannon	Website

3940	I would love this if there was lots of parking at La Caille!!!	Patrick Mikula	Website
3941	I'm totally in support of the Gondola!	Jon Barlow	Website
3942	I believe that increasing buses without adding an additional lane is our best immediate option. However this should include priority access for buses. There should also be larger park and rides and incentives for people to ride the bus.	Anthony Aadland	Website
3943	I do not believe gondolas make sense as a long term solution. I believe increasing buses and potentially widening the shoulder (if there is limited environmental impact) are the way to go.	Kellyn Trummer	Website
3944	Vote for to have a tram to take you up the canyon	Topacio Ramirez	Website
3945	Now is the time to preserve Little Cottonwood Canyon for future generations. More cars, more buses, more lanes and massive concrete tunnels are not the solution to transportation in Little Cottonwood Canyon. The Gondola Plus La Caille Base Station is a way to get cars out of the canyon and off Wasatch Blvd.	Amnon Schlegel	Website
3946	As a skier who has stayed at Alta-Snowbird 7-9 times in the past 15 years, I endorse the Gondola plan with the La Caille Base Station. Protecting the Canyon as well as increasing safety and accessibility is paramount to good stewardship of these magnificent canyons and recreation areas. It is the canyons that brings me to Utah and I hope to continue this with my 25-30 other lifetime ski friends who all fly in for our annual week long outings. We split our trips between Park City and Little Cottonwood canyon. Thank you Steve Gilbard	Steve Gilbard	Email
3947	First of all I'd like to say how happy I am of how public the decision making process has been for the solution in the cottonwoods. However, nothing will matter if the wrong decision is made at the conclusion of this debate. My personal opinion is that a gondola is the only real solution that makes sense when thinking long term in this scenario. In considering aspects such as environmental impact, efficiency, footprint, and overall visual appeal I think a gondola would be the best option of those being considered. I understand it may be a higher up front cost, but if you take away from the very thing you are trying to save by adding more asphalt and widening the footprint of the roads, you are only kicking the can down the road. I believe that not only will a gondola be necessary and increased parking at the mouth of the canyon, but also there will eventually need to be a limit on the number of people granted access into the cottonwoods on a daily basis. The area is not getting bigger, but the crowds are. You can't make the problem go away by simply increasing the number of people you can get up the canyon and decreasing the number of cars. Obviously anyone who lives in the area can tell that the population in the SLC area and Utah as a whole is increasing at an alarming rate, as well as skier visits from all over the world. Eventually the cottonwoods will become overwhelmed no matter what solution is decided upon unless the number of people allowed up the canyons is held to a number agreed upon by the resorts operating at full capacity. Thank you for hearing me out on this issue, I'm sure there are many different viewpoints and this is a difficult decision to make, but I hope for the sake of the cottonwoods that the right decision is made.	Andrew Kelley	Website
3948	I would like to voice support for the expanded busing without the lane expansion. Ideally, I would prefer to have the Wasatch Blvd widening continue past the intersection at the mouth of the canyon so buses could have an exclusive lane until after the parking lot.	Kurt Nosack	Website
3949	My backyard is on wasatch blvd. I would love to have a banner on my fence facing wasatch I am so against widening wasatch. I watch cars go up little cottonwood a lot during the winter. I can only count maybe 10 days out of the whole season when traffic is backed up. Anything I can do to help	Robyn Goeller	Website
3950	For 10 consecutive days each winter, we rise earlier and earlier to make the drive up the canyon to Snowbird before heavy traffic. Please build this grand solution!	Lee Garner	Website
3951	Make the cottonwoods toll roads and increase the price on busy days, discount for carpooling, majority of the cars are single occupancy. The gondola is stupid. Where the hell are you going to park a couple thousand cars? When you figure that one out traffic is going to be the same shit show just going to a new location. One US resort went to locals only on weekends, probably not the answer but out of the box thinking needs to happen, the way you're headed isn't going to fix anything.	Brett Antram	Website
3952	Our beautiful valley is so polluted already. Please consider the gondola option! Let's save our ever growing city and keep our green spaces green!	Alayna Nelson	Website
3953	I believe enhanced bus service is the best possible solution. My primary reason for not liking the gondola option is there are no plans to make stops at trail heads or other important areas along the way up the canyon. The gondola would primarily positively impact resort traffic.	Corey Machen	Website
3954	In the mornings prohibit all personal transportation from going up the canyon have enough boxes hang up parking to take everybody up buses only until at least 10 a.m. it to make this work you've got to have buses lined up loading passengers soon as one gets full it heads up these need to continue all morning one right after another until 10. You would have to turn traffic back down the valley at both Kenyans so they didn't jam up the road traffic coming up Wasatch Boulevard would have to be diverted to go down 7200 South traffic coming up 90th would have to be diverted back down 90th floor turned on wasatch and back down to 7200 and then West they wouldn't be allowed to block the roads or Park alongside the roads you need to completely eliminate road side parking in the canyons as long as people think there's a chance they're find a parking spot they're going to come up	Brent Ludlow	Website
3955	I support the development of a gondola system up LLC. This is a proven system that works all over Europe. Let's take what has worked well in other countries and implement it here to save the canyon from having move cars and less parking in the canyon.	Ken Ohlinger	Website
3956	I'm in support of less traffic and CO2 emissions in Little Cottonwood Canyon. Please implement the canyon Gondola plan.	Gerry Halverson	Website
3957	Traffic and parking are a problem. Many people complain that the bus service is to slow and time consuming. Make the bus service quick and efficient and you will eliminate all the traffic.!	mark owens	Website
3958	Sounds like a great idea as long as gondola doesnt intrude on iron blosam views.	MICHAEL RIBERDY	Website
3959	Please consider the Little Cottonwood Gondola - it preserves the LCC wilderness and surround ecosystem and allows the thousands of us skiers and hikers to still enjoy the canyon without dealing with the constant growing traffic. It's a win-win for everyone - let's do it!	Mark Banholzer	Website
3960	Gondola is the Answer for Year-Round Canyon Access Ski Utah is the marketing association charged with promoting Utah's \$1.7B ski and snowboard industry. Our membership consists of over 250 members including resorts, lodging, transportation, retail, restaurants, and other ski and snowboard related businesses. Collectively as an industry, we believe a gondola is the safest, least-polluting, least-impactful, highest-capacity, revenue-generating transportation solution under consideration, and an alternative proposal to move the base station to property next to LaCaille fills in the remaining pieces to the puzzle. Ski Utah, along with the Cottonwood canyon ski resorts, have invested in the utilization of ski buses for decades, however the bus is vulnerable to all of the same weather-related issues that inhibit personal vehicle travel including avalanches, landslides, and traction issues. Cars cannot be the transportation answer in a canyon with 64 avalanche paths and an average of 500 inches of The Greatest Snow on Earth per winter. Recent vehicle travel reductions related to COVID-19 have illustrated the immediate impacts less driving can have on Wasatch Front air quality. Carbon dioxide emissions are reduced by 56% from the gondola running 12 hours a day, as compared to 3,500 cars per day traveling the canyon. The gondola is the only electric option that would reduce the amount of Nitrogen Gas (NOx), Particulate Matter 2.5 (PM 2.5) and Volatile Organic Compounds (VOC) in the canyon atmosphere. Constructing an additional lane to SR 210 would have major impacts to the environment and water quality. While we do not dispute the safety implications of building snow sheds at three of the major slide paths, that still leaves 61 avalanche paths unmitigated and the construction impact of building massive concrete structures in the canyon. SR 210 operates at the whim of Mother Nature and too often people are stuck for hours trying to get up or down the canyon. Current gondola technology functions in high winds and accommodates large spans that can put towers where there are no avalanche risks. Safe ingress and egress, regardless of weather conditions, is paramount in the solution for Little Cottonwood Canyon transportation. UDOT should give careful consideration to the alternative gondola LaCaille base station proposal featuring a parking structure west of SR 210 that is at grade and includes designated bus circulation between mobility hubs. This proposal would dramatically reduce the amount of private vehicle traffic on Wasatch Blvd and in LCC and the gondola ride up the canyon would be the fastest from this alternate base station. A gondola's lifespan is three times the life span of a bus. The gondola is also the only option that has the opportunity to share capital and maintenance costs through public-private partnerships. In order to preserve this treasured area, both environmentally and recreationally, we must plan for its future use in a sustainable way. Gondola is a long-term transportation solution that is cost-effective, clean, and efficient. It is the best means to provide safe transportation to year-round visitors while having the least physical impact on Little Cottonwood Canyon.	Nathan Rafferty	Website
3961	Save cottonwood canyon!	Tori Thomas	Website
3962	The gondola makes the most sense to me. Moving similar numbers of people without massive road work. Cars could be severely limited and only with x number of people in the car. It would have European appeal a la zermatt.	Scott Hopkins	Website
3963	Don't build more roads!!!	Sicily Romano	Website
3964	I am supportive of the La Caille gondola option, please consider this progressive solution to the LCC traffic crisis.	Elizabeth Bliitner	Website
3965	I love the proposed gondola solution! It's out best option and isn't shortsighted	Aubre Gambin	Website
3966	This would be incredibly beneficial to alleviating the traffic issues involved with LCC. As well as multi layer parking structures and restricted access to the canyon with out a permit or pass of some sort.	Shane Josephs	Website
3967	It appears the study thus far has really not address the "fare" to travel to the ski resorts. If the "fare" is too expensive skiers will travel to BCC or other resorts. Furthermore, I did not find any meaningful discussion on encouraging 3+ carpools up the canyon, sure the word "carpooling" is in the report some six times, but really no discussion on improving it. Lastly, the bus/gondola concept assumes that there is capacity all of the time and no one waits ... but this isn't really the case, and additional que time needs to be added.	Mark Dimond	Website
3968	Yes	Jennifer Radl	Website
3969	The gondola proposal is a great idea. As a Swiss citizen I have seen gondolas in many ski areas in Europe. They are attractive and quiet and clean!	Gabriela Sessions	Website
3970	I support the gondola	Matthew Johnson	Website
3971	I think the gondola is the best option	lucas geerts	Website
3972	Please consider more buying alternatives versus gondolas. It was mass transit that takes parking into account.	Molly swonger	Website
3973	Please approve the gondola.	John Gallagher	Website
3974	I prefer the enhanced bussing option without widening the road. It is more inclusive of non skiers than the gondola because it provides access to many trailheads for hiking. It is also lower impact than building a gondola or widening the road. What makes our canyons so great is that they have wilderness right next to the city. Installing 150 foot towers for the gondola would degrade the wild feel of the canyon, and it would only serve skiers. Please choose the enhanced bussing option to limit the environmental impact and give the widest range of recreation options for users accessing the canyons.	Erin Acker	Website
3975	An alternative to cars and buses traveling in Little Cottonwood Canyon in the winter needs to be studied. The proposed gondola or similar is an important option to consider.	Henry Bisner	Website
3976	I am a resident of Draper. Have lived here for 4 years. Would like to see the enhanced bus service with no additional road capacity be chosen as the alternative transport option as it will have the least environmental impact to our beloved Cottonwood canyons. I'm very opposed to the gondola as I feel it would ruin the beauty of the canyon.	Jennifer Cayabyab	Website
3977	Yes to gondola	Jared Tambaschi	Website
3978	Build the gondola	Boyd Anderson	Website
3979	I support The construction of a gondola up Little Cottonwood Canyon. Traffic in every canyon surrounding the valley is putting far too much pressure on the environment and infrastructure.	Gretchen Perniciele	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
3980	I'm in favor of the bus plan that does NOT require road construction. This is cheapest for tax payers and best for the environment. Win win. The canyon traffic occurs during peak hours for the most part so not allowing personal vehicles during peak times would leave plenty of room for busses to move up and down the canyon freely.	Josh Orwig	Website
3981	I think the gondola is a fantastic solution to the traffic problems in LCC. Can we also add a gondola to BCC?	Adam Marcus	Website
3982	Please approve the utilization of the Gondola Plus Base Station to enhance the immediate and long term travel up and down Little Cottonwood Canyon.	Michael Kutschke	Website
3983	This seems like the best environmental move	Hannah Shelkey	Website
3984	I vote for the gondola	scott patton	Website
3985	Thank you for putting together the option for little cottonwood canyon. However, in my opinion DOT is way off base and not thinking long term. If you going to invest millions or eventually billions of dollars why not think 20 years ahead and develop elevated light rail right now that can be expanded to serve all mountain communities in the region. I know the costs look out of line right now but think of enormous life benefit this provide out state and set apart from other states that rely on outdated car, electric or natural gas busing of even gondolas. Trains stand the test of time and are a proven transportation success all over the world. Innovations make Utah unique...reject these sub standard solutions and embrace the future of Elevated electric trains!	Matthew Galvin	Website
3986	the gondola option is good for traffic and tourism.	Brett Staahl	Website
3987	This is a much needed resolution to the road and traffic problems. A safe effective alternative to preserve the area. With access to Snowbird & Alta. no hazardous driving conditions. Safe travel for the people who work in these areas. Ticket revenue generated to assist in maintenance & safe operation. I support the Gondola program	BRENNY ALCIVAR	Website
3988	Not a fan of the gondola. It will ruin LCC in more way than one. One, it'll be an eye sore. Two, it will turn LCC into an even more crowded place. We have reached maxed capacity multiple times these past few winters. The resorts are already packed. Tracked out within in hour, 45-hour long wait times. The canyon can't hold twice as many people as what it had in it last year. Three, this will lead to further expansion. Gondola = expanding into grizzly/Mary Ellen/elsewhere = one Wasatch = ruined backcountry. The backcountry is growing exponentially, so we need as much land as we can get... not to mention, this does nothing for backcountry skiers! It only hurts them. WIDEN THE ROAD WITH SNOWSHEDS PLEASE!!!! I love LCC and Utah, but this will be the last straw if a gondola is put up the canyon. I love the access to mountains, but will be forced to move it that's the case. Stop trying to overfill LCC, it's crowded enough already.	Mitch McDermott	Website
3989	I support the gondola!	Rachel Nielsen	Website
3990	I would like to strongly advocate for the la caille gondola plan. I believe this can be a big part of the solution to the canyon crowding issue	Cameron Fowler	Website
3991	I am for reducing gridlock up the canyon and for alternative methods like the Gondola to relieve traffic and increase safety in the canyon.	Parker Christiansen	Website
3992	Gondola sounds great!	Victoria Chamberlain	Website
3993	I'm for the gondola. I'm from salt lake and I don't want the road expanded.	Cammie Browning	Website
3994	Gondola sounds like the best option	Troy Hussey	Website
3995	I am in favor of the gondola option	Austin Troya	Website
3996	As a Salt Lake City Resident. I would like to see the Gondola built. Instead of expanded roadways.	Marco Liuzz	Website
3997	I definitely support the gondola option for addressing the traffic problems in LCC. I travel up and down the canyon over 100 times a year, as an avid skier and an owner of a condo in Alta. I dont believe more frequent buses will solve the traffic problems. And I believe the gondola will be an enhancement for the ski tourism industry.	Chris Peterson	Website
3998	I look forward to using a gondola on extreme winter conditions.	Fritz Braun	Website
3999	The reason why we live off Wasatch Blvd is to get away from the hustle & bustle of the valley and to enjoy its beauty and serenity. Making this section of Wasatch wider with more lanes will not fix the problem of ski traffic going up the canyons - it will all still be funneling to the narrow canyon roads. Public transit is the answer. Save not pave.	Sara Gemmell	Website
4000	Gondola with snow sheds	Matt Martinez	Website
4001	Clearly, the Gondola is the best choice	david Peck	Website
4002	Personally, I just drive up really early to avoid the traffic, but I would love to use public transit instead. Currently, I don't use the bus because it also gets stuck in traffic and I get motion sickness on buses for long times in the canyon. A gondola provides fast, quiet service that is SUPPLEMENTAL to the current road which I think is key. If we want people to drive less, we need to give them a comfortable option that doesn't cost much time. I know a lot of NIMBY folks don't want a gondola because it affects the beauty of the canyon, but I couldn't disagree more. I AM an environmentalist, but I don't think a gondola hurts the environment nearly as much as all the cars. The population is growing whether we like it or not. We may as well provide comfortable, clean transportation for us all to enjoy the resorts.	Rick Puccio	Website
4003	Based on the numbers from this site, it looks comparable in price to increasing bus service. Gondolas seem like a win-win. Can we get one for BCC too?	Edward Zambrano	Website
4004	I think the gondola solution is the best option for little cottonwood canyon As a long time (50+ year) user of Little Cottonwood Canyon, Option Two is the best way to address the current excessive use situation for the following reasons: 1) The gondola is not a credible alternative especially during times of COVID. As the climate changes and the amount of snow declines each year, building an obtrusive and underutilized gondola situation will be a waste of tax payer money. 2) The best alternatives build on proven bus technologies which, along with an updated Canyon Tolling system building on the successful ones in Millcreek Canyon and American Fork Canyons will manage traffic more smoothly while allowing intermediate stops for hikers, climbers, bikers, walkers. 3) Of the two bus options, Option #2 is the best because the new travel lane can be used in summer and fall by the hikers, climbers, bikers and walkers. This is really important to allow more private use and make the canyon more accessible for everyone. With the advent of e-bikes, riding the canyon on the dedicated paved road will be a fun alternative for many people who do not dare to take their lives into their hands and ride a bike up the canyon. Just make sure it is wide enough. The canyon is beautiful in the fall and it would be a pleasure to be able to enjoy it along the new path. 4) Snow sheds work great in Switzerland and will work great in Little Cottonwood Canyon if designed and landscaped well. Very unobtrusive and along with upper mountain avalanche control much better than having uncontrolled slides like the recent one just a few years ago. 5) Despite their claims, winter ski resorts are not going to be growing in the future as the climate changes, the snow season gets shorter, costs go up because of fewer days and COVID forces user dispersion. The best Option (#2) focuses on allowing private citizens easier and more secure access to our public lands as the priority versus an under-utilized and obtrusive gondola. 6) Please continue to focus on improving water quality in the canyon by banning any pets and also providing more toilet facilities along with any point source issues in the upper canyon. 7) Considering the massive use of the Cottonwood Canyons, none of the options are really that expensive when measured against actual user days over the next 30+ especially with tolls kicking in towards the cost. I have no problem with paying the Millcreek toll or American Fork toll and I have a Utah State Park pass along with the National Park pass. Investing in outdoor recreation will allow the Utah economy to diversify. At the end of the day what is important is that the Option #2 investment will help more citizens to enjoy the canyon for more days in the year in a more organized way. Thank you.	Craig Wallentine	Website
4005	I strongly approve of this submission!	Gordon Smith-Gander	Website
4006	In favor of adding an electric bus lane that is open (and enforced) during the winter months. Lowest cost, lowest environmental impact. Supports locals and all recreationists. The gondola only serves people going to the resorts.	Blake Nielson	Website
4007	Thank you for your work on this project. There are some things in the plan that I can support, and there are some things that I find unacceptable. First, I strongly oppose adding additional lanes of traffic to Wasatch Blvd. This is a priority. I agree that mobility needs to be improved, but I strongly disagree that adding additional lanes of traffic is the answer. The price of creating more lanes is too great for saving only a few minutes of driving. As the population grows, we need to stop prioritizing individual automobiles and start evaluating better public transit options. I understand that there was a mass transit option evaluated with regards to Wasatch Blvd mobility and there were several factors suggestive against this as a viable option at the time. However, I also think the evaluation only goes to show that we need a more comprehensive public transit system for the entire valley and cannot just look at one corridor on its own. Sifting in traffic on Wasatch Blvd for a few more years is a small price to pay if UDOT would allocate those resources toward better ways for us, myself included as a regular commuter on this section of Wasatch Blvd and LCC skier, to run errands, commute, and go skiing without a car. Second, I like that the gondola option gets people out of their cars, but the proposal of having to take a bus from the transit hub to the gondola is overly complicated. We should try to eliminate barriers to getting people out of their cars rather than create them. The goal should be to create a travel time that is equal to if not faster than the amount of time it takes to get to the ski resorts in a car. Also, for the residents such as myself who live between the transit hub and the gondola loading site, would we need to get in our cars to drive to the transit hub to then get on a bus to then go past our houses to get to the gondola? This hardly makes sense. Third, I appreciate that a cog railway is enormously expensive, but it is also an option that is scalable and can grow with the region over time. Finally, I do appreciate elements such as a widened bike lane along Wasatch Blvd, as I believe there should be one connecting BCC and LCC. I also strongly support a separated/protected pedestrian path along Wasatch Blvd. Overall, I encourage UDOT to improve movement in this area without increasing automobile volumes through this area. Thanks again. I am happy to clarify any thoughts or points and I prefer to be contacted via email.	Theadora Sakata	Website
4008	I support the gondola	Stephen Taylor	Website
4009	Let the gondola happen!!	Connor Allain	Website
4010	Gondola	Alan Ralphs	Website
4011	In commenting in favor of enhanced bus services. I do not support the gondola option as it only benefits tourists and not the locals. Because it doesnt stop at trailheads or other dispersed areas that we all are using the canyon for most of the time. I also do not favor this option because of the impact the construction will have on the environment and the watershed. The problem with these three options is they dont address different user groups in the canyon.	Haley Williams	Website
4012	gondola!	Jay Jones	Website
4013	I am against a gondola going up LCC. Enhanced bus services would serve the community better without further developing the canyon.	Kate Klibansky	Website
4014	The gondola seems like the best option. Fewer cars, less pollution, most reliable.	Christy Lucia	Website
4015	I support the Gondola as long as we can drive a car up to access the backcountry	Cameron Clarke	Website

4016	I am a lifelong Alta skier, and have enjoyed the beauty of Little Cottonwood Canyon all my life. I support the Gondola plan as a way for people to enjoy the canyon without the traffic and danger of the canyon road. Widening the road would put unnecessary environmental impact on a precious natural space. The gondola would enable people to enjoy the natural beauty of the canyon without disturbing it.	Paige Bennion	Website
4017	Gondola plus La Caille Base Station! Not more buses and cars. Let's create a European-style alternative to the current mess.	William Green	Website
4018	Please stop Wasatch expansion. Gondola's are a great alternative.	Cory Isaac	Website
4019	Do not widen Wasatch Blvd. Provide EXPRESS TRANSIT bus transit solutions. Protect & Preserve our LOCAL neighborhoods and environment. People over ski resort profits.	Monica Zoltanski	Website
4020	I totally support the gondola system. It Would support future generations of use, it makes so much better sense for the environment. It would leave the beautiful canyon alone, the way it deserves to be. Please consider the gondola system your first option. Personally, I could see no problem at all coming from the airport to the base station and taking a gotten a lot. It makes perfect sense.	Sterling Swaim	Website
4021	I support the Gondola option.	Julianne Smoot	Website
4022	I do not feel that the plans for LCC make accomodations for Backcountry users. They seem tailored for resort users.	Daniel Hadley	Website
4023	I support the gondolas plan.	Brittany Ward	Website
4024	Hi. I support the gondola plus la Caille base station solution for the ongoing traffic congestion in Little Cottonwood. Widening the road would have a huge impact on the natural area and watershed, and would only incentivize people to drive their cars up to the resorts, where parking will remain an issue. With the gondola, traffic will be reduced, there will be fewer car accidents in Little Cottonwood, and the environmental impact will be far less. Plus, the gondola will serve as an added attraction for visitors, especially out of town tourists, and will provide a fun and unique canyon experience to differently-abled people who may not be able to use take advantage of all the activities at the resorts.	Kiley Morgan	Website
4025	I am a frequent user of LCC. My wife and I, along with our five children have season passes to Alta and ski there frequently throughout the winter. We have been skiing in LCC for over 20 years and strongly support the gondola solution being studied. We believe this will have the best outcome for visitors, LCC businesses, and the environment. In addition, we believe it to be the most cost effective and reliable solution available. Please pursue the gondola solution.	Rich Bennion	Website
4026	A GONDOLA is the PERFECT solution to LCC transportation!! It is necessary for safety and access to LCC for all. Please put in a Gondola!! We support!!!!!!	Courtney Pena	Website
4027	Gondola	Ty Smith	Website
4028	To Whom it May Concern: I have had an opportunity to review the options for making provisions to get Utahans up and down Little Cottonwood Canyon during high usage peak periods. I am pleased to have had the opportunity to have also reviewed the option of the Lacaille Base Station with Sustainable Gondola System. This seems less invasive and should aid in preserving the beauty of the canyon while reducing auto traffic up and down the canyon. I think this brings an element of fun and diversity to the canyon as well. This also appears to reduce carbon emissions within the area and canyon as well. Please consider this option during your deliberations. Kind Regards, Shane	Shane Minor	Website
4029	Please allow the Gondola up Little Cottonwood Canyon to relieve the traffic	Douglas Brown	Website
4030	Great idea but with Covid right now who knows what happens with our mountains? Whose getting on a gondola? <input type="checkbox"/>	Carol Goodliffe	Website

4033	A gondola is a way better option than adding more buses. Build a parking garage at the gondola station, and add a toll to drive up the Canyon.	Dane Weister	Website
4034	I am in support of increased bus routes, no widening of the road and no gondola. The gondola is a huge investment and doesn't provide any solution to those recreating outside of the 2 ski areas. Numerous trailheads along the road are full year round. The gondola will do nothing to fix this issue. Widening of the road is surely the worst option. Build it and they will come. If you widen the road that will only kick the problem put a few years. We need a solution that will address climate change by decreasing car traffic. It there was a bus departing every 5 minutes with plenty of parking at the park and rides I would always rode the bus.	Aaron Rice	Website
4035	Enhanced Bus services are needed to keep our canyon's as wild as possible.	Zach Hill	Website
4036	I want the gondola!	Bella Lee	Website
4037	As an avid user of both Big and Little Cottonwood Canyons, I have first hand frustrations with traffic issues as well as a persistent desire to continue to explore and play in our wild, undeveloped canyons. The solutions proposed are thoughtful, but have several flaws. The problems: (1) Limited parking at the base of the canyon restricts the potential success of any proposed solution to limit private traffic in the canyon. Without easily accessible locales for parking, any carpool or public transit option is less likely to be used. At the bases of both Big and Little, carpool lots are usually full by 9am on high traffic winter days. Without access to a parking spot, users will not leave their cars to take busses (regardless of increased frequency or decreased transit time with dedicated bus lanes) or a public gondola. (2) Gondola access only supports users at ski resorts. (3) Widening the roadways will have irreversible consequences on the ecosystem, development, and aesthetic of the canyon. Additionally, widening the roads will not alleviate the ever-increasing amount of traffic running through the canyon. This is, at best, a temporary solution to a long-term problem. (4) Any restrictions in Little Cottonwood will pass traffic to Big Cottonwood, which, while not as severe, has its own traffic problems. Proposed Ideas: (1) Tolling a. A driving pass for both Little and Big Cottonwood Canyons. Since changes in one canyon will undoubtedly affect both, let us not postpone addressing the issues that will trickle down. Users of the canyons can purchase a season pass allowing car access into the canyon. To purchase this pass, you must have documentation that your car is 4WD or AWD and has appropriate tires or chains. b. If you do not have a pass, your car must pass tire inspection and you must pay a day use fee, much like Millcreek Canyon. c. To maximize traffic flow, there may be an "easy pass" lane at the base of the canyon abutted to a human operated lane. There should be a fine for cars in the easy pass lane without the appropriate pass, enforced by camera. d. Discounts or complementary passes could be provided to homeowners and employees. Restrictions on vehicles should remain the same. (2) Parking structures at the base of first Little, then Big cottonwood canyon. Additional parking spaces, combined with financial costs to drive independently, will encourage users to utilize carpooling and public transit. (3) Increased public transit (busses), with stops at popular backcountry trailheads and ski resorts. Thank you for your attention to our canyons and outdoor recreation opportunities. -Madison Gravitte	Madison Gravitte	Website
4038	This sounds like far and away the best option! Having the gondola base right at the mouth of the canyon still sounds like a traffic disaster	Jonathan Wegleitner	Website
4039	I'm in favor of the gondola in addition to an improved bus system. This option seem to be less disruptive to LCC and more eco friendly. Not sure if this is economic or possible but would hope that the utilization of the gondola is not deterred by a fee or seasonal cost for users.	Bradford Schaub	Website

4069	Private bus lane with stops at all the major trailheads. Snow sheds would be good to keep canyon open more.	Chris Stowe	Website
4070	This is such an amazing way to preserve our canyons and cut down on traffic and pollution.	Kristi Colobella	Website
4071	Let's do this!	Howard Wright	Website
4072	As far as I'm concerned, this is only in a position to save the resorts. There's no thought to backcountry or let alone the mountain itself. If canyons continue to be congested then so be it. Resorts should learn to limit their ticket sales daily and season passport sales as well to keep from this congestion. Powder mountain is a prime example of this and they thrive by having that policy of limiting sales per day. Never too many people = no congestion. The resorts take advantage of how many people are touring out here now whilst still underpaying their employees and telling UDOT their needs of a wider road to benefit them.	Madi Tracey	Website
4073	I like the Gondola option	Blair Monell	Website
4074	The gondola option would be the only way o start going back to that canyon	Cameron Tanner	Website

4083	I support the gondola plus LaCaille Base station proposal	Kay Vogelsang	Website
4084	yes to the gondola base station	Curtis Sigoda	Website
4085	I support the Gondola plus La Caille base station option. The gondola needs to go all the way to La Caille base station to make it the optimal transport option between Salt Lake City, Snowbird and Alta. Not enough drivers would be incentivized if they have to take a bus to get to the gondola station since travel time would be longer than driving, let alone the inconvenience of having to load and unload twice which can be a direct deal breaker for families. Widening the road or adding bus services will only produce limited results because snow conditions on the road and in the canyon can still prevent/limit access thus resulting in congestion even with added lanes and buses. The canyon is in an avalanche prone area and with snow cover becoming increasingly unstable with climate change, avalanche control may become more difficult. Also, more buses does not help families with very young children who need to carry a lot with them. It's easy on the gondola, it's a lot trickier on a bus for a long period of time too. Therefore, the gondola plus the proposed La Caille base station is the optimal choice for little cottonwood canyon. Thank you	Eric Vincent	Website
4086	Love the gondola option. I hate being in the car.	Jake Cohen	Website
4087	I support the Gondola plus La Caille base station option. The gondola needs to go all the way to La Caille base station to make it the optimal transport option between Salt Lake City, Snowbird and Alta. 4090	Definitely Gondola + La Caille base station	Parker Higgins	Website
4091	A gondola with thoughtful access for backcountry recreation to me makes the most sense and avoids the most congestion and potential safety hazards.	Matt Wells	Website
4092	The gondola would be an excellent choice for one big reason. It will be moving almost all the time. It also would add value to little cottonwood canyon. The longest gondola in the world.	Noah Bodnar	Website
4093	One other thought: this concept of bussing people from BCC to the mouth of LCC does absolutely nothing for anyone who lives south of BCC. Right now, I can get to Snowbird in 25 minutes. Under your ideal scenario it will take me an hour because I will have to drive past LCC to BCC, only to get bussed back. How is that an improvement? Wait for a bus, wait for a gondola, why don't you build the parking next to the gondola terminal so I don't have to wait in two lines?	Peter Cullen	Website
4094	Gondola plus is the best option imo	John Bosshard	Website
4095	I vote for the gondola.	Ariel Eiftman-Hanson	Website
4096	I support the gondola solution for Little Cottonwood Canyon	Aeolyn Gwynne	Website
4097	Please build a gondola and leave the road alone. Save us from the pollution that you would bring with more roads. PLEASE do the innovative and safe option to clear cars out of our beautiful canyons.	Clara Bachman	Website
4098	More buses isn't a long term solution. Nothing is going to work unless it's convenient. The two parking structures at the base of little need to be turned into one gigantic parking structure going over the road. Then a train or gondola can work. Without convenient parking nothing will be effective.	Chris Lambert	Website
4099	Who came up with these ideas? None of these make any sense. Get some decent bus service, more frequency, more routes and you solve the congestion problems. Many people, like our family would love to take the bus, even if it's just to avoid UDOTs vandalism to our car, but that's just not an option when you have to wait 2+ hrs to get on a bus. Have 10+ lines from different areas of The Valley, buses every 5 min and require snow tires (mountain snowflake symbol, not MS) for all cars driving up the canyon. That's all it would take to solve the problem and you can avoid this giant waste of taxpayer money. But I'm sure the people who decide on this are way too excited to spend other people's money to consider any common sense solutions. You are welcome.	Lukas Gruber	Website
4100	Gondola plus La Caille Base!!! Yes please!!!! Please? Pretty please :)	Lara Brewer	Website
4101	A gondola option that goes from the base of the canyon is the best way to get people to ride. If you have to take a bus and then transfer halfway up, there is little incentive to get off the bus.	Josh Cates	Website
4102	Has a train been studied? The train could tunnel underground for the majority of the trip but is much better suited for large crowds and would allow for more stops. Examples such as Zermatt and Wengen.	Davis Anderson	Website
4103	We should seriously look to the future for access to Little and Big Cottonwood Canyons. Building bigger roads and creating more parking in the canyons will ruin the natural environment we so cherish. We must pursue mass transportation. I strongly believe the GONDOLA is the best option of the three proposals. The advantages I see are: The smallest footprint and least impact to the environment Alleviate danger and frustration of driving up and down snowy / icy canyon roads Being above the road, Avalanche would not be a safety concern Less exhaust pollution from cars and busses CLEANER- less road pollution from salt and automobile chemicals. Would actually be a FUN experience for visitors I feel it's Critical to the success of a Gondola to have PARKING AT THE GONDOLA BASE STATION rather than requiring users to park at a distant lot and bus to the gondola station. Parking at the base and boarding the Gondola would give the feeling of "Already Being There" Considering time for the 3 options this makes it feel the quickest! A FUN SCENIC RIDE UP THE CANYON TO START YOUR DAY IN THE MOUNTAINS !	Mark Barone	Website

4104	I completely support the Gondola PLUS La Caille Base Station. We need a long term solution that removes the need for cars and buses to travel into the canyon.	George Blunt	Website
4105	Please expand bus service up LCC. A gondola is not the right option, it won't serve the trailheads and it will mean a huge amount of disruptive construction. Increased bus service will serve a broad swath of the population with minimal disruption and development of LCC, and the lack of development is what makes this place special. No road expansion, no gondola—please increase bus service.	Blair Williams	Website
4106	The Gondola idea seems like a great solution to the traffic jams and pollution caused by all the cars going up and down the canyon every day. Would solve a lot of the parking issues as long as there was ample parking in the valley. I think its a great idea.	Peter LeFebvre	Website
4107	I'm a visitor from Germany. Please don't make the same mistake as Germany and Austria and build a gondola. Enhance your bus service and make it for free, leave the road as it is, put expensive tolls on the road and create a bigger parking lot at the base for bus users or carpools!	Andreas Thiele	Website
4108	We need to preserve the nature of the canyon. Any widening of the road will ruin our canyon. I believe a gondola will help achieve both preserving beauty and accommodating large crowds at the resorts.	Creed Walker	Website
4109	Little cottonwood does not need more cars going up and down adding to pollution. I think a gondola / tram idea is much better.	Kip Sharpe	Website
4110	I believe the gondola is a much better option for little cottonwood canyon.	Tom Bateman	Website
4111	The gondola is the only way to go!	Les Gingell	Website
4112	This is the perfect solution	Dave DiRocco	Website
4113	I support more busses without building an extra lane.	Sarah Malyn	Website
4114	More buses does not solve the LCC road problems. Don't widen the roads and cause only more congestion in the canyon. Vote for the gondola works project and save LCC. Please.	Ali Fluke	Website
4115	I support the Gondola plus La Caille base station option.	Cydney Rollins	Website
4116	The gondola does nothing to resolve congestion at the mouth of the canyon and still traps the local residents in. Getting buses to the gondola adds congestion as would a gondola parking structure. If people are already on buses with their gear, its much more efficient to just take them straight up the canyon on buses from 2 hubs and add the extra lane to accommodate 2 lanes up in the AM and 2 down in the PM with an express bus lane. The most important oversight in all of this, and one that would determine the solutions and resolve most of these issues, is to agree on canyon carrying capacity! The ski resorts, who are the only ones who benefit from putting more skiers up there than they can handle, are the only ones opposed to carrying capacity. They apparently have no problems sacrificing the canyon to get gondolas full of people up there on a big snow day when they can't even get the resorts open. Electronic tolls can also count vehicles and cut it off at an agreed upon number, thereby saving our canyon experience and managing parking congestion in one fell swoop, regardless of the population growth in the valley and these options to resolve it. Thank you	Douglas Vogeler	Website
4117	Anything except more busses	Jordan Davis	Website
4118	I am a resident of Cottonwood Heights living along Wasatch Boulevard and I am writing to protest all of the plans that include a 5 lane expansion of Wasatch. I am protesting the expansion because of the damage that it will inflict on the existing lives of the people who live along Wasatch. I am already suffering horribly from the current noise and pollution levels generated from Wasatch. I fear that with an expansion I will never be able to enjoy my garden or yard again. Of course my property value will only go down with an expansion. Who would want property where you have to live inside your home all the time because the conditions outside are untenable. That would be the environment created by an expansion. You must listen to the residents' wishes. Please do not use my tax dollars to degrade the quality of my life and others in my neighborhood and to support two ski resorts that only benefit skiers. There must be a better approach to the problem of getting more people up the canyon. Plus whatever happened to the option of doing nothing? Thank you for taking the time to read this.	Pauline Reisner	Website
4119	I would like to submit my support of the enhanced bus with no additional lane widening plan. I believe the use of current resources (bus system) is the most sound long-term investment with the least impact to already-stressed natural resources in the canyon. At the current pace of technological advances, our bus systems will be operating with very low environmental impacts. A robust bus system also provides further employment options for citizens. Thank you!	Michael Bodrero	Website
4120	I would like to vote for alternative #2.	Ian Mason	Website
4121	I support the gondola plus lucky base station option	Scott Sanders	Website
4122	Yes, build the gondola!	ben Olson	Website
4123	I would be in favor of widening canyon road, adding more bus service. The extra lane could be used in the 'off season' as a dedicated cycling/running lane.	Gretchen Erb	Website
4124	I live near the mouth of Big Cottonwood, and hike and bike in LCC. I don't believe tax payers should bear huge financial and environmental costs for the benefit of the ski industry. I favor buses in the canyon. I don't favor a gondola, which can't move people fast enough to fix the ski season traffic problem. Unless busing is required for those coming to the canyon, there will be nowhere to put their cars. I don't favor widening Wasatch by more than one "swing" lane.	Charles Ayers	Website
4125	Don't touch the road!	Declan Murray	Website
4126	Let's move forward with a viable public transportation option.	Benjamin Hanson	Website

4141	Agree with this	Alma Yates	Website
4142	I am supporting the gondola option	Ron Jenkins	Website
4143	I fully support the gondola because it is the best option for transit! It decreases the negative effects of traveling up to the mountains and would be so much better than the current system or widening the road!	Erin Carroll	Website
4144	Save our natural spaces with less traffic and more public transportation alternatives. I fully support the concept of a gondola system or continued exploration of ideas along those lines. Thank you very much!	Royce Wesley	Website
4145	I support the Gondola option over widening the road	Yash Dalal	Website
4146	I support the gondola... you should post a petition.	Angela Wright	Website
4147	We need to keep the canyon in tact and keep the environment healthy. This is a great solution.	Mara Murphy	Website
4148	A gondola would be way better for the environment cmon spend the extra chedda to save the earth someone's gotta do it and it's not gonna be China so we gotta start here to set a good example and stuff u know boss??	Andy Barry	Website
4149	Reduce traffic and reduce emissions! A win-win!	Ary Faraji	Website
4150	I love the gondola proposal! My family has been coming to Snowbird before I was born (I am in my late 20's) and spends a couple weeks at the lodge. I know for a fact we would use this every time we visited the canyon. We regularly ski and attend Octoberfest and watch the amount of vehicles crowd the parking lots and streets. I LOVE the base idea and think this is the best option. This would be an efficient, clean, and fun addition to this AMAZING canyon. This reminds me of telluride and what a fun place that is to visit. Thanks for considering this option!	Alan Walker	Website
4151	Either limiting daily traffic up the canyon to what the road capacity can currently handle, or the Gondola option are the only two options I would favor. No to gondola! No to wider roads, perhaps some passing/ or bus lane only for morning uphill for afternoon rush downhill, we need more buses running specially in the early morning 7am and 7:10,7:15am, 7am bus is always packed w employees no room for others to sit, not many buses til 7:30 and that one is always full, not going to take a bus if I have to stand w boots and gear w me, more parking at mouth of canyons.	Paul Phipps	Website
4152	4x4 chains only vehicles restrictions for the whole d nation of winter Months nov-April not only snowy days, and don't take restrictions off during day when days have a chance for snow many days last year I noticed restrictions taken off mid day and later in day it was snowing. Not practical for outbound traffic. Too many slide offs making canyon have to shut down not a smart move specially given every year we have more cars in canyon, & many drivers with no experience driving in winter conditions, almost got hit by car driving too fast on a cold day, he hit black ice started to swerved into new my lane. Always have cops checking vehicles tires tread since early morning. More cops in canyons, so drivers will slow down, Tom many moose getting killed last few years.	Gandhi Zapata	Website
4153	We have already had enough crap in 2020 don't ruin little cottonwood canyon	Britney Walker	Website
4154	Out of all the options available for consideration, OUR FAMILY SUPPORTS THE GONDOLA PLUS LA CAILLE BASE STATION CONCEPT. Our primary reasoning behind this is that it's the only plan that does not include the widening of Wasatch Blvd. WE DO NOT SUPPORT THE UDOT GONDOLA CONCEPT, AS IT INCLUDES WIDENING OF WASATCH BLVD AS PART OF THE PLAN. To be honest, we feel the smartest solution to minimize developer greed and community degradation is increased bussing and/or the extra lane/snowsheds in the Canyon, with parking structures at the gravel pit and 94th and Highland. Unfortunately both of these UDOT plans include the widening of Wasatch Blvd, which as a local in the foothills between LCC and BCC, we find completely unacceptable, a guaranteed negative outcome, opening the door to continued manipulation and abuse by developers, making them money at the expense of our community aesthetic. We would like to note that all of these solutions are only needed about 30 to 40 days a year. The vast majority of the year there are no problems and no "solutions" necessary. With that in mind, why not keep Wasatch Blvd as is, keep gondola poles and scaring out of LCC, and simply integrate a more thoughtful and efficient bus and parking system? We are disappointed that a concept that prevents both widening of Wasatch Blvd and towers and ground destruction within the Canyon is not available. As a result our default comment/vote is: SUPPORT THE GONDOLA PLUS LA CAILLE BASE STATION CONCEPT.	Jim Fairchild	Website
4155	I fly in to skii at SLC 3 times every season, would love to have a Gondola ride up instead of driving up the Canyon road. It sounds like a more sustainable long term solution.	Vivien Wong	Website
4156	No more roads in Little Cottonwood Canyon. I support the high-capacity, sustainable gondola PLUS the proposed LA CAILLE BASE STATION.	Peter Lukens	Website
4157	We support the gondola	Bradley Smith	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4158	<p>I was born and raised in the Wasatch, and I like to think that experiencing its wilderness has shaped who I am today. However, in recent years it has become clear that there is far more effort going in to pumping as many people as possible in to our canyons, instead of protecting them (as well as our watersheds). What has been proposed here are three problems that terrible quite frankly. They are designed to put more money in the pockets of IKON and EPIC, and are not at all concerned with the preservation of wilderness or the interests of those who patronize the canyons. Although traffic is undeniably bad, looking at the road as the only way to fix it is frankly ignorant. There are reasons why people don't take advantage of busses more; it's because the transit system is terrible. If this money were invested into having more busses that could have a broader reach across the valley it would actually decrease traffic instead of simply moving the congestion to the mouth of the canyon.</p> <p>The thought of a gondola going up the Little Cottonwood Canyon makes me want to f****ing throw up. If you can't see the inherent problems with this, then maybe you should not be involved with a project that has the potential to cause so much damage. There is a immense value to preserved wilderness that you simply can't place a price tag on, although this is clearly all Utah legislators care about.</p> <p>In conclusion, all three of these options are terrible, and the gondola is uniquely insulting to the people of Utah. Don't waste money on "road enhancement" projects, give the money to UTA to employ strategies that encourage canyon users to ditch their cars (and not all at the mouth of the canyonist). I beg you to listen to the comments of concerned citizens.</p>	Zach Coury	Website
4159	<p>The La Caille base station proposal should be included in the next stage EIS.</p> <p>While people might use a gondola over private vehicles, I can't see any way they would do that if they have to take a shuttle base to the gondola base.</p> <p>Batch process transport (shuttles, gondola etc) is difficult but putting two batch processes in series is more than twice as bad.</p> <p>Please continue to study the gondola - the reduction in vehicle emissions over busses could be very valuable - but please consider the alternative La Caille base station also.</p> <p>Thanks</p> <p>Dear UDOT,</p>	Tim Renwick	Website
4160	<p>First and foremost, thank you for your work in all aspects of this project. There's no question that UTA is changing before our eyes and a sustainable long-term solution to traffic in LCC must be decided upon soon. Also- big shout out to UTA, USDA Forest Service, and Snowbird and Alta in all working together to make something sustainable happen for the long term. I have spent many hours researching this topic and need to spend many more. I am not yet ready to say the gondola is the solution; however, I am confident saying that road-widening is not the solution. If SR-210 were to be widened, I believe it would promote future use of personal vehicles into the canyon, which is not the sustainable long-term answer. However, I still have many questions regarding the gondola. My first concern is how high the environmental impact on the canyon would be (it sounds low if it were to be an electric gondola). Second, if it were to take away from the natural beauty of the canyon. Sure, Gondola Works and La Caille are promoting rendering that it would be painted a beautiful color to "blend in" with the canyon, but how realistic is this? Maybe the impact to the beauty of the canyon wouldn't be as much as I'm imagining, but I wanted to voice this concern. It would be difficult to tell until built. Third, Snowbird stated in their letter of support for the gondola that "Park n Ride lots have historically paid for the UTA ski bus fares of employees and season passholders". I hope I'm reading this correctly as I give credit to what Snowbird and UTA figured out that my bus fare has been included in previous season passes; they go on to say "we envision a similar funding model if a gondola were to go into place". Excellent if I'm reading that correctly in that the gondola ride could be included in a season pass price. But what about the price to park at La Caille? I very well could have missed this, but I have not seen any parking quotes to park at that enormous structure at La Caille. In the UDOT report, it mentions gondola riders would park at a mobility hub, then take the 13-minute bus ride to the gondola. With that being said, I'd be more apt to just stay on a bus up the canyon (if there are more electric buses/ less impact on the environment). Again, I could have missed this, but it was only in separate reports that I saw the option to park at La Caille for the gondola- I'd only imagine they'd charge a pricey amount to park there. With all this being said and the unknowns on my end, alternative "one": enhanced bus service would get my current vote (if there are additional environmentally friendly buses). A few ideas around this: not as much of an eyesore that a gondola would bring to the canyon. No additional canyon road widening (I understand Wasatch Blvd. would still be widened under this option). Priority to buses on Wasatch Blvd and tolling to shy people away from driving up in their cars. This next point might not be realistic- but on huge storm nights (when UDOT puts out the statement that they are blasting until 8am) could a statement also be put out that it will be buses only/ no personal vehicles until noon the following day? (outside of emergency vehicles, workers, canyon homeowners, etc.) and include a statement saying people in personal vehicles can't line up until noon? We all know that in addition to the wet, avalanche prone snow (last year) that caused such large slides, one of the biggest reasons for such crazy traffic the last few years is that we hear the canyon is closed until 8am, but people start to line up at 5am, which backs things up through 9am (or later) by the time things start moving. I am all about getting up super early on pow days, but the reward would be close parking to the bus then enjoying a ride up from UTA on a nice early bus. I might regret that idea, but it could seriously help with the traffic. Side note- UDOT and UTA did an amazing job last year, you women and men rock! My last point- Snowbird and Alta have such an incredible service in their skiing- mostly due to the geological magic that is LCC. I'm sure they are sick of hearing this, but they seriously need to consider removing themselves from the multi-resort pass. To my understanding, Ikon financials are private. As an Ikon holder last year, my girlfriend and I are going back and buying an Alta/Bird this year (and we still would have even if it didn't include an Ikon base pass). The skiing is that much better in LCC. I can only imagine they make a boat-load by being a part of the Ikon; and maybe I'm way off, but it's such a legendary place that I imagine strong revenue could still be generated by selling day tickets for those whom really wanted to ski in LCC. Again, maybe I'm way off, but their seems to be so much loyalty from LCC resort skiers- in many forums, I have read numerous comments that passholders would be willing to pay more if they weren't apart of the multi-resort pass. I'd hate to see that type of loyalty go away. I'd also hate to see the proposed gondola turn LCC into any more of a Disneyworld than it already has started to (when the gondola becomes just as much as an amusement ride as it is a solution to traffic); Utah can still benefit from the tourism dollars from those type of visitors, they really enjoy Park City. Thank you for hearing me out. This will be my 8th full year here (I can only imagine what the people who have lived here for 30+ years say about us; but hey, I was here before Ikon and don't worry, was coming here anyways before I knew Epic had arrived that same year- when they operated the Canyons, previous to the combination with PCMR). I love skiing LCC (I celebrated my 150th day of the season today at Alta) and I love Utah and look forward to a sustainable solution. Thank you again for all of your work. Sincerely, Michael Jablonski</p>	Michael Jablonski	Website
4161	<p>Please decrease the speed limit on Wasatch Blvd.</p> <p>Please do not widen Wasatch Blvd.</p> <p>Widening Wasatch Blvd will increase pollution and disrupt a family neighborhood, while benefiting only a few businesses.</p> <p>The presence of more and higher speed cars in our neighborhoods makes it harder and harder for people to connect with each other and is driving an epidemic of loneliness. We need slower speeds and fewer cars in order to be able to connect with real human beings.</p> <p>More cars in the canyon benefits the owners of a few ski resorts at the top of the canyon. Please don't increase the power of a few individuals over the needs of our entire community.</p> <p>More cars at the mouth of the canyon and in the canyon means more idling and more pollution. Pollution is easy to ignore but unless we - you and me - actually make other choices, our air and world will grow increasingly worse. That's why I'm taking the time to write and comment.</p> <p>Don't use road-building when there are other alternatives. Other alternatives exist that do not destroy our community. A valley-wide transit program is a much better overall option. Mass transit does work.</p>	Carrie Akston	Website
4162	<p>I feel that UDOT's proposed zero emission, high-capacity, sustainable gondola PLUS the proposed LA CAILLE BASE STATION is the best option for Little Cottonwood Canyon.</p>	Jake Neerings	Website
4163	<p>I believe that Save Our Canyons has made a significant contribution toward helping relieve traffic congestion in our Cottonwood Canyons, in particular Little Cottonwood Canyon, and at the same time protecting the environment, the watershed, and the natural beauty of our canyons by proposing more use of dedicated UTA busing to the resorts from convenient hubs around the valley, for the majority of the people wanting to visit our Cottonwood Canyons. This makes so much more economic and environmental sense to me than gondolas, snow sheds, widening roads, ad nauseum! Concerned Utah citizens and taxpayers should have a say in such matters, not just developers or businesses or the state all trying to increase their slice of the economic pie at the irreparable expense of the beauty, integrity, and health of our Cottonwood Canyons! I am adamantly opposed to UDOT's EIS and reject their opposition and close mindedness to Save Our Canyons' and other like-minded conservation groups' thoughtful, viable, and sound alternative proposals!</p>	Janet Gillette	Website
4164	<p>The gondola is zero emissions. Let's not add to the air quality problem</p>	Kyle Kranz	Website
4165	<p>TRAINS ARE THE SOLUTION! Speaking as someone with lifelong experience with Little Cottonwood Canyon, someone who has seen the massive increase in traffic over the past few years alone. I submit that the proposed alternatives WILL NOT BE ENOUGH TO SOLVE THE PROBLEM LONG TERM! People will wait 2-3 times longer to go up the canyon if they have the option to drive their own vehicle, rendering upgraded buses obsolete from the start. Do not waste taxpayer money on an upgraded bus system of any kind that WILL FAIL IMMEDIATELY. The gondola is a better alternative and may ease congestion in the canyon for a time, but population growth and economic prosperity in Utah, along with the option to continue driving and parking in the canyon will render the gondola obsolete as well. If we're going to invest hundreds of millions (if not billions) of taxpayer dollars into this project, we need a long term solution that will be effective now and for the future. TRAINS ARE THE ANSWER! Keep the La Caille Base Station similar to what has been proposed as part of the gondola plan, but instead of a gondola that transports a small number of people slowly, I propose a train that follows a similar route and is the only option for entering and exiting the canyon, apart from service vehicles. Tunnel under avalanche danger areas if we must and transport people up and down the canyon in large numbers. The train will be a large investment upfront, but offers the best long term solution to a problem that will only grow worse. I plead, do not move forward with any of the proposed plans and consider drafting a new proposal for a train. If anything, look at the transportation infrastructure in Switzerland. There are entire towns that are only accessible by train and the system works efficiently on a much larger scale. Please consider before moving forward on any plan that will waste taxpayer money and do little to nothing to solve a huge problem for Utahns!</p>	Benjamin Randle	Website
4166	<p>Please study the feasibility of the gondola plus La Caille plan.</p>	Milton Witt	Website
4167	<p>I fully support the Gondola with the Caille base station option for reducing traffic into Little Cottonwood Canyon. My son and I are both pass holders at Snowbird and really support this option</p>	Bryan Loll	Website
4168	<p>Remember to commercialize the transportation hubs in the Valley. Make it more than a parking structure - hotel, restaurant. Think about a long term plan to connect Park City and Big Cottonwood Canyon. Think year-round activities, think big.</p>	J Rowland	Website
4169	<p>I love this concept of the gondola and large parking station near La Caille. Let's make this a reality!</p>	Jennifer Whitehead	Website
4170	<p>I am in favor of the gondola as part of a long term strategy to help reduce traffic and decrease emissions in LCC.</p>	Harry Herzig	Website
4171	<p>I support the Gondola plus La Caille base station</p>	Todd Wiadrowski	Website
4172	<p>i strongly support the gondola. as a physician who owns a property on wasatch boulevard and knows of the air problems in salt lake city why would we not want a gondola system to reduce pollution?</p>	ryan potter	Website
4173	<p>After reviewing the proposed options I strongly support the gondola with base station option. This would allow 24/7 access during avalanches and decrease emissions overall in the canyon. Widening roads is not the best answer, if we keep doing this more people will drive and roads will always be crowded and backed up. Not to mention the wrecks that the gondola would help eliminate.</p>	Tyler Westensee	Website
4174	<p>I would love to leave the car behind to get up to Alta and Snowbird. A gondola is a very good alternative to keep traffic out of the canyon</p>	Stefan Ivansson	Website
4175	<p>Build a gondola!</p>	Derek Markovic	Website
4176	<p>As an avid out-of-state skier who visits Utah at least three a year, I urge UDOT to consider the LaCaille Gondola option. Doing so eliminates the amount of traffic while preserving the pristine nature of Little Cottonwood Canyon.</p>	Wesley Chioh	Website
4177	<p>The gondola plan makes sense, would minimize impact on the environment! It's the best proposal I've seen for mitigating traffic while still providing access to LC.</p>	Spencer Henriod	Website
4178	<p>We are skiers from Colorado and enjoy skiing Little Cottonwood Canyon. This past winter we experienced the best and worst of the canyon. We tried the public transportation mode (buses from the city) and found them to be an enjoyable option, although traffic made the going slow. One day it took 1.5 hours to get to Snowbird from the historic Sandy Station! That is unacceptable. Driving into Little Cottonwood gave us the freedom of a vehicle, but that too was fraught with problems. We've decided to forego future trips to Little Cottonwood, esp. on weekends, until the situation improves. We support the gondola option, or some high-speed train or bus only or some mode of public transportation to get cars off the road! Thank you.</p>	Tony Daranyi	Website
4179	<p>Yes, go with the Gondola and La Caille Station</p>	Sarah DeBlois	Website
4180	<p>Enhanced bus service NEEDED!</p>	Michelle McGarry	Website
4181	<p>I do not want a wide road going through my neighborhood so we can fix a problem two businesses created.</p>	William Meiling	Website
4182	<p>I support the Gondola option. Gondola option is the most environmentally sensitive, safest and will provide consistency in service.</p>	Cameron Pratt	Website
4183	<p>I am not in favor of any of these ideas. We need to keep the natural beauty of the canyons. The best ideas would be an overhaul on mass transportation. SLC in general has a driving mentality that needs to change. I am originally from NYC and Philadelphia where most people opt for public transportation because it is easier. When you make public transportation easier than driving, people will use it. We need buses from all locations going to the canyons (both Little and Big). I live in Sugarhouse and if there was a bus stop within 4 blocks of me, I would use it rather than drive to the base or the top. Take a look at the buses in Park City for instance. They work, no need to reinvent the wheel and ruin the environment.</p>	Vivian Gayol	Website
4184	<p>I believe that the Gondola option for Little Cottonwood Canyon is the best and most viable solution for protecting the fragile environment Of the canyon while making the beauty and recreation of the canyon most accessible to large numbers of people. The gondola option checks all the boxes that need to be considered and I fully support UDOT in pursuing this option.</p>	Margaret Pratt	Website
4185	<p>I support the Gondola option. We need to protect Little Cottonwood Canyon's environment, and the Gondola option would be the cleanest way to reduce pollution from vehicle emissions. It's also the safest and most reliable option.</p>	Chelsea Pratt	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4186	I think the gondola up the canyon is a smart, long term decision that should be now. Early intervention is best in most things, and for this, I totally agree. We will be preserving the canyon, saving the numerous lives that die driving in that canyon every year, and allowing workers to commute to their jobs without being in harms way from avalanches or other drivers. I love this idea and think it is the best option. Plenty of people take a gondola ride from the parking lot at the canyons. I think this. Oils be very effective in little cottonwood canyon as well.	Shannon Pratt	Website
4187	Gondola Plus La Caille Base Station option should be studied and considered. HW 210 regardless of its width poses a problem with snow slides. This option will reduce the risk of injuries from a slide and pose a better solution for the environment by reducing vehicle traffic in and out of the canyon.	Douglas Wain	Website
4188	Of the alternatives, the Gondola option should be the preferred option. The Gondola option is the least-polluting, least-impactful, highest-capacity, safest, revenue-generating transportation solution under consideration, and an alternative proposal to move the base station to property next to LaCaille will be an efficient solution to access needs. The bus options are vulnerable to all of the same weather-related issues that inhibit personal vehicle travel including avalanches, landslides, and traction issues. Cars cannot be the transportation answer in a canyon with 64 avalanche paths and an average of 500 inches of snow each winter. Some of the environmental benefits of the Gondola option are illustrated with the recent vehicle travel reductions related to COVID-19. Carbon dioxide emissions are reduced by 56% from the gondola running 12 hours a day, as compared to 3,500 cars per day traveling the canyon. The gondola is the only electric option that would reduce the amount of Nitrogen Gas (NOx), Particulate Matter 2.5 (PM 2.5) and Volatile Organic Compounds (VOC) in the canyon atmosphere. Under the bus options, constructing an additional lane to SR 210 would have major impacts to the environment and water quality. Even building snow sheds at three of the major slide paths leaves 61 avalanche paths unmitigated and the construction impact of building massive concrete structures in the canyon. SR 210 is subject to weather and too often people are stuck for hours trying to get up or down the canyon. Current gondola technology functions in high winds and accommodates large spans that can put towers where there are no avalanche risks. Safe ingress and egress, regardless of weather conditions, is paramount in the solution for Little Cottonwood Canyon transportation. Moreover, UDOT should give careful consideration to the alternative gondola LaCaille base station proposal featuring a parking structure west of SR 210 that is at grade and includes designated bus circulation between mobility hubs. This proposal would dramatically reduce the amount of private vehicle traffic on Wasatch Blvd and in LCC and the gondola ride up the canyon would be the fastest from this alternate base station. A gondola's lifespan is three times the life span of a bus. The gondola is also the only option that has the opportunity to share capital and maintenance costs through public-private partnerships. In order to preserve this treasured area, both environmentally and recreationally, we must plan for its future use in a sustainable way. Gondola is a long-term transportation solution that is cost-effective, clean, and efficient. It is the best means to provide safe transportation to year-round visitors while having the least physical impact on Little Cottonwood.	Seth Lucia	Website
4189	Please! We need this now.	Erika Wiggins	Website
4190	Please look and listen to the people! The gondola ? is a possible solution to the car problems in little cottonwood canyon! Thanks S.S.	Steve Schneider	Website
4191	Hello, It seems the options primarily consider the resorts and tourism from the resorts. What will the backcountry recreationists due With a gondola? To me the resorts should be on the hook for determining the transportation problems they've created with their mega pass. They have seen an increase revenue why can't they run their own bus service? I do not like any of the proposed ideas. I wanted to, as I try to embrace change. However, to me these just benefit the bottom line of the revenues and helps them out on the tax payers dime. Would love to be able to discuss more ideas in person to help think of logical solutions that benefit everyone. Thanks, Logan	Logan Julian	Website
4192	The gondola is no question the right option.	Sam Flitton	Website
4193	I believe the gondola and La Cai base station makes the most sense for long term planning.	Duane Carille	Website
4194	Taxpayers interests and environmental protection interests agree for once. The answers are to provide MANY more buses and much more parking at the bottom of the canyons, not waste huge sums of money on gondolas that can only transport 5% of the canyon users. Closing canyon roads during peak times to all cars with less than 4 occupants or buses and charging parking fees to offset expenses should also be considered.	Kathy Light	Website
4195	As a property owner in Big Cottonwood Canyon and previous resident of Cottonwood Heights, I'm writing to indicate my support of increased bus service in the canyons during peak time periods as an appropriate solution to the increasing traffic burden on the canyons. When the canyons reach their parking capacity, traffic should be blocked at the canyon entrance allowing only residents to travel the canyon. I'm opposed to construction of a gondola system which would be underused most of the year and would create an unsightly structure running through the canyon. This solution also appears to subsidize the ski areas, assisting them in avoiding providing appropriate infrastructure at their expense to support their operations.	Steven Sanders	Website
4196	I support the proposal for the GONDOLA PLUS LA CAILLE BASE STATION	Matt Styf	Website
4197	Please consider the gondola as opposed to widening the road in Little Cottonwood Canyon	Rodney Villella	Website
4198	Yes, pls increase capacity to snowbird!	Rob Logan	Website
4199	I live in Cottonwood Heights and for 16 years lived in Alta. After reviewing the 3 plans I support the gondola as the best solution to the traffic problem. Thank you, Carl Mandenberg	Carl Mandenberg	Website
4200	I would like to see more incentives for car pooling and not letting so many one person cars go up the canyon . Having a bus lane along with car pooling is the best option for alleviating such congestion and the impact to our beautiful canyon .	Lori Smith	Website
4201	I support the gondola option and think the La Caille base station makes the most logistical and aesthetic sense.	Jonathan Schabowsky	Website
4202	I support the gondola option plus a La Caille Base Station because it has the least environmental impact and provides the safest way out of the canyon in bad weather.	Suzanne Schild	Website
4203	The gondola seems the way to go twofold: 1) for the environment and to reduce congestion regardless of weather conditions, and 2) a unique year round opportunity To increase tourism (not many places have these up a whole canyon!). The bus to la Caille would be simple and straight forward. As a local resident I support the gondola.	Mike Vacanti	Website
4204	The gondola project has my complete support (I submitted a similar idea for its construction several years ago). Additionally, there can be substantial reduction in the carbon footprint by making another bold, wise move. Construction of a gondola system from the Park City area to Alta/Snowbird, as well as, Brighton and Solitude would multiply the number of vehicles traveling over 30 miles from the Park City region to the Cottonwood Canyons. Since construction of the new gondola is likely, I recommend there be an add-on consideration of the Park City gondola as part of this project. It can also be the answer to the recurring idea of an interconnect for all the ski areas in the region. The two-gondola approach will double the positive environmental impact and provide huge long-term impact to well-managed access to the canyons. I recently watched a program detailing the construction of the Golden Gate Bridge in San Francisco. This was a construction marvel born of imagination, extraordinary engineering and huge risk-taking. The result was a structure that has served as an icon of wisdom and foresight for over 80 years. The Cottonwood Canyons Gondola(s) project can reach similar status if done correctly. I encourage moving forward with a two-gondola, area interconnect approach to making the canyons access project a world-class model for environmental protection.!	Marvin Chapman	Website
4205	Our family has been going to Snowbird for more than 20 years. Sounds like a great solution	Martin Hettinger	Website
4206	I support the gondola option. It would have the lowest environmental impact, would not be subject to avalanche and weather like roadway transit, and allows for other alternatives to be considered in the future. The gondola has the lowest long term operating costs and is safer and more reliable.	Christian Peña	Website
4207	Les Cailles/Gondola is the best alternative.	Tom Lanning	Website
4208	I support the UDOT gondola option PLUS the proposed LA CAILLE BASE STATION.	Kristin Hettinger	Website
4209	As a resident in SLC I'm fully in support of the gondola. We need to drive less to lessen the pollution impact to our community and especially the youth.	Jim Westover	Website
4210	I think the idea of having a gondola to bring people up Little Cottonwood Canyon is the right option. A gondola would be a better option for the environment, it would help prevent congestion and over crowding up our beautiful little canyon, and it would be a unique draw to people around the world, thus promoting tourism and bringing more capital into our state. I also think it will help other people all over the world put more thought into taking care of our planet by using alternate forms of transportation, instead of just adding bigger roads and destroying nature. We could be leaders and good examples of change.	Shellie Ireland	Website
4211	After reviewing the proposal, I support the enhanced bus option. I do not support the gondola.	Rachael Jacoby	Website
4212	From Bolivia to Europe gondolas have been proven to be an excellent solution traffic problems in mountainous Terrain it's time for Utah planners to stop thinking small look how quickly I-15 became overloaded after it's widening in the early 2000s having used Ski Bus Service much of the time it is rife with problems Gondola would add consistency that the bus service cannot	Wallace Cox	Website
4213	I support	Pennie Strebel	Website
4214	I support the gondola!	Carl Horton	Website
4215	PLEASE reduce the traffic and accidents and explore gondola options!!	Brittany Anderson	Website
4216	I feel that the gondola is the only sure way to assure access on heavy snow events. It is also environmentally the most friendly.	Brent Pratt	Website
4217	Pls support the Gondola Plus Caille proposal	Craig Rollins	Website
4218	I am a Salt Lake City resident and writing to express my support of the gondola as a solution to mitigate congestion in Little Cottonwood Canyon. I believe it is the best of the 3 options to balance the need for moving people up/down the canyon in the winter months with environmental impact. The worst option would be expansion of the highway which would only put more vehicles on the road. Any solution requires expanded parking near the mouth of both Big and Little Cottonwood canyons such as the proposed La Caille base station.	Paola Nix	Website
4219	I support studying the gondola as an alternative to widening the road and increasing traffic in the little cottonwood canyon.	Lisa Redmond	Website
4220	I support the gondola in LCC	Thomas CARRUTHERS	Website
4221	I am in support of the Gondola project. I am not in support of projects that widen the roads.	Dana Bobbert	Website
4222	I think the gondola would be a great form of transportation with minimal effects on the environment as compared to highway expansion. Go with the gondola!	Jarod Thompson	Website
4223	Please add more buses, not a gondola. A gondola feels like an extreme, showy option. One just used to make us look fancy and make money.	Joelle Baxter	Website
4224	I am for Alt 1 - enhance the bus service and leave the canyon alone!	Dave Prey	Website
4225	Please make this happen!! I have been skiing Alta and Snowbird since 1974 and this is really needed!!! It is also a much "greener" option than all those hung up cars!!	Dan Flesher	Website
4226	Like the idea of a gondola bs more cars and busses up the canyon.	Will Metcalf	Website
4227	I live above Wasatch Boulevard in the Top Of The World Neighborhood. I would be open to a bus flex lane in the canyon or a Gondola from the Highland Drive Park and Ride. I am in NO WAY for widening Wasatch Blvd from Fort Union to the High-T. There is currently not enough traffic anymore with most people on the East side and Draper working from home. A lot of companies are re-evaluating having to have people continue to come in to the office. I also am against being essentially cut off from the rest of Cottonwood Heights by a 7 lane roadway that will just back up anyway another mile down the road. I would like to see Wasatch cut down to 35-40 miles per hour, like it is on the area south of 9400 South. There is no need for a 50 mph speed limit coming out of the canyon that is only 30 mph. Please have a little heart and consideration for the residents of the area most of whom have lived in that area for 40+ years. The business properties west of Wasatch from the gravel pits sit empty on the weekends. Those could be used for parking on the weekends when no one is there on powder days. Please do not turn us into California with a 7 lane highway along our beautiful mountain corridor. If you plan to widen Wasatch still, then I also think an extension of Highland Drive should be also looked at.	Jennifer Murphy	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4228	The only plan that makes sense for our air, water, and snow is to increase bus service, and I really mean increase. In the crunch time of early morning, there should be multiple buses leaving at the same time, or 5 minutes apart. There should be financial disincentive to drive up the canyon (either canyon). A tram will only create a bottleneck. Widening and building more roads only puts more cars on the roads. I don't use the bus because there aren't enough of them, and I don't want to stand all the way up the canyon. Increase bus service exponentially, make it easy to catch a bus and have a seat, and you will get cars off the road. Our air needs fewer cars, our snow and water needs fewer cars, and not more concrete.	Laurie O'Connor	Website
4229	Expanding the road will just lead to more vehicle traffic and more cars are not the answer. Alternate methods of mass transportation need to be considered. Including light rail or overhead cable. The air pollution from automobile exhaust in the Wasatch corridor is literally sickening.	peter layman	Website
4230	I do not think you should do anything. When the parking lots are full, the resorts are full. Period. Offer more busses to lessen car traffic. But don't try to get significantly more people in the canyons. It is making the resorts too crowded and unsafe. If you cannot get out of bed early enough to park, then you do not ski	Katie Storrs	Website
4231	I support the development of a gondola.	Katelyn Ivey	Website
4232	I support the gondola!	Jeremy Mack	Website
4233	This is the kind of thing we need to do for a greener future. The traffic caused by widening the road would be horrible. Building a gondola seems more efficient in the long run. It would also be an attention in and of itself bringing more tourists for the benefit of the state.	Ashlyn Wright	Website
4234	brilliant proposal. In Jersey, they had a similar effort to reduce the traffic to the airport but it wasn't successful. Multiple transfers and infrequent. Most people just take an uber.	Michael DeCorte	Website
4235	to be successful it's important that its: - convenient (so no transfers, drive to gondola, take it, short walk to a lift) - fast (so similar to driving ; high capacity, frequent)	Jose Molina	Website
4236	I would prefer gondola plus la caille base station	Kasia Dobrzanska	Website
4237	I support the plan for the Gondola Plus the La Caille Base Station to save Little Cottonwood Canyon. Widen the road!	jeff gurney	Website
4238	I support your gondola base location in the existing UTA park and ride lot at the base of the canyon with support from buses at the yet to be added parking structures at the gravel pit location near 7200 South and the UTA lot at Highland Drive and 9400 South. I absolutely do not support seeing public money (UDOT money) spent on a gondola that leads to an ill conceived parking structure directly on Little Cottonwood Road as depicted by gondolawork.com. This private parking option is in direct opposition to reducing traffic congestion to Little Cottonwood Canyon, would bottleneck traffic on the corridor, block efforts to see the Bonneville Shoreline Trail completed and be a visual blight on the hillside. The gondolaworks.com proposal is led by private interests, who also sit on the Central Wasatch Commission. The gondolaworks.com is not in the public interest. No public money should be spent on their proposed gondola option.	Christine Coutts	Website
4239	I do not like any of these options. Train service connecting with Trax is the only viable option for me. Since that has not been put forth, the only one of these I would support would be increased Bus service. No gondola, no dedicated bus lane. The lowest cost and lowest impact option delivers the highest return on investment.	Brooke Kenney	Website
4240	When you weigh all important components for the 3 options, enhanced bus services with incentives to increase occupancy per vehicle clearly delivers the highest return. From protecting the canyon from over use, water quality, wildlife, delivering people to the resorts, increasing resort revenues, increasing land values, enabling resorts to stay competitive, helping home owners near the canyons, building base camp transportation hubs in the valley, less taxpayer money that is a greater benefit to ski industry and tourists, are all examples where outcomes and ROI improve. Road widening and gondolas diminish the total returns by creating some winners and too many losers. Lawson Scott Reichard	Lawson Scott Reichard	Website
4241	The gondola option seems most attractive, but how will it be managed in foul weather? Yes, it is at lower altitude, but lifts and the tram suffer from wind and weather-related shutdowns, does this option have that worry as well? What will the cost to the riders be of the gondola? Will there be discounts for resort season pass holders? IKON pass holders? Also, I think expanded busing with priority lanes is a good idea. I would like to see minimal expansion of the road up LCC, it's not a location that should see a highway for a variety of reasons. There is enough challenge maintaining the roadway in the winter as is, with a wider road this would be a bigger headache. What are the proposed tolls for single-driver vehicles? Not all folks, especially local folks with jobs, have the time or flexibility to always make use of these alternative transportation options. Have there also been thoughts of encouraging the resorts to cease partnerships with IKON pass and similar multi-resort passes? These have clearly contributed to the increased strain on these transportation routes.	Drew Lehnerd	Website
4242	The best solution is instead to have a toll to go up the canyon. Even on the busiest weekends in the winter there is an existing resource (empty seats in cars) already making the trip up the canyon that is not being put to good use. Tolling would encourage car pooling and therefore decrease road congestion. It would also be very inexpensive to implement, and, if desired, could even be done in a revenue neutral fashion. Problems with the other options: Gondola: sounds nice, however, has a fixed base location and so it will require a huge parking lot, and all the traffic will converge on that lot presumably just shifting the location of the congestion.	Matthew Gumbleton	Website
4243	Road improvements e.g. Lane widening, snow sheds: This will make no difference because one of the main factors limiting the number of people going up the canyon on busy weekends is how much people are willing to "pay" with their time. This is for several reasons including that the cost of going skiing on any particular day is fixed (e.g. season pass, Ikon pass). Increasing road capacity won't change the "price" people are willing to pay (i.e. how much time they are willing to spend to do the activity) thus congestion (on the road) will remain the same; congestion in the resort will likely increase (unless they do something such as raise their prices to decrease demand--it's no wonder these are all popular options with the resorts). I support the gondola plus la caille base station that snowbird is proposing. I've lived here since 2013 and been an altabird pass holder almost every year since then. Time it takes to get up the canyon is important to me and gondola seems like the fastest option. Also, I don't support road widening. My personal opinion is that widening the road will ruin the beauty of the canyon, one of my favorite places on earth. Thank you for taking our comments into consideration! The Gondola PLUS La Caille base station option should be added to the study.	Kate McDermott	Website
4244	I think it very important to understand how many people would or would NOT use the bus to get up LCC. Widening the roads and building snow tunnels are very expensive, and don't really solve the problem of additional skiers wanting to drive their own cars up the canyon. Given the slowness of bus service and the problems of buses on snowy roads, many will continue to just use their own cars, which means UDOT spends a hell of a lot of money and doesn't solve the problem. Also, removing road-side parking from ski resorts is a big problem if the UDOT does not provide for more parking at the ski resorts. This is a HUGE problem. The studies intend that people will take the bus but the bus isn't used that much currently - I don't think additional BUS really solves the problem well, certainly not for 30 years. With gondola AND a suitable base station location, it could work to convince many many more people that the way up the canyon is through gondola - much more like a normal skiing experience, and likely to be actually used. It is also sustainable and is possibly equal in costs to the road widening and snow sheds which are very expensive. Snow sheds are ugly and not desirable in LCC. Adding gondola service could be promoted as being very "ski-friendly" and Utah leading the way for future access and availability to the worlds greatest snow. More study is required for the location and layout of the gondola base station, and it absolutely must have EASY parking and access. The La Caille option has right-in, right-out access which greatly helps motivate people to stop using their cars and start using a new method. Overall, more study is needed and I am asking to follow what Snowbird is suggesting and please ADD the Gondola PLUS La Caille base station to the study. Thanks!	Greg Haerr	Website
4245	I think the gondola option needs to be considered. I Skil little cottonwood canyon 2 weeks or more a year. I also ski in Europe and they have undertaken projects to solve similar problems. Massive tunnels that don't help with pollution. Add a couple wind turbines and solar and this is a much cleaner solution	Bryan Harter	Website
4246	I think it would be a big mistake to impact the wildlife and environment It's almost all commercialized as it is. Leave some for people who like to hike and bike.	Patricia Montgomery	Website
4247	I support the plan to build the Gondola lift. For the sake of safety, frozen roadways need to be alleviated of congestion. Expanding roadways brings more traffic and parking issues, and bus resources need to be allocated to the needy, in my opinion, not the affluent at play.	Bethesda Spencer	Website
4248	The gondola is a great idea! I volunteer as a mountain host at Snowbird, meaning almost every day I work I deal with customers who don't understand road closures due to avalanche risk. Explaining avalanche risk to visitors is difficult when people don't live in areas where avalanches occur, and they expect to drive to the airport in less than an hour as judged by the distance. A gondola would help those guests easily get back and forth from the airport to the resorts, reduce the usage of rental cars that don't have snow tires (they could uber/lyft from the airport to the gondola - no rental car company will provide snow tires), which would in turn reduce the number of accidents and abandoned cars on the road. Also, a gondola would increase local revenue both up canyon and down, since no one spends money when they're angrily waiting for buses that are stuck waiting for avalanche crews to finish.	Sarah Haskin	Website
4249	I support the gondola with the la caille base station with on site parking.	Brian Hansen	Website
4250	I think more studies should be done, especially before widening the road.	Paul Haerr	Website
4251	This gondola option is geared towards tourists, however a significant locals discount could also encourage locals to utilize this option if additional lockers were a a available at the resorts. There could also be an annual pass discount for parking at the LaCaille parking structure to support that private revenue generating component by locals whose taxes will go towards this project as well.	Michelle LeBaron	Website
4252	In looking at the various alternatives, it appears that the Gondola alternative provides a viable solution for mitigating the congestion on the road while still moving sufficient numbers of people. While the gondola has a high construction cost, it's O & M is lower. I would encourage UDOT to explore options for the base station that might eliminate the bus leg and add on site parking. One of these options was reported in several news article. While I enjoy skiing at Alta and Snowbird, I avoid these areas due to the traffic and congestion.	Dan Johnson	Website
4253	Please start the process to build a gondola and relieve the LCC road traffic!	Charles Duncan	Website
4254	I would prefer to see strong encouragements for car pooling.	David Madsen	Website
4255	I'm 100% behind the gondola and the extended lane for buses. In that order.	Matthew Lust	Website
4256	I support the gondola project.	Bob Shaffer	Website
4257	As someone who visits little cottonwood canyon almost every winter, I would like to express my support for the GONDOLA PLUS LA CAILLE BASE STATION proposal. It sounds like this would be the fastest and most convenient option for skiers. A gondola without on site parking is much less appealing to me. Without on site parking, I would prefer widening the shoulder instead.	Jeff Niu	Website
4258	I SUPPORT THE GONDOLA PLUS LA CAILLE BASE STATION	Tony Caligiuri	Website
4259	I like the idea of building the parking structure and road expansion and shutting people to the base of Little Cottonwood Canyon and creating a gondola base station at the bottom of the canyon to transport recreationalists to different locations up the canyon on a gondola plus the La Caille station	Michael Bennett	Website
4260	Preserve little cottonwood canyon with the gondola.	Haylie Stubbs	Website
4261	I feel that the gondola idea is the best idea to reduce traffic and pollution in the canyons. It makes a lot of sense to me to see people traveling up the canyon via a gondola rather than widening the roads. I think the next step would be to remove all personal vehicle traffic in the canyon except for buses. On those willing to carpool, take a bus, or the gondola should have access to the canyon during the winter. Summer is a different story with the camp grounds up the canyon. I would also suggest making the gondola free or extremely affordable. People are like water, they'll take the path of least resistance. If you want this to be adopted then it needs to be free or worth the price of admission. I support this idea and would love to see this in both canyons.	Dallin Koehler	Website

4262	I support the gondola. I ski in Telluride quite a bit. Their gondola is great.. fast, relaxing and a great way to cut down on traffic in the area. Everything possible should be done to protect Little Cottonwood Canyon and the surrounding environment. More cars are NOT the answer.	Barbara Sengenberger	Website	
4263	this is the only long term answer	Eric Hagman	Website	
4264	Gondola, though modified to have expanded parking at base of LCC, with gondola leaving directly from the parking area. If I have to take a bus from parking to gondola, I simply won't do that.	David Cutler	Website	
4265	Little cottonwood canyon is a wilderness marvel that should not be paved over any more than it already has been! A gondola poses the lowest impact solution to the transportation problem while allowing the wildlife to continue to flourish. Please consider the gondola with a La Caille base station!	Cole Paradis	Website	
4266	I'm opposed to the widening and not sure of other proposed changes to Wasatch Blvd. The traffic slow down happens maybe 30 days out of the year. It last for a total of 90 hours over those 30 days. Think wisely on the final choice.	Danny Moore	Website	
4267	I support the gondola - the only way to solve the issues in LCC are to remove more cars from the equation. Expensive tunnels and digging into the side of the mountain to widen the road will create more problems. Stop the madness up the canyon, get people up there via the gondola and not cars.	Elisabeth Leeflang	Website	
4268	I support the gondola station!!	Abbie Cannon	Website	
4269	favor the gondola option, given sustainability, likelihood of use and environmental aspects	Isaac Noyes	Website	
4270	Gondola all the way!! It's sustainable and safer! We just need to make sure the parking lot can sustain the demand.	Keith Eikevik	Website	
4271	I am not a local resident but a frequent summer and winter visitor. I think the gondola with the La Caille would be popular with out-of-town visitors. I know that I always try to find alternative transportation when heading up the canyon be it winter or summer. A convenient place to leave my car and grab the gondola would be much appreciated. I have experience with the gondola transportation in Telluride, CO. I usually stay in Mountain Village but the gondola allows me quick access to the town of Telluride for all the entertainment and dining options in town. I even had a medical emergency a couple of years ago in Mountain Village. I was able to access the gondola and make my way to the emergency room down in the town rather than waiting for an ambulance to makes its way from the town. I would like to see the gondola option. I believe it would have less impact on the canyon than widening the road and building tunnels.	David Varney	Website	
4272	We do not support any plan that involves widening Wasatch Blvd. Widening the road only brings more traffic and more pollution to a community area that is a gateway to Utah's beautiful canyons that bring tourism to our state. We DO NOT support the UDOT Gondola concept as it includes widening of Wasatch Blvd as part of that plan. We support the Gondola plus La Caille Base Station concept ONLY BECAUSE it is the only plan that does not include the widening of Wasatch Blvd. Developer and political greed is driving the decisions being made in Cottonwood Heights at the expense of our community aesthetic and under a guise of solving a problem that exists for only 35 days out of the year.	Heidi Fairchild	Website	
4273	This is a much needed idea who's time has come. Please put our UDOT efforts into supporting this environmentally sound plan to access our precious canyon.	Tommy Cordova	Website	
4274	Traffic is growing exponentially with Ikon pass holders. Having an alternative to getting to and from the mountain is always preferred.	Kyle Markowski	Website	
4275	Please support this!!	Shelly Cordova	Website	
4276	Please DO NOT move forward with the gondola project. I lived in SLG my whole life and LCC is the most popular location to hike. It is peaceful and beautiful at such a short distance from the crazy city. It is a place to relax and enjoy nature with peace. It should not be disturbed by extra noise and increase of tourism. Gondolas will take away from the beauty of the canyons that locals love so much. Again, Please do not move forward with the gondola project.	Lucero López	Website	
4277	Bring on the gondola - traffic help and a way to keep the emergency flow of people going when the road is closed for avalanche work.	Kevin Radzinski	Website	
4278	After watching the video on the gondola , I have changed my mind . I had commented that I favored buses but now I like the gondolas ! Thank you	Lori Smith	Website	
4279	The reality is that the problem isn't just LCC, it's that we have NO increase in recreational areas in a city that has grown by 2 million people. All the resorts are the same as they've been for the last 40 years. If you want to decrease traffic in the canyon you need options elsewhere. This means new resorts. Also, you need connectivity. There is no reason that the top of the canyons can't be connected. Decrease traffic by allowing other areas to be open and connectivity. Building gondolas, trams, widening roads do not change the primary problem of the same "recreation space" for 3-4x the population it was build for.	Tyson Cook	Website	
4280	Support GONDOLA PLUS LA CAILLE BASE STATION	Noe Bellet	Website	
4281	Gondola!! PLEASE don't pave more of paradise to put up more parking lots. It's unsustainable. More cars will not be a long term sustainable solution. That will lead to more pollution and problems and hurt the delicate ecology/environment up the canyon. It's time to think about the long term effects of our activities in this state instead of just accommodating out addiction to driving. LEAD instead of following decades behind on population planning. We need to discourage more driving and encourage public transportation to curb the local air pollution and global greenhouse gas emissions. We can't keep lowering the bar for every human to access wild spaces. People should have to make some level of sacrifice to enjoy wilderness. It breeds respect instead of complacency. We have to respect and protect the flora and fauna as well instead of displacing them for our own convenience. Set the tone for a future of respect for the natural world instead of oppressing and displacing it.	Peter McMullin	Website	
4282	I support taking new measures that will reduce traffic in our canyons.	Laura Marre	Website	
4283	Hello! As an avid skier and transplant to Utah (of 10 years!), protecting the environment and preserving beloved outdoor space has always been a priority of mine. My initial, knee jerk reaction to the 3 proposals was to expand the bus lanes and bus service as it, at first glance, seems to be the cheapest, fastest and most effective solution. However, after further research, I have determined that my opinion SUPPORTS THE GONDOLA. While the gondola could be the most expensive option, I think it is the only option that will truly discourage personal vehicles up the canyon. Research has shown that expanding roads doesn't actually reduce traffic, which is the ultimate goal. Additionally, the gondola in the future could be run completely on sustainable energy and reduces the potential of human error.	Frances Sebahar	Website	
4284	Fewer cars, less pollution, less wasted time and more care for the precious environment.	Graeme Spratley	Website	
4285	UDOT in the past has expressed the desire to limit the number of vehicles traveling the two canyons. How then is widening the highway to 5-6 lanes going to accomplish this? This widening will only allow more vehicles to converge at the mouth of each canyon resulting in traffic jams. Parking lots located away from the mouth of the canyons with shuttles for transportation up the canyons would seem to be better options. The increase in noise and particulate pollution for the existing residences should be another concern for widening the highway. As an option why doesn't UDOT continue Highland Drive south? I don't understand why this hasn't been done some time ago. The right of way already exists.	Robert Brown	Website	
4286	I have been a seasons pass holder at snowbird for years and need to be able to quickly get in and out of the canyon to enjoy the pass. The gondola is the only viable option in my opinion, provided there is ample parking at the base.	Jerry Cox	Website	
4287	Parking is a mess in the canyon.	scott Gerondale	Website	
4288	I think the gondola is a much better option because it allows more people to get up the canyon per hour and has a smaller environmental impact of the canyon.	Garrett Slack	Website	
4289	Get it done. Be bold and know people will look back and say. They were smart! 50 years of goodwill to the natural gem. Lil Cottonwood deserves it.	David Benson	Website	
4290	I am in full support of the gondola with the alternative base next to LaCaille. I have spent many hours waiting to get up and down LCC, many times giving up after an hour or two. This is best for the environment, best for the skiers, and best for businesses - a win win win.	David Pratt	Website	
4291	I support the project. Let's maintain the uniqueness and aura of Little Cottonwood Canyon.	Bill Fairfield	Website	
4292	I am in support of the gondola system. We must keep wild Utah intact, especially with the growing number of residents in this state! We must protect wild Utah!	Austin Versteeg	Website	
4293	Very much in favor of the Gondola Plus the La Caille Base Station option. The Gondola makes a lot of sense to me to reduce or eliminate winter traffic up the canyon. It also seems like the safe option.	Casey Pettingill	Website	
4294	Dear UDOT, I would like to recommend implementing either the Gondola option, or Enhances Bus with dedicated shoulder lane. I fear that the simplest (though cheapest) option of the enhanced bus will not incentive people to use the public transportation option and we will still see traffic in our canyons. I am encouraged by both the enhanced bus with dedicated lanes option and gondola option as options that people will realistically use.	Tyler Sebahar	Website	
4295	The enhanced bus with dedicated lane is quickest and most comfortable option, and for that, I can envision many travelers using it. However, the price tag and impact on the environment is greatest.	Denice Hyer	Website	
4296	For the gondola, I support the option as the best for our environment, and I think people would still utilize this option as well. However, my concerns are the fact people will still need to bus to the gondola from the mobility hub - won't this ultimately create a bottle neck with the buses from the mobility hub? Can we really fill gondolas every two minutes if the buses aren't running at the same frequency? Also, will there be seats? Standing for 63 minutes may discourage many from riding.	Teddy Grandquist	Website	
4297	I support the gondola proposal only if cars are still allowed in the canyon. I think it is fair to limit the number of cars and post that number but not to eliminate public cars completely. If public cars will be banned in the canyon I support adding another lane.	Diego Piraquive	Website	
4298	Please build the gondola!!	Tom Christiansen	Website	
4299	As a long time Salt Lake City resident, Please do not alter this road. There is no amount of economic development that is worth the loss of ability to go enjoy nature throughout the whole year.	Kevin Leecaster	Website	
4300	PRO Gondola in LCC	Beth Cline	Website	
4301	The gondola option is the BEST way to protect the canyon while providing economic benefits from tourism	ATTN: Timothy Peterson	Website	
4302	As an avid skier for over 50 years and a lover of the Canyons, I would like to see less traffic and the Gondola seems to be a perfect solution. Thank you	Brooke Lewis	Website	
4303	PLZ look at all options.	Anders Houser	Website	
4304	I think a Gondola is the best solution. I think it will be convenient once people adjust and have the means environmental impact.	Kelli Buttars	Website	
4305	As a skier from Colorado, I can empathize with the traffic, vacationers, and conservation issues at hand. Personally, I haven't given the bus a shot but would be happy to park at the base of the canyon and take the gondola from a base area with amenities. Thank you for considering the option.	Linda Kaunitz	Website	
4306	As a resident at the base of Little Cottonwood Canyon for over 35 years, I support preserving the canyon and the quality of life for residents invested in this area. I do not see the widening of the road or the gondola option as solutions to the congestion and problems that occur only a few days during the year. I believe more thought should be given to better solutions but in the interim, more attention should be given to promoting bus use, Increasing bus availability and convenience, and marketing bus use. I say NO to a gondola that potentially creates more parking problems and changes the look of our canyon. I say NO to widening the road and suffering through years of construction that supports more cars going up the canyon with no where for them to park...and potentially increasing need for unsightly parking structures at the base of the canyon. Problems exist with all the proposals. Instead of creating new problems, let's focus on mitigating the problems we already have with better management of the current problems.	jon pearson	Website	
4307	No more cars in the canyon.	I would also think there needs to be a fee for entering the canyon (or at least significant fees at the parking areas). The Increased Bus Service option can't work if the canyon is choked with cars. The fees can also be used to subsidize cheaper fares for the buses. A mixture of carrot and stick is needed.	Zane Santacroce	Website
4308	I prefer the simple Increased Bus Service option. It seems to give the most "bang for the buck". Let's get something done NOW, and we can still visit the other options as time goes by. I wonder if the lower annual cost of a Dedicated Bus Lane includes the increased costs of maintaining a new lane of traffic (asphalt repairs, wash-outs, plowing)? A gondola certainly has some advantages, but I think it would be best to get things going as fast as possible, and also have an option that will work in conjunction with Big Cottonwood (I have never heard of anyone planning a train or gondola in BCC). I realize the funding and scope of the study only allow you to talk about LCC, but you must realize that anything you do to one canyon will have profound impacts on the other. In fact, you won't really know the true impacts of any of the 3 options until you also implement something in BCC.	Jordan Buttars	Website	
4309	I would also think there needs to be a fee for entering the canyon (or at least significant fees at the parking areas). The Increased Bus Service option can't work if the canyon is choked with cars. The fees can also be used to subsidize cheaper fares for the buses. A mixture of carrot and stick is needed.			
4310	I support the Gondola and La Caille Base Station.			
4311	As a resident at the base of Little Cottonwood Canyon, I support preserving the canyon and the quality of life for residents invested in this area. I do not see the widening of the road or the gondola option as solutions to the congestion and problems that occur only a few days during the year. I believe more thought should be given to better solutions but in the interim, more attention should be given to promoting bus use, Increasing bus availability and convenience, and marketing bus use. 4309	I urge you to promote forward thinking plans and support the gondola and new base station as a way to reduce traffic congestion and pollution in Little Cottonwood Canyon. Part of the beauty and awe of Utah and this area is it's prestige scenery. No one enjoys sitting in miles long traffic or battle the hazards of frustrated drivers. Having the gondola and new base station, not only helps the surrounding environment but also creates a more environmentally friendly and supportive mood/culture/milieu. Don't forget what draws visitors, like myself from California, to your state and mountain areas, it's beauty like no other. Continue to make Utah special by building the gondola and new base station. It will allow more ways for visitors to observe your gorgeous mountains as they make their way to their recreational activities. Leave this area better for future generations, build the gondola! Thank you for your time. Alison Rose	Alison Rose	Website
4310	I would prefer adding additional busses, without additional street widening or a gondola. In order to reduce traffic, all parking at the ski resorts needs to be paid parking. This would encourage more bus users. We also need to add more parking lots for the bus commuters. I believe that this option would reduce traffic congestion, while also allowing the landscape of the mountain to remain "wild". Widening the road would knock out various rock climbing locations as well! Thanks, Amanda Hartzler (Sandy, UT resident & frequent rock climber and skier)	Amanda Hartzler	Website
4311	I support the gondola for little cottonwood canyon	Aaron anzaldo	Website
4312	I'm 45, I lived in SLC my whole life and have spent 40 of those years travelling up and down Little Cottonwood Canyon. I am a long time employee in the canyon and I've experienced all of the comment periods throughout the years. I've always supported a mass transit solution so I support the proposed gondola. We all know Europe has done it this way for years, so let's get it going here in Utah. I could go on about the traffic problems, the avalanche problems, the vehicle accident problems, the black ice, the rental cars the busses, etc. You've heard it all for decades no so please do something about it. Build the gondola.	Jonathan Murakami	Website
4313	I support the gondola plus la caille base station option for the Little cottonwood station. I am a skier who has traveled with my family to SLC for the purpose of skiing for 6 of the last ten years. This is the most sustainable and reasonable option and will help pave the way for additional gondolas to Big Cottonwood and Park City, thus providing the type of efficient transportation that is reasonable to expect at a world class destination. I support elimination of the proposed turn station by allowing the gondola to traverse the corner of the wilderness area.	Joe Pugh	Website
4314	I support the gondola project. As a frequent user of these canyons during the winter, I can attest to the overwhelming traffic and danger that emerges on a good powder day. Having an alternative mode of transportation to reach the ski destinations will reduce traffic, reduce carbon footprints, and will make skiing Utah's canyons a more enjoyable experience for all. One thing to consider is that the busses, which should serve a similar function, are continually ignored by individuals who want to bring their cars to the resorts. While I hesitate to say make riding the gondolas necessary, it may be worthwhile to think through how to make the gondola as appealing to as many riders as possible in order to achieve the goal of reduced traffic in the canyons.	Sean Collins	Website
4315	I live in Portland, OR but enjoy skiing Snowbird. I don't enjoy the canyon drive. I support the gondola plan.	TJ Ernst	Website
4316	I support the gondola system plus La Caille base station to improve access to Little Cottonwood Canyon. I have spent time in Europe and have seen how well gondolas work to transport visitors to different parts of the mountains. They are low impact and provide safe travel options in all weather conditions. My family has had season passes to Alta for many years but increasingly it has become more difficult, congested and dangerous to travel up Little Cottonwood when the weather is not good. We have been stuck many times going up or coming down the canyon. My concern with increasing bus traffic is that it doesn't solve the fundamental problem of unsafe road conditions in heavy snowfall. I have seen buses slide on the road. A gondola system would be an exciting addition for tourists as well. It would provide a beautiful view of the canyon. Additionally, you can easily increase capacity by adding new cars. Buses are not the answer. It is a steep, narrow canyon and so a gondola system would be safe and efficient.	Jeff Davis	Website
4317	Yes...as long as access to La Caille station is well thought out to eliminate congestion getting into the station	Mark Machlis	Website
4318	Building a gondola would be the better option if you're looking for the environment.	Aylin Nelson	Website
4319	I prefer the gondola option more than any other solution for congestion in little cottonwood canyon.	BLAKE EMETT	Website
4320	Gondolas cool	Max Tregaskis	Website
4321	UDOT should give careful consideration to the alternative gondola LaCaille base station proposal featuring a parking structure west of SR 210 that is at grade and includes designated bus circulation between mobility hubs. This proposal would dramatically reduce the amount of private vehicle traffic on Wasatch Blvd and in LCC and the gondola ride up the canyon would be the fastest from this alternate base station. A gondola's lifespan is three times the life span of a bus. The gondola is also the only option that has the opportunity to share capital and maintenance costs through public-private partnerships.	Perkins Miller	Website
4322	In order to preserve this treasured area, both environmentally and recreationally, we must plan for its future use in a sustainable way. Gondola is a long-term transportation solution that is cost-effective, clean, and efficient. It is the best means to provide safe transportation to year-round visitors while having the least physical impact on Little Cottonwood Canyon. I support this proposal	Rick Freeland	Website
4323	Build that gondola baby!	Taylor Koenig	Website
4324	I do not support any large scale gondola, train, bus solution until parking is actually removed from the canyon. The parking in the canyon mixed with bad weather and poor cars is usually the reason for the road. Keeping all the parking and adding gondolas etc just sets the resorts up to expand and does not actually solve the problem that there are simply 75% too many cars in the canyon. Toll and paid parking does not take cars out of the canyon.	Jonathan fay	Website
4325	I have looked over all the possibilities and I want to cast my support of the Gondola option based at la Caille is my vote. Family Season pass holder since 1999 at Snowbird/Alta.	Christopher Lincoln	Website
4326	I prefer the enhanced bus with roadway widening. I do not like the gondola alternative due to the additional impacts to the canyon and time to get up the canyon.	Georgia Sullivan	Website
4327	I coach with SBSEF and have found that the traffic has become more and more of a problem every year. The proposed gondola seems like the best possible solution to alleviate the growing canyon traffic problem. Connect via public transportation from multiple outlying parking facilities and it's a winner! Very forward thinking.	David Moore	Website
4328	+1 vote for gondola!	Ryan Johnson	Website
4329	As a resident of Salt Lake City and long-time user of Little Cottonwood Canyon both in the winter and the summer, I strongly support the Gondola Plus La Caille Base Station and the entire idea of increasing access into and out of the canyon while reducing vehicle traffic.	Robert Blanco	Website
4330	A gondola would only serve the needs of those skiing at a resort. It would hurt the experience for dispersed canyon users. The resorts themselves should be required to find part of the solution, which I feel would be creating a new parking structure somewhere near the base of the canyons and running not only increased busses, but also shuttle services that go to not only the resorts but have specific drop off and pick up times at popular backcountry trailheads. I also feel that a toll on the road is acceptable as long as there is an option for a season pass so locals can't still drive up freely, but someone visiting for just one weekend will likely opt to park at the bottom and ride a free shuttle.	Jackson Schor	Website
4331	Gondola	Charlie Freedman	Website
4332	I live South of Fort Union Boulevard. Why is there not a transportation hub and frequent buses from a location West of LCC? This plan does not address those wishing to access the canyon from the South or West of the Canyon. There needs to be an additional hub from the South of Fort Union, regardless of whether there is an enhanced Bus system or Gondola. I actually live about 2 miles directly West of LCC and would like access to public transportation up the canyon without having to drive four miles north to park and get on a bus. There used to be a bus that left two blocks from my home to head up LCC. I frequently rode the bus then. Now I have to drive 20X as far to catch public transportation. I just won't do that. I would favor a Gondola to limit road traffic, limit air pollution and create access from multiple areas in the valley. Please add in a parking hub for access from the South of the Salt Lake Valley.	Terri Gillfillan	Website
4333	As an employee of Alta Ski Area I am thrilled to see actions being taken towards improving canyon transportation. I am in favor of the gondola installation plus the La Caille Base Station. This option is the most environmentally friendly and adding the base station at La Caille allows people to park directly at the loading terminal, further motivating people to use this new form of transportation. As someone who goes up LCC most days in the winter it is apparent that ease & simplicity of a transportation option will be the most incentivizing for skiers. Let's save LCC, not pave LCC.	Isabelle La Motte	Website
4334	Let's preserve the beauty of the canyon! More traffic will only hurt wildlife and natural habitats. Humans should be the ones inconvenienced not nature. A gondola makes more sense than building endless freeways. Also - ask any urban planner and they will tell you that building more lanes does NOT reduce traffic. Instead it causes more traffic, something called induced demand. Instead lets find alternatives for people to travel and enjoy the beauty.	Jeanine Mendez	Website
4335	I would suggest doing whatever is going to have the lowest impact on the canyon. I imagine this would be the increase bus service but not adding a dedicated lane. Anything else would potentially have a negative effect on the recreating that is done in the area which is what makes LCC so great. This would also be the cheapest option.	Christopher Stango	Website
4336	Please make a decision now that will benefit us for years to come. Make the gondola happen!	Alex Daines	Website
4337	This makes SO MUCH sense. As a Utahn who has grew up skiing at Alta, I love seeing the passion for the sport grow. However, the canyon traffic and parking situation is a nightmare. With four kids, to park close, we have to leave at 6:30 every ski day. it's a long day with little kids who need rest. The gondola proposal seems to address the environment and crowd concerns.	Shawn Stinson	Website
4338	I support the Gondola for Little Cottonwood	Bill Camel	Website
4339	Too busy now	Robert Blakeslee	Website
4340	Something needs to be done and this looks like the best option.	wesley jess	Website
4341	My name is Kelly Pawlak and I am the president of National Ski Areas Association. Thank you for the opportunity to comment. I have read the supporting documents and have been following with interest. My comments are focused on the proposed gondola as that is my area of expertise. I support gondola transport for a number of reasons. I have seen it work effectively in Europe, most of my travels have been in Austria where gondolas and trams supply transport from town to ski area bases. Gondola transport is reliable and will cut GHG emissions tremendously. Addressing the climate crisis is reason enough. But access to the canyons is also a problem and a great detractor to guests who have planned for a ski trip but find that one of the greatest barriers is getting to the mtns. Unfortunately, some of those guests will pick alternate destinations in the future. Ski areas are open for a finite number of days per year and anytime the canyons are closed or overcrowded are days or time periods that ski area operators cannot make up. Skiing UT is one of my favorite trips. SLC is so easy and the ski areas so close and offer amazing mountain experiences for all levels. I believe this improved transportation system would make Utah a top global pick for any skier.	Kelly Pawlak	Website
4342	RE Wasatch Blvd Expansion: UDOT's Imbalanced-lane and Five-lane Alternatives are unacceptable because they are based on encouraging high-speed through a residential area which includes eleven residential intersecting streets. 12-foot wide lanes and straightening of roadway are the wrong measures to take as they will create higher speeds, more air/light/noise pollution along with higher danger and fractionalizing of the Cottonwood Heights community. A desirable roadway through residential strip includes no more than one lane in each direction with either one REVERSE LANE or two additional lanes for BUS TRANSIT/HOV ONLY. Current and foreseeable future vehicular use does not warrant an expansion based on new commuter trends driven by Covid-19 pandemic, virtual officing, incentives for workers to live near where they work, projected housing growth focused on the west and central valley, and a projected new business epi-center located at the south/central valley area replacing previous prison space. More analysis is needed regarding effect of fracturing of approximately 8,000 resident Cottonwood Heights community with a high-speed highway. The gondola option is the best option from my point of view.	Igor Ermakov	Website
4343	The main reason is to keep traffic down in the canyon, not expanding the road, while still transporting folks up the canyon, in a comfortable relaxing fashion, while reducing environmental impact, and saving money. Additionally, the gondola could be expanded to larger gondola cars in say 20-30 years if need be. This is far and away the best option.	Bryn Carey	Website
4344	Due to impact on climbing resources, I do not support the widening of the roadway up Little Cottonwood Canyon. The canyon is used by more than just skiers, a plan should reflect the use by multiple groups and not cater to one at the cost of the others. Enhanced bus service without widening the road should be considered.	CAMERON ANDERSON	Website
4345	I support enhanced busses and shuttles with no roadway widening. This would have the least impact on climbing resources. We need to keep access to our climbing areas!	Eiiza Zenger	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4346	I support the concept of the Gondola Plus La Caille Base Station. Little Cottonwood Canyon is not designed to support the vast quantity of cars that frequent it in the winter. More people will not use buses. I see the Gondola Plus La Caille Base Station as the most feasible long term solution to solve the traffic, congestion, and pollution issues associated with cars in Little Cottonwood Canyon.	Billy Schmohl	Website
4347	I am a climber that frequents little cottonwood Canyon. I am concerned that none of the three proposed options will adequately support my ability to access climbing in little cottonwood.	Matt Haidenthaler	Website
4348	I do NOT support the gondola plan. I support a more detailed analysis of enhanced busses/shuttles and no roadway widening. This proposal would have the least impact on the climbing resource with the information currently provided by UDOT.	Kelly Stewart	Website
4349	I support the extended bus service option, as I cannot envision a scenario where widening the road or building a gondola would not have a destructive impact on the canyon water source and wildlife.	Michael Shipman	Website
4350	I am opposed to the gondola plan. I propose the bus lane and additional busses with snow sheds, as the plan that is put in place to reduce traffic in LCC. This will have the least impact on the views in the canyon, will have better use ability through out the year. It will also have least impact on other recreation that occurs in canyon. Do not ruin our canyon by putting a gondola up. Do. It listen to private industries opinions on this matter as they are only focused on the bottom line and their profit margins. We want to continue to ski and decrease traffic though this issue should not be rushed, we need to understand the environmental and recreational impact these plans will have on our community and the canyon. I implore you to listen to the community and take all things in consideration with out moving forward with a plan that will have lasting impact. The gondola we do this.	David Swan	Website
4351	Snowbird's Gondola plus La Calle Base Station is the only solution that makes sense. I can't even begin to describe how frustratingly absurd it is to those of us who need to drive 2.5-4 miles away from the canyon to catch a bus that takes us right past where we came from. I will happily take Snowbird's Gondola plus La Calle Base Station solution and will actively avoid using any of the UDOT solutions.	Ken Ringsen	Website
4352	I am in favor of the gondola.	Jim Bielefeld	Website
4353	I believe we need the gondolas in little cottonwood	Nick Vaught	Website
4354	I am for the enhanced bus service. But, I'd like to see as little disturbance as possible to the historic climbing boulders along the roadway. I feel like the gondola is a non starter just because of the huge travel times. With a dedicated bus land and snow sheds, bus's could move more quickly than regular traffic and be a much faster alternative that may not be hindered by avalanche conditions as much.	Tim Roberts	Website
4355	Gondola or buses.. I'm for either. But the key...no passenger cars in winter, period. None. That's the only way either option would work. If a drive option still exists... People won't use either bus or gondola. Like Zion np.	Torey Couper	Website
4356	I am in support of the GONDOLA option with the LA CAILLE base station. It gives access to the canyon regardless of the weather. It is also most friendly to our air quality. Please support this proposal	Mike Pingree	Website
4357	Hello, I would like to voice my position for enhancing the bus services without changing the road. I believe that the gondola is excessive and will ultimately be a bad use of money. If money is invested in more busses and more bus stops to alleviate the congestion in the parking lots I believe this is better utilization of money. The idea of a toll or a pass for users that would like to continue to drive makes sense too. As a backcountry user I think this could be a good policy if implemented correctly like that of state parks to some affect. Thanks for taking the time - no gondola or road construction please!	andrew lam	Website
4358	I am a Utah local and have loved and experienced Little Cottonwood my whole life. I ski at Alta and Brighton and climb almost daily in little cottonwood. I would love to see a better way for traffic to go up the canyon but I would hate to see that come at the expense of the local flora and fauna. Not only that but expanding the road would ruin many great bouldering spots and hiking trails. I would personally want to have a gondola or more advanced bus system rather than encroaching into the beautiful little cottonwood canyon wilderness.	Max Koszinowski	Website
4359	It can be so much simpler! Please don't destroy what we love about the Wasatch! As a homeowner in the Top of the World neighborhood, environmental planner, watershed expert, and seasonal full time employee of Solitude Mountain Resort, I agree with Save Our Canyons. It seems that we can make a big difference by offering better continuous bus service and parking options for those taking the bus. This option was not presented by UDOT, but would be the most cost effective option with the least impact on the environment.	Kelly Boardman	Website
4360	If we simply invested less than a quarter than is being proposed in some of these options, \$50 million to \$100 million in buses, transitioning 50-70% of the people out of their vehicles and onto transit well before the mouths of the canyons; if we altered behaviors by not allowing cars to line up, implemented a toll that encouraged 4 people per vehicle, ticketed vehicles for having ill equipped tires, and enforced no roadside parking as should have been done years ago -- we could make a bigger dent in the dreadful traffic woes caused by cars and would have to build nothing more in our canyons. Give it an earnest 5 -10 years, actually funding it like you want to solve the problem. We can continue to investigate long term solutions in the interim. All we know for sure is that the options before us right now, completely fail the users and the environments in the Wasatch, destroying the values that make this place special.	Walter Krebsbach	Website
4361	I like the idea of the tram/ gondola concept Support the gondola proposal. Unique solution; preserves the natural beauty; creates an "experience" for out of town travelers; long term flexibility as needs change	Dennis Schmidt	Website
4362	Greetings, I am writing to submit my comments regarding the Little Cottonwood EIS transportation alternatives. I feel the gondola is the best option, for multiple reasons. More of the same isn't the answer, meaning more busses. Using busses as the 30-year solution is short sited and isn't the most sustainable and environmentally friendly of the options. O&M costs make up the difference in the higher cost as opposed to expanding current bus services. As a resident of the area and a frequent user in the canyon, I feel a gondola will only become an attraction and something to add to the world-class reputation the canyon already has. Please do not add more busses (read: fuel-guzzling engines)! Thanks for taking the time to read.	Brian Gallegos	Email
4363	Please reconsider the effects of roadway widening for climbing access as that is a major economic attraction to LCC during the spring/summer/fall months and the roadway widening will severely impact access to areas near the road that are so popular among locals and tourists alike. Please evaluate the plan for widening and consider expanding bus (preferable electric bus) access.	Colton Gordon	Website
4364	As a citizen who recreates year-round in LCC, here are my thoughts on the options for bettering traffic in LCC. These thoughts and opinions are my own through my own research and investigation into the issue: First, widening roads due to traffic increase continues to show little to no positive impact on the issue. Please see article here: https://transpophile.com/2017/08/09/improving-transit-will-not-end-traffic-congestion-and-thats-okay/ It is not fair to the residents who reside on Wasatch to feel the blow of additional car traffic. It is the city's responsibility to find a solution with little impact to the residents who purchased homes on or near Wasatch, not the resident's responsibility. Homes and livelihood shouldn't be impacted due to the city's inability to act at the opportune time (which was arguably a decade ago). Additionally, adding more car traffic/exhaust in the canyon will have the most harmful impact of all the options on the canyon and the city. This project has the ability to set a precedent of creating good and healthy standards for Utah's development as it continues to grow. Continuing to widen roads is not the solution. Secondly, there is a failure with your options for bettering bus service or Gondola with no increase in parking outside of the canyon. Cities and communities are built on collaboration and teamwork. There are large land areas around the intersection of Fort Union and Wasatch to build parking infrastructure. Has this committee considered reaching out to corporate property owners in regard to bettering parking? Less car traffic helps surrounding corporations with their own day-to-day operations and traffic. Similarly, employees who live near the canyon mouths have impacted morning and evening commutes. Salt Lake county is a community-based culture. How can we help each other? Are members of this committee reaching out to local businesses, especially those who benefit from recreation traffic? If ample parking existed outside of the canyons, buses could be the primary mode of transit. Excluding residents of Alta and the surrounding area, all traffic could be limited to just buses or some type of monorail. As outlandish as this may seem, it's possible. All ideas are initially outlandish, especially the ones that will impact default behavior. Utah has not had to consider these options (or had the foresight to consider these options) until now because it wasn't a problem. We let this problem go on to long, and now we need drastic or outlandish measures to solve it. I urge the committee to look into public transit and better parking infrastructure. There is no reputable evidence against public transit positively impacting communities and the environment. Now is the time to do it. Our winter season is impacted by the current pandemic. Recreation will still exist in the canyons when the work to better transit is complete.	Carey Brown	Website
4365	Thank you for taking the time to read my opinions on this subject.	Bob Mack	Website
4366	GONDOLA! This will lower emmisions for the Canyon and greater wasatch from.	Royal Rose	Website
4367	I prefer the enhanced bus with road widening alternative. this could also be a dedicated bike lane in summer improving safety for the increased bicycle traffic in the canyon.	Isabelle Cella	Website
4368	Do it the gondola is lit exploring alternative transportation options to mitigate traffic congestion in LCC is important to the future of our canyon.	Alan Mark	Website
4369	I strongly feel that enhancing bus service is the best way to keep LCC both wild and accessible. The other stated improvements (gondola and road widening) will leave indelible marks on the canyon, regardless of their effectiveness.	Nicholas Koch	Website
4370	As evidence, I'd like to draw attention to the idea of Braess's paradox, which notes that creating wider roads often leads to increased use, leading you back to slow transit times and high traffic anyways. As for a gondola, I doubt anything but the fastest, largest kind could equal the speed and efficiency of a well-run bus fleet.	Sophia Palmer	Website
4371	Support Choice #2 Enhanced Bus w/roadway widening - represent the Newcomers' Club of Salt Lake City, Inc. Hiking Group who enjoy hiking in LCC during the summer/fall.	Ryan Selfaison	Website
4372	As a climber who frequently visits Little Cottonwood Canyon to climb, I would appreciate it if you considered an alternative that would allow year round access to all climbing and bouldering areas. While the enhanced bus service with no road widening most accurately fits that description, it does not come close to fitting it well. Please consider another option that will allow climbers to access climbing areas year round.	Shiona Howard	Website
4373	I think that Enhanced Bus Service Alternative with NO roadway widening is the best option. Decrease traffic while preserving recreation all along the road/canyon. No one is a fan of how much traffic LCC receives but lets not destroy places of recreation right off the road for the sake of decreasing traffic. Gondola is just an awful idea as well. Enhanced Bus Service Alternative with no roadway widening is the best option, while none really balance the ability to recreate still at spots along the road.	Abby Keeley	Website
4374	The best part about living in Utah is the pristine mountains that are so close to the city. While there is incentive to widen little cottonwood to allow more traffic & revenue, providing a climate and congestion friendly alternative would appeal to many more people. The gondola itself would be another attraction in the canyon and decrease traffic congestion overall rather than destroy the natural beauty of the mountains we all love.	mark burton	Website
4375	ok lets build the gondola	Ken Jackson	Website
4376	Why is Rail not a considered alternate? This would be a much cleaner approach than running buses up the canyon. Also this rail could be connected to the existing Trax and Frontrunner systems to connect the rest of the valley, city, and airport and pull more cars off the road. If your going to do this put in a permanent fix not a temporary solution.	Josh LaFleur	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4377	I sincerely hope that UDOT removes the building of a gondola from consideration as it is by far the worst proposal here. Despite the fact that it will take longer and likely be the most expensive for the consumer, the impact it will have both on the climbing, hiking, and back country skiing as well as the environment and the majestic views of one of the most beautiful canyons in the world, will be disastrous! This seems like it is largely motivated by the profits of developers rather than public access to the canyon. Right now there is a simple solution. Increase the frequency of buses and create a few express buses from city hubs such as downtown, Murray, and Sandy. Expand the parking lots at the base of the canyon and then create a carpool checkpoint and issue a toll to vehicles with less than two or less than three passengers. All this would be a fraction of the cost of a gondola, and would make the most sense through the various seasons. For even better environmental results, provide incentives to drivers of electric vehicles. I hope UDOT reconsiders the gondola proposal and thinks about what makes sense for the people of Utah and not just the developers and owners of the big resorts. In 5-10 years, if the aforementioned solutions don't solve the problem, then reconsider a gondola, but until then this proposal for a gondola is absolutely ridiculous.	NATHAN ROYAL	Website
4378	I support the gondola project to alleviate traffic in LCC	Roxana Dan	Website
4379	Move forward with the gondola. Less cars on the road is always the best option.	Nicholas Norwood	Website
4380	Would there be enough parking to support the kind of traffic that the canyon consistently sees?	Rachel Del Valle	Website
4381	First and foremost, we favor a Capacity Study to determine the maximum acceptable human load in LCC and plan accordingly. Failing that, and restricted to only the options in the current EIS, we favor the Enhanced Bus with Peak Period Shoulder Lanes. Here's why: 1. Most Likely to Succeed. The only way to kill the red snake is to change human behavior. While we'd prefer to avoid additional construction in LCC, Enhanced Bus alone will not be enough. People will only get out of their cars if the alternative is cheaper and faster. When people in cars see buses zooming ahead in the PPSL, they'll be more likely to try the bus the next time. Tolling for cars will also be necessary to ensure bus adoption. 2. Environmentally Responsible. Assuming we'll use low- or zero-emission buses and vans, and provide appropriate accommodations for storm water collection and runoff, road widening is possible in LCC without an unacceptable level of environmental impact. Many areas of the LCC road can already accommodate the PPSL, and others need only minor expansion. In contrast, a gondola would have a much larger environmental footprint – adding many 150' towers and the roads to maintain them, plus permanent damage to the LCC viewshed. 3. Favors More Local Users. A gondola favors tourists, and permanently excludes non-resort visitors as it only has two stops – Snowbird and Alta. Enhanced buses, or a bus/van solution, would also encourage local backcountry skiers and other trail users to take public transportation. Additionally, the current gondola plan excludes skiers from the entire southeast portion of the valley. Without the southern mobility hub on 9400 S (which is included in both Enhanced Bus proposals), south valley residents will be unlikely to adopt the gondola. No one will drive past LCC to board a bus at BCC only to head back south to LCC to board the gondola. 4. No Interconnect Exposure: Once the gondola is built in LCC, it's only a matter of time before there are proposals to extend it into BCC, Park City and beyond. We are firmly against additional construction in Albion Basin or over the ridgeline between the canyons. 5. A Note on Cost: The cost projections in the EIS are misleading. The gondola solution looks comparatively affordable because it excludes a) the southern mobility hub, and b) the snow sheds for avalanche mitigation on the LCC road. Both of those are included in the Enhanced Bus options, and should be included in the gondola projection in order to compare apples to apples. \$283M — Enhanced Bus Service \$470M — Enhanced Bus Service with Peak Period Shoulder Lane (PPSL) \$390M — Gondola Alternative	Gregg Stephanie Frohman	Website
4382	I would love to have the gondola in LCC it has my full support!	Austin Neff	Website
4383	Your proposals of increased bussing, increased lanes, or building a gondola would impose a dramatic and unacceptable alteration to the classic bouldering in lower LCC. You might compare it to permanently replanting trees on 75% of a ski resort's slopes. The implementation of any of these plans would be a slap in the face to the climbing community of SLC and the climbers from all over the world who visit LCC's world class bouldering.	Harry Edwards	Website
4384	I vote for option 1. No gondola. Please Growing up in Utah and having the Wasatch in Our backyard Has been a place unlike anywhere else. Let's keep Utah, Utah.	Jake Welch	Website
4385	I moved to East Sandy 2 years ago, and my family loves to hike, bike and ski in LCC. We also love to simply see the scenery and go up the mountain just to be present there. We do Not want more cars in the canyon all year round, especially in the winter. A young person almost killed me flying down the canyon during a snowstorm, and I have gotten stuck trying to drive up the canyon during a storm, and my wife has faced a 4hr commute from Alta to home due to the snow and massive amount of cars. To us it makes sense to incorporate several aspects of the proposals: build the gondola, and toll the canyon, and simply make it safer and more efficient for travel.	Josh Opp	Website
4386	I would love to have the gondola in LCC and the station at the bottom would be awesome	Austin Neff	Website
4387	I'm with Snowbird and like the proposed gondola solution.	Sam Liston	Website
4388	Why not build more ski resorts all up and down the wasatch and spread out the people and give everyone what they want.	Josh Williams	Website
4389	Please do a gondola :)	Peter Previte	Website
4390	A widened road would totally wipe out several climbing areas. Climbing is RAPIDLY becoming more and more popular in Salt Lake City and these areas need to be preserved.	Ryan Hurst	Website
4391	I support the gondola plus La Chi base station as it seems to address the issues most effectively & economically	Earl Middlemiss	Website
4392	I am in favor of increasing bus service (all day not just during peak hours) and incentivizing use or completely stopping entrance of cars on holidays and weekends if not local traffic. This seems to be a cost effective option as well as limiting impact to broader canyon. I do not think people will happily drive to a park and ride to get on a bus to get on a gondola. My name is Jake Hardy, COO of Ski Butlers. We are a ski and snowboard rental delivery company headquartered in Park City but service resorts throughout the Wasatch as well as many other premier North American resorts.	Emily Stigler	Website
4393	It is our position that a gondola would be the most appropriate decision when factoring in safety, long-term environmental impact and skier capacity. Along with any potential revenues that might be generated. Thank you for accepting this feedback.	Jake Hardy	Website
4394	Save the Canyon, save our environment, preserve the earth.	Lauren Carris	Website
4395	Udot has said that there are going to reduce the speed to 35 mph. Let's have that happen and see what happens before we move one with the widening of Wasatch or construction of any additional projects	Leslie Kovach	Website
4396	Rather than make Wasatch a freeway, bringing more cars and pollution up the already overstuffed canyons, why don't you make the large gravel pit into a massive parking lot with busses that run up the canyons. The park-and-rides are all completely full in winter and more solutions are needed. Adding more lanes of idling cars is not a solution. Please consider busses and a big park and ride a better alternative. You can even put a coffee shop and restaurants there to occupy people while they wait for their bus. Busier canyons packed with lanes of cars is the worst possible solution.	Blair Prowse	Website
4397	I am a Salt Lake local and recreate in LCC year round. I believe the best solution to help out congestion in LCC would be enhanced shuttles and buses. A 3rd lane will only add more vehicles up the canyon therefore yes allowing more people but at the same time adding more pollution which will impact our inersions in the valley heavily. A tram will also impact climbing areas that bring lots of tourism to the city and canyon. The locals care deeply about LCC and having the most efficient ways of getting around while also helping our pollution problem at the same time. I and others highly encourage that better shuttles and bus routes be considered first before other options!	Isabelle Galland	Website
4398	After reviewing all of the options, for environment, public safety (avalanches), and longevity I support the Gondola plus Le Caille base station option.	Charles Graybill	Website
4399	Yes Gondola. Every 10th ride you get a coupon for 1/2 off a ski day. Just throwing out incentives. Dear UDOT,	Kate DeVincentis	Website
4400	I would like to see tunnel alternatives developed and analyzed, in addition to the current transportation proposals involving enhanced bus and gondola options. A tunnel may have important advantages over the current proposals. We need to consider all feasible solutions before making this important decision that will impact our community for decades to come. Sincerely yours, Carolyn L. Orthner	Carolyn Orther	Email
4401	I support the Gondola as the best solution! Thanks	Shelby Herrod	Website
4402	I support the gondola concept. I am concerned about park/ride lots. Will there be other lots besides the laCaille lot? Will there still be limited traffic up the canyon for travelers residing at Alta or Snowbird? What will the wait time be to get on the gondola?	Scott Silverstein	Website
4403	Last month I made a comment in favor of the gondola. However after further thought and research I'd like to retract my comment and support the enhanced bus with no additional roadway capacity. In addition I think more proceeds should go towards making the park-n-rides or "mobility hubs" more accessible to surrounding communities within the Salt Lake Valley. Ideally there would be hubs where a person could get off of TRAX or Frontrunner and directly on a bus that will take them up to Snowbird or Alta with a few stops. Instead of a gondola, I would have the base of the canyon be an area where people can transfer and there are very frequent buses going direct to Alta or direct to Snowbird. One day in the not so distant future I believe those buses will not even need a driver :)	David Tillotson	Website
4404	I have concerns about all three alternatives. The gondola is very concerning because of the visual impact it will have in the canyon and the potential environmental damage as a consequence of construction of the towers and other mechanical elements. The two auto/bus alternatives that require show sheds will also be very damaging to the canyon environment, water quality, flooding, sedimentation, etc. and construction damage. Can we just eliminate the snowsheds and concentrate on a bus only alternative for transit to the ski resorts, which appears to be the only concern of the EIS. Cars could be allowed for trail access and other uses, but skiers would be required to use a bus system that is greatly enhanced in terms of frequency and capacity. Generally, speaking it just seems like there are other alternatives to try first that could reduce congestion and increase efficiency without these large and damaging construction projects. Thank you.	Jan Striefel	Website
4405	Please do it. I left Salt Lake City because of the shit show that is and was little cottonwood canyon. I live the place and would be happy to see a gondola instead of a huge road with tunnels.	Jeffrey Sawyer	Website
4406	I like the idea of the Gondola Plus plan. I think it makes a lot more sense to have a base station more removed from the narrow confines of the canyon from both an environmental and logistical standpoint.	Gabriel Bellante	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4407	I believe that enhanced bus is the best option as long as the buses are electric. I think the environmental impact would be too great with the road widening and gondola options. Plus, it seems that this could be implemented much faster than the 2 other options. I also believe that tolling on the BCC & LCC roads would be helpful. My only concern here is the lack of parking at the base of the canyon. If the parking lot is too far away from the canyon base, I think bus use will decrease. But if there were a toll for driving a car, it seems like taking the bus would become more desirable for users.	Jane Hudson	Website
4408	I vote NO to widening the canyon for more lanes or gondolas. As a local skier, there are too many people being enticed to come here with programs such as Ikon which has increased the numbers skiing here. The cost of expanding the access to the canyon/ski resorts only provide additional profits to the ski resorts, but it also increase our cost as local residences to ski here. With the expanding the road the ski resorts will have to expand there facilities which cost will be passed on to us local ski residents. A better plan might be to provide better and more bus transportation to the resorts. Locals ought to be given consideration on the cost of skiing and parking passes.	Jeff Stevens	Website
4409	I think that a gondola system should be constructed to ease the traffic flow up Little Cottonwood Canyon. This might be more expensive than other options but it will have a long-term positive effect.	Greg Tanner	Website
4410	I like the idea of the Gondola Plus plan. I think it makes a lot more sense to have a base station more removed from the narrow confines of the canyon from both an environmental and logistical standpoint. My major concern with the gondola is capacity--will this project really make a large enough difference thinking longterm and the ever-increasing popularity of the Wasatch. If not, than more progressive ideas or permanent solutions should be explored, such as a elevated train, etc.	Gabriel Bellante	Website
4411	Something reasonable and sustainable would be ideal. I do not think widening roads is a good plan in canyons ruining the landscape. A gondola seems like a great solution.	Allison Pippin	Website
4412	Gondola for sure the other options will just make the air worse and may not even solve the problem. Please gondola.	Joseph Enniss	Website
4413	I fully support a gondola and additional parking at the base of the canyon. This makes good sense both environmentally and economically.	Dave Sacco	Website
4414	I support the gondola proposal	Lionel Longson	Website
4415	I would like to amend my comment that the Gondola Plus La Caille proposal by Snowbird would address all of my concerns stated previously. Please consider this as the best option.	Josh Rhea	Email
4416	Gondola	Leea Sorensen	Website
4417	As a Snowbird pass holder and backcountry LCC skier, as well as summer climber, I vehemently disagree with the proposed gondola. While we do have a serious traffic problem in the canyons, I do not think a gondola is the answer. This gondola serves only the resorts, and will be a developmental eyesore to backcountry users year round. Not to mention, I have deep concerns about the potential for development it opens the canyon too. I believe the right solution is increasing parking near the base of the canyons and improving bus access and efficiency for all users, such as more busses and stops at backcountry trailheads. There is no need to invent a new system, but we should improve the current one.	Cassidy Van Deursen	Website
4418	Has anyone considered maybe making the first hour or 90 mins after a canyon opening buses only? This would drive people to the buses real quick if they felt they might miss a powder turn. If they didn't take the bus. Or make 7-8:30 or 9 am on high traffic days bus access priority or buses only? With exceptions for employees, residents, and those with reservations at the hotels.	Matthew Rocha	Website
4419	I support the gondola being put in LCC!	Mara Kushner	Website
4420	Save the canyon, no more cars	Jyst De Boer	Website
4421	7-7-2020 Greetings EIS Crew, I have been traveling Little Cottonwood Canyon since Snowbird opened almost 50 years ago. In that time 4x4, all-wheel drive and snow tires have become more common and of better design. One thing that has not changes is the laws of physics that come in play when a very small patch of rubber riding on ice is all that separates a safe journey down the Canyon from one with more dire consequences. Three snow sheds will not change the icy surface whenever a storm hits the canyons. It is my opinion that rubber tires, ice and snow do not mix when we are talking about 1000's of vehicles traveling that canyon every winter day. Yes you can make the road wider with more lanes but then you just have more vehicles going up and down. You have designed dedicated Bus Lanes, but have you ever driven up the canyon on a Powder Day? People presently do not follow the laws on not crossing double lines. Many mornings the race up the canyon has cars three wide trying to be first to the chairlifts. Coming down the same happens, generally with one or more cars coming in contact with each other or the mountain. There is no way to delineate the bus lanes other than markings on the roadway which will be covered by snow even if people followed the safe driving laws. Asking the UPD to increase traffic enforcement will just bring folly as on heave traffic days as there will be no place for an officer to pull someone over. More lanes will but only be more problems. Snow Sheds? The plan is to protect 3 avalanche paths when there are 64 known slide paths in the canyon. The study is two years old and did not include this past shortened season where huge slides came down in place not seen in years. Why this year? Who knows, but maybe with global warming, debatable to some but not to any skier I know, the type of snow is changing. With those changes, how soon will more of the slide paths come into play beyond the main 3. Will we just build more and more sheds? In my opinion the Gondola is the only solution that can move people in all weather while reducing traffic on the road. What needs to be changed from the EIS is access to the Gondola. Based on the existing plan having one Mobility Hub is not enough. People will not drive past the mouth of Little Cottonwood Canyon only to ride a bus back. Anyone coming from the South will turn East on 9400 South and just drive up the canyon. So much for cutting traffic. This was proven a few years ago when UTA cut the busses from the North expecting people to drive past the canyon to catch the bus at 9400 South and 2000 East. People will just not do it. And not having the space to allow people to at least drop people at the Gondola base is just asking for trouble. People in my opinion will drive their kids up rather than take them to the Gravel Pit Mobility Hub if they are coming from the South. A better for all would be busses from 9400 South & 2000 East and the Gravel Pit going to a Gondola Station at the La Caille Base Station as proposed by those who have formed www.gondolaworks.com. This proposal seems to solve more issues than having one or even two Mobility Hubs. In my opinion this solution would provide an option that will work much longer into the future than any of the options making changes to the road or the one Mobility Hub. Plus it would add more parking which looking into the future will be always needed. Dave Fields, President of Snowbird, has forwarded to me the letters he has submitted in response to the EIS. I fully agree with all of Dave's well-presented points. Please go with the Gondola option and look to start it at the suggested La Caille Base Station. Thank you for allowing me to submit my opinion. Sincerely, John Cotter Director of Skier Guest Services Snowbird	John Cotter	Email
4422	What an intriguing idea. If we can make it cost effective , it is the best proposal I've seen. How cool and enjoyable to ride a gondola up the canyon to the resorts!	Mark Hesterman	Website
4423	Switzerland has the most efficient gondolas!! Why can't we have one? It is pollution free and saves our roads !!!	Cindy Dechart	Website
4424	Gondola makes a lot of sense from a pollution perspective, considering SLC air quality problems, thank you	beau carlson	Website
4425	I would love to see this option implemented, I think Little Cottonwood Canyon has enough problems with the road during winter time, and I Utah should consider implementing a more preservative and sustainable option, like the gondola with the La Caille base station.	Katie Clayton	Website
4426	Have you considered using a rollercoaster? I suspect you could build a series of lifts and drops that could get people up and down the canyons very efficiently and the cost would be much lower than roads or gondolas. The carts could be covered and it would be a wonderful attraction in the summer. By keeping the pitch transitions moderate, you could eliminate any motion sickness issues and these are simple machines. Very low cost to maintain them. Plus, we have great companies in Utah that build them.	Joe Benowitz	Website
4427	Little Cottonwood is SLC's greatest resource. preserving this resource should be top priority.	Brian DiLoreto	Website
4428	I am not a skier, however I frequently use Little Cottonwood Canyon for ice climbing in the winter. I do not like the idea of building a gondola on the north side of the LCC road. I am most in favor of increasing public transit (buses) and not widening the road. I am concerned that road widening will negatively impact access to areas in the middle and lower parts of the canyon in the warm months for climbing and hiking. I am also not in favor of any plan that would limit parking on the shoulder during the winter. I frequently visit parts of the canyon that do not have accessible parking in the winter and have to park on the shoulder of the road. Thank you for the opportunity to comment on the Little Cottonwood Canyon EIS Draft Alternatives. It is clear that a great deal of work has gone into developing these alternatives, and I appreciate the effort. Generally, I support the Gondola Alternative as it mitigates avalanche issues, avoids additional roadway widening in the canyon, has a small footprint, is highly efficient and has the potential of increasing capacity if needed. Since a LaCaille Base Station proposal has now been developed, it should also be evaluated in the context of the current EIS. It may bring many benefits to the table.	DYLAN PIKE	Website
4429	One of the issues with the Gondola is the impracticality of stopping at trail heads. There should be further analysis as to how these trailheads can be served now and into the future with transit. Trailhead improvements and reducing the associated roadside parking will greatly improve the safety and traffic flow over the coming years. Resort roadside parking has become a major component of resort capacity. While reducing roadside parking at the resorts will improve traffic flow and safety, this parking should not be expanded or eliminated until additional transit capacity and valley parking is achieved. Many Thanks,	Randy Doyle	Website
4430	I live east of the proposed lane widening. While we do need to address the traffic issues, more lanes is not the answer. It will only lead to more cars on the road and more pollution. Please consider improved bus service and light rail.	Jonathan Pace	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4431	In regard to environmental impact (each car that drives up and down Little Cottonwood Canyon emits approximately 24lbs of CO2 (so I am told)) and human and transportation safety priorities, a "ropeway" (gondola) transport system far and away provides the BEST long term solution for addressing transportation of thousands of outdoor enthusiasts up and down Little Cottonwood Canyon. I have had the opportunity to experience ropeway systems (as they are called in Europe) in much of the mountainous terrain of Europe over many decades, and the ropeway approach to transportation is significantly better than cars and buses (which often have poor tire traction and no traction when roads are icy) as a means of transport in narrow mountainous areas subject to avalanche and road safety challenges. I fully support the Gondola Plus La Caille base station solution for addressing long term transportation improvement in Little Cottonwood Canyon. With best regards, Jim Bass	Jim Bass	Website
4432	I appreciate that there isn't a "blow out the whole LCC road and widen/increase the travel lanes" option. Thank you. Please choose the options that make non-auto modes faster than driving. Do not use personal vehicle convenience as a criteria in ranking the transit options, some of which (of the four initial options) are better than what made it through all levels of screening. Otherwise, people won't choose those modes and traffic will get worse. Please do not remove or narrow the uphill bicycling shoulder, either through widening, restriping, or the wrong implementation of the transit shoulder lane. I support increasing transit mobility and the shoulder lane, yes, but not at the expense of bicycling access. You state "peak use", but that could be in use during an event in the summer when bicycling is also popular. I don't agree with the assumption that they are mutually exclusive modes or times of year. Thank you for the snow sheds idea. Reliability on and infrastructure condition of the road is very important. Please implement, particularly if a transit option (and not gondola option) is chosen. Related to Wasatch Drive, all of the options I saw in the story map and other materials do not make Wasatch Drive safer and only minimally improve traffic. I believe there are far better ideas to improve reliability, slow speeds, improve bicycling conditions, etc. Additionally, the right turn lanes are much longer than they need to be, particularly for the residential developments east of Wasatch Blvd, which do not see enough peak hour right turns to justify that length. Thank you. Whatever you do, make non-auto modes more desirable, safer, and our infrastructure more beautiful.	Tom Millar	Website
4433	I believe the gondola is the best option. Clearly more buses would help but not in the same way as a gondola as it still adds traffic. In the post OCOVID world, you may want to consider a smaller 6-10 person detachable gondola used at many ski resorts. my further hope is this would continue to Solitude/Brighton then to Park City/deer valley linking al the resorts.	Duncan MacLean	Website
4434	I support the construction of a gondola/tram to move skiers and riders from the bottom of LCC up to the ski resorts. Stop and go traffic nearly killed my transmission two winters ago.	Jeremiah Paquette	Website
4435	Gondola. Time for change and creativity. Don't make the mistake of creating more traffic with a bigger road. Gondola. Gondola.	Todd Cahill	Website
4436	You can still have more people transported in to the canyon with ways that will preserve the canyon. Wasatch Resort homeowner and full-time resident.	Ethan Godlesky	Website
4437	I am not in favor of widening the road. I am in favor of a gondola, but not the 1000 hourly persons option with no parking at the base. We need a gondola that can carry larger capacity, and has a parking structure. The private gondola seen here https://liftblog.com/2020/06/30/landowner-proposes-alternate-little-cottonwood-canyon-gondola/ is clearly a better option as it provides parking and would triple the proposed uphill capacity laid out by Udot. I do not believe that the gondola option and snow sheds should be mutually exclusive. It seems obvious that snow sheds need to be constructed in order to save lives. Put yourself in the shoes of those responders who have to constantly dig people out of avalanches. The families of those whose loved ones are involved in the accidents. Snow sheds are a very simple proven option and should be constructed no matter what happens with the road. I am in favor of more busses. I am not in favor of a wider road. From my naive perspective, it seems that busses could be split with a summer location. For example, Zion National Park runs a fleet of busses from March until November into their park. We could split the up front cost of purchasing busses with a similarly seasonal destination. I do not support options that require a fee for users to enter the canyon. Outdoor recreation needs to be available for all income levels. As a resident of the canyon, I support the private gondola, and want to see snow sheds built to protect the existing road. There is no slowing the growth of the city, or outdoor sports. Thanks.	Spencer Harkins	Website
4438	I'm not in favor of the gondola proposal or the road widening proposal due to the impact it could potentially have on popular climbing and backcountry access areas. The enhanced bus schedule seems like it could be a good solution. The gondola seems to only cater to ski resort users as it doesn't even have any stops for popular climbing or backcountry access areas. I also don't love the way it could disproportionately affect access into the canyon for people that might not be able to afford the gondola/resorts	Logan Bentley	Website
4439	I support the gondola	Kyle Cline	Website
4440	A gondola is a terrible idea. It will give 900 people an hour access to get up the canyon while we know that 21,000 people an hour are trying to get up the canyon. So does that mean the other 18,000 are still in traffic and possibly even worse bc now we have to backtrack to a parking lot, which will no doubt have traffic problems, and then get on a bus, and then transfer and then get on a gondola??? I live in Granite and would have to backtrack to park and then take a bus and then transfer to the area I live in to get up the canyon. In your own material you have submitted to us for review and comment we can do simple math and see that by adding a gondola you are creating MORE PROBLEMS. An added lane is also an eyesore, look at Parley's, it makes me want to cry. But in this situation the added lane is the best option as a gondola is one serious eyesore to the natural beauty - the reason so many of us are here. Honestly, does it even matter what the public has to say? You guys are the worst. You refused to work with watershed managers and other local groups to help protect us and the nature that gives us literal life. It feels like a total scam that you'd even ask for our input as if you value it. But please, Please, I am begging you guys, do right by the people you serve. Stop serving your own interests and pushing for an interconnect which we know is what will continue to happen with a gondola. Please, again, listen to us. And honestly, why can't we consider tolls. What about an underground electric train? I don't get why our "solutions" are really only things that serve to create more problems. It doesn't take years to see this or surveys, it takes common sense and good human decency. PLEASE YOU GUYS, DO NOT MAKE THIS WORSE WITH A GONDOLA.	Shandi Kano	Website
4441	I support the Gondola.	Emilie Knight	Website
4442	I do agree with the gondola option. But in the meantime , tolls must be instituted to encourage people to use public transportation or car pool.	susan hildebrand	Website
4443	Advancing bussing techniques seems to be the to go. A gondola!? Would be such a massive project and the least effective. when you take how much of an impact a gondola would have on the canyon and what traffic would be like just to get on the damn thing. Would the gondola only go to the top of the canyon or would the be gondola stops throughout the whole canyon?! A third lane is also a huge project but more reasonable than a gondola. The main concerns with A third lane is the environmental impact but also most of the canyon is cliffs and hills right off the road? Just the demolition alone would fuck up the canyon traffic and the canyon itself. And finally to the most reasonable solutions is getting more buses up the canyon. Most people should be taking buses anyway or carpooling so adding more buses hopefully they don't end up to be empty seats	Diego Peggs	Website
4444	After looking at the possible alternatives for Little Cottonwood Canyon Rd, I support the Gondola option. It would be less destructive of the valley going up to the mountain and is less expensive. I have been a condo owner at Snowbird for 45 years and would like to see that trip to Snowbird stay as it is. Plus a Gondola ride to the mountain would be quite an experience and would generate year around tourist dollars. It would provide a reasonable way to have a day in the city when you are spending a week at the resort and would like a day out. So my vote is for a Gondola	Gay Fawcett	Website
4445	I'd vote for plan #2 with strong enforcement of snowtire rules. People with the proper tires should get window stickers; this would save a lot of time.	Todd Schreiber	Website
4446	I would like the Enhanced Bus Alternative (without roadway widening)	Johnathan Keefer	Website
4447	I'm for enhanced bus service. The other options are too hard on the canyon. Hello,	Brian Smoot	Website
4448	Please consider any option besides the Gondola. Inserting a Gondola structure into Little Cottonwood Canyon could resolve some traffic issues, however it would not be worth the visual pollution that it would bring with it. LCC is a pristine oasis from city life, we do not need a man-made structure bringing aesthetic noise to this beautiful canyon. Please consider other options. Thank you	Kyle Goupil	Website
4449	I don't agree with the gondola. It will impact climbing and not allow climbing with ease.	Mike Kraszewski	Website
4450	Please consider the current recreational activities that exist in the canyon. Roadway expansion or a gondola could cause great harm to the current roadside activities. Enhanced bus service with no additional roadway expansion would preserve the area the most.	Andy Summers	Website
4451	I am an annual visitor and timeshare owner in Snowbird. I SUPPORT THE GONDOLA PLUS LA CAILLE BASE STATION	Ilene Celniker	Website
4452	Not sure if I commented already. I am in favor of the new and dedicated bus lane alternative. The gondola, while amusing, would both severely damage the LCC viewscape and given the fact that we'd have to park, wait for a bus, take a bus, wait for the gondola, then ride the gondola would make getting up the canyon an extremely time consuming ordeal. The dedicated bus lane option would allow for direct transportation to Alta or Snowbird from dispersed locations throughout the valley. Add in snowsheds and reliability of transportation also goes up. This plan would also continue to provide access - via individual transportation, to the climbing, hiking, and backcountry touring options lower in the canyon while a gondola would not. For example I could easily see certain bus routes stopping at the White Pine trail head. Not an option with a gondola.	John Bird	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4453	<p>I side with the SLCA recommendations to support the Alternative of Enhanced Bus and no additional roadside capacity, with caveats (#1-14 below), as this Alternative would have the least impact on climbing. Overall, any Alternative needs to carefully consider dispersed recreation, especially in the lower part of Little Cottonwood Canyon. The climbing areas in the lower portion of the canyon are heavily used throughout the year and the Alternatives will potentially negatively affect the user opportunities, user experience, and environment.</p> <p>The SLCA has invested heavily into the recreation infrastructure in the canyon via hundreds of thousands of dollars in a sustainable trail system that spans both USFS and private land. The potential impact to this trail system needs to be analyzed. Further, there must be analysis of the 1 visual and auditory impacts to the climbing and bouldering resources that are in close proximity to the roadside. Finally, UDOT should analyze the loss of these resources due to road widening, road re-configurations, and/or gondola infrastructure. SLCA recognizes that the removal of roadside parking along the highway increases safety and has responded by working to formalize trails and increase connectivity from centralized parking and access points such as the Little Cottonwood Canyon Park & Ride, Gate Buttress and the Grit Mill parking lots. However, during the winter months these parking lots are not available to climbers because they are full (skiers), closed, or unplowed. As such, roadside parking is utilized. UDOT must analyze how the elimination of roadside parking during the winter months will impact climber access. In addition, the EIS must also include substantive analysis on the following:</p> <ol style="list-style-type: none"> 1. Analysis of current and future dispersed recreation usage, transportation and parking needs in the whole of the canyon during all times of the year, spring, summer, fall, and winter. Dispersed recreation areas including, but not limited to the lower LCC Park & Ride, Grit Mill, Gate Buttress, Coalpit, Y-Couloirs, Tanners, Mt. Superior, and Heligate. 2. Analysis of impacts contributing to anthropogenic climate change. 3. Analysis of public transit options for dispersed recreational users. 4. Analysis of metrics for how vehicles will be reduced in the canyons. 5. Analysis of how tolls will impact dispersed recreation and aid in maintenance and infrastructure of dispersed recreational resources. Dispersed recreational users travel at off-peaks hours. 6. Contain substantive details, including GIS referenceable points for road improvements, including widening, passing or third lane, realignments, or the installation of snowsheds which will have impacts on climbing resources. 7. Contain substantive details, including GIS referenceable points for the gondola, including base station, tower locations, tower heights, and terminus stations which will have impacts on climbing resources. 8. Contain substantive details on the transportation hub including plans for public transit connectivity to the hub from the Salt Lake City Airport, as well as along the Wasatch front and back. 9. Contain substantive details on the transportation hub Alternatives to the "Gravel Pit" location which is on private land, currently in use for the foreseeable future (5-7 years) 2 and may not be available afterwards. The transportation hub Alternative should include locations utilizing public land, namely part of the Old Mill Golf Course. 10. Contain details on utilization of transportation when multiple forms are required. That is, will people drive to a transportation hub, take a bus, then a final bus or gondola over just driving directly to the destination? 11. Contain capacity analysis for the additional parking at White Pine Trailhead. It is proposed to expand the parking at White Pine Trailhead to well above the recommendations without any analysis. 12. Contain details on the environmental impacts, including visual, auditory, wildlife habitat. As well impacts to the scenic byway designation. 13. Contain analysis that there will be continued traffic growth in the canyons. The ski resorts have a finite capacity and will not be able to expand. 14. Contain analysis to economic feasibility of a running gondola and how it would be operated such as via a private/public model. 	JILL ADLER	Website
4454	I think it would be so much better overall	Christian Tenney	Website
4455	We need to think of LCC as more than just a single-use canyon. While the gondola may make the most sense for in-bound skiers at Snowbird and Alta (many of which will be visitors and not local taxpayers), how does this project (as well as the road widening project) affect the local rock climbing and back country skiing community? There is world-class rock climbing located in the canyon that is mostly frequented by locals that will undoubtedly be negatively impacted by the infrastructure of these projects if local bodies are not consulted. Please think about all types of recreation that occur in LCC for the future of LCC!	Dennis Pruzan	Website
4456	Enhanced bus seems like the best solution	John Mietschnig	Website
4457	These proposals appear to be mostly focused on the end of the canyon activities ie snowbird and Alta but does not take into consideration the large amount of down canyon activities such as climbing, MTB, and hiking. Some of the worlds best climbing exists in LCC and it would be a shame to reduce the access especially as the sport is growing so much.	Jack Hill	Website
4458	I am a climber and user of public transit. I agree that there should be a solution to the traffic situation in LCC during the wintertime. LCC is a beautiful canyon that lies near and dear to many local and nonlocal climbers and I support the enhanced bus service with no road widening. This would allow increased access to the canyon in a safe and feasible manner, without destroying the natural beauty with an obtrusive gondola or construction to widen the road. The enhanced bus service seems to be the ONLY alternative to the lacking bus service currently available. I respect everybody's desires to admire and utilize the canyon, and I hope people will respect climbers' needs to keep the canyon natural. Thank you for your time.	Emily Pitsch	Website
4459	I am very concerned about the impact on other forms of recreation in the canyon, especially hiking and rock climbing. It is already hard to find safe spaces to park in the canyon. What is the impact on wildlife? I am also concerned by the gargantuan cost of these project. How much will a single ride uphill end up costing overall (more than 30\$?)	Christopher Hacon	Website
4460	The Gondola options is not desirable. It requires too much construction and not enough people moving capacity. But also, none of the proposals adequately reflect how many users of the canyons want to travel to their destinations. Park and Ride lots do not appear to provide adequate ability to conveniently catch a bus and contain the cars that would otherwise be up the canyon. We need better bus routes, more frequent up and down accordion busses and no lane widening. With adequate and convenient busses plus a large toll for non-carpool cars, many studies outside of UDOT show that capacity could be managed quite effectively. I would like to see busses and no further construction.	Gregory Corey	Website
4461	I prefer the enhanced bus service alternative that does not require road widening. Both road widening and the gondola would ruin the natural aesthetic of Little Cottonwood Canyon. Additionally, the gondola would only serve resorts and would visually ruin the natural environment of the canyon for climbers and backcountry skiers. The enhanced bus service with no extra lane would have the least impact on the canyon and only a parking garage outside of the canyon would be necessary which would be cheapest to build.	Robin Fults	Website
4462	As someone who regularly performs outdoor recreational activities in LCC it is essential to the community to maintain the opportunities currently established and even provide for more. Many options in the draft such as widening the roadway for increased shuttle service or adding a gondola both have an environmental and recreational impact. Of the proposed alternatives to address increased traffic to the resort, I advocate with SLCA to opt for increase shuttle services without widening the roadway. There are many climbing opportunities that would be sacrificed, in turn decreasing the climbers tourist traffic and having an overall impact on tourist economy. As a climber, it is a core motivation to enjoy our mountains to the fullest, while leaving as little trace. While increase in the resorts has been economically beneficial, removing and/or greatly altering what people came to experience nullifies the entire purpose.	Janel Barney	Website
4463	Please install a gondola and a large parking lot at the base of the gondola. See Silver Mountain in Kellogg, Idaho. There system is awesome	Shelley Tucker	Website
4464	I think the best option for LCC is to widen the road and improve the bus system. A gondola sounds exciting but it will ruin the natural aesthetic of the canyon. I can't imagine looking across or up the canyon and seeing wires and towers all the way up. Also it would only serve those going to the resorts, the majority of which are not even residents of Utah. Why is Utah paying for something that really only tourists will use? I use the backcountry trails in the canyon so I always drive up the road because there are no bus stops at any of those places. Widening the road will save the traffic in the canyon and improving the bus system and hopefully including more stops will make it easier to access different areas of the canyon and make it more enjoyable. But something that I did not see in any of these proposals is to increase parking at the bottom of the canyons. Right now those parking areas are filled by 9 am on the weekends. Taking the bus or even a gondola is not an option if there is no where for people to park and ride. We have too many people enjoying the canyons in the winter and no one will use an expensive new gondola or bus system if there is no where to leave their car. The crowded problem in the canyon will not improve if we don't fix the parking, no matter what fancy system is put in place.	Kylie Bytendorp	Website
4465	I haven't been able to thoroughly inspect UDOT's alternatives for expansion in Little Cottonwood Canyon, nor am I an expert in this area, but I want to share my opinion in regard to climbing access in Little Cottonwood Canyon. I started climbing in Little Cottonwood Canyon 10 years ago. I traveled from the south of Utah County in order to experience the climbing in such a unique canyon, and after having moved to Salt Lake City 5 years ago, it has been an area that I frequent, and is my favorite local destination for climbing. My friends and I do our best to carpool or at a minimum at least meet at the Park and Ride in order to only take one vehicle up the canyon at a time. It would be difficult to access many of the climbing areas that we often go to if we were not able to do so with a vehicle, though I do acknowledge UDOT's need to expand access to the canyon due to our population and tourism growth. I would request that you please allow for groups in individual vehicles to still be able to access the areas where we love to climb. Thank you,	Matthew Cloward	Website
4466	- Matt Cloward		
4466	I highly am against the gondola, that only benefits those who are going to the ski resorts. I use the canyon all the time for hiking and would love if there was a bus system (needing a parking lot for park and ride) get less cars up the canyon!!!	Lindsay Nelson	Website
4467	Hello, I appreciate the work being done to manage traffic in LCC. As a year-round user of the canyon, I strongly support enhanced bus service without roadway widening. The other alternatives would adversely impact climbing and hiking in the canyon. A continual, free shuttle service would be particularly useful, similar to those used in areas like Breckenridge. Thanks for your work. Best, Vanessa Wall	Vanessa Wall	Website
4468	Been enjoying the canyon since 1976, time to reduce the traffic.	Mark Overson	Website
4469	Yes, I'm all for the Gondola alternative. Unfortunately, Snowbird has become so popular that the crowds are out of control. It appears to be similar to what Breckenridge has today. Expanding LCC seems to be environmentally unfriendly and aesthetically unpleasant.	Javier Damien	Website
4470	Please chose the route of an enhanced bus service alternative with no roadway widening. As someone who spends a lot of time in LCC skiing, biking, climbing, and hiking, an enhanced bus service will have the smallest impact on the environment I love to enjoy. One of my biggest concerns of a widened road way is that this is a band-aid approach to a transportation issue. By not addressing the actual problem, how people are transported through the canyon. I also urge everyone to consider what a gondola would look like polluting the majestic uninterrupted mountain views, not to mention the environmental impact to build and maintain this new infrastructure.	Shannon Legge	Website
4471	Alternative bus w/no widening of road	Jeffrey Degenars	Website
4472	I do not support putting in a gondola in LCC. I think it would be an eyesore in the entire canyon. I also think that throughout the year it would be underused. Even on busy weekend pow days, people would still choose to drive up on their own if that option is available to them. I think that Zion National Park has the correct formula for transporting many people up and down that canyon. LCC should follow suit and greatly expand their bussing system, even to the point of closing off the canyon to private vehicles on heavy use days.	Randy Vanurden	Website
4473	I support the gondola.	Matt McGinnes	Website
4474	Enhanced bus with no additional roadway capacity seems to be the most logical solution. If people are not willing to ride the bus, widening the road for the buses will only be an expensive effort with little effect. Using the enhanced bussing for now allows us to cost effectively see if there is an impact before spending more money. I believe the gondola option will create more issues than it resolves (environmental, parking, traffic, support/maintenance, ect).	Patrick Calder	Website
4475	Finally, none of these take into account downcanyon access. There are alot of people that recreate downcanyon from the ski resorts. Banning cars on the side of the road or not providing them areas to park will severely impact peoples ability to access all that LCC has to offer.		
4476	I support enhanced bus service in LCC. Please don't widen the road!	Tristan Smart	Website
4476	The gondola would be the best solution. Please add parking at the gondola base instead of requiring a bus ride	Steve Heckendorn	Website
4477	Hello UDOT, Thanks for letting us weigh in on this! I think the Enhanced Bus option is best (no widening). This will also help people see that buses are not so scary and perhaps lead to more bus use across the valley. Gondolas are gross, inefficient, and expensive. Buses will provide jobs, and can be converted to electric models as the tech progresses.	Shane Benhoff	Website
4478	Thanks!		
4478	I support the gondola! Would be so much easier and better for the environment	Caroline Powers	Website
4479	I do not support building a gondola through LCC. Building such a transit option represents a significant environmental and ecological disruption. More-so, it is very costly, and will be extremely ugly! I can also only imagine that the gondola ride itself will be quite a bit more expensive than a current Ski Bus one-way fare, which is already arguably unaffordable to many individuals who would like to recreate in the canyon. I DO support increasing bus capacity, and incentivizing public transit options through tolls on personal vehicles traveling in the canyons. While a designated bus lane that converts to a designated hiking and biking lane in the summer months, I a) don't think it is possible to eliminate roadside parking in the canyons, and b) worry about the environmental impacts of such an expansion. This voter says NO to the gondola! YES to increased bus service and Wasatch expansion (and yes to tolls!)	Alexandra Gero	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4480	Gondola sounds expensive to only serve one user group. What about climbing access?	Trevor Long	Website
4481	Alternatives Comments from League of Women Voters of Salt Lake City	Jan Striefel	Email
4482	None of these three solutions are the best option for our canyons. A gondola would be horribly inefficient and would create such a minimal impact on traffic that it is no where close to being worth the cost. In addition, parking for such a gondola is planned to be only enough for 2500 cars and the gondola could only carry 3000 people throughout the day. This is not enough transportation. Enhanced buses will not attract more people. The hubs are poorly positioned to make people drive to get on the bus, an unattractive option while carting around ski gear. We need better transportation, yes, but we need bus hubs throughout the city. We don't have space at the bottom of the canyon to park all these cars. If we want any lasting effort made to save our canyons, we need to limit cars not only going into the canyons but immediately surrounding the canyons. I live at the base of Big Cottonwood and can barely leave my house on weekends due to the traffic along Wasatch, but expanding the road only disperses cars and they continue to emit fumes into the air. If we actually want to reduce the number of cars, we need more bus routes picking up throughout the valley. We need options that don't require people to move all their gear three or four times. Work with the transit hubs and parking lots that we already have and give us more buses, throughout the year, not just in the winter.	Dani Sadorf	Website
4483	With already bad pollution in the winter months, I don't see how increasing the amount of cars going up will help. I heard the proposal for the gondola last summer while working at snowbird. I think the gondola with not only help with winter traffic, it could also make summer traffic safer and more efficient.	Alex Saunders	Website
4484	I think the enhanced bus service, without lane-widening is the best. Widening the highway would have more significant impact on the environment (noise, pollution, loss of wildlife habitat, viewscape). It would also limit access to dispersed recreation throughout the canyon, which I enjoy as an avid rock climber. From the perspective of climate change and fossil fuel-burning, an enhanced bus system without lane widening is preferred. There must be more incentives to use the bus (e.g. tolls, occupancy requirements for cars), because otherwise everyone will just drive. That also means bus stops at trailheads and climbing areas along the route! I am most gravely concerned about the environmental impact. Thanks for considering my comments.	Gilbert Moss	Website
4485	please consider the gondola	Ian O'Gorman	Website
4486	Keep the canyons pristine. Along with our air.	Halley Keller	Website
4487	I do not think the gondola is a good idea. Either enhanced bus service or roadway widening. I think it'd be smart to limit the number of cars each day and then the remainder of people would have to take the bus. I believe that the gondola would just get really long lines and it wouldn't be super popular. It also has the greatest human impact and will cause the largest human footprint in an otherwise beautiful canyon! Please avoid building a gondola, thanks!	Cammy Stukel	Website
4488	Absolutely support the idea of a gondola. Winter pollution is not just ugly, it's dangerous. It's time Utah show that it's truly a friend to the environment and consider a canyon gondola.	Spencer Anopol	Website
4489	After reviewing the proposal and cost analysis, the gondola is the obvious choice. It would be in the best interest of little cottonwood canyon, Salt Lake city, and Ski Utah to opt for this solution.	brent amsbury	Website
4490	Enhanced bus no widening. Thanks.	John Pease	Website
4491	I am pleased to see that alternatives are being studied to relive the traffic congestion up Little Cottonwood Canyon on powder snow days. My first choice of the three alternatives in Enhanced Bussing - alternative # 1. This is the cheapest and easiest to implement. If the "snow sheds" are built with possible road expansion in the future it will allow for alternative # 2 to be implemented at a future time as needed. I didn't see any discussion about how many days a year the canyon is congested. As a Season Pass holder I ski over 80 days a year and I know the "powder days" can be a problem, but I don't think those days occur over 10 -12 times a year. I feel on "normal" days we should be allowed to drive our own car up the canyon. On days when congestion will be a problem then bussing with busses leaving every few minutes will be a welcome alternative. Why run the busses every few minutes on days when it is not needed? I do not understand why alternative #1 has the highest yearly maintenance costs at \$9.0 M/year. It seems that alternative # 2 would have similar yearly costs - if not higher costs. I also think senior skiers (over age 70) should be allowed preferred access because of some limited physical conditions. I did not see any discussion about the cost of using the bus or gondola. Is this going to be free? I doubt it. If the gondola option is the preferred alternative, then a large parking area must be provided at the base station. Parking at several "mobility hubs" and then bussing to the base station will only cause additional congestion and difficulty accessing the ski areas. If the gondola option is preferred then it has to be easy and quick. Also, it is hard to believe the yearly maintenance costs for the gondola will be the cheapest. Thank you for providing an opportunity to comment on this very important project.	Paul Allen	Website
4492	I live at 8074 Mountain Oaks Dr, Cottonwood Heights, UT 84121, and my home overlooks Wasatch Blvd. I spend winter mornings trapped in my neighborhood as I wait for the traffic on Wasatch Blvd to clear so I can leave my home. I watch packed busses stuck in the "snake" on Wasatch with thousands of single occupancy cars. I am a strong proponent of transit, active transportation opportunities, and improving air quality through reduction of VMT's. I would like to offer my support of the gondola option because I believe it is the best option to improve air quality in the Salt Lake Valley. With that being said I think this option is missing the mark with only two east side mobility hubs. I would like to suggest that UTA/UDOT initiate a study that examines transit connections to the hubs from other areas in the Valley. This option really supports the east side residents and also brings more traffic to this area. This also seems like it is a white privilege option so I would like to recommend looking at ways for low-income and minority populations to access Little Cottonwood Canyon, which is such a beautiful asset in our state. If the gondola is the preferred alternative I recommend a year-round service as this would be a great way to access the mountains in the summer months. I prefer the imbalanced lane on Wasatch Blvd with a focus on active transportation. The Cottonwood Heights Wasatch Blvd Master Plan called for a greenway on Wasatch Blvd which is not shown in the preferred alternatives. I know this is a joint partnership/management of the road but would like to see the City and State to invest in the greenway option. I recommend protected bike lanes, rather than just striping and options for bus priority (not just signaling). I really appreciate the trail and think this will be an invaluable asset to our community. Many of us living above Wasatch do not have connections to the rest of the community and support the opportunity to safely cross Wasatch Blvd. I was not able to find information in the EIS about speeds on Wasatch Blvd. As a practicing planner I think that we can all agree that traffic calming measures (active transportation, trees, lighting, etc) make roads safer for motorists, cyclists, and pedestrians. I would like to recommend traffic calming measures on Wasatch to discourage road rage (people coming down from the resorts who are done sitting in canyon traffic and fly down Wasatch) and loud cars and motorcycles driving the road at high speeds. Again, thank you for the opportunity to comment.	Angela Price	Email
4493	There needs to be more analysis done on the effect of you dots plan on climbing as well as hiking and biking and some are use. This plan has not been thought out and his half baked at	marisa cones	Website
4494	Why isn't rail being considered as an alternative? A train has much more capacity compared to a bus or a gondola. Environmentally and long term the train is a better option. Cog rail could be installed as well for steep slopes. Cog rail is being installed in Colorado right now, up Pikes Peak (google it). I guess what I am saying is that the technology is there to install rail up Little Cottonwood why not add it as an alternative.	Ronald Espindola	Website
4495	Gondola - seems least invasive, cheapest to maintain, and I assume safest? Purely increasing buses, without adding a lane, won't solve any problems	Katie Teubner	Website
4496	I strongly support the Gondola PLUS LaCaille Base Station option. Thanks for the opportunity to review and share input.	Sean Meegan	Website
4497	I support the Enhanced Bus Alternative (without roadway widening), as it would have the least impact on LCC climbing and backcountry skiing. I am strongly opposed to additional resort expansion.	Michelle Tessier	Website
4498	I support enhanced bus service with no road widening. The environmental impact of a widened road or gondola would be detrimental to LCC. More buses and imposing a limit of single driver vehicles, a canyon toll, may help to reduce traffic problems and encourage more public transit usage.	Shanon Whitmore	Website
4499	I've taken the ski bus to Alta over 90% of the 50+ days I've skied each year for the last 6 seasons and feel it is an excellent service. Not only does it save on gas and wear and tear on my car, I don't need to deal with driving and get dropped off near the bottom of the lift. I would like to see UTA and the ski resorts increase marketing that emphasizes the convenience and savings of taking the bus. I support increasing bus service and continuing to allow season pass holders free service. I would like to see the cost for non-pass holders decreased and if possible eliminated to further encourage ridership. I also support limited road widening in strategic spots that will keep traffic moving on crowded days.	Craig Hamada	Website
4500	Bus enhancements but not 6 lane hwy .	Carla Patton	Website
4501	I think the Little Cottonwood gondola is a great idea. I think keeping people off of driving up and down the canyons in the Winter is safer, and it would promote Utah businesses by making it easier for people to come here and ski. I for one am a lazy person that enjoys skiing and would go more often if there were a gondola, and I think there are many like me. Skiing is good exercise, which is good for mental health, which is something our country struggles with, especially during Winter months sometimes.	Taylor Evanson	Website
4502	Yes, I used to climb on the Granite in Little Cottonwood Canyon, and yes, I share the Salt Lake Climbers Alliance concerns about roadway widening and not adequately addressing the need for adequate off road parking at the Gate Buttress area.	Bob Springmeyer	Website
4503	I am still supporting extra buses with a dedicated lane. I think the gondola will not get people up the mountain fast enough in the morning. There may be people who will enjoy the scenic ride on the world's longest gondola but it doesn't get people there quick enough. Buses with bigger capacity is the answer.	Susan Thomas	Website
4504	As someone who recreates in LCC 4-5 times per week, I truly value it as one of the sole reasons to live in Utah. It has already had enough impact from human infrastructure. The only plan that makes sense is enhanced bus service WITHOUT widening the road. We must address true root cause of the canyon congestion and focus on solving those. Widening the road will impact climbing in little cottonwood canyon which is a year round activity as opposed to the 4 months of ski season. It is not fair to only cater to what the ski resorts want. Please don't construct more infrastructure in an already fragile environment that will not solve the true root causes behind the canyon congestion.	Tom Barber	Website
4505	The Gondola is the absolute best solution, both environmentally and safety wise.	Olivia Ogier	Website
4506	I think the Enhanced Bus Alternative is the best choice for LCC users, without roadway widening. Encouraging more public transportation is the most environmentally responsible option, and it also minimizes impact on the land. Climbing, skiing, and hiking are incredibly important to many SLC residents, and taking away from any of these resources would be a tremendous loss.	Daniel Berger	Website
4507	I'm supportive of the the alternative of enhanced buses and no addition roadside capacity. Although not a member, as a local climber I concur with much of what SLCA stated in their letter. The other proposed alternatives are geared towards winter capacity expansion and ski recreators of the area, ignoring the needs of climbers and dispersed recreation access throughout LCC. There also appear to be no mobility hubs included for climbers should this option not be considered. I would request the mobility hubs at popular climbing locations to affect personal habits. Otherwise, climbers are likely not going to change behavior to take public transit (I would take my personal vehicle).	Jennifer Baker	Website
4508	Enhance bus service without widening the road. There is no positive impact of widening the road	Taylor Boyd	Website
4509	This EIS is a joke, clearly the goal of UDOT is to focus on how we can use funding to build more more more, no matter the impact to the community, water quality, wildlife and the overall environment. This whole draft needs to be thrown out. Resources should be immediately focused on increasing the number of buses in the canyon, implementing tolls to incentivize carpooling/reduce the number of cars in the canyon, and to improve transit access to the canyon. While longer term holistic approaches can be researched and then implemented in a reasonable manner. I repeat, we do NOT need to expand roadways, or build inefficient gondolas as a short sighted response to the growing demands to our canyons.	Athyn Scofield	Website
4510	Please see the attached comments from the Metropolitan Water District of Salt Lake & Sandy regarding the LCC EIS Draft Alternatives Development and Screening Report.	Michael DeVries	Email
4511	Please contact me with any questions. I am in favor on enhanced bussing with roadway widening. It is important to do this in a way that will be most efficient for greatest number of canyon travelers. Enhanced bussing with roadway widening makes sense to me. Let's get this done the right way from the beginning with the lowest chance of regrets later on.	Clark Richards	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4512	Hello. I'm so glad I can offer an opinion. Thanks for listening! I work up the canyon at Snowbird and have for seven years. I've been skiing at both resorts for 47 years. I support the gondola option. As a lifelong Utah resident looking forward to the next 50 years, I see the need for sustained transportation. Our poor mountain is groaning to us to reduce her stress. The avalanches are warning us. Please help reduce the stress on the environment. The buses are packed, the parking lots are full. The people are angry and the driving is dangerous. I see it in the front lines of customer service at Snowbird. Thank you. And thanks to the bus drivers who drive in often treacherous conditions. They deserve a reward!!!! I have seen them save lives and remain calm with sometimes horrid people as I interact with them daily during our shifts. Please hear our pleas! Thank you! Michelle Gillette Woods	Michelle Woods	Website
4513	I had originally posted a comment about this issue, and originally had supported the gondola. However after extensive research and reaching out to community members, I have changed my opinion and now greatly oppose the gondola. I am in full support of the enhanced bus system without the lane widening. This option has the least environmental impact and change to the canyon. It draws an immense amount of tourism in its current condition, and though tourism could possibly further increased with the widening of the road or the addition of the gondola, I believe that pro is greatly outweighed by all of the negative impacts those options would have on the integrity of the canyon and the locals who live around it. The improved [electric] bus service would increase accessibility to the canyons without the further destruction of the canyon, increased pollution, traffic due to construction, and massive increase in tourism (and decrease in accessibility for the locals to use the canyon) that the gondola would cause. The implementation of more electric buses I believe would set a new precedent for the rest of the buses in the UTA fleet, and would lead to an eventual transition to only using electric vehicles. This would further grow the renewable energy resources and use in Salt Lake City which would lead to an improvement of air quality and the expansion of the renewable energy sector in Salt Lake City. There is still a significant amount of wildlife in Little Cottonwood Canyon, and widening the lanes or putting in a tram would cause increased traffic and construction (or for the trams case, increased disturbance and diminishing of backcountry land) leading to decreased wildlife and degradation of the existing but delicate ecosystems in the canyon. Buses also tend to have the ability to have the option for good air circulation and purification while trams and gondolas in my experience have pretty poor circulation. With the status of Covid-19 spreading, buses are a safer option than packing trams. There is more control also with human spacing-more buses can be added thus decreasing people per bus, much easier than more tram cars, thus also providing more employment options within UTA. Please take this into consideration to try to preserve the precious Little Cottonwood Canyon as we know it. This is not the place to push massive economic growth. The locals need to be respected and represented in the decision making process, as well as the environment. Put the environment and locals first in this decision. Thank you.	Pauline Kneller	Website
4514	I support the enhanced bus alternative without road widening. The impact of widening the road would be devastating to so much of the climbing/bouldering and hiking community. Please consider this as the best option as the other options on the table have a very high economic impact to not only the canyon but the wildlife that lives there and the canyon beauty itself. Thank you	Dawn Griffith	Website
4515	I support the Gondola option Plus La Caille base station	MARIA GUARNIERI	Website
4516	After reviewing the alternative options for transportation in Little Cottonwood Canyon, I can't help but to be drawn to the option of rail. Having a train as an option to move people up and down the canyon would have so much value. Ski resorts are becoming ever more popular, and I am familiar with the high volumes of people, and traffic that exist during those fresh powder days. Even in the summer, it seems as though there is so much going on in the roadway that there are inevitable delays in travel up the canyon. As a college student going to the University of Utah, I meet hundreds of students who come to Utah for the mountains and resorts. Having a railway up to these resorts would make Utah a much larger attraction to those who love adventure. It is my request that rail be heavily considered for a transportation option through Little Cottonwood Canyon.	Mitchell Schwab	Website
4517	Hello! Thank you for continuing to work towards improving access in LCC while also protecting its incredible resources! I'd like to support the Salt Lake Climbers' Alliance in backing the enhanced busing option that does NOT include road widening. The further impact created by a gondola or road widening are unacceptable considering the benefit of either. I would also like to encourage UDOT to heed the concerns expressed by Save Our Canyons (https://saveourcanyons.org/the-latest/save-our-canyons-blog/ikon-t-believe-how-udot-s-environmental-impact-study-epically-fails-the-wasatch?eType=EmailBlastContent&id=32bf6ef5-3332-4c3d-aa4e-e51e38a24ce8) and seriously re-evaluate what solutions will best serve the Cottonwoods, Utahns, and all recreationalists. Thank you again for your work. I hope that you will consider this input.	Azissa Singh	Website
4518	gondola please.	Mark Barton	Website
4519	Hi, Thank you for taking comments during this analysis. I am also glad to hear you are taking action to address the increasing demand in the canyon. I am in favor of increased bus service WITHOUT lane widening in LCC. To enable greater use of the bus, additional parking along Wasatch Blvd needs to be found because the parking lots already fill up too quickly with the bus service currently in place.	Greg Sun	Website
4520	I don't believe you have the best plan(s) yet. For the gondola I don't think transfers on buses are practical compared to peoples love of cars. I like the gondola, but I think you need to iron out more details, as well as fixing the sizes of existing park and ride lots that fill up. More people would ride the buses if the parking and the buses themselves were not full, or the likely hood of getting robbed in those lots weren't so high. The fact you took away the base lot this last year meant I drastically stopped my participation in bus service, put in a tunnel, put in a stop on the other side of the road, build out the mouth, put the parking structure there. It has double the buses already, which helps people fear missing their bus less. I think a gondola is a great option slowly and surely but fix the actual real problems first. Not to mention if you incentivized non-powder days more maybe you could break up the crowds, and a very loud cry for better buses in the summer to service mountain and road bikers, Good luck.	Kelli McEwan	Website
4521	Seems best option weighing cost vs long term environmental impact	Paul Bishop	Website
4522	Hi, With regard to the proposed option for LCC, I think the increasing bus service is the best option. I am opposed to the gondola and road widening for a few reasons, but the major one being disruption to the environment. If either of these options are chosen, we need to see that the environment will not be destroyed and that it will be effective. I don't think we can build a gondola without taking away from beauty of the canyon and as we have seen with the trams and lifts at the resorts, these are often shut down for winds and they will still be exposed to avalanche danger. Further LCC has seen a few mudslides in the last few years and I don't think major construction is wise. Another major issue with this is that it would require more parking at the base of the mouth. There simply isn't room for much more parking than already exists (which isn't enough even for the amount of people taking the bus.) With widening the road, many of these issues will still be present. Avalanches and mudslides will still cause major delays. I think in addition to adding bus services and encouragement to ride them, putting a toll both at the base of the canyon would be ideal. The details of that would have to be worked out, but this would encourage carpooling, taking the bus, and ultimately reduce single rider vehicles. Employees, residents, ect would have some kind of pass system. Maybe adding a lane just at the base would help- one for canyon pass holders and buses, and one for day use fees.	Elsa Dillman	Website
4523	I highly prefer Alternative 1 - Enhanced bus service with NO road widening. Road widening will cause significant negative impacts on recreational opportunities in the lower canyon. Alternative 1 is the only alternative that adequately protects lower canyon recreation. A gondola would be a horrible eyesore addition to a canyon already overrun with our impacts.	Molly Barth	Website
4524	I support improved bus service with no road widening within the canyon. While infrastructure improvement and expansion is probably called for at the mouth of the canyon, especially in regard to parking, more infrastructure within the canyon (either road expansion or a gondola) would impinge upon both the scenic and ecological value the canyon provides. A gondola, in addition to having negative scenic and ecological consequences, would not offer substantial benefit to backcountry skiers, climbers, and hikers who use parts of the canyon not near Snowbird and Alta. Between 1/3 and 1/2 of my trips up the canyon are for those purposes, and my perception is that backcountry use of the canyon has been increasing in recent years. Expanded and improved bus service will likely be cheaper than the other options, is a more flexible solution that can adapt to changing needs within the canyon, and does not use nearly as many new resources (monetary or natural) as the other options presented.	Noel Potter	Website
4525	I wanted to voice my support for the Enhanced bus alternative (no road widening) for LCC canyon. This option keeps impact to a minimum and encourages the use of mass transit. In addition the natural and recreational resources of LCC and be better maintained.	Andrew McClure	Website
4526	I do NOT support a gondola in the canyon. I believe it would be an eyesore and worry about the negative affects there may be on recreation outside of the ski resorts (backcountry skiing, climbing, biking, hiking, etc.). I see the need for a better system, especially on the weekends during ski season. I think bus option without road widening seems as if it would have the least negative impact on the natural beauty of the canyon but do see the advantage of having a wider road. Thank you for your work UDOT! We appreciate your work that allows us access to our favorite places!	Kirk Hietpas	Website
4527	Along with enhanced bus service (i.e. a bus every 15 min going up and going down the canyon I'd like to see a car limit. Something similar to a gate. If you live up there you'd have an express pass for the gate, if you have confirmed hotel reservation you'd have a pass to go up. Then I'd like to see 2 parking structures with a minimum of 1000 spaces each at the bottom of lcc and bcc. If people want to be able to drive their cars then they need to pay and pay \$2000-\$3000 for a pass PER year. With the structures you can charge a nominal fee—(\$3) to help pay for the structure. You can also work out a tax to charge the resorts.	Melanie McDaniels	Website
4528	Strong vote for gondola. Better I'm almost every way and much better (unique) experience. Pretty views, riding the bus is hard, and everyone knows how road construction in Utah goes (see I-15 for the past 10 years). Count everyone out skiing for the next 15 years if we begin extensive road work in little cottonwood. +1000 for gondola.	Joseph Hatch	Website
4529	As a climber and supporter of the SLCA, and as a skier and employee at Snowbird Resort, I am highly invested both personally and professionally in UDOT's ability to best serve the environmental, recreational, and professional interests of Little Cottonwood Canyon. Of the alternatives presented, I support the enhanced bus alternative without roadway widening. In my opinion, it will best serve the needs of skiers seeking resort access. Because this demand is highly seasonal, I do not endorse roadway widening or gondola construction that may threaten LCC's ecological health as well as non-resort skiers' recreation experiences permanently. It is important that minority recreation groups such as climbers and backcountry skiers are equally considered when determining how to best improve access to Little Cottonwood Canyon. Additionally, as part of our community watershed, Little Cottonwood Canyon deserves careful, conservative consideration from an ecological standpoint. As a graduate of Parks, Recreation and Tourism from the University of Utah, I am especially invested in working with public establishments such as UDOT to holistically consider natural land resources such as LCC from all stakeholders' points of view. Based upon these tenets, I repeat I support the enhanced bus alternative without roadway widening. Thank you for respecting community needs and allowing us an opportunity to provide our input in this matter.	Claire Simon	Website
4530	I support the enhanced bus without widening lanes. It is difficult to understand how the gondola and parking would work for the many points of interest along LCC.	Tony Hellman	Website
4531	Looks like a viable option.	Joseph Jackson	Website
4532	looks great	AUDREY MEDE	Website
4533	My vote is for #2; however, the snow tire rules must be enforced to keep the idiots off the road. Thank you.	marypat paxton	Website
4534	Enhanced bus service without widening the road To Whom It May Concern:	Jaron Earle	Website
4535	Please find attached a letter of support for the gondola option based at the La Caille station. A hard copy of this letter will be mailed as well.	Kirk Cullimore	Email
4536	A Gondola with seating and La Caille base parking structure makes the most sense. That's my vote	bruce c hochberg	Website
4537	I am writing as a hiker, climber, and front-country skier, and a resident of South Salt Lake. I agree that traffic in the canyons is a huge problem, and one that will be a challenge to solve. I disagree with plans that will significantly impact backcountry access and climbing areas. Widening the road will potentially destroy many of Little Cottonwood Canyon's most prized climbing crags, and it's only a temporary fix: as more and more people enter the canyons to recreate, even a wider road will soon become congested. The expense of a gondola, as well as the impact of gondola towers on the canyons, strikes me as ridiculous. This option, like expanded bus service, will still require increased park-and-ride capacity, but it will be vastly more expensive, difficult to maintain, and even slower than expanded buses. I support a major expansion of the bus system, including into the summer months, so that no one needs to wait more than a few minutes for a bus to take them to the resort or trailhead. The current bus fleet is overwhelmed by its current ridership -- what could be a better endorsement of that system? Unfortunately, even as a very enthusiastic rider of the ski buses, I have been disappointed to encounter situations in which, for example, I have waited at Solitude to go home while 5 buses full of Brighton riders passed, unable to fit any more passengers, until finally everyone waiting at Solitude had to catch an "up" bus to have a hope of getting down before the bus service ended. That is a huge, but fixable problem. There is no need for flashy, complicated, over-engineered solutions to this problem. A well-maintained bus fleet of an appropriate size is the obvious solution.	Nancy Radigan-Hoffman	Website
4538	Please use the Enhanced Bus with no additional road capacity or widening! Protect the canyon resources that so many people come here to see! Thank you for the open comment period!	Robert McFarland	Website
4539	The Gondola Plus La Caille Base Station is a way to get cars out of the canyon and off Wasatch Blvd. I support the Gondola Plus La Caille Base Station	Kristie Bennett	Website
4540	This is brilliant. It would definitely Encourage me to vacation in SLC and even retire there.	Gregory Kazemi	Website
4541	I am a backcountry skier who occasionally gets caught up in the downhill traffic nightmare. I am in favor of enhanced bus service in peak period shoulder lanes. Thank you for this effort.	Adam Jensen	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4542	In the gondola draft, the transportation hubs are noted near commercial developments which makes sense due to the density of traffic that will surround these hubs. There are many people who propose this could be a viable solution, however, it has recently made known that a parking garage/ transportation hub has been recommended at the base of the canyon near residential area, which will continue to back up traffic on Wasatch Blvd while people wait to access the garage just as they have waited to access the canyons. And during the off season, this section of Wasatch would become a high speed commuter highway. I understand the resorts are backing this proposal and money talks. How has UDOT considered the thousands of children that cross Wasatch Blvd to access schools, parks, etc., and all of the residents that live in the area? Why was a gondola parking structure in this area never addressed in the virtual meetings and draft alternative plans?	Molly Sparks	Phone Comment
4543	I support the enhanced bus alternative WITHOUT roadway widening, as I believe this solution will have the least impact on the environment, including climbing crags while allowing for improved transportation in the wintertime.	Emily Preib	Website
4544	Hi there, thanks for all the hard work so far.... I would just like to give my opinion on the matter. While I think the gondola is the best idea out of the 3, I still don't think this is the final decision. The two other options don't really solve any of the main issues (avalanches, landslides). I believe the best idea would be an elevated train/trax. This is done in multiple other country's (Germany, Austria), with similar terrain. This would also allow the trax infrastructure that we already have, to get to that station for going up the canyons. This also would help alleviate some of the parking constraints at the bottom of the canyon. Just my two cents...Thanks!	Daniel Telenko	Website
4545	We need this sustainable option!! Our canyons do not need more cars and buses	Hannah White	Website
4546	#2 enhanced bus	Nancy Ramsdell	Website
4547	I would LOVE the Gondola and the Lane widening. I think we will need to have all options available for the future of skiing.	Phil Lust	Website
4548	I am the President of the Newcomers' Club of Salt Lake City. Our membership consists of more than 450 individuals, many of whom came to the Wasatch Valley for the skiing and hiking. It is our hope that this beautiful Canyon can be preserved for others in the future and that the transportation delima can be settled in a way to preserve the ecology and attraction for skiers and hikers. It is our consensus that this could best be accomplished with OPtion #2 with enhanced busing and the widening of the road to accommodate the traffic with a designated lane. Our club would be more than willing to meet with the planners at any time to discuss this option. We can be reached on our website newcomersclubsaltlakecity.org or me personally at juliacodell@gmail.com Thank you for considering our comment. Julia Codell, President, Newcomers' Club Salt Lake City	Julia Codell	Website
4549	I use the canyon for both skiing, climbing and mountain biking. I believe the least environmental impact would be the bus option WITHOUT lane widening. The other two options leave permanent change / damage to the area, and will only see use for a few months out of the year., Please listen and take the SLCA (Salt Lake Climbers Association) concerns into consideration. Thanks, Adam	Adam Knutson	Website
4550	I would welcome the gondola idea!	Melissa Layton	Website
4551	As a climber, backcountry skier, and mountain biker who frequently uses and parks alongside the road in the canyon (both at pull-offs and designated lots), I am sincerely hoping that UDOT maintains sufficient parking and pullout access. I think this is especially important for keeping the canyons accessible to a diverse population that includes all income ranges. Canyon access should not be restricted to those who can afford to recreate at a resort. I strongly support increased public transit options (especially bussing) and availability, and hope that UDOT will seek to implement an egalitarian solution.	Eric Swenson	Website
4552	I use the Cottonwood Canyons year-round; back country skiing and snowshoeing in the winter, and rock climbing in the summer. None of the proposed alternatives appear to help with the congestion and traffic I encounter year-round. The best of the three proposed alternatives is the enhanced bus service, with no additional road capacity. The imposition of a limitation on personal vehicles is of extreme concern to me. Unless the proposed bus enhancements include buses every 6 minutes around-the-clock, people who attempt to use the bus for back country access will end up dying due to exposure when the last bus leaves early. During the summer months, there is already too little parking in the canyon, with no proposal for addressing the increasing summer use of the canyon. Will the bus system run during the summer at a 15 minute or better interval from 0600-2200 hrs, with continued service from 2200-0500 hrs? People are routinely climbing in the canyons before 0600 hrs and well after 2200 hrs; no bus service means such trips force the use of personal vehicles, and thus necessitate road-side parking. This applies year-round! I do not see in any of the alternatives how recreation outside of a ski resort is addressed? The vast majority of traffic in the canyons is NOT to the ski resorts, and thus what provisions are being made for the majority of users? Of the proposed terrible alternatives, the enhanced bus service with no road increase is by far the least terrible, and the gondola option the most awful. I look forward to a new set of proposals that account for the majority use of the canyons by those of us NOT in the ski resorts, and options that won't kill winter users with a missed bus.	Paul Gettings	Website
4553	I prefer #2 alternative, Enhanced Bus w/roadway widening.	Hugh Paik	Website
4554	I feel the Gondola alternative provides the best benefit as it's a greener option for providing better traffic flow that has lower longterm costs.	Ryan Hebert	Website
4555	I fully support the Gondola option!	Roman Bas	Website
4556	I support the gondola option for Cottonwood Canyon, thankyou	Erik Johnson	Website
4557	I can support a "user tax" for this project. We can support a Gondola unless it means seniors on fixed incomes will be taxed because we're being taxed to death while inflation rises but income does not - and may decline. Because it is the Travel / Resort Industry that will benefit they are the ones who should foot the bill. Because it is the more youthful who go to the ski resorts, they should foot the bill. Thank you for accepting this comment.	Suzanne Wille	Website
4558	I support the "Enhanced Bus option with No widening of SR 210"	Eric Bollow	Website
4559	I would like the "Enhanced Bus" option. But please add some large parking structures at the bases of BCC and LCC, as the achilles heel of all bus and carpool options is parking spaces where carpool/bus rides originate.	Peter Veals	Website
4560	A Gondola is a RIDICULOUS option, that scars not only the view, but the landscape of a canyon I have grown up in for the last, almost 50 years. Our beauty, views, resources, and access to ALL parts of the canyon should not be sacrificed for the GREEDY ski resorts/industry. Their prices have gone up every year since they have been in existence. They make plenty, and should not be allowed to expand their boundaries, capacities, nor should they be able to dictate (or influence) a "so-called solution", funded by our tax dollars, in order to increase their bottom line. Make the resorts pay for a tunnel through the mountain (like they have had in the European Alps for decades), if they want to pack more people in to their resorts in the winter.	Spencer Jacobs	Website
4561	Why is light rail not being considered, it seems to be the best long term solution. The Gondola and bus seem very short sighted	Maverick Gibbons	Website
4562	I would support the enhanced bus service but not widening of the road in LCC. I would suggest that additional bus stops be added starting from downtown SLC and that express bus service routes be added that make no additional stops. For example, there might be two buses that leave a West Valley area parking/loading zone. During peak rider hours - one goes express from that WVC loading area straight to Snowbird making no additional stops and the second goes express straight to Alta making no additional stops while heading up the canyon during a morning ski peak time. Expand this plan to add additional UTA ride lots. Disburse the parked cars away from the mouth of the canyon and reward the bus riders willing to take a bus from outer location (like WVC or downtown) with not making them stop multiple times lengthening their commute. Make it faster and easier to ride than bus. Sadly it currently it is faster and easier to drive your own car rather than hassle with the bus unless you happen to live right by the mouth of LCC.	Kim Pauiding	Website
4563	I support the second enhanced bus concept, with minimal road widening. A reversible lane for HOV/Transit would allow transit to travel unhindered but not require construction of a 4-lane road. The gondola is an enticing concept but would impact the natural, forest-like ambience of the canyon. Parking for either a bus or gondola option must be improved; the available parking for bus riders this past season was ludicrous. Overall, these solutions focus on winter users of the ski resorts. One concern I have about all proposals is the reduction/elimination of roadside parking. As a rock climber, I value summertime access to various locations throughout the canyon. The proposed 21-spot parking lot for Gate Butress is drastically undersized. Please consider summertime users and their needs. Similarly, backcountry skiers park along the road in the winter (particularly in Big Cottonwood) and safe, legal access for these users needs to be considered alongside the needs of resort users. That said, I have been a resort passholder for many years and rarely utilize the resorts on the weekend anymore. The access and crowds are too much of a deterrent. I look forward to some improvement of the traffic situation in the canyons.	Andreas Schmidt	Website
4564	I support the enhanced bussing with no additional roadway widening. Any of the other options will negatively effect rock climbing areas in the lower part of Little Cottonwood Canyon. Further, increasing the capacity to bring people up Little Cottonwood Canyon on congested days will serve only to increase the profits for resort businesses while degrading the quality of canyon recreation through overcrowding. No additional capacity is needed, or indeed, desirable.	John Badila	Website
4565	PSSL, enhanced bus service with Peak Period Shoulder use.	paul buehner	Website
4566	I believe from the information that I've read, the Gondola solution is more cost effective and environmentally friendly. It will take a little longer to get to the slopes, but worth it.	Jill Hays	Website
4567	I support the gondola as a way to improve safety on the canyon road and reduce carbon load in the canyon.	Eileen Lischer	Website
4568	I have been a resident of Cottonwood Heights all my life. I support the enhanced bus alternative as a ski resort worker, climber, backcountry skier, fisherman and hiker.	Trevor Searle	Website
4569	I think the Gondola option should be studied and compared to the road upgrade proposal.	Dan Holt	Website
4570	Supporting the bus initiative	Tyler Nelson	Website
4571	Bringing more electric buses/park & rides into the operating infrastructure of LCC is the obvious solution to me. It would offer the greatest amount of relief for the traffic while keeping environmental impacts low throughout the canyon proper and minimize air pollution.	Travis O'Connor	Website
4572	I support the idea of a gondola as the solution to reduce traffic up and down Little Cottonwood Canyon. The gondola should not, however, impair any of the trails (such as the Quarry Trail/Little Cottonwood trail) currently in the canyon.	Scott Rosevear	Website
4573	I support the Gondola rather than paving more lanes & having more room for cars.	Africa Lilley	Website
4574	LCC is a climbing resource sought after year round. I support transit solutions that accommodate appropriately for traffic safety as well as current and future access to climbing resources. Growth trends in climbing as a sport are increasing as is the use of outdoor climbing resources in LCC. This use needs to be appropriately considered in UDOT's Alternatives.	John Martin	Website
4575	I support Enhanced Bus (no widening of Hwy 210 in LCC) option because it has the lowest environmental impact; is an inclusive transportation option that serves dispersed users; is a solution that can be offered now, and is the lowest cost. I strongly disagree with the option to widen Hwy 210, and completely reject the idea of adding gondolas.	Christopher Watkins	Website
4576	I strongly support the Gondola Alternative, as in my opinion in long term it will increase the prestige and value of the canyon for everyone, thanks to making it more pristine, quiet and pollution free. I will go even further and block the road for non-administrative traffic or issue additional permits for climbing/biking,hiking access.	Sergiusz Wesolowski	Website
4577	I support the bus incentives much more than the gondola. I think the gondola would mainly serve winter users and this is a 4 season use canyon. I am a climber and a backcountry skier and am concerned with how the widening of the road will affect access to places that aren't snowbird or alta. The bus needs to be incentivized or else people will not change their behavior and will continue to drive up the canyon. There could be a toll or pay for parking for single occupancy vehicles.	Rachel Preuit	Website
4578	Please don't widen the road, build unsightly tunnels or add more buses! LCC is my church. The gondola is the best option to preserve LCC's pristine, natural beauty.	Cooper Blackhurst	Website
4579	I use Little Cottonwood Canyon for snowboarding in the winter and climbing in the summer. I don't support widening the road as I believe it will negatively affect the climbing situation as alot of great boulders are right off the road. I think I would support the gondola option as It'd be a unique, attractive way to combat winter traffic congestion without widening the road.	Trevor Dahl	Website
4580	The Gondola is the best option.	Hank Tauber	Website
4581	Wasatch does NOT need to be widened for more cars! Why does Utah refuse to preserve what we have an improve on it. Add safe bike lanes, get people out on bikes so they can feel safe. Wasatch should have full protected bike lanes all the way to 3300 south. Stop turning our state into a cement pond. Please preserve the area and learn to make it functional without just adding blacktop. Unfortunately it seems to be the Utah way and decisions are made by the deep pockets of lobbyists. Stop CW and listen to the people instead of ram this down our throats with the same old proverbial excuse of wider roads solving the problems.	MEGAN TRAPLETTI	Website
4582	Living in this area my whole life, we cannot handle anymore vehicle capacity in our canyons!	Tami Cummings	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
	To whom it may concern,		
4583	As you know we are in the midst of a climate crisis. It is our responsibility as humans and consumers who use the outdoors to make responsible decisions that are best for the planet and all creatures, including humans. This is why I am writing today. I believe that to best handle the traffic of cottonwood canyon you should build the gondola with the La Caille base station. This is the most responsible choice. Widening the highway allows more traffic and takes away precious land we are already losing every day. I hope that you'll set an example by choosing the gondola. Saying that we must respect the outdoors in order to fully enjoy it. Thank you.	Nichole Snyder	Website
4584	I support expanded bus service and roadway capacity, which also includes considering and providing equal access for dispersed recreation uses too, all year- like climbing, hiking, biking and ski touring- throughout the whole canyon. I think any options will also require a huge investment in parking lot infrastructure in several locations, and a commitment to operating those as safe, clean, well-lit, with bathrooms and attended 24/7 transport hubs- even if that means developing these with an extra public space/retail/commercial component to subsidize the construction, and make these a more desirable option for users (along WITH the increased bus capacity that is needed too). It could be a captive market for any business- like permitted food truck vendors- as long as waste disposal is handled too.	Jesse Williams	Website
4585	I only support the option of enhanced busses in LCC. I do not support roadway widening and I most definitely do not support a gondola. Enhanced busses would put the least impact on the environment and the other recreational activities the canyon is used for year round. Personally I use the canyon for resort skiing in the winters and other activities such as rock climbing, hiking, and camping in the summers.	Julie Williams	Website
4586	Please do not impact the access for climbing either sport routes or boulder problems.	Phillip Symons	Website
	I wholeheartedly think that a transportation solution is needed in Little Cottonwood Canyon however, I do not think any of these options fully address the problem. They come close, but all options have some flaw and I think there is a way to improve upon these options.		
	Of the 3 proposed options, I am most in favor of the gondola option. I think it is in the best interest of all stakeholders to have a solution that is aimed at being long-term. I think the gondola provides the best option for the future. It shows a commitment to addressing this problem that is lasting. With that being said, it needs to be implemented properly. The current gondola option has some serious flaws. First, I think it is unreasonable to think that people will drive, to bus, to ride the gondola. Especially, if they live closer to the mouth of the canyon than they do to the gravel pit or the other bus stations. A solution where the parking is at the gondola base station makes the most sense. There are locations where this seems feasible. The area surrounding La Caille and near the tree farm. I am imagining an option where a public bond is proposed to purchase some of this undeveloped land right near the mouth of the canyon to build a base station and transportation hub for LCC. It could be a transfer station for buses and feature a parking garage, maybe a coffee shop, and house the terminus of the gondola. Next, I think it is important to consider the capacity of the gondola. We need to plan for numbers that greatly exceed numbers of LCC users right now. It seems likely, that with or without a transportation solution in the canyon, visitation will continue to increase.		
4587	My concern with road widening or increased bus routes, is it may be more of a short term band-aid solution. What happens when tax-dollars get moved away from the UTA budget in a year, or 5 years, or 25 years? There will still be a traffic problem in the LCC. Another concern with the bus options, are the buses are often a cause of the traffic in the canyon when there is a lot of new snow and road conditions are poor. We don't need more buses sliding around on the road causing accidents. And a specific bus lane will be very difficult to maintain proper plowing if the is only one bus driving up it every 10-15 minutes. The road conditions in the LCC need to be taken into consideration with this plan. Finally, I think regardless of the solution to traffic moving up and down the canyon, there is a larger (potentially larger) problem of space and parking once people are up in the canyon. I think these solutions need to address the problem of parking in upper LCC at the ski areas and surrounding recreation sites. People will continue to drive up the canyon, even with increased bus traffic or a gondola, and there is already an increasing problem of parking. I think the Alta and Snowbird should be on the hook for creating some of this parking infrastructure. They will directly benefit from a UTA transportation solution and should be accountable to address the increase in visitation by improving their parking capacity. It seems the best way to do this would be by building parking garage structures or underground parking. Please consider: https://gondolaworks.com/	Martin Lentz	Website
	Dear UDOT, I can't believe anyone that is from Salt Lake City or loves the outdoors would seriously consider putting a gondola up our amazing Little Cottonwood canyon. Once something like this has been installed, the natural beauty of the canyon is gone FOREVER! You are talking about HUGE gondola pillars and huge gondolas flying over head destroying the view of everyone trying to enjoy the canyon. I see the gondola developers are in business with LaCaille. LaCaille was bought by a developer and has turned it into a Disney land mess and wants to make it even more of a commercial mess, destroying the natural charm LaCaille and its grounds has always held. I just noticed today they have installed a NEON sign over the country french gates.. obviously the developers have no taste and you are seriously willing to turn over our natural treasure to these developers? Snowbird also is no longer owned by the original family that built beautiful snowbird, they already have made many mistakes. The canyons are for everyone to enjoy, there are many gondolas around for people to ride, our canyon is not for sale to the developers of LaCaille & Snowbird. All we need are more busses and to ask Snowbird to make convenient lockers. There is not that much traffic and virtually no busses in the mix. Honestly I don't think the gondola will be used by many skiers, its will end up destroying the hiking and climbing experience for the rest of us and you will end up adding busses anyway Thanks, Audrey Pines		
4588		Audrey Pines	Website
4589	I believe that the gondola is the best long term solution and a worthy investment in our future.	Liza Springmeyer	Website
4590	When the toll system is implemented I hope that it is not too prohibitive to prevent underprivileged children in the valley any opportunity to see	Andrew Grimes	Website
4591	Something has gotta give. In the choice between gondola and highway widening/show sheds... definitely gondola is the best option. Increasing bus service on the existing highway is a band aid.	Tom Benson	Website
4592	I support the Gondola Plus La Caille base station. Please find attached my comment letter for the Little Cottonwood Canyon EIS.	Chris Fischer	Website
4593	Thanks, Dan Hemmert	Dan Hemmert	Email
	I, support the gondola plus La Caille base station option that has been floated around. I think having a parking hub in the gravel lots, and then bussing people to the base of the gondola, is inconvenient and adds an extra barrier to people being drawn to using the gondola and allowing it to fulfill it's intended purpose. With the La Caille station, you park, unload, and step onto the gondola. No loading and unloading from a bus. No 15 minute bus ride. In addition, the reduced environmental impact and not increasing bus traffic in LCC are huge. I really hope that the gondola and La Caille base station come to fruition.		
4594		Aaron Grove	Website
	Good luck with everything moving forward. If you need any GIS help, I'd love to be part of the team that sees this through to a solution.		
4595	I prefer the gondola option. Seems to me it is more efficient, safer, and cuts down on pollution	Jim Webber	Website
4596	please build the gondola	JOSEPH SEMBRAT	Website
4597	LOCALS ARE AGAINST THIS PROJECT, CONSIDER THE GONDOLA SOLUTION.	Ricky Becerra	Website
4598	I strongly oppose a gondola as this would completely ruin the aesthetic of the canyon.	Albert Kabili	Website
4599	I support enhanced bus service alternative which does not require roadway widening. Keeping the environment and bikers and drivers interests in mind. Please do not widen the road. And no way on the gondola. I support the enhanced bus service as the best transportation improvement option in LCC. It's the least expensive, quickest to completion, has the smallest negative environmental impact, most effective and will allow for disbursed access to various trailheads.	Annette Blackham	Website
	I'm very opposed to any gondola in LCC. This may sound appealing but the details of any actual system have significant negative consequences. These include difficulty of use (parking a car then taking a bus to the terminal), significant damage to the canyon to build the system, continued access to the towers for maintenance and no access to dispersed trailheads resulting in the continued use of cars for non-resort users.		
4600	I'm also opposed to expanding the LCC road or any other proposal that at it's core encourages more use of autos. An expanded road will do permanent harm to the beauty of the canyon while making parking and other car related problems worse. Thanks for the opportunity to comment. I'm a frequent canyon user year round an want to be part of the solution to the critical problems we now face. Daren Cottle Sandy Utah	Daren Cottle	Website
4601	Please do not widen the road. The gondola plan is better for the environment, economy, and animals.	Courtney Case	Website
4602	The gondola option seems to me the most sound proposal. I'd support this alternative to congestion and closures in little cottonwood canyon	Anthony Anderson	Website
4603	I support the La Caille Gondola. Time for a permanent fix.	Karen Marriott	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4604	<p>BIG COTTONWOOD COMMUNITY COUNCIL COMMENTS TO THE LCC-EIS DRAFT ALTERNATIVE OPTIONS</p> <p>GENERAL COMMENTS</p> <ol style="list-style-type: none"> 1. Include Big Cottonwood Canyon in Transportation Planning. It's critical that the impact to Big Cottonwood be considered in areas such as tolling and BCC Park and Ride changes, for example. 2. Provide Year-round Bus Service. Year-round bus service is essential in the short-term for both canyons no matter what UDOT option is chosen. Safety and comfort would dictate that all passengers be seated. 3. Trailhead Connectivity. All UDOT options should provide for major trailhead connectivity. 4. No Road Widening. Road widening would not be needed in Little Cottonwood. More pavement could bring more vehicles. <p>THE GONDOLA OPTION</p> <p>A majority of BCCA members support the Gondola Option as the most practical environmental and safety option for Little Cottonwood Canyon. Reasons for support include:</p> <ol style="list-style-type: none"> 1. Better for the Environment. Gondolas rely on efficient technology with reduced fossil-fuel requirements to help protect watershed, forest, and air quality. Like any cable system, the Gondola system does not need access roads to the towers. 2. Better Safety. Riders will avoid stressful, crowded, high-risk canyon roads year-round. A Gondola system could provide an emergency egress, which is a critical need in Little Cottonwood. 3. Lower Costs. There would be a significant reduction in transportation operating costs with a Gondola System. These systems have reliable performance records worldwide. 4. Better Reliability. Gondolas are not subject to slow traffic, road closures, accidents, or slide-offs. Riders will have a predictable travel time frame. 5. Better Quality of Travel. Gondolas provide a more enjoyable travel experience, avoiding noise and polluted air. All of the UDOT options should require passengers to be seated. A Gondola system will reduce the need for high-pollution buses, which are obstacles to quality of life and travel for everyone in the canyon corridor. <p>THE ENCHANCED BUS-NO ROADWAY WIDENING OPTION</p> <p>Some BCCA members support the Enhanced Bus-No Roadway Widening Option because it could address traffic problems more quickly. Other reasons for support include:</p> <ol style="list-style-type: none"> 1. Good Trailhead Connectivity. The Bus Option would be able to connect to trailheads and address the growth in year-round recreation outside of the ski resorts. 2. Create Incentives for Riding the Bus. <ul style="list-style-type: none"> • A key goal is to reduce vehicles on the road by at least 30% using incentives that will encourage people to take the bus, such as: <ul style="list-style-type: none"> • Provide free bus service. • Implement a tolling system for cars that would encourage people to take the bus. • Eliminate roadside parking in the canyon. • Maintain bus stops year around at key backcountry trailheads. • Find ways to give buses traffic priority. 3. No Road Changes are Needed. More pavement encourages more traffic. The Enhanced Bus Option is scalable for future growth because buses can be added gradually. However, snow sheds in Little Cottonwood would be needed for safety. 4. Cost of Bus Service. The higher ongoing maintenance and operation costs incurred by bus service could be partly offset by implementing a tolling system for private vehicles. <p>THE QUESTIONS</p> <ol style="list-style-type: none"> 1. Will the UDOT LCC-EIS include plans for Big Cottonwood regarding tolling and parking at the mouth of the canyon? 2. Were other aerial solutions considered, such as a monorail? 3. What is the bus and gondola capacity of people per hour if only seated passengers are counted? 4. Can the UDOT study mandate that all passengers be seated on buses and gondola? 5. Will the LCC-EIS study consider ideas for connecting to major trailheads year round, such as local shuttles or buses? 6. Would emergency egress from the LCC be improved by having a gondola that is not limited because of road conditions and accidents on the road? 7. Will UDOT consider an emergency egress into Big Cottonwood as a public safety measure for LCC? 8. Was travel-time reliability considered and compared in the bus and gondola options? 9. Will UDOT analyze air pollution and noise pollution from buses and gondolas? 10. Can UDOT mandate that electric buses be used in the canyon corridor to mitigate noise and air pollution? 11. Will UDOT ask if UTA is willing and able to provide for the seasonal rehiring and retaining of bus drivers year after year, and at what cost? 12. Because snow-equipped buses are an expensive, dedicated fleet that would likely not be used year-round, will the UDOT study consider the specialized maintenance and storage facilities that would need to be built to house buses in the off season? 13. Since UTA officials say they cannot supply peak ski day bus service, could the options be reworked to provide a combination of buses and gondola? 14. What are some possible sources for funding to implement a project of this scale? <p>The Big Cottonwood Community Council appreciates this opportunity to submit questions and comments. UDOT's considerable public outreach and respect for all opinions is commendable.</p>	Big Cottonwood Community Council Barbara Cameron, Chair	Website
4605		Sydney Blake	Website
4606	The only reasonable option for reducing the traffic problem up little cottonwood is the gondola. Will limit construction traffic during the expansions period and allows for both inbounds and outbounds skiers to access the canyon easier. I fully support this option and believe either of the other two will only be a bandaid for a problem that will last decades.	Jake Gilmore	Website
4607	A gondola up LCC (sr210) will ruin the canyon. The increased number of people as well as the eyesore of a gondola cutting our beautiful canyon in half. Please rethink this and keep in mind why we love the Wasatch so much. The gondola will ruin the backcountry as well as resorts.	Matthew Cummings	Website
4608	I am in favor of the gondola system I think it's more efficient and better suited for the amount of traffic little Cottonwood Canyon have and endorse year-round.	Donovan Ramsay	Website
4609	Enhanced bus service to the base of little cottonwood then a cog wheel train up the canyon. It's what they use in Zermatt Switzerland. Only home owners and service vehicles would be allowed.	Jimmy Ludlow	Website
4610	I support the alternative that includes a Gondola plus La Caille Base Station for Little Cottonwood Canyon as the best environmental solution. Increasing vehicular travel and not extending the gondola are not reasonable, environmental approaches to this problem.	Catherine Miller	Website
4611	The LaCaille gondola gets my vote. Bus is for the birds!	Sam Rafferty	Website
4612	<p>Dear UDOT,</p> <p>As a Utah resident, avid skier and as officer of an alpine ski equipment company, I am in total support of the proposed gondola in Little Cottonwood Canyon. I have seen the traffic and parking situation deteriorate over the years, to the point where I no longer wish to attempt to travel into the canyon on a snow day or weekend.</p> <p>This plan addresses both the traffic and parking issues while maintaining the beauty of the canyon.</p> <p>Sincerely,</p> <p>Dennis Gaspari</p> <p>Vice President Sales and Marketing Dynastar-Lange-Look Group Rossignol North America</p>	Dennis Gaspari	Email

4614	My vote is for the gondola option la Camille	Katrina Jensen	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4615	We live at the base of the canyon and feel the Gondola is the best option with the new proposed la caille station. I wouldn't know how parking would work for people who live close to the canyon to drive to big cottonwood to take a shuttle to the starting point and pass their houses again on to be three minutes from their house so the la caille station i think is a must accommodating parking and quick transition from car to gondola. I am concerned how rock climbing areas would be impacted and feel further analysis of where each tower would be and how high the structures will be. This also concerns me with road widening and that encroaching on the climbing/bouldering areas close to the road. the SLCA has expressed their concern with that. I still do wish an underground train would be an option but i'm sure the budget is not high enough.	Pieter Leeflang	Website
4616	Please help protect LCC and our local environment! Gondola all the way. I vote for option 2	Regina Farley	Website
4617	I must note that I have 30+ years of recreating in LCC year round. The last two winters with the IKON have made the gradual increase in traffic into an overnight nightmare. The resorts sure bathe in the money and all is locals pay the price. Where are Snowbird and Alta's responsibilities in the mess? My true vote is #2 and ban the IKON pass that has turned LCC into a Walmart situation. Sad....	Bruce O'Donoghue	Website
4618	I am in favor of snow sheds and increased bus service. I have lived in this valley for 12 years and use this canyon multiple times a week in all seasons. I want you to consider multiple uses in the lower portion of the canyon when making this plan, especially rock climbing. I do not advocate widening of the road. We should be looking to reduce car traffic not make it more hectic up top for parking. Also a gondola is not a safe option when looking at breakdowns and high winds that the canyon gets. Also the time it would take for a gondola trip would make it a non choice for most users.	Ross Miller	Website
4619	Enhanced bus service makes the most sense. We can eliminate most of the traffic congestion simply by adding buses and prioritizing carpooling. Single occupancy cars should pay a toll or have to buy a yearly permit.	Joel Trachtenberg	Website
4620	I am in support of the UDOT gondola option PLUS the proposed LA CAILLE BASE STATION. I think that it is the kind of investment we need to be making in Utah's future. The gondola option will have the most positive impact on Utah by reducing carbon emissions and protecting our beautiful mountain, which is crucial if we are to continue to have skiing for generations to come. It will be a boost for our economy, especially given our current economic situation because of Covid-19 by creating new jobs and bringing even more tourists. Also this is a long term solution which means it will be the cheapest of the current UDOT solutions. It is very important to me to have a solution that will last, and invests back in our community. UDOT should choose the gondola solution.	Kallin Glauser	Website
4621	Thanks for the alternatives. The only choice that seems to make sense is the enhanced bus with their own lanes. That is the most expensive, but it will actually help with the congestion. Buses running in normal lanes do not help, it actually adds more congestion. The gondola seems way to gimmicky. You have to drive to the parking lot, wait for the bus, take a bus ride to gondola, wait for the gondola, and then ride up the gondola. The time estimates seem way too optimistic, plus they do not include the drive time to the parking lot. I live 20 minutes from wildcat parking lot. I would never consider taking the gondola, with conditions perfect it would take me 1 hour 20 min at a minimum. My fear is that it would be so much of a hassle nobody would ride it, or they would ride it 1 time and never again because of how inefficient it is. My first choice would be looking at a tunnel system like the Boring Company, they have dramatically decreased the price of tunneling compared to traditional methods. It is super high speed and they have bus pods now (or will when this project starts). my two cents . . .	Brent Hawkins	Website
4622	We are residents of the Top of the World neighborhood and OPPOSE wider roads and higher speed limits on Wasatch. Commuters and skiers are already treating the road like a highway, not a road that runs through a neighborhood. On winter weekends we can't go south onto Wasatch during morning ski traffic times and North during afternoon ski traffic. We need mass transportation options NOT a bigger/faster road.	Kim Bloom	Website
4623	The alternatives proposed do not address the underlying problem: volume of cars. The whole reason there are traffic issues is that there are simply too many cars. The gondola does not reduce the number of cars because people are not willing to make several transfers when they could just drive their cars. Lane addition only encourages more cars. Bus enhancements are a good idea, but not just more buses. There needs to be more bus and rapid transit placed throughout the valley that run into the canyon. If we actually enhanced mass transit in the valley, then we would not need to fund major infrastructure changes like lane additions and avalanche sheds.	Chris Reisinger	Website
4624	For many years I've been a season pass holder at the little cottonwood canyon resorts, and have driven in and tried to bus up during the worst of traffic and parking. In terms of expanding the road, parking, and buses I think it is only a short term fix until it'll have to be done again which will be harder and with even less available space. I like the gondola idea because it is easier to expand parking and bus systems in the valley and is more in my opinion, is more environmentally friendly in the long run. As for lift lines, the timing of buses will be able to help with that so hopefully it never gets too out of hand	Jared Foerster	Website
4625	No gondola in this canyon please.	Meghan Roy	Website
4626	Building a gondola is too focused on the resorts without considering the other users of the canyon. The best option of these is enhanced bus service with a vehicle widening lane. This preserves the low cost, community feel of the canyon without exclusively catering to the resort users.	Tyler Pender	Website
4627	I am in support of better public transportation, but the gondola and the access roads that would come with it....I am totally against. Increase public transit and charge access fees.	Elizabeth Thomas	Website
4628	In an effort to reduce additional traffic and safely transport recreationalists in Little Cottonwood Canyon, I support the Gondola + La Caille Base Station option. I feel a gondola is a bad idea due to aesthetic and weather concerns.	Jon Whipple	Website
4629	a much better option and one which has been talked about for many years is a funicular railway. Better aesthetics and could run in all conditions if designed properly. In lieu of this while being built , more busses, more often and restrict vehicular to travel;perhaps to commercial vehicles including taxis,shuttles etc.	Chip Herron	Website
4630	Making it more difficult to drive discentivizes those of us who drive up the canyon and grill, eat outside, and work not to clutter the lodge. If this becomes a reality, it needs to become much easier to carry in lunch to a resort...	Douglas Wake	Website
4631	I live in Cottonwood Heights. During powder days you can hardly get on Wasatch Blvd. It's bumper to bumper to both Big and Little Cottonwood Canyons. I love the Gondola solution. It's unique, it will bring people to the area. It reduces carbon footprint and eliminates congestion in Little Cottonwood Canyon. Thank you	Lawrence Scott	Website
4632	UDOT, I am concerned that some of the alternatives presented in this statement do not account for recreation use other than skiing, and lack enough environmental study to be viable. Roadway widening would negatively impact many treasured bouldering areas in the Canyon, and potentially reduce access to trailheads. As skiing only makes up a portion of recreation in little cottonwood canyon, I think climbing, hiking, and biking access should be equally considered before any traffic solution is implemented. In addition, the Gondola alternative should undergo more intensive environmental analysis, as well as an analysis of how it might impact rock climbing and other recreational experiences. I agree with the Salt Lake Climber's Alliance that the best option for maintaining positive recreation experiences while alleviating traffic is the Enhanced Bus Alternative. This alternative would decidedly reduce traffic and lower emissions without impacting recreation in the canyon. This alternative seems to be the obvious starting point, and should be at least attempted before resorting to more costly and large-scale projects. Thanks! -Knox Heslop	Knox Heslop	Website
4633	I would like to express my avid support of a Gondola up Little Cottonwood along with the proposed La Caille Base Station and the Big Cottonwood Base Station. Having the second alternative to the south allows for skiers from the southern part of the valley ease of access to the gondola. Having to drive past the gondola only to park and ride a bus back to where you came from, makes no sense.	Hailey Griffin	Website
4634	The gondola would be my preferred option for little cottonwood canyon	Dan McAuliffe	Website
4635	Please don't build tunnels, add more busses or widen the road.	Mercedes Blackhurst	Website
4636	The Gondola Plus La Caille Base Station is BY FAR the best solution. The best environmentally, and the best practically, but what of BCC and Parleys? When it's all linked by lifts powered by renewable energy we'll really be making some progress.	Nick Hill	Website
4637	I am a hiker and skier who lives in Salt Lake. I support the gondola option. It isn't that much more initial outlay than the expanded bus service, it's cheaper to maintain, and it carries more people. Saving a few million dollars on the front end only to spend more money in ongoing expenses year after year seems unwise. Not to mention the lower emissions of gondolas is a huge benefit.	Kat Dayton	Website
4638	The gondola with a parking garage is the best long term solution. The gondola could have stops at a white pine/gad valley, Cliff lodge/Snowbird center, Alta, and terminate at Twin Lakes Pass at a day lodge. The gondola could serve the 4 cottonwood resorts. It would increase public access while reducing traffic in the canyons. This model has shown to be very effective in Europe and it's time for us to embrace this transportation technology.	Cabot Curtis	Website
4639	We need a gondola in Little Cottonwood Canyon. Safer and cleaner!	Leticia Lopez	Website
4640	Increased bussing without the widening of the lanes seems the most practical, fiscally responsible, and least intrusive to property and local access. Please consider this as the best option for the local community.	Juliette Palmer	Website
4641	Gondola!!	Jackie Langenecker	Website
4642	I'm in favor of a gondola for both big and little cottonwood canyons! Get the cars off the road!	Rebekah Connors	Website
4643	I support the "Enhanced Bus Alternative WITHOUT Roadway widening". While increased use and traffic is obvious and evident, current outdoor recreational resources are finite and cannot be replaced or relocated. A traffic solution that DOES NOT EFFECT the current climbing, trails, wilderness, etc. must be sought out. I am fully supportive of a "pay to play" fee schedule and expect there to be one soon.	Glen Kaplan	Website
4644	They need to restrict traffic flow up the canyon on snowy or on peak times limiting traffic to only the north entrance until off peak times. People who drive the canyon knows that people can't properly merge to enter the canyon on restricted days . So where does everyone park to take the gondola and how much is it going to cost to ride the gondola. I say try moving the traffic at a less restricted pass to prevent so much congestion going up the canyon. I have thought of this remedy many times as approaching the canyon entrance brings slowed down by the south entrance mergers. Try it once please before we build infrastructure up the canyon	Dan GRUNDFOSSEN	Website
4645	I'm in support of the La Camille Gondola	Anthony Manzione	Website
4646	The Gondola is a great option and should be a requirement for non-locals (not born in Utah, visitors, etc.). Utah born locals should have priority in accessing their own back yard. There should not be a toll in the canyon for private vehicles of Utah born locals. Non-locals should be subject to tolls.	Jenessa Henrie	Website
4647	No matter what gondola you build there will be people piling up to get to canyon first. So just moving the traffic from one hand to the other don't help	Dan GRUNDFOSSEN	Website
4648	Gondola!!	Christie Williams	Website
4649	Sandy resident. Please do the gondolas.	Taylor Warnick	Website
4650	Shuttle and bus service. Similar to Zion National Park. If it works for millions of tourists it'll work for us in big and little cottonwood.	Kim Rowland	Website
4651	Gondola Plus La Caille Base Station is the absolute best solution.	George Goodman	Website
4652	Gondola would be neat and I'd actually want to take my friends from out of town on it instead of a bus. Less traffic too and a reliable schedule sounds great	Jeff Kelso	Website
4653	seems that Alta and Snowbird stand to make all the money here ...how about they both invest in buying buses and shuttle people up and down the canyon ,i can see that happening maybe the city helps subsidize... Gondolas are a horrible idea ..dont go there .leave the canyon be..... I am talking like 5 buses each uta is not enough for sure thanks :)...slc is getting over populated and the problem is just starting in my opinio	nick ziter	Website
4654	I support "Enhanced Bus With Roadway Widening".	Michael Gibbons	Website
4655	Gondola & la caille	Janae Sudbury	Website
4656	My name is Joe Elliott, Salt Lake City resident and 30-day skier at our resorts. I am writing in support of the GONDOLA PLAN, though all three options have merit. I feel the gondola's biggest advantage is that it isn't beholden to avalanche closures. With that said, thank you for your eternal hard work and proactivity in tackling this issue.	Joe Elliott	Website
4657	This is a much studied issue, and I don't think there is a single answer to our transportation needs. I do think, however, that zero emission options should be considered, and that zero emission vehicles should be given preference for summer use and winter resort parking. Thanks!	David Richardson	Website
4658	Option 3 is the best choice in my humble opinion.	chris veloz	Website
4659	I support the gandola option	Braydonn Moore	Website
4660	Don't pave LCCI I support the Gondola	Robert Meffert	Website
4661	The gondola is the better option. I'd suggest we invest in our future and build a rail lone as the Swiss would, but short of that I support the gondola.	Matthew Natt	Website
4662	I am in full support of the gondola proposal for little cottonwood Canyon. I believe more busses, traffic lanes and concrete tunnels will ruin the integrity and beauty of this already gorgeous canyon.	Jenna Zaldonis	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4663	This is an amazing idea. A lot safer travel and way more efficient. Wish I had the ability to sign the check! I work as a lift mechanic in Park City. If this happens I will definitely be putting in an application!	Christopher Pierson	Website
4664	I support the Enhanced Bus Alternative (without roadway widening) Thank you!	Josh McAlister	Website
4665	Gondola option is the only one that makes sense for all parties!	Adam Macklin	Website
4666	The gondola would limit recreational access for climbing and bouldering in LCC. Additionally, expanding the road would destroy roadside boulders on the north side of the road.	Cyrus Johnston	Website
4667	I opt for the gondola! It is better for the environment, will greatly improve the transportation problem, and will help with air pollution.	Luke Davenport	Website
4668	As long as their is enough parking the gondola is a no brainer.	Jeffrey Fisher	Website
4669	I think the gondola should be the only option! Preserve the canyon! Widening and expanding the roads will only create bigger issues! I vote 100 times over for the gondola :)	Stephanie Dickson	Website
4670	I think tunnels/sheds over the roads and enhanced bus service/a bus lane makes the most sense. Gondola as presented makes the commute time too long. As a member of the mountain sports industry I commuted from my house in Millcreek up the canyons multiple times per week, and have been able to make the bus commute work by taking the 220 to the two available intersections with the existing ski bus. I've also observed successful implementation of avalanche sheds in Japan and seen how it positively impacts road traffic in avalanche prone areas. What good is a gondola if you have to drive to an easily overwhelm-able parking area that at best doubles the commute time and severely impacts the aesthetic of the canyon. More busses, a lane for busses, and avalanche sheds please!!!	Jacob Levine	Website
4671	As a resident of cottonwood heights and an avid skier in LCC, the gondola is the way to go! I am a native son of Salt Lake City, now 52 years old and learned to ski at Snowbird and Alta at age 7. The amount of cars going up LCC has become untenable and created parking crisis at the top of the canyon on many days, where there are no places to park a car. Cars with only one passenger heading up the canyon must not be allowed any longer without a significant toll for those who choose to drive up LCC with only one person in their car. Local Residents with Utah Driver Licenses should be allowed to drive up the canyon in cars at a lower toll rate - especially with more than 2 people in each vehicle. Thank you for conducting the studies to create the 3 final alternatives for LCC transportation solution. MY VOTE IS FOR THE AERIAL GONDOLA system -detachable cars - that are powered by Electricity and can carry the maximum amount of people, from canyon bottom to snowbird and alta stops.	Adrienne Brown	Website
4672	The trip would be scenic and fun for most travelers being transported up the canyon and this GONDOLA option would greatly reduce automobile emissions and carbon effluent and provide an environmentally strong transportation alternative using electricity rather than internal combustion engines. My Opinion is that the bus alternatives with widening of the road should include only electric or natural gas powered buses - otherwise you are contributing to more carbon monoxide emissions in the canyon. Why was there no discussion or component of the bus alternatives stating HOW the Buses would be powered. If diesel powered buses are the plan - as the buses are now powered then that is a terrible arcane idea and should not even be considered as a viable alternative. MY VOTE as an SLC long time resident and Local and long time LCC skier - is to build the Gondola Towers and put in state of the art gondolas that will greatly decrease car traffic, provide a lovely scenic ride up the canyon and back down, and have a high carrying capacity with lowest on-going maintenance costs and greatly reducing carbon emissions. Seems like the best choice by far. GONDOLA TOWERS AND DETACHABLE GONDOLAS to Snowbird and Alta	Camron Carpenter	Website
4673	I live near the base of the canyon and strongly favor the gondola option. It would be more convenient and attractive for families with young children.	Kaitlin Carpenter	Website
4674	Yes, let's definitely gondolate! No reason to destroy what we love by adding more asphalt and cars. Little Cottonwood Canyon is unique and wonderful - let's not turn it into Newark. It's that simple.	Keith Rosenfeld	Website
4675	This is the best ski area ive ever been to	Mark Turkowski	Website
4676	THE EIS should include a La Caille base station. I have been on some long gondola connections in the Alps and they are very effective. I used to live in Utah and return to ski 2-3 times/year.	Andrew Taylor	Website
4677	Hi there, I'm a long time lover of our canyons. This conversation over canyon congestion now a huge issue in many states, and I'm so glad to see it being addressed so constructively in my home state. This gondola is a great idea and would set an excellent precedent for other states as well. Please implement it to save our canyons!	Elizabeth Greene	Website
4678	Putting in a gondola would be a dream come true, it is a model shaped after European resorts, and has proven to be effective. I fully support this proposition!	Ian Stosich	Website
4679	While the Gondola is very cool, if it takes longer to get up and down the canyon, few, especially locals, will use it. I'd hate to see the line at the end of the ski day to get on that thing! Instead, I'd like the committee to consider charging for parking or can tolling the canyon PLUS adding more busses AND including a ski bus ticket with every lift pass. This way, we are incentivizing the behavior we want (public transport) and de-incentivizing the behavior we don't want (driving). Without big, expensive infrastructure projects and construction. Give people a better alternative to driving and parking (a lot of busses that run on time and get us up and down the canyons) and we'll do it. Thanks!	April Lisonbee	Website
4680	I am in favor of the Enhanced Bus Alternative (without roadway widening)	Michael Sieverts	Website
4681	I own a home right by LCC. Also, I ski Alta. I am in support of the gondola for 1. Conservation of the majestic canyon and 2. Economic growth, gentrification and profitability for the surrounding area.	Kristy Muir	Website
4682	Would love to see a gondola over adding more cars to the canyon which would only increase emissions and road rage! I live in Sandy Utah and Little Cottonwood Canyon is my favorite place in the valley. I frequently go up to hike. I've been skiing a few times as well. I've noticed more traffic in the canyon every year since I began driving up there 6 years ago. I've also noticed that parking areas next to trails usually smell like exhaust and burning brakes. Reading about the idea for a new gondola and base near LaCaille is so exciting to me! I would so much rather choose that than to widen the roads and put up concrete tunnels. The most environmentally impactful option should be chosen and it sounds like that's the gondola. More cars up the canyon would just make it ugly and really take away from the nature that we're all here to see. It's a bonus that the gondola would still work on avalanche days or slippery conditions because that would make the possibility of being stranded much smaller. Gondolas are exciting! I am really looking forward to riding this when it comes out. I know me and all my friends would be incredibly disappointed in our beautiful valley if the road was widened to fit more cars. That is not what a nature recreation area needs.	Blake Borgholthaus	Website
4683	Invite for the gondola	Megan Mullanley	Website
4684	As a resident of Salt Lake City, and a frequent skier in little cottonwood canyon, I would like to voice my opinion on the matter. I believe a gondola would be much more efficient, safer, cleaner, and probably cheaper alternative to improving the highway infrastructure. The gondola would also add an aspect of nostalgia similar to a European ski town, and could be used to attract tourists to contribute to salt Lakes tourism industry.	Ethan Brown	Website
4685	Invite for the gondola	Megan Mullanley	Website
4686	After skiing 70 plus days a year in Little Cottonwood for the past 5 years I have experience my fair share of traffic congestion trying to drive up to the resorts. I believe the gondola is the best way to rectify the problem because it will result in less carbon emissions but also help tourism. Last season I worked at a Ski-N-See location in the valley and had to always field questions from tourist about how to drive in snow. Many of these tourist are coming from areas where they never experience driving in snow so I'd always recommend taking the bus, however I know very few would actually listen as they probably see buses as lower class forms of transportation. Putting in a gondola would act as a bit of a tourist attraction and will help alleviate tourists who do not know how to drive in snow from driving up the canyon, therefore reducing the amount of accidents that cause heavy traffic in the canyon.	Ryan Cordes	Website
4687	Please do the gondola, not only is it better for the environment, or would also be a fun experience for all guests.	Jessie Anderson	Website
4688	The draft EIS was logical and comprehensive. One note of concern: The gondola with the La Caille base station seems to present the most logical long term environmental solution. If the gondola is the selected alternative, it sets the direction for transportation throughout the Wasatch front and back. Although the study is limited to LCC, it would be a gross oversight to isolate the decision to LCC without considering (within the means of the proposed study) the possibility for future expansion and connectivity within a larger system that connects BCC and the Wasatch backside.	Brian Reynolds	Website
4689	Gondola!	Anna Everett	Website
4690	I think the Gondola is by far the best short and long term option, best option for the environment, and best option to put Utah in the lead for all the above. I do think it should be in conjunction with a toll road. This would ensure the use of the Gondola, allow those in certain situations to pay, and allow that useage to benefit any cause deemed necessary. We could look to Colorado and their use of fluctuating tolls along 70 where tolls are higher in peak times. For example maybe a \$5 toll on summer weekdays, then \$100 on winter powder days.	derek skea	Website
4691	I while hearted agree that the best option for Little Cottonwood Canyon is to explore the unique option of The LaCaille/Gondola. Creating a Zermatt atmosphere versus Park City or Vail will maintain the beauty and the majestic environment that can be returned for generations.	Steve Urry	Website
4692	Thank you for considering this as a very viable plan. Thanks in advance Steve Urry	Steve Urry	Website
4693	The Gondola is such a better choice! What an amazing way to help the environment and help give people a fun experience!	Elizabeth Cox	Website
4694	Anything to reduce traffic and serve the ski areas is preferred. There are always slide offs, roll-overs and fender benders that increase during snow storms as well as hinder access to the resorts. A gondola would improve conditions on all days. I'm for it! I would also like to see gondolas connect Big Cottonwood and Park City.	Steven Miller	Website
4695	I support the gondola option. I feel it will enable the canyon to remain in a much more pristine state. I am an arborist and I feel this will save many trees from the pollutants of vehicle emissions. The combination of salt and pollutants from car emissions have a devastating effect on the trees. Tree health is compromised by road salt and vehicle emissions. Even trees that do not die are more prone to beetle infestations that can decimate the forest. Trees in good health have a much better defense system to fend off insect and disease problems.	rich chaffee	Website
4696	I think the gondola from the LaCaille base station is the best proposal. I would add that creating several additional stops on the way up the canyon would also be useful for those wishing to use the canyon beyond the ski resorts and Tanners flats.	Geoffrey Crockett	Website
4697	This will greatly impact the places I love to climb and hike. I have a 3 year old son who I can't wait to take up LCC to enjoy the same fun things I've gotten too. It will also greatly impact the wildlife and the beautiful scenery lcc has to offer. Please don't do this! Please!	Brandon Hobush	Website
4698	Gondola and parking structure is the way to go.	Dave Steele	Website
4699	I vote for the gondola option! It is clearly the most cost-effective, energy-wise, and eco-friendly option. I would hate to have the LCC altered by paving a larger road or increasing bus traffic.	Stephanie Hayes	Website
4700	I support creating a gondola in little cottonwood canyon. I feel it is the most beneficial option.	Bryce Phillips	Website
4701	Love it	Hunter Walker	Website
4702	I am NOT in favor of the gondola. Anything but the gondola. Dear God.	Martin Kuprianowicz	Website
4703	I feel the improved transit system would be best as it does not require the expansion of roads or construction to do so.	Jackson Liston	Website
4704	A tram for little cottonwood canyon is the most efficient way to move people up the mountain	Dom Camelio	Website
4705	Hello MY name is cameron griffiths, I am 36 years old, a utah local born and raised, I am married with two daughters. I am a passionate rock climber up little cottonwood canyon. My concern would be to preserve the canyon in a way so my daughters may enjoy it in the future. In addition to protecting the world class climbing the canyon has to offer. Preserving the canyon also means protecting it from visually impactful structures. As it is a wild place and should be left that way, I am aware of the increased traffic up the canyon. Significant increase in areas like lisa falls and red/white pine. That is in the summer. I think we all agree the worst traffic problems occur in the winter. I have read the proposed solutions to address the traffic. I am not opposed to making the existing parking areas like lisa falls, red/white pine slightly larger or developing/maintaining them better. I am opposed to the additional lane and gondola. The additional lane will wipe out world class rock climbing boulders and possible routes as well. I believe the gondola visually will be just as bad as the air quality in the winter. bad. A gondola would change the landscape of the canyon indefinitely. The main problem still would be parking. Where do all the bus passengers and gondola riders park ? My proposal would be to acquire the shopko on 9400 s. It could be turned into a parking/ uta bus hub for the canyon traffic in the winter. I believe the shopko area has potential if developed properly. I would not be opposed to a toll as well if an annual parking pass would be made available. In closing, Little cottonwood has the best rock climbing in the world. The climbing is equally renowned as the skiing. Developing the canyon road if done Improperly with damage the climbing forever. Please consider this when moving forward. Feel free to contact me for information on climbing in the canyon or any other way I could contribute.	Cameron Griffiths	Website
4706	Thank you The enhanced bus system without road expansion is the best option for transportation in little cottonwood. This still give easy access to lower parts of the canyon, as well as back country access in the winter, with minimal effect on recreation access and environmental impacts.	Torin McDonald	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4707	I am building a home in the Granite Oaks subdivision at the base of Little Cottonwood Canyon. It is one of my favorite canyons. I am very concerned about high volume traffic days and just being able to get to my home on those days. I have a business at the base of Big Cottonwood Canyon area and I see the traffic on high volume days. I would be opposed to widening the roads and making a "highway" feel out of the canyon. It could ruin the charm of the canyon and encourage a lot more traffic on non high volume days. My vote would be for the Gondola as proposed with bus station at the base of Big Cottonwood Canyon as proposed. I think this only works if you ban other cars in the canyon on high volume days other than residents, workers, etc. as proposed and then push people to use the gondola. I also think on non-high volume days (all season) the gondola would be used by those who want to see the canyon from a different perspective. I drive the canyon and never can see the true beauty as I drive. I believe the gondola option as proposed would even get summer use and used on non-high volume days by those who just don't want to drive the canyon, want the view, etc.	Paul Salisbury	Website
4708	Please go the extra effort and make the best decision	Steve Weidenbacher	Website
4709	Hi, I am concerned about access in lower points of the canyon. Maybe climbers rely on this parking on the side of road for access. The current proposals make our recreational sport very hard.	Susannah Anders	Website
4710	A permanent non-road solution is needed. The gondola would be optimal.	Tim McMasters	Website
4711	I'm fully in favor of building a gondola, it really does seem like the best option out there besides maybe a light rail and that's out of the question. Gondola4life!!!	Spencer Gordon	Website
4712	I have visited the cottonwood canyon in both summer & winter (from Canada) and the best option for easing traffic congestion is to construct the gondola and provide transit to the base station. Widening the road and adding snowsheds/tunnels is not the way to ease congestion.	Derek Gourlay	Website
4713	Buses will not solve the traffic congestion due to snow conditions. A gondola will reduce emissions in the canyon and allow the citizens unparalleled access. Build the gondola.	John Waskowicz	Website
4714	Hello, I am a Utah local who lives in Salt lake City because of its Unmatched outdoor access. I typically spend 3-4 days in big and little cottonwood and the wasatch range year round. I am an avid skier, climber, runner and cyclist. I am in support of the letter written by the Salt Lake Climbers Alliance. I strongly urge UDOT to consider the Ecological impact and climbing closures that most likely would occur if a second lane is added or if a gondola is installed. I AM IN SUPPORT OF ADDING MORE BUSSES TO THE CANYON. I do not believe that a second lane is needed if a larger park and ride is created to accommodate larger commuter demands. I am strongly skeptical of building a gondola. This only addresses canyon issues during the winter and does not ease parking issues at trailheads during winter and summer months. I also would much prefer to keep such a large eye sore and noise maker far far away from our canyons. Thank you for your time, Steven Henke	Steven Henke	Website
4715	I support the gondola	Bethany Sorenson	Website
4716	I support the Gondola Plus La Caille Base Station. This is the most viable long term solution to support and preserve LCC.	Rani Quiram	Website
4717	I am in favour of the gondola!	Willow Lange	Website
4718	We have taken gondolas to resorts in Italy and they were wonderful. The roads could not handle the amount of traffic. It would be awesome to do a gondola!	Lesli Rice	Website
4719	I very much support the idea of a gondola and thanks to everyone who worked so hard on these proposals that address a very important issue for Utahans!	Morgan Aguilar	Website
4720	I am a home-owner in Sandy and live not too far from the mouth of Little Cottonwood and I believe the best solution is an improvement to option #3 being referred to as the "Gondola Plus La Caille base station". A group of community stakeholders, including Snowbird, have looking into the feasibility of this option for the past year. Please go to www.gondolaworks.com to see the details of this solution. To simply explain this solution, a developer has secured land at the base of Little Cottonwood Canyon that would allow for an efficient gondola base station including 1,500 parking stalls built into the slope of the mountain to not impede the views but effectively transport recreationalists up the canyon safely. This solution would be able to transport 1,500 people per hour up the canyon today but scale to 4,500 with very little additional capital investment. I believe this is the best solution economically, environmentally, and in the best interest of public safety. As a resident of this area I think this would continue to incentivize tourism dollars to our community and improve the way those tourist experience our outdoor recreation, as well reduce the impact of that tourism on the residence. Thank you for pursuing transportation solutions and helping to improve access to the Greatest Snow on Earth!	Steve Morrill	Website
4721	The Ikon pass should really not exist at all. The mass transit solves nearly every problem. Let's think long term!	Megan Galura	Website
4722	Please go the gondola route! No way should there be more traffic	Jock Danforth	Website
4723	I am a doctor here at the University of Utah. I know the importance of a disturbed wild places on our physical and mental wellbeing and health. I think we should do the enhanced bus service without roadway widening in order to preserve our canyons as much as possible for hiking, recreating and for the environment itself. Thanks, Dr.Abbeh	Rebecca Abbey	Website
4724	I live in wasatch resort and would appose a gondola running in front of my house. I didn't build here to see cables and poles and gondolas. Dear Utah Department of Transportation,	Jim St John	Website
4725	I appreciate this opportunity to comment on the LCC Environmental Impact Statement. I support enhanced busing with no widening of Highway 210 as the best transportation option to alleviate traffic issues in LCC. Specifically, I am in favor of using low -or zero-emissions busses and vans on the current LCC road with no, or minimal, additional construction. This option has the lowest environmental impact, is an inclusive transportation system that serves dispersed users, has the lowest cost, and is the quickest way to solve the traffic issues in LCC. As you know, LCC is an important part of the Salt Lake City watershed. Therefore, it is important that UDOT pursue a traffic solution that has the lowest environmental impact. Expanding the road or installing (and maintaining) a gondola will have a larger environmental footprint than simply utilizing energy-efficient mass transit vehicles on the existing infrastructure. Additionally, buses and vans can provide year-round transportation to trailheads, serving dispersed users such as backcountry skiers. In contrast, a gondola will not stop for people at backcountry trailheads and, as proposed, would not be a year-round solution. Enhanced busing is also the most convenient option for the public, and convenience is critical to ensuring the public actually utilizes the chosen transportation solution. And, as described in the EIS, enhanced bus service is the lowest cost option, coming in at a significantly lower price than either bus service with a peak period shoulder lane, or a gondola. As a backcountry skier I urge you to consider how each alternative will affect, and serve, dispersed recreation users in addition to resort visitors. A considerable amount of the traffic in LCC in both summer and winter is people heading to trailheads to backcountry ski (in winter) or hike and mountain bike in summer. The transit system must include stops at trailheads in order to serve backcountry recreationists. Likewise, the transit system needs to originate at multiple locations around the valley so that people can access it where they live, rather than drive their car to a distant mobility hub (in which case, they'd likely stay in their car and continue the drive up LCC, not utilizing the transportation solution). Enhanced busing with no widening of the LCC road is a solution that can have an immediate impact. There is no need to wait years to construct additional, expensive, infrastructure when we can solve the traffic issues with the infrastructure that is already in place. Sincerely, Ms. Hilary Eisen	Hilary Eisen	Email
4726	I posted a comment a few minutes ago supporting the gondola. I still support that option but then read the proposal from Snowbird and Alta proposing that the base station be at La Caille. This would ruin a beautiful part of the canyon by taking what is by and large a residential area and ruining it. The base of Big Cottonwood Canyon seems to be the correct location for the bus hub and parking station. Putting it at La Caille makes no sense for the canyon nor for the people in and around the canyon. Having the gondola start further up the canyon makes the most sense from a visual standpoint and from a use standpoint.	Paul Salisbury	Website
4727	I am in support of a gondola for LCC.	Jaynell Booth	Website
4728	From a local perspective additional parking and more frequent electric power buses seems more environmentally friendly. Additionally adding a gondola would add more congestion and a greater environmental impact.	Debbie Lam	Website
4729	Gondola	Tyler Anthony	Website
4730	I am for the installation of the gondola. It will make traffic flow faster for other reasons to get up the mountain	Jack Berry	Website
4731	Save our natural beauty!!!	Makenna Lynch	Website
4732	Gondola makes the most sense for Little Cottonwood!	Peter Bland	Website
4733	I strongly support the option that includes a gondola from the base of little cottonwood canyon. This provides for minimal environmental impact, compared with other alternatives. It also provides for highly efficient movement of individuals and groups up and down the canyon in all conditions. I believe this solid option would also be supplemented favorably with additional bus support.	Matt McReynolds	Website
4734	I am a proponent of the gondola solution.	Kate Bulger	Website
4735	I support the gondola with expanded La Caille parking. I've used similar installations at Sunshine in BC and at various places in Europe and it works well.	Kate McGuinness	Website
4736	Traction on the road is the significant issue during a storm that won't be solved by adding a lane, sheds and increasing bus service. Less pollution is always the better option	Alex Hansen	Website
4737	Widening the road is only going to make it more congested, more room to drive equals more room for cars to take the place. there are studies in CA and other states where they made more lanes only to have more traffic. stopping traffic and reducing cars are the only effective way. More buses and vans.	Kyle Moran	Website
4738	I support the la caille alternative gondola proposal for transporting people up little Cottonwood Canyon in order to mitigate traffic, reduce environmental impact, and reduce carbon emissions. This alternative the most efficient, and by it's unique design will put the wasatch front at the forefront of innovative design for resort transit.	Micah Rosenfield	Website
4739	The gondola for LCC is by far the most effective way to reduce traffic congestion in the canyon. The impact on the environment from the traffic is already astronomical and is a massive contributor to the awful winter inversions in salt lake. Not to mention widening the road will destroy more forest and wildlife habitat opposed to a gondola installation. WE NEED THIS!	Emerson Coddling	Website
4740	Gondola!	Kristen Haungs	Website
4741	This is a solid ideal I'm very supportive of the gondola. My only concern is the potential repair times if a malfunction were to take place on the gondola. Basically, what would the plan be if there were malfunctions? Maybe address the public on the website gondolaworks about safety plan and back up plan if there should happen to be an incident that could take hours to repair.	Meilissa Clemm	Website
4742	The Gondola Plus La Caille Base Station is the best option to move people up/down the canyon and get cars out of the canyon.	Brian Barnett	Website
4743	Go with Gandola option.	Cameron Chin	Website
4744	I'm excited that this is being addressed, as I think this will greatly benefit our community! Reviewing these, the enhanced bus with roadway widening and the gondola both seem like viable options. However, I think long term the gondola will be better. While it is a longer transit time, I think the bus will inevitably have a lot of the same issues we currently have. The road will still have to close for avalanche mitigation. There will still be people driving in the canyon in cars that can not handle it slowing and blocking traffic. I think the extra bus lane will help, but having a gondola that will run regardless of road conditions seems like a better solution.	Deirdre Murdy	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4745	Let's save this canyon. It's out of control. We will lose the tourism battle if we don't preserve.	Jason Hughes	Website
4746	I support the gondola option for improving transport up little cottonwood canyon. I think it is the safest, cleanest and most efficient solution. Thank you for listening to my option.	Ian Woulfe	Website
4747	My first choice is the Gondola. This will greatly reduce canyon traffic, and noise and air pollution from cars. Gondolas are widely and successfully used in Europe. It will also be safer for wildlife. My second choice is increased bus service. Ideally in addition to the Gondola.	ANNE ANDERSON	Website
4748	I support Alternative 1 – Enhanced Bus Service with no additional roadway capacity on SR 210, Little Cottonwood Canyon. This option provides needed increased bus service with a reasonable average time to destination, the least amount of environmental impact to the canyon, is the least expensive, and the fastest plan to implement. We are already "loving" Little Cottonwood Canyon almost to death and environmental impacts like roadway expansion and installation of gondola towers will push this already stressed ecosystem over the edge in a way that may never be recoverable. In addition, this plan needs to prevent future increase in the number of visitors in LCC. This is a small canyon that cannot handle much more human impact (aka "love") than it already receives. Not adding roadway capacity may help to keep the level of human impact where it is unlike the other alternatives which could result in more people than ever accessing the canyon at the same time and causing irreversible damage to this already stressed ecosystem. Alternative 2 – Enhanced Bus Service in PPSL may allow visitors to get to their destinations faster than the other alternatives, but this benefit does not outweigh the huge cost and devastating environmental impact risks. Alternative 3 – Gondola may be slightly cheaper than Alternative 2 and have lower maintenance costs, but will take significantly longer to get to Alta, cause a huge environmental impact to build, initially does not get more visitors up the canyon, but eventually may bring more visitors than ever up to the top of LCC, which this already stressed canyon cannot withstand. Alternative 1 is the only reasonable plan for using tax payer money wisely, quickly, and with the least short and long term environmental impact.	Katy Andrews	Website
4749	For the sake of future generations and our environment, please seriously look at the Base Station as a serious option.	Julie Christ	Website
4750	I support the gondola solution	Jack Levine	Website
4751	Anything to reduce traffic and serve the ski areas is preferred. There are always slide offs, roll-overs and fender benders that increase during snow storms as well as hinder access to the resorts. A gondola would improve conditions on all days. I'm for it! I would also like to see gondolas connect Big Cottonwood and Park City.	Steven Miller	Website
4752	Increase bus capacity. As a resident of Park City to see how the bus system works and functions here you guys are crazy to do anything other than increasing bus/ public transportation. Normal solution for many busy ski towns. Personal note I have a Public Management degree and have taken all the proposed solutions into deep consideration.	Adam Johnson	Website
4753	I support the gondola and base station!	Kait VanHoff	Website
4754	Please consider the Gondola Plus La Caille Base Station	Scott Kelly	Website
4755	Please don't ruin our beautiful little canyon. Wider roads and more vehicles are not the solution!	Gavin Campbell	Website
4756	Let's protect the canyon from becoming a tragic cautionary tale of paving. It's too beautiful to ruin. I support the gondola option.	Michelle Baird	Website
4757	Anything that idea involving buses will fail! Locals do not want to load their family into the car then unload and load all their gear onto a bus to ski a few hours only to have to reverse the process after skiing. Tourist want nothing to do with a bus either. If you build a gondola it will be part of the experience! People will pay to ride it just to site see! Buses already run empty up and down the canyon 1/2 the season. Do the right thing and build a lift!	Michael Coyle	Website
4758	I support the initiative to build the gondola as a solution. I agree that it is a more comprehensive and holistic solution to the problems the Canyon faces. I would suggest, however, that the gondola be extended to cover the Wasatch Back (Park City etc.) in addition to the current plan to cover the Wasatch Front. During the ski season, especially, many visitors to Alta/Snowbird have lodging in Park City and must drive all the way around through I-80 and up LCC, a drive that takes an hour at best. Covering both sides of the Wasatch would substantially reduce the need for people to drive up LCC and reduce emissions/tear on the environment, which is after all the purpose of this project. Thank you.	John Broadbent	Website
4759	For the sake of keeping the Wasatch Wild, please refrain from building an extra gondola service. This gondola service will only aid those in the resorts and not actually those who want to come and enjoy the canyons for all of their beauty. Instead, expanding the bus service along with having a dedicated buildout for the buses to stop would be a more efficient way to enhance travel into the canyons for anyone wishing to go without immensely slowing down traffic in the canyons. The gondolas will only serve to impact the wilderness and nature of the canyon in a negative way and will not be available to all. Again, please do not choose this option. Opt to keep Utah wilderness as wild as possible.	Sarah Paxton	Website
4760	Thank you Save little cottonwood canyon!	Olivia Larsen	Website
4761	I am a 100% for the gondola option. That will be a wonderful addition year-round and will help us preserve the canyons and reduce carbon emissions. It's a win for everyone! I'm excited for this option.	Allison Chappell	Website
4762	Dear UDOT, I am in support of clean air and I hope that you will consider the gondola option for improving the little cottonwood canyon congestion problem. Thanks for your consideration, Libby Anderson SLC resident	Libby Anderson	Email
4763	I support improving the bus system. The lack of development in the canyon is one of its' best attributes, and building a gondola will only detract from that.	Sarah Allred	Website
4764	I support the gondola option as it decreases car and bus traffic while eliminating the need to expand the roads in the canyon.	Diego Correa	Website
4765	Best long term solution.	Steven Fredley	Website
4766	I am support of gondolas for a transportation solution. It is the best option for beautiful Utah environment. Something that is worth protecting.	Markell Kolendrianos	Website
4767	We are season pass holders at Alta and love LCC. The gondola and La Caille base station is the obvious right choice.	Ben Pugmire	Website
4768	I support the gondola option	Benito Ramirez	Website
4769	I support the building of a high speed gondola to create more access in Little Cottonwood. I do not support the destruction of the canyon to widen the road for more vehicles.	Kristi Hurd	Website
4770	Build a high speed train system like you see in Europe with similar terrain. Add additional cars on busy days.	Jacqueline Faust	Website
4771	Being an European now living in Sandy, UT the Gondola is the way to go. Those will allow Alta and Snobird to be connected during Avalanche lockdown, will limit noise and pollution in the Canyon and could be upgraded with time (adding more gondolas). A large multilevel parking at the entrance of the Canyon would be the best as it would make for much easier access instead of waiting once for the bus in a small parking lot and another for the gondola.	olivier balthazard	Website
4772	Love cottonwood canyons! Looking into the future of our resorts , it makes sense to gondola people up . It can run during snow , avalanches, floods , sun , etc...Its an incredible alternative and future thinking! We must stop trying to cram cars up our canyons! Buses can shuttle people to the gondola , up they go! Done skiing , jump on the gondola! It is world class ! People from.far and wide will want to come to Salt Lake! Its a futuristic answer to today's issue! Let's do this! Love a true Utahd	ROBERT CRATIN	Website
4773	I fully support this gondola idea! This would be a HUGE improvement in the LCC traffic situation.	Jason Glotzbach	Website
4774	Gondola plus La Calle parking station. I believe instituting a Gondola now will open up opportunities in the future, much like how TRAX has been expanding throughout the valley. Adding Parking infrastructure is critical to all three of the proposed plans. Consideration during the design/engineering phase should be given to develop mid-way drop-off locations for future development to allow for summer access to trailheads.	Alex Mongold	Website
4775	Gondolas are a great way to move folks up and down, fewer people on the road, fewer cars and buses polluting the air, and a chance for all passengers to see the beauty all around. (The driver always misses something) If they can build it with a garage nearby out of view and minimal intrusion on private property, why on earth would anyone be against it? No drunk drivers, no avalanches, no cars on the side of the road taking pics. Sounds like a win!!	Crystal Randall	Website
4776	As a local backcountry and resort skier, I support the expanded bus system and am against the gondola system. The gondola would further add development to the canyon and no studies have been done on carrying capacity, and would be more of a tourist attraction than solution. However, I do think additional parking is needed for the bus systems.	Jocelyn Cuthbert	Website
4777	I am in favor of the Gondola Plus the La Caille Base Station. If UDOT has not seriously researched this option I recommend that they do. It is the most viable option to me as a twenty year skier in LCC and business man in UT. Thank you, Paul F	paul fischer	Website
4778	I support the gondola option for improving access to Little Cottonwood Canyon.	Ben Maughan	Website
4779	The gondola looks like a great idea! Looks like it'll have lower impact on the environment and there won't be construction delay on that road which will inherently create more traffic on that road during construction.	Lauren Hughes	Website
4780	I support the gondola option for improving access to Little Cottonwood Canyon.	Ben Maughan	Website
4781	The future is.gondolas! To widen a canyon seems.expansive and non.solutionary. To expand roads (labor , traffic, unknowns, etc...) To always be held hostage to mother nature, doesn't make sense . Use a gondola , top to bottom ! Its an answer for the 21st century!	Sesil Cratin	Website
4782	For gondola in this area to help with traffic in and Carbon footprint.	Heather Johnson	Website
4783	I support the Gondola solution for its minimal effect on the environment both to wildlife, beauty of the canyon, less particulates and emissions.	Susan Mirow PhD MD	Website
4784	I am writing this in support of the Gondola Transportation option. This seems to provide the best transportation alternative with the lowest environmental impact as well as help address the air pollution in the winter from all the cars waiting to go up the canyon.	Kasandra Lundquist	Website
4785	I feel a.gondola is our best choice! I like to visit Utah a couple times a year. I've seen challenges/ issues going to Snowbird, Brighton, Alta , etc...a gondola makes great sense! Sincerely, (a tourist) Wade	Wade dennis	Website
4786	I prefer the gondola option. Lower annual O&M. Less environmental impact. Hopefully UTA will NOT be the operator. A bit more expensive initially but it will probably last longer than the buses.	Mark Schneggenburger	Website
4787	I am in favor of the gondola. I am against widening the road. The widening will destroy the canyon, disrupt wildlife, and cause more congestion. A gondola is much better for the environment, for air pollution, and for our wildlife.	Amanda Van Meter	Website
4788	This initiative is a great first step in finding transportation solutions for our growing outdoor recreation population.	Jennifer Powers	Website
4789	I support the gondola solution. No canyon widening, no extra buses and the commute time is not a whole lot longer than just driving myself to the resorts, especially on slick mornings. I can spend my time elsewhere. Like a good book or actually ENJOYING the ride and beauty up to the resort instead of focusing on driving or the other people that are affecting my driving. My only concerns are how often the gondola would breakdown or stop...Would it happen more often during bad weather than a bus and how many people would potentially be affected by those delays? Can they be avoided altogether? If a bus breaks down, it impacts the people on that one bus typically. If a gondola breaks down or has to stop for whatever reason, it's delaying the whole line. Thanks for this, I expect great things!	Emily Smith	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4790	I am Bob Paxton. Josh, I appreciate the Zoom meetings you directed and some honest candor and comments I've never seen from anyone on the topic, including Mountain Accord. I have skied at Alta for 50+ years, and I annually purchase a variety of passes for 12 of my extended family members covering 3 generations. Our family has been supportive of Alta and other cottonwood canyon resorts through the good and bad times. I really appreciate your admission that personal transportation, ie, cars, are necessary and integral to the 3 alternatives. I will cut to the chase here and comment that your group's goal is to cut personal transit by 30% and add alternative public transit that accounts for 31 - 32 % (based on your numbers and your charts). As a man of science these net increases of 1 - 2% additional bodies moved up the canyon are statistically insignificant. AND, the cost is overwhelming for those 1-2%. Is there an additional agenda that's undisclosed? Perhaps you can correct me on this calculation, and I do realize your intention to restrict road parking of a couple hundred vehicles. Why not take a cheaper approach and add 10 buses a day up the canyon? That eliminates widening the road - which will lead to hillside instability - refer to Provo canyon, gunite and all. Last weekend I drove to Alta for a quick mountain bike of the summer road. I spoke with a young lady at the toll booth, also an Alta ski instructor, for an opinion. She said the resorts are full enough and if we add people we should expand the resorts. She said that having quality runs is getting difficult and safety is becoming a concern. Most people that are 'avid' / regular skiers would agree. And most would admit our cottonwood canyon resorts are quite small compared to Park City, Aspen, Vail, Tahoe areas, etc. We all know that resort expansion is nearly impossible these days. Since UDOT has added buses the past few years, I've noticed an increase in skiers. However, that busing, as well as all 3 alternatives have flaws. Convincing people to ride the bus has been difficult, and subsidizing of a very non essential service is now the norm. Most Utah/SL County residents are non skiers. Most are also unaware of the subsidies that exist and unaware of the \$400-500M plans being considered. Even my State Senator is unaware of the meetings and plans. Josh, you were fairly transparent at your presentations, but the citizens deserve more. People distrust politicians and media when we all are not involved. (Consider the prison, the inland port and most recently the proposed tax on all services.) A few more thoughts: 1. Widening the road will likely create hillside weakness and lead to landslides, and eventually gunite up the canyon walls. How lovely that would be, let alone the impact on the watershed or animals. 2. As frequent canyon travellers know, snowy conditions preclude 2 lane travel in the same direction. Thankfully drivers feel it is unsafe to utilize 2 lanes and we generally form a single lane even in wider areas. 3. Gondolas may be interesting to ride with family and friends, for fun, like a 6-8 occupant car, but 30 per car and loading / unloading that car in under 2 minutes? With children? We rush the 'charm' of it. And, is there enough time and space to move your skis and bags into the car? Same question with buses. 4. Once the customer arrives at the resort, where are the changing and storage rooms - it's basically non existent. Personal automobiles are good storage and place to put your boots and equipment on. And once at the resort, how do 1000 people per hour move to desired starting point, as both resorts have multiple lower mountain chairs/tram. 5. TOLLING. Tolling is very negative to we the locals that support our resorts every year. We locals get very little recognition and rarely a thank you. Most of us want to ski with friends, and carpool, but occasionally it doesn't work out. Alta rewards carpools with better/closer parking. That's positive. Instead of 'tolling' our locals that do pay the road, local, and state taxes, why not reward the carpooler with a gift certificate for the driver to a resort. UDOT has plenty of money to subsidize, just make it a reward. Enough said. Please choose a cheaper and less impactful option like adding a few buses to the pool that exists. The resorts are wonderful but they are full. We must also think of quality. Alta is known around the world for quality powder skiing, as is the State. Please think of quality before the almighty dollar.	Bob Paxton	Email
4791	Option 3. Build the gondola.	Justin Holt	Website
4792	There will always be more people who want to access the canyons. Unfortunately, they have a carrying capacity. Humans destroying nature just to cram more people up into nature, further depleting biodiversity and pristine areas. So money hungry it's quite unsettling. It's so self centered to not consider the fragile ecosystem of the Wasatch and only think about how you can make this better for humans. We need to protect and preserve the environment. These options are not sustainable. Think about improving life for the flora and fauna before you think about yourselves and your pocketbook. Consider building a parking garage at the base and expanding bus service with electric/zero emission vehicles and more capable buses that aren't at risk of sliding off the side of the mountain in heavy snowfall times. This is the only solution currently being considered that does not have an enormous environmental impact that will forever leave a shameful scar on our beautiful mountains. Please protect little cottonwood. Thank you.	Cade Tyrell	Website
4793	I'm in favor of the gondola. I think just the fact that it can stay open during road closure will keep the canyon much safer	Kaden Larsen	Website
4794	I think the gondola is a good idea to get more people in the canyon safer and with a smaller carbon footprint. And it allows for more social distancing opportunities than the bus.	Leticia Nascimento	Website
4795	Hil I 100% support the gondola for getting up Little Cottonwood canyon as the most sustainable and environmentally friendly option.	Lindsey Marchant	Website
4796	I feel public transportation up LCC would be beneficial. However at the end of the day a gondola would be more beneficial getting up the canyon!	Rim Critch	Website
4797	While the idea for a gondola may seem like a good one, there will always still be the issue of parking at the base of the gondola where where it is currently proposed, there will be no way to have enough parking or to bring people there in a good way. Really the main issue is that there are just too many people trying to access the ski resorts and the ski resorts just do not seem to understand that they should just put a cap on how many people can come. Namely it doesn't even make sense why they're still advertising to get more people up there when the canyons just can't handle that many people at a time. It's like trying to add more pickles into a jar, once it's full it's full. Additionally the environmental toll of cramming more and more people into the canyons is a detrimental one. It requires further widening of roads which in turn further degrades the canyon from its natural state. Finally, none of these proposed expansions address or are in favor for any backcountry travel activities, the partakers of which are most in touch with keeping the canyons pristine and in their natural state and not developing them with more and more ski lifts that takeaway from the natural state for the greedy profit of those on top of the ski industry. It is absurd to support such an industry that makes those on top rich and richer, for example with ski lessons costing a fortune and the ski instructors getting paid so little. Not to mention how little ski patrol get paid for the work they do, exhausting and dangerous altogether. We simply should not be supporting such greed by allowing the ski resorts to expand even further by providing further capacity up the canyons all for a few more people on top to make more money while the rest of us deal with an even more crowded Canyon and a reduced quality of the ski experience	Arash Farhang	Website
4798	I support the Gondola PLUS La Caille Base Station as I believe it the most sustainable, effective and user focused option.	alex Dencic	Website
4799	Thank you for taking our input. I noticed on each hypothesis that a thousand (give or take) will make it up Little Cottonwood Canyon. This seems probably during the summer. In the winter it seems a bit more suspect! How many times have I been caught in traffic going to Alta? (I can't count). To be able to whisk people to Snowbird or Alta 24/7, 365... weather not a factor? Spectacular! Be forward thinking! Thanks	Drew Creighton	Website
4800	I support the gondola and base station. Save little cottonwood canyon.	Jeremy Jackson	Website
4801	I support the gondola option over all other options. My reasons are as follows: Traffic safety, especially when roads are icy. Traffic congestion, pollution from cars and buses contributing to the shameful air pollution in our beautiful valley. Other options will damage, destroy and pollute the treasure of our beautiful canyons. The gondola is a smart, forward thinking option for the future of mass transportation!	Susan Egan	Website
4802	Alternative means of transportation is our future. We need more Elon Musk'ish projects	Vladyslav Brylinskyi	Website
4803	Gondola is the best option!	Alexis Weixler	Website
4804	This is definitely a much better option	Garland Ledbetter	Website
4805	Don't ruin the canyons that make Northern Utah so beautiful! Staying small and saying no to intrusion of nature keeps tourism alive! Tourists come here for the nature, not the concrete.	Odessa Tinius	Website
4806	So few details on the "gondola works" website. Will it move as many people as fast as cars and/or buses? On a busy powder day, how long will I stand in line to wait to get on the gondola, both in the morning going up and in the evening going down? Will those lines be indoors or outdoors? What wind speeds can it operate in? How much will it cost per-person to ride? Will there be seats, or standing only like the Snowbird gondola? Where will I put my gear on the ride, do I just have to hang on to it the whole way? How far do I have to haul my gear (and my kids' gear) from my car to the gondola, and then from the gondola to the lodge/lockers/lift? How much use will it get on low traffic days (weekdays, weekends when it hasn't snowed in a while, summer, basically the vast majority of the days of the year it seems like it will be mostly empty, unless it's really cheap or free to ride)? Will it be of any use to anyone who is not skiing/riding at Alta and Snowbird (such as hikers, backcountry skiers, mountain bikers, climbers, etc.)? Are we really not going to do anything about Big Cottonwood Canyon while we are at this?	Bryan Murdock	Website
4807	Clearly the #3 choice for a gondola is brilliant and needs to be the one chosen. All of us at the U.S. Ski & Snowboard Teams in Park City, UT will make great use of this lift. Please do not alter the road and only amplify the vehicle issue.	Tiger Shaw	Website
4808	Please consider the gondola to enable easier access and decrease pollution	Tyler Richards	Website
4809	Option 3, with parking at terminal.	Eric Morgan	Website
4810	I support the gondola+la caille bus station. I love that it's both environmentally friendly and allows for year round access to slopes. Would be great for down hill biking options too!	Zachary Olsen	Website
4811	Increased canyon mass transit is the only way, private or public. Wasatch does not need to be 7 lanes in June.	Reginal Thompson	Website
4812	I support gondolas	Annika Cook	Website
4813	I would like to suggest that the IKON pass creates too much burden on the canyon roads. Yes, the resorts can support the load, but the roads can not. Please limit the amount of patrons allowed to ski in the resorts per day and thid will solve the unsolvable problem.	Mark Decker	Website
4814	No thanks UDOT!	Madison Bodily	Website
4815	tldr: I support the Gondola Plus La Caille Base Station proposal. As a resident of Park City, I would welcome and utilize improved year-round access up Little Cottonwood Canyon. The only option that removes vehicles from the roadway is a gondola. In addition to being a beautiful and relaxing solution, it would be a tourist attraction in its own right. However, solely relying on off-site parking ensures underutilization of the transit mechanism and continued increases to vehicular traffic in the canyon. It would be foolish not to include absurdly expensive below grade parking as a means to subsidize the cost of riding on the gondola, thereby making the use of the gondola practical for lower wage service workers. Therefore, I support the revised gondola proposal referred to as the "Gondola Plus La Caille Base Station".	David Hotchkiss	Website
4816	Gondola, get it done!	Jeff Egan	Website
4817	I support the gondola. Road widening is just a temporary solution. A gondola is the kind of investment that will make Salt Lake City unique. It will make people proud	Benjamin Czaja	Website
4818	Please do not widen the road and add more car traffic to LCC. I support the gondola.	Megan Sessions	Website
4819	I support the gondola project along with the La Caille base station terminal above all other alternatives.	Karen Terzian	Website
4820	I support the gondola and anything else that helps to reduce traffic and keep the canyons sustainable and accessible	Claire Momberger	Website
4821	I would prefer a shuttle service. During peak times why not stop ALL cars at the bottom and only run a shuttle service. Similar to national parks like Zion and Yosemite. An increase in bus service with cars still on the road just adds buses to the traffic. Being stuck on the bus during peak ski traffic is horrible. With no cars on the road the shuttles could be extremely efficient and probably safer than some drivers. The only construction that might need to be done would be parking lots at the bottom. No widening of the road, no environmental impact through the entire canyon, no destroying cherished climbing areas, no confuting lane changes that would cause accidents, no gondola. Things that would shut down a gondola wouldn't shut down shuttles. Small everyday stuff like...wind. I would be happy to save the gas and brakes on my car to ride a shuttle up to a trailhead or a climbing spot. I rarely drive all the way to the top of the canyon. A gondola would only serve people going to one place while shuttles could serve the entire length of the canyon.	Katie Rockwood	Website
4822	I believe the Gondola, plus base station at La Caille is the best decision for LCC transportation. It will create a unique feature to the SLC skiing experience in addition to the benefits described in the proposal summary.	James Nadauld	Website
4823	i support the gondola!! please don't widen little cottonwood it's so beautiful and the nature is what makes it! by widening the road you're not only destroying the woods and our trees but creating something ugly for the sheer purpose of increased financial gain. people travel to utah to see our mountains and little cottonwood is a big part of that!	Mieko Johnson	Website

4824	<p>Hi guys! Being born and raised in the mouth of little cottonwood canyon that place will always hold a very special place in my heart. Once I was old enough to get a job I started my career at Snowbird in 1998 Three seasons I spent traveling up and down that canyon and witnessed all the good the bad and the ugly that can happen in Little Cottonwood. I also watched as I drove into the fluorescent clouds each evening and held my breath as I traveled down into the pollution. 22 years later I can finally be grateful we are finally getting some solid ideas & solutions on paper. Working in the ski industry now for 22 years I can honestly say the Europeans all ready have it figured out. Looking into the thousand plus years of experience in the Alps it is clear that the modern day Gondola systems are the key to traveling the extremely rugged terrain in the mountains. Not to mention can also tremendously help the pollution issue SLC Valley has had by reducing vehicle traffic.</p> <p>Clearly the third plus option is a no brainer.</p> <p>Hopefully I can take my kids back to Ski little cottonwood, ride a gondola to the top and share the same experience I had as a kid with them on the slopes and know that UDOT understood the Important reasons behind the best decision...prepping for the future with the environment in mind. Leaving room for sustainable growth. My vote would be for UDOT to encompass the 3+ strategy of a responsible approach to the future. COLIN HALES</p>	Colin Hales	Website
4825	No more cars No bigger roads	Thomas Shields	Website
4826	I am in favour of the gondola. As an annual visitor from the UK the beauty of the valley would be ruined with tunnels and lines of cars, I think for the air pollution to reduce then parking at the foot of the canyons and having to use a gondola will cut the traffic. Thank you	Kate Whittington	Website
4827	Unfortunately one Gondola will only be enough to move a portion of the problem to the bottom. Their needs to be a massive parking lot built directly off the highway with a direct route to the new gondola station. Also if you don't allow any non essential vehicles up the caynon and only busses from this parking lot you won't need a gondola at all. Gondola's don't run in bad weather and you can build a parking lot and run hundreds of electric busses instead. This is a very easy simple solution based on the European model at basically every resort in the alps. The local bus system would drop at this big lot instead of the useless small lots at the caynon. Thank you	Roy Okurowski	Website
4828	I vote for option three. It has the least impact on our environment and the most cost effective. Zermatt has gondolas for all traffic into their beautiful mountain resort town. It is beautiful, a chance to look around while traveling to such an idyllic location. Little Cottonwood Canyon would benefit from this same option. It will be a draw for tourism and keep everyone safe.	Rebecca Roatcap	Website
4829	Why not just control how many cars go up the canyon, like they did last year. That should encourage car pooling but most importantly it will maintain the beauty of the canyon and save the environment. And/or more buses. Please don't dig up and ruin the canyon.	Terri Bingle	Website
4830	I strongly encourage the Department to move forward with the gondola. While the pros and cons relating to logistics and environmental protection for each of the options are clear at this point, as a marketing strategy consultant, I'd like to point out one more pro for moving beyond roads in LCC. Colorado has long been seen as the more environmentally considerate Rocky Mountain state. If Utah wants to continue to solidify its credentials in that department with would-be visitors, we need to make decisions like this and not have videos of the valley floor being torn up for a road expansion we all know will be overcrowded and fallible, just like the current road, as soon as it's completed.	Mike Treiser	Website
4831	I support the Gondola and base station.	Ilya Rudnitsky	Website
4832	<p>Little Cottonwood Canyon is a national treasure and is used ALL YEAR. Please do not selfishly focus only on winter sports. Bicycling up and down LCC Road is currently dangerous; yet, there is a high volume of bicyclers. The road needs two committed bicycle lanes for safety. In order to accomplish this road enhancement is the only alternative.</p> <p>With the advancement of electric vehicles, there will be few internal combustion engines on the road by 2050. Combine this fact with the visual damage to the canyon of hanging wires and gondolas, the environmentally proactive choice is road enhancement.</p> <p>Finally, the cost must be considered. USDOT dollars will have to be spent on road management anyway. By providing sheds to protect the road, road damage can be mitigated resulting in fewer dollars spent over the lifetime of the road. Any USDOT dollars spent on the road management will be on top of the nearly half a BILLION dollars spent on the gondola.</p> <p>Therefore, the only reasonable alternative is road enhancement with sheds as designated by Alternative number 2.</p> <p>Thank you, Thomas P Branch MD</p>	Thomas Branch	Website
4833	No road widening or gondola please. Yes to more buses during peak periods and yes to toll road system with AWD or 4WD or snow tires check at canyon entrance. Turn-around lane if in violation.	Ed Siebrits	Website
4834	I believe the Gondola plus base station proposal is the best solution to meet the needs of the public and protect the canyon.	Jeff Timmick	Website
4835	I support the gondola option, pending better impact study. Additionally, emergency bus service in case of gondola issues should be considered. My main concern with the gondola is that if it goes down, it's capacity increase goes to 0. Buses need to be available on short notice to handle this situation.	Jason Luther	Website
4836	I fully support the implementation of a Gondola system in Little Cottonwood Canyon. I also feel it is imperative that a parking structure is included at the base of the Gondola. If a parking structure is not included in the final plan and people are required to take a bus to the Gondola I feel the ridership would be negatively impacted.	Matthew Bednarczyk	Website
4837	Please consider the Gondola Plus La Caille base station alternative.	Moe Hickey	Website
4838	Preservation, protection, and prescience are primary for this pristine place. Thus, the ONLY reasonable option is creation of the gondola with a subterranean parking facility. Of course, a monumental secondary benefit would be the gobsmacking views of Little Cottonwood Canyon, the expansive surrounding landscape, and perhaps even a mountain goat. This forward-thinking solution will be an attraction unto itself, and will generate untold revenue for continued LCC preservation.	Brett Wilson	Website
4839	The SLCA supports the Enhanced Bus Alternative (without roadway widening), as it would have the least impact on LCC climbing (according to information provided by UDOT). That being said, there is still extensive analysis needed that considers dispersed recreation in this Alternative.	Jess Powell	Website
4840	As a born resident of Utah I'm for the gondola. Been skiing here since I could walk. The gondola is the on only actual solution to this issue, the other proposals are just kicking the can down the road. Additionally, if there are any slides, cars off the road, or road closures, the other two options will still be stuck waiting to get up the canyon.	Aaron Neuenschwander	Website
4841	I support the gondola option.	Theresa Boone	Website
4842	I support the gondola As the best option to solve the traffic nightmare at Little Cottonwood Canyon.	Mary Christa Smith	Website
4843	I do not support widening the road. I would like a train, bus or other form of mass transportation from the gravel pit. Also would like to see Highland Drive completed through Sandy to remove local traffic.	Mike Halligan	Website
4844	I support mass transportation or gondola over increasing road width. Also want to see Higland Drive completes through Sandy to remove local traffic instead of an increased lane on Wasatch.	Mike Halligan	Website
4845	Increase buses, more parking at mouth of lcc, use technology to Scan how many people are in a car and charge cars appropriately	bill novak	Website
4846	In order to preserve the climbing up Little Cottonwood Canyon I implore that you please do not widen the road. Widening the road in Little Cottonwood Canyon will destroy several of the boulders alongside the canyon road, which bring in hundreds of tourists to climb on the unique granite rock. If more transportation is needed, I support the "enhanced bus alternative" WITHOUT road widening. Little Cottonwood is a sanctuary to climbers during the hot weather, where a lot of the walls and boulders provide shaded coverage to continue climbing during the off-season of summer. Please don't destroy the all the hard work the Salt Lake Climber's Alliance has done to maintain and protect these climbing areas. Thank you.	Jessica Cerchiarì	Website
4847	As a 25 year old Utah native, who grew up skiing at Alta, Snowbird, and other Utah resorts, I hope UDOT seriously considers this initiative to preserve beautiful LCC as more and more people flock to these resorts every year. It is a long term investment that will prove to benefit my children's children.	Jacob Hughes	Website
4848	Please help improve the canyon access while preserving the mountain experience. The gondola is the best option to mitigate the 'evil question'.	Andrew Smith	Website
4849	2nd alternative for a enhanced bus with road way widening is the best option.	Maddy Warner	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4850	<p>Hello CWC,</p> <p>Tyson Bradley here with Utah Mountain Adventures, a stakeholder in the Cottonwood Canyons. We do mountain guiding, with a Wasatch-Cache-Uinta National Forest Permit since 1993.</p> <p>Dispersed Recreation: backcountry skiing in winter and rock climbing in summer, are what we primarily do. The transportation in LCC solution chosen now will directly affect our business going forward.</p> <p>Enhanced Bus Service with Road Widening and Snow Sheds is the alternative I support. It's essential to provide an incentive for people to use the buses. Having a dedicated lane for them would provide this incentive. I think carpools of at least 3 persons should also be allowed to use the "shoulder" lane, that would be uphill-only in morning and downhill-only in afternoon.</p> <p>Snow Sheds between Tanners Gulch and White Pine Trailhead will address a long-standing problem, decrease artillery use and road closures, and greatly enhance public safety.</p> <p>My main concerns with this option are two: 1. Roadside parking is essential for dispersed recreation, and must be preserved in most areas of LCC. Expansion of White Pine Parking Lot, and addition of proposed new lots is also important. 2. Climbers treasure boulders that are within 30 feet of the road. These should be preserved, if possible, when the road widening and establishment of new parking is done.</p> <p>Other notes...</p> <p>I support the transportation hub and parking structure at the Gravel Pit. Old Mill Golf Course would also be a good location for such a facility. Another one at Highland Blvd/9400 South intersection would also help.</p> <p>Tolls for private cars should be implemented. These should be highest for single-occupancy vehicles and lower for carpools. Monthly and season passes should be available.</p> <p>Similar solutions should soon take place in Big Cottonwood Canyon.</p> <p>Thank You for all of your efforts toward solving this acute problem. Let's implement these transportations improvements now! The CWC can then re-focus on long-term public access and undeveloped lands preservation</p> <p>All the Best, Tyson</p>	Tyson Bradley	Email
4851	<p>I am in full support of the Gondola Proposal. As a park city resident, I believe this is the only option that makes sense for Valley residents, tourists and committing skiers like myself. Cars on the road are the reason and that alone are the reason for my personal decline in ski days in the LCC. I used to ski in the LCC over 70 days a year, now I'm regulated to about 10 in early December before the masses arrive. I'd love to purchase a season pass again, but with the current traffic situation it's just not worth it. On a day in March in 2019, it took me 4.5 hours to go from PC to Alta. A friend of mine left PC at 5 am and was literally on a chair in Jackson Hole before I got into the Alta parking lot. That's just insane!</p> <p>I do not support the gondola or road widening options — particularly the gondola which will only service getting more folks into the ski resorts. It will funnel all users into a smaller space, delivering too narrow an impact for the great disruption its construction will cause to the Canyon.</p>	Matthew Baydala	Website
4852	<p>I am in support of tolling options and incentivizing/better equipping an enhanced bus route.</p> <p>I do not want to see LCC torn up. That would be an absolute tragedy and, to my knowledge, not the goal of this plan.</p> <p>It is a privilege to access and enjoy LCC. That doesn't mean the privilege shouldn't be shared. How accessible will a gondola really be to all socio-economic groups?</p>	Colleen Thibeault	Website
4853	I support the "Gondola Plus La Caille Base Station" option.	Luke Woydziak	Website
4854	I support the Gondola alternative to LCC	Kellen Mandehr	Website
4855	Please consider other options for Little Cottonwood canyon access Gondola option would be a better option for environment	Pamela Cengiz	Website
4856	I vote for the gondola, with La Caille Base Station. The bus options don't really solve the problem, and buses and transfers take too long - people won't actually use them. The gondola with parking onsite is fast and easy enough that people will actually use it.	Rob Horacek	Website
4857	I support the enhanced bus alternative method in order to preserve the climbing areas.	Ian Decker	Website
4858	Please create the gondola rather than widen the road to add more busses. The gondola would be safer in the winter anyway.	Cameron Skidmore	Website
4859	Gondola option	Clay Partain	Website
4860	The bus option allows access to the canyon and resorts to the most people. For many low income families, taking the bus is an affordable solution. This is a measure we should be taking to better equalize outdoor access.	Caitlin Jones	Website
4861	I believe the gondola plan is the most modern and sustainable going forward. It has the smallest footprint. Is very efficient. Is green, quieter, proven as a legitimate transportation option across the world. It would be enjoyable for all and be comfortable in ski clothing. The future is away from cars and roads, let's start that here.	Cody Cunningham	Website
4862	Do not destroy our canyons. Limit who uses the canyon roads daily. Use the lottery system on use. Prioritize use.	Lynda Reid	Website
4863	I am in support of the gondola however I would like to see parking AT the gondola location. I would also be in support of toll booths to help offset the costs of gondola.	Janalyn Osborn	Website
4864	I am in support of gondola alternative and anything to decrease vehicles of any kind up little cottonwood canyon	Camryn Osborn	Website
4865	I like the gondola idea.	Patrick Burns	Website
4866	I support	Calli Case	Website
4867	<p>Hello,</p> <p>My name is Jim Collinson. My family and I have lived in LCC for 30 years, and I have worked here as a ski patrolman, avalanche forecaster, rescuer, and dog handler for 40. The most terrifying moments of my life have been performing avalanche road rescues in the canyon, especially at night. And I've been involved in many.</p> <p>To address safety concerns and traffic congestion I feel that both a minimum of snow sheds AND a gondola are necessary.</p> <p>Snow sheds under the earliest and most frequent running slide paths will mitigate but not eliminate rescues.</p> <p>If we do not move the public in a safer manner there will be catastrophes involving many people; a high capacity gondola is necessary.</p> <p>Avalanches and snowstorms will not affect the ability to move people and goods safely and quickly.</p> <p>The current UDOT gondola proposal does not fit the bill at 1,050 people per hour with parking at the gravel pit and does not have my support, but the gondolaworks proposal appears to. If it can truly move 4,000+ people an hour and park them at the base terminal, it is a no brainer for many, not just me.</p> <p>If one must choose between gondola and snow sheds, my vote is for gondola first with snow shed plans for the near future.</p> <p>White Pine Chutes #s 1 + 2 are the earliest runners, usually. They enjoy a steep hillside above which I assume would make construction costs much less than Little Pine or White Pine. I suggest starting small with one shed covering both WP #1 + 2.</p> <p>As an aside, if one believes in climate change there will be no snow in Summit County or the temps to make it in say 20 years. Yet most of our hotels, condos, eateries, etc., are located there.</p> <p>We need to spin bull wheels not bald tires to get these guests to upper BCC and LCC where the last islands of snow will be. So, I am in full support of the idea of connecting Park City with upper BCC and LCC via a gondola in the future.</p> <p>Thank you for accepting input on a solution to a very real set of problems for us here in LCC.</p> <p>Jim Collinson</p>	Jim Collinson	Email
4868	Please refer to comments submitted by the Salt Lake Climbers alliance (https://www.saltlakeclimbers.org/news/2020/7/5/slcas-comments-to-udots-lcc-eis-draft-alternatives). I wholeheartedly endorse their analysis.	Adam Schmidt	Website
4869	There is absolutely no to widen Wasatch Blvd. First of all the canyons can't handle more traffic anyway and secondly if more access is required South than Highland Drive would be a better solution.	Bill Carrigan	Website
4870	I am in support of option 2. The reason why locals don't want to ride the bus is because it's faster to drive your own car. Why would people want to ride a gondola if it's going to take an hour? It should only take about 30-40 min to get to the resort. If it's going to take 60 then I might as well drive my own comfortable vehicle to PC or Snowbasin. Also it looks like a toll will be in effect regardless...a discounted pass for locals would be ideal (they do this in Hawaii and other tourist destinations). The icon pass also greatly added to this problem as well as the traffic in BCC...get rid of it. Lastly, I think that some responsibility should fall on the resorts to increase parking capacity with parking garages. Even if the traffic is reduced there still needs to be big enough parking lots, including the bus stops. I used to love to ride the bus but you can't find a parking spot on a powder day.	Kimberly Deem	Website
4871	Been skiing in Little Cottonwood since mid 70s. The change in demand an impact has been catastrophic	Tom Peek	Website
4872	I have been a season pass holder at Snowbird for many years and I love the idea of a gondola. I worry about traffic, safety, environmental pollution and ruining our beautiful mountains and after reading and considering proposed options I believe that the gondola is the best solution to the problem.	Amy Moon	Website
4873	build the gondola, not more cars in little cottonwood canyon	Richard Eyster	Website
4874	Gondola makes the most sense economically, environmentally and logistically	Josh O'Neil	Website
4875	After looking at the variety of options presented, I believe the La Caille Gondola provides the best option of keeping traffic out of the Canyon, lots of parking and an enjoyable ride up the Canyon. Please implement the La Caille Gondola Solution! Many thanks!	Karen Burnz	Website
4876	I support the Gondola + La Caille Base Station	Melissa Lopez	Website
4877	I support the gondola La Caille base station	Rasa Karosas	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4878	I am a 24 year veteran tour guide. Canyon visitors go to enjoy the vistas. Therefore, provide the best option that results in maximum visual experience. That would be a gondola. Think about why European countries have built majestic mountain gondolas. Building costs should not be the major issue in this monumental decision. Gondolas will provide a "Theme Park Opportunity" for us to be in a panorama, 360 degree, stunningly beautiful adventure in the Majestic Wasatch Mountains. The building cost may be high but it will become an icon of Salt Lake Valley.	michael williams	Website
4879	I support the Gondola + La Caille Base Station	Rodrigo Lopez	Website
4880	Gondola is the best all around solution. Poor air quality and inversion in UT is always a struggle in the winter. Adding more buses and Capacity for cars doesn't help and doesn't fit the needs of LCC. Gondola is the best all around choice and will improve UT.	Colton Twitchell	Website
4881	<p>First callout...</p> <p>The latest proposal by CW management to create a parking garage near La Caille is a total disaster on so many levels. The CW teams attempt to side step the past few years' EIS community involvement & feedback is just wrong, period. Notwithstanding, the proposal is completely void of the visionary leadership required to keep the Wasatch Front the jewel we know today and smells of a total money grab. NOT part of the study, stop it now.</p> <p>3 Proposals</p> <ul style="list-style-type: none"> • Bus service improvement with no additional lanes. • Bus service improvement with additional flex lane (going from 2 lanes to 3 lanes) & • Gondola. <p>Option 1 –Bus service improvement with no additional lane. Cancel this option immediately. We've already seen this DOESN'T work in Big Cottonwood Canyon. It's a dead stop. Toss it off the option list.</p> <p>Leaves us the improved bus service with an additional (flex) lane OR Gondola options:</p> <p>The Choice – Improved bus service with an additional (flex) lane.</p> <ul style="list-style-type: none"> • ONLY option that clearly mitigates upper and lower canyon traffic issues. • Decentralizes the traffic congestion; provides an opportunity to have direct bus service between many Salt Lake County locations to and from ski areas WITHOUT stops. • Provides high speed access to the upper canyon. • Super scalable. Has the agility and flexibility to solve issues all seasons. • Creates a holistic model that can service the entire canyon 12 months a year. • Is the ONLY solution for hikers, bikers & canyon aficionados from an improved safety perspective if engineered appropriately... (That good ole 3rd lane that can convert from a bus lane in the winter to a hiker biker people pathway in the spring/summer/ fall months). A dynamic vs static model. Today, bikers and hikers use a less than safe shoulder. • Provides disaster/fire danger mitigation through additional lanes up and down Little Cottonwood. • And in today's environment provides additional SLC County employment opportunities. <p>Option 3 -Gondola</p> <ul style="list-style-type: none"> •Although an interesting solution, it's a one horse pony. Neither scalable nor agile. The infrastructure is static NOT dynamic. You build it today, you live with it forever! • We haven't solved the traffic congestion problem JUST moved it down the mountain a bit. A painful consequence for poor leadership and vision. • Only addresses people to and from the ski areas; the canyon is A LOT more than Alta and Snowbird. • Fails to improve hiking and bike safety that blends itself nicely with a 3rd (flex) lane up the canyon. • Doesn't tackle summer month's traffic surges up and down the canyon for hikers and day use groups (which have been more prevalent in today's headlines and increasing yearly). • Fire management & mitigation isn't addressed. <p>Best Stephen Bissett</p>	Stephen Bissett	Website
4882	I support the Gondola + La Caille Base Station	Meissa Lopez	Website
4883	I think the path chosen should be the one that produces the least impact on the land. It sounds like adding buses would be the best way to go. Electrical buses are widely available and can reduce emissions significantly. Widening the road would cause damage to LCC as well as building a Gondola. There comes a time where we need to decide we do not need to increase capacity, just cap it, and people will find other places to go to. I do not go up LCC on snow days because I know what traffic is like, and I'll let others enjoy it. I would take the bus instead of my car if it was frequent enough to be reliable. I can't afford waiting 30 minutes for a bus, only for it to show up full and having to wait for another bus. If I know I can catch a bus within 5 minutes of when I decide to leave I wouldn't think twice, I'll save my car's mileage, gas, and tires, and ride the bus instead.	Itay Neumann	Website
4884	I am a Colorado resident and visited Snowbird in early January of 2020. The first day that we went to Snowbird (January 2nd), they got 18" of snow. We avoided the powder traffic rush because we got there at 11:30. Regardless, we wondered what happens to Little Cottonwood Canyon whenever there is awful traffic. A Gondola or Tram may be a wonderful idea to help with traffic. Driving up the canyon is cool, but taking a gondola would be even more scenic and reduce traffic. Back in February, there was a giant storm there where I heard that a lot of people got stranded because the road was closed. In this type of scenario, would the gondola also be closed and all of those people be stranded too? This needs to be looked at from every angle, but I would support a gondola.	Robert Murphy	Website
4885	I am in support of the gondola option for access into LCC. Alternative, environmentally friendly transportation is a must to maintain and improve the canyon and Mother Earth.	Peter Fleischmann	Website
4886	I support the Gondola option as the best long term solution.	Michael stringfellow	Website
4887	I support the gondola option for Little Cottonwood Canyon. I feel it is the more sustainable, economical, and environmentally friendly option. It would also reduce road rage incidents and limit the number of inexperienced drivers in the canyon.	Kirsten Benson	Website
4888	I support the Gondola option.	Michael stringfellow	Website
4889	I am very concerned that the draft EIS report does not adequately take into account the impacts of the alternatives on dispersed recreation, especially in the lower portion of Little Cottonwood Canyon.	Bill Ayers	Website
4890	Expanding the roadway and providing additional buses to the resorts is the only viable option. As noted by dozens of comments, gondolas are a terrible idea. Storms, wind, power outage and dozens of other low-probability scenarios could trap hundreds or thousands of people up the canyon without a viable way down. Expanding the roadway does not necessarily mean more traffic - historically yes "build it and they will come" is true, however as Solitude demonstrated this year with charging for parking at the resort, traffic was reduced in that canyon (or people switched to other resorts - unclear) and I can say from personal experience my carpooling increased dramatically. There is no reason this new lane or lanes shouldn't be tolled. Allow people to buy an annual canyon pass, partner with the resort and make it an additional \$100 fee for canyon access and parking. There MUST be coordination between the resorts and UDOT because if you price the parking and tolls to high you will discourage use entirely and that is the wrong course of action.	Christopher Mitton	Website
4891	There are other ways to encourage car-pooling, use of public transit and other alternative transportation sources, that don't mandate slow, inefficient and costly new transportation alternatives. Safety should always be the #1 priority of UDOT and expanding the highway to allow for greater mobility is the only way to guarantee passengers are safer on that road.		
4891	We need to think the long term benefit and preservation of our drinking water and safety first.	Leily Caz	Website
4892	I support the gondola, it's a great idea to improve our safety and is much safer than driving up and down LCC, both in terms of avalanches but also accidents!!	adriana villalobos	Website
4893	Let's look for the future not just put a band aid on the cut.	Valerie Caz	Website
4894	I am in support of the Enhanced Bus Alternative without widening the road or adding a tram. Of the proposed options, this will have the least impact on the canyon in total.	Blake Zimmerman	Website
4895	Maybe consider a train system? Something needs to be done.	Richard Trombi	Website
4896	I am a 50+ year Cottonwood Heights resident. For winter access, the gondola option seems to be the best choice by far. More costly to construct, but with lower O&M costs for the future. Less pollution, and less susceptible to extreme weather conditions. I wonder though if there is any concern about traffic problems for summer access to hiking trail heads, camping and picnic areas. If the gondola only has access points at Snowbird and Alta the traffic relief during the summer may be minimal (if indeed that is a concern).	Cliff Beattie	Website
4897	hi, I would like to see the gondola developed. This appears to have the lowest impact to the environment and recreational activities of the canyon.	Nicolr Mcdaniel	Website
4898	We need less cars & pollution in Little Cottonwood Canyon. The best option is the gondola.	Emily Jones	Website
4899	As a resident of the area, a gondola would be a much better long term solution. There would be less pollution of the canyon. Widening roads is only a temporary solution, and the environmental impacts would be sad for such a beautiful area.	Andrew Gagnon	Website
4900	100% behind the gondola and base station proposal. This seems to me to be the only solution that makes real sense. As a 31 year resident of UT and an avid skier, it's past time to take real action to save Little Cottonwood and all of UT's beautiful and unique canyons for generations to come. PLEASE! Let's take the Highway to the sky and show it can be done. Little Cottonwood Skyway, bring it on.	Allison Willingham	Website
4901	I would like to see a Gondola to LCC	Jay Goldberg	Website
4902	Please make sure you address access for climbing in the spring summer and fall and Backcountry ski access in the winter. I still would like to be able to access these areas if a bussing on gondola system is implementes. Overall I support a better way to get up the canyon to ski resorts.	Karen Bakken	Website
4903	I support the gondola given that it is the greenest option. I am sad to see the canyon's beauty disrupted by the infrastructure of a gondola, but the air quality and pollution caused by the millions of dirty cars is even worse. I would also support increased bus service provided that the buses are all electric.	Alek Konkol	Website
4904	I would love for a gondola and wider roads in LCC for more bus service too.	Henry Gates	Website
4905	I think the gondola solution proposed with a base near LCC should be considered. The road should be widened as well. It will be worth the investment even at 2x the cost.	Brian Burgfachtel	Website
4906	The problem is NOT Wasatch Blvd and the solution is not to increase traffic capacity. As a skier and resident living in the Granite neighborhood, I commute on the Blvd several times weekly and the delays are entirely tolerable. Instead, reduce the CANYON traffic volume with base parking and effective bus transfer. Those who insist on driving private vehicles should be capacity-limited and pay a hefty toll for the privilege. \$40/vehicle feels right. DO NOT widen Wasatch Blvd.	Richard Tanner	Website
4907	I think the gondola is the best option, when looking at the future, as it reduces impact and pollution from car and bus traffic.	Josiah Peck	Website
4908	Enhanced Bus Alternative preferred. Please consider parking for back-country skiers. Safety and enjoyability for cyclists also needs to be considered.	Chris Peterson	Website
4909	I support the Gondola option - as it is cost effective and requires less money for ongoing maintenance. In addition, it is the ONLY option that makes the canyon experience begin during the travel portion. This gondola would drive fly-in and regional travel - and would be utilized year around.	Blake Sarlo	Website
4910	How is it that taxpayers are supposed to foot the bill for a gondola while at the same time paying resorts for extremely overpriced passes and tickets? Since the resorts are the only entities in a position to gain anything monetarily, shouldn't Alta Ski Area and Snowbird be paying for a large chunk of the Gondola, or any road updates? Seems like locals are paying to ski twice, while the resorts are double dipping on money earned by locals.	Warren Scott	Website
4911	As mentioned in my previous comment, I favor the "Enhanced Bus with Roadway Widening". But I forgot to add a request to PLEASE charge a stout toll (at least \$40) to cars with less than 3 people for winter weekends. If individual driving is not made very inconvenient, while at the same time the bus is made very convenient, the traffic problem cannot be solved. Making the bus very convenient would involve large parking structures, where a bus will take you straight up the canyon.	Peter Veals	Website
4912	I use the canyon frequently in winter and summer for recreation. The traffic is terrible and environmentally irresponsible. I favor the gondola option. The sooner the better	Kurt Frankenburg	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
	Please pursue the gondola plus La Caille base station option.		
4913	I worry that widening the road and promoting busses will only be a ten year bandaid. Major changes are required to address our immense forecasted growth, and I believe this investment to be the most sustainable.	Craig Lindsey	Website
4914	I'll make this short as I'm sure you have a lot of comments to sift through. It is essential that the interests of all individuals, not just resort skiers, are considered during this process. LCC is one of the best climbing locations in the Wasatch. However, in order for it to remain so roadside parking access is required in various locations throughout the canyon. Prohibiting roadside parking in the name of roadway widening would greatly diminish both the access and value of this precious public privilege. Maintain access to LCC climbing.	Zac Pond	Website
4915	I think that widening the road will be a mistake. Since this impacts watershed options and the environment through exhaust pollution, there needs to be more environmentally friendly options. The Tram is the best alternative.	Marla Howard	Website
4916	Go gondola!	Michael Fucci	Website
4917	My family and I fully support the Gondola option for the canyon.	Todd Davis	Website
4918	I am a 20 year weekend veteran of Alta/Bird ski schools who used to take the bus up the canyon. When UDOT closed the bus stop at the mouth of LCC, I started driving on my own (sometimes car-pooling). #1 I am okay with a limited number of skiers/boarders in the mountains... less on-hill collisions, quicker lift lines, better powder! #2 More parking at the mouth of LCC. Increased number of parking stalls, better public transportation hub for LCC at the mouth of LCC. Keep LCC transportation separate from BCC parking. Encompassing Temple Quarry Trail parking and infrastructure into LCC mouth parking area and UDOT hub for LCC. #3 Snow Shed Alternatives make the most sense to me... tested, tried and true thought Europe. With Berms and/or with Roadway Realignment. #4 Strictly enforced "AWD/4x4 and snow tires only" policy from UDOT during winter months.	Cooper Cazedessus	Website
4919	I think this is a great idea! I've been skiing Snowbird for the last 20+ years and nothing is worse than looking down at SLC and seeing the cloud of pollution - I think anything we can do to reduce that cloud is beneficial to the mountain and to residents.	Julie Miller	Website
4920	I support the gondola option. It gives more people access, during the most conditions, but without adding more cars. Please also consider the La Caille base station.	Susie Strong	Website
4921	I am AGAINST widening of Wasatch Blvd. I live on Kings Hill Dr and at times, it is already difficult to turn onto Wasatch Blvd because of the speed and frequency of cars. I feel widening Wasatch Blvd would increase the traffic more than the neighborhood can bear. Please keep Wasatch the way it is.	Patti Asay	Website
4922	As a Utah native I support the gondola plus la Calle base station!	Megan Perkins	Website
4923	In my opinion, the only alternative that is close to the mark is the enhanced buses, WITHOUT sheds or berms in the canyon, or adding lanes to the road. The problem in Little Cottonwood Canyon seems to me to be a transit problem in need of a transit solution. Enhanced buses with routes that penetrate further into the valley communities, thus making them more usable for both residents and visitors, seem to be the most workable solution on offer at this point. Apart from that, I don't think Little Cottonwood Canyon will be enhanced by building more stuff there. Berms, sheds, and a bigger road are unnecessary. A gondola would be an absolute blight, with negative impacts for every canyon visitor or user who is not actually riding the gondola. That alternative should be thrown right out, and does not deserve further consideration.	Curtis Meek	Website
4924	Gondola!	Mel Ott	Website
4925	The gondola is the only solution that really makes sense. It's the only way to make "ski city" mean something for guests who face incredibly frustrating drives. If you build more lanes, you'll simply end up with more cars.	Robert Rosing	Website
4926	Thanks for your hard work. Is there a possibility of modifying the Gondola option by developing parking at the base of Little Cottonwood Canyon eliminating the need to transport those who park in the mobility hub to the base of the canyon? In the long-run, I suspect this would be less expensive.	Scott Pickett	Website
4927	I am against the gondola option. It's not feasible for families and I don't see it alleviating traffic enough to make it worth. It also commercializes the canyon more. The extra time it takes to get up the canyon makes it the least appealing option. I vote for increased bus service and widening the road. If there were convenient bathrooms and enough parking so many more people would be willing to shuttle up on a bus. If tolls are put in place for busy day I hope carpooling will be taken into account. Families with young kids should get first priority for being able to drive up in their own vehicles without being penalized. Are you also considering options for alleviating traffic in BCC?	Cheryl Bikman	Website
4928	The Gondola plus LaCaille base station makes the most ecological sense. It cuts down car traffic and dangerous travel conditions on the road up the canyon, and eliminates both the perceived winter need to widen the road to Snowbird and Alta and the unsightly tunnels that destroy the non-snow season views. Fewer cars and more clean buses also protect the culinary water in the canyon, and also reduce emissions harmful to both people and wildlife in Little Cottonwood Cyn. I am a Snowbird summer owner from suburban Philadelphia, PA, and the biggest appeals of spending time at Snowbird each year are being able to breathe the clean air, drink pristine water, and watch all kinds of wildlife on our hikes. Adding 2 more lanes of pavement to the road would destroy all three! The cleanest and most conservative (in the ecological sense, not the political sense) solution to the winter problem is the gondola plus the LaCaille base/parking garage. In fact, I would use the gondola (and then public transit) in the summer too, on days when we head into SLC itself to eat at the Red Iguana and visit Red Butte!	Gertrude Graves	Website
4929	Please consider the gondola alternative above all others to fix the traffic, pollution and overcrowding problems in Little Cottonwood Canyon. Thank you.	David Cumming	Website
4930	It's a great idea!	Cathy Schaeede	Website
4931	I'm not in favor of any transportation improvements up LCC. But if you just have to, then please simply improve the bus schedule. My largest comment pertains to the fact that I believe the LCC EIS is too narrow in terms of looking at the Wasatch transportation issues from a more holistic viewpoint. Big and Little Cottonwood Canyon have different transportation/access problems but should be viewed as part of a larger comprehensive system.	Paul Robertson	Website
4932	With regards to the alternatives laid out in the EIS - I am personally in favor of the enhanced bus with no additional roadway capacity in LCC. I think that route combined with the snow sheds will help to alleviate some of the "Rush hour" impacts that are created with the morning and evening commutes combined with heavy snowfall. I personally think that the widened roadway and gondola options are too intrusive for the canyon and will have negative impacts on the natural beauty and important watershed. The Gondola option is by far the most ridiculous. Transportation planners all understand that three different transfers (car - bus - gondola) will likely reduce the actual usage because of the convenience and overall commute times spent. Further - I ask if we are only considering this option as a way to focus on the primary tourism components of the canyon with the ski areas. There are a ton of other ways this canyon is used and I think create a tourist trap does not actually help to alleviate the transportation challenges. JD	Jesse Dean	Website
4933	I appreciate the thought being put into alternatives for LCC transportation. I am most in support of the gondola addition as this seems like the best way to truly add capacity to the canyon. Bus schedules and routes can still be improved with the gondola in place, but this will add an entirely new and highly efficient transportation option. The gondola will allow maximum throughput without any natural repercussions or negative impacts to the canyon itself. Thank you for your consideration!	Nick Sorenson	Website
4934	Gondala	Josh Williams	Website
4935	No toll should exist what so ever. Toll booths slow down traffic. causing pollution. From 8:30 to 9:30 close all traffic coming down the canyon buses get left lane all other traffic gets the right lane. Repeat this from 4:00 to 5:00 in the opposite direction. Sure build the Gondola but it needs to be cost efficient and pay for it's self.	Kit Eizenga	Website
4936	We prefer the gondola option with a parking structure at the base of the gondola. Dear Utah Department of Transportation,	Lawrence Hoffmann	Website
4937	I am a backcountry skier who frequently travels up Little Cottonwood Canyon (LCC) for outdoor recreation and I appreciate this opportunity to comment on the LCC Environmental Impact Statement. I support enhanced busing with no widening of Highway 210 as the best transportation option to alleviate traffic issues in LCC. Specifically, I am in favor of using low- or zero-emissions busses and vans on the current LCC road with no, or minimal, additional construction. This option has the lowest environmental impact, is an inclusive transportation system that serves dispersed users, has the lowest cost, and is the quickest way to solve the traffic issues in LCC. As you know, LCC is an important part of the Salt Lake City watershed. Therefore, it is important that UDOT pursue a traffic solution that has the lowest environmental impact. Expanding the road or installing (and maintaining) a gondola will have a larger environmental footprint than simply utilizing energy-efficient mass transit vehicles on the existing infrastructure. Additionally, buses and vans can provide year-round transportation to trailheads, serving dispersed users such as backcountry skiers. In contrast, a gondola will not stop for people at backcountry trailheads and, as proposed, would not be a year-round solution. Enhanced busing is also the most convenient option for the public, and convenience is critical to ensuring the public actually utilizes the chosen transportation solution. And, as described in the EIS, enhanced bus service is the lowest cost option, coming in at a significantly lower price than either bus service with a peak period shoulder lane, or a gondola. As a backcountry skier I urge you to consider how each alternative will affect, and serve, dispersed recreation users in addition to resort visitors. A considerable amount of the traffic in LCC in both summer and winter is people heading to trailheads to backcountry ski (in winter) or hike and mountain bike in summer. The transit system must include stops at trailheads in order to serve backcountry recreationists. Likewise, the transit system needs to originate at multiple locations around the valley so that people can access it where they live, rather than drive their car to a distant mobility hub (in which case, they'd likely stay in their car and continue the drive up LCC, not utilizing the transportation solution). Enhanced busing with no widening of the LCC road is a solution that can have an immediate impact. There is no need to wait years to construct additional, expensive, infrastructure when we can solve the traffic issues with the infrastructure that is already in place.	Sedona King	Email
4938	Sincerely, Ms. Sedona King Please go with the gondola! Preserving the canyon is important. The gondola achieves all of the goals of the project with smaller impact, less emissions, and is a better option overall.	Mike Marshall	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
	<p>I urge you to recommend enhanced busses with NO road widening. Why? The transportation system should use the best currently available technology to serve all user groups on a year-round basis. The best currently available technology that meets our criteria is a flexible and dynamic fleet of energy efficient buses and vans using a series of transportation hubs. Highway 210 should be widened to accommodate more vehicles. More vehicles= bigger problem.</p> <p>Flaw that need to be addressed in the current EIS Does not address many Mobility Hubs. People should be able to catch the bus where they live, rather than drive their car to a mobility hub to catch the bus. very little discussion of the needs of non-ski resort, dispersed users (ie anyone not going to the resort) No financial life cycle analysis. Least-expensive will cost of ~\$100 for every single Utahn. no mention of any interim solutions. We need solutions NOW! There is only token consideration given to the effects of each of the options on the vital LCC watershed, either by construction or ongoing use. little/no mention of tolling on vehicles Why no gondola?</p>		
4939	<p>Volume – the gondola as proposed will only carry ~1/3 of people heading up LCC. This means that 2/3 will still be on the LCC road, so how does installing a gondola at cost of ~\$400M make any sense if it will not help alleviate the traffic issue currently plaguing LCC Summer use- winter is the worst BUT traffic and parking in LCC is a year round issue Schedule – Backcountry enthusiasts, employees, and contractors travel the canyon at all hours. The gondola will be scheduled only the peak skiing hours. Taxpayer-paid ski lift that benefits two private companies that operate largely on public land. Fees – there was no mention of the potential costs to riders. If fees are prohibitive, the system won't be utilized. Convenience of travel – the three-step process for getting up the canyon using the gondola. You will still have to take a bus to get to the gondola. Parking/traffic – a bottom terminal at the mouth of LCC will create the same traffic and congestion issues that prompted the closure of the existing parking lot to UTA bus service. Timing – there was no discussion of the potential timing of gondola implementation beyond a generic goal of the 2050 plan. Tourism – the concept of increased tourism value was discussed in the EIS; however, this was not identified in the Purpose and Need. The very thought that the gondola would be marketed as a tourist attraction seems contrary to the purpose of a gondola as it will put more pressure on its capacity, thereby leading to more traffic and congestion issues in the canyon. In addition to the above comments, any transportation solutions being considered must take a much wider view than the current EIS. The fact that Big Cottonwood Canyon is not being considered is a mistake given that what happens in one canyon will have a direct impact on use in the other. It also seems that other key stakeholders, including UTA, have not been consulted as part of the EIS, which would seem to pose immediate issues and risks with implementing any solution. Many local recreation and environmental groups share these sentiments are are huge stakeholders in the future of the Wasatch mountains. There are more to these mountains than two resorts and tourism. Thank you for listening.</p>	Danielle Poirier	Website
4940	<p>I support the gondola proposal for little cottonwood canyon</p>	Donald Schroeder	Website
4941	<p>I live in Big Cottonwood Canyon and the traffic problem is now year-round and it's in both canyons. It truly is terrible and only getting worse. I now have to plan valley trips around high traffic times. The solution needs to be a year round option and it needs to benefit both Little and Big Cottonwood Canyons. I favor a separate bus lane with year-round bus service and with adequate parking in the gravel pit at the mouth of BCC. This would necessitate a large parking ramp. But if it's related to the base of the mountain in the pit, it could be relatively inconspicuous. Additionally, I would like to see no parking allowed along the side of the canyon roads. It is very dangerous now and I'm surprised that no one has been killed due to parking on the road and walking to the resorts or trailheads. Please DO SOMETHING! This feels like the 100th survey/public discussion on this issue. All the others have been a waste of time and money. It's past time to act! Thank you!</p>	Sally Loken	Website
4942	<p>The gondola should absolutley be considered as a new route up the canyon. Not only would it save on congestion and pollution, but it would be a fun innovative way to get people up and down quickly and safely. More lanes, more tunnels, that is just overkill in the wrong direction. Build the gondola!</p>	Trent Croft	Website
4943	<p>I support the Enhanced Bus Service Alternative with no road widening. Let's keep this canyon beautiful by not adding unnecessary gondolas or road widening.</p>	Matthew Colomere	Website
4944	<p>I believe the Gondola is the most favorable option for solving the traffic and emissions related issues in Little Cottonwood. Eliminating the need for additional buses or to expand the road, while also allowing for additional emissions reductions, it's a sure-fire way to keep actual Utahns happy and content. When travelers from all over the world come to use our canyons in the winter, it can become frustrating when you realize that a lot of the traffic congestion and emission woes are coming from out of state people. As an environmental engineer working for Carollo Engineers, Inc., the values that must be maintained for this project are the 1) amount of people the gondola will be able to carry should be highest and 2) the environmental impact associated with air quality should be lowest.</p>	CONSTANCE SMITH	Website
	<p>Thank you for taking the time to read my comment; I sincerely appreciate the opportunity! Hello, I am a Salt Lake resident and Snowbird volunteer. I've spent many hours stuck in Little Cottonwood Canyon because of traffic congestion.</p>		
4945	<p>I support the Gondola option and the La Caille base station. I think this is the best solution to preserving Little Cottonwood Canyon and providing safe, timely access to Snowbird and Alta. Thank you, John Whetstone</p>	John Whetstone	Email
4946	<p>I'm very much against the Gondola option. I think it will be a waste of money and blight the view of a gorgeous Canyon. There will be no parking at the mouth of LCC to accommodate Gondola riders. I do support enhanced Buses and hope this alternative can be implemented in a creative and sustainable way. I also support sheds to protect the road near Little Pine. Please don't hang an albatross around our necks with a stupid Gondola.</p>	Will Springmeyer	Website
	<p>Dear Utah Department of Transportation, I am an employee at Alta Ski Area and a recent backcountry skier who frequently travels up Little Cottonwood Canyon (LCC) for outdoor recreation and I appreciate this opportunity to comment on the LCC Environmental Impact Statement. I support enhanced busing with no widening of Highway 210 as the best transportation option to alleviate traffic issues in LCC. Specifically, I am in favor of using low -or zero-emissions busses and vans on the current LCC road with no, or minimal, additional construction. This option has the lowest environmental impact, is an inclusive transportation system that serves dispersed users, has the lowest cost, and is the quickest way to solve the traffic issues in LCC.</p>		
4947	<p>As you know, LCC is an important part of the Salt Lake City watershed. Therefore, it is important that UDOT pursue a traffic solution that has the lowest environmental impact. Expanding the road or installing (and maintaining) a gondola will have a larger environmental footprint than simply utilizing energy-efficient mass transit vehicles on the existing infrastructure. Additionally, buses and vans can provide year-round transportation to trailheads, serving dispersed users such as backcountry skiers. In contrast, a gondola will not stop for people at backcountry trailheads and, as proposed, would not be a year-round solution. Enhanced busing is also the most convenient option for the public, and convenience is critical to ensuring the public actually utilizes the chosen transportation solution. And, as described in the EIS, enhanced bus service is the lowest cost option, coming in at a significantly lower price than either bus service with a peak period shoulder lane, or a gondola.</p> <p>As a canyon employee and backcountry skier I urge you to consider how each alternative will affect, and serve, dispersed recreation users in addition to resort visitors. A considerable amount of the traffic in LCC in both summer and winter is people heading to trailheads to backcountry ski (in winter) or hike and mountain bike in summer. The transit system must include stops at trailheads in order to serve backcountry recreationists. 4948	<p>I would prefer the gondola. I would also like the roadway stay opened, but consider to charge for driving. And keep the buses going. That way there are options. I think expanding the roadway if not a good idea.</p>	Mary Montgomery	Website
	<p>Tolling should be put in place to encourage higher occupancy of vehicles. Toll booths present an ideal location for 100% enforcement of 4x4/AWD and snowtire/chain laws. Season passes/fast lanes for Utah residents should be made available. Additional transit centers, electric buses, and dedicated Alta/Snowbird buses should be utilized to increase bus travel.</p>		
4949	<p>Tolling, Electric buses, and additional transit centers are lower cost (environmentally and \$\$) and serve the beauty and future of the Wasatch better. I do not believe any of the proposed options realistically address the transit issues for little cottonwood canyon. The Gondola requires too many exchanges, takes too long, and will not be able to move enough patrons in the 3 hour rush. It also presents dangerous situations in the event of high winds or unplanned stoppage. It adds 2-3 additional lines before the resort lines start. Roadway widening does not increase throughput enough to warrant it's environmental impact.</p>	EVAN BARTILSON	Website
4950	<p>Get the biggest bang for the buck with busses.</p>	Mark Jensen	Website
4951	<p>As per experts, gondolas are great for places where you can't build roads, like up a steep mountain. But the road is always going to be more effective and expeditious at transporting people. Little Cottonwood has a road. Why not use this road to build a surface rail that will become the only way to go up the mountains for users. We can keep lanes to be use only by residents or employees that need to access house or work. Gondolas can only transport people from bottom to top. What about those who wants to stop anywhere else to attend trails or pic-nic area? The gondola fails the canyon and the users.</p>	Chantal Papillon	Website
4952	<p>I support the following options: 1) This was not proposed: bus system ONLY in LCC, no personal cars allowed. This would be a setup like Zion Canyon. By doing this, bus will be the only vehicles in the canyon which would reduce traffic and streamline the transportation process. More buses would be needed for this option as it would have to support all canyon travels. This would work well as long as there is a constant flow of buses. This works very well in Zion so I think it would work well in LCC. 2) Gondola. This again streamlines the transportation process by making it very easy to use and there will be a constant flow to get travels quickly up the canyon.</p> <p>I do not support the two enhanced bus system alternatives. Bus are already an option and people choose to not use the bus as it is a hassle. It is much easier to go up in a personal vehicle. People will always choose personal vehicle over bus. By having bus only or the gondola, travelers will have an option that is much easier to use and isn't battling against personal car travelers.</p>	Justine Goebel	Website

4953	<p>Dear Utah Department of Transportation,</p> <p>I am a backcountry skier who frequently travels up Little Cottonwood Canyon (LCC) for outdoor recreation and I appreciate this opportunity to comment on the LCC Environmental Impact Statement. I support enhanced busing with no widening of Highway 210 as the best transportation option to alleviate traffic issues in LCC. Specifically, I am in favor of using low -or zero-emissions busses and vans on the current LCC road with no, or minimal, additional construction. This option has the lowest environmental impact, is an inclusive transportation system that serves dispersed users, has the lowest cost, and is the quickest way to solve the traffic issues in LCC.</p> <p>As you know, LCC is an important part of the Salt Lake City watershed. Therefore, it is important that UDOT pursue a traffic solution that has the lowest environmental impact. Expanding the road or installing (and maintaining) a gondola will have a larger environmental footprint than simply utilizing energy-efficient mass transit vehicles on the existing infrastructure. Additionally, buses and vans can provide year-round transportation to trailheads, serving dispersed users such as backcountry skiers. In contrast, a gondola will not stop for people at backcountry trailheads and, as proposed, would not be a year-round solution. Enhanced busing is also the most convenient option for the public, and convenience is critical to ensuring the public actually utilizes the chosen transportation solution. And, as described in the EIS, enhanced bus service is the lowest cost option, coming in at a significantly lower price than either bus service with a peak period shoulder lane, or a gondola.</p> <p>As a backcountry skier I urge you to consider how each alternative will affect, and serve, dispersed recreation users in addition to resort visitors. A considerable amount of the traffic in LCC in both summer and winter is people heading to trailheads to backcountry ski (in winter) or hike and mountain bike in summer. The transit system must include stops at trailheads in order to serve backcountry recreationists. Likewise, the transit system needs to originate at multiple locations around the valley so that people can access it where they live, rather than drive their car to a distant mobility hub (in which case, they'd likely stay in their car and continue the drive up LCC, not utilizing the transportation solution).</p> <p>Enhanced busing with no widening of the LCC road is a solution that can have an immediate impact. There is no need to wait years to construct additional, expensive, infrastructure when we can solve the traffic issues with the infrastructure that is already in place.</p> <p>Sincerely, Ms. Kenna Tychsen</p>	Kenna Tychsen	Email
4954	I like #2, even though it is the most expensive, it moves the traffic with the least time and allows for more access points. Rich Bennion, Owner Anniversary Inns	Richard Bennion	Website
4955	I live in Sandy and recreate in the canyon multiple times a week, all year, either skiing, climbing or mountain biking. I am strongly against the gondola option for LCC transportation. It will have a devastating effect on the experience in the canyon outside of the two ski resorts. The construction of the towers will also have a large impact on the ecosystem of the creek and watershed overall, which does not seem to be addressed. Enhanced bus service is the best option, and I do support some road widening or tunnels in slide paths. Please do not destroy the natural experience in the canyon with a gondola.	George Stevens	Website
4956	The Imbalanced-lane and Five-lane Alternatives are unacceptable because they are based on encouraging high-speed through a residential area which includes eleven residential intersecting streets. 12- foot wide lanes and straightening of roadway are the wrong measures to take as they will create higher speeds, more air/light/noise pollution along with higher danger and fractionalizing of the Cottonwood Heights community. A desirable roadway through residential strip includes no more than one lane in each direction with either one REVERSE LANE or two additional lanes for BUS TRANSIT/HOV ONLY. Current and foreseeable future vehicular use does not warrant an expansion based on new commuter trends driven by Covid-19 pandemic, virtual officing, incentives for workers to live near where they work, projected housing growth focused on the west and central valley, and a projected new business epi-center located at the south/central valley area replacing previous prison space. More analysis is needed regarding egress/ingress lane design and associated roadway width on the additional six residential streets excluded from the LCC EIS.	Jeremi Godbout	Website
4957	I am in favor of the gondola option for all the reasons expressed on the Gondola works website. This makes sense and should be the only option considered if we are looking to be smart as a state and set us apart from the world.	lee johnson	Website
4958	I support the option for enhanced buses and no road widening.	China Lim	Website
4959	I would be happy with any of these proposals, but I think the Express bus with the dedicated lane is the best option. I also think there should be strict restrictions(tolls or outright bans on single passenger cars) aimed at getting people to carpool and take the buses.	Noah Flint	Website
4960	We do not need a gondola to take people up the canyon and we do not need five lanes on Wasatch Blvd! There should be parking lots throughout the valley and buses to pick them up and take them up to the ski resorts. This makes the most sense and causes the least amount of environmental impact. Let's keep our canyons as pristine as possible for all and not bog down Wasatch Blvd with tons of cars. Thanks.	Patricia Casper	Website
4961	I am I'm full support of the proposed gondola system. It appears to solve most issues with the current challenges and will be best long term	Erin Frilling	Website
4962	I supports the Enhanced Bus Alternative (without roadway widening), as it would have the least impact on LCC climbing (according to information provided by UDOT). This is the best decision with the least impact on the community to try first. I don't think we should make a huge change and impact to the current canyon, without trying this option first. Please consider that the other options can be explored if this system doesn't work. This the best choice to make at this time.	Aspen Echelmeier	Website
4963	Consider the gondola instead of more road and tunnels.	Cole Walters	Website
4964	I'm concerned that unless parking capacity restricted at the resorts and more parking is available at the base of the canyon, increasing bus infrastructure will go unused by the public. Unfortunately I feel that if people still have the option to drive, they will continue to do so out of convenience. How can you illustrate the increased convenience of using a transit oriented system over a single vehicle alternative? Great work, I look forward to seeing the results of this.	Annaka Egan	Website
4965	I'd rather have road access which would enable emergency vehicle access	Michael Obrien	Website
4966	Please consider this. It's the right thing to do for traffic, the environments, etc! Thank you!	Allison Cumming	Website
4967	<p>Dear Utah Department of Transportation,</p> <p>I am a backcountry skier who frequently travels up Little Cottonwood Canyon (LCC) for outdoor recreation and I appreciate this opportunity to comment on the LCC Environmental Impact Statement. 4968	Gondola makes sense and still maintains road access. It's a very successful strategy in Europe and, assuming its structurally viable, would be the most favorable option. The Peak2Peak gondola chair in Whistler has a massive cabin and something like that could support almost an entire bus of people.	Cristina Patrizio	Website
4969	I support enhancing bus service without road widening or Gondola.	David Shiembob	Website
4970	In favor of La caille base station and gondola option.	Kim Agostinelli	Website
4971	As a life long resident and avid skier, hiker and mountain biker I support the gondola solution	Jason Cowdell	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
4972	<p>Dear members of the Little Cottonwood Draft EIS Group,</p> <p>First of all, thank you for tackling what is a critical and daunting task for our Wasatch Mountains. It's apparent to all of us who love Little Cottonwood that the status quo is not sustainable. While many of us have divergent views on how best to preserve Little Cottonwood's character, I think we all agree that transportation is ultimately where change needs to start, and I appreciate UDOT taking the initiative.</p> <p>After attending your public meeting and listening to the proposals, I want to express my preference for the Enhanced Bus Service with Road Widening Proposal. I feel this proposal best blends traffic mitigation with preservation the canyon's character. While I don't exactly like gouging the canyon to widen the road, nothing will motivate mass transit use more than motorists watching UTA zip up a dedicated bus lane every 10 minutes. I want to emphasize that I think that a "bus only lane" is a crucial part of this plan; trapping busses in the same congestion as cars won't solve anything. I also think that widening a road and utilizing existing infrastructure may leave less of a "footprint" than a gondola. While I don't think the gondola would be that obscene an intrusion on the scenery (at least not as obscene as the "red snake" and cars parked on the side of the road), the road is "already there" after all.</p> <p>I do, however, have some comments I'd like you to consider related to the Enhanced Service with Road Widening Proposal:</p> <ul style="list-style-type: none"> • Roadside Parking - Yes, please prevent roadside parking. I suspect this may happen even sooner than any of these plans are enacted. This is a problem that will hopefully be alleviated by whatever solution is chosen, but eliminating roadside parking is yet another enticement for people to use mass transit. Now that Solitude has started charging for parking, it wouldn't surprise me if Alta and Snowbird follow suit at some point. Parking on the road will become more prevalent if that happens. • Trailhead Parking - I also think the canyon could benefit from improved but environmentally sensible parking lots near some trailheads with improved facilities, like bathrooms. Many may disagree with me on this, but as use increases, a county-wide recreation parking pass (basically expanding what's done in Millcreek) might be a good way to fund these improvements. • Pedestrian Use of Bus Lane - I especially like the idea of the bus lane being used for cyclists and pedestrians in the summer. I often ride the canyon myself and think motorists and cyclists will be in favor of this. I'm a little curious though how that would work in the snow sheds? Will they be lighted? • Summer Service - I would like to see UTA provide summer service, maybe on the weekends, for hikers. Just last weekend I saw cars overflowing from the White Pine lot before 9am. • White Pine Stop - Could a bus stop be added at White Pine for the benefit of backcountry skiers? This lot is also frequently overloaded in the winter. • Lockers at the Resort - To improve the experience on the busses, I would love to see the forest service encourage Snowbird and Alta to provide more season-long lockers for locals. I personally can manage my gear, but it's not fun and watching a parent try to wrangle two kids with ski gear on the bus is painful. The less of us that have gear on the bus, the better. <p>I would also like to add some comments on the Gondola Proposal. This would be my second choice, but here are my concerns:</p> <ul style="list-style-type: none"> • Mobility Hub on 94th - The reasoning explained at the meeting for not having a mobility hub at 94th was that larger busses could be used from the Fort Union hub and accommodate more skiers. To me, that's just creating an unnecessary traffic issue at the mouth of Big Cottonwood. For those of that live south of Fort Union, driving to the current Little Cottonwood bus stop at 94th is a major enticement to take the bus. I would like it to be an enticement for the gondola as well. • Access to White Pine - I'm not expecting the gondola to stop at White Pine for backcountry skiers, but a trail from Snowbird would be helpful. This could encourage backcountry skiers to also take the gondola. • Summer Gondola Service / Allow Bikes - Once again, traffic problems in the canyon are not restricted to the winter anymore. By allowing bikes, mountain bikers and hikers will have an efficient way to get up and down the canyon. • Alta's Gondola Alternative - As a season pass holder at Alta, I was sent an email by them (presumably to get me to comment on their behalf) that they would prefer the Gondola Proposal with a parking facility at the "base". I'm not sure what they mean by "base" but I assume they mean the mouth of the canyon. Let me be clear: I do not want a parking structure at the mouth of the canyon. This seems counterproductive as it would just add congestion at the mouth. I'm not even sure where you would put it? <p>Thank you again for accepting my input.</p> <p>Mason J. Diedrich Sandy, UT</p>	Mason Diedrich	Website
4973	I think the Gondola alternative with the gravel pit mobility hub is the best option—it's a great way to supplement mass transportation and will reduce pollution, traffic, and crowding. It's also much safer—The National Ski Areas Association reports says that riding a gondola is exceptionally safe, more safe than riding in a car (0.138 fatalities per 100 million miles transported compared to 1.23 for cars). Not to mention that the addition of a gondola will maintain the ski resort charm of Little Cottonwood Canyon.	Jannika Miller	Website
4974	Please commit to the gondola alternative for Little Cottonwood Canyon. This seems the best alternative to road traffic. We don't need more lanes and tunnels, and with them more cars, buses, and tunnels.	Eliza Hitz	Website
4975	Preserve the forest	Samara Jackson	Website
4976	I think the Gondola option is the best. It's in the middle regarding capital costs and the least amount of O&M costs. The gondola would be a great tourism attraction. As a local meeting planner, I can see lots of international and domestic travelers who attend my conferences taking advantage of the gondola. It will help decrease the amount of vehicles on the road which helps, with traffic, potential accidents during bad weather and is better for the environment. We don't need wider roads and more buses, more traffic, more pollution. More roads and wider roads never fix traffic problems. There have been studies. I can't wait to ride the gondola! I've been fortunate enough to ride gondolas and cable cars throughout Europe and it would be amazing to have one here. The views are going to be awesome!	Carrie Grant	Website
4977	Because of the negative environmental impact of auto & bus traffic up & down Little Cottonwood Canyon, plus the traffic snarls/stoppages due to weather/road conditions, I support the Gondola Plus La Caille base station solution for addressing long term transportation improvement in Little Cottonwood Canyon. Barbara Bass Moroney	Barbara Moroney	Website
4978	I'm a lifelong skier who visited Alta/Snowbird for the first time during Spring of 2019; I'm also a native Californian living in the UK. We were SO delighted to visit Littlewood Canyon and NOT drive. Took an Uber up to the lodge and the UTA bus back into town. Utah is already leaps and bounds ahead of Colorado with its bus network to the slopes. Please keep that pioneering spirit alive and build this gondola! Between SLC's shiny air terminal and this new option that's car-free we are much more likely to return as overseas skiers if there is a gondola linking Snowbird and Alta. Cities such as Munich have fantastic integrated slope to town options (like DB's ski train to Garmisch from Munich). Please consider the opinion of international visitors. Out West, the sole town that offers this easy option of car-free travel from town to slopes is Whitefish MT. (Thanks to its Amtrak link, I've skied there car-free from Seattle.) This gondola project places Utah on equal footing with Whitefish as an ideal in-bound destination for car-free skiing which appeals to European visitors who expect that. After over 20 years living in Europe, I've discovered that car-obsessed North Americans are ruining winter sports by polluting the world's most beautiful places—including Littlewood Canyon—with their gas-guzzling, CO2-spewing vehicles (often half full or worse, driven by a single driver). Please save our winters and build this outstanding, green project!	Kristofer Peterson	Website
4979	I am a go for the Gondola. Best option I've seen for Little Cottonwood Canyon. What are we going to do about Big Cottonwood now????	Tad McRae	Website
4980	I support the idea of building a high capacity gondola to shuttle skiers and hikers. Recent vehicle travel reductions related to COVID-19 have illustrated the immediate impacts less driving can have on the Wasatch Front air quality. The Carbon dioxide (CO2) emissions generated from transportation up Little Cottonwood Canyon are significantly reduced by using the Gondola. Carbon dioxide emissions are reduced by 56% or 47,000 pounds from the Gondola running 12 hours a day, as compared to 3,500 cars per day traveling the canyon. For local air quality issues and associated pollutants, the gondola option greatly reduces the amount of Nitrogen Gas (NOx), Particulate Matter 2.5 (PM 2.5) and Volatile Organic Compounds (VOC). As the energy from Rocky Mountain Power to run the Gondola is consumed outside of the Wasatch Front, there are zero pollutants generated locally from the gondola, and therefore NOx, PM 2.5 and VOCs are removed from the atmosphere, as compared to the daily pollutants that are generated locally from the tailpipe of the thousands of cars that travel the canyon.	Thomas Miller	Website
4981	As a life long resident and avid skier, hiker and mountain biker I support the gondola solution	Jason Cowdell	Website
4982	As the population of Salt Lake County increases and ski passes such as the Ikon Pass and Mountain Collective become more widely available, inevitably residents and visitors will increase engagement with the Cottonwood Canyon Resorts. One of the biggest draws for Salt Lake resorts versus Colorado resorts is the ease and accessibility of the mountains. The last two ski seasons were appalling the length of time I sat in my car to get to the Cottonwoods. It's not just Little Cottonwood Canyon that has a problem. I skied Solitude and Brighton which were equally packed with single-rider cars. Any of these three options would be better, but in order to continue to set this destination apart from our competitors in Colorado, the gondola option is the best choice. Not only does this take drivers out of the canyon, assisting in eliminating some of the terrible car exhaust we breathe every winter, but it also a unique experience in Western US resorts. While it might take a bit longer to get to the ski resort from the parking area, it is less costly to tax payers, and will come with a ton of incredible PR for the tourism industry. The gondola is the best choice in achieving the two goals set out at the beginning of this process by alleviating congestion on the road and keeping costs down. As an aside, it appears that there is also consideration of providing gondola service in the summer to keep cars from parking on the side of the road. While I typically also hike in Big Cottonwood Canyon, anyone who has attended the Wildflower Fest at Alta can share that the parking situation is horrendous in the summer and any opportunity to keep cars out of the canyon is a good thing. Please also consider a similar remediation in Big Cottonwood Canyon.	Marion Neversummer	Website
4983	Please go with the gondola option for the little cottonwood canyon. Utah's natural beauty and it's environment is what brings people from all over the world. Slapping a giant freeway up the middle of one of our most beautiful canyons will degrade that beauty and damage the environment.	Mitchell Jensen	Website
4984	My family has season passes to Snowbird in the winter where my kids enroll in the adventure academy and we send our kids to the Snowbird summer camp most summers. I also climb, hike and mountain bike in LCC. I support the Gondola proposal plus the La Caille base station.	Cliff Venable	Website
4985	I am in favor of the Gondola proposal. This project makes a ton of sense to preserve the beauty of the canyon as well as reducing carbon emissions	Scott agostinelli	Website
4986	I support the newly proposed Gondola plan which includes the La Caille Base station with immediate parking.	Ryan Tyler	Website
4987	I would be unlikely to use a gondola if it required parking elsewhere and shutting to the base.		
4987	Climbing areas must be taken into consideration in the development of these plans. I don't see much information regarding access to 4 or 3 season climbing areas in your plan. While skiing definitely brings the most money into the canyon and greater salt lake area, climbing is a huge part of the LCC community. Parking and access to climbing areas needs to be discussed.	Zach Averill	Website
4988	Thumbs up!	Scott Dietzen	Website
4989	I support the Gondola plus La Caille base station! I would not ride a gondola that takes an hour to get up to Snowbird as proposed. I ski in Europe. The fast gondola would be their solution. Lower impact on the environment while being able to see the beautiful canyon from the gondola. Also, I don't think that I would use the bus system if it was in place.	Kim Stringham	Website
4990	I am writing in support of the new proposed gondola project! I worked for Snowbird for nearly 20 years from 1999-2019. This is an issue near and dear to my heart. The gondola makes perfect sense for our community. I am now the Director of Sales for a hotel located at the base of Big and Little Cottonwood Canyons. This would be a huge plus to promote to our future guests. Our property runs at an extremely high occupancy during the ski months. As a member and supporter of Ski Utah for many years and an avid ski enthusiast, I have followed updates about this project for some time. I am happy to see we're finally getting closer to a firm decision. GONDOLA---HELL YES!	Ruth Naccarato	Website
4991	I fully support the goldola. Although from the East Coast, I spend several weeks each year visiting my daughter in Sandy. I look forward to an ecological, economical and practical solution to the LCC transportation issues that exist today and believe that the gondola is the best solution, BY FAR.	Phil Silverman	Website
4992	Considerations for both backcountry and Lower canyon use need to need addressed. Specifically climbing. The resorts are a very small part of little cottonwood and have the most irresponsible users. Please be most considerate of local frequent users of the whole canyon	Matthew Conn	Website
4993	I support the less clogging of the canyon	Ashley Larson	Website
4994	I support the Gondola plus La Caille Base Station modified option. I think it will improve air quality and traffic issues by reducing cars on the road. Please consider this option put forward by gondolaworks.com.	Lauren Bolger	Website
4995	Little Cottonwood Canyon is a wonderful place; my favorite! The problem we face is overcrowding due to its popularity. The result is excessive traffic. The three EIS alternatives are good mitigating solutions, but do not address the main problem. Consider a queuing idea such as even/odd license plates for entering the canyon on peak days. It would be like the Covid-19 mask issue; everyone deserves the opportunity to recreate in our beautiful canyons, but overcrowding has a detrimental affect on all activities. Just a suggestion.	Chuck Leaghty	Website

COMMENT NUMBER	COMMENT	FULLNAME	COMMENT SOURCE
	The most important metric for getting people out of their cars and onto a public transit option in LCC is that public transit provides faster service to the resort. As long as it is (perceived to be) faster to drive a SOV up the canyon, transit ridership goals will not be attainable. The only proposed option that hits this critical metric is the "Enhanced Bus Service in Peak Period Shoulder Lanes." While this approach has the undesired need for expensive and impactful roadway expansion, it is the only approach that will actually move a significant number of canyon users out of their cars, because they can finally get up and down the canyon faster than in their personal autos.		
4996	Another benefit of expanded bus service option, is that it provides future flexibility to serve the non-resort stakeholders who have been largely ignored in these three proposals. While the ski resorts may be the primary drivers of traffic up the canyons, they are not the only stakeholders who suffer its effects. The impact of resort caused traffic is substantial to other canyon users, including climbers, hikers, and backcountry skiers. Not only are these activities essential means of recreating in the canyon, but these users are also the taxpayers who will be funding its construction. Of all options, the gondola does the most to serve the interest of ski resorts and the least for non-resort users. It is not the taxpayers' responsibility to provide the resorts with a fancy amusement ride that they can prominently display in their advertisements. As the slowest option for travel to and from the resorts, it will be the least effective means of incentivizing transit use (without resorting to a ban on personal autos in the canyon that forces people onto the gondola). Other detractors are that the gondola has a fixed capacity, it cannot be reconfigured in the future to accommodate mid-canyon users, and it still requires the roadway as a backup during maintenance. The gondola also does not seem as robust as a bus system; if the gondola goes down for service the whole transit system is shut down, but if a bus breaks down only one bus is removed from service. Busses also do not require expensive and risky downloading procedures in the event of equipment malfunction. Given the frequency of chairlift breakdowns at the resorts, these issues do not seem unlikely for the gondola. Additional points of concern: <ul style="list-style-type: none"> • Wasatch Blvd widening does nothing to improve peak service in the canyon if the 2-lane canyon roadway is left in place. All this does is move one bottleneck from the intersection of Wasatch Blvd and N Little Cottonwood Rd to the mouth of the canyon. Wasatch Blvd widening must be paired with canyon roadway improvements like the PPSL to improve service in the canyon. • Either option needs to have both north and south mobility hubs. It is unproductive if users traveling from the south are required to drive to the BCC gravel pit to access transit options. • It is unclear how the proposal to eliminate wintertime roadside parking above Snowbird Entry 1 would apply to the Town of Alta. Much of the parking areas in the TOA are extensions of the roadway. 	Jared Zitnay	Website
4997	I would like to comment requesting alternatives two or three. I believe that people would choose to use the bus system if there was a special bus lane so they knew they would not be getting stuck in traffic during peak hours. Or, investing in a gondola to the top of LCC would greatly reduce traffic although the cost may be a little bit extreme but the environmental impact of not having as many vehicles going up the canyon could be very impactful. If alternative number one is chosen I don't believe it will help the traffic situation much because there will still be so much traffic backed up in the canyon that riding the bus will not be helpful to skiers and snowboarders trying to get to the ski areas more than driving their own cars.	Emily Wise	Website
4998	As much as I like the idea of the gondola, I ABSOLUTELY oppose the idea of taxpayers like myself paying for it. There is zero benefit to me or my family. We never go there, we never ski or snowboard and it is WAAYYY too expensive. I think the privately owned resorts and residents should pay for the majority of it. Maybe charge a fee to anyone using the canyon, but NOT ME!!! I literally NEVER GO THERE, WHY SHOULD I HAVE TO PAY FOR IT? THERE IS ZERO BENEFIT TO ME!	Chandra Wolf	Website
4999	Thank you UDOT and all the stake holders for your efforts in addressing the traffic issues in LCC. This is a critical issue for all of us to address and find a winning solution. After reviewing the EIS and various proposals, I am in strong support of the Gondola/LaCaille option and feel it is clearly the best option from an economic, environmental and life safety standpoint. It will also preserve the beauty of the canyon and provide a great amenity for both locals and visitors to LCC and the resorts. Let's make it happen! Thank you.	Jon-Eric Greene	Website
5000	The gondola will only increase users in the canyon. Parking at the base of the canyon will be a mess, not including those who will need to drive up canyon to tour, then hit the resort after, will we require those to drive back down? three lanes plus bus seems to be the only good way to do this. What about summer activities? Hunters in LCC need access to the canyon at pre-dawn hours, well before the gondi will run, unless it is run 24 hours.	Perry Hall	Website
5001	Aside from busses, no non-essential vehicles up-canyon during winter months, + la caille gondola	Colton Rice	Website
5002	I had a class where we studied these same transport options and split into groups to argue our points. At the end of the arguments, it was found that busses would be the best solution since we already have everything we need. A gondola would just cost way too much and how would you be able to stop at specific parts of the canyon to hike or anything, it just isn't practical. The only problem with busses is that as of right now, there just aren't enough parking spots close to the canyon. There aren't a lot of people who want to park far away from the canyon and take the bus up. If you want the bus option to work, you need to add parking garages at the parking areas near the base of the canyon. If this can happen, then there will be more people willing to park there and take the bus, but the busses will have to come at least every five to ten minutes, depending on the time of day and time of year. I think busses are the best option, but there need to be a lot more things put into play then there are as of now for the busses to be a viable option for people. Nobody likes to be on a bus that is packed shoulder to shoulder.	Christian Riley	Website
5003	I support Gondola Plus La Caille Base Station	William Hubbard	Website
5004	I support the gondola option due to decreased annual costs combined with the lowest annual environmental emissions impact.	Mark Price	Website
5005	I am in favor of the Gondola option for many reasons. In the long run, I think it will have the least environmental impacts. By reducing traffic there's a reduction in carbon emission as well as chemicals and other micro-pollutants that buses and cars offload through normal wear and tear. Fewer accidents including accidents with wildlife. Economically I think the Gondola will be a huge asset. It will in and of itself become a tourist attraction being a novel transportation experience and one with scenic views. Ultimately the Gondola resolves and issue with a win-win-win solution.	Tim Brown	Website
5006	I support the enhanced bus with road widening. I think we need a system to count cars entering and exiting the canyon to determine when parking has reached capacity. Don't allow more cars up the canyon than there are parking spots. Thank you	Thad Golding	Website
5007	Overall, I'm very concerned that the draft EIS report does not adequately analyze the impacts of the Alternatives on dispersed recreation, especially in the lower portion of Little Cottonwood Canyon. We need to advocate for year-round dispersed recreation access to climbing, backcountry skiing/snowboarding, hiking, snowshoeing, birdwatching, wildflower sporting, for the poets and artists, Mtn bikers. Resources with transit solutions that accommodate appropriately for traffic safety as well as current and future access to climbing resources is a major concern. Growth trends in backcountry activities are increasing as is the use of outdoor resources in LCC. This use needs to be appropriately considered in UDOT's Alternatives.	Josh Allred	Website
5008	Based on the design drawings, I see no benefit from this project. It is not a feasible solution to bring more traffic in/out of the canyon because the bottleneck of the ski traffic is always in the canyon! If the road in the canyon will remain the same, there's no way more cars can travel to the canyon. It has been a one-lane parking lot during peak ski season. It will be a three-lane parking lot if the new design passes. As a local resident, I feel that the current road has enough capacity to handle regular local traffic. If no benefit is expected to ease the traffic condition during peak ski season, why bother wasting the money and disturbing local residents? Thanks.	Yan Wang	Website
5009	I want to see a third lane open only to busses going the overwhelmed direction. This creates a major advantage for winter users to take the bus, which does not exist now. Taking the bus is currently a service as opposed to an advantage.	Chase Shane	Website
5010	I don't really like any of the proposed solutions. I am a back country skier and all of these would severely limit my use or cause me to do a lot of walking along the side of the road to get to where I Backcountry ski. The solution must include provisions for those who use the canyon outside of the resorts...at many points along the canyon. I know that many climbers have the same issues.	Kelly Griffiths	Website
5011	Gondola!!!!	Tanner Haycock	Website
5012	Unless the gondola stops at all of the popular trailheads, it's not going to alleviate as much traffic as it claims, summer or winter. It will only serve the resorts. That and it permanently impacts the canyon with even more development. I think the answer is limiting the amount of passenger cars going up and develop a robust and reliable bus system with more park n rides in the valley. If you're a backcountry user, just ask the bus to stop to let you off at a trailhead. Also, developing to accommodate more cars is a terrible ideas, we need to develop a system that eliminates most cars going up and down the canyon	James Roh	Website

5014	Hi UDOT! I want to indicate my support for the Gondola Plus La Caille Base Station Alternative. This option will reduce traffic and congestion in the canyon, thereby reducing travel times to Snowbird and Alta, which the other alternatives do not offer. The Gondola will also decrease air pollution by limiting the number of cars and busses idling in the canyon on busy and/or snowy days, will not require road widening and further encroachment on wilderness areas, and is a year round solution for transportation in LCC. The Gondola also increases safety by reducing risks to car and bus passengers due to avalanches in the canyon which happen every year and which currently close the canyon to all traffic, either up or down. Overall, the Gondola option offers the most cost effective, environmentally friendly, and tourist/local friendly option for future transportation in LCC and I cannot indicate my support more strongly. Thank you! Danielle	Danielle Beatty	Website
5015	Started skiing Little Cottonwood first Alta then Snowbird in the early 70s. Now shorter seasons and increased traffic have greatly diminished the anticipation driving up for a ski day. Most of us would want the canyon to never change to preserve those earlier years' experiences BUT the current winter gridlock really cancels any enjoyment. The gondola would be the least impact on the canyon and avoid huge parking lot expansion at Alta and Snowbird if UDOT were to bulldoze its way to the top. We will not like to see lift towers in the canyon but far less environmental degradation than road widening and massive rock cuts.	peter finn	Website
5016	"I support the gondola"	Meikjen Larson	Website
5017	I have heard about the La Caille base station and I support the gondola.	Kelly Williams	Website
5018	Do not widen any of the roadways. The traffic is only heavy during ski season. It is not worth the millions of dollars to widen the roads for such periodic problems. The rest of the year is no problem!! I live 100 yards off Wasatch and know this to be true. Expand Bus Service if anything. The population isn't going to go down. The Southeast Valley needs more public transportation access. Expand Bus service!	Sonya Campana	Website
5019	I espouse the views of the Salt Lake Climbers Alliance. Please make consideration for their recommendations	Marni Robertson	Website
5020	Please consider the SLCA's comments. They're views resemble my own on this issue.	Paul Robertson	Website
5021	I propose gondola alternative to remove traffic/congestion/emissions	Donald bly	Website
5022	Projected Vehicle Flow RE Wasatch Blvd Expansion: UDOT's Imbalanced-lane and Five-lane Alternatives are unacceptable because they are based on encouraging high-speed through a residential area which includes eleven residential intersecting streets. 12-foot wide lanes and straightening of roadway are the wrong measures to take as they will create higher speeds, more air/light/noise pollution along with higher danger and fractionalizing of the Cottonwood Heights community. A desirable roadway through residential strip includes no more than one lane in each direction with either one REVERSE LANE or two additional lanes for BUS TRANSIT/HOV ONLY. Current and foreseeable future vehicular use does not warrant an expansion based on new commuter trends driven by Covid-19 pandemic, virtual officing, incentives for workers to live near where they work, projected housing growth focused on the west and central valley, and a projected new business epi-center located at the south/central valley area replacing previous prison space. More analysis is needed regarding projected commuter vehicle numbers and flow based on projected developments to the southwest where prison once stood	Donna Anderson	Website

5023	<p>My name is Quinn Graves and I am a Summit County resident who recreates in Little Cottonwood Canyon on a regular basis. As this EIS and transportation plan moves forward, I would love to see an enhanced bus system implemented with NO road widening. Why? Because transportation systems should use the best, currently available technology to serve all user groups year-round. Using a fleet of energy-efficient vans and busses to transport users in the canyon would meet these criteria. Additionally, Highway 210 should NOT be widened to accommodate more vehicles. More vehicles on the road will create bigger problems such as more cars sliding off the road, leading to increased congestion.</p> <p>There are also many flaws that need to be addressed in the current EIS. First, the document doesn't address many "mobility hubs". I want to see recreation become more accessible in LCC. People should be able to catch the bus close to where they live, rather than drive their cars to a mobility hub near the mouth of LCC. Second, there is little to no discussion about the needs of the non-ski resort, backcountry users. These users value the beauty and opportunities in this canyon, and their needs must be included in the EIS. Third, there is no mention of interim solutions to the LCC traffic problem. We need solutions now, not in a year. Finally, there is not enough focus on the impact that road widening or installing a gondola will have on the vital LCC watershed.</p> <p>I would also like to explain why installing a gondola is NOT the first transportation "solution" that should be implemented.</p> <p>-As stated earlier, transportation solutions should use the best, currently available technology. So, increased bussing should be implemented before a gondola is ever created.</p> <p>-The proposed gondola will only carry about 1/3 of the people traveling in LCC. 2/3 of those people will still be on the road. So, a \$400M gondola doesn't make sense if there will still be traffic in the canyon.</p> <p>- The EIS does not address summer use of the gondola. Parking in LCC is a year-round issue.</p> <p>- There is no mention of the potential fees associated with gondola use. Skiing and other outdoor activities already have so many barriers to entry, like cost. If the expense of a gondola is high, people will not use it and this model further contributes to increased inequality in outdoor recreation.</p> <p>- There is no discussion of the timing of gondola implementation. This must be addressed further so building plans are transparent for the public.</p> <p>Thank you for your time and I hope you consider my comments.</p>	Quinn Graves	Website
5024	<p>Although traffic can obviously be congested at times, I feel all of these proposals are made solely for the benefit of the already well funded ski resorts in the canyons. MANY people use these canyons daily, including in the winter outside of the resorts. However these solutions are only meant to help for the very few days out of the year (10, maybe?) where things get extreme, a weekend with powder. Why are tax payers paying for a problem caused by the ski resorts? I feel the solution should be put squarely with them, be it with limiting guest count, higher costs, whatever they determine necessary. I also visit the ski resorts very often and have been a season pass holder every year, in both canyons. However, I do not understand the desire to upend the entire Wasatch for a few bad days where the resorts get flooded (with money). The Gondola is laughably obtuse. I am all for tons of extra buses and other less impactful methods...but I live next to mountains because they are wild, not a resort.</p>	Ryan Gillespie	Website
5025	<p>Absolutely NO to any toll for locals. You can roll the heck out of any one with an IKON pass. Local season pass holders should get free access. I personally like the gondola with a Lacaille base with parking. Although I would probably continue to drive up provided there is no toll. Many of us older skiers only ski until early afternoon freeing up some of the parking stalls.</p>	Collier Reid	Website
5026	<p>I support busses with or without lane expansion. I don't want a gondola in LCC</p>	Joseph Hastings	Website
5027	<p>For community safety & health, we seek to have Cottonwood Heights' stretch of Wasatch Blvd treated by UDOT as a "street" (narrow lanes, wider bike/sidewalks, crosswalks, slow speed) not a "road" (high speed travel to get from one spot to another spot).</p>	Paula Breen	Website
5028	<p>After attending meetings with UDOT, I felt confident that those representatives were being truthful and sensitive to keeping Wasatch Blvd and the surrounding neighborhoods peaceful and safe. Now I'm feeling very much lied to and placated! Please honor your stated intentions to reduce the speed to 35mph and limit the number of lanes.</p>	Paula Breen	Website
5029	<p>Dear Utah Department of Transportation,</p> <p>ENHANCED BUSES, NO ROAD WIDENING.</p> <p>I am a backcountry skier who frequently travels up Little Cottonwood Canyon (LCC) for outdoor recreation and I appreciate this opportunity to comment on the LCC Environmental Impact Statement. I support enhanced busing with no widening of Highway 210 as the best transportation option to alleviate traffic issues in LCC. Specifically, I am in favor of using low- or zero-emissions busses and vans on the current LCC road with no, or minimal, additional construction. This option has the lowest environmental impact, is an inclusive transportation system that serves dispersed users, has the lowest cost, and is the quickest way to solve the traffic issues in LCC.</p> <p>As you know, LCC is an important part of the Salt Lake City watershed. Therefore, it is important that UDOT pursue a traffic solution that has the lowest environmental impact. Expanding the road or installing (and maintaining) a gondola will have a larger environmental footprint than simply utilizing energy-efficient mass transit vehicles on the existing infrastructure. Additionally, buses and vans can provide year-round transportation to trailheads, serving dispersed users such as backcountry skiers. In contrast, a gondola will not stop for people at backcountry trailheads and, as proposed, would not be a year-round solution. Enhanced busing is also the most convenient option for the public, and convenience is critical to ensuring the public actually utilizes the chosen transportation solution. And, as described in the EIS, enhanced bus service is the lowest cost option, coming in at a significantly lower price than either bus service with a peak period shoulder lane, or a gondola.</p> <p>As a backcountry skier I urge you to consider how each alternative will affect, and serve, dispersed recreation users in addition to resort visitors. A considerable amount of the traffic in LCC in both summer and winter is people heading to trailheads to backcountry ski (in winter) or hike and mountain bike in summer. The transit system must include stops at trailheads in order to serve backcountry recreationists. Likewise, the transit system needs to originate at multiple locations around the valley so that people can access it where they live, rather than drive their car to a distant mobility hub (in which case, they'd likely stay in their car and continue the drive up LCC, not utilizing the transportation solution).</p> <p>Enhanced busing with no widening of the LCC road is a solution that can have an immediate impact. There is no need to wait years to construct additional, expensive, infrastructure when we can solve the traffic issues with the infrastructure that is already in place.</p> <p>Sincerely, Mr. EJ Orschel</p>	EJ Orschel	Email
5030	<p>I prefer the gondola.</p>	Robin Chalhoub	Website
5031	<p>Whatever we end up doing, it needs to be a long term solution. Adding more busses (whether just in general or with their own lane) still adds congestion and has more of an impact on the environment. Adding in a gondola is optimal, with limited canyon access to drivers. I think that it will have less of an impact on our environment in the long run due to emissions even though the infrastructure needs to be put into place. I think it's getting to a point where that is the only way to manage the crowds effectively. Please don't just add more busses. I've lived here my whole life and grew up skiing LCC, and I'm getting sick of how much traffic I'm having to sit in. I backcountry ski as well, and hope that you will keep us in consideration when it comes to stops/road access.</p>	Jackson Cheney	Website
5032	<p>Please add enhanced bus service. No road widening or gondola! Thank you!</p>	Nick Charles	Website
5033	<p>I think UDOT should definitely pursue the option for a gondola. It would be the best long term investment in my opinion. It would allow for better summer access and over all lower the traffic in the canyon. The problem with any of the bus options is encouraging people to use the bus on their own. Without tolling, or charging for parking, or eliminating street parking, people will still prefer to drive up to the resort. Since skiers are familiar with gondolas, they would be most inclined to use it. Also all of these options should add some transportation option for the summer time. There is less congestion in the summer but it won't be long before that changes since the Utah population is growing exponentially.</p>	daniella birch	Website
5034	<p>Gondola</p>	Laura Alley	Website
5035	<p>I support the enhanced buses because they have the minimum impact on the canyon environment while providing the maximum return and access</p>	Louree Houston	Website
5036	<p>Please find attached our drinking water source protection and related comments from Sandy City to the Little Cottonwood Canyon UDOT roadway improvements EIS. We look forward to your incorporation of the issues identified therein with your project. Please contact me, or Ryan Kump, Sandy City Engineer, if you have any questions or concerns.</p> <p>Best regards, Tom</p>	Tom Ward	Email
5037	<p>looks like a good plan</p>	BECKER EDWARD	Website
5038	<p>I appreciate the detailed analysis. I find the combination of minimal road enhancements, improved bus service, along with the gondola service to be an optimal solution. Let's work to reduce the number of private vehicles in the canyon.</p>	Alan Rindlisbacher	Website
5039	<p>Please reduce the number of cars driving in the canyon, many now have only one passenger, by mandating carpools, bus services and gondolas to get people to the resorts year round. Parking structures need to be provided that are safe and well lit.</p>	Lori Komlos	Website
5040	<p>Do not widen roads. Please create this gondola system!!</p>	Annie Vriens	Website
5041	<p>Increased electric bus service with gondola is the best. Road widening and snow sheds in the LCC will have longer lasting environmental impacts vs a few gondola towers. The gondola can also run during canyon closures. This option along with consideration for tolls during peak times (weekends and powder days) will ensure the decrease in traffic and increase in responsible usage of the canyon.</p>	Sean Collins	Website
5042	<p>I support building a gondola up LCC with stops at Snowbird, Alta...and then continuing up and over Twin Lakes Pass into upper Big Cottonwood. This would ease congestion in both canyons. I support the gondola to start at the gravel pit at the base of BCC where this "pit" can be transformed into a commuter hub with ski shops, coffee shops, bars and restaurants. (Apologies to those concerned about privacy issues as the gondola travels overhead south from the base of BCC to LCC). This does nothing to address summer parking and congestion (I counted 150 cars on the road near the full White Pine parking two weeks ago)...and so would support continued running of the gondola in the summer with stops at Tanner's and White Pine as well. Thanks.</p>	Drew Hardesty	Website

	<p>July 7, 2020</p> <p>Comments on Little Cottonwood Canyon Environmental Impact Statement SR 210 – Wasatch Boulevard to Alta, Utah Department of Transportation, June 8, 2020 by Michael Allegra, President, KivAllegra Consulting</p> <p>Overall</p> <p>The train is best overall long term, year-round and cost-effective solution. It should not have been eliminated during the screening process. It appears that they chose one of the most expensive rail design options while grossly exaggerating the capital cost estimates and compared it to the simplest configuration and cheapest gondola solution. The report does not have the Cog Railway on a level playing field with the other alternatives. This mismatch of alternatives scenarios needs to be rectified or could be grounds for an environmental challenge.</p> <p>A life cycle cost analysis is the best tool to compare a diverse set of modes and should have been prepared.</p> <p>A 9-mile Cog Railway is being completely rebuilt in Pike's Peak, Colorado for a total cost of \$110 million or \$12 million per mile. This report uses \$138-\$169 million per mile.</p> <p>A train can be built with minimal construction impacts as seen by the real-world experience in constructing the Pike's Peak Railway.</p> <p>A train is the most environmentally friendly for air quality, watershed quality, energy consumption, congestion relief, economic development, land use management, pedestrian compatibility, and visual aesthetics, and is the most consistent with the Canyon's core values. The impacts to our wilderness areas and boundaries are unclear.</p> <p>The rail solution has the best potential for a one-seat ride from the Salt Lake International Airport or downtown Salt Lake City and would allow transit access to ALL the residents in the Wasatch Front via Trax or the Fronrunner.</p> <p>A Cog train has the highest potential carrying capacity of all the modes and can easily be adjusted for peak vs off peak demand, and it can service intermediate stops. A gondola does not have this ability.</p> <p>The report suggests a gondola every 25 seconds or a bus every 2.5 minutes or a train every 15 minutes. In the canyon, in both directions, this means a gondola every few hundred feet or a bus every quarter mile. Imagine the visual aesthetic impact of these alternative versus that of two trains every hour.</p> <p>The gondola has no heat or air conditioning. It is primarily a ski resort chair lift. Evacuating passengers from gondola cabins is extremely dangerous, especially in inclement weather.</p> <p>Although a massive park and ride lot for 2500 cars is recommended for LCC needs, the report ignores the parking needs and requirements for BCC. Stalls for up 5000 cars might be necessary for both canyons and all users.</p> <p>Technical & Policy Issues</p> <p>Most major capital transit investments require a long-range travel forecast. The analysis picks a 2050 horizon year but makes no assessment of what the needs are. Additionally, in one place, it refers to a 2050 auto count which only represents a 1% growth rate per year. This has NEVER happened in Utah since we started keeping traffic counts. Typically, in Utah, we have had a 2% population growth rate and a 5-6% increase in traffic annually. Any forecasts that suggests a 1% growth rate are suspect and could be challenged.</p> <p>All major transit capital projects look at year-round use. What do you do with the vehicles and equipment if only used in the winter? Do you shut the gondola down in the summer? In the past, UTA has been required to use its ski buses during summer months. This cost should be factored in. It is inappropriate and bad public policy to plan a major public investment just for only a brief part of the year without a discussion of the use of this equipment at other times.</p> <p>The only fair comparison between modes is Life Cycle Costs. Especially when the horizon year is 2050. Why wasn't this done? It is standard industry practice. In this time period a bus would need to be replaced 3 times whereas a train is able to last much longer. Many rail systems are 50+ years old. Additionally, the biggest costs in transit is the cost of labor. A bus carries 42 passengers with 1 operator, a train carries 240 passengers with 1 operator. Typically, the costs for operations and maintenance are greater in a 30-year time frame than the initial capital costs. The failure to address Life Cycle Costs seems to be a systemic failure of the report and it questions the validity of the entire report.</p> <p>The report poorly and myopically addresses the purpose and need. For example, it only refers winter service. But this is not in the purpose and need. The 30th highest traffic count may work for highway design but is not relevant for transit planning. As another example, the purpose and need talks about safety but the only real measurement they use is the protection from avalanches. It's possible that this was written when UDOT was just looking for short term solutions and not sufficiently thought through for larger capital expenditures. This appears to be a major process weakness and could be subject to a legal challenge.</p>
