

Comments on the Final Environmental Impact Statement

Little Cottonwood Canyon S.R. 210 | Wasatch Boulevard to Alta in Cottonwood Heights, Sandy, the Town of Alta, and Salt Lake County, Utah

Volume 1: **Final EIS Comments Master List**

Utah Department of Transportation

UDOT Project No. S-R299(281)

Submitted pursuant to

42 USC 4332(2)(c) and 49 USC 303

The environmental review, consultation, and other actions required by applicable federal environmental laws for this project are being or have been carried out by UDOT pursuant to 23 USC 327 and a Memorandum of Understanding dated May 26, 2022, and executed by FHWA and UDOT.

As of the publication of this document, UDOT has not reviewed, in detail, all of the comments received on the Final EIS. Comments are essentially verbatim with personal information and rude or vulgar language redacted or removed. Be aware that some inappropriate language could have been missed. In addition, UDOT did not verify the safety or security of any hyperlinks that were included in the comments; please use caution if clicking on any of these links.

The comments are separated into four volumes:

Volume 1 contains a comment identification (ID) number for all comments received during the Final EIS public review and comment period. Volume 1 also contains the majority of the comments that were submitted through the project website, emailed, texted, or received via voicemail.

Volume 2 contains some of the longer comments that were automatically truncated due to cell character limits in the Volume 1 comment table. These longer comments are presented in their entirety in Volume 2.

Volume 3 contains comments that were received as attachments to an email. These comments contain the comment ID found in Volume 1. Many of these comments are also found in Volumes 1 and 2.

Volume 4 contains the comments that were mailed to UDOT. These comments also contain the comment ID found in Volume 1 along with the text "mailed comment" in the comment column.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25267	David Lyman	I prefer the gondola solution and hope it gets chosen.
25268	Perry Hall	The gondola is not what the people want. Without extensive parking infrastructure at the base, and along Wasatch Boulevard, with improved bus service, it will be a failure. IF this measure is imparted, please make the resorts foot most of the bill, not the taxpayer as this project solely benefits the resort traffic.
25269	Kevin Lockwood	you
26703	Sussette Newsom	Gondola B proposal seems to be the best choice!
25270	Kent Wise	Gondola is the way to go!
25271	Cj Heaney	I believe that something major needs to be done with the overcrowding of the Cottonwood Canyons, however I think there are a multitude of things that can be tried before a permeant mark if left in LCC. I think the buses should be attempted to be maxed out, more parking in the canyon for bus access and possible tolling (besides employees and homeowners) should be implemented. I hope the current resources will be exhausted before large scale projects are started.
25272	Christopher Balun	I'm a Sandy Resident and I love the Gondola!
25273	Andrea Andersen	After watching the video and researching the current decisions, I hope UDOT implements VERY AFFORDABLE summer service. If we have a \$500million gondola, it should be year round. I would also like to see Snowbird and the Town of Alta or the Alta Lift Company kick in to help pay.
25274	Hunter Brown	I see the statement that UDOT doesn't have funding for any of the additional or side projects relating to bussing or trailheads, etc. And yet the gandola proposition is going to cost half a billion dollars. Plus millions every year. I think it would be useful to see how this will be paid for and the benefits of this proposition to all parties involved. This has nothing to do with safety or efficiency at the end of the day. It is a cash grab by the resorts. You are making the mountains more crowded and less fun for locals. And this has potential to effect locals year round. Not just the few powder days that we see.
25275	Abby Miles	This EIS is a corrupt procedure. The gondola will clearly have a greater environmental impact than any bus system. There will be a needless plowing of trees in order to facilitate a gondola that very few will use. Many people will still continue to idle their cars in the canyon to race for first chair. Buses are a far better alternative to take cars off the road. Charge a congestion/entrance fee to private cars in order to subsidize buses. More buses more frequently is the best way to mitigate the issue. People don't take the busses at the moment because they are cramped and uncomfortable. If you run more buses, this will not be as much of a problem, especially if they are cheap/free to skiers. The gondola is a big waste of public funds, and I think the decision needs to be reconsidered.
25276	Bayley Scholz	Keep the Gondola out of LCC. Place a toll booth at the bottom of the canyon to encourage carpooling.
27578	Adrien Covington	The gondola is the correct choice!
27580	Sarah Johncock	<p>I'm happy the gondola is the preferred option, as I feel this will actually address the bottleneck effect in the canyon.</p> <p>HOWEVER, the traffic problem lies in the canyon and not on Wasatch Blvd. Wasatch is simply a product of the problem. If you already plan on increasing bus service and the long-term plan is the gondola, why is widening Wasatch necessary?</p> <p>Wasatch Blvd is already dangerous to travel along (via car, bike or pedestrian) or for my children to cross to get to the park safely, based on the current number of lanes and speed. Widening will simply make it effectively impossible to use the park for those that live on the west side of Wasatch Blvd, unless a car is pointlessly used to go less than a mile solely for safety concerns.</p> <p>This doesn't even touch on the environmental impact it will have on the established mature trees/greenery, the air quality in our neighborhoods, and the noise impact.</p> <p>It seems to me you chose to combine the 2 options and just slapped a label on it saying this first phase will be road widening anyway and sometime down the road, if funded, you'll throw the gondola up.</p> <p>This may benefit the ski resorts and the economic impact from visitors, but you are ultimately hurting the locals.</p> <p>Long story short, pick the gondola, increase the buses, and DON'T WIDEN AN ALREADY DANGEROUS ROAD THAT GOES THROUGH OUR NEIGHBORHOODS.</p>
27579	Jeff Robison	<p>I cannot begin to express how disappointed I am in this decision and yet how unsurprised I am that you selected the alternative that best serves commercial interests. The kabuki theatre of "accepting comments" prior to coming to this decision is insulting to the intelligence of our population. Why don't you make available the totality of the comments that you received rather than just bullet points? My guess is that the number of comments that express concern to adamant opposition to this gondola gimmick far outnumber those in favor.</p> <p>Absolutely shameful.</p>
27581	Kelley Bollinger	<p>We love the idea of gondolas. We have been to Switzerland many times and we have seen how wonderful the gondolas are there and what little impact they have. We have seen how buses do not work.</p> <p>Ted and Kelley Bollinger</p>

ID	Full Name	Comment
25277	Derek Tillotson	<p>I am completely baffled by UDOTs recent decision. The gondola does nothing to address canyon traffic and mouth of the canyon traffic while imposing a huge cost on the tax payers and canyon aesthetics.</p> <p>15-minute drive, or 45-minute gondola ride? The gondola will only be more efficient than driving the canyon a few hours each year.</p> <p>Find a viable year-round solution that will be good for LCC and BCC. Big Cottonwood is being completely ignored by this process. Or are you planning to build an even more nonsensical gondola there?</p> <p>A very frustrated skier, climber, and taxpayer. Derek</p>
25278	Ian Ehrlich	<p>This decision is absurd. The public is overwhelmingly against the decision to erect a Gondola which will ruin multiple neighborhoods as well as the LCC. Why did you even ask for public comments and then make a decision that 90% of the public is against?</p>
25279	Andrew Worsham	<p>The Gondola is not the correct solution to this nuanced problem. This is Taxpayer money to specifically benefit private businesses. There is rampant corruption that has been very clearly covered throughout this process. The Gondola is not a solution that makes skiing or accessing LCC more approachable for any Utah resident or visitor.</p> <p>Expanded Bus services, which could begin at numerous locations around the city, paired with carpooling incentives would be a far superior and inclusive option.</p>
25280	Ryan Hunter	<p>This gondola is a waste of taxpayer money in the name of corporate interests. There are better solutions to canyon traffic that do create greater negative impact to the places we enjoy in the Wasatch range.</p>
25281	Dani Hogan	<p>Although I am a great fan of public transport, this is a terrible idea. The canyon has already been disrupted enough in the name of human recreation. Maybe we could consider more busses up the canyon or limiting the number of people/cars in the canyon.</p>
27582	David Meiling	<p>Hello,</p> <p>I am at a loss as to the decision to move forward with the Gondola option. Everything I have seen online and in meetings that have been held concerning this has been overwhelmingly against the Gondola option from what I have seen. The statement put out recently makes it sound like the majority of the people living in the area that will be affected are FOR the Gondola option. From the comments received what percentage was against the option versus for? This seems like another case of the Developers getting in with the decision makers and just pushing a project through. It also mentions that UDOT does not have the funds for this project. This is a project to help the Ski resorts specifically. They are what are causing this traffic congestion problem. I do not think anyone disputes that fact. Why are these options not being funded completely by the Ski Resorts? God knows they have the money and are the ones who will be benefiting once more people are able to access the mountains during the peak traffic times in the winter. In the end this will cost over a Billion dollars and the taxpayers of Salt Lake will foot the bill. Very frustrating to see everyone saying no, no no and the politicians just continuing with "everyone wants the Gondola option so here we go..."</p> <p>Waste of my time sending this but I feel compelled to at least have my objection noted in the notes and comments of this farce. Clearly a decision was made years ago.</p> <p>W. David Meiling [REDACTED]</p>
25282	Paula Monaco	<p>I definitely prefer the gondola. I am a resident of Salt Lake County.</p>
25283	Will Black	<p>I'm disappointed to hear that UDOT has chosen to ignore the overwhelming local consensus against the gondola. I would encourage UDOT to reconsider and listen to the locals who care about the canyon and represent the diverse user groups who enjoy it. We don't want a gondola!</p>
25284	Palmer Larsen	<p>I'm really disappointed in UDOT's final decision to select the gondola option. As a lifelong resident of Utah and rock climber/skier I am a consistent user of Little Cottonwood Canyon. I respectfully urge UDOT to reject this selection and rather pursue more sustainability, less invasive options. Any of the other option, road expansion and increased bus services would have a much lower impact and can be attempted first to observe their effectiveness at reducing congestion. I would hate to see rock climbs that I have been climbing on for 2 decades get ruined by gondola towers. Once again as a lifelong resident of Utah I ask you to reconsider this decision.</p>
25285	Casey Logan	<p>No to the gondola! Please, just better public transportation in the area. And consider a cap in lift tickets sold daily at the resorts.</p>
25286	Jake Rehm	<p>There are many less impactful to try before making a gondola. The government shouldn't be spending resources to fuel 1 private business at the cost of destroying a huge chunk of Salt Lake Cities fresh water and year round tourism attractions. You have an international crowd drawn to SLC because of climbing, don't destroy that for cheap profits and bribes.</p>
25287	John Dough	<p>I don't want a gondola</p>
25288	Christopher Carlson	<p>I moved to the Salt Lake area for outdoor recreation, and especially for the amazing climbing that exists there. If this project was to be approved and go forward, you would be doing irreversible damage to the area that a massive community calls home. This needs to be heavily reconsidered, please listen to the community that uses this area and knows it.</p>
25289	Jeff Johnson	<p>This is a terrible idea. do not put a gondola up little cottonwood canyon.</p>

ID	Full Name	Comment
27583	Sueann Morrison	<p>Hello,</p> <p>I am a Salt Lake County resident and am not a skier. I do understand that Utah has an obligation to improve road conditions in Little Cottonwood Canyon, but I think given that the gondola solution is so much more expensive than the bus solution, we ought to say no to it.</p> <p>The bus solution is good enough. This project would only benefit those few who live near Little Cottonwood, and a few residents who ski.</p> <p>Many families like mine would prefer to see our tax dollars go somewhere more beneficial for the general public, as skiing is kind of a hobby of the more well to do, that most of the rest of us can't afford. The bus solution may not be the most convenient or the fanciest solution for skiers, but it makes more sense as a solution for everyone (skiers and non skiers alike) in my opinion. Perhaps the bus solution could be coupled with a parking pass reservation system to help keep cars from driving up the canyon when there is no available parking, similar to the system used by Glacier National Park for Going-to-the-sun road. If those who don't get a pass know in advance that they will be turned around and sent back to ride the bus, it could help keep a lot of traffic off of the road. People who live or work up the canyon could have a permanent pass.</p> <p>My family hikes in the canyon or goes for scenic drives up there. I much prefer the natural beauty of the canyon unspoiled by a bunch of towers and cables.</p> <p>Please serve the tax payers of the state with good, common sense, and say no to this expensive, unnecessary project.</p> <p>Thank you,</p> <p>SueAnn Morrison </p>
25290	Allison Vest	<p>I am writing to hopefully encourage UDOT to decide against the proposed gondola and road widening in Little Cottonwood Canyon. UDOT's proposed construction plans negate to consider climbers, hikers, and other users who are not heading to the ski hills. Little Cottonwood Canyon is home to some of the very best climbing in the world. It is a global attraction, especially with Salt Lake City hosting a World Cup climbing event that brings many international athletes here. Please allow the next generation of outdoor enthusiasts to enjoy the canyons as current residents have had the luxury to. I urge UDOT to consider a cheaper more sustainable solution such as expanded bus services that run year round.</p>
25291	Shauna Sloan	<p>I am an avid skier and love the resorts. That being said, it's ridiculous to have taxpayers fund a gondola that benefits a relatively small handful of people. I join Mayor Wilson in opposing a gondola. It sounds sexy, but will futher tear up the canyon. I would prefer a solution that involves widening the road for dedicated bus lanes. That will be less expensive for tax payers and accomplish the same result.</p>
25292	Weston Gastrock	<p>Please do not move forward with this proposal. It is not what the people want and will only cater to the resorts. If this gondola is built I will be forced to move away unfortunately. Also, it seems like other recreation users in the canyon will be excluded and their experience will be highly diminished or gone all together. Please do not build this gondola. A lot of shady things are going around with the resorts buying the land down low and it catering to the rich. This is a mistake.</p>
27585	Jj Freedlund	<p> the gondola and  you</p>

ID	Full Name	Comment
27586	Tom Newhouse	<p>To whom it may concern...</p> <p>I am disappointed in the non-comprehensive preference for Little Cottonwood Canyon transportation. That fateful preference is for a Gondola service. Two main reason undergird my disappointment:</p> <p>The preferred "solution" does not alleviate the main winter issue which is the number of people that Little Cottonwood Canyon can handle in its present state for winter recreation. A Gondola will primarily serve the ski areas (resorts) in the winter. Those areas already experience long lines with waiting skiers because the chairlifts are at capacity. Moving more people up the mountain will result in ski resorts selling more tickets, but that will not result in more skiing. In other words, the primary reason for going up the canyon in the winter, which is outdoor recreation, will not be met. Winter recreation will not be enhanced. To solve this dilemma, efforts to increase the ski areas with more territory and lift lines must be adopted.</p> <p>The preferred "solution" does not address the main summer issue which is the number of people that Little Cottonwood Canyon can handle for summer recreation. A gondola that does not stop at the many outdoor recreation sites cannot accommodate summer recreation. To solve this dilemma, the gondola option, if applied at all, needs to be configured to stop at various locations up the canyon. Sure, this will add costs, but the costs go to the heart of the matter which is helping more people enjoy the canyon in the summer.</p> <p>I think there are better options than a gondola system. But if you are resolved to have that, at least, address the amount of skiing capacity and the ability to use the gondola along the canyon.</p> <p>Do not miss the point of accommodating outdoor recreation. Transportation is not the real concern; it only is an outgrowth of the main concern.</p> <p>Tom Newhouse  </p>
25293	David Frazier	<p>This is a bad Idea!!!</p> <p>I would take the bus if they didn't stop a ton right by the canyon. They could do 5 double busses from fashonplace or Trax on 53rd and get people up there so easily. It's really simple. Charging would help as well, they could do an app with a fast pass and also do canyon reservations. It's like why do we have to spend so much on stuff that is easy to fix</p>
25294	Savannah Mccauley	<p>It is ABSOLUTELY ridiculous that you as a PUBLIC SERVICE ORGANIZATION refuse to listen to the people you serve. The decision to back this gondola is absolutely offensive to the people of Salt Lake City. You should be ashamed of yourselves and make no mistake the people who love this canyon and this environment, myself very much included WILL FIGHT YOU ON THIS. It is a disgrace to our city and a huge financial burden on the taxpayers. Destroying our environment to further the capitalistic gain of the resorts who are the only ones who will benefit from this will not be tolerated.</p>
25295	Colin Earle	<p>I am glad to read that you will be starting your improvements by enhancing bus service. But please do not go through with building the gondola. I believe that simply radically limiting car traffic and increasing bus service you can solve the currently issues cheaply and easily.</p>
27588	Jen Day	<p>My heart is broken. I am devastated that you would choose to deface our beautiful canyon with a gondola. In your videos, you reference the year 2050. By then, there will barely be enough snow to ski for 3 months at Alta. Yet you are willing to ruin the entire canyon forever, simply to squeeze as much money out of the next few decades of resort skiing that are left and leave the canyon in disgrace once ski seasons are over? This is a terrible legacy to leave for our grandchildren.</p> <p>The problem is NOT "how can we get more people up the canyon", but rather the problem is and always has been-"how can we REDUCE the number of people up the canyon" to preserve our beautiful landscape and water resources. The gondola does not help solve the problem. It furthers the problem by shuttling more people up the canyon and destroying its beauty and resources!!!!</p> <p>There is no need for a gondola. Toll booths, mandatory bus travel, or permits (like Zion national park) would solve the ACTUAL problem and preserve our canyon. We are no reason for you to take such drastic measures when techniques within our own state have PROVEN effective at reducing traffic and preserving the beauty and integrity of our natural places.</p> <p>Please, we beg you to STOP this terrible gondola and save our canyon!!!! Listen to the voice of the people who live in the community. 80% do NOT want this gondola. How can you disregard the popular vote of those of us who have lived here our entire lives, 40+ years???</p> <p>With ALL my concern, Lifetime resident of cottonwood heights, Jen Day</p>
25296	Wallace Mccarthy	<p>I am opposed to the gondola being put in LCC. It will destroy many incredible boulders that the next generation will not be able to experience. From even the beginning of my climbing carrier I have been taken into lcc to climb and these experiences are some of the best from lcc. I was able to bond with my coaches and teammates while doing something that we all enjoy so much. The gondola will ruin this opportunity for climbers in the future. Please don't go through with this proposal.</p>
25298	Emilio Conchabo	<p>Building the gondola and destroying little cottonwood canyon is a great disservice to the American people as a whole. For some extra revenue during peak ski season the gondola threatens to remove a beautiful area that once gone can never be recovered.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25297	Thorn Merrill	The gondola is not the answer!
25299	Raleigh Simpson	The plan for the gondola ruins the scenery of the canyon. People love Utah for the nature and all the gondola achieves is moving the traffic from the canyon down into Sandy and blocking neighborhoods. I am a climber and I love many bouldering areas that will be destroyed by the construction of the gondola. The scenery of traditional climbing on the larger walls will be ruined. Scenery for hikers and people driving through the canyon will be ruined. This is a bandaid solution for something that requires a surgery, and it is completely unfair to people engaging in all other activities in the canyon, for an activity that can only be done in one season of the year. The fact that UDOT plans on moving forward with the gondola is absolutely ridiculous.
25300	Gavin Fisher	This will destroy the canyon and the many climbing areas in the canyon please don't do this
25302	Eric Johnson	Absolutely ridiculous. This clearly was always going to happen regardless of public opinion. You all should be investigated for bribery and fraud. Clearly money from a select few to another select few is driving this decision. It makes no sense to build an expensive eyesore to alleviate traffic that is bad, what...30 powder days in winter. Ignoring the other 330 days out of the year where it is not a problem. It is an environmental disaster that hurts the natural beauty of the canyon in order to cater to two private entities. Alta and Snowbird are socializing the costs and privatizing the profit. A perfect metaphor for America as a whole. The fact that we didn't even try increased bussing during peak hours shows that UDOT and the Utah government doesn't care about the people or the environment. They only care about money. Embarrassing. Maybe think about other people instead of your greed.
25301	Anna Hubbard	Thank you UDOT. Gondola is by far the best option for all the reason you listed. Now, can you please list realistic timelines for project completion? I would hope it will be during our family lifetime and not just empty promise to appease Utah/slc taxpayers and pretend you are planning on doing something with this LCC commute disaster during winter
25303	Lynn Johnson	Bad idea. No gondola in little cottonwood
25307	Catherine Johnson	Please do not build the gondola. I have been going up this canyon since I was 5. Majority of my winter weekends. As well as many summer.
25308	Alyssa Peterson	Test Comment
25305	Brian Squire	As a college student and climber, someone who actively utilizes the resources and activities present in the greater Salt Lake City area including Little Cottonwood Canyon, it would not only be detrimental to the ecosystem but ruin the overall atmosphere that the canyon provides. Climbers are one of Salt Lake City's biggest communities and destroying so much climbing for infrastructure which will realistically only be utilized for a minimal part of the year is disrespectful and unnecessary at best.
25304	Ben Goebel	The preferred alternative is an expanded bus system with individual vehicle tolls and/or reservation cap. An expanded bus system allows for satellite parking areas limiting traffic at the base of the canyon. The current proposed alternative of a gondola and 2500 car parking lot at the base of the canyon is neither feasible or desired by the public. It will be an eyesore in an otherwise beautiful natural space. It lacks the flexibility and capacity of increased buses on the existing roadway. We will not allow a gondola system to be built in LCC.
25306	Nathan Hansen	The gondola option will ruin the aesthetics of the canyon, destroy world class bouldering areas, damage the canyon permanently, and only solve a problem for a few days a year. Please do not ruin the canyon with the gondola. Expanded bus service, toll, snow shelters, etc will be enough to serve the people and preserve the canyon. The gondola option is a selling point to tourism - it will be a spectacle and draw in ever more people. We do not need more people in the canyon. The canyon should have a capacity. There is only so much area to ski - LCC is not that big. Please do not pack the canyon with more people and over market our beauty!
25309	Isaac Miller	This proposed gondola is not the solution to LCC's problems. Enforced tolling, traction laws, and public transportation incentives (With more eco friendly busses) are the solution. It would be cheaper and easier to implement immediately as opposed to an expensive gondola that will take years to come into being. As an employee in LCC I know I speak for many people on this. Again, a gondola is NOT the answer.
25311	Dan Krauss	This is an absolute disgrace. The easiest solution to this is add more buses and more parking at the base. 95% of people don't want this gondola. It's an eye-sore, atrocious and unnecessary. Why don't we take that half a billion dollars and do something to help our dying lake? There are so many more things our state and city needs to get out of this environmental wreck we're in, and a gondola should be the last priority. This is an absolute shame to our beautiful state, city, and canyon. I hope you actually read and review the comments from the citizens that live here and become aware of just how much the vast majority of people hate this idea.
25312	Jeff Loria	Do not build this eyesore. If traffic is a problem, limit the sale of lift ticket or pass utilization. Don't ruin the canyon so that more profits can be mined. Don't build the gondola.
25310	Will Higgins	Busses are fine. Don't literally destroy the natural environment that is enjoyed by climbers and many other canyon users just so that those who want to go to the resorts don't have to sit in a bus.
25313	Makenzie Lambert	This will completely disrupt fragile ecosystems, world class climbing areas and some trails that those who use have worked so hard to maintain. This is disgusting to even think about how this will "benefit" the Canyon Community.
25314	Ava Anderson	This gondola would affect many iconic climbs that are part of the climbing history and culture in Salt Lake City. These climbs are irreplaceable. Other outdoor recreaters in the canyon (climbers, hikers, bikers) need to be considered as well - not just skiers and the resorts.
25317	Ryan Smith	While putting in the gondola is convenient for one group of people it completely limits access for other groups. This is not the way.
25315	Elizabeth Caldwell	I am incredibly disappointed by this decision. As someone who lives at the base of the canyon and accesses Wasatch Blvd multiple times daily I don't believe this gondola is the solution to the problem. We should instead focus on fixing and enhancing the public transportation to the canyon that we already have (buses). This decision will take away boulders that rock climbers use as well as detract from the view of the canyon. We should not alter the canyon for this reason. I also do not believe that this mode of transportation will be utilized other than once or twice as a novelty. This solution panders to tourists and does not take into account the desires of the residents of the areas that you are choosing to affect.
25316	Jared Draper	I'd like to express my support for the gondola as the correct decision for the problem at hand. I believe it's the best option that checks all the necessary boxes and also brings a unique attraction to Utah and it's ski resorts.
25318	Noah Bardwell	Please do not do this. This is not the right solution. It will destroy a lot of climbing and outdoor access.
27590	Jason Taylor	This is garbage.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25320	Colin Young	I strongly disagree with the gondola up Little Cottonwood Canyon. This project will inevitably run millions over budget, take years to complete, and ruin the natural beauty of the canyon. Not to mention the fact that every year ski season gets shorter due to climate impacts, so the economic gains are unlikely to be worth it. This is a complete waste of everyone's time and money.
25319	Gwyn Higgins	Please do not support this gondola. It will have a massive impact on the canyon and all we need is more buses.
25321	William Hastings	This gondola will inevitably destroy the beauty of one of the best places in Utah.
25322	Erin Greer	Please do NOT build the gondola. Utah won't have any snow in 10 years to even enjoy this greedy device. Why waste tax dollars, time and resources on something that no actual CITIZENS want! The only people who want this are greedy politicians and people of the sort. We don't need a gondola for tourism. PLEASE use those tax dollars to create more public transportation, parking and better access instead of this ridiculous spectacle. I hope you truly listen to what the people want. This is not what they want
25323	Robyn Ragins	I just like so many other people moved to slc because of the close proximity to nature. Within 20 minutes I can be in LCC hiking, climbing, running, and painting the beautiful nature I'm surrounded by. Building any type of infrastructure including a gondola will take away from that beauty. And that beauty is one of the things that draws people here. It's an ugly solution to a problem that can have alternative fixes.
25324	Zach Ensign	This deal feels corrupt and like the best interest of the canyon is not at heart. Please make real change for the better of the amazing place it kills me and everyone to see bribery of this level get pulled off. Please please please make change to solve the problems of the canyon instead of further lining the pockets of the resorts up here. The canyon needs to be protected not profited.
25325	Nicholas Guinta	IMO. Gondola should not be a 35 person model. Should we ever end up in a covid/ passenger limiting loading situation in the future. Smaller more frequent cars that hold no more than 10 people will be more suitable. Also, I believe that the Wasatch boulevard temps are "very warm" for people in their high altitude snow gear, thus any prolonged wait or large crowded gondola cabins become an unpleasant sweatbox. Me= educated, 30 years as a trauma neurosurgery ICU RN. 46yrs of skiing and 30yrs of snowboarding. Have been to Utah skiing/boarding many, many times since 1985. IKON and INDY pass holder
25326	Will Owens	Why are we doing this? This gondola, which UDOT says will only transport 1K persons PER HOUR, at peak use won't even solve the traffic problem on a high use day. What this gondola will do - guaranteed - is ruin the magic in LCC. We should try increased bussing before ruining this canyon for ourselves and future generations.
25328	Ronan Mendoza	As someone who has spent literally their whole life in Utah this is heart breaking.
25327	Zach Ensign	This proposed gondola is not the solution to LCC's problems. Enforced tolling, traction laws, and public transportation incentives (With more eco friendly busses) are the solution. It would be cheaper and easier to implement immediately as opposed to an expensive gondola that will take years to come into being. As an employee in LCC I know I speak for many people on this. Again, a gondola is NOT the answer.
25329	Stephanie Adams	As a regular user of Little Cottonwood Canyon both in the summer for hiking and heavily in the winter for skiing at Alta I think this is absolutely the wrong decision. The reservation system implemented by snowbird and Alta over the last couple of years has made a monumental difference in winter Canyon traffic and the gondola is an astronomical expense to solve a problem that does not exist in the same way it used to when it was originally proposed. The gondola will further burden the taxpayers with expenses that most of them will not see the benefit of, as the solution will be mostly for the ski resorts. In addition, it causes traffic and parking issues to be moved to the edge in the valley and not really solving a problem. Please reconsider this decision. The community, the taxpayers, and the users of the canyon do not want the gondola.
25330	Casey Sanders	ANY gondola plan going up Little Cottonwood Canyon is going to destroy the scenic beauty of the canyon. I am strongly opposed to any gondola option
28160	Allen Weston	To whom it may concern: I wanted to write a quick letter showing my support of the Gondola project in LCC. I've talked to many people that agree. I think it would be a fantastic addition to our recreational opportunities here in the valley. I look forward to seeing the project move forward. Thanks for your time! Allen Weston Resident of Murray, Utah
25332	Karl Sjogren	As a SLC Avenues resident who has skied across the world I am THRILLED with this choice. Save the environment, allow continued access to the canyon and move us towards a low to no carbon impact transit system. Can't wait to take the bus from my house to the new gondola! :)
25331	Nico Virgi	No. It's not "worth it". All for two resorts? For 15 days out of the year where the roads are bad? Where traffic is bad? What about the other 350 days of the year? What about our boulders, what about our scenery? What about our tax dollars. We don't NEED a gondola. We don't NEED these things especially at a price of 500+ million while we have other larger problems in the valley. I.e droughts
25333	No Gondola	WHY WOULD YOU DO THIS. WHAT THE HELL IS WRONG WITH YOU. PUTTING A BIG GONDOLA IN THE MIDDLE OF A CANYON THAT WON'T EVEN RUN JUST LIKE ALL THE OTHER LIFTS AT THE RESORT. DO YOU KNOW HOW WINDY IT GETS? YOU STUPID IDIOTS.
25334	Oakley Miller	As a Born and raised Utahn, a skier and an outdoorsman I find it absolutely reprehensible that this project is moving forward. Comments and opinions from citizens are vehemently against the forward development of the gondola. It will be a permanent scar on the canyon and Mother Nature. Additionally, the fact that it will be paid for using taxpayer dollars but benefit only the resorts of the canyons financially is disgusting. This is a great example of corruption and the desire to fill pockets. DO NOT BUILD THE GONDOLA
25335	Neve Lahy	This is destructive to riparian zones and the micro ecology of our canyon. Improve bus transit in canyons which is less expensive, destructive and more effective
25337	Deon Gines	I am delighted with the gondola option! It will be a major attraction year round!

25336	Rebecca Hill	I am shocked that this is the proposal accepted. Anytime I talk to members in the community, they are against it, specifically those of us who live near the canyon and it could significantly impact. I do not believe this isn't the best interest of all parties involved, you are simply trying to make certain parties happy. Let's go back to truly consider the other options. There are better ways to deal with the traffic that won't have an irreversible impact on the area.
25339	Greg Carling	I think the gondola is completely unnecessary and would ruin the natural beauty of Little Cottonwood Canyon. It is also not necessary to build dedicated bus lanes. There must be more creative solutions to the traffic problems, which only occur on a limited number of days per year. For example, Alta and Snowbird could put a cap on daily ticket sales, encourage carpooling through paid parking (with a premium on busy days), and provide free bus passes with a ticket purchase. UDOT should provide additional buses without building dedicated bus lanes. Please keep Little Cottonwood Canyon beautiful and find simple solutions to improve transportation.
25338	Landon Bartholomew	How is this the conclusion after the public who is funding the project is against it? We would prefer nothing over the gondola. The gondola will inflate to \$700m, only benefit skiers, and not contribute to other tax payers. We are talking about hundreds of millions of tax dollars to alleviate 15 days of bad traffic, for a select group of people that can afford to ski. I'm an avid skier, and this makes no sense whatsoever.
25340	Gary Allen	I am 100% in favor of the gondola. Something has to be done and this is the best option by far...regardless of what Mayor Wilson says or thinks.
25341	Rachel Helms	The decision to build a gondola when literally thousands of people do not want this to happen is disgraceful. While so many oppose this decision, you maybe hear one or two who are for it. There are so many more options to reduce congestion in the canyon, like tolling, incentivizing carpooling, etc, which would be way better options to explore before committing to an expensive gondola that the vast majority of the public does not want. This decision needs to be rethought and reversed before you irreversibly destroy our public lands.
25342	Katie Waugaman	This is clearly not about traffic but about profit for the ski resorts. What about all of the other uses along Cottonwood Canyon? Hiking, climbing, backcountry skiing, and other activities contribute to traffic but will not be "helped" by this gondola.
25344	Nicholas Milburn	To whom it may concern, I, and many others, view this gondola is an unnecessary addition to the area and it's negative impact on the environment is unnecessary. I feel as though it would be better served to cancel plans for the gondola and leave the canyon in its current state.
25343	Derek Larsen	Why is it my responsibility to pay for people to ski at snowbird or alta? Improper use of public funds to benefit private business interests. I am greatly concerned with this option as it will destroy many local climbing areas. DO NOT favor private interests over the public use of the natural beauty of this canyon.
25346	Adalayde Scott	When I was 10 years old, I went bouldering for the first time in Little Cottonwood Canyon. I loved it. Now, you want to built a gondola to take away the beautiful hikes, boulders, and views by building a massive silver industrial eyesore to block the views of the granite slabs and canyons. I highly encourage that you preserved this are and think of future generations rather than the temporary income that Snowbird will make from the small amount of tourists that want to pay that price. Maybe explore better solutions that allow for an ongoing fostering of environmental care rather than a destructive money machine
25345	Derrick Lytle	No gondola!! There's no need and it's gross.
27591	Trevor Long	Glad to see greed and corruption win out for the few of you that are getting rich off this and [REDACTED] everyone that actually lives here. Thanks!
27591	Trevor Long	
25347	Bailey Mcintosh	This has a huge environmental and recreational impact on the land. I do not support this project.
25348	Eric Amerling	The gondola does not support what LCC needs, which is SURGE travel up the canyon. There's no way to increase capacity (like with buses) on a gondola and will be a drop in the bucket to the many thousands of people that still need to get up to snowbird/alta
25349	Phil Hedrick	Please do not destroy this beautiful place with big metal towers. People move to slc for the beauty. There's other sports besides skiing to consider
25350	Chantal Davison	Please do not build this. Not only will it negatively impact the climbing in the area but it will also ruin the mountain. Environmentalism over profits.
25351	Caleb Barksdale	I don't support a gondola in the canyon.
25352	Jordan Peterson	I have made this observation in every single comment period of this project, but it bears repeating: presenting road expansion and a gondola as the "only" options UDOT can pursue is a false dichotomy. Before committing half a billion dollars to anything, why not start using methods like tollbooths and parking reservations. They cost next to literally nothing and are proven (tollbooth's especially) to reduce traffic during peak times. That Gondola Works and any local official would argue the idea that a 500 million dollar, landscape altering construction project is done for the sake of "protecting the canyon" is infuriating and disingenuous. NO to the gondola. NO to road expansion. Do the right thing by the people who's money you're trying to spend, and exhaust all practical and affordable options before you permanently disfigure the canyon.
25353	Carly Alba	Little cottonwood has been a place with lots of memories for me. From spending time with my friends to watching the sunset and scenery. With this change that would not be the same.

25354	Jonathan Burnham	<p>This seems like a very short sighted decision that will destroy the beauty of the canyon and not really help the traffic situation. The gondola stated it can't run in high wind conditions which are frequent in that canyon. It also will be an incredible eye sore. Above all else though, it makes no sense for tax payers to shoulder the burden for something that will only benefit the ski resorts.</p> <p>The ski resorts are already overcrowded and dangerous. Snowbird has lines that take over an hour to get through on weekdays now. The last thing we need is more people at the resorts. Imagine if Zion put a gondola in instead of their shuttle system. The gondola makes little sense because it will not help hikers or anyone wanting to visit their public lands who want to go anywhere other than the ski resorts.</p> <p>The solution people want is either no "solution" or more adaptable canyon restrictions during the busiest times with increased busing on the handful of days when canyon traffic is exceptionally busy.</p>
25355	Brian Neilson	<p>What a Joke! The whole State will pay for two resorts to add to their profits. We are still paying the "Temporary sales tax" (which was made permanent a few weeks later by the state), to build the pumps out at the Great Salt Lake to control flooding. That worked so well, we barely have a lake anymore, but we are still paying to maintain those darn pumps that only worked for a day for the press to see them. This will be another mess like that one. Why don't we do what they do in Jackson Hole Wyoming. Only sell so many ski passes a day to control the crowds.</p>
25356	Angela Bailey	<p>Are you kidding? Did you just ignore the specific objections of the Sandy mayor, the SLCo Mayor, the numerous state and local leaders and the MASSES of Utahns who did not want a gondola? Expensive, slow and only built to line the pockets of greedy developers. Hugely disappointed. This is a terrible idea.</p>
25357	Ian Brown	<p>We do not need the gondola, nor do we actually need a new solution just so people can have a quicker commute a couple handful of days a year. The natural beauty and climbing would be greatly impacted in only negative ways if this gondola where to be built. So please consider not going with the gondola.</p> <p>Thank you</p>
25358	Navar Gottschalk	<p>I think it's absolutely wonderful that the Gondola was determined to be the best means of transport up the canyon. My eyes are filled with tears of joy! There was a lot of opposition to the project from residents who live near by where it will be constructed, however I don't think I considered all the positives of a gondola. This will be an amazing addition to our beautiful state and my future family and families to come. I'm ecstatic and can't wait to see our beautiful new gondola in place at our beautiful resorts. Great job UDOT, congratulations!!</p>
25359	Marta Samokhvalova	<p>I support the no gondola in LLC movement</p>
25360	Andrew Summers	<p>This is an absolutely terrible decision by UDOT. Greed, arrogance and egotism have once again drowned out the voices of the citizens. No gondola!</p>
25361	Soren Feola	<p>No no no! Think about if a person has a medical emergency while riding the gondola. There will be no way to save them.</p> <p>Not only are their environmental impacts but you also have to address the medical impacts.</p> <p>Please don't do this. No one wants this anyways.</p>
25362	Allie Ulland	<p>This decision is incredibly disappointing and will negatively impact the canyon, the valley, and the environment for decades to come. If you truly believe you're representing the interests of Utahans and Salt Lake area residents, you'll rethink this horrendous decision. This is about so much more than just transportation, it's about our beloved canyon as well.</p>
25363	Lynn Paul	<p>Everyone knows how adamant I am about protecting our precious, 15 mile wide, 75 mile long watershed this is our public lands! This is a horrible decision by Utah Department of Transportation.</p> <p>This will not only literally be a disaster for the Wasatch and our watershed, this will fuel a "pay to play" environment that will price out economically challenged family's here from enjoying their public lands in Little Cottonwood Canyon. Last time I checked most of the canyon is public lands.</p> <p>We as a society, protecting something this precious and finite, is far more important than benefiting ski resorts economically. Widen the road for a dedicated bus lane up and down, year round bus service, toll the canyon, and offer a season pass like they do for the mirror lake highway to park roadside or in trailhead lots to prevent resort traffic from taking parking from backcountry users. See problem solved with no gondola.</p>
25364	Michelle Crossley	<p>WHY doesn't the Utah government listen!? Apparently sustainability, the environment and what Utah Residents want doesn't matter! You're going to destroy this beautiful area for a huge gondola that will run 4 months of the year to bring skiers up and down the mountain. The other 8 months it will be a GIANT eyesore! Stupid!!</p>
25365	Scott Mosher	<p>UDOT cannot go forward with the proposed gondola which will inflict irreparable damage on the canyon so many love and call home. There simply MUST be another way to move forward.</p>
25366	Brenna George	<p>The gondola is an expensive solution that degrades our environment and only benefits the ski resorts. We need a solution that benefits all users of the canyon and works in summer months as well. The most logical solution is tolling, improved bus service, and increased parking at the bottom of the canyons. I strongly oppose the decision to support the gondola.</p>
25369	Peter Williams	<p>This plan seems to go against the will of the large majority of public commentators, be wildly expensive, and subject a fragile and wonderful resource to significant further environmental degradation. It's hard to see what the long run benefit of this would be given the substantial financial and opportunity costs that come with this plan. Ski resorts are not the only actors UDOT should serve and a myriad of other proposals seems likely to more effectively serve the broad public interest; in addition a substantial portion of the winter backups stem from a failure to enforce existing chain and winter laws resulting in foreseeable and unnecessary backups that could be wails prevented.</p> <p>Using buses is really not a bad solution, one done in many other busy ski areas across the world to little effect and surely substantially less marginal cost than a miles long gondola.</p>

Comments on Little Cottonwood Canyon Final EIS

25367	Alex Burlison	This is going to go down as one of the worst decisions regarding infrastructure in Utah history. No local residents want this gondola built. Read the comments, please. You are not considering the interests of LOCAL RESIDENTS. Little Cottonwood Canyon will be permanently scarred with an enormous metal eyesore. Not to mention the damage done to the hundreds of boulders that are used by one of the country's largest climbing communities. Please rethink your decision. There are other alternatives that don't destroy the pristine nature of the canyon.
25368	Shannon Mcgirk	I am devastated by the news that there could be a gondola in Little Cottonwood. I was born in the valley, I grew up in the canyons, and I believe that a gondola is not only an improper use of money and resources, it is an insult to the beauty of these canyons. I do not, in the least, believe this is the most responsible decision. I want an improved bus system. I want the canyons to be respected. I want their beauty to be preserved. And a gondola is a direct insult to these canyons. And I am heartbroken by this news. Please, please consider the option to improve our bus system in any attempt to preserve OUR canyons.
25371	Katie Moore	Please do not go forward with the Gondola. I am a taxpayer in Sandy City. I do not ski and would rather have my tax dollars go toward things in the community rather than subsidizing the ski industry. I do use Little Cottonwood Canyon during the spring/summer/fall to run and I would hate to see its natural beauty destroyed by huge permanent structures. The gondola prices are going to be too expensive for the majority of residents to use and provides no benefit.
25370	Tyler Walker	So exciting to hear of the approval of the gondola as the preferred alternative. I'm so relieved that Udot didn't add more bus service, that's not what was needed for our beautiful canyons. The gondola is going to be a great new addition to the mountain and I'm very happy and ecstatic to see what comes of this. Great job Udot and thank you from a local!
25372	Bryan Paul	Please don't be short sighted on this project. If it is going to go forward please take it all the way over to Park City so folks staying there can jump on and access the two Cottonwood canyons without driving. If this isn't going to happen in my opinion you are wasting the public's time and money. It like the Bangeter Hwy project you build it one way and then tear it all down to do it the right way later. How about doing it the right way the first time. A Novel concept that Udot doesn't seem to get. If it was the private sector I guarantee it would be done right the first time.
25373	Roberts Rebecca	As a local in Cottonwood Heights I find the news about the gondola in LCC heartbreaking. This is not the solution to better air quality in the canyon. I would rather have nobody be able to get up to the ski resorts or into the mountains on snow days, than to have our beautiful canyon bombarded year round with a gondola no matter how little impact this has on the canyon. There is no going back on this decision, except in cities where locals are agaisn this- like in Whistler,BC, for example, the gondola has been cut down by angry locals multiple times. I can see this being a local war against operations and a similar thing happening here. Please listen to the locals, and the ones who have to live in this canyon. Who will benefit from this? Snowbird and Alta pass holders? Wrong, the experience will be a congested nightmare with endless lift lines and no easy way out of the canyon. Please do not go forward with the gondola, I am begging you.
25374	Jasmine Rhoads	I do not think this gondola should be built. As a family tradition, we hike up LCC and go on the hiking trails and climb. This would be destroying the natural landform and opportunities for other climbers, hikers, mountain bikers, and the people who live up there. It also would effect runoff.
25375	Matt North	By selecting the gondola alternative, you are authoring the destruction of Little Cottonwood Canyon. Reading the message that the gondola alternative has been selected broke my heart, and I am devastated for the canyon and future generations.
25377	Hilary Hickingbotham	A gondola is not the solution! It will destroy the canyon without solving the real problem.
25376	Patrick Shepherd	We can waste money on something that benefits people who already have a higher income but we can't use state money to give students free meals anymore. Another shot showing Republicans in this state don't actually care about kids.
25379	Mark Robinson	No Gondola. This is the worst idea. Don't do this!!!
25378	Peter Preston	it would ruin the view
25380	Kasandra Lundquist	I am a season pass holder at Snowbird, taxpayer, and SLC resident. I do not support the proposed Gondola. As a skier at snowbird, I will not be utilizing the gondola because it is not going to be convenient, there are not enough lockers and lodge space at Snowbird or Alta to make this comfortable for me and it will take longer for me to get to the hill via the gondola. There are other less impactful and less costly solutions but you are driven by greed and this is purely about money. I hope this is tied up in court for years! Shame on you UDOT! We do not want the Gondola!
25381	Eli Primmer	No Gondola! I live in Salt Lake City and have never talked to anyone who supports the Gondola. People literally just want a better bussing system. It's clear that these public comments are taken less seriously than what the owners of Alta and Snowbird have to say. Building a gondola is a total disgrace.
25383	Melanie Gladding	You obviously don't care about public opinion otherwise you would not be moving forward with the gondola. I am 100% opposed to the gondola! No gondola! Please consider something less destructive to the canyon and our views. The gondola doesn't solve the problem - people will still drive up the canyon. A cog train + no non resident/non employee vehicles is the best solution. I'd love to know who is getting rich off this absolute disaster of a decision.
25384	Alex Bule	To take taxpayer money to fund a project that will largely benefit multimillion corporations is a bald-faced, egregious abuse of power in opposition to NUMEROUS loud voices in the valley saying that we DO NOT want this. On top of that, it will destroy the history of climbing in the valley that exists in Little Cottonwood. This gondola erases a culture of climbing and replaces it with a culture of industrial, corporation strong-arming. Please reconsider this proposal, ask anyone in the valley and I can almost guarantee you'll get a negative response to the gondola. Do not bring this evil to our beautiful home. Thank you.
25382	Kathleen Merrill	No gondola. I ride the bus over 50 times a ski season. The bus system works! Make the buses mandatory for skiers and snowboarders on heavily trafficked days (weekends/holidays). And create a bus lane. The ski resorts are already deterring patrons by paying for parking. Improve the bus services! More, frequent busses with bus lanes is our answer!
25385	Kyle Kerns	Do not close the area for the gondola. This favors one recreational user group over another. This is not okay!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25386	No Thanks	<p>This benefits nobody but the executives of Alta/Snowbird and whichever politicians get paid.</p> <p>It would be much easier and much more environmentally friendly to handle the canyon similar to how Zion handles park access via bus only (maybe at peak times only).</p> <p>Both projects will need massive parking, only one would be significantly cheaper, more beneficial, and ready significantly sooner. The gondola being a paid expense as well is quite a joke as people will choose to drive to avoid the cost and still jam the canyon with traffic.</p> <p>If this is really about accessibility and environmental impact then the gondola is a cash grab that will benefit a very select few.</p>
25387	Geoffrey Reyes	<p>The gondola is not a solution, rather a money grab for the resorts. Little Cottonwood resorts are already overcrowded at times which makes for unpleasant skiing experiences. The gondola is only going to bring more and more people to Alta and Snowbird which in turn will negatively impact the skiing experience for Utah locals. This gondola is simply a political power play by the liberal politicians of Salt Lake City.</p>
25388	Andrew Philson	<p>I see that the plan calls for winter gondola operations, but that summer operations are still undecided. I would strongly encourage the gondola to run in the summer as well as the winter. Many of us who live here cannot afford to ski regularly. Frankly, the summer is the only time I would get any value out of the gondola, as that is when I can take my kids hiking up the canyon or go on a mountain bike ride myself. If the gondola only runs in the winter, then the plan amounts to a regressive tax -- it taxes the full populace but only benefits the rich who can afford to ski regularly. Running operations year-round ensures all tax payers can benefit from the gondola.</p>
25390	Davan Howell	<p>Going forward with the gondola is going to ruin our canyon. Forever changing the landscape, and creating potential watershed hazards to an already scarce source. It's just simple to see this is wrong. The "problem" your trying to "fix" is nonexistent. So what there's traffic, so what there's a wait when avalanche work being done, so what you have a 30 min canyon ride to get to and from the resort. Salt Lake still have the easiest access to the mountains than anywhere else. You're trying to put a 1 billion dollar scar on national forest that should be preserved!</p>
25389	Andrew Conroy	<p>This is devastating for Salt Lake City. Those maps shows it traveling directly above many of the best boulders and public recreation areas in Little. I presume there will have to be destruction of some of those boulders as well. It is a selfish and financially-motivated move by UDOT and ski resort owners. Sad to see them destroy so many people's opportunity to enjoy a peaceful experience outside just to serve a small, elite, and financially privileged community for a minuscule portion of the year. The owners of those resorts have enough money. They do not need this to happen for any reason other than making more money for themselves and making access to resorts more convenient for upper-class people. Other options must be further explored before permanent desecration of the land takes place.</p>
25391	Rachael Swenson	<p>Please do not destroy this portion of the little cottonwood canyon. The proposed gondola will destroy a beautiful piece of our nation's lands. In this phase in the climate emergency we need to be doing all we can to prevent the destruction of the natural lands around us. The planned destruction will ruin the habitats of many plants and animals using that land.</p>
25392	Rebecca Jacques	<p>Please do not build this. The environmental impact of destroying landscape, boulders, and wildlife habitat is not worth some additional convenience to tourists, nor the added traffic the gondola will attract. This is also unsafe, transporting individuals further into wilderness than they are equipped to go, risking their safety.</p>
25394	Gabe Cali	<p>Please please do not ruin our beautiful boulders and skyline with a gondola. It's the last thing the PEOPLE want.</p>
25393	Hollis Hunnewell	<p>It is sad to see money and greed control this decision. Every local and patron of this canyon that I spoke to did not support the gondola. It was wildly unpopular and the only support came from the corporations that stand to benefit. It is sad to see that udot is willing to ignore the widespread disapproval to develop and destroy such a magical place. This is a sad day for the canyon and for environmentalism in Utah. I guess I shouldn't be surprised</p>
28186	Liz Kinne	<p>Dear Mr. Braceras:</p> <p>I am totally and utterly disappointed in UDOT for backing the proposed Gondola in Little Cottonwood Canyon. I live 2 minutes from the canyon and this project will not only totally destroy the entire canyon itself but it will destroy the quality of life for the residents like myself who live in the area. The evidence against this project is irrefutable. How UDOT can back this project is beyond me. It's a poor choice and one that will leave nothing but a scarred landscape for generations to come.</p> <p>Sincerely, Liz Kinne</p>
25396	Zachary Adams	<p>The gondola is a terrible use of taxpayer money. Do we not recognize that we will need any money we have to resolve the great salt lake issue? Our local government is failing us.</p>
25395	Kevin Neuberger	<p>I support the gondola. Seems to be the least disruptive to the canyon. Please don't scar the canyon by widening the road. Wish the resorts would at least pay for 10% of the upfront costs</p>
25397	Michael Wright	<p>I support the Gondola plan</p>

ID	Full Name	Comment
25398	David Heeger	<p>I am a resident of Park City. I ski at Alta/Snowbird frequently throughout the season. I'm pleased to learn that the gondola option is preferred. I agree that's the best option. But I do have a concern about both the gondola and the interim bus service. We have learned over the past few years, from the covid pandemic, quite a lot about health consequences of enclosing large groups of people in a limited space. There are millions of people in the US alone who are struggling with long-term effects of covid (long covid). Some are literally disabled. Even young people who were extremely healthy prior to the pandemic are now debilitated. Covid is not going away. And we must expect that there will be another pandemic with another novel virus in our near future, followed by yet another. Any public transit solution (bus, gondola) must take this into account and deal with it appropriately. The key factors are: 1) Each bus or gondola car must not be overcrowded. Standing in close contact with complete strangers from around the world is a serious health concern. 2) Ventilation. We now know that covid (and most respiratory viruses including the common cold and the flu) are transmitted primarily by air. When the virus is exhaled by an infected individual it stays in the air for a surprisingly long period of time. So the risk of infection is greatly reduced if the air is completely replaced with fresh air from outside sufficiently frequently and if the space is not overcrowded. Look to air quality standards for operating rooms as an guideline. Importantly, the current standards for air quality are wrong, based on incorrect and outdated information.</p> <p>Please take a look at this article for background on this topic:</p> <p>The 60-Year-Old Scientific Screwup That Helped Covid Kill</p> <p>https://www.wired.com/story/the-teeny-tiny-scientific-screwup-that-helped-covid-kill/?fbclid=IwAR0dH6RjxSN8uA2h-dvD2OwmHoEBxJzBJ8_Nm7LqeV1Zxbr15vDzQLScoMc</p>
25399	Brian Weenig	<p>I am extremely disappointed and sad to see UDOT going forward with the gondola. This plan is extremely short sighted in my opinion. Installing this massive piece of infrastructure for one user group for a short (and shrinking) portion of the year seems ridiculous. Utah's winters are becoming much shorter and inconsistent. In 10 years the ski resorts will likely be struggling much more to open up and building a gondola for a dying industry does not make sense. It will visually disrupt the beauty of the canyon and destroy many beautiful climbing boulders. I hope you read and acknowledge everyone's comments.</p>
25400	Patrick Depaulis	<p>I am against the gondola in little cottonwood canyon and feel this is a tax payer give away to Alta & Snowbird. The public voice needs to be heard and your going to destroy our canyon just so ski resorts and politicians make money while the price of lift tickets for Utah residents will be increased. This whole thing is wrong!</p>
25401	Stephanie Ubelhor	<p>NO GONDOLA IN LCC. Find another solution. This gondola will destroy many areas that we live and enjoy while only servicing wealthy ski resorts!</p>
25403	Syd Ricketts	<p>The gondola plan is only going to make the locals, the employees of the resort, and the culture of Little Cottonwood Canyon. It is only going to make it more difficult for users to access their public lands. The gondola only supports the resorts and makes it immensely more difficult for those not able to recreate at said resorts. Not to mention the environmental impacts and the wilderness aspects of the land you are putting at risk. The gondola is not the answer. - Sincerely All Locals</p>
25402	Jennifer Baker	<p>I do not support the gondola option. The majority of public comment and opinion also does not support the gondola. You have a fiduciary duty to taxpayers to make a better decision than this. The gondola has greated enviornmental disruption, cost, and will not support adequate travel through the Canyons. More than skiiers are private clubs use the Canyons. A bus with multiple stops is the best option. I hope your decision is not upheld through litigation.</p>
25404	Arthur Kock	<p>Please do not obstruct or destroy any of the historically important boulders in Little Cottonwood Canyon. They mean a lot to the global climbing community. It would be a very sad loss.</p>
25407	Kyrarn Adsit	<p>Please don't destroy another peoples playground/resources just for another more privileged group to enjoy theirs, especially since it's only 4/5 months outta the year. Seriously don't know why this is even being considered, the gondola YouTube page is full of propaganda about why we should put a gondola in. If you watch these from anyone else's point of view they are misleading and not factual. Please please consider these comments.</p>
25405	Jack Gross	<p>As a long time skier in the SLC area I think the gondola is an atrocious proposal that will not fix any concerns over a backed up canyon, will cost the residents thousands in tax money and partially destroy an incredible canyon. I will never go back to Snowbird/ALTA due to the behavior of their staff and all of the propaganda for a gondola that has cost them millions. Sad day for the state of Utah.</p>
25406	Gabe Menicke	<p>Don't do this please</p>
25408	Sarah Fahey	<p>The gondola is just a horrible idea - it will not fix any "traffic congestion" and destroy a canyon. So little respect for Snowbirds staff and the money they spend on propoganda as well as most Utah state officials who are taking donations from ALTA/Snowbird to support an 500 MILLIONNNNN dollar toy... SADDDD</p>
25409	Hayden James	<p>A gondola is not the best option to address little cottonwood canyon traffic. Not everyone going into LCC is going to the ski resorts, and to service resorts with taxpayer money is a wasteful use of that money. Additionally, with great concerns for the Great Salt Lake drying up, our long-term snowpack is likely to be affected. At that point, what good would a gondola do? I advocate for expanded, year round bus service. Buses at the pick up points every 5 minutes instead of 15.</p>
25410	Emma Dingman	<p>The gondola is a terrible idea</p>
25411	Emily Paskins	<p>I am AGAINST the gondola in LCC.</p>
25412	Douglas Schaefer	<p>This is actually insane. Alternate means of traffic alleviation have been proposed, and yet you still choose to destroy nature.</p>
25413	Jacob Hancock	<p>We have a tendency to destroy every beautiful space for the sake of convenience. I would love to leave the natural and wild feeling of little cottonwood. It's been commercialized enough as it is and I would hate to never be able to escape the eye sore that the gondola would be.</p>
25414	Patrick Brown	<p>Please build the gondola. Being stuck in the canyon during an avalanche, or trying to get up and down through traffic on the weekend is a nightmare. We don't want our tag line to be "Come experience the greatest snow on earth.... if you survive."</p>
25415	Max M	<p>Don't do this. This is not what residents want. The ecological ramifications of this project will last for generations. This is the wrong decision for Utah.</p>

25418	Wylie Davis	No one locally wants the gondola, you're gonna ruin the canyons by constantly having construction up there for the next 5 years while it's being built and your gonna destroy so much of the land just trying to get construction equipment into these areas the gondola is gonna go, do not build this gondola
25417	Dawn Bardon	So incredibly disappointed that the tax payer (me) is being told that I have to pay for a special transportation system to PRIVATE businesses. The gondolas are expensive eyesores that help a few skiers in one canyon and two very profitable ski resorts. I noticed this topic was completely avoided in the presentation. Yes, I reviewed the plan and saw proposed trail parking lots but that does nothing to decrease congestion on the road. Instead it will likely increase congestion due to more vehicles filling more parking. The trails and canyon can only handle so many hikers.
25416	Sierra Gasperoni	The Gondola is NOT the answer to the transportation situation in LCC. It will destroy so much of the natural environment that makes Salt Lake City so special, and will lead to even more damage in the future.
25419	Chris Grosh	This seems short sighted given the dramatic rise in temperature and decline in wasatch snowpack. The gondola will serve an ever dwindling audience. Please no gondola.
25421	Cameron White	No one wants this.
25420	Cynthia Yeo	This is very sad. There are so many better options that would actually improve and help traffic. None of this makes any sense and impacts a large amount of bouldering and climbing as well as parking for those crags. Please reconsider.
25424	Rick Branchini	I fully support Gondola Alternative B project. I believe this project to be superior to other alternatives as this will have lasting sustainability and eventually the least environmental impact.
25423	James Welch	I am very disappointed with the decision of Utah to pursue the gondola option and hope that this course will be reversed. Looking at the number of people and how long it takes to move those people up the canyon during high traffic hours indicate that it will never be able to carry a sufficient amount of people to satisfy the transportation needs. In fact it may create greater problems than are currently experienced. I am a frequent skier and have driven the canyons or ridden the bus for years now. The problem is not as pronounced as the proponents of this project indicate. This seems to be a problem in search of a solution where developers dollars are at stake at the expense of the public interest. Increasing the efficiency of bus lines is a much better option without destroying the aesthetics of the Canyon. Congestion at the base and also at the top when loading large amounts of people at the beginning of the day or at the end of the day also seems very untenable. This will be a very big mistake and will impact all the residents of the state for a very long time. I strongly oppose the gondola system as it is or of a tourist attraction to any real solution. The taxpayers of the state should not be on the hook for a one-off transportation solution that does not benefit all of its residents proportionally. This solution seems that it will benefit the land developers at the base of the Canyon at the expense of the public interest.
25422	Carlie Seliger	I do not want this gondola to go up. It will massively impact outdoor recreation and i do not support this.
25426	Kelly Robinson	The gondola option does not account for multi use and address issues for lower income. Consider an option like a lottery rather than an expensive option that serve few wealthy people
25425	Colin Cassidy	An absolutely ridiculous project and an utter embarrassment to everyone involved. Hundreds of millions of dollars in taxpayer money to subsidize two ski resorts while solving absolutely zero problems.
25427	Ari Ferro	The least environmentally impactful solution is to no build anything new in the canyon. Nothing needs to change. Seriously. Do not bulldoze our heritage just so that snowbird/alta can make _more_ money. Implement parking reservations, eliminate first-come first-serve parking. I pray that the gondola is beleaguered with red tape and litigation for years to come.
25428	Nathan Baldry	I don't think that the gondola is the best or most practical option being taking by UDOT. I also think that the community's voice is being ignored in this process in favor of resort traffic.
25429	Cheryl Olson	Gondola does nothing for hikers. I do not want my tax dollars to enhance the ski industry. No gondola. Limit canyon car use or eliminate and enhance bus service.
27592	Terry Lescard	Why would anyone proceed on a project of this magnitude when the backlash and vast majority of the public are screaming"NO"? It's been abundantly clear the people of Utah want nothing to do with this gandola project and instead this looks like a pet project of people who care little about the environmental and community impact and solely economic interest. What a sad and pathetic show or moral character and common sense.
25431	Ari Ferro	This "EIS" is an absolute farce. The "EIS" is dead-set on implementing something and bulldozing the canyon regardless of any public input or environmental impact. This is just about money. UDOT does not care about the environment. Who's pockets are getting lined the most out of this scam?
25430	David Hardy	No gondola. Only enhances private business. Offers no benefit for hikers. More buses and limit car use in the canyon.

25432	Andy Weuling	After reading the Final EIS it is apparent by the numbers (clearly shown in the infographic presented) that Enhanced Bus Service provides similar if not the same transit time as Gondola Option B with far less impact on views, community, and the environment of the canyon. This solution can be scaled with changes in demand and population of the city as well. For example a weekday with poor snow conditions can warrant a scale back in bus service that day at a savings to UDOT. A gondola would be a fixed, permanent, high cost, and extremely high impact way to accomplish the same results. No matter if demand is high or low the gondola would remain a static entity. A convincing argument has not been made to show the gondola has a better environment impact than the bus, in fact the numbers show a higher impact. Reliability of the gondola is not promised and if anything is less likely than a well maintained bus fleet. If anything goes wrong with the gondola the entire line must be shut down. If one bus breaks down a repair crew can easily get to it while the other busses keep running. The report states the gondola does not have an environment justice impact. However, the cost of taking the gondola verses the bus will be far more expensive, thus pricing out lower income canyon users. On a broader social note, the job creation from the bus service exceeds gondola operation by a large margin. Finally, busses have the ability to serve locations other than the resorts including popular trailheads for winter non-resort canyon users. Thus car traffic in these areas is further reduced and accessibility is increased. The Utah community hopes UDOT will see the light and pivot to the clearly smarter and more publicly supported decision. Thank you for your time.
25433	Lucie David	I am not sure where has IDOT received 14000 supporting comments for the Gondola Alternative B plan. All the residents living by the LCC strongly disagree as it will forever change the quality of our lives. The traffic in the canyon hasn't really been an issue in the last few years, we only had a few good storms. Such an extreme to build a Gondola seems greatly inappropriate and ignorant to the LCC residents, community and environment. Please DO NOT proceed!
25434	Myles Barrett	For the love of god and anything sacred, and by that I mainly mean LCC. Do not build this gondola and ruin the natural beauty of one of the most special places on earth. Anyone who has ever claimed to love LCC would be a cheap sellout to foolishly condone this monstrosity. I hope you get zero funding for this natural disaster. .uâÔ[]è
25435	Bryce Buchholz	How does this plan make literally any sense? This is a huge price tag for very little rewards. This will at best only alleviate about 10% of traffic based on the numbers in the proposal. With increased visitation, that number gets smaller. What a shame. Just appears to be a cash grab.
25437	Taylor Arney	This gondola goes against the management plan set in place!! The intentionally vague language used so there are loop holes is not sneaky. Amend it or stop the project please!!! This is not the way!!
25436	Nathan Waterfall	I fully support the decision on Gondola B. Ease of access to the entirety of the canyon is a part of why I live in the [redacted] zip code. The amazing resorts are not the only attraction; I personally enjoy accessing numerous climbing routes, hiking areas, mountain biking trails, and photography spots which would realistically be made significantly more difficult to access if roadside parking were removed in favor of bus lanes. The gondola is both a safety enhancement and a tourist attraction and the right way forward to ensure a low carbon emissions method of accessing my favorite canyon in the world!
25438	Joshua Pugmire	These is no need for a gondola, or to widen the road. Incentivize carpooling. Most cars that are heading to the resorts contain 1 person. If all those cars had at lease two people that would decrease the car traveling by 1/3 to 1/2. That solves the town of Alta's and the ski resorts parking problem and traffic would run much faster. Plus this is a problem that happens maybe 20-40 times a season. The rest of the time the road is fine. A gondola is idiotic and unnecessary. It will not only ruin the land scape but beautiful canyon that is already far too developed.
25439	Alexander Cooper	How could you even think of MARRING Little Cottonwood Canyon with a gondola. Expand bus infrastructure in the valley by adding new ski bus routes, improve bus frequency, and more parking options. I'm so sorry you don't want to sit on a bus with the regular people but a gondola is a horribly inefficient way to aid traffic. What happens on a stormy day and the gondola itself is on wind hold? What happens to the natural beauty of the LCC? If you proceed with this you will place an ugly cable car and tower line into every photo of LCC from here on out. That alone is unacceptable. It's not only a poor choice, it's more costly, less efficient, and hurts Utah's scenic beauty and wildlife. It's not happening.
25441	Joshua Foulger	No gondola!!!!
25442	Liam Nolan	The people of Salt Lake do no not want a Gondola, it would be a environmental disaster that would alter the canyon forever. We want common sense solutions like tolling and buses, solutions that can be reversed if they do not work. Or better yet restrict all private traffic to upper canyon. Only allow buses and resort employees to drive in upper canyon and implement an enhanced bus service. There is no reason for the gondola, we do not want, we will not tolerate it. Do better
25440	Ari Ferro	30 * 35 = 1050 people per hour on your gondola. Did you know that the Wildcat lift does more people per hour? Did you know that on a busy weekend, snowbird and alta each get 5000-7000 skiers? How are 10,000-14,000 people going to ride a 1,050 person-per-hour gondola????? What about when they are leaving at 4pm and the line is six hours long!? How is this possibly a solution? It doesn't improve the situation at all, and significantly impacts the environment. What a joke. The "EIS" is a scam.
25444	Ari Ferro	Do. Nothing.

25446	Joel Salem	<p>Gondola is the wrong decision for the community.</p> <p>Major traffic and safety issues occur less than 20 days per year.</p> <p>Implementing better bus service, and proper traction law enforcement is cheaper and more effective than a gondola.</p> <p>Better bus services - more frequent, direct to Town of Alta (as opposed to 4 snowbird stops) would incentivize use, and significantly reduce car usage.</p> <p>Proper traction law enforcement, turning cars away that are FWD without snow tires and AWD/4WD without M/S+ would prevent ill equipped drivers from entering canyons. As a frequent LCC traveler, on these days I can attest it is rarely enforced properly</p> <p>Please listen to the community.</p> <p>Joel Salem</p>
25443	Jeff Stoddard	<p>WE. DO. NOT. WANT. A. GONDOLA. You clearly had no intention of listening to the public and tax payers addressing their suggestions and recommendations. We have the ability to provide affordable and electric mass transportation, but you will not listen. Get off your [REDACTED] and do your job.</p>
25445	Ethan Kendrick	<p>Clearly the democratic public opinion does not matter to UDOT. This is wanted by no one who will be affected by it and is endorsed with the false impression that it will somehow positively affect Utah's GDP. We the people (especially the people who live in the area and will have to deal with its environmental consequences) do not support this and do not pay for this. Any drive by neighborhoods near the mouth of the canyon will tell you this. University of Utah studies will tell you this. Surveys of public opinion will tell you this. Tourists don't live here. Tourists either won't care to use or will misuse this system. For shame.</p>
25447	Tommy Mitchell	<p>I haven't formed an opinion on is having a gondola in LLC is good or bad idea, but spending over \$500 million of public funds for a few very specific private businesses to increase revenue potential is egregious. The Gondola must be a strategic growth initiative for the resorts, so they should fund in from the increased revenues they will gain from this infrastructure (like a \$5/ lift ticket "gondola" fee).</p> <p>Also- I would argue the resorts are already at operating capacity for many days of the year, so what's the point of increasing the access without increasing the amount of recreational terrain?</p>
25448	Rob Schocker	<p>What an awful decision!!!!!!</p> <p>How about getting rid of the Icon pass or charging to go up the canyon???? There was never the traffic issue that there is now, until the Ikon pass came out.</p> <p>Why are the ski resorts not paying for this???</p> <p>They are a private business keeping rewards from public funds.</p> <p>And a giant 2,500 car parking lot at the mouth of the canyon??????</p> <p>How utterly abhorrent is that, for this beautiful area.</p> <p>SHAME!!!!!!</p> <p>Traffic</p>
27594	Christoper Koester	<p>The absolute worst decision you could have made. Who got paid off? Time for UDOT to be investigated for destroying OUR Little Cottonwood Canyon. You should all be fired.</p>
25449	Parker Willett	<p>We don't need a gondola to destroy the canyon and waste money. Spend it on things that will benefit everyday Utahns, like double tracking the front runner, expanding trax lines and public transit, and/or helping the unhomed population!</p>

27593	Dave Tucker	<p>Concerning Little Cottonwood Canyon, I think the Gondola is a great idea; and should be painted with UDOT Brown paint, like the cell phone towers in Big Cottonwood. A gondola will reduce the noise pollution from the proposed multi-lane canyon road, bus lane, and canyon traffic.</p> <p>I disagree with charging people with a Toll. I believe it should be the ski resorts, Alta and Snowbird that should charge the fee for parking during the ski season. Maybe 1/2 rate for those who carpool. Toll signs in the canyon would be ugly. If they can't pay a toll, will they have to make a U turn on a busy road? Skiers could buy an online SKI PASS with parking fee included and designate how many passenger will be in their vehicle. No Government involved.</p> <p>I like the idea of adding new parking areas with restrooms in Little Cottonwood Canyon. I enjoy hiking in the Summer and Snowshoeing in the winter; and I prefer not to park on the main road. May be you should put up signs to keep skiers from using these parking areas for park and rides, to keep more vehicles out of the canyon.</p> <p>I believe you still need to build some more UTA Park and Ride lots below the canyon. During the winter season, the lots fill up fast, and people have to park on streets. For every space available below, that's one less car in the canyons.</p> <p>Concerning Millcreek Canyon I know this comment is about the Cottonwood Canyons, I don't know why UDOT doesn't buy from Salt Lake County the little park, that nobody is using, and add 60 new parking spaces for Millcreek Canyon users only. This would be a non-UTA lot, so that people wouldn't be using the UTA lot on 3900 South or Olympus Shopping Center for parking. GPS: 40°41'28.6"N 111°47'45.9"W</p> <p>Thank you for reading my comment. Dave Tucker</p>
27595	Maria Evans	<p>Do not build a gondola in Little Cottonwood Canyon! Residents do not want it; it's not a great long-term solution; we don't need it; it costs a lot of money; it's invasive; we have quicker solutions with less impact! Gondolas mean parking lots and that's even more invasive. Please do not build a gondola!</p>
25450	Alec Quick	<p>I am opposed to this decision. I do not want my tax money to fund this decision. I believe that this decision goes against the wants of the public. I believe that this has been chosen due to lobbying. Horrendous!</p>
25452	Samuel Pew	<p>This gondola is being built on tax payers dime to benefit corporate greed. It will ruin many historical climbing areas. I feel as though this just moves the problem elsewhere as well. You are still going to need a parking lot bigger than alta and snowbirds combined.</p>
25451	Korinne Bricker	<p>I live full time in a tourist centric town and can tell you first hand how building more infrastructure impacts locals and the environment in a negative way. Building this gondola will result in a decrease in experience for those in the area as well as threatening habitat, ecosystems and wildlife.</p>
25453	P. Robert Augason	<p>I attended a meeting to discuss issues that have now come to a head. The discussion basically had three (3) main thoughts. 1. The cost is heavy and there needed to be million more money spent for environmental evaluation that have already been done three times prior. 2. The cost will be the burden of the state tax payer despite it only affecting one country. 3. Alta ski lift company stated that they (ski resorts) would pay for the whole gondola 100%. After this was presented the question was raised why are we even discussing hemorrhaging taxpayer money and senseless meeting. Is the real reason that politicians (active and past) and contractors are making a process difficult to make lots of dirty money?</p> <p>Nothing has been addressed (elephant in the room) regarding those who own the property that is being affected by adverse means. Is there going to be a government "taking" to provide financial benefit to the resorts? Is there going to be any restrictions or cost to property owners to use the roads and right of ways? Note that some of these roads and right of ways existed before Utah was a state or the Forest Service even existed.</p>
27596	1 2	<p>you and the gondola.</p>
25454	Jesse Hanks	<p>I am against the gondola option. The gondola will not go to the places I want to go. I prefer a reservation system to limit traffic. The beauty of the canyon is spoiled with the Gondola and with more traffic. The best option is not to raise prices but to enforce reservations.</p>
29393	Michael Keeley	<p>Yes, my name is Michael Keeley. My phone number is [REDACTED] I am in Salt Lake and I just read on KSL that the gondola plan looks to be moving forward and I wanted to express my grave reservations and non-acceptance of this path forward on the prospect of getting up the Canyons. I think it's a terrible idea. I think they expanded bus service and other Associated, prospects would be a lot better for the citizens of Salt Lake Valley and the benefit to the Resort's and the grab of taxpayer money, which I'm extremely dissatisfied with Thank you.</p>
25456	Gabe Loredo	<p>Stop wasting our tax dollars and lining your political pockets</p>
25457	Emily Loken	<p>The gondola is the most ridiculous idea. How is got this far, is unimaginable. Why is this better than creating a bigger parking lot, and increasing public transportation. This much simpler option would be better for the community and the environment.</p>
25458	Chrissy Richards	<p>The Gondola is a win for developers and big money and a loss for the people of Utah who spoke out clearly against it. Why have public comments if the public's will is flagrantly ignored at every step?</p>

ID	Full Name	Comment
25455	Madeline Vandel	<p>My name is Madeline Vandel, and I am a lifelong resident of Salt Lake City. I have been recreating in Little Cottonwood Canyon for over 20 years. I have several very serious concerns about your department's August 31st decision that Gondola Alternative B is your preferred alternative.</p> <p>First, looking at who you are consulting for your environmental impact statement I see that you are missing a major agency to consult with: the Department of Environmental Quality for the State of Utah. Why on earth have you not yet consulted them? As a state agency you need to work in conjunction with other departments to make a fully informed decision. The experts here are DEQ. You cannot make the correct decision without consulting them and having them give you a statement. I refuse to believe that building a gondola will not have negative impacts on the air and water quality of little cottonwood canyon. You cannot make a decision about the environmental impacts of any of the alternatives without consulting DEQ. They are the experts and their statements should be of the utmost importance to you and your departments decision.</p> <p>Second, I do not believe that this is the right choice for the people who actually live in Salt Lake City and at the base of the Cottonwood Canyons. It seems as if this decision was made to benefit developers and special interests. I am curious to hear why you think that a gondola is best for locals. As someone who has lived in the area for over 20 years and comes from a family who has been here for generations, I can tell you that this is not the right choice. What Salt Lake residents need is certainly not a gondola with giant parking lots and obstructive construction. This seems like it benefits tourists and developers, voices which most certainly should not be valued over those of the residents. I am seriously disappointed in this decision and my voice does not feel heard.</p> <p>Also, as somebody who recreates in Little Cottonwood Canyon year round, I do not understand how a gondola would support not only backcountry skiing access but also climbing and hiking access in the summer. Sure maybe a gondola makes sense in theory when you solely consider access to Snowbird and Alta, but what about all of those who recreate in the backcountry in the winter and climb at various locations throughout the canyon in the summer. How would a gondola support us in accessing these locations that are so important to us?</p> <p>In conclusion, as a resident of the Salt Lake area whose voice should be a priority in this decision, I demand that you firstly consult with the Utah Department of Environmental Quality before taking any further steps. They are the experts who can really tell you what the environmental impact will be of a gondola. This should be your number one priority. I understand that without consulting them it is easier to make whatever decision you want, but this is unacceptable. They must be consulted in order to make a decision that is informed and responsible. Next I urge that you really examine who this decision benefits. Your priority needs to be residents of Salt Lake City and those who live at the base of the Cottonwood Canyons. Stop listening to developers and those who may be trying to pay you off. You represent Utahns, not whoever will pay you. I also urge you to consider those who recreate throughout the canyon year round. Climbers and backcountry skiers deserve access to the canyon. Do the right thing here. You MUST consult DEQ, and please do the right thing by prioritizing locals over big money and developers.</p>
25460	Ricco Cordova	<p>So with putting in a \$550 Million Gondola did you consider how many more people you are bringing into the Watershed? Especially with The Great Salt Lake evaporating every year we get are getting less and less lake effect that has been so crucial to making the greatest snow on earth. You aren't fixing the "congestion" problem either. You're just moving it into the residential areas of Cottonwood Heights and Sandy.</p>
25459	Kylie Daniels	<p>I've lived in Utah the last 30 years, a majority of that time on the east bench of Sandy. I am FOR the gondola. Please operate it year round. I work in a field of anatomy and kinisiology, and I have elderly clients who hold the canyon dear to them who have not been able to travel up due to the drive time and safety, they're in their 80s-90's! Many of them have stated they'd love to take the gondola to enjoy the fall colors. We've all discussed this very much and they want me to stress how lovely it would be. Thank you! One would love to add he spent all his life using the canyon, including proposing to his life long love and wife at Alta. He hasn't been able to visit since 2011 on his own because he no longer can drive. He can take the gondola solo and enjoy the peace of the mountains.</p> <p>Thank you from all of us, again.</p>
25461	Dave Morgan	<p>I ride the temple quarry around 80x a year on my mtn bike. It's my primary form of exercise. And what's going to happen with that? Don't say closure when it could have been lane widening. I WILL gladly trespass if needed..</p>
27597	Traci Monson	<p>Never have I been more disappointed and disgusted. You will change Little Cottonwood Canyon forever for the worse by adding a Gondola that will only help greedy developers. I find it interesting you released no public comments on this. Thank you for making it worse, not better and adding to the pockets of a few. You are ruining a beautiful masterpiece for what? You know there are better options and you let greed win out.</p>
25462	Michael Ahern	<p>PLEASE do not build a gondola. To use taxpayer dollars to strictly benefit the ski resorts is extremely irresponsible. The public does not want this and we are the ones affected by the congestion issues. Not to mention, this will not solve congestion issues considering the parking lots will still be full every day. All this will do is increase the number of skiers on a given day, which is already as massive issue. Please save the beauty of our canyons and require parking reservations instead. This is the only way to reduce and spread out congestion.</p>
25463	Maxfield Green	<p>Hello,</p> <p>I'm writing in concern for the proposed gondola installation project in Little Cottonwood Canyon. This seems incredibly short sited and a solution to a problem that effects a very limited and very privileged user group. The project is being pitched as a public transportation issue while it poses a problem to a small fraction of salt lake residents. Even within the user groups of the canyon itself, the gondola would only serve those utilizing the two ski resorts as opposed all other sections of the canyon. This seems like a corporate use of tax payer funds.</p>
25464	Brianna Tiller	<p>Please do not build the gondola. The majority of Utahns don't want it and it have a negative impact on sight lines and canyon. Please look at less expensive more popular options such as increased busses.</p>
25466	Anne Lawlor	<p>No Gondola. Instead, please implement FEE STATIONS, SHUTTLE BUSSES, RESERVED PARKING at ski resorts during winter. Look to ZION NATIONAL PARK who have done a wonderful job!</p>
25467	Blake Nielson	<p>LCC is a Utah treasure. Let's not ruin the iconic skyline with a Gondola that only benefits some winter time users. Enhanced busses and tolling CAN fix the problem, especially peak time shoulder lane busses.</p> <p>We have the infrastructure in the road to do this. Lets optimize what we already have.</p>
25465	Kylw Nelson	<p>No one wants this listen to the people we pay your salary don't destroy the area with this useless project</p>

ID	Full Name	Comment
28183	J. Trent	<p>Josh,</p> <p>My name is Joshua Trent and I am a resident of Holladay UT and I work with a company very interested in either funding or financing the entire Gondola Project. I called and left a message, but thought an email would work as well.</p> <p>I originally approach members of the Utah City Counsel but they said they were opposed to the project on financial basis, when we told them we would fund the entire project they said they were opposed to it on an environmental level as well.</p> <p>I finally was able to speak with Brittany at Exoro and she said you are the person in charge of the project.</p> <p>Below is a summary of what we do and how we fund projects, but we can tailor a specific solution for UDOT on the Gondola project and maybe other UDOT projects as well.</p> <p>Here is a summary about our group and an example of what we do.</p> <p>Alpina is a privately owned investment boutique firm in Canada that provides professional services in the sectors of Finance, Real Estate, Insurance, Corporate Services. Established in 2018 as a holding company, group companies operating since 1978, and headquartered in Vancouver, Alpina has grown into a sophisticated local and international investor with a global revenue generating asset base.</p> <p>The Alpina investment model focuses on (1) government development projects, (2) large-scale projects, (3) infrastructure development and (4) projects funded through grants rather than loans. We fund governments, international institutions, private equity, sovereign wealth funds, corporates, private and family businesses, social and educational institutions, medical institutions and 501(C)(3)</p> <p>Example 1 - outline of the Alpina method: When we spoke I told you about a group I work with that can provide funding or financing for projects. We mainly focus on government projects but can also do public/private partnerships and private projects. I know this program can be an ideal solution for the UDOT Little Cottonwood Gondola Project and other projects as well that UDOT may be involved in.</p> <p>Here is a list of the focus areas:</p> <p><u>Affordable Housing</u></p>
25469	Katherine Luke	<p>The gondola is not the solution. Just ride the gondola in Breckinridge when everyone is trying to leave when the sun goes down. They are timing and capacity limited. With buses or a cog train you can increase vehicle frequency and capacity to move people more efficiently. Please reconsider these options. We need a practical solution, not a glamorous showy one. I love utah because it is the perfect friendly and practical for normal people. To make solutions work they need to be the easiest option. Thank you.</p>
25468	Blair Hickman	<p>I watched both videos and really appreciate the detailed information. To me, the high visual damage and cost of gondola B is just not worth it. I would urge UDOT to consider a reevaluation after phase 1, rather than committing budget and pre work toward a gondola before even evaluating the real results of enhanced bus service....especially as we don't know how the climate will change over the next several years. Start small.</p>
25471	John Johnson	<p>Keep our canyon clean and small. Don't destroy our climbing heritage. The resorts are already inducing too much demand in the canyon.</p>
25470	Michael Adamo	<p>I do not support the gondola in Little Cottonwood Canyon. As a regular user of the canyon for summer and winter activities including hiking mountain biking skiing and snowshoeing. The gondola will be invasive and take away from the natural feel of the canyon. Instead of being able to hike bike or climb in the canyon and feel like you're in the wilderness you will feel like you are at a ski resort. Additionally, this is a poor use of taxpayer dollars as the gondola really only benefits the ski resorts.</p>
25472	Michelle Cowan	<p>The Gondola is too expensive. Taxpayer funds should be spent on greater needs of the community such as education! This benefits very few people. The resorts needs to limit the amount of lift tickets that are sold. Developers and Ski resorts should not be spending tax payer dollars! There are just too many reasons that this is not a good solution!!!</p>
25473	Jensen Lehmborg	<p>This is absolutely ridiculous, you are going to ruin an entire canyon to benefit only a select few who can afford to ski and it will only help to alleviate congestion on a handful of weekends a year. For the rest of us we have to pay the bill and enjoy the eyesore for the rest of our lives. Will we even get snow in 10+ years from now?? What happens to the gondola when it's deemed useless??</p> <p>The entire project reeks of corruption. Ask yourselves who owns the land the parking lot and base station will be built on??? Who benefits from it???</p>
25476	Tyler Struss	<p>The gondola is a profit grab! It is not a sustainable solution, and represents corrupt corporate lies. The negative impacts far outweigh the benefits and should guide the decision making process. Utahs ski industry will fail, persistent drought will cause societal collapse in this region, and this gondola will only contribute to future pain and suffering by long term residents of this state.</p>
25474	Jensen Lehmborg	<p>This is absolutely ridiculous, you are going to ruin an entire canyon to benefit only a select few who can afford to ski and it will only help to alleviate congestion on a handful of weekends a year. For the rest of us we have to pay the bill and enjoy the eyesore for the rest of our lives. Will we even get snow in 10+ years from now?? What happens to the gondola when it's deemed useless??</p> <p>The entire project reeks of corruption. Ask yourselves who owns the land the parking lot and base station will be built on??? Who benefits from it???</p>
25475	Jodi Pyle	<p>80% of Utahans expressed that they DON'T want the gondola. Better bus services would is a much better alternative and actually works!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25477	David Pedersen	<p>I strongly disagree with the proposed "Gondola Alternative B". Not only would a gondola have limited passenger capacity, but the towers would also ruin Little Cottonwood Canyon's aesthetics. I'm disappointed that UDoT chose this alternative instead of the cog-rail alternative, which in my opinion and based on the best-available science would have been the superior choice. Gondola Alternative B will also keep SR-210 without alleviating its traffic issues, resulting in ongoing traffic emissions (including from tires) and harm to nearby Cottonwood Creek via runoff containing fish-killing tire chemicals.</p> <p>David Pedersen, Saanichton, BC, Canada</p>
25478	Kaiden Kazemini	<p>There is not a single soul in Utah who wants this gondola to be built other than the people who will make money from this. The environmental impact it will have will be irreversible and we are sick and tired of our voices not being heard when we the people are the ones paying for this garbage. Nothing realistic has been proposed such as tolling, carpooling requirements on busy days (weekends/holidays), etc. Maybe if the ikon pass wasn't allowed in our canyons this mess wouldn't have happened, but yet again money over everything.</p>
25480	Stephen Lundquist	<p>Both plans (gondola and road expansion) are horrendously expensive for taxpayers and primarily benefit two private companies and the developers. Both would significantly alter the views of this world class canyon. They don't offer immediate relief (as it would take years to construct) and their long term benefits are highly questionable. I've lived by little cottonwood canyon for over 30 years. How many Utahns do you know who would pay for an expensive ticket to take a public transit option (that still takes a long time to get to the resort) when there is still the option to drive?? I don't know many at all. This will not be a popular option. People will still drive as they will assume that the roads are more clear and that "other people will take the gondola". They won't take the public transit option unless it's the only option.</p> <p>Expanding lanes historically only alleviates traffic temporarily. They fill up with time.</p> <p>There is a much more affordable alternative (that is mostly in place) that is much better for the environment and offers both immediate and long-term benefits: Offer significantly more parking at park and rides, expand bus routes with stops at trailheads, and STRONGLY incentivize people to use public transit by instituting a sliding-scale toll. Powder days and weekends in winter should cost at least \$75-\$100 per vehicle. Or don't allow private vehicles during ski season (aside from those with specific passes for residents, etc). Buses puke then be exempt. This would cost significantly less and would actually incentivize public transit. The gondola does not do that.</p>
25479	Will Romano	<p>A gondola is about the dumbest option to relieve congestion in the canyon. Maybe not the most destructive -that award probably goes to expanding the roadway- but definitely the dumbest option. First, it does nothing to solve the issue. Transporting around 1,000 people an hour when those resorts get 20,000 people a day? Taking an hour to get people from the base of the canyon to the resorts? Pure idiocy. Second, the price tag is absurd at half a billion dollars. I am sure there will be cost overruns as well. Finally, as has always been the issue with this project, the people who benefit most from any of these proposals are the owners of the resorts. They should be on the hook for funding a solution to the problem and that solution should not come at the expense of the canyon ecosystem and other users besides skiers and boarders. Busing seems like the most obvious answer here, mandatory carpooling, etc. No one should be allowed to drive up the canyon during peak season in a car alone....</p>
25482	Charlie Dean	<p>Taxes should help the people paying for the service, not increase revenue for private business like Snowbird and further reduce ability for everyone (especially locals to ski). Why not build a tollbooth booth like millcreek canyon? This way canyon traffic decreases, crime/graffiti decreases, and the money is used to maintain the canyon. How does a gondola have anything to do with sustainability or access??</p>
25481	Michael Gillett	<p>NO! This is a limited solution that does not scale. There is no integration with other long term infrastructure such as a rail option to link current and future trax capability. It destroys the unique beautiful views people come to Utah for. It cannot expand capacity to meet future demand like a rail system could. Emergency rescue and maintenance will be a problem when it eventually breaks down as the ground below will not support rescue operations. High snow and adverse weather conditions is going to make maintenance a problem resulting in failures. This does not serve the community or is a solution. Make snowbird implement a parking requirement like Alta already does. Please do not build this!</p>
25483	A E	<p>I strongly oppose the gondola for many reasons. Ultimately this project will produce an influx of people to a scared area which will become very vulnerable to the impact of human activity. The construction of this project also brings up negative environmental impacts. This land should be preserved rather than exploited for selfish, capitalist reasons.</p>
25486	Justin Lutz	<p>I do not understand how this is more efficient than banning single passenger vehicles during high volume hours. I regularly observe the number of single passenger vehicles in the canyons during the weekend and find that on an average winter day, there are 40-70% single passenger vehicles in the canyon. It is egregious not to consider banning them during peak hours (6am-10am for example) on weekends. This would clear up a lot of the congestion issue.</p>
25485	Ann Jog	<p>Just no. I could give you a well thought out essay as the the nervous environmental reasons against this idea, but I'm sure others have already done so. It makes me want to cry thinking about what this will mean for climbers, and all humans due to the environment aspect if you follow though. Do better.</p>
25487	Austin Tiller	<p>Data must be presented that will this be used prolifically. This is a massive investment from the public and it will permanently and irreversibly change the landscape.</p>
25484	Erin Bartke	<p>The public does not want a taxpayer funded gondola that will only profit two private businesses! This gondola does not take into account other users of the canyon or locals who live at the bottom of the canyon. This gondola would be paid for by the many and used by the few!</p>
25489	Brock Reynolds	<p>Disappointing to put that big eyesore up little cottonwood canyon. It's such a pretty canyon and I'd rather not pay for something that's going to ruin the atmosphere and environment of that canyon. Please rethink this.</p>
25488	Hayden Marshall	<p>Nobody wants a gondola. It will ruin climbing that has been along the ride for years. It is just a marketing ploy by Alta to cater to the Uber rich and push locals out. Just put a toll and use only buses up the canyon in the winter, except for employees.</p>

Comments on Little Cottonwood Canyon Final EIS

25491	Laura Little	<p>I am a frequent user of LCC as a backcountry skier and hiker. I am deeply disappointed to the point of tears with this decision. The gondola exists to enrich TWO PRIVATE entities (Alta and Snowbird) for a limited time of the year and is detrimental to all other users of LCC. It is shameful and embarrassing to permanently destroy the natural beauty of this canyon to simply enrich the operations of two ski operators. While I am encouraged to see enhanced busing and remedy prior to securing funding for the gondola, PLEASE DO NOT GO FORWARD WITH THE GONDOLA. It is a permanent, devastating move that visually symbolizes profits over people. It would be a stain on Utahs natural beauty and Utahns do not want the gondola. We have used every possible means to civilly and constructively engage to say this, and it is beyond disheartening to see that the will of the people is being pushed aside to go ahead with this approach. That you have not published the comments "pro" vs. "against" gondola is telling, because it would reveal the truth on this. Please reconsider as there is still time.</p> <p>Respectfully, Laura Little Park City, UT</p>
25492	Anthony Snow	<p>Boo this [REDACTED] The environmental damage to the canyon on the taxpayers dime so that all the money flows to private capital is disgusting. Gondolas are slow and inefficient. Effective transportation would be in the form of a train and would be at a minimal cost, same as our public transportation. Gross display of greed to grab money from the public at our mountain's expense.</p>
25490	Gregg Hawkes	<p>I'm against any gondola proposal and consider it a very poor use of my tax dollars. I also ski Park City and Deer Valley and find their bus system much more efficient. A Central Bus Station could receive bus traffic from the entire valley and express it up and down ANY canyon stopping ANYWHERE in the canyon to embark passengers for ANY canyon use. Autos should be very restricted from canyon use.</p>
25493	Arthur Mahoney	<p>I don't want to drive up our canyons and have the beautiful view ruined by gondola towers and cables. Please don't do this.</p>
25495	Koki Nagawa	<p>This is an awful awful decision. This will destroy the climbing world and although yall claim that only one boulder will be destroyed we all know that this is not true. What are you guys doing to ensure this doesn't happen, what are some solutions to make sure the boulders survive, or maybe relocation of some boulders.</p>
25494	Natalie Wingfield	<p>The gondola is not a time effective or cost effective solution. Please consider tolling the road and having a dedicated bus lane. The environmental impact will be huge and destroy a number of local climbing spots. WE DONT WANT THE GONDOLA.</p>
25497	Delaney Sillman	<p>This is a poor decision on the part of UDOT. Tax payer money should not be used to shovel rich skiers up to private ski resorts. The environmental degradation and the destruction of other recreation opportunities, like climbing and hiking highlight even more inequities. Recreation for the wealthy is not more important than recreation for the masses. I have spent a great deal of time up the canyon, working at Alta, climbing, hiking, and fishing in the creek. It is certainly busy, and adding more people with an expensive gondola that will only be in operation part of the year will actually not help overcrowding, and will take attention away from other common sense alternatives that have the potential to address the concerns of all canyon recreators. Environmental stewardship programs, potentially road widening, improved bussing, etc. Utah has managed to deal with huge visitation numbers in our national parks, this isn't a problem that needs new, innovative, and EXPENSIVE solutions, it needs a dose of common sense. It needs decision makers that prioritize the stewards and regular users of the canyon over the occasional guests to the resorts that happen to have deep pockets. I think this is an incredibly irresponsible choice. I appreciate your efforts to continue to serve the people of Utah who love this place and want it to be here and available to our children. At this rate that is not going to be a reality. Please say no to this alternative.</p>
25496	Steve Cazier	<p>Bravo. Wise and courageous choice by UDOT, despite all the vocal opposition. People all around the world have already embraced gondolas as the best solution. Eventually the citizens here will see the wisdom in this choice. PS. I ski at Snowbasin and I would hope someday all the resorts can have gondolas and the cars and buses stay home!!</p>
25498	Alexander Kemp	<p>The proposition to build a Gondola in LLC is atrocious. I was a new resident years earlier and some of the most incredible natural splendor I've seen in my life is driving up the canyon and seeing the uninterrupted beauty on either side of the road. Using the enormous budget for this project, UDOT could easily create more incentivized park and rides, charge affordable tolls and create other systems to accommodate the three month rush that this enormous YEAR-ROUND' Gondola is supposed to accommodate. Shame on anyone who would think creating a permanent large metal structure up the centerline of the canyon would be a way to preserve one of the most beautiful mountain canyons in our country. The canyon has always looked this way, and you will be leaving a terrible scar down its ancient front. The Canyon is bigger than Ikon, bigger than snow season, bigger than skiing. Do not ruin our canyon with a gondola down the middle.</p>
25501	Brandon Orme	<p>I hate the gondola. Don't back the project. Taxpayers shouldn't have to pay for this.</p>
25499	Meg Emory	<p>This decision is disappointing and it is quite clear how heavily lobbying was involved to come to this conclusion as the "best" option for the future of lcc. It shows how important the support of the resorts and pleasing tourist are over the practicality and overall enjoyment of the public. Not to mention as the environment continually and quickly deteriorates in the area, this seems like a foolish way to waste money when these resorts may be heavily struggling by the time this is completed. Do better.</p>
25500	Travis Swiger	<p>The gondola seems absurd and will ruin the natural beauty of LCC. The reason I don't use public transport at the moment is lack of parking, no time benefits, and buses do not come fast enough. I think the best way forward is forcing people to use public transit and making it more feasible. Allow only private vehicles with 3+ occupants up the canyon, create more parking, turn away those who do not have 3+ occupants unless parking is full, and supply more buses. You could even charge a small amount of money for the buses when you consider the alternative is paying for parking and gas used sitting in traffic</p>

ID	Full Name	Comment
25503	Colin Maguire	The decision to green light the gondola is unbelievable. I agree with Carl Fisher's comments that this decision has nothing to do with transportation. As usual, it is about economic development and corruption at the highest levels. The canyon is already overdeveloped. For those of us who love the natural beauty of the canyon, it is challenging enough to take a photograph without some sort of man-made object in view. These sensitive habitats will be further degraded. UDOT and regulators care most about is catering to the Ski Resorts. Little Cottonwood Canyon has become a playground for the wealthy and well-connected. The residents who live at the mouth of the canyon, a majority oppose this decision, get [REDACTED] The message is clear for regular working class people of Salt Lake, please stay out of the canyon!
25502	Brodin Bennett	Please no gondola! Can we at least try less permanent and invasive solutions first. Why does the first option that we try have to be a permanent 550 million dollar fixture in a beautiful landscape
25505	Gretchen Cooley	I'm so disappointed that UDOT has chosen this & decided to make the taxpayers pay for it. It only benefits the ski resorts. They should be footing the bill. We don't ski. My family doesn't ski, and yet we have to pay for this. Totally disagree. Plus let's disclose how much \$\$ certain politicians, possible UDOT officials, etc, are going to profit from this project. Somebody is making money off the land by LaCaille. Totally a gimmick that's unwanted by the majority of Utahns. Bad idea! No to the Gondola unless the ski resorts pay for it!!!
25504	Flynn Mcfarland	This is obviously corrupt and not what the public wants! This serves only the private companies and developers, while leaving a huge impact on the beauty and land of LCC. There must be alternative solutions worth trying before making this the only option! Don't play into this obviously poor decision
25506	Clay Wilkes	Gondola is stupid. Flashy project for rich snowbird funded by public money - insane. But good for snowbird to bribe this one thru. Just put a tollbooth at the bottom to charge at peak hours unless you're on a bus
25507	Knox Heslop	How exactly would the Gondola reduce traffic? The worst traffic days are when the canyon is closed, and cars collect at the base. Now, on every busy day, there will just be horrible traffic getting into the parking structure at the base of the gondola. This idea won't even work, and will impact the Canyons climbing, and natural beauty. This idea really [REDACTED] Please listen to the voices of the people who live here, rather than the companies who only seek profits. The mentality that is driving the decision to put in a gondola is the same mentality that it ruining the entire planet. Please do what's right.
25508	Lynn Bourdaghs	Unbelievable. Total waste of money.
25509	Ray Anderson	<p>I am 74 and a life-long skier. As an Alta/Bird season pass holder I often head up the canyon for half-day ski jaunts in my trusty Subaru Outback, which is outfitted with Blizak snow tires. I've never had a problem getting up and down LCC. In fact for two season, I had a UDOT sticker that confirmed that my vehicle was properly equipped to make the journey. That pre-check pass should be continued.</p> <p>At present it takes 15 minutes door-to-door for me to get from my home to the Creekside lifts at Snowbird. The Gondola and/or bus increases that time to an hour.</p> <p>My recommendation is three-fold:</p> <ol style="list-style-type: none"> 1) Sell "annual" unlimited trip toll passes for Utah residents to expedite trips up LCC. 2) Require vehicle winter inspection stickers to purchase an annual toll passes to assure snow tires, four-wheel drive, etc. 3) Enforce ride-sharing requirements (at least two people per vehicle). <p>I may not be around by the time the Gondola is built but my grandchildren and great grandchildren will be. I want them to enjoy the wonders of LCC as I have.?????</p>
25510	Christine Milbank	Please identify on a map the location of the "new, one-way access road" to the base station said to be at about 9500 South Wasatch Blvd. Do you anticipate an expanded entrance of the current La Caille driveway, or something else?
25511	Tori Steely	I am disappointed in the decision by UDOT. I don't feel as if all options have been explored. The gondola will only service the two ski resorts and ignores all the other recreation that happens in LCC. Going with this decision is a very short-sided money driven decision that goes against what the majority of citizens in SLC want.
25512	Thomas Kawagoe	I do not want the gondola. As someone who enjoys Little Cottonwood Canyon (LCC) as a place of recreation, I think adding the gondola will have too high of an impact on the land and will detract from the experience of LCC enjoyed by so many people! Keep nature wild and quit developing land that doesn't need to be developed! Please pick an alternative that won't scar the land!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25513	Deborah Stewart-graf	I do not want to pay for a gondola to bring skiers to a private ski resort. The cost of the gondola is outrageous. I don't ski and I won't use it and I don't want to pay for wealthy skiers to get to the ski resort faster. I use the canyon down below the ski resorts and the gondola won't even stop at any of the places I want to go. The gondola is going to benefit only a few people using the canyon. We DONT need a gimmick to attract more people to the canyons who will cause damage to the eco system and trash the area. The roads leading to the gondola will be heavy with traffic that they can't handle. With global warming, the drought and the Great Salt Lake drying up I don't know if the ski resorts will still have skiers in 10 years. Don't do this stupid project. So many knowledgeable people have suggested better ideas with gas powered buses that don't pollute or need wider roads. I don't think your board really looked at the many ideas offered. They narrowed their choices to two and those both were not good. Why didn't you look at the many that were cheaper and more environmentally friendly. I have lived near the mouth of Little Cottonwood Canyon for 32 years and I know this area. Who are you really trying to benefit here? There are very few days where traffic is bad in the canyon. It's bad because people went there to ski. For the few days a year the skiers have to be delayed going or coming from skiing I don't really care. I think this is called a first world problem that only a few wealthy people have. To reduce the traffic in the canyon impose a toll, make gas powered buses mandatory, make people make reservations like the national parks do. Preserve the canyon as it is. Don't build a ridiculous monument for the ski resorts and the wealthy. The canyon isn't Disneyland so don't try to make it a huge tourist attraction. I've seen the gondolas in Switzerland and this situation in Little Cottonwood Canyon is not the same. Use taxpayer money for projects that benefit many, not just the Ski resorts and skiers.
25514	Ian Clements	The installation of a gondola while maybe environmentally friendly, will ruin the visual beauty of the Little Cottonwood Canyon.
25516	Kay Lundquist	This is a very disappointing decision considering the majority of the people it will impact do not support it. Since buses will have to be used in the interim, start with an enhanced bus system and implement a fee system for cars that favors carpooling. Also use a permit system for the busiest ski days. Before you ruin the canyon by tearing it up, try an option that saves our canyon and supports the desires of the majority.
25515	Kai Benedict	I want to preface this by saying that safety should always be the first concern and I appreciate UDOT doing what they do to keep us all safe in LCC on a daily basis. That being said, I strongly believe that the gondola is an unconscionable alternative and requires excessive alteration of this incredible natural landmark. I don't really understand why none of the onus is being put on the ski areas. Why are they continually allowed to profit off of the degradation and alteration of public lands and now off of taxpayer money? Why is it so egregious that they should cap ticket sales or limit guest access to the resorts? Are their profits so much more important than public lands? I totally support more busses, totally support tolls for non-carpool cars, but this is extreme to a huge degree without even taking mitigating measures first. Why commit to this plan now? I understand that it is a tiered rollout but try something else first! This kind of land management that just bends over to the financial interest of corporations is honestly enough for me to leave the state over. Hard to think of a move that shows more of a lack of commitment to local residents. I get wanting to support the tourism generated by the ski resorts but this goes a step too far in sacrificing local lands enjoyed by locals at the expense of wealthy out-of-towners. In a larger sense, seems to contribute to the unlivability of salt lake area to all but either long-term residents or those not looking to establish a community here. Tough to see myself staying if this is approved.
25517	Ed Matsu	Little Cottonwood Canyon is a world-class natural resource with nearly pristine views. It is a retreat for enjoying nature and getting out of the hustle and bustle of the valley. You can't replicate that. Using over half a billion dollars to build a gondola to benefit just two resorts (mostly during the winter months), plus annual operating costs, is not a fair and proper use of tax payer money. It's only boosts marketing for those resorts-at our cost, not theirs! Then, on top of that imposing tolls for drivers? Once these towers are built they will mar the experience for generations. Please reconsider going forward with the Little Cottonwood Canyon gondola.
25518	Lindsey Kaneko	Please reconsider the option for a gondola. The impact on climbing and other recreation is devastating. Buses are a usable option in other canyons, I believe it can work for this canyon as well.
25519	Ben Klein	The idea of putting a gondola in one of the most pristine canyons in the world is absurd!! The only one who will benefit from this will be Snowbird and Alta. We do not need to transport more people up the canyon. We need to find a way to make it safer, and more efficient without disturbing the environment and beauty. This is the most rushed solution every and will only act as a bandaid that will fall off within a decade then you will be looking for a new solution which is going to cost double. This will drive people out of the most beautiful state in the country just so greedy businessmen can make some money. This is disgusting, and anyone in favor of this should be ashamed. We have taken enough from this planet, and we are already seeing the effects. We can't take advantage any longer just for our own enjoyment. THE GONDOLA SHOULD NOT BE THE SOLUTION!
29394	William Michael	Yeah, William Michael [REDACTED] You know, this is a travesty, you know, it doesn't matter what the will of the people is. It's the will of the big dollars that are coming in from the gondola company. There's some politicians and Little Cottonwood Canyon. It's just a load of crap.
25520	John Stilley	\$550 million. I can't believe the state is wasting our taxpayer dollars on a project that only benefits wealthy tourists and skiers. Our state's homeless problem is a much more pressing issue and solutions could thrive if they were ever presented with that amount of money. The gondola only expects to make \$7 million a year max, so this is an investment that won't pay off for 80 years. How is this beneficial to Utah's economy? This decision is catastrophic, and just another example of how the state government places the wants of the wealthy over the needs of the general population.
25523	Samuel Alexander	I won't ride the bus but I will ride in a gondola. No one wants to ride in a bus and deal with potential slow traffic, crashes and slide offs. I fully support the gondola. I have been a little cottonwood user for 30 years. It's precious and the gondolas make it usable.
25522	Albert Kabili	This decision is very upsetting and opposed by most Utahns. Wrecks the aesthetic of canyon, fiscally irresponsible, and doesn't give a chance to improve the situation versus less xrastic means. Horrible decision.

ID	Full Name	Comment
25521	Amelia Wilson	<p>I DO NOT support the proposed gondola. This alternative serves the ski resorts and the ski resorts only and only on the snowiest weekend days of the year. It will likely not serve the community in and around slc as only tourists will have interest in riding it up to the resorts. It does not serve anyone want to recreate in other parts of the canyon or during year round canyon use. It will destroy the rock climbing in the canyon and the construction will have huge impact in the little cottonwood stream which is our source of drinking water and other wildlife and plants in the area. If snowbird wants a gondola so bad they should be funding it not local, state or federal government sources. Why aren't increased bus services being tried before deciding on the gondola as the best alternative? Low impact alternatives are far superior to meet slc outdoor community needs.</p> <p>Climate change is causing the salt lake to dry up which will take away our lake effect snow so by the time funds are raised we won't be skiing many days in lcc anyway. It's a far too expensive alternative.</p>
25524	Whitney Osborn	<p>I am beyond disappointed and outraged. UDOT is supporting an eyesore that directly benefits Snowbird and Alta, yet neither company is paying a dime for this atrocity. It only POTENTIALLY helps skiers commute through the canyon but everyone is paying for it, including those who don't ski.</p> <p>This shows the public opinion doesn't matter in the least bit, our officials simply follow the money.</p>
25526	Michael Yingling	<p>Consider a tunnel instead of a gondola. It wouldn't impact visuals, it might be cheaper, and it could connect through to Park City to allow an alternative when I-80 is closed due to weather.</p> <p>Good write up here: https://www.sltrib.com/opinion/commentary/2022/07/28/peter-dahlberg-tunnel-alta/ And here: http://lctunnel.com/</p>
25525	Cliff Calhoun	<p>the idea to rip little cottonwood canyon up to put in a gondola is disgraceful! utah is all about the money not the enviroment. i have lived in salt lake for 43 years and this is going to make me move. what a loss to our great canyons....</p>
25527	Warren Young	<p>This is tax payer money and the ski resorts need to find alternatives to the problem they have caused. They are not paying a dime for this project and that is a really big issue, as a tax payer, this is not a good ide at all! What is going to happen the other 7 months out of the year with the gondola and parking lot? UDOT is okay with creating a eye sore 7 months out of the year?</p> <p>As a tax payer, I would propose another lane that is buses only to give revenue to the UTA and in the summer months, this can also help with traffic..... rather than having a gondola 7 months out of the year just sit there and collect dust.</p>
25528	Cliff Calhoun	<p>horrible decision!! leave the canyon alone. all you care about it money. what about people that actually enjoy the outdoors. this is MADDENING!!!</p>
25529	Erik Obrien	<p>Give me a call. Do not do the gondola. Already wrote before about it. Do not do it. Bad for the environment and bad for the tax payer. No corporate welfare please. Do the bus option and make the bus lane a dedicated bike lane for summer.</p>
25530	Steve Olson	<p>I literally do not know a single person that is local to Salt Lake City, or even Utah that is in favor of the Gondola. It will cost taxpayers so much for the relatively small benefit that it will bring. The only ones that truly benefit are the corporations that control Snowbird and Alta. The people have spoken, and I'm honestly outraged that that UDOT has made the choice to go forward with the gondola. It is frankly unethical, and I can't imagine being the one to make this decision knowing that the people are so against it. As a climber, I will be truly saddened if the gondola is built both for the boulders that will be destroyed and for the awful stain the gondola will be on the views from the many beautiful crags throughout LCC. As a hiker, resort skier and backcountry skier, I can't see a reason to build the gondola when increasing the bussing available would be so much cheaper, have so many more options for pick-up and drop-off locations, and will have a much lighter impact on the environment. Please please reconsider. This is what the people of Salt Lake City want, and the people's priorities should not suffer because a few corporations see an opportunity to increase their profits.</p>
25531	Martin Bigatti	<p>No gondola. Stop it.</p>
25532	Hilary Silberman	<p>The gondola is not a good choice for LCC. It will cause considerable destruction to resources in the canyon. Most significantly important climbing resources of much loved and frequented world class boulders. It will create a huge visual impact. It will only serve the ski resorts and not other winter recreational canyon user groups. It will not help with summer traffic parking or travel at all. It will have impacts on parking and access at the canyon base.</p> <p>The least intrusive option should be considered first. Increasing and improving already existing bus service.</p>
25533	Julian Fowkes	<p>The 30 year cost benefit seems pointed. They are only comparing it to one potential solution, which includes widening a major road way. This data should be made public, so that a far and honest review may be conducted , to ensure intellectual honesty. Thank you.</p>
27629	Vikki Nelson	<p>I am opposed to building the gondola. I live at the base of Cottonwood Canyon. I am a skier, biker and hiker. I am affected by the traffic congestion on Wasatch and Little Cottonwood road. The visual impact of a gondola would be terrifying and destroy the beauty of the canyon. I prefer a more subtle solution that doesn't increase our taxes. That is a toll and limiting the cars that actually drive up the canyon. Both ski resorts up the canyon are overwhelmed with the amount of skiers already.</p> <p>I was born and raised here in Utah. I'm not opposed to change if I believed it would be the best solution for those that live in our State not just property owners, businesses, Politicians and tourist.</p> <p>There are better options.</p> <p>Sincerely, Vikki Nelson</p>
25535	Colin Reeder	<p>Very concerned with how this will impact the bouldering and climbing areas. LCC is a place you can go to get away from civilization and clear your mind. This might ruin that.</p>

25534	Deborah Stewart-graf	I've listened to the info on your videos about the proposed gondola B option. What I don't get is why is it so important to move more and more people into the canyon? At some point it will be too many for the environment and ruin the experience with all the crowding of people. Please don't keep talking about moving more people easier up the canyon. We don't need more people up there. Regulate the numbers entering the canyon. Arches National Park has gone to a reservation system and people have talked about how much better their experience has been. Regulate the traffic don't build a disney type ride for only wealthy people to ride. I'm middle class and I don't want my money to finance this project. There are so many other projects that deserve the fortune that the gondola will cost. I also believe that a few people with insider info are pushing for this project to benefit themselves. None of the people along the route to Little Cottonwood Canyon want this gondola. Traffic will only be worse for them. Widening Wasatch Blvd. would ruin the beauty of that road. Keep the money hungry people out of this. The canyon needs regulation not big projects that will ruin the environment of the canyon. People are going to fight this. Taxes should not be spent to fund privately owned ski resorts.
25536	Nathanael Meyers	I support the gondola. For about the same cost as the bus expansion it just makes so much more sense. It will remain more usable in inclement weather or avalanche scenarios, and be more environmentally friendly. Just do it.
25537	Timothy Kelly	I, personally, am AGAINST the gondola in LCC. If this whole thing is about anything other than money and greed, simply limit the number of vehicles into the canyon on any given day. People who live there or have a need to be there can be granted a special pass and everyone else can pay a toll to help with road maintenance. The gondola will be an eyesore and it will bring even more people into an already crowded canyon. I feel like if the issue is overcrowding in the canyon, the gondola is only going to exacerbate that issue.
25538	Timothy Kelly	I, personally, am AGAINST the gondola in LCC. If this whole thing is about anything other than money and greed, simply limit the number of vehicles into the canyon on any given day. People who live there or have a need to be there can be granted a special pass and everyone else can pay a toll to help with road maintenance. The gondola will be an eyesore and it will bring even more people into an already crowded canyon. I feel like if the issue is overcrowding in the canyon, the gondola is only going to exacerbate that issue.
25539	Mike Ekstrom	The Gondola makes a lot of sense to me. I have had season passes to Alta for years. This proposal seems fair to the environment while being VERY cost effective compared to massive road construction. Also, many people don't like the bus due to the risk it proposes in bad weather-the thoughts of a bus slide off terrify me. I would take a gondola long before I would take a bus.
25541	Alex Chagovetz	Have all other options that do not cost roughly 500 million dollars been explored and eliminated as this is crazy to spend on something that has other options available
25540	Doug Barnett	The majority of Utah residents that use this canyon are not going to the ski resorts, they are accessing all areas of the canyon for recreation; hiking, biking, snow shoeing etc. Please explain how a gondola helps the majority of these residents access the canyon? A gondola helps skiers and the ski resorts only. This solution is 100% subsidy for private businesses!!!!
25543	Anamika Blomgren	Lets not ruin the canyon scenery and ecosystem with a horrible gondala. Thanks
25542	Chaunceton Bird	Please reconsider the department's plans to install a gondola in Little Cottonwood canyon. This costly option will result in an eye sore that interrupts the People's view and enjoyment of the canyon from top to bottom. Development at this scale is best suited for metropolitan areas--not wilderness. This unnecessary development will also contribute to the already decreasing enjoyment of the resorts at the top of the canyon. Crowds are already making a day at a ski resort a day of waiting in line, and finding a way to jam more people into the resorts will exasperate the problem (obviously). A gondola is a unduly costly, ineffective at alleviating accessibility issues, and would only decrease the public's enjoyment of the ski resorts. In sum, it is a bad idea.
25545	Callie Wiesman	There are better ways to handle or navigate the influx of traffic, and destroying an extremely important piece of natural land is not the way to do it.
25544	J Aura	wrong decision. Computerized Alta parking system dramatically reduced traffic issues. Snowbird to adopt this year. Paid parking coming. Electric busses and enhanced road structures.
25547	Joseph Gilmore	The Gondola is one of the worst ideas I've heard in years. The fact that this got approved when a VAST majority of people polled didn't want it and it will cost tax payers millions is absurd.
25548	Susannah Anders	I am opposed to the gondola. As a climber it destroys history and access to our recreation!
25546	Benjamin Neilson	Once again, I strongly ask that you do NOT put a gondola in this canyon. We do NOT need to do irreversible damage to the canyon for weekend traffic for 2-3 months of the year. The Canyon is a great resource to people the other SEVEN months. I moved to SLC and bought a house here for the back country skiing and rock climbing both which I would prefer not to see a gondola. It seems much more sustainable to close the canyon for 2 hours during peak times and only run Busses.
25549	Dan Sullivan	Finally a right decision, we definitely need no more traffic in that canyon. Catching up with the rest of the world
29396	Anonymous	Hello. I just wanted to let you guys know I am begging and pleading with you guys not to build the gondola or whatever because we don't need more people here. Utah has already been trashed with everything else is coming here and stuff and you're going to ruin the canyons and everything, and I just don't want to see it there. That's just my comment. I don't know if it's worth anything. But anyways, that's the way I feel now. I'll be sure to make sure that when the when the elections come up, I'll figure out who's done this and I'll make sure I go to give stuff. So anyways, that's my comment, and I just wanted to say thank you so much for messing this whole thing up with Utah, great grade of f so, all right. Thank you.
25550	Sommer Glasgow	Please use this money to invest in existing infrastructure like public transportation. The gondola will have massive impact on the fragile environment of LCC. Please do not build something that will further jeopardize this fragile ecosystem when we are already facing a climate disaster in this state. NO GONDOLA!!!!
25551	Anna Brandes	This is absolutely not the way to improve air quality in Utah. Widen the bus lanes, make it a toll road, there are so many better options than putting in a privately-funded gondola. This will have so many impacts on the canyon, wildlife, access, and flexibility for canyon users. I don't know anybody in my life that uses the canyon regularly who is supportive of this gondola. Think about people, not profits. Alta and Snowbird resort owners do not get to decide the future of this canyon. We, the people get to-so listen up.
25552	Jimmy Church	Stupid. You guys are idiots
25555	H H	Dumb

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25553	Pamela Bloom	I support the gondola option. I feel it will enhance and provide stunning views, less impact and an elevated access to resorts that can be found in a world class destination.
25554	Nicole Widmer	I cannot believe this absolute waste of taxpayer money was approved. The ecological damage alone should have been enough to cut this project. It's shameful that a city given so much tourism for it's natural beauty is, once again removing more of that natural beauty in favor of easing the "difficulty" in going to the ski resorts. Why is there money going to this instead of things to help maintain the Great Salt Lake? Without which, we will not have the famous lake effect snow our tourists love so much? What happens to this gondola when nobody comes for the greatest snow on earth anymore because it's disappeared?
25556	Lane Church	I am against this! Why on earth are tax payer dollars being used for something that people will have to pay to use and the money to operate it will benefit only a few select groups and businesses? At the end of the day it's not UTAH VOTERS that benefit from it. It's the resorts who benefit from it and a SELECT group of people who benefit. Second to that, let alone COMMON SENSE says people will still drive up the canyon even if a fancy gondola is there. It will still be congested, and the problem will still then exist except only to be complicated by this gondola project. An additional point of view is that snow packs are being recorded less and less year over year, and now concern exists that seasons will be shorter with less snow on the slopes. Facts are facts with regard to that. This project will ultimately look NO DIFFERENT than the HUGE waste of tax dollars spent on pumping station for the Great Salt Lake that's about to be a dust bowl. SO AGAIN, WHY WASTE MONEY ON THIS WHEN THERE ARE SO MANY OTHER LARGER TRAFFIC ISSUES IN OUR STATE????? FOR REAL! UDOT is being extremely short-sighted on this, and it's a gross abuse of taxpayer money and is as unconstitutional. It's really at the end of the day no different than what was proposed for Utah Lake which was also ruled unconstitutional.
27630	Tessa Rees	You will ruin our canyon. The majority of the people who actually use it (not the people who make money from the canyon) don't want it. I live at the base of Little Cottonwood and it's heartbreaking that you are going against 80% of our community that DO NOT WANT IT. Such a ridiculously dramatic "solution." Don't do it. Don't ruin our canyon
25558	Colin Hale	I say no to the gondola. We as a community do not support it. It is not an effective way to reduce traffic. It will make parking worse. In the plan the is proposed you don't even have enough parking to support the gondola so it can't even be an option. The community does not want this. Skiers do not want this. The gondola will take over an hour to get up the canyon. This is not a solution this is a money grab for developers. We do not want a gondola!
25557	Lane Church	I am against this! Why on earth are tax payer dollars being used for something that people will have to pay to use and the money to operate it will benefit only a few select groups and businesses? At the end of the day it's not UTAH VOTERS that benefit from it. It's the resorts who benefit from it and a SELECT group of people who benefit. Second to that, let alone COMMON SENSE says people will still drive up the canyon even if a fancy gondola is there. It will still be congested, and the problem will still then exist except only to be complicated by this gondola project. An additional point of view is that snow packs are being recorded less and less year over year, and now concern exists that seasons will be shorter with less snow on the slopes. Facts are facts with regard to that. This project will ultimately look NO DIFFERENT than the HUGE waste of tax dollars spent on pumping station for the Great Salt Lake that's about to be a dust bowl. SO AGAIN, WHY WASTE MONEY ON THIS WHEN THERE ARE SO MANY OTHER LARGER TRAFFIC ISSUES IN OUR STATE????? FOR REAL! UDOT is being extremely short-sighted on this, and it's a gross abuse of taxpayer money and is as unconstitutional. It's really at the end of the day no different than what was proposed for Utah Lake which was also ruled unconstitutional.
25559	Val Klemm	has a Park City to Brighton to Alta gondola been considered? Much less obtrusive. Cheaper, shorter and connects the resorts. I realize that the interconnect was rejected but it would be less obtrusive than the LCC gondola.
25560	Ben Wasser	How about actually enforcing traction laws rather than destroying the canyon with a gondola. Or require parking reservations at the resorts to reduce crowds. The gondola is not going to help anything except destroy the canyon and overcrowd the resorts with people who have no business being there. Call me exclusionist but if you can't get a car up/down that canyon safely you have no business skiing that terrain
25561	Carlos Garcia	Please don't ruin nature. Use more busses encourage carpooling. Leave the mountains alone!
25562	Iker Lastra	I find it shady that 60% of people disagreed with the gondola yet UDOT decided to go ahead with it anyways. Do people actually have a say in this or are we just wasting our time with our comments? I still believe that building a gondola is a decision that would impact our canyons beauty and would likely only be used during the peak winter days. Also I do not believe it will cut down on emissions in the canyons as people will continue to drive up there and fill up the lots, like they always have. If the size of the lots does not increase then there can't be an increase in emissions in the canyon. However turning the entire canyon into a construction zone for years and years WILL have longterm impacts. Having thousands of construction trucks trudging up and down the canyon will have an impact on the water quality as well, I just dont see how this could be avoided. If snowbird was incompetent enough to waste millions of dollars by failing to install their tram car properly, imagine the insane amounts of possibility for failure in this project. I just do not see how you see this as the best environmental solution. I really doubt anyone even reads this but if you do please reconsider this decision. I vote no on the gondola, lets just increase the buses. No need for more construction inside the canyon, that is not the best way to save it.
25563	Tyler Murrill	I LOVE THE GONDOLA! This is a good decision and I can't wait to see it in action!
25565	Austin Gurchiek	Please try the phased approach first and see the results before committing to the gondola. We do not want a gondola and want to see more common sense solutions.

Comments on Little Cottonwood Canyon Final EIS

25564	Eric Dorsey	I am against the idea of constructing a gondola in Little Cottonwood Canyon as it will obstruct and destroy the beautiful views, cost too much money, destroy riparian habitat, destroy rock climbing areas, not provide access to backcountry ski and hiking areas and do nothing to reduce traffic and congestion. Close to 100% of comments on UDOT Cottonwoods Social media post has been AGAINST building this gondola yet this is still being pushed forward as the only viable solution. Implement canyon tolling and an improved bus service and you won't need to widen the road or build a gondola, of course the investment companies that have currently bought you off won't benefit and this will only benefit the citizens of Utah so we understand why you won't pick this solution. Its ridiculous to say you "listened to the 14,000 public comments" when a vast majority of them told you we do not want a gondola and you are trying to push it through anyway. You need to listen to the public (your employer) and do what we want otherwise you are going to have headaches and trouble with your gondola you try to shove down our throats. WE DO NOT WANT A GONDOLA, we want efficient bus service using the existing road tied into mobility hubs throughout the city that can help BOTH big and little cottonwood.
25566	Vicki Haltom	I am VERY happy about the gondola choice, I would absolutely use it and I would love to have it as an option for the summer as well. We love to take the gondola up the Tetons and I think this would be a great tourist option with the chance to gain more funding. I do not ski anymore due to an accident, but I would definitely use it in the summer and winter to take my teen kids on it for the views and also for lunch or dinner at the top. I love this idea! I love that it has little impact environmentally as well. I think this is a win-win!!! .
25567	Dory Trimble	As a lifelong Utahn and regular recreational user of the Cottonwoods, both as a resort and backcountry skier, and rock climber, I STRONGLY oppose the proposed gondola. It would be a source of enormous shame for the entire city, and is clearly an option that prioritizes corporate earnings over the desires of the community and the needs of the environment.
25568	Jonathan Vowles	I support the Gondola. When it comes to addressing the main issue at hand, which is to minimize traffic and congestion due to the many factors, building out the Gondola is the best solution. Adding another lane to the current state route does not circumvent the factors that typically cause the issues, mainly avalanches, slide-offs, crashes, and ski-day congestion. The Gondola transfers more people faster with less pollution, than adding more traffic to the canyon with another lane. The Gondola, in itself, would be a unique Utah activity, that highlights one our greatest features, the mountains, within 30 minutes from SLC. I'm sure this will also create a steady revenue-stream to help with it's costs and maintenance. People and moaned about using tax-payer money to help build out the Real Salt Lake stadium, and look how it has positively impacted us since! The same will happen with the Gondola project. Once it's up and running, you'll find people will actually love to use it. These are the types of projects I can get behind using tax payer funds for.
25570	Nathaniel Pham	I am writing to express strong disapproval of the decision to install a gondola in Little Cottonwood Canyon. Doing so will not only mar the landscape and natural beauty of the area, but is also a massive disservice to Utahns who use the canyon for anything other than resort skiing between the months of December and March. Not to mention the large, unnecessary bill for taxpayers (who are mostly against a gondola anyways) it will rack up. Please reconsider expanding bus (or even electric bus) infrastructure instead.
25569	Shaylor Jack	This gondola will ruin the canyon! skiing is one of many uses in the canyon and we need to look at everything else. climbing in lcc huge as well as biking and hiking. the views and natural beauty of the canyon will be forever ruined and it will ruin the canyon for users during the summer. NO GONDOLA!!!!
28170	Byron Marchant	Mr. Van Jura, Just one question regarding your announcement. When I board the completed gondola at the bottom of Little Cottonwood Canyon, where will I get off? My plan would put me at a location somewhere in the mountains where I could choose (using gravity as my assistance) to ski (or travel by some other kind of transport) to any of the ski facilities currently available in all the nearby canyons (Little Cottonwood Canyon, Big Cottonwood Canyon, Parleys Canyon...)-Alta, Snowbird, Brighton, Solitude, Park City, Deer Valley, you name it. Then the interested resort would need to decide if they wanted to aid me in my return trip to the Gondola when I would want to return to the Salt Lake Valley via the Gondola. Byron Marchant
25571	Tom Anderson	It blows my mind that the gondola is looking like the choice, yet no one appears to want this? Goes to show that UDoT is for sale
25573	Patrick Emery	The gondola is a terrible idea! Looking through the comments it seems pretty obvious that the public does not want this. UDOT has much bigger issues to worry about and better places to spend taxpayer dollars. This only benefits Alta, Snowbird, and the local developers.
25572	Tanner Maerz	I feel like the Gondola is a waste of money that won't actually help alleviate traffic. Instead, why not a system like Zion National Park, where the canyon road becomes a bus-only road. That works really well for shuttling people.
25575	Susan Squire	so disappointed by UDOT decision. Obviously UDOT does not care that the majority of people DO NOT WANT THIS and DO NOT WANT TO PAY FOR IT. I hope lawsuits will stop UDOT.
25574	Michelle Tessier	Hello, While I'm happy to see that you are taking a phased approach to improving the traffic situation in Little Cottonwood, I want to state that I am still strongly opposed to building a gondola. I believe that state taxpayer money should be spent on improving the resources that those who live here full time use the most frequently. I believe that most people who would use the gondola, or even the expanded bus system, are from out of state. I think the resorts should pay for improving the experience of tourists accessing the resorts, not taxpayers. Additionally, I would like to add that with the increasingly unpredictable weather we are having in Utah and the world as a whole, now does not seem like the right time to be building such committing projects. Why don't we invest more in greenways, local parks, and trails, which are resources the local community is much more likely to use with greater frequency than a gondola. The gondola plan doesn't even include a stop at the White Pine parking lot, which is extremely busy during the spring, summer and fall, even during the weekdays. I think the gondola is an unacceptable use of taxpayer dollars.
25576	Lukas Williams	The wrong choice by far. Expanded bus service through the canyons is the way to go, not creating a taxpayer-funded gondola to only benefit private companies.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25577	Blake Roling	Stupid idea none of the locals want it do your job better
25578	Scott Ferony	I am begging you to please not destroy our treasured natural resource with 200 ft towers and access roads to each one because of a couple dozen or so days of ski traffic. This is a ridiculously overzealous answer to a small and temporary problem. I am up in little cottonwood canyon all summer and winter and rarely do I have any traffic complaints. I avoid the canyon on days when I know it will be overloaded such as a weekend powder day after a dry spell. If an average citizen like me can figure out a way around this problem with little to no effort, then I think we can come up with a better solution than spending what is now very likely to be over a billion dollars in taxpayer money. This is ludicrous. Let's start with a toll and better winter tire policy and enforcement and go from there. There are so many cheaper and easier options. This just smells like someone is fishing for a big contract. Stop the nonsense!
25579	Grant Johnson	<p>Are you kidding me? Hundreds of millions of dollars to rip up and make the canyon look like a construction zone for YEARS all so a few private ski resorts can exclusively benefit.</p> <p>Heres an idea, just build a basic ride volume based toll booth at the mouth of the canyons and make it prohibitively expensive to drive the canyon alone. \$100 for a solo car, \$20 for two people, and free if your car has 4. No canyon construction, no corruption.</p> <p>This is an absolute environmental DISASTER, and I refuse to pay to have MY canyons turned into a cooperate gimmick.</p>
25580	Michelle Tessier	One piece of additional feedback on buses I would like to add is that one chief problem with the current bus system is the number of stops at Alta and Snowbird. Canyon buses taking visitors up and down canyon should only have one stop at each resort. The additional stops make taking the bus much slower than driving, especially if going to Alta.
25581	Daman Bareiss	<p>A taxpayer-funded gondola that only drops off at private ski resorts and only is useful in winter traffic is not a good solution. There are other trailheads and parking area through both summer and winter that are utilized.</p> <p>Expand the current bus system, funding it partially through making the road a toll road during high-use periods including drop-offs throughout the canyon.</p> <p>The canyon is, and should be, multi-use. It's not for skiiers only to be funded by the rest of us.</p>
25582	Tim Bennion	<p>No! No no no no no!</p> <p>No gondola! No one wants it! Well, besides the people lining pockets.</p>
25583	Fiona Hayes	The trade off of destruction of LCC by adding a gondola is not worth lessened commute times - which could be resolved through alternative means - not to mention this is a gimmic for ski resorts funded by taxpayer dollars - the vast majority of whom don't support the gondola as the appropriate solution. How can it be justified to spend this large amount of tax dollars - public funds - on something an overwhelming majority disagrees with? It does nothing to facilitate access points other than those that directly service the ski areas.
25585	Galen Graham	I strongly suggest against the gondola for LCC. Larger parking at the base for carpooling and shuttling is essential."Low" impact to climbing boulders is not an acceptable approach. There should be NO negative impact to climbing, wildlife, and accessibility or the plan is a failure. Listen to the people of Utah.
25584	Mark Nischalke	<p>I am not in support of a Gondola in LCC. I believe other alternatives are more cost effective and more flexible to adjusting conditions and usage. Tolling should be considered with variable rates dependent on conditions, time and season. Our natural resources may be available to all, but they are not free.</p> <p>Additionally, enhanced bus service should be used to make it more appealing and convenient for users. However, buses MUST be electric so as to not contribute more pollution.</p> <p>Further, resorts should be encouraged to implement parking schemes to discourage driving and encourage more responsible usage.</p>
25586	Cameron Lyman	I don't understand how this is the more popular opinion when I haven't met a single person who is actually in favor of this move. Please listen to the people. Especially the locals who actually use the canyon. I am very very against the gondola. Parking is still going to be an issue. The gondola will only service the ski resorts, not the canyon itself. We should have busses that stop at the backcountry options. This option is a huge no from me still. No gondola!
25587	Kelly Barton	Please don't build a gondola! It is going to destroy so much nature, having to build more roads to get to the towers, etc. Better to make everyone bus up to the slopes!
25588	Ben Neff	This seems truly shortsighted. The cost of this project will likely end up nearer the \$1B mark and permanently mar the canyon. In the short term the analysis on pollution makes sense, but technology is changing rapidly and alternative less pollutive energy sources are viable and quickly becoming a reality. The gondola only serves the resorts, not other canyon uses, which are so valuable to us locals who like to hike and backcountry ski. The resorts are already limiting our access to the canyon (solitude parking lots, grizzly gulch, etc.), and now the government is too. electric buses would alleviate traffic and pollution to the resorts, serve the resorts, they could help foot the bill for them, and it would allow other users of the canyon continued access without permanently marring the landscape.
25589	Daniel Hilker	Hi, I OPPOSE the building of the gondola up Little Cottonwood Canyon. I believe we could better accomplish the access but running a bus rapid transit that could ultimately be converted to a light rail eventually. I believe the this creates better access to the trailheads along the way as well. Running the gondola seems to only serve the financial interests of the ski resorts, but doesn't serve the overall canyon access issues.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27631	Stefanie Naden	<p>I am a Snowbird pass holder and 13 year resident of Salt Lake City.</p> <p>I desperately want to take the bus, but the current bus system is not meeting our needs. There is so much potential to create a better transportation hub and limit drivers on critical snowy days.</p> <p>Local driver permits Limit rental car access Buses better equipped for winter users Strategic snowsheds to minimize closure times Thanks you for you consideration.</p>
25590	Maya Parsons	<p>I do not think that this decision for the gondola reflects the residents of the salt lake valley. We all appreciate Utah for its beauty, and the gondola will be an eyesore in the middle of our beautiful canyon. We need to implement carpooling rules/laws as well as use our buses to our advantage. More buses, more funding for the buses, etc. The parking lot at the bottom of the canyon is an easy out option! It is easy to stick a gondola in the middle of the canyon because it is the EASIEST option! But that's not what we need! We need an option that won't wreck our canyon, but take more planning, takes more cooperation from locals, but in the end will be a much better idea.</p>
25591	Sean Ryan	<p>What a joke! The gondola has a massive impact on this canyon and is completely unnecessary. The first part of your plan is the only part that makes sense - implement tolling, parking and increased busses that operate year round. These simple, efficient and obvious measures will reduce almost all the issues in this canyon. There is no need for a project like this (with a price tag like this). You should be ashamed for allowing private interest groups to bully this decision and make tax payers pick up the bill.</p>
25593	John Talbot	<p>The proposed Gondola is a bad idea and serves the needs of Alta and Snowbird only. Not the people who use the canyon the most.</p>
25592	Chaz Hart	<p>No gondola! You guys can't jump straight to the gondola, without having tried other options to relieve congestion in LCC! So many other options. No gondola!</p>
25594	Caroline Crane	<p>I hope every single businessman who gets money from this and every single 1% skier who uses this gondola experiences extraordinary suffering. Spineless. Pathetic. This is a gigantic middle finger to the middle class that cherishes this canyon.</p>
25595	Meghan Gardner	<p>Building such a huge gondola in a majestic canyon will only make our canyons busier!!!</p>
25597	Alvin Anderson	<p>I am not in favor of the Gondola. Traffic is only a concern in the canyon about 15 to 20 days out of the year. An enhanced bus system - along with carpool incentives (discount ski passes for carpoolers), etc. - on those days and during the ski season would solve that problem. Please don't build a Gondola. It will destroy the natural beauty of the place.</p>
25596	Natalie Nielsen	<p>I am an avid hiker and love snow shoeing in the winter months, and I am extremely upset with the decision to go forward with the gondola. How often will it be utilized outside the ski season? Who truly benefits from this beyond the ski resorts? Why ruin the landscape of our beautiful canyon for cables, noise,, and towers? For those of us who enjoy the unobstructed views at the tops of our beautiful peaks, this is an absolute travesty that will only benefit a limited number of people. Utah puts on the image of wanting to protect nature and preserve our outdoors, but this decision shows that money supercedes reason.</p>
25598	Cooper Maw	<p>It is absolutely ridiculous that you are even still considering building the gondola. You are completely disregarding what the majority of Utahns are telling you. WE DO NOT WANT THE GONDOLA. The gondola by itself does nothing to mitigate traffic or discourage people from driving. Why else would you will still be needing more busses and tolling even with the proposed gondola. A growing amount of people are still going to be accessing the canyons and they will still need to drive and park to get to the gondola station. This means that all of the traffic would simply be redirected to Wasatch Boulevard and surrounding neighborhoods which would up even more than just canyon recreation traffic. It is easy to see that the decision to move forward with the gondola is just pandering to wealthy developers and private businesses owners who would benefit from the gondola instead of to the average canyon user in Utah. I visibly saw that parking passes at the ski resorts greatly mitigated canyon traffic which is why I, along with other canyon users that I know, would very much like to see tolling, encouraged carpooling, enhanced bussing, and parking passes enforced and tested out well before construction for a gondola starts to take place. I think it would be very unwise to spend a half billion in taxpayer dollars on the gondola before we try out some less expensive and more effective methods to mitigate traffic that are much more popular with the people of Utah.</p>
25599	Alvin Anderson	<p>Please don't build the Gondola. It will destroy the natural beauty of the place. There are other simpler options. Please start there!</p>
25600	Laura Tully-gustafson	<p>Please do not more forward with the gondola plan!! The environmental destruction will be catastrophic, and the cost is absurd. I love this canyon and would hate to see it torn up like this, for what? The convenience and entertainment of a few rich people?</p>
25601	Ann Carter	<p>Please NO GONDOLA in Little Cottonwood Canyon! We need long term solutions for preserving what makes our canyons so special. It is unimaginable to imagine this kind of disrespect to nature.</p>
25603	Megan Woodward	<p>Don't sacrifice the people who live here for a business. Also the climbing in Utah will be greatly impacted by this project all for the ski resorts to earn more money. Pretty atrocious.</p>
25604	Austin Nuttall	<p>Here's how I view this entire situation:</p> <p>"Hey we're open to public comments about what we should do for Little cottonwood canyon! Leave them here"</p> <p>Utahns:"please dear god anything other than a gondola. We don't want to pay for it and it'll ruin our canyon"</p> <p>UDOT:"thanks for all the comments, we're gonna go with the gondola because snowbir...er we mean, the public REALLY supports the idea of a project that will really only benefit two privately owned resorts and leave them with the burden of paying for it in state taxes and also paying to use it!"</p> <p>Really wish that all the public outcry from your constituents rather than businesses made you all give a [redacted] but hey, money talks I guess.</p>

25602	Cooper Maw	Please just try out tolling, encouraged carpooling, parking passes, and enhanced bussing before spending so much money on a gondola. If these methods don't do the trick, then you should start considering other methods. Utahns do NOT want the gondola.
27632	Cooper Maw	It is absolutely ridiculous that you are even still considering building the gondola. You are completely disregarding what the majority of Utahns are telling you. WE DO NOT WANT THE GONDOLA. The gondola by itself does nothing to mitigate traffic or discourage people from driving. Why else would you will still be needing more busses and tolling even with the proposed gondola. A growing amount of people are still going to be accessing the canyons and they will still need to drive and park to get to the gondola station. This means that all of the traffic would simply be redirected to Wasatch Boulevard and surrounding neighborhoods which would up even more than just canyon recreation traffic. It is easy to see that the decision to move forward with the gondola is just pandering to wealthy developers and private businesses owners who would benefit from the gondola instead of to the average canyon user in Utah. I visibly saw that parking passes at the ski resorts greatly mitigated canyon traffic which is why I, along with other canyon users that I know, would very much like to see tolling, encouraged carpooling, enhanced bussing, and parking passes enforced and tested out well before construction for a gondola starts to take place. I think it would be very unwise to spend a half billion in taxpayer dollars on the gondola before we try out some less expensive and more effective methods to mitigate traffic that are much more popular with the people of Utah.
25605	Ian Hamilton	Gondola will ruin the canyon, more humans in the canyon and views ruined forever. Public does not want this.
25607	Jamon Smith	I am heartbroken to hear that UDOT feels this is the correct way to handle the crowding impact on the canyon. The thought of regretfully telling my kids and grandkids what LCC used to look like without 200ft towers and miles of cable is overwhelming. We have already sacrificed enough of our special natural places, and placing a gondola in the canyon would be unforgivable.
25606	M Jarvis	I really like this option. It will provide a wonderful alternative to the congestion and provide a destination activity in and of itself. I can see many people riding it just for the scenery and not just to get up the canyon.
25608	Everett Tueller	Simply put, do we really need to add more to this canyon? More people, more construction, more infrastructure? Adding another lane to the freeway doesn't improve traffic, why will this help congestion either?
25609	Jessie Anderson	This is extremely disappointing. The gondola will not fix the traffic issues as it will not even operate year round. In addition, it will cause irreparable damage to the natural beauty that draws people to the area. This is a waste of money that will only benefit a few. Disturbing to see a willingness to destroy what brings people to Utah in the first place.
25610	Jed Sky	PLEASE don't make the rash decision of hastily moving forward with gondola development!!!! PLEASE give improved bus services an honest effort. Give the bus solution a CHANCE to succeed/alleviate the transportation problem. THERE IS NO HARM IN GIVING THIS OPTION A TRY. There is NOTHING PERMANENT about the path of improving bus services. There are NO LONG TERM CONSEQUENCES with giving the bus option a chance!!!! The problem isn't going anywhere soon - so don't rush the solution!!!! The implementation of a gondola is IRREVERSIBLE!!! Think about the long-term. Think about future generations. Think about the vast impact on the community, ecology, and sense-of-place a gondola will have. PLEASE give buses a TRY. PLEASE DON'T MAKE ANOTHER BAD PLANNING DECISION FOR OUR GREAT STATE.
25612	Steve Motzkus	The enhanced bus alternative is the best solution. Designate pick up points all over the valley along with pickup times, using public school parking lots for riders to park. Utilize Electric Buses to cut down on diesel waft. The Gondola will require a massive parking structure which will be very costly and make the mouth of this majestic canyon look like some kind of disney attraction. The walk with Skiis and boards to the tram would be crowded and taxing. Offloading from the Gondola would be like off loading at Snowbird up top only add the frenzy factor on steroids. The cost of such a monstrosity would be back breaking! The noise polution, construction crews would be cumbersome and noisy for years! Please use common sense! A Gondola would be a huge, expensive, noisy, busy cluster and won't be easy to use.
25611	Joseph Smith	Putting a Gondola in Little Cottonwood Canyon is such a terrible idea, and a disgrace to the natural beauty of that canyon. All so that the ski industry can make more money. What a complete disaster. Please reconsider. Increased bus service is a terrific idea. Gondola is the worst.
25613	Sara Mo Vanacht	I think we need to focus on enhancing public transit and active transit before spend millions to put in a gondola. I'm very against the gondola and I hope the committee reconsiders.
25614	Melissa Tyszko	The gondola is neither the most preferred nor the most efficient method of improving transportation in Little Cottonwood Canyon. Alternative measures would be more immediate, less invasive to the canyon, and more cost-effective. Implementing staggered tolls (in which single-occupant and multi-occupant vehicles are charged differently) and increased bussing would vastly improve use of the canyon in a more timely manner. I'm not convinced that years of construction work in the canyon will be noninvasive to the wildlife and visual appearance of LCC. Not all Utahns who use the canyon are skiers, and the gondola would only benefit skiing corporations.
27633	Peter Vander	Boo!
25615	Braden Bentson	Very disappointed with UDOTs decision on the gondola. If this can be reversed it should.
25617	Jennifer Hoggan	If the project is mainly to accommodate for the busy ski season, it seems much more logical to implement temporary measures during those times to address the increased traffic such as those mentioned - improved bus routes and restrictions on single passenger cars. Lets see how the simpler measures help before committing to a very expensive, invasive project. It would be a shame to add unsightly towers throughout the beautiful canyon or to dig it up to build wider roads if it was possible to accomplish improved efficiency in another way.
25616	Adrienne Dixon	I fully disagree with needing a gandola for the canyon. You are only catering to people who ski, but you are making taxpayers pay for the gandola. I know how expensive skiing is, so if the gandola is to help with the ski season, make the ski resorts pay for the gandola. Hikers, bikers, joggers, etc. will not be using the gandola. It is ridiculous, and on top of that a gandola is going to make the canyon look so ugly.

25618	Pete Malen	The problem in LCC is not a transportation problem, its a 'too many people problem' - pushing people up the canyon faster utterly fails to solve the problem of too many people in the canyon. All it does is bring the too many people problem to fruition sooner. You blew it. The only winners are the ski resorts and gondola owners. Thanks for nothing.
25619	Ravi Altman	I along with the majority of salt lake taxpayers do NOT SUPPORT the building of a gondola. This project would destroy the canyon, but the main reason I don't support this is that it spends a LOT of taxpayer dollars on infrastructure that only benefits private corporations. There will be no increased access to wilderness for under served communities, there will be no green transportation to trailheads. This only gets people with money to spend on the gondola ride (an hour long with 35 people???????) up to a private corporation to spend more money. Please Please Please Please do not go forward with this flawed gondola project.
25622	Julie Bauer	This is an outrage! I'm a local small business owner, home owner and season pass holder of Alta/Snowbird. The traffic issue is not everyday and I do not want my tax money going to this nonsense! It will be ugly and an absolute show that will solve nothing.
25620	David Sandberg	\$550 million reasons to pause and consider other options. I'm sure there are all kinds of special interest pushing this along (Olympics). But I can't find many who truly want this bill as a partial fix to the problem.
25621	Isaac Krieger	Way too expensive. Way to exhausted all other resources
27635	Stefanie Naden	I strongly oppose building a Gondola in Little Cottonwood Canyon. I have had a season pass in each canyon during various years, and the traffic in LCC has actually become better than Big Cottonwood Canyon. An enhanced bus service would help both canyons, but the Gondola only services LCC. The resort parking lots and lifts are at max capacity, so there is not a growing number of people who need to be brought up the canyon, just a reduction in cars.
25624	Adam Cook	While gondola construction was not my preferred option for UDOT's Little Cottonwood project, I appreciate that a phased approach to its construction is being planned. At this point, my main hope is that UDOT will be willing to proactively implement tolling and expanded transit during the intervening period, and that UDOT will forestall planning for the gondola project should tolling and transit solutions yield substantial benefits at lower cost. I have to admit that I seriously question the wisdom of any solution based on increasing capacity when both Snowbird and Alta are already well-attended (and sometimes even overcrowded) with existing infrastructure. I hope that planners acknowledge the possibility that interim measures designed to consolidate existing transportation demand in Little Cottonwood will be much more cost effective than a gondola and consider making them permanent instead of building the gondola itself. Lastly, as a resident of Salt Lake City's west side and a frequent user of the UTA system, I give these comments partly out of a feeling of bitterness as this project's nine or ten-figure price tag will almost exclusively benefit the very wealthy demographic which uses Snowbird and Alta facilities. Considering the value which would be added by applying this investment to new TRAX lines, expanded bus service, or pedestrian safety improvements (in light of the mounting body count on UDOT roadways), it seems perverse that these funds might be used to subsidize wealthy resort skiers without a more pragmatic contingency in mind. Thank you for your time.
25625	Mikayla Rewey	The Gondola option is only liked and approved by the people that profit, excuse me, the corporations that profit. It's not going to be used by the masses. One, it's too expensive. And two, it doesn't carry enough people. Instead of just putting money into people's pockets I urge you to think about what's actually best for the communities surrounding the mountains.
25623	Forest Lemon	I think that designated uphill and downhill bus lanes are a much better solution
25626	Emily Mckay	I love visiting Little Cottonwood Canyon. This past winter was great and the traffic was very reasonable because of the new parking reservation systems instituted by the resorts. The parking reservation system coupled with improved bus transport is the best option here. I don't want to park at the base of the canyon and get on a crowded gondola to get to the resorts. Also, it is unfair to the cities of Sandy and Cottonwood heights to put 2,500 parking spaces in their community. DO BETTER UDOT.
25627	Patricia Becnel	It was very disappointing to hear of UDOT's determination that the gondola is the best option. I doubt this comment now will hold much sway since I would bet most of the 144, 000 comments you received opposed the gondola. Yes, it will be a tourist attraction and seems fun to have a gondola, but the reality is that taxpayers will be saddled with \$550 million bill for something they did not choose and most will never be able to use. Riding the gondola, if we base it on Park City numbers, will be expensive. It caters to the ski resorts which is a rich man's sport. Researchers predict we will only have snow for another 20 years. So are we spending millions of dollars, not only in the construction costs, but with maintenance for something which will last for ten years? Yes, the gondola will run year round, but most people who use the canyon other than for skiing, do so for hiking and climbing. The gondola will not make stops at any of these areas on the way. I can only hope the legislature will not support it , but with their love of"economic development" with little concern for the environment, I doubt that will happen. Imagine, now we will give visitors a front row seat to our dirty air as they gaze into the valley and increase tourism to support the ski resorts. There are more viable options than a gondola: increased electric busing, carpool incentives, limiting the number of people in the canyon, and so on. Unless you block all traffic from going up the canyon and force people to ride the gondola, it will not eliminate all the problems you are trying to eliminate, but cause additional problems and costs. Patricia Becnel August 31, 2022
25628	Tyler Dail	I am completely against this gondola. It will impact the climbing community and remove iconic boulders from the canyon. Very much against this!

25629	Benjamin Snow	With the gondola B plan you almost double the time from bottom of canyon to the top compared to car - no one will choose this unless they feel like they have to, it also will have the largest visual impact of any of the projects. Bus alternative A and B are cheaper and achieve the same peak performance or better - bus with shoulder widening would be able to provide a time competitive alternative to driving a car up the canyon and would minimally impact visuals. The gondola cost is higher yet the final EIS says that all other alternatives are "unaffordable". This decision is not the Best for anyone besides the gondola developer.
25630	Hallie Martinez	I'm a student at the University of Utah and got assigned a project to do extensive research into this proposal for my Urban Ecology class. What I found was exactly what the team has now decided on. The gondola is the best longterm decision socially, economically, and environmentally. Due to the amount of cars that travel up the canyon on any given day - we needed a solution that turns us towards clean energy consumption. Which this gondola provides. I support the gondola. Great job UDOT!
25631	James Bowen	I live in Cottonwood Heights and I remember the failed attempts for the Gondola in Ogden, one which made total since. I would love to see the fights and protests this will bring. Go for it.
25632	Julie Bauer	There is no way I'm sitting on a gondola with my two children for 55 min just to get to the mountains with all our gear and lunches. That is absolutely insane to expect families to use this!
25633	James Udall	I am vehemently opposed to a gondola solution. This only benefits some users of the Canyon and in particular, benefits corporate interests. It also detracts from the natural environment and is obtrusive. This is not what is right for our community or for the Canyon.
29397	Sue Bounous	Hi, this is Sue Bonounous. We live at [REDACTED] in Sandy. Our phone numbers [REDACTED] We are in agreement with the gondola b proposition info that we were just sent out we're supportive of it and just wanted you to know that we do think the gondola b solution is the best solution and thank you for all your work and time on this. Okay, Bye
25634	Cameron Griffiths	No gondola!!!! We don't want it !!!
25635	Erik Badger	How can you completely disregard the fact that the population along the wasatch front opposes the gondola. We don't want this. UDOT, snowbird and alta, and the developers are the only ones that want this. Seems self serving and dishonest. You should be ashamed.
25636	Eden Sloan	Please don't ruin our beautiful canyon with this eyesore of a development. There are better, less intrusive solutions to the canyon traffic. It is not a gondola. Please reconsider before Little Cottonwood is changed forever.
25638	Justin Cunard	This is not something tax payers should foot the bill for. As someone who lives by LCC and does not ski at all, why should my tax dollars go to something that benefits a couple of corporations? Protect nature, eliminate the corruption and move forward with not building this atrocity.
25637	Tracy Bennett	The Gondola may help with some traffic issues but create a whole lot more issues at the mountains than it will solve. The better options are expanding bus service- year round and by adding more stops in the canyons such as Lisa Falls are, Tanner Flats camp ground, White Pine trailhead along with Snowbird and Alta. The issue is so much greater that winter traffic. My hope it that UDOT will address some of the other canyon traffic issues and NOT just resort traffic issues.
25640	James Stewart	The gondola may dissuade single or double passenger cars from going up the canyon on a weekend or holiday IF the price of gondola is less than the canyon toll fee and any resort parking. During the week, it is still more convenient to pay a little extra and just drive up so the gondola really only solves weekend and holidays during ski season which about 5 months long/year. Let's say the gondola can run 30 years without any major overhauls that would run the cost up more. \$500M, 45 weekend or holidays/ski season, X 30 years....that's tax payers spending \$370,000/useful day for this thing, just to haul a few more people up the canyon. You don't need to increase capacity, you need to encourage ride sharing. Make it painful to be a single or double car going up the canyon during ski season and encourage the resorts to charge for parking. You don't need to increase infrastructure, you need to let market economics do this for you. UDOT is going about this backwards and for a deeply conservative state that loves capitalism, this seems like a very popular and easy solution.

ID	Full Name	Comment
25639	Steve Hampshire	<p>I am absolutely shocked at the decision to put a gondola in LCC. It is a short sided solution to a issue that only effects a shrinking winter season. And ultimately continues to add money to private parties and companies.</p> <p>People dont ride the bus now why would they ride a tram having to stand the entire time shoved in like cattle. Its not the right solution. I am will to bet you will still have the red snake on the worse of days and empty gondolas zipping by because people dont want to deal with the hassle.</p> <p>Stop making decisions that are not in the public favor. Polls have shown that Utahns dont support this. Why would people in Teasdale, monticello, logan, or St george care about this, yet alone have to feel like they are footing the bill.</p> <p>The pricing is inaccurate for the estimated build cost. Skyline High School is double its budget and 3 years behind schedule. I didnt vote for that bond but at least its going to education instead of something that only 25% of the state can afford to do.</p> <p>Waste of time, waste of money, waste of future natural beauty that will be destroyed forever.</p> <p>All this is a marketing ploy to be able to plaster on more out of state ads boasting about our latest attraction bring more people to a state that doesn't need them. This is NOT a utah tax payer issue, this is NOT a real issue. Its only being pushed by those who again are lining their economic pockets.</p> <p>Stop for ONCE and actually PLEASE listen to the PEOPLE who live in this state. We are saying no!</p> <p>One of the best ideas i have heard yet is widen the road to have it be a 3 lane road with a flex lane in the middle. 2 lanes going up in the morning and then 2 lanes coming down in the evening. That doubles the traffic. And leaves the other 10 months of the year the way it sits now. I drove up LLC on Sunday and didnt have more than 2 dozen cars on the road. We dont need a gondola for 95% of the year. So why put one in.</p>
25641	Richard Gordon	Please pleas please for the love of god do not build this gondola! It serves one user group, is ugly as all hell and will destroy key elements of LCC that embody its character and beauty! NO GONDOLA
25643	Michael Bolton	Gondola construction only serves the purpose of padding the pocketbooks of ski resort owners and transportation executives while costing taxpayers for a project they do not want. This gondola will damage a beautiful canyon irreparably when less drastic, and MUCH less expensive alternatives should be first implemented.
25642	Jeff Holce	Please don't do it. I like the bus. The gondola won't even be free ?
25645	Micah Banks	The decision to move forward with the gondola is clearly against public opinion and only serves private interests. Even in Snowbird and Alta were paying for the entire thing it is an absurd idea. Please go forward with ANY other plan besides the gondola!
25644	Tessa Rees	Please don't go against what the community wants. This is our home. Done ruin it.
25647	Mckay Gordon	please don't mess up LCC!! the beauty must be preserved!! shuttle buses can run without changing how the road is set now, why dig up and ruin more of the canyon when the solution is so obvious right in front of you!
25646	Jennifer Whitehead	Please don't implement the gondola. Enhanced bussing is the only way to go with out obstructing the natural beauty of the canyon forever.
25648	Edie Greenman	No gondola!
25649	Grant Turpin	This is a massive eyesore and negative addition that serves a very small population respectively. There are cheaper, more efficient alternatives that respect the landscape and the residents and visitors to Little Cottonwood. Use one of those.
25650	Montana Kimmel	<p>Please, I implore we seek other alternatives before beginning the detriment of building a gondola through Little Cottonwood. Better funding to busses and other forms of public transport would be so much more beneficial to not only the area, but the community. Little Cottonwood is a beautiful, diverse area, and not only incredibly special and cherished to so many, it is honored and loved for its' lack of development. The canyon is cherished in that it is an escape from our modernized world, untouched and pristine. The wildlife, the flora and the fauna, the landscape- it is all treasured and should be preserved. Where the traffic situation in the canyon is unpleasant, the building of a gondola not only destroys the area, it poses so many more damaging aspects than the traffic itself. We're talking pollution, we're talking wastes and building byproducts, like chemicals and equipment fluid. We cannot avoid the reality that building something like this will not only bring higher volumes of traffic to the areas surrounding, with it, that also means more potential for this beloved canyon to be damaged by people in the process. Littering, dumping, etc- the idea of how much garbage and waste can be produced by the people in a project like this is painful to think about.</p> <p>Please, I implore we continue to seek other alternatives before damaging such a pristine and enchanting area. This place is special and sacred to so many, and loved mainly for the reason that it has stayed undeveloped. We must protect our natural resources and I believe building a gondola is a step in the wrong direction- a step directly to pollution, excessive crowds and their tendencies to litter and disrespect the area, destruction of one of the few untouched places in the area. Please reconsider this decision. Please consider funding more public transport and restructuring the bus system. Please do not destroy Little cottonwood with excessive machinery and an overabundance of people. We must protect this area.</p>
25651	Emily Walker	This is an irrevocable decision that will destroy the natural beauty of the canyon forever. I do not feel that the irrevocable nature of this decision has been considered enough.
25653	Jordan Lagana	Decisions like moving forward with the gondola will be the end of this town. If you destroy the natural beauty that locals and vustors cherish, there will be no community to visit during the sparse "powder days" that you seek to capitalize on. This is a blatant refusal to acknowledge the desires of the populace. Be careful.
25652	Caleb Baker	You would be destroying everything beautiful about little cottonwood. No gondola.
25654	Paul Winter	I vote gondola

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25655	Leslie Hackman	You dirty money >:(You get an OVERWHELMING response against the gondola and you decide to put it in anyway. UDOT's in bed with the ski resorts aren't they. I thought you were supposed to kiss the public's considering you exist as a government entity. Hope you all get defunded for this.
25656	Leslie Stobbe	I grew up at the very base of this canyon. The problem is only an issue a handful of days a year. This is not the solution to year round enjoyment of this canton. Developers and the manager of snowbird are NOT the spokespeople for Sandy citizens. They just want money in their pockets.
25657	Jim Collinson	As long time canyon forecaster and resident, I am glad to see this alternative chosen. I submitted strong comments in favor in the last go round. I like the modifications and adaptations, but think it is a mistake to only secure 1,500 stalls at the gravel pit, looking at future needs. Unless a structure is installed, think about 6,000 stalls.
25658	Dane Hainsworth	No gondola!!!
25659	Kole Winters	I live right at the mouth of little cottonwood canyon in Sandy. My ask is that we do NOT implement a massive change in the canyon for only a few days a year when traffic is bad. It's a lot of money and creates a permanent eyesore (especially the gondola) all year long. If something must be done, can we expand the road? At least it keeps the eye line clean and allows for more robust transit options, especially as we move to electric.
25660	Cameron Morgan	The gondola and charging for access to the canyon are both awful ideas. If you are going to charge for the canyon, do an annual pass. For access to the canyon, allow buses to stop at trailheads and expand bus access. The gondola will be environmentally hazardous and fiscally irresponsible.
27636	Joseph Munier	I fully support the project around the condo and think it's the best idea about the options.
25661	Tammie Atkin	I'm am opposed to the gondola. It will ruin the canyon and it's majestic beauty. It is meat for a small population of skiers of which I am one. This hardly seems fair to people in rural Utah or others who don't visit the canyon. The cost is exorbitant and cannot be justified. I am completely opposed to it!
25662	Kordell Black	You are not goi g to solve the traffic problem with the gondola , you will just relocate the traffic jam to cottonwood heights. Have you ever tried to ride the buss out here. What a joke. Public transportation shouldn't be a disservice.
25663	Tyler Tamarantz	I spend nearly every day of winter recreating in the cottonwoods both at the resorts and in the backcountry. I believe a gondola is not an option in the best interest of the community, only to benefit the resort owners wallets and as a marketing attraction. It's a one way path to the resorts and has no option for the 1000s of people using the trailheads throughout the canyon. Among the many other reasons not to move forward with the gondola, I think it will be an eye soar to one of the most beautiful sections of Utah and it's a shame to see Utah representatives supporting such a narrow minded solution to this situation.
25664	Annie Studer	I upset by UDOT's selection of the Gondola Alternative B as the preferred solution to improve transportation on S.R. 210. This does not reflect the comments from other periods and seems to favor private interest over public good. Even the way the data was presented is skewed towards the gondola by breaking down summer and winter costs. This is a known marketing tactic (written by a marketer here) to show smaller numbers which are more appealing. This should have been done for the Bus Alternatives as well. While scouring the EIS Final documents, I cannot find any mention of"wind". The safety and operations measures evaluated snow and traffic flow, but wind is a huge factor in gondola and other elevated mechanisms operability. Most skiers and snowboarders are familiar with"Wind Hold". Was Little Cottonwood Canyon's proposed gondola evaluated for wind effects? The Final Executive Summary fails to mention trailhead user access aside from"implementing trailhead and roadside parking improvements, as funding allows." Canyon access paid by taxpayers should not favor ski area visitors. It should favor ALL visitors. The proposed Gondola will also take years to complete, while the Enhanced Bus Service can be implemented much quicker. The operating loss cost of build time should be included in the EIS evaluation. This would heavily favor the Enhanced Bus Service over the Gondola. Please re-evaluate. Thank you, Annie Studer in Salt Lake City, UT
27637	Steven Pocock	If you believe the propaganda about unloading 30-plus people with skis, boards and belongings from a tram car in under two minutes, I have a bridge for you... What a giant boondoggle....creative taxation...let the skiiers pay for it...4 million to operate...how much is that a ride?
25665	Elizabeth Carter	This is not a viable long-term solution and it solely benefits the resorts. The beauty of LCC is that there are so many public, natural wonders to explore. Please please do not do this to our beautiful home.
25666	Michael Shawn	Leave the canyon the way it is. Go play Tonka Trucks somewhere else. Go dig up the middle of the desert or the junk yard or your own home. Don't touch more of our canyons.
25667	Allison Schuh	Why can't we focus on creating a bus system that works well and reduces traffic? The gondola will cost so much that only tourists will use it. The gondola will disrupt the beauty and the ecosystems of little cottonwood canyon. The gondola is not inclusive or equitable for people. The public does not want a gondola. What are you going to do to make the gondola equitable so all people can have access to the canyon?
25668	Tj Budge	Terrible idea. Spend hundreds of millions of taxpayer dollars so it will take longer to get up the canyon and so you can pack more tourists into ski areas owned by out of state businesses that most locals cannot afford to visit. The gondola is a short sighted solution that does not fix, bit rather exacerbates, the real problem. LCC ski areas are super overcrowded. Spend taxpayer dollars building community or county owned ski areas elsewhere to disperse skiers.

25669	Kayla Smartz	There are better alternatives to the gondola that will improve the roadways. Avalanche mitigation, tolls, enhanced bus, and widening the road are all good options, with avalanche mitigation being the best option. The gondola is an aggressive resolution for only 50 days of heavy traffic per year. Enhanced busing options (with a peak-period shoulder lane) will have the biggest benefit on time. 63 minutes to take the gondola up?! That is insane. I'd rather sit in traffic in my own car with my boots off, getting work done and such. Please consider the other options. Building a gondola is ruining LCC. I have lived here for 10 years and LCC is my favorite roadway. I run it, bike it, and drive it frequently. Thank you for listening.
25670	Adam Bates	<p>Glad to see the Gondola chosen. Given both options this is the best choice for the environment and for those who need transportation. I remember Provo Canyon before the road expansion and 4 lanes would destroy LCC canyon. Snow on the road is the cause of all the problems. Bus's still uses the road and would be prone to all the same problems, so it will NEVER be a logical solution.</p> <p>Gondola is like a wind turbine, it may have a visual impact but its better for the environment than a fossil fuel burning power plant built all pretty.</p> <p>This is no different than a TRAX stop with stations at Jordon Commons or downtown businesses. Transportation growth needs to reflect where/how people are going.</p> <p>People are going to hate on Snowbird/Alta because that is where the stations are going to be. But as a transportation engineer you design stops where people go. Just like there are no TRAX stops at parks.</p> <p>Don't let passion overrule reason, think, and leave politics at the door.</p>
25671	Sam Baum	As a climber, snowboarder, outdoor educator, guide, and ski shuttle driver, I am appalled by UDOT's decision to move forward with the gondola. To make such an irreparable impact to one of the most beautiful locations in the Salt Lake valley is a shame. This is especially true considering that the traffic in LCC is only an issue for a small fraction of the ski season. The decision to build the gondola only serves the ski resorts and their patrons. It neglects the other users in the canyon. This decision is clearly pandering to the wealthiest and most privileged users of the canyon and only serves to widen the inequity that is far too common in outdoor recreation. For a city that has some of the worst public transportation I have ever experienced in a large urban area, I would think that this would be an excellent opportunity to build up the bus system both in the canyon as well as in the valley at large. I hope that UDOT will reconsider other options in the coming months.
25674	Cameron Brodrick	Do not ruin our naturally beautiful landscape with your greed. No Gondola.
25673	Lauren Mcmillan	Please don't do this. NONE OF THE PUBLIC WANTS THIS AS A SOLUTION. Bus system like Zion please. It's a proven successful solution.
25672	Brian Harris	<p>It's expensive. It's permanent.(well, kinda). It only benefits Snowbird and Alta. It's undersized.</p> <p>Vastly prefer a drastic increase in bus usage and incentives to get people out of their cars. (Tolls, restrictions etc).</p>
25677	Lily Halvorson	No Gondola!!!! You are ruining the canyon!!!
25675	Joshua Brown	This is not ok. This will not solve the problem. This will just move the congestion to the roads at the base of the canyon wherever the parking lot is. This will ruin the aesthetic of the canyon. You are listening to big money and not the people. This is not ok.
25676	Marisa Mikonis	This is not saving the environment of LCC. This is turning it into Disneyland.
25678	Kathryn Crezee	A majority of Utahns do NOT want this option to go through. There are so many other viable options that haven't even been tried yet, wouldn't cost nearly as much, and could be implemented this next year. The environmental damage to our canyon is not worth this. The money that would be made from this will never be recouped. This should be an issue that is on the ballot. There are so many negative impacts that will happen as a result of this project and it is disgusting that the taxpayers who would have to fund this asinine project do not actually have a say.
25679	Carson Crezee	60% of respondents opposed and udot moved forward? Make the ski resorts pay. This is completely unnecessary in a recession.
25680	Sarah Zanolunghi	The decision that the gondola in Little Cottonwood Canyon is absurd. Tax payer money used to benefit two private resorts is out of control. I also have not met anyone that uses this canyon often that agrees with the idea. It seems like someone is being paid off to continue with this proposed plan.
25681	Benjamin Carney	Horroric misuse of tax dollars to benefit private corporations and permanently destroy the beauty of the crown jewel of the Wasatch. I'm horrified and shocked at this development. This only helps traffic for a few days of the year for people rich enough to afford the resorts. Also, rich people will still ride in their cars, rich people HATE public transportation. And it's not even free, ensuring most people of color will never ride it. Any politician who supports this will never get a vote from me or my entire family for life. Disgusting. I'm embarrassed to live here. I am a single-issue voter with this.
25682	Michaela Kiersch	This is abhorrent and will be catastrophic to the enjoyment of the canyon. Serving the private ski sector is NOT in the best interest of the community or environment and should not be a priority for UDOT. Establishing a toll system is more realistic and financially impacts those who wish to frequent the canyon, rather than taxing the majority for a small, snow community.

27638	Ben Anderson	<p>I am devastated that the state would choose to mar a pristine landscape with a gondola. In years to come, I believe this will be looked at as a devastating mistake as a natural environment falls victim to short sighted policy. For numerous reasons, I beg you to consider other options before progressing with the gondola.</p> <p>In many ways, the gondola is an answer to a problem created by the ski resorts. The ski resorts, without concern for consequences, have increased their number of skier visits without increasing parking, lifts, amenities, or lodging services. The expanded gondola service serves the ski resorts to bring more skiers to an already crowded mountain and puts the burden on taxpayers. Ski resorts have been able to expand ticket sales without any recourse. The formula that supports the number of skiers, parking stalls, and amenities is extremely out of calibration. I know it is not the governments job to dictate how a private business is run, but why are taxpayers on the hook to support a business that is not offering the same consideration. I am not sure how I benefit from paying for a gondola that will serve only ski resorts.</p> <p>The gondola does not serve other recreational users in the canyon. Parking will continue to be dangerous. There should be paved pull outs at Lisa Falls, Gate Buttress, and Tanner's Flat, among other locations similar to the new parking lot at the vault. Additionally, police presence on snow days is abysmal. They consistently allow cars without chains, bald tires, 2 wheel drive, etc. up the canyon without a second thought. On the majority of occasions, the police are not even there. Given the number of LCC users, it seems that advertised canyon plans and thorough organization from law enforcement could address some initial needs that have not been met in the last decades as traffic has increased without regulation. There is no question that much of the traffic problems are caused by drivers who are unprepared and unfamiliar with what it means to drive the canyon in winter conditions. Although the gondola is purported to remove traffic, unless UPD does its job, there will continue to be unprepared drivers that cause concern and hazards to others on the road.</p> <p>As a personal editorial, those in power in Utah seem to be very concerned with making Utah the best place to live. My family has been fortunate enough to know "This is the Place" since the 19th century. However, in our quest to be economically progressive, we are damaging many of the reasons why I love to call Utah home. Destroying LCC is another step in the wrong direction as we damage a wonderful place to find solitude and wilderness. Hiking the other day, I ran into a man. We greeted one another and I asked how he was. He replied "suffering", to which I responded, "that's wonderful". And continued "wild spaces should be hard to get to, because then it keeps them away from the insincere".</p> <p>I could go on, but I'm sure you are busy. Please keep our spaces wild. Please do not mar the beautiful skyline that exists in Little Cottonwood Canyon. Not everything that looks good on paper is good in real life. Don't destroy the natural beauty of LCC. The flare and sparkle of this type of progress will fade, eventually to stand as a cautionary tale. LCC will never be the same: once it's gone, it's gone forever. Don't be the one to take it away, protect it. I beg you to reconsider.</p>
27639	Becky Arrowood	<p>Please do not listen to the naysayers. I have been to Switzerland and have seen them first hand. Gondolas are the way to go!</p>
25683	Emma Luke	<p>I do NOT support the implementation of a gondola in the canyon. This is not accessible for all, damages the environment, and doesn't benefit the greater good, those of us commoners. Instead, it only benefits private companies, the only supporters of the gondola. Please listen to the people, it is obvious that this is not what we want.</p>
27642	Katrina Graham	<p>I fully support the gondola.</p> <p>Katrina Graham SLC, UT</p>
25684	Marika Xydes	<p>I am VERY upset about constructing the gondola. for the following reasons:</p> <p>It also doesn't really fix the problem of parking. To ride the gondola - people will still need to drive to park at the gondola base - and the LCC park+rides are already at capacity just using buses. Unless they can find a location to put a REALLY big parking lot - this is going to be gondola access for the 100 people who get to the park and ride first - and then nobody else :disappointed:</p> <p>It's also going to be a huge impact on the native wildlife in the canyons. Installing gondolas is a big undertaking with lots of heavy machinery - and establishing the worlds largest will mean cutting access roads, digging big holes, etc into areas which are currently forest and protected habitats.</p>
25685	Tanner Colledge	<p>As a lifelong resident and multigenerational Utahn, I do not support the Gondola. This move comes off as a money grab for the developers and ski resorts, funded by taxpayers. Continuing with this project will only further widen the distrust between corrupt government officials and the public. This proposal demonstrates that irregardless of public opinion, our limited public lands are always for sale to the highest bidder.</p>
27643	Clint Juhl	<p>Love the Gondola selection!</p> <p>Don't let the negative & opposing voices change your mind.</p> <p>Clint 29 year Sandy Resident and avid skier!</p>
25686	Mel Tingey	<p>Great idea. Build the gondola quickly.</p>
25687	Austin Williams	<p>The gondola is not the correct course of action! Pretty much any other avenue would be better than tearing through our canyon and ruining what is left of it.</p>

ID	Full Name	Comment
25688	Jacob Heyerdahl	<p>Issues to be addressed</p> <p>1) Wasatch boulevard widening will likely not decrease the amount of traffic. As countless traffic studies have shown, when there are more lanes for cars to use more people will drive on them until the lanes are once again congested (induced demand).</p> <p>1a) What we need is a TRAX line that runs along the wasatch front and connects to downtown so that the people commuting have another option other than driving.</p> <p>1b) Bike gutters / shoulders /lanes" are extremely dangerous and especially when they are paired with an even wider busier road. Instead of having two bikes lanes going in either direction can we make the road itself smaller and make a bike specific pathway separate from the road next to the multiuse path. Or if its easier just make the multiuse path wider and make half for bikes and half for walking/running.</p> <p>2) There is no plan for if phase 1 solves the congestion issue. What if having more buses and limiting private cars up the canyon solves the problem.</p> <p>2a) Is there a plan for what do with the money for Gondola if it turns out that we do not need it?</p> <p>3) Is there a step we can take before tolling or can we limit tolling to only single occupancy vehicles?</p> <p>3a) What if we required all of the resorts to implement parking reservations?</p> <p>3b) Can we have a free pass for cars with 4 people in them?</p> <p>4) None of the proposed traffic solutions take into account anyone not going to the ski resorts. So hikers, climbers and backcountry skiers are stuck driving regardless of road conditions.</p> <p>4a) Why build new trailheads if the new solutions are not going to stop at them?</p> <p>As a longtime (20+ year) voter and tax payer this decision does NOT have my support.</p>
25689	Joshua Graham	<p>The solution is simple and inexpensive: During the ski season simply limit access on the weekends to only allow residents of the canyon to drive up and public buses - think Zion canyon. This is a fair approach.</p> <p>It eliminates the traffic problem at little expense to the tax payer. The gondola is an expensive gimmick that will only add more people to an already stressed ecological community.</p>
25690	Caroline Page	<p>There are so many pressing issues facing taxpayers, please do not waste our taxes on an eyesore to fund PRIVATE COMPANIES!! Please consider the bus option, tolls, anything but a gondola. This is a travesty of government</p>
25692	Owen Casey	<p>Improving bussing routes and improving that system I feel would be way more efficient and cost effective while keeping our canyons clean and safe as well as preserved. Thank you.</p>
25691	Rachael Galipo	<p>No no no no</p>
25693	Chris Natalie	<p>I am an 8 year resident of Salt Lake City and a weekly user of little cottonwood canyon. As a rock climber, skier and runner I am in support of the proposed alternatives to a gondola and strongly opposed to the construction of the gondola. This proposal will destroy many acres of natural habitat, recreation and incredible views. There are other solutions to the LCC traffic issue and the gondola is a very poor solution helping only the resorts and hurting this who choose to use the canyon in many other recreational pursuits. Please reconsider the alternatives.</p>
25695	Whitaker Morgan	<p>As a resident of Cottonwood Heights and someone who has been a resident skier for my entire life, I vehemently disagree with UDOT's proposal for the Gondola. Although it is an alternative to the existing road, the idea of installing the proposed infrastructure while only utilizing it for a tiny portion of the year to benefit two privately owned ski resorts is appalling. There needs to be a proposal that benefits all of the trailheads in the canyon and is not solely utilized during the winter months.</p> <p>I also am a frequent resident of Moab and wince every time I drive past the broken-down gondola on the way into town. That is essentially what this proposed gondola will look like for ~270 days a year. Widen the road, create a tunnel. Spend the proposed dollars in a way that will improve the canyon for all visitors, not just foreign skiers and private resorts.</p> <p>I drive past the gondola billboards daily. It is their way of attempting to soften the public perception of something that is happening because of big business and government relations.</p> <p>If this went to a ballot, I would vote NO to the Gondola (coming from someone who skis 40+ days a year at a resort and in the backcountry of Big and Little Cottonwood canyons).</p>
25694	Greg Hilbig	<p>The gondola option only helps skiers and ruins climbing areas in the canyon. It will be an eyesore. The Central Wasatch had more visitors than the "Mighty Five" You need to do what Zion and Arches to with shuttle buses and reservation system.</p>
25696	Hanna Clements	<p>I am strongly against the proposed gondola installation in LCC. The recreational and environmental impact far outweigh any solutions a gondola might result in. A more conservative, environmentally considerate solution should be put forward.</p>
25697	Alexandra Tobeck	<p>I live in Orem. Let's invest in electric buses and regional transit hubs throughout the valley.</p>
25698	Isaac Lindstrom	<p>No gondola. Just a terrible idea. Protect the CANYON!!! Do not destroy it.</p>
25699	Mike Walton	<p>The little cottonwood gondola is not the answer to the ski resorts transportation issues. The resorts need to be reminded to protect the skier experience. The lifts at their resorts can only handle so many people. The gondola will only create longer lift lines. Skiers and snowboarders are not there to wait in line. If the resorts insist on destroying the views of little cottonwood, they will loose me as a season pass holder. Remove the Ikon! Alternative would be to put a gondola up Snake creek. Doing so would prevent commuters from midway, park city and heber from driving down parleys and allow for a better interconnect.</p>
25700	Marisa Mikonis	<p>Have you thought about implementing a ticketed entry/reservation for the entire canyon? Such as the national parks like Glacier, Arches, Etc. This will ruin backcountry access, solitude, interrupt climbing experiences.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25701	Michelle Cruz	None of us want you destroying our beautiful canyon for profit!!! NO, NO, NO! What is wrong with ya'll?!
25702	Hayden Duffin	I disagree with moving forward on the gondola option for LCC. Not only will the gondola hurt the natural beauty of the canyon but it will create an entirely new set of issues like: Stress at the base of the mountain, where the posts with be set, offloading, parking lots, etc.. I can't say I know the best option to help LCC traffic but this is not it. I would rather limit the amount of access in the canyon per day AND pay a toll to enter. Please hear out the locals, we need your help!!
25704	Brennan Smith	The proposed gondola is a boondoggle and will mar the natural beauty of the canyon in favor of transporting people directly to ski resorts that may or may not have snow in 50 years due to climate change. This canyon is for everyone to enjoy, all year round. This "solution" would force Utah tax payers to foot the bill for resorts first and recreation equity second. My favored solution is to restrict driving and offer more frequent bus services. One bus can express straight to the ski resorts, another to major trailheads with infrequent stops and the third as a regular bus service with frequent stops. To help facilitate, a toll can be imposed similar to Millcreek Canyon. Please reconsider this as a solution and instead prioritize a better, more beautiful and more accessible solution for our canyons. Thank you.
25703	Katherine Forth	I don't want my taxpayer money to pay for gondolas that are clearly only for the benefit of two skiing resorts. They should pay for their own gondola.
25705	Maddie Hileman	The gondola is a permanent, damaging choice that will only lead to worse traffic at the mouth of the canyon. Nobody wins with the gondola, except the greedy people who make money from it.
25706	Brandon Thomson	Hello, do you have the EIS comments stored in a more analyzable format? Perhaps a CSV or database? I think it would be beneficial to provide the community access to this information in a format outside of a PDF. Let me know! Thanks.
25707	Gwendoyln Buehner	I have spent time in LCC and I enjoy climbing there so much and the climbing community at LCC is wonderful and it is going to be a huge dissapointment if we can no longer climb there
38619	Brandon Thomson	Hello, Are you able to provide the EIS comment data in a more analysis-friendly format? Such as a CSV, Excel file, or database link? I believe in the current format it is hard for members of the community to aggregate the information stored in the comments. Thanks in advance, Brandon
25708	Alex Bruey	A gondola is an inefficient and unsightly solution to the problem of congestion in the canyons. It will RUIN the aesthetic. Furthermore, the gondola serves to only benefit private businesses at the public's expense!!!
25710	Kira Maicke	Please don't ruin the best canyon in the valley with a [REDACTED] gondola that only benefits two private businesses.
25709	Julianne Mahoney	This is an absolutely ridiculous proposal. Is there traffic during ski season? Yes. Are there ways to help this issue without destroying the environment, the climbing, or the beauty of LCC? Yes. Expand the bus route, please expand the bus route. Add more buses and more parking at the base of LCC and BCC. Add a bus lane. The damage of expanding the road one lane is infinitely smaller than the damage of destroying historic boulders for the climbing community, fragile ecosystems, and the natural beauty of LLC.
25711	Ryan Eror	I think that only serving 1000 skiers per hour it really won't make a dent in weekend traffic especially on a powder day. I think there's other options that would be a much better start and cheaper for a community.
25712	Jacob Debry	Thank you for considering all possible options. I agree that the gondola B plan is the best. I'm looking forward to reduced traffic and being able to rely more on public transportation. Thanks for all your hard work.
25713	Kacie Wilks	Please don't destroy a beautiful canyon. We need to be protecting nature at all costs these days. Hop on board already, please.
25715	Larisa Diamond	I am against the gondola. I think that the best option is to make a large parking garage at the base of big and little cottonwood canyons both with limited to no uphill driving by private cars on busy days. The Uta can then have much more frequent bus service up the canyon from the lots at or near the base. The biggest deterrent to people taking the bus is the fact that there isn't enough parking by the bus stops and the buses don't run often enough. If you change those problems, the bus is a viable solution for all. Having to wait 20-30 minutes for a bus if you miss one is a major deterrent to bus use, as is not having a spot to park once you get there. If you make a big parking area, people wouldn't be backed up trying to go up the canyon. Ditch the gondola and improve the parking/bus situation and problem solved. They make electric vehicles to cut down on pollution too.
25714	Jan Degerberg	Learn from Breckenridge, when it's windy the gondola can't run. Then what? Not a good option for you all. Not the solution!!!
25716	Peter Wiarda	If Utah taxpayers are paying for a portion of the gondola, they ought to be allowed to ride it for free when it's completed.
25717	Aidan Mccarthy	The gondola is not a real solution. The cost is ridiculous. The amount of time it would take to ride the gondola from the base to Alta is longer than it currently takes me to drive there from my house. The gondola does not service the best interest of myself, or of my fellow local Utahns. Increased bussing, requiring carpooling or charging a fee are by far better solutions but i would argue the best solution is to do nothing. I would argue the traffic is worse in BCC and ever since Alta started to charge for parking I have never had a traffic issue in LCC. There are maybe 10 days a year where traffic is tough and that is a small price to pay. The gondola only benefits developers and is completely out of touch with the reality of what Utahans want. I beg you to reconsider. I am against the gondola.
25718	Briant Carter	I agree with this proposal.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25719	Terra Perez	NO GONDOLA!!!! Please. All it does is feed corporate pockets, and destroy the beauty of the canyon. Toll every private vehicle during the busy days/weeks of the year, no matter occupancy. And increase the amount of busses going up the canyon. The gondola only benefits select few. There are no benefits to the hikers, bikers, and climbers of the canyon. The gondola creates an eye sore. Please, the people of SLC are begging you not to build this gondola. It's an eye sore and is blatantly in favor of the rich corporations. NO GONDOLA!!! Please try tolls and increased public transport first. Please don't destroy our beloved canyon.
25720	Caroline Jackson	Hello, Firstly, I want to thank you for all the hard work I'm sure undergoing this project has taken as it's certainly one fueled by a lot of passion! While I'm not opposed to the eventual gondola and strongly prefer it to widening the road, I'm wondering why UDOT is not considering closing the road to all private vehicles as part of this EIS. I worry that the projected 56% reduction in air pollution with the gondola will not be reached when all it takes for a private vehicle to drive up is a \$20 toll. With both Alta and Snowbird having already experimented with paid parking I fear another toll just negatively impacts who can access the canyon vs. changing peoples behavior. Instead I urge UDOT to consider only allowing canyon residents, guests staying at lodges in the canyons and buses to enter the canyon. By only allowing UTA buses for backcountry trailheads and ski resort access to day skiers by the eventual gondola that might better reach not only the air quality goals but also serve as an effective way to change peoples behavior. I also think this will speak to a lot of people who don't currently take the bus because they feel they're just going to have to stand squished into a bus to sit in the same heinous traffic they could otherwise sit in their car for. I believe these steps could also be taken incrementally and enforced sooner than the completion of a gondola with the bus routes. Another tolling option which might be more approachable would be selling a set amount of "season pass" type passes to valley residents to then have a set number of cars going up, although I'm sure this would be tricky with Forest Service equitable access requirements. Thank you for your time and I look forward to seeing what change can be made in the canyon this winter.
25723	Ben Anderson	No to the gondola. There is a huge list of reasons why but first and foremost is do not mar our canyon, keep its natural pristine beauty. I'm happy to talk if you want more reasons, call me. No to the gondola
25722	Courtney Harper	No gondola, keep our canyons beautiful!
25721	Joe Draper	I am against using tax payer money to help 2 private businesses pay their bottom line and destroying natural lands in the process. Absolutely horrific.
25724	Thayne Rich	No gondola!!! Such a massive waste of money with other options that would be less expensive and less infrastructure.
25727	Aiden O'gara	I am appalled by the Gondola option proposal. I feel that this will be detrimental to the historic viewshed and quality of recreation within the canyon. I do not feel that this decision is representative of the feelings of the Utahns that use this canyon for their recreation. Many of the best days of my life have been in LCC, and it breaks my heart to know that if this is implemented the experience will never be the same and that climbers et all in the generation after me will be robbed of the LCC that I know and love. I plead that UDOT takes into consideration the opinions of the public who know and love this canyon, weighing them over the opinions of the bureaucrats and contractors who will profit from this unwarranted and impractical proposition.
25725	Nicole Weaver	A gondola only kicks the can down the road and does nothing for BCC. I don't want my tax dollars to pay for it, I won't use it, and it doesn't provide access for back country skiers. If Alta and Snowbird want it, then Alta and Snowbird can pay for it. I think this plan is a catastrophe for LCC and I can't believe that this is even what was chosen when the extreme majority of public opinion is against it.
25726	Loren Orullian	This is terrible news. It will be a huge burden on residents to pay for for generations. I am troubled by the people who stand to gain the most money by this. Corruption and closed meetings are to blame. I hope this will somehow be stopped.
25728	K Smith	very excited for the gondola, i hope this actually happens and Udot doesn't back down to a small and loud opposition. We should have transportation options for a major activity in Utah. This will help the mountains be accessible to all!
25730	Mitchell Moody	The gondola is a terrible move. The road is obviously a better choice for the people of Utah, but you don't seem to care what we think. The public should decide, but private companies and their political donations.
25729	George Smith	I think this is a great solution to the resolving traffic issues in LCC. Widening of the road just doesn't make sense to me. THANK YOU UDOT
25733	Brandon Wilde	Please consider alternatives to building the gondola. There are other less impactful and less costly alternatives. That is precious land that many recreate on. Let's not turn our sacred canyon into Disneyland.
25732	Caitlin Recker	THE PEOPLE DO NOT WANT A GONDOLA. This is devastating for the land and the locals in utah. Absolutely disgusting that anybody thought this was an okay thing to do, to ruin LCC like this. For what? For money and greed? Sickening.
25731	Jared Greco	I am very disappointed with the decision to do the gondola. I would like to see an accurate plan depicting how the annual maintenance costs of running the gondola will be paid as it is surely going to be on the tax payers shoulders. Far more cost than running the bus system. My only hope is that the bus system is run for several years and provides the relief needed for the demand of the canyon. I trust Utah and UDOT to make the right choices but this seems to be persuaded by big money donors and politics.
27644	Daniel Presnell	Your comment format is ridiculous and designed to make it almost impossible to send a comment Your commercials were biased, misleading and offensive. I rode ski buses for years. They were full of people, clean and flexible
25735	Thomas Kakatsakis	The vast majority of the population does not want the gondola. Listen to your constituents. DO NOT BUILD the gondola. Please listen to the opinion of the public which is overwhelming against this.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25734	Isabella Didier	This is a massive waste of taxpayer dollars. This equates to \$120+ dollars per Utahn. And it will only help a small minority of Utahns for approximately 12 weekends in the year. Completely impractical, irresponsible use of resources and damaging to the canyon. The citizens of these canyons and the surrounding areas DO NOT WANT THIS.
25736	Scott Sinner	This is a disgrace to our public lands and the greed and corruption is obvious. Shame on all who have made this happen. You are truly major [REDACTED] [REDACTED]
27645	Josh N/a	<p>Erecting the Gondola will destroy to views of Little Cottonwood Canyon. Why not try some simple solutions before installing 550 million taxpayer dollars? What about charging people to pay for parking at the resorts? Have the resorts build more parking garages? I can drive up from my house on a good ski day to snowbird in 20 minutes. The traffic isn't that bad to require such a drastic move. Makes everyone realize this isn't about transportation. Resort profits.</p> <p>Josh</p>
25737	Patty Dailey	I think it is a great idea. My son works up there and I fret all winter about those roads. He hates the bus, too crowded. I do not see the expected time from base to resort though and am curious how long the proposed gondola trip is expected to be.
25738	John Pruitt	No gondola. It is an eye sore to the canyon and not a sustainable fix to the issues it's proponents are claiming. It's a project motivated by money and corruption. You. Should be ashamed to okay this project after such public backlash. Let the people vote. UDOT does not have the authority or right to ruin our public lands like this
25740	Frances Riter	I am against this project. I can't afford the cost of this project and don't won't to pay for something I will never use!!!! I am tired of being taxed for things that I will never use.
25739	Jerilyn Holt	I'm horrified that you are going ahead with gondola!! Most of the people don't want it. It is a scam for ski resorts, will destroy the canyon and not solve the problem!!! Stop!!
25741	Jared Meadors	<p>I oppose both any widening / expanding of the existing roadway and certainly any sort of ridiculous boondoggle of a gondola idea. If the estimates are \$550 MILLION--which is already eye-poppingly ridiculous--you can bet it will likely end up costing well over a BILLION. (Google Boston big dig and Honolulu rail project if you aren't familiar with this concept.)</p> <p>I vote for NEITHER the road widening nor the gondola. I vote to simply LIMIT the cars allowed up the canyon on particularly busy days--either by simply shutting it down and not letting more cars in until cars come out--or implementing a floating / fluid toll system that simply increases (from zero to infinity)--as demand increases--ultimately reducing demand until it meets the target supply available.</p> <p>I'm a snowboarder and have been using the canyon for boarding / skiing, biking and hiking for over 30 years. And the last few times I went boarding--over the past couple of seasons--I was stuck in crazy long traffic lines coming out of the canyon--which [REDACTED] but was completely voluntary. Not ONE single time during that long drive down did I ever think: "Man, I really wish there was GONDOLA running up the middle of this BEAUTIFUL--PRISTINE--canyon--so that more commute back down would be faster--or so that the ski resort owners could make more money. Not ONCE. EVER.</p> <p>And why in the [REDACTED] would UDOT ever ask taxpayers to SUBSIDIZE the ski resorts while destroying the natural beauty of the canyon in the process? That's just crazy talk.</p> <p>It certainly appears that--ski resort owners aside--the VAST majority of canyon users do NOT support a gondola--or ANY OTHER major infrastructure project in the canyon. So... sounds like a good time for a class action lawsuit to tie this project up in the courts for decades. Running up the costs even higher.</p>
29398	Joe Jensen	My name is Joe Jensen. My number is [REDACTED] I'm leaving a voicemail in complete and total opposition to the announcement UDOT made today proposing to move forward with the gondola in Little Cottonwood Canyon. This is a horrible idea almost everybody I know that lives in our neighborhood here at the mouth of the canyon is opposed to it and UDOT needs to reconsider and it also looks like a majority of Utah residents are opposed to it to the tune of 60%, so uh take my comments into consideration. This is an awful decision. Thank you.
25742	Will Secunde	Improve buses, gondola is a dumb idea
25744	Jacob Boden	I am against the gondola. Check out the photo of LCC on this website. It is of a sweeping canyon with no manmade objects in sight besides a small road and a parking lot. Do we really want to add more urban sprawl to one of the last remaining pieces of undeveloped land in the area? Who wants to ski, hike, or climb in this canyon with views of wires, towers and other man made objects obstructing the view? Once we put that stuff in there is no going back. I want my kids and grandkids to enjoy the majesty of this canyon in the same way that I have been able to. There are other ways to cut down on traffic and I think those ways should be explored and invested in. What makes our canyons wonderful to recreate in is the natural beauty. If we loose that then we loose what makes our canyons great.
25743	Tom Wharton	I am opposed to this gondola. It will be an ugly blight on the canyon scenery. It will put more people in the canyon which we don't need. It is government subsidizing private businesses. I prefer electric busses such as those used at Zion and a daily reservation program like the one at arches. We don't need more signs of humans in our canyons. This is terrible.
25745	Isaac Greenwood	I'm not saying no or yes to the gondola, but if you have 2,500 parking spaces and each car has 2 people in it. Which i know the 2500 parking spaces might not get filled up. But that's 5000 people. Only 35 can fit in each gondola every 2 minutes. you could be waiting in line for over 4 hours up and 4 hours back. Thats worst case scenario. But that is a long time to wait especially if you have an emergency. With how things are right now worst case scenario instead of a 30 min drive up the canyon its 1.5 hrs up and less coming down, which really isnt that bad. You have probably already thought about this though.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29399	Marcus	Hi, my name is Marcus Iado. My phone number is [REDACTED] And I just want to leave a comment about the gondola project in Little Cottonwood Canyon. And I think it's an egregious error. I think it's shouldn't be done. And I think the wide variety of public support is minimal for this project. And so I think you guys should reconsider. And honestly, look at other Alternatives like enhanced bus routes that are more energy efficient, but just more of them rather than just kind of doing some sort of honestly just seems like a very shady business practices for economic growth. And anyway, I just hope that my comments are heard and then a lot more people like me speak out and speak up against things like this.
25747	Ian Peisner	While the gondola will have little to no impact on traffic and safety issues in LCC, at least it will have a chance to be an economic boon to large corporations and a small group of politically well-connected individuals. The rest of Utah's population will see no improvement, and those of us that value LCC and the Wasatch for something other than its economic value will be dealt yet another loss at the hands of developers, speculators, and environmental profiteers. Has anyone in your office ever been up LCC on a weekend? Did you not notice the hundreds upon hundreds of vehicles crowding trailheads and lining the roads far removed from Alta and Snowbird? Have you ever waited at the Albion Toll Booth for hours? Did anyone wonder how a gondola would impact any of those folks? At least the ever-growing hordes of rich tourists will have something to marvel at! Thanks UDOT, for your service.
25748	Konnery Vigil	Stop the gondola. Building the gondola will violate the ability for recreation in the canyon that isn't skiing. Little cottonwood is so much more than skiing. There are better long time solutions to this issue that don't include a gondola. Please reconsider the decision to build it.
25746	Chris Schulte	You guys could save the effort in staging these do-over comment periods if you just bought bots. No one wants the gondola.
27646	Barbara Aiken	I will not be at the meeting but totally support the gondola project. Barbara Aiken
25749	Jill G	How many trees will be cut down to build this? How much destruction of our beautiful canyon? And who is paying for this? Residents against this gondola should not have to pay for this with our tax dollars.
25751	Madi Lynch	I am very against the gondola addition to Little Cottonwood canyon. There are other methods of human transport that are better for the environment and much less destructive. Please reconsider
25750	Doesnt Matter	This is the most disappointed I've ever felt about the great state of Utah. Will not be skiing that canyon ever again.
25752	Joseph Terry	No, please don't. I'm a rock climber, and please no.
25753	Logan Hughey	Check out the IPCCs (Intergovernmental Panel on Climate Change) report and begin to understand that the weather extremes that we have seen in recent years are the tip of the iceberg. If you're going to move forward with something that benefits one activity (skiing/snowboarding) maybe provide sufficient evidence that there will even be enough snow for a long season in 10-15 years. Second point - Salt lake is growing more quickly than it can handle. The gondala will not be able to keep up with future demand. Think the interstate or the housing market. Furthermore what is the actual plan to handle traffic leading to the base of the canyon. Maybe we need to cap the number of people that can access the canyon at a time. Think Zion Natl Park. It works. Conservation is a good.
25754	Sara McCormack	This proposed "solution" is an irresponsible use of money that will only benefit the wealthy resorts in LCC. It seems unlikely to be a solution I will be interested in implementing into my transportation regime to the predicted high cost of use as well as the presumed frequent times in which the gondola will be unable to operate in inclement weather. Inclement weather is when the highway is also more likely to be closed, and if anyone has been at a ski area with a tram or gondola, they will know that these are extremely likely to be shut down at a moment's notice. We are in need of a more reliable, cheaper, and longer lasting solution than an expensive, gaudy gondola that will only support transport to a fraction of the beautiful places within LCC.
25755	Wesley Eads	Private citizens are not interested in a gondola. A train, more buses and better public transport and parking opportunities are what the public want. Stop funding private business with tax dollars!
25756	Gaby Leblond	Try improving buses / shuttles before implementing a gondola
25757	Elan Sturtz	These climbs are irreplaceable, and are truly some of the highest quality in the world. No one wants this gondala, please please please do not destroy the beauty of the canyon for something no one wants.
25758	Louise Mohorn	Save our canyon!
25759	Daniel Presnell	Your comment format is ridiculous and designed to make it almost impossible to send a comment Your commercials were biased, misleading and offensive. I rode ski buses for years. They were full of people, clean and flexible
29432	Boyd Young	Hello, this is Boyd young in Brigham City, Utah. I'm trying to gather some more information on this Little Cottonwood Gondola thing. Now the advertisements on see on TV is it's much more cleaner alternative for transportation the information I find on Utah Power & Light is we're still over 85- 86% of the power generated and Utah is fossil fuel with the majority of them still being coal. So we're really not cleaning up the air. We're just moving the tailpipe, from here to there. I'm looking for some more information on how many businesses are served, the nature of the businesses. It's all ski resorts. I'm thinking they should pay for this to get their customers to their place, to have senior citizens throughout the state paying the bills for this I would be highly opposed. Any more information I mean, I certainly grateful. Thank you.
25760	Maya Wheeler	Absolutely disgusted by this decision. The gondola is a horribly short sighted and destructive response to the issues we are having in LCC
25761	William Thompson	This would be one of the fastest ways to remove pristine from this view. Environmentally and beauty wise I hope this project is stopped.
25762	Mikeina Yang	The gondola is a complete violation of privacy to the residents living below, it's overall just weird. The gondola will not only be costly, you're going to be considered selfish for prioritizing tourists and profit over locals and the environment. Let's not do the gondola :)

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25764	Mark Pairitz	Very disappointed that Udot ignored the majority of 14,000 comments on this project. I'd at least expect you TRY tolling people who are not carpooling or implement more effective bussing system. Extremely disappointed your catering to a cooperation over the average Utahns who work and pay taxes here. In short, please just try any other solution before you do permanent damage to one of the most beautiful places near SLC.
25763	Hunter Tuesday-heathfield	NO GONDOLA. Please. The people have spoken: we do not need a half billion dollar gondola to serve only resort skiers. Enhanced bussing, transit parking, and tolling are much better options that are cheaper and will not have an impact on the environment. Also, regarding slide offs: if there were personnel to enforce the traffic law, it would be a much better situation.
25765	Jeffrey Freedlund	I do not support the gondola. I do not support the use of tax dollars to support private business. I will do everything I can to avoid paying for this.
25766	John Schwarz	I'm glad to see that the roads won't be widened, however the impact of a gondola will negatively impact the canyon as a whole and serves the ski resorts more than it does citizens. Public lands are more important than business interests and it's disappointing that we are in this position.
25767	Marshall Allen	We the people DO NOT WANT the gondola built.
25768	Danika Christner	The gondola is going to ruin so many boulders that are used by climbers every day.
25769	Melissa Warren	This is not a good use of taxpayer dollars. The ski resorts will benefit. Any other canyon users will have the eyesore of the towers. Summer users don't benefit at all either. This is purely for the ski resorts' benefit, which are companies, and should not be using taxpayer dollars in this way.
25770	Mimi Taylor	A gondola would interrupt the scenery of the canyon that so many go to enjoy! I believe bus systems would be much more efficient to get skiers/hikers up the canyon and reduce waste. The remaining cost of the gondola vs bus should be used to improve water conservation efforts.
25771	Dave Crosby	We need our bouldering problems. It's going to ruin the climbing ecosystem. Please don't do this.
25772	Erick Boyer	Who's paying for this?? Tell me that first. If it's paid for in taxes, then NO! Absolutely not. People that don't use those facilities should not pay, ever. Figure out a way to pay for this without taxes! I will be keeping an eye on this as I hope all of us will
25773	Riley Koester	Building the gondola is a major step backwards for Utah. There are tried and tested ways of efficiently moving people that do not involve the destruction of boulders and other natural wildlife that would actually benefit the people of Utah. As someone who recreates in Little Cottonwood Canyon climbing the boulders I am abhorred by the idea to destroy this unique beautiful place to benefit the rich and not even solve the problem of congestion. Because you obviously were not paying attention to comments from others this is firmly OPPOSED to the gondola.
25775	Kirt Huber	I am against the gondola due to the fact we are using public funds to service two private businesses Alta and Snowbird. I am a ski season pass holder. If this gondola is built with public funds, I will discontinue skiing in little cottonwood canyon. There are a lot more important things to do with 1/2 billion dollars in our community. Shame on you.
25776	Jordan Dullnigg	DONT BUILD THE GONDOLA!!!! RUINING SO MANY CLIMBING AREAS ANS NATURAL BEAUTY
25777	Marisa Cones	This is a joke. Privet citizen should not fund a solution for a ski resort. This negatively impacts the environment and our canyon. Increase bussing and use charge for entry up the canyon if you drive your self. We need that money to save the lake not line a privet company Gondeal works and snowbird. Why don't we use electric busses over a electric gondola. This is not a solution there is no parking in the canyon with this solution this ruins climbing back country skiing and hiking in the winter with the parking solution. This plan fee bought and paid for by snowbird.
25774	Rebekah Richardson	This sounds like a horrible solution that makes no promise to address travel outside of Snowbird and Alta. This does not help trail congestion or provide access to climbing and touring. And there is also no guarentee that it will run in summer, negating any benefit to the environment. It is a lot of money for taxpayers when the solution only caters to a very specific group of people between December and April at best. It also ruins the beauty that is Little Cottonwood canyon. I am deeply disturbed that my tax money is going towards a useless gondola while also ruining the nature around it.
25778	Gavin Fisher	No gondola please it will remove climbing boulders
25781	Leah Hunt	As a Utah resident and frequent user of the climbing and recreational space of Little Cottonwood Canyon, I am disgusted by the decision to move forth with a gondola that benefits none besides the profits of the ski resorts at the cost of the canyon. Please consider alternatives that do not damage the beauty, value, and opportunities provided by this beloved and historical canyon. I will not continue to reside in proximity to the Wasatch if this gondola is created as it will directly conflict with my interest in living here.
25780	Khang Le	This is such a terrible idea, how is destroying the place gonna somehow help Little Cottonwood? All you want is just fill your little greedy pocket with cooperate money and don't give a █████ about the people who live there and the natural habitats. You should be ashamed of yourself!
25779	Gannon Brady	LCC is an extremely special place to me. It's the place where I climb, I snowboard, & I reset after a long week. The gondola proposal is not only an extremely inefficient solution to LCC's traffic problem, but it would destroy recreation within it (specifically climbing) and ruin the tranquil vibes we all enjoy. This is a vanity project meant to increase the appeal of ski resorts, not to improve traffic or help out the local community. I am begging you not to give in. There are much, MUCH better and cheaper solutions available.
25783	Trevor Mcentire	I am a Salt Lake County resident and I do not want a gondola in Little Cottonwood Canyon
25782	Amy Dall	NO GONDOLA. The gondola does NOT solve the problem of traffic in the canyon. It is merely a billion dollar"solution" for Snowbird and Alta and anyone who can afford to ride it. So disappointed with the lack of foresight by UDOT. Seems like you all only see dollar signs.
25784	Bridger Henriksen	I believe it is quite apparent public sentiment is against a gondola. Especially since you have listed the source of funding as unkown, we all know where its coming from. If it was any source other than tax payers it would have been publicized already. Please reconsider a bus expansion. If such massive amounts of funds were to be used I think a two rail train system between both cottonwood canyons would be better suited for public access and environmental protection. No gondola please.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25785	Devin Winchester	Taxpayer money should not be going towards funding access to ski lodges. How does this benefit citizens of salt lake? Ski resorts can pay for their own transport, because the traffic issues stem entirely from themselves. Stop bailing them out with my money, and expand the tracks system for SLC county residents to use.
25786	Nick Kouretas	As a resident of Draper, I strongly oppose the Gondola being created in Little Cottonwood. This would destroy the splendor of the canyon and is being proposed for private interest at the detriment of the community. Nick
25787	James Freas	Nobody wants a gondola
25789	Mike Cooper	Improving buses would be better than a gondola.
25788	Travis Ehlinger	Dear Sir/Madam, I would like to voice my opposition to the UDOT recommendation of the construction of a gondola to serve Little Cottonwood Canyon. I ask the Utah legislature and my legislators specifically, Representative Dailey-Provost and Senator Kitchen, to oppose it and not provide funding for it. I believe the people of Utah and Salt Lake County are better served through less invasive means of transport up and down the canyon, such as through bus service during peak usage times. Sincerely, Travis Ehlinger
25791	Ace H	Why spend so much money? It seems like it would be more efficient to simply only allow buses up and down the canyon. Especially if you're gonna make people park at the bottom anyway
25790	Frank Brunson	The Gondola B Plan works for me. It offers the most cost effective solution combined with a beautiful 27-minute scenic ride to the ski resorts.
25792	Justin Wilcox	It seems apparent you don't actually care what the public thinks since the overwhelming majority of the public is opposed to the gondola, for good reason. Why not try something with less of a footprint than the gondola first? The gondola won't run all year, only benefits resort skiers, and will be a massive eyesore. Such a tragedy. This reeks of lining the pockets of certain stakeholders.
25793	Chris Schmidt	I am all for the gondola especially if it runs year-round. I don't see how everyone can say it is so bad for the environment when the current situation which is driving thousands of cars up and down the canyon has to be just as bad if not worse long term. This does not even touch on the fact of how dangerous it is driving up that canyon when there is a storm. A gondola has to be safer than driving on ice and snow.
25794	Haley Mayfield	Spend the \$550M on something that will actually benefit the canyon and the people who live near it. Nobody wants a massive, ugly, energy-sucking gondola running through LCC. Respectfully.
25795	Andrew Renner	How is this a publicly funded endeavor? This directly and only provides financially benefits the resorts up the canyon. There is no other use in winter outside of these activities. To have tax dollars essentially be given to a private resort so they can increase capacity and thus make more profit is absurd.
25796	Billy Barghahn	Installing a gondola would be devastating to the character of Little Cottonwood. It is an outrageously expensive solution to a problem that is only present a small time of the year. Public funds should not be supporting this. The impact on the environment is negative for the climbing community. Another important user group in the canyon. Boulders will be destroyed and access to climbing routes will be limited. Skiers should not be considered most important users in the canyon. They are creating the traffic issue, and it's unfair that they will negatively affect others with this unnecessary gondola. Increase bus services and widen the road if necessary.
25797	Trina Christopher	I LOVE the gondola idea!!! Buses are part of the congestion and a gondola is more fun!!!
25798	Cody Ramsey	Please consider ALL user groups in Little Cottonwood Canyon and not just resort visitors. As a rock climber I am likely to never visit the resort, however, I would definitely go to climb in LCC. Destroying one resource in order to make another more accessible, especially destroying a resource that is sustainable and environmentally friendly in favor of one that is decidedly and demonstrably not, is the height of hubris and inanity.
25800	Deborah Watters	I oppose infrastructure changes to LCC, including the gondola. To have the state spend millions of taxpayer dollars so more wealthy white people can ski is a travesty. This looks like an environmental and aesthetic disaster being implemented to ease congestion on a very small number of days during the year, as well as a financial windfall for two privately-owned resorts.
25799	Jeff Lambert	What a spectacular waste of taxpayer dollars. In use for 4 months of the year, not needed 5 of the 7 days of the week. So a total of 64-70 days a year. Most people won't pay for the cost of the ride, many will want to stop at various stops between the resorts, many will need to be to trailheads earlier than the tram will run. Obstructed canyon views. I can go on and on. What a terrible idea.
25801	Jared Belnap	This is a terrible idea and waste of tax-payer money as it just kicks the can down the road. and solves nothing for BCC or traffic along wasatch blvd and surrounding areas. I've lived here all my life. I'm a rock and ice-climber and the ecological, environmental, and visual impact of this option is not what I'd hope UDOT was capable of approving. Get federal funding please, spend more money and solve it in the only way this could possibly work long-term. A COG-WHEEL TRAIN SYSTEM connecting via tunnel to Heber City, Park City and BCC. This would attract tourism from all over the world in a sustainable way to handle this increased traffic, with sizably lower impact in the long-term. Please do the right thing and turn this project down!
25802	Brady Brajavich	The gondola is a bad idea. Traffic is terrible maybe 30 days out of the year. 550 MM shouldn't be acceptable to fix this issue. If the resorts institute reservations on high-traffic days, that would immediately resolve the issue. Or, taking notes on how they do things in Europe, more and better park and rides. I imagine half a billion dollars invested in busses and pickup locations would go a long way.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25803	Camille Keys	<p>Here is a draft comment you can use to make your submission: I am opposed the proposal to install an 8-mile-long gondola in Little Cottonwood Canyon.</p> <ol style="list-style-type: none"> 1) The gondola would move people at an incredible slow pace. 2) the gondola would ONLY serve massive corporate resort interests. 3) it is clear the resorts want a gondola to serve only the resorts instead of serving the public landowners in general. 4) The cost of over \$500,000,000 is better spend on more economical and efficient mass transportation. 5) The use of public land to serve three corporate owned resort is an unlawful grant of public land/funds violating the Utah Constitution. 6) It is physically impossible for a gondola to replace cars in any meaningful way in the canyon due to gross inefficiency and low riders per hour ability of gondolas. 7) A gondola serves only resort users and provides no solution for 1 of the other users of the public lands in Little Cottonwood Canyon. 8- I support the use of dedicated bus service that may be increased or decreased based on anticipated canyon usage. 9) I support the use of hybrid and electric buses that can be used year-round and provide access to all of the public land accesses in the canyon. 10) I support the use of dedicated bus lanes as a phased in solution with road widening as needed to support the dedicated bus lane. 11) I DO NOT SUPPORT THE OPTION OF A GONDOLA THAT IS INEFFICIENT, ONLY SERVES CORPORATE RESORTS, AND IGNORES ALL OTHER PUBLIC LAND USERS AND USES.
25804	Theresa Heinrich	If 80% of Utahns want something else, not the gondola, Then why did UDOT choose it?
25805	Sharlyn Coon	Listen to the people! We don't want gondolas!!!
25806	Alec Dehaven	Again the Utah Government wishes to destroy its natural resources for the profit of a few. The canyon is a beautiful place for all to use and should be protected and prioritized as such. The Gondola does not do anything but harm the existing resources and should not be considered at all!
25807	Darby Mcdonough	I am happy to hear of the choice of a gondola vs. widening roads within the canyon. I think the environmental impact, future travel and culture can benefit from a gondola. I would like to see added stops for the gondola(s), or considerations of multiple gondolas/cars, to allow for short term or offside ramps at points up and down the canyon, for hikers and non-skiing users of the canyon to have access to the gondolas. This will include the increased users from locals and visitors, alike. I can see increased use of the canyons just from the gondola installations, as adds a unique nature experience that hasn't been offered before.
25808	Mary Fairbanks	Not wanted
25809	Rebecca Marshall	I am definitely FOR the gondola. I think it is a great alternative to ease congestion. I am not for an option that would add buses or cars.
25811	H Pohlsander	DUMB... destroying nature, millions of taxpayer dollars, no way to keep it running at all times, how many times will people get stranded(like when the front runner decides they're gonna stop service early and not tell people) this is not a smart or viable option. Expanded roads by UDOT also not viable cause they take years to do anything, and when they do, it's not done right the 1st time. I'm not sure what the right option here is I just know this isn't it.
25810	Susan Steinke	I strongly opposed to the Gondola. This does not benefit ease of transport nor environmental preservation. I have written before and stand strongly with the mayor of Brighton to use a cog wheel train! This allows passengers to exit at various resort locations with ease as well as being able to transport more guests. Look at Zugspitzebahn in Germany!
25812	Blake Fredrickson	Please build it. Make it free or exceedingly affordable. And then build another one to BCC. Then build another one to Park City. Gondolas and trams all over the Wasatch! It's the only way to save the canyons from the single passenger automobile.
25814	Brandon Bingham	<p>Prima facie, the gondola system would seem to be workable. However, it is generally assumed that the more people you can get to a location (and quicker) will also mean that commerce will follow eventually to exploit the resulting growth. Restaurants, hotels, golf courses and other amenities to support the growth would need be developed to support the extra traffic of people. That would require destroying the natural beauty of the area as those venues would need to be built adjacent to the location.</p> <p>Secondarily, it is possible with the current drought and possible continuation of the drought, there would be no water to make snow and therefore lose attractiveness for skiers.</p> <p>Lastly, it would be like another Park City, affordable only for those without financial restrictions. I do not have a solution for the situation but perhaps we should make minor adjustments as current resources and technology will allow. If we cover the entire area in ski runs, transportation hubs, parking, restaurants and hotels, there would be nothing to distinguish it from just a plain, ordinary mountain in the end. (This comment may be very short and overly simplified but it is intended to get the onus on a situation that may not really have a comprisable solution.</p>
25813	Thomas Gaston	The preferred alternative is still a terrible idea. To think the historic cottonwood canyon would be marred by a gondola that only services one user group of the canyon and in general only for the winter season is boneheaded and reeks of corporate greed. Have you even been on the mountain in winter? It's jam packed with people even with the current road situation. Adding a gondola only serves the winter resorts to get more bodies onto an already crowded mountain. Destroying vast parts of the canyon and leaving an eyesore that will be there for decades should never have been considered in the first place. Shame on any city officials in support of this plan. No gondola in little cottonwood canyon!
27647	Susan Steinke	<p>I strongly opposed to the Gondola. This does not benefit ease of transport nor environmental preservation. I have written before and stand strongly with the mayor of Brighton to use a cog wheel train! This allows passengers to exit at various resort locations with ease as well as being able to transport more guests. Look at Zugspitzebahn in Germany!</p> <p>Please do not do a gondola!</p> <p>Sincerely, Susan Steinke</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25817	Brett Carroll	<p>Thank you for taking the time to consider these transportation solutions, as it is clear that we must do something to alleviate traffic and increase safety in Little Cottonwood Canyon and on Wasatch Boulevard. I still believe that the Enhanced Bus Service Without Highway Widening alternative is the best option moving forwards, as it is cheaper, has a lower visual and environmental impact, can serve both resorts and trailheads, and can be implemented in Big Cottonwood Canyon as well.</p> <p>The EIS Executive Summary shows that the Enhanced Bus Service Without Road Widening option would cost \$200 million less than the gondola. While it does also show that upkeep and maintenance costs are \$7 million per year more for the bus option, it would take 30 years before the bus option cost the same as the gondola. By then the gondola would likely require some major repairs/upgrades, therefore remaining more expensive.</p> <p>The EIS Executive Summary shows that neither the bus nor the gondola option would exceed current air or water quality standards. While that may be true, environmental quality is not a binary "yes/no." The Enhanced Bus Service Without Road Widening would still have a substantially lower impact than the gondola.</p> <p>The gondola would only serve Alta and Snowbird, making it essentially a taxpayer-funded resort upgrade. Trailheads could be updated to accommodate buses, making buses a solution that everyone could utilize.</p> <p>I recognize that this EIS process has been focused on Little Cottonwood. However, Big Cottonwood Canyon faces many of the same issues. BCC will need its own solution soon, and I think it makes much more sense to implement the Enhanced Bus Service solution, which could be scaled for use in BCC, as opposed to the gondola, which will only effect LCC.</p> <p>I do appreciate that UDOT will be implementing aspects of the Enhanced Bus Service Without Road Widening option while waiting for funding for the gondola. I implore UDOT to give the Enhanced Bus Service solution a chance to show its merits, and be willing to back away from the gondola option in the future.</p> <p>Thanks for your consideration.</p>
25816	Concerned Citizen	<p>Has this project considered that Salt Lake City is on the verge of an environmental disaster, and if the Great Salt Lake dries up, there will be no more snow to ski on? Why spend millions on reducing traffic instead of addressing the real crisis? What happens when all the snow is gone and the city is a toxic wasteland?</p>
25815	Kristen Wolfe	<p>I am in favor of the planned gondola system.</p>
25818	Laurel Shepard	<p>I disagree with using a gondola up the canyon. This primarily benefits only the ski resorts. And yet you ask the public to pay for this. With climate change occurring, we don't know if skiing will even be an option. To have the gondola only service those that ski during the winter sounds like a disrespectful use of the public's money.</p>
27846	Sandra Aguilar	<p>My submission of opposition to move forward with the Gondola project. This is not a project the public should pay for, which is mostly used by tourists and the subscribers of the resorts in that canyon. Our money is better spent on alternatives that don't manipulate the natural terrain even further.</p>
25820	Kent Adams	<p>GONDOLA GONDOLA GONDOLA No Brainer, save the air, save lives on winter roads, get more people to the resorts quicker, long run saving...</p>
25821	Jackson Cheney	<p>I can't believe that this is actually something that is even being considered. Everyone I know doesn't want this to happen, yet it's still being played off as the preferred method because you're all probably being paid off by the resorts. It will be an absolute eyesore and cause much more harm than anything else. As a biologist, I can't imagine what it's going to do to the surrounding area. To say I'm upset (along with so many others) would be an understatement.</p>
25819	Chad Nanfito	<p>The decision to put a gondola in LCC is as dumb as all you are for even considering it. [REDACTED] you and your [REDACTED] gondola.</p>
25824	Miranda Newdome	<p>Please do not implement the gondola. There are countless other causes that justify this exorbitant taxpayer money or at least provide a better year round solution to LCC. The biggest beneficiaries are companies. Not people. Please find a better environmental and meaningful solution. Or no solution would be better than the gondola as it is proposed.</p>
25822	Ginny Dehnert	<p>I think the gondola will be an expensive boondoggle- if it costs riders they'll go the less expensive way. And if it's a hassle, it'll be a turn-off.</p>
25823	Ashleigh Hamilton	<p>I do not want a gondola. Increase parking and bus access. Why can a ski bus be placed through out the city instead of near the mountain. Our public transportation is the problem. The gondola is not the answer.</p>

25825	Lorraine Wilde	Some of the reasons why I am against the Gondola, is I don't think that those that don't go up to the resorts or even travel to the Cottonwood Canyons should have to pay for this extravagant mode of transportation. My husband and I are retired. We don't even clear \$4,000.00 a month to live on. How can you expect people like us and those that live on less than that? Is bad enough that the leadership of this nation is throwing us into a recession because they have holes in their pockets and spending money that we don't have. The administration is moving forward with their stupid GREEN ENERGY, eventually forcing people into buying these stupid Electric cars. What power source is the Gondola going to use to operate? What about the effects of the earthquake that we keep being reminded of? How will that affect the gondola? The Mountains are always moving and shifting. I don't think that UDOT has researched the transportation concerns enough to come up with other ways. I don't think that they have been open minded enough. It sounds to me like their being pressured by skiers, the resorts Blue Collars and owners. What are UDOTs plans to handle a medical emergency, an break down of some sort, again the earthquake concern. Just because Colorado's Gondola has been running for 50 yrs, we're not Colorado. I'm so sick and tired of our leaders comparing Utah to other states, cities like we heard from Salt Lake City Councils did back a few yrs ago when they wanted to approve the Sugarhouse Trolley running along 1100 East go up to the University, and all of the ridiculous apartment, Condo and business bldg that is being done all over the city cramming housing all over the place without a plan on how they are going to address the population challenges that they are causing by all of the building that is being done. With inflation being caused by the Administration of this Nation, the drought. If you have any intelligence at all you know that it's only going to get worse before it gets any better. If the Gondola is going to be powered by electricity, then YOUR Gondola is just going to make water consumption worse. Your going to be taking water away from the Farmers, the cattlemen, recreation and other things. I don't like the idea of having to pay for something that I will probably never, or hardly ever use. My husband and I have to pay for too much of that enough, let alone this dumb Gondola.
25826	Nancy Curtis	Totally against this. We are taxed too much already and being a senior, I cannot afford more taxing. Not only Utah is using the canyons. Tourists are. Let those that want the canyons for skiing let them add to the high prices that an average Utahn can't use as it is. Get realistic about how expensive it is to live in Utah as it is. Seniors, and families with kids are already stressed for money. No, No ton any of UDOTS plan.
25827	Lance Baxter	A TRAX line makes so much more sense in the longterm. This allows people to not use a car at all and get up the canyon from all across the wasatch front. It might be more expensive, but it integrates into what UDOT has been developing over the past 20 years. This [redacted] gondola is just a huge mistake
25828	Robert Kidd	As an avid skier in LCC I support your thorough study process. While I "like" the idea of a gondola, I have several concerns. 1. Funding. The primary beneficiaries (ski resorts) need to have some skin in this game. Perhaps annual taxation to them is in order. They can use their land presently used for parking for something else, for example. 2. Time to the mountain. If the gondola isn't fast enough, we'll end up spending ALOT of money while existing road and cars remain used as primary mountain transport. Along those lines, maximizing speed to the mountain and putting in economic incentives for gondola use and penalties (one time use fee to use) should both be pursued to the furthest extent. Robert
25830	Ben Croft	This is a terrible idea, the Beauty of our canyon is not worth the agenda of big business.
25829	Nathan Simpson	Please do not proceed with the gondola. It is not in the public's best interest. Instead, shut down the canyon to private vehicles and invest in valley parking with continuously running busses. If the gondola has to be constructed, make Alta and Snowbird (those who would benefit and profit from the gondola) pay for it. Using public tax money to subsidize private businesses who are largely to blame for the traffic to begin with is an incredibly inappropriate solution.
25831	Addison Hunter	The gondola is not the correct solution to the traffic issues in little cottonwood canyon. The capacity is not enough to significantly relieve traffic congestion. The project is also too costly when compared to other solutions. Please reconsider and pick a common sense solution over a flashy one.
25832	Madeleine Humel	Preserving our canyons should be a priority, and the construction of a gondola that only serves Alta and Snowbird is not the solution to our traffic problem. There will still be congestion in LCC, and the end results will just become a tourist trap, unavailable to locals. We need increased bus services and car restrictions, just like in Zion. There is no gondola in Zion National Park, yet millions of people visit every year, and they have also found a method to reduce canyon congestion. In the off season, the proposed gondola will serve as nothing but an eyesore, whereas increased busses can easily be reduced during the off seasons. There are smarter and more practical solutions that serve the interest of locals that should be considered. A train would be a bigger improvement than a gondola and could serve even more people than busses. Or never allow humans in LCC again.
25833	Austin Schmitz	This is an absolutely atrocious final decision. I can't believe the influence that a greedy few can have against the entire population of recreational users. This gondola should not be happening!
25834	Riley Finnegan	I can't seem to find the data that supports "Support for gondola." Would be great to see the numbers as I recall a lot of public comment *against* it. As usual, I would rather see expanded and free bus access to alleviate car usage, more bus stops along the highway in the canyon and tolls on cars to discourage their use. This will help ensure access to marginalized populations isn't further reduced by changing for cars, the gondola, and the bus itself.
25841	Jamie Lloyd	Do whatever you think will benefit the rich and affluent, as it is them that a gondola will benefit. ZERO taxpayer money should be used for this project. Widen the road if necessary, we all can use the roads but don't lock the poor out of little Cottonwood canyon, unless of course, that is what you've intended.
25838	Ben Rosen	This will destroy important outdoor recreation areas
25837	Jenn Talbot	As a resident of Davis County, that does not use the canyon, I ask that you choose the option that costs the least for those of us that will be paying for it but not using it. Thank you

25840	Nicholas Meinzer	This is madness. Over half a billion dollars for a project that the citizens of a democracy overwhelmingly do not want. The damage to the canyon bottom will be a tragedy. I've spent many happy days in green light those quiet cool woods. To think it will be adulterated by a lift line cut saddens deeply. The canyon traffic issue is a sign that the land is receiving enough visitors; this project is simply engineering over-use. I don't ski at Alta or Snowbird any long because their are too many people; I hike and climb in the Cottonwoods. Why should my experience be detracted from to provide convenience to patrons of a private businesses? Please, please don't do this to my happy place.
25836	Nathan Lyon	The decision to support the gondola is pennywise but pound foolish. While the gondola may be fiscally more advantageous over time, this option only services two areas of the canyon, turning a blind-eye to a large segment of the population who want to use different portions of the canyon. What about us? Do we not matter? Under the gondola plan, the amount of people who will be restricted and impeded in their ability access the outdoors in unacceptably high. The cost to ride the gondola will also be prohibitive for far too many, creating yet another barrier to entry except for the wealthy. How can these outcomes be consistent with Utah's policies to promote tourism and access to the outdoors? This is a one-sided solution. It's offensive that taxpayers will subsidize a plan that only benefits the private entity ski resorts. And aesthetically, it's going to ruin the canyon. The public deserves better when it is a publicly funded project.
25835	Eric Strohacker	The proposed gondola idea is nothing more than a boondoggle and a complete an utter eyesore to our beautiful Wasatch Mountains. Not only has there been some fishy math with paying for this-including the proposed parking area at the base of Little Cottonwood Canyon where the land was secured with some at best questionable real estate dealings-but also how can we as tax payers expect to pay for something the ski resorts should be paying for?? How is the weekday athletic adventure supposed to occur mid-way up or anywhere other than all the way up the canyon with a gondola? Buses are the practical way to go-says every environmental study that has been completed. Don't build a gondola when it is NOT WHAT IS GOOD FOR THE ENVIRONMENT NOR IS WHAT THE PEOPLE WANT. Listen to the people an to nature. Don't muck this up.
25839	Travis Bellantino	The gondola has got to be the worst idea ever! The only ones benefiting off of this is Alta and Snowbird! I absolutely refuse to pay for any of this and if you think us tax payers should have to pay for this my family will gladly get the [redacted] out of here!!
25842	Tahni Jungst	I am a part of the rock climbing community and this area is extremely important for our community. This project would destroy or make inaccessible areas that we recreate and spend time outside. Please reconsider the gondola project as the rocking climbing community would be greatly impacted.
25844	Ian Mckellar	Have you considered making the bus services to the ski resorts adequate and imposing a carpool limit on drivers up the canyon? This feels like a very aggressive and expensive solution when there are other more obtainable solutions that would not require any construction and could improve public transportation throughput the valley
25845	Jackson Smith	This would be the biggest mistake that would ever exist in our beautiful Wasatch. Every time I enter Little Cottonwood canyon, my mind is blown by the epic granite walls and vistas. Nothing would be more sacrilegious than building this ugly man made structure up our canyon. Imagine a gondola running down Zion NP, down Bryce, through Arches. That's right, those would be travesties. This would be just as unacceptable and wrong.
25843	Dave Baird	Happy to see increased bus service, snow sheds and tolling going into effect soon. Those should work great on 99% of days year round, on the few days in winter when the road is closed or impassible people can just deal with it like we have for as long as we've been recreating in the canyon. A handful of days in a year shouldn't be the decision maker for something that will sit unused as an eyesore for more than 50% of the year. Please re consider what could be done with increased bus service, specifically DIRECT routes to each ski area and stopping at all trailheads. At the end of the day a dialed bus service or a gondola could move the same amount of people, without an absurd taxpayer cost and ruining the natural appeal of LCC. Coming from someone who's ridden the bus for probably 50% of ski days over the past few years and planning on more this coming season.
25846	Alex Bocock	One of the very few positive developments that resulted from COVID was that both Alta and Snowbird instituted parking restrictions. These worked beautifully at reducing the traffic jams into the canyon. It is clear that a combination of tolling and parking restrictions will solve the traffic problem. These solutions would cost the tax payers nothing. In fact, a tolling system in the canyon would be net positive to taxpayers. Please re-evaluate the need for a gondola based on traffic data gathered over the last winter.
25847	Will Hollo	The public has repeatedly made its views on this gondola clear: we DON'T want it! It's a bit of a slap in the face to time and time again be asked for public comment despite the clear consensus. This is simply a bad project and you can see the writing on the wall. The point of NEPA is to facilitate public involvement and information sharing on federal projects. You've shared the information, the public is informed: good! But now that we've once again made our voices heard, will you listen or remain willfully ignorant? The Canyon (as any canyon) is a land-constrained place, never appropriate for development in the first place. You cannot engineer your way out of this reality! - LET people sit in traffic if they don't get up early enough. - DEAL with the accidents that inevitably happen on icy, windy, busy canyon roads. - DO NOT prop up Snowbird's further growth in an age of withering winters and decreased snowfall: they don't need it, and this is NOT worth the ruination of one of the few beautiful locales we have left.
25848	Taavi Zoller	I believe that the gondola will create more stress and issues at the resorts and do little to solve the traffic problem. The lines to the gondola will inevitably be there so I think most people will continue to drive. Additionally the gondolas will not put a limit on the amount of people that can access the resorts which will decrease everyone's experience and overload the resorts more than they already are.

25849	Jon Lewis	I am opposed to any taxpayer money being spent to benefit for profit ski resorts. If Powdr Corp. wants a gondola, they can pay for it. End corporate welfare now.
25850	Trent Heiner	<p>I have used little cottonwood canyon for many years, year round, and love the canyon. I've experienced the occasional 3-4 hour traffic-delayed trip down the canyon after a powder day, and yes it's a pain, but the gondola plan is NOT the answer.</p> <p>95%+ of days in the canyon, driving a car or taking a bus will be faster, easier, and much less expensive than a gondola ride - nobody in their right mind would try using the gondola to hike red pine in the summer, or use it to get the resorts when the road conditions are normal. The gondola would be useless, and an eyesore, the majority of the time.</p> <p>The above ignores the costs, which will be substantial - I would be against the gondola even if were free, even if snowbird/alta (as far as I can tell, the only beneficiaries of the plan) offered to pay 100%. But of course, they are not, and enormous unnecessary costs to taxpayers is another reason to be against the gondola proposal.</p> <p>Having used the canyon for 20+ years, it's fine 95%+ of the time, and if you're not willing to wait in some traffic you can merely avoid the canyon on those occasional powder/traffic days (if the weather continues warming, it'll be 99% of days soon).</p> <p>Simply doing nothing is much better than the outlined gondola plan, but if UDOT wants other solutions it's simple: charge a toll / hefty parking tax for all skiers heading up the canyon (\$20+ per vehicle, enough to make a dent, the skiers can afford it) and use the proceeds to have more frequent busses that are free to all. Do this only the rare days when traffic is high; most of the time it's fine as is.</p> <p>PLEASE DON'T AGREE TO THE TERRIBLE, NATURE-TAINTING, TAX-LEECHING GONDOLA! KEEP THE CANYON FREE FROM INDUSTRIALIZATION</p>
25851	James Henrie	The gondola is the worst of the proposed plans. Please stop the gondola nonsense. Doing nothing is better than the suggested plan.
25852	Jamieson Stuart	<p>In a Nutshell, If the traffic in little cottonwood is only 1/2 to 1/3 of the problem, this gondola proposal only solves at best, 1/2 the problem. The gondola does NOTHING for big cottonwood canyon, nor will it help the flow of traffic in and around Ft.union blvd. and cottonwood heights - WHICH YOU [REDACTED] WELL KNOW IS THE problem. I wanna see a solution that helps both canyons, and the people of the local towns. Here are my suggestions:</p> <p>For big cottonwood:</p> <ul style="list-style-type: none"> - tolls/incentives to carpool on powder days - widening the shoulder from spruces to Brighton: Many areas have a very small shoulder which is covered up by the snowplows. Everyday, some unsuspecting skier or boarder tries to park, ending up nearly flipping their vehicle due to no solid ground underneath the park space. This creates a HUGE L, but solvable problem with slowing down cars around the mouth of solitude which in part backs up the whole canyon. Also, so many people are choosing to park on the road for free, that they end up creating a safety hazard themselves and others driving by. - More snowplows - the crowding is not the problem, it's the crowding with poor road conditions / so hire up a gang of plows and people to make sure the roads are in as best driving condition before allowing anyone up! <p>These are just a few very basic ideas that could be easily implemented this year. Please let's start small instead of jumping to huge conclusions that let's face it, won't turn us into Europe. Americans like to have their cars whenever and where ever they want. That's the difference.</p>
25853	Brant Rudd	Please do not build a gondola. This canyon is beautiful beyond words and should remain as it has for eons. We have no right to disgrace this amazing area in this way. It will never be the same after addition of this large man-made object. Please be respectful of our home planet and do not permanently alter its beauty for monetary gain.
25854	Abby Gaston	This is an awful idea. Please listen to people and stop letting money motivate you to put this gondola up when it's obviously very unwanted.
25855	Alex Bocock	I'm glad to hear that there will be a phased approach. I hope that UDOT will maintain an open mind. If Phase 1 (enhanced bus service and tolling) are effective at reducing traffic jams, I hope it will consider extending Phase 1 in order to collect enough data to possibly revisit the whole gondola question.
25856	June Suppinger	My parents were Swiss and I have spent time there. There are many gondolas and funiculars in use there. It seems to me the towers are not as obtrusive as the detrimental effects of building bus lanes, widening the road or making no change at all. Using any one of those options causes ever more pollution and traffic which is unsustainable as population numbers increase yearly. The avalanches, slide-offs and accidents cause the canyon to be closed on a regular basis. The gondola would alleviate these problems and maintain more of a pristine environment in the canyon. I am in favor of less pollution and reliable regular traffic flow up and down the canyon.
25857	Brian Willhard	The phased portion with improved bus service, tolling/restrictions for cars, snow sheds, and parking and trailhead improvements are great and should be the only part of the plan that is pursued. The gondola is particularly bad and is clearly for the benefit of two ski resorts and whoever will make money off of the land while harming every other use of our beautiful canyon. The choice between an expensive gondola or an expensive widening of the road seems like a false dichotomy pushed by developers looking to enrich themselves rather than an actual solution in the best interests of the population and the canyon. It seems obvious that measures such as parking reservations, improved busing (particularly electric buses), carpooling, and tolls on the current road should be implemented to limit traffic in the canyon rather than jumping to large-scale construction that will only benefit a small number of people while being either negative or neutral to the vast majority.

ID	Full Name	Comment
25859	Graesyn Scruton	9990 is a popular lift at park city. tourists see they can leave the resort and do so, then die. The solution is then to close the backcountry. So when a gondola is put in to superior, people die and then the backcountry gets closed. As a backcountry skier I made the choice to not be a part of the resorts and to go ski off piste, but now I have to be involved with the resorts, and now I'll have to pay with money I don't have for my freeski desires. Utah Avalanche Center had 0 deaths this year, I can guarantee that when this lift opens, it'll be at least 10 dead no questions asked off superior once this thing opens. Alta and Bird are not big enough to contain the amount of people you hope to put on the hill, the dangerous side affects of the money here is too dangerous for an enjoyable time for guests. nobody is safe 2023!
25858	Trent Rolf	I think the proposal overall is looking good. A few thoughts: I am a resident of Top of the World neighborhood that accesses Wasatch Blvd. from King's Hill, so one of my primary concerns is that intersection. It feels unsafe currently, especially when turning out of the neighborhood. Regardless of the posted speed limit, often people are traveling freeway speeds and there is poor visibility around the corner. You have to jump out into the road and floor the gas in case someone comes screaming around the corner. Visibility around the corner needs to improve and speeds need to go down. Another idea is have a right turn merge lane in front of the fire station to give drivers an opportunity to accelerate. I have a few teenagers getting their drivers license in the next few years and I worry about them being safe just getting in and out of the neighborhood. Please help keep us safe.
25860	Brent Nielsen	I was under the impression this issue was to be placed on the November 2022 ballot. Construction supports special interest groups (skiers, politicians - Wayne Niederhauser, Christ McCandless, lobbyists) not the general taxpayer population! This is a bad idea. Purchase electric buses. STOP IN NOW!
25861	Matthew Gale	I support the gondola and think it's the best solution. I don't want to widen the canyon road and feel the gondola will reduce traffic while incentivizing more tourist and growth for Utah
25862	Alexander Swenson	How is this going to get funded? Are you seriously planning on making us shell out half a billion for a project this overwhelming unpopular? Between the gravel pit and this gondola Utah's managed to totally wreck the natural beauty of these canyons.
25863	Shauna Ehninger	This gondola makes absolutely no sense! It will take years to implement when traffic in the canyon is an immediate problem. Plus, its construction will have a negative environmental impact by destroying the natural beauty of the canyon, habitats & recreational areas. It seems this proposal is being pushed by people in power who stand to financially benefit from the gondola's construction. Why can't we use the infrastructure we already have by adding more busses? It would be much less expensive, have less environmental impact & immediately solve the problem.
25864	Amy Sybrowsky	Awful awful awful. I've lived on Little Cottonwood rd for 25 years. Nobody wants this. You guys have obviously sold out for corporate money and not the best interest of the community or the land. Why rush this when there are so many options and ideas that can still be discussed. Frankly it's disgusting, and you all should be ashamed. One of the saddest days of my life today.
25865	Eric Sharp	How dare you use tax dollars to support the ski resorts, destroy the beautiful canyon for something that won't solve the problem! Alta and Snowbird can't support any more people. This will ruin it for everyone!
25866	Edouard Saget	Absolutely against gondola of any kind going up the canyon. Work a little harder and do what the Europeans do...dig tunnel, cover them up if needed. No avalanche risk, no eye sore, temporary distribution, long term sustainable growth, and do the same for parking at the top...!
25867	Jonathan Field	<ol style="list-style-type: none"> 1. It permanently defaces the canyon will destroy numerous bouldering and climbing areas 2. It will not actually solve the traffic issue, the traffic around the openings of the canyon will still be an issue and it will also only run in the winter 3. It's using tax payer money to only service a private resort. <p>Horrible use of taxpayer money to fund corporate greed. No thank you.</p>
25868	Maddie Harston	I do not support building a gondola and damaging ecosystems and our canyons by adding this infrastructure and increasing the footprint in this way. Neither an expanded road nor gondola are viable options and this appears to be a greedy decision. Why would we not consider parking at the base of the canyons and canyon specific shuttles like we would have in Zions to help with this problem as a starting ground???
25870	Nick Chilton	This makes absolutely no sense! It is very hard for me to believe that a majority of comments were in favor for this, there has to be some requirement for a third-party review for the sake of transparency on a publicly funded project. People will lose complete faith in UDOT if there isn't more transparency.
25871	Aaron Payne	Please don't build that gondola. It ruins natural beauty, and traffic won't be solved. Just another way we are going to over build.
25869	Keith Phinney	<p>Of these themes:</p> <ul style="list-style-type: none"> * Support for gondola and bus alternatives * Support for tolling * Support for phased implementation * Consideration of all canyon users, not just resort visitors * Keep existing recreation opportunities intact (climbing boulders) * Maintain existing visual experience <p>I agree with everything but the words "gondola and"</p> <p>Gondola and road widening (which seems out of the picture now) should be the absolute last alternative until all other non invasive options have failed.</p>
25874	Christiane Paney	Overwhelmingly, Utahns care about our canyons and want minimal impact. This is why we respect the watershed. With this in mind, so many others share my sentiments of blocking the gondola. I do not want my tax dollars supporting the problem resorts refuse to confront.
25872	Mark Allen	<p>Tax dollars should be off-limits for any transportation solutions that benefit the resorts- directly used public money to support the private sector. The resorts should solve their own problems.</p> <p>#GondolaBadIdea</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25873	Nirvana Borland	Please DO NOT move forward with this gondola project. It is not the way to help traffic as it will impact the canyon in detrimental ways for the environment and future. Consider what they people want and not what is easy.
25875	Christopher Hacon	The gondola is a terrible idea. Leave the canyon alone! And don't waste public money!!!!
25876	Nicholas Hoffmann	This comment is in regards to the identified preferred alternative. A gondola that only stops at the two ski resorts is a blatant and despicable government giveaway of taxpayer funds to benefit just two businesses. A proposed gondola should serve all LCC users, including those who use trailheads and other locations in LCC. UDOT should reconsider this extremely unpopular and inequitable proposal.
25878	Abbie Packard	The gondola will cause environmental degradation. Our goal is to improve biodiversity, not destroy it. I am against the gondola option and instead would support entrance fees, flexible bus schedules, or carpool requirements.
25877	Alexander Pasmann	Listen to the community, the Gondola alternative is not the favored option. The Gondola is the most disruptive to the community and is a permanent solution to the traffic issue. The Gondola primarily serves skiing only, while little cottonwood is utilized for various other activities. If this truly were an environmentally conscious decision the alternative would be to cut down traffic up the canyon by decentivizing the IKON and other similar passes. This would reduce the amount of traffic up the canyons without jeopardizing the natural integrity of the canyons. The Gondola alternative being chosen shows that this has turned into a debate of how to increase skiers (money) on the mountain rather than protecting the environment. The Wasatch community is largely dissatisfied with this decision.
25880	Alexander Richins	Try implementing a regular bus route (every 15 min) with more parking outside the canyon before adding an expensive and increasingly intrusive gondola that will operate less than the buses in terms of time of day operation and throughput
25879	Shaun Mower	Much rather ride and see the gondola vs. sitting in an idling car going nowhere. The gondola could be a relaxing alternative!
25881	Robert Langworthy	I don't think that a single dime of taxpayers money should go to this incredible waste of money. If someone starts a class action suit to stop it I will gladly join.
25882	Porter Geddes	A gondola is a horrible idea and a slap in the face to everyone in Utah, and honestly just anyone that wants to protect public lands. Why would this be put into place when the people have repeatedly said that they don't want a gondola. This honestly shouldn't even be up for question anymore and will be a dark streak in Utah history if the gondola ends up going up.
25883	Tina Lewis	NO NO NO!!!! To the gondola. Many more options to do first - that well work if given a chance. Shuttles like Zion National Park will work. Always try the simple solutions before costly options. I will never vote for any taxpayer funds to use in this project. No private ones either. The canyon belongs to all Utah residents!!! We make the decisions!!
25884	David Tucker	No to the gondola!
27847	Rachel Anders	Hello - As a lifelong Sandy resident and LCC user, my family and I disagree with the preferred Gondola B Alternative. I believe in maintaining the scenery of Little Cottonwood Canyon as much as possible. Save the canyon's natural beauty, save the watershed, and save the existing trails and habitats. I do agree with the phased portion of the plan - enhanced bus service without widening the LCC road. Additionally, I would add a \$25-30 toll on weekends, holidays, and "powder" days during the winter to encourage private car drivers to take public transport. This toll should be implemented by UDOT on both BCC and LCC. To make canyon access equitable, make the BCC and LCC buses free for all users (not just season pass holders). The cost of the toll would ideally offset any lost revenue for free bus fare. Finally, do not allow parking on the side of the road, since this tends to slow traffic down at the end of the day. The bus system is a tried and true method. I already use the bus almost exclusively to ski (>50 days per season). It is also a system that can be easily tapered down in the summer. In contrast, the gondola will be year-round, when it is really only needed in the winter. It will also have more significant up-front costs. I plead with UDOT to consider the voices of the masses, and not just the voices of private companies (Alta and Snowbird). Thank you for putting us locals first,
25885	Amiko Uchida	I am very much against the gondola. This will not address the issue it's set out to solve. Most environmental groups and activists agree. Neither will widening the road. This has the optics of private companies lobbying for a priori failed plans to build infrastructure that is not helpful. We need to ban single or double occupancy vehicles in the canyon, which will get cars off the road. You need to make public transit MORE CONVENIENT than driving. That means cars eliminated and buses coming every 2-5 minutes. It also increases safety. Buses need to be frequent and stationed to stop at locations that permit outdoor rec use of the canyon. I have not met or talked with a single person who would take the gondola, it's inconvenient disruptive and a waste of money. There is a CHEAP and simple solution that does not perpetuate additional environmental impacts to the canyon and wildlife. MORE BUSES BAN CARS.
25886	Anna Ellis	i dont like this. dont do it
25887	Ace Anderson	This is nothing but a money grab for the resorts and Wayne neiderhouswr and Chris mccandless who currently own the land for the parking and main hub. Their past connection to house leadership screams corruption and personal benefit at the tax payers expense. Again, proving money and who you know is what matters in Utah! Not one good thing in this for ALL taxpayers. Shame on everyone involved who are railroading this through with big money and personal agendas.
25888	Sedona Arabella	The gondola sounds like an awesome idea, but it doesn't seem like a good fit for Utah when it destroys other recreation and water sources. The issue can be solved in other ways, a gondola is not the answer.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25891	Abbie Packard	The gondola option will cause environmental degradation. Our goal should be to promote biodiversity, not limit it. I do not support the gondola option, but would rather support implementing an entrance fee or providing a more flexible bus schedule
25890	Shaina Couch	I do NOT support a gondola in LCC
25889	Lindsey Roller	This gondola is going to ruin Little Cottonwood Canyon. Traffic in the canyon is very manageable and this isn't the solution. This gondola will be a disgrace to the canyon and the Wasatch Front. Majority of people don't want the gondola and if you took the time to listen to them you'd know that.
25892	Ryan Frecka	Despite UDOT's statement claiming that they have addressed the concerns of recreational groups (such as climbers), the proposed gondola option still destroys much of the area it claims to provide access to. This seems juxtaposed to the entire proposition. Not to mention lower impact options have not been pragmatically piloted for these areas. Instead, the highest impact option is being firmly proposed despite the massive opposition to it, and its destructive footprint. This is undemocratic, and seems to serve only the businesses who will profit, rather than area users at all.
27848	Gerald Oswald	My response to UDOT's approval for the Gondola project up Little Cottonwood Canyon is that it should not be done. It will be a risk to our water shed, it will be too expensive to maintain (which always falls on the taxpayers). We are already taxed to death in Utah. Why not implement all electric buses and make people ride them up the canyon. Maybe you could also allow people with electric cars to drive up. It wouldn't hurt to put it on the ballot and let people vote on it. Jean Oswald
25895	Magnus Oeveraas	No gondola. Increase Buss access and incentives to carpool. Don't block backcountry users that don't want to pay the resorts to use public land
25894	Justin Miller	This is great! Let's do it.
25893	Patrick Kiley	Try Improving busing first before looking towards building a gondola
25896	Jake Thomas	Improve the buses before putting in a gondola.
25897	Canyon Plante	This is a very dumb and disappointing use of tax payer money. Busses would be much more efficient use of funds as the can be used year round all over that state. This decision needs to be up to the tax paying voters to decide.
25898	Malyne Rasmussen	Please DO NOT ruin this beautiful canyon. Keep it the way it is, there are only so many beautiful spots left untouched in Utah
25899	Camdon Kay	Super bummer for a state that is known to have some of the best climbing in the country choosing to toss it away for money. I hope folks involved feel ashamed. It truly means a lot to climbers to have this area preserved.
25900	Jennifer Smith	No Towers!! Keep the canyon beautiful!
25901	Justin Wood	The Gondola is NOT the way. I believe there are less invasive options that will work for a larger user group. Please explore other options. I spend most of days recreating in little cottonwood canyon and I say NO to a gondola.
25902	Kathryn Anderson	60% of the impacted residents to not want a gondola in this area! Why are tax paying citizens never heard! This is a private enterprise issue for ski resorts. Reserved parking, regular scheduled busses dedicated to Little Cottonwood canyon could handle this traffic problem! Please listen to the people and respond accordingly!
25904	Forrest Engle	I absolutely can not believe that the majority of locals support the gondola. I'm a sandy city local that has spoken to many within our community and the vast majority are against this proposal including but not limited to the district 3 Mayor who one her office with the promise to fight against the gondola. On top of this there are no local discounts for gondola usage/ local breaks. This should definitely be the case because we are the people finding this project.
25903	Lucas Clayton	I am very supportive of the gondola system being built in Little Cottonwood Canyon. I would like to see a stop available at Tanner's Flat in the summer in addition to the planned stops. This would further ease traffic and reduce pollution in the canyon and is easily accomplished as there is already a turning station at that location in the proposal. Thanks!
25906	Jason Peters	I am against installing a gondola up little cotton wood canyon. I believe there are other options that will have less impact on the environment and they should be fully exsauded before such drastic measures are taken.
25905	Ben Guinn	I have been coming to this canyon for over 20 yrs and have many memories in these boulder fields. Every fall I come to climb and watch the leaves change in color. With this gondola most of the areas I hold dear to my heart will be destroyed. Please we do not need this.
25909	Lauren Ashton	The voices of Utahns have been ignored as per usual in this state. We do not want the gondola. As a life long citizen, I am absolutely opposed to the gondola. We have been vocal. You have not listened. You are ruining our precious canyons. Shame on you. I am beyond disgusted at this decision.
25908	Mackay Reid	100% support the gondola. It is the best option, the most environmentally friendly and safest. Please Please Please don't let the loud minority sway you on this. Let's keep and nerve and do what's best for the state and our children!
25907	Chad Vansolkema	This is a giant waste of tax payers money. It could be used for environmental concerns such as the Great Salt Lake and air pollution. Also could help fund education.
25910	Taylor Thurman	This decision does not reflect the best interests or will of the people. This decision serves two ski resorts and does nothing to alleviate the actual problems. Reconsider this decision. We are upset.
25911	Tom Fletcher	This decision is based on greed for a few that impacts the lifestyle for many more. It's only 15 days of use during the winter. Why is nobody addressing the impact at the mouth of little Kawa Canyon for the residence? Wasatch Boulevard doesn't need any more traffic or retail or parking structures or greed. Absolutely positively no for my family
25912	Anna Timothy	I vote no on the LCC gondola.
27849	Brian Homer	I support this decision 100%
25914	Amanda Hartzler	I am an avid user of little cottonwood canyon. I love having access to nature so close to home. Having a gondola would ruin the beautiful landscape! I want to again advocate for increased bussing instead of permanently changing our gorgeous landscape!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25913	Audrey Pines	I think its extraordinary that anyone would consider destroying the natural beauty of our canyon and run a gondola down it. The canyons belong to everyone, not just the ski industry. The bus system is 100% the way to go. The bus service can service all the people who want to use the canyon year round. The traffic is only for a short period of time and only a few days a year. It's not worth the destruction of our natural habitat. The skiers are not actually going to use the gondola, except a very few and probably just once then go back to an easier form of transportation. I find it shocking UDOT is even considering the option, the canyons belong to the citizens, not just a few corporations. There has to be a better option. Brighton has done well making reservations. You will destroy our ski industry and people will just go somewhere thats more majestic. UDOT is turning Utah ski industry into a Lagoon ride. People might as well go to an indoor ski hill set up in a mall.
25916	Tyler Brown	This is a wonderful idea and I'm glad y'all came to this conclusion. Gondolas have been working well in Europe for decades and it's about time we bring one to one of the most crowded canyons in America. Little Cottonwood is first and foremost a recreational canyon. There are plenty of houses and developments and if people want a truly natural scene they can go into the Uintas.
25915	Jenny Christensen	I oppose the proposition to make tax payers pay for this gondola. It's too expensive and completely ignores more ethical and reasonable options. Prioritizing only the ski season is dangerous and short sighted. Please revisit other options for addressing the congestion of the canyon during the winter months.
25917	Elizabeth Petterson	This is disgusting. There's homelessness, with no shelters. There's thousands of children in the UTAH foster care system with no homes, education, clothing, or resources. There's no beds at the mental hospital because so many people are being admitted. Yet we're paying to build something that costs 550 million dollars? When we could realistically get a better bus system? What about the wildlife? What about the scenery? What about the canyon needs this? Imagine how many poverished lives you could make a difference in with this amount of money instead of building a box, that the middle and upper class snow sport people can be part of. Get out of your privileged bubble and think for once.
25919	Scott Hansen	I am strongly in favor of the gondola option for Little Cottonwood Canyon. A running gondola would be a quieter, less impactful means of transport up the canyon. A widened road means more asphalt. That means cutting into a canyon that will experience new and different avalanche slide paths. It also means more danger to wildlife trying to cross from one side to the other. A gondola would lessen the impact. Further, park and ride options, or kiss and ride options, would lessen traffic congestion at the point of departure for the gondola at the mouth of the canyon. It makes no sense to put more vehicles, what is a big boss or otherwise, in such a narrow canyon.
25918	Tina Lewis	NO, NO to gondola!! Have the ski resorts run a shuttle services to their resorts. Parking garage at the bottom of the canyon - shuttle services included with your ski lift fee for up and down the canyon.
25920	Dex Mills	Great job of pretending to give a [redacted] and not really giving a [redacted] You guys [redacted] like so much
25921	Pete Gasser	Do not begin construction on the gondola now or anytomr in the future. Listen to everyone opposing the gondola plan. There are more people that do not want it than do want it.
25924	Ian Just	This gondola service will destroy the canyon, there is no way around it. The scenic views and natural beauty will suffer at the hands of selfish individuals who seek a convenient commute to a resort that doesn't care about them but to only take more money from them.
25923	Ryan Leick	I support the Final EIS recommendation. The study provides a fair and objective analysis of all stakeholders' concerns with Gondola B as the best compromise of benefits for canyon users while mitigating negative environmental impacts.
25922	Theresa Heinrich	When you talk about a phased approach is Snowbird onboard for this? what have they committed to? Park City is making people have reservations & fees for parking & capping ski ticket sales. How can we see what Snowbird is doing in a phased approach to make things better? Or do they want everything to be status quo & congested so they can get their free gondola?
25926	Jon Fox	No gondola, no one wants this!!!!!!!
25925	Morgan Westfall	The Gondola up LCC is a terrible idea. Increasing busses would actually help solve the problem, not just push it down the canyon. it will ruin the canyon FOR SURE
25928	Judd Gottschall	Hey dummies, people still have to drive to the mouth of the canyon to get on this stupid thing. It's not going to stop congestion, it's just going to cause more congestion at the mouth of the canyon. I could see the line to park at the stupid"La Whatever" station getting backed up all the way to the intersection to turn into Big Cottonwood, which will cause more congestion to get into Big and Little. Maybe you should think about these types of things before you sink half a billion dollars of taxpayers money into a stupid idea like this gondola.
25927	Ali North	Against this option. There are other options that could help traffic. Please do not ruin our beautiful canyon
25929	Natalie Calaway	I think gondola is a waste of money, no one is going to take it including tourists staying in the canyon, especially with Covid concerns.
25930	Moses Smith	Please think about something besides profit here.
25931	Carl Wilkins	The gondola idea is a waste of my taxpayer money. Do not build it.
25932	Jeff Sindt	I oppose the gondola. It will destroy our views and the sensitive environment. It will cost taxpayers a fortune, I oppose on economic grounds, that money should go to others such as low income Utahns and not enrich snowbird. Legislature! Please do not fund! Unite!
25933	Robert Deutsch	I fully support the gondola. I believe it is the best, possibly only approach that solves the traffic problem over the long-term. It's different and new, so I understand that people are skeptical. But ten years from now, people will look back and say"what a great decision".
27850	Matt Happe	Get those bullwheels turning.
25934	Alec Sandberg	I am very against the gondola. It won't address all of the problems at hand appropriately, but rather just fill the ski resorts up while the canyon is still grid locked. It's never going to run on windy days and will still be in danger of avalanches. PLEASE DO NOT BUILD THE GONDOLA. THE VIEW WILL BE HORRENDOUS.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25935	Haley Munson	I know you are going to improve bussing and all that. But I find it frustrating that these havent been implemented beforehand in previous years. Improving bussing up the canyon and reducing the amount of traffic in general should have been the goal before making this multimillion dollar idea which will only profit the private businesses that own them and create more traffic at the bottom of the canyon. This seems like such an extreme when we havent even tried some of the more sensical and practical solutions first. Plus we should be considering and investing in the health of our canyons and their ecosystems. Ee shouldn't he trying stick a gondola and disturb the nature more than we already have.
25936	Jose Salinas-barrera	<p>Frankly, a gondola is just not a great way to shuttle traffic flow through Little Cottonwood Canyon at all. Realistically, although it could be used all year, it will only be operating at full capacity for so little of it. It may be a cost effective solution during those peak periods, but it in turn will impact nearby communities and the natural vistas of the canyon itself. Even if it works as intended, UDOT will create another bottleneck at the gondola base itself and increase traffic, contrary to the gondola's intended goals. Furthermore, this gondola will realistically only benefit the owners of Alta and Snowbird, and provide little benefit to the community at large.</p> <p>There are a number of other means to curb traffic in LCC, even if they are not the most cost effective:</p> <p>Make major powder days exclusively/near-exclusively public transport.</p> <p>Charge/increase tolls for individuals taking vehicles up.</p> <p>Reduce/eliminate tolls for carpooling.</p> <p>Reduce/eliminate fares for public transport on major powder days.</p> <p>Constructing other means of transport, such as a new TRAX line.</p> <p>Any number of these options could be considered over a gondola. Even with multiple cars, there can only be so many users at any given time, limiting just how much traffic is reduced.</p>
25937	Holden Page	I'm not quite sure why the ski resorts aren't participating in paying for at least a portion of this solution. Last I checked this is only needed during the ski season. Also why are taxpayers paying for something that only benefits a minority of residence. Maybe somebody should visit one of these two beautiful resorts during a powder day to realize getting more people up is only going to cause more issue. I think \$500 million could go towards solutions that benefit a broader demographic of residence.
25938	Michael Mathews	This isn't a Disney attraction, and while the ski industry is doing its best to make you think this is totally normal, it isn't! Let's put in some slide path tunnels and beef up our bus transit system and find a more environmentally friendly solution and not another attraction to charge an arm and a leg for just to benefit a few instead of something that is a benefit to all land users! Please find a better solution to this gondola, our canyons deserve better!
25939	Annie Huang	The negative impact of the proposed Little Cottonwood Canyon gondola greatly outweighs the positive outcomes from this endeavor. As a visitor to the ski resorts in support of this gondola, there are clearly many other approaches that they may take to regulate traffic (i.e reservation systems, carpooling incentives, etc.) that do not push UDOT towards this environmentally detrimental solution. I encourage the EIS firm to adequately and clearly identify the impacts of this proposed gondola and consider the overwhelming negative feedback from local communities about this proposed project. Without this appropriate consideration, there likely will be an extensive legal battle about this proposed project that no parties want to endure. I encourage UDOT to look at long-term, alternative solutions, especially with rapidly developing technology and inviting local input outside of the ones with the most funds. UDOT should not make their final decision ont his project without the final EIS and input from the local community.
25940	Ryan Winger	The canyon would suffer greatly having a gondola system. First off the amount of construction would destroy the nature of the valley floor, second it would a door open to more growth up the valley which would ultimately destroy the beauty and nature of it in the long run. Keep Utah pristine and beautiful the way it's been designed to be.
25941	Niq T	Please reconsider the gondola. Once these places are impacted by such machinery, we cannot get them back. The west, and Utah especially, are such places of magic and wonder. Please consider an alternative that is less impactful to the views that make Utah, Utah.
25942	Mark Williams	I am strongly apposed to the gondola and don't believe it is in the best interest of UT citizens. The gondola will be a stain, blight, and ultimately just push the traffic and congestion to the mouth of the canyon. The gondola option should be dropped as an option!
25943	Verdean Petersen	<p>My concern is that the canyon can only support so much use. If we continue to open it up to endless number of people it can be destroyed for all. The number of people that can enter the canyon can be the way to restrict its usage. We need a way to restrict the usage in order to maintain control of the destruction of its beauty. Can we continue to destroy what it is, so more people can come and the resorts can make more money. Is that what the state wants? Remember this is national forest land, the land belongs to the people. The resorts are now expanding to allow ATVs in the canyon, but not for all the people, just those that have the money and go threw the resorts. Once the canyon is opened to more usage, more people, when will it be enough! How does the state or the Federal Government intend to control the expanse, or do they plan to control the take over of (OUR) mountains? Is it all about the money? At any cost? once its done we can never stop, or go back.</p> <p>Thank you for allowing me to make a statement.</p> <p>Verdean petersen</p>
25944	Aidan O'malley	What a horrible waste. Destroying so many amazing boulders and it's all for a [REDACTED] gondola. Couldn't agree with this awful decision any less

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
25945	Max Muecke	Hello, I grew up in the Sandy area and would often go up little cottonwood to enjoy nature and get AWAY from the civilized world. This project puts my favorite canyon at great risk. I fear the massive scale of this construction project and the impact it will have on the views, nature, and wildlife. If you've driven up Little Cottonwood Canyon you'd know it's absolutely stunning. Having a large gondola will jeopardize that for tourists and locals. The other issue me and the community have with this project is the financial burden. This project is being funded by our tax money. You can't provide impoverished children with a free meal at school but you're willing to spend half a billion dollars on a gondola that will NOT be free for locals? That's an awfully greedy and short-sighted decision to make. What of the drying great salt lake? What measures are being taken to quell the incoming dire situation being created? What of the numerous homeless that have nowhere to live or better their lives? The money being spent on this project would be much better utilized solving the plethora of larger issues plaguing our state. I always dreamed of taking my children into Little Cottonwood Canyon for the same reasons I love the canyon. This project has the potential to ruin that. I love this state and this has me considering moving elsewhere to ensure access to nature that has not been decimated by greed and development. There are very few people in this state and I'm the surrounding communities who support this project. This project only serves greedy politicians, corporations, and ski resorts; not the people paying for it. Please consider the greater impact of this action.
25946	Jayden Agnello	Focus on improving the canyon transportation. Please do not build the gondola.
25947	Emma Dingman	Please no gondola
25948	Katie McClain	I vote no for the Gondola, it is going to be an eyesore and seems to only help the resorts
25950	Michael Nielsen	I'm against the Gondola proposal. I would rather see something like a pay per use for personal vehicles like Millcreek Canyon or American Fork Canyon and use the money generated from that to fund a free or low cost shuttle system that would take people up and down the canyon.
25949	Ryan Bethel	Please try do use buses before a gondola
25951	Priscilla Moiseoff	Please don't go forward with this gondola. It will take so much of the magic of the canyon.
25952	Mary Vaughan	If you actually believe the people who live near little cottonwood canyon cannot see through this scam/scheme, you are dumber than you consider all of us to be, we see what this is, Backroom shady schemes to pave paradise for major profit. Utah politics as usual?
25954	Katherine Venti	I oppose the extremely high cost of a gondola that will only serve/subsidize the ski resorts but negatively impact the entire canyon. I oppose the incredible permanent impact gondola stations will have on one of the most beautiful canyons in the country. I oppose what appears to be disproportionate fix that will negatively affect the entire canyon year round to solve a traffic problem that only occurs on a handful of weekend ski days in the winter. This is a gross misuse of a half billion dollars in taxpayer money for a gondola that will only stop at the ski resorts
25953	Morgan Arseneau	This is so unnecessary and harmful to the mountains. Please rethink!!!
25955	Montana Smith	It would be a shame to ruin such a beautiful canyon like this. Some things need to be left alone, and this canyon is absolutely one of them.
25956	Aaron Rae	Please please please do not build the gondola! There are cheaper, less intrusive solutions that use existing infrastructure. The gondola is not the answer!!!
25957	Eric Odonoghue	So frustrating and disappointing. Nobody in the local community wants or supports this decision at all. Corporate greed on pure display. There are better solutions to the issue. I've been a local my whole and am just so disappointed. I do not want to be hiking my favorite ridge in the Wasatch and looking down at huge pieces of machinery.
25958	Larry Hansen	Two tunnels, connecting Alta to Brighton, and Brighton to Park City, with enhanced looping bus service to begin with. Think about it! A gondola is a one canyon, two resort solution to a three canyon, seven resort problem. And for about the same price! Ever heard of the Alps? They did it over 150 ago! With trains!! Come on, people.
25959	Kassi Harris	Very much opposed to the gondola solution. Tax payers should not be subsidizing ski resorts. The towers are going to be terrible and completely take away from the beauty of the canyon especially to be used only in the winter. As a Sandy resident so incredibly disappointed.
25960	Ryan Lee	As a Snowbird and Alta pass-holder and lover, I am disgusted to see UDOT catering n towards the profits and tourism of these resorts. The announcement that UDOT is moving forward with plan B flies in the face of public commentary and the will of the people. Not to mention it is a gross misappropriation of taxpayer dollars and an unfair transfer of wealth. This plan benefits no one but those who already will be profiting from it. Meanwhile, those of who actually recreate, use, work, live, and play in the canyons are getting nothing less than █ on. I spend over 90 days a years in LCC and see nothing but the guarantee that my experience will be ruined, the environment destroyed, and the tragedy that will be experienced by future generations when they will be unable to enjoy LCC for what it truly once was.
25961	Jeff Odonoghue	Very disappointing. Bizarre to toll locals alone in cars whose taxes are paying for the road and maintenance and plowing etc. how about toll the ikon pass holders coming from out of town. That is the issue not solo locals driving up. We pay taxes to maintain this road and our taxes will go towards this project the fact that it's even considered to toll the people paying taxes for this road is ridiculous. It's a small local canyon and should stay that way not cater to the Rick ikoners. So lame.
25962	Westin Porter	NO GONDOLA!!! I am from Morgan county originally but have lived in Salt Lake for the last 20 years. I'm no stranger to the problem of rapid growth and lack of infrastructure with which to manage it. But a gondola is much too costly and much too harmful to our canyon to be a reasonable solution.

ID	Full Name	Comment
25963	Stacey Noble	<p>I oppose the gondola. Why are we spending this large amount of money for something that will not be utilized effectively or solve the problem. I'm actually shocked that UDOT would choose this option over taking some smaller steps first. As long as there is a road going up the canyon people and families will choose that option so it is only on big powder days that the gondola will be utilized and on those days it will not even come close to meeting the demand of getting people up the canyon, not to mention the mess at the parking structure and pushing more traffic into Sandy and surrounding cities. Building this gondola is irresponsible and will forever change the natural beauty of the canyon. I find it very convenient that all the advertisements pushing the gondola there has not been one that shows the massive towers and what the forever changed view of the canyon will look like. With such a high disapproval by Utah residents it seems like UDOT caved to the businesses and state leaders that will directly profit and push more traffic into our surrounding cities. I feel like no one is listening to UT residents and it is so disappointing. It's a sad day to be a Utahn. Please reassess and begin with the increased bussing, continue with the reserved parking on peak days (this worked very well at Alta this year). Technology is always changing so let's be willing to adapt with time to the needs of the canyon and community rather than putting in the shiny new toy that forever changes our beautiful treasured canyon and can never be undone. Let the lawsuits begin if this plan actually transpires.</p>
27851	Ryan Perry	<p>Hi. Just saw in the news the gondola program for LCC is approved. I am strongly opposed.</p> <p>It is not as flexible, or pragmatic as what can be accomplished via mandatory bus services to non residents, which can be transitioned to electric over time. Bussing can also leverage existing distributed pickup points, without the need of a large base station.</p> <p>This stinks of lobbying and politics.</p> <p>Please add my vote to whatever metrics you are hopefully using to asses public opinion. As far as I've seen the public is strongly opposed to the gondola. Don't waste our money.</p>
25965	Alec Weeks	<p>As a salt lake resident and frequent user of LCC I vehemently oppose the gondola</p>
25966	Matthew Mckenna	<p>I am opposed to the plan to build a gondola plan. It does not allow enough parking or move enough people to provide a noticeable benefit relative to its financial and environmental cost. It benefits resort owners and private investors for a gamble. Ultimately we may have to accept that the canyons have a maximum capacity (as lift lines at the resorts exemplify) and what we're trying to do here is just not wise. I view an equivalent investment in bussing, shuttling, and public education as a better investment, along with tolling that scales down the more seats of a vehicle are filled</p>
25967	Matt Bekker	<p>Please don't do this. Let the ski resorts solve their own parking problems. There are so many better alternatives with less of an impact. Consider electric shuttles!</p>
25964	Tj Davis	<p>I am confused why we can't just toll the canyon and use that to fund a bus system that works. Let's build park and ride and have bus only days.</p>
25968	Ryan Borys	<p>Nobody with a brain wants the gondola in little cottonwood canyon. There are plenty of alternatives that you all are well aware of. This is not a viable solution to WINTER traffic..</p>
25970	Parker Nelson	<p>Don't tear up the mountain for a gondola!</p>
25969	Kelsey Viehmann	<p>Local here- what a shame to our beloved canyon and the wildlife there. This is not a sustainable solution.</p>
25971	Jovvany Villalobos	<p>I'd love to see a better bus plan before such a dramatic move. I recommend checking out what they do to shuttle people in Zion canyon inside Zion National park.</p>
25972	Edgar Webster	<p>Please no gondola. Please choose the bus alternative. I'm a backcountry skier and want to be able to get to the White Pine trailhead with family and friends. Please stop the gondola giveaway or make Alta and Snowbird pony up to foot the bill. Thank you!</p>
25973	Katharine Bekker	<p>I do not believe that the gondola project would be beneficial for LCC or the community of people that uses it. It is simply too expensive to be a viable option for the majority of prospective users. The canyons should be accessible to all cimmunity members regardless of their socio-economic status. Instead of the gondola, UDOT could improve the bus system--preferably an electric bus system--to minimize traffic in the canyon. The gondola would also be more harmful than a bus system to the LCC ecosystem. Long story short, the gondola is a greedy, capitalist-based project that would be harmful LCC. Moving forward with this project would indicate that UDOT is more concerned with money than with community or sustainability. Furthermore, it would show that you are not taking the input and opinions of community members into account, as the vast majority of people in the Salt Lake Valley are not in favor of the gondola. Please make a wise, sustainable, and community-minded decision.</p>
25974	Diane Carter	<p>As a skier trying to get to the resort, I would much rather ride a gondola than a bus. Many European resorts have beautiful gondolas. I world expect nothing less of Utah.</p>
25975	Kathy Bekker	<p>I don't like the gondola option because it only allows access to the ski resorts. If you chose a train or bus option you could put in more stops that would allow for people to enjoy different parts of the canyon. This one is cheaper than the train, but so limited in scope, I don't feel it meets the needs of the canyon.</p>
25978	Brandon Newton	<p>Don't ██████ build this ██████ If you want to see increased tourism revenue allow beer higher than 3% ABV you ██████</p>
25976	Natalie Zachman	<p>The only time traffic is bad is on powder day which is 3 days a year. Why is this even a logical solution to it !</p>
25977	Emily Adler	<p>Wow. This is a terrible idea. The environmental impact from adding this gondola will be massive. These canyons are important wildlife corridors that are irreplaceable. DO NOT PUT UP THE GONDOLA.</p>

ID	Full Name	Comment
25979	Avery Parrish	<p>I hope I am speaking to people here, not an entity. As people, we tend to value the connections shared closest with us, not the ones we continually make over the progression of our lives. As people, we have skied Little Cottonwood since the first day there until now. We are the heart and soul that took the "greatest snow on Earth" and made it into what it is today. We are also the people, who you have knowingly shoved off without what feels like proper consideration. We have people who have lived and died in the Salt Lake Valley, skiing LCC, begging for this to not become a reality. If I am speaking to a corporate entity, I would like to say Congratulations. Congrats on the visitors you will get and the problem you're facing stay the same. The line to the gondola will be just as long if not Longer than our current traffic situation. All while belittling the many people who oppose. Is little cottonwood canyon a country with its own politics? Why must we choose one path which is opposed without just working with the more optimal solution of express Bus Lanes, which the major population has no opposition to?</p> <p>I hope this falls in the lap of someone. Someone who feels the same pain that wrote in this comment after seeing what you have done. Good Luck Avery Parrish</p>
25980	Zach Snavelly	Really an unbelievable announcement today. UDOT received a record number of comments voting for NO GONDOLA and this is still the outcome. The Utah taxpayers do not want to find a private transportation system for the ski resorts! Please reconsider for the sake of Little Cottonwood Canyon.
25981	Cat Miller	The gondala is a terrible environmental opention. It is just going to take away from the 3 other season of little cottonwood. Please no gondola!
25982	Adam Turville	<p>The gondola proposal is a poor decision and will exacerbate several problems.</p> <ol style="list-style-type: none"> 1. The gondola will increase congestion at the mouth of the canyon, whereas buses will disperse congestion to park n ride's across the east bench. 2. The gondola will take much longer, especially for those traveling to Alta, than driving or the buses will, especially when taking parking into consideration at the gondola base station. 3. By the time people drive to the mouth of the canyon they will be faced with the decision of getting out of their car and waiting for the gondola or staying in their car and waiting in traffic. They will opt to wait in traffic. Whereas enhanced bus service picking people up at park n ride's throughout the east bench will be much more palatable for those beginning their journeys near a park n ride.
25983	Angella Tran	I believe the gondola will not help with the problems LCC is facing but rather make it worse for the environment and the public, destroying recreational activities enjoyed year around, and possibly even making traffic worse.
25984	Emily Rice	Please don't ruin our canyon with a dirty gondola. You won't even let me take my dog to respectfully enjoy the outdoors but you will scar this area for eternity? what would joseph smith do? Coffee drinkers and those who build gondolas in pristine areas for their own monetary benefit, we both know we're they're going.
25985	Daniel Leifson	<p>Once again, we, the public, find ourselves at the short end of a well-crafted political stick. Once again UDOT has pandered to the beckon call of private interest instead of the public. The simple truth is this. The canyon has a human capacity. When it's full, it's full. Nobody, not you or I, or anyone else is entitled to be there. While Alta, Snowbird, Powdr and Dave Fields would build Disneyland up there if they could, that answer is not correct nor ethical. The proposed gondola stands on two legs; safety and environmentalism. Both of their arguments are cut down in front of them with the harsh reality that the canyon is full to capacity many days out of the winter. The true believers in this outcome and the true lovers of the Utah environment recognize the snake oil being sold to the pubic by these private interests. We know their corporate greed and hunger for growth and profit. The public should not have to pay a single dime to help them achieve that, nor should the environment pay in the form of polluted water and damaged habitat. The very commodity they seek to exploit would be damaged and the view they wish to capitalize upon would be tainted by this cable monstrosity. The final vestiges of credibility enjoyed by UDOT will be dashed to bits if they see this deal through. If they want the canyons to be safer, draw a hard line and close it more often. Enact a toll on canyon road and use the proceeds to better maintain and fund safety projects. Listen to the public, who seem to be the least of UDOT's concern. What a world we live in, where right and wrong can be bought and sold so openly and where the obvious is so relentlessly ignored.</p>
25986	Suzie Pressett	I agree with the other parts of the project, but having a gondola that only makes 2 stops that only benefit skiers and the ski resorts is not a good idea and an eyesore for the mountains. I am against it.
25987	Matt Tice	This decision should be reconsidered. It benefits the ski industry and entities that have purchased land around the proposed installation- no one else.
25988	Bill Hoover	I do not support a gondola, due to the impact on the environment and negative impact on recreation in the area. Busses and tolling are perfectly function to reduce car traffic, and do not impact the environment, recreation and visuals.
25989	Joan Heinz	I have come to Utah for more than thirty years to ski at Alta. The image of a gondola marring the view of this beautiful canyon is heartbreaking.
25991	Kevin Williams	Stop blatantly wasting tax payer dollars on pet projects nobody wants. Inflation is through the roof, costs are at record highs, property taxes continue to explode across the state, and UDOT continues to bleed taxpayer dollars like they can just print more. More and more people inside the state are struggling under the weight of inflation, rising food costs, and unaffordable housing and you want to spend over half a billion on a gondola no one wants? Project needs nuked entirely, but if UDOT insists on wasting money it should be the high priced resorts that it benefits footing the bill, not the citizens that are being milked to death that can't even afford a day pass.
25990	Mason Garcia	This is [REDACTED] The people that use the canyon don't want this. Please save the canyon we love and increase public transit to get people to the resorts.

ID	Full Name	Comment
28173	Andrew N/a	Its crazy to think so much money will be spent on a project to solve an issue that can be solved by limiting skier capacity in the canyon, or through so many other alternatives that benefit the local community and the resorts-as well as lowering carbon emissions. Aside from the eye sore, its a shame that local taxes are used to pay such a controversial project. If i did not ski, I would be upset over this even more so. There are so many people (lower income-locals) who should not have to pay into a project like this. Why wouldn't powdr corporation or other private entities pay for this project first, as it benefits two ski resorts more than anyone. Also, what special interest gain project contracts though this type of approval? It is insane that as we move forward through these crazy times, we do not put money into other things such as saving the great salt lake, or passing laws to limit how green lawns continue to be during the greatest water crisis we have seen in our lifetime. I just signed a lease where I am required to run my sprinklers daily to keep the yard green. It is a shame that with everything happening in real time that we are not calling to action on more important issues such as water conservation. I drive LCC everyday for work and see no need to add something of this nature. As someone who loves innovation and considering all options, I see this as not serving the publics interest but instead serving the interest of elected government officials. Government officials are elected by the people for the people. 80 percent of Utahns do not want this. Why cant anyone at the government level listen to the public opinion. It is really disheartening and brings on feelings of despair for the future world we will live in. Limit the IKON passholders usage up the mountain and stop marketing so heavily for areas that are already stressed and over used. Utah residents pay taxes and move here from all over to enjoy the mountains and have the right to experience Utah in a way that unfortunately cant be had for everyone. Pretty soon there will be no winters left anyhow as our Climate changes and you will be left looking at a gondola that serves no use as heavy rainfall goes away.
25992	Amanda Bennett	I am saddened by the fact that the costly vision of the gondola is the one that my government has decided on. It's hard as a canyon employee who loves nature has to see such change that doesn't make sense. The public has spoken out against a gondola for many reasons and I feel that my government officials have not listened to those they say they represent. It does not align with my vision and I feel my representatives are not doing their job. I feel unheard and disappointed in the future of Little Cottonwood Canyon.
25994	Zachary Leavitt	The Gondola is the worst option. We love the canyons for their beauty, not for their ease of access. The number of days and the times the canyons get super crowded is such a small portion of the year. Do not ruin a beautiful canyon so that people can get somewhere faster. That is the most garbage and privileged problem I have ever heard of a city having. If you ruin the scenery, the tourists will go elsewhere, and then you'll have a useless freaking gondola.
25993	Joshi Haskell	I do NOT want a gondola up LCC. That would negatively impact the beautiful canyon that so many people, animals, and plants visit/live within. Listen to people who have lived here in Utah for decades, not businesses who want to profit off of a scarred environment. The gondola is income limiting for a majority of the SLC and Utah community. Preserve the beauty that currently exists.
25995	Isabel Masi	This is not the answer! The gondola will take a very long time to get up the canyon and there will be a long line. Therefore the incentives are low to use it. As well as the cost of this lift will indeed be catered more towards people with money and therefore most likely to tourists and not represent the greater Salt Lake City area. The environmental impact of this project will be drastic and will completely alter the wildness in the canyon. Better solutions would be to promote more carpooling and bus usage. Keep the traffic to the road!
25996	Hannah Yore	This is destroying an entire community of hikers and climbers that move to Salt Lake City for its beautiful non invasive landscape and serenity. The gondolas are not only completely obstructing the view of the mountains surrounding cottonwood but it's destroying hundreds of boulders that climbers like myself are moving to Salt Lake City to climb.
25997	Sam Wright	I cannot understand why you would lock us into a technology that is going to be stuck. We will have electric buses and other solutions that will make it technologically much easier in the future to reduce greenhouse emissions and the impact to the canyon. Why are you locking us into a gondola where the technology is sat forever. This seems like a project that you will set up and then in 20 years take down because the technology has sufficiently advanced. It sure seems like you listened more to developers in the ski resorts than you did to the people.
25998	Ryan Ballard	I do not believe the gondola is the what the public wants. There are very simply alternatives that could be implemented such as mandatory carpooling or tolls during the peak season. Don't scare the beauty of the canyon!!
25999	Rebecca De Schweinitz	A gondola is sexy but an inflexible choice that won't address traffic at the mouth of the canyon. We need improved public busing. I am opposed to UDOT decision and the use of tax dollars to build huge towers in the canyon.
26000	Jesse Warringron	Disappointing to see such willingness to negatively impact our environment, especially when alternative options that are completely serviceable (public transport) exist. You owe your grand children an apology.
26001	Bimini Horstmann	No gondolas. Please. You know why it's disgraceful to the environment and all the wildlife and humans that need wild spaces to thrive. Do the right thing, please.
26002	Michele Martorano	Please don't proceed with the gondola. It would destroy so much of the natural beauty of this place.
26003	Louis-philippe Corbeil	I disapprove with the gondola project, it think it will compromise the integrity and beauty of the landscape.
26004	Adam Holt	Do not build a gondola that primarily benefits private companies with taxpayer money. Use incremental solutions to reduce traffic such as tolls, buses and avalanche sheds. The gondola will not have the throughput or upgradability required to be a good investment. I moved here 20 years ago to ski alta and have lived in Sandy ever since. Thanks, Adam Holt
26005	Scott Gart	No no no. A gondola for 10 days per year of too much snow and avalanche is wrong.
26006	Aiden Cable	No one wants a gondola. It is going to be a massive eye sore and effective all recreation negatively except the ski resorts, which already reach near full capacity making it awful to ski with the large crowds. Leave LLC how it is. It is a gorgeous canyon and does not need a bunch of metal pillars everywhere.
26007	Christine Garrett	I oppose the gondola and the direction UDOT is recommending. Traffic flow should not so dramatically alter such a beautiful canyon. 80% of Salt Lake wants smart small changes before something so gross is tried. This recommendation should be reconsidered.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26008	Carly Anderson	The canyon traffic should be the least of your worries in the salt lake valley. My recommendation is to require bus transport on weekends. It's that easy and it's more cost effective in the long run. We should be focusing on the fact that the great salt lake is almost dry and the entire valley will become inhabitable in the next 10 years... what good will a gondola do then? Please focus on the environmental issues we are facing rather than an astronomically priced gondola that NO ONE will use. Please.
26009	Will Wesson	Please improve busses and roads and set up tolls before building a gondola.
26010	Jon Summerhays	I live near the mouth of little cottonwood canyon and the number of days that traffic is an issue is minimal during the course of a year. Those in favor keep pushing this false story of how impossible it is to navigate the area all winter long. It's just not true. It's easy to see who is in favor of the gondola. The former politicians that own the land (how convenient) and their developer friends. Of course Alta and Snowbird are proponents of the gondola...it only serves their business and gives them a leg up on the competition. They should be the ones paying the majority of the cost. It does nothing to alleviate traffic for all of the people using the canyon in the 7-8 miles below the ski areas. The parking lots and road sides will still be packed. I admit the gondola sounds hip and novel, but at \$550 million, which will end up higher than that, it is a collective theft of tax payer dollars by the few who benefit. I vote no using any taxes (state and federal funds) to pay for any part of it.
26011	Kristy Tane	Please say no to gondola. Do electric powered busses instead. The gondola is an expensive eyesore. It will destroy the beauty of the canyon. 8miles will take a long time for gondola to reach. Just say no.
26013	Ian Mccubbin	Great idea, please move forward. This is good for canyons and SLC. It helps with so many issues, and gondola's work in Europe. Mass transit is great!
26012	Liz Wolk	I really like the idea of the gondola as it will keep hundreds of cars out of the canyon. My only concern is are there any hiking trails that will be impacted? And if so, can you publish which ones and what the impact will be.
26014	Kyton Sweat	This is the wrong decision and I completely opposed is a Salt Lake city/county resident. Work on other opportunities instead of this.
26015	Terri Gelb	I come from Utah county and my door to ski lift time is 45 minutes. Why would I park my car 30 minutes in for an additional 40 minutes gondola ride, plus waiting?? As a local, I often just ski for a few hours. Now with this gondola, it would make my round trip commute from 1 1/2 hours to about 3. I would rather pay a toll to use the road. The only time I would ever use this service would be if the canyon is closed for avy control. Also, this is only going to make Big cottonwood have the same serious traffic problems. If I am forced to take the gondola, I'll ski there instead, and I'm sure many others will too. This gondola will not just be a terrible eye sore, but a much much slower way to get up the canyon.
26016	Russel Nelson	Hello, The addition of a Gondola is an unnecessary and terrible way to destroy God's Creation, Little Cottonwood Canyon. The Mormon Church does not support this proposal. Thank you, Russel Nelson President and Prophet of The Mormon Church
26018	Stephanie Ormsby	Anything paid for by the public, for a private company's profits, is a mistake. Anything that will destroy the ecosystems and have an environmental impact on the mountain, is a mistake. The people have spoken and we don't want this gondola.
26017	Henry Hunt	The Gondola option is a huge step forward. Telluride is a fantastic example of where Gondolas are used to transport high volumes of people between hubs and works effectively. The Gondola itself will become a tourist attraction for people to enjoy the scenery of the canyon rather than have their eyes on the road. Might even reduce DUI incidents. Fantastic job UDOT.
26019	Jordyn Heyn	Please reconsider the gondola as a solution to traffic in little cottonwood canyon. The environmental deficits that would come due to the gondola are not worth the little benefit that the gondola would bring, especially since there are other options. Besides the environmental disaster that this would bring, the gondola will only service the ski resorts that already can't handle the amount of people that ski each year. The gondola will provide little service to hikers, backcountry skiers, rock climbers, picnics etc. It's a shame that you would be putting the needs and wants of large businesses before the wants and needs of Utah locals. There are many other options to the traffic and pollution problems that come from the current situation with the canyon. Have a bussing system similar to what Zion NP implemented would be one option. It would be especially beneficial if those buses were electric, such as the BART system in Provo. Please reconsider the Gondola as the option to solve the dilemma in the canyon now. Implementation of a gondola in little cottonwood canyon would truly be a tragedy.
26020	Lindsey Rose Melby	This is a mistake! We are pleading for you to not pass this! Do not destroy little cottonwood canyon please!!!
26021	Arup Prasanna	I think the govt and its entities should work for the people, considering how many people responded against the gondola it behooves me that you all ended up exactly where we the people don't want you all to end up. Why would you deface a beautiful canyon that nature took millennia to sculpt? With where the world and Utah is headed in terms of weather (we are in an exceptional drought and signs of it getting any better) it makes no sense to build this monstrosity considering it will only be used for part of the year. It is your job to provide mass transit that is cheap and effective to the people and the gondola is not that. A lot of us go the mountains to disconnect from he daily grind and this gondola will do exactly the opposite, being a reminder of the folly of man. Please reconsider.

ID	Full Name	Comment
26022	Sarah Scott	<p>I think the gondola is a mistake. Considering it's tax payer dollars we should choose a plan that's not at the top of the pricing scale as well as one that is scalable in implementation. If I wanted to ride novelty rides, I'd live in Anaheim and go to Disneyland. However, I've chosen to call Utah home for 30 of my 35 years on the planet because of its natural beauty. I understand that change is inevitable but I feel this is a regrettable solution. I urge you to listen to the people, this is not something we want. Please reconsider the more reasonable option of Enhanced bus service with road widening.</p> <p>Sincerely, Sarah Scott</p>
26023	Shana Davis	<p>Thank you for allowing me to comment on the gondola proposal. I have lived in Sandy for 25 years. I love Little Cottonwood Canyon. I've been up the canyon many times. We are so fortunate to have such a naturally beautiful place in our back yard.</p> <p>With that said, my family strongly opposes any time of gondola in this canyon. This gondola will financially benefit the ski resorts and the land owners where the parking will be. It's a huge financial burden on tax payers. Many of us will never use the gondola. If you want to go hiking, how would one use the gondola? I fear that my 21 year old triplet sons will be paying for this for many years. Please record my opposition as a public comment. Thank you.</p>
26024	Wendy Paultet	<p>This is a disgusting use of tax payer money. We've already ruined the cabin with a road increasing the size of the road is a much better option. What happens when this gondola breaks who is going to pay for that. This gondola is going to be a money pit.</p>
26025	Debie Reid	<p>I am opposed to taxpayers funding a gondola in the canyons to take skiers to ski areas. Let the ski resorts provide funds for their customers. This is not something taxpayers should be ask to to and we will fight it with everything we have!</p>
26027	Casey Carrigan	<p>Just make cars pay tolls and run a bunch more buses. If the rich want to drive up they should pay. Why should my tax money subsidize these businesses and their wealthy customers? I understand half of the resorts up LCC don't even allow snowboarders??</p>
26026	Jon Parker	<p>I am NOT in favor of the gondola. I believe it will be a terrible eyesore inflicted on a beautiful canyon. I also believe this is a waste of taxpayer money that benefits Alta and Snowbird. UDOT should not have the power to make these decisions. They are not representatives of the people, not elected nor accountable.</p>
28174	Karen Jackson	<p>Bad decision. Why doesn't the public get an input?</p>
26028	Jared Gleue	<p>This is insane. Why should I pay for the rich to go skiing? To me, this is like me paying for a stranger's airplane ticket to Los Angeles so they can go on a cruise. Please do not put us taxpayers in debt for someone else's luxury. Use electric buses. Even diesel buses would be cleaner than cars going up the canyon. Do not spend our money to ruin the canyon. Why don't we get to vote on you committing our hard-earned money?</p>
26029	Tracy Woo	<p>Please do not destroy a treasured natural area that many rock climbers enjoy</p>
26030	Sarah Auchincloss	<p>How could this happen?! At least make Alta & Snowbird pay for the gondola. 70% of canyon use is NOT for resort skiing.</p>
26031	Jacob Richardson	<p>Hello,</p> <p>Thank you for providing the final EIS materials and making the videos that summed up the major points. While I do not support the gondola, thank you for starting with a phased approach that includes extended bus service. One of the videos discussed the impact tolls would have on lower income families. I agree with this concern, but I think the best way to address this is by closing the canyon to any ski traffic. Only residents, those working in the canyon, and people staying in the resorts should be allowed to drive a personal car up the canyon on the busy snow days. There are a number of UTA park and ride parking lots around the valley that can help hold the number of cars that go up the canyon. I think having bus service from these lots would help keep capital costs low and provide greater utilization of existing assets. Providing bus service from different parts of the canyon can cut down on the total miles driven by drivers helping to improve air quality. I think it would be best to have a bus serve only one parking lot to help keep the travel time low in this situation. Spending \$500M for a problem that only happens a few times of the year and will mainly benefit ski resorts seems like a bad allocation of limited resources.</p> <p>Thanks, Jacob</p>
26032	Dylan Cray-kaden	<p>Booooo. The gondola [redacted] The local community hates you.</p>
26033	Alexander Stewart	<p>This should be solved via buses. Express buses to the resorts and buses that stop at trailheads. Cars should pay a fee high enough to let demand be what the current parking supply is. We don't need to spend money on fixed infrastructure when variable transit can better adjust to demand as can variable fees for cars. Have economists been involved to define how supply and demand will work in each scenario?</p>
26034	Jennifer Holmberg	<p>I am against the gondola. No one will ride it. Most will choose to continue to drive. It only serves the two resorts and will destroy amazing bouldering areas in the canyon. It will be an epic expense and failure. I vote no on the gondola!</p>
26035	Christopher Walker	<p>Yeah you should definitely put up a gondola. I've suffered the hell of LCC traffic on a powder day, and even though I tried to be part of the solution and take the bus, yeah the bus got stuck in traffic too. It was the worst, and this is from someone who drives I-70 out of Denver every weekend.</p>
26036	Amanda Maze	<p>Respect the land we have left without putting more damage on the environment. Limit users in the canyon. No Gondala will fix this.</p>
26038	Marc Lind	<p>I am against having the gandola built</p>
26037	Bryce Belshin	<p>Dont build the gondola, it will destroy the canyon. Nobody wants it</p>
26039	Lauren Butler	<p>The people of Utah do not want this gondola. This gondola will not benefit the residents of Utah and we are the ones who will have to pay for it (monetary and environmentally).</p>
26040	Tim Burnett	<p>The gondola is stupid and a waste of money. NO GONDOLA! Protect our canyons beauty</p>

ID	Full Name	Comment
26041	Sheryl Boehme	It is a mixed bag of worms but a big concern to the environment and also all the citizens living in Salt Lake County and especially the majority of we who seldom go up little cottonwood canyon. Yet our taxes would fund an elephant that mainly is used by skiers. Many people who use the canyon would be negatively effected. I would hope that the decision will be a win-win for we who live and pay the taxes verses those who benefit without paying any taxes. Please rethink your decision UDOT.
26042	Stephanie Wood	No gondola. No taxpayer solution for rich ski resorts to make more money. Institute required bus/shuttle during peak times. No tax payer dollars should be spent on this project.
26044	Andy Odenwald	Good decision. The gondola seems like the best idea if we are interested in an option that will be upgradable and greener over time. It does not make sense to blow up the mountain for a wider road that will still be covered during severe storms that people want to ski through. That should draw more money to funding it over the long term.
26045	Sean Hartley	Just use busses. This is ridiculous, a waste of taxpayer money, and will hardly put a dent on busy days. Use busses, toll the canyon very steeply during peak times, and have free/reduced time. I know that's not as glamorous as a "gondola", and it likely enriches nobody like the gondola would, but come on.
26043	Alicia Lott	I am against the gondola. You don't need to change or add the gondola just to get more tax dollars. Leave it alone. The canyon is beautiful and you'll be destroying it
26046	Liam Lewis	The gondola uses public funds to make private companies richer all while not solving the problem at hand. Traffic will move from the canyons to the streets around the gondola parking lot. Imagine what \$550 million could do elsewhere.
26048	Michael Gutknecht	Congratulations on the decision to promote the gondola solution to traffic issues in Cottonwood Canyon. The reasons gondolas are the clear choice are many: Less traffic, less air pollution, less road construction, nobody likes to ride the bus, etc. Plus the ride up to the resorts will be a wonderful time to relax and take in the views! Clearly gondolas are the best solution and I'm proud of the UDOT to make that decision. Well done.
26047	Robert Gorelik	I support the Gondola. I have lived in Park City for 30 years and I am now a Salt Lake resident. I don't ski anymore, but I will likely visit the Canyon more with the Gondola...
26051	Andrew Smith	The proposal has many good aspects including: Some parking at the base of the canyon (could encourage car pooling). Added parking at trailheads. However the gondola is an absolutely terrible idea. It comes at an extreme cost to the taxpayer and will primarily benefit the two mountain resorts (who are doing just fine for themselves). Although I live out of state, I visit the canyon often during all seasons. I can say that I would not be inclined to visit the canyon if the gondola comes in. It turns the canyon into what looks like a massive power transmission line. Honestly it would ruin the canyon. When people talk about LCC they describe it as beautiful. The gondola would take that away. As far as spending tons of money to reduce a few bad traffic days-- and a few control hours, poor use of money. I hate to say Toll it, but peak hours on pow days would significantly reduce single occupancy, keep Car pool rates low. Backcountry Skiers would also disproportionately be affected. The 'infomercial' about the gondola is a sure sign that if gondola is chosen, then private companies (developer, builder, and resorts) comes much before the rights of the citizens. PLEASE don't ruin the canyon with a gondola. I think it's great you've evaluated it, but it clearly is not a good fit for LCC. Preserve the Canyon, protect the view.
26049	Gary Gene	A gondola is a true travesty to the detriment of everything. The environment, the people, the community. More busing and no destruction!!!
26050	Liping Wang	I live minutes away from Little Cottonwood canyon. I'm against the gondola. My reason is simple: the Great Salt Lake is shrinking at extraordinary rate, meaning the lake effect snow is diminishing. How do we attract people with the gondola when there's not enough snow? I do not want my tax dollar being used to build the gondola! The decision seems to have been made and I doubt that you truly want any feedback -- but here goes.
26052	Donald Abbott	<p>TRUTH/FACTS: STORMS (high winds) close all lifts. Chairlifts, Gondolas and Trams are unsafe to operate under extreme wind and icing conditions and those who are touting otherwise are scammers.</p> <p>Follow the money trail and you will see who stands to benefit financially from this "Sounds Too Good to be True" Gondola scheme.</p> <p>How to solve the traffic problem on S.R. 210: 1) Encourage Skiers to Ride UTA by raising Parking Fees at Alta & Snowbird. 2) Parking Fees MUST be shared with UTA to pay for increased bus services. 3) On Powder Days ALWAYS have a Police escort leading buses to the mouth of the LCC. 4) Add more buses. 5) UTA's Ski Service must originate and terminate at a TRAX station (Park & Ride in Historic Sandy). WAKE-UP! UTA should NEVER leave a TRAX patron without Ski Bus Service. 6) And S.R. 210 does not need to be widened.</p>
26053	Jason Blauch	No to the LCC gondola. There are other solutions that have precedent and are much more pragmatic. See Zion Cny bus system as an example. A gondola makes zero sense. Who is being pandered to with this plan? Definitely not the majority of residents in the Salt Lake Valley. Hard NO to this imprudent and destructive idea.

26054	Donald Abbott	<p>The decision seems to have been made -- thus I doubt that you truly want my feedback, but here goes.</p> <p>FACTS: STORMS (high winds) close all lifts. Chairlifts, Gondolas and Trams are unsafe to operate under extreme wind and icing conditions and those who are touting otherwise are scammers.</p> <p>Follow the money trail and you will see who stands to benefit financially from this"Sounds Too Good to be True" Gondola scheme.</p> <p>How to solve the traffic problem on S.R. 210: 1) Encourage Skiers to Ride UTA by raising Parking Fees at Alta & Snowbird. 2) Parking Fees MUST be shared with UTA to pay for increased bus services. 3) On Powder Days ALWAYS have a Police escort leading buses to the mouth of the LCC. 4) Add more buses. 5) UTA's Ski Service must originate and terminate at a TRAX station (Park & Ride in Historic Sandy). WAKE-UP! UTA should NEVER leave a TRAX patron without Ski Bus Service. 6) And S.R. 210 does not need to be widened.</p>
27852	Andrew Smith	<p>The proposal has many good aspects including: Some parking at the base of the canyon (could encourage car pooling). Added parking at trailheads. However the gondola is an absolutely terrible idea. It comes at an extreme cost to the taxpayer and will primarily benefit the two mountain resorts (who are doing just fine for themselves). Although I live out of state, I visit the canyon often during all seasons. I can say that I would not be inclined to visit the canyon if the gondola comes in. It turns the canyon into what looks like a massive power transmission line. Honestly it would ruin the canyon. When people talk about LCC they describe it as beautiful. The gondola would take that away. As far as spending tons of money to reduce a few bad traffic days-- and a few control hours, poor use of money. I hate to say Toll it, but peak hours on pow days would significantly reduce single occupancy, keep Car pool rates low. Backcountry Skiers would also disproportionately be affected. The 'infomercial' about the gondola is a sure sign that if gondola is chosen, then private companies (developer, builder, and resorts) comes much before the rights of the citizens. PLEASE don't ruin the canyon with a gondola. I think it's great you've evaluated it, but it clearly is not a good fit for LCC. Preserve the Canyon, protect the view.</p> <p>Andrew SMith Winnemucca, NV</p>
26056	Daryl Christiansen	<p>Before building, please research and consider the gondola system in La Paz, Bolivia. Each gondola line has multiple stops and still integrates a high-speed system that works extremely well. Multiple stops should be included on the Little Cottonwood line and La Paz proves that it won't reduce efficiency or increase time. Please implement multiple stops. The people of Utah want this!!!!</p>
26055	Donald Abbott	<p>The decision seems to have been made -- thus I doubt that you truly want my feedback, but here goes.</p> <p>FACTS: STORMS (high winds) close all lifts. Chairlifts, Gondolas and Trams are unsafe to operate under extreme wind and icing conditions and those who are touting otherwise are scammers.</p> <p>Follow the money trail and you will see who stands to benefit financially from this"Sounds Too Good to be True" Gondola scheme.</p> <p>How to solve the traffic problem on S.R. 210: 1) Encourage Skiers to Ride UTA by raising Parking Fees at Alta & Snowbird. 2) Parking Fees MUST be shared with UTA to pay for increased bus services. 3) On Powder Days ALWAYS have a Police escort leading buses to the mouth of the LCC. 4) Add more buses. 5) UTA's Ski Service must originate and terminate at a TRAX station (Park & Ride in Historic Sandy). WAKE-UP! UTA should NEVER leave a TRAX patron without Ski Bus Service. 6) And S.R. 210 does not need to be widened.</p>
26057	Elissa Alyvi	<p>I am not support Gondala, because the coast very high and not meet with utah residents expenses!!</p>
26058	M.sean Tomlinson	<p>I would like to know who is paying for the propaganda TV ads.that are trying to persuade the public that a gondola is the answer to traffic problems up Little Cottonwood Canyon. Why do you think more than 3% of travelers will ride the gondola, when that's all that ride the buses? This is a perfect example of government control, fed by a very few promoting it for monetary greed! Stop ruining our beautiful state and go back to where you came from, as you can tell I'm against any gondola!</p>
26059	Rick Marino	<p>please no to the gondola. it just moved the traffic from the roads up the mountain to the local roads around wasatch boulevard. so it doesn't help with congestion. plus slot of people would feel trapped on it with no way to get off of medical emergency or need bathroom</p>
26060	Kelsey Nicholson	<p>How many times do the taxpayers have to say we DO NOT want this. This is not a sustainable option nor the best option. The long term damage this will do to our beautiful canyon can never be undone. With the current climate it is not guaranteed that there will be skiing in the the next 30 years. All of this damage for nothing and it truly benefits snowbird and Alta, not the locals. Listen to the people, do not do this.</p>
26061	Stacey Rabiger	<p>I adamantly oppose the decision to go forward with the Gondola. This will negatively impact the watershed and restrict access to public lands for non-ski resort patrons. Not to mention a total eye sore to our gorgeous canyon. We have better options and this is not an economical efficient way I'd like to see our tax dollars go to.</p>
26062	Raymond Mak	<p>Please improve buses before the Gondola. Its so important we keep our environment safe and not interrupt it with infrastructure. Thank you</p>
26063	Nya Peterson	<p>Please Please don't do this. This will be the downfall of SLC</p>
26064	Ammar Issa	<p>I don't support this project for tax reasons</p>

ID	Full Name	Comment
26065	Brandi Obriem	I am really opposed to this gondola. The purpose of it seems to be to cram as many people up the mountain as possible, which will only serve to benefit the businesses and is not in the best interest of the people. Our canyons are why people live and visit here and this would be a step in the wrong direction as far as protecting them is concerned.
26066	Craig Lanning	Extremely disappointed at your decision to back the gondola, and ask taxpayers to foot the bill. Whether or not that is the most effective transportation solution I don't feel qualified to say, but providing a half a billion dollar amenity at no cost to the business owners it benefits enormously is criminal.
26067	Karthik Sonty	<p>Today's Final EIS announcement is disheartening and conflicts with plain environmental law. Accordingly, it is incorrect.</p> <p>Under the Multiple Use and Sustainable Yield Act (MUSY), National Forest land is designated for multiple use and sustained yield giving due consideration to the interests at stake. Multiple use requires the appreciation of myriad of recreational uses—including those that do not redound to the advantage of private ski resort operators—as well as range, watershed, and wildlife. The management of our natural resources must be conducted in a harmonious and coordinated manner. Sustainable yield requires maintenance without permanent impairment of the benefits provided by the land.</p> <p>The Final EIS fails to adhere to these standards. The decision demonstrates a substantial preference for immediate private commercial interests at the expense of all others—ecological, public recreational, etc. It is predicated on subsidized economic boons to the very few, while diminishing the benefits enjoyed by so many others. Moreover, the articulated the environmental benefits appear dubious. Absent any enforcement mechanism requiring use of the gondola, why might the status quo change? During the majority of months when the gondola is inoperative, how is it a benefit? The Final EIS provides no answers and it strains credulity to conjure them on its behalf. The truth is that, at best, this may provide an *additional* transit mechanism—one that is highly disruptive and destructive—rather than a *substitute*. Moreover, the decision prioritizes short term benefit to a select user group which comes at a permanent cost to the natural environment and a broader user group. This is antithetical to the MUSY.</p> <p>Under MUSY, the government must give due considerations to the relative value of the various resources. MUSY does not define value in purely economic terms. Instead, it is a capacious term and a nuanced analysis which involves balancing the myriad interests at stake.</p> <p>The Final EIS fails to weigh these interests appropriately. Instead, it recognizes value only in dollars—specifically, those that may be earned by both private entities and the government. Entirely absent is analysis of the countervailing interest to other user groups—specifically, those that will not contribute to the above coffers. This reading is improper, but perhaps unsurprising.</p> <p>Utah has marketed itself to residents and visitors as an outdoor paradise. And yet, upon finally receiving the extrinsic recognition it has so long sought, it foolishly sprints towards the destruction of this resource.</p>
26069	Brian Wade	I am 100% against a gondola as the LCC solution. At such a large cost and permanent eye sore to the canyon to solve for only a portion of the year's crowds. To put the financial burden on taxpayers is absurd. Out of state users of the canyon should pay an additional cost paid to the state.
26068	Jack Loumeau	Try improving bud systems instead of gondola
26070	Aaron Stillman	<p>As a lifelong Wasatch front resident, year-round recreation enthusiast, and friend to hundreds, I am qualified to state that the gondola option is NOT wanted. Literally almost nobody wants this option. Read the EIS comments. Read the news story comments. Visit the ski shops and pubs. Nobody wants this.</p> <p>The gondola option will predominantly only help Alta and Snowbird, only during the winter, and do nothing to the traffic problem.</p> <p>Do. Not. Do. This.</p>
26071	Maya Mortensen	Little Cottonwood's boulders are an integral part of the history, culture, environment, and recreation in the canyon and Utah as a whole. Over 100 boulders will be destroyed in the making of the gondola, which opens access to the canyon for some but irreparably removes access to resources for an entire climbing community. I have some of my fondest memories, closest friends, and even my now husband as a result of the community centerpiece the boulders of LCC are. Please do not move forward with the gondola.
27853	Ian Walch	The proposed gondola is estimated to take 50-55 minutes to get up to the top of LCC... that right there is not a solution. A bus is faster than that. A gondola simply moves the traffic to the foot of the canyon. Put a variable toll on the road, and enhance bus service with money from Alta and snowbird. Taxpayers should not foot a bill that will only bring more pollution and congestion. It is naive to think these people still won't have a car to drive to the base of LCC.
26072	Marie Gardner	Building a gondola goes against the wishes of all who live in the area. You all should be ashamed.
26073	Maya Madere	Nobody wants or needs this gondola. It will destroy the canyon's natural beauty and utility as a recreational area as well as negatively impacting the ecosystem. Leave the mountains alone!
26074	Brandon Ussery	You cannot with a clear mind choose the gondola as an alternative for traffic in LCC. It will not solve traffic, only push it to the bottom. This will only further worsen the problem. Also, look what happened to the gondola in Squamish. They pissed off thousands of locals and the line got cut TWICE, resulting in tens of millions in damages. You're pushing war against locals and activists who have called Little Cottonwood home for years. Invest in solutions that can't be disrupted by extremists and that benefit everybody equally, so no group is left out. Everyone is frustrated with your judgement, and I would like to see an audit of this process.
26075	John Mason	<p>I feel like there is backroom dealing going on here. This makes zero sense for the canyons.</p> <p>1- Big Cottonwood is not being considered in this plan. This is ridiculous. It suffers from the exact same problems</p> <p>2- You will never reduce congestion on the roadway without limiting traffic on the roadway. Why is this not being addressed?</p>

ID	Full Name	Comment
26076	Reilly Beckstrand	I can't believe this is actually being approved. Little Cottonwood is so much more than just a ski destination! So much of the year is spent doing numerous activities besides skiing; it doesn't make sense to permanently impact the canyon for the powder day pile ups.
26077	Diane Barber	I am COMPLETELY OPPOSED to putting a gondola in either big or little cottonwood canyon. The amount of days that traffic is a problem is very minimal and not worse a huge cost and ugly impact that a gondola would cause. I do not want to see a gondola when I am going up the canyon to enjoy hiking or biking etc.
26078	Dontmakeme Payfort	If Snowbird and Alta need another gondola, including one up LCC, Snowbird and Alta, not Utah Taxpayers, should be the ones to pay for it.
26079	Sierra Hymas	Building a gondola in LCC is an incredibly stupid plan and enormous waste of taxpayer money. Invest in crucial issues like the drying Salt Lake and droughts instead of continuing to invest in the dying ski industry. As someone who has worked in Little Cottonwood for the past 5 years, I and everyone else who spends significant time in the canyon knows what an idiotic plan this is and that it will only increase traffic and further environmental damage.
26080	Cole Sax	Voicing my opinion of NOT in favor of the Gondola. Please revisit and propose shoulder lane for bus only access.
26081	Rachel Hume	please don't do this. we're better than this.
26082	Mike Kimball	Thank you for the comprehensive study on the Little Cottonwood Canyon Final Environmental Impact. Your process and work is very comprehensive. I trust you as the experts in this matter, looking at all aspects of the project, and ultimately support your conclusions. I wish you success in making the canyon and roadways more accessible, safer and enjoyable for everyone.
26083	Brooks Steele	This is a travesty. You can not repair the damage that will be done by the gondola. Spending billions of dollars to solve a small problem and mar the beautiful canyon is reprehensible. We are not Switzerland. People will not use the gondola and we will be in the exact same boat as today. Shame on greedy UDOT and the pathetic choices made.
26084	Kara Wetzal	My heart sunk when I read that UDOT's preference is a gondola in Little Cottonwood canyon. A gondola will forever change the feel of the canyon. Is the goal really to shove as many people as we can up into our precious wild spaces, or should some of our concern be limiting the area to sustainable numbers? The gondola option feels like an expensive and irreversible ploy to make more money for the ski resorts, and I question what developer has UDOT in his pocket. Please reconsider and protect our beautiful canyon!
26085	Leslie Guido	I see how this plan benefits the ski resorts but how does it benefit wild life and residents? Why is a toll being imposed? I am not sure why utah residents have to be impacted by tolls, more traffic due to construction, and a direct impact on wild life and the environment?
26086	Andre Zak	This is absolute [REDACTED] No tram, not now, not ever! Hold on to the integrity of what we have while we still can!
27854	Adam Ton	For a problem that only exists 15-20 days per year the gondola is the wrong choice for LCC.
26087	Aubrey Nekvinda	<p>If udot has any credibility left they should mandate reservations and a toll next season and watch this problem disappear. Udot collecting revenue what a crazy concept.</p> <p>As a hiker, climber, and skier who uses LCC almost weekly, I am vehemently opposed to the gondola. It will be an expensive eye sore that will do almost nothing to prevent traffic in the canyon. And, it refuses to acknowledge the inevitable impact of climate change on the mountain. How many big powder days will we be getting in 10, 15, or 20 years? Certainly less and not more.</p> <p>Traffic in the canyon during ski season is a 10-15 days out of the year issue- which this gondola will not even solve. The cost to the taxpayers, environment, climbing, watershed, wildlife, and LCC visitors is inexcusable to alleviate traffic for only a few weekends each year.</p> <p>And to be honest, locals will hardly use this gondola. If people were that interested in public transport, everyone would take the bus. Clearly, only a limited amount of people do that which is why we have a traffic issue. Locals want their vehicle for tailgating and hauling their skis, beers, snacks, and personal items. This isn't going to change.</p> <p>What you can do is enforce carpooling. Improve the bus system for those willing to use it. Encourage the resorts to handle this issue through limiting lift tickets or using a parking reservation system. They did it during covid and they can do it again. Or, restrict single drivers going up the canyon on peak days. The gondola is an insane overreaction to an issue that only impacts a select group of people during a select time of year.</p> <p>Even IF the gondola was taking up more than 15% of the traffic in the canyon (which is exactly what UDOT says it can do) it wouldn't be worth the cost. This project is a completely insane ploy to attract tourism to the cottonwoods, something that clearly we don't have an issue doing already. I could not be more against this idea.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26089	Laurie Keller	<p>Buses with extremely limited car access is a preferred alternative to the gondola.</p> <p>Currently, the primary counterpoint to increasing bus access is because people think it will require the road to be widened. This is false.</p> <p>You can prioritize bus access to the canyons WITHOUT widening the road. All you need is a toll booth.</p> <p>I propose increased bus service to Little Cottonwood canyon with restricted access to all other vehicles. Exceptions would be made for employees working in the canyon, individuals with disabilities (if the system becomes abused, they may be require to request a driving pass in advance), and vehicles that have at least 4 occupants with a toll cost of at least \$50 during peak times (higher if needed).</p> <p>This has the advantage of a) being easy and quick to implement, b) it benefits all who are using the canyon equally including hikers, back country skiers, those who are and aren't going to the resorts, and more, c) if a train or tram is later built, buses are a lot easier to repurpose or sell to other cities than a gondola, d) when a bus breaks down, you can still operate the remaining buses instead of having an entire gondola out of service, e) the number of buses operating, the toll, and other restrictions to the canyon can be adjusted easily throughout the year to match demand.</p> <p>Please say "No" to the gondola and consider making the canyon more accessible to everyone by keeping cars out.</p>
26088	Scott Farnsworth	<p>The gondola is a horrible idea that will bring revenue to the gondola company and the ski resorts while residents pay extra. It will look horrible, add tons of paved parking, and people will still want to drive up the canyon. But it seems that the project will move forward no matter how many people oppose it. Sad.</p>
26090	Greg Nuckolls	<p>I support the decision to build Gondola B. I do not support the Phased approach. Just build it right away.</p>
26091	Tate Peterson	<p>NO GONDOLA!!!! If you do it, make the billionaires pay for it. We don't want to pay for a project that is going to deface the wasatch and is only needed because of tourists. Tolls, fees, etc... whatever you have to do.</p>
26093	Katie Atkinson	<p>No Gondola for our Canyons. Please explore other options like clean busses.</p>
26092	Rick Heinz	<p>I would love to take a Gondola over driving or taking a crowded bus, but these are my concerns. I would not enjoy it if it is going to be as crowded as the busses currently are during peak times. A Gondola would be slower than a bus, and I wouldn't want to be standing in my ski boots that long if there is no seat available like with the bus. I would not like it if a gondola invited more crowds to the ski resorts. The lift lines are long enough, and the ski resorts will need to cap how many can be admitted if this inadvertently attracts more people to the mountain. The Ski resorts probably would welcome more people even if it ruins the customer satisfaction, so maybe get more regulation on capacity size on the mountain to force the resorts to cap the admittance if it gets too crowded. I would not want to take the gondola if I have to pay for a pass. It should be paid for with my resort pass. This is primarily to get customers to the ski resorts, so the resorts and those visiting the resorts should be the ones that pay for the bulk of the project, not through taxpayers. The Gondola should only stop at the ski resorts if the ski resorts pay for them. More stops along the way would not be necessary for this reason, but more stops would be welcome in the summer months when there isn't even a bus. If more stops will be added in the winter, they need to be during non peak hours. The gondola should start at a transportation hub that would be easy to get to via trax and bus from all over the valley (again, should be free with ski pass). Do not expect the majority of users to park at the base of the gondola, because you will not make a lot big enough to accommodate that. It needs to be a better option for most people to take public transit to the base of the gondola.</p>
26094	Stephen Hashimoto	<p>Please do not build the gondola. To disturb the nature more in the beautiful canyons would be a disservice to the generations to come after us. More busses and carpool efforts should be made before building a gondola.</p>
26095	Kristy Imhof	<p>This is going to negatively effect cottonwood heights and sandy. Please Do NOT put a gondola system in place. This is only for the benefit of the ski resorts and that is it. It is going to destroy certain area we like to climb and hike and my family is against this.</p>
26096	Austin Purdy	<p>The gondola plan proposed by UDOT is a horrible "solution" that only benefits a small percentage of the user groups of LCC while ruining the environment and scenery for all the others. It seems that no serious consideration was given to the publics preferred alternatives of increased funding for public bus systems in the canyon and only the voices of the rich few who benefit from this were listened to. Please do not go through with this and make a decision that will actually benefit everyday Utahns</p>
26097	Tatjana Kanashiro	<p>Do not build the gondola. It is a waste of taxpayer money that will not alleviate traffic congestion. The congestion will just be moved to wherever the parking for the gondola is. The structures required for the gondola are also an eyesore and will disrupt wildlife.</p> <p>Enhanced bus service would be a much better solution. It is far more flexible and has less impact on the canyon. Buses could be used by people going to places in the canyon other than the ski resorts in all seasons.</p> <p>The gondola would mainly serve to give the ski resorts more money, and is not a good use of taxpayer dollars. Please reconsider this decision.</p>
26098	Bridger Layton	<p>Here to put in some formal opposition to the gondola. This would fundamentally change the way we experience the canyons for the worse. The wasatch deserves minimum impact treatment. That means getting serious about buses in LCC. A gondola serves a specific demographic of resort skiers in a canyon that should be for everyone.</p>
26099	Michael Hendricks	<p>As a SLC resident, please do not build a gondola. Thanks</p>
26100	Harrison Buck	<p>Hello. I am an avid climber, hiker, biker, snowboarder, and nature lover of LCC. Please don't do the gondola. There has to be a better way. Even the traffic seems better to me than destroying numerous classic climbs and recreation areas that many people love and cherish as Salt Lake citizens.</p> <p>Thank you for allowing me to comment.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26101	Rochelle Smits-seemann	A gondola up the canyon is a horrible idea. The community doesn't want it. The canyon needs to be accessible for all, and we need not just a solution from base to resorts, but an entire valley that has public transportation infrastructure. This plan needs to include ways to ease congestion on Wasatch boulevard and the other car arteries. Increased bus frequency, lower fares, dedicated bus lanes. The solution is complicated and multifaceted - you can't just slap a gondola on it and solve the problem
26102	R S	You are destroying some world class bouldering. This doesn't serve the community at all. There have to be better alternatives.
26103	Justin Grieco	None of the partners in this endeavor have convinced me that the permanent damage gondola construction would cause... is less than the damage of attempting increased busing and traffic control or fees. Sure, those alternatives may not work either, but they are not permanent and destructive if they don't. The gondola reeks of a money grab for the benefit of two corporations, at the expense of the environment, non-ski-resort recreation, and neighbors.
26104	Lucy Peifer	DO NOT PUT THIS UGLY INFRASTRUCTURE IN OUR BEAUTIFUL CANYON!!!!
26105	Rob Smith	Little cottonwood canyon holds its own unique natural value that will be tarnished by a gondola. Some of the greatest climbing in the world will be destroyed to alleviate traffic for a few weeks a year. Outdoor sports should embrace nature, not desecrate it.
26106	Bobby Vannoy	Unbelievable
26107	Kate Skilbred	I am saddened to see that the gondola has received approval, despite so much pushback from Utahns. To this I ask, who are you building this gondola for? If the majority of people in your state, and the taxpayers who are ultimately paying for said gondola, all reject the proposal, then who are you building it for? Yourselves? Out of state tourists? Certainly not the generations to come who would have such the blessing to marvel at our stated natural beauty? Snowbird claims to be progressive. Claims to support sustainability and environmentalism. Than how can you as an organization support a \$550 million dollar fossil fuel extravaganza. I am truly saddened by this, and to say it is in a traffic decreasing, environmentally conscious decision is a flat out lie. So tell it how it is. If you truly cared you would implement busses immediately. Ban all cars if necessary. Surely this is not the answer. Surely you can be a role model for other large corporations, because we are in a crisis, and a new half a billion dollar infrastructure is certainly not the answer. The resource we need are here, let's allocate them.
26108	Orion Falkenrath	Lived in utah my whole life, always enjoyed the beauty of the canyon. Would like to not have gondola built
26109	Taylor Romney	I believe building this would be a huge mistake. It would be disrespectful to our beautiful mountains and nature, it would cause so much more traffic and waiting a long period to be able to even use it as transportation when you could make three trips and back in the waiting and travel time. You could invest the money into something more beneficial for our environment. The canyon doesn't get that backed up besides snowed in days and 15 minute wait when it's busy during winter. You could have people pay for a canyon pass and have the locals get discounts due to the fact that this is there home. I believe there's so many ways you can go about this.
26110	Maurena Nauman	The gondola will NOT benefit ANYONE that lives in the area or uses the canyon. Also does NOT benefit our environment as it will NOT reduce the number of cars able to go up the canyon. NO GONDOLA
26111	Will Cook	Thank you for reading all these comments. I have no opinion, i have not educated myself enough to warrant having one. This comment is to give you a break from all the rest of the comment reading you are doing. Im sure some are mean and don't understand the whole problem. You are trying your best and thats all you can do. If you are reading all of these, good work! I'm impressed! You can't please everyone! I hope this gives you a smile and a break from the serious comments. Here's a couple jokes to keep you going: whats worse than raining cats and dogs? Hailing taxis What was a more useful invention than the first telephone? The second telephone. Have a good day! You're doing great! Spread the love You probably aren't even the one making decisions, i am guessing your job is weeding out comments that are helpful or not- pass this one on so the next person who reads the important comments can get a smile break too! Life's fun don't be too serious!
26112	Joshua Pugh	I think this decision is premature and we should try out some other options first before building the gondola. The costs of the gondola are too high to be the first solution we try. Trying something such as expanding the bus system will not have massive permit affects on the canyon that the gondola will. Also I think it is not smart to put \$550 million dollars in to fix this problem. I am ski bum who skis 50+ days a year, and I only have problems with traffic a couple of those days. Also, on those days there is not room for more people at the resorts. Those days have lift lines that are hours long. The resorts get to full capacity even with hour long traffic lines. Overall, I think it is a better idea try out an option with less of a cost first. If we try those other options and they don't work then maybe the gondola is the right solution, but I don't think it should be our first option.
26113	Dustin Nordquist	A significant issue with a similar gondola at Breckenridge is getting traffic into and out of the base parking area. If the parking area was more accessible to traffic to/from the south, it would cut out a major bottle neck at the junction of Wasatch and LCC road. The propose parking lot would only be accessible from one main street. If the lot were moved up the canyon, it could be accessed via Wasatch or LCC rd. Also, in the current proposal, anyone who came north on Wasatch, turned right onto LCC rd before La Callie, would then have to turn left into that lot, which would probably never happen without a stop light present.
26114	Karen Hansen	I think the cost of getting up the canyon on a gondola will be prohibitive. I would prefer the bus.
26115	Conner Allred	As a resident of Salt Lake City, who owns a home on Wasatch Boulevard, I believe it's in our community's best interest to simply limit the amount of daily traffic being used to access the ski resorts. We live here because of the natural beauty that surrounds us. A five-lane highway or gondola is an eye-sore. Not only that, it only serves the ski resorts and their wallets. Tax revenue be [REDACTED]
27855	John Kern	What a horrible waste of money for 2 private resorts. Complete [REDACTED] from the legislative. Branch of Utah
26116	Warren Daynes	I'm all for the gondola!!! Best proposed solution.

26117	John Doe	I cannot believe Utah in general, nor specifically Cottonwood, is considering abusing yet another natural waterway for humans (who happen to occupy the desert). At the same time, I'm roughly equally unsurprised this option is the selected path forward. The state lacks potable water and has a record drought, but is green lighting dumping even more humans into its limited water area. Go Utah.
26118	Max Stransky	Please don't scar the natural beauty of Utah, it's irreplaceable.
26119	Garrett Wilson	I am a Sandy resident and stand firmly against the gondola in Little Cottonwood Canyon, regardless of whether private or taxpayer funds are used to construct it. Leave nature as untouched as possible, even if that restricts the number of those who can access for-profit, privately-owned ski resorts.
26120	Max Test	Please please please do not build this gondola. The traffic issue is a direct cause from the private ski resorts and should not be solved by tax payer money. Not to mention the devastation the gondola will have to the environment. Building the gondola benefits the ski resorts and goes against the majority public stance against the gondola.
26121	Sunny Muldoon	PLEASE don't do this. All of the people who are Utah citizens don't want this. Listen to those who LIVE here full time. We will have to experience and live through the repercussions of this gondola, not the rich politicians or tourists who visit. US. Please listen to us, and don't put up this gondola.
26122	Donna Kuhl	PLEASE VOTE NO for an expensive, UGLY gondola system that will ruin the natural beauty of our canyon and mountainside. It will junk up the area known to attract nature lovers to benefit only RICH skiers who can still afford the high price of skiing. As global warming continues each year, LESS snow will fall each winter and there will not be any demand for this UGLY gondola at all when skiers stop coming. It will be a useless eyesore. It will ruin the pristine natural beauty hikers, locals, photographers, sightseers, fall leaves enthusiasts, and out-of-state visitors come to our gorgeous state to see for themselves how pretty Utah is without hunks of metal blocking unique amazing views.
26123	Kaylee Jones	That is a ridiculous cost to put in gondolas and more parking to use said gondolas. Parking lots add to wasted space in cities. It is much better to invest that money in better bus services. Plus, with the salt lake drying up, there won't be a lake effect to make the power snow Utah is known for. Fix the salt lake before we even start to think about gondolas in a canyon ski resorts won't thrive in.
26124	Amanda Catharine	A multi-million dollar, cumbersome gondola does serve the best interests of the public who recreate in LCC. The proposed gondola appears to serve only two businesses in the canyons for a short period of the year. Not a worthy investment in the eyes of the taxpayer. If reducing traffic in the canyons is the ultimate goal, how would a gondola solve this issue? Ultimately this question goes unanswered. A better use of tax payer money that serves more than just two businesses, would be to invest in increased bus services and public transit in the canyons, as well as increased capacity for park and rides in the valley. The quarry on Wasatch Blvd is an ideal place for a parking structure and bus hub for both canyons. People who want to access the canyons in the winter would be more likely to use public transit if it is 1) convenient, 2) affordable and 3) more widely available. Increased public transit helps with traffic congestion for BOTH canyons, not just LCC. The proposed gondola just doesn't make sense for resolving any of the issues faced in our beloved Cottonwood canyons.
26125	Alex Robinson	█ this plan. This is absolutely outrageous on so many levels. First of all the plan █ Very expensive, ugly towers in literally the crown jewel we have in our valley, doesn't build on existing infrastructure, and will only be practical to use a very small number of days throughout the year. I'm not going to go into any more details about how much this whole plan █ however I could write an entire essay. Put this up for a vote with the people paying for it before you just shove it down our throats, this is absolutely ludicrous.
26126	John Fife	The gondola is a poor choice because it can't be expanded, stops can't be added, it's poorly suited to special freight (construction equip and material), and it does not entirely displace surface traffic. The more expensive cog railway accomplishes all these goals admirably. The CR can add or remove cars to adjust for volume of passengers, be lengthened, add new stops, and accommodate special freight of all kinds. The gondola is sexy but shortsighted, while the cog railway will serve more people, better, for a longer time, and more reliably.
26127	Ella Olsen	This is a devastating decision to move forward with the gondolas in Little Cottonwood Canyon. It is a beautiful, stunning, and strong piece of nature. By putting in these gondolas you will ruin that, and for what a chance to make money? A chance for some random man to make money? Leave Nature be. Let people enjoy it by seeing it in its natural state with out any building or disruption.
26128	Trent Dicks	Please try improving bus travel and encourage carpooling in creative ways like giving free parking at resorts to cars with 3 or more people in them! Nobody wants a gondola
26129	William Washburn	Please just don't. There are so many problems with the destruction of environment and also the destruction of valuable recreational areas that would be permanently damaged by this. Especially rock climbing, which has a storied history in this state and a lot of economic activity from it as well, and a lot of that just disappears with this project being proposed. It's the destruction of several industries and hobbies for the benefit of a couple ski resorts. Just don't do it, there are other ways to reduce winter traffic that don't kill the canyon.
26130	Brandon Kupczyk	the people will riot. Do not install the gondola. There will be blood.
26131	Purachet Amornwithayawech	I do not agree with this idea of reducing the traffic jams while damaging the beauty of little cottonwood canyon
26132	Jaden Whittier	Our community is extremely disappointed in your decision to move forward with the construction of the gondola. You can bet that whichever representative gave the okay will be voted out as soon as possible.
26133	Lee Burnham	In the very first Olympic Bid there was a proposal to build a monorail up Little Cottonwood over the hill to Big Cottonwood and then over the hill to the Park City area going backdown Parleys Canyon. Who would not want to take that loop just for the experience, let alone to ski? UTA killed it. Are they doing it yet again? It is a better solution and would make a fortune.
26134	Daniel Petty	This is a terrible idea. Why do you even accept comments that you are going to ignore in favor of doing irreparable damage to the canyon and the landscape!?
26135	Jacob Atwood	Please don't install the Gondola as it will not improve traffic in the canyon and environmentally it will worsen the already impacted area.

ID	Full Name	Comment
29434	Anonymous	hey, I just wanted to tell you guys how disgusted I am to hear that you're moving forward with this plan for the gondola and just planning to destroy the landscape of the Skyline we have here in Salt Lake such a short-term decision and and really short-sighted. Yeah. I mean, it sounds like really these comments are pretty useless and there's really no avenue for us to do anything to prevent this poor decision from actually going forward, but I'm just not going to keep trying to reach out to you guys.
26136	Dahriel Gelderman	Don't put in the gondola. It would destroy so much beautiful landscape
26137	Cristina Regalado	A gondola is not the answer. This is devastating. Irreversibly ruining our ancient canyons for pure greed. A gondola would only be used a few months of the year. I will not use a gondola. More busses, restrict the amount of people in the canyon at any given time, incentivize carpooling during peak season... anything but the gondola!! NO GONDOLA.
27856	Lee Burnham	QUESTION: "If you had your choice between riding a monorail to all the ski resorts or a gondola that only went up Little Cottonwood Canyon which would you choose?" I would be willing to bet most people would choose the Monorail. What does that tell you?
26138	Nathan Moore	We don't need a gondola. We need buses. Don't reinvent the wheel, use a bus!
26139	Jason Clemens	Please don't disturb the ecosystem or remove boulder access
26140	Nick Deforest	I think putting in a gondola is going to completely ruin the beauty in the canyon and will disrupt the wildlife in the canyon. There are many other ways to prevent traffic other than adding a big tram in thr middle of such a beautiful canyon. Having more busses to and from, charging for season ticket canyon passes and widening the road are huge ones.
26141	Cody Bradshaw	I am not in favor of the proposed Alternate B gondola proposal. This will just move the congestion down further into the neighborhoods, and the lift lines will start hours before the real lifts even start turning with folks lining up to ride the gondola. As a former Mountain collective pass holder I have seen the negative effects of the Mtn collective and ikon super passes, and can no longer support what they have done to my favorite ski areas. It's not fair that the resorts take in the money these passes bring in, but yet the community and visitors have to pay even more to sully the infrastructure to fund their coffers... The LCC will always hold a piece of my heart, and will still chase powder up there, but these sort of changes will insure that I won't be doing that as often as I have, and had hoped to continue doing so for the rest of my life...?
26142	Matt Barnes	I am firmly against the gondola, please improve bus and tram system instead, works great in every other ski town
26143	Mackenzie Kucej	The gondola is an absolutely absurd solution to the issue in the canyon. Destroying the canyon to benefit the ski resorts at the expense of the tax payers is unfair and not right. I'm an avid climber and an extremely concerned for the future of the bouldering and climbing in LCC if the gondola is implemented.
26144	Laura Morris	I am against the gondola. As a taxpayer, I don't believe it is a good use of funds. I have assessed, based on information that I've read, that it will have a negative impact on the canyon and will be cost prohibitive for many to utilize - which will not solve the transportation issues in the canyon. Let's think of other solutions, please!
26145	Jackie Rodabaugh	I highly disagree with the gondola project in little cottonwood canyon- there are other ways in which we can decrease traffic while also lowering the environmental impact. No gondola!
26146	Clayton Leuba	As a rock climber, angler, hiker and skier I am in strong opposition to the planned LCC gondola. The gondola would benefit a wealthy few (ski resort owners) whose wishes should not outweigh the desire of the general public. Salt Lake City does NOT want the gondola. We want to preserve the canyons for future generations, not exploit them for the gain if the ski industry. Shame on UDOT.
26147	Betty Stearns	You're asking all Utahns to pay for a more pleasant way for skiers to get to two ski resorts. Is that not the case? Explain how that is fair.
26148	Kerry Faulkner	NO GONDOLA! Don't Ruin The Canyon View With A Gondola! How does a gondola get me to the trail heads--before sunrise--all up and down the canyon? I see it benefiting the corporations that run the resorts over the general public. A gondola defaces the canyon. It solves only the ski areas parking issues, transferring it to the canyon mouth area. Are public transportation choices to get to the mouth of the canyon going to be enhanced too? In general public transportation in Salt Lake County big fat rocks! NO GONDOLA!
26149	Dan M Hess	Would love to see a tram system installed just like in Europe!!
26150	Scott Arrowood	I fully support the gondola option!
26151	Serena Lambiase	Please do not ruin our beautiful landscape and delicate environment with the gondola.
27858	Terry	> Ø understand you may have an echo chamber to promote this project, however, the public is screaming against this initiative and sincerely hope there is actual interest in doing what the public and community want rather than a select few who stand to gain economically. I think there are few cases in history, if any, where preserving Mother Nature, ahead of those who are after returns on their land and development purchases, is the long term best option. It's sad and pathetic that the overwhelming resistance to this project went unheard or noticed, clearly those involved in this decision stand to gain economically and therefore have bias.

26152	Benjamin Allen	I have lived near little cottonwood canyon for most of my life. Tearing up the canyon to build a gondola for UDOT transit fees is not only a visual and environmental travesty, nor will it effectively address the issue of traffic in the region. It is absolutely not in the public's best interest as we are seeing residents speak out against the gondola across the board. Using climate change as an excuse to further destroy the canyon is as ironic as it is tragic. Do not allow government agencies to overstep their boundaries in participating in this political circus to line their own pockets at the expense of residents and mother nature alike. There are other options worth exploring that have not yet been considered or attempted and these should absolutely happen before a single structure is built.
26153	Benjamin Allen	As a lifelong resident of salt lake city I strongly oppose udots proposition to build a gondola in little cottonwood canyon. There are other less harmful options that need to be implemented and the gondola only serves special groups of interest. Not the public at large or for the benefit of nature. Climate change is not an excuse to further destroy the ecosystem with a gimmick like this.
26154	William Andes	I oppose the gondola and modifications to the road up Little Cottonwood Canyon. The resorts need to deal with the problem they are creating.
26155	Meghan Boyd Boyd	The answer to this problem is not the gondola. The gondola seems to favor privatization on public lands benefitting a few instead of the masses. It will be an eye sore and the continued is used for much more than the 2 ski resorts. Make a smart decision for Utah and the fate of this state. No on the gondola. Retract the approval.
26156	Taisei Yu	Don't make a gondala that's goofy we gonna burn it down
26159	Dan Lidgard	I believe the installation of avalanche sheds/avalanche galleries over the road in key spots will keep the current road open nearly 7x24 and solve most of the problem. These are simple, proven and affordable.
26158	J V	Alarmingly tone deaf decision made by the powers that be once again. Throwing the blinders on to help out big business instead of the average Utahn without care. The amount of changes made every summer to make recreating in the cottonwoods less efficient and more expensive every year is astounding.
26157	Colton Gordon	Please reconsider and take into account that roughly 60% of SLC citizens do not want a gondola and support an enhanced bus suster. This is a great example of corporate influence overriding public decision. Hope you all understand how this makes your organization look if you pursue the gondola.
26160	Lauren Nef	NO GONDOLA.
26162	Ryan Mulkerin	A gondola is not a constructive solution to the LCC traffic issue. All this does is slightly reduce and rearrange existing bottlenecks. With a finite amount of Peking spots in the gondola lot, traffic will now start lower on Wasatch BLVD. additionally, bringing more skiers and riders up the canyon only makes resort congestion worse. Do not make the taxpayers subsidize bad business decisions by Alta and Snowbird. Bringing more people into the canyon will only make the issue worse. LCC has a natural carrying capacity. The USFS should engage UDot in opposition of this.
26161	Thomas Sykes	Don't build the gondola
26163	Kevin Myers	Thank you for all the hard work and this decision. Admittedly I do not live in Utah but have been skiing in Utah for a long time and am basically an annual visitor. I strongly support the Gondola B decision/option and applaud you for this determination. Obviously detractors are welcome to their opinion, and I encourage you to be polite, but these detractors are hypocrites - skiers and boarders who oppose this option for a gondola, yet their primary reason for accessing this area... is to go ride.... gondolas and lifts (same things) to even be able to ski and ride. Please remind them of that. Worse, the alternative...widening Route 210, I don't care what the EIS study says, it seem obvious, would have even greater environmental impacts than a few pad sites for gondola towers. The space, excavation, fill, increase in impervious surface, visual impact of a widened road, increase in stormwater runoff, etc., etc, etc, is sure to be much more of an impact than a few gondola pads/towers. Don't listen to the hypocrite skiers/riders that suggest otherwise, or remind them of the facts. So the impact of the ski lifts and the Snowbird Tram have no visual impact? But this gondola will? Really? And a widened road will not, come on people. While unfortunately I am doubtful this Option B/gondola will ever really be constructed due to cost, lawsuits, people fighting it, etc., it still is the right decision. For Gods sake I certainly hope 210 road widening doesn't become the only choice. But, hopefully the gondola/Option B does come to pass. Thank you.
26165	Tobin Ochoa	Stop doing this it's ruining the canyon the way of transportation is already good
26164	Katherine Brown	No to the gondola. Why not smaller buses leaving at 15-30 minute intervals?
26166	Jo Savage	Have you heard the people who live near, love & recreate in this canyon? The real people who really don't want this Gondola. Once it's there, the canyon is forever changed and there is no going back. And who does it benefit? Certainly not the people who live, love & recreate in this canyon. Please, please reconsider and please don't put this permanent monstrosity of a change in our beloved canyon.
26167	Ben White	Why should I have to pay to solve a problem that was created by private corporations? It's also a problem that exists like 8 days out of the year, and the current solution doesn't address BCC. This is silly.
26168	Eric Wadley	It should go without saying that the fact that either of these options, with the Gondola being clearly the unbelievably unreasonably insane option of the two, is being considered by you at all. Tolls, limited access, parking and skier reservations and buses that actually run on time and more frequently would easily solve this problem. And it is a problem as we all know that only happens on a limited number of days a year. The fact that you could even consider such a world class idiotic solution, something so expensive, so permanent for an intermittent problem is nothing except world class incompetent, stupid and corrupt. Your agency is a bloated piece of that seems to be determined to build some sort of statement project, like the absurdity of the US Bureau of Reclamation that threw up thousands of unbelievable expensive, unbelievably damaging dams on every river in the US for 75 years. Now look at where we with that - trying to undo it. Your decision is criminal and deserves every conceivable public backlash of any kind to root out every single one of your worthless selves from your perches. You think this sounds extreme? How extreme is to oblige at the force of jail and all kinds of state penalties upon citizens for their tax dollars to build a reckless project that is financially unsound up a watershed canyon for private benefit of two business and their wealthy customers? It is you who are extreme and you deserve an extreme response.
26169	Jared Cullen	A climate consciousness state must recognize that park of protecting nature is keeping some things at their "natural" level of accessibility. The gondola will only make impacts from overcrowding worse, not lighten the impact.

Comments on Little Cottonwood Canyon Final EIS

28158	Aria Conran	<p>Hello,</p> <p>It's very saddening to see government ignore the opinions of their people. It's easy to see that many locals are upset about the Gondola I'm curious, would it be possible to publicly share the benefits of the on social media for the public to see? Personally, I do believe that the negative impact to the ecosystem of LLC is not worth anything the gondola could provide, however I have no idea why the gondola is being put in.</p> <p>Additionally, I'm very interested to hear more about the plans and what you plan to do to minimize disturbances to the local environment while continuing with the installation. I hope there's a lot of thought put into this as well as input from environmental science so that generations can enjoy the canyon for decades to come and we don't do too much harm.</p> <p>Thank you, Aria Conran</p>
26170	Marc Coles-ritchie	<p>Buses are a far cheaper and less damaging option. And they can benefit summer visitors to canyon by stopping at picnic areas, trailheads and campgrounds. If buses were given priority on busy days in canyon people would ride them. People just want to get up fast to ski powder in those busy days.</p>
26171	Jan Oneill	<p>I am not opposed to the gondola entirely. I am opposed to the idea that the stops to get off are only at the ski resorts. If this can be amended to include stops for hikers, bikers etc., I think the gondola could be a viable solution to pollution in the canyon as well as serving all interested parties, not just the ski resorts and their profit based operation. It's not fair to the general public.</p>
26172	Mac Plumb	<p>First of all, I think it's a terrible idea when the gondola will only be used primarily in the winter months and very seldomly be used during the spring, summer and fall seasons.</p> <p>Second of all, the gondola serves no purpose for locals and so it therefore if it ends up coming to fruition, should be 100% paid for by the ski resorts it serves.</p> <p>Last, the parking at the bottom is going to be a major concern and potential issue.</p> <p>NO to the gondola</p>
26173	Emily Desmeules	<p>Literally no one wants a gondola except the people that will make money off of it. It will ruin the iconic beauty of Little Cottonwood and I doubt it will do anything to improve the traffic as the tickets will likely be so expensive that they are only available to rich tourists and not to any of the working class locals.</p>
26174	Anika Loyd	<p>this is disgusting. utah is known for its beauty and you want to destroy that beauty with upgrades? we take pride in our mountains and you want to build something that covers up that beauty that we kept so well intact? it is so incredibly selfish. no one wants this. stop this</p>
26175	Richard Steiner	<p>This is a terrible idea. A 1500 car parking lot at the base will increase congestion, not alleviate it. The traffic issue is occurs on a small number of days and does not warrant the expenditure. With climate change issues and a drying Great Salt Lake the long range health of the ski industry is questionable. Maughan's comment that the ski areas provide a service and therefore deserve the public funding is a joke. More people recreate in the canyon in the summer. The gondola ignores all recreation in the canyon except downhill skiing. Rock and ice climbers, snow shoers and back country skiers all will have to contend with towers and overhead gondolas as they pursue their passion. On the very days this plan is supposed to alleviate congestion the demand will be high and the inconvenience of fighting the traffic to get into the parking lot will cause havoc. And no one ever mentioned price of a ticket. The ski areas are said to have promised to make the ride free for ski pass holders. Will they be paying for those tickets to help recover the cost of building the gondola? I'm guessing the cost would be prohibitive for those individuals and families that have to purchase a ticket. Has anyone considered a time entry permit for those reserving a parking space at Snowbird or Alta? It is the ski area patrons who cause the majority of traffic issues so spacing out their arrival would leave the canyon manageable for those taking the bus or accessing non ski area parking areas.</p>
26176	Dennis Gile	<p>I am adamantly opposed to the gondola. I live in Tavaci at the base of big cottonwood. I know first hand that the days something like this are necessary are very, very few per year. Maybe 10%. There are much better alternatives to manage traffic than scarring our beautiful mountain with a gondola and wasting hundreds of millions dollars. And an even a smaller percentage of our population will use the gondola (10%) than the days it would be beneficial. I will be joining the forces of those who have been opposed and helping increase the awareness and opposition of this unfortunate decision of ODOT.</p>
26177	Paula Krupin	<p>NO GONDOLA</p>
26178	Luke Goins	<p>Don't put up the gondola</p>
26179	Monty Thurber	<p>The gondola is a great solution to an ever growing problem in the canyon roadway network. A gondola would promote more ridership than a bus. There is nothing sexy about riding a bus up the canyon. Taking a gondola to the resorts would give visitors to the resorts a better view and experience of traveling up and down the canyon. This option also reduces the need to build a wider than necessary roadway reducing congestion on snow days, or days where a crash has occurred. Good job UDOT for thinking outside the box and delivering a good transportation solution.</p>
26180	Deb Denbraber	<p>I oppose the proposed gondola as a reasonable solution to the increased traffic in LCC. The funds needed to complete this project, in addition to the disruption it will create to these wild spaces is unacceptable.</p>
26181	Pamela Grubaugh	<p>Please reconsider the gondola recommendation for Little Cottonwood Canyon. Please consider busing alternatives instead. The gondola use is NOT for the general public as purported.... gondola use is for the RICH!!! Taxpayer funds to support recreating for the RICH!! NO to the Gondola! Please NO to the Gondola!</p>
26182	Jake Merl	<p>For once... can we make a decision that isn't completely fueled by greed?? The public could not be more clear, NO GONDOLA IN LCC!</p>

Comments on Little Cottonwood Canyon Final EIS

26183	Derek Gloudemans	I am strongly opposed to the gondola and much prefer the bus alternative. The gondola is much more expensive, is a huge eyesore destroying a natural area, and has overwhelming (80%) public opposition. As a public agency spending taxpayer money, it is your responsibility to act in the best interests of the public, and the public has clearly voiced their opinion. If you are willing to sacrifice the quality and beauty of a natural place, to allow people to experience that place, you've created a self-defeating process. I'd also draw attention to the bus shuttle system at Zion National Park, a canyon that receives a comparable number of visitors each year and which restricts traffic on the main road to shuttles only. The shuttle system is a clearly efficient and workable solution, the gondola is an expensive, destructive, unpopular eyesore. Please act in accordance with the public will, as you derive your ability to execute law from the people themselves
27859	Weston Cooley	Greed, happy for the property owners who benefit from my tax dollars. Extremely disappointed in you. Thank you for taking care of the wealthy while destroying the look and feel of something you will not get back. Hope you can look at yourself and know what you have done. Weston Cooley
26184	Michael Diehl	I am 110% opposed to the construction of a gondola in Little Cottonwood Canyon. We would be spending \$500 million dollars to relieve traffic congestion that only occurs 10-20 days per year and only for a few hours on those days. We need to try other less expensive solutions first.
26185	William Pratt	You did a thorough study and ultimately made the right choice. Nice job
26186	Xander Gordon	Enthusiastic YES to a clean gondola system!
26187	Lenice Paulsen	I am NOT in favor of the gondola. From all my reading and research, not many people are. Please reevaluate the damage it will do to our s Community and state. Thank you.
26188	Charles Giambusso	I support the gondola option. Less environmental impact, fewer emitting cars, no construction delays on the current road, can be removed and sold if decision is reversed, can be a year round tourist attraction, makes the scenic view accessible to the less able, less construction materials than road construction, continuous travel available rather than scheduled bus service are reasons for my choice.
26190	Scott Osborn	I don't want to help pay for something that will only solely benefitsl the resorts. Even worse, will permanently destroy the natural beauty of the canyon. This gondola is a terrible option for our canyon. We arrest and fine people for spray painting and vandalism in it canyon but this gondola would be far worse and more permanent than a graffitied boulder.
26191	Jj Sullivan	Do not do this
26189	Brooks Sherman	Good decision on the gondola
26192	Jacob George	I am strongly opposed to the Gondola option. UDOT should not be recommending a \$550 million project that only relieves a small portion of the traffic going up the Canyon. UDOT failed to mention how the Gondola would scale with more skiers. There is not enough parking at the base, and not enough capacity in the gondolas to address peak needs currently, and certainly not in the future when more people move. It is also not the responsibility of Utah tax payers to solve a problem raised by two ski resorts. They should pay to fix the Gondola, which serves them primarily. There are no summer uses for hiking, and no uses for Backcountry skiing. This is a resort gondola, not a citizen gondola. Why is UDOT not looking at other canyons? Are we going to propose a gondola in Big Cottonwood Canyon next? This is not sustainable. Ski resorts need to solve their own traffic problems. Traffic has largely been mitigated already simply by enforcing paid parking at the resorts and incentives for car pooling. UDOT should have stayed out of this and told the ski resorts to fix this themselves. It's disgusting that snowbird has paid for everything supporting this gondola, including buying the land immediately surrounding the cite. Legislators are also poised to benefit financially from this. UDOT should publicly disclose this information about who would financially benefit from this development. UDOT should poll Utahns to see who would actually use a gondola... Why would anyone pay to park at the bottom, and pay more to ride a 40 minute gondola packed with other people?! Especially when you could just drive yourself or take a bus and be more direct and efficient! UDOT should modify their proposal to state: 1. UDOT suggests a 5 year period of reassessment after rolling, snowbanks, and enhanced bus capacity is implemented. 2. UDOT should set specific criteria over those 5 years to determine go/no-go milestones for the Gondola. 3. UDOT should publicly disclose who would financially benefit from the Gondola. 4. UDOT should clearly describe the scalability of each approach as the number of skiers grow. 5. UDOT should give examples of other projects that have cost equivalence. For example, how much affordable housing could we build with \$550 million? Or, how much impact could we have on the shrinking great lake with \$550 million dollars?
26193	Jene Mortensen	Thank you for approving the gondola! It makes the most sense. Electric busses will just continue the issue of traffic, slow moving vehicles, and limited parking.
26194	David Gotsch	This plan is worse than the smell of hog on a hot summer day! Don't destroy the LCC!
26195	Adam Terry	This has been fun to follow along with. I love the idea of the gondola. For once we have an idea that will by pass the asphalt solution. I can imagine riding it up already free from looking at the road, free to enjoy the incredible views. This gondola might be as cool as some of the gondolas I've been on in Europe and telluride. We have incredible mountains, this allows us all to enjoy them safer and easier. A true step forward. I hope it goes through! -Adam

26196	Corine Van Althuis	For 590 million we could do so much for the city. Cycling routes and improved infrastructure. This is ridiculous and needs to be shelved.
26198	Jody Doner	I firmly oppose the gondola. Let's try some sensible alternatives first. I calling it a phasing in I fear the funding and politics will be in play for the inevitable gondola.
26197	James Wilson	If we utilize more eco friendly ways of travel (electric buses or vans) and get more parking at the base there will be less traffic. A gondola just adds infrastructure that will hurt the environment physically and aesthetically.
26199	Garrick Bruening	The environmental impact of this gondola is way too large for the benefit that it will give. Please find another option.
29435	Ella Vincent	Hi, my name is Ella Vincent. I live in Sandy Utah 18 years old. My phone number is [REDACTED] and I'm just calling to say I do not want to build the gondola of Little Cottonwood Canyon. Because i feel like spending millions of dollars on the increase skiing Transportation is a bad idea. Hundreds of people a day use the canyon for other things from Spring through fall and building the gondola will hurt ecosystems. And make it harder to go, you know hiking or snowshoeing, rock climbing running, biking all the other sports package. That's all.
26201	Peter Lampley	An egregious waste of resources, an unacceptable environmental transgression and a non-solution to the LCC's congestion problems. More busses and shuttles, expanded park and ride, fees for private vehicle use, there are so many workable options that would be equally or more effective (not to mention much cheaper) than this absurdist boondoggle. Consider me against it.
26200	Zach Clauss	The gondola does not increase canyon capacity and will only end up being a tax-payer funded luxury for those that can afford it. If a gondola were to happen, making it free to the tax payers is the only fair way to make it. Although, increased busing, snowbanks, and widening the road will drastically increase the capacity of the canyon. Additionally, to even get to the gondola, traffic is still going to have to get to the mouth of the canyon, it is not decreasing the traffic that sprawls for miles at all.
26202	Jennifef Cotton	I do not want the gondola. An enhanced bus system that are electronic and other measures to encourage carpooling/alert people to busy days would be better. The gondola feels like a gimmick that will cost too much and mar the beauty of the canyon.
26203	George Kelly	Love the idea of minimizing ecological impact and solving the growing congestion problem in the canyon. I'd like to see the whole of the Wasatch range accessible via gondola system. I approve of the gondola phase plan.
26206	Cheyenne Bushman	As a resident in Salt Lake County I am disappointed to find out the recent approval of the gondola. I believe the Gondola is not a solution to the traffic in LCC and will only add to problem. LCC is a special place that should be protected and not commercialized. 500million dollars is a ridiculous price that should not be put on the shoulders of Utah residents who will most likely not being using the gondola especially in time where inflation is already exhausting us. Think smarter please at a toll both that will only fuel our economy and help mitigate our traffic issues. The gondola is not a well thought out plan and if it the only plan you see feasible make the resorts who the gondola will toll to pay for the overly expensive solution.
26204	Steven Ramirez	Try and improve the bus system first
26205	Ben Siefert	Seams fiscally irresponsible to use tax payers money to help deal with a major traffic issues 3-5% of the days of the year. Who will own the base village and who will pay for the massive annual maintenance?
26207	Christopher Jones	Hard no! There's still trash in the canyon from when they quarried granite for the temple. Keep the canyon as natural and beautiful as possible. As a climber for 20+years I continue to see the canyon more and more impacted, and a gondola will make it even worse.
26208	Bonnie Kaminsky	I am a citizen of Salt Lake, and an all-season canyon visitor. I have significant concerns with the impact of this proposal and fear it is serving the ski resorts but with great harm to the canyon as a whole and the wilderness areas. I am also unsure as to how this problem truly cuts down on the issue of congested travel routes, requiring users to still commute to the canyon base to access the gondola and not improving transit for the system on a whole. Is it possible to share the types of comments and numbers? My impression is that the public strongly opposes this initiative, and I would appreciate seeing our comments represented fairly.
26209	William Stratton	for the limited number of days extra canyon commuting capacity is needed the resorts should provide it by selling bus tickets with their ski passes. I don't want to pay for this just to enrich billionaires.
26210	Dale Ricks	This is outrageous. A group of developers get approval for a project that will destroy the canyon forever. If these developers are not cancelled, and our elected officials do not stand up to common sense, there will be enough rage in the community to throw them out of office. The people have spoken and you are not listening. NO GONDOLA..!
26212	Karl Stien	I agree with the gondola proposal.
26211	Myles Sykes	The Gondola is the worst idea! Please don't ignore massive public opinion against the gondola. I'm disappointed UDOT only recognized so few options. Why wasn't a tunnel option part of the discussion? There are multiple US firms specializing in tunnel construction that would protect the boulders, view shed, and Essenes of Little Cottonwood. Quite frankly it's a shame that UDOT is railroading this Gondola decision on us. There's no way it is the public's favorite choice. Don't ruin the canyon with a stupid, slow gondol that just pushes the parking problem to the bottom of the canyon.
28157	Luke Larsen	I grew up in Cottonwood Heights and I now own and run a ski business, The Lifthouse, at the mouth of the Canyons. This gondola will destroy our community please listen to the community, no one besides a hand full of developers want this. There are so many reasons this does not make any logistical sense, more than I can list here. Please do not do this!!!!!! Luke Larsen

26213	Toddmac Macdonald	I think it is a great idea and I applaud the agency for the courage to make this decision. Having lived in Switzerland, I saw 1st hand how aerial transport worked with the landscape and highlighted the majesty that is the Swiss Alps. We have similar challenges and beauty here and I think a gondola is a perfect way to address both. To the wieners and complainers, well, I believe they were the same ones that complained when we started putting roundabouts here in the Jeremy area and when sound wall went up along 80. The wildlife bridge was at Parleys was a "complete waste of time and money". Lots and lots of "the sky is falling" back then, but a much better place today. Thanks again for your courage and foresight and please don't let the loud voices of the minority mob overshadow what is best for the majority of us. That canyon deserves a gondola.
26215	Sam Wellskopf	I've been against the gondola and have commented all along, but let me know how this sounds. For a gondola holding 35 people arriving every 2 minutes it would take just under 6 hours to get a 2500 space parking lot of people (at 2.5 persons/car) up the canyon. How is this a solution to move people effectively? Is my math wrong? Do I not have all the information? Your about to scar a canyon for a solution that no one will opt for
26214	Chris Hendry	Yes on Gondola ? option. Thank you
26216	Lucy Bizek	Not the move.
26217	Dayci Patterson	Implementing a better bus system is a great way to improve transportation in the canyon while continuing to protect the biodiversity and watershed of Little Cottonwood. Building the gondola will be a massive undertaking that will destroy many natural habitats and climbing areas along the canyon and will ultimately attract even more visitation to the canyon, which will be more detrimental to the sanctity of that beautiful place. Please don't build the gondola. Start with the bus system and make improvements to that as needed. In an increasingly more developed world, it is essential that we work to protect wild places. Once a gondola is built in the canyon it will never go back to the way it has been, which is already developed enough. Please choose to protect our earth!
26219	John Wettlaufer	<p>It's unconscionable that UDOT has chosen the very limited and costly gondola option for Little Cottonwood Canyon. Anyone who thinks this will address the issues of LCC are biased by other factors. This supposed "solution" creates a permanent infrastructure that will be a perpetual burden to the people of Utah at the benefit of ONLY two businesses, ONLY two stops in the entire canyon, and limited seasonal use. It's cost both in the form of tax burden and customer usage fees will disenfranchise the local community for the benefit of tourism (or the wealthy. AND, the tourism WILL occur regardless of the occasional traffic "problem," as has been seen the last few winters (even low snowfall and covid didn't deter the tourists from coming en masse). Common sense including the results of the last couple of seasons show that at most all that is needed to address perceived traffic issues in the canyon (I've traveled the canyon frequently these last seasons -- I can count the "bad traffic" days I encountered in the single digits) is a combination of requiring the resorts to meter access through parking reservations, ticket sale limits, etc.; potentially imposing a toll; if a toll is implemented allowing RESIDENTS to purchase a discounted season access pass; and increasing the bus frequency in the canyon. AND, those tactics can easily be piloted before any commitment or expense to a massive gondola project. The issue isn't the traffic -- it's the number of people/users. If the gondola is you're backwards way of metering the access to the canyon via fee, there are far less costly ways to incorporate that tactic. On top of that, the majority are against the gondola. You aren't representing the voices of the community, and certainly not the local community you are affecting. I demand that you disclose EVERY individual and organization that is going to financially benefit from this project. That list I bet is simply two ski resorts, some land developers, and some specific land owners in the canyon at the expense of everyone else. And don't list the citizens of Utah on that list. The vast majority of them will be negatively affected by this project, not benefit from it. To claim the revenue from tourism is complete b.s. That revenue is coming in regardless of the traffic model for the canyon.</p> <p>It's just common sense that this shiny object is not the solution. And, it doesn't address what's going to result is an even worse influx of traffic to already overcrowded Big Cottonwood Canyon.</p> <p>Sandy resident</p>
26220	Adam D'sousa	<p>I support the decision for Gondola B, and look forward to the long-term expected benefits and lower impact to the environment.</p> <p>I appreciate the time it took to consider the options, the commentary, and the expected results, on traffic, on the environment, and on the canyon itself.</p>
26218	Polly Chapman	As a taxpayer and skier, I am opposed to the cost, long term ugliness, and probable inefficiency of the gondola. There's a finite limit to how many people can get up the mountain and keep it enjoyable for all.
26223	Brooklynn Gallacher	This gondola will damage the environment, hurts the locals and only helps those who make money off of it. Please reconsider. Seriously. This is an expensive way to tell utah locals you don't care about their voice. SAVE THE ENVIRONMENT.
26221	Julio Gonzalez	I love the Gondola idea. The traffic in the canyon has become terrible. The gondola will make using the a much better experience
26222	Duff Marissa	We DO NOT need this. I would much rather deal with traffic than have this gondola built. Little cottonwood canyon is beautiful and this would absolutely ruin it. Disgusting that this idea has even made it this far. PLEASE don't do this :(
26226	Anna Ratliff	No gondola. The community has spoken. This is an outrage that would not solve public transportation up the canyons year round to the crowded parking lots at trailheads. This gondola is solely chosen to financially benefit two ski resorts and a private company benefiting certain Utah politicians. Not only would no one pay to take the gondola, but we don't want to pay for it, and it would be a massive waste of resources in a few decades when utah receives minimal if any snow. Start small! Start with less permanent solutions including additional bussing and canyon tolls. We know the traffic up little cottonwood for the 2021-22 ski season was greatly reduced with pay to park at ski resorts, reducing the need for any action. Big cottonwood canyon is being completely ignored, despite the worsening traffic secondary to the Ikon pass. The solution is simple: additional busses without any road expansion in both big and little, but NOT a gondola. The permanent and devastating affects of the gondola would immediately ruin the beauty of little cottonwood canyon while financially benefiting a few individuals.

ID	Full Name	Comment
26225	Larry Clark	I am opposed to tax dollars being spent in the amounts mentioned for a transit system that is being built to financial reward ski resorts. The majority of taxpayers in Utah do not and will not use this system, whether it be Gondola, Buses or improved road structure and primarily for a limited season for those that go there to ski. We have issues in Davis County where we have horrible traffic congestion 12 months of the year and the necessary projects to correct this is often not even in the loop. So - Let the ski resorts purchase property at the mouth of the canyon, build a parking facility (whether it be a lot or parking terrace), they can provide buses or they can contract with UTA to provide buses and charge riders. Limit the number of personal vehicles allowed and levy a toll either on per vehicle or per person. This will help offset the maintenance of the road. Those individuals that reside in the Canyons area could be provided with 2 free vehicle passes allowing year-round access at no charge. Again - I am opposed to using my tax dollars to benefit a commercial entity that I will never patronize and the majority of Utahns will not patronize.
26224	Jackie Concannon	this gondola will benefit the ski resorts and they are lobbying hard for it yet they are not footing the bill. the enormous cost of building and maintaining the gondola will be the responsibility of tax payers. With a cost of over \$550 million, including about \$10 million in yearly maintenance funding, this doesn't benefit enough Utahns to have my support. Imagine the positive impact this amount of funding could have for affordable housing or housing for homeless individuals, for public education, and many other needs that would benefit taxpayers and our society UDOT SHOULD IMPROVE BUS SERVICE TO RUN MORE BUSES. residents would have a sticker on their car to drive the canyon but bus would be mandatory for everyone else. large parking lot still would be built at the bottom of the canyon as the bus depot. most utahns do not support this gondola yet UDOT has decided to build it anyway? why the lengthy comment process for citizens if UDOT wasn't going to listen to our voices anyway?
26227	Thayne Rich	This is absolutely ridiculous that they want to have paid everything to access and enjoy th mountains that I grew up enjoying. All just for the benefit of the rich. No gondola!!!
26228	Da Teng	The now proposed gondola has a service rate of 35 passengers per 2 minutes. This is way too low for peak traffic while too many for low traffic times. Measures need to be implemented to be able to adjust capability of the gondola plan. For example, buses still need to be improved during peak time.
26229	Anna Wilkinson	Did you not listen to the public at all? This is exactly what is wrong with America. Stop choosing money over the planet and the peace and happiness of it's citizens! Little cottonwood is precious to most if not all Salt Lake residents and the thousands of people it brings out every year to hike, enjoy nature, climb and spend time with family and friends. Just listen to all these comments. No one wants this except for greedy money grabbing people!
26231	Troy Gienger	I am a US citizen living in Salt Lake county and have been a consistent visitor of Little Cottonwood Canyon for years. I think that the gondola is a terrible idea that will impact the canyon views, climbing areas, nature, and beauty far more than it will provide any utility. Building a gondola just to aid in lowering traffic up the canyon and back down it during the winter ski season weekends seems to make little to no sense due to the very small percentage of days out of the year that it will be providing a function to lower the frustration and annoyance of ski season weekend drivers. I propose that UDOT increase the number of busses that travel routes up canyon during the prime ski season weekends and that an increase in parking fees be made at the resorts to limit the traffic up canyon and lower the chances of accidents and pollution from individual drivers. A fee for a seasonal bus pass could even be created, making UDOT and the state of UT some money off of this Approach. I would happily pay for a bus lass and take the bus if it meant no gondola in Little Cottonwood Canyon. I hope this and many other options are considered far more than the current gondola proposal and that it's seen that the citizens of UT who frequent the canyon would far prefer anything other than the gondola and want their voices heard.
26230	Nathan Watkins	We do not want a gondola. Look at other options that actually benefits access like a bus system or putting a toll in place to encourage carpooling and bus use. No gondola!
26232	John Bercaw	You have got to be kidding me! A gondola! Can you say corruption, special interests? Why is the tax payer bailing out corporations? This whole project reeks of doubling dealing and nefarious motives. As a life long Alta skier they can kiss my season's pass goodbye.
26233	Megan Ball	Little cotton wood canyons biodiversity is worth saving. The gondola project will disrupt this beautiful environment. The gondola project is a bad idea and should not be put through.
26234	Anthony Johnson	Morning, As a Sandy resident and frequent user of little cottonwood canyon, I am writing today to express my concern with the Gondola proposal. I am not wholly opposed to a Gondola, but I am opposed to having Taxpayers footing the bill. This proposal is for the ski resorts; if they want a Gondola they need to pay for the project. I would much prefer a wider road and train or bus system or better yet simply add parking garages and a wider road. Sincerely, Anthony Johnson
26236	Brendan Mcadams	This will change the landscape of a beautiful natural area that means too much. It's a brutal commercialization of nature. Irreparable damage for generations. Please do not do this.
26235	Abe Weintraub	I think this is a terrible idea and I am disappointed in this choice. I think it amounts to a massive subsidy to the ski resorts at taxpayer expense. It is a single use project. It will probably just back-up traffic on Wasatch blvd, pushing the problem downstream. We need to think of better solutions like expanding bus access across the Wasatch front including dedicated bus access up the canyons. Please don't do this.

26237	Drew Brodhead	This is a sad day to be a Utah resident. This decision to permanently alter LCC for a select user group is up right negligent! To be a part of a shadow campaign for the gondola, snow bird secretly buying up the lower land and to play into the hopes of future Olympics is piss poor leadership of a state run organization where build build build is its model. You know that winters are changing, becoming less intense. The storm days are decreasing. 20 years from now this will be an example of poor planning as it sits there more as a gimmick attraction then a"sustainable form of transportation". I don't want to pay for this. Utah does not want to pay for this. Your special interest group wants the levy on taxes dollars to pay for this. This decision is the start of loosing public trust in your institution. Shame on UDOT.
26238	Joel Clutton	The gondola isn't going to fix major traffic issues. There are more effective and responsible options such as increasing the busing and limiting personal vehicle usage up the canyon.
26241	Ed Coombs	I am not in favor of the gondola. I do not see it serving the needs of the canyons, but only the needs of a few, including resort owners and the builders/maintainers of said gondola. please do not spend our tax money on this boondoggle of a project.
26240	Michelle Todd	I am extremely upset and disappointed about the decision to put a Gondola up Little Cottonwood Canyon. If this happens, we will be branded terrible stewards of this magnificent canyon. During peak times, people can bus up the canyon just like they do in Zions National Park. There comes a time to take the planets side over people. I am a skier also. I understand the problem. But when I finally get to the top of the mountain, it is breathtaking. To think about looking down through the canyon at a bunch of steel, it is devastating. UDOT will be branded as having made the biggest mistake when it comes to the care of our natural habit. I plead with you to please, consider busing . If it works in Zion, it will work here. PLEASE DO NOT DESTROY WHAT WE HAVE! Michelle Todd
26242	Kim Buesser	This will ruin one of the main draws of SLC. I hope you enjoy your gondola when no one wants to live here anymore because of it. This is one of the worst violations of the environment and public interest. It's a shame that utah sides with corporations over its own citizens.
26239	Caroline Weiler	As you are aware, thousands of tax paying citizens have already, with STRONG voices, expressed their desire to not have a gondola placed in little cottonwood canyon. This is coming from the people who support UDOT with their tax dollars. We appreciate being a part of the process of our how money is spent, and this is not it.
26243	Mollie Delahunty	I do not support the gondola being constructed in Little Cottonwood. We have a responsibility to the canyon and to the future generations to preserve it how it naturally is. A gondola will scar the canyon permanently. Please look at less radical solutions.
26245	Lucas Bush	Construction of a gondola will not reduce traffic up the canyon, as this vehicles will still have to drive to the mouth of the canyon and park their vehicles. Additionally, the gondola is such low capacity and high cost for individuals that it will not benefit the average skier. Please reconsider, and implement a reassessment period to determine the feasibility of this project.
26246	Jill Laws	I oppose a gondola in Little Cottonwood Canyon. I support a phased approach and taxpayer friendly solution to protect our canyons - expanded parking, reservation systems, carpooling, and more responsive bus service. Taxpayer funds should be used to benefit all taxpayers, not just ski resorts. Utah needs to protect our canyons not destroy them with expensive projects that only benefit some.
26244	Roman Fisher	i just don't get it. you say you care about the canyon but you're stripping it of it's natural beauty with this [REDACTED] there are plenty of other ways to stop traffic. tolls to go up the canyon is one of them. also where [REDACTED] is anyone gonna park to get on said gondola?
28190	Marie Barnhurst	It seems that no matter what the public thinks about this project, our opinions do not matter. We love Little Cottonwood Canyon. We are not skiers. We will not be benefitting at all from this decision, just like the majority of Utahns. But you want us to pay for it with tax moneys. The general public is as always powerless in the face of special interests. It leaves us as always powerless.
26247	Jill Reud	So you are going to totally disregard the input of those of us who live in or near the canyon or those who work there. I find it incredible that Money... money for profit is how you made your decision. This will benefit NO ONE who lives here. People in z Utah are NOT going to pay the big bucks to take their family on the gondola just like they don't use buses because of the cost. Please reconsider. This is list a waste of OUR money.
26248	Ilene Helfrich	Totally against gondola - it will change the entire feel of the canyon experience... and i am a skier. Public funds should NEVER be used for this gondola....
26249	Elli Lavon	Hi. Please don't build a gondola in Little Cottonwood. No one in salt lake wants a gondola in little cottonwood. nothing good comes from that kind of infrastructure
26250	William Dunn	Sad. This is a short-sighted decision based on numbers that are highly speculative & misleading. The towers will ruin Little Cottonwood Canyon. The concrete footings and access to each one will devastate the canyon floor along Little Cottonwood Creek. Little Cottonwood Canyon is our Yosemite and needs protection not exploitation. It's will just fuel further problems down the road like further ski resort expansion and increased mountain degradation. Tolling and Pooling are better solutions when you consider the percentage of days in a year where congestion is a problem. Let's not turn LLC into an amusement park which is clearly the selfish goal of Snowbird. Our powder days are becoming a thing of the past and now is the time to prepare for declining water supply considerations. The Greatest Snow on Earth was (emphasized tense) a result of winter storms passing over the Great Salt Lake. Look at that - another sign of things to come! Imagine how much more water these ski areas will require to "make" snow. Let's not feed the monster! Let's not be tricked into a transportation plan fraught with error! Get off the money machine and become responsible stewards of our Wasatch!
26251	Tyler Blaine	Absolute dumb [REDACTED] idea and a terrible use of funds. You all should be fired for suggesting the notion. Absolutely disgraceful.
26252	Cami Haderlie	This is a mistake. I live and travel this canyon very frequently. This is not a good solution to the travel it will ruin the environment of the base of the canyon citizens. Please reconsider.
26253	Troy Merritt	Cleaner air, cleaner water, most efficient and cheaper ! An incredible view enhanced by incredible engineering! Fight off the rich libs and put up a gondola please!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26254	Chris Firmage	The gondola is not for Utah. The gondola is for ski resorts and investment bankers. By creating the Gondola you are destroying the very canyon we all seek to preserve. You eliminate hiking trails, boulders and the pristine view by creating a gondola. For the sake of SLC the canyon and the people of Utah do not build a gondola.
26255	Jack Levitt	Please consider the impact of the proposed gondola on one of our most precious resources. As a resident I feel this proposal directly sacrifices my interests in lieu of benefiting the ski resorts. Climate change projections indicate we won't have skiable snow in the wasatch forever. The gondola is a permanent solution to a temporary problem.
26257	Jared Barney	This is obvious what is going on. The vast majority of people that live in the area want nothing to do with a gondola, but you are shoving it down our throats to appease snowbird. Something is so fishy about all of this. They "secretly" buy the land and now udot magically decides that's the best option? There is money exchanging hands in a back room somewhere and it will eventually all come to light, but not before you guys deface our canyon with your 15 story towers. This whole thing is
26256	Angie Bell	-increasing the number of people that can access the canyon is not a solution. It is a new problem. There has to FIRST be measures in place to control the number of people. Alta and snowbird implementing reservations for parking has basically solved this issue (I ski every single weekend so I've seen the difference it made). -There has to be some incentive for locals to use the gondola. More time and significantly more money does not make me want to use it. Why would I spend \$200 and plan an extra hour to take my family skiing where we will end up standing in ridiculously long lift lines? -This feels completely motivated by land development to generate more tourism and create more revenue. That doesn't have to be a bad thing, but let's call a spade a spade.
26258	Tanner Czerny	Pease don't ruin our canyons like that. Eco systems will be lost just to save you 15 minutes
26260	Brie Houston	Please keep the land in its natural state. You will destroy the natural beauty and destroy animals homes. Stop this movement please!!
26259	Rosemary Nicholson	I am really disappointed in the decision to use the gondola. It seems to only benefit those skiing at a resort in LCC and doesn't help any of the other users of LCC. There are many things to do other than ski at Alta or Snowbird such as hiking/running, back country skiing, climbing, back packing, and many others. The gondola does not solve any problem for these users. It seems many locals are against this and I'm disappointed that these opinions were not considered.
26261	Maximilian Moore	Do not approve this project. It will have a negative impact on waterway flow, air quality and the simple good view
26263	Adam Knutson	NO Gondola. NO ripping up the canyon to add this horrendous metal monster eyesore. NO to the ski industry and rich financial backers who lobbied to get this option put in. NO to a gimmick that is only useful for 20% of the year, but destroys the views that are currently unmarred. NO to tearing up the boulders and rock climbing that are world class. You have got it wrong. Do NOT install Gondolas in Little Cottonwood, listen to the people who are helping you get elected, not just the rich.
26262	John Bosshard	I support the gondola as the preferred alternative. Great choice!
29436	Adam Knudsen	Hi, my name's Adam Knudsen. I moved to Salt Lake four years ago for rock climbing and mountain biking and I quickly fell in love with skiing, but I've never left the public comment. I sent an email and I feel so strongly about not putting the gondola in Little Cottonwood that I decided to leave a voicemail as well. I'm sure you hear a thousand of these probably the same comments you here for everyone but this is something wrong. Option it leaves a permanent scar in a beautiful Canyon and it's it's only useful one out of Four Seasons out of the year and the rest of the year it's there and it's it's blocking the views of this gorgeous Canyon and we're out there. There's other people that use them besides skiers and besides it's not just a theme park for the for the ski resorts to build. Whatever the hell they want. This is You know public land and or at least partly public land probably private land obviously, but this is the wrong option. Please do not put the gun to a conflict. Thank you.
26264	Ari Hobfoll	This gondola would be a blight on our beautiful landscape. And a 2000 vehicle car lot!? Disgusting short sightedness. Just add more buses and charge a fee for private cars.
26265	Mckay Williams	Please, don't put the gondola up. The people have spoken and we don't want this.
26266	Julie Zamora	The gondola is not a solution; it will create numerous other problems for Utah residents and land stewards to 'fix' the problem of a select group of people.
26267	Linda Houtz	Over \$500,000,000 for something that involves a small portion of our community? With decreasing snowpack as the years go on (much more by the time your gondola would even be done) and we will see fewer cars in that canyon. The value of our community is nature and this is not working with nature. A couple decades from now, I think people will look at those chunks of concrete and feel embarrassed. Tax payers are at a time where they will be facing all sorts of other demands (homeless crisis...you don't see that if you don't live where they are camped out...and spending money to figure out solutions to our water crisis. We will need to fork out a lot of money to improve our air quality and water availability. Big projects in this direction, I could respect the \$500,000,000 price tag.
26268	Eric Christensen	We all know you're going to go with the less popular gondola option. I just wanted to be another voice in the sea of people dissenting. Can we just focus on buses, encourage carpooling, and maybe just accept that there will always be bad traffic days? Gondola listen to the people.
26269	Mackenzie Epperson-valum	Instead of trying to jam pack more people into this small ecosystem why don't we try to find a better alternative than the gondola. This canyon is being loved to death. I say no to gondola. Has anyone over there considered avalanche tunnels like they do in the rest of the world? That would help with safety and still allow for public transit and private transit up the canyon. Either way, we can do better than a gondola....
26270	Ed Belka	I say don't mess with Mother Nature.
26271	Richard Villata	As a civil/environmental engineer I do not think that a gondola is a good solution due to the high visibility and operational problems during inclement weather. European tunnels and lane expansion using covered roads would be an advantage. The cost may be higher, but the advantage lies in having access even during periods of avalanche activity. The road is covered by the roof of structure. This method also permits the road to be built into the side of slope, which would minimize the potential for road closures in Tanners Flat and Superior. The road was closed for an extended period this winter during heavy snowfalls. A gondola will not permit the necessary access for logistic support services such as provisions and emergency services. High winds will close the gondola and the road could be blocked. Take a cue from the roads in the Alps. They are tastefully designed and provide minimal impact on the scenery. An additional design consideration is that work could commence immediately, in stages, with the areas that are most prone to slides.

26272	Karen Wilcox	The gondola is an expensive, disruptive boondoggle that will benefit the corporations that run the ski resorts, not the people of salt lake county. INSTITUTE a TOLL on the road and see how fast that fixes the traffic. I live in the mouth of the canyon and during covid, when parking reservations were implemented, only a couple of days were congested. If you institute a high toll for the wealthy who ski (not the majority of us) you will see car pooling and increased interest in the buses. Also, hello climate change. By the time you build this monstrosity (which will absolutely mar the view, and disrupt the wildlife/watershed) we won't have much snow anyway. Please please please ignore the wealthy and try a cheap common sense approach first. Institute a high toll for skiers. I am 100% opposed to this short sighted, misguided approach. You cannot convince me that such an expensive approach that will be so devastating is even a remotely good idea.
26273	Thomas Derks	This has to be the biggest waste of taxpayer money you imbeciles have come up with. There is no consideration for any outdoor enthusiast besides the greeting hands of Snowbird and Alta. I would love to hear how you plan on evacuating people from the gondola. Will you need to construct roads so that an evacuation would be possible?? Wouldn't that harm the environment and ecosystem? Do you guys really believe this is the right choice or has greed, once again, gotten the best of you. I hope you guys will open your eyes to the bigger picture and not just the 10-15 days in the winter that the canyon is overly congested.
26275	Joy Johnson	This is terrible! I hate having a stupid ugly gondola scarring our beautiful canyons. This is a tragedy.
26276	Mark Schmele	This is blatantly and brazenly ignoring OVERWHELMING public sentiment. If this gondola is built, it will show clearly that the state has no regard for its citizens. If this gondola is built, I will leave the state, taking ALL of my taxable income with me.
26274	Jason Brand	A serious analysis with serious commitment to solving canyon traffic would not have come to this conclusion. It is apparent the goal posts have moved here toward building a novelty/tourist attraction well supported by a long list of special interest groups operating under the name Gondola Works.
26277	Will Delany	I do NOT support this decision. The decision to implement a gondola will undoubtedly limit access to public lands and take advantage of taxpayer funding to serve privately owned ski resorts. It represents an inappropriate use of public funding that should be focused elsewhere.
26279	Benjamin Green	<p>It's unreasonable to spend an ABSURD amount of taxpayer money, that doesn't exist yet, on a structure that will have a high visual impact on one of the most beautiful places in Salt Lake City.</p> <p>This thing will run from late November (at the earliest) to late April? That isn't even 6 months! There is zero traffic early and late in the season, people will opt to drive than to take the gondola, it's a fact. You can't grill and hang in the lot if you take a Gondola.</p> <p>The use case for this Gondola is Late December to Middle of March, IMO.</p> <p>In addition, on those days we may get 14-20 overnight powder days, in which traffic does back up because of canyon closure. We have great snow but in the past decade we really haven't been getting dumped on where we have weekly powder days.</p> <p>Finally - stop splitting the cost over the number of years. It needs to be split over the number of MONTHS it will be used.</p> <p>It's upsetting that money always wins. Get ready for lawsuits to put a long, long hold on this.</p>
26278	Deidra Hartwell	I oppose the proposed gondola. The cost is exorbitant, the impact on the natural resources and beauty of our canyon would be irreparable. The benefit is to a select few, on a very limited number of days per year. It is also an inflexible option, that if implemented, would leave very little option to change, modify or improve. There are better options available, that would not be such a huge cost. There are better ways, and I'm sure the people of Utah can creatively implement these better ways.
26280	Raelyn Shackelford	There are more efficient and less destructive ways to figure this out. Why would we destroy our canyon?
26282	Helen Wade	This gondola is a disastrous idea. The impact it will have on the environment, wildlife and overall health of the canyon surely will not be positive. There are better solutions then this dumb idea.
26281	Rebecca Mellema	I believe that the gondola is a poor decision. While I absolutely hate the traffic up to the ski resorts, I believe that there are better ways of dealing with the given situation rather than building the gondola. Making the buses more accessible, or incentivizing using public transportation with a discount or something.
28189	Jared Zaugg	<p>In your email, you say that UDOT is accepting comments until October 17 but you have no link to where comments can be made. Here's my comment: As a resident of Salt Lake County, a taxpayer, a skier, and a hiker, I support the gondola in Little Cottonwood Canyon.</p> <p>Thank you,</p> <p>J. Zaugg</p> <p>██████████</p> <p>██████████</p>
26284	Stephen Allen	Don't do the gondola! Protect Utah wilderness!
26283	Sydney Johnson	STOP RUINING OUR BEAUTIFUL LANDSCAPES FOR MONEY
26287	Adam Child	Not acceptable to use taxpayer dollars for funding and only include two stops at Alta and Snowbird. The proposal should consider additional stops to make the canyon more accessible to everyone not just resort skiers.

26297	Jake Treadwell	I am Glad UDOT made the right decision about the Gondola. The problem in LCC is rubber tired vehicles on the road. We need to get people off the road and riding mass transit that makes sense. The road is the issue. Good Job UDOT
26294	Sera Gearhart	Release public comment information, or you won't find the funding for this! We need to try simpler options first-- tolls and buses. The public has given a resounding NO. This will ruin the beauty of Cottonwood and existing resources for all time. The public is against this.

26300	Sera Gearhart	Release public comment information, or you won't find the funding for this! We need to try simpler options first-- tolls and buses. The public has given a resounding NO. This will ruin the beauty of Cottonwood and existing resources for all time. The public is against this.
26302	Glynn Donahue	This is an obvious taxpayer funded boondoggle to benefit the wealthy oligarchs at the expense of the wage earning taxpayers. The best solution are smaller capacity hybrid buses (20-30 passenger) running every 20 minutes instead of once an hour during peak traffic hours from designated parking areas & Trax stations. Very few wage earners can afford a \$35-50 round trip gondala pass in addition to their lift ticket/IKON pass.
26301	Paul Wason	I'd really really hate to see permanent damage to the canyons I grew up loving and recreating in. Rather than make it complicated with a gondola, why not just tolling, or doubling / tripling bus service? So many alternative ways that are not as intrusive to the canyon. Please re consider
26304	Christian Widener	No to gondola up little cottonwood canyon
26303	Andy Hulka	I am personally in favor of the gondola option, mostly because I am opposed to road widening in most cases. I hope the project team will consider options to add more stops along the way so the project will benefit campers, hikers, climbers, etc. I also want to express support for a train up the canyon as my #1 preference if that's ever possible.
26305	Lyndsie Gibson	No gondola

26307	Robert Barr	I have a cabin on the Brighton loop. I have been driving these canyons for over 50 years. The motivation for all of this(outside of the ski resorts interest) is to reduce impact in the canyons by changing behaviors . I suggest starting with a virtually zero impact and significantly lower taxpayer cost. In conjunction first with the resorts do a sliding scale toll that could be worked by the resorts. And adjusted by day and season. They all have several employees working their parking areas. Start by enforcing a prohibitive sliding scale toll. Say \$50 for a single occupant in a vehicle (driver only) progressively diminishing to \$0 for 4 in a vehicle with a reduced price pass as an incentive for the driver and preferred parking spots reserved for fully occupied vehicles. Of course this would still need (to be reasonably attractive to the general public) a park and ride lot located near the base of the canyons. The fees at the resorts would offset the reduced passes and also allow more skiers access to the resorts and ultimately sell more passes. Also by sliding the scale due to day of the week or season it encourages more skiers to ski during weekdays and lower use periods and again boosts the resorts overall bottom line without contributions by taxpayers. Ultimately a similar program could be run in summer months to abate traffic and impacts on the canyon. And ultimately the toll may want to be handled prior to entrance to the canyon at the base. But still at incredibly reduced cost and impact than the current proposals. Of course it also impacts those that are hoping for financial gain from the more expensive proposals from the builders, property owners , politicians and possibly even UDOT employees. But not implementing and trying at least some form of this would be absolute proof of the motivations.
26306	Carson Roberts	You really gotta bring more infrastructure to the sacred and beautiful wasatch mountains. When will it be enough? There is already too much infrastructure from the hotels and resorts in the canyon. Appreciate the beauty, don't destroy it.
26308	John Borla	I am not opposed to the proposed gondola, but am opposed to it be funded by the taxpayers. Snowbird and Alta will benefit the most from this project thus they should be funding it.
26310	James Grenke	I disagree with the proposed plan. The visual impact will negatively affect the experience of climbers and hikers in the canyon.
26309	Erin Wal	Stop letting people drive up the canyon. Charge a toll if they want to drive. Use that money to fund more bussing. Turn the canyon road into a free bus system that runs through the summer. People can get off and hike at popular spots. Give us more busses on busy ski days. Pay the bus drivers more. Do not construct either a wider road or a gondola. Stop cars from using the canyon. Or if they can't be stopped, charge a fee and use that money for other government projects (more public transit in the city).
26311	Matthew Gill	Please do not move forward with the destructive building of a gondola. There are other alternative options that are cheaper and as environmentally friendly as the gondola. Please do not deface this beautiful canyon.
29437	Eugene Kim	Hi, my name is Eugene Kim and I'm calling because I was interested in gaining more insight into the gondola project that is currently being proposed by little cottonwood udot. To be completely honest, I don't want to be the person that's going to be nay saying cuz I know that there's a large number of people doing it, but I do want to be the person that is requesting more information regarding the project itself. Um a little bit more transparency regarding how this is going to be done. What is addressing anything else that can be given in regards to the gondola project would be wonderful and I think that it's only fair especially as someone who's grown up his entire life at the base a little cottonwood having been able to appreciate that area.
26312	Nat Obrochta	People who live here are overwhelmingly against the gondola. Listen to the people and not the money.
26314	Kyle Alpert	This is like performing surgery when physical therapy can do the trick. Invest in an electric bus fleet and increase tolls, both of which can be tweaked and adjusted as data comes in, unlike the gondola which is irreversible infrastructure. There's plenty of research that shows that increasing throughput doesn't reduce congestion. Car traffic will remain the same in LCC with the gondola. The only effect will be that more people can get to the resorts, plus a giant impact on the landscape of the canyon and the experience of people who recreate in it for reasons other than skiing.
26313	Melanie Ogden	No gondola. The people do not want it. Let's listen to the people who live here. Dave said that people don't want their tourist friends to ride a bus when they come and visit but a gondola is public transportation also
26315	Doug Jones	Extremely disappointed that this expense would be considered by the state when that amount if money could greatly benefit homelessness and education. Much more important problems than getting more skiers up a canyon.
28188	Jim Kanaley	Yes to enhanced bus service. No to expensive ugly gondola. Dont ruin our beautiful canyon with gondola towers and cables!!
26316	Tara Shupe	We need to implement MANY other things before moving forward to build a gondola. I DO NOT agree with providing corporate welfare to ski resorts in building a gondola that only benefits them. I DO NOT use the canyons to ski. I use the canyons for many other reasons, so this plan doesn't serve me at all. We have yet to implement toll booths to enter the canyon and at the trailheads, we need a more comprehensive reserved parking system, regulate the entitled skiers entry into the canyon, DO THE CAPACITY STUDIES, more buses!
26317	Joshua Reynolds	I appreciate the opportunity for comment. It seems the majority of people don't want a gondola. Why as someone who has never skied before, should my tax dollars go to this project? Make the ski resorts foot this bill or limit the amount of people allowed in the canyon each day. This will be a colossal waste of money as people will still opt to drive 9 times out of 10.
26318	Dylan Droxler	I think building a gondola is a terrible idea, puts resorts interests over the health of the canyon. Promote car limits and improve public transit.
26320	Bart Miller	in favor of gondola!!!!!!!!!!!!!!
26319	Melissa Wright	Yes - Please build the gondola! Best idea ever!
26321	Jonna T	I am strongly opposed to the gondola as a transportation solution up our canyons, especially up Little Cottonwood. Incredibly unsightly, invasive infrastructure that will still depend upon vehicles getting to the starting point. Upkeep and maintenance for decades to come.
26322	Regan Sinclair	A gondola is a great idea! I'll pay for a gondola ride as long as there's free parking at the base. I'd rather have one consistent ride via gondola rather than wait forever via ground transport if any type. I'm sick of greedy resorts jacking up pricing and forcing locals to pay for parking.
26324	Mallory Millington	The gondola does not service all users of Little Cottonwood Canyon and does not solve the parking problem, it just moves the parking issue down canyon. Frequent free electric buses with picks up locations at multiple locations near shops and community hubs is the most sensible and flexible solution.

Frequent free electric buses with picks up locations at multiple locations near shops and community hubs is the most sensible and flexible solution.
26323	Becky Ochsenhirt	Why should WE have to pay for the resort owners to become richer? Traffic will still be going up the mountain but the cost of making the resorts more profitable will be passed on to the tax payers. With the ski season typically December - April, what about the other 7 months of the year? Who is going to be taking it up the mountain???? Also, I know that a gondola was proposed in Ogden many years ago and the environmental concerns were overwhelming with Federal properties and damage to our mountains. I am VERY opposed to the gondola and will do everything to fight against it.
26325	Heidi Robinson	The gondola is a terrible idea to supplement skiers coming in for a portion for the year. We need to look at better options that the residents of Utah support for year round access. Toll roads would be the best place to start, and incentivize the more people per each car. The gondola is limited to like 35 people per cart, depending on how many stops are added, the length of time will quickly outweigh the benefit for riders and we'll end up in the same situation where we have too many cars in the canyons. Make people pay to use the canyons, not pay hundreds of millions of dollars in taxes for a gondola system that will do little to solve the actual problem.
26326	Aspen Morris	Please do not do this!!!! This isn't what Utah wants!!!
28185	Christopher R George	I applaud your well considered determination on resolving high traffic loads in Little Cottonwood Canyon. I fully support the Gondola option. Thank you.
26327	Mykin Race	No gondola!!! Listen to the public! We do NOT want it!!!
26328	Darin Poulson	UDOT's continued insistence on pursuing the gondola over every other common sense and cost-effective solution only furthers the sentiment that this is not intended to be efficient, but deliberately costly and laden with pork. Bussing will not require gigantic, years-long, over-budget, and environmentally hazardous construction projects. However, I suspect, as many people do, that this approach is preferred precisely for that reason. Routing high dollar construction contracts to preferred contractors to waste money, jack up costs, and extend project timelines to serve the individuals on the UDOT board and other politicians rather than the public who will be footing the bill through taxes. The gondola was and continues to be a symbol of egregiously self-serving government officials making decisions against the public interest to ensure that no one benefits from it more than themselves. It's disgusting.
26329	Michael Mc Ainsh	As a 71 year-old frequent hiker in Big and Little Cottonwood Canyons, I am opposed to the UDOT's preferred answer to congestion in Little Cottonwood Canyon, the gondola. Besides it being an eyesore, it will move far fewer people than other suggested modes of transportation, at a greater cost in construction and in ticket sales to the public. It will turn this beautiful canyon into a playground for the rich, while UDOT will expect the taxpayer to foot the bill. Maybe we should ban cars in the canyon and build a railroad to shuttle canyon visitors to hiking trails and ski resorts!
26331	Lynn Dixon	I strongly oppose the Gondola in Little Cottonwood Canyon. I oppose it for many reasons, both environmental and financial. It is WRONG to have tax payers pay for something that really only benefits the privately owned ski resorts. I live in Cottonwood Heights and while traffic is certainly an issue, the answer is not a \$500+ Million dollar gondola that will destroy the beautiful canyons that we moved here for. There are common sense ways to alleviate the traffic and honestly, the traffic is only bad on snow days and big ski days (It's not a 365 day/year problem). We need common sense, affordable solutions like: requiring minimum riders in a car, more bus access (clearly marked where to get and ample parking at those bus accesses), reduce number of IKON pass holders (that's a huge part of the problem!! and not one that tax payers should pay to resolve) All in all, my family is strongly opposed to the gondola. We enjoy the canyons regularly, are skiers and tax payers: there is a better way forward. NO TO THE GONDOLA. Thanks for hearing from those residents and tax payers that this will affect. Lynn Dixon
26330	Joanna Johnson	Please don't do this! There are other options for our canyon. As a lifelong Utah resident, I am aware that snow has varied these past few years. Why destroy so much nature for a resource that isn't guaranteed? Find a way to transport skiers that doesn't damage the canyon that they would be using. Find a mutualistic solution, save money, and save that canyon! Nature in Utah is disappearing, please don't contribute to it.
26332	David Anson	As a concerned retired geologist and Salt Lake resident I am against the gondola. Please do not ruin our environment and scenic values. Thank you very much, David Anson, PhD
26333	Anya Biskupiak	I think the this is the worst idea on earth and I hate it. NO GONDOLA.
26334	Buc Buchanan	Well Done! I believe you made the logical, common sense decision. Thank you
26335	Sarah Fender	We do not need a gondola! Stop ruining our beautiful state! Keep it preserved!

ID	Full Name	Comment
26336	Judith Warner	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean" the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium" parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.
26337	Dee Munson	<p>Please reconsider common sense alternatives including enhanced electric buses and a reservation system for the road & parking. The gondola towers alone, are huge & unsightly and will dominate the beautiful, scenic skyline of the whole canyon.</p>
26338	Sophie Dasaro	<p>I am very disappointed with the plans to install a gondola for recreational use in the canyons. Environmental impacts considered and aside, this is a frustrating plan to see while observing a housing crisis in Salt Lake City. I work with refugees and New Americans resettling in Utah, and I am aware of the rising population of unhoused residents generally in Salt Lake City. Underserved populations are living so low under the poverty line, and are forced to remain there under federal programs that perpetuate poverty. To see a plan that offers over \$500 million to constructing a gondola, purely for recreational purposes, while such economic inequities persist, is beyond devastating. This amount of investment and development should be prioritized for the wellbeing of Salt Lake City residents. I am infuriated by how easily this money can be allocated to a cause that will cater more to tourists and visitors from out of town. This money should be spent on HOUSING, subsidized programming, and PUBLIC TRANSIT. I am devastated by the lack of care by our governing bodies to prioritize issues of livelihood and survival, choosing instead to focus on an investment that profit just a few entities. I hope this comment reaches the attention of those who have power in decision-making. I feel like a broken record in begging for local support of living humans over profitable developments.</p>
26339	Matthew Schwartz	<p>I live in Utah and recreate weekly in LCC. The gondola will ruin the user experience for everyone other than the tourists visiting the resorts. Not only will this be an unsightly project that will ruin the LCC feel (alpine, nature, ya know not having 250+ ft tall polls with a tram running along then creating even more noise pollution). LCC can really feel out there in some areas, with just a view of the beautiful canyon. This project is not what we need. Make the road more efficient, add bussing. There are less drastic and costly steps before this gondola. I also really don't enjoy my tax money going to support snowbird and alta. I love them as mountains, but I like to choose when to give a corporation my money, not be forced into it by the tax collector. You clearly aren't going to read this because the people you've got someone greasing the wheels with the piggy pig slime. So I'm speaking to the ether. The gondola is not the solution for LCC.</p>
28184	Mollie < Delahunty	<p>Hello, My name is Mollie Delahunty. I'm an outdoor enthusiast and recreate in Little Cottonwood Canyon. The purpose in writing to you today is that I am extremely concerned about what has been proposed for the canyon. I have been following this for over a year and a half now, I have worked with Save Our Canyons and the Salt Lake Tribune about this issue. And I'm concerned that while the proposal for the gondola has been met with extreme resistance, that UDOT and EIS have still selected to go forward with the alternative B, the gondola. It is our responsibility to protect the natural beauty of the canyon and do all we can to leave as little trace. I have written ideas, argued for a more sustainable solution and I would like to share that article with you all. You will find it attached. In the end, we want the same thing. A resolution to the traffic concerns. I truly believe that we can work together to come up with a solution that will work just as well as a gondola and have a low impact on Little Cottonwood Canyon.</p> <p>Kindly, Mollie Delahunty</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26340	Rebecca Maisy Sweeney	Seriously, don't waste money with this project. And definitely don't negatively impact the environment. Don't be dumb asses
26341	Brian Keller	The gondola is not an effective or efficient solution to canyon traffic. Public opinion (at least according to the response I've observed) supports this sentiment and local lawmaking should reflect the beliefs of its constituents.
26342	Claudia Pearson	I absolutely am opposed to the idea of a gondola in our beloved Cottonwood Canyon. I live within a couple of miles of canyon entrance. When the canyon parking is full to capacity, close entrance until parking spaces open up by cars leaving. Make a reservations system such as national parks have. Ex. Zion. Car pool. Please do not fill our canyons with humanity at the expense of loving our canyons n parks to death of them. Do not take out trees, disturb wildlife. Listen to your voters. The largest percentage does not vote for a gondola.
26343	Makalu Arnold	There should be no reason for a gondola in little cottonwood canyon! This will only clog up the base of the canyon more. People will be waiting for hours before getting to the hill. Parking would be a mess with it already being a problem. More buses and having people car pool is way better not to mention all the damage you will be doing to the canyon by putting in a gondola.
26344	Jerry Smith	The gondola option for Little Cottonwood Canyon is not viable because it is intrusive from a visual standpoint and an overall perspective. It would be intrusive for homeowners that would be impacted by the presence of the gondola. I really don't understand how a gondola system can alter the volume of traffic versus a managed electric busing system.
26345	Andrew Junk	I'm against the decision for a gondola. I don't think gondola will be used more than buses. I think enhanced buses can help the little cottonwood traffic.
26346	Christian Johansen	This is a terrible direction for the canyon. Why do folks want the west to burn? Bad bad bad on all fronts. Listen to those who live and breathe the canyon everyday.
26347	Leslie Castle	I'm opposed to UDOT's support of the gondola and would support further consideration of other alternatives to decrease traffic, ie. Tolls, buses, etc.
26348	Shane Duffin	I am disappointed that UDOT hasn't listened to the public. No Gondola. Widen road to three lanes. Alternate up and down with peak times. Add buses. Also could include avalanche sheds in high activity chutes as done in Europe, CO and WA. Don't mess up our canyon with pillars... Also quit taking special interest dollars. This is only benefiting Alta, Snowbird and the two legislators with land ties.
26350	Tessa Babcock	I don't agree with the construction of any gondola in any of the canyons. We need to be making decisions based on climate change and water preservation. It is absolutely ridiculous that our leaders would okay a project as detrimental as this. Please stop it.
26349	Connor Bott	this is a horrible idea. say goodbye to the "local" ski resort
26351	Miranda Small	Dear UDOT, Your decision to move forward with the gondola is disheartening. I have received messages from climbers across the US who are both angry and heartbroken, and we will not sit on the sidelines while you destroy Little Cottonwood Canyon in the name of greed and politics. Do you know how many climbers travel to SLC for the chance to climb the boulders you will destroy? I hope you've done your research on the economic impact of lost revenue from climbers who will no longer travel here because the boulder they've dreamt of projecting no longer exists. Skiing is not the only reason people travel to SLC and spend money at our local businesses. Have you considered anything that Nathaniel Coleman has said to you? Anything that any of the climbing community has expressed?? Because it does not appear that this was a fair fight. We have made our voices heard. The resident around the canyon, regardless of their level of outdoor enthusiasm, have made their voices heard. It is a resounding NO GONDOLA. Yet you decide to move ahead with a gondola?? That is not in the publics best interest. Please listen to your residents and the people who use the canyon on a regular basis. Those are the voices that matter. Profit should NEVER take priority over preserving public lands for continued public enjoyment and outdoor experiences. Respectfully, Miranda, Draper UT.
26354	Mark Michaels	Gondola wont fix traffic. May decrease somewhat. But we need to cap daily skier visits. But oh wait, Altabird doesn't want to to limit their profits. But the skier experience is declining. Give the people what they want: build more ski areas outside the canyons!!
26352	Gillian Stanfield	I am strongly opposed to construction of a gondola in LCC. Installation of a massive structure throughout the canyon will essentially destroy the wild beauty of one of our precious natural resources, without even serving the full population that uses LCC for recreation. I favor a solution involving environmentally-responsible buses that run at a high frequency & strongly limiting access to low-occupancy cars/ charging fees for driving into the canyon, along with expanding transport hubs/parking near the bottom of the canyons and at strategic spots in the valley. The drawback to the current bus system, which I believe prevents more people from using it, is the low frequency of service and long times required for the trip. These issues could easily be mitigated by more-frequent service that includes both intra-resort/intra-canyon routes and express routes, along with reducing traffic volume so that buses can provide more rapid service. Transit hubs could include dining & shopping options, to enhance the experience for those using transit.
26353	Lynn Walter	Every time I talk with someone about the gondola I ask if they would actually want to take it and the answer is always "NO." This project is a big waste of taxpayer's money. All we need are more better busses!

26355	Beau Burbidge	<p>I am strongly opposed to this taxpayer subsidy that will do nothing to benefit the majority of Utahns (who will be paying the cost of this) and serve only to benefit two private ski areas. We moved to Utah because it is a fiscally conservative state, values its low taxes, and has a strong preference for private enterprise and against government subsidies. This proposal flips those values on their head.</p> <p>The reserved parking situation in the canyons have greatly relieved congestion and appear to be working well. Additionally, lift lines this past season were as long as ever. So what will this gondola do? Aid in reducing already manageable traffic? Increase resort attendance when the resorts are already at capacity? To me, it is a drastic and expensive solution in search of a problem.</p> <p>I therefore urge everyone in a decision-making authority over this boondoggle to oppose it. Thank you.</p>
26356	Easton Jackson	<p>I'm strongly in favor of the gondola. I'm pleased that UDOT has made this preliminary selection. I'm dismayed that Mayor Wilson describes her opposition as "Common sense measures" in her email today. A gondola, once built, is much lower impact. One pedestal/tower every several hundred yards, with no impact on the ground, plants and people below. Europe has successfully used gondolas for decades.</p> <p>Widening the roads and adding more buses is a much higher environmental impact. How are you gonna wide roads? This will require extensive excavation and removal of rock and dirt and then subsequent stabilizing of walls and foundation. And more buses up and down the mountain, even if energy efficient, certainly adds more carbon cost. And buses are affected by avalanche warnings, black ice and other road conditions. All of these issues are obviated by the gondola.</p> <p>I think UDOT has made the correct decision and I strongly support this.</p> <p>Easton Jackson, MD Draper, UT</p>
28182	Wendy N/a	<p>Yay! So so happy you are going forward with the Gondola project! It's the perfect answer to a traffic congestion in the canyon.</p> <p>THANK YOU! KEEP IT MOVING FORWARD</p>
26357	Ran Yehushua	<p>Once again, I am voicing my opposition to the LCC gondola. This will be a massive investment which will only benefit ski resorts and only for a handful of days in the year. An electric bus system with increased parking at the base (which is also needed for gondola) will likely be cheaper and much easier to scale as needed. Please do not proceed with the gondola, we do not want it.</p>
26358	Jim Mchugh	<p>The gondola is an outrage waste of taxpayer dollars. The Resorts created this mess, therefore they need to adjust their business model to eliminate/reduce the problem. The carrying capacity of the Resorts has been exceeded. Growth is not endless. UTALEC POLICIES are a malignant cancer to our Community.</p>
26359	Timothy Hood	<p>Is a gondola really the most cost-effective solution? \$550 million seems like a ton of money to alleviate traffic for skiers 20-50 days a year. Why aren't ski resorts bearing any significant cost? At \$10M per year in amortized construction, maintenance and operating costs (conservatively), this solution costs \$2-\$5M PER DAY to alleviate traffic in the canyon on high-traffic days. If 25,000 vehicle trips were saved (an impossibly high number, given only 2,400 parking spaces are planned), each car trip saved would cost \$200. Why don't we just give everyone free helicopter rides? It would be cheaper.</p>
26360	Mikhael Mikhalev	<p>UDOT needs to address why it selected a preferred alternative that was contrary to overwhelming public support. The gondola option still relies on bus service, but creates a single point of failure for the public transportation system up the canyon. If anything breaks down in the gondola system, or maintenance needs to be performed, then the entire system is inoperable. In contrast, an enhanced bus system (with or without road widening) can be easily scaled up and down based on demand, and any mechanical issues or breakdowns can be addressed by swapping out or adding buses. This will improve reliability of the system, and will eventually open the door for environmentally friendly gasoline-alternative busses. In addition, UDOT noted that many of the comments related concerned "Consideration of all canyon users, not just resort visitors." However, UDOT appears to entirely disregard this point in selecting the gondola, which does not serve any drop off points outside of the resorts. In contrast, the bus option would be able to service transportation for rock climbing, hiking, backcountry skiing and mountain biking. This is not possible with the gondola.</p>
26362	Keegan Parrotte	<p>As a frequent tourist that comes to Utah to ski Snowbird and Alta, the gondola plan is something that makes me and skiers that I travel with less inclined to want to ski here. Car traffic will remain the same or get worse. Increasing capacity does not necessarily decrease congestion. Invest in better buses and increased tolls which can be adjusted as time goes on, unlike the gondola or widening the roads, which is irreversible infrastructure that will have a negative impact on people who recreate in LCC for other reasons. Stop focusing on cars and don't create infrastructure that lines the pockets of ski resort execs and ruins the canyon for others.</p>
26361	Dave Griffiths	<p>How on earth is a gondola up the canyon, the best option for public transportation when it doesn't serve hikers, climbers, backcountry skiers, bikers, or any user group other than those buying ski tickets at the ski resorts? Will the canyon and parking be only made available to all other user groups with the gondola being the only option for skiers using the resorts? If it's solely for the resorts, then the resorts should be paying for it, if it's being paid by taxpayer dollars, then all tax payers, regardless of the intended use, should have access to it and it should be extremely affordable or free to ride.</p>
26363	Tyler Tippetts	<p>I am in favor of a gondola approach</p>
26364	Sharee Birrell	<p>Has anyone considered the feasibility of an electric cog railroad?</p>
26365	Robert Greeneisen	<p>I am not in favor of the gondola solution. It makes little sense to me. There are many other ways to resolve this issue (that occurs for perhaps 10% of the year) without building this project. It is a mistake in so many ways.</p>
28181	Jim Phillips	<p>All that money spent on a gondola to benefit a few (skiers) could be better spent building Trax lines in Davis and Weber counties. It would even be better spent to house the homeless, clothe and feed the poor. To alleviate traffic congestion in the canyons, build bigger parking lots at the bottom and only allow bus traffic up the canyons.</p>
26366	S M	<p>Why not spend the ungodly amount of 1/2 a billion to rebuild the great Salt Lake? No lake no snow worthless gondola? Greed....</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26367	Mark Barone	At first I was in full support of a gondola.....but after considering a gondola would only serve two ski areas. I am strongly believe busses are the answer (without widening the road) the future of little cottonwood canyon is only going to get more crowded and busses will ultimately be needed for all visitors, lets be proactive with the better bus solution!
26370	Savannah Mccauley	As an avid skier and a fellow ski resort employee, I understand the idea behind the gondola up to the resorts that allow more people to safely commute without traffic jams. However I am also appalled as someone who works in the ski industry how absolutely reckless this proposal is, destroying the mountain space that the resort cannot own and ruining it for everyone else who enjoys hiking, backcountry touring, etc. This is ridiculous. We do not want this!!!! And we do not want to pay for this!!!
26368	Gareth Daunton	I come to Utah frequently to ski. While I appreciate the need for less traffic in the canyon, I don't think increasing the capacity of the road or adding a gondola will solve the problem. Instead it will encourage more people to go to the resort causing there to be similar traffic issues. A potential solution could be making the canyon a toll road and using the funds to add more frequent and easily accessible public transit options.
26369	Natalie Taylor	No gondola! We do not need more people in the canyons. A gondola would forever ruin the canyon. Right now the priority should be to preserve the natural environment, not make it easier to get more people up the hill. Please focus on long-term sustainability with an eye to protecting our natural resources. No gondola.
26371	S Cowley	It is time to limit the number of vehicles in little cottonwood canyon...including gondola cars. That option is a boondoggle and will enrich the already rich construction companies. NO to the gondola tramway option!
26372	Lannie Vu	Don't we have more immediate needs than to support the skiing industry? Among the most immediate needs is this: Utah is rapidly running out of water, and that problem ought to be solved before we even consider any "gondola" operation.
26373	Kelly Distefano	While a gondola has the advantage of reducing car emissions - how much emissions will be produced in the prolonged building phase ??? And in additional cars and visitors coming to this canyon to ride this new and exciting gondola ??? Please consider modifying what we have in place now and use this money to save our salt lake so that this city is LIVEABLE in 15 years when this project is done.
29439	Randall Bouca	Hi, this is Randall Bouca. R-a-n-d-a-l-l Last name is b as in bravo o-u-c-a. I'm an area code 8 installing twenty two hundred foot Towers in Little Cottonwood Canyon would be grotesque and obscene anybody that promotes such a installation, construction should be ashamed. Alta is a hallowed and sacred place, unique. It's sad that people would consider. implementing such a system. Goodbye.
26374	James Kvasnicka	ok- If you want to build your gondola then why don't you build one for all the resorts- Little Cottonwood over to Big Cottonwood then on to Park City. And since the owners of Alta and Snowbird are in such favor of this project, they can subsidize this extension - just to be fair to the other resorts for using state tax dollars
26375	Carol Swenson	The gondola is the most expensive and worst option for environmental reasons, for a comprehensive solution to traffic issues, and for aesthetics - we already know this. NO GONDOLA! Why is this being chosen? Who stands to make profit off of the taxpayers that will pay for this?? STUPID decision, plain stupid! Widen the lanes and make it for buses only!
26376	Lapplebipoolo Lapplebipoolo	http://lapplebi.com/news/8139-cho-takoe-root-prava-na-android-i-zachem-oni-nuzhny.html
26377	K Forman	I am not in favor of the Gondola project. The list of reasons is long: traffic congestion to the parking spaces, building new parking areas and retail, the gondola changing the canyon views, the sound of a gondola overhead every 2 minutes (go stand under the tram and listen- not a quiet nature sound), the overcrowding of the canyon, the cost to tax payers, the ugly towers in the landscape, the inability to run in storm cycles, the environmental impact, the impact on wildlife, the list goes on- but you have read all the reasons. DO NOT BUILD THE gondola, for the love of LCC.
26378	Covey Morris	Well chosen! I appreciate the balance of safety, capacity, and environmental factors that led you to what I think is the best solution. I look forward to riding this gondola with my family in the future.
26382	Eliza Zenger	To whom it may concern: Please listen to your community, our needs, and our desires. As a climber, hiker, and skier I do not support the plan to move forward with the gondola. The canyon needs to be preserved and not permanently altered. The proposed plans will impact the iconic and natural character and aesthetic of the canyon. The gondola DOES NOT serve the climbing, hiking, and running community. It only serves ski resort users on approximately 25 days a year. Plus, it is fiscally irresponsible with a wild price tag on construction alone. I urge you to preserve the canyon and listen to your climbing, hiking, and running community. Sincerely, Eliza Zenger
26379	Hugh And Marilyn Douglas	No to the gondola!!!!!!!
26381	Kristin Swenson	The choice of a gondola is a bad choice. It will not solve our traffic problems and will be a huge eyesore, and it is the most expensive option. It isn't a matter of how many people might THINK they want a gondola, it should be if it makes sense to install one. Sneaker fact...it does not make any sense. Did you guys read the facts? I guess not, it just sounds so cool to have a gondola, whether it solves the problem or not!
26380	Emily Thorell	I believe the gondola is unsightly, more environmentally damaging, and too costly. The enhanced bus system, using electric busses, is way less expensive and more environmentally friendly without losing our views with an unsightly gondola. Plus, we can do this now! Please scrap this gondola plan that people do not want anyway.

28180	Susan Beck	My skiing experience is only related to cross country, so the problems I see are only related to the health of the canyon and the cost related to establishing this monstrosity. This is recreation we are talking about; a choice not a necessity. It is almost impossible to address such frivolous use of public funds. Even more upsetting is the pressure this activity will bring to this critical, fragile environment. How many people can be allowed to enter this spectacular place at one time and how can one expect it to remain a place dependent on careful management. The time of freedom for all, especially those who can afford it, is over. The time is now to protect places that we all depend on to remain healthy. Because we need this critical environment for all of us to benefit from the important resources these wild places provide, less is more.
26384	Nathan Henrikson	Please dont do the gondola or widen the road! We need to preserve the scenic little cottonwood canyon which i grew up up in! Listen to the people this affects the most!
26383	Cyndi Sharkey	Thank you UDOT, for conducting an intensive review applying subject matter expertise to the transportation question. I appreciate the fact that our experts chose to seriously address current and future transportation problems in LCC rather than ignore them. I support the selection of the gondola for its superior mobility, reliability, and safety aspects, as well as its reduced environmental impacts. I support UDOT's recommendation as the alternative that best serves the needs and interests of everyone whose goal is to preserve to the greatest extent possible the natural canyon environment, its beauty, its recreational attributes, and wildlife and watershed protection.
26385	Charlie Warrell	<p>I am disappointed with the gondola decision. Here are my points.</p> <ol style="list-style-type: none"> 1. Price is far too high. At \$550M with 3.5M Utahns, that's \$157 for each man, woman and child in Utah. Most of them don't ski. Ask Snowbird and Alta to foot the bill and see what there decision is. Effectively you are giving a credit of \$550M to the ski areas. This is grossly unfair to the tax payers of Utah. 2. Does not solve the problem in Big Cottonwood. Are you going to build another one there? 3. Canyon is full already with existing parking. Both Alta and Snowbird managed it very well last year. There is not enough excess capacity on the ski hills for more people. I am not thrilled with the parking reservations system but I have to admit it worked and is the best solution. If I am desparate to ski and don't have a reservation, I can get on the bus. This is not a great experience and is a natural throttle to overcrowding which reduces the skier experience and is dangerous. 4. Cost of maintenance will be high and possible overruns. Once construction occurs, there are few options to control cost overruns and an even higher cost of maintenance. We've all seen that before. 5. The travel time is too long compared to the road. On very busy days, yes it could be better but generally it adds a lot of time to the travel process. <p>Sincerely disappointed, Charlie Warrell</p>
26386	Steve Kartchner	This is not a good allocation of money, particularly with a downturn in the economy and high inflation. I do not support this project. Please abandon the plan for a gondola.
26390	Clay Dean-perry	<p>I feel the Gondola is the wrong solution for LCC.</p> <ol style="list-style-type: none"> 1) The visual intrusion of 250ft+ towers 2) The inflexibility of the system to future changes 3) limited stops 4) pushing the traffic on to Wasatch Blvd 5) The stench of cronyism with Snowbird <p>Building a regional hub at the gravel pit and limiting cars is the right answer for both canyons. You don't need extra lanes if you cut out 60% of vehicles.</p>
26391	Yukio Kachi	I support "the common-sense solution". The other options are too costly and too disruptive of nature.
26393	Evan Kraklow	I'm not sure if the udot representatives that announced the gondola is the best option are either corrupt and had their pockets lined, or if they are just that ignorant and short cited, or perhaps both. It is beyond disappointing to hear of the decision to go with the gondola despite OVERWHELMING PUBLIC SUPPORT AGAINST IT! What a terrible waste of taxpayers money to deliver the option that benefits the least amount of people and doesn't help the issue. Shame on you for trying to commit this crime against nature and our loved lcc
26387	Nathan Shipp	The review process has been very thorough. I fully support the conclusion. I look forward to finally being able to get up the canyon. This is an incredible project.
26388	Alyssa Erickson	I do not want to see a permanent gondola ruin little cottonwood Canyon, a gondola does not solve the traffic issues but does highly impanct the scenic and environmental health of the area. Increased Bus service that was on time and pay parking is a good solution.
26389	Eric Heath	I fully oppose the financial debauchery imposed by 2 already wealthy institutions. NO GONDOLA!
26392	Chloe Bokinskie	<p>Kindly note, the outdoor recreation in LCC is the epitome of what makes Utah and each of our canyons unique. The large scale infrastructure that will ultimately destroy many climbing and hiking routes will leave many like me devastated. Others will not have the opportunity to explore the variety of routes and trails those areas offer. The gondola project will obstruct views and will displace many animals; it may relive ski traffic pressure during the winter, but i assure you the environmental disturbance will remain forever.</p> <p>I encourage you to rethink and come up with alternative approaches towards the solution. Skiing brings in an ample amount of profit, however, climbing and skiing alike have allowed many of us to keep our sanity during these uncertain times in the world, and it's brought wonder and curiosity into the eyes of the youth. Consider ultimatums for the children who haven't had the opportunity, and won't if you take it away. Consider the future.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28179	Eilla Vincent	Please don't build the gondola in Little Cottonwood Canyon! Transportation to the ski resorts is not more important than the rest of the canyon! The canyon isn't wide enough for the gondola to be built without destroying ecosystems and trails. Hundreds of people a day use trails for hiking, running, and biking from spring to fall, and people go snow shoeing in the winter. Please please don't spend millions of dollars for skiing transportation at the expense of other, more accessible sports
26395	Peter Haglin	I fully support the gondola and would absolutely use it to avoid sitting in traffic (be that in a bus or a private car) in LCC.
26394	Cami Shipp	This is an incredible option! I fully support the Gondola and look forward to finally being able to get up the canyon
28178	Nick N/a	Why is the gondola moving forward when the vast majority of publicly polled opinion was against it? Considering it is supposedly ~95% taxpayer funded this should be the local peoples decision, a public vote or forum or townhall so udot can formally hear the voice and reasons why we are against it. I have really lost a lot of faith in udot as a organization today due to this decision, and as someone who works for a small local solar business in salt lake doing everything we can to help aid the environment, this feels like a backhanded slap
26398	Allen Weston	I am in FULL support of the Gondola being built. It is the cleanest way to move people in and out of the canyon. The roads are always backed up and cars put off way more pollution than a gondola will. Thanks!!
26396	Austin Shipp	This option is perfect. Thank you for coming up with the right solution. I look forward to being able to get up the canyon
26397	Bryton Quick	I think a better cheaper solution to the traffic problem is to add more busses during ski season. On powder days you typically get stuck standing in the bus, completely packed in, trying to balance and hold your gear at the same time. If we add more busses then that would allow people to actually sit down to ride the bus and people will feel less pressured to cram into a bus because they know the next bus is only a min or two away. Also these tax dollars could be going to fund public education and helping students get free meals if their parents cannot affors a meal plan. Lastly I don't want to look at gondola towers while in LCC
26399	Spencer Shipp	This a a great option! I really appreciate this solution being provided. I look forward to seeing it come together and being built - hopefully sooner then later
26400	Tom Nufer	I am 100% in favor of the gondola. I'd love to have a gondola to ride up and down the canyon. No parking hassles at the top. You'd see views of the mountains you'd never see while driving. I've ridden several in Europe, plus Snowbird Gondola. Take your bike up. Or hike. Huge tourist attraction year round.
26401	Osiris Cabral	UDOT needs to reconsider this. more flexible, effective, and fiscally-responsible options exist that do not require destructive large-scale infrastructure
26402	Alicia West	Please do not build a gondola system. Please, please increase public transportation options, via electric buses & require canyon reservations for every car, every day of the year. Add a toll booth & incentivize cars with multiple passengers with lower tolls. The buses could be staggered, for example: buses that leave on the quarter hour, stop at the ski resorts only & busses that leave every 20 minutes, stop at every trailhead and/or parking lot. Sell canyon passes similar to the National Parks passes. We do not need a gondola.
28156	Print Fitzgerald	Hi my name is Riley Fitzgerald, and I have an issue with your gondola project. Instead of spending all that money for a gondola, why dont we invest in more electric busses? There's so many activities up in our mountains and itd be a Shame to waste so much time for our residents of utah. It seems like you big companies aren't really caring about our surroundings or even us as people, it's all for profit. It's attracting more tourists for more money. It's bad to create such an expensive way to get up the canyon for such a silly reason. The costs of this project is not only a lot of money, but it's very costly to our earth too. CO2 emissions for the project would practically suffocate our valley, it's not healthy or even logical for any us. There's a shortage of concrete too, we should conserve our resources because everything is becoming more scarce, and emissions from concrete industries are 88% CO2 purely. I respect UDOT, i believe you guys will take in our voices and let the canyons remain as they are. There's so many better, and more go green options. You can even add a restriction to the touristy parts of the canyons where the car must have two or more people like an HOV lane. Let's not settle this just yet, let's look at what we as a city can come up with. I appreciate your time. Sincerely Riley Fitz
26403	Jefferson Curtis	This project reeks of government corruption thanks to Chris McCandless and Wayne Niederhauser's connections with Snowbird and LaCaille. Its stupidly expensive and only serves to grease the palms of a select few. Stop wasting taxpayer's money
26404	Darrin Lythgoe	I am opposed to any gondola in Little Cottonwood Canyon. It would be too expensive to build, too expensive to use, too destructive to the environment and the view, and it would serve only resort users. I would like to see a bus or shuttle bus system that would also stop at popular hiking trailheads.
28177	Suzanne Mahre	As a Utah tax payer and resident of Cottonwood Heights I am extremely disappointed in Udots decision for the gondola. Little Cottonwood Canyon is a beautiful and undeveloped place for us to recreate. Not only will the gondola take away from the natural beauty but you we taxpayers are to pay for this. The gondola will only benefit Snowbird and Alta resorts not the residents and patrons. I think this is a gross injustice to assume the taxpayers should pay to benefit resorts. Our tax dollars would be much better spent on preserving water and other resources for Utah residents rather than spent on private businesses and tourists. I think bus frequency and improved roads would be much more efficient especially if they were electric busses. I hope my thoughts will be considered in final decision.
26405	Brian Heaton	The gondola only serves the ski resorts. it should not be a tax burden. this is a private company issue. I do not ski, but use the canyon to hike and hunt and recreate. this is going to be a terrible eyesore, and long term regret.
26408	Angie Packer	THE TRUE SOLUTION MODEL HWY 210 AFTER ZION NATIONAL PARK!! NO CARS, BUSES AND SHUTTLE VANS ONLY!!!! DONE!!!! No widening the canyon road or Wasatch Blvd!!!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26407	Matthew Kastellec	I am incredibly disappointed by UDOT's insistence that a gondola is the right solution despite its astronomical monetary cost and unknowable impacts on the environment and watershed, all to ensure skiers can get up canyon on the 10 days a year when driving is unsafe. I am hopeful that the alternatives in the earlier phases prove once and for all that we don't need a gondola - we need better bussing, tolls, and restrictions to help manage the flow of people and vehicles. I will be lobbying my representatives to ensure the funding for the gondola never happens.
26406	Clea Hurst	I am apposed to the gondola. A more practical solution would be to make everyone that is going to the ski resorts take a bus and only allow cars through that are going to individual cabins, etc. don't let individual cars go up to the resorts in the winter. Run busses every ten minutes or so.
26409	Robert Kempton	Build the gondola. Buses are lame and pollute too much. Jenny is wrong.
26411	Jo Alberts	The LCC gondola will only lead to more ecosystem destabilization and higher congestion of humans and human travel. Not to mention the exponential increase of direct human to environment impact due to such increased amounts of people in the canyon. Trails will be expanded, litter will increase, and wildlife will be more scarce.
26410	Sheri Clark	I am not a skier so I don't think this is a good solution for everyone involved with the project and why should I have to pay for it if I don't use it!
26413	Maya U	I am incredibly disappointed that the gondola has been decided on. I am currently studying environmental and sustainability studies at the University of Utah in Salt Lake City. The gondola is not sustainable it will only harm the beautiful Little cottonwood canyon. The impacts it will have on air pollution and biodiversity is immense and will do more harm than good. Please reconsider your decision. If you actually listened to the public you would see that the majority is against the gondola and actually understand the environmental impact it will have. Please reconsider!!
26412	Rory Smith	I don't want to see more busses and a gondola added to constructed. It will take too long to get up the mountain and is catered to the resorts. Put in a light rail!
26414	Leah Frazer	Environmental impact aside, the gondola isn't an effective business plan. Unless it is essentially free, regular skiers will not ride it, so we won't recoup costs, and it won't help ease congestion. It doesn't offer any advantage outside of ski season, and the monetary and environmental cost is too high for little or no gain.
26416	David Idelkope	I think this decision is against the majority of what the population of Salt Lake City wanted. Besides that you're taking away the wildness of Utah by putting a man made structure that will obstruct the natural beauty to the area for only possibility of ski resorts to benefit. This gondola won't be free and will also require more pavement to be constructed to allow for more capacity as well. Only the tourists will take the gondola as I feel the majority of the population who don't want it will still continue to drive up. In the end of both resorts did parking reservations and we had officers actually enforcing the traction law, the canyon would be more manageable and regulated. Hope our comments aren't just ignored.
	Bijan Hosseini	38 years old, Utah born and raised and increasingly disheartened at the direction our state is taking. Everything that made Utah "this is the place" is rapidly disappearing, and more often than not at the cost of the environment in order to line a few more silk pockets. In case you haven't noticed, the ski resorts aren't exactly getting a lot of snow these days - I point out in the middle of yet another historic heat wave. We need to be working on environmentally sound and sustainable solutions that preserve and protect our natural landscapes - this gondola is far from that. "When the last tree is cut and the last fish killed, and the last river poisoned then you will see that you can't eat money."
26415	Jacqueline Solon	I am against the gondola and for electric buses. The gondola is unsightly, extremely costly (both in construction and continual upkeep), basically only helps the privately owned ski resorts and locks us into a certain technology for the next 50 years. Electric are cheaper, less conspicuous, can potentially stop anywhere in the canyon and allow for a switch to better technology in the future.
28175	Angie Packer	Hello, THE TRUE SOLUTION! MODEL HWY 210 AFTER ZION NATIONAL PARK! NO CARS, BUSES AND SHUTTLE VANS ONLY!! No widening Little Cottonwood road or Wasatch Blvd! This has worked for over 20 years at Zion. I grew up here and have worked at Alta ski area for 25 years. I'm happy to help in any way I can. Thank you! Angie Packer [REDACTED]
26418	Maya Carlsen	don't build the gondola!
26419	Mike Summerhays	The gondola is a mistake that can't be undone. Please don't build this eye sore when better options like buses exist. This only helps the resorts and neglects all areas in between.

26420	Cali McMurtrey	<p>Hello, I have major concerns about the gondola project. I do not think enough alternatives were studied.</p> <p>I know, for example, one reason I drive is that I don't want to take my gear on a bus. Asking the ski resorts to provide more overnight gear storage would be a HUGE help for local skiers.</p> <p>Parking reservation systems have not had time to be sufficiently tested. Carpooling systems (for example, smaller public vehicles, beyond busses, or incentivized private carpooling) haven't been explored. Staggering opening times for Alta and Snowbird (one opens at 9, the other at ten, alternating, for example) hasn't been tested.</p> <p>Operating a gondola has many of the same drawbacks as the bus (you have to carry your gear, you have to plan around the operating schedule, etc). I am not convinced that it will actually reduce canyon traffic. The modeling done hasn't taken human behavior into account.</p> <p>I am not in favor of UDOT paying for or sponsoring this project at all. We have so so many other needs. Build a gondola for I-15 and I'll back that. But please keep it out of the canyon.</p> <p>Please consider the other alternatives listed above, or others you come up with. Thank you.</p>
26421	Ryley Behr	Please don't follow through with this. The overwhelming voice of the public does not want a [REDACTED] gondola in any of our canyons.
26422	Hannah Rubin	More flexible, effective, and fiscally-responsible options exist that do not require destructive large-scale infrastructure.
26424	Caroline Brophy	Please try improving busses before building a gondola. A gondola will have larger environmental impacts for the canyon as a whole. Also the lines were not bad during the past season.
26423	Jane Griffith	I do NOT support UDOT's support of the gondola!
26425	Esther Valero	It's clear that profits have been made a priority here. Don't build the gondola for the sake of people and preservation of lcc's beauty
26426	Erika Doty	A gondola system utilizes tax dollars while benefiting only skiers/ski resorts. It will also take away from the beauty of Little Cottonwood Canyon, while also disrupting the environment (for animals, plants and humans who use it). Before approving funding and moving forward with this invasive project, the state needs to try all other alternatives first (tolls, increased public transit all the way to Albion Basin). The gondola benefits ski resorts and the companies involved in the project. That's it. That's not good enough.
26427	Bryan Flamm	I am in full support of the Gondola. I'm shocked that there is opposition to it. It is the true long term solution to the problem. The rapid bus system is nothing more than a bandaid that will need to be fixed again.
28172	Edwin Casady	<p>A GONDOLA???? IS THIS SERIOUSLY THE BEST CHOICE???</p> <p>I cannot help but feel that the choice of a gondola is the most Rube Goldberg of options!</p> <p>Why is there not more discussion of simply building a few avalanche-tunnels to mitigate the worst of the slide areas???</p> <p>Why not expanded bus services and restrict private car access to encourage use???</p> <p>Why not implement a checkpoint requiring ACTUAL checks on installed traction-control devices on vehicles from Nov - May (Could only be activated when dangerous conditions are expected)??</p> <p>Why are we focusing on the most complicated least scalable option??</p>
26429	Tate Aronstein	There is so much possible improvement ti the bus system before a drastic decision needs to be made. Make the buses enjoyable to ride, use higher quality coach buses and attach ski racks to the exterior to leave the inside comfortable to ride. If the bus experience is as comfortable as a personal car we will use it.
26428	Kim Flamm	I am in full support of the gondola.
26430	David Jessop	Taxpayer funds should not go toward a gondola which only serves to increase revenues for 2 ski resorts. Limit number of skier days to preserve the canyons.
26432	Don Rondinelli	<p>I absolutely do not agree with or want the horrible gondola!</p> <p>This will be a financial disaster with cost over runs and ultimately under used by the cost paying public and skiers. There is no flexibility in its use or operation.</p> <p>I would much prefer to see an expanded bus service that is flexible and has the ability to increase or decrease service based on time of year due to snow and skiers.</p>
26431	Collin Sheppard	I do not support the development of a gondola in LCC. It's clearly aimed at bringing in more business to the ski resorts and not at reducing traffic or minimizing impact in the canyon. It is not only a huge eye sore in a beautiful canyon, but has significant environmental impact relative to ustilizing the existing road, and does not provide any benefit to the hundreds of daily visitors that are not going to ski resorts. A solution that discourages personal vehicles is needed, but this is not it. Technology easily allows for bus or vehicle systems that do not require drivers, primarily leverage the existing infrastructure, and could be run in frequent schedules and to nearly all parking areas, providing a far superior solution than the proposed gondola.
26433	Benjamin Theurer	I am AGAINST the proposed gondola in LCC. To do so is an environmental disgrace. Keep LCC wild!!!
26434	Mark Handy	I'm not a supporter of the Gondola. It will forever impact the most natural beauty of the canyon. As our population continues to increase. There will be a time that we will be right back to where we are now. I believe the best thing is to do a reservation system to access the canyon. We don't need more cars or skiers in the CANYON .Though that wouldn't be popular with most anyone. It's the price of our uncontrolled growth
26438	Tom Nufer	I respectfully disagree with those that claim the gondola would be an eyesore. It would be a spectacular way to go up and down. It would present canyon views to the traveler they've never seen while driving. Gondolas are magnificent engineering feats and it would be a wonderful to see, and to ride. It would help the canyon be enjoyed by waves of new people who've never seen its beauty before - not just the few willing to brave the drive and parking.
26435	Meg Frost	<p>I am opposed to the gondola.</p> <p>The resorts have implemented a reservation system for their parking lots and traffic in the canyons was much better last year as a result.</p> <p>The gondola is a solution in search of a problem.</p> <p>Put that money toward our embarrassing per-pupil spending in the schools instead.</p>

26436	Carmen Morris	The environmental impacts of this decision are obvious, irreversible, and incredibly detrimental. As a state and as a country, we urge you to rethink your decisions.
26440	Spenser Kearl	I am for the gondola going up the canyon. I would hope that there are plans to expand this lift beyond to the park city resorts, as well as connect big cottonwood canyon. I would also hope to see this lift run through the summer months and add activities like mountain bike trails, hiking trails, etc. excited to see this unfold!
26437	Amelia Miller	The transportation issue should not be solved by the gondola. There are alternative answers to this problem. For instance, carpooling, electric bussing, small parking hubs, etc.
26439	Anna Jacobsen	Please do not build the gondola. We cannot destroy the environment in favor of our own recreational and corporate greed. I suggest limiting the number of cars allowed in the canyon per day and creating a robust, timely shuttle system. There has to be another way. We should be the ones making the sacrifices, not Little Cottonwood Canyon.
26441	Shaun Chatelain	While I definitely understand the need to address the traffic issues in LCC, I strongly feel a gondola is not the answer. I enjoy the canyon for many activities year round. In particular I fish little cottonwood creek and can't imagine gondola towers near or even in the creek. This would disrupt a priceless ecosystem and would be permanent damage. For something that would primarily be used only during the winter months, it's not worth destroying the beautiful aquatic home to so much life. Please reconsider and move away from the gondola. So much of the future depends on preservation, not more construction. Go Aggies!!!
26442	Julia Lester	As tax-paying, canyon-recreating Utah citizens residing in salt lake, we do not need or want a gondola to benefit little cottonwood canyon ski resorts & former legislator niederhauser & his la caille-related real estate associates. We need an increased number of buses running every 15-20 minutes up &/or down little cottonwood canyon in connection with peak user -based statistics for each separate season. Let's reduce personal vehicle traffic in little cottonwood canyon by charging fees for single-occupant vehicles. And increase udot service routes' parking spots in parking lots feeding into little cottonwood canyon.
26444	Tate Larkin	I say no to the gondola! It will ruin the visual impact of the canyon and it adds new problems. There are much better solutions that should be tried first. Waste of money and ruins canyons for more traffic.
26443	Aimee Larkin	Please don't disturb the beauty of LCC for just a handful of powder days. I oppose the gondola.
26446	Justin Griffiths	I am a resident of Riverton and a frequent Alta skier. I oppose the gondola proposition until other, cheaper, less environmentally impactful approaches be tried first. Things like tolls, parking reservations, increased bus service, etc. Just last year, with the introduction of parking reservations for Alta, I experienced a dramatic decrease in my commute times up the canyon. There are more simple and possible solutions that require far less of an entry fee to try first.
26445	Kate Thomas	There was an article in the Tribune several weeks ago describing a tunnel as an option for transportation up the canyon. Apparently this option wasn't given a lot of consideration, even though it is much less expensive & there are companies that are capable of taking on the project. I have lived on the East Coast where there are several tunnels under the bays. It seems to me if an underwater tunnel can be built, an intermountain tunnel is certainly doable. And it also seems that a tunnel would have much less impact on the environment, especially air quality. In fact, it seems air quality would improve. Why hasn't a tunnel been given more consideration??
26448	Kyle Kepler	NO! No to funding the Gondola option without trying the other alternatives first. No to funding the Gondola with one cent of Utah resident taxes! Alta, Snowbird, and private donations can pay for this if we are going to skip the other options (tolling, buses, etc) without trying them first. A former state senate leader and local mayor stand (CW Management) personally benefit from this. They used those positions and the power that comes with them to push this project forward. The widening of Wasatch Blvd is also unnecessary. Vehicle speeds and noise are already too high in a residential area where the home values and taxes are artificially too high. In the end a widened road will bring those property values down, decrease the tax value, and decrease tax revenue. Finally, as a resident of that area...why would I want to pay for more burden, noise, and less safety in my neighborhood? Businesses and their patrons need to pay for business and the associated entertainment, not the taxpayers of Utah!
26447	David Jessop	This is my second comment so I apologize. I really like the idea of expanded Wasatch Blvd, snow sheds, better trailhead parking, and restricted road parking. This along with expanded bus services during ski season will surely solve the vast majority of our problems without a \$0.5B gondola which is sure to cost much more. thank you, Dave Jessop
26449	A B	There should not be construction in this canyon. If the supposed problem is traffic, and the supposed concern with this traffic is environmental impact, then construction of a gondola which would destroy some parts of the canyon, makes no sense. Stockton is on the verge of disincorporating, and the Salt Lake is disappearing; I think this decision is a permanent overreaction to a very possibly temporary boom in population and canyon use.
26450	Jonny Wilson	Making sure my voice is heard and my opinion is clear. Do not build a gondola. We each take personal responsibility in contributing to traffic up the canyons, and a gondola would impact numerous bouldering spots that little cotton wood canyon utah is know for and loved by our beloved climbing community. Find solutions that work, and that the community actually want.
26451	Kathryn Petrozzo	I am writing in opposition to the proposed gondola plan. As a local who is a major proponent of accessibility to enjoying our beautiful natural backyard, I am deeply concerned about this costly, ineffective project. It is unclear how this is the preferred alternative, when it would greatly disturb the natural beauty of the area, significantly restrict access for all visitors, not just those going to the resorts, given the cost and effort to access the canyon if a gondola were in place. I am highly in favor of investing in buses instead, especially electric buses, given the better environmental impact, accessibility, and not as much disturbance to the natural land. I highly urge you to reconsider the gondola in favor of a more sustainable approach--investing in electric buses.

26452	Katie Petrozzo	I am writing in opposition to the proposed gondola plan. As a local who is a major proponent of accessibility to enjoying our beautiful natural backyard, I am deeply concerned about this costly, ineffective project. It is unclear how this is the preferred alternative, when it would greatly disturb the natural beauty of the area, significantly restrict access for all visitors, not just those going to the resorts, given the cost and effort to access the canyon if a gondola were in place. I am highly in favor of investing in buses instead, especially electric buses, given the better environmental impact, accessibility, and not as much disturbance to the natural land. I highly urge you to reconsider the gondola in favor of a more sustainable approach--investing in electric buses.
26453	Zachary Larkin	Please DO NOT pursue the gondola. It will ruin the canyon.
26454	David Ryser	I live at the entrance of Little Cottonwood Canyon and visit it for recreation frequently. The proposed phased implementation approach to traffic on SR210 is a good with the exception of the final step - building a gondola. Tolling, snow sheds, enhanced electric bus service, trailhead parking and other infrastructure improvements that do not lead to road widening are much needed and should proceed. I am strongly against placing a gondola in this unique canyon because of the environmental and visual harm it will create. Before the gondola option is revisited an assessment of the overall use capacity of this delicate ecosystem is essential. Using public funds to cater to private ski companies does not justify the risk it presents. I do not wish to see a tourist magnet created that greatly increases canyon use and detracts from the natural beauty and priceless healing environment it offers.
26455	Viktoria Margetts	Stop planning the gondola. There are so many reasons why it shouldn't be built -- the surrounding environment and wildlife will be negatively affected, it's costly and an ignorant and unwanted decision from people who just want to make a buck on tourism. The money that is planned to be used in building the gondola could go towards our community to better the well-being of the citizens that would otherwise be possibly harmed by the outcomes of this decision. You all can do better as individuals and as members of our community.
26456	Eric Swenson	PLEASE DO NOT INSTALL A GONDOLA IN OUR CANYON. Enhanced bussing is by far the easiest and lowest-impact solution and should be tried before we resort to more permanent solutions
26457	Doran N. Hansen	I am strongly opposed to the Gondola. It's too expensive, invasive, and only serves a few. It will detract from the serene beauty of the canyon, while not fully solving the transportation issues in LCC we currently face. An improved Electric Bus service in tandem with other common sense solutions is strongly preferred.
26458	Karlis Lubavs	I don't mind the addition of a gondola for those that want to use it. However, I do not support any restrictions to travel or tolling for any canyon. I frequently use the canyons to ride my motorcycle, and occasionally go on a hike or visit a store at one of the resorts. Losing the motorcycle ride is a big problem for me, and I would not visit any store or restaurant at a resort if I have to pay to drive up, or if I'm forced to use a gondola.
26459	Mark Opasinski	No tax dollars, gov't bonds, or similar to support a transportation system that only supports a few businesses. No tax dollars, gov't bonds, or similar that only help solve an issue for rich people to get to their playground. This will have no benefit for an overwhelming number of Utah citizens. Pay for it with lift ticket taxes, or fees from the businesses that benefit, or any other private funding. Do not give large swaths of public land away for this project, only the bare minimum to build should this ill conceived project go forward.
26460	Alex Simon	The building of the gondola has much worse environmental impacts than most other options. Udot, snowbird, Alta, and Utah politicians claim that it's better for the canyon and environment but are only saying this because they're getting paid by gondola works. Gondola works has paid multiple news medias like KSL to falsely report to the citizens of Salt Lake that it's somehow beneficial to the environment and Utah citizens. I believe more bus service and larger parking at the bottom of the canyon is the one true way to get more people up the canyon and also save the environment. Don't ruin the canyon with the best snow on earth for a check. And if you do at least don't lie that it's beneficial to Salt Lake citizens and the environment. Don't let your legacy be ruining one of the best canyons on earth, you still have time to make the right choice.
26461	Tanner Jensen	A bus system would be so much better. We need to preserve the beauty and serenity of the canyon. I think zion national park's bus shuttle is a fantastic example to attempt to replicate.
26462	Christopher Barkdull	There should be no tax payer money used for this. Let the ski companies pay for it as well as the skiers. I am 100% opposed to my tax money being used for something I do not use nor do most Utahns will use.
26463	Kyler Roush	I overwhelmingly SUPPORT the Gondola. Out of the available choices it 100% has the lowest overall environmental impacts. Thank you UDOT for making a factual decision and not one based on emotions.
26464	Emily Zhang	The gondola is not the solution to solving the transportation issue in Little Cottonwood Canyon. I have grown up and lived in the community below the base of LCC, and have been exploring, skiing, and hiking the canyons since I was a child. Putting a gondola in has already been acknowledged to have the largest visual impact out of the options proposed, marring the natural beauty and turning the canyon into a tourist attraction, solely backed by taxpayers and local citizens. While I am not opposed to tourism in LCC, I believe that a city and state has obligations to its citizens and obligations to protect the natural lands, serving to instead educate about and preserve natural resources instead of drastically altering the environment to serve convenience and tourism. A few weeks ago, I was at Zions National Park, an area much larger than LCC, and cars were not allowed in because it was peak season. However, I found that the shuttle service offered was incredibly convenient, timely, and did not at all detract from the surrounding natural beauty. Carbon dioxide emissions were limited, miles travelled by personal vehicle were cut down, and still, people from all around the world were able to get where they needed in the park and have a wonderful time all without the use of a gondola. Am I acknowledging that canyon congestion is a problem? Yes, it is a problem. However, for every problem, there is more than one way it can be solved, and I truly believe that a gondola is not the way to go about it.

ID	Full Name	Comment
28171	Diane Schnarr	<p>1. It is foolish to increase the capacity of people who can go to Snowbird and Alta when Snowbird and Alta are not increasing their capacity. They are full now.</p> <p>2. Paid parking at the resorts has already helped to control the problem. More paid parking could be used and would not cost anything.</p> <p>3. A toll for powder days may be a good idea - but I don't know that it will have much of an impact. People who are willing to sit in a line for 1 hour on powder days are probably willing to pay a toll.</p> <p>4. The gondola is ugly, destroys the beautiful canyon, and really does not solve the overcrowding problem.</p> <p>Diane Schnarr</p>
26468	Ralph Packard	<p>My family and I remain opposed to the gondola solution just adopted for Little Cottonwood Canyon. The expense will be horrific and the damage to the splendor of the canyon extreme. Far better in the long run to increase electric busing, limit car traffic in various ways, reward multiple passenger autos, etc. A gondola rewards Snowbird and Alta resorts only and damages forever the splendor of a monumental canyon that happens to be located adjacent to a very populous valley.</p>
26465	Andrew Drennan	<p>I see parallels between the gondola project and Glenn Canyon dam. Both ruined (or will ruin) immense natural beauty in the name of a dwindling resource. The resorts are approaching their natural capacities and finding a way to shove more people into the resorts will be horrible for the visitor experience. The gondola is going to have multi-hour waits at peak hours which will make people want to drive anyways. Let's think about the legacy and the natural wonder we want to leave future generations...</p>
26467	David Dickerson	<p>Please please please reconsider the permanent impact this gondola will have to LCC. This plan only sets to benefits two private companies, and forever changes the wild nature of this beautiful canyon.</p> <p>How will having a massive parking lot help traffic leading to the canyon? Everyone will still be heading to the exact same location on a busy day, clogging the streets surrounding the mouth of LCC. We are also just trading the canyon traffic jam, for a lift line traffic jam. We need to limit the number of users, not create an unsustainable system by increasing human traffic year after year. The gondola option is a tax payer funded money grab for two privately owned companies and a gimmicky attraction for out of state vacationers.</p> <p>This gondola is only good for getting people to the ski areas! Why not implement a system that gets people to other biking areas, climbing areas, and hiking areas all year and not just mainly in the winter??</p> <p>I am SHOCKED this option has made it this far, and it disgusts me seeing PAID FOR ADS from "Gondola Works" being promoted on local news outlets.</p> <p>Please make a decision that won't negatively change the canyon forever and LISTEN TO THE LOCALS!! NO GONDOLA!!</p>
26466	Ian Wade	<p>The gondola is the worst imaginable solution for access to LCC. At enormous cost taxpayers would subsidize two very profitable ski areas while ruining the views for all other users of the canyon. A train would be a better solution that would allow all users of the canyon to have better access, not just the two stops of the gondola. Every other option should be explored before spoiling the canyons for future generations. The impact of climate change on the snowpack and desirability of winter sports needs to be considered. The gondola could be white elephant by 2050.</p>
26469	Rochelle Kaplan	<p>I am totally opposed to the gondola plan, and although a long time skier at both Alta and Snowbird, now plan to ski Big Cottonwood Canyon to protest their support of the gondola. The gondola is an expensive boondoggle, benefitting Little Cottonwood Canyon ski resort owners, developers like the majority of state legislators, including former legislators involved in this expensive plan. The bill would be borne by all taxpayers, the canyon's beauty would be hurt, and the route is on an earthquake fault line.</p> <p>The nearby community, of which I am a part, is opposed, as are its mayors, to the gondola. We don't need more skiers. We need to instead limit the # of skiers, increase electric buses, charge for parking.</p> <p>Shame on you. Doing this in stages does not alter the damage a gondola will cause. Shame on you!</p>
26470	Melissa Inouye	<p>It is crazy and illegal to use taxpayer dollars to subsidize/fund/help out two private businesses at the back of the canyon. It is terrible public stewardship to allow two private businesses to ruin Little Cottonwood Canyon for the public. So the skiers have to sit in traffic. Big deal! If the gondola served the whole canyon, like the picnic areas and trailheads, this would be one thing. But it's just like a big handout to two private businesses. It will just make skiing more elitist. It will make the Cottonwood Canyons for rich people from out of town. Please DO NOT implement this dumb, expensive, not-helping-taxpayers, not-helping-local-people gondola idea.</p>
26471	Rick Miller	<p>The Gondola B solution appears to shift the problem of parking, and all the side issues that come with it, from the top or near-top of LCC to the bottom. This would include: Car emissions, traffic, the building of a parking lot/structure, the loss of space around La Caille, additional UTA space required for new/updated bus stop This is of course a short list, but it demonstrates how much of the valley will be sacrificed in order to build the Gondola B solution. And all it really does is shift the underlying problem, not solve it.</p>
26472	Dan Johnson	<p>Putting in a gondola that only serves two ski resorts during ski season is not a good use of funds. Not to mention the permanent damage to the natural scenery of the canyon. As a skier I know that while the traffic can be bad on powder days or if there's an avalanche, there are not many of those days in a year. Certainly not enough to justify a \$600 million project that I don't anticipate many will use due to cost and inconvenience. This proposed system truly only benefits the ski resorts and will only be of any benefit on very few days. If it get's funded I will vote against any legislators who voted in favor of this.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26473	Richard Benson	I am opposed to the Gondola. Too much money to spend for a select group of people..
26474	Lauren Mcmillan	I'm back here again to express my disappointment with UDOTs decision to move forward with the gondola plan. I'll be back again tomorrow.
28162	Linda Timm	So I guess the people have spoken means little these days. It is just the rich and greedy that get their way and our votes and opinions do not matter. It was the final straw for us sadly. As much as we love our home in Sandy and as much as we love Utah, we will sadly be selling and leaving. It has become so very apparent that the only thing that matters is who can buy what they want. Obviously votes and public opinion don't. When our beautiful canyons are destroyed and those of us who could afford the taxes this travesty will wrought have left, who will be there to pay the piper? What a sad, sad decision you have made. Linda Timm [REDACTED]
26475	Aaren Colemere	Please, please do not go forward with the proposed gondola plan. I love little cottonwoods canyon and have spent countless afternoons skiing and climbing up the canyon. As a Utah citizen, please listen to me and the countless others who are begging you all to find another alternative that doesn't ruin our beautiful and unique landscape.
26477	Sadie Cronney	I am not in favor of the gondola project. I don't think taxpayers should be paying this money when the only stops the gondola goes to are ski resorts. If they want gondolas they can pay for it themselves.
26476	Derick Bingman	Such an environmentally disruptive gondola is just another Utah boondoggle where taxpayers support the already rich at the expense of public education
26478	Zoey Floyd	the people of cottonwood heights have consistently said they do not want this put into action. To create this gondola is to actively ignore the words of the people as well as the needs of the environment. There is no ethical way to do this, nor is it necessary. DO NOT CREATE THIS!
26479	Tessa Dvorak	This canyon has been a natural, and beautiful place forever. A place to recreate and access an escape from society. While congestion has resulted from limited infrastructure, additional means of congestions and traffic are not a viable solution, particularly when it then takes away a climbing (world class climbing, attracting world class climbers) and recreating areas from those seeking to and who have enjoyed it.
26480	Nick Horning	HARD NO to the gondola. There are other options that would not ruin the beautiful landscape of little cottonwood canyon. This would make the traffic both in the canyon AND then recreation areas worse by attracting more people to the area from out of town. Let alone the environmental impact! There has to be another way. No to the gondola.
26481	Elisabeth Morgan	I support the extended bus service.
26482	Richard Byrne	A gondola system in LCC should be the last resort after every other option is tried.
26483	Beth Winkemleck	Electric buses, timed entry systems, reservations required at ski resorts with daily limits, and tolls up the canyon should all be explored and utilized before the development of a very expensive gondola - both financially and environmentally. I do not want my taxpayer money to go to a project with this big of an environmental impact. Most people I speak to are against this - at least allow the citizens who will have to foot the bill VOTE on this and have a say as to where our money is spent.
26484	Peri Koester	Destroying the wilderness, causing horrible traffic issues in the area, outrageously spending tax payer's money for corporate profit ... All so people can pay to park, pay to ride, pay to ski for more corporate profit. Perhaps you should look into how that turns out in the end.
29440	Anonymous	Yeah, I'd like to leave a comment. I live in Draper. I don't I don't I'm a skier. I like skiing but you know what how about Snowbird can pay for gondolas if they want one. I'm not going to get my taxes up to support that if they've made millions and incredible amounts of money over all these years if they want a gondola what that's fine, but it shouldn't be funded by the state and so all of us have to pick up the tab, but when I skied I didn't particularly even like going up there. I think they are a good ski resort, so they can write a business as far as I'm concerned. I like skiing up a Park City And Deer Valley funny other ski places in Utah if they can't afford to make to pay for the gondola themselves. I don't want to pay for it as a taxpayer. Thank you. Bye.
26485	April Nielsen	Absolutely do NOT want a gondola built in the beautiful canyon.
26488	Kayla Watanabe	I am NOT in favor of this gondola. As a born and raised Utah resident, this canyon has held a special place in my heart since I can remember. So much of the magic is felt while driving up the canyon in all her beauty and realizing how extremely blessed we are to have this untouched piece of nature so close to home. Please reconsider the decision to put a man-made gondola in Little Cottonwood Canyon. I do not think the gain of this gondola would be the worth the immense loss that would result.
26486	Michael Herfurth	Please consider less invasive options before installing the eye-sore of a gondola. Furthermore, this solution is narrow and would likely create new traffic to wherever the massive parking lot is put. Bussing and tolling solutions should be tried before this unnecessarily large and expensive gondola solution is tried. I do not want my tax money to go to a gondola please try less invasive solutions first. No gondola!
26487	Luke Cudney	There are much better, fiscally responsible alternatives to a gondola that don't involve large scale environmental destruction of a pristine area like little cottonwood canyon. Please reconsider this plan!
26489	Hamilton Smith	this is a dumb idea it won't help cause it takes to long to get people up the canyon and won't be able to take enough people up the canyon it will make the environment less liveable for wildlife in the area and make it have no conservation in the area it costs way to much and is not worth it
26490	Alison Sepulveda	I am against the Gondola in LCC. I am disappointed with UDOT's decision. There will be irreparable damage done to the canyon for the benefit of those that ski, not to mention the fiscal irresponsibility. Please reconsider.
26491	James Clark	I believe a gondola is a terrible idea. Minimal changes have to be made. UDOT and I'm sure private companys can handle the overblown seasonal transportation issue which I believe is non exsistent. Something bright and shiny is what makes others income increase. It's all about the money. We already have the infastructure in place to solve getting skiers up the hill.

26492	Taylor Lundquist	The mountains belong to everyone. We cannot continue to separate the 1%, this will create more separation involving only the rich to enjoy the life saving mountains to play on. Not to mention you are going to destroy nature by putting in this gondola.
26493	Amelia Whitlock	Stop trying to ruin our canyon by building the gondola
26494	Brett Stohlton	I'm opposed to UDOT's finding that the gondola is the best solution for Little Cottonwood Canyon. The proposal not only does not address the core issue -- eliminating traffic bottlenecks during peak snow hours -- it is a massive public subsidy that benefits private entities (Snowbird and Alta) and landowners, including a member of the legislature who should not be allowed to weigh in on the subject. The gondola is 1). wildly expensive; 2). does not move enough people in the short time windows when it would be needed to mitigate bottlenecks; 3). inflexible in what it serves (Snowbird and Alta vs. all the other stops in the canyon); 4). is permanent and not in keeping with the natural beauty of our canyons; and 5). is not wanted by an overwhelming majority of the public. There are so many wiser and cheaper ways to create a tourist attraction in our amazing state. I further think you should make the 14,000 comments publicly available. Inviting people to your office to review the paperwork seems lazy and disingenuous when weighed against other available options. We don't use physical carbon copy imprints to process credit cards anymore and we no longer compute complex problems on mainframe computers. So why in an era of digitization and cheap online storage, are you choosing to step back into the stone age - i.e. hey drive across town so you can flip through all these pages where signal will be difficult to extract and share. The better option would be to make public comments available online and unedited for all to review. Furthermore, it could easily be in a format where it could be fed into a sentiment analysis engine. What are you afraid of that you're choosing to make this inaccessible? I suspect that the data would overwhelmingly support the themes I've highlighted above. This is an expensive option paid for by taxpayers, that desecrates our canyons, benefits private corporations and wealthy individuals, while not solving the actual problem. I recognize that Europe has used similar technology to great success. But that in its own is not sufficient cause to follow their example. I've travelled extensively through Switzerland and Austria and gondolas or funiculars are used where roads are not a viable option. In contrast, roads do work in our canyons and there are several, less expensive options that should precede a gondola - e.g. charge for parking at the ski resorts while incenting carpooling with discounts and other benefits, shift existing bus capacity to the short windows when congestion is most acute, etc. Spending half a billion dollars plus (yes, the actual figure will far exceed the budget if the SLC airport is any guide) on something that will look good in a brochure isn't sufficient grounds to fleece the taxpayers. This is not good for Utah now and won't be good for Utah in the future. Please reconsider and make the data transparent and available to all. Sincerely, Brett Stohlton.
26495	Sheryl Facktor	I think the gondola and tolling are the only ways to preserve both LCC and BCC Canyons. We are destroying this natural resource with cars and gas busses.
26496	Maureen Makar-olson	Hello, I am highly disappointed in the decision to move forward with Gondola B option. Local residents do not support this option as evidenced by the feedback you received and the survey done in 2021 by Desseret News where only 20% were in support. There are real concerns about damaging this beautiful canyon and unintended effects of watershed. There are other transportation options that can be implemented. Think of the solution for Zion National park. The gondola on serves ski resorts not trails used year round. The gondola seems to be a gimmick for resorts not a functional asset to control traffic for all canyon activities. Resort parking fees, increased bus service, bus only options in the canyon are far cheaper and will have a significantly smaller impact on our water and canyon preservation.
26497	Marion Smith	I am NOT in favor for the proposal for a Gondola in Little Cottonwood canyon. We need some area in our mountains that is "untouched" and that would remain "scenic". I am against the proposal!!!
26498	J W	use other options first such as tolls, reservations, etc, then have recipients fund gondola i.e. Snowbird and alta
26499	Robert Wood	No no no
26500	Megan Gilman	This entire ordeal is a terrible idea to say the least not only would the gondolas destroying an entire ecosystem, contributing to an absurd amount of fossil fuels being emitted, using half a BILLION tax payer dollars to pay for something that none of them want, but as someone who grew up in the mouth of the canyon I have been late to school for 90% in the winter and the only thing the gondola would do is push the traffic back towards several schools zones. I shouldn't have to get a police escort to school in the wintwe because all the tourists decided that this gondola that is contributing to climate change, ecological destruction, and waste of tax payer money that tax payers don't even want to pay to contribute to this monstrosity is better than spending a couple hours in traffic
26501	Janalee Tobias	If private enterprise wants a gondola, let them pay for it. Tired of the poor paying for the rich to play. No taxes for private business!!
26502	Sarah Malyn	The gondola is not the answers! Please dont ruine the cayon.
26503	Jackie Fane	Please don't ruin little cottonwood canyon with too much parking and gondola service. The way to get to the top of a mountain is your feet! You don't see Colorado putting gondolas up to the top of 14ers. This is also a huge waste of public funds. The cost is enormous and unnecessary. Where will all of that money come from

26504	Kimberly Rowland	<p>UDOT released the news yesterday that they are going to move forward with the LCC Gondola. Here's the thing. Public opinion should count. Our voices are being ignored by UDOT. Just for fun, I added up "likes" (thumbs ups) from the comments section in the story that KSL wrote yesterday. 1043 oppose it, 140 for it. The public has spoken. There is overwhelming opposition to the Gondola, but they have never cared. Once they decide to do something, they WILL DO IT!</p> <p>My beef with the Gondola is that nobody will ride it! It will be a waste of our taxes, and the tranquility in the canyon. This is not a transportation issue for a large majority of SL county taxpayers. The road will stay open, and cars will still drive. Skiers and Boarders will not take an hour-long ride up the canyon on a powder day, period.</p> <p>The Gondola will not stop anywhere but Alta and Snowbird. It only benefits the resorts and the corporations building it. The estimated cost is \$580 million. ALTA/Snowbird and CW Management Corp need to pay for it if they want it. Some supporters are comparing it to the Swiss Alps tramcars... That ride is 5 minutes long (similar to our Snowbird Tram).</p> <p>The longest gondola in the world is a 25-minute ride. The proposed gondola is roughly 40 minutes, add to that the parking, walking, and waiting in line...Nobody will take it.</p> <p>We could accomplish so much with enhanced bus service.</p>
26505	Andrew Prior	<p>I am sad to see that UDOT has met my expectations that the final decision would favor tourism and real estate investors over residents. Sure residents will have to fund it, but why would the state pass on an opportunity to redistribute our money to benefit the wealthy.</p> <p>We should be increasing bus service. Tolls for single occupancy cars, studying what positive impact those easy changes can have before deciding to pave paradise...</p> <p>Eliminate all non-resident cars from the canyon and bus everyone like we do in Zion canyon...</p> <p>There are so many better options and no one realistically believes a massive construction project like this to come in any near budget. But again that does matter to UDOT because it isn't their money and the money is going to the people who have power, win win, while residents lose.</p> <p>If you want my buy in to your silly plan then you will need to publish the public comments so that we can analyze public opinion instead of just taking your word for it that this is what is best.</p>
26506	Heather Mendiola	<p>I'm apposed to the gondola but am pleased that a phased approach is being taken. Tax payers should not be paying for a project that only serves the ski resorts. Ski resorts should be paying for it. This money can serve the community in much better ways. There is no taking back the damage that the gondola will do. Let those who use the canyon can pay with a toll fee (I use the canyon regularly all year). Also increase buses. It sounds like these options will be tried before permanently destroying LCCs beauty!</p>
26507	Tyler Stevens	<p>This is too hasty of a decision. If we're going to commit this much taxpayer \$\$ towards a project to alleviate congestion in LCC then we must consider better long-term solutions that actually solve the problem at hand. Permanent tolling or railways perhaps. A gondola isn't it.</p>
26508	Lane Valum	<p>As an avid user of LLC I DO NOT support pursuit of a gondola as a solution to transporting people to and from the resorts.</p>
26509	Kodi Frost	<p>Please expand public transportation and do not build the gondola.</p>
26510	Thomas Murray	<p>I don't believe we need a gondola in the little cottonwood canyon. This will be more impactful then increased bussing. The cost will be expansive and will have a detrimental impact on the atmosphere of the canyons if a gondola exists.</p>
26511	Ashley Goeltz	<p>This will not only disrupt the environment of the canyon, but also the breathtaking views. Please reconsider your choice of taking money from developers and actually listen to what the people who recreate in the canyon want.</p>
26512	Robert Mckinnie	<p>The Gondola is a boondoggle to increase traffic at the ski areas. The ski areas cannot accommodate any more traffic. They are already obscenely overpopulated. I quit buying tickets several years ago because of long lines and mismanagement of the ski slopes. Now they are using demand pricing to sell cheater lines to rich people.</p> <p>The state has no interest in increasing the mess. In order to promote the upper canyon it is ruining the lower canyon. There will still be hours-long traffic jams from the canyon backed up on every access road. The valley is already overpopulated with skiers and the state is promoting the importation of additional skiers. Just like water and air, ski slopes have exceeded the available resources and continued overpopulation will only make matters. You are asking me to stop using water so you can sell it to new users. I have already stopped skiing because it is no longer sustainable. It's time that government agencies start serving the existing residents better and stop promoting businesses which exceed the limits of the region's resources. Increasing traffic to the ski areas is not sustainable and simply hastens the collapse of the valley.</p>
26513	Brielle Wyllie	<p>Listen to the locals. The people that live here. This is not a good idea for our environment and our beautiful mountain range will be ruined. Don't follow through with this. Please</p>
26514	Susan F Fleming	<p>My concern is that the gondola idea will bring too many visitors to the canyon and mostly will benefit the ski industry. With climate change, we may have reduced future snow. We have TOO MANY PEOPLE using these canyons, so I recommend a system where only an allotted number of people can access this canyon during any given day. We are ruining our beautiful outdoors and must restrict, in a fair way, the number of people allowed up the canyon. Bussing seems to be the best choice.</p>
26515	Emily Kotnik	<p>The gondola serves the resort skiers and that's it. I'm a runner that frequents white pine. How will I get there? Are there stops for me? What about hikers, fat bikers, snowshoers, and everyone else that is trying to get up there for reasons other than to visit the resort? It's a travesty that udot would agree to destroy arguably one of the most beautiful spots in the state and the country to put up an eyesore that benefits very few people at the expense of very many people. BCC traffic is way worse, yet we all just deal with it rather than propose ripping up a gorgeous canyon</p>

Comments on Little Cottonwood Canyon Final EIS

26516	Campbell Smith	<p>Hello,</p> <p>As a resident of Holladay and a weekly user of little cottonwood canyon year round, I strongly oppose the proposed gondola. We need to preserve our canyon without destroying and introducing new ways to highly traffic our sacred land. The impacts on land and wildlife are unacceptable with this proposed plan. I strongly urge you to come up with another solution including tolls and fees that are less intrusive to this already fragile area. Locals who use the canyon would be happy to pay access fees to help put money back into the canyon.</p> <p>Thank you, Campbell Smith</p>
26518	Sean Menk	<p>I am opposed to the gondola option which has been selected. It is completely unfair for UDOT to burden the taxpayers with the cost to pay for infrastructure that supports TWO PRIVATE businesses. These businesses already operate on leased forest service land (I understand Snowbird owns some of their land but not all of it). I am submitting my comment to be clearly opposing the gondola because I do not think it will reduce congestion only move it down the canyon. Please do not move forward with this alternative.</p>
26517	Amber Measom	<p>This is not the best way to serve any other canyon visitor EXCEPT skiers so there needs to be a way to get people up the canyon and add stops easily. NO to a gondola!</p>
28169	Lisa Peterson	<p>I am curious to know who else other than UDOT prefers a gondola as an alternative in Little Cottonwood Canyon? I do not prefer it. Mayor Jenny Wilson does not prefer it. It is going to be too expensive. It will have a negative impact on the environment and wildlife, It will only benefit two ski resorts. and no other alternatives have been tried such as implementing a toll fee or increasing bus service and requiring bus usage during ski season or giving free bus passes with season ski passes. I do not support widening the roads in the canyon but i do not support the gondola either. Plus it will be a huge eye sore. No one is going to want to look at the ugly towers of the gondola. Please do not build it,</p>
26519	M Mallon	<p>I strongly support the enhanced bus approach to easing LCC congestion and e-busses are currently a viable option. Utah taxpayer dollars can be much better spent than on an extremely expensive gondola system that would serve only two private enterprises. If the last few years has taught us anything, it is that we are realistically facing fewer and fewer skiing days as climate disruption goes forward.</p> <p>The gondola and it's towers would be an unsightly intrusion in the canyon.</p>
26520	Brandon Webb	<p>As a Sandy City Resident and lifelong recreationist in Little Cottonwood Canyon I am extremely disappointed in UDOT's decision to support construction of a gondola in LCC. It does not reflect the opinions of the majority. It would ugly our canyon that has been a beautiful refuge since our state was founded. Although this is publicly funded, it will only serve to line the pockets of few. It is an unequitable solution and one that disregards the opinion of those that it negatively affects. I urge you to choose a different alternative or if you're so confident this is the correct decision, have the courage to put it to a public vote.</p>
26521	Colin Quinn	<p>This is an absolutely disappointing decision. This gondola is not wanted by many locals and does not fulfill the goals of the project. The gondola only benefits the two resorts at the top of the canyon. I can't believe that anyone could think this is a good idea.</p>
26522	Mary Grace Stocker	<p>Please think about other options instead of a Gondola. Other resorts do mandatory bus rides past a certain time. This way backcountry skiers can still drive up and resort skiers take the bus. Please consider other options to protect the environment and our communities.</p>
26523	Eric Edelman	<p>I do not support the construction of a gondola within Little Cottonwood Canyon. It does not service the taxpayers of Salt Lake County that will be paying for it. The ski resorts should cap the number of skiers. A dynamic bus system would be able to better service the ski resorts at peak times, cost much less, and allow passengers to be picked up from numerous other locations throughout the valley.</p> <p>I support replacing the UDOT member who did not serve the requests and needs of the 14,000 residents who voiced their displeasure of the gondola.</p>
26524	Scott Biddinger	<p>I'm 100% against the gondola and so is most of the wasatche. Don't do it. Use tolling.</p>
26525	Andrew Fowler	<p>I plead with you to actually regard the voices of community members- the gondola is not at all a suitable option for Little Cottonwood Canyon. It disturbs the environment, pushes out locals (particularly those who aren't wealthy) and still neglects to address any of the reasons a transportation solution was sought in the first place.</p>
26526	Wilson Lamb	<p>Before moving forward with a gondola, less expensive and more cost effective methods should be pursued. This includes increased bus services, tolls to enter the canyons, and more comprehensive parking reservation systems. At this stage any plans to spend \$1 billion on a gondola that mainly benefits one group, skiers, is irresponsible and against the wishes of majority of taxpayers.</p>
26527	James Woods	<p>Please don't put in this gondola to serve two private owned ski resorts and make the taxpayer fund it. The canyon is so beautiful and this will take so much away from it. No to the Gondola!!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26528	Katy Gardner	<p>The currently proposed gondola will do little to reduce congestion, but will rather serve as a flashy (and expensive) advertisement for these 2 private resorts that it will transport people to.</p> <p>The numbers provided in the initial draft of the gondola plan show that the gondola is only able to transport about 15% of cars and people (~1000 skiers/hr) to these resorts at peak times (7-10 am). It also will take ~45-60 minutes between waiting for a gondola and the entire gondola ride to get to a resort, which will discourage people from actually using the gondola. If people show up to use the gondola and have to wait 2 hours to use it, they will end up driving. And then you're transporting fewer than 15% of skiers. The gondolas do not transport enough people to make a difference. And on a cost-benefit analysis, this project costs a metric [REDACTED] and impacts the surrounding environment in a dramatic way. All for a possible slight reduction (15% if it is used to its full potential!!) in car traffic. Isn't this supposed to be an environmental impact statement????? Where is the consideration for the environment?</p> <p>What about the traffic around the gondola parking lots? What about the cost of a gondola ticket? What about the fact that a 15% reduction in current numbers will hardly be a beneficial amount of reduction in 2050 use numbers? Ditch the gondola plan until you can show numbers that would get more cars off the road than a measly couple hundred.</p>
26529	Julia Cloward	<p>So basically. It's primarily funded by tax payer dollars, but gondola works and the two resorts are the only people that profit. It claims to make the canyon more accessible but it 1. Will cost dramatically more than the bus system, 2. Will take dramatically longer to get up the canyon, 3 only stops at the resorts.</p> <p>It is incredibly invasive and will scar the canyon forever. Countless climbing areas will be destroyed, our watershed will be put at risk due to construction. The parking lot for the gondola is past where the line usually is on weekends so it wouldn't help alleviate traffic in that respect.</p>
26530	Adam Sandoval	<p>Funding a "gondola" would be an egregious use of tax payer money and everyone's time. This is not a solution. Snowbird and Alta should invest in free storage on their properties so patrons who take the bus can bring up whatever they want instead of driving private vehicles. A small solution/idea such as that would already decrease traffic up the canyon. THINK.</p>
26531	Jody Sybrowsky	<p>Please don't ruin our canyon with a gondola! I love running, biking and hiking in this beautiful canyon.. but at my own speed and own my own time table. Using a gondola will put time restraints and make the experience too futuristic and less rustic! Please stop these plans now! It is a huge mistake!</p>
26532	Jennika Zyp	<p>This gondola is not a great idea. It's just going to push the traffic back even more and it's going to be terrible for the environment.</p>
26533	Thomas A McNulty	<p>How many times do we have to repeat this process. The answer is clear. The taxpayers do not want to pay for private industry's newest toy and We Don't want our canyon destroyed at the cost of these resorts. The answer will and always will be no to the gondola. UDOT please make the moral choice and side with the community beliefs.</p>
26534	Mark Brand	<p>Why is a gondola necessary if, per your own reports, enhanced bussing without road widening would achieve the same average transit (~55 minutes) time at a lower cost? Are we instead opting for the cost of doing both? To me, the result will be a pricey gondola (\$40/day ticket?) the lower income folks cannot ride.</p> <p>Lastly there should be a free APP-based lottery where you can get in the canyon with your car for free even on a snow day. (no toll)</p>
26535	Elisa Esnaola	<p>My friends house and my house is located in little cottonwood canyon and we'll have to move!!! DONT DO THIS YOU ARE LIKE PAPA</p>
26537	Michael Kestler	<p>I do not support the gondola option. I have never been to either ski resort the gondola would serve. I do go to downtown Park City often and would need to continue driving, with the gorgeous canyon now full of gondola infrastructure. I strongly urge you to consider Mayor Wilson's proposal for the less physically invasive bus option.</p>
26536	Sophia Molenaar	<p>MY FRIEND IS LOCATING IN LITTLE COTTONWOOD CANYON AND SHE WILL HAVE TO MOVE</p>
26538	Mary Freed	<p>DO NOT DO NOT PUT A GONDOLA!!!! YOU WILL BE RUINING CLIMBING AREAS & HIKING AREAS THAT HAVE BEEN AROUND HERE FOR YEARS !!! LAND THAT MEANS THE WORLD TO LOCALS !!! DESTROYING WHAT MAKES UTAH SO SPECIAL !!!!!!!</p>
26539	Liz Carmen	<p>Utahns have spoken! We have resoundingly expressed opposition to a gondola as the option to resolve congestion in Little Cottonwood Canyon. Local residents (like me) have said this, our elected officials (like Mayor Wilson) have said this. UDOT should listen to the sentiment expressed from the residents you are charged to serve, not to the special interests pushing for the nonsensical gondola solution. IT IS NOT FEASIBLE. IT IS NOT DESIRED. Go back to the drawing board!</p>
26540	Kathy Freedlund	<p>PLEASE do not do this. The landscape should stay as it is. Also, a HUGE NO to putting in a huge parking lot! Please stay true to the natural beauty of Utah and not buying into commercialism!</p>
26541	Paige Dawson	<p>This will ruin the beauty that the canyon is. Maybe try putting in other driving or bus restrictions before doing a gondola. Or honestly just add more buses to the rotation. The people of Utah DON'T WANT A GONDOLA.</p>
26544	Noah Shearer	<p>Hello,</p> <p>I would like to voice my opposition to the construction of this gondola. I do not believe it is the right attempt at a solution to congestion issues, given that it stands to disproportionately benefit wealthy skiers and the resorts, at the expense not only of other skiers, but all those who benefit from the canyon in all sorts of other ways. This seems detrimental to Cottonwood's diverse recreational use, as well as the local ecosystem in terms of not only destruction in its installation but permanent upset in its operation. I believe that superior alternatives exist in improved busing, mandatory carpool systems, etc, that if implemented properly, would better and more equitably serve this space and its community.</p> <p>Thanks for reading</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26542	Richard Brady	I don't believe you guys are thinking this through! 2 resorts are not a reason to put in a very environmentally invasive structure as a gondola. Those towers are there forever. Force people to take the bus. Pretty simple! Please don't ruin the natural beauty of LLC.
26543	Paige Rausch	No to the gondola. It fails in many ways. It will alleviate traffic but there will be more that fill the roads. This is an unsustainable solution that will do irreversible harm to the Wasatch. And the president of Snowbird also works with Gondola Works. Does UDOT see that as a conflict in interest? Finally the gondola only services skiers. It appears to be a big money grab by the resorts. Please try buses and tolling before you create a gondola. The number of users does not add up.
26546	Deborah Read	Let us be transparent. UDOT is in charge of roads. The forest is USFS. Part of the canyon is church owned. Part is privately owned. The impact is all of the state of UTAH. Not just alpine skiers but all of UTAH who love the outdoors. The immediate impact will be on Cottonwood Heights and Sandy citizens and communities. To control the traffic a TIMED-entry ticket should be created for those who travel by car at \$5.00. The ticket will pass through a controlled screening at the mouth of the canyon. Buses will have priority and will pass through a different gate. The TIMED-entry tickets will go into effect from December 20th to March 5th. This with the USFS passes and TIMED-entry will decrease traffic and bring some sanity to all. Special interest groups like Alta and Snowbird are only for their resorts. The USFS is a federal area for all to enjoy just like our National Park Service.
26545	Sean Slack	I strongly oppose the gondola. First, this decision is both financially and environmentally more damaging than other proposed solutions. Further, why not try the bus solution, toll's and improved carpooling. Second, why are taxpayers footing the bill for a gondola that only benefits Alta & Snowbird while those of us who use the rest of the canyon year-round are left on the outside. Lastly, this decision wrecks of good-old-boy Utah politics with the land acquisitions and smoke and mirrors of dark money and lobbying. I appreciate UDOT is not an elected body but do us all a favor and listen to the people of the state, not the money and the lobbyists.
26547	Taylor Jones	The last thing we need is a gondola, we need to prioritize the current issues with our roads to make it safer, not create something that will most likely create bigger issues in the long run. Please reconsider
26548	Emma Holm	Please don't ruin the nature!! There are other ways of transportation that you can find. Utah has been fine without it all of these years, please think of the long term consequences!
26549	Jeremy Bussard	I do not think the gondola is a good idea for the community nor the environment in the recreational areas. The area is already getting overcrowded and I only see this raising costs and problems for the locals who frequent this area.
26550	Shawn Smith	I have been a Salt Lake City resident for seven years and I strongly oppose a tax payer funded gondola. Tax dollars are supposed to help the public, not increase profits for two private corporations. The gondola does nothing to address transportation during the summer and does not provide access to the many trailheads that are in LCC. A gondola is also a giant eyesore on our beautiful natural landscape. Nobody wins with the gondola except Snowbird and Alta so please make them pay for it. Invest in wider roads and electric buses that can be used year round and have a smaller environmental impact.
26552	Josh Mcalister	I would like to reiterated, emphatically, that the taxpayers of Utah should not be in the business of funneling profit to two private organizations who have brought this problem upon themselves. Alta and Snowbird joined the Ikon pass in order to bring more traffic to their resorts, knowing full well a narrow, steep 8 mile canyon CANNOT handle the capacity. Snowbird and Alta should be footing the bill to remediate the issues they've caused, not Utah taxpayers. DO NOT GIVE THEM THE MONEY FOR A GONDOLA.
26551	Libby Coe	no gondola!! a bus lane / tolls / literally anything else would be better. this is environmentally the worst option and nobody wants it.
26553	Alison Satterlee	It is shocking how UDOT could come to support such an obvious boondoggle. For every reason already and repeatedly stated, the gondola should not be built. Full stop.
26554	Kim Cloward	As a property owner in Sandy, I am vehemently opposed to the gondola project. We purchased our house 20 years ago because of the clear view looking up LCC. The construction, astronomical costs, and impact on the natural environment will be disastrous. Please, keep researching for a better option.
26555	Mia Brown	As a Utah local, I have become increasingly frustrated by the acceptance of the gondola. Not only is it more expensive, but it will likely not reduce traffic and will cause a more harmful environmental impact than simply improving the current bus infrastructure that UDOT currently provides. I, and many of my peers, urge you to reconsider the gondola option due to the massive cost, corporate preference, and environmental impact and instead ask you to find a cheaper, more common sense solution that will serve the local people more than the corporations that are backing this option.
26556	John Mauss	Please don't let them muck up the beautiful view of the canyon by building a gondola with all those towers and cables! I would prefer clean energy buses with parking lots at the base.
26557	Braydon Johnson	Do not build this gondola. There is much better things we could be spending the money on. Use it to buy more public transportation and help the community. This will ruin the mountain and bring in all sorts of tourists and people we don't want here just for them to trash it even more.
26558	Steven Duncan	I am appalled that UDOT chose the gondola option that does not support public access. The gondola requires massive taxpayer support but provides stops only to two privately owned ski resorts. Canyon traffic is only estimated to be a problem for 15-20 days per year but the gondola would be a year round eyesore. Ski resorts managing parking through fees and expanded bus service are a much better solution. I've heard negative things said about the ski bus service but as someone who uses it regularly, the statements are blatantly false. The busses run at capacity on problem days, are always clean and the drivers are always courteous.

26559	James Thompson	I am ALL for a gondola solution in LCC! In fact my only real, complaint is that the proposal doesn't go far enough and include a simultaneous solution for BCC. The simple fact of the matter is no amount of mitigation strategies or incentives to get people out of their cars is going to have significant impact. The inescapable truth is traffic is only increasing in both LCC and BCC and will continue to do so for the foreseeable future as the desire to recreate in the mountains strengthens. A long term solution had to be planned and considered and MUST be funded now as delay adds complexity and cost. No one is advocating for decreased access to the canyon nor does a gondola necessarily decrease access. Some argue this is nothing more than a handout to Alta/Snowbird ... how so? Fact is, most traffic whether winter or summer are those bound for either of those two destinations, a gondola shifts that burden to the skies rather than packed bumper to bumper. Further, to claim a gondola represents a handout would equivalent to claiming TRAX is a handout to downtown businesses and the University of Utah, an equally absurd assertion. I urge my fellow Utahns to consider the future and the facts and leave aside the emotional rhetoric.
26561	Kate Shepherd	<p>I am opposed to implementing the Gondola plan in Little Cottonwood Canyon. As an avid outdoor recreator in the Cottonwood Canyon, I feel I speak for many recreators whose voices have been ignored in this process. A gondola will do NOTHING to support the transportation needs of the people who recreate in the canyon year-round, and do not recreate at the 2 ski resorts. The gondola would only serve two ski resorts at the end of the canyon, forcing backcountry skiers and other winter sports enthusiasts to drive personal vehicles to desired trailheads and starting points. The long duration of the gondola ride, and its inevitable ticket price, will push skiers towards driving their personal vehicles. Spend money to take longer, or save money to take less time.... That is a no brainer.</p> <p>The push for the gondola by the ski resort coalition is driven by the desire for more skiers to be brought up the canyon to the resorts. Yet no one has stopped to think about the impact of more people in the canyon. There are always negative consequences to growth and increased ticket sales that no one talks about. Protecting the canyon's beauty should be a higher priority than putting more skiers on the mountain.</p> <p>And finally, I speak for the thousands of residents who will be impacted at the mouth of the canyon. The traffic congestion will be pushed to their already crowded neighborhood streets.</p> <p>Listen to the people of Salt Lake County. Listen to the residents of southern Salt Lake County. Listen to the thousands of people who use the canyon and DO NOT SKI. The future of Little Cottonwood Canyon should not be placed solely in the hands of ski resort owners. There are far more players at the table whose voices are not being heard. The only people who want the gondola are those who are poised to make money from it - and that is the smallest fraction of the involved millions.</p> <p>Listen to the people. NO GONDOLA.</p>
26560	Edu Reroma	The Gondola is not the best solution for the traffic in LCC. Traffic is only bad on powder weekends which probably 10 days a year. Incentivizing carpooling and riding the bus is a better and cheaper solution
26562	Kristin Gavin	I do NOT support a gondola up LCC. It will be a huge eye sore in one of the most beautiful canyons in the state. Let's remember why people want to be in that canyon in the first place.
26563	Jamie Egan	For those of us who do not ski but have lived in the are 40 plus years this is totally unreasonable to make us pay taxes on this. Somehow find the funds through the canyon users and residents of the canyon and that makes sense. This is ridiculous. I know you won't listen or read or care about this comment because you already made the decision. This is just to help residents feel like they had a say, even though we don't. Whoever is lobbying for this and making money off the gondola should be ashamed. It's all about getting them money, not anything to do with our used to be beautiful canyon. Know this won't get read. Venting makes me feel like I tried.
26565	Connor McCormick	Please do not go forward with this plan. It is an eyesore, and will not improve traffic in the canyon. A dedicated bus lane and snow sheds are a much better idea
26566	Jennifer Saracino	I am opposed to the plan for the Gondola. It only addresses congestion on certain days in the winter, and is a taxpayer gift to private companies - since those are the only stops on the gondola. It also would completely ruin the views of one of the most spectacular canyons in the state. I hope the legislature is more conscious of taxpayer dollars and considers investment, like dedicated bus lanes, that can benefit all users of the canyon, year-round.
26564	Jason Mcdonough	Buses are the better route - let's consider low hanging fruit with less environmental impact!
26567	Sarah Malyn	The gondola is the wrong answer! please take into consideration the comments of the community! This is not what we want!
26569	Hailey Schiff	<p>UDOT,</p> <p>I am extremely disappointed to see the complete disregard for the public opinion surrounding the traffic issue in Little Cottonwood Canyon. I think it is extremely irresponsible to jump straight to the most expensive, environmentally degrading, visually disruptive and short term solution when other solutions have not been tried yet. A proper, free bus schedule with a toll booth for private vehicles at the mouth has not been implemented yet and quite frankly seems wildly easier and more cost effective to at least TRY before ripping apart the canyon for a gondola.</p> <p>I am not okay with my tax dollars going towards a gondola that will be fully utilized for, at most 4 months out of the year to serve two private businesses. The resorts cannot handle more people than they already serve and the ability to gondola more people up to an already at capacity resort seems wildly shortsighted.</p> <p>I am not okay with the environmental degradation and visual disruption a gondola will create in the canyon. Little Cottonwood is a gorgeous canyon and the gondola will be a scar of destruction to the visual landscape.</p> <p>I would like to remind you that you work for the people of Utah not the personal interests of Powdr Corporation and the Laughlin/Quinney/Bass families.</p> <p>Sincerely, Hailey</p>

26568	Mark Doherty	<p>Please consider alternatives to the Gondola Project. Here is what I propose:</p> <ol style="list-style-type: none"> 1) Canyon Entry Fees for every car, similar to what is done through the National Park System. Travelers can pay daily, or can purchase a winter/summer pass. These fees can be set high enough to substantially discourage excess travel and ENCOURAGE bus transit. 2) Widen the canyon road to accommodate a full, upcanyon bus lane. 3) Establish transit hubs throughout Draper and Cottonwood heights which will disperse traffic congestion. <p>We as a state simply should not build a gondola which would serve only two, medium sized ski resorts during a four month season. The entire state tax base would shoulder the bill for a project that will undoubtedly cost three times the estimated costs after all of the legal and environmental issues come into play.</p> <p>Finally, with the impending decline of the Great Salt Lake, the certainty of enough snow to keep Alta and Snowbird viable as resorts becomes a legitimate question. If we propose anything that requires massive state wide tax based funding, it should be along the lines of pursuing a pipeline from the Pacific Ocean to regenerate the Great Salt Lake.</p> <p>Thankyou for considering my thoughts. Mark Doherty 40 year resident of Utah.</p>
26570	Joshua Cook	<p>Seems like way too much money to spend on a limited section of populace. Would ruin the beauty of the canyon. But most importantly, can you even imagine the bottleneck of getting in and out of a parking garage??!!! People will do it once and decide they don't like the wait and then end up driving up the canyon anyway which would make the money spent a waste and the marred environment a waste!</p>
26572	Josh Verschoor	<p>Please listen to the public and reconsider your priorities. Tolling would be a great option to lessen cars in the canyon and to limit single vehicle occupants. This would also pay for itself and not raise taxes or other costs.</p>
26571	Grace Garrett	<p>Do not put in a gondola! This will only hurt the canyon by bringing a ridiculous amount of traffic. More traffic means less nature and less enjoyment of our beautiful mountains. You are hurting the way of life of those who live here.</p>
26573	Sarieh Gmitro	<p>Very upset and disappointed in the decision to put a gondola in LCC. This is not the answer and we don't want it. Please change this decision.</p>
26574	Lyndsay Gang	<p>Please do not put a gondola in LCC. Instead, force the resorts to put a reservation system in to limit visitors. The canyon is so beautiful and a gondola will be such an eye sore. Let's stop turning the beautiful outdoors into Disney World. Keep it wild.</p>
26577	Carson Field	<p>This gondola is a mistake and a colossal waste of public funds. It will have very minor benefit for very extreme detriment.</p>
26575	Eric Johnson	<p>Please do not build a gondola that will ruin the views of Little Cottonwood and only serve the ski resorts. The canyon needs a better solution that takes into account all uses of the canyon. The gondola will do nothing to alleviate congestion at the trailheads. Nor should the public be asked to pay for a project that primarily serves private business. These are funds that should be directed elsewhere where they will benefit more people.</p>
26576	Melissa Flynn	<p>I do not support the building of the gondola. There are better and more fiscally responsible options for solving the transportation issue in LCC</p>
26579	Jack B	<p>The Gondola seeks to solve a problem that isn't there. If tire checks were conducted on the way up we could significantly decrease accidents. Only conduct checks on the way up to ensure the traffic does not get backed up. The Gondola project is not worth it's value, and matinance on the gondola further adds to the problem. Pick practical solutions</p>
26580	Carly Miskol	<p>As a resident of Cottonwood Heights, who is directly affected by the traffic on Wasatch blvd from both canyons, I am 100% AGAINST the gondola in Little Cottonwood Canyon. This is a beautiful space that needs to be preserved. The canyon provides enjoyment for people all throughout the year and building a gondola will significantly affect the usage of those who hike, bike, and mountain climb. Not to mention the HUGE impact it would have on wildlife and the watershed that so many of us rely on. It's an insane burden on taxpayer funds that could be used for so many other higher priority things and is terrifying to think the canyons could be taken over by private entities who care more about making money then the preservation of our beautiful canyons. We will NEVER be able to fix the damage the construction of the gondola would make on Little Cottonwood Canyon. I beg you to reconsider this decision . Increased bus services, carpool incentives, and tolls into the canyon during high traffic days can work and should, at very least, be tried before jumping into something that has the potential to be catastrophic like the gondola.</p>
26578	Mike Azarian	<p>Please do nothing. The skiers can wait in traffic or go earlier. Thanks.</p>
26581	Stephen Chipman	<p>I believe that a gondola system is an extremely costly and landscape destroying solution that would mainly benefit skiers and the ski industry. We do need to find creative congestion reducing ways to transport ALL users of our canyons, not just ski traffic. There should be increased parking and shuttle buses every fifteen minutes, possibly with dedicated express buses to the resorts, thus reducing parking congestion at the resorts and trailheads. But the gondola is not the way to go. I strongly oppose.</p>
26582	Ben Brown	<p>Hi. I've lived at the base of LCC for my whole life and have spent every single waking day being amazed at the natural wonder and beauty that surrounds our canyon. I am an avid skier myself, averaging almost 70 days a year, and I can see theoretical benefit in that of stream lining traffic up SR 210. But, I am 100% against this movement. The impact of the human footprint on our canyon would be forever altering and would destroy the already fragile wildlife and vegetation. I would hate to see my beautiful up canyon view be muddled by a gondola that will bring even more skiers to our over crowded resorts. I believe that God would want us to preserve the creation he made, regardless of how much money it will make. How about we educate all our friends on how to drive in the snow or how to take the bus instead of creating an even bigger traffic problem. I appreciate your desire to create opportunities for everyone to get up the canyon, but I cannot support this immense of a footprint and damage to the ecosystem that you will create only to bring sh8t skiers to the ski resorts. Thank you.</p>
26583	Dakota Wright	<p>The gondola is the wrong choice. Please listen to the community and continue to look for more solutions that don't involve an eyesore.</p>
26584	Sonya Gilbert	<p>No gondola. Thank you.</p>
26585	Rayna Scott	<p>I'm against the gondola. I think it's important to start with a phased approach.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26587	Lance Butler	I support the gondola. As a resident in Salt Lake Valley, a skier and year round user of Little Cottonwood Canyon I think this would help the environment and access to the canyon.
26586	Chris Croft	This smells like corruption all the way. No one wants this. Who's pockets are being lined. Instigation needed. Seriously.
26588	Abbey Hadley	It is incredibly invasive and will scar the canyon forever. Countless climbing areas will be destroyed, our watershed will be put at risk due to construction. The parking lot for the gondola is past where the line usually is on weekends so it wouldn't help alleviate traffic in that respect.
26589	Averi Sommer	DO NOT BUILD! Don't ruin nature and the mountains more than they have been. Keep Utah beautiful and tourist free. The environment needs you to not build, listen to Mother Earth!
26590	Steve Mehne	Putting a gondola up restricts roadside access for backcountry use and purely serves the resorts. This will not allow people of all activities to use the public land which sits on either side of the road. This is not the best solution and further increases the inaccessibility to the PUBLIC land which is trying to be utilized by the land owners (the public). This will restrict access to public land and make it more difficult to access. It is an over the top bourgeoisie solution to a simple problem.
26591	Jonah Callister	Unbelievable that the Gondola is still going through with approvals....it's going to do nothing but benefit Alta and Snowbird. No hiking trail stops in the summer? The resorts aren't even paying for it. One of the first concerns was that they wanted to find a solution that wouldn't ruin the natural beauty of Little Cottonwood Canyon. 50-100ft gondola towers going all the way up the canyon will be the biggest eye sore possible! Much worse than making a tunnel, or blowing up some rock, in order to expand the road. It's very disappointing that there's so many people giving negative feedback about this project, yet the idea continues to be pushed on us, over and over.
26592	Andrew Driffill	This is the dumbest thing we could have chosen to do. Not only will the gondola be bad for the environment, it will be problematic for the the wildlife and will continue to make are air quality worse and worse. Why not put the 50 million dollar of taxpayers money into electric busses And only allow canyon entry to the community and have visitors be forced to take the busses.
26594	Dusty Hanna	A gondola will only impact our canyons in a negative way. I believe we are trying to make this better for Utahns especially because the money will most likely becoming from their pockets. Please listen to the public on this issue there is alternate ideas of how to make our canyons more efficient, less congested and still being in revenue for our state. My idea was to only allow local Utah residents in the canyons (cars with Utah plates) to drive the canyons on week days and on the weekends out of state vehicles can use the roads. This would at least fix weekdays for locals and still keep travelers happy on the weekends (when it is most busy) please listen to us and hopefully we can come together on a joint effort to fix this problem within our community.
26593	Ryan Tate	The people have spoken, NO GONDOLA
26595	Brooklyn Snell	I'm not extremely sure what is going on but I think our mountains are beautiful and our animals are beautiful and I know people want to keep it that way
26596	Alessandra Maw	I am strongly opposed to this taxpayer subsidy that will do nothing to benefit the majority of Utahns (who will be paying the cost of this) and serve only to benefit two private ski areas. We moved to Utah because it is a fiscally conservative state, values its low taxes, and has a strong preference for private enterprise and against government subsidies. This proposal flips those values on their head. The reserved parking situation in the canyons have greatly relieved congestion and appear to be working well. Additionally, lift lines this past season were as long as ever. So what will this gondola do? Aid in reducing already manageable traffic? Increase resort attendance when the resorts are already at capacity? To me, it is a drastic and expensive solution in search of a problem. I therefore urge everyone in a decision-making authority over this boondoggle to oppose it. Thank you.
26598	Eva Echevarria	Please help us protect our beautiful wildlife and the creatures that need it as homes. This ecosystem is a delicate balance, and we need to protect it. It's completely unreasonable for us to build in places like this, places that are supposed to be protected.
26597	Ryan Smith	Please DO NOT construct a gondola. There is a better solution. My family and community are firmly opposed to building this kind of conveyance.
26600	Leif Zaugg	Honestly this is just a bad idea in general. Destroys climbing areas, will increase already horrible pollution with more tourists, and just boosts the ski resorts, especially snowbird, that constantly raise prices and favor tourists rather than locals just to increase profits. Ikon pass is already ruining utah skiing. Instead of spending half a billion dollars or whatever the crazy amount is, it should be spent on increasing bus systems, used on upkeep in general of mountain area, and help with problems that we already have in utah.
26599	Tyler Barnhart	I do not support the Gondola in Little Cottonwood Canyon. There is a better solution for the traffic
26602	Benjamin Lawrence	I write in strong opposition to the gondola solution. This seems like little more than a \$500M handout to the ski resorts, while not helping with other uses of LCC and likely just add more traffic at the base of the canyon. There are significantly cheaper options available. For example, Zion NP closes the main canyon during crowded times of year, allowing access only through a bus system with many stops. The same makes sense for LCC, closing the canyon to all vehicles between certain hours (such as 6 AM to 4 PM) on all crowded days. This will require the purchase of buses (and the installation of snow sheds make sense) without any widening of the road. The buses, when not used on busy days, can be used for other applications throughout the city. Ultimately, I encourage the commission to keep the road the same size, add sheds, not add a gondola, and increase the number of buses with mandatory closure of LCC on busy days between specific times.
26601	Gary Fritzsche	This will scar the beauty of the glacier made canyon for life. I laugh when I see the commercial no one rides the bus. Well those same people won't ride a condola. This is all about money for the condola project. I will ski elsewhere if you take my car option away. Save the canyon by not putting in a ugly line of towers from the bottom to the top. The greatest snow on earth should be protected with other options. Not a eye sore condola.

26603	Greg Bobetich	<p>I want to state that I am strongly against any proposed gondola for Little Cottonwood Canyon transportation. I feel that a gondola does not solve the transportation needs for myself or many members of my community. Furthermore I would like specific details about how the half a billion dollar project will be funded and how Utahns can be certain that the proposed budget will be enough to see the job is completed within the budget perimeters and on time. I can't help but think of the story of the Californians bullet train to nowhere that was never completed, which was a project for a high-speed rail system in California that was not able to raise the capital needed to complete the job after it was started. I strongly feel that implementing solutions that reduce traffic in the canyon is the answer for the short and long term, especially when the proposed solution is so expensive, publicly funded, and does not run 24/7 or even year round.</p> <p>If this project is to move forward, I would like to the ski resorts to pay for it. Not the government, which is responsible for funding never ending construction projects, or any members of the community which opposes it.</p> <p>Sincerely, Greg Bobetich</p>
26606	Ada Fendler	<p>The Gondola is one of the worst things to come from these resorts corporate greed. These canyons are a sacred homeland to plants and animals and they are rooted with history. This gondola goes against everything that would help to preserve this beautiful place. I am disgusted with Snowbird, Alta, UDOT, and their decision to build this monstrosity. As a Cottonwood heights resident this is detrimental to the traffic control in my neighborhood right at the bottom. How is this expected to help the local residents and outdoor users when it uses our money to get ikon tourists into our mountains. Listen to the people and let go of the greed, when we lose our canyons we will all be sorry, can't make any money when the beauty disappears. Do better SLC.</p>
26604	Matthew Lundberg	<p>I don't like a solution that is going to deface the canyons and ultimately lead to the lose of public lands. It's wrong that majority of the people do not want it but yet this tourist attraction for the resorts will be subsidized by our tax dollars.</p>
26605	Jack Baldwin	<p>If ski resorts want the gondola they can pay for it themselves. If they don't think it's worth the investment why should public money believe so? The resorts may likely already be at capacity so how does a gondola help anyway? It's a bad idea all around. If it goes through I can only imagine the source is corruption i.e. misaligned incentives that put the wrong skin in the game.</p>
26607	Carter Chytraus	<p>Don't do it!!</p>
28167	Anthony Martinez	<p>So the government goes against the will of the citizens who have to fund it ? Sounds like this was a done deal long ago. Shady as hell.</p>
26608	Macie Wagstaff	<p>Gondola will not fix anything. It's terrible for the environment, and it's going to make traffic worse because people will still drive up to get parking for gondola.</p>
26609	Diane Whittaker	<p>I am so disappointed that the gondola is the route UDOT decided to take.</p> <p>Making taxpayers pay for this is unfair, with such a small percentage of Utahn's that actually ski. If UDOT insists on this crazy solution, then find a different funding source.</p> <p>The resorts do not have the infrastructure to support the gondola.</p> <p>No one wants to spend an hour getting up the canyon.</p> <p>The gondola will not serve many winter sports fans, such as backcountry skiers, hikers, snowshoers because it won't stop at those non-resort places.</p> <p>UDOT states a dollar amount. What is this figure based on? Do we have the final structural engineered plans approved by the state and county? I believe this estimate is way too low.</p> <p>Frequent bus service with natural gas powered busses is the solution. Cheaper and faster than the gondola and much more sensible. Buses could also be used in Big Cottonwood, giving access to both canyons.</p> <p>With global warming, skiing may not be much of a draw in Utah ten years from now.</p> <p>Please, please do not approve the Gondola for Little Cottonwood.</p>
26610	Daniel Strong	<p>People keep trying to explain to me why the gondola is bad, but I must say, I don't see the problem. It sounds both functional and exciting. I look forward to riding it with my kids and grandkids in the future. Gondola on!</p>
26611	Anthony Martinez	<p>The gondola was shot dow by the citizens funding it. Yet the government goes ahead with it ? Shady as hell. Fix the roads, potholes first.let private companies fund there own projects.</p>
29442	Madison Dotson	<p>Hi, my name is Madison Dotson. You can reach me at this phone number [REDACTED]. I'm calling to comment to comment that I'm opposed to the gondola being placed in Little Cottonwood Canyon as a solution. I do not believe that our Canyons should be funding private project management teams, and I believe that the gondola will be a blight on the canyon and is an unnecessary ineffective and expensive way to solve this issue, and that public opinion has not been elicited and listened to enough. Thank you.</p>

28166	Paula Breen	<p>Paula Breen <paula4breen@gmail.com> Thu, Sep 1, 2:20 PM (7 days ago) to me, Scott, ttingey, mweichers</p> <p>Hi We have a relatively new home located on the west side of Wasatch Blvd at approximately [REDACTED] [REDACTED] Some of the original EIS maps showed our home as an empty lot with no concrete sound wall included on the plans. We were hoping that since our home has been built in the interim, the plans would now include a sound wall in front of our EAST facing house. There is still no sound wall included in the final EIS, but the neighbors on either side of us do have the wall. We would like the wall to continue across the front of our property as well. Please respond with your thoughts on this.</p> <p>See attached pics.</p> <p>Thank you for your attention to this,</p> <p>Paula and Scott Breen</p> <p>[REDACTED]</p>
26612	Brie Poirier	<p>Don't mess up a beautiful place and Salt Lakes watershed even more! Explains bus system and carpooling options! The vast majority of slc locals and people recreating here don't support the gondola!</p>
26614	Izzy Parker	<p>If you put a gondola in little cottonwood canyon it'll ruin the beauty of the canyon and it will bring more people to the ski resorts and make the lines even longer and make it so we have less time skiing. DONT PUT A GONDOLA UP!!!!</p>
26613	Sarah Kaufmann	<p>The gondola only moves traffic issues down canyon into Wasatch neighborhoods around whatever parking monstrosity will be assembled, the gondola can't run in high wind conditions so people are still stuck prior to reaching a resort, it is expensive (both per trip for riders and for tax payers to build), and it amounts to taxpayer dollars funding a private initiative for Alta and Snowbird. Let's improve bussing and canyon infrastructure with avy tunnels and bus lanes.</p>
28165	Roxan Anderes	<p>I very much support the Gondola solution it is the only one that makes sense. There was no information about the concept of charging for the usage of the gondola. I think a small usage fee would be indoor. As of now people drive up pay gas and wear and tear on their car and I assume a bus fee. Plus Parking fees. Seems like to me especially in the winter a per ride usage fee is called for. That income could offset and possibly pay for the cost of running this service. This is a win win and the sooner you get this up and running the better off we will all be. Thanks for all of your hard work it has been a long process, Roxan</p>
26615	Corby Devico	<p>This is a wonderful idea and I fully support it. Trying to get up the canyon is so hard and as a native I want my children to enjoy skiing as I did. Please use this option and help reduce pollution</p>
26616	Gretchen Devine	<p>The gondola is not the correct solution for increased traffic in the canyon. It is costly, mars the landscape, and doesn't make as much impact as bus and community centered solution. Improving and supporting increased bus options would not only positively affect the canyon, but improve transportation and safety in the rest of the valley. We don't need to do some much damage to our landscape to provide better access to it.</p>
26617	Matt Devico	<p>I support this</p>
26618	Abby Salisbury	<p>These structures are so unnecessary. the canyons barely ever have large amounts of traffic and these new structures will ruin the environment. instead of having beautiful mountain views of trees and rivers we'll be looking at bland metal towers. these new structures won't solve the issue, because they'll get traffic heavy too. Don't ruin our mountains, don't build these.</p>
26619	Jeffrey Woolery	<p>Gondola final comment</p> <p>The Wasatch Blvd expansion to 5 lanes should not be waited on, or done after the imbalanced expansion, because that's an increase of cost, plus Wasatch Blvd needs to be expanded in phase 1 if for anything the 2050 growth plan of the state.</p> <p>Rather than a bus running between Fort Union and Little Cottonwood mouth, have a Gondola that is running from parking lot to parking lot. This would also help add to infrastructure should a Gondola go up Big Cottonwood [which it should].</p> <p>The snow sheds should be in phase 1 and phase 2 depending on how far up SR-210 they go. With that said, the Gondola needs to have a stop via parking areas of all 4 trailheads (Gate Buttress trailhead, Bridge trailhead, Lisa Falls trailhead, White Pine trailhead) in addition to the ski resorts. This could open funding from the parks and department in interior, BLM.</p> <p>Funding should not be through new taxes, that will be the biggest pushback to the Gondola's future. This needs to have funding from the federal infrastructure grants, but also two other parties. Alta and Snowbird should be taxed a maintenance and operations fee and rather than a "toll", SR-210 should be added to the state parks pass. In other words, should someone drive up little or big cottonwood they either would need the "state parks pass" or pay "\$30 a car".</p>
26620	Leland Gibson	<p>SHAME ON YOU. DO NOT BUILD A GONDOLA IN LITTLE COTTONWOOD CANYON WITH MY TAXES.</p>
26621	Brett Digwood	<p>Along with 80% local residents I am not in support of this decision. This is plenty of alternative that make more sense including alternating traffic. It is unfortunate that we are destroying a canyon for 11 days of extreme traffic so that few can profit.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26623	Kimberly Sloan Ellis	I do not support the gondola. I'm a snowbird skier and an SLC resident. The congestion is still infrequent in the canyon. I also don't want to ruin the canyon's beauty for a few days of inconvenience each year for private resorts to make more money. The cost is exorbitant to build the gondola. Given the wealth of issues in SLC, I think the money could be much better spent.
26624	Miguel Knochel	Opposed to gondola. Although a gondola is one solution, it is too expensive, and too disruptive to the land. However, we cannot do nothing. How about a fleet of no-few electric buses leaving every 5 minutes during peak time and every 15 minutes off-peak AND very strict chain requirements in winter, AND an automated fee by photo-license plate to exit the canyon by car, AND only carpool allowed for cars during peak hours, AND a towing patrol all day, etc.
26622	Nadia Bigney	I do not support building of a gondola in any of the cottonwood canyons as this will only add more stress the the actual land that we hold so dear as back country athletes. This does not adequate solve our problem and further adds construction and access roads to our shrinking back country.
26625	Jenny Lieb	You need to stop the gondola. We do not want to pay for it with tax dollars
26627	Duncan Smith	I oppose the plan for a gondola running up Little Cottonwood Canyon. A gondola would be visually unpleasant and primarily would serve those visiting the ski resorts. Impacts from canyon transportation are important but a gondola that UDOT lacks funds for is not the answer. A far more cost effective approach is to limit single occupancy vehicle travel and impose tolling for canyon access. Based on the given figure of \$7 million year round operating costs, assuming 365 day operation, that works out to over \$19k per day. If the gondola operates 12 hours per day every 2 minutes as stated with each car at capacity, that works out to \$1.78 per person, which sounds reasonable but it is highly unlikely to run at capacity year round. One can expect many of the 30 cars per hour to be empty or nearly so, which will make tickets expensive and unattractive or they will be taxpayer subsidized, neither of which is a good idea. I picture use of a gondola to be a novelty used by few, meaning it will not fix the problem it is meant to address.
26626	Ethan Boulter	I'm absolutely thrilled that the gondala option is being considered. I think that it will be the least impactful and best solution in the long run
26628	Garrett Morris	DO NOT BUILD THE GONDOLA. The Lee are other options that don't involve destroying the environment and spending hundreds of millions of dollars. I repeat, DO NOT BUILD THE GONDOLA.
26629	James Thompson	Why is UDOT so hellbent on this lame and expensive gondola idea? It benefits no one except Snowbird and Alta resorts and maybe some rich tourists! Which probably is the worst thing about this--is that public monies will be used to build the thing. How is this fair to the Utah taxpayer, especially if he/she doesn't ski. If this were truly a public service transport system, it would have at least one stop at the White Pine Trailhead for those canyon-users who don't want to also pay expensive lift-ticket prices. I agree that perhaps the Utah public has a chance now to prove that we can carpool or use public mass transit (buses) while waiting for sufficient funds to magically be found to build the golden gondola.
26630	David Kirk	A gondola serves only the ski resorts, while spending hundreds of millions of dollars of public funding. Rapid transit is cheaper, and provides better access to the WHOLE canyon. I do NOT support the gondola.
26631	Marcia Ferrin	Our family owns a condo on the by-pass road to Alta. We are extremely concerned with the decision for a gondola. The towers required are unsightly, hideous against the beautiful canyon views and it is unjust to have a couple of big corporations buying and steering against public desires. The gondola is only the tip of additions that will be required once people arrive at the top. People will still prefer to drive, reserve a parking spot and forget the hassle of a slow ride up to the resorts. Looks like a real mess! Adding more, frequent busing is not such a burden on the tax payer and Udot is looking beyond this simple mark.
26632	Rebekah Couper-noles	Please, please do not build a gondola in LCC. I would like to see tolling and expanded bus options instead of making any permanent changes like a gondola. This is a precious environment and we should be doing everything possible to provide access while minimizing impact. Tolling will reduce traffic and push people to use mass transit. Increased busses will help people move through the canyon while minimizing vehicle traffic all year. Please, please no gondola. Let's use our existing resources to get people into the canyon with busses and tolls. Understanding the importance of tourists and wealthy consumers to resorts, they can still drive their vehicles for a premium price or use a private carpool or private MOV (multiple occupancy vehicle) service (as opposed to the public bus option) for a premium price. We can do this with busses and tolling and perserve the environment and reduce the overall impact of the solution.
26633	Josie Bohling	I am opposed to the use of tax payers money to fund a gondola so private business can increase their profits. I am equally opposed to the destruction to the canyon and the visual beauty of Little Cottonwood canyon so ski resorts can increase their visitors. This is a peak flow issue 20 data out of the year. This canyon is for more than the ski resorts. It's a place of peace and beauty all year round for residents and visitors. Please do not support the destruction of such a treasure. How about the ski resorts pay for their own busses that are super durable for snow. They pay to increase their profits not the taxpayers
26635	Del Turner	This is a terrible idea. Corporate welfare, only skiers will benefit, climate change will alter the ski industry, stop the insanity.
26634	Charlie Clark	please do not allow this to happen LCC is utilized for more than just skiing!
26636	Bendick Hoeg	Widen the road to make bus-only lanes. Then the bus will be faster and people will ride it. A 55 min gondola only to the ski resorts is lunacy.
26637	Megan Andersom	This is a horrible idea and damages so much of the natural beauty in Utah we have all been striving so hard to maintain. Check your greed at the door and protect our mountains!
26638	Katie Ferriello	Please do not build the gondola. It will forever change the landscape and environment. It is expensive and not beneficial to the general public.
26640	Erik Nielsen	I have lived at the base of the cottonwoods my entire life and have recreated in the canyons at least 65 times per year during that time. A gondola in LCC would effectively RUIN my quality of life in the winter time as well as give unwanted access to unsafe tourists and rich folks to these beautiful canyons who don't respect or appreciate them the way everyone should. I am AGAINST any proposal for a gondola in any of our wonderful canyons.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26639	Samantha Soderman	Please do not do the gondola. I believe more frequent buses is the better alternative. A large bus station with ample parking, lockers, cafe, etc, would entice people to use the bus.
26641	Cameron Soelberg	With all due respect, the idea of a gondola moving visitors up and down Little Cottonwood Canyon effectively enough to alleviate road congestion is a financial boondoggle on par with the infamous "Bridge to Nowhere" that was partially built and then abandoned in Ketchikan, Alaska. Please apply some common sense and choose an alternative that is flexible, scalable, and will not have a permanent impact on the scenery, ecology, or water quality of LCC. Thank you, Cameron Soelberg Salt Lake City, UT
26642	Mark Lolla	This gondola will only support tourists and skiing. Little Cottonwood Canyon is so much more than 4 months a year at Alta. Please do not destroy a world class climbing area for a few months of tourism.
26643	Bailey Attebury	This is stupid. How are you not seeing/considering the immense amount of disturbance and inconvenience you will be causing these people who have lived there in peace? Use your damn brain cells
26644	Patricia Lake	I agree completely with Mayor Wilson. I think the problems can be solved with less money spent and most importantly without ruining the beautiful view and drive up Little Cottonwood Canyon. We don't need high-rise structures there that will make the canyon look like a commercial enterprise. We need to preserve the natural look as much as possible. Skiers are important, but they aren't the only ones we need to consider.
26647	Gary Lovell	I am completely against this new infrastructure in the canyon.
26646	Kary Norton	I do not support the gondola. It is a poor use of tax payer dollars to make some rich people richer, including state legislators who are fighting for it. Improving and incentivizing busses is a much better option for the general public. As a backcountry skier, this gondola does nothing for me. Please don't go ahead with the gondola plan. It is a horrible business decision, and a bad look for udot and shady Utah politics.
26645	Pierce Kettering	No gondola
26649	Beth Lacarra	This is super disappointing as a strategy. This does nothing to help trailhead traffic, it destroys active climbing and hiking areas, and honestly probably wont help traffic at all.
26648	E Ingraham	Gondola B is not an acceptable fix to Little Cottonwood's problems. We need to try mandatory bus or car pooling 1st. To do otherwise is a give away of public dollars for corporate profit and a few ex-politicians. Its very expensive for taxpayers, there are limited benefits for non-skiers, with significant downside and damage for the rest of us. A gondola is premature overkill. First try the transit fixes the SL Co. Mayor and Sandy mayor and everyone else who is not making money on this is suggesting, before putting 20+ 250 ft towers all up that valley. The slick ads from Gondola Works somehow dont show those hideous support towers. Please reconsider and do the right thing, no gondola! Thank you
26650	Brandon Mayhew	I believe this will ruin what little cottonwood is as we know it and only benefits the private for profit. Instead I believe we should limit the amount of people up the canyon at once
26651	Carly Griffith	NO gondola. We need taxpayer friendly solutions that also protect our canyons and air.
26652	Richard Billings	I find this approach very sensible. The aesthetics of a gondola far outweigh any bus system.
26653	Jack Smith	The proposed gondola will spread litter/pollutants throughout the canyon. Polluting areas that may not be accessible to clean.
26654	Elizabeth Tronstein	A gondola is not the answer for LCC. It will irreversibly harm the canyon. Please don't destroy our canyons! Better buses are the way to improve the canyon. We do not need disneyland with gondolas that will not carry enough people to aid in canyon traffic . Better bus service will help. Stop the gondola- it's the only way to save the canyon!!!
26655	Ian Birch	The proposed solution of a gondola will NOT solve the congestion problem in LCC, and will likely increase traffic instead. There are no busses to the base station, therefore more people will drive to the mouth of the canyon on basically two surface streets, causing more congestion. Once parking spots fill up, those that did not get a spot will have no other choice but to drive up the canyon. Fees to use the gondola will discourage groups from riding because it will be cheaper to drive. Travel time is too long on the gondola, so people will opt to drive anyways. The gondola will not stop at trailheads, so winter recreationalists will be forced to drive. Increase bus service with meaningful parking availability and widen the road, that is the solution to ACTUALLY solve congestion.
26656	Jake Owen	This is a waste of money, and something that will completely alter LCC. I am not in favor of the gondola
26657	Ashley Donham	A large portion of Utahans will not utilize the gondola, including myself. Utah tax payers should not pay for such a significant infrastructure development, and large price tag, that will only benefit one industry - an industry that may not exist in Utah in 15 years. The resorts should be the primary buyers, IF this moves ahead. While I do have concerns about canyon conversation and vehicle impact, I believe such a large amount of funding should be devoted to water conversation efforts. As stated earlier, the snow/ski resort industry may not be practical in Utah in a few decades, if our drought and Great Salt Lake conditions continue. All non invasive strategies should be attempted first. Please listen to the people, we do not want this.
26658	Susan Ford	This reeks of cronyism, the only people for this solution are the ones making money off of it. It will ruin our canyon and won't fix the problem. But since the people with the money get to tromp all over whatever they feel like, at the very least make snowbird and Alta pay for it. This isn't a tax payer issue. This is corruption and I hope the voters see it for what it truly is.
26659	Sophia Paradis	The gondola is the worst option for LCC. No one who visits the canyon regularly or daily is in support. The only beneficiaries are snowbird and Alta, not the residents of salt lake and taxpayers. There are a slew of other more reasonable, less expensive options that don't require 10 years and millions of dollars. Not to mention ruining the canyon. Spend some time looking into more realistic options. We could enact something like Zion, limiting private vehicle from 8-12 and increasing bussing at that time.
26661	Brody Swanner	I do not support the gondola. Save little cottonwood and do not approve the gondola.
26662	Julie Allred	It would be nice if the area residents desires were considered! We do T want this to happen. And, we don't want to have to pay for it.

26660	Scott Liljenquist	I fully support the gondola option, and applaud UDOT for making the correct choice. I further commend those who made this decision despite the cacophony or special interest groups attempting to derail this great and logical option. Please continue to push forward with the construction of the gondola, and continue to make common sense decisions rather than succumb to the special interest groups and the loud but minority group naysayers who do not represent the majority of canyon users who can't wait to use the gondola.
26663	Drew Gill	As a long time user of the cottonwood canyons and a snowbird frequenter I can confidently say that this gondola is an absolutely disgusting misuse of resources. Traffic is only a problem a couple days of the year. We have not yet fully explored lower impact options such as increased buses. Let's try some cheaper and lower impact options out before we start dumping insane amounts of money to subsidize a private business.
26664	Mark Decker	I am in 100% in opposition of the Final EIS preferred alternative. I will not support this alternative and urge UDOT and all other stakeholders to consider the removal of the Ikon pass or any other services that subsidize access to Little Cottonwood Canyon to travelers. I want you consider the economic impact this will have for the state. Yes there is economic stimulus from the Ikon pass but how many years will it take for that stimulus to out weigh the cost of the gondola? Also, please consider the experience the gondola and parking structures will have for the end-users. Also consider the strain on our neighborhoods and surrounding areas the support traffic to this parking structure. They are not designed to handle this type of traffic. Lastly, consider all of the other days in the calendar year when the gondola is not needed.
26666	Sarah Mcdonald	This is utterly ridiculous from every standpoint but from those who stand to make the most money off of development (the same people destroying every other part of the state). It's the safest and most reliable public transportation? [REDACTED]. Refusing to put any worthwhile money and effort into developing our EXISTING public transport has led to this. It's an easy, easy fix. What can transport 40+ people at a time, as well as hold their equipment? What can employ drivers, technicians, ticket checkers, and more? What doesn't destroy the beautiful canyon with endless construction and red tape? What do we ALREADY have? Busses. We don't need a [REDACTED] gondola any more than we need less water in the Great Salt Lake. If you're going to be this publicly corrupt, at least do it in an intelligent way. This is just blasphemous- and if the plans do get approved, I hope to God that some concerned citizens will continue their plans of sabotaging your shotty development and construction plans.
26665	William Shiflett	Gondolas is a very poor solution. With only two destinations, Snowbird and Alta, there is little reason for many to ever ride the gondola during the summer months. Additionally, in the winter months there will be significantly more traffic and congestion at the mouth to Little Cottonwood Canyon. The gondola will only transfer the traffic problems in the canyon to be on Wasatch Blvd. The gondola is NOT the solution for the concerns we have for Little Cottonwood Canyon.
26668	Sam Stringham	We don't want a gondola.
26667	Isaac Mortensen	As a Sandy City resident I do not support the construction of the gondola for Little Cottonwood Canyon. This project is way too expensive and travel time using the gondola would be much slower than driving (most of the time unless during a rare high peak traffic time or an accident causing traffic delays). I believe there are better and more economical alternatives to solving this problem. Please do not build the gondola.
26669	Alison Holbrook	<p>I don't like several things about the gondola idea, and the ways it seems the tolls would be assessed. Here are a few of my thoughts.</p> <ol style="list-style-type: none"> 1. The idea of installing a gondola so that everyone DRIVING up the canyon needs to pay a toll doesn't seem fair because people using the canyon for other activities besides skiing, like hiking and camping, don't have any other option for ways to get up the canyon besides driving. Taking a bus doesn't work for camping either because folks need a car full of supplies. There is already a fee to camp in the canyon, so another toll for driving in the canyon seems off. As far as I understand, the gondola won't stop at all the campgrounds, so even if people wanted to, they couldn't really utilize the gondola for hiking and camping. Then it feels they are penalized for not using the gondola, when it isn't even an option anyway. 2. How long would the gondola stop at the bottom and top of the canyon? You say that a gondola would come every 2 minutes, but how are 35 people supposed to get all their ski gear on a gondola in 2 minutes before it has to leave? Seems that people wouldn't have a lot of time to get IN the gondola (especially families with children), and it would be difficult or impossible to carry the gear with them without having a vehicle, so they would just opt to drive up the canyon anyway, and not use the gondola. Seems that the gondola would only really benefit adults going skiing on their own, or with friends... not older folks or families with children, which are MOST of the dynamic of the Utah population. Busses seem to be a more feasible solution for that, where people could have more time to load their gear before pulling away. And we can buy so many busses for the cost of the gondola system. 3. Taxes are being raised so much right now anyway with inflation. I don't think it's a good time to be asking for so much more money from taxpayers for a gondola for 1 canyon that is most often used for one group of people that go skiing up there. 4. Reservations at the ski resorts have apparently reduced congestion already. Why can't we continue to give some time for the implementation of reservations, more busses, etc before we jump the gun to raise taxes a lot to pay for this HIGHLY controversial addition? 4. This super pricey decision only affects road congestion in Little Cottonwood Canyon. But what about Big Cottonwood? We couldn't afford to do the same thing in that canyon as well, so why can't we use the solution we come up with in Big Cottonwood as the Little Cottonwood solution too? 5. What if the gondola system doesn't work out as well as is hoped, and is abandoned? Then we have ALL of that super expensive, eye-sore equipment through the canyon getting dilapidated and unused and very difficult to remove, and a huge waste of money. I'm worried about that possibility. 6. What other locations with gondolas have been studied, and how are their situations similar/different from our situation? Are we sure the public likes the gondolas already in use? <p>There are some of my thoughts and concerns. Thanks for the opportunity to provide input.</p>
26670	Nancy Rushforth	The proposal to build a multi-billion dollar gondola to transport MORE skiers to already overly crowded ski resorts is a huge corporate welfare giveaway. In view of the many pressing needs in our state, I firmly object to state subsidies for such a project. People could make canyon reservations, take buses, drive early to ski. I don't want to help pay for skier access to Alta and Snowbird. I vote NO

26671	Haley Lewin	<p>I am very disappointed by the decision to support the gondola. The days that draw the most people to the canyons are often very windy and not ideal weather conditions to run such a long gondola.</p> <p>Instead, vehicle traffic could be reduced by increasing busses (and expanding hours) as well as requiring vehicles to have snow tires to enter the canyon. This would improve safety while reducing crowds and maintaining accessibility.</p>
26672	Michael Pappalardo	Please do not build a gondola -sincerely a concerned resident
26673	Connor Garvey	<p>I do not support the proposed LCC gondola.</p> <p>Close the roads on weekends and peak days, and operate the road as bus only. Run a bus service to Snowbird and Alta bases, and an additional bus service to trailheads for non-resort users. Residents of the canyon and their guests can be issued special use permits for the road during peak days. This reduces congestion on the road and utilizes the existing infrastructure. The Zion NP shuttle service can be used as an example of a high capacity shuttle service that is highly effective.</p>
26674	Elisa Schvaneveldt	<p>This study doesn't show consideration for decreasing snow pack levels. The Utah Avalanche center has data going back to the 80s for Alta snowpack. Since the 90s, our snow levels have been decreasing. UDOT released a memo in 2020 that hardly addressed this - it only featured a 7 year study and said visitors did not decrease in bad snow years. 7 years is not a long study. If snowpack levels continue to decrease, at some point people will stop buying passes. Not within a year or two of a bad snow year but over time. Why are we building taking on such an expensive project when we know our snow levels are only going to get worse as the lake dries up? Additionally, 960 people per hour is not going to get enough people up that mountain to mitigate traffic. We have so many more visitors than that. And the gondola works video claims green energy but how are the gondolas going to be run? Most likely coal from Utah plants when solar or wind isn't feasible. This is not a green gondola and this is an incredibly expensive undertaking for an uncertain future for our ski tourism. Let's focus on the small changes first.</p>
26676	Lucas Ried	<p>I don't believe any construction should begin in a fragile ecosystem like this. We've done enough in the SLC area to degrade this zone, the addition of gondolas or similar would just lead to more issues. Native plant populations will immediately take a hit as the trees are cut to make room, and invasive are much quicker to grow back, which will cost the city millions in the long run. Take it from an ecologist please. You don't want this.</p>
26675	Emery Lortsher	<p>Hi there,</p> <p>I am writing to formally notify UDOT of my opposition to the proposed gondola in Little Cottonwood Canyon.</p> <p>This does not seem like a viable solution to the traffic issues in the canyon.</p> <p>Please consider expanded bus routes and other options.</p> <p>Thanks</p> <p>Emery</p>
26677	Eric Fritsch	<p>For some people their temple is the outdoors, not a bright building on a hill. Sadly, the Mormon influence dominates decisions in Utah. If a bunch of hippies wanted to build towers on "sacred LDS land" there would be an uproar. The black mark on Utah will be a long shadow as long as Little Cottonwood cast down by the Gondola line. I consider this Gondola as much as a desecration as much as a Mormon frowning on their temple getting tagged by gangsters. U-dot is that gangster and they are as thick as thieves with the LDS church.</p>
26678	Marc Warren	<p>Please try the simple Zion NP method.</p> <p>Close the canyon to public vehicles on weekends Dec-Mar. everyone has to ride the bus.</p> <p>You can build a parking garage at the mouth to house all the cars. You only need a to add a few busses. You're going to need a parking garage for the gondola anyway. Add stops for backcountry access. And then people can still use the canyons like normal on weekdays and summer.</p> <p>It's so simple and cost effective. Even with the extra BC stops, it will still be much faster than the weekend traffic.</p>
26679	J W	<p>This entire project is set up to benefit two companies and should therefore not be considered as a public works project...it's not for the public. If Snowbird and Alta want this, let them pay for it. It should not be planned or constructed by UDOT.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26680	William Wade	<p>While the gondola on the surface sounds very appealing, there are far too many unsolved issues. If taxpayers are paying for a transit for Alta and Snowbird customers for 3-5 months a year, what happens to summer canyon hikers, (summer & winter)climbers and travellers? This will require the need for buses and car traffic to accommodate these visitors. Thus you have not done anything to reduce auto traffic in the canyon for most of the year. This estimated half billion investment, that will surely exceed \$1 billion when completed, will have a 3-5 month peak usage and then service a few out of town tourists wanting to ride up to the resorts. What will the cost of a gondola ticket be for someone wanting to get to the resorts to ski? Will it be more than what a day's parking at the resort would be? Will they need to pay for parking at the base? Will tax payers need to pay to widen Wasatch Blvd or other streets to accommodate the traffic congestion heading to the base parking? Running a variety of buses departing from various locations in the valley will reduce the traffic on Wasatch and at the mouth of the canyon. This can include express buses directly to the resorts and some that stop along the way. These can be modified to deal with seasonal traffic. Avalanche sheds can be built over high avalanche risk sections to help avoid canyon closers. People who want to use private vehicles should be required to purchase a pass to drive into the canyon. Shouldn't Alta and Snowbird be required to help pay for a solution or modify their business model to help deal with his problem? I lived in Hong Kong for 25 years where they have the most efficient public transport in the world. Why not look at what other countries have done to successfully deal with similar problems. The gondola idea maybe works in Europe, but SLC and LLC are very different from Chamonix or Zermatt. The Wasatch canyons are far too valuable to turn them into a carnival ride.</p>
26682	Lorne Hofstetter	<p>I am a local resident who is not in favor of gondola plan for several reasons: (1) it is not an integrate solution that solves both BCC and LCC traffic issues; (2) requires construction and disruption along length of canyon; (3) taxpayer expense is too much given solution is only specific for winter access to Snowbird and Alta ski resorts.</p> <p>I believe a better alternative would be to connect Highway 190 and 210 on the brighton/alta end using 2-lane tunnel. This would allow for novel traffic pattern optimization scenarios while reducing construction impact along the length of BCC and LCC canyons. Tunnel would only impact top of canyon and would be largely be underground.</p> <p>During peak uphill traffic to resorts (i.e ski mornings), 3 lanes could be open for uphill traffic (i.e. both lanes on Highway 210 could be used to access Snowbird, Alta, and upper BCC). One lane of Highway 190 could be used for downhill traffic for both canyons and the other lane would remain open for additional uphill access to BCC.</p> <p>During peak downhill times, traffic pattern could be reversed providing 3 downhill lanes and 1 uphill lane. Similar solutions have been implemented on Oahu, Hawaii to handle peak traffic demands in unique way that doesn't require road widening. This solution provides the "third lane" to both canyons without having to perform road construction along the full length of BCC and LCC canyons.</p> <p>The 2 mile tunnel would likely cost more than the gondola but would service both BCC and LCC and would improve travel to all access points (and not just the ski resorts).</p>
26681	Elsa Aune	<p>The gondola for LCC would just get more people up the canyon, it doesn't solve the original traffic problem, there for not helping air quality either. The gondola is going to be built with tax payer dollars and those same Tex payers won't be able to afford to take the gondola up. It's a pay to play scenario and only benefits the government and the super wealthy. Saving LCC from to many people a greed should be a priority.</p>
26683	Hannah Smith	<p>As a Utah taxpayer, I do NOT approve the use of taxpayer dollars-or anyone's for that matter- to be used for construction that will forever impact the ecosystems and microclimate in Little Cottonwood Canyon. Regardless of how people get up there, the canyon does not have the capacity to host the amount of visitors that the gondola would enable. The gondola is an outrageously expensive solution to a problem that occurs only a handful of months out of the year and only a certain subset of Salt Lake residents. I do NOT support the gondola.</p>
26685	Leah Bothwell	<p>I do not agree with the decision to fund a gondola in LCC. It is not an efficient solution.</p>
26684	Kinloch Earle	<p>I appose the gondola solution to LCC. There are cheaper, and far less destructive to puplic lands alternatives</p>
26686	Scott Simmons	<p>Excited for this. Although I think additional stops should be considered as well as gondola access during summers - maybe weekends and holidays?</p> <p>This is great for the future of our city.</p>
26687	Elizabeth Steimle	<p>"Enhanced bus service" is just a quick-assemble light rail that adds to the winter inversions and gets stuck in traffic. Why not save money just make the real thing? A commuter train, possibly along the existing roadway, could be useable by the entire community all year, and we know historically there were rail lines that went through these Canyons all winter; just revive those lines. If you stick with the gondola, then expand it at least to Park or Heber City--not just stopping at the resorts but also to the towns in the area so it can be used all year long; it's a better return on this expensive investment and better for the overall air quality and traffic. Think all-year regional tourism--not just winter recreation. Half-baked and half-hearted commitment screws over taxpayers and loses potential supporters. Whatever you choose, please get rid of the ski bus.</p>
26688	Ryan Wells	<p>As residents who love LCC for its multi-recreational use and stunning beauty, we were taken aback when reading that the gondola was approved. Admittedly, I thought (and hope still) that it would not be the first method of choice when alternative options that are far less damaging to the environment and less costly, are on the table.</p> <p>Please reconsider the gondola. It's not wanted by anyone I've met who lives or uses the canyon.</p>
26689	Karson Ashby	<p>I strongly disapprove of the decision of UDOT to encourage the dismantling of democracy by ignoring the voices of thousands of concerned citizens across the Wasatch front who oppose the implementation of a publicly funded project to benefit two private ski resorts. The people of the Wasatch Front have spoken up against this gondola yet, the project has still not been stopped in it's tracks. I do not and will not support a project of this caliber to ever be implemented against the will of thousands of Utahns. Deplorable.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26690	Brian Homer	I am in favor of the gondola plan to reduce traffic in little cottonwood canyon. I know the naysayers say that a 45 minute gondola ride will not be used when someone could ride up in 15 min. by car. On a busy snowy day, no one can get up that fast. If there are avalanches, many cannot get through at all or they are stuck up there and can't get home. They complain that it will be unsightly. Don't mind seeing the tram at snowbird.... They complain of the cost but no matter what you do, it will cost money to control high traffic. If we can reduce air pollution, it will be worth it. Don't let a few very vocal complainers ruin a great plan.
26691	Elliot Smith	I just wanted to add another comment in opposition to the gondola. I grew up skiing at snowbird, and love the mountain, but will have no qualms boycotting both LCC resorts if the gondola goes through. The environmental impacts of this project are obvious and the general shouldn't be forced to subsidize this desecration.
26692	Mike Pepper	Thanks to UDOT for a very thorough review of the options. The Gondola is a good choice.
26693	John Whittaker	A gondola is a waste of tax payers money. 1. Alta is not supportive of the gondola because they will have to build a terminus 2. Structural engineers say that the current design is not sustainable during an earthquake the design has never been built before and they are not sure if it can be built - fixed price? 3. This project is will line the pockets of developers, Niederhauser and his friends in the legislature. I understand they own the property where the West terminus will be built. 4. The ski resorts, visitors and the developers are the the only ones to benefit from this plan. Not the local skiers 5. Improving the road and using electric buses is the best answer 6. I have not seen any plans for parking at the mouth of both canyons. 7. Local resort skiers will end up going up Parleys to ski because of the time and inconvenience of the gondola. 8. Another project for developers at tax payers expense 9. This money needs to go to developing SL City and County affordable housing first!
26695	Emma Johnson	I'm deeply saddened that a gondola has been chosen as the eventual LCC building plan, despite research and comments by organizations. The gondola is a self-serving money grab for the ski resorts, and will not actually help citizens trying to get up the canyon. It will be a tragedy when all the building has been done, and the city finally realizes that the natural beauty of the canyon is being lost.
26696	Piper Sadler	Why are we supporting big business with a self serving gondola as the first option. Why can Zion canyon close to traffic and use electric shuttle service while our canyons cannot? Electric shuttle busses would slow for better cleaner use of our already built roads, create jobs for people, and keep the canyons running smoothly even on busy weekend powder days. Building a gondola will cause noise disruptions to wild life, even more congestion during long construction months, and ruin trails that have already been established. Close traffic to all but who live and work up the canyon and run shuttle busses every 15-20minutes.
26697	Sam Kapcinskas	The gondola will ruin the visual experience of the canyon, destroy climbing areas, and force tax payers to pay for the benefit of the resorts. There are better alternatives to the transportation issues in the cottonwoods that don't involve permanently ruining the canyon and the community has overwhelming voiced there support for those alternatives. Please listen and act accordingly.
26698	Joe Taylor	This "project" is simply another boondoggle to get taxpayers to fund the special interests of various business people, from contractors to recreational resorts. We don't need something to "ease congestion" in any canyons; if people don't like the congestion in this canyon, they can go elsewhere or arrange to come at different times. Not the problem or interest of the average taxpayer, and not the role of government.
26700	Zoe Brown	This is so disappointing. It is clear that UDOT cares more about corporate gains than sustaining the beautiful Utah mountains and canyons. This is not the solution the people want.
26699	Michelle Kelly	I do NOT approve of the gondola. Using tax payer money to fund a gondola to 2 privately owned ski resorts feels a bit criminal to me. If the ski resorts pay for 100% and don't use tax payer dollars I would be a bit more open to it. Please do not use tax payer dollars to build the gondola.
26701	Thomas Akerlow	Instead of using 500 million on a gondola, why don't we use the money for a frontrunner that is emissions free???
26702	Xiaodong Qin	I have read the proposed Gondola B. I cannot believe such an expensive and disastrous proposal got selected. Note that to protect our environment, the solution is not to build 2500 parking spaces and transport tons of people into the canyon throughout the year. The traffic into the canyon must be and can be controlled by much less expensive ways such as tolling, parking fees, canyon passes, etc. Bringing more people into the ski businesses is completely against the intention of protecting our fragile environment. It is so wrong to use public funding to boost private businesses. Gondola B is beyond ridiculous. Please abort it by all means.
26704	Monica Birth	Please reconsider the gondola. The environmental impacts cannot be undone. This is a poor use of tax money as it primarily benefits the ski resorts and the people (many from out of state) who are using this road on a dozen or so prime days. Consider building a parking structure and limiting traffic to buses and certain permitted vehicles during peak times. This would alleviate the need for either expanding the roadway or building a tram. Thank you for considering my comment.
26706	Joe Jopling	I am strongly opposed to the gondola in Little Cottonwood Canyon. The only people that benefit are skiers and the Snowbird and Alta ski resorts. The gondola is forever and with global warming , even man made snow will not be option in the not so distant future.
26705	Pamela Hinrichs	Keep the wild wild. Please.
26707	Mark Meadows	As a long term resident who has driven the canyon for over 50 years ---- I like the idea and I am supportive of it. Just because the Mayor does not like - well she does not speak for me. keep moving forward.
26708	Kathleen Kershaw	Disappointed on decision for the gondola. Not being a skier I don't want to be taxed for the resorts & skiers benefit. Towers will ruin the vista of the canyon. The people have expressed not wanting the gondola.. so please listen.
26709	Doris Long	No to a gondola. We are not the Swiss Alps. As a tax-payer I oppose this as a blight on our beautiful canyon. Lets give a solution based on buses a try. Use electric buses if possible
26710	Alex Franke	The gondola is expensive, and inferior to busses. Toll the road, charge for parking at resorts, say no to the gondola.
26711	Tacy Sjostrom	NO on the entire project. Let the users (skiers) pay for this, and not taxpayers who are DRAINED by governments grand schemes.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26712	Jennifer Morrison	I am against the gondola going in little cottonwood canyon. Shuttles can be used like in arches. A gondola will negatively impact the environment.
26714	Suzie Ellison	I continue to be firmly opposed to building a tram in Little Cottonwood Canyon. I believe the answer to the congestion problem is more efficient and more widespread and available mass transit. Building a tram that would benefit private businesses is an egregious misuse of taxpayer money when our state is lacking in so many other things that would benefit everyone or more Utahns and make more lives better, such as affordable housing, higher teacher salaries, increased mental health services, climate action, environmental work, etc.
26713	Kenneth Black	Please do not construct gondolas in Little Cottonwood canyon. It will be a eye sore to one of Utahs most scenic areas. It is also unnecessary. Meter traffic if you must. Limit the number of cars using the canyon per day if necessary. Add a day use fee just to enter the canyon or make it toll road. Gondolas never!
26715	Ruth Larsen	NO GONDOLA
26717	Aaron Gaitan	This doesn't resolve anything related to traffic and parking. People will still have to park somewhere... will the Gondola somehow extend across the salt lake valley to where an enormous parking garage is waiting for pick up. If not than this is just another half assed idea that literally solves nothing.
26718	Harvey Nelson	I have been a resident of Sandy, Utah for 35 years. I am in total agreement with Mayor Zoltanski's Statement on the UDOT Environmental Impact Statement for Little Cottonwood Canyon, dated August 31, 2022. I am absolutely opposed to the gondola alternative in Little Cottonwood canyon for all the reasons she states, including the viewpoints many, many other individuals have that are opposed to the gondola proposal.
26719	Grant Doty	<p>UDOT and partners: PLEASE reconsider your decision to implement the Little Cottonwood Canyon gondola as a method of traffic mitigation.</p> <p>I grew up at the foot of Little Cottonwood Canyon and have been blessed to explore the forests, streams and mountain peaks within. However, I do not write to protect my own interests, but the integrity of the canyon and what it represents to the Utahns who drink from its watershed and the visitors that experience the natural beauty of the Wasatch Range. The installation of a gondola will jeopardize the outdoor experience for those to whom the canyon belongs - the citizens of the state, the neighbors in the community and the tourists (whom are attracted by the natural essence of the watershed). My opinion, which you will see is shared throughout the many other comments, is that the gondola will disrupt the essences of exploration, connection, peace, escape and camaraderie that have existed in the canyon for decades. We do not want to look out from the peaks we summit, walls we climb, slopes we ski and meadows we rest to face the obtrusive metal reminder that business and economy has yet again trumped the need for the connection between human and nature. We do not want to be reminded that the resorts and stakeholders were given greater consideration than the residents who seek the canyon for solitude and healing.</p> <p>As a resident of Utah for the past 19 years, I've seen firsthand the growth that has occurred along the Wasatch Front and the impact it has had on our beloved Cottonwood Canyons. To maintain the natural integrity of the canyon, we have to limit the number of visitors. There is a breakpoint where snow sports will become unattractive due to overcrowded terrain and outdoor areas left battered from overuse. My nearly two-decades of Cottonwood canyon residence does not grant me exception from being limited to canyon use; the watershed is for everyone to share, and we all must make some sacrifices to conserve it.</p> <p>I propose that UDOT and partners reconsider the simpler and less expensive alternative of prohibiting personal vehicle travel along SR-210 and implementing an improved bus or shuttle system. I assume this alternative would require only minor adjustments to infrastructure, would greatly reduce the number of accidents and traffic jams during hazardous weather events, temper and balance visitor traffic at trailheads and resorts, cost significantly less than installing, operating and maintaining a gondola, and, most importantly, maintain the spirit of the canyon that draws people from around the world.</p> <p>Thank you for your consideration. I hope that these comments are acknowledged and the desires of the public are held above those of the developers and investors.</p>
26720	Alexis Lozano	Please no gondola. We don't need more invasive infrastructure in our canyons! 11 days out of the year are untenable, a billion dollar gondola is not the answer!
26721	Hanna Zwemke	We do not want the gondola. There are too many negative environmental impacts that will come with the construction of the gondola. The enormous cost of the gondola could be better used by implementing a fleet of electric buses that would not only lessen the environmental impact, but also preserve the natural beauty of the canyon. There is also the possibility of expanding the bus system to provide better, more accessible transportation for Utahns down the in the valley as well.
26722	Mae Butterfield	NO GONDOLA!! YOU haven't even tried a tollbooth?! Charge \$10 a day during ski season plus the cost to park at the resort! Also TRY extra buses coming out of the La Caille parking lot. Why would you ruin that canyon forever? Our pioneer ancestors would be ashamed this is how we manage the treasures in this state.
26723	Christopher Stanley	The Gondola is a clean / low impact solution that will offer opportunities to anyone visiting the canyon. Not just skiers, but year round options that connect to public transit are welcome. Expanding a road just continues the congestion and the expansion itself would likely be more damaging the an ongoing gondola (used successfully in Europe / and globally for fast, efficient, low emissions public transportation.
26724	Clayton Walker	<p>The decision to build a gondola is short sighted, and ignores the will of the people of Utah. This is public land, and you're destroying it for the sake of the wealthy few.</p> <p>STOP this plan now.</p> <p>NO GONDOLA.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26741	Lindsay B	No gondola!
26743	Berkeley Summerhays	Please keep our canyon natural and beautiful. There are SO many other options. Having a toll fee to drive up the canyon, having a season pass, have paid parking to get people to carpool. This has been my home for 18 years and I love it because of the mountains. Please keep my mountains natural<3
26742	Roxane Googin	I am against making cash strapped Utahns who do not want a gondola up Little Cottonwood to pay for it. It serves two for profit institutions who should pay. We should see how the fees and improved bus service impact traffic before committing to corporate welfare. With no Great Salt Lake, and continued global warming, we won't have snow anyway.
26744	Naomi Oberg	As a salt lake resident and multi sport user of little cottonwood canyon I do not support the building of this gondola at all. Little cottonwood canyon is a multi use recreation area. The building of a gondola will primarily support for-profit ski resorts which already restrict local ski access to backcountry terrain and should be held accountable for the large amount of usage during the winters, not tax payers. These are institutions that make billions of dollars a year, most of which does not get returned to the PUBLIC lands on which they reside. Why are we not discussing limiting day passes to Alta and snowbird? Or making the bus system more accessible and efficient? Not to mention that the primary season of high traffic has nothing to do with the mountain biker, climbing, or trail running community who would all be impacted by this project. Especially when we have a public transportation system already in place that is underfunded and underutilized. This project is akin to turning public lands (which we ALL have a right to enjoy) into an amusement park. An amusement park that would only benefit extremely wealthy ski resort executives. There are so many other options that have not been discussed yet so why rush into building something that will ruin little cottonwood forever? I oppose this gondola, the local ski community opposes the gondola, and this would be a catastrophic mistake.
26746	Kirk Hietpas	I oppose the purposed gondola solution. I believe construction of a gondola will be an eyesore in the canyon and will only benefit the ski resorts. I hope UDOT will consider less destructive alternatives that will benefit all canyon users.
26747	Christie Seamons	No one wants the gondola. There are other options to make transportation/traffic in the canyon better. Please do not put the gondola in.
26745	Jon Schofield	Please do not build the gondola. I am an avid user of LCC. I spend approximately 60 to 100 days in the canyon each year. I was born in SLC and learned to ski at Snowbird in 1979. I continue to hold a Snowbird season pass and utilize the LCC backcountry on a regular basis. I do not think the gondola serves the interests of those who regularly use the canyon, but is merely a tourist attraction/gimmick that will not benefit anyone. From what I can tell, this will only create additional traffic issues at the mouth of the canyon, lines to board the gondola, and even longer lines to ride the gondola down canyon at the end of the day. Additionally, it will be an eyesore to the pristine canyon as is. And it costs a significant amount of taxpayer money, when there much are better solutions. Please consider additional buses, better park-and-rides throughout the valley. Use the funds to build a substantial park-and-ride in the mouths of the canyons with added traffic lanes on Wasatch Blvd to accommodate traffic into park-and-ride lots. Frequent buses would go a long way to encourage people to take the bus. Charge a toll for cars wishing to drive, and subsidize the bus system. Please do not support the gondola. And please listen to my voice. I truly have experience and use the canyon, unlike developers who just want to profit at the expense of ruining what so many of us have enjoyed for decades. Thank you!
26748	Madeline Schulze	The gondola should not be built!!!
26749	Jonathan Wilson	I'm saddened by the recent decision to go forward with the gondola. I'm concerned that the gondola serves only one specific user group while not taking into consideration any of the other user groups. I do not agree with spending my tax money for a project that mostly if not completely benefits one narrow user group at the expense of all other user groups. They are alternatives that are much more affordable. I might consider a gondola if it had additional stops at locations like red and white pine trailhead, the gate climbing area etc... this project has increasingly started to feel like it was done in bad faith, pretending to be interested in the needs of the many while actually only serving the needs of a few. I hope you listen and adjust plans to benefit all user groups.
26751	Mark Pogue	The gondola is by far the worst proposal for little cottonwood canyon and the best option for the ski resort that's already planning not to stop for any recreation other than their own resorts, charge for that and I'm sure charge for parking on top of it anyways. Access to LCC needs to be for everyone, backcountry recreation, hikers, climbers, bikers and a gondola serves none of them. A dedicated bus lane and a system to check for resort parking passes/reservations in the winter is the best solution. One lane is enough for BRT because in the winter people are all headed the same direction at the same time, and the buses can do the return trip in the lane along with vehicles, which if limited to resort parking reservation holders and demonstrable backcountry users should not be as crowded as past seasons anyways. In fact it's likely just stopping those without parking reservations or backcountry gear/ the proper winter tires during traction law events (which UDOT has noticeably failed to enforce the past 2 years) from accessing the canyon at all would make the bus system much faster on avg during peak times and a dedicated lane wouldn't even be needed. It's clear someone somewhere somehow has gotten to the decision makers at UDOT and pushed Gondola. Consider this a push back. I guarantee building a gondola ends up sending people to prison for corruption because it will not stand. LCC is a thing a beauty for all that use it and a gondola would not only destroy that beauty but deny many access.
26750	Jack Lange	Please reconsider the decision to add a Gondola to lcc. The Gondola plan will introduce an eyesore, and eliminate the most accessible recreation are in LCC, the secret garden boulders. please consider a solution that will encourage carpooling and reduce environmental impact rather than an ugly gondola.
26752	Zeke Tripp	DO NOT INSTALL A GONDOLA IN THE CANYON! The utah community DOES NOT WANT to ruin our canyon with a Gondola. INCREASE BUSSING AND OTHER PUBLIC TRANSIT ALREADY IN PLACE AND CHARGE A PREMIUM TO PARK AT THE RESORTS DURING WINTER MONTHS. NO GONDOLA!
26753	Lucy Mulligan	The gondola is detrimental to the ecology of LCC, I urge you to hear the overwhelming disapproval of the communities who it will effect and who care for this environment.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26754	Judy Hunsaker	I believe that both widening the road and building a gondola are not in the best interest of users of the canyon and residents nearby. I believe there should be more data collected on the impact of these options as well as the actual capacity that the canyon needs to support. I urge you to postpone any development until it is more clear what steps need to be taken to improve traffic and sustain viability of recreating in little cottonwood canyon.
26755	Randy Hartwig	Please do not put a gondola in LCC. The alternative of electric buses, an extra lane and avalanche sheds is less invasive and keeps with the Utah tradition of protecting our natural beauty. If that method fails sell the buses you still have an extra lane for emergency vehicles and avalanche sheds. This gondola will destroy the beauty of LCC. Also will this not elicit lawsuits from every homeowner below the gondola. Do they not have a right to privacy from people in gondolas looking into their yards and homes from above. This is not what the majority of people who use the canyon want
26756	Barbara Wheat	Please find a different solution to this problem. The money could be better spent for all citizens of Utah. Too much for a dwindling ski industry.
26757	Carolyn Peed	If the gondola serves only those who go to the ski resorts, the taxpayers should not pay for it. If the gondola is used like a bus, with stops designed to serve anyone who needs to reach and leave their homes, then it makes sense for taxpayers to help pay for it. Taxpayers should not have to finance a mode of transportation which serves only ski resorts and rich patrons of those resorts. Many of us can't afford to use those resorts and we've lived here all our lives.
26759	Shane Jorgenson	Please exhaust all other possibilities before investing time and money into the Gondola solution.
26758	Julia Maier	I do not believe the gondola will fix the congestion and will only serve to harm the mountainside. It seems like a cool idea but I believe it will quickly show its negative impacts over other solutions.
26760	Mary Smithing	This plan is another poorly thought out, short sited decision by UDOT. A gondola to two ski resorts does not help the whole canyon or servicing people to other places in the canyon. This plan seems to be benefiting only a handful of people, and none of them are the middle class, tax burdened members of Utah.
26761	Andrew Noh	Please please protect our natural public lands. This is a unique a beautiful recreation area used by thousands of people from many different sports. Please move to not pass this motion, which will destroy public lands for the sake of a gondola.
26762	Liz Harrison	Please consider using the cost effective and eco-friendly alternatives to the gondola. It is unnecessary to start such a big project that will only benefit a specific group of people, when the canyon is special to everyone here. Keep it natural. Please!
26763	Josh Smith	<p>Good afternoon,</p> <p>I write to you today as a concerned citizen of salt lake city, and frequent user of Little Cottonwood Canyon. While I agree that there is a traffic problem in Little cottonwood canyon, I am strongly against the proposed solution, Gondola option B.</p> <p>I totally agree, something has to be done about congestion in the canyon. Not only is it inconvenient to all users, but cars idling their way up the canyon many days out of the year generates tons of pollution, which we already have too much of in the salt lake area. The gondola solution certainly has the potential to reduce car emissions on the road, but I believe that udot thinking that people will opt for the gondola over driving up the canyon is flawed. I personally use the ski bus, carpool, and do whatever I can during busy times of the year to cut down on traffic, but the majority of users do not. Unless the gondola is made mandatory on high traffic days (which I'm not a proponent of either, see below), I don't see the average person using it. What happens when you forget a glove, or lunch in your car? The gondola will ultimately only be used by tourists, and those who ski very few days out of the year. And what then happens if the gondola is made mandatory to backcountry users, just trying to access public land? This ultimately would be wrong, and toeing the line of illegal as it would restrict access to public land. Overall, I see the gondola being a flashy option, that few would use, and many would pay for.</p> <p>Secondly, lets look who benefits from this solution, and who doesn't. The two key beneficiaries are Snowbird and Alta ski resorts. To have a gondola, that shuttles customers straight to their doorstep and nowhere else, AND the taxpayers of Utah will pay for it for them!? This seems ludicrous when put in terms like this. I may not be so vehemently opposed to this option, if Alta and Snowbird were paying the majority of the bill, but so far it looks like they aren't. This to me screams crony capitalism...which I hope will not win out over morals.</p> <p>Next, let's look to one of our own national parks, Zion. They have implemented an impressive bus system that seems to work very well, even on the busiest of days. If you invested in a large bus fleet and parking, implemented mandatory bus days, and dropped off at many stops so backcountry users could still access public land it seems as if this could be the ticket! Zion national park serves over twice the visitors of little cottonwood per year (4.3m vs 2m) and the road travels through similar terrain. This to me points to that we should use a tried and true system, that also saves the landscape of the canyon from eyesores.</p> <p>Lastly, I'd really like to call to question the morality of the decision making process, and those ultimately making the decision. I'll admit, I haven't read all 14,000 comments from the draft eis period, but from the circles I'm involved in, and even circles I'm loosely related to, the vast majority of salt lake city citizens are against the gondola. I also understand</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26764	Nora Brunelle	<p>I appreciate that you are taking some time before choosing the awful decision that you've chosen. I absolutely cannot believe that an option that costs taxpayers at excess \$200M, has a SLOWER travel time than bus thus making it LESS convenient for skiers, and will profoundly change the visual experience of the canyon was chosen as the best alternative. It is so unbelievable that it is impossible to believe there is not some type of sweetheart deals, lobbying, and grifting going on here, as the residents are almost uniformly opposed to this and it's perfectly obvious someone's pockets are being lined when such a terrible alternative is chosen.</p> <p>Why don't you simply close the canyon road to everyone but residents, employees, UDOT buses, and other licensed providers during the winter??? That wouldn't be that big of a deal. Let everyone take up a bus or service and your problem would be solved immediately without the need for widening the road and with only the cost for additional bus service and mobility hubs. But I suppose that is just way too simple and easy? People would be perfectly happy to take up frequent, convenient buses if there were nice, heated hubs at the bottom of the canyon with reliable parking and service. Many people would prefer it. You could solve the problem with that alone and this gondola idea is just beyond the pale.</p>
26765	Anjali Garrett	<p>Ruining the natural splendor of the canyon without solving any of the transportation and overcrowding issues will not be tolerated by this community.</p>
26766	Rachel Blackburn	<p>I do not agree with this as the solution</p>
26767	Keziah Mayer	<p>I do NOT think the gondola is a beneficial or necessary change that should happen. Putting it in will not only disrupt canyon flow but also wildlife, nature, and the neighborhoods that are located at the mouth of the canyon.</p>
26768	John Smith	<p>For those that think the gondola is a bad idea, they have never been stuck up in LCC for 5 days at a time. Having the option to get down the canyon during those times is very ideal. Having a way of getting people up/down canyon during those times safely is the most important. To guess I would say 70% of people saying it's bad for a gondola because it ruins their "backcountry" but I bet those individuals are not stuck up the canyon for multiple days. It's the safest option. Avalanches are unpredictable and with more buses on the road do you want a bus taken out by one?</p>
26769	Marni Ambrose	<p>I'm not absolutely against the gondola project, but I am concerned the main beneficiaries are ski resorts. I have lived in the Salt Lake Valley for almost 30 years and I can no longer afford the ski resorts. I think before this project is built, we should look into: 1. Bus service that goes not only to ski resorts, but to trail heads. I would not mind riding the bus to a hike, and could possible connect by catching a city bus in front of my house. 2. Charging tolls, I am sure we will have to pay for a gondola ride, so how about trying a road toll first. 3. I would be for canyon reservations, to lower the environmental impact. 4. Since the gondolas will benefit ski resorts the most, they should pay a large share of the cost. I currently feel that all the trail/canyon plans around the Salt Lake Valley are geared towards either skiers, or mountain bikers. Hikers, trail runners, etc need consideration as well. A Gondola that goes to only one trail head (which will inevitably make that trail the most crowded in the canyon) is not fair. Unless, once again, ski resorts pay a large share of the cost.</p>
26770	Ammon Traeden	<p>I am incredibly disappointed in the decision to build the gondola, especially using tax payer dollars. That \$500 million could be put to so much better use in other areas in this state. We should be spending money to restore our environment here not destroy it. I find it very hard to believe that any comments made are actually taken into serious consideration and it honestly just makes me sad that the desires of a few people who stand to make a lot of money are being implemented rather than the many solutions asked for and proposed by the people who this will truly impact. If you are dead set on building this awful gondola, at least make the resorts pay for it since they are the only ones who will actually benefit. Please at least consider expanding the toll and bus system to a point that it will actually be a valid long term solution. Zion National park has been able to make it work, why not the cottonwoods. The other issue with the gondola is even if it were a good solution to the traffic issue, which it is not, it does nothing to address the traffic in big cottonwood canyon. Please make public transport a more viable option for people in both canyons rather than just picking the gondola because it will make big news headlines and make a couple rich people even richer.</p>
26771	Mike Jones	<p>As a Sandy resident, I fully support moving forward with the gondola proposal. What I don't support is Mayor Zoltanski sending out constant propoganda that the gondola proposal should be "dismissed". She is just one person with one point of view, no more or less important than any other person. She needs to stop trying to silence other voices with her platform.</p>
26772	Sumiko Martinez	<p>I am against constructing a gondola system in Little Cottonwood Canyon both because of the expense and the negative environmental impact on our beautiful canyon. I prefer the Common-Sense Proposal outlined by Mayor Jenny Wilson. Thank you, Sumiko Martinez</p>
26773	Sara Erickson	<p>I am strongly opposed to the gondola implementation in LCC. It is an egregious use of tax payer dollars to fund only two private resorts - this is not the equitable option nor reflective of the majority citizen opinion. NO to the gondola!</p>
26774	Paige Dejong	<p>I don't want this gondola. Leave our mountains as untouched as possible. We don't need more ways for more people to access and ruin our mountains + the environment and ecosystems that exist.</p>
26775	Wilma Ofell	<p>Too much of taxpayers' \$\$\$. Find a less expensive way, or private\$</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26777	Elliott Hansen	<p>Strongly opposed to the gondola solution: The gondola solution represents nothing but corporate welfare and does nothing to mitigate the current issues brought on by over use of our watershed and natural resources. Please explain how the gondola solution accomplishes the goal of, "improving transportation-related safety, reliability, and mobility for all users" when many users require access to destinations that are distant from the unloading zones. Furthermore, if you had really "considered an alternative's environmental impacts, which include impacts to water quality, air quality, and visual and noise impacts, among others" then the recommendation would have stopped after the implementation of what are now considered to be only phased solutions such as tolling and expanded bus service.</p> <p>Consideration of all canyon users, not just resort visitors is of the utmost importance and the recommended solution is grossly inadequate in this regard. The recommended solution fails to maintain existing visual experience and therefore should be discounted. This alternative has the highest visual impacts and therefore should be eliminated.</p>
26776	Paige Dejong	<p>This gondola would only benefit developers and the ski resorts. We don't need any more money to go in the pockets of developers destroying all of our land with a high density building and now massive, hideous towers up the entire mountain. This is a waste of taxpayer dollars when there are better more eco-friendly options that would benefit the citizens as well.</p>
26779	Cindy Borland	<p>This project will be a big eyesore. The people who live near it don't welcome it. And it appears ridership will be voluntary. If people won't ride the bus they won't ride this either. I expect in the beginning ridership will be high because it's a novelty. But then riders will go back to driving. It will damage the wilderness and ruin the canyon for rock climbers, backpackers, and hikers. Please don't waste taxpayer money on this boondoggle.</p>
26780	Keegan Grow	<p>This is a disgusting cash grab. Choose busses I beg of you. If the gondola does go through and gets funding, all hell breaks loose.</p>
26778	Zack Swain	<p>Please just go with a simple solution that benefits everyone. No one wants the gondola. I'd love to see a fee for cars and more bus service. Please no gondola.</p>
26781	Joshua Mudge	<p>Please do not add a gondola. It would be slow, expensive, and partially obscure the beauty of the canyon.</p>
26782	Danielle Huffman	<p>DO NOT DO THIS!!!!</p>
26783	Anneliese Hammond	<p>The gondola is such an obvious money grab that benefits a very small minority of people. I am astonished such brazen bribery is happening despite Public outcry. No citizens support this. It destroys climbing areas, scenery, increases taxes..why not tunnels or a toll booth at the mouth of the canyon. the gondola is utter nonsense. The only way this happens is through outright corruption. And we all know it.</p>
26784	Grant Howard	<p>Gondola for the win! Cars are the problem</p>
26785	Susan Diehl	<p>I am strongly opposed to the gondola, even though I am a skier. The money it will cost is needed for many other higher priority items. The traffic congestion it will theoretically help with exists only a small number of days every year and will really only benefit the two ski resorts, not any other destinations in the canyon. It will also be an eyesore. Stick with the buses, carpooling, paid parking on weekends at least and timed entry type ideas!</p>
26786	Rachel Willick	<p>Construction of the gondola serves only the ski resorts, and offers no benefit to Backcountry skiers and climbers. It is blatant catering to the money pull of the resorts. Additionally, the gondola will destroy many climbing spots in the canyon and create a permanent eyesore for everyone.</p>
26787	Chris Daily	<p>I am fully against the decision of the gondola moving forward. I love both ski resorts located there, but absolutely not enough for them to be privileged to a tax funded project that solely befits them. The environment in this canyon is in my opinion already at max capacity. I see this as being awful for the environment, rushed, poorly thought through, and lacking in completion.</p>
26788	Jennifer Perez	<p>I do not agree with the gondola idea! I believe that environmentally this is not going to help with emission and actually think it will bring more people. I believe this is to make money and will not be beneficial. We need to protect our lands and stop trying to build on the beautiful mountain in Utah that so many enjoy hiking, biking, and climbing in. Please do not build this gondola, let's preserve our land. I believe a shuttle system or even just capping the resort on vehicles in general, or maybe just making reservations for the resorts would be a better way as to not block the view of the mountains and damage the trees and environment. I am against this plan and will fight till the end.</p>
26789	Samuel Werstak	<p>UDOT, Please consider these comments. The majority of citizens in Salt Lake and Utah are NOT for the gondola. 550 million dollars of taxpayer money to implement an exclusive, detrimental addition to our loved canyons that we call home is a terrible mistake. Wildlife will suffer from your decision. the problem of canyon congestion will not be solved, and implementing this irreversible decision instead of even making an attempt at other options. use that money to make public transit free to use and pay wages to new drivers and increasing bus systems.</p>
26790	Scott Osborn	<p>Even IF it wasn't going to absolutely destroy the natural beauty and disrupt animals homes, it's an absolute slap in the face we have to pay for it in taxes just to then also pay for the ride ticket.</p>
26791	Zinnia Collins	<p>Hello. As someone who utilizes LCC multiple times a week I want to ensure you know I don't support the gondola proposal. Nobody I know does for that matter. It utilizes public tax dollars and ultimately only benefits private organizations. It offers no remedy for backcountry skiers, climbers, or hikers (all of whom will shoulder the financial burden for this decision). This doesn't even touch in the impact a gondola will have on the wildlife of little cottonwood or the impacts to the ecosystems. Lastly, LCC is known as one of the most picturesque canyons in Utah, with people coming from all over just to take pictures. The beauty of this canyon will significantly decrease with a gondola going up it. Approving the gondola would show your taxpayers that you're more interested in private interests than actually solution oriented. The public does not want this. Please don't ruin this beautiful space</p>
26792	Caroline Capell	<p>The gondola is NOT the answer. There are various other methods to at least try before destroying little cottonwood canyon with the eyesore and geological impact a gondola would bring. There is also hardly any type of traffic build up in LCC in non-winter months. Moving forward with such a negatively impactful option to help traffic for 4 months out of the year is NOT the answer. Other options for traffic mitigation need to be explored and tested before going to these extremes!</p>

26793	Ryan Welch	Seems like the Gondola is a large band aid for only part of the overall problem. I would rather see mandatory buses and with an improved station at the bottom of the canyon than a ultimately limited use gondola paid by taxes
26794	Mack Lewis	I do not want an irreversible gondola going up In little cottonwood canyon. This is not the best way to use taxpayer money to only serve 2 private ski companies. There are better solutions and this should not be rushed. I believe starting with a toll to help alleviate single rider traffic and using these funds to help with future plans for traffic in the cottonwoods.
26797	Bryce Bouchard	Climbing is one of the fastest growing outdoor sports in the world right now...you're going to destroy places for people to climb who travel to your city and spend their money there just for a privatized business to destroy the natural land. Despicable people y'all are
26795	Mack Lewis	I do not want an irreversible gondola going up In little cottonwood canyon. This is not the best way to use taxpayer money to only serve 2 private ski companies. There are better solutions and this should not be rushed. I believe starting with a toll to help alleviate single rider traffic and using these funds to help with future plans for traffic in the cottonwoods.
26796	Mack Lewis	I do not want an irreversible gondola going up In little cottonwood canyon. This is not the best way to use taxpayer money to only serve 2 private ski companies. There are better solutions and this should not be rushed. I believe starting with a toll to help alleviate single rider traffic and using these funds to help with future plans for traffic in the cottonwoods.
26798	Tyler Colbrie	A gondola is great...for two ski resorts. What about anyone else who wants to use the canyons? No traffic will be alleviated, nothing will be done to future-proof canyon access beyond allowing skiers/riders access to Snowbird and Alta. The ski and ride season is getting short and shorter every year, thus the main gondola use season will as well. What evidence is there that this is a sound economic, environmental, and community-benefitting decision? Someone can reply with 'but we'll have to see what happens,' even though we have all kinds of projections for climate change damage. The gondola will not solve problems for the canyons it is intending to address, but instead provide great financial opportunity for a few builders and the resorts. These same people could benefit alongside the entire community of other proposed solutions are instead implemented - nobody loses out, and everybody wins something.
26799	Sophie Stolk	The two options that were first proposed - a gondola or widening the roads, were not the only two options. As it has been presented recently, utilizing public transportation seems like a more feasible idea. It's not always about widening the roads, nor is it about building the next best or big thing. Utah as a state has lost hope in our public transportation system, so take the opportunity to show us what proper funding can provide us. It also needs to be considered that snow days have been decreasing since 1990, and they WILL continue to decrease into future years. Building something that is 500 million dollars, pushing 600 million that will not be done for years and will not be used indefinitely is a waste a legislative funds. Though there are people that support this idea, a majority of the east bench population DOES NOT, can we try and hear our people out? Instead of slamming \$500 million towards what seems to be a permanent answer - but is temporary, put it towards something else. Like our school systems that are under funded. If you look in the Salt Lake Tribune for today's date (01SEPT2022) notice there's an article discussing underfunding for school districts. Don't be dumb..
26800	Margaret Miller	I am against my tax dollars paying for the gondola that serves just a few. There will still be traffic issues- you're just moving them to the LaCaille area. Why not a train? Who wants to see the ugly tram?
26801	Rachel Tibolla	No gondola!
26802	Mckinley Aguirre	Please don't build the gondola it will ruin the beautiful canyon
26803	Jennifer Hulse	I am a frequent user of the Cottonwood Canyons and am not not in favor of the gondola. It is a very expensive solution that only benefits ski resorts. I'd rather see a greater investment in year-round public transportation with stops at trailhead picnic areas in addition to ski resorts.
26804	Sam Wilson	This seems like an irresponsible use of tax paper money, that will permanently mar the beautiful landscape. I thought that we lived in a fiscally conservative state, but I guess I was wrong. With 550 million dollars, we could invest in electric public transportation, a noninvasive solution that benefits everyone. Please reconsider this reckless idea.
26805	Adam Evans	I feel I am fairly neutral on the gondola. I think it's going to be more environmentally friendly after they build it given the towers have less of a footprint than asphalt. I however share the concern that this mainly serves private skin resorts and wish there was maybe a consideration to design stations as having more around and the resorts just happen to also be there.
26806	Brooke Jacobsen	I stand with Mayor Wilson in that this is a costly project with better solutions. Gondolas, while sounding fancy, will not service the public as effectively as the other options presented.
26807	Matt Podolinsky	The gondola is not a good option for little cottonwood canyon. It doesn't solve the problem and it only benefits Snowbird and Alta. It doesn't work for climbers, hikers, or other recreationists. We should explore bases and other public transportation before considering this plan. Snowbird can pay for it if they want, not the taxpayers
26808	Becky Bradford	This project isn't in alignment with what I feel uDot should be doing for the long haul. People who need/use public transit for everyday use (that's me). Please invest in those who use your resources daily, and not for tourists.
26809	Randy Smedley	I fully support the gondola idea. Gets people off the road and avoids congestion on the road along with reduced accidents in winter. Also allows for an enjoyable view while going up the canyon.
26810	Leslie Keener	I am storing my opposed to the destructive project to bring a gondola to LCC. There are more flexible and cost-effective ways to combat the canyon traffic. The gondola solution does not benefit anyone th at is interested in visiting the canyon at places other than the ski resorts.
26811	Britannah Rich	While good in theory, this gondola will destroy everything we love about utah and our canyons. It would disrupt the scenery and only benefits private ski resorts in the winter. This would be extremely selfish and catering to the rich and wealthy and developers who do not care about Utah. Please do not build this gondola and ruin LCC. Use those resources to get more buses, pay the drivers more, and even make a toll into the canyon for all I care. But please do not destroy the lovely scenery of the canyon for the sake of ski resort traffic. It will not solve the problem I can guarantee you that.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26812	Allan Post	I am emphatically against a gondola in Little Cottonwood Canyon. It will forever deface the Canyon, creating a "humanized" environment when the while our purpose people have in mind when they go up the Canyon is usually to escape the human world and get back into an uncontaminated natural environment. There is no crushing need for a gondola but there certainly is for natural spaces within an hour drive of Salt Lake Valley I am bitterly disappointed in your decision to go ahead with the gondola project.
26815	Mark Anderson	I do not want to wait in line for a gondola which will then take 50 minutes to get to the top. The whole plan is so unnecessary . It is [REDACTED] .
26814	David Lindsay	Hi, thank you giving this proposal serious consideration. I know it is expensive and challenges many of our present norms, but it must be done. Traffic, air pollution and ground pollution from tens of thousands of cars each year simply have to be addressed. I wish you the best in your deliberations. People will adjust. Businesses will adjust, and just watch, nature will adjust. I wish you the best.
26813	Nicole Berry	While I know elements of the gondola are less than ideal, it is STILL better than more buses and road congestion! Many beautiful mountain cities in Europe have option for very tasteful and gorgeous gondolas to complement the scenery. I believe we can accomplish this!
26816	Colin Thompson	NOT in support of proposed gondola in Little Cottonwood Canyon. It is too impactful to the environment and recreational resources such as rock climbing and is too expensive. PLEASE DO NOT APPROVE!!!
26817	Jamie McNulty	I do not believe that our canyon needs a gondola. As someone who has lived up canyon, and now in the salt lake valley I of course desire a more convenient and less busy commute to access little cottonwoods deep and epic powder. Thus far, both Alta and Snowbird have done very little to incentivize car-pooling. I believe that taking a small, more cost effective step would be to add a tolling booth at the mouth of 210. As the buses fly through in their own lane, people would think "Ah \$25 to drive up alone? I'll hop on the bus next time. The canyon is only so big, and the two resorts can only handle so much capacity. Installing a 600 million dollar tram is only going to invite millions of more people per year which the ski areas, nor the land, can support. I urge you to consider the irreversibility of this project as it will overtake a canyon landscape that has won over many a soul. Once the gondola is installed, what's next?
26818	Hannah Moores	Please do not take away from the beauty of this canyon by installing a permanent structure. I would rather pay a parking fee, and my neighbors fee, to not have a gondola.
26819	Ethan Newman	Respectfully, I believe this alternative is a mistake that largely suits the desires of the ski resorts along the Wasatch front, rather than many of the people who live here. I believe increased bussing would much better utilize the existing infrastructure at a lower cost, and more minimally affect the resources within Little Cottonwood Canyon (watershed, viewshed, climbing boulders, etc.).
26820	Joan Childers	As a resident of Cottonwood Heights and a frequent user of Little Cottonwood Canyon, in all seasons: I strongly oppose the UDOT plan to move forward on the gondola. Putting all costs aside, the environmental impact on the canyon would be horrendous. It would be forever scarred. Let's manage attendance, larger park and ride lots and move forward on more frequent and electric buses. Buses WILL be utilized when it is the only option. The gondola may be initially "fun and exciting"- but it is not the solution. Protect the canyons, they are what makes Salt Lake City unique and oh so special.
26821	Andrew Writt	Please run more buses up the canyons before you commit to the gondola. Advertise the buses and the fact that a seasons pass will get you on the bus without fare. Look towards only buses in the canyon, no gondola, year round. Build several bus centers, with lodging, food and entertainment, and put them on Trax lines. Maybe build more Trax lines. Please do something for the good of the whole valley, the gondola isn't the answer for a community problem.
26822	Sarah Astill	I think the idea of putting a gondola up Little Cottonwood Canyon is absolutely wrong. This will ruin so many beloved climbing routes, will cost an absurd amount of money and will lessen the experience of anyone who is enjoying Little Cottonwood canyon in anyway. Not to mention it's a horrendous eye sore and will only cause traffic elsewhere instead of in the canyon itself. On top of that, if it does happen, I know plenty of locals who care about this matter will boycott the gondola making it utterly pointless.
26823	Carolyn Gough	Thank you for your work on the canyon transportation issue. I support a gondola and the phased busing in preparation for full gondola services. After having visited the Swiss Alps, I am totally convinced that a gondola is a safer, cleaner, quieter, and more convenient and beautiful way to access our mountains. Although I infrequently travel up Little Cottonwood Canyon I would be willing to incur the costs as a tax payer to help protect our mountains. Though "some assembly is required" I believe the construction of the elements necessary for a gondola system far outweigh any other construction or development. Thank you for moving forward with the gondola plans.
26825	Edith Puthy	[REDACTED] the gondola
26824	Pat Annoni	As an environmentally concerned Utahn, I think that a gondola in Little Cottonwood Canyon is not the way to solve the traffic problem and would be a huge burden on taxpayers.
26826	Bradley Penrod	WE DO NOT WANT TO PAY FOR A GONDOLA. This gondola is corporate welfare, I don't want our money to work to help ski resorts. I dont use the ski resorts, I climb my own mountains. Abolish ski resorts
26827	Olivia Merrill	The gondola will significantly impact the wildlife and ruin the beauty of the canyon! It won't do much to lessen travel times!
29445	Garrett Wilson	Yes, my name is Garrett Wilson. My phone number is [REDACTED] . I am Sandy Utah resident. I'm calling to express my disgust and displeasure at the recent UDOT decision to move forward with this ridiculous waste of taxpayer money. Not only does it only benefit very high strata of society and to privately owned ski resorts, but it also destroys the majesty of this beautiful Canyon in which I grew up and I can't imagine the disgust and the evil that that comes along with making a decision like this in the name going green and or accommodating more traffic up the canyon. I think you need less traffic up again, and and this only facilitates dead. For the development of what we what we should avoid and the fact that even a dollar of my tax money would be going to this is just disgusting. So I hope we can find a way to sue the crap out of you. And stop this project immediately.
26828	Deborah Wagner	No gondola! Enhanced bus service please.
26829	Sydney Hyer	Please don't build this gondola. Someone needs to make the unpopular decision of determining what the capacity of LCC is. Impacting this beautiful canyon in such an irreparable manner only prolongs the issue of overcrowding.
26830	David Wagner	I support enhanced bus service. No gondola.

Comments on Little Cottonwood Canyon Final EIS

26831	James Freedlund	I don't believe this project is in the best interest for the people of Utah. Please leave the natural beauty of this area as is.
26832	Faye Porter	Please do not put in a gondola. I am worried about the impact it will have on our beautiful mountains and boulder problems
26833	Mark Vigil	It is disgusting that you would destroy canyon resources with taxpayer money to help a private company be more profitable. This is basically saying Utah will destroy other resources to give wealthy skiers a traffic free experience. Please please do not do this.
26836	Alex Kinghorn	The fact the the gondola is even being considered after such comprehensive opposition from the overwhelming majority of taxpayers is laughable. This is 100% the result of bowing to corporation agendas at the expense of environmental impact and the taxpayers who oppose it. This has been rejected at every level but that of pocket liners at a state level. To put in this gondola is an affront the democratic process. This is neither environmentally conscious or a real solution to the issue it purports to solve. This is corporate welfare for resorts already printing money. I am disgusted that this has gone this far, and I will never patronize those resorts ever again.
26835	Caroline Maahs	As a local completely and wholeheartedly vote against this and knowing that UDOT ignored the majority is abominable.
26834	Richard Bork	I think the Gondala is a great idea and is the right choice. The Gondala serves everyone in the State that choses to go up LCC anytime of the year, not just winter. Plus, less cars running means les smog.
26837	Rachel Barker	I resist UDOT's proposal for a gondola as it will tear up our little cottonwood canyon and use millions of our taxpayer dollars. I vote no!
26838	Andrew Korpi	No gondola, no!
26840	Jack Lambert	This is a historic canyon, not fit for a gondola or 2500(!) parking spots at the base of the canyon. This is not the solution, this is for profit, not for the users. This is a joke from you.
26839	Ronald Overman	No Gondola, Period ! We need a 5 Lane highway, all the way up the canyon. Plus increased parking availability at Alta and Snowbird. Don't mess things up, like you did 35th South during the recession, with the fast bus lane. Didn't help a thing !
26841	Amanda Drake	This is not a tax payer problem, this is a snowbird problem. I'm all for improving mountain access but this improvement SOLELY benefits resort profits and therefore should be paid for by the resorts under city and county guidance. This is the grossest misuse of tax payer money I've seen come from SLC in my ten years here. Do better please!
26842	Joe Hansen	The gondola is a HORRIBLE decision. You're spending \$600m tax dollars from people who the majority DO NOT WANT A GONDOLA! You've had your mind made up on this a long time ago. This is all about padding the pockets of a few and ignoring the community of people this affects. There are better ways to do this than permanently ruin our watershed to ease traffic on a dozen powder days each winter! Listen to the people!
26843	Thayne Macarille	I am a resident of Sandy and go to little cottonwood weekly. Do not ruin the canyon with the gondola. Very sad to see the option that does not support the community only one large business. Most of the users of the canyon will not use the gondola because it will not give access to the terrain they going to
26844	Reagan Rick	I recreate in LCC at least 100 days per year. Traffic is never a problem except for a few hours on Saturday and Sunday during ski season. Why put an obnoxious monstrosity all the way up the canyon to alleviate traffic for so little hours during the year. Also, you can hear the Snowbird Tram from quite a distance when it is running.
26845	Dennison Gretchen	No to the gondola. Self-serving and shortsighted. It will disrupt our canyon and the people in it and those that use it for hiking and biking. Charge every car that goes up instead widen the road get buses that can be repurposed in the valley make them electric make a bus only lane so there are two lanes that go up in the morning and then it alternates to two lanes that go down in the evening the number of days that there is a disruption is minimal. Impact of a gondola is out of control. Make it so that you have to have an easy pass that certifies your car has four-wheel-drive and snow tires not all-wheel-drive tires no rental cars allowed up in the canyon and charge a season pass of \$1000 to drive your car up and down the canyon. Then repurposes buses for other things or let them rest when they are not in need when numbers die down. Widen the roads and put snow sheds and you're going to do it anyways a gondola is only for the purpose of the elite rich and only serves Snowbird and Alta furthermore the journey to get up there is ridiculous. Eminent domain the gravel pit in Wastasch and turn that into a mass parking area where buses can run out of and also serve big Cottonwood Canyon because there's a problem there too just like Utah in good fashion you're very shortsighted in how to fix problems. By taking over the gravel pit and making it a giant park-and-ride cars will be able to exit the highway come from all different directions park their vehicles and a multi-tiered structure keep their cars out of the snow grab buses and go up either big or little Cottonwood Canyon make it so that there is a bus lane all the way Wastasch Boulevard going up little Cottonwood Canyon that does not have to stop it picks up at the gravel pit and goes all the way up to Snowbird and have one that goes all the way up to Alta to shut up people up there. Furthermore we really don't need more skiers in the canyon the ski resorts are crowded plenty. The road is crowd control. And let's start talking about big Cottonwood Canyon what is wrong with you people you're taking all that money for one little canyon when there is just as much of a problem or a bigger problem in big Cottonwood Canyon this is absurd And charge to go up both canyons and limit the vehicles and have more cops and therefore by charging there will Be funds to pay for everything no no gondola no!!!!
26846	Aubrey Gamble	So disappointed that public opinion was disregarded, yet we will be the ones funding the majority of this project. What the heck?! We don't want the gondola!!!!
26847	Kyle Wehrung	We would appreciate it if you recognized climbers and outdoor enthusiasts needs and values. This proposal goes directly against what a large population of people believe in. Destruction of the environment to get more people waiting in lines. Could I suggest a permit system to get into LCC?
26848	Kent Carbon	All in favor of gondola project in some way. It would be another positive and unique aspect to our area.
26850	Ryan Wadge	I strongly believe that a gondola is not the solution needed for LCC. A gondola will only service the ski resorts and therefore not alleviate traffic/congestion for other parts of the canyon. I believe that tolling and/or extended bus service is the right solution with minimal impact to this previous natural resource.
26849	Lindsey Nielsen	I am not in support of the gondola. It is very disheartening to see articles from formally likeminded organizations now change their tune as well. Save our canyons. Preserve.
26851	Claire Sudbury	Why would we put our wildlife and natural resources at risk for a gondola just to draw more people in?

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26852	Natalie Smith	Please do not build a gondola in Little Cottonwood Canyon. This will ruin the natural beauty of the most beautiful canyon in the Wasatch Front.
28164	Torhalla Talaksdater	NO GONDOLA! Don't Ruin The Canyon View With A Gondola! How does a gondola get me to any of the trail [trail] heads--before sunrise--all up and down the canyon? I see it benefiting the corporations that run the resorts over the general public. A gondola defaces the canyon. It solves only the ski areas parking issues, transferring it to the canyon mouth area. Are public transportation choices to get to the mouth of the canyon going to be enhanced too? In general public transportation in Salt Lake County sucks big fat rocks! NO GONDOLA! Kerry Faulkner West Jordan
26853	Adison Christiansen	please reconsider the decision on the gondola. there are less invasive ways to promote public transportation. don't ruin the beauty of the canyon forever.
26854	Brooke Bastar	The view up the canyon will be forever ruined. It services 2 locations only. Where will cars park? You going to dig more into the mountains to create it further destroying what we need, vegetation to cool the already heating city. Please reconsider this horrible idea! Electric buses and more of them like Zion National Park
26856	Francis Wikstrom	The gondola is a bad idea, fiscally and esthetically. Taxpayers should not be subsidizing the ski resorts.
26855	Nate Lemoine	Please reconsider adding a gondola to our beloved Little Cottonwood Canyon! There are far better solutions to the problems we are facing, including ugrading existing public transportation, and additional incentives for carpooling. More time must be taken to evaluate potential solutions that are less impactful to the local environment. We will have nothing to visit in the Little Cottonwood Canyon if we don't make smart decisions now.
26857	Kelli Davey	I do not support the gondola and feel like the needs of the canyon can be addressed with sufficient buses coming from terminals from the south, west, and north. Everyone can pay a costly toll to promote the buses. Please do mot destroy the canyon when it it's not necessary.
26858	Ressa Gagat	I think if this is going to be the chosen option, the gondola should be modeled after tellurides public gondola. There should be no admission fee, this should be a free mode of transportation to incentive use over cars. Also there should be multiple drop off and unloading stations other than alta and snowbird. Track population use of hiking areas in lcc determine the most used parking areas now and add 2/3 more stops to allow access to hiking, climbing, and backcountry trails through the gondola. Also access should remain year round. If this is going to be a winter only gondola, that only serves alta and snowbird it should not be a public funded project.
26860	Alison Moss	Please don't do this. It's a terrible idea. Use the taxpayers money to improve buses along the wasatch front, not to destroy pristine environment up little cottonwood canyon. This has a huge environmental impact and costs far too much money and who will benefit? The ski resorts and those who can afford to ski there. I am strongly opposed to my taxes being used for this
26861	David Cook	NO GONDOLA! Busses, toll, restricted personal vehicles in winter, expanded bus service and parking only!
26859	Isaac Lindstrom	No gondola. It's not the right choice for utah it's not the right choice for the taxpayers money!!! No bail out for Alta and snowbird
26862	Molly Drake	Please do not build this gondola . Little cottonwood is the last standing bit in that doesn't feel run over with construction compared to other areas it is rustic and holds value . We have not exhausted our other options yet and I think it would be smart to start with least invasive options like better bus systems . Please re think this because it can't be undone
26863	Creed Archibald	I'm opposed to the gondola. The price and the visual impact are unacceptable. Please don't use tax dollars to enrich private companies.
26865	Lexie Howe	NO GONDOLA!!
26864	Ressa Gagat	If this is the option that udot is leaning towards, I think the project needs to be rethought to be modeled like tellurides public gondola. The gondola should be free to incentive use over cars. Also I think there needs to be more public stops added. The gondola should not just serve alta and snowbird, but other areas of lcc. Survey population use of parking lots in lcc and determine which trailheads have the largest traffic influx, these should also be included in gondola stops. If the gondola only serves alta and snowbird then this should not be a public funded project.
26866	Erin Davis	I'd like to see a sustainable, cost effective solution that honors the residents wishes at the base of Little Cottonwood canyon and serves both the needs of the paying customers in LCC and the backcountry users. The gondola is not it! Especially when the burden of cost falls on the taxpayers, not the ski resorts it's solely serving
26867	Markus Mitchell	A taxpayer funded eyesore that serves two privately owned ski resorts is a terrible solution to this problem. More buses would be a much better option.
26868	Matthew Ellis	Hello, this gondola project will likely still create backups, just into the valley. Buses can hold so many people, why not improve bus routes throughout the valley? I live in Murray and drive because the bus stops are usually filled up. If the bus stops fill up, and the resort stops fill up, how will one more parking location solve the parking issue? People will still backup onto I215 regardless. I would support a better bus system, and better public transit in SLC in general.
26869	Rachael Gluck	This is a terrible idea and will be detrimental to little cottonwood canyon and Alta and snowbird. Not only will this not solve the traffic problem it it will just make the treaters more crowded it will make them more dangerous. Building the gondola will forever change lcc for the worse.
26871	Kyle Minnick	Do not build the gondola!!! Building a gondola ruins our nature and is a massive waste of money!!! Please just provide more buses if you want less cars on the road

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26870	Michael Goode	build the gondola but make sure there is a mid station! its the only option that reduces the presence of vehicles and ground footprint in the canyon. not having a mid station would make this a snowbird and alta only project though. granted the resorts may be one of the biggest pulls into the canyon... it would still be majorly short sighted to not have a mid station for people to get off mid canyon to enjoy other areas.
26872	Elise Petersen	A gondola is not the best transportation option here!
26873	Paniz Saisani	I love our canyons. This is our home, and the gondolas would ruin that. Little cottonwood canyon has so much natural beauty and wildlife that these stupid machines would ruin. No one wants these gondolas in our wildlife!!
26874	Holly Hackett	No to gondola. It is unnecessary and a big waste of money. It will strain the canyon environment, is permanent, is not needed for most of the days of the year and is serving highly privileged people not have to wait in traffic before they go skiing. It's so gross to ruin the environment for not reason.
26875	Blake Gibbons	I spend significant amounts of time in the backcountry in LCC. Trail running, backcountry skiing, and rock climbing. A set of gondola towers would significantly detract from the original beauty of the area. Everyone who recreates outside of the ski areas themselves seems to oppose the gondola. The only reason it is being proposed is to drop more people at the ski resorts which are already overcrowded. The solution is unfortunately, limit the amount of people that will be in the canyon. When it's full, it's full. You can sell all the ski lift tickets you want, but the lift capacity is the same. No one wants to ski for \$200 a day at \$50 per run because you wait in line for 1 hour per ride. Allowing thousands more into the canyon will just overrun this resource. The gondola is a non-sense plan being pushed by big business that irresponsibly damages the land around the resorts. Don't do it.
26876	Nicole Brannen	I'm happy to hear UDOT I supports the gondola. Both economically and environmentally speaking, this is a huge win and the right decision. As a lifelong resident of the Sandy/Draper area-I can't wait for the gondola!
26877	Solomon Duffin	Please don't build this gondola. Little Cottonwood is an incredibly beautiful canyon, it's seriously a treasure. I've lived 5 minutes away my entire life and I genuinely do not want to see this thing blocking the amazing natural views. It's not worth it.
26879	Jordan Carroll	I would implore UDOT to reconsider the decision to build a gondola in LCC. With inflation, it will surely cost much more than \$600 million as it is built over the next 10 years. To build such a permanent structure when waning winters have been occurring more often and we have the devastating consequences of a drying salt lake upon us seems short sided. Let's implement common sense transportation solutions first, like tolling, increased buses, parking reservations, monitored and ticketed enforcement of 4-wheel drive. I do not want my tax dollars spent on a gondola for a select elite who are wealthy enough to afford these resorts' daily \$200 tickets. Protect the canyon. Limit traffic and encourage carpooling, shuttles and buses.
26878	Gary Jones	I am a cottonwood heights home owner living less than a quarter mile from wasatch blvd. I love little cottonwood not just for skiing but hiking and climbing too. A tram will ruin the beauty of one of Utah's most beautiful areas. Ski resorts will be the big winners with the gondola. I am extremely against it and it's time for recreation and the ski industry to back down to save the natural beauty of the canyon. 600 billion? If this does happen, which I hope it does not, please have the ski resorts pick up the tab. It's too bad the 600 billion, I'm sure when all said and done it will be 800 billion plus, should be used to fix the great salt lake. Once dried out say goodbye to lake effect... this is insanity and shocked it's being considered.
26880	Jos Smith	This is not about the environment, it's about money. Stop being a phony and just come out and say it.
26882	Katie Weiner	As a local who's rode at Snowbird for twelve years I must say I'm very disappointed in your support of the gondola. Public transportation is so limited between the schedules and parking. The base lot in LCC should be returned to a bus stop and parking lot, not a park & ride. There has to be potential parking over by the Cottonwood business center that sits empty all weekend? Can you not use finding to find more places to allow for parking since the swamp lots full up by 8am? The bus service should begin earlier and encourage more people to learn the system. What is happening with the old Reams parking lot on Fort Union and the potential to use some parking at the Smiths on Bengal? Or the schools down the road on the weekends when the worst traffic is occurring with new routes that service areas where the residents are traveling up to LCC? There has got to be a better push to increase more buses and allocate more parking lots? I'm amazed that a 550 million dollar gondola seems appropriate when a sliver of that money could rent more parking lots or build a parking garage somewhere?
26881	Cameron Treat	An eyesore for all eternity for Two private ski resorts on the taxpayer's dime. Let them pay for it if they are going to ruin such a beautiful and world famous canyon and make skiing even more crowded and more dangerous by allowing more people to access the already crowded resorts. Better to limit everyone like the National Parks system is doing quite successfully. And yes, I support both resorts; I ski and board Snowbird and ski Alta. 20+ days a year and still believe this option is wrong and does NOT enhance the experience for all canyon users and only runs 1/3 of the year but is an eyesore year round. I'm also a climber, one-time Great white icicle Ice climber, hiker, biker, paraglider, boulderer. We are all equal but this decision only favors a few canyon users. We can't afford this in so many ways. Please reconsider the "preferred" plan. This decision will adversely impact the canyon forever.
26884	Kathleen Mcmillan	There is too much opposition and way too much potential damage to the natural environment. It's not worth it, please listen to the people and do NOT develop the gondola system.
26883	Sam Christensen	No gondola please.
26885	Audrey Pohl	For the love of god, NO GONDOLA. NO NO NO. Please exhaust all your other options before building a gondola. It appalls me how unbelievably stupid this idea is. If you want to save the ski industry in Utah maybe make sure the Great Salt Lake has water in it. Run busses up BOTH canyons every 5-10 minutes during peak hours. Incentivize carpooling, don't let cars up with only one passenger. Screen every single car before they go up the canyon with their 2 wheel drive and bald tires on a snow day. The money to fund the gondola comes from tax payers. Yet it doesn't even marginally benefit taxpayers or those who use LCC. Y'all get your head out of your greedy money hungry [redacted]. Me and thousands of others will leave Salt Lake and take our money elsewhere if this gondola gets built. I'm intensely disappointed in UDOT. Figure something out that isn't so invasive to the canyon. Talk to some experts and use your [redacted] brains for once. THE GONDOLA IS A STUPID GREEDY IDEA. If you don't listen to these comments it proves how greedy and horrific you are. LISTEN TO US. Nobody besides you wants a [redacted] gondola.
26886	Isaac Woodruff	No gondola!!!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26887	Alan Morgan	No gondola. This only serves commercial interests and not the unique natural landscape of the Wasatch mountains. Limiting capacity in the canyons may be a hard pill to swallow but it's the price you pay for having supreme canyons at the door of a metropolitan area. No gondola.
26888	Forest Astill	As a homegrown Utah resident. This plan is despicable. It is solely for the profit of corporations not for the ease of traffic OR more importantly the lessening of carbon emissions in our state. UDOT needs to revise its planning and prioritize the well-being of our environment and its residents. NOT corporate interests.
26889	Cody Knappenberger	PLEASE PLEASE PLEASE, don't spend a ludicrous amount of money on this rushed solution. We don't have the resources for a quick bandaid fix that will not serve the general public. This only helps the ski resorts.
26890	Ben Galanes	Please do not do this, the money is never worth it. Years down the road we will all look at our once beautiful natural resource with regret. Because hindsight is always. 20/20. Please do not make this mistake
26891	Thomas Giallorenzi	I support the decision to build a gondola in LCC.
26892	Dellan Fielding	Save the roadside boulders please
26893	CJ Sowles	Please stop trying to ruin our environment
26894	Scott Roberts	I absolutely oppose more destruction of our canyons. Putting a gondola doesn't solve the issue here. Traffic will only be worse when people get stuck up there and can't get down. Unknown costs to taxpayers and unknown damage to an already damaged ecosystem.
26895	Dellan Fielding	I am a rock climber and outdoor enthusiast. This transportation option would permanently hurt the natural beauty of the canyon and destroy some world class granite boulders for rock climbers. Please consider better options before choosing this.
26896	Stephanie Alpizar	This is a private ski resort problem and state tax payers should not have to pay. That money should be going to something more important. They have plenty of tourists and pass holders they can come up with the money themselves.
26897	Jon Cooke	Stop ignoring your those you're supposed to serve. Why are you giving my tax dollars to ski resorts? All public land ski resorts operate on should be given back to the public.
26898	Colby Hatch	I am 100% against the building out the gondola in LLC. It doesn't honor the wishes of the locals that use that canyon and only honors the wishes of the resorts that want to price out skiing.
26899	John Mletschnig	The answer to more people is not more people! This gondola will be beneficial for a handful of days of the year for those that want to ski at snowbird or Alta. It does nothing for other users in the canyon. And acts as an eyesore for 330+ days of the year, and an eye sore only! This is atrocious! Also, what's the evacuation plan look like if this thing details in the middle of a storm with thousands of people stranded at 250' all over the canyon. I come from a patrol background, and I can tell you that it would be easy and people may get serious hurt by an extended delay. Also when all these people come to park for the gondola the traffic problem is still in tens of thousands of peoples backyards! The only solution is busses direct to individual ski areas (because the ski areas are the ones causing the traffic problem) from remote points all over The Valley. Ski area participant number should be limited too before anything is tried. This is two private business screwing it up for everyone else! Most locals do not want this gondola. Listen to the public!!!!!!!
26900	Kate Cranney	NO gondola. LCC is one of the prettiest places this state has and we are going to spend millions of dollars to destroy that.
26901	Jeff Piacitelli	I do not support either options (bus or gondola) presented. I feel that electric cog rail/train is the best option and deserves a deeper look.
26902	Lyti Weed	The proposed gondola is not the best solution for a developing salt lake, destroying the natural beauty of the little cottonwood canyon is a bad call.
26903	Derek Ginos	The ski resorts stand to gain the most from this half billion civic project. How much will they be contributing toward this project?
26904	Nain Christopherson	As a Salt Lake City taxpayer and skier, I'm horrified at the proposal that \$550 million in government funds should go toward an invasive gondola to private ski resorts-particularly when that money is needed so urgently to address the health of the Great Salt Lake, the shrinking of which could soon render local snowfall insufficient to sustain those resorts in any case. Who will be left to run the lifts when we've all fled the state in search of arsenic-free air?? Please, please, take a step back and consider the ways in which this plan will benefit the very rich, out of state few skiers and snowboarders at the expense of our local people's and landscape's well-being, and take this opportunity to develop a more responsible alternative.
26905	Mckenzie Mckeon	NO GONDOLA!! I climb AND ski, and while I agree the line to get up to the ski resorts is absurd but putting a gondola in will only make the lift lines even worse! The 'snowbird fast pass' is ridiculous. This also disrupts a lot of beautiful natural climbing spots and won't really solve the problem. It will just allow even more people up at the resorts and bring traffic out onto wasatch. I beg you to find a better option, this is not it
26906	Patrick Powers	I believe the gondola is a very poor choice . It serves two private resorts, costing taxpayers millions, while placing a blight on a previously pristine alpine environment. Please reconsider and adapt like many other popular outdoors destinations with better bussing, shuttling, carpooling, and increased size of existing park n rides.
26907	Brian Hanson	Please don't build a gondola, the whole point of the canyons is that they are a worldclass outdoor destination, and with a gondola you are going to ruin the outdoor experience. If the only thing we cared about was skiing, and driving up profits for the resorts this would make sense, but for everyone else, all of the taxpayers, climbers, hikers, and everyone who is trying to actually enjoy the canyon, this will detract from the experience with this ugly piece of man made transit that has no place in the wilderness. This isn't Disneyland, we don't need or want a ride in our outdoor experience. Keep the canyon as pristine as possible, why would we want to destroy the very canyon that we claim we are trying to help with this proposal? Tax folks with a toll, require carpooling, increase busses, widen the road, but don't ruin one of the most special places on this planet with a gondola, there has got to be a better way that doesnt require us to destroy the world class views of what is still very pristine wilderness. It doesn't make any sense. Please, we are begging you, find another way that doesn't destroy the canyon
26908	Kim Judd	This is fantastic! The gondola option makes sense for so many reasons, and it will also generate revenue for the city, which additional buses would not have done. The gondola is safer, and addresses the traffic much more effectively.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26909	Jason Fox	Please, please do not destroy the beauty and sanctity of Little Cottonwood Canyon with a millionaires pet project. 550 million hard earned tax payer dollars could make a great difference for the entire Salt Lake Valley if not being spent servicing 2 profit laden ski resorts that have less than 14 days a year, wherein travel for their patrons is hampered. Please don't scar the wonder is LCC, this project will fail, underuse will be evident within the first year and yet the towers would still stand, symbols of greed and big business doing what they want vs. what would actually benefit the public.
26910	Houston Gilbreath	A gondola is not the solution- especially at the burden of tax payers. Regardless of the impacts of the other options, this is unilaterally a half a billion dollar project to benefit two private businesses that I have to fun. Do better.
26911	Lucette Barbier	it find too bad to invest so much money and utilizing the gondola in the summer, even if just on weekend. Also, summer weekends show hundred of car at White Pine.
26912	Benjamin Eaton	I am in favor of the gondola. Seems better than widening the road for a lot of reasons.
26914	Julie Young	I think the gondola is a great idea! Lots of resort areas have them. People are complaining about the posts but I'm more worried about the canyon having to be torn up for wider roads.
26913	Tek Kilgore	Ridiculous for 10-15 weekends a year. Better bus service. And restrict travel. Come on DOT!!!!
26915	Lexi Griffiths	I don't know what I could possibly say that hasn't been said 1000 times already, but I so strongly disagree with the gondola. It will have such a huge negative impact on LCCs world class climbing/bouldering areas, cost millions of dollars that could be allocated to countless other areas (how about that water shortage, amirite), not to mention it only serves to benefit 2 private companies, one of which boasts accessibility for everyone yet doesn't even allow snowboarding at their resort! It would be slightly easier to swallow if those private companies footed the bill but they're not even offering that. Not to mention it does nothing to address the issue of cars all along wasatch blvd between BCC & LCC, I would argue probably make it even worse. Then there's the whole capacity issue as well; currently resort capacity is regulated by parking availability, the gondola will ruin that as well. People will wait in line to park, wait in line to ride the Gondola, wait in line to buy a ticket and wait in line to ride the lifts hoping to get a few runs in before 4:00 closing...? What about the climbers, bikers, backcountry skiers, hikers? Will the gondola make anything more accessible for them? No. Bottom line is the gondola serves to benefit 2 private companies, one season of the year. On the taxpayers dime. WE. DO. NOT. WANT. IT.
26916	Christopher Garrard	As a long term employee off Utah ski resorts and life long resident the majority of canyon users are against this Gondola. The latest issue is conservation groups are already getting prepared to launch lawsuits if the gondola is chosen. This will cost millions of dollars over many years and could put it years behind schedule. With ish's current growth rate by the time it is completed it will be obsolete and other more efficient, environmentally friendly, and won't ruin the canyon. Just like most of the comments you will be receiving I an highly against the gondola and will actively participate in social action to hopefully defeat this plan.
26917	Rylee Olsen	Please don't build the gondola. That's a terrible idea and would ruin the natural beauty
26918	Ashley Mckinlay	Taxpayer dollars should not be used to pay for a gondola for private companies to profit from. Do not use taxpayer money to build this gondola. Let the resorts pay for it.
26919	Troy Mennitt	As a resident of Sandy, Utah; I support the Gondola Alternative B.
26920	Will Yeomans	Respectfully, as a long time hiker, skier, and climber who was quite literally raised in the canyon I am fully against this decision. So much of the beauty of the canyon and it's summer activities will be ruined by the gondola. Please consider anything else, this will destroy a precious ecosystem and one of my favorite places on the planet.
26921	Curtis Hunt	Gondola will ruin LLC. I am against it
26922	Cooper Stewart	The gondola is not going to solve any of the current traffic issues, it will only allow even more people to cram into the canyon. The same number of people will continue to drive up LCC and clog the road, and simultaneously, the ski resorts will ALSO be able to ferry additional people in above the road traffic. More people sardined into the canyon for the ski resorts to profit off of. If you want to actually alleviate traffic, get more busses and create more ski bus parking areas, and ideally invest in more eco friendly busses too. The gondola structure will permanently scar the pristine beauty of LCC, it has no place being in such a beloved alpine environment and it solely serves to help the ski resorts make more money.
26923	Ian Larsen	A gondola will not fix the problem. It will be unused as traffic in the canyon only happens on a select few days while permanently destroying the natural beauty. I am sure you guys have run through the options and know a gondola is not a great option. And promise me you'll actually try to not just improve the bus system but make it amazing. Make it as easy and as comfortable as driving in your car. Don't let money and greed destroy Mother Earth more than it already has. I hope these comments are not ignored like the last ones. #moneyalwayswins
26924	Jon Mather	The proposed gondola system in Little Cottonwood Canyon would be a travesty to the beautiful nature captured in the canyon. Surely there are more responsible and efficient ways to control the traffic as well as preserve as much natural scenery and beauty as possible.
26925	Dylan Marcinkowski	I know I am not just speaking for myself in opposing the construction of a gondola in lcc. It is an entirely inconsiderate and undemocratic decision which does not represent the wishes of a majority of Utah residents and outdoor enthusiasts like myself.
26926	Kyle Nelson	Keep the [REDACTED] gondola out of the canyon. The people have spoken and you guys aren't listening.
26927	Jake Jimenez	Don't destroy it. Let it's beauty stand

Comments on Little Cottonwood Canyon Final EIS

26928	Cheryl Altman	<p>After the enhanced bus service and the county-wide hubs are completed, the problem with be solved. Nothing else will be needed. Anything additional will only create more problems for the homeowners of Sandy and Cottonwood Heights without helping anyone else in the county.</p> <p>I am totally opposed to my tax dollars being spent on a gondola to service Alta and Snowbird, and further crowd Wasatch Blvd.</p> <p>We all know snowfall will be decreasing over the years, and as the Great Salt Lake dries up, we will have still less snow and more toxins. Put our tax money where it is really needed by all of us.</p>
26930	Sid Johnson	<p>There are so many better ways to serve the people and needs of LCC than a Gondola. If it isn't obvious, it's a massive play wherein public funds are funneled to the ski corporations. We don't want a gondola. Charge us a fee for non-carpool. More busses. Anything but a gondola. I'd way rather pay a tax/car than pay the resorts in yet one more way.</p>
26929	Alexandria Cantrell	<p>Shame on UDOT for not listening to the people that live work and recreate in this canyon. Utahns don't want this. Locals dont want this. I don't want to look out on the canyon and see a goddamn gondola in every photo. Private interest should not get to decide this, especially through public lands. If there's private money involved, those that stand to profit shouldn't get a say. This will negatively affect thousands of people for a problem that happens for maybe a couple of hours on weekends and powder days. The rest of the year there isn't an issue, and if you had listened to the public AT ALL you'd have made a different decision. I hope you all run into every road block and every problem imaginable for this project. There are so many other viable solutions to helping aid the problem in the canyon, such as tolling in the winter and adding a bus stop to the south side of the bottom of the canyon. Can't believe you can't even add a bus stop at the base before deciding on a god damn gondola. Screw you guys. I hope whoever made this decision gets fired and this project never gets funded. It will ruin the beauty of the canyon forever.</p>
26931	Brayden Skillicorn	I'm opposed to this gondola going through the canyon.
28161	Matt Belman	More busses! More Parking! Mandate no single drivers! A Toll! No Gondola!!!!!!
26932	Kathy Dudley	<p>I am opposed to the construction of a gondola for the traffic in Little Cottonwood canyon. It is a permanent structure in a time when climate is changing and there are no guarantees that there will be millions of skiers in the future. The option of clean buses is much more flexible and would not require the extensive construction and the unsightly tower/cables, etc. Alta and Snowbird would be the primary beneficiaries and there are thousands of non-skiers who use all areas of the canyons year round, so there would still need to be traffic on the road. The idea that families who want to use the gondola would park, take gear and kids on a bus to then get to the gondola is crazy. If they could not just park, jump on and go, families won't use it. Too much hassle. Please reconsider this decision and expand the process. This is too important to our county. Thank you. Kathy Dudley</p>
26933	Lance Affleck	<p>Been skiing at SB and Alta since prob 1987. I hike and use the trails in LCC also. I like the idea of the gondola. Better than busses that I don't/won't ride or widening the road.</p>
26934	Charles Maulding	Just build a train. Normalize this form of transportation. 2.) where will people park for this gondola
26935	Olivia Boer	It's simply a stupid idea. Let's leave nature alone. Please don't ruin the beautiful views.
26936	Isabel Slaymaker	<p>I think the gondola is the wrong solution!! Wrong to put so much money into an unsightly tourist trap. What's wrong with buses? Expand the bus system to increase accessibility and allocate those extra funds elsewhere! Also, I find it hard to believe that there is no significant impact on the ecosystem. Taking the homes of lots of wild critters, destroying vegetation, and causing air and sound pollution in the process. If the gondola is built, don't count on my or my friends' dollars going anywhere near Little Cottonwood Canyon.</p>
26937	Julia Grant	<p>As a Salt Lake native who's spent every winter and summer since I could walk in little cottonwood canyon I'm am seriously saddened by the recommendation. I believe that an improved bus system is the correct solution. The gondola will only solve small problems and predict there will be many kinks in designing"the worlds longest gondola ride". There's no freaking way it's going to go smoothly because of how unpredictable the canyon and plans of this scale are. I would also like to point out that big cottonwood often had much worse traffic than lc, we need a system that would benefit the whole community (not just a tourist attraction).</p>
26938	Stephanie Mchenry	Please no!
26939	Justin Albrecht	I support the gondola option.
26940	Sheila Gelman	<p>We are Alta skiers.</p> <p>If you ski during the week and not on powder days there is little traffic.,People are not riding the bus so there needs to be more incentives. It is a waste of tax payer money to enable a few. With climate change there won't be much powder.,Maybe limit the number of skiers per day as Deer Valley.,There is no need for a gondola in the summer.</p> <p>Let the resorts pay for it . Why should Utahns pay for something that they will not use.</p>
26941	Tricia Pil	NO! Increase frequency of public transit buses and design systems to encourage carpools instead. Don't tear up the canyon building an unsightly gondola
26942	Christopher Smith	This is a senseless costly move that does not serve the public as a whole but just two resorts. This would ruin a beautiful canyon.
26943	Torrey Ferguson	Absolutely not! Would like to keep our nature as natural as possible. We already have the road up the canyon. That's plenty. Maybe just limit the number of people allowed up the canyon per day
26944	Steve Nickman	Please DO NOT support the gondola for Little Cottonwood Canyon. The gondola is NOT the best solution to serve all users of the canyon. I support promotion of bus public transit. Thank you.
26945	April Ensign	No gondola. Let's put that money toward our water crisis instead.
26946	Nathan Reznik	<p>This is a terrible idea. This ruins the natural beauty of the canyon and will only lead to even more large infrastructure projects that ruin the environment and natural beauty. Generations of skiers will not benefit from this. Additionally, the lines at the ski resorts are already long enough. Imagine even more people going into the canyon on a daily basis. It ruins it for everyone. Please do not build a gondola. How about mandatory carpooling and bus usage?</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26947	Katherine Kittrell	<p>Build the gondola! I am all for expanded bus service anywhere it will be used, but I am against any significant expansion of the canyon roadways. Canyon roadways are not safe in winter. Road traffic contributes to our poor air quality. Road expansion in canyons is not environmentally friendly.</p> <p>Yes, gondola construction will have negative environmental impacts, but once construction is complete, the earth will heal. There is no healing from additional canyon traffic induced by an expanded roadway.</p> <p>My hope is that the gondola base area include a well-planned transit hub and a mixed use, mini city that includes multifamily workforce housing, retail, restaurants, and a grocery store.</p>
26948	Kristina Esham	<p>Please reconsider the gondola. It will permanently change the landscape of Little Cottonwood Canyon. It is a solution which only caters to skiers and does not address overall congestion in the canyons and the east bench/foothills. If millions of dollars are going to be spent for a transportation hub then that hub should serve a year-round purpose. The solution only helps people going to Snowbird and Alta. Please consider a plan which will aid a larger group of people..</p>
26949	Doug Skyer	<p>I think this is the best option to help reduce Little Cottonwood Canyon traffic, reduce CO2 emissions by vehicle traffic and minimize impact of avalanches. I hope funding can be found to get this project going forward.</p>
26950	Margaret Beardsley	<p>Why not close the canyon to cars and use buses, so that no additional infrastructure is needed, or replace the road with a train - which seems to be the most environmentally friendly option because of train efficiency. This solves the traffic problem without destroying any of the canyon or ruining the natural look of the canyon that people love.</p>
26951	Jessica Scheetz	<p>This should not ever be something to consider for LCC. There are many other options that are less expensive, and fulfill the need just as much. How can the the plan be to spend nearly a half billion dollars on a gondola, while Utah public schools remain an embarrassment to the nation? Fix the long-standing issues, not the issues with ski resorts upset because the don't have parking.</p>
26952	Landon Hart	<p>We don't want the gondola the traffic will be just as bad. Ee can oy get 1k too 2k people up an hour. What will that doo too my neighborhood at the bottom make it worse???</p>
26953	Parker Bond	<p>The Gondola is an unsightly, slow, expensive tourist attraction, and is not a serious transit solution for the canyon. It has limited capacity, limited stops that make it impractical for hikers and other users of the canyon, and will mar the beautiful views in Little Cottonwood. There are also significant unknowns around making a longer than usual gondola line and how high winds and inclement weather would negatively affect the Gondola. Additionally, if someone has a medical episode while riding on the Gondola there is no way to turn the gondola around, stop the Gondola to let people off, or otherwise deal with incidents that may occur in transit, which will lead to dangerous, preventable, incidents. Trapping strangers together in a small space with not even a bus driver or train conductor to facilitate things will also lead to altercations with no means to deescalate or remove passengers who threaten others while in transit. I support enhanced bus service year round.</p>
26954	Lauren G	<p>Good morning. I am a resident of cottonwood heights, right near little cottonwood canyon, and I have anxiously been keeping up with the updates for the new gondola plans. It saddens me that even with huge community pushback, you would still go forward with this. We don't want it!! I do not want a gondola ruining the beautiful landscape and boulders that thousands enjoy and climb on. Please stop looking for funds and leave LCC alone!</p>
26955	Alan Gates	<p>Udot and the public must combine to make the BEST decision for our environment and for the people. I watch as newly constructed roadways are under built and are outdated before completion. I observe the proposed parking area for the gondola, I see city congestion and the ill effect the parking lot will have on our wildlife and environment here in Sandy. The gondola will be for access to Snowbird and Alta ski resorts, not for the public and Sandy City. I think there are better ways of accessing the canyon, for instance use the current bus stops, provide electric busses, limit automobile ski access to carpooling only with an appointment system in place. Electric bus service would also be advantageous in the summer months, especially during Octoberfest, Octoberfest creates its own congestion as well. I hike year round, I hate the thought of hiking near the proposed parking area in the winter and have to dodge cars on their way to park. I also don't want to pay for something We The People of Sandy don't want. Go build your parking lot in your backyard. A resident of Sandy donated his land on 9400 South and Wasatch for a nature center, it has been turned into a concrete eyesore. Bell Canyon Reservoir summer parking is a congested Joke, Guardman's Pass is a giant congested concrete parking lot. Let us learn from these places, let's do the right thing for our citizens and our environment.</p>
26956	Dave Kliger	<p>Building the gondola is in my mind comparable to swatting a fly with a sledge hammer. Why visually destroy a magnificent natural jewel to facilitate traffic 10-15 days a year. It will also further aggravate traffic congestion in Cottonwood Heights. Again a much improved bus system coming from different locations is less expensive and more flexible. I personally stopped using the bus regularly when UTA eliminated the direct bus to Alta forcing me to make three stops at Snowbird and taking 45 minutes to get to Alta as opposed to 18 by car.</p>
26957	Ellen Sherk	<p>The gondola will only service the resorts. What about those of us who snowshoe, hike or ski anywhere else in Little Cottonwood Canyon? Your gondola won't help us, we'll still have to drive up that canyon. Which will still cause traffic, which will still cause parking problems. Alta and Snowbird have you wrapped around their little fingers if you think this is the correct solution.</p>
26958	Greg Freebairn	<p>First, let me say, I've been opposed to the gondola from day one. It's too expensive, misuse of public funds, and will have a massive environmental impact on a beautiful canyon. With that said, your phased-in approach is sensible. The issue has never been getting more people up the canyon it's getting people to use mass transit, and getting more vehicles out. I believe that enhanced bus service and tolling would be the best course of action. And can be used to service both Little and Big cottonwood canyons. Thanks for your time.</p>
26959	Chris Balun	<p>I support the gondola and I'm a sandy resident.</p>
26960	Ellen Liebelt	<p>Instead of expensive, unsightly cables and Gondola towers spoiling the views of the canyon, why not use shuttles like Zion's during the winter months. Stops could be arranged for trailheads or other points of interest besides the ski resorts. There would be no need for an extra bus lane as the shuttles would mostly be the only vehicles on the road. Special passes could be issued for those who work or live up the canyon.</p>

26961	Shannon Woulfe	The gondola is not the right choice. It feels like Utah is in the pocket of the resorts. Consider your residents and our ability to enjoy the canyon! Please let's start with a less environmentally harmful alternative: let's try more parking and more busses. And then if it doesn't work let's talk about a gondola or train or road widening.
26962	Jackson Bradford	Don't put a gondola up little cottonwood. Instead, charge a toll for cars to limits the amount of people that drive up there. And if they do, you make money. Increase the amount of busses and bus stations without widening the road.
26963	Scott Mathers	Full disclosure, I am a full-time year-round employee of Alta Ski Area for 34 years. I have driven LCC a few times... I believe you are missing two significant strategies in the preliminary plan that includes the enhanced busing, snow sheds, road widening, etc. We badly need a 24/7 traction law from November 1 to May 1. We do winter visitors in LCC a huge disservice when they drive up the canyon on a sunny morning and it begins snowing hard in the afternoon. We literally strand people up the canyon who don't have the appropriate vehicle equipment and often don't have winter driving skills or experience. This in itself causes enormous traffic congestion on snowy afternoons. The other missing strategy is that Snowbird needs a parking lot below Creekside to accommodate all of the vehicles that currently park on the road. The road-side parking between White Pine and Entry 4 is a significant public safety issue, certainly a skier experience negative for Snowbird skiers and causes literally hundreds of traffic stops and delays when all of those cars need to do a 3 or 4 point turn to turn around and head down canyon later in the day. Implementing these two strategies alongside the other proposed pre-gondola projects would pretty much take care of the entire problem, potentially negating the need for a gondola. In exchange for a parking lot Snowbird should be required to implement parking reservations like we have at Alta to manage the number of vehicles in the canyon. Please feel free to contact me. Respectfully, Scott Mathers. Director - Alf Engen Ski School, Alta Ski Area.
26964	Jeremy Valentiner	<p>Dear UDOT,</p> <p>I am fully support the Gondola as a solution to providing increased access and transportation within Little Cottonwood Canyon.</p> <p>I think the Gondola would be valuable in creating opportunities for people of varying abilities and would allow people in wheelchairs, people with cognitive limitations, and other physical limitations to enjoy the mountains in way that would not be possible or as accessible from a car.</p> <p>I do hope that the Gondola would have provide access to backcountry locations, e.g. a stop at White Pine Trailhead to allow backcountry users in the Winter and Summer to access the entire canyon. Providing access to locations besides the Ski Resorts would demonstrate that the Gondola is for all users, and not just benefiting two private ski resorts.</p> <p>I would also hope that the Gondola would provide Summer and Winter operations to provide users the ability to access the Canyon year round.</p> <p>Regards,</p> <p>Jeremy Valentiner</p>
26965	Abigail Johnson	<p>I am a Cottonwood Heights resident, my partner and I own out home just off of Bengal Blvd. We have lived in Cottonwood Heights for 5 years and are devastated at this push to move forward. The gondola is NOT going to discourage people from driving - it's going to increase tourism and bring MORE people into the canyon. Little Cottonwood was special, and with each piece of added "progress", it loses the magic people love. There is such a thing as backwards progress. Remember Zion - before the mandatory buses, lottery hikes and MILLIONS of people who go there each year?</p> <p>LCC will face the same fate as Zion if this gondola goes in. Not to mention the increased traffic near my home, the pristine and unobstructed view from the top. All of that will be for nothing if you move forward with this. Salt Lake City is on its way to becoming the next Vail, and that's NOT a good thing.</p>
26968	David Nelson	No gondola. It would ruin the view of the canyons and only cause traffic on wasatch to be worse.
26967	Eugene Tyler	This gondola is a terrible idea. Like, seriously, how did this [redacted] waiting to happen even make it through the brainstorming phase? Are y'all so bought and paid for by corporate interests that you can't see the needs and wants of the actual communities you allegedly serve? Increased bussing is a great solution. Increased tolls on single occupant vehicles are a great idea. Using money from the community to finance access and operations for two richer than god corporations is unforgivable. Building infrastructure that will damage an undeveloped area, not to mention destroy several recreational sites, so that it can be operated for part of the year for a small part of the population is unforgivable. Hear your community; cancel the gondola.
26966	Allison Holmberg	This gondola serves one industry, the ski industry. While it destroys multiple other industries including the world class climbing industry. Decisions should reflect the entire community not just the one that is gonna make you the the most money. You might think this will protect the canyon but you will destroy it while the gondola is built and there are many other less destructive ways. How about you think again UDOT.

26969	Cooper Smith	<p>I personally feel that the goal of this project should be to find a way to allow as many people as possible to experience the natural beauty of Little Cottonwood Canyon (LCC). The two main ways I think this gondola project will come up short are:</p> <ol style="list-style-type: none"> 1. Putting a bunch of floating people movers in the canyon will take away from the wild ruggedness of the canyon. I don't think this is insignificant. People need to experience these places as they are. Being in a wild place helps to restore the connection we are trying hard to break between us and the world. We are part of this world, not masters of it. 2. The gondola doesn't seem accessible to everyone. It seems like the gondola would be used by the ski mountains to get customers up the canyon. And those customers are, for the most part, rich people. I understand that these are the same people who are driving their cars up the road and creating the traffic that needs to be addressed but if you're going to spend a boat load of money why not do it on a project that can benefit more people than just the wealthy (I'm assuming it won't be free to ride the gondola). I know that you are the experts and I don't know what I am talking about. I worked in LCC at Alta and lived in the valley, so I understand well the need to do something. But it's my opinion that a gondola isn't the best option, it's just the cheapest and most convenient.
26970	Spencer Reynolds	<p>Please don't spend our tax dollars on a giant gondola. This only benefits wealthy residents that ski at the resorts. Enhanced bus service is a much better long-term plan, especially for summer users. Traffic is only bad a handful of busy weekends each year.</p>
26972	Richard Emery	<p>Opposed to the gondola. A fleet of electric busses and snow sheds would be cheaper with less impact on the canyon.</p>
26971	John Eckert	<p>Gondolas may seem to answer a problem, but will create numerous new problems. The permanent support piers will change the wild and beautiful scenic look of the canyon forever. It serves ski resorts while ignoring all other recreational opportunities in the canyon.</p> <p>The proposed changes to Wasatch Boulevard are also unacceptable. Five lanes of traffic will make it impossible for those of us living on side streets to ever get out of our subdivisions and make a left turn onto Wasatch Boulevard. The speed limit in Wasatch Boulevard should be slowed down and a center parkway should be added. Cottonwood Heights does not exist as a sole reason for its existence to offer access to ski resorts. It is a residential community and has as many rights as the owners of the ski resorts.</p>
26973	David Morgan	<p>This is a travesty! The overwhelming majority of people want no gondola. It would it would severely alter the character of a beautiful natural setting in a negative way. Listen to the public!</p>
26974	Nicholas Mougey	<p>This is a huge disappointment to everyone who enjoys LCC. Please consider a less invasive approach to solve the traffic problem. Everyone knows that this only benefits the resorts and it's driven by greed and payouts. Disgraceful.</p>
26975	Macy Olivera	<p>A gondola is an irreversible and expensive solution to the LCC issue at hand. Please reconsider the other solutions to the problem such as road expansion to maximize both expense and citizens happiness. It is also important that you look at the high percentages of canyon goers that oppose the gondola including mayors from many surrounding counties.</p>
26977	Brett Glasheen	<p>Please reconsider the implementation of the gondola and little cottonwood. As a citizen of Salt Lake county I have many concerns relating to this option. First I (and many others) believe that this option does not truly solve any problems. Traffic will not be reduced by this option. Instead we have another bottleneck at the gondola. Second, this completely defaces a once beautiful canyon. I have driven up LCC countless times and still the beauty takes my breath away. This place should be preserved, not destroyed. Please reconsider this option. Taxpayer dollars cannot be spent to serve 2 business entities, it is completely wrong and misguided.</p>
26978	Richard Matthews	<p>I support the gondola. This sounds like the best deal for taxpayers. There is no perfect plan.</p>
26979	Juliana Van Hook	<p>This gondola is not supported by any of the citizens that it will effect and it will be hugely detrimental to the wildlife and nature surrounding the construction. PLEASE STOP.</p>
26980	Steve Keyser	<p>This is a fantastic development and you only have to go to Europe or Telluride Colorado to see what an asset this would be to ALL TAXPAYERS! Go to snowbird for dinner via tram, excellent!</p>
26982	Glen Fish	<p>I am all for the gondola I think its best for the canyon</p>
26981	Bruce Jeffrey	<p>Why spend so much money, which could be better used elsewhere, to reduce traffic backups/congestion on a few days during the winter season. Why not impose a reservation system to avoid the overcrowding on these few snow days?</p>
28155	James Ledyard	<p>How do I volunteer to put a gondola tower in my front yard?</p>
26983	Ruth McMullin	<p>I want my kids in the future to be able to enjoy the nature and tranquility of little cottonwood canyon without a gondola. I want to be able to climb and hike the paths I did as a child. I think this is a very poorly made decision. There are way more cons than pros to this. Please think about our future in recreation and how this will impact it. Instead of a gondola expand the public transit system.</p>
26984	Lura Harvey	<p>I am opposed to the gondola project for several reasons and think you need to seriously reconsider adopting this option. First, I recently moved to Utah, I chose to live and work here because of the rock climbing. LCC holds a sacred space in American climbing history, many of the great American climbers have set routes in LCC, have made pioneering achievements in this canyon. The destruction of those sites and that legacy makes me wonder what matters to Utah-a state that benefits economically from outdoor recreation. Skiing isn't the only demographic here, and with the changes in global climate, 3 season sports like climbing are going to be the better investment in a Utah future.</p> <p>Secondly, I lived in Switzerland for 5 years, and their La Posta buses could get you anywhere. The bus system was how I got from the village of Grindelwald to my ski lift. Here is an elegant solution to your problem: make the whole canyon reliable on the bus in the winter-no cars in LCC in the winter. Anyone who has skied in Europe will be more than accustomed to this system. Have it so a bus leaves every 10 or so minutes, it will be more efficient and safer for everyone. It won't involve spending a ton of money to destroy nature, or severely impact climbers and other outdoor recreational activities. Why not choose and win-win situation?</p>

26986	John Hill	The Gondola is a terrible idea; and I'm one of the Alta skiers that could benefit. Worst of all is the massive infrastructure and tall towers that would destroy all site line and vistas in LCC. And really, how many people will actually use it, especially if there is still a road. There are only so many snowy days when the crowds rush to the canyon that it would possibly be needed. And with global warming, the ski season is getting shorter and the expense to taxpayers for two companies to benefit: Alta and Snowbird, is bad for all Utahns! Expand buses first and foremost!
26985	Ben Kieffner	The grass is rarely greener on the other side. Leave it alone. Do nothing beyond enforcing carpool restrictions on the handful of busy days each year. Don't do this to the taxpayer and most importantly, don't imprint unnecessary development in a sacred mountain paradise. I repeat, don't over-engineer a problem to fill pockets. Do NOTHING and listen to the majority who want the same.
26987	John Wise	No gondola. It will only cause more congestion 7 miles closer to town. More busses from all over the city. No gondola. Literally, nobody wants it except the people profiting from it.
26988	Lezlee Amoss	As a Utah resident for 65 years, I believe the money for the proposed Gondola should be used for many other more important needs. I have worked with adjudicated youth for the State of Utah for many years and we need many more prevention programs, rehabilitation programs and programs for the homeless. I am against the proposed Gondola program for the impact in Little Cottonwood Canyon!
26989	Brielle Rummens	I think having the gondola plan for little cottonwood is interesting, but overall I think it would take away from the canyons beauty. I think if traffic was turned into a bus only situation like we have in Zion National Park it would be better in a way that we wouldn't have hundreds of cars in the canyon at a time, it would give people jobs, the maintenance wouldn't be as expensive and the scenery wouldn't be destroyed. The bus system could have multiple stops for hikers and have stops at snowbird and Albion basin. If people have houses and cabins up that canyon, they should have a special ops that needs to be renewed every 5 years so they can get in with their personal vehicles, but everyone else should be using the buses. If we widen the roads up there- if it's possible- and make it for buses only, there'd be less emission/exhaust from cars and the buses could be equipped with tires made for snow for skiers in the winter. I definitely think there is a different alternative way to go for this instead of spending over \$500 million to put up a gondola and spend years tearing down the scenery in the canyon to build poles to hold and move big boxes. At the mouth of the canyon or at some distance away, parking lots and/or garages could be built for people to park their cars and then buses could pick them up and take them up the canyon. It could work just like Zion. Millions of people go there every year and there's no complaining about having to take buses in Zion. If it was put to the rest in Little Cottonwood, I think it would be successful just like it is down there.
26990	Leonard Seifers	I am totally in favor of the tram it will change pollution in the canyon
26991	David Wilde	As a resident of Sandy that lives by the mouth of the canyon, I am opposed to the gondola. It services to benefit the private business and not the canyon as a whole. The gondola is of no service to anyone wanting to use any other part of canyon other than the ski resort areas. Tax money should be for the benefit of everyone using the canyon and not just the private interest groups. Expanding bus service and improving the road gives equal benefit to all users of the canyon.
26992	Jared Lyman	I think that a gondola is the best idea for transport up cottonwood canyon. Because of the mountainous terrain it would be very difficult to add new roads or to create another type of transport that would be as available as the gondola. One of the concerns with the gondola is that it has safety issues. However, it would be more safe then travelling on the roads because during the winter the roads can get icy and slippery and with the increase in people travelling along them there could be more traffic around bends of the mountain that you may not be able to see until you are right up on them. By then it would be too late because it would be difficult to stop and you could slide off the road or crash into the cars in front of you causing an increase in likely hood of you getting injured or worse. Because more people are taking the gondola and not driving up themselves they will be able to save on parking space up at the top of the mountain where it is harder to do construction if they wanted to add in another parking lot and instead we only have to build one at the beginning of the gondola. The gondola would also be a fun way to go up there where no one has to worry about driving on the roads and being as cautious and you get a nice view as you are headed up and have been proven to be safe. It will be saving time in the future where times are projected to be in the 1.5 hour range for driving and 55 minutes by the gondola saving people gas money and time that they could be spending having fun. Considering all of this the gondola is the best option for trying to get the increased amount of people up the mountain safely and with the best experience.
28154	Tony Vander	I support the gondola. It is the right thing to do. I hope there are additional stops at trail areas. For additional recreation experiences. Many European countries do this with success. I would also be 8n favor of a box on my tax form for additional donations that could be made, Tony vanderheyden
26993	Alexander Boynton	No. I believe the negative impacts of a gondola outweigh the benefits. I believe a combination of tolls, and increased bus capacity would be a superior solution. Preferably Electric buses.
26994	Randy Vannurden	NO GONDOLA! I dont want to see it when im in the canyon, and i dont want to pay for it either. It will be under utilized, and will only push the traffic problem back further into the city. people need to be forced to carpool with tolling and resort parking fees. Low impact solutions NEED to be explored first before developing the canyon FOREVER!!!!!!!!!!!!
26995	Woehr Kayla	First of all, I'm disgusted that we have to comment a 2nd time that WE DO NOT WANT THE GONDOLA! This an absurd waste of tax payer dollars to solely benefit two privately owned ski resorts. We have to thoroughly investigate who else is making money off of this project as well as cheaper and less destructive alternatives first.
26997	Malack Mouhammad	This is not a good idea and will ruin the beautiful canyon.
26996	Jackson Yip	As a citizen of salt lake, I am strongly opposed to a gondola being built in little cottonwood canyon. We must explore other options before our tax dollars go to funding a project that benefits private businesses before the general public.
26998	Katie Nicholls	The gondola is a huge waste of money, looks terrible, and won't solve the issue when it only goes to ski resorts. Why are we not looking into the future and using electric buses? This is irresponsible and disappointing.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
26999	Nicholas Consiglio	As a resident of midvale and little cottonwood canyon recreation user I am fully against the proposal to gondola proposal. Not only would it not solve traffic and road issues as it only serves to get more people up little cottonwood and does not address anything traffic or road related. It will ruin the views and natural beauty of the canyon and im am opposed to the project and opposed to funding it with my tax payer dollars
27000	Andie Mace	I am against the initiative to build the gondola. I believe that electric buses are a better and less disruptive solution all around
27001	Hank Bates	I believe that in order for the gondola to work at all you cannot have it start at the mouth of the canyon. If the gondola were to start at or near rio tinto soccer field it would have easy freeway access on I15 from both directions (north and south) and there is already a massive parking lot that only gets used in the fair weather seasons during games. Putting the base station at the mouth will be a complete waste of money and will not relieve pressure on cottonwood heights and sandy, it will probably make it worse.
27002	Marcus Espinoza Owens	The Little Cottonwood Recreation Areas solution should be a gondola as it would provide safe and predictable outcomes every time. In contrast, vehicle-based solutions such as letting others drive up to their desired locations could prove difficult and dangerous not to mention unpredictable as you do not know what they will do with their freedom. Although some might offer that a gondola would be much more money and citizens having the freedom to drive themselves would add to another incentive to go because you don't have to go anywhere you don't want to. Except this opens things up a little too much as this freedom could cause traffic to more popular spots and issues with parking not to mention the fact that if something like a wreck were to happen up there then it would cause massive traffic and rescue would be somewhat lagged because of the location as well as some newer people might not know where exactly to go and get lost. In addition to this, a gondola would be a fun and exciting way to get up to your favorite ski resort the only issue would be the parking lot would get packed with people, but this is better than trying to park up at the location you want to because you might lose your spot and not remember how to get back up or just have a hard time getting to your spot. While the gondola offers a safe and reliable way to get up without the unpredictableness of driving.
27003	Andrew Koziatek	I Don't understand why it's even still debate. It will destroy the natural beauty little cotton wood has to offer, you better not tamper with any climbing spots. LLC is the capitol of climbing in the United States. As a Alta employee too there is nothing horrible about the traffic, yes seriously people are always going to want to be first chair it's part of the culture. You're too busy trying to attend to the needs of all these tourist and don't give a [REDACTED] about the locals. Ikon already [REDACTED] the ski resorts up don't let the gondola [REDACTED] even more. Take a look on how many local mayors and representatives we have that are against the gondola! Don't be [REDACTED] dumb and destroy our canyon with our tax payer money. It's ridiculous!
27004	Mackenzie Mondek	I am a constituent in Salt Lake City and am against the gondola in LCC. The environmental threat of the gondola on our city's water and risk of overuse of land overrides the greed of ski resort profits, ski resorts that are already doing just fine. Tax dollars to conserve environmental concerns are better spent towards electric buses. What will we do once the structure of the gondola poisons water supply and wipes out portions of our natural landscape? Tourists won't come.
27005	Charlotte White	Little Cotton Wood Canyon has been and will become even more popular. It is a great recreational environment and has drawn in many people that participate in snow sports. With the increased number of attendants there is going to need to be a change on the route to get to your destination. Some of the suggested ideas are widening the road, increased bus transportation, or a gondola. So far the plan that is going to be implemented, unless another solution provides bigger advantages, is the gondola. This is a great idea because it decrease the traffic going to your destination from the La Caille restaurant. Not only will it help the traffic flow, but it will hopefully eliminate pollution and it will shorten the time it takes to reach the ski resort or your desired destination. Instead of the hour, hour and a half, commute, it will be cut back 20-30 minutes, taking you only 45-50 minutes to reach your end location. Along with these gondolas, bus transportation will be increased. Participants will park their cars in a 2,500 lot parking lot and either hop on a bus or take the gondola that will arrive every 2 minutes. By providing the people with the gondola, UDOT is also helping prevent accidents. By decreasing the number of vehicles that go up the canyon they are decreasing the amount of collisions or disasters that could happen if the road was packed with cars. I think that the gondola is a great idea and will help the community access recreation better, sooner, and safer.
27007	Brad Christensen	I think that this is definitely the best way to proceed. Little impact to the environment with clean energy.
27006	Jon Brigance	I'm an strongly in Favor of the gondola system More busses will not solve the problem. Weather, road conditions and avalanches can easily block little cottonwood canyon road. I live just south of the canyon off wasatch and 1700 e. Look to European ski towns, they embrace the quiet, zero emissions of gondolas, funiculars and trams. More busses and wider roads are the last thing we need. Please built the gondola. The parking and coordination outside the canyon makes more sense.
27008	Matt Thalhamer	This is not the best use of public funding and will only serve a small portion of people to private resorts. Better public transportation options would be a better solution
27009	Ethan Watts	Please DO NOT make this gondola and ruin one of Utah's most loved and enjoyed pieces of nature. The gondola is NOT a solution!
27010	Douglas Franchitto	Im a milcreek resident that actively uses little cottonwood canyon to recreate 2-3 times a week. the gondola would do irreversable climate damage to the wasatch and ruin the views. please do not move forward with this
27011	Chris Otteson	Listen to the people. A gondola serves the skiers and no one else. The busses will at least serve everyone. 80% of people surveyed do not want the gondola, listen to the people. We don't want our taxes to pay for private business to profit.
27012	Andy Nelson	It seems that the only people who will benefit from a gondola is the ski industry so let them fund it not taxpayers. Its obvious that the designers at UDOT are totally incompetant when u look at the history of Bangerter highway design and Mountain View the initial design should have had overpasses and now after failed continuous flow redesigns bangerter highway is being updated with overpasses at what additional expense to the taxpayer. so let the skiers and resorts fund a gondola system in big cottonwood canyon on a private deal and not a state funded project

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27013	Sarah Robbins	I am a resident of South Jordan, season pass holder at Alta, and lifelong skier. No way I would ever ride a gondola all the way up the canyon. Have you ever been in a gondola when it stops? You just sway, and wait and wait and wait. Claustrophobia at its finest! I would never ever ride a gondola 8 miles.
27014	Kelsey Corr	I do not support the building of a gondola in the cottonwoods. I fear that it will take away from the beauty of the canyons.
27015	Heidi Schubert	I do not endorse a gondola. I support increased bus transport, A wider array of park-n-ride options and bus lanes to circumvent traffic. When Brighton traffic backs up to the fire station, the bus should get through. Heidi
27016	Tyler Mcconnell	I'm very against using tax payer dollars to make two ski resorts and the corporations that own them more money. If this is the option, make the resorts pay for it.
27017	Sarah Wuthnow	Do not build the gondola! Fix the shuttle system!
27018	Blair Janis	The gondola does not serve the interests of the public, meet the needs of the community, or protect the environment in a way that preserves our vital natural resources. The damage of a gondola will be irreversible to the natural environment and to our economy - what makes recreation unique in this part of Utah is the vast backcountry and relative solitude that can be achieved so near the city. This is an expensive option that will cheapen the experience of being outdoors - all while burdening tax payers with a project that will only benefit private resorts. I urge you to reconsider this irresponsible proposal.
27019	Kurtis Barth	The proposed gondola is still a horrible solution. The gondola will only meet the needs of specific tourists that want to ski the resorts and will damage the beauty and views of our canyon. The gondola provides huge funding to the ski resorts it not valued by any of the local communities. Increased bus service and large parking centers further from the mouth of the canyon would be a much better solution for the seasonal, pulsed nature of the traffic. The gondola does not benefit anyone for the summer who wishes to park along the road and would be a huge waste of money 3/4 of the year to taxpayers. A bus system would much better meet the needs of seasonal commuters or the swell of skiers that all need transportation between 7-9a and 3-5p
27020	Benjamin Van Dorn	Don't destroy the simplicity of our canyon
27021	Neil Fortie	Why would you spend so much of our money on something that would only be used 4 months of the year. You would also cause a problem with parking space at the mouth of the canyon. What a waste of our taxes.
27022	Dylan Alexander	I am thrilled on the choice of gondola option B as it can operate independent of road conditions, accidents, canyon closures, etc. A long, winding, crowded bus ride up LCC is not enjoyable. Having plenty of accessible parking at the base of the gondola is critical. The Wasatch boulevard lot is often full on weekends and powder days. It is a deterrent to use public transit if I have to drive farther out of my way to find parking and spend a longer time on the bus.
27023	Kari Lewis	I am wholeheartedly against the gondola. It will be a monstrosity to the most beautiful and legendary canyon in America. It will be an eyesore. It will destroy mega classic boulders for rock climbers who come from all over the world. I have not heard a single local say they are for this gondola. This will be fully funded by tax payers who do NOT want the gondola and only enjoyed by tourists for a couple months who aren't even paying for it! 14,000 people commented last time, most of which I'm sure were against it, and you decide to go forward with it? Listen to us! We the people do not want this.
27024	Marjorie Gendler	I am opposed to spending our tax payer money on a project that will benefit almost exclusively two private businesses, Alta and Snowbird. It does nothing for backcountry skiers and summer hikers who use the trailheads along the roadway. I do not believe the general public is in favor of this expense, especially the majority who do not ski the resorts.
27025	Robyn Seldin	I support the gondola as the end result to the transportation problem in LCC, but in order for the initial phasing of buses to work, there needs to be parking at the base of the canyon for cars. Since Snowbird owns the land for the 2500 parking stalls at the base, the parking garage should be built so that people have easy access to the canyon's bus transportation. As a LLC skier and season pass holder, I have never used the "free" buses because of the limited parking at the base of the canyon.
27027	Jody Reid	I am opposed to the building of a gondola in Little Cottonwood canyon. I support common sense strategies to address the congestion issues in the canyon, such as those proposed by Jenny Wilson:" Parking hubs in the valley, electric busing with regular routes, carpooling and tolling, reservations, common-sense solutions that are fiscally sound." The price tag and environmental impacts of a gondola make it a poor approach to addressing the issues in the canyon.
27026	Michael Torres	If you pay attention to any of the comments, it's clear no one wants the gondola. Enhanced bussing is the only logical solution. Permanently altering the canyon with a gondola should never have been an option. Tax payer dollars should not be used to build something that only benefits the ski resorts. If they want the gondola so bad, they should pay for the land and cover the cost of the gondola 100%. It's sickening to think that that beautiful canyon will permanently be scared due to the greed of the 1%.
27028	Lynne Decol	I support the gondola as the best option and really the only long term viable option for sustaining Little Cottonwood Canyon
27029	Roy Randles	If someone were to go camping. What could you bring or not bring on the tram, as in. Tent, sleeping bag, pots and pans, firewood, fuel?
27030	Samantha Miller	Update the bus system. Create better and more parking. Have direct buses to resorts and others with stops along the way. With the current infrastructure the gondola won't eliminate these issues. But it will affect climbing areas greatly. No gondola!
27031	Isabella Anderson	The building of the Gondola will not only disturb people living in Utah, but it will be disturbing our beautiful wildlife in LCC. This would be a very expensive form of transportation that would likely come out of tax-payers while only serving two resorts. This is absolutely unnecessary.
27032	Lauren Cabrera	The gondola will not be an improvement over increased bus service. It over doubles the cost, but continues to just push all other issues elsewhere! Parking will still be required in the valley, the same number of people will be at the resorts, and traffic will back up to almost the exact place. Additionally, it ignores the other recreational activities in the canyon during winter. The majority of citizens disapprove of this choice, and so do many of our elected representatives. Keep only the enhanced bus service and find ways to encourage carpooling. Additionally, the resorts should limit their capacity.

27033	Leslie Mismash	NO GONDOLA!!!!!!!
27034	Santiago Urbisaglia	I strongly oppose the construction of the gondola. Electric buses would solve the problem, with out destroying the natural beauty and will benefit the resorts. Long lines at the gondola will cause loss of revenue for the resorts as people will turn away and go somewhere else. You would lose to much time trying to get up the canyon, also traffic at the mouth would be worse
27035	Liam Mcgee	As expected, government just followed the money instead of listening to the people. To be fair, the first step implementation should of expanded buses is a god first step, but the gondola makes no sense. There's still going to be traffic at the base of the gondola station. More importantly, it's going to ruin the very best part of SLC, the access to incredible mountains and nature just minutes from the city, by scarring the landscape of LCC. A gondola also only solves specific issues with transportation: the ones that the big resorts that have money to pay legislators, care about. I hope UDOT and the state of Utah can reconsider and make an informed choice that benefits everyone, instead of just looking for money.
27036	Craig Garrison	I'm strongly opposed to the gondola and any other solution that increases my taxes so ski resorts can increase their profits. The ski resorts should be paying the cost of fixing the problems they create. If they don't want to pay for traffic improvements, limit the number of skiers that use the canyons. Fewer skiers equal less traffic up and down the canyons. DON'T HARM LITTLE COTTONWOOD CANYON SO SKI RESORTS CAN MAKE MORE MONEY!
27037	Jane Rupp	From the research I have read it does not appear that the gondola will service the traffic fast enough. Why not purchase electric buses and bus everyone up and down the canyon. That would appear to be a far better way to do it. I am opposed to the gondola disturbing the environment, animals and water sheds.
27038	Brandon Fessler	Thank you for making the right choice! I'm glad we will not be adding more vehicles and widening the roads. Not only is the gondola efficient but what a beautiful way to commute. Thank you for having the courage to do what is best versus listening to the noise.
27041	Kara Jones	No!
27040	Alex Porpora	<p>I am deeply concerned about the selection of the Gondola Alternative B by UDOT as the preferred solution to improve transportation in SR 210. This selection does not honor public opinion but rather favors private interests and a small population of canyon users.</p> <p>The gondola will forever alter the landscape, character and ecology of Little Cottonwood Canyon for the benefit of a very small user group and private interests. If the goal is truly to improve accessibility, safety and maintain the ecological balance in the canyon, a phased approach to busses and alternate modes of transportation seems like the most logical approach.</p> <p>The gondola is not accessible or equitable for many user groups. This selection fails to take into account that people use the canyons for recreation year-round. Over the past few years, we have seen visitation and vehicular traffic spike in the canyons, often leading to unsafe conditions and increased traffic year-round. The gondola provides no solutions to these issues, but rather serves a niche user group and private interest on days with very particular weather conditions.</p> <p>The gondola will take years to complete when we could be implementing solutions now, like enhanced bus service that would meet the needs of multiple user groups and keep tax payer costs low. I do not want to see my tax dollars go towards this wasteful project which prioritizes the few over the many residents and community members that should have access to this recreational treasure.</p>
27039	Thomas Smart	You are supposed to be a transportation agency, which means helping people get where they need to go as efficiently as possible. A gondola does not serve the needs of people who want to go places other than two ski resorts. It is not efficient, as taking a bus or driving a personal car will still be significantly faster for most people on most days of the year. It's easy to predict that, even with the gondola, the road will still fill up to and beyond its capacity, just as it does now. The only justification for the gondola is to sell more lift tickets, burgers and beer. It's a huge giveaway to the ski resorts at the expense of taxpayers who will never use it. Shame on UDOT.
27042	Kely Beth	Please listen to us. The users, the passionate, and the wallet. Gondola does not resolve the issues. It does not cater to the overall safety of the users. Please reconsider
27044	Vy Pham	Please please please rethink about the gondola!!! Think about our future, the gondola would only make traffic worse and worse. It'll not solve the problem it was meant to solve while ruining our precious wild places that we desperately need to keep. Please stop putting the dollar sign first. It only benefits the ski resorts! Increasing busses with mandatory booth who won't let individual cars up unless they're carpooling (3,4 or more). Please think about our future!
27043	Russ Jansen	I am 100% against the gondola. The cost, it's effectiveness do not line up. Improve the bus system. Create one way traffic options on weekends. NO to the expensive, inefficient, ineffective eyesore.
27045	Brinnlie Harward	NO GONDOLA
27046	Dylan Day	I don't think this is a solid solution. Your talking about more infrastructure in the canyon, which is what your trying to avoid.
27048	Brian Hall	This is not what the people of Salt lake county want. Numerous people have commented previously and you ignored the will of the people. The gondola will be a huge eyesore and will be detrimental to wildlife during and after construction. A toll road with increases carpooling and increased buses is the only solution. Brian Hall Millcreek resident

27047	Tracey Price	<p>To whom it may concern:</p> <p>I'm writing to oppose the building of the Gondola in LCC. This boondoggle only benefits Snowbird and Alta a few days a year, at the cost of 550 Million tax payer dollars. This is not how I want my tax dollars used.</p> <p>As a back country skier, hiker and climber I will continue to drive my car up canyon to access the trails in the canyon. I think most people will be inconvenienced with taking the Gondola, which takes longer than a car with increased cost to access skiing and other outdoor activities.</p> <p>I think you need to rethink this eyesore and add another lane with more buses making stops beyond Snowbird and Alta to decrease cars in our canyons during the busiest time of the year.</p> <p>The Gondola is a hideous addition to the natural beauty of our canyon.</p> <p>Please rethink this really expensive, bad idea.</p> <p>Sincerely, Tracey Price</p>
27050	Erik Misiak	<p>I moved to Salt Lake City for the untouched beauty and incredible landscape offered by the mountains, The canyons around salt lake are a retreat for everyone in the valley. Adding a gondola is BAD IDEA and will not solve the long term issues of traffic. Little Cottonwood will be forever disturbed and scarred from a gondola. PLEASE DO NOT ALLOW A GONDOLA TO HAPPEN. I am an avid back country and inbounds skier and the community is not behind a gondola.</p>
27049	Will Summa	<p>We don't need another tourist attraction in the canyon, the gondola will just increase the volume of people trashing little cottonwood canyon.</p>
27051	Steven Burton	<p>A gondola system up Little Cottonwood Canyon amounts to corporate welfare. This more than half a billion dollar boondoggle benefits just two businesses. If a gondola is to be built let Snowbird and Alta pay for it. You do not have my permission to use my tax dollars for it. And every honest person should admit that costs will almost certainly escalate as the build progresses. My guess is it will cost closer to \$750 million. The best solution for the canyon is simply limit the number of cars allowed to enter it. Give a pass to locals who live in the canyon and just close it down when the parking lots are full or the canyon becomes too congested. Simple and low cost. Let's not love the canyon to death.</p>
27052	Bailey Smith	<p>I don't support the gondola</p>
27053	Ryan Thomas	<p>I'm a regular hiker in the cottonwood canyons and I think the gondola is a terrible idea, for many reasons. Please, please, don't go forward with this.</p>
27054	Alex Stewart	<p>NO to gondola. I have seen these Gondolaworks advertisements spammed all over our local news channels, geolocated online video ads, etc. I have never seen a bus option advertised for LCC. It is obvious how much big money is backing the gondola and to approve it as the option for LCC only makes it obvious how the general public is being passed over in favor of corporate interests.</p> <p>Bus routes can be modified (different stops, different times) and maybe down the road we can incorporate more environmentally-friendly bus options on the route to improve its effectiveness. I support an option that will provide good access to public, free recreation options at the trailheads. This is particularly relevant during the summertime. I happen to live right next to a small gondola that takes people from a parking area to the resort base. I can count the number of times I use it in a year because there's no midstation loading. It exists only to serve the resort not the general public.</p> <p>What about pricing for the gondola? How can we know they won't strong arm ticket prices in the future?</p> <p>There's no ads for the UTA bus because there's no big money in it. Its an affordable way for the public to access multiple parts of the canyon, not just catering to expensive resorts. The public are the primary intended users of the LCC transportation option and their interests need to carry more weight here.</p>
27055	Julian Cebrio	<p>I don't think you'll read the long ones. The gondola would ruin the scenery, overcrowd resorts, and be a terrible addition.</p>
27056	Joe Buonocore	<p>I am against the gondola and using my tax dollars to subsidize the ski resorts. Most citizens cannot afford to ski with the prices they charge. How about spending that money to help the many people who need it instead of the few who can afford to ski. what does the average citizen get for their taxes?</p>
27057	Cecilia Webber	<p>I am a sandy, Utah resident and am against this project. Besides the negative environmental impact it is an all around waste. Nobody will pay lots of money to ride a gondola if they can ride a bus, or drive in their own car. It also only benefits the ski resorts. I vote no.</p>
27059	Aharon Shulimson	<p>I am opposed to the LCC gondola for the following reasons: 1) It will irrevocably change the look of the canyon; 2) For the estimated \$500+ million dollar cost of the gondola, 500+ electric buses can be purchased; 3) The estimated \$7 million annual cost of maintaining the gondola can be used to maintain the buses; 4) The buses will create more higher-paying jobs than the gondola; 5) If a bus breaks down, 40 people will be inconvenienced; they can get off the bus or wait for a replacement. If the gondola stops, hundreds of people will have to sit and wait for it to be repaired.</p>
27058	Scott Bowen	<p>If the ski resorts want to pay for the initial outlay for the gondola, and pay for it's operation and upkeep, I think I MIGHT think that it's a good solution. But otherwise, no chance. My bet is if you took a poll, most people are against it...if that's the case, then why even consider it.</p>
27060	Isabella Hategan	<p>It should not be built. The canyon is known for its natural beauty and building anything in it will ruin it</p>
27061	Rick Newton	<p>I am in full support of the Gondola option for Little Cottonwood Canyon and believe it is the most prudent solution for the long term.</p>
27062	Cynda Melville	<p>I'm a Centerville resident, not a skier. I don't like the idea of a gondola up the canyon. I am against state funds going toward the maintenance or upkeep of a gondola.</p>

27063	Max Sollis	The gondola is a great idea with few negative impacts but it also gives a great impact on the environment. While you may argue that a good view is taken away, you in turn get a better one from high above that everyone could look at, where if you were going by yourself you couldn't see it because your keeping your eyes on the road. The construction of the gondola may cause animal displacement and avalanches, but if an avalanche occurs and we make a controlled estimated area that the snow can fall near and melt, we can obtain water that's needed as well as, if animals are being displaced it is sad and bad for the ecosystem but it's a tradeoff that is worth it. It is worth it for the reason that with less vehicle emissions in the air, we help the world and the environment, because as it gets hotter due to greenhouse gasses trapping heat we will get hotter and soon animals may be naturally displaced due to heat or even die.
27064	Bill Misiak	This is insane! It does not help transportation issues and threatens to ruin our beautiful canyon! Do not let this happen!
27065	Patrick Harvey	Build the gondola over the highway if you do build it. Keep the mountains wild
27066	Cole Hemingway	With the gondola, the changes that happen will effect not only Utahns, but the canyon and the life there. It will destroy the natural beauty as well as climbing, hiking, and other spots for us Utahns. The construction will destroy the natural water stream, that and the drilling will make the area less structurally sound. It will cost way too much, has the potential to break, and will drive wildlife away. The alternatives are better than building something that runs through our beautiful canyons, the people don't want to have to take up anymore of the places to see nor take away from the view going up little cottonwood. There are better alternatives that everyone can get behind that will be left likely to ruin our beautiful states canyons and tourism.
27067	Lolah Uigaese	I think that this is bad for the environment and that it is going to draw away tourist. It is going to ruin the pretty view of the canyon and ruin alot of the habitats for the wild life in the canyon.
27068	Milli Pichardo	This only goes to the ski resorts, there is already too many people driving in the canyons in the summer for hiking and camping. We need a solution that can be year round and is not just for access to already expensive ski resorts. I say NO on the gondola as the plan stands now
27069	Jordan Peterson	A gondola will not reduce cars it will just add more people. The same amount of parking will exist, the same amount of traffic jams will happen. The gondola doesn't stop at rec areas, it stops at Snowbird and Alta. We are subsidizing private companies with tax payer funds, allowing them to pack more people on an already full mountain. The cherry on top: it ruins a beautiful canyon.
27070	Jordan Peterson	A gondola will not reduce cars it will just add more people. The same amount of parking will exist, the same amount of traffic jams will happen. The gondola doesn't stop at rec areas, it stops at Snowbird and Alta. We are subsidizing private companies with tax payer funds, allowing them to pack more people on an already full mountain. The cherry on top: it ruins a beautiful canyon.
27071	Brynn Andreason	The Gondala is not a good idea for Utah. There are many reasons why; wildlife will be destroyed, climbers won't have as much access to the places they want to climb, and it will be costing a lot of money. An enhanced bus, like an electric one, sounds the best. Less gas usage so less air pollution, it still takes people up the way they'd original go if they were driving themselves, and it won't ruin wildlife. Multiple buses could go up at one time, and people would have to know the schedule of each bus (ex; Bus A, Bus B, Bus C...). There are other alternatives.
27072	Cady Gregg	The ski industry is not the only aspect of our canyons that make them awesome and something ppl travel to see. It is NOT worth spoiling our canyons in the name of one industry. Ultimately this decision will negatively impact exactly what a team would try to boost, tourism. This is because tourists come to our canyons for there beauty, and a tram takes away from that. There is a ski bus for a reason, use it.
27073	Caryl Fletcher	The biggest impediment to using the bus service to the canyons is the lack of parking and restrooms at the base lots. I also oppose using taxpayer funding for private resort benefits, especially considering the gondola won't be used in summer and the likelihood of good snow decreases each year. The time it would take to ride approximates the bus time- if you can park to use the bus-and buses can convert to electric.
27074	Carter Palmer	I believe that a gondola would work really well. Not everyone is able to drive, and driving through a canyon may be dangerous to many. A gondola would solve both these problems by allowing people to not drive, and instead just sit on a gondola. In the KSL article, it says that the gondola had the 3rd highest initial cost, but the lowest maintenance cost over 30 years. This will also remove cars off of the roads, decreasing carbon outputs and saving gas. With the gas prices as high as they have been for the past few months, many people would love an alternative. It was estimated that it would prevent 4,000 tons of greenhouse gases from entering the air. There would also be a large portion of people who would love to go on the gondola for sight seeing. Being able to sit in a gondola and watch the landscape would be a savory feature for many. Currently a lot of the traffic and closures is caused by heavy snow. Options such as widening the roads or an enhanced bus service would be closed in the same conditions that cause the traffic now. Taking cars off the road will also leave the road open for large semis who are unable to take the gondola. Downsides to increasing the sides of the road would be that in order to increase the size, they would have to blast away the sides of the canyon for room. This would be worse for the environment compared to building a gondola.

ID	Full Name	Comment
27075	Weston Thornock	I believe that the best solution to the Little Cottonwood Recreation Areas would be to build a gondola. The countless snow storms and avalanches that hit Little Cottonwood canyon every year make traveling through the canyon by vehicle incredibly dangerous and often result in the road being closed which creates heavy traffic. Literally nobody likes sitting through heavy traffic. Building a Gondola would make it so much easier to travel across Little Cottonwood canyon. People wouldn't have to worry about potential delays that can result from traveling across little cotton wood canyon anymore and prevent many potential car accidents that could seriously injure or kill people. A gondola would be completely weather and avalanche resistant meaning that people would be able to use it regardless of what goes on in Little Cottonwood canyon. Not only would the gondola be very convenient and safe, it would also be a very environmentally conscious decision. According to gondolaworks.com as many as 7,000 vehicles drive across Little Cottonwood canyon every single day. All of these vehicles produce 70 tons of carbon every day. These amounts of carbon are incredibly harmful to the environment and help contribute the the horrible air quality that Utah experiences every year during the winter. Despite this some people still argue that the state shouldn't go through with these plans to build a gondola primarily because it would be expensive to fund and could result in a tax increase. While these concerns are valid, building this gondola would benefit every single person who travels across Little Cottonwood canyon and because of that I believe that it is well worth the price. Source: https://gondolaworks.com/
27076	Grace Houmand	Maintain the visual experience of little cottonwood canyon with out building the gondola . I support gondola and bus alternatives! Please don't built this for the sake of the wildlife and our water source for the salt lake valley!
27077	Peter Vars	This gondola idea is a total ripoff of taxpayers. This won't alleviate any traffic problems and everyone involved knows this. The parking lots at the ski resorts will still fill up on powder days there will just be a few more gondola cars full of paying tourists added to the lift lines. The ski resorts won't pay for it because it does not make economic sense. This is just a way for the politically connected to make some unethical cash. Will also ruin a beautiful canyon. Stop this!
27078	Connor Breinholt	I think its dumb and that its not worth how much its going to be. I'd rather drive or take the shuttle up and keep out money for something more important. I think more people would rather drive so they can do hikes and climbs with the tram you wont be able to go to as many hikes and climbs and sights.
27079	Ender Cerny	I think that we should have the gondolas to have less traffic in the canyons
29463	Anonymous	Im against the Gondola. Lets just widen the road. Thought I leave a voicemail to voice my opinion.
27081	Briant Novinska-lois	The problem is that the bus alternative that was considered included new road lanes and not electric buses. If the road will be tolled no matter, just shut it down to cars altogether, unless you are an employee or disabled. Then the electric buses can run. Increase transit through the valley to get to the entrance so the traffic congestion just doesn't become a massive parking lot.
27080	Nathan Smoller	No gondola!!! Build a lightrail instead or something much less harmful to the environment and views of the canyon!!!!
27082	Ali Fetters	I feel that the Gondala is unnecessary. It costs a lot of money and ruins the physical enviornment in little cottenwood. Not only is it expensive to start and set up, it is also expensive to keep. This Gondala will only make travel time about 20 minutes shorter This is an unnecessary, large change to our enviornment.
27083	Macay Clawson	I see no point to the gondola. The roads will still be open and all it does is waste taxpayer dollars and destroy homes for wildlife. As a climber, little cottonwood is one of my favorite places to go in the fall, and building this will block access to most of the crags up the canyon. If they go through with the project, it will make the canyon so much less enjoyable. Its such a pretty canyon, and the gondola will ruin all of that. The construction will also put more emissions in the air.
27087	Lexi Ball	I think that busing should be the solution to this issue. It would cut the amount of cars and air pollution. There should still be the ability to drive up the canyon yourself. It should cost money to be able to drive up or a pass that would last you threw a season. It would promote more people to use the bus.
27084	Anneliese Christensen	The fact that they could care less about the environment and what they'll be destroying is beyond me. The whole point of it is to reduce congestion in the canyon, however you'll still be able to drive up? I don't fully understand what exactly they think this will do? When they start this project, the amount of pollution that will happen? But they want to reduce air pollution? Not only this but the fact that it'll take 37 minutes to get up there but 15-20 minutes driving, much rather just walk or drive up the canyon.
27085	Lewis Hone	I do not want my taxes spent on a project that I will never use with no help to me.
27086	Sage Stickley	No Gondola!!!!!! Clean busses are carpooling is the answer.
27088	Desi Rodriguez	The cost for the Gondola is very high, and do we already have the money to make it or are we going to have to fund it with higher taxes and things? And if we do already have this money why can't we put it towards something more environmentally friendly. Yes, the Gondola can reduce pollution during the winter, but to build it is going to cause pollution and not only that but disrupt ecosystems within the canyon. Another this is the giant parking lot at the bottom that would have to be built. Parking lots are known to ruin the environment and affect many animals. Why not have more buses that go up the canyon or start to fee the people who go up the canyon. I just feel like there are better options for the environment that don't require to build a giant thing.
27089	Evan Ashby	I don't like the idea of adding a gondola to the canyon. I believe instead of relieving the congestion and pollution from tourism it will bring more people from out of state to visit the attraction. It will not only affect Cottonwood canyon it will increase the housing prices, gas prices, pollution in salt lake, and traffic in the valley.
27090	Nate Borgenicht	No to the Gondola! Would be an eyesore that critically damages the very essence of why this canyon is so loved. Enhanced bus service is the answer to traffic congestion.
27091	Johanna Semon	I'm vigorously opposed to the gondola proposal. Climate change is here. Our days of large winter snowfall are a thing of the past. Using public funding to support the dying business is offensive to the general population. Let's find a green solution, such as ev powered buses, car sharing. Our state has many innovative citizens, let's use them to find a better solution.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27092	Katie Shuman	The vast majority of locals, the people most impacted by building a gondola, do not want it to be built. It is incredibly unfair to use our tax dollars to build something (we don't want built!) which will only benefit a few for-profit companies. There are already too many people in the canyon. The solution should be capping how many cars/people are allowed in the canyon, not building a gondola. Please listen to public comments on this section. Please look past capitalist greed and do what is best for the environment and the people.
27093	Meghan Harding	I am not a skier. How will this policy help me? I love hiking and would LOVE an option that makes hiking more accessible to me. I do not see how a gondola would do that. How expensive would riding the gondola be? I assume extensively more pricey than a bus, which only serves to make this canyon more inaccessible to me and others on my income level. My ideal would be increased year long bus service with stops along popular hiking trails in the canyon. This gondola seems to be more of a benefit to these ski resorts than it is to actual residents.
27095	Allison Coffelt	<p>To the committee:</p> <p>I implore you to reconsider the backing of the gondola in Little Cottonwood Canyon. In terms of data, I wonder: are you pulling bus ridership data that includes the rates of riders during the 2019-2020, 2020-2021 winter seasons? We must consider the impact COVID likely had on that data--many folks were uncomfortable riding and opted for cars. The data from those years should not be the basis for bus ridership moving forward.</p> <p>Moreover, I saw in the plan that one of the points made was that UTA did not have the funds to expand bus routes. There should be more communication on why this is--and why the funds that would be going toward a gondola could not support additional UTA buses in that canyon. After all, there are no current funds to support a gondola either, based on my understanding.</p> <p>Respectfully, Allison Coffelt</p>
27094	Merrilyn Cruz	Please don't build a gondola up LCC. The view as it stands now is one of the natural beauties we need to protect in our state. Also, building something that only serves a purpose during ski season is absolutely ridiculous. People in our state don't want to see it ruined by bulky, ugly machinery that will require upkeep that I imagine is far more than upkeep of the roads or other alternate plans. Listen to the population! We don't want a gondola. Thank you.
27096	Rob Dosch	From a SLC resident, NO GONDOLA. Taxpayers don't want this illogical eyesore and neither does the forest or animals. Keep it out
27098	Tanner Strickland Lenart	I have lived in Salt Lake City for 14 years. I am a backcountry skier and this proposal, with the gondola included, is for business and not for individuals or the environment. Please do not implement this, but look to options like Zion Canyon's bus service. Thank you.
27097	Westley Shaffer	The proposed solution only benefits one user group, two private companies, but negatively impacts larger and more numerous groups and through construction destroys other user groups natural infrastructure like boulders and cliffs
27099	Janet Buonocore	I do not agree with spending millions of dollars for gondolas in the Cottonwood canyons. I feel it would take away from the beauty of the canyons. The gondola would benefit the ski industry in the winter only, not the whole of Salt Lake County all year round. The millions that would be spent do not include the maintenance/replacement on the gondolas. Why should our residents have to pay for the ski industries profit? If there is snow, people will come & spend their money without the gondolas. I do not want my tax dollars spent on the gondola! With global warming changing our climate, there may not be consistent weather for snow or cold to make snow. I've lived here for 69 years. I skied in the canyons since I was 6 years old. However, I don't want to foot the bill for only the ski industries benefit. I say no to gondolas!
27100	Alex Beaufort	Are you kidding me??? People don't want this. We don't need a gondola. There are more financially responsible first steps to mitigating traffic problems, like mandating buses, increasing prices of parking, etc. but a gondola won't do it.
27101	Stephanie Kagen	<p>Let's look at some facts.</p> <p>Park city almost didn't have enough snow last year to open all of their mountain. Sierra Nevadas won't have snow by year 2050. Where does that leave the Wasatch with year of snow left?</p> <p>This gondola is permanent & not environmentally friendly. Please give rise to the idea of increasing the bus system. Why is it so hard to give an increase to the bus system for one or two years? Try that and if that's not working then fine-gondola.</p>
27102	Amy Fulton	<p>I am strongly opposed to this taxpayer subsidy that will do nothing to benefit the majority of Utahns (who will be paying the cost of this) and serve only to benefit two private ski areas. We moved back to Utah because it is a fiscally conservative state, values its low taxes, and has a strong preference for private enterprise and against government subsidies. This proposal flips those values on their head.</p> <p>We moved away from SLC in 2015 for school and when we returned in 2020, found the canyons to be an absolute mess, especially in the winter. From the outside, it looks as though the IKON and EPIC passes have greatly contributed to this increased traffic. This past year at Alta, we did notice that the reserved parking situation in the canyons had greatly relieved congestion and appear to be working well. Yet, lift lines this past season were as long as ever. So what will this gondola do? Aid in reducing already manageable traffic? Increase resort attendance when the resorts are already at capacity? To me, it is a drastic and expensive solution in search of a problem.</p> <p>We already see that we need to protect Utah's natural beauty, biodiversity, and environment or there will be consequences. The gondola is too disruptive and unnecessary. It also doesn't transport nearly enough people to fully solve the issue.</p> <p>I therefore urge everyone in a decision-making authority to oppose this. Explore and evaluate lower-cost solutions first and share this data publicly. Thank you.</p>

27102	Amy Fulton	<p>I am strongly opposed to this taxpayer subsidy that will do nothing to benefit the majority of Utahns (who will be paying the cost of this) and serve only to benefit two private ski areas. We moved back to Utah because it is a fiscally conservative state, values its low taxes, and has a strong preference for private enterprise and against government subsidies. This proposal flips those values on their head.</p> <p>We moved away from SLC in 2015 for school and when we returned in 2020, found the canyons to be an absolute mess, especially in the winter. From the outside, it looks as though the IKON and EPIC passes have greatly contributed to this increased traffic. This past year at Alta, we did notice that the reserved parking situation in the canyons had greatly relieved congestion and appear to be working well. Yet, lift lines this past season were as long as ever. So what will this gondola do? Aid in reducing already manageable traffic? Increase resort attendance when the resorts are already at capacity? To me, it is a drastic and expensive solution in search of a problem.</p> <p>We already see that we need to protect Utah's natural beauty, biodiversity, and environment or there will be consequences. The gondola is too disruptive and unnecessary. It also doesn't transport nearly enough people to fully solve the issue.</p> <p>I therefore urge everyone in a decision-making authority to oppose this. Explore and evaluate lower-cost solutions first and share this data publicly. Thank you.</p>
27103	Brad Hogan	<p>I don't understand why we are not trying a lower impact solution before approving a potential landscape changing solution that will never allow us to resort back to a non-gondola option. The main benefactors of the gondola are two ski resorts. This completely ignores half of the year to summer traffic. Limit cars and increase buses. If that doesn't work, then and only then should we talk about altering a pristine landscape.</p>
27104	Daisi Cardenas	<p>I think there should be a vehicle-based solution, such as an enhanced bus service mentioned in KSL's article titled "UDOT moves forward with \$550M gondola, enhanced bus plan for Little Cottonwood Canyon," and capacity control. The Gondola is a good idea when you look at it on a surface level but once you read their ideas, the money, and overall energy that is going to be put into this project; is simply just not worth it. They stated in the article that it will save time, however, the time is only cut by 30 minutes. Taxpayers, secure state, federal, and private funding will spend almost half a billion dollars just to save 30 minutes of traffic time. My concern with the Gondola is health safety. They are going to put 35 people in one cart at a time. We are still in a pandemic with new viruses appearing almost every month. With monkeypox, cases can spike and we can even see a rise in covid cases if we are cramming people in a cart. By also having capacity control we can save people time, fewer emissions with fewer cars on the road, less crowding, and a drop in crashes on the road. Also, the wait for it to be built is ridiculous and throws out the argument it will help the environment and that the materials needed to build the gondola will damage the environment as well. Having multiple solutions I believe is the best case for this argument.</p>
27105	Jennifer Lawton	<p>I strongly believe that building a gondola in Little Cottonwood Canyon would create more problems than it solves. It would compound traffic congestion and parking problems at the mouth of the canyon with limited ability to move large numbers of users in a reasonable amount of time. There would be serious negative physical disturbance in a uniquely beautiful canyon in addition to excessive negative visual impacts on the canyon. Widening the road is the proposed alternative that would offer more flexibility over time. Expanding bus service to year round and increasing the number of clean-air busses in the canyon is a better solution that would reduce emissions while meeting the needs of the increasing number of canyon users. The property at the mouth of Little Cottonwood purchased by Snowbird for the gondola base station could instead be developed as another parking and bus service node.</p> <p>I strongly object to the building of a gondola as a solution to solving traffic congestion in Little Cottonwood Canyon.</p>
27106	Clint Karren	<p>I am a native Utahn, an avid user of Little Cottonwood Canyon and have been for my entire life. I fully understand the need to reduce traffic congestion up the canyon and I am not entirely opposed to the Gondola proposal. However, I do not support this proposal simply because IT WILL COST UTAH TAXPAYERS HUNDREDS OF MILLIONS OF DOLLARS THAT WILL ONLY BENEFIT A SMALL PORTION OF THE CANYON STAKEHOLDERS (I.E., SKI RESORTS AND PATRONS) FOR ONLY A FEW MONTHS OF THE YEAR (I.E., THE SKI SEASON). I do not ski at the ski resorts, and I see thousands of other recreationists, like myself, that backcountry ski, snowshoe, ice climb, sled, hike, rock climb, backpack, fish, camp, mountain bike, etc. that will not benefit from this. The Gondola will do nothing to gain access or reduce congestion to the many recreation spots that dot Highway 210 that are used throughout the year (not to mention the enormous eyesore that will be created with +200 ft gondola towers lining the canyon floor). I realize that there is no perfect solution to this problem but there certainly are better options that will use tax dollars more equitably for all canyon users throughout the year.</p> <p>If the Gondola is constructed, it would only be fair to the Utah taxpayers that most, if not all, of the cost be covered by the ski resorts (and their patrons) since they are the only ones to benefit from this.</p>
27107	Izabella Anderson	<p>There are more problems than just simply getting people from point A to point B. The bigger problem is how many people can point B hold? There are potential solutions to the transportation problem. They can make the road wider, they can make parking lots a bit away and people could take busses from the overflow parking, they can make gondolas to take people up the canyon to the ski resort, but what good will all this money effort and time do if the ski resort cant hold all the people that they are sending up there? Another concern is what would the resort charge to get people on the new gondolas? It would seem that they would over charge simply because they are able instead of charging a reasonable cost, no one could stop them for this. By making the gondola system to get up the mountain, they are kind of making it a necessity so they could charge whatever they want to. They could do things like sell passes for gondolas to make it more cost effective. Another limitation to taking a gondola or something up to the ski resort is that people are forced to only take what they can carry. Not only is this inconvenient it could be a safety risk. people would be pushed to carry more and maybe hurt themselves or others, it also can make it easier for other people to steal their personal belongings. Although gondolas could help with traffic and travel efficiency by having a steady stream of people going up and down all the time, I think there are more drawbacks than advantages.</p>

27108	Julie Williamson	As a local citizen and recreation user, I strongly oppose the gondola in LCC. The gondola construction and towers will highly disrupt the beauty of the canyon and the natural surroundings, climbing areas, animal habitats around it. The gondola is only made for skiers in the winter, which is only a small proportion of users of LCC year round. Many who recreate outside of the resorts and outside of peak ski season will be hurt by this decision. If the parking in the canyons will be closed, everyone who recreates outside of the resorts will not be able to enjoy the unique surroundings and peaceful solitude in nature LCC offers. Additionally, the gondola will not serve the exact purpose it is designed to serve: skiers at the 2 resorts. In peak hours, it will only get a small minority of skiers up the mountain while still creating bottlenecks at the canyon, and the large majority will still be left to drive up the canyon. Instead, I think the solution is expanding the bus system. I personally use the bus system to get up the canyons in the winter and carpool other times of year. Expanding the bus system will be far less costly to taxpayers, reduce the congestion at the mouth of the canyon by getting people TO the canyon as well as through it (which the gondola will only worsen), be more environmentally friendly if investments are made in E-buses, and increase inclusivity in the mountains. People of lower socioeconomic status and marginalized communities will be further limited from recreating in the mountains when bus services which many of them rely on are neglected and when a gondola only serves wealthy skiers at expensive resorts. I urge you to reconsider this solution and consider the whole Wasatch community when making this decision, not just the tourists and few pockets who will benefit.
27109	Alexander Pasmann	The Wasatch community is not in favor of the gondola alternative.
27110	Cabot Jennings	This is much too expensive to handle overflow traffic that only occurs on a few weekends during the winter. It also only benefits the two ski resorts and skiers. Other alternatives should be tried first.
27112	John Dee	NO GONDOLA. LCC is natural and wild and beautiful and not an amusement park. A gondola would be disgusting and so environmentally terrible. Not to mention it will not help transportation issue at all. No one benefits but the rich and greedy. Who don't care about the environment or our community.
27111	Jack Hindley	I would just like to add my voice to those of so many others who disagree with the proposal of a gondola up Little Cottonwood Canyon. This canyon means a lot to a lot of people. I personally have grown up skiing exclusively this canyon and use it all the time year round. The view of the canyon literally fills my heart with joy every time I see it. After serving a 2 year LDS mission, the first thing I did with my family was to drive up Little Cottonwood to Alta and just enjoy my favorite view in the world. I know there are many benefits to having a Gondola, but I know that for me, none of those will ever mean more than the current unobstructed view looking down the canyon. Waiting in a long line of cars at the end of the ski day is a small price to pay for such a pristine and beautiful canyon. Please try out the bus system, see how it works, and seriously consider not putting a gondola up the canyon. Thank you.
27113	Kjerstin Phillipps	Please please please do not put in the gondola. It will destroy the canyon. Just the sheer number of people it will put up there will have enormous impacts on our environment. A better solution is to limit the number of passes sold up little cottonwood instead. Please NO GONDOLA
27114	Michelle Dominik	No gondola
27115	Paul Benedict	Please do not build the Gondola. There are other alternatives. The people, overwhelmingly, do not want this. Thank you.
27116	Grace Kelly	On the topic of the plans to make a gondola for going to sky resorts I think the best thing to do would be to make the gondola system and having the parking be at the bottom. This would help the ski resorts manage the number of people coming in so they do not get over filled. Another benefit of a gondola taking people to a ski resort is it would decrease the number of car crashes on the windy roads. People have all sorts of crashes on those roads. This would be a safer solution to driving considering how many people get into crashes. This is not the only advantage to the gondola people will also be able to enjoy watching the scenery in a way that they wouldn't be able to while driving. a birds eye view would be a reason to ride the gondola itself people can kick back and enjoy the ride and not have to worry about crashing their car. Even though this has a lot of advantages people could overcharge for this service and it can be unusable because people don't want to pay for it. Although this could be easily fixed by putting a limit on what they can charge. The ski resorts could probably make additional money by renting out bill board. No one would be able to look at them while they are driving but when they are hanging out on their way back into town they will probably be hungry after a long day of skiing and the bill boards will put the idea in people's heads
27117	Anna Owen	Although funding will be difficult and expensive I think this will be worthwhile and even profitable. I think the long term goal should not just be the Gondolas. There could be multiple goals including the gondolas along with a larger parking lot at the bottom of the mountain, near the entrance to the gondolas, if the parking lot next to the gondolas is too difficult maybe include a bus to take people there. There are three main reasons that the gondolas are a wonderful idea including, it won't be as dangerous, it could be profitable, and it is fun and adds to the skiing experience. When people are driving up the canyon to the ski resort, it is super full and takes forever to get to the top. This creates a lot of crashes and emergencies, especially the it is snowing heavily. With gondolas, not only will these traffic jams be shortened a lot, but there will also be a more organized system of getting to the top of the mountain. Along with that, no matter the season, or if there is an emergency, the gondolas will work and will make it much easier to evacuate people if necessary. Next, these gondolas and/or busses could be profitable! Although there may be some pushback, adding a small fee for parking or taking the gondola will essentially help pay for it. As long as it doesn't become an excessive amount of money required, people should be able to work with it. Lastly, consider why people are going in the mountain, for a fun time with loved ones! Going on a gondola and looking at the beautiful mountain view could increase the overall experience.
27118	Deborah Johnson	The Gondola will not make less traffic. It will make more. The gondola, if installed, will become a tourist attraction and a reason to come to slc. Businesses will love this but our local skiers will not. The gondola is NOT the solution.

27119	Nick Lazechko	As a climber, I regularly travel to outdoor recreation destinations on vacation. A huge consideration is not only what boulders or climbs are available, but the ambiance of the setting. This gondola will undoubtedly reduce my, and my climbing friends' desire to visit Salt Lake city and little cottonwood, a place we have been wanting to go for years. The climbing industry is growing exponentially, and I am shocked that Salt Lake is willing to permanently damage one of its biggest, and most beautiful outdoor recreation activities by building this gondola. I will not travel to a climbing spot where I am constantly in eye shot of a massive gondola, and can't enjoy the peace and quiet of the scenery around me. I am also confident that many climbers feel the same, and will be so disappointed if the gondola or road widening plans come to fruition. In recent months Little Cottonwood has become one of the most talked about climbing destinations in the world due to exposure from athletes like Ross Fullerson and Nathaniel Coleman, and it is shocking that this department does not recognize the revenue they will be missing out on by implementing the decided upon measures. PLEASE rethink your decision. Look at the number of views on youtube and other social media mechanisms these athletes are getting when they climb at Cottonwood, and understand how much these pieces of content affect where climbers travel on their holidays.
27120	Kyle Kranz	NO GONDOLA. I do not agree with using tax payer money to build a gondola that benefits only two PRIVATE ski resorts while also ruining the natural beauty and skyline of LCC. I keep hearing about how the gondola will allow transportation to continue even during inclement weather. This is largely a falsehood as winter storms are often associated with high winds that would put the gondola on wind hold, mitigating one of the much touted benefits.
27121	Ben Verdejo	<p>With any choice made, there will be those of disagreement. I understand the gondola is currently viewed as best option. I am not very educated on the matter as to exactly what all of the options are. However I do not like the gondola option. would busses be more efficient at getting people through quicker?</p> <p>The use of busses means that transportation could be provided based upon the demand provided by the current time and season. Considering winter rush hour in little cottonwood is the peak busy time.</p> <p>Would provideing busses be cheaper?</p> <p>Would the gondola structures ruin the natural landscape and view in the canyon. A place that for so many is a get away from the city.</p> <p>Would the gondola ruin a lot of popular and frequently visited climbing locations?</p> <p>My opinion is no to the gondola.</p>
27122	Suzie Bagshaw	Please Please don't install a gondola. It will negatively impact and ruin the beautiful scenery of that canyon. Please find another option. I am strongly against a gondola!
27124	Andrew Villanueva	The gondola is a waste of funding and does significant damage to the canyon. The options provided were a false choice. UDOT's own phased implementation plan lays out the best option. The road through the canyon should be closed to private vehicles, with few exceptions. Users can instead use the fast, and reliable bus service without the need to expand roads or further impact the environment.
27123	Troy Gotfredson	I love the idea of the Gondola, I have been to other cities that have gondolas. The gondolas are not only a great transportation up canyons to resorts, but are a tourist attraction on there own, creating a unique view of the beauty of the canyons they are in. I look forward to the day I can enjoy the gondola ride up the canyon to Alta for wonderful hikes, and Snowbird for its great snowboarding!
27125	William Hunt	A gondola only benefits a few: the 2 ski resorts and tourist skiers. The huge amount of money should be used to address Utah's biggest problem: homelessness.
27126	Steven Nino	We don't want the gondola here, don't bring it.
27127	Marc Buterbaugh	As a owner at Snowbird and Solitude I support the Gondola B, UDOT is proposing.
27128	Luis Serrano Bellido	<p>Please, let's try to find new options to avoid building a gondola or widening the road. These two options are terrible and would create the biggest impact in Little Cottonwood Canyon. Let's hear what users in this canyon would like to have for their recreational activities, and not only focus in one sector, skiers. There are many more users in this area, climbers, hikers, mountain bikers...</p> <p>One option can be to manage canyon capacity during peak traffic periods. It would keep the canyon cleaner, less traffic would avoid air pollution, car accidents, and please consider not to build the gondola, it would ruin this fantastic place forever.</p>
27129	Gregory Gavin	<p>Hello,</p> <p>I am commenting against the construction of a gondola in Little Cottonwood Canyon. I do not want my tax dollars funding this project that I know so little about, and that is not scalable moving forward. The UDOT Plan submits that 2500 parking places are needed and that 21 gondola towers are to be installed. All while the canyon is still to be open to vehicle traffic. This dependence on motor vehicle traffic both to the gondola and up the canyon simultaneous to gondola operation will only increase local traffic issues in Cottonwood Heights and Sandy. Increased traffic combined with the needed construction of the gondola will severely degrade the viewshed in Little Cottonwood Canyon in addition to water quality in Little Cottonwood creek.</p> <p>UDOT needs to propose a scalable alternative for winter canyon traffic. One that will not adversely effect the beautiful landscape of Little Cottonwood Canyon like the gondola project will.</p> <p>Sincerely,</p> <p>Greg Gavin</p>
27131	Catherine Adams	I oppose the gondola. As a SLCo resident I do not want the tax expense to support Snowbird. WE need to be able to vote on this. I think it would fail a referendum

27130	Stacie Fleischer	I am strongly opposed the gondola being built. We need to preserve so much of this beautiful canyon and there are solutions with a much smaller impact for the land and environment that will cost less and provide long term, flexible solutions for the surrounding area. Please reconsider the gondola project and choose our planet over profit. Thank you
27132	Lisa Johnson	Please DON'T use gondola. The cost is too much and benefits only ski resorts. The environmental damage to canyon would be too great. It doesn't solve the transportation problem. It would be an ugly eye sore.
27134	Gavin Wesemann	Kinda cring not gonna lie
27133	Natalie Wilson	In theory it is a good idea, but I feel like there is going to be a lot more consequences. It will benefit the people who ski and snowboard, and other people who oftenly go up the canyon to use it. But a lot of people who use it who like to climb, and hike will be affected by this. You're taking the opourtunity away from the people who like the natural elements of it. And it will most likely lower the emissions from cars, but it will ruin the home of many animals living there. So I think there are better policies that can be put into place instead of building 22 giant structures. Thanks
27137	Xander Lyman	The gondola is a terrible idea, not only would it ruin the landscape it wouldn't save enough time going up and down the canyon to be beneficial. I suggest simply implementing a system limiting the amount of cars allowed up the canyon to limit traffic and issues from the crowds.
27136	Luke Goins	I am a huge fan of the gondola ? I hope it gets put up
27135	Carson Wood	I personally don't believe that the benefits of this movement exceed the consequences. There are more efficient, better environmentally conscious options. In addition, the unrestricted road access to the top of the gondola raises the question "Why bother?" Sure it gives people an option to use the provided transportation, but most would likely still drive.
27138	Kiersten Luther	this is a bad idea. a lot of people will lose climbing privileges and also lose homes on wasatch. This does not need to happen because either way people will still be taking cars up so it doesn't help the ecosystem. what this will end up doing is destroying the environment and things people love.
27140	Cadence Bingham	I think this is a waste of money and time. There are a lot of alternatives such as bus stops/shuttles that could take skiers to their destination. 22 towers would ruin the view of the canyon in my opinion. The process of building the gondola would also disrupt nature and increase the risk of avalanche so there would also need to be precautions for that.
27139	John Doe	I can personally see both sides so I will list a positive and negative. Positive being it will reduce congestion on the roads, negative being it will create a parking issue at the base of the canyon when the lots fill up.
27141	Connor Dunn	I don't agree with this as it interferes with the environment, habitats, and wildlife.
27142	Alec Achtziger	The gondola is a bad idea for several reasons. First, It states that the gondola will not meet air and water quality standards. The gondola will ruin the natural beauty of the canyon from the massive towers and drilling to support the towers. The gondola will raise taxes by quite a bit considering that the project will be 550 million dollars. Another reason that it is bad is it takes homes away from people that live on wasatch and will eventually create even more of a pollution problem with everyone trying to access the gondola due to the traffic and everyone idling their cars. It will also destroy citizens houses and force them to leave.
27143	Hannah Foreman	As a young taxpayer in utah I do not want to fund a \$550 million dollar gondola that will not only increase traffic to the canyons, but have a negative environmental impact on the canyon itself. Increased budding [busing], a designated bus lane, and avalanche sheds are a much more reasonable solution that I would happily support. It allows better access to the resorts, without completely changing the existing infrastructure of the canyon. The gondola serves as a tourist attraction and is a poor project to allocate utah taxpayer dollars to.
27144	Koko Strong	As someone who loves nature I wouldn't love if IES became a thing. Knowing that it would ruin my hiking and some peoples transportation. In my defense I don't think this is a smart idea.
27145	Aaron Hershgold	The fact that buses isn't the first option is not smart. The cost of buses instead of gondolas is \$200 million cheaper while also having a shorter transportation time. If gondolas are built, roads will be widened which leads to houses being taken down, forcing citizens to relocate against their will.
27146	Vincent Cook	Please hold off with these actions, for now. Seek a more logical way to go about this, as the current idea here still places safety at risk, and the aftermath may end up being worse when it is believed that this action will improve the situation. So until a solution that can meet the safety standards completely and hold them true while the action is progressing.. I am most against this. Once this is done, and provided it is safe and far more logical, you would in turn have more support to this idea.
27147	Melodie Balding	Putting in the gondola will ultimately only help with traffic congestion. There are so many more negative impacts that it will have on the environment and the people then there will be positive. People will be losing their houses, more pollution in the air and in our water, and will cause so much harm to the wildlife that is currently up there. When you go drive up the canyon, you go to see our beautiful canyons, no one wants to see and ugly tall medal stand with hundreds or tourists looking down at you. There are so many better and cheaper alternatives to the congestion problem!
27148	Claire Wright	I do not think the gondola is a good idea right now. Though it is better for the environment, it will destroy many important things and create new problems. It is a large cost for something that will not solve everything. The enhanced buses are better options because it is a lot less change to manage.
27149	Zachary Carroll	This idea is crazy. To put something up that will demolish world class boulders, as well as force the removal of trees, and also the obnoxious views of large lift towers for miles through the canyon would take everything that's so special about this canyon away.... To just reduce traffic for the winter months to only 2 ski resorts... I can't imagine looking down the canyon and seeing huge towers for something that may not be running because of wind or weather or mechanical issues.... This can not, and should not even be a thought, and the fact it's supported by the UDOT makes 0 sense at all. This should not even be a thought.

27151	Dima Kurdi	I believe that implimenting the alternative plan Gondola isn't the best solution for Little Cottonwood Canyon. Gondola seems to have a negative effect on the environment that may outweigh the positive effects. In short, the whole point of establishing an alternative plan is to save the canyon, and lower congestion, yet building the gondola will damage the canyon, as well as bring more visitors and tourists into, leading again to more damage. With such a large problem and the ability to spend \$550 million, I beleive there are other alternative plans that can be implimented to not only help the environment, but reduce congestion and visitors, yet still allow full access to the canyon.
27150	Rebecca Bytendorp	so when it comes down to the fact of the gondola. there going to be taking out nature in the canyon, and that its going to affect the wildlife there. In there fact that they put out , it states that it is not going to help the air quality and water quality. and that its going to create more sound and that they are going to make some people move from there house.
27152	Jillian Meyer	This comment is in regards to the Little Cottonwood Canyon Gondola B project. As someone who works in Little Cottonwood Canyon, I do not agree with the decision go forward with the gondola B construction. Not only will the gondola be impactful to tax payers of Utah, it will also be extremely inapctful to the Little Cottonwood environment, animals, and employees. The construction of the gondola is a destruction of the natural environment that skiiers, hikers, bikers love and enjoy. As an employee who takes a shuttle up the canyon everyday for work, I feel that the gondola will hve more adverse effects than positive ones.
27154	Hanna Blackwell	\$550 million dollars to put in a gondola that is used for 4 months out of the year is ethically wrong. If you were to put that money towards the public transportation that is already in place you could improve the buses to be electric, make them more comfortable, add more buses at a time, pay employees better, hire more bus drivers, provided them with benefits! And all this would be more effective and beneficial for the community and also cost A LOT cheaper. The only people who want the gondola in LLC put in place are those who are making money off it. Quit feeding the rich and this to your community and the people who live in the community. Citizens quality of life and happiness are a lot more important than a damn gondola.
27153	Truman Schenck	NO GONDOLA!!!!!!
27155	Bridgette Meinhold	I do not support the Gondola in LCC, which will benefit the ski resorts and no one else. Please listen to your constituents. <u>We want better bus service, and better parking.</u>
27156	Lynn Kirbby	I don't want my taxes used for the benefit of ski resorts in the canyon. They should pay most of the cost.
27157	Rachel Sweet	Dear UDOT, I fail to see how your recently released statement in support of the gondola does ANYTHING to alleviate the issues facing the canyon now and for the future. What it did do was 1) discredited 1000s of voices who wrote in opposition to the gondola 2) ignored realistic, less expensive solutions to the problem 3) proved once again UDOT can be bought with enough money and influence. I am wholeheartedly against the gondola on many grounds. 1) The water shed will be destroyed. 2) view sheds will be destroyed. 3) new noise levels to the canyon will be introduced, potentially disrupting the wildlife that lives in that area. 4) it's too expensive. 5) it's not a cost effective way to spend money for the valley. a few hundred thousand people will benefit for 2 corporations when we have many other real issues that would benefit from that same money and have a greater per person quality of life improvement index. 6) cost of maintenance is expensive, on and on. While I know it doesn't matter, but here is one more opposition vote to moving forward with the gondola. Find other solutions that incentivize what we are truly trying to do... cut down on the number of cars going up the road. Rachel Sweet
27158	Alessa Deollos	No to the Gondola! Save our cantons, save taxpayers money. There needs to be alternative solutions.
27160	Tyler Nelson	I do not support the gondola plan. Please do not move forward with it! The canyon is a special place and does not need more towers or development. This is not a good solution.
27159	Zach Terry	As a resident of 9400 south and wasatch for over 44 years, I can legitimately call this my home and my issue. I regularly hike and bike and play in both cottonwood canyons. I am saddened and frustrated that we are allowing politics and secondary gain and corruption control what the people want in this situation. A gondola is like putting lipstick on a pig. It doesn't work. The people have spoken. UDOT has clearly been payed off for its position on the matter and you are not part of the solution. Don't tax me and my friends and family for this pet project. Over 80% of those this gondola would impact have spoken and don't want it. Now do your civil duty and portray what the community wants, busing lanes and electric buses and NO gondola!!
27161	Jessica Hall	As an avid skier and lover of the cotton wood canyons and a native utahan for my entire life i strongly disapprove of the gondola in LLC. it will have a major environmental imapact and destroy the natural beauty of the canyon that people travel from all over the world to see. Please listen to the locals who love and use this canyon and use an alternative to manage the traffic going up the canyon.
27162	Michael Mitchell	Little Cottonwood Canyon welcomes around 2 million visitors year-round and it is increasing rapidly. There are various activities to do there and many people are getting more and more interested in what Little Cottonwood Canyon has to offer. This causes more than 7,000 vehicles clogging up the road ways and causing traffic. I think that having a gondola is better than a vehicle based transportation method. Gondolas could really help improve the environment by not using as much gas as cars. The vehicles that are going to and from Little Cotton Wood Canyon produce up to 70 tons of carbon. Buses just dump diesel exhaust everywhere they go, and cause major environmental problems. Gondolas would definitely be a effective way to move people around and not ruin the environment while doing it. And it could help ease traffic that vehicles cause. In a KSL article, it states that "a cabin that can hold up to 35 people." this holds holds a little less than the average bus, which holds around 40-50 passengers. There are tons of highways that are prone to avalanches and heavy snowfall. Many times avalanches and heavy snowfall have caused traffic delays. A gondola would allow the traffic to flow in all weather conditions, even if the highways are closed. Also, gondolas are way more durable and last way longer than buses and other vehicles. Gondolas last around 50 years and buses last 14. Gondolas are cost also effective. Although the initial cost of the gondolas may seem steep, they require little maintenance and less operation costs. Gondolas also increase tourism assets and economic opportunities.

27163	Steve Young	I am a resident of Cottonwood Heights and live just off of Wasatch Blvd.. I have lived here my entire life and I am bitterly disappointed that a gondola would be chosen to solve high traffic issues. I don't recall anybody complaining about a road up the canyon as destroying the experience of the most beautiful canyon I have ever seen. Expanding the road seems logical and adding electric busses seems to be the direction taken everywhere else that the same problem exists. I know that 60% of our population feels the same way and it would be refreshing if the will of the people was carried out.
27164	Connor Hill	We do not need a gondola. It's a waste of money and habitat and resources.
28153	Galen Schuck	NO Gondola in our canyon. We don't care how much money whoever is going to make off this project. It's not the solution. I say expansion of the road and Electric busses. Did anyone read the article on how the borrowed electric bus going up and down Little Cottonwood used almost no energy because of the Regenerative braking on the way down? It captures the kinetic energy from braking and converts it into the electrical power that charges the vehicle's high voltage battery. Galen Schuck Sandy, UT. Regenerative braking
27165	Benjamin Wood	Any transportation "solution" that fails to serve the trailheads, rock climbing destinations and other non-skiing activities in the canyons, year-round, is a failure of imagination. To spend hundreds of millions of dollars on a system that only serves one type of canyon user is wasteful and shortsighted.
27166	Elizabeth Enos	The traffic study needs to be repeated to validate the data- post Covid volume and regular days- not snow days. The high volume days can be accommodated at significantly lower costs through the use of electric buses. We should also utilize electric buses during the Summer months, providing access to the canyon trail heads. The expansion of Wasatch will permanently destroy the beauty of the foothills and prevent pedestrians and bikers from safely enjoying all that Wasatch blvd has to offer. The only proven method to reduce the accidents and injuries on Wasatch is to reduce the speed limit and enforce it! Even with the current speed limit, we see excessive speeds and three of my neighbors have had cars fly off the road into their yards! This is a neighborhood area that borders Wasatch and needs to be safe for the families who live here. Why do we not try electric buses and reduced speed limits first, before spending a huge amount of money. This stretch of road in the foothills and the canyons need to be preserved in a conservative manner that will allow people to safely enjoy both
27168	Leah Button	I oppose the gondola. It will not improve traffic and will only destroy nature, climbing spots, views, watersheds, and pollute even more as our electricity generated here in Utah is not renewable! Improving bus transportation or creating tolls are a few better solutions to solve this issue. Not a massive gondola that only benefits the pockets of ski resorts.
27167	John Hollerbach	I am totally opposed to the gondola, which is a boondoggle to the ski areas who boost ticket prices every year. It will mar the landscape, and will stick the taxpayer with a high-cost subsidy to the ski areas. I favor the electric bus option over existing roads. I don't see why that won't work. The deliberate disinformation campaign that electric buses won't have enough charge for multiple daily trips has been shown to be totally false.
27169	James Engle	30 cars/ hrs. X 35 ppl/car = 1050 ppl/hr. How is 1050 pp/hrs. going to alleviate the traffic problem???
27170	Tyler T	Considering the phased nature of the preferred alternative, I would like to see the performance outcomes of the initial phasing (i.e. bussing and tolling) before proceeding to full implementation, especially in light of the magnitude of other transportation issues across the region (i.e. what could such a large investment in infrastructure do to better serve the wider region, such as supporting non-motorized vehicle access to mountain transportation.
27172	Karen Riching	I am opposed to the Gondola proposal. The gondola will primarily serve Snowbird, Alta and the skiers, yet everyone - even those who do not ski - will have a part in funding the project. (the project will be partially funded by UDOT, which falls on the State and ultimately onto the taxpayers of the State of UT.) I propose that Little Cottonwood Canyon be treated similar to Zion National Park. Residents who live up the canyon and/or skiers who have lodging reservations up the canyon may enter with a valid date-specific pass. Valid ID and/or the date-specific pass would be shown at an unmanned entry gate located at the appropriate spot. Snowbird and Alta would then provide dedicated round-trip shuttles up from the base of Little Cottonwood Canyon. The cost of this could be borne with minimal increases in ticket prices. UDOT would continue to provide ski-bus services from outside the canyon as it has done in the past. The beauty and splendor of Zion National Park has been preserved with such a system and the same would apply to Little Cottonwood Canyon. Traffic would be so reduced that shuttles, ski buses and the occasional ski lodger could make the trip up the canyon quickly and easily, thereby reducing the horrendous traffic jams experienced in the past. The gate restrictions would be lifted outside the normal ski season, in conjunction with ski bus schedules, so that anyone wishing to visit the canyon during the summer months would have the option to drive up. Please consider this proposal and feel free to contact me with questions.
27171	Skyler Simmons	As someone who has worked at Snowbird for almost 11 years I firmly believe the gondola is not the correct answer to the traffic problems. Little Cottonwood is a place of beauty and solitude, the gondola would be a total eye sore for hikers, bikers, climbers, people driving the canyon etc. In every picture there will be gondola towers or a gondola itself, let alone the people who live in the canyon or at the mouth will now have a gondola cabin of 35 people souring over their backyards looking at them. I also believe that the gondola will create a brand new bottle neck before you even reach the canyon on wasatch blvd traffic will be horrendous on a powder day potentially worse than it already is. And i know your answer is to park at different park and rides to get a bus to the gondola, which in that case you drive to the bus stop, wait in line for the bus, the bus takes you to the gondola, you wait in line for the gondola, then finally get on the gondola and 36 minutes later get to alta. Seems to me that after all that noone will be getting to the mountain any quicker than before.
27173	R Magee	I vote no to the gondola. A huge waste of money. Busing up the canyon works.
27174	Ben Kaplan	No Gondola! Preserve the nature and keep little cottonwood beautiful for generations to come!

27175	Sherri Bohne	<p>Biggest waste of our tax dollars ever for 3 months out of the year that there are "traffic problems" up Little Cottonwood. Here is an idea...Use existing bus systems and limit the amount of people going up! You could make reservations. You could have people with the last name that starts with A-J on one day while the people with K-Z the next day. You could limit the number of vehicles by having a guard station set up (a lot less expense than a gondola) whereby you would only have 100 (or whatever is appropriate to not create too much traffic) cars a day go through, and once the quota is met, the guard station turns everyone else away, til the next day. You could also do priority parking for those vehicles that have 3 or more occupants in them. Little Cottonwood canyon is a treasure, let's not destroy it by putting in a money wasting, land destroying gondola.</p>
27176	Evan Anderson	<p>While there is a very real need to address the traffic pressure placed on LCC. Let it be known that the UDOT plan to endorse the gondola project is incredibly flawed and appears to be a project based on the desires of special interests not the actual individuals that will have to pay for it, We the People.</p> <p>What stops will the gondola serve? Just the ski resorts? Each and every point of interest that a person may want to visit?</p> <p>It would seem that closing the canyon to all traffic with a few exceptions ie: residents, deliveries, and guests with hotel accommodations while increasing bus service would have the biggest impact towards actually providing a significant improvement towards the sighted concerns. This requires rather minimal improvement to 210 in the form of additional bus stops where there is not already adequate space. Obviously this will require a parking area or series of areas that the gondola plan would include. However, due to the existing bus structure it would not be an unrealistic thing to spread these out to existing bus lines that service access to the canyon.</p> <p>If UDOT chooses to force this option onto the taxpayer it will be a clear sign that the special interests control the outcome and the taxpayer is simply here to be bilked not heard.</p>
27177	Braxton Vranes	<p>Please do not do the Gondola. It will cause permanent destruction to the fantastic view up and down the little cottonwood canyon. Little Cottonwood Canyon is one of the most picturesque glacier-carved canyons in the USA. To permanently add an ugly expensive Gondola would ruin this view for the sake of capitalism. It would just be added to the unfortunate list of natural landmarks destroyed by capitalism which includes Utah lake which was ruined Geneva. Please do not do the Gondola. Its a horrible idea.</p>
27178	James Morgan	<p>I, and the overwhelming majority of LCC frequent users, strongly oppose the installation of a gondola. This will cause irreparable harm and change the landscape forever. This decision feels As if special interests rule everything.</p>
27179	Brian Pugh	<p>Moving forward with a Gondola to solve the congestion problems in Little Cottonwood Canyon before trying common sense, lost cost, low impact solutions is irresponsible. Furthermore, it seems unlikely to actually solve the congestion problem.</p> <p>I live at the mouth of Little Cottonwood Canyon and I know from firsthand experience the challenges faced when the canyon is full. There have been times when I can't get to my home due to traffic. However, I don't think that implies that nearly a billion dollars should be spent and the canyon view forever altered.</p> <p>Last year, parking reservation systems were implemented at the resorts. That move alone significantly improved the situation. Did it solve all problems? No, but as a resident who has lived with the congestion problem for years I can confidently say last year was significantly better than previous years. More common sense solutions like this should be tried before spending at least half a billion dollars and altering the canyon forever.</p> <p>Examples of incremental solutions we can try include first and foremost a toll. The toll can be waived for those carpooling to both provide a low cost option for those with less financial means and encourage more carpooling. The toll can be increased on particularly busy days (holidays and weekends). Resorts could offer preferred parking for large carpools and rolling start and end times for lift tickets. These solutions would all cost a fraction of what the Gondola or road widening project would cost. Let's start there.</p> <p>Finally, even if I put to the side the enormous price tag and permanent damage to the canyon, I don't see any reason to believe the Gondola will solve the traffic problem. Having driven 30 minutes or more to get to the mouth of the canyon, will most individuals continue in their car for 15 more minutes to get to the resort, or will they take an extra 1 hour+ to park in a lot below the canyon, get out their gear, take a bus to the gondola station, pay for a gondola pass, get in the gondola and eventually get to the resort? I think the vast majority of people the vast majority of the time will just keep driving. Yes, there are days the canyon is totally clogged and people would use the Gondola. As soon as the canyon clears a little, people will keep driving. A Gondola may succeed in getting more people up the canyon, but not succeed in reducing the congestion problem on the road.</p> <p>A Gondola has an enormous price tag and cost to the canyon while providing only a very marginal benefit.</p>
27180	Karen Elliott	!

27181	Dustin Pellegrino	<p>First off, I appreciate all UDOT does and am pleased to see UDOT carefully considering the options in this project. LCC means a lot to a lot of people. Like many, moving here from the eastern half of the US, the first drive into LCC was life changing and ultimately led to me moving to Utah permanently. Seeing a glaciated canyon with such extreme features so close to a city center was mind blowing. It is something unique to the Salt Lake Valley and a reason so many of us have moved here as opposed to CO or other neighboring states. I think so many across the valley who utilize this canyon (and BCC) regularly could agree.</p> <p>With that being said, it is hard to fathom UDOT would prefer to move forward with a plan where the end result would be the building of such a large and obstructing feature to this canyon. I understand UDOT's responsibility is to fix the problem of traffic and congestion, but to the many people who utilize the entirety of this canyon and not just the two ski resorts at the top of it, this is not the best option. I am happy a phased approach is suggested but please try some of the more obvious and sensible options before committing to this enormous project. Adding additional transit hubs with way more parking would be a great start. Offer direct routes from other parking locations in Salt Lake, Sugar house, Sandy etc. so people have more incentive to utilize transit hubs that are not on wasatch Blvd. Quite frankly people will not utilize public transit until it is a better experience, and currently, it is not a good one.</p> <p>When it comes to the gondola it looks to be a very costly option that will only be fully utilized for part of the year. when the canyons are at their worst during an incoming storm how will it fare? Will it go on a wind hold and thousands of people will be forced into the lodges of the resorts to wait it out until it hopefully let's up? How will parking look at the loading station? That area is clearly limited by The surrounding neighborhod. Will wasatch Blvd remain lined with cars? And limited parking still leave people wanting to drive up canyon instead of utilizing the gondola.</p> <p>Obviously UDOT has a very difficult job here. I don't think any option is going to fully alleviate the issue at hand, but please try less obtrusive options before going to such extremes. Phased approach is great but let's put the gondola on the back burner until we see the outcomes of those different phases.</p>
27182	Kevin Holmes	<p>If each car takes 36 minutes to make the one way trip, that's 72 minutes round trip. Add in a conservative 10 minutes of loading/unloading time, that's 82 minutes per round trip. That means each car is able to make approximately 0.73 trips per hour. If there are 35 people per car, multiplied by 0.73 trips per hour, each car can carry approximately 25.6 people per hour. To move the claimed 3,400 people per hour would thus take 132.8 cars, or 66.4 cars on each side of the line. That equates, on an 8-mile line, to one car every 636.1 feet. Travelling at 1173 feet per min (8 mile trip in 36 minutes - 8 miles x 5,280 ft per mile = 42,240 feet \div 36 minutes = 1173 feet per minute), that means each car would need to be 0.54 minutes, or 32.5 seconds, apart. The claimed one car every two minutes equates to one car every 2346.7 feet, or 3.7 times the distance between cars that would be necessary to carry the claimed 3,400 people per hour.</p> <p>I'm no mathematician, but the basic math does not seem to add up. Also, the need to have some 66.4 cars on each side of the line to meet their reported capacity of 3,400 people per hour, would seem to require an incredible feat of engineering. Each car will have 35 people in it, and if you VERY conservatively estimate 200 pounds per person with gear, that's 7,000 pounds of people and gear per car. Add in the weight of the gondola car itself, and you are well over 20,000 pounds, if not 30,000. So, 20,000 pounds per car, with one car every 636.1 feet = 166,011 pounds of car/people/gear per mile of line at a minimum. I'm not an engineer either, but that seems to be an impossible goal.</p> <p>Additionally, as we all know, these two resorts draw people from around the world. Is this gondola plan going to negatively affect the plans of some (? many) of those folks, particularly those of means, when they look at any of the other world class resorts available in Utah and neighboring states? Perhaps not, but it is a consideration given how much of the Utah economy is based on tourism.</p> <p>I welcome any corrections to my math, as the numbers are all estimates based on the data provided by the project planners. My point is that data does not appear to line up with the reality of what would be necessary to move the claimed 3,400 people per hour. If the basic math doesn't line up, how can we trust the rest of the numbers, e.g. the cost to build the project?</p>
27184	Michele Tagger	<p>I am outraged by this decision to erect a gondola in Little Cottonwood Canyon. LLC is one of the most beautiful canyons in Utah. I do not want my tax dollars to support this eyesore that would only profit Alta and Snowbird resorts. I am a skier, and I agree traffic is an issue, but this is a short sided solution. It would make more sense to buy electric buses that could have multiple pickup and drop off stations scattered throughout the valley. And this irreversible plan could be moot if we don't get control of our shrinking GSL which brings in all that "greatest snow on earth"! If I was a homeowner in LLC, I'd go ballistic. The noise, the obstruction of views, the disruption to life during the development will be intolerable. Please, reconsider6 this plan which seems to be a result of corrupt lobbying by developers and resorts.</p> <p>Sincerely, Michele Tagger SLC</p>
27183	Cleve Bohne	<p>Being a general contractor, I can understand the devastating environmental effects of construction on land. Our canyons are our crown jewels and it is our responsibility to keep them pristine. We need to look at limiting traffic up the canyon, not expanding it. Do what is done up Millcreek Canyon and charge a fee. Limit the amount of vehicles like they do at National and State Parks. Building a gondola system is a waste of money and destroys the environment.</p>

Comments on Little Cottonwood Canyon Final EIS

28152	Don Stepan	Comment: UDOT made the correct decision to decide to build a Gondola up Little Cottonwood Canyon. It's the only choice that will fix the traffic problem. It is environmentally sound, and will be a great addition to the SLC Valley and it's residents. I'm ashamed at the Sandy City Mayor, Salt Lake County Mayor, and news media that speak so negatively about this decision by UDOT. Please interview those persons who are in favor of this project instead of just those who are against this project.
27185	Sadie Jensen	This new and "innovative" idea is essentially not innovative at all. To begin, I understand that the Gondola could potentially reduce some carbon emissions going into the air and the skiers would have an easier route to the resort. Although these outcomes are somewhat beneficial, the cons outweigh the pros by a landslide. From an environmental perspective, and even your very own environmental impact statement, the visual change is significant, both the air and water quality would not be improved at all and the effects of tourism will displace individuals indefinitely. Installing the Gondals will disturb the natural habitats of the animals we love and it will also create an ugly mark on the canyons that Utahns love. After the Gondola is installed, tourists will flock to Utah. On top of that, housing costs are skyrocketing, and having a hoard of tourists traveling because of the Gondola will increase the number of Airbnbs. Gentrification will ensue if the Airbnb numbers rise and this is dangerous because it is discriminatory toward the minority class. The whole project is extremely costly might I add, instead of shelling out this money for the benefit of the ski resorts we need to funnel it into alternative ways to reduce pollution in our canyons. I am angry that this decision was made for the benefit of ski resorts when even skiers appreciate the beauty of our NATURAL and not industrial canyons. Take us seriously
27186	Jacob Parkin	Please reconsider. We live in a country that relies on the comments, opinions, and ideas of the public. Not just one department, organization, etc. It seems as though this decision was made without any of that in mind.
27187	Mark Okino	<p>UDOT Gondola B Alternative</p> <p>For those residents who live near the mouth of the canyon and will be directly impacted by this decision, what considerations are being addressed to mitigate the vehicular bottlenecks that will be created at the mouth of the canyon? When I built my home 15 years ago, I was given a "Canyon Resident Pass". The pass was issued by the Salt Lake Sheriff's Office and was an attempt to allow local residents to get thru avalanche road closures so we could get back to our homes. The attempt failed due to the inability to even get to the closures due to vehicular grid lock. While a good gesture, the Canyon Pass didn't meet the needs of the local residents and community.</p> <p>As an Engineer with some experience in Queueing Theory and Theory of Constraints. You take the vehicles that are waiting in line on the canyon road and dump a percentage of them at the mouth of the canyon and now you've added to the current bottleneck. As it is, I can't get back to my home for hours once I leave. I will say, not having seen your model, that if you can keep the additional cars you've added to the mouth of the canyon moving, your bottle neck might not be as impactful. I see the local residents, who live near the mouth of the canyon as being impacted the most by this decision.</p> <p>What plans are in place to mitigate the ability for local residents to get back to their homes? Heaven forbid that EMS needs quick access to a local resident in need of Cardiac Care. Unless your model includes a plan to improve the grid lock, such as a paralleling road for local residence only, I only see the Gondola B alternative as adding to our current problem. Maybe the bike lane can double as the residence only lane to allow locals to get back to their homes.</p> <p>On another note, why would you add a toll for those who elect to not use the Gondola? I purchase a Snowbird pass every year and ski solo on most days. Adding a toll for local residents who already pay state taxes is a slap in the face!</p> <p>Having used the canyon since 1968 and patrolled for 15 years at one of the local resorts, our mountains don't have unlimited capacity. The skiing experience will never be what it once was, and your Queueing Model needs to include the ski resort capacity. Realize that a simulation model is just an educated approximation of what you think is going to happen.</p> <p>Funding's a whole other issue!</p> <p>Concerned Resident</p>
27188	Tanner Miller	This is the last thing we want don't do it. No gondola please.
27189	Peter Madsen	Please, NO gondola. Encourage and incentivize carpooling and innovate with shuttles not buses.
27190	Adam Skaggs	I use the canyon pretty extensively. probably 10 times a year. I have never seen a need for more efficient travel up canyon. Never been in traffic. The problem is seasonal and needs a seasonal solution. No gondola. No road expansion. Force bus use in other ways and increase busses
27192	Thomas Jameson	The rest of the plan is great, but installing a gondola would follow an outdated belief system regard our world as something to be taken advantage of. When we as humans are only guests on this planet it would be incredibly irresponsible to further disrupt lcc
27191	Mary Gibson	I strongly oppose using our tax money to build a gondola in Little Cottonwood Canyon to benefit two private businesses. There are many less expensive and less disruptive options for improving transportation in this canyon.
27193	Aimee Mcvey	The proposed gondola heavily burdens the taxpayers of Utah with most benefit going to tourists and select ski resorts. What about the climbers, hikers, runners, and Backcountry skiers who want to use the canyon? How does this gondola relieve that traffic? Would a gondola not just move traffic from the canyon out to neighborhood roads that would then need to be avoided by locals? The gondola does not seem to have nearly enough capacity to limit traffic in the canyons. Why build something that won't fix the traffic problem? How about the eyesore? The boulders and climbs this gondola will destroy? The animals it will drive out? The gondola simply does not make any sense for the traffic issue and will definitively not solve the problem at the enormous cost to Utah citizens.
27194	Elinor Brunner	The people of Utah do not want this gondola. It will not serve us. In fact, the impacts it will have on our public transportation system will actively worsen our quality of life. I understand that as politicians and legislators you rarely actually care about the will of the people, but please for once make the right decision for your constituents and stop the foolish and shortsighted gondola project.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28151	Jody Vorwald	The ski resorts need to pay for the gondola. The taxpayers should not be on the hook for something that only benefits resorts. Expanded bus service would be better. Build a parking lot in the valley. And expand bus service. The ski resorts should pay for the gondola. The taxpayers should not have to pay for something that only benefits the resorts. Expand bus service and build a parking lot in the valley.
27195	Jerry Neves	The Tram is being promoted as an answer to poor weather days in the canyon. However, I have been skiing at Snowbird several times when lightning or wind have closed the lifts. I doubt the tram would be immune to such events, stranding plenty of people at the top of the canyon without their cars. I experienced just such an event when I rode the tram in Breckenridge, Colorado. I ended up taking a bus to get back down.
27196	Robert Hathaway	Thank you for planning to minimize vehicle traffic in the canyons!
27197	Aaron Redd	A gondola in Little Cottonwood Canyon would be harmful to many of the places we love and visit within the canyon. As a climber, this project would ruin a lot of crags.
27198	Becky Stone	No gondola. Use the funds to actually help both canyons...
27199	Rebecca Kitchen	The gondola is too costly. Let's go with the ideas to limit traffic but eliminate the Gondola. The Gondola will scar the beauty of the canyon and we can't afford it.
27200	Billy Treacy	No gondola please. Won't work on the days it's supposed to and not needed on 340 days per year
27202	Kennard Machol	appalled at the decision to put in the gondola to serve only the resorts (and their wealthy clients) rather than road and bus improvement that would serve all canyon users. And having snowbird sneakily purchase the land for the base of the gondola stinks
27201	Julie Bauer	On the handful of days that traffic is really bad it is backed up all the way to the hwy. do you honestly expect someone to wait in their car for an hour in traffic just to get to the mouth of the canyon then unload and get in a 55 min tram? Of course not. At that point they are almost there and will stay in their car for the duration of the drive. It's as if you people have never actually been there when the traffic gets bad.
27203	Michael Turvey	I'm against the gondola idea. Too expensive and intrusive to the environment.
27204	Emma Mcconkie	DO NOT PUT IT!!!!
27205	Carly Dobitz	Please don't ruin our canyons with a gondola. It'll take away the beauty of the canyon. Keep it natural not industrial. There are always alternatives to make this work. Ski lifts go down all the time which means the gondola will require maintenance causing people to be stranded. Do not ruin our canyons!
27206	Kylee Sechler	This is a lazy negligent made decision. Not even giving an increase for busses or added bus times a chance/test drive, and immediately resulting to an outlandishly expensive and environmentally destructive decision blatantly shows lack of respect to the community. I have yet to meet someone in favor of the gondola. The voice against this idea is much louder than those desiring for this unnecessary solution.
27207	Daniel Clark	UDOT asked us for our comments prior, and still want the most expensive option. They didn't listen to the majority voice, nor did they choose the option that is the least expensive, or least intensive on the canyon. WE DO NOT WANT A GONDOLA. WE DO NOT WANT TO PAY FOR THE GONDOLA. NO GONDOLA UP Little Cottonwood Canyon Please!!!
27208	Henry Hoffert	No gondola
27209	Stephen Skarvinko	How about nope. I can't even bring my dog into LCC for a hike due to the risk of releasing potentially infectious biological materials into the watershed (that can be disinfected with standard treatment methods to meet acceptable drinking water standards) and y'all are seriously considering disturbing uncharacterized CERCLA mining sites that could potentially leech toxic heavy metals into dwindling drinking water supplies (e.g. Lead?!). At a time when the great salt lake is shrinking and also expected to release toxic dusts into our air in the near future and we are in a historic drought? Not to mention taking over the long-term liability and unknown costs of remediation? All of that risk just to appease weekend visitors who are simply too lazy to get up early enough to beat traffic? How about the irreversible impact to excellent world class climbing areas? Why do our privileged skiers and local wealthy community property holders at the base of LLC get prioritized? How about we take that 500+ million dollars and spend it on education or other infrastructure projects (e.g. water conservation, subsidizing and beefing up weekday public transport, adding a EPA air monitoring station in west valley, etc.) to reduce the current risks associated with the impending drought and air quality issues that are well known to plague our valley from weekday commuting into SLC? It is simply disgusting to leave the clean air up at the top of LCC and having to drive back down into the fog/smog after a day of skiing. During the pandemic, you could see how much the air quality improved when locals had simply not been commuting back and forth to work... my \$0.02 is to take that \$ and incentivize residents to convert their homes to solar, purchase electric/PHEV's vehicles, or invest in more public transport in the valley where most residents are commuting during the week vs. weekend travel in only 1 of our canyons where seasonal skiing occurs.
27211	Janie Wilson	Strongly oppose the gondola choice. I live in Cottonwood Heights and we are impacted by the traffic for sure. Would hate to see the views of the most beautiful canyon in Utah ruined by gondola towers. It's more expensive than buses and the analogy of having transportation to a Jazz game is severely flawed. Buses /light rail downtown serve buses hundreds of sites, not two! We can do better than 600 million to get to 2 ski resorts.
27210	Bin Lin	I personal prefer to use existing infrastructure and least intrusive to the canyon. Using electric buses on the existing road, charging fees of using the canyon
27212	Craig Snow	A gondolas paid for buy taxpayer money is CRAP Why is the public on the hook to help private businesses. Let them buy it. They will be the benefactors!!!
27213	Grady Crawford	Alta and Snowbird should be paying for this if there are only two stops, not Udot. Also a subway would be the best of both worlds here, it's unaffected by weather, including wind and ice (unlike the gondola) and it'll have no effect on the environment or the views of the valley.
27214	Daniel Monda	Our beautiful canyon does not deserve to be disgraced by a giant carnival ride. Please have some respect for all that is descent in this world don't build the gondola.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27215	Ellie Ienatsch	The citizens of greater Salt Lake City do NOT favor a gondola. The ski resorts are, of course, tickled to death that the taxpayers will give them a free ticket to tremendous success. A gondola benefits a narrow population of citizens. It is not fair to ask the general public to foot this bill. The 22 towers and huge cables would overwhelm the beauty of Little Cottonwood Canyon. A phased program could be implemented that would solve the serious traffic problem. Install a fleet of e-busses to arrive every 5 minutes, no widening of the canyon road. Establish parking areas outside the canyon with shuttles to the bus terminal. Establish a graduated toll on all personal vehicles - least amount on vehicles that are full, greatest amount on single-occupancy vehicle. Rivers have a reservation system in many areas. This could be established by the ski resorts also. Reserve the day(s) you want to ski next season. When parking, lift, run availability reaches capacity, close applications for that day.
27216	Jolena Hagen	I would prefer to see reservations/toll/increased incentive for carpooling/bussing vs construction of gondola. Alta reservation system worked great last year that there was less panic to go up right away knowing you didn't have a reservation. I think it is the most beneficial and fair. The E side bench can't support a massive amount of traffic to the gondola - the traffic to the canyon would just be the traffic to the gondola and not anymore beneficial. There is not retail space to add and make it a "village" to support this area either. Please consider incentivizing those who do bus and carpool and consider a reservation system on busy weekends.
27217	Cj Heaney	Hello, I believe something needs to be done about the overcrowding of LCC. However, I do not believe that the gondola is the answer. There are many other less environmentally impactful solutions than having gondola towers lining the entire canyon. I think there are many lessons to be taken from national parks and their shuttle systems and tolling. Please exhaust all existing solutions before putting an irreversible mark on the canyon.
27218	Isaiah Archuleta	This is another example of governmental greed. I have to pay a fee to climb a public peak this is disgusting.
27220	Megan Mcjames	Why not try making highway 220 a toll road first? It would be low impact to the environment, tires could be easily checked and unsafe vehicles turned around and a fee would incentivize carpooling. If this solution doesn't work you can always go further but why start with a gondola. No gondola in our canyon!
27219	Chelsea Fuelling	NO ONE WANTS THE GONDOLA. You would NOT put a gondola in Yosemite why put it in our little cottonwood canyon which is our little Yosemite. Before our tax dollars pay for this gift of a gondola for the ski resorts, we should at least try having a toll for the canyon. Also with tolls, locals should get a discounted version of the pass. This is our backyard. last year I felt reserved passes for parking spots helped and limited the amount of traffic. There are no benefits to having the gondola that are worth it. It will attract more attention. Don't ruin our mountains!
27221	Emma Shinsky	Please do not move forward with this gondola. This will destroy our beautiful canyon and cost way more money than it is worth. This is not an amusement park. This is not in favor of the public or Salt Lake City.
27222	Peter Magrath	I do not support ruining a pristine canyon with a gondola. More busses, more parking at bus stations, and a bus only lane on LCC would be a much better option.
27223	Justin Whittaker	Please. NO gondola. What a dumb idea and an eyesore too.
27225	Tish Buroker	The gondola is a terrific solution. Having traveled in Europe I have seen how non-invasive a gondola can be. Expanding the road would be much more invasive to plants, wildlife and the community. Yes to the gondola!
27226	Max Jones	Nobody wants a gondola! The mayor of Alta included! Listen to the people!
27224	Sophie Stewart	A gondola is not the solution to the transportation issues of little cottonwood canyon. It would massively impact the beauty of our mountains and I do not believe that it is a solution that will solve all the issues at hand. We take pride in our mountains, and placing ugly poles with large gondolas hanging in the way will ruin something we and so many others hold so sacred. A gondola is not the answer, we must do better for the place we call home and for ourselves.
27227	Zach Hall	Hundreds of rock climbing routes will be annihilated with this giant thing of machinery. Thanks for making me pay for something that will literally destroy one of my passions and hobbies. The only thing this gondola serves are the rich, whiney and spoiled percent of Utah who don't have hobbies. This is the absolute worst option. Can't wait to hate this radically conservative and out of date state build the biggest eye sore they could possibly do. Nice work ya virgins
27228	Kailey Wilson	I do not consent to the gondola! Earth over Profit.
27229	Lauren Mcmillan	I remember when UDOT had a contaminant spill of some sort from the I-80 construction work (I think it was sometime in 2021) that went into the water at Tanner Park. Luckily that water isn't drinking water. I'd be concerned about any spill potential in LCC from gondola construction.
27230	Tori B	The decision to add this gondola in LCC is a sad excuse for a solution. Tolling, ride share incentives, limiting number of cars allowed in the canyon, distributing passes on a daily busses for a number of cars allowed to enter the canyon at a given time, cranking up bus numbers all of which can help are much less expensive, environmentally taxing, and disruptive to the local people around LCC. It is unfortunate that you have allowed these outside companies to come in and flash some pretty numbers and ruin the way of life that has existed for so long in this area. This place will turn into the next park city and housing prices with sore and the locals will no longer afford to live here. Please reconsider the gondola and think about the community that has existed here for for years and years and not the outside people who have come in out of nowhere with showy money to woo you.
27231	Brad Sargent	The gondola should stop at multiple locations to serve more than two private businesses, otherwise it's obviously nothing more than corporate welfare from the taxpayers.
27232	Troy Coody	Find another option. The cost of a gondola, fiscally, environmentally, and as a whole to the canyon watershed is awful.
27233	Evan Bartilson	1. Spending \$550 million to remove 30% of the cars for two ski resorts for 100 days of the year does not seem to be the best way to spend this money. Can you justify this use of funds for this small benefit? 2. @30% of cars removed from the road, there are ~1000 gondola riders per day (2011 data) to pay only for O+M it will cost \$44 to ride the gondola. To amortize the \$550M in capital costs over 25 years, the ticket price should be \$182. What do you factor for ticket price? Will summer riders be charged differently? 3. There have been reports of Snowbird officials having purchased real estate that has been slated to be sold to the gondola production company. Can you please provide a conflict of interest investigation between the Gondola company and the ski resorts?

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27235	Glenn Jensen	<p>Little Cottonwood Canyon Snow Season is about November 15 through March 15. During this time the canyon road should be restricted to UTA busses and Alta residents only.</p> <p>UTA shuttle busses also operate from Old Mill Golf Course Parking lot and new Big Cottonwood parking lot on North West corner of canyon mouth. Access both from I-215.</p> <p>UDOT-build snow sheds/slide areas budge 2023 and construct</p> <p>Same system can be used for Solitude and Brighton resorts in Big Cottonwood when and if deemed necessary.</p> <p>Start Alta system this year, this season it is only 4 MONTHS PER YEAR! Don't wait 3 years to decide save millions!</p> <p>Glenn M. Jensen</p>
27234	Alex Larson	I am not in favor of this proposal in it's current form - specifically the addition of the gondola. It's addition will impact ways in which the canyon is enjoyed in it's current state, particularly for rock climbers that have enjoyed the area for decades, to the singular benefit of those that use the canyon for skiing. This is not an equitable proposal and other measures such as traffic reduction, tolls, and bussing should be explore to their fullest before resorting to changing the topography of the canyon.
27236	David Montgomery	I love the gondola and I think it will be a big plus for all skiers, and summer tourists and the environment. It will remove a ton of polluting traffic-jammed vehicles from the canyon. Let's get it done!
27237	Dr. Michael Brunson	I am totally against this project for the many negative environmental impacts. Additionally, as air pollution continues to worsen, literally KILLING UTAH CITIZENS, the UDOT should be working with UTA to improve our MASS TRANSIT, which is a total [REDACTED] joke! Invest those millions of dollars into more public transportation. That's what we need, not some cute [REDACTED] sky tram for richer folks with a higher SES! Thanks. Dr. Michael Brunson
27238	Lorenz Cushman	I personally believe this decision (Gondola phase B) is not the decision that will benefit the most amount of people. This is only a solution for 2 out of the 4 ski resorts and doesn't consider the large amount of people who recreate for reasons other than ski tourism. This is an enormous amount of money to be putting into a environmentally damaging and aesthetically displeasing gondola. Please think about what the people want not about what the corporations want.
27239	Martha Johnston	We don't need a gondola. We just need mandatory car pooling 3+. To a car and all Traffic problems will be resolved. Please stop this nonsense and wasteful spending and time
27240	Ian Bonnes	a gondola is not the answer. no one but the ski resorts benefit from the gondolas and it uses tax payer money. total ludicrous
27241	Maddi Frissora	No!
27242	Mitch Frankel	What an absolutely joke - No taxpayer wants to fund a lift that only goes to 2 private resorts. If they want a gondola, they can pay for it. Buidling a gondola just moves the traffic down canyon where there is no infrastructure to handle it. And the traffic issues in BCC are so much worse than LCC the past few years. Limited parking, tolling, and enforcement below the canyons mitigates all the issues. Buses, snowsheds, limited parking, tolling, all will do what is needed without building a stupid lift for greedy resorts. NO TO THE GONDOLA. NEVER. NEVER. NEVER will I pay for that stupid thing.
27243	Kristina Schmidt	I am completely against a gondola in our beautiful canyon. Public monies to benefit snowbird and Alta are an inappropriate use of those funds.
28139	Luke Moeller	Hello, Do not build the gondola. Expand busses and a potential toll system. Do not build the gondola and ruin the natural beauty of little cottonwood canyon.
27244	Kyla White	The gondola is the worst option for Little Cottonwood Canyon. NO GONDOLA.
27245	Allison Hardy	<p>No Gondola support here. I'm a resident of Hidden Valley.</p> <p>Encourage people to use the bus system by limiting the amount of cars per day. The buses are clean, nice and convenient. I take them to ski.</p> <p>If you have a cap, this will encourage riding.</p> <p>You should also include an incentive to ride. Example: discount on ski pass or free parking pass if you ride the bus.</p> <p>You should collect a parking fee to pay for 'clean fuel' buses and drivers.</p>
27246	Jesse Harness	Too many times in American history we have ruined a landscape due to capitalism. This is no different. A gondola in LCC would be devastating to so many people including myself.
27247	Charlie Dehner	NO GONDOLA. Stop ignoring the public. Y'all are beyond shady.

27248	Christopher Biltoft	<p>If the Gondola B alternative "best meets the project purpose and need," then the project purpose and need require reexamination. On what basis is it supposed to provide the "highest travel reliability?" If safety, mobility, and reliability are issues on S.R. 210, then traffic engineers should concentrate on addressing those issues. The gondola is just an expensive waste of time and resources. Please consider the following:</p> <ol style="list-style-type: none"> 1. The gondola will take years and much more funding than fixing the road and expanding parking alternatives; 2. The gondola lets people off only at Snowbird and Alta, while expanding parking alternatives and fixing the road would make trailheads along the entire Canyon available; 3. Few people want to cram into a crowded gondola for a 1-hour ride; 4. No one wants to be stranded in a gondola during high wind events that happen frequently in the Canyons; 5. It is likely that Canyon use will change over time, and the gondola alternative will likely become a "white elephant" soon after it is built. <p>If large amounts of public funds are to be spent on transportation alternatives in the Cottonwood Canyons, those funds should be used to enhance accessibility, watershed protection, and sustainability, not just serving the desires of the wealthy few to more conveniently access ski resorts.</p>
27249	Kathy Van Dame	<ol style="list-style-type: none"> 1. The Gondola will serve only the ski areas. 2. Riders to Alta must change cars at Snowbird. 3. While the gondola system is poorly suited to the transportation needs of all-season users in Little Cottonwood Canyon, it will be a windfall for the current owners of the La Callie Property & Snowbird.
27250	Heather Howard	No gondola
27251	Ken Rockwell	I'm highly skeptical about the use the gondola will receive. If it isn't as cheap as the bus, most people will not use it, and if they find it quicker to drive, they will take their chances on parking. Great expense plus little use means wasted taxpayer money. Better to see how the planned interim measures work, as well as parking reservation system.
27252	Rachael Warner	A gondola up Little Cottonwood Canyon will not solve the transportation issues, nor is it a friendly presence in the unique and beautiful landscape of the Wasatch. In addition to the inordinate cost of construction, it is monopolizing access to public lands. Additionally, it only benefits the ski resorts and does not support backcountry skiers, hikers, rock climbers, or other recreationists. It is clearly a fad, poorly thought out "solution" that will forever scar the Wasatch. We need practical, common sense solutions such as road tolls, free parking reservations, enhanced busing, and stricter 4WD checks in the winter season. Given that the gondola will not operate in the summer months, it is clearly just a marketing tool for Utah's ski industry, which, if weather patterns continue in the same direction, won't even exist in 20 years. The Wasatch deserves better. NO GONDOLA.
27253	Erik Gibboney	You can't build this gondola without destroying the environment in LCC. Please observe that there are much cheaper and better ways to reduce traffic! Over 80% of Utahns vote against the gondola. I don't want LCC to be polluted by huge towers and construction.
27255	Sharlene Nielson	Love the gondola
27254	Cortney Nebeker	Please do not put this in our canyon. Please don't sacrifice the natural integrity of its beauty.
27256	Nathan Lyon	<p>The decision to support the gondola is pennywise but pound foolish. While the gondola may be fiscally more advantageous over time, this option only services two areas of the canyon, turning a blind-eye to a large segment of the population who want to use different portions of the canyon. What about us? Do we not matter? Under the gondola plan, the amount of people who will be restricted and impeded in their ability access the outdoors in unacceptably high.</p> <p>The cost to ride the gondola will also be prohibitive for far too many, creating yet another barrier to entry except for the wealthy. How can these outcomes be consistent with Utah's policies to promote tourism and access to the outdoors? This is a one-sided solution. It's offensive that taxpayers will subsidize a plan that only benefits the private entity ski resorts. And aesthetically, it's going to ruin the canyon.</p> <p>The public deserves better when it is a publicly funded project. Please listen to the public on how we want our public lands to be used.</p>
27257	Maija Nisbet	I fully support the gondola and would love to see this happen. It seems that it would be the safest and the greenest option to help traffic in llc. You have my full support.
27258	Elisabeth Hatch	I cannot tell you how appalled I am by the proposed gondola. You're going to push more traffic into the foothills, you're going to blast our picturesque canyon to pieces, and you'll contaminate our watershed while you do it. I do not want my tax dollars being spent on this abomination. Don't build the gondola.
27260	Dennis Welch	I oppose the Gondola construction for a number of reasons. First, it is planned to stop at the ski resorts, clearly benefiting private corporations at large public expense. Second, it does not address the transportation needs of a wide range of canyon users. Everyone from hikers, picnickers, cyclists and sightseers may have other destinations in the canyon. Third, the ski season is only shortening and our State's resources should not be used for the primary benefit of one recreational activity. Our canyon deserves protection for overuse, especially our watershed. I favor electric busing, which can be applied incrementally as the need provides. Also, limiting access will be necessary at times so we don't love our Canyon to death.
27259	Nicole Land	No to gondola!
27261	Neil Rosenberg	<p>I oppose the gondola: any gain in reliability serves only a portion of canyon users yet destroys the visual and physical experience for all. What is the justification for this value choice? It does not seem to reflect the community's values nor be a wise choice. Even according to the EIS numerical estimates, enhanced bus service would provide faster mobility for the same number of users, with nearly the same reduction in traffic backups, and at a much lower cost.</p> <p>Even by EIS estimates, the cost is much higher than an enhanced bus solution while providing slower travel times</p>
27262	Daniel Herbert-voss	Since the ski resorts are the largest beneficiary of this gondola, let them pay for it. No public money should be used that truly benefits only a limited part of the public. I think it is a bad idea to use public money for what in effect is "private" infrastructure (the Real Salt Lake stadium comes to mind).

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27263	Emi Wickens	Please do NOT build the gondola. Early on in American history President Teddy Roosevelt created a system of national parks to protect wildlife and public lands. While the Wasatch range is not a national park, it is a state park, and the park and it's wildlife deserve our protection. Building a man made gondola would disrupt the natural wildlife and cause irreparable damage. This gondola is being built out of greed to attract tourists to utah. This attraction would only cause MORE traffic in salt lake and around the wasatch. PLEASE hear the public of salt lake. We all cherish Little Cottonwood and are screaming to you: DO NOT BUILD A GONDOLA.
27264	Kyle Price	I can't believe that a gondola is a viable option. This is so sad. The canyon will be forever negatively impacted by this. I grew up near the mouth of this canyon. I can't believe that this is honestly a good option. Who is really benefiting from this? Please reconsider.
27265	Jim Walker	this is bunch off crap if skyers and businesses in little cotton wood canyon thats fine but not for the state of tax payers to foot the bill!!!!
27266	Paulette Platt	A gondola will take longer to travel up the canyon, won't move very many people, costs a massive amount of money and will really only be used during the winter ski season. There will be the cost of repairs and maintenance and with either buses or the gondola, parking at the foot of the canyon will need to be available. Other, more passive options seem to be better: tolls, reserved parking, limiting cars etc, plus buses seem to be a smarter, less costly solution. I don't feel like tax dollars should go to an expensive gondola that only serves a small part of the population and tourists. The ecological impact of construction for the gondola could be immense. I don't trust those in power to make the environmentally correct decision and feel like the resorts and developers will be the ones profiting from a gondola. Make parking available at the base of the canyon for those taking the bus up, increase the number of buses, especially electric buses, encourage resorts to enact parking reservations, & add a toll to LCC.
27268	Dan Petersen	While yes I am sure this may help slightly help with traffic in Little Cottonwood Canyon for anyone specifically going to Alta/Snowbird. How that helps literally ANYONE ELSE is the problem I run into. There is (if you ask me) a BIGGER problem with BIG Cottonwood Canyon. I am applaud that solutions being proposed is not addressing CANYONS traffic on a holistic level. Why can we not simply run buses on a continuous loop and NOT leave the canyons. I feel the UTA routes are incredibly inefficient and with a base bus connection area (that doesn't run the need to add extra bus lanes and ruin the water supply). There are so many SIMPLE solutions that can be applied that solves issues in BOTH canyons before ever thinking about a Gondola that ONLY serves two private business during the winter time.
27267	Jacob Anderson	I think adding 2 bus-only lanes to the road would be a good solution. Buses can move without traffic and more people will take buses instead of cars, reducing overall congestion
28150	Mary Fleming	Please do not use tax money for this elitist project. Fix the roads and parking lots. Invest in e-bus public transportation that residents can afford. Most of us can't afford the price of a ski ticket anymore, let alone adding the cost of a gondola ticket. But we can bus to a trail head to enjoy snow shoeing for free. Don't saddle us with a gondola eyesore that that becomes a maintenance nightmare as it becomes obsolete due to climate change. Mary Fleming
27269	Elyssa Morrill	The gondola is the worst option. Please consider literally any other solution, preferably one that prioritizes the health and longevity of the canyon and all inhabitants of the valley.
27270	Sara Kenney	Hello, I am opposed to the gondola construction in Little Cottonwood Canyon. The gondola will not do much to reduce the flow of vehicle traffic. There are any alternative such as buses and shuttles that people can take up to the ski resorts. I prefer the canyon to appear and its natural state and I do not wish the environment to be disturbed by construction. I am an avid outdoors woman and climber and I don't want any of the boulders to be disturbed either. I think this is a terrible idea and residents of Salt Lake and surrounding areas are mostly against the Gondola!
27271	Stephen Bergen	I think that this is a damaging idea, the canyons natural beauty will be effected. This canyon brings in many people but a gondola doesn't provide any more added benefit than the buses that already exist. The resorts are already crowded with people from just the cars and buses, it would make the skiing much less enjoyable and feel more like Disneyland where you spend more time in line than actually skiing.
27272	Grant Allen	I am truly saddened by the decision that was made Wednesday. I visited the canyon this summer and was amazed at the natural beauty it provided to the Salt Lake area. I've been to many other mountainous regions; the Colorado Rockies, the Rockies of Wyoming, and even the Alps in France, Italy, and Switzerland. Compared to all of those fantastic regions, there is something special about Little Cottonwood Canyon. Just a single two lane road carving through the canyon leaves so much room for the natural beauty of the canyon to flourish. An area that feels so raw and untouched by man. Building a gondola straight through this precious environment will damage the canyon beyond repair. Altering this environment means my generation and generations after me won't be able to experience this fantastic place in all it's true, natural luster. I really do hope you hear the public's call to reimagine a solution to this pressing issue. Please think about future generations and not just money in the pockets of this generations wealthy business leaders. Thank you.
27273	Josh Douglas	Stop this nonsense now! Do not build this. This is an eye sore for life to stop a 12 day a year problem. This "solution" does nothing for the canyon beside detract from its beauty for the other 350 days a year. The solution to this problem is to limit the amount of tickets that can be sold by these FOR PROFIT businesses. Lift lines are bad enough dragging hundreds more people up this canyon daily is going to have an impact. DO NOT forever destroy the beauty of this canyon for a 12 day a year solution. More access is not needed, less overall traffic is needed to preserve this beautiful place. Already way too much foot traffic in the canyon daily, lets not encourage more. Preserve what we have its the only one.

27274	Shannon Whitaker	Do not ruin our beautiful public land with a gondola that primarily benefits two for profit businesses that already profit off of our public land. The majority of Little Cottonwood Canyon is a National Forest and should remain an unmarred wilderness for our public enjoyment. A gondola will ruin the views in the canyon for those of us that hike in it. It will ruin the views of the canyon for those of us that live at the mouth in Sandy. Only a handful of days out of the year (about 12) have traffic issues caused by the for profit ski resorts. Instead of forcing the tax payers to pay for their greedy business, perhaps the businesses should be constrained to occupancy that the canyon can support. A gondola will only service these businesses. It will not provide value for those of us that choose to hike or snowshoe or ski in the back country. \$500 million dollars for 12 days out of the year is unreasonable. It will require ongoing tax payer money to maintain. Snowbird has already purchased the land for the gondola while lobbying for this solution because they know ultimately they are the ones to profit from tax payers paying to solve a problem Snowbird and Alta ski resorts have created. I have lived in this community my entire life and treasure Little Cottonwood Canyon that makes our city a wonderful place to live. Please do not destroy our beautiful canyon. Please do not build a gondola for the profit of a greedy business over the desires of the community. As a member of the community I am saying NO to the gondola.
27275	Elisabeth Kennedy	Holy hell. This is the worst idea I've seen in a long time. Let's not scar the canyon with an expensive gondola. The community DOES NOT WANT THIS.
27276	Erin Bean	I adamantly oppose the construction of a gondola in Little Cottonwood Canyon. This is a huge expense to Utah taxpayers, and it will only benefit the relative few who ski at two resorts. It is ridiculous to spend more than half a billion dollars on a gondola when we haven't even begun to exhaust the far more cost-effective options available-increased busing, tolls, and paid parking at the resorts, to name a few. It is unconscionable to spend this amount of money to benefit the relative few who would benefit. Please put the burden on the people who ski, not on the backs of all Utahns.
27277	Brian Ladouceur	Obviously UDOT doesn't understand the concept of cause and effect. They are deeming the cars in the canyon to be the cause of canyon congestion. In reality this cause is the recent partnership of the resorts in little cottonwood with the Ikon pass. If you are looking for the source of congestion look no further than people unfamiliar with the canyon road itself. Even with the removal of the ikon pass, the cottonwoods would generate plenty of tourism. To think that this would do anything but push the congestion onto Wasatch blvd is foolish. What happens on days where winds are too high to run the gondola? Square one is what happens. Not to mention how hideous the gondola would be in little cottonwood. It would stick out like a sore thumb. Taking away from the whole point of the cottonwoods. A place to escape the city, a place to feel more connected with our beautiful state. It would ruin the immersiveness of numerous campgrounds and climbing spots. The cherry on top is that you want US to pay for it. This gondola directly impacts private resorts that should be paying for this out of their own pockets.
27278	Larry Hunter	Let the ski resorts pay for it.
27279	Kurt Gee	This"comment."Is a complete sham! Utah's have spoken out roundly disapproving of the gondola idea! The hubris, arrogance, shortsightedness, and wanton disregard for public opinion are all shameful!
27280	Joseph Conaty	I absolutely hate the gondola idea. It's galling that this white elephant will be paid by the public, while benefiting two private, for profit, enterprises There are far greater needs in Utah than delivering customer to ski resorts with questionable futures.
27281	Kurt Gee	What is going to be done so that the disadvantaged can still afford to enjoy Utah's beauty?
27282	Eva Echevarria	Please protect our home
27283	Kathy Musson	I am writing to express my opposition to a gondola in Little Cottonwood Canyon. A gondola will ruin the views in the canyon and the towers/stations will impact the environment. And, it's a taxpayer-funded perk solely to benefit the ski resorts which is not right. I am for limiting access to the canyon to control traffic. Not everyone who wants to visit the canyon on a given day should be allowed to, if the limit of visitors has been reached. The canyon's natural resources are limited and must be protected.
27284	Michael Budge	I am adamantly opposed to the gondola solution for Little Cottonwood Canyon. This is nothing more than a handout to the ski resorts and is unnecessary. Further, tax payer funding for this resort should not be born by residents, most of whom would not benefit from the Gondola. Residents do not want the Gondola!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27285	Lisa Austin	<p>I have lived in Utah since 2007 and I am a frequent user of LCC for skiing, hiking, and just general enjoyment of its beauty.</p> <p>The gondola proposal will NOT solve the issues facing LCC. It will not alleviate the majority of the traffic crowding our beautiful canyon, and it only serves the two ski resorts at a great expense to our state. Plus it will forever mar the landscape of LCC.</p> <p>There are only a few days each year when the canyon becomes overly crowded due to powder days. The rest of the time, the crowding is more manageable and comes from a variety of uses....hiking, snow shoeing, rock climbing, sightseeing, camping, going to the hotels up in the canyon, etc.</p> <p>How can a gondola that ONLY goes to the ski resorts and ONLY runs in the winter solve these issues? It can not.</p> <p>Let's look at the success of Zion Canyon in managing YEAR ROUND traffic which is the real issue. We need electric buses that are modern, comfortable and run frequently and stop at numerous places. This would cost millions less to implement. We could have EXPRESS buses that run directly to Snowbird and Alta (separate from each other) and have a general bus that stops at trail heads, etc.</p> <p>Build a multi-level parking garage for the bus station instead of the gondola!</p> <p>Stop allowing private cars into the canyon unless they have a permit (homeowners/critical employees). Or implement a daily fee/annual pass. Additionally, if the snow tire/chain law was enforced (as well as speed limits), there would be fewer accidents on the road and less delays in the winter.</p> <p>I am shocked and appalled that UDOT thinks that a \$500 million gondola (that the taxpayers will ultimately pay for) and will forever mar the beauty of the canyon is the best solution to this issue. And, I am not a NIMBY homeowner in Cottonwood Heights (although I sympathize with them). I live in Draper. I am surprised that anyone who lives anywhere in Salt Lake County thinks that the gondola solution is a good one. It makes no sense from a financial standpoint, an ecological standpoint, a preservation standpoint, a sustainability standpoint, a common sense standpoint, and most of all - it only serves TWO locations in the entire canyon and ONLY in the winter.</p> <p>Please UDOT, do the right thing and support other options to resolve the issues facing LCC.</p>
27286	Jill Haslam	<p>I think that a gondola will ruin Little Cottonwood Canyon. I do not believe that it is the best option for dealing with traffic problems. I would highly suggest that Little and Big Cottonwood Canyons follow Zion, Bryce Canyon, and Yosemite National Parks and start using a shuttle/bus system. There could be times of years when both cars and shuttles/buses would be allowed, and times of years when only shuttles/buses would be allowed up the canyons. Just like the national parks, anyone staying at the lodges or who live in the canyons would be given a special pass to drive.</p>
27287	Jackie May	<p>Hello there, I believe building a gondola to support increased traffic in little cottonwood canyon is reckless and short sided. My main concerns are that the addition of a Gondola to the canyon will cause irreparable damage on an ecological as well as community trust level. We don't necessarily need more humans in the canyons at all times as we understand that increased traffic will undoubtedly add strain to the preservation of little cottonwood canyons ecology. We understand that the cost of this gondola is far from our most efficient use of tax payer dollars. There are surely more options that can be explored. Hopefully a gondola will never be built in LCC but if it does it absolutely does not need to be funded by tax payers.</p> <p>Best, Jackie</p>
27288	Taylor Hartman	<p>How can you possibly see this as a positive solution to traffic control?! We all see this for what it is and if you are seriously willing to sell your soul at the expense of so many thousands of citizens who deserve much better from you, then I hope karma finds you and returns the favor.</p>
27290	Jeffrey Stevens	<p>I am very concerned about the proposed gondola project. It will be a burden on the taxpayers, will destroy the aesthetics of the canyon and will serve the needs of a narrow group of the population, those who ski, for a few months of the year. It is too expensive! As a local resident and a skier, I don't think this is the best solution.</p>
27289	Mitchell Manwaring	<p>Please don't ruin the view of nature for an inefficient service there are other ways like a bus system</p>
27291	Mckenzie Anderson	<p>Please don't do this. This is horrendous and will ruin the beauty of our canyon. I couldn't be more vehemently against this if I tried. Please, NO.</p>
27292	Harley Lennon	<p>Taxpayer-funded transportation projects should benefit all residents, not just ski resorts</p>
27293	Terry Heinrich	<p>Why do we have to even consider putting a 10 story parking structure in our housing community next to our homes? Why can't you put it at the gravel pit so BCC & LCC people can have access. Are we only spending 600 million for Snowbird & Alta? What about Brighton & Solitude? This parking structure is enormous. It is already so difficult to get out onto Wasatch. Then you have all the "commuter" traffic coming up 9400 south. They will have to compete with ski traffic in the morning & after work. What about getting into the parking structure? Won't it be all backed up bumper to bumper? All those skiers are going to take one look at that & drive up LCC. Who's idea was this addition to the parking? McCandless Neiderhauser Snowbird & LaCaille? This is a very bad solution we do not want the parking structure. Why are you doing all of this when 80% of Utahns want something besides the gondola. Don't you care what the people want?</p>
27294	Joyce Marder	<p>I believe more of the natural world should be left alone to enhance the survival of non-human life and ecosystems, as well as facilitate the psychological well-being of humans. It would be difficult to appreciate the beauty of the trees and cliffs in the canyon when the view includes concrete columns, wires, and people riding overhead. I think millions or billions of taxpayer dollars should be spent to benefit ski resorts. I think fewer people should be in the canyons at any given time so that the few could enjoy solitude, safety, and silence. (Emoting now: Bad idea. Really bad idea. Awful, disturbing, sad idea.)</p>

27295	Jason Habib	The gondola capacity is not worth its cost. On a busy day, it will hardly cover 15% of canyon traffic. Sure, this makes a difference now, but with continuous growth in SLC, this project is simply taking us back 3 years. Within a few years of growth, traffic will be back. Taxpayers will be footed a bill, LCC will have permanent environmental impact, and the only true winners will be the investors padding their pockets. For the cost of the gondola we could snow shed most of LCC, which would alleviate traffic and accident concerns. The gondola is not our solution. We can do better.
27296	Lindsay Gilbert	Polls show that Utah taxpayers do not want a gondola put into Little Cottonwood Canyon. There are more flexible, effective, and fiscally-responsible alternatives that exist that will not require large scale destruction of our canyon. This solution does not consider anyone other than the privately-owned ski resorts, and as a climber, I'm devastated about the numerous boulders with world-class climbs that will be destroyed in this process. Please reconsider.
27297	Jed Green	Let's develop the canyon. Reopen white pine to Jeeps, Snowmobiles, ATV's, and SxS's. Let's Drill through the mountain to Park City. Let's add lift service from Little Cottonwood to Big. Let's add a \$500,000,000 Gondola that could be seen from every part of the canyon. Think of the money that could be generated from all of this development! The world would think how very cosmopolitan of those Mormon's. These ideas are very foolish and short sighted once the canyon is developed it's scarred forever. We are very lucky to have these wilderness gems this close to the city. They should be protected and preserved at all costs. As an avid outdoors man, I vote NO on the gondola. With concern, Jed Green
27298	Marni Robertson	I absolutely do not want a gondola added to little cottonwood canyon. We do not need to spend money on this. We need to focus on conservation and preservation.
27299	Scott Mcllelland	The gondola is not the right choice. The idea of using taxpayer dollars to install an eyesore that permanently mars a beautiful canyon just to service a few wealthy corporations yet does little or nothing to mitigate congestion is folley [folly] and unfair to Utah taxpayers and the people who live in and around the canyon. The gondola is an extreme measure that once executed will change the canyon forever. From what I've seen the majority of people that live and work in the canyon, state officials as well as people from all over who enjoy LLC recreationally are opposed to this absurd proposition. Why should this pet project of the wealthy few overturn the voices of the majority who will ultimately be paying for it? There are other options that should be explored first. This is not a decision that should be made with haste.
27300	Shane Armitage	Please no gondola!
27302	David Wilson	The gondola idea is the worst proposal that solves the least problems in a crowded canyon. Following the money to those that benefit from this gondola option is sickening. Only the Ski Resorts and land owners that will sell or lease land for this project will benefit. People that want to use the canyon for other use beyond skiing aren't helped. Even skiers aren't really helped. Expanding the bus service and widening the road in the canyon is a much better alternative. This would benefit All canyon users rather than just the Ski resorts. Please don't ruin the canyon and charge tax payers 550 Million dollars on this ridiculous plan of a gondola.
27301	John Gunn	I'm all in on this one. I just makes sense...
27303	Alex Goyzueta	In 100% support!!!
27304	Audrey Laney	Please reconsider this decision and the local impact that will incur. The public has entirely refuted this decision, and yet, it's as if they are not being heard. If you truly care about the people you serve, please reconsider and decide against this horrible installment.
27305	Mark Skidmore	Put the Gondola down in the canyon where it would not be seen for most length of the canyon.
27306	Todd Langston	NO GONDOLA. NO NO NO NO NO... please listen to our community. NO GONDOLA.
27307	Rainey Cornaby	The gondola will do very little to reduce canyon congestion and will be a terrible blight on the beautiful natural beauty of the region. It also has the potential to contaminate the water stream and negatively impact wildlife. This is a terrible idea and needs to be stopped.
27308	Nancy Talcott	Growing up in Utah, I have watched the state grow in population and understand the need for better solutions for the canyons. However, I do not want taxpayer money being used for private companies' advantages. When we were in college 40 years ago, we could barely afford the ski lift passes, as it were. How much is a gondola ride going to be for the present students? Wouldn't it be better to do what Zion Nat. Park has done -- have people reserve a bus time, close the road to private cars and allow only shuttles (busses) to access the road up the hill. We'd save wear-and-tear on the road, and we could limit the number of people, so that lift lines wouldn't be horribly long. (I know people who are already giving up on skiing due to the long lines.) And, NO, do not allow cars up for an extra fee. That just allows the rich vacationers more access than the locals. It's also time we started realizing we can't have unlimited access to the canyon with unlimited numbers of people if we want the canyon to remain what it is. What about the people that are not skiers but want to go up and enjoy the canyon? The canyon is being defaced, & the quietness of hiking or camping have now been changed for skiing. I don't believe Alta and Snowbird own the canyon.
27309	Ed Chauner	Please save LCC. If the alpine countries in Europe can save their pristine canyons we can too. 1. Charge a heavy toll on 1-passenger vehicles. 3 or more per car should be free. 2. Increase mass transit. Triple the number of busses. If people know that a bus runs every 15 minutes all day, they will use them. I believe that using these 2 options will cut the vehicle traffic by at least 50%. I watched the change in Mill Creek when a toll started being charged. The number of cars were significantly reduced overnight! This system works. DO NOT EXPAND LANES ON WASATCH OR IN THE CANYON. REDUCE THE NUMBER OF CARS! Thanks for reading this. Ed
27310	Andrew Jorgensen	With Public Opposition so massively against the gondola project, it's about time you listen to the taxpaying voters - instead of the campaign contributing donors.

27311	Margaret Madsen	Buses buses buses!!!! They work in many of our busy national parks. It takes the public and visitors no time at all to adjust to park and ride. And it will keep our viewshed, prioritize the natural character of the canyon and make just as much money for all the ski and outdoor industry. Plus, they can be electric or clean fuel buses. Let's not ruin our canyon with an unnecessary gondola. Salt Lake Resident of 12+ years.
28149	Will H.	<p>Hello,</p> <p>I would like express my concern that the Utah Department of Transportation's recommendation for improvements in Little Cottonwood Canyon do not reflect the interests of most local canyon users that will be impacted the most by this decision.</p> <p>Little Cottonwood Canyon is a natural wonder that attracts visitors for many reasons year round. These visitors flock to the hiking trails, the road side vistas, the climbing routes and boulders, and to their summer homes and cabins. Besides ski resort patrons, who else is served by the gondola? Due to the nature of a gondola the drop of locations are limited, the impact to the structure is high both environmentally and visually, and the expense and expertise required to maintain one is great.</p> <p>All users, even visitors to the ski resorts, would be better served by an enhanced public bus service on the current road as it would maintain the flexibility users require to experience their chosen portion of Little Cottonwood Canyon.</p> <p>Right now, with usual summer traffic, I can drive from my home in South Salt lake to the town of Alta in about 40 minutes. In the winter it usually takes about 50 minutes. The proposed plan would increase my MINIMUM travel time to an hour and 5 minutes and the complexity would be increased significantly.</p> <p>Who is this plan good for? No user I know would be best served by this plan.</p> <p>I appreciate this opportunity for comment, I believe that providing this forum will help ensure that the future of public use of Little Cottonwood Canyon is headed in the right direction.</p> <p>Thank you,</p> <p>Will Hamann</p>

27313	Jillian Fox	No gondola
27312	Jenise Jensen	I am not in support of UDOT's decision to build a gondola to reduce traffic congestion. Not only does this feel like a publicly funded subsidy for the ski industry, the environmental impact of building the gondola, as well as the continued traffic congestion to the canyons does not make sense at all. Improving and expanding bus options should be prioritized above all else.
27314	Blair Porter	Please do not move forward with the gondola. I am an avid hiker in this canyon and the gondolas will not benefit my recreation in this beautiful canyon. I am a holladay resident and live locally. The thought of this gondola going in is so upsetting to me. Please preserve Utah stop this unnecessary eye soar. Once in there is no going back. We will never again see this canyon bare and sacred and scared from this view. It will only benefit the ski resorts and put money in their pockets. Most Utahans do NOT want this. Listen to us.

27315	Brianna Platt	Please don't put this ridiculously expensive gondola in our beautiful canyon. Just leave that canyon alone. I don't understand how you can justify putting up such an expensive piece but you can't even help the homeless or kids in poor neighborhoods. Shame on you. Leave nature alone and leave your poor citizens alone. Hasn't the state of Utah been through enough already?
27316	Nicholas Moncur	BIG NO TO THE GONDOLA. BIG NO TO WIDENING THE ROAD. The canyon should operate one-way during peak travel times, and single-occupancy vehicles should be tolled (with the exception of residents and resort employees). WE THE PEOPLE have spoken and WE SAY NO TO THE GONDOLA. Those who support it are those who stand to become millionaires from the project. I grew up at Wasatch Blvd and 8300 S, I know the issue. THE GONDOLA IS TOO EXPENSIVE FOR UTAH. Utahns won't use it. People will still sit in traffic because private transportation is still the preferred method. We need to optimize the roads without widening them. Stage emergency vehicles at the resorts for the resorts and surrounding homes. One-way traffic in the canyon in the morning and evening. Toll single-occupancy vehicles.
27317	Glen Larsen	A lot of effort and thought went into this process. I am looking forward to the future and think the Gondola B proposal will be great. It's better for the environment, folks won't get stuck during snow slides in the canyon (as happens with vehicles), its a nice way to show off our canyons (particularly folks with disabilities and tourists) . A win-win for everyone!
27318	William Harkins	No gondola. Like seriously guys? Listen to your people. We feel completely ignored.
27319	Natasja Van Boerum	I think a gondola is absolutely not the right decision. It's a very expensive alternative to many other more efficient, cheap, and sustainable alternatives. I think the money that is planned on being poured into the gondola project could better be used in promoting and improving other forms of transportation up the canyon.
27320	Diana Vanuiter	Gondolas in the canyon are a bad idea. They are very costly and I imagine that a ride up and down the canyon would also be pretty pricey. Would there be space for the equipment people might be taking up the canyon for skiing or biking? The gondola towers would be very unsightly and obstruct the beautiful views we enjoy now. Years ago, we battled to keep unsightly power towers and lines underground out of our neighborhoods in Sandy City. I remember a presentation by the power company where they showed those of us in attendance a picture of a bright blue sky with blue electric towers. The presenter said, "See, they can be beautiful." I quietly threw up in my mouth. Anyway, same scenario here. No matter what color they are painted, they will still be eyesores. Being retired, I would probably not be able to afford riding the gondolas. Having environmentally friendlier enhanced busses without widening existing roads is a better alternative.
28148	Daniel Knox	Little cottonwood doesn't have a problem that needs to be addressed by the public. This is a private business problem. The businesses up the canyons need to stagger the entry and exit of their customers to their businesses. This isn't a road problem!!! A gondola just changes the problem to further down the hill and fixes a problem that doesn't need the government to fix. It is a private business problem!!! The answer is do nothing! please excuse any typos or auto-correct
27321	Laila Gerace	As a taxpayer in SLC and user of recreational activity in the canyon, I am un pleased with UDOT's preference for the gondola. A consistent bus option has not been trialed at this time and could be a viable solution. If buses were available every 5-10min with adequate parking, most people I know would take the bus. However, having to wait 40 min for a crammed bus is not appealing. Please consider a real bus option prior to drastically changing our canyon.
27322	Gina Knowles	Please do not build a gondola and Rubin the beauty of the canyon. Add bussing. Add tolls in the winter. Anything but the gondola. PLEASE!
27324	Mackenzie Searle	I support the common sense solutions approach proposed by Mayor Jenny Wilson and described here: https://musercontent.com/cd45be9655184a589ee4d23f0/files/730ac101-68cb-bed9-2b47-d07e86309227/LCC_EIS_Common_Sense_Solutions_Handout_v3_kf.pdf The Common-Sense Solutions Approach offers a more fiscally conservative AND sustainable option. Fiscal conservatives and environmentalists agree that a \$500 million-plus, environmentally harmful infrastructure project that benefits an extremely narrow population of people is a BAD idea.
27323	Ariel Elftman-hanson	Hello, I am an avid skier and hiker in Little Cottonwood Canyon. I live in Sandy and love the short commute to Little Cottonwood. It is embarrassing to see the irrational decision-making of UDOT officials. If you could answer these questions for me that would be great. First question is the reasoning for choosing an option the state cannot afford. If we cannot afford to build a gondola then why did you select this option? Second question relates to the reasoning for not pursuing a less invasive and cheaper alternative first? Tolling in the canyon is one example of a great alternative! Third question is the reasoning for such an invasive option to our natural environment. The natural of beauty of Salt Lake is already being ruined by continued building and expansion. A 2,500 space parking lot at the base of the canyon is going to ruin the raw beauty Utah has to offer. And the nightmare of traffic this so-called "efficient" option is going to create in the neighborhoods and streets west of the canyon. Fourth question, in a recent survey only 20% of Utah residents voted in support of a gondola. Why is the State of Utah's transportation going against the wishes of the citizen's of this state? Lastly, we are in a climate crisis in which the years of snow in Utah are numbered. Let's put this money into saving the great salt lake and renewable energy! Please open up the decision for this project to the public. Let the citizens of Utah decide what they want done with the canyon. Who's ego is driving this project and keeping it afloat? Because the citizens of Utah do not agree and it is disgusting what is being approved by you all. -Ariel Hanson

27325	Pedro Martins	I do not support the gondola. The expense of this project does not justify the perceived benefit to a smaller user group. This will be a public service that will always be n the red and the biggest benefactors are the ski resorts and the wealthy percentage of our community. There are no many projects that need funding for road improvements that benefit a much greater percentage of Utahns. Please stop this madness.
27326	Matt Rocha	I'm hoping with phased implementation we will find that a gondola is not the answer and tolling, bussing, and controlling private traffic in the canyon will solve the problems without having to have 200' towers and 500million in tax payer money used to benefit 2 private corporations while also ignoring other canyon users. With bussing we can have a trailhead route gondolas just run strait to the resorts. While ruining what makes LCC special.
27327	Kevin Robinson	No tax money should be spent on this project. The beneficiaries of a project like this should shoulder the cost. Resorts and riders. A very small percentage of Utah residents will benefit from this project. Over Use of the canyon is killing it.
27328	Sharlene Wells	UDOT has made a mistake. The expense of the gondola is not commensurate with the number of days each year when the traffic is particularly heavy. They are happy to take that money from tax payers who are not skiers nor snow boarders and thus are not likely to ever use the expensive gondola. It will have a major environmental impact, destroying the natural beauty of the canyon, as well as the habitat for plants and wildlife. I can't imagine why anyone thinks these detrimental factors affecting people, animals, plants, and offending the scenic canyon is a good idea. Plus, with the current climate changes we are seeing, how much longer will there be snow for skiers and boarders. I implore UDOT officials to re-think their choice and to re-consider other options.
27329	Lindsey Lawmaster	NO
27330	Elise White	The utter audacity to think this is a solution that won't do irreparable harm to LCC is asinine. You are only providing parking for 2500 people and a gondola that can only move 1000 people per hour. The math doesn't add up . Please don't ruin this place for profit of politicians and ski resorts that are already making a killing and over using the resources. This is not the answer. Tolling would be a much better and less impactful solution that would limit canyon users. This is a corrupt tax payer money grab for private gain.
27331	Joshua Varughese	I think that the boulders and scenery of little cottonwood canyon should be preserved and be put above traffic concerns. Little cottonwood boulders are a refuge from day to day life and the scenery is beautiful ruining either things would damage the spot as a whole.
27332	Gary Jacobson	I oppose the gondola. My reasoning is as follows: It's ridiculously costly and like all projects of this magnitude will end up costing far more. It is not necessary because there are other alternatives such as limiting single rider vehicles. Charging a fee . Policing car to affirm they are compliant to snow tire and 4 wheel drive. Adding buses. The gondola will increase the number of people at the resorts thus decreasing enjoyment. And the money would be much better spent dealing with the lake issues
27333	Amy Garvey	The gondola is the worst and most wasteful option of all options to reduce traffic impacts in little cottonwood canyon and it doesn't make sense. 1. It will only serve 2 ski resorts, thereby making it useless for anyone utilizing the rest of the canyon for hiking, biking, Rock climbing, snow shoeing and camping. 2. There are really only a few days in the winter when traffic is a problem. Why the expense for only a few days of the year? A fee system or mandatory buses are a much cheaper solution to a problem that is not year round. 3. The canyon is beautiful. Towers and cables snaking their way up the canyon are not beautiful. 4. Yes avalanches happens in a canyon that receives snowfall. And those avalanches sometimes affect the roadway or trap people at the ski resorts. Avalanche mitigation efforts, before and after resorts close, make avalanches that actually trap people in the canyon a rarity. A gondola is an enormous expense for relatively rare occurrence. 5. This is an outrageous expense that will only serve some people. It does not make sense to build something so expensive that will only serve two ski resorts.
27334	Tim Garvey	I looked at the proposals and think the gondola is the most wasteful and impractical. From A cost and practical standpoint a tunnel option is superior, and not the proposal assuming it could only be built by the Boring company. I will fight the gondola all the way.
27335	Derika Phippen	The majority of the population is anti gondola but it's still the proposed/recommend plan by UDOT is unacceptable. The communities voice isn't being heard. Please reconsider.
27336	Emily Heider	There is no reason public funds need to be spent constructing in our canyons for an industry that is struggling due to the conditions caused by global warming and the destruction of the great salt lake. Can we focus on preserving and saving the great salt lake first please??
27337	Luke Gangi-wellman	Deeper development into the wilderness and privatization of transportation options for access into public spaces is a dangerous proposition. Please consider other options such as a closed road bus system, similar to models executed with success in Zion NP and Rocky Mountain NP. Please consider the heavy weight of public opinion and access when choosing this model for canyon access in a growing population.
27338	Megan Fleming	As a resident who lives within a short drive to the canyon, I do NOT support the gondola. This proposed"solution" does not allow for trailhead access along the way, it is costly and has large environmental impacts. I much rather see UDOT champion increased bussing in the canyon. It is more fiscally sound, logical and serves the needs of those looking to access the canyon. Please reconsider.
27339	Jennifer Majersik	I don't understand how the gondola makes sense when the ski resorts are already full. Where are these extra people to go?
27340	Will Marquardt	The gondola is not a good idea. The impact on the environment and the climbing just to serve one group of canyon users seems like you just want money and don't actually care for the canyon.
27342	Chuck Konopa	Will there be a station at White Pine trail head so more users than just the ski resorts can benefit from this tax payer funded project? If the stations will only be at the resorts, let the resorts fund the entire project.

27341	Logan Raming	The planned gondola in little cottonwood canyon is a permanent structure that will be subject to a rapidly changing canyon. The anticipated impacts of climate change on little cottonwood canyon remain a great unknown. It would be conservative to find other solutions to addressing traffic, rather than putting a permanent and costly structure through a canyon prone to debris flows, avalanches, and potentially fires, not to mention the possibility of earth quakes. Please don't build the gondola.
27344	William Elder	This is such a critical project to complete NOW, to decrease negative environmental impact. Let's keep Utah as clean and uncongested as possible.
27343	Weston Edwards	I do not support the creation of a taxpayer funded gondola. This multi-billion dollar project would only serve the privately owned ski resorts and the wealthy who frequent them. It would not alleviate traffic in and around the base of the canyons. To call the gondola a solution to our traffic problem is naïve. The stated maximum capacity of the gondola (1000 ppl/hr) is not sufficient to even put a dent in the total amount of traffic caused by the 20,000+ patrons to the resorts on a typical busy day. The current problems with canyon traffic are mostly limited to a few incidents per year while the rest of the time the traffic moves smoothly. The traffic issues could be easily solved by a more flexible bus system with the highway protected from slide paths by avalanche sheds. Also the problem of vehicle slide-offs could be solved by requiring vehicles to be equipped with snow tires all season long regardless of current conditions. In addition, if built, the gondola and its unsightly towers and cables will blight the landscape of the canyon year round. It is next to useless during the Summer and fall months since it doesn't stop at the popular trailheads. The only ones to truly benefit from its construction are the wealthy business owners of Alta and Snowbird Who will turn parking lots into more vacation housing or hotels so that they can pad their pockets. If built, the gondola will stay, wether the taxpayers like it or not. The gondola is terrible idea.
27345	Bernardo Elder	We need this now. So much vehicle congestion is bad for the environment. As a local resident of 8 , I agree with this project.
27346	Dave Coyne	As a frequent LCC traveler, I believe a gondola is NOT the answer. Most of us enjoy mid canyon activities and a gondola merely serves upper canyon and the ski resorts. I've said for years, let's start by legalizing hitchhiking in the canyon and make single occupant vehicles illegal during high use times (holiday/ weekends). Less money anyone needs to pay in use fees, taxes, and no major construction mess for years to come.
27347	Brensley Dohmen	I am for the gondola. I think it a great alternative route and the best one. I will definitely be using it once it built.
27348	Carly Griffith	Please don't build the gondola. It is such an irresponsible use of taxpayer money and there are so many better uses for the money. I do not support the gondola - this is our beautiful canyon. The construction of a gondola will undoubtedly cause damage and likely contaminate the watershed. Not to mention the eye sore of the cables and towers. Please choose a different option. There are better, more financially and environmentally responsible options. The gondola is a bad idea on many levels.
27349	Eric Hall	No gondola. Keep the canyon clear of anything that obstructs the views. It's the wilderness, not a amusement park.
27350	Marshall Brown	The environmental damage to the canyon from the heavy equipment needed to build the gondola infrastructure would be horrific. The permanent infrastructure would be unnatural and unsightly. Better solutions that limit auto use are available. Reservation system. Busses. Shuttles. Car pools. Keep the canyon natural. Do the right thing.
27351	Beverly Bawden	During the 2021 ski season, there were less than 5 days that there were any significant traffic delays in LCC. The parking reservation system was a successful resolution to previous traffic delays. In fact, it was so successful that Park City will implement the reservation system for the 2022-2023 ski season. There is no need to build a gondola. Furthermore, increased parking to accommodate ski traffic and reduce road congestion should be the responsibility of the resorts, not the taxpayers. The canyon is used by many people including boulderers, climbers, hikers, mountain bikers, trail runners, and campers whose outdoor experience will be diminished if a gondola were constructed. Moreover, taxpayers across the state don't want to pay for a gondola in LCC. Finally, Governor Cox has said that he wants to protect Utah's great outdoors. He said, "even actions that feel like a light touch can damage or even destroy a site forever," Adding a gondola to the delicate environmental balance of Little Cottonwood Canyon must not happen. A gondola would, in fact, create catastrophic and irreversible damage to the canyon. Additionally, Alta Ski Resort general manager, Mike Maughan, told my state legislative representative that the parking reservation system has been a tremendous win. Everyday, skiers told him that it had improved their experience. The 2021-22 season Alta was one of their top revenue seasons on record. We certainly don't need a gondola. The majority of locals and taxpayers don't want one.
27352	Mark Bennett	Absolutely 100% opposed to the gondola. Eyesore to a stunning canyon, perfect by nature... please don't ruin it forever! I'm a former Cottonwood Heights and now Millcreek resident. I work at Snowbird, for ten years now... I hope I don't get fired for my position here. If, sadly, this goes through, MAKE ALTA AND SNOWBIRD PAY FOR IT, as they are the ONLY beneficiaries. Certainly not general Utah taxpayers. If the gondola gets built, I can no longer in good conscious work at Snowbird, a resort that I love.
27353	Nate Parkinson	Gondola does nothing to address traffic issues from Big Cottonwood to 215 and even compounds some of the problem by pushing volume to the base of Little Cottonwood. This takes traffic that would normally be housed in the canyon and pushes down 9400 and Wasatch (towards Big Cottonwood). Honestly I don't even know why I'm sending this. It seems so evident as a bad idea that the fact it's identified as the preferred option damages my faith in the system. Other solutions so I'm not just being critical: how about the resorts fund a 4x4 and snow tire check booth that also enforces reservations on the mountain. Can get tag or sticker identifying you as compliant. And the reservations ensure that the canyon doesn't get overrun. Or just express buses. Anyhow, I fully expect a gondola despite the fact that it's clearly not the will of private citizens within 5 miles of the proposed site. Can't speak for the rest of the state.

27354	Eric Johnson	I am against a gondola. It would negatively impact the environment forever that I have enjoyed in LCC. It is a disservice to all state residents.
27355	Steve Mason	I don't want public money to be spent for the benefit of private businesses i.e. the ski resorts and not enable the public to have access to other recreational areas within the canyon. This proposal is an inappropriate use for a public funded project.
27356	Isabelle White	This gondola will do little to help the congestion in the canyon. Considering the shorter ski seasons we are experiencing each year due to climate change the project simply doesn't make sense. Do not destroy the beautiful natural scenery of the canyons for a project that utilizes tax money to do nothing except build useless transportation for tourists visiting a dying industry. Do not move forward with this plan if you want to adequately represent your constituents.
27357	Teri Chipman	This seems like an all or nothing decision. Let's have buses and a toll road which would be way less expensive. Stop corporate welfare! How about we invest the \$550 million instead in education, raise the WPU for the kids. The proposed bid amount always ends up doubling (New prison and SLC airport both more than double the initial projected cost) imagine what quality of education the UT kids could have if we invested 1 billion more into Utah's K-12 education budget! Or let's save the Great Salt Lake, otherwise there will not be snow for the resorts down the road. Just say no to the gondella, please!
27358	Ann Rutherford	Putting in a gondola, especially with tax payers money, is a poorly thought out, selfish, gross money grab for two private companies and whom ever is the recipient of this tax money. The canyon is a limited resource and should be treated that way just like many of the state and national parks are doing. Why do we need to get more people up the canyon? Seriously, have you skied recently on a busy day? It's terrible, you spend a huge amount of money to spend the day waiting in lines and then dodge others skiers every turn. So let's get more people up there? Why? The most simple solution is obvious, reservation system and caps on how many can come up. Why should we destroy our land to get more people into a confined area to destroy more land? And let's be realistic, will we even have the snow needed to ski, at least the way we have know up to now? People have blinders on if they can't see the decrease in snow we've been having.. And come on, that road where the parking lot is proposed cannot handle this kind of traffic. It will be an insane mess, the locals will have decreases in their property values and their sanity. Please get this dumb plan off the books, it's all about a few people making a ton of money from tax payers to solve a fabricated problem (we don't need more people up there). Reservations only, or you don't get to go. Protect the land for the future, stop being selfish.
27359	Austin Goebel	Please build the gondola. These are the best resorts in Utah but the traffic is horrible. The experience would be far better with the gondola.
27360	Jordan Hillock	Stop using tax payers money to fix a private industries problem. A tourist attraction built by the state tax payer. It won't solve any problems. Its only going to be used as an attraction to bring more people to the area and overload the system. Waste of tax payer money. Ski resorts should have to pay for it. Only building it as a tourist attraction and to further alienate locals.
27361	Elizabeth Chauca	Please do not build the gondola, this is a big mistake that only considers money making for the resorts and not the actual health of the environment or water we need from the canyon. NO GONDOLA.
27362	Dan Gates	Please please please!!!! Listen to the people. This is an insane plan. There are better options that support the entire canyon. I am 100% AGAINST THE GONDOLA!!! Let's try tolling and occupancy restrictions. A law enforcement officer to actually Check vehicle requirements. If you've got 550 million to build this project, then you have 100k to give some law enforcement some overtime money. So many other options before a transportation system to service two stops!!!! Please reconsider!!!
27363	Anna Schlehuber	I don't think a gondola is going to solve or even alleviate the issue. i really think that making a third lane that runs bus only would make the most sense. The lane could run up the hill in the mornings and then down the canyon in the afternoons. It makes me sad to think about the way a gondola would change the view of the iconic canyon and how it may not even move that many people that quickly.
27364	January Marsh	I love where I live and want to respect and help our environment. This proposal seems unnecessary at this time & waste of precious resources that could be better used elsewhere - such as reviving the Great Salt Lake (to help weather & snow conditions), improving air quality, etc.. What do we gain from a gondola?? Nothing. Just more money spent & some pride filled in someone's heart. There are better ways - this does not right. I worry that we will regret it and then have to find another solution for the consequences of this choice. No please. This is not what our canyons needs.
27365	Sharon Holland	If the Great Salt Lake dries up, as it seems it will, will there be any snow at Snowbird or Alta? If not, skiing won't be a viable industry for Salt Lake City area. And if something can be done to save the lake, shouldn't Snowbird and Alta contribute to the cost of bringing their customers up the canyon? I don't think they pay enough sales tax or "tourist" tax to justify the cost of a gondola that serves their ski resorts.
27366	Matt Monson	NO to the gondola. There are better ways to do this, and in ways that serve EVERYONE that uses the canyons, not just Alta and Snowbird clients.
27367	Alicia Daniel	Less destructive options exist-options that would be more equitable for dispersed recreators and other users that will not come at the expense of the canyon's beautiful landscape. Transportation infrastructure that physically and permanently alters the canyon should only be considered after less impactful options have been implemented and shown to be ineffective before beginning to make permanent changes to the canyon's landscape

27368	Jorja Morgan	this is such a waste of money. get green busses! don't tare up the road and natural habitats because tourist want to come up the canyon! BE GREEN!!
27369	Mia Moore	Like many other locals of the SLC area, I am grossly disappointed and angry over UDOT's recommendation for the construction of a gondola through little cottonwood canyon. Not only will it have an immense ecological impact to the biodiversity and sustainability of an already fragile area, it will also inhibit the activities of recreational fliers [skiers?], put more strain on the already overcrowded resorts, and waste precious resources in its construction that will only be of use for approximately 30 years. My ski group will NEVER ski at Alta or Snowbird if this lift is approved and constructed- I hope other locals will do the same. I hope UDOT is willing to reconsider their recommendations with the people of SLC in mind rather than an empty monetary value. If not, well then you have not heard the end of us. We will do what we have to to make our voices heard.
27370	Wendy Garcia	Put a toll on non Utah residents. Utah residents should NOT pay a toll for a road they helped finance. Mandatory park and ride UTA for people day skiing. If you can show you have a reservation to sleep in the canyon let them drive up. No gondola.
27372	Allison Kendell	I am a skier and hiker who frequently enjoys the beauty of LCC. I do not support the gondola or the road widening option. I feel our Canyon access needs to be viewed as a limited resource. There are simply too many people and too many cars. We need to limit the number of skiers on any given day, and toll single vehicles. I support keeping the canyon as it is and controlling the population's access. We must protect our most beautiful places.
27371	Daniel Jensen	I support this. We need solutions to reduce vehicular traffic and congestion and enhance air quality in the canyon.
27373	John Trazetti	No gondola!!
27374	Stephen Dankert	As someone who started skiing Snowbird and Alta in the 1990's, I think this solution is brilliant. Users would be happy to pay a daily fee to avoid the difficult drive up the canyon road and parking issues would be significantly reduced. Bravo.
27375	Madison Stratton	This is ridiculous. Despite many people well over a year now protesting and being against the gondola you guys want to move forward? Seriously? You guys have zero spine and are clearly just being paid to go forward with the gondola.
27376	Olivia Hansen	I do not want the gondola built in LCC. This will add permanent infrastructure and use electric power made from coal-burning plants. Additionally, the views in LCC will be changed forever.
27377	Nathan Parrish	This is not what the people want. This is a completely unnecessary expense. The canyon only has a handful of days in the winter where traffic is an issue. A gondola is a permanent fixture to an issue that can be solved by buses. Thank you and please reverse this decision.
27378	Cindy Spangler	I'm against the gondola. I don't want my tax money funding a ski transportation system. There are other financially responsible options to support full canyon access and incentivize better options on high traffic days. Please do not build this gondola.
27379	Chris Schaaf	I do not support the proposed Gondola B addition. Instead, of the options presented, I believe the Peak Period Shoulder Bus Lane is the best option.
27380	Paul Salisbury	Please NO gondola! When I first saw the video for a gondola, I thought this is charming and why not. Very early on I commented in the positive. Then, I took the time to get educated. I feel the impact directly on busy canyon days with an office for the last 25 years at the base of Big Cottonwood Canyon and a home at the base of LCC. If a gondola would solve the issue for the handful of busy days, I MIGHT be more intrigued. It will not solve the busy canyon transportation problem that simpler, more cost effective, less intrusive and non permanent solutions could. And, we haven't even tried those solutions. Mandatory car pooling and buses on busy days. Start there. Let's see what can happen with simple solutions. Perhaps one of the most compelling arguments I've heard against the gondola came from a Latina representative for minorities who made a plea for better west side to east side bus terminals and public transportation. These public funds should be used for more thoughtful and needed application for the many-not the few. How is it that a small piece of land at the base of LCC along with a small group of developers can command so much attention against the voice of "the many" who oppose this project? No really, why? It is obvious to the many! At a minimum, don't just pause the project for public opinion and wait out those opinions and cave in to expensive bad ideas, but rather use the "pause" time and a few dollars to try something simple at first. Be wise with our funds and thoughtful in their broader application for the many. NO gondola.
27381	Pat Green	We should explore the easier to implement and thus change with data collected in the year. Recommend they implement a mandatory carpooling (2+ with no exceptions, only staff exceptions during work days) from 7-10AM during ski season with increased bus service....Tolling can be explored as alternate. The gondola is an extreme approach, with permanent impacts to the canyon year round. We can change carpooling/bussing with little impact, but a gondola will take years to implement and no incentive for people to utilize. What does the gondola provide during the non-ski season?
27382	Anne Van Hoose	Please don't do this. Please don't obstruct the views of this beautiful place!
27383	Robert Brown	I don't understand why tax payers need to give yet another giant handout to companies and rich people. There are two obvious solutions. 1) congestion pricing for any vehicles with fewer than 4 people in them, and 2) making the canyon bus only during peak times. For this incredible amount of money that is going to be spent, can we please help people who actually need help, not ski resorts and those who can afford it. Also, let's be honest, all of this money should really go to conserving the great salt lake. If that doesn't get figured out, and with all of the climate change and pollution issues, there may not be ski resorts left for the gondola to serve

27384	Cory Arthur	STOP THE GONDOLA!!! This is not the long-term solution that will meet the needs of all canyon users. This solution meets only the desires of a few individuals and corporations. Please refer to the previously submitted feedback from Save Our Canyons, which includes much more viable approaches to our collective challenges: https://saveourcanyons.org/images/pdfs-doc/SOC_UDOT_DEIS_Comments_20210903_.pdf .
27385	Abby Figgins	I am a longtime resident of cottonwood heights and I do not support the gondola system. However I do support the enhanced bussing system. I think we should start with the enhanced bud system and other options before considering the gondola. There are not funds for the gondola. The gondola would be expensive to tax payers and is not the correct solution. We still don't know how much a ticket price would be for the gondola. The gondola is destructive to the beautiful landscape of LCC.LCC is a world class canyon and it should be protected and sustained.
27386	Steve Evans	I'm against the gondola option. Picking the gondola options is a typical Utah backroom choice to spend 1/2 billion dollars that benefits 2 private business Alta and Snowbird ski resorts. This choice would only solve the transportation issue in Little Cottonwood Canyon for the elite few that ski at the 2 resorts because it only unloads at Snowbird and Alta. It leaves out all the other users hikers, walkers, campers, climbers, site seers and back country skiers. The bus option serves all the tax payers not just one user group. If Snowbird and Alta want a tram to their resorts let them pay for and build it. The best long term option in my view would be to close the canyon to motorized vehicles and build a train. This has been successfully done in europe.
27387	Lauren Larko	I strongly disagree with the gondola project. Improving electric bus infrastructure that would take skiers to the resorts would not only be less destructive and unsightly but also produce no admissions. This project is geared towards the greedy , environmentally unconscious ski resorts that only car about money. If this project goes through it would be disastrous to all of the group that use the canyon year round such as bikers,hikers, and climbers just so those who ski in the area a few times a year can do so more comfortably. You should consider the needs of those that use the canyon more often then a few weekends a year rather than the interests of the resorts.
27388	Kyla Becker	This gondola plan caters to the tourists of our city, not the residents, and further harms our AIR QUALITY! Please get your head out of the sand and your hand out of resort co pockets and do the right thing. This is idiotic and disgraceful.
27389	D J Bryant	No gondola ever.
27390	Brittny Rene	This is an irresponsible choice, and a heavily opposed one. Our beautiful mountains are why so many people come to live in Utah and by making this choice, irreversible damage will be done. Don't do it. There are so many other options.
27391	Katelyn Mendel	I would like to comment on the expectation of public actual use of the gondola. What is the percentage of locals driving up the canyon and travelers? If the gondola plans to charge its riders to use this method of transport how many locals and non locals will actually use this method of transport? If people are already paying for equipment, day pass, food, stay etc. will people be willing to pay for another inconvenienced way to get up the canyon? Driving to park a car to haul all your equipment on and off a gondola to stand next to a group of people for 20-30 minutes to get up the canyon will not be a preferred choice. Not only will it be physically more difficult, financially more difficult, but now that we live with new viruses people should not be forced to be in these enclosed spaces. The gondola will not be the preferred option of use for people to go up the canyon and can easily be compared to the trax system. For example, employees of University of Utah hospital are given a free pass on trax in hopes to reduce the parking complications, traffic, and promote cleaner air. For most employees this method of transportation includes driving to a station, riding trax, then a 20 minute walk to their place of work. It would be important to note how many people use this method of transport or still choose to drive themselves to work. Very few use the trax and most all of the employees choose to drive to work. This will be the same for the gondola. Not only will in cost almost 600 million to build but the solutions it proposes to try to help will in the end not be used. It is much easier to have a car on a ski day with equipment and will cost less. My request is that you have a logical look at what locals and non locals will choose and if they will in the end choose to pay a fee for each of their riders to use it. Or will it be similar to other failed transport methods. This idea is not new and people do not change. People are not going to drive to a parking structure then pay to ride a gondola the walk with all their ski equipment to get to the slopes they want.
27392	Robert Hillyard	I am OPPOSED to the gondola option. I support charging fees for private vehicles using the road and additional bus alternatives with less cost than for private vehicles.
27393	Justin Bradley	!!I'm so excited about the gondola. I live at the bottom of the canyon and worked up there for 10 years. Don't listen to the negativity, it's going to be great!
27394	Kristin Thomas	Please do not put in a gondola and especially don't put one in that only services ski resorts. Use other things like tolls and reserved parking to reduce congestion. The canyons are over capacity.
27395	Paul Matthews	I do not believe a \$550 million dollar project is worth money for 30 days per year of over crowding. I am in favor of electric bussing instead
27396	Christie Coltharp	I do NOT support the Gondola project. I do NOT want the canyon's beauty tainted by a huge eyesore! There ARE other ways to solve the transportation problems. This is NOT the right one!
27397	Devin Vernick	The decision to authorize the construction of a gondola is terribly short-sighted, and yet another shameless maneuver by Utah legislators to fill their coffers with coin from investment companies that care little for the natural world. As a Salt Lake City resident of going into my 7th year, I do not support the decision to build a gondola in either Big or Little Cottonwood Canyon.
27398	Meredith Vernick	The decision to authorize the construction of a gondola is terribly short-sighted, and yet another shameless maneuver by Utah legislators to fill their coffers with coin from investment companies that care little for the natural world. As a Salt Lake City resident of going into my 7th year, I do not support the decision to build a gondola in either Big or Little Cottonwood Canyon.

27399	Nick Norton	I am a 68 year old retired professional and I have lived in SLC for the past 42 years. I am against the gondola plan. Satellite hubs in the valley with regular schedules of electric buses during ski season makes more sense. The gondola is too expensive and caters to out of town skiers who can afford the high cost. Also, a regulated controlled access plan could be the best answer but the ski industry would fight this. In Utah, local interests vs the monied ski industry equals a win for the monied ski industry. The ski industry does not own the mountains...maybe they do...maybe they also own UDOT.
27400	William Jessing	The gondola and road widening should be last ditch efforts. The focus needs to be on streamlining the public transport system and tolling single passenger vehicles. The plan caters to a very small group over a very small time of the year. It's not worth the price or the distruction of the current land scape. Please hear the voices of the public on this matter and not the money of 2 ski resorts.
27401	Kathie Keeler	No!! This expensive, environment-destroying project only benefits a few and lines the pockets of developers and politicians.
27402	Marie Wow	This is a bad idea. Tax payers are the ones paying for it!!
27403	Pamela Alexander	I do not want my tax dollars going to the ski resort. If they want to pay for it great. I vote no.
27404	Megan Sieverts	The gondola is going to be extremely costly to benefit only skiers and two businesses (Alta and Snowbird). Do the owners of the resorts own you and the people who make up this committee? That's the only logical explanation for this fiscally irresponsible decision.
27405	Chloe Wilcox	My family has lived in little cottonwood canyon for almost my entire life. We do not support the gondola. Please do not ruin our neighborhood and home.
27406	Beverly Bawden	A gondola would ruin the recreational and aesthetic enjoyment of LCC for boulderers, climbers, hikers, trail runners, mountain bikers, naturalists, and campers. And we don't need a gondola because the parking reservation system is working so well. In fact, Park City is implementing parking reservations this year. Furthermore, Governor Cox wants to protect Utah's great outdoors. He said, "even actions that feel like a light touch can damage or even destroy a site forever," Adding a gondola to the delicate environmental balance of Little Cottonwood Canyon must be included in his thought. It would, in fact, create catastrophic and irreversible damage to LCC. Additionally, the parking reservation system is working. Alta Ski Resort general manager, Mike Maughan, told my state representative that the parking reservation system has been a tremendous win. Everyday, skiers told him it has improved their experience. This past season Alta had one of its top revenue seasons on record. We certainly don't need a gondola. The majority of locals and taxpayers don't want one. The expense cannot be justified when there are so few days each year that Snowbird skiers are vying for the first run down powder. UDOT would do well to put its money toward rebuilding/repairing flood destroyed/damaged roads in southern Utah. Please do not spoil our canyon and add to our taxburden.
27407	Theresa Heinrich	I read a lot of the 14,000 comments on your website. I thought you told us a long time ago that this comment period wasn't for keeping score for ot against. You implied in your video that wasn't the case. Why do we have to spend so many tax dollars on a gondola that will be bypassed my most drivers up LCC? Let Snowbird solve THEIR problem. Seems like all UDOT Snowbird LaCaille McCandless Neiderhauser care about is \$\$\$\$. There is more to life & to the people in our community who Will have to put up with more traffic and more difficulty getting out of their residences. We don't want to drive up beautiful Little Cottonwood Canyon and have to look at a 10 story parking structure and 260 foot towers everywhere. Doesn't Utah care about how the beautiful canyon will turn out? There are other ways to solve the existing traffic.
27408	Thomas Mckenna	Has UDOT committee calculated the additional property tax cost to Utah taxpayers to build the Gondola and will taxpayers who do not ski be taxed as well. Additionally, what percentage of the costs will be paid by the ski resorts who benefit with additional revenues? This will no doubt affect lift tickets which seems fair.
27409	Jill Mower	The gondola is not the best option and the most expensive. Good grief!!
27411	Katherine Ferguson	My family owns a home up LCC and we are vehemently opposed to a gondola. My largest opposition is that it will be partly paid for by taxpayers who will never use it--that's unethical in my opinion. It will be unsightly, and mar the beauty of the canyon. This option clearly isn't in the best interest of anyone except the ski areas, who don't seem interested in maintaining the charm of LCC, which is why people come here. It's killing the goose who laid the golden egg.
27410	Kelli Anderson	From what I can tell the local people, the ones that will be the most impacted by the gondola and or widening of the road, don't want any of it. We have always advocated for enhanced bus service and maybe tolls. Yet, here we are basically being told we have no say and as long as funding for the gondola can be found that's what is happening. This all leads me to wonder if the "comment period" is merely a formality and we actually have no say whatsoever because that few percent of those who have the influence, power and money are going to get what they want regardless of what the general public wants. And excuse me, not a "government handout to the wealthy businesses"? Sorry Mr. Maughan that's exactly how it looks.
27412	Robert Pickell	No, no, and no! The proposed gondola is financially unsound, aesthetically dreadful, and logistically dubious. \$-Ω billion for a transit solution that will require riders to spend 2 hours in a single day accessing the upper canyon? Who actually would do this more than once? Nobody. This is reminiscent of the CA bullet train - and will end just as badly. An overbudget, underused monstrosity that destroys public lands and serves as a dark mark on those that pushed it. Beyond these obvious flaws, the core issue with the gondola is that it's solving the wrong problem. There should be no goal to cram as many people into Little Cottonwood Canyon on any given weekend. Instead, the goal should be to accommodate only the numbers that allow a positive wilderness and / or snowsports experience. With this in mind, the solution is quite simple with Alta leading the way. Simply requiring reserved parking on weekends and holidays solved traffic in the upper canyon. Why not require this throughout the canyon? Costs nothing and solves everything. With modest improvements in mass transit, those without reservations or cars can also be addressed. Those businesses supporting this disaster might also want to consider the backlash they will face for their support.
27413	Sandra Jovanovic	The gondola is a terrible idea! Nobody wants it, just say no!!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27413	Sandra Jovanovic	The gondola is a terrible idea! Nobody wants it,just say no!!!
27414	Adair Kovac	This is a transparent handout to a private ski company that will be enormously environmentally destructive. We don't need to support high tourist volumes in environmentally sensitive areas. This is a terrible project idea and what it will destroy cannot be brought back.
27415	Ruth Taylor	<p>UDOT is planning on the gondola down Little Cottonwood Canyon. Click the link and tell them no!!!</p> <p>I've long advocated for a phased approach and taxpayer-friendly solutions that protect our canyons. Taxpayer-funded transportation projects should benefit ALL residents, not just ski resorts. We should be working for fiscally responsible solutions like expanded parking reservation systems, increased carpooling, and more responsive busing service. I continue to believe a gondola is not the right direction for our canyon.</p> <p>We need sustainable, innovative transportation solutions that benefit ALL of us.</p>
27416	Lexy Lovato	Given that the issue of traffic congestion is only prevalent maybe 30 days a year during peak ski season, this is an outrageously expensive solution. The ski industry is dwindling fast and this will only risk contaminating our water in the canyon as well as the natural scenery that is little Cottonwood Canyon forever. With this budget we could enact real change with our states horrible air pollution problem, saving traffic for a few weeks a year, won't do that. Please deny this proposition.
27417	Mikayla Willis	<p>No gondola* there are better alternatives that don't cost 50 million dollars. All the options that are being compared to the gondola are unrealistic to make the gondola proposal look better. Why not a few more buses and a parking garage?! The resorts can go back to limited parking. Little Cottonwood wildlife can be a priority over tourists. I am a local athlete that rides for both Alta and Bird and I can't understand how the gondola is the preferred alternative when every local I know is against the gondola proposal. I ski in little cottonwood 6+ days a week. I promise you I don't live under a rock and I'm speaking for the vast majority of locals and pro skiers when I say the gondola would be a huge mistake. I believe that as a born and raised athlete geared toward pushing women's skiing, my opinion should be valued more than corporate opinion. Can't we commit to limiting parking with the same system Alta used this previous season across both resorts? The problem primarily exists on weekends and holidays. Season pass holders get a code for free parking all year and then you just need to reserve it. Limiting parking would undoubtedly improve the experience in Little Cottonwood for everyone. No matter what, people are going to be against change. Watching your home turn into a tourist attraction before your eyes are heartbreaking. We have an issue with capacity at the resorts. Sitting in a lift line all day when we average 6-minute laps makes training way less productive:/ A gondola is a bad idea. I've sent the statistics before along with a handful of other people I could imagine. The gondola would improve accessibility for tourists and drive out all the locals. It would obstruct views - even if it's camouflaged you can't change the fact that there would be a big gondola in the middle of the canyon. It would ruin the secluded/ sheltered vibe of Little Cottonwood. A gondola would be worse than what Vail did to Park City!!! Park City is sad because so many athletes have had to quit because of commercialism taking away culture, prices increasing, parking struggles, and crowds. LCC doesn't deserve to ever be overtaken by the dark side of corrupt capitalism influence. The mountains are too beautiful to be overcrowded by gapers. It should be a crime to commercialize LCC anymore the way the ski industry tends to! LCC is not Jackson Hole (not yet at least). The wildlife in Little Cottonwood should be a priority over the convenience of an obstructive gondola. Just because the idea seems cool at first, doesn't mean it's a good idea! It's simply a tourist attraction and even if you can limit the people on the gondola you can't limit the people diving in the canyon in addition to that. In all honesty, you gotta consider that Alta and Snowbirds' target market is ski bums who prioritize their beer in the parking lot after skiing. This is just one example but taking that away would simply ruin the community culture. In conclusion, a gondola would strip LCC of much more than what the convenience would be worth. Thank you, please value my perspective - speaking for locals and committed skiers. -Mikayla Willis</p>

ID	Full Name	Comment
27419	John Kennington	<p>Thank you for soliciting comments on this most important issue.</p> <p>It is unfortunate that this expensive project is proposed to serve just two businesses only for a maximum of 90 - 120 days per year, at this, the twilight of the ski resort age, with shortening ski seasons and rising ticket prices, to remediate traffic conditions that occur just 15 - 30 days per year. This project seems to be proposed about 50 years too late. I am, therefore, opposed to the proposed Gondola B project for the following reasons:</p> <ul style="list-style-type: none"> -One glaring omission for this project is that it should be proposed in light of what would also be envisioned for Big Cottonwood Canyon (BCC), as well. For example, in the future will it also be envisioned to serve the needs of the two resorts in BCC by extending the gondola from Alta to Solitude and Brighton by a taxpayer funded additional extension? As such I would be most opposed to any further construction resembling a ski-interconnect. -I do agree that easier, less invasive options should be implemented in LCC before the gondola construction is considered, like tolling and limiting single occupancy vehicles on snow days, building the snow sheds, enhancing trailhead parking lots and enhancing the bus service with more, cheaper rides, flexible schedules and better buses. I would then propose that the schedule of the project be paused for at least two ski seasons to conduct traffic studies to determine if further measures are needed to bring traffic congestion down to acceptable levels. After that, any additional needed improvements should be considered and designed. Such preliminary measures may potentially save the state lots of money. Such evidence of this needed traffic mitigation is already apparent with various resorts' implementation of parking requirements and the recent UTA Free Fare February which reduced the traffic loads in the canyons. There are plenty of other large resource needs, like saving the Great Salt and Utah Lakes, mitigating the homeless problem, and addressing air quality and climate change problems, than to spend significant resources on a declining tourist issue. -Gondola service during adverse weather conditions may be spotty and inconsistent, causing it to be less dependable. For example, service may be halted during avalanche mitigation work and high wind conditions. -The road already exists and will always be needed to service the canyons. It has the potential to service all canyon users for the entire year with only slight improvements, the snow sheds and better mass transit, all at much less expense than the gondola. -A full length canyon gondola will greatly diminish the view shed, is too long and expensive a ride to continually attract tourists, and will likely be much less needed by the time it's completed. For those who want a tourist attraction in LCC, one already exists, with the Snowbird gondola which has great bottom and top facilities, fantastic views and is not too long or expensive a ride. It is also positioned to the side of the canyon, which is less intrusive to the canyon view shed. -Installation of a 2500 car capacity parking garage, with its ancillary businesses, will create a traffic congestion problem in that part of Hwy 210 and the area around it, intensifying the exact problem we are trying to avoid. -In modifying Wasatch Blvd through Cottonwood Heights, instead of expensive pedestrian overpasses, please consider installing several raised pedestrian crosswalks which are much cheaper, are self-enforcing and they will calm traffic.
27420	Mary Whittaker	<p>I do not support the proposed gondola due to the limited number of local residents who would benefit from it or who could afford to use it. I would like the bus/ toll option to be given the chance to solve the problems, as this option is less expensive and would benefit the greatest number of local users in all seasons.</p>
27421	Donna Thomas	<p>I am opposed to the gondola due to the enormous cost to tax payers and I rarely use the canyon. This unnecessary expense will be costly for seniors and other middle class families. I think the gondola cable is unsightly and will impact other types of recreational activities in the canyon. For these and many other reasons I do not support this action. There are more cost effective ways to accomplish this. Please No Gondola!</p>
27422	Donald Gartman	<p>I was heartened to see that the implementation of the proposed recommendation was not immediate, but included the 'Phased Implementation'. I was saddened to see the long term plan for a gondola. The Swiss build great gondolas. I say this because they have the most experience building gondolas and may be involved in building this one. I know there are a number of large passenger gondolas in Switzerland and some other places, but most of them are in areas that are much broader than Little Cottonwood Canyon, hence have less visual impact. When I look at the computer generations of what a gondola would look like in the canyon, I am shocked. God gave us this awe inspiring canyon, but man could take it away, for now and future generations. And this desecration of beauty and grandeur all to benefit 2 ski resorts and the relative few tourists to Utah who use them. What about the 'economic benefit' from tourists who ski at our other ski areas? What about Snowbird and Alta requiring reservations with staggered start times (and leave times). That is possible with smartphone passes, or even smart passes, monitored prior to skiers entering the lift lines. What about limits on the number of skiers per day, tolls, limits on parking permits? Come on. A gondola blighting the canyon does not really benefit the 2 ski resorts the rest of the year, yet they will take away from the natural wonder all year, and forever, for a ski industry which could diminish, or even go away, sooner.</p>
27423	Melissa Wanserski	<p>I have commented previously and once again am asking to be heard that a gondola is NOT wanted in our community. A bus system is preferred, as well as incentives for all users, especially ski resort users, to use it. My community wants to keep our wild canyon beautiful and unhindered. We do not want an unsightly gondola that would serve no one but the elite ski resorts. We want buses that can make stops at all locations throughout the canyon, at a variety of times, is affordable to all, and greater disadvantages for people who don't carpool or take the bus. Thank you.</p>

28147	Garrett Wilson	<p>Use hundreds of millions of taxpayer dollars to benefit not hikers or bikers, but rather privately-owned corporations? Are you all insane or just corrupt?</p> <p>A gondola will not benefit the overwhelming majority of local residents, and it will irreparably damage the majesty of the canyon. I don't care if fewer out-of-town skiers can get up the canyons. It would be good to limit traffic in the canyons regardless. Let them take the buses and carpool. Preserve LCC in its natural state. My hard-earned tax dollars should not go to this proposal that will be a blight in the canyon and will only benefit private businesses and wealthy skiers. The fact that UDOT continues to ram this down our throats when the majority of the public clearly disapprove is a red flag of corruption.</p> <p>LCC is a hiker's paradise and we should sacrifice economic growth for the preservation of the canyon, not enable more traffics up to the private ski resorts, getaways for the wealthy.</p> <p>Garrett Wilson Sandy, UT [REDACTED]</p>
27424	Wilma C	<p>What is the plan to do with all the people coming up, via gondola, to the resorts on a snow day and the resorts are closed most of the day, or all day, due to avalanche mitigation?</p> <p>When the resorts go on interlodge, what happens to all the Gondola travellers? Where do you shuttle bus them to? Do you have lodging for them?</p> <p>During interlodge, will the Gondola run?</p> <p>Do you have a viable plan for paying customers during avalanche mitigation and interlodge?</p> <p>When the road is closed due to avalanche danger, what happens to the gondola during avalanche mitigation in the canyon?</p> <p>Are the resorts selling resort passes to Gondola riders, during road closures and interlodging?</p> <p>Do Gondola riders receive a refund for riding the Gondola, and their resort passes, during resort closure?</p> <p>Comments: We've had fewer big snow days each year. The Salt Lake is shrinking, lake effect is diminishing. In 10 years, due to the climate change, there won't be enough snow to continue winter sports. Having a Gondola will only increase population on the mountains with less snow and causing even more overcrowding at the resorts.</p> <p>Construction of the project will cause noise pollution for years to come to all residents living close to wasatch boulevard, hikers, climbers, bikers and back country enthusiasts.</p> <p>I truly hope this project is not yet another deal done by greedy, power hungry, self serving individuals, seeking financial gain for themselves.</p>
27425	Teri Jenkins	<p>The gondola is a TERRIBLE idea. How stupid do you think Utahns are? Millions of dollars of OUR money to build a private gondola for rich skiers at Snowbird and Alta? Why don't THEY pay for it? Many Utahns can hardly afford food and gas, let alone pay for a mode of transportation up LCC that will NOT benefit them and that they will not be able to even afford to ride! The gondola will absolutely ruin beautiful Little Cottonwood Canyon, a canyon, as a Utah native, that I have hiked in all my life. I have also skied. I love skiing. But this gondola should not happen and I will fight to my last day to oppose it!</p>
27426	Jan Kennington	<p>I am completely in favor of everything you have planned for managing traffic PRIOR to considering a Gondola. I believe that making these initial changes will resolve most of the traffic issues. Global warming will reduce our ski season and consistent snow so I see a future where a gondola will not be needed. As a taxpayer I am also opposed to a gondola as it only supports two private companies. I would prefer my taxes be used to build affordable housing for those who are homeless. It is likely the gondola will only reduce traffic on a 5 to 10 days (weekend) of the season. Other less crowded days people will continue to drive up the canyon and will NOT utilize the gondola unless forced to. Parking in the parking structure carrying your gear to the gondola would be a pain. For families with kids it would be a NIGHTMARE. Building a garage in the area of Bells canyon would also be a traffic nightmare. We are living on a planet that is slowly warming not cooling. We are already seeing these effects on the consistency of regular snow fall. 25 years ago I could ski in the backcountry in November. Now your lucky if there is enough coverage by January. Building a Gondola would be a poor decision only meant to put money in the pockets of a few people and costing money to the average person who may or may not ski</p>
27427	Elizabeth King	<p>Wow. 80% of Utah people do not want the Gondola. Who does it benefit? Some politicians and folks at Snowbird who have "quietly" purchased large tracts of land around La Caille. UDOT is destroying our canyon for money. What we want is redesigned streets for bikes and pedestrians and to slow traffic and curtail noise. Wasatch is full of mufflerless motorbikes and there is no noise enforcement. It's what I've come to expect from this state of pious thieves. Shame on you! Your children and grandchildren will have nothing left to protect.</p>

27428	Kevan King	80% of Utah people do not want the Gondola. What we want is redesigned streets for bikes and pedestrians and to slow traffic and curtail noise. Wasatch is full of mufflerless motorcycles and there is no noise enforcement. Who does it benefit? Some politicians and folks at Snowbird who have "quietly" purchased large tracts of land around La Callie. UDOT is destroying our canyon for money.
27429	Kevan King	80% of Utah people do not want the Gondola. Who does it benefit? Some politicians and folks at Snowbird who have "quietly" purchased large tracts of land around La Callie. UDOT is destroying our canyon for money. Where are all your investigative journalists? This Gondola clearly benefits a few dishonest politicians. Why don't you follow the money and expose these thieves and would be destroyers of our beautiful state. What we want is redesigned streets for bikes and pedestrians and to slow traffic and curtail noise. Wasatch is full of mufflerless motorbikes and there is no noise enforcement. It's what I've come to expect from this state of pious thieves. Shame on you! Your children and grandchildren will have nothing left to protect. I hear that Utah officials approved a plan for "small mining operations" in Parley's Canyon. John Baza, (may your name go down in infamy) director of the Utah Division of Oil, Gas and Mining, approved Granite Construction's request to operate a mine owned by Tree Farm, LLC, near Mount Aire. These two horrible destructive projects still need approval. Come on journalists! Do some investigation and lay bare the truth.
27430	Clive Watson	After many years as a ski patrol, lift crew and instructor I have never failed to enjoy the unobstructed panorama of our beautiful canyons.....some say the gondola is "beautiful".....what could be beautiful when it impacts the god.....or Mother Nature, given view of this gorgeous view.....that serves a commercial few (Snowbird & Alta). Further, I have seen no plan to evacuate the gondola in the event of a crisis or shutdown, which I saw often as a patrolman at Park city. I encourage those in power to look at a groundhog [ground] based solution, be it expanded bus traffic or a more easily maintained track system. Clive Watson
27431	John Jacobs	Please build the Gondola!!! Feel free to knock down any ree with or without a protester in it to get it done!
27432	Mayra Estrada	Please do not build a gondola. Keep Utah beautiful
27433	Ron Steckler	I think its the best alternative. Please try to hide the lift towers if possible.
27434	Rex Nelson	I am a Sandy resident and have been skiing in little cottonwood for the past 5 years. I have seen the resorts traffic drastically increase. I think the proposed solution should be reevaluated. Expanded bus service makes more sense. Even closing down the road to private vehicles would be preferred. This way the number of busses can be increased/decreased based on demand. Build snow shelters in the avalanche paths. The gondola is not the right solution here. It cannot be adapted and does not have enough capacity.
27435	Kyler Roush	Thank you UDOT for taking the time needed to come to the appropriate decision of a Gondola. I believe the facts stand for themselves the Gondola is the lease environmentally impactful choice. I look forward to its eventual implementation.
27436	Donna Knight	What's irking me is that SLCounty residents are expected to pay for all of this, and It benefits only the skiers and the ski resorts! I'm neither, and I do not want to pay for this for that slice of people
27437	Arthur Lipson	I am a resident of Cottonwood Heights and for many years purchased an AltaBird pass. I strongly object to the tram. It will be an ugly scar on a beautiful canyon. It only benefits two ski area. I favor tolling to discourage vehicle traffic and to pay for free busses. Charge for parking. This is a political ripoff. Sham on you.
27438	Pamela Ballard	WE, THE PUBLIC AND CITIZENS OF COTTONWOOD HEIGHTS HAVE MADE IS OBVIOUS AND CLEAR WE DO NOT WANT THE GONDOLA - EVER!!! Maybe this should go to a vote before you are allowed to process against the will of the people.
27439	Craig Lindsey	With the apparent transparency offered by the UDOT EIS contrasted by hyperbole spread by those against, I generally support the direction chosen as the least environmentally impactful. I support the option least impactful to the environment, despite whose view might be impacted.
27440	Michael Bates	Having lived in Salt Lake for multiple winters, I would love to see the project move forward. I remember a couple times trying to make it up the canyon stuffed in a buss elbow to elbow with as many people the buss could hold. Then having to sit in traffic stuffed with all the people for up to an hour or more. I have been to Lake Tahoe and rode the gondola there and it was a very pleasant experience.
27441	Braydon Harris	Electric buses, maditory carpooling. Absolutely no gondola!!!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28146	Annalise Mortensen	<p>The popularity of Little Cottonwood Recreation Area has become an increasingly apparent problem. Transportation in the canyon is always backed up, unsafe, and unreliable. I think the only solution to this problem is a gondola. Though there are disadvantages to traveling publicly, the gondola offers improved and more eco friendly ways to travel. Advantages such as sustainability, safety, and cost-effectiveness are just a few pros to building the gondola.</p> <p>Sustainability is an outcome of building the gondola because it protects wildlife among habitats and trails. The construction of it would be small enough to, overall, help more than hurt. After construction, the gondola produces much less pollution in our air for the eco system. Safety is a big advantage for multiple reasons. Avalanches and landslides have been consistent enough in this particular canyon to be worrisome. According to "Save Little Cottonwood Canyon" by Gondola works, "A gondola would...ingress and egress in all weather conditions, even if the highway was temporarily closed to vehicles." Despite any weather conditions, the gondola would offer a mode of transportation that is safe.</p> <p>A big disadvantage that has been talked about when considering building the gondola in Little Cottonwood Canyon is the cost of it. A source from UDOT News explains that the total cost would be \$550 million dollars. This is a large amount of money- definitely something to consider in the scheme of things- however, the good outweighs the bad despite the cost. The gondola is cost-effective because it provides more tourist attraction and less expense in road work.</p> <p>Thank you, student.</p>
27442	Wei Shen	As a Sandy city resident, like most people around me, I'm opposed of the gondola solution. And I believe the authority that will make the decision should listen to what people say.
27443	Stanley Russell	I am a life long Utah resident and have lived in Sandy, Ut for 42 years. I am 100% AGAINST the Gondola plan for the Little Cottonwood Canyon. Using additional buses, technology tracking of traffic, limiting travel at high traffic time and alerting users of such limit, and charging fees for usage at high traffic times will naturally control traffic flow. Most of us that live in the affected neighborhoods no longer use the local canyons due to the congestion but will suffer the effects of pushing the traffic problems into our neighborhoods AND using taxpayers funds to do it!
27444	Terri Moser	Keep the gondola ? and update it even if new redone is needed. Move it to where it needs to be to be the best middle for all
27445	Olivia Beadner	I ski frequently in Little Cottonwood Canyon and am therefore very aware of the issue. This is not the proper solution and I would rather take the bus or carpool or anything else than add more infrastructure into this precious canyon. Utah's wilderness and environment advocates have long been ignored by public officials. I urge you to understand that the impact of this project will have repercussions for decades. The exact reason why Utah is so beautiful and does bring in money will eventually be destroyed if we continue like this. Skiing, climbing, hiking, and fishing all thrive in the Wasatch Front. The wildlife has a haven deep in these mountains, and they are a drive for people to visit and spend time here. This is their home first, not ours. We have already destroyed the valley, Utah Lake, and the Great Salt Lake is rapidly drying up. Please put money into harm reduction for the residents of Utah first before beginning a lengthy construction project that very few want. Listen to the voice of the many, not the money of the few. This is the whole reason you exist, isn't it? Do you remember that you are to serve the people of this great state? I love being a recent resident of Utah, but I am devastated by how this land is taken care of. While there is still snow, I would love to ski. It won't last forever, and while that is devastating and will lead to less money put into the economy, a gondola will only make it worse. Please let us enjoy the land while it is still here.
27446	David Cook	Please please please just implement tolls, HOV passes, more park and ride options, car pooling options, and additional buses so that we can keep the canyon free of construction and permanent and expensive gondolas that will leave our canyons changed forever.
27447	Theadora Sakata	I still think widening Wasatch boulevard is a mistake. We need better transportation options than more commuter cars as the valley continues to grow. Instead of extra car lanes, we should be building protected bike lanes separated from traffic by more than a paint stripe, and there should be walking/jogging paths separate from the protected bike paths. We also want functional public transit in the valley, including in this area, so that people can get out of their cars and still get to work within a reasonable amount of time. This would reduce the capacity constraints. We want and need safety as well as better options than cars for commuting on Wasatch Blvd.
27448	Warren Xanthos	Please do not build the gondola. It will cost taxpayers untold millions of dollars while primarily benefitting privately owned ski resorts. It will also damage summertime recreational activities. Please consider other options. Increased buses. Road tolls etc. The gondola is not necessary, and will hurt Utahns.
27449	Nick Curtis	There are better ways such as limiting the number of people in the resort each day so that the gondola does not have to destroy our beautiful canyon
27450	Kole Beeny	LEAVE OUR CANYONS ALONE... this is entirely a money making process with little to no support from the general public. LEAVE NATURE ALONE....
27451	Scott Terry	No gondola! It brings much more damage to the canyon only to benefit the resorts and the rich out of state ski patrons off of the local taxpayers. Add more public transportation and allow local access to the entire canyon all year while relieving the canyon mouth/canyon traffic nightmare.
27452	Kirk Talbot	great Job. Please move forward with this proposal
27453	Tony Scott	Does not matter and has nothing to do with what is the best option for the canyon. All the public commenting is just a fraud. What decision will be made is what is best for UDOT financially. In this case the decision will be the work, contract work, favors paid and being paid and tax money. Comment all you want, go to the meetings and waist your time.....Gondola will be the decision regardless of public input and/or what's best for the canyon. It's like the meetings about all the apartment complexes.....community meets and complains about traffic, too many people, influx of low income questionable people, crimes etc etc. the county adds up all the extra tax money and guess what ... poof apartment complex approved. By law they have to hold the meetings, public comment on and on. The decision is already made. Follow the dollar ALWAYS.

27454	Patti O'keefe	I strongly oppose the gondola option. Why should taxpayers pay for an expensive intrusion into the canyon that primarily benefits resort owners? This is "Socializing costs and privatizing profits" on a massive scale. I strongly support: less intrusive means (tolling and/or restricting single-use vehicles during high-use periods); maintaining existing visual experience of the canyon; keeping existing recreational opportunities intact; improving access for all users, not just resort visitors.
27455	Ross Hildebrandt	I do not approve of this.
27456	Jaren Tolman	Very happy that we are going the gondola option. Some are unhappy at the moment but down the road all will realize this is by far the best and most environmentally friendly option!
27457	Devon Aubrey	The decision to build a gondola before exhausting simpler options is asinine. I have an adventure tourism business here in Utah and I and my customers enjoy the canyons all year long and I'm in favor of installing a tollbooth at the mouth of the canyon. It would help reduce canyon traffic while providing much needed funding for the Forest Service and the state to update and maintain infrastructure in the canyon. I've worked at ski resorts most of my adult life and know that lifts and gondolas never work all the time. A gondola is not a fix all answer and will come with its own problems. As soon as people realize that it will have holds and delays and have maintenance issues, they will stop using it and go back to driving up the canyon and we'll be back at the beginning with a huge gondola and bill to build it with hardly anyone using it. Who is to stay that people will even use the gondola in the way that the organizers expect. A tollbooth would force everyone that wants to use the canyon to pay to go up. Paying to go up the canyon and having to pay for parking at the ski resorts and at trailheads would help reduce traffic and protect the beauty of the canyon, scenic views, and the wildlife. Let's please consider other far cheaper and more environmentally friendly options. Thank you for giving us the option to comment.
27458	Dani Mapes	I urge you to please consider widening the road and limiting traffic to busses in the winter. This will prevent the construction of an eye sore that may not be needed in 10 years due to climate change. It will also preserve a lot of the area right around LCC which is used by many for many activities outside of just access to the ski mountains.
27459	Jon Hallman	This project is only to benefit the ski industry during winter months so that means it would sit at lower usage during the summer at a cost that way exceeds electric busses. I believe that the states tax payers should not pay for a service that is being used for a select group for 4 to 5 months of the year. I am a 65 year old Utah native born in SLC please consider electric busses instead of destroying the beautiful canyon thanks.
27460	Kurt Nosack	I am fully against the proposed gondola system. It is expensive, inflexible and serves primaythe ski resorts while being funded by taxpayers. No to the gondola!
27461	Virtual-localvex Virtual-localvex	canadian virtual phone number
27462	Peggy Scott	Please do not put in a gondola. It will be unsightly expensive and make enjoying our canyons nearly impossible.
27463	James Sferas	I oppose spending public money, tax money, to build a Gondola.
27464	Thomas Kellough	This is not a good idea why are tax payers being footed the bill for A snowbird and Alta issue. They are private corporations let them fund a solution . The gondola will not benefit anyone who wants to backcountry ski or hike/mountain bike. The gondola won't be Able to run on windy days or during storms. It will also destroy the wonderful views in the canyon. All this will do is cost citizens of the state more in taxes we have roadways that could use serious help over this. I rather have the freeway sections on bangarter completed going to 201 and 80 I spent 85% of the time on my commute sitting in traffic between. 201 and 4700s. Build overpasses and eliminate the traffic signals. In that area. Or even mtn view 4100s-2700s needs overpasses those lights kill traffic flow also.
27465	Daniel Anson	That \$600 million is a desecration of natural wild spaces, leading to darkness (remember rhe lorax?). It could be an *investment* in a brighter future by putting that money into education, where nationally, we are lagging... You can make the right choice. Invest in our future and our children's future. Not deep pockets.
27466	Amy Sorensen	NO GONDOLA!!
27467	April Goddard	I support the enhanced bus service in peak period shoulder lane. This is affordable, protects the beauty of the canyon, and recognizes that LCC is an asset for the entire community - climbers, hikers, bikers - and not just skiers.
27468	Judy Calder	I am opposed to taxes for any solution that only benefits skiers. The gondola should be paid for by the ski resort, not all of the taxpayers in Utah.
27469	William Rimmer	I support the gondola. I still have not skied in Utah, in part because of apocryphal stories of the traffic in Little Cottonwood Canyon. We need more options than just cars.
27470	Clayton Jones	Absolutely love this idea. I think it solves all the problems currently facing the canyon and provides the least amount of environmental impact.
27471	Joseph Evans	I think the gondola is a terrible idea! It favors access to the resorts and leaves out the rest of the canyon recreation and I don't see how it could possibly move enough people to reduce congestion significantly. Since there still need to be a major investment in parking for the gondola, why not just build more parking and increase bus access. And invest in improving the roads? The gondola seems like a gimmick, not a rational solutions. In addition to increase bussing we could look into canyon access reservations like the national parks have been doing. That would limit canyon access to set capacity and encourage use of public transit and carpooling. PLEASE DO NOT RUIN THE SKYLINE AND WASTE MONY ON AN IMPRACTICAL SOLUTION LIKE THE GONDOLA!!! It really seems like someone at udot is getting a kickback on this since it doesn't have widespread support and feels like it's being forced on the public.
27472	Pascale Gulick	Thank you for letting the public comment, but this is an awful idea for solving lcc congestion. It will only create more bottlenecks and traffic at both ends of the canyon. We understand that finding a perfect solution is difficult but installing a gondola is the exact opposite direction we need to be going in.
27473	Emily Evans	This just seems like a terrible idea to me. I suspect there must be some special interest/kickback going on here. Please don't do this. Little Cottonwood Canyon is such a pretty canyon and a gondola is going to ruin it! This makes no sense to me.

ID	Full Name	Comment
27474	Dolly Garlo	<p>Greetings,</p> <p>I am a human behavior specialist.</p> <p>Of the current proposal as of September 2022, I agree only with the enhanced bus service portion of the proposal:</p> <p>"The proposed phasing would include increased and improved bus service as described in the Enhanced Bus Service Alternative (with no canyon roadway widening), tolling or restrictions on single occupancy vehicles, and the construction of mobility hubs. UDOT would also proceed with widening and other improvements to Wasatch Boulevard, constructing snow sheds, and implementing trailhead and roadside parking improvements, as funding allows. "</p> <p>I do not agree with the gondola proposal. It is too costly and would create great disruption in its construction, added parking, etc.</p> <p>I will reiterate earlier comments I made about creating more, affordable, locker storage for day use at the ski areas. People use their individual vehicles to bring additional clothing and equipment, for skiing/boarding and afterward with them in their vehicles. Having a place to bring a bag and after ski boots, etc. to the ski areas would make using public transportation MUCH more convenient, and alleviate the desire to bring one's own individual vehicle to the resorts.</p> <p>These proposals all leave out this individual use consideration and the human behaviors of individuals and families and the gear needed for accessing these public land areas in all seasons - not just winter, but especially winter for snow sports.</p> <p>Please include some consideration of adding affordable lockers as part of the resource upgrades. Take a look at the cubby and locker areas now, and how congested they are when in use, to get a realistic idea of the 'micro' aspects of people.</p> <p>The gondola proposal seems to take mostly into account the desires of big money investment interests and not necessarily how people will use the resources. Even if you get them up the canyon by gondola, and maybe especially - like with bus service public transport - people STILL need a convenient place to manage their additional gear to spend a day in nature in all four seasons. Winter just presents a need for greater gear and clothing options. Lockers would help address that a LOT, giving people more incentive to leave their own vehicles out of the canyon.</p>
27475	Chad Levanger	<p>If this is going to be funded it should be by the resort companies and not the taxpayer. These resorts are so expensive these days they are not even worth going to, I will never use the gondola and I do NOT want my taxes to pay for it. Snowbird owns the property that will be sold for the gondola to sit on, this should not need too be purchased by the state they should donate it at minimum. Parking lot land for the gondola should be purchased by Alta. All funding for the gondola should be from the two companies that stand to make the most, but they wont because it is not a good investment for them and that should not be fronted by the tax payer!</p>
27476	Matthew Darling	<p>If any gondola is to be built, it must be built at the scale where it will create a substantive difference, being able to remove 75% of vehicles from the road. The 1000 person per hour stated capacity is woefully inadequate and could at best remove 25% of vehicles on the busiest of days. The biggest risk of this project is under-utilization, and if passengers have to wait an hour or more to get on the gondola, then your average person would just assume drive.</p> <p>The system needs to be able to move the majority of passengers within 3 hours, as the majority of skiers show up between 7-10 am. On busy days as many as 10,000 people might be intending to ski between the 2 resorts. It is entirely feasible to move these people as 3S systems are capable of moving well in excess of 3000 people per hour. The incremental cost of capacity increase is rather small in comparison to the overall cost of the infrastructure.</p> <p>So I'm pleading you, do it right the first time or don't do it at all. You risk wasting half a billion dollars on a shiny machine if it ends up being less convenient than driving.</p>
27477	Phil Palminere	<p>I fully support the proposed Gondola. Pay attention to the anti-everything crowd who say "no" to everything. Those who seek to protect the environment by opposing solutions will find they are destroying the very environment they seek to protect. I give this project 2 Thumbs-Up!</p>
27478	Chris Hughes	<p>I do not know a single person who actually wants the gondola. You are taking one of the most beautiful places and making it look terrible.</p>
27479	Stephan Cross	<p>Don't do it. There are much better and more eminent problems to solve using tax dollars than transporting people to ski resorts. What about a shrinking Salt Lake or the condition of highway 201 or teacher shortages or low low funding for K-12 (when compared nationally)?</p>
27480	Keenan Waeschle	<p>As a cottonwood heights resident and frequent user of little cottonwood canyon I am very disappointed in the current plan to build a gondola that will primarily benefit Alta and snowbird at the high cost to taxpayers.</p> <p>The gondola does nothing to ease access to the busy trailheads before snowbird, and doesnt account for a reasonable solution once the parking lots at the bottom of the canyons fill.</p> <p>Widen the road, expand bus services and access and lower the cost to ride them. That's a tax burden I can easily support, as it benefits the people of the salt lake valley, not just the owners of snowbird and Alta at the expense of salt lake taxpayers.</p>
27481	Norah Visker	<p>The gondola needs more stops or routes than just the ski resorts if it's going to be built using taxpayer money. If the ski resorts want a direct line of transportation they can buy it themselves.</p>

27482	Becky Hansen	Go for it. I would love to ride a gondola up Little Cottonwood Canyon every season of the year. It would be a tourist attraction, and certainly be less pollution than buses and cars. It's a seems like a no brainer. It also seems that those opposed are the ones that live in the area. Sometimes progress has to consider what is best for the majority not the minority. Go Gondola!
27483	Tony Defries	<p>The gondola is not the right answer - its expensive and not needed and will damage the canyon. The best solution is distributed car parking in the valley - the quarry, at LaCalle, and in car park structures close to the I-15 in Sandy. Electric or hydrogen powered buses should then run up the canyons. Cars should be banned from the canyon - not tolls. If this does not work then build the the tram, but it should.</p> <p>This would also work for BCC too. It's a no brainer. The sooner BCC has this the better, as it has the same issues as LCC</p>
27484	Dominic Fratto	This is not an appropriate way to reduce traffic to the resorts. Why is this happening when the majority of citizens are opposed to it? Have a vote.
27485	Kathi Whitman	I am opposed to the Gondola based on not only the visual destruction of the canyon, but the price tag given other more-pressing needs for taxpayer/government grant money in our area. The "alternatives" never addressed a lottery system for skiing, which would likely solve the problem and could be structured to fit a bus-only access during the winter. Because the resorts have already purchased the land for the base facility and parking does not justify their influence on a decision that has neither non-taxpayer based funding nor majority support among citizens impacted. If we want federal funding for our area, let's get more light rail and train travel throughout the region and incentivize people to use it. If local citizens can't get to work, a doctor, or a grocery store by public transit, why should we use precious transportation subsidies and taxpayer money to help those with the money go skiing.
27486	Jay Larsen	<p>Every engineer knows the closest distance between 2 points is a straight line. That being said, rather than have the gondola follow the canyon. I'd rather see a straight-line go from near say 80th south up to a stop at a trailhead at top of OSullivan peak then drop down to Snowbird and Alta. This way, people will enjoy beautiful view of SL valley and little cottonwood canyon.</p> <p>Another option starts near Bear Canyon in Draper straight up to Lone Peak the some long lines to peaks to get to stops at White Baldy and Twin peaks then meet the Snowbird gondola. This option people would see beautiful lakes below. Please do not follow the canyon up. Sell people these awesome views.</p>
27487	Bill Trevithick	<p>I do not want a gondola built in Little Cottonwood canyon.</p> <p>If built it will be visible from almost everywhere in the canyon and greatly detract from the beauty on the canyon. Most of the traffic congestion happens in a couple of hours in the morning and in the late afternoon. I see the cars lined up for miles in the morning in the winter. I cannot imagine a gondola will be able to take enough people in the 2 short windows in the am and pm to make much of a dent in the rush to get up and down the canyon.</p> <p>The gondola also only stops at the 2 resorts. What about people who want to go somewhere else.</p> <p>The gondola would be built mostly for the benefit of the 2 resorts in the winter when most of the problems occur. If it is built it should be paid for by the resorts who benefit from it and the skiers who use it. Do not use public funds to subsidize private resorts.</p> <p>Please do not ruin our canyon by building the gondola.</p>
27488	Margo Harpster	There are so many reasons this is bad. It is already taxing the environment to have that heavy of use. It will lead to resorts requests for expansion runs which also will push the environment. It is already so crowded on the slopes it is truly unsafe. And crowds create long lift lines so you get 5-6 runs on a \$150+ day pass! This represents significant free profit for two resorts. It will impact other users in the canyon. Wonder how reliable it will be in extreme weather. Other resorts And national parks have implemented reservations systems to manage the crowds and traffic. Improved bus service is a very valid part of the real sound solutions.
27489	Beckie Andersen	I am for the gondola. They work well throughout Europe and could work well in LCC. Cars and bus traffic are not a long term solution.
27490	Joan Gregory	<p>I support the common sense solutions approach proposed by Mayor Jenny Wilson and described here: https://mcusercontent.com/cd45be9655184a589ee4d23f0/files/730ac101-68cb-bed9-2b47-d07e86309227/LCC_EIS_Common_Sense_Solutions_Handout_v3_kf.pdf The Common-Sense Solutions Approach offers a more fiscally conservative AND sustainable option. Fiscal conservatives and environmentalists agree that a \$500 million-plus, environmentally harmful infrastructure project that benefits an extremely narrow population of people is a BAD idea.</p>
27491	Matthew Black	I oppose Gondola Alternative B. I think so much taxpayer money should [not] be spent to service two ski resorts so few days a year. Also, I would like to see just a fraction of that money spent on other conservation projects in the canyon. Watershed and wildlife protections should be prioritized over increasing human use. As our population continues to grow, I would support limiting and capping access to the canyon.

27492	Tim Greenwood	<p>I'm writing to you about UDOT's proposed transportation alternatives in Little Cottonwood Canyon and the risk they pose to non-resort users, such as climbers. UDOT has identified two preferred transportation alternatives to mitigate winter-time traffic issues: a gondola or widening the road for additional bus-only lanes. I am advocating for a less impactful alternative: expanded bus service that is fiscally responsible and would serve all canyon users year-round, coupled with other traffic mitigation measures such as tolling.</p> <p>UDOT's transportation proposals are only a partial solution, serving only resort users in the canyon. Little Cottonwood Canyon is popular with many user groups, including hikers, runners, mountain bikers, and climbers. UDOT's proposals are short-sighted and do not stop at trailheads or other parking areas, ignoring these groups.</p> <p>Both of UDOT's proposals come with initial construction cost estimates of over \$500 million. There are more fiscally responsible options. Not only would an expanded bus service be less impactful to the landscape, it would use existing infrastructure and would cost less to implement.</p> <p>UDOT's proposals are aimed only at mitigating wintertime traffic in Little Cottonwood Canyon, even though the canyon is popular in all seasons. A year-round expanded bus service would address traffic problems throughout the year.</p> <p>UDOT's transportation proposals serve only those traveling to resorts, leaving all other canyon users behind. In addition, the proposals threaten world-class climbing resources. The road widening alternative would eliminate a large number of boulders that are used for climbing and the gondola alternative would ruin the climbing experience for everyone. Rock climbing has occurred in Little Cottonwood Canyon since the 1960s and its development has played a major role in the global climbing community. It is unacceptable to remove a single recreation group's access at the benefit of private industry on public land. Less impactful options exist and should be implemented before making permanent changes to the canyon.</p>
27493	Drew Chamberlain	No Gondola!
27494	Stan Morgan	No gondola
27495	Julie Anderson	I oppose this gondola. There are less expensive solutions that meet the needs of the public without taxing them outrageously!
27496	Tami Derezotes	please, do not allow a gondola in the canyons as a means of transport. it is going to ruin the canyon in so many ways. there are other options to keep it open and regulated.
27497	Ken Andrews	Build it already.
27498	Frank Crandall	The gondola is clearly there to ensure that Alta and Snowbird maximize their profit but will do nothing to help the canyon remain the beautiful place that it is. If climate change continues at the current pace, there will be nobody riding the tram in a decade.
27499	Claire Adler	As a native of Salt Lake City, Utah, I strongly oppose the construction of Gondola B. As the projections indicate, it will be a disruptive eyesore in one of the most beautiful canyons in the world. It's an unnecessary and frivolous project whose function could be easily satisfied by an additional bus lane. It's clearly aimed not at the community, but at tourists, and it's an embarrassment that the UTAH department of transportation is even considering this expensive, disruptive, and hideous development.
27501	Donna Shattuck	<p>I do not support spending tax dollars to build a gondola because it will serve only people who can afford to ski. I think tax money should be spent to benefit all Utahns. Homelessness is a bigger problem here than traffic congestion to ski resorts ~20 days each winter.</p> <p>If the ski resorts want to spend their own money, I don't like the idea of building a gondola but if they pay for it I cannot object. I just won't use it.</p>
27500	Kenneth Black	The only responsible and equitable choice is the Gondola, however it should continue over to the resort's in Big Cottonwood

ID	Full Name	Comment
27502	Diane Forster-burke	<p>Opposition to the Gondola Project in Little Cottonwood Canyon Dear UDOT decision makers,</p> <p>I have lived on Wasatch Blvd between Little and Big Cottonwood Canyons for 32 years. Yes, there are a few mornings during ski season when there are cars parked in front of my house as people await the opening of Little Cottonwood Canyon (LCC) following avalanche control measures. When I need to exit my driveway, I ask the drivers to accommodate me and they politely do so. This happens mostly after a large snow fall and on weekends. Last winter, there were only 2-3 days that I needed to ask drivers to let me out of my driveway. Most of the time, cars are on the main road moving in an orderly fashion, even on what we like to call "powder" days.</p> <p>I strongly oppose the gondola project! The gondola would ONLY serve those people intending to visit Alta or Snowbird for perhaps 3.5 months of the year. It would not work for those people in the spring, summer, and fall, who wish to rock climb, hike, or bike the canyon. And as we recognize that with Climate Change and the irreparable damage that we have done to our weather, our snow pack will be less and less. Why spend millions of dollars on a project that serves for a limited time period of the year; only works for 2 ski resorts; and will be fighting the trend of warmer weather? This would be fiscally irresponsible!</p> <p>I have looked at renderings of what the gondola towers would look like in this beautiful canyon, and it is hideous! The esthetically spectacular canyon would be forever marred by these towers.</p> <p>When US Senator Proxmire served in the Senate, he would award his "Golden Fleece" award to expensive projects that made no sense. This gondola project should definitely win this Golden Fleece award. It is an enormous expenditure to benefit two ski resorts for a few months during the year.</p> <p>I am appalled that UDOT would prefer this option above metering traffic or providing more electric buses to carry people up and down LCC. It makes absolutely no sense.</p> <p>Sincerely, Diane Forster-Burke [Redacted]</p>
27503	Ashton Wade	You're gonna have to build a parking garage anyway, why not build the garage and just use busses. Someone's getting a nice payout from this. As a [Redacted] loving republican go [Redacted] yourself
27504	Mary Corporon	The idea of putting this gondola up the canyon is horrible. The skyscraper sized towers will destroy all vistas in the canyon. The state needs to deal with this with busses. Or limit the number of people in the canyon. Or both.
27505	Mary Ann Vidrine	Please don't destroy the beauty of the canyon. Find another viable alternative. NO GONDOLA.
27506	Maria Cranor	No, No, No! Utah taxpayers should not be on the hook for yet another massive project which benefits the few. Please implement a serious bus plan before you commit to tearing up LCC. The destruction of natural beauty to support Alta and Snowbird seems especially ill conceived when we consider how damaging climate change will affect the resorts. Skiing: not a smart investment for the future.
27507	Carol Dixon	Yes I would love to have gondola. They work well in many places like Europe.
27508	Matt Sorum	The original concept was to alleviate the traffic and the amount of vehicles in the canyon and its just adding a tourist attraction to LCC. Why isn't BCC being looked at too? They have a full blown lkon resort. Unlimited days vs Alta and Snowbird only offer a handful of days. This is a terrible idea. Widening the road may take away some recreational area, buy would also not make the canyon look like trash with a giant gondola running up the middle of it. Total eyesore and takes so much beauty away from the canyon views. If you are taking about \$150m to build snow sheds for the road (unrelated to the gondola) why don't you take the cheaper option seeing as you are already allotting funds for snow sheds. Implement a fast pass like using the HOV lane with a single occupant. The die hard skiers of LCC want to drive or bus it up. I know this is years and years away from taking off, but a gondola is nothing but an eyesore to thee beautiful views.
27509	Sandi Brown	Gondola is an expensive project to serve a limited clientele with only two stops while ignoring the needs of other canyon users. Taxpayers shouldn't foot the bill to enrich two ski resorts. A reservation system for vehicles on the busiest days and increased buses which can stop at multiple locations is preferred. I am against charging for access to the canyon. If we don't do more about climate change ski resort could end up with gondolas dangling over bare slopes.
27510	Hannah Wood	This is a terrible decision. Locals will be compromised by insane tax raises in an area that is already experiencing exponential growth. I DO NOT support this act at all! Please don't do this!!!
27511	Terry Heinrich	Please do not build a gondola or parking structure. Corporate welfare, 600 million tax payer dollars, upkeep every year. Why not invest with fast frequent free bus service express up the canyons BCC & LCC. If you have to build a parking structure why not in the empty lot at Hillside Plaza that could service both canyons. Or any area that has existing structure. Or by the gravel pit. Let's make some intelligent common sense decisions please.
27512	Aaron Skabelund	Disappointed that the gondola option was chosen but glad there is not enough money to move forward. I am not in favor of the other option to widen the road either. Hopefully, the delay in moving forward will allow another option to emerge and be selected: Zion NP-style shuttle buses to transport people up and down the canyon wherever they need to go on the existing road. That is the most financially and environmentally wise option. Thanks.
27513	Diane Leaver	I am against a gondola because the taxpayers would be paying for something that only serves skiers and the resorts. There needs to be a better way to meet the needs of all canyon users. How about shuttles or a reservation system?
27514	Wendy Harding	I believe that this is a great idea to alleviate traffic in the canyon. Hope enough others agree

27515	Philip Howland	<p>I oppose the proposed UDOT's selection of a gondola for Little Cottonwood Canyon. This selection is a flaw choice that will negatively impact quality of water and will adversely impact the health and diversity of our public forests. This selection only benefits 2 privately held companies and is not in the public interest. There are other alternatives including electric bussing, mandatory canyon access and parking restrictions for the two privately held resorts that will alleviate the stated problem of traffic.</p> <p>The long term negative impacts to the canyon are, I feel, being underestimated and the potential benefits is being overstated. This is an expensive project which is unlikely to solve any problems, but will instead create environmental issues. The natural sky line will be marred by poles, wires, construction. The creek will be polluted. This is the worst decision possible for Little Cottonwood Canyon and the surrounding community. As a tax payer in Utah I strongly oppose this project.</p>

27516	Todd Eberhard	<p>Having lived in Utah for 45 years and an avid skier, I am OPPOSED to the gondola for multiple reasons and support the proposals of Mayor Jenny Wilson.</p>
29464	Anonymous	<p>Hi, I live in Cottonwood Heights my feedback on this is that for the for the canyon is tolling is the answer. You get to reduce the traffic by about 30% and we be good back to where were ten years ago. You do that by charging \$25 a car and everybody opening their friends. They'll be less, you know, yada yada if you did it in the summer and you change the price we're talking like a lot of money that could be used to improve the roadway, put in bathrooms, people to take care of the trails, increased, you know forest service patrols, Etc.. So that is my solution that red snake that we're talking about happens four times a year, maybe six or eight and guess what? I'm never in it, cuz I know to get in my car by 2:45 if I don't want to be in that traffic, so these people are dumb they're being stuck in this traffic and everybody's up in arms about it put a toll on the road and the other thing is to get rid of these morons in these crappy vehicles. and so UDOT has to do that. They don't they don't enforce the four-by-four chain rules. They don't you know, and then everybody complains, so I put a toll on the road and my other thing, sorry a million ideas, but smaller buses the people actually want to get on nobody wants to get on those giant buses that goes so slow. So anyway, good luck. I know you guys are going to do what you want to do anyway, so but that is my solution.</p>
27517	Wayne Cannon	<p>I am submitting a friendly objection to the Gondola. I am simple and not expert a business things. The price tag however sounds inflationary and not worth it. I grew up skiing and have taken my children skiing, but I would much rather ration that opportunity then to have such a permanent change to our landscape and pocket book. So I am against the gondola, for a modifed busing option and other ways to manage this. Thanks for all your work</p>
27518	Susan Olson	<p>I do not support a transportation system that does not help the many other users of the canyon besides skiers. Hikers' cars are lined up along the road in the other three seasons. Moreover, with global warming it is unclear how long the ski industry will be able to continue in Utah. We should not make this huge investment that serves such a limited purpose.</p>
27518	Susan Olson	<p>I do not support a transportation system that does not help the many other users of the canyon besides skiers. Hikers' cars are lined up along the road in the other three seasons. Moreover, with global warming it is unclear how long the ski industry will be able to continue in Utah. We should not make this huge investment that serves such a limited purpose.</p>
27519	Jaime Pedersen	<p>The gondola is a terrible option. It seems to just put money in the pocket of the ski resorts and developers. Why would we want an option that only goes once place?!</p> <p>The last thing I want up a beautiful canyon like that is an eyesore like a gondola, signaling the triumph of greed over community.</p> <p>The gondola idea needs to be shut down and the other options should be reconsidered.</p>
27520	Marvin Mitchell	<p>I visit from out of state annually and own a timeshare at snowbird. I will sell and never visit again if LCC is ruined by this proposed monstrosity. If I was a resident I'd move. Utah is giving in to big money interests and trying to create a Disney land that will kill the goose</p>
27521	Mady Seeber	<p>I have been enjoying recreating in the LCC since I was little, and am moving finally to Utah this winter. The backcountry, climbing, and alpine skiing scene in the LCC are fully unique, and while I believe that there are high traffic rates, I do not think a gondola is the appropriate solution. It is not fully accessible, as it only services so many locations and May likely destroy natural areas that make the canyon unique in the process. I believe tolling, improving public transport, asking for parking reservations at resorts among other things will make the biggest differences in traffic in the canyon and a gondola is not the solution we need.</p>
27522	Rachel Allen	<p>I'm a resident of Cottonwood Heights and live between the entrances of LCC and BCC. I do not support the gondola. This is a poorly thought proposal they are trying to push on the taxpayers of the state. A gondola is a terrible option for the canyon and will not solve any traffic, commute time, or congestion issues. What happens when there is poor weather and the gondola is on hold for hours or the day? Other simpler, less expensive, and more viable options are available. Stop pushing your gondola agenda on taxpaying residents, we do not support it.</p>
27523	Judith Sing	<p>There are other ways to reduce traffic up Little Cottonwood Canyon than to ruin it with an eyesore gondola which will only benefit skiers to Snowbird and Alta. I am a hiker. I want increased bus service that will stop at several trailheads year long. Also simply limit the number of cars allowed up the canyon, put in a toll road, so a shuttle like Zions NP. There is so much more than can be done other than charge taxpayers half a billion dollars for something only a few privileged people will use.</p>

27524	Katherine Kunz	We are completely against this proposal and feel that less expensive, less intrusive options should be explored first. For example, why not charge a use fee similar to Zion NP? That would certainly encourage ride-sharing and bus use. Or, limit auto traffic before, say 8:00, but allow buses. Right now it's simply too convenient for single riders to drive the canyon. Also, because the gondola only stops at Snowbird and Alta, this project will spend up to \$1B of taxpayer money to benefit two private resorts. The gondola doesn't relieve pressure on the canyon from those who hike or backcountry ski. Finally, our winters are getting shorter and drier. The reality is we may not have any snow in 10 years. The gondola project is a permanent solution to a problem that will likely diminish as the ski season shortens. Then we residents are left with an ugly structure that spoils the landscape.
27525	Leithen Crider	This is an absolute travesty. Please cancel the gondola and look for a less invasive way if bringing more profit to private ski resorts. I will be leaving salt lake city permanently because of this decision if it is not rectified.
27526	Shauna Whitelock	I am strongly opposed to a gondola. I can support busing expansion. I can also agree single occupant vehicles could be charged a fee please don't impose a fee on cars with multiple occupants getting into nature is good for mental health and not all can afford to pay to go
27527	Ryan Mower	We simply don't need this. It will only drive more visitors in that will create expansion of the resorts and less watershed. We have greatly affected the watershed along the Wasatch front due to the expansion in the summit, Wasatch county area.
27528	Ryan Mower	Rolling [tolling] is the best way to support and limit the use of our canyons. Funds created by tolling can be applied to search & rescue along with cleanup & maintenance minimizing tax payer expense. The cottonwoods has went too long without a toll. It is time.
27529	Ryan Mower	Trailheads need to be slightly increased. My personal opinion is most don't support handicap regulations and in addition create more impact if we expand. Rolling [tolling] or access fees would slow down the impact and fund canyon projects.
27530	Ryan Mower	We need to limit roadside parking for safety reasons and environmental impact. If we limit available parking we will also limit the impact on our trailheads and resorts. Being wilderness land what federal regulations are disrupted by the expansion of our public "wilderness" land and the watershed impact we have seen gone in California and other states.
27531	Dan Obrien	Don't build the gondola. Ban the ikon pass and see how that changes things first!
27531	Dan Obrien	Don't build the gondola. Ban the ikon pass and see how that changes things first!
27532	Jill Fonte	Would you please continue your investigation? Park City has an electric bus station at Kimball Junction. The busses are clean, quiet and environmentally friendly. Is that an option before investing in the infrastructure that will disrupt canyon views, wildlife and ecology? Alternatively, if Snowbird and Alta would make their parking fees exorbitant, people would be forced to use the bus system that's already in place.
27533	Megan Sievert	How are you moving this along without public approval? You stated that the preferred alternative wasn't going to be based on positive or negative public feedback. How is that the case when the public is funding it? Environmentalists are mad about the gondola (Save Our Canyons). You clearly weren't shooting for preservation. Recreational groups (besides skiers) are mad about it (Salt Lake Climbers Alliance). You clearly only care about the one sport that fills Alta and Snowbird's pockets. Residents are mad about it and the widening of Wasatch Boulevard (Save Not Pave). There are three separate groups that I know of who have been fighting this decision the whole time. I am against it as well and agree wholeheartedly that the public does not need to invest that kind of money into two businesses, especially with global warming. This is a shameful and obviously corrupt decision.
27534	Mark Pugliese	I'm having trouble finding the words to describe my disappointment In this decision. The reasoning behind jumping all the way to a \$550 million Gondola needs to happen before any other options have been tried makes zero sense. Limit driving up the canyon, restrict days all vehicles can drive up there, build a parking lot at the base and only allow bus travel up the canyon, etc. There are so many possible options that need to be explored to limit the traffic issue before jumping all the way to building a Gondola. This massive project would be addressing a traffic issue for a small amount of the population on a relatively small number of days when compared to 365 days of data. The Gondola is also just servicing 2 ski resorts, what about rest of the canyon? The rest of the trails, mountains, climbing, backcountry skiing, hiking, sledding, all the activities other than skiing at Alta or Snowbird that the canyon offers? This is so disappointing because it is clear that a massive majority of the people living in SLC and Cottonwood Heights that will actually deal with this change day to day don't want this but also don't matter as much as the big cash cow ski resorts that will be the only ones who benefit from this, big resort money talks louder than an angry and disappointed population of tax payers I guess.
27535	Caroline Newman	I oppose the gondola. It will be unsightly, costly and would not be needed if the ski industry was being so catered to. There has been no talk of limits to numbers of skiers at the resorts. They could use a system of caps for daily users. Like Arches allowing odd or even plates on certain days. It would reduce numbers by 50%. Or the resorts could use a timed entry approach to stagger entrance into the resorts and thus the canyon. The ski resorts are making zero concessions towards the problem. They want more more more! Lets see how serious they are towards helping canyon congestion. They need to pony up, as the sole monetary beneficiaries, oh, and state tax commission.
27536	James Burbank	My family lives very near this location and welcomes the gondola. The traffic during ski season is extreme and widening/expanding the roads is not a preferred option for us.
27537	Dennis Alexander	I am strongly opposed to a gondola in Little Cottonwood Canyon. it appears to be the least effective in mitigating environmental impact and least convenient for those seeking the canyon experience beyond skiing.
27538	Mark Evans	Why dump a \$550 million tax burden on the citizens of Utah for the benefit of Snowbird and Alta. Let them pay for it. Too much of a tax burden to foist on the taxpayer.
27539	Jill Manwaring	No gondola, More park and rides at mouth of canyon the gravel pit would be good or old mill for parking.
28143	Jill Manwaring	No gondola, More park and rides at mouth of canyon the gravel pit would be good or old mill for parking
27540	Jennifer Young	Strongly opposed to gondola. 1)It too slow, 60 minute ride versus 20 minute drive 2) It should not be tax payer funded, if wanted, resort owners should fund. 3) there are much better traffic and environmental solutions, buses for one!

ID	Full Name	Comment
27541	Jon Hager	<p>To Whom It May Concern,</p> <p>I am opposed to the UDOT plan of a gondola in Little Cottonwood Canyon or anywhere in the Wasatch. A gondola would be an eyesore and a waste of tax-payer money, not providing enough visitation relief and only benefiting the local ski resorts at the public's expense. This is a horrible idea that would completely change the wild aesthetics of the canyon. Instead of looking up at the majestic crags of the mountains, one would see the cables and gondola cars overhead, completely ruining the mountain experience. Why is UDOT catering to the obvious choice that mainly benefits the ski resorts? I strongly urge UDOT to scrap the gondola plan and look into other less expensive and practical methods of alleviating visitor impact in our wonderful canyons.</p> <p>Thank You, Jon Hager [REDACTED]</p>
27542	Sophia Edwards	NO NO NO!!
27543	Andrew Tritt	I think the plan to put in a gondola is disgusting. This plan fixes one problem, only to create another problem. The gondola will only serve Alta and Snowbird and the tourists that come to Salt Lake for a few months a year, while destroying local recreation for the residents of the Salt Lake metropolitan area. I think the UDOT should investigate other more cost effective and less impactful alternatives that would benefit us all.
27544	Nancy Boskoff	I don't see enough planning and research to support UDOT's recommendation for a gondola system - it's imperative to study increased bus service; tolls both to enter the canyon and at the trailheads; a more comprehensive reserved parking system; realistic data-driven capacity targets - in order to actually find the best solution. The gondola project is not supported by enough professional evidence; there are too many complex issues to address and not enough measurement of the full impact of a gondola system now and into the future.
27545	Lori Cordova	<p>I love how the public voice SCREAMS and SHOUTS NO GONDALA!, Then the rich business men go behind close doors and make the big money deal. Now we're getting a [REDACTED] GONDALA!, that only benefits the rich, and the locals get stuck with the bill. When did our mountains become for sale? And why is it just a few of the rich think that they own it and can deface it for their profit? The people have spoken, NO GONDALA!! It's a shame you didn't listen..... Sincerely, Another taxpayer who's getting [REDACTED] over and over!</p>
27546	Taylor Thoman	As a concerned resident and an avid skier at both Snowbird and Alta Resorts, I strongly oppose the gondola proposition. Building this gondola in LCC would be tragedy. We have year-round access and traffic problems, none of which will be solved by the gondola. Most of the recreation in the canyon is not focused on the two ski resorts. It would be a shame to mar one of our most beautiful canyons, only to increase overall traffic and make skiing more cost prohibitive. The better solution is to invest in a robust year-round bus system, and disincentivize driving. This will improve equitable access for locals and skiers. It will not permanently damage the canyon, as the road will not need to be widened if we can eliminate many of the cars on weekends and holidays. We could also run designated "ski" busses during the winter that go to the resorts and other busses that stop recreation points in the rest of the canyon. This would improve traffic conditions in both BCC and LCC all year round. Please consider the long term consequences of this gondola and choose an option that conserves and respects the majesty of the Wasatch mountains. I urge you not to prioritize the desires of big businesses and tourists who do not understand or care for the best interests of our wilderness and local community.
27547	Tyler Callister	I'm against this as a tax payer. I don't use this area to ski. Why should I find this for private ski resorts? Shame on you for bending over for these companies that will no longer be able to support skiing over the next 50 years as seasons change and the lake dries up every oz of lake effect snow.
27548	Matt Hanson	I have lived in the Sandy & Cottonwood Heights area for nearly 50 years, and am a current resident. I have also always been an avid skier. The Little Cottonwood Canyon gondola is a very bad idea because it is 1) Extremely costly to those it will not benefit, 2) Will not solve the congestion problem, 3) Taxes the people contrary to their voice only to serve nefarious private special interests. There are other easier potential solutions that need to be studied and/or tried before such drastic action is taken.
27549	Sandra Roberts	Why should the whole public pay for a system that accomodates people who can afford to ski? The majority of Utahns" who will be taxed to pay for this system will Never use it. Add buses, tunnels and tolling to use the road so that at least the people who are in favor of doing something to improve their skiing experience will be paying for it!
27550	Craig Boogaard	I do NOT believe the Gondola is in the best interest of Little Cottonwood Canyon or the people who use the canyon. As a season pass holder at Snowbird for the past 4 years, I have been a constant bus rider to the resort. I believe buses (especially electric buses) running on a frequent schedule, are a much more cost effective, environment friendly solution. Let's try increasing the bus options for a couple of years and see how that works before we investing a ton of money in the gondola option. Thanks, Craig Boogaard
27551	Ryan Vlietstra	<p>To whom it may concern,</p> <p>Please stop disregarding the thousands of comments saying that a gondola is the best solution and pursue more equitable options.</p> <p>The gondola provides extremely unfair access and almost exclusively only helps skiers. However, skiers are only part of the userbase that utilize LCC and to leave them other users behind is irresponsible, unfair, and immoral for providing unequal representation.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27552	Leslie Scopes Anderson	<p>\$550 million dollars is too much money to spend on 15-20 bad traffic days a year and that will only benefit a select few. It will only run 120 days a year. There are better sustainable and cost effective options such as reservations, tolling...etc</p> <p>The gondola is limited to two stops in the canyon, whereas buses would operate all year round and can service multiple popular spots in the canyon.</p> <p>Instead of spending \$550 million dollars on one gondola ride that only serves two businesses, why not invest in transportation hubs and infrastructure to move people in a more economical way that would benefit all Utahns, not just skiers.</p>
27553	Archie Phillips	<p>In the EIS, I saw no comments discussing the existing Tram shutdowns due to the increasing high wind storms due to Global Warming that Utah avoids discussing. Please comment on this in the next report.</p>
27554	S M	<p>Please take more time to explore other solutions and give more consideration to proposed solutions. The gondola can lead to irreversible damage.</p>
27555	Steve Prior	<p>I adamantly oppose such a unsightly cable car up the canyon. Tax payer money spent for just a few people. 3 lane road w snow sheds. Smarter lanes. 2 going up in the morning and 2 down hill evening</p>
27556	Lee Walker	<p>I learned from past that only responses responding to your proposals are counted. My response is NO To this out-dated, unfunded, too expensive plan. Wher has the "none of the above" option been in all this.</p>
27557	Emily Maclary	<p>As a SLC resident and frequent user of LCC for recreation, I, like many others, am extremely disappointed that UDOT has made plans to move ahead with a gondola.</p> <p>So many canyon users have already pointed out the issues with this alternative, from ecological and visual impacts of towers to the exorbitant price. It seems that UDOT has opted to ignore these valid concerns in favor of lining the pockets of developers.</p> <p>I am hopeful that changes made during the phased transition period (like tolling and increased bus service) will render building the gondola unnecessary; for this to happen, though, UDOT needs to actually invest in and implement these alternatives rather than treating them as a stopgap until the funding for a gondola appears.</p> <p>Please treat the expansion of public transit and tolling as serious long-term options to help control canyon traffic. Incentivizing public transit and carpooling is the simplest and most cost effective possibility that also minimizes environmental impact and financial burden.</p>
27558	Gary Fudyma	<p>Against the gondola because of cost and beauty of the canyon. Would prefer bus options as alternative. Also the gondola would benefit Alta and Snowbird. People will still drive up the canyon knowing the gondola will bring people that would have driven.</p>
27559	Steve Mayer	<p>Thank you! As a frequent skier in Europe I see how awesome gondolas are around Europe and provide a easy car free / pollution free(er) solution that we need for Little Cottonwood. I live at the base and am excited to see this beautiful solution come to life.</p>
27560	Blake Hopkins	<p>What a brutal way to mar such world class scenery. How about a Gondola in Zion, Bryce, Arches, and Canyonlands while we're at it. Try Electric Busses! They're getting better and they're way more affordable. Limit ticket sales at the resorts.</p>
27561	Cynthia Buchanan	<p>Why isn't this on the ballot in November when you are planning to spend so much tax revenue to support this project that only benefits a couple of ski resorts who are not helping fund the project and the "investors" that purchased the land at the base of the canyon? Electric buses would be a great alternative! They can handle the canyon, I rode one up a mountain in China and it was great. Please do not ruin our canyon? The towers and their bases are going to ruin the beauty of this canyon and the cost is ridiculous to tax payers! Listen to the people!</p>
27562	Maryellen Johnson	<p>Please consider charging a sliding scale for ski car access for parking/toll at the ski resorts. For example, a car with 6 people are free; 1-2 car occupancy \$50, etc. Alta and Snowbird are the two entities that benefit from the gondola. Why should we as taxpayers pay for this expensive transportation which will be used by skiers? Plus, why would skiers even want to use the gondola? This only means more time and money for them to access the ski resorts not to mention where do they store their personal belongings? Please do NOT approve the gondola. Let's think of better, smarter alternatives.</p>
27563	Allen Pettee	<p>I am in full support of the gondola. The canyon is jammed all winter with cars and enhanced buses won't solve the problem, but the gondola will.</p>

ID	Full Name	Comment
28142	Richard Kanner	<p>Sirs & Madams:</p> <p>Any plan for transportation up and down Little Cottonwood Canyon must consider costs, maintenance, esthetics, inconveniences caused by construction, use by poorer individuals, use by ski and hotel resort employees, who is paying for the improvements, skiers, hikers and just tourists coming to see the beauty of the canyon. Costs and maintenance have been determined although, as a general rule these tend to be gross underestimates. Esthetics must be considered. What will road widening do to the canyon or what will towers for a gondola look like. The beauty of the canyon must be maintained. Use during construction must be maintained and be at a minimal inconvenience. Allowances must be made so that those with lower incomes can also enjoy the canyon. Ski and hotel resort employees are usually not paid very well and have to live in lower income neighborhoods. They need free use of whatever system is decided upon. The costs should be shared by those that will profit from whatever is decided upon. The hotels, condominiums and ski resorts need to pay their fair share of the costs and everything should not fall upon taxpayer money. Hikers need areas by the trailheads to park or to get off a bus or gondola by the start of their hike. If a gondola is decided upon we need to consider those that will ride up and down for views of the canyon and skiers need a place to carry their equipment. We just cannot stuff people in a bus or gondola and ignore views, lack of seats skis being kept with the skier in the cabin. Adequate parking at the entrance point for a bus or gondola is necessary. How will visitors staying at downtown hotels be accommodated? Will there be bus service from downtown to the starting point of buses or a gondola to the resorts? Both the bus service and the gondola have assets and liabilities. We must look beyond 35 years. To me 35 years ago seems like yesterday as time has passed so quickly. We need a 100 year outlook. I believe road widening and a dedicated bus service provides the best flexibility as climate changes and population growth continues.</p> <p>Than you. Richard E. Kanner, MD</p> <p>[REDACTED]</p> <p>Tel: [REDACTED] Email: [REDACTED]</p>
27564	Jeremy Hill	<p>I think the Gondola is an excellent idea. I fully support it. It will be far less impactful on the environment than adding more fossil fuel vehicles, buses, to the canyon roads and far less environmentally impactful than expanding the road to add more lanes all the way up the canyon.</p>
27565	Danielle Gaztambide	<p>I was born and raised in Utah and am horrified by the efforts to commercialize our canyons. The canyons have a carrying capacity and not enough has been done to improve upon the bus systems to safely and efficiently move people through the canyons.</p> <p>Using taxpayer money to fund a high dollar gondola program for two ski resorts is NOT the way. I love skiing, but the canyons aren't only for skiing.</p> <p>I urge you to do the right thing and say NO to the gondola.</p>
27566	Nick Lyle	<p>I don't think increasing the amount of people into the canyon is going to solve its carrying capacity issues.</p>
27567	Margret Boes-ingraham	<p>I am opposed to the gondola in Little Cottonwood canyon. I no longer ski and like to hike in the canyon. The gondola will be of no use to me. I am opposed to supporting Snowbird and Alta ski resorts with my tax money. The gondola only running during the ski season and not stopping at any trailheads is criminal. Skiing has gotten so expensive it is unaffordable for families and many Utah residents. Please do not build the gondola.</p>
28141	Ronald W Ebert	<p>Comment in regards to the referenced subject. Two comments / questions;</p> <p>It does not seem this option addresses the Little Cottonwood Canyon's maximum capacity of people and really goes to the side of the resort owners. Does UDOT have a valuation of that criteria of maximum capacity? Is the public opinion weighing in favor of this option or against it? Does UDOT have a mechanism for measuring that input?</p> <p>Thanks, we wonder if this matters, given our past experience with UDOT!</p> <p>Ron & Perri Ebert</p>
27568	Justin Fague	<p>No to the gondola!! Why would we put in a gondola for people to use in winter time when people won't even use the bus system?? Do we really think people are going to take a 30 minute gondola to relieve traffic instead of a bus? This just doesn't make sense. Carpooling, busses, or a dedicated bus lane would be far superior, and would be useful in summer for those crowded summer hiking days.</p>
27569	Mercedes Jensen	<p>No to the gondola!! It's a huge eyesore for the canyon. People would rather bus up with increased bus service than a gondola. We aren't Europe!!</p>
27570	Marie Mischel	<p>I oppose the preferred option for the gondola. The primary beneficiaries are private resorts, not the community. I support increases in bus routes and other mass transit but not using tax money to benefit private corporations. Also, the cost of the gondola is prohibitive</p>
27571	Octavia Haines	<p>I favor a phased approach and common sense solutions as outlined by Mayor Jenny Wilson. I am not in favor of a gondola, as a tax payer, an environmentalist, an appreciator of aesthetics. Electric buses, regional transportation hubs, monitored access to the canyon--fees, tolls, carpooling, etc.</p>

Comments on Little Cottonwood Canyon Final EIS

27572	Michele Belmore	I've lived in CH since before it incorporated and I do not feel that spending \$1 Billion+ to service a small number of local and state residents is a proper use of out tax dollars (etc). I would like to see a STOP to promoting Utah tourism until we can get our air quality in check. We have quite enough people visiting and with the granite pit and Hillside developments, I can think of far better ways to spend \$1 Billion+. Who will bear the burden of upkeep, maintain/replace the canyon ripped out? Personally, I feel that no matter we--the citizens of Cottonwood Height want--that this is a already a done deal and somebody in the know will be benefiting monetarily from it being built. (Much like the sponsors of the prison moving who are getting even wealthier than they already are). NO to the Gondola, a moratorium and ALL drive-thru businesses in our valley. Let's put clean air, affordable housing and water conservation back on the table as or #1 priorities.
27573	Catherine Richards	Gondola B ? Where is the money coming from? Skiers who've already bought passes are going to pay additionally to ride this gondola? Have you even started discussions with the Forest service? How about starting with more parking both free and paid, additional buses and limiting vehicles during snow storms to hotel guests employees and essential workers. This is all talk again.
27574	Lori Stahler	Why wouldn't we try simpler things first before jumping to the extreme of a gondola? How about starting with tolls to get up canyon, parking reservations, more parking near the mouth of canyon? Instead of a gondola, has anyone considered snow sheds like they have all over Europe to go across all the slide paths? I realize that these are expensive also but then people can still drive up the canyon. A lot of people are concerned about the amount of time it will take to get up to the resorts when using the gondola. A lot of locals sometimes only have a couple of hours to go up and ski. Using the gondola when you only have a short amount of time is not feasible. Please consider the simpler options first before jumping to such an extreme option like a gondola. Thank you.
27575	Bradley Ray Eggertsen	To press for more vehicle traffic (car or train) ...up and down the canyon makes no sense at all. Scaring the land further with a bigger road is in conscionable to any consideration..more air pollution....snow melt sand or salt....noise from a bus or train...the earth rumbles from train or bus....not to mention the risk to the water. I understand the worst congestion is from vehicle slide offs or crash....I always dreaded driving down little cottonwood after the ski day ended and had snowed all day...O I can drive in Snow as well as I Ski in it...it's those other people we should have concern over...I ve been in congestion coming down to find someone had slid off...I was in a bus that slid off we waited for another bus to arrive where we disembarked to board another while traffic snarled around us....I have stopped with other traffic as a slow moving slide was moving down the south slope near the White Pine parking...one time it came onto the road while we watched and grateful we be were not in it's in path.... At other areas the Gondola and towers are very much obscured from site either from a ridge or even just the vegetation.... I'm going to be happy to be off the road.
27576	Clyde Wheeler	I live close to the mouth of Little Cottonwood Canyon. On busy ski days the traffic is backed up to Mt Jordan Road, about where I live. I understand the frustration of the skiers. However, they are a tiny, tiny percentage of the population of our state, and many of them are not even from Utah. How can you justify a billion dollars of our UDOT money to make it easier for people more wealthy than me to travel to two private ski resorts? Let's leave things the way they are. Skiers can leave home earlier, the resorts can open their lodges earlier, and the people can go up and have a nice breakfast while they wait for the lifts to open. Use the money to build better east west access across the salt lake valley. If the resorts want the gondola, let them pay for it. I doubt most people will use it. Also, I love to ski, however the price for a lift ticket is getting so ridiculous, that the common citizens have to save up. What will it cost to ride the gondola? Or a tole road? Again, making skiing a wealth person's sport.
27577	Maura Domeier	NO gondola, please! The majesty of Little Cottonwood Canyon would be marred by a gondola that benefits only the private ski resorts of Alta and Snowbird. Starting now, Alta and Snowbird resorts both should be required to have parking reservation systems with reduced rates for large group carpools. Both resorts should also be required to include transit passes in the price of their lift packages with discounts offered with proof of use. If these measures do not alleviate traffic congestion sufficiently, tolling in the canyon should be initiated. On inclement weather days, this toll collection should be combined with tire inspections to ensure that the canyon is safe for all visitors. Enhanced bus service, preferably with electric buses, should be implemented without widening the canyon road. The "trial" with electric buses proved that these are a powerful and clean alternative to canyon transportation.
27584	Charli Mckee	To whom it may concern, As a resident of cottonwood heights, and an avid recreational user of little cottonwood canyon, I strongly urge against the construction of the proposed gondola system to transport users to and from Alta/Snowbird. I understand the critical concerns that the gondola will disrupt ecosystems, pose threat to a fragile watershed, and to no real account contribute to the problem of traffic in the canyon. I frequently back country ski in this canyon, and therefore a gondola will not limit my, or many other skiers traffic up the canyon. There are many trails and rock climbing crags that if not directly effected by the construction of this gondola, will continue to not be accessible in any season by this eye sore of transportation. The time for a road widening project seems far more realistic to solve a problem of congestion, and cost a large deal less from my and local residents tax payer dollars. I fear the gondola will create more issues in limiting access to the mountains and trails of little cottonwood, and directly effect vulnerable communities. Please do not subject our community that is in a majority against the gondola the burden of cost and continued problems for our beloved little cottonwood canyon.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27587	Mike Schmidt	<p>Please, please, please reconsider your proposal of the gondola. As a citizen of the Sandy community, this is something that many of us here who I have talked to, myself included, do not want. Not only will a gondola an eyesore to the natural beauty of the canyon we love, but it will also be a tourist trap we don't want or need. We do not want to pay for it either with our tax dollars. How dare you put something in our community like this that we do not want. There are far better, less impactful ways, to help fix the needs of transportation in Little Cottonwood Canyon - for starters, just look at the shuttle system in Zion National Park to see a great solution that works to serve a similar transportation need for millions of people. You think a gondola is a better idea down there? Well, it's not a better idea up here either.</p> <p>I have ridden the busses up and down the canyon during the winter season and find them to be a great service. If you can upgrade that with more parking, pick up stations, direct lines, and more busses (like a shuttle system) I will ditch my car. I will never ditch my car for a stupid amusement park gondola ride.</p>
27589	Michael Domeier	<p>The gondola is a poor choice to deal with canyon congestion. A gondola serves only the private ski resorts. The resorts should be tasked with dealing with the congestion and parking issues associated with their businesses. Expanded bus service, with stops at trailheads, would serve all canyon visitors. At some point it needs to be acknowledged that there are limits to the number of visitors the canyon can accommodate. Dealing with these limits may require tolls or other means to reduce the number of visitors.</p>
27598	Patrice Powell	<p>I don't believe we need gondolas or more highway. At the rate we are going we won't be skiing much longer in the canyons. The money saved can go to environmental solutions. Change out the existing buses for electric buses. Limit the amount of automobiles in the canyon & charge those who wish to drive a premium to park.</p>
27599	Michael Fleisch	<p>A thousand times no, those of us that can only access our homes off of wasatch blvd already have hours when we can't leave our subdivision without your widening the road to accommodate more cars for a gondola no one wants.</p>
27600	Royce Shelley	<p>To all concerned:</p> <p>I am writing to express my support for the Gondola B option for Little Cottonwood Canyon. It is time to look forward to the future and do something different that has been tried in the past. The gondola provides an opportunity to access the canyons without the headaches of traffic jams, snowslides, whiteouts, road closures, etc.</p> <p>The statement attributed to Albert Einstein, "Insanity is doing the same thing over and over and expecting different results" is applicable in this situation. We have widened and improved the roads in Little Cottonwood Canyon multiple times in the past and have never been able to resolve the traffic problems. With the cost estimates differing by less than 10%, lets do something new and different to solve the problem.</p> <p>Royce S. Shelley</p>
27601	Moriah Henning	<p>Thanks for opening another public comment period on the Final EIS around Little Cottonwood Canyon travel improvements. I do not support the final decision to implement a gondola, as I believe the environmental impacts of construction outweigh the benefits. Because I don't want my taxpayer money going to support the construction of a gondola, I support it being as privately funded as possible.</p> <p>I do support the phased approach of implementing increased bus service and tolling, especially tolling only in the upper canyons to leave the lower canyons accessible for all. I also support tolling in Big Cottonwood to ensure that LCC tolls are impactful. I support toll funds going into better bus service, canyon road and trail maintenance, but not to the gondola.</p>
27602	Jennifer Welding	<p>I live in CH and use LCC canyon frequently. I am against the Gondola. There are many areas of play and that does not open it up to all areas.</p> <p>Improved and more frequent busses. Some busses that stop at different trail heads. The ability to have busses have priority and not get stuck in traffic. Upgrading the road to have some areas bus travel only.</p> <p>Basially more busses. More bus stops. A fee to single drivers.</p> <p>No Gondola. Who voted for that? only the people who ski on powder days?</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28136	John Gleave	<p>I am writing this to urge you not to build a Gondola in Little Cottonwood Canyon. I'm 75 years old and my first day skiing was at Alta when I was 8 years old. I took the Deseret ski school bus up the canyon. I believe it is tragic to think of the iconic and beautiful stream bed of Little Cottonwood Canyon being bulldozed by heavy equipment in order to put up gondola towers.</p> <p>I'm a lifelong skier but I also love to fish, hike, mountain bike and enjoy nature. Little Cottonwood Creek is one of the loveliest treasures that we enjoy. The kind of encroachment and disruption to the natural environment that a gondola would create to me is almost beyond comprehension.</p> <p>The gondola itself would benefit a small percentage of Utah's population. Skiing has gotten so expensive that is out of the range for the average Utahan. Those who would benefit are wealthy out-of-state visitors the ski resorts and a small percentage of Utahns.</p> <p>To maintain a quality experience I don't believe that continuing to expand access to ski areas is beneficial. I think we have reached a carrying capacity beyond which it becomes harmful to the resource and diminishes any enjoyment because of overcrowding. At some point I believe the solution is placing a quota on the number of people that can enter the canyon.</p> <p>Please reevaluate your recommendation,</p> <p>Thank you,</p> <p>John Gleave</p>
27603	Vinessa Certo	<p>We don't want a stupid gondola!!!! We want our beautiful mountains and landscape to stay the way they are!!!! There is no need to waste our tax dollars of this horrible idea!! Let alone the fact that there is more than enough unnecessary and detrimental development in the state!! There is absolutely no reason to add more deforestation to that in this herendus and pompous idea... So rich people who want to ski don't have to drive all the way up...</p> <p>This atrocity is not something that us Utahns need!!</p>
27604	Brian Hays	<p>I oppose the LCC gondola. The gondola is a mistake for several reasons:</p> <ol style="list-style-type: none"> 1 It is an eyesore. LCC is a beautiful, natural escape from the urban sprawl of the valley. A giant aerial gondola will alter this forever. 2. Public funding at this large of a scale should not be used to benefit two private businesses (Alta Snowbird). 3. Climate change, lack of snow, and lack of water are larger issues for the state than congestion in LCC. We should be addressing and funding these problems as our highest public infrastructure priority.
27605	Barbara Haslam	<p>The gondola project needs to be paid for entirely by Snowbird and Alta ski resorts. It's outrageous to make public taxpayers pay for a project that only benefits private businesses. There is a simple cheap solution to traffic in LCC. Close the road to all vehicles except buses year round. Have buses run continuously and stop at all trailheads as well as resorts.</p>
27606	Doug Finlinson	<p>I have yet to hear how much is going to be charged to park at the gondola and how much to ride the Gondola, and if UDOT feels ridership will be limited due to the cost?</p>
27607	Ashley Nye	<p>The gondola project is a corporate grab at public land access. The use of local taxes for private interests is unconstitutional and simply unethical. The gondola will not address the urgent needs for reform in LCC. This decision pits the community against local leadership and will not be a fight that simmers down over time. The idea that this project will "increase access" is negated by the exorbitant fees, tolling, and environmental impact that will eventually cut locals off from national forest land.</p>
27608	Kim Parry	<p>I shouldn't be surprised but am so disappointed and feel like this decision is based on corrupt politicians and developers lining their pockets. I really do not understand how you could think the gondola will solve the traffic issues and find it funny that your going to implement a toll and enhance bus service because you know that's really a better way since people don't just go to snowbird and Alta but actually utilize the entire canyon for recreation. But you are still pushing the gondola which obviously only benefits the two ski resorts thus the only stops it will make! Also this is just opening the door for a disgusting development by La Caille which will further the traffic issues by bringing more people to the area. At the end of the day we all know the most environmentally friendly solution and probably most cost effective solution is to shut down the canyon and have it open to buses only that will make stops at all the trailheads. You would need more parking and to add buses but doesn't that seem much less impactful to this beautiful area??</p> <p>Don't ruin what makes this area so amazing anymore than we already have!!!</p>
27609	Annette McMullin	<p>Mayer Jenny Wilson is right. It costs too much money, does not serve the general public, forever disrupts the canyon. UDOT is self-serving. They want it for themselves, not what is best for the canyon. We call on the legislature to say no gondola and put this rest.</p>
27610	Colton Korpi	<p>Hey I just wanted to get on here and make a comment on the fact that I think the gondola is a waste of time and money. I believe that building something that would be used a few months out of the year while destroying land used by thousands of climbers every year is disrespectful. This will destroy the natural beauty of the canyon and create a monstrosity. And what seems more efficient riding an hour long gondola to the top of a canyon or creating more parking at the resort to accommodate the people. Thank you for your time and consideration and I hope you make the right choice</p>
27611	Nicole Korpi	<p>This project would be a terrible waste of money and resources. Also the impact would be awful for the area and the beauty of that area.</p>
27612	Jake Korpi	<p>This is a dumb idea. And it's taking away from the landscape and outdoor recreational activities.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27613	Mike Gleue	I'm very disappointed to learn the gondola was chosen as the approach to take. It serves on the two ski resorts, and if funded with taxpayer dollars, amounts to a taxpayer-funded subsidy. If development of the gondola proceeds, funding for the project should be largely borne by the resorts. I'm firmly against the gondola itself and more firmly against it if I and my fellow taxpayers will be asked to subsidize Snowbird and Alta to build it.
27614	Bob Hutchins	Build the gondola! I ski everyday at Snowbird. I would love not having to drive, but I don't like buses. Please build the gondola ?
27616	Perrine Anderson	A gondola will cost many millions and not solve the congestion problems in LCC. Wish I could attach the photo of the cars parked along the road at Red Pine today 9-5. Please do not spend my tax dollars on this expensive gimmick which will serve only Alta and Snowbird.
27615	Mark Greenwood	Great work. I'm all in favor of the Gondola! Don't let the narrow minded "haters" convince you to change your mind.
27617	Kaitlyn Korpi	Leave it alone.
27618	Jedidiah Smith	Having ridden gondola stems elsewhere is the world, I believe that after the construction that this will offer a unique view of the canyon without harming the natural canyon itself. This will turn into a tourist attraction itself with people traveling just to see them goals and then get the magnificent views it will provide
27619	Drew Pectol	I have recreated in the cottonwood canyon for 30 years. This place is my home and I do not want a gondola to private resorts (one that doesn't even allow me to recreate at because I snowboard). I strongly oppose my tax dollars going towards private profits and destruction of the natural beauty of the canyon. Please consider other options before choosing one that we cannot reverse. PLEASE DO THE RIGHT THING
27620	Haokun Yang	Adding the gondola would be a great option for people living far away from the little cottonwood. I won't have to drive another 40-60 minutes just to get to the ski resorts and even more during snow days.
27621	Doug Lockman	I think the gondola idea is fantastic. It will help showcase Utah as a modern city if we get the Olympics again. I'll ride it just for fun!
27622	Heather Horsley	I want to begin by clarifying, yes I am an avid skier, however; I do not believe that the taxpayers from the state of Utah, the majority of which do not ski, should be financially responsible for the Cottonwood Canyons and the traffic. Let's be honest, at the end of the day how many actual bumper to bumper traffic days are there out of the 365 days of the year? At what point do the resort owners become accountable for transportation in and out of the Cottonwoods. I say no to the gondola, the environmental impact and the price tag are not worth it. Let's not forget, when the snow dries up, you're just going to have a giant gondola and no skiing. We need more busing, with parking structures around the valley that can also be utilized for people to take public transportation places other than the resorts, like perhaps work as well. Utah, the Salt Lake and Provo specifically, needs to step up it's public transportation. On a sidenote, I do not ski at the resorts on the weekends anymore, I recreate in other ways in order to avoid the red snake. Stop the gondola.
27624	Gayle Denman	No to gondola, great salt lake is in danger, most taxes sb directed to water conservation (ex nevada)
28140	Daranyi/ Indian Ridge Farm	To whom it may concern: Nicely done. The selected alternative B with the additional implementation of tolls and increased bus service, is the correct alternative to mitigate the ongoing challenges with traffic congestion and the environmental impacts currently experienced by users in LCC. I fully support your Final EIS. Thank you, Tony Daranyi Skier, LCC
27625	Jere Gimbel	I am in favor of the gondola to snowbird and alta
27626	Clement Gelas	Great with the presentation. Look like an enhance bus line in the cotton wood canyons with a flex bus schedule base on the season , some direct buses to the resort and some smaller busses to the trail head are the way to go . I would be in favor in eliminating all traffic in the canyon for non owners, have a pass for hotel guest, delivery and cabin owner
27627	Daniel Clark	Please no gondola.
27628	Leslianne Groves	I love it! And think it's a great idea to ease traffic. Do it!
27634	John Knab	I live by little cottonwood and drive this canyon all the time. There are almost no days in the summer when you can't get to the top in a timely fashion. Most winters have 5-10 days where the traffic is truly bad. So this \$0.5B project is to solve for 5-10 days. The ski resorts have 30-60 min lines those days. So getting more people to the resorts seems counterintuitive. I don't think the tram will get near the usage to cover the costs, and on the few days it does it will create such nightmare lines at resorts this will go down as a huge failure.
27640	Brian Miller	In recent discussions of traffic in the Cottonwood Canyon, many people think a gondola will clear up the traffic. On one hand, it would work because it would keep a portion of people off the roads, helping to reduce accidents and traffic jams. On the other hand, some people think the gondola is too expensive and would not be worth it. Even though some people might take the gondola, there are still lots of people who would rather take their car up for a variety of reasons, such as tailgating, ease of use, and being able to haul as much stuff as you want. However, the answer to this big question will not be found in just one solution, but rather in a combination of many that will all work together to accomplish the same purpose. The gondola is a great idea that will help reduce carbon emissions, traffic, and impacts due to weather. A bigger road would also help by creating more space for safer driving and decrease accidents. With every option, there are drawbacks. With the gondola, a huge obstacle is the cost, both to build and operate. Some are against using taxpayer money for the huge project because it doesn't benefit all taxpayers, only ski resorts. However, experts say it is the most reliable form of transportation and will be cheaper over a 30-year period. Overall, the gondola is the best option because it is the most environmentally friendly long-term solution to a problem that would otherwise never end.

27641	Dan Cox	In a state that considers itself "tax conscious," how would taxing the citizens to pay for the rich to go skiing even be considered? Unless the tram project is at least 1/2 funded by the ski resorts I would be adamantly opposed? Ski resorts continue to outprice anyone except the rich. Excessive lift ticket costs continue to rise and have excluded low income individuals from being able to enjoy the outdoors - and a proposed tram isn't going to make skiing any more cost affordable. Now you expect Utah citizens to pay more for corporation profit? Let's consider stabilizing lift ticket prices for low income individuals to be able to participate in the Utah outdoors before we give a huge handout to the ski resorts. Great reverse Robin Hood mentality we have here in Utah!
27648	Andrea Mazzocchi	As a Holladay, UT resident and heavy user of the canyons, I do not support a gondola being built in LCC. The gondola only serves Alta and Snowbird, resorts that are inaccessible to the average Utahn due to cost, and remain unused in the summer. Building the gondola is only a service to big business and does not serve local Utahns. To move forward with the gondola is to go against what the people of Utah wish for lobbyist companies to only have deeper pockets.
27649	Aidan Clark	I think that the gondola is a good decision
27650	Jeff Munger	As an avid skier I can see the logic of the gondola. But, there is so much more to consider. There are many people like me who currently use the canyons from top to bottom and all the trails in between to hike, run, backcountry ski and mountain bike. A gondola that only drops one off at the Ski areas does not serve us when doing these activities. Please consider increasing the free parking capacity at trailheads and providing bus service that stops at trailheads in both canyons. Let's make it a win for everyone and not just those fortunate enough to ski at the resorts. Thank you.
27651	Kynzie Henriod	I feel like we should just leave the canyon alone. I don't think we should build anything or force anyone to drive a bus. I think a fee is a little over the top too but its much better than taking so much out.
27652	Kenzie Matagi	While the environmental impacts, especially destruction of land, seem harsh I do not see a better alternative that there is funding for so I'm in support of the gondola.
27653	Joseph Sosa	I believe that the Bus system is a better option because it is way cheaper than the gondola. It is also a quicker alternative. It wouldnt require a mass amount of building and space. You wouldnt have to ruin natural land in the canyon.
27654	Ben Wallace	i think that the cons outway the pros in this situation do to the fact that of the environmental tole [toll].
27655	Joshua Barraza	I feel that we don't need this at all, we are hurting our earth more than we know we don't need to be taking out more natural habitats we are affecting our earth with stuff like this, changing our canyons like that will make things worse for our environment and our precious earth
27656	Cooper Smith	The Gondola is one of the worst ideas to come out of Local Government in a while, especially with the far more beneficial alternatives such as the electric busing systems used in other canyons around the state. Why take a canyon such as Little Cottonwood, why taint the millions of years of natural, nature given beauty just to replace it with abhorrent, grey towers that will only intrude on the wildlife and plant life. Not to mention the parking lot that's gonna be the size of an elementary school at the bottom right next to one of our fanciest French restaurants? Just an all around bad idea from start to finish
27657	Amy Parker	I am in no way interested in having a gondola built up our canyon. It is not a good solution and only benefits the ski resorts and those who get paid for building or having it built on their property. The vast majority of the people whom would be paying for this monstrosity are not interested in having it built. Stop wasting your money on false research. It feels like you are not listening to what the locals actually want, but rather what you are trying to force to happen. I do not want our canyons to be destroyed by a false solution to a minor problem in the name of greed by a select few. We should just add a toll booth at the base of the canyon, if this is such a problem.
27658	Amar Grbic	I feel that making this gondola will ruin a lot of things. As it stand this topic has become extremely popular at school and we are even disusing [discussing] how bad this could be for us or even how good it can be. In my opinion I think there are many other options that can help with little cottonwood but I believe building the gondola will be bad for the environment. Building this will ruin many homes to animals and on top of that it will also be pollute the air with all the machines that it takes to build it. With that it will also reduce the over all amount of people driving in the canyon but that can also be done with electric buses.
27659	Kaden Roberts	The bus would be a better option because it is a lot cheaper to do, and the buses are electric. This will help with the amount of cars because you will end up needing to pay a fee when going up to the canyon in your own car.
27660	Ryder Irons	I think that the enhanced bus route would be more cost efficient and environmentally friendly. The gondola is going to effect groundwater and cost billion to make.
27661	Faith Lasson	I don't think the Gondola is the correct choice, the bus is more sustainable. If the Gondola is implanted [implemented], it takes away from the ground water and the environment is still affected because of the measures that take place to put it there. The bus is the better option because the same roads can still be used and still greatly reduces the number of cars going through.
27662	Isabella Coleman	While the gondola is a good idea, the fact that more parking will be added is concerning, as that land would be better left alone. The enhanced busing option seems much more environmentally friendly, especially since people are more likely to use a bus (easy transportation) than the gondola (could be a source of fear). Busing is such a great way to get around, and it's easier to make stops if there's an emergency or whatnot. If there was still a certain fee for cars to go up the canyon, that, too, would be a viable along with the buses themselves.
27663	Tyler Armstrong	The gondola would be a good course to take however the drilling and cost to take this course of action is heavily weighing it down. I think that the electric busses are probably the best alternative out of the ones provided. I like the idea that people can still drive up or take the bus because public convenience is a big matter at hand too. but with this course the money used towards taxes for the gondola could be used towards personally driving up if wanted. The cost for winter activities ie: ski pass, gear etc is already super high, the fee to drive up the canyon would be annoying but with the busses it would provide cheaper transportation than the gondola still leaving the option of driving up if for your reason you needed too.

27664	Ashlee Stoker	I believe that we should no change anything, from personal experience, my family loves to take drives up the canyon. Yes it can get busy but everyone else is taking time to enjoy as well. some people get car sick, and wouldn't want to be on a bus full of other people. but then they can't always afford to drive up the canyon in their own car. and with the gondola, that just ruins the whole purpose of family drives up the canyon. and you can't pull over to explore unpopular places.
27665	Liv Lo	I personally don't think that this is the greatest idea just because there are a lot of things we are going to lose in the process and I don't think that it will help us accomplish what we want to accomplish while trying to do this
27666	Owen Hadfield	after looking at the benefits and costs of the alternatives to the gondola, i have noticed, that a lot of the alternatives 1. cost more 2. the air and water quality do not improve. yes the gondola will help with cars and there transit. but wont buses do the same thing? and they cost less, you can have more of them. they can be electric and help improve the environment. so in conclusion you should take another look at the bus alternative.
27667	Gunner Morgan	I think this is a great idea
27668	Willa Grimmer	The Gondola being added to Little cotton wood canyon is the wrong alternative choice. Though it would solve the problem of congestion and pollution due to cars, it has so many other environmental impacts that aren't all that great. By putting in 22 huge towers little cotton wood canyon would lose some of its natural beauty, and it would destroy natural habitats and trails used by the public. The gondola would also effect the fresh water source that is provided by the canyon. I think the best alternative would be to use electric buses for transportation. It would solve congestion, stop pollution, and not obstruct the natural beauty of little cotton wood.
27669	Ben Ramos	This gondola will be so hurtful to our canyons biodiversity and will hurt our environment. we will be removing wildlife, trees, and plants. It will also take away from our beautiful canyon it just won't look the same with 20+ massive towers up our canyon.
27670	Londyn Coonradt	I do not fully support the gondola, it does alleviate major traffic in the canyon but at dangerous environmental costs. It is going to pollute water and damage ecosystems from adding a parking lot and widening the road. I do like the idea of electric busing as an option. But if there is a way to build the gondola in an environmental friendly way that would not hurt the ecosystems or water we use, I would be all for that.
27671	Ben Ramos	This gondola will be so hurtful to our canyons biodiversity and will hurt our environment. we will be removing wildlife, trees, and plants. It will also take away from our beautiful canyon it just won't look the same with 20+ massive towers up our canyon.
27672	Charles Luckau	I am in favor of the Gondola, it would be more efficient, by it running every two minutes.It would have less cars on the road, but the parking lot would take up a bit of nature
27673	Carson Rigby	I am in favor of Gondola B. It will provide a safe, reliable, and quick form of transportation. It will make the road much less congested, and it will make for a better experience for residence and tourists.
27674	Kiana Montellano	I think that the gondola is not the best course of action. It is one of the more expensive options and would have a bigger impact on the environment around it than a plan like the enhanced bus service, which is cheaper and would have a less noticeable change on the environment. Although it would take longer by bus it is not that huge of a difference, being roughly around 10 minutes. Overall I believe that if you take into account both the environmental and economical impacts you can clearly see that the gondola is not the best option.
27675	Kiana Montellano	I think that the gondola is not the best course of action. It is one of the more expensive options and would have a bigger impact on the environment around it than a plan like the enhanced bus service, which is cheaper and would have a less noticeable change on the environment. Although it would take longer by bus it is not that huge of a difference, being roughly around 10 minutes. Overall I believe that if you take into account both the environmental and economical impacts you can clearly see that the gondola is not the best option.
27676	Benjamin Buzilow	The gondola solution offers too little flexibility as times change. The skiing interest in LCC will ebb and flow. This infrastructure meets only the needs of resorts and ski traffic. Plan B (gondola) does not serve the public.
27677	Doug Jensen	NO gondola! It's impossible for me to believe that the gondola is the best choice. Especially with the gondola company spending money on an advertising smear campaign. How do the gondolas do in winds? That canyon gets a lot of wind. Why can't we try toll booths first to off set the cost of more busses and more bottom of canyon parking lots. I guarantee more people would bus if it was easier to find parking. Plus with a toll first solution the state would literally be raking in money. Something we know they like to do. It works for National Parks it should be our #1 option right now. Oh here's another novel idea, let the people vote on it and then actually do what the people decide.
27678	Michael Devries	the easiest plan is to cap the number of cars allowed up LCC daily. udot just has to [redacted] up and do it. the resorts can reward people who carpool. nearly free and easy. no gondola.
27679	Kim Shapiro	I completely disagree to construct a gondola up Little Cottonwood Canyon and widen Wasatch Blvd. There are much less drastic solutions. The gondola would only be useful for a handful of days each year, only has two stops, is expensive, and would completely ruin the visual beauty of the canyon. Pollong suggests the vast majority of Utahns do not want the gondola.
27680	Megan Owens	The gondola is a horrible idea and it will not help. The traffic problem is a problem year round, not just during ski season. Upping the amount of buses, tolling the road and having buses run year round will actually help. I will be so ashamed of Utah if the gondola actually becomes a reality. It would mean that Utah puts big business over their residents. 80% of Utah residents oppose the gondola!! Honestly I would consider leaving the state if this goes through.... Don't do it!
27681	Nathaniel Gallegos	Briefly, I am a Cottonwoods Heights resident and I am in favor of the Gondola plan. The costs and environmental impacts from either plan are comparable. The traffic in those canyons during the winter is ridiculous and needs to be addressed. The Gondola option will lend to tourism and that may be consolatory offset. It's the least evil of the options.
27682	Diane Olson	I am strongly against the gondola. It would be corporate welfare at its worst, and does not adequately resolve the traffic issues in the canyon. Clean-running buses and a toll would improve traffic, while helping to cover costs.
27683	Russelcic Russelcic	[redacted]
27684	Mackenzie Montague	Our Community does not WANT OR NEED A GONDOLA ruining our canyon.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27685	The Williams	The gondola project is a ridiculous expensive taxpayer gift to snowbird and alta, without providing any significant reduction in traffic or increased access. It must not be allowed to proceed . Have the ski resorts charge large fees for private vehicle parking to discourage private transportation. And put all of those parking fees into enhancing bus service in the canyons so that people will be motivated to ride the bus. That is the only viable solution
27686	Amelia Mcrae	This seems like an over the top, expensive option and visually unappealing to our canyons. What other solutions have been discussed? I would personally like to vote on other alternatives.
27687	Shannon Dye	I am extremely opposed to the UDOT plan of installing a gondola system in Little Cottonwood Canyon. It will be extremely costly and will destroy the beauty and wildlife of the canyon. It will only make a minor impact to the traffic issue in the canyon. I am much more in favor of an improved busing or shuttle system.
27688	Rhianna Sullivan	This idea will not benefit the true issue in LCC, which is a lack of parking everywhere. Trailheads are just as packed as the ski resorts are, and the tram will not help this. Trying to solve an issue for the ski resorts that only exists half the year with an insanely expensive and environmentally altering solution is a poor choice. Expand the roads to add parking, or have buses run more often and stop at trail heads. Create a toll to enter the canyons or park anywhere in them or at ski resorts. This is much too expensive of a solution when there are less drastic, less permanent solutions that can be used. Also, while function over beauty is important, it should not be forgotten that this tram will be an absolute eyesore in the canyons, which takes away from utahs natural beauty. I truly hope this project does not go into effect.
27689	Paul Newman	The gondola is a year round commitment for a 20 day a year issue. There are other less costly and less damaging to the canyon alternatives for those 20 days. Utahns who will not go to the trouble of getting on a bus will not get on a gondola.
27690	John Garr	The gondola is a horrible idea. It will be a permanent eyesore in a truly special canyon. If people ride it, it may deliver more skiers than can be safely accommodated at the resorts (overcrowding is already a hazard at all of the major resorts). Ads depict existing UTA buses as litter-strewn and just awfully unpleasant; why would anyone expect piggish folk to not leave trash on a gondola? What kind of eyesore will the base terminal parking be? Prices for lift tickets at the LCC resorts (in particular, Snowbird) have FAR outstripped the cost of living. They're making obscene profits---why do the taxpayers need to subsidize a boondoggle that will benefit only the resorts? The gondola idea should be dumped, now (along with the idiotic "Islands in Utah Lake" concept!).
27691	Michael Hlas	The gondola is the best option for the canyon. Widening the road will only kick the can down the road for a few years until traffic catches up with the added road capacity. We don't want to increase the number of cars going up the canyon. A gondola is a carbon free, reliable means of transportation and will help preserve the beauty of the canyon for much longer. Please support the preferred alternative and build a gondola.
27692	James Delano	No Gondola. No change is needed.
27693	Megan Sieverts	I fought the monorail in 2015. Notice how it wasn't even an option this time? The cog rail was, but not the monorail that was surely going to save us all? That's because it was not a wise idea. A few years showed that. The gondola is similar. It's expensive, permanent, invasive, and unnecessary.
27694	Michael Brooks	I don't oppose the gondola, but I think with this kind of money we should address both canyons. I think a cog railway would be better, built right next to the road with snow sheds at the problem spots. Then at the top make a tunnel to BCC ski resorts and maybe even all the way to PC. Then either make it a loop back down BCC or just have it return back down LCC. Build in multiple stops on the way with passing zones so you can run at least 6-8 trains if not more. I think this will probably be in the range of the gondola in cost maybe more, but why not try to hit all the ski resorts and minimize the aerial impact. Then you also can build and protect the road with snow sheds that protect the train.
27695	Lynn Joyce	"No to the Gondola". Be smart. With global warming, how viable is the ski industry anyway. The big 2 you're catering to may not be able to even produce their own snow in 5 or more years when the temperatures don't get low enough to produce any. Then you'll have a Gondola to nowhere. Just like the bridge in Alaska... not a very good idea.
27696	Josh Bedard	Please NO! This only helps us a few days (lets say 25 at most) out of the year when things are bad. The other 340 days it's a permanent eyesore. Right now chain controls are not enforced and single occupancy vehicles are common. There is no way skiers are going to wait 35 minutes to get up the hill when they can drive in 15. Parking lots for the bus service are too full. More busses = more people seated which makes people happy. We need to actually execute conservative measures first! Please please please do not build a gondola.
27697	Aaron Libby	I actually think the gondola is a great idea, and I'm in favor of it. My concern is around the initial cost and the ongoing use cost of the gondola. Are there projections of what the fee will be? I'm not interested in using it on a case by case basis because I think the cost would kill me. I have a family of 10 people. If it's possible to ride the gondola for free with a season pass it makes absolute perfect sense! I'm all in! As for the aesthetics of the canyon, or environmental impact... I'm not worried about it in the least bit. I think it would be a perfect solution to moving people up and down the canyon with regularity and ease.
27698	Hong-yen Hoang	I support expansion of bus routes. The gondala needs to end and not be built.
27699	Alesha Brisbay	Please reconsider the gondola. The community does not want it. Anything that uses taxpayer dollars beyond maintenance should be put on a ballot. Why should nonskiers be forced to pay for this? The canyon is beautiful as is. Investing should be done in more buses and other ways without expanding the roadway or building a gondola. The beauty will be taken away from the canyon. Please reconsider this decision or at the very least put it on a ballot.
27700	Allison Eining	I have lived in Cottonwood Heights for 22+ years. The idea of gondola seems very extreme given that the small canyon can't even accommodate the summer crowds this year let alone winter crowds of years past. When the Winter Olympics was here, no events were held in LCC because its too small! The gondola would only cram more people into an already overpacked canyon. Why not start with pay booths at the bottom of the canyon or parking reservations & paid parking? These options seem like they'd maintain crowd numbers & encourage carpooling. The gondola is horrible idea for our environment, wildlife and the locals that live near the area! Tell the developers to keep their pavement off our paradise. Shame on you UDOT! You should be protecting our lands, not selling out!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27701	Karen Buzanoski	Hold off on spending that kind of money and try the alternative options first. Increase bus service up the canyon. Commuters can park same area as designated for gondola. Take some of the needed funds and add Portapotties in the Canyons. That would save the canyons in traffic and people using the trails for bathrooms.
27702	Cody Elletson	The gondola is not what the people of this community want. This will not solve the congestion problem, just move it elsewhere, yet also ruining the beauty of the canyon.
27703	John Curtis	I am extremely disappointed and concerned with UDOT's selection of the Gondola alternative. This begs [raises] the question of whether UDOT is listening to public comments or is simply in the pockets of Alta and Snowbird. The visual damage to Little Cottonwood Canyon from this permanent change will be horrible. I still don't understand why the train concept was abandoned. Everyone I talk to about this is opposed to the Gondola, once they understand the visual impact to the beauty of the canyon. Lastly, if the Gondola ultimately is constructed, Alta and Snowbird should pay the ENTIRE cost as they are the only two entities benefitting from it along with their users. Skiing has become so expensive that this is essentially serving only the elite. Alta, Snowbird and their users should bear the cost if that is what they want. The Gondola does not stop at any other trailheads and serves the good of the ski industry only.
27704	Rachel Bevan	The gondola option is short-sighted and detrimental to Utahans who enjoy Little Cottonwood Canyon. I was born and raised in Utah, and have spent every winter since I was 3 years old skiing in Little Cottonwood canyon, and every summer hiking and enjoying the beauty we have in our backyard. I understand that recently the canyons have become crowded well beyond what they used to be, but a gondola is an expensive solution that degrades the beauty and natural wonder of the canyon. We need increased bus/public transportation options, or a dedicated shuttle, and incentives for individuals to change their behaviors to utilize these transportation options. A gondola will still require extensive infrastructure updates to accommodate park and ride options for individuals utilizing the gondola, plus the extensive cost of the gondola construction and maintenance. That cost should be reallocated to improving public transportation or shuttle offerings including clean energy and electric vehicle investments, not permanently changing the visual impact of the entire canyon, particularly since UDOT does not have the funding currently to move forward with the gondola. The gondola option feels like an extreme overreaction to the increase in demand to recreate in the canyon over the last 3-5 years, and feels punitive to those of us who have responsibly recreated there for over 30 years. Please reconsider the gondola construction and consider investing in better, cleaner, more reliable services utilizing the existing roadway infrastructure.
27705	Matt Pacenza	Hello! Thanks for taking comments on this important issue. Here's my number one issue about the gondola: It won't work, it will not be cost effective and it will directly benefit private corporations, who should pay for it if they want it. Whenever I see studies about canyon usage, the facts are always clear: Many, and in sometimes even most, users are NOT resort skiers. Many are residents, Many are employees. Many are back country skiers. Or hikers. Or sledders. To design a wildly expensive solution which has just TWO stops -- at Alta and Snowbird -- serves only some of that usage. And, inevitably, as always happens when you widen a highway, the rest of that demand will simply take up the slack, leaving the same problem we have now. Of course you know this, but I'd be shocked if "induced demand" doesn't play out in LCC as well. Lastly, I can't for the life of me imagine why taxpayers should pay millions and millions (and some more millions) for a huge project that benefits two businesses. We have about a dozen other resorts. Why these two? Let the market work -- if it's too crowded, and other resorts get more visitors, fine. Why is it our job to ensure their profitability? It's a bizarre mis use of public money. Thanks for listening.
27706	Ben Hale	Hello. I am a lifelong Salt Lake Valley resident. I grew up spending a lot of time in the Cottonwood Canyons. They are home to me. I strongly oppose the proposed gondola development. The environmental impact is too great. The damage to hiking trails and views is to great. The data show that it is not likely to significantly reduce traffic in the canyon. More buses, year-round buses, and carpooling requirements are more economically feasible, lessen the environmental and aesthetic impacts, and actually solve the problem at hand. Let's use the infrastructure we already have to minimize impact and keep the canyon enjoyable for everyone, not just the wealthy staying at resorts. Do not waste half a billion dollars on a pie-in-the-sky vanity project. It is not in the interest of the general public.
27707	Rebecca Sabo	Living in Sugarhouse. I am totally against the waste of taxpayer money that will only benefit Alta and Snowbird. If they want a gondola, they should pay for it. I can get behind enhanced bus service and by enhanced I mean a transportation hub at the bottom with at least 2000 parking places, beef up those busses with state-of-the-art 4 wheel drive, appropriate tires, even a snow pusher on the front like they do in Switzerland. Charge a toll to get up the canyon from November 1 to the last day of Ski season to fund road, trailhead and snowplow maintenance. There are so many other solutions that would provide more bang for the buck than a Gondola.
27708	Jana Nelsen	As a resident and avid canyon user for 40 years I am absolutely appalled by the decision made by UDOT regarding the proposed gondola. It's no secret that the gondola will only serve a those using the resorts in LCC but will cost taxpayers millions. THIS IS NOT ACCEPTABLE AND IS A MISUSE OF FUNDS. The desires and opinions of tax payers has been openly expressed and ignored. This is of deep concern to me and everyone I am in contact with. The bottom line is that what the public wants has been ignored in favor or private interest and this represents FAILURE by UDOT to do their job. I am a resort and backcountry user and I have seen the damage clouded [caused] by more people in our canyons. The goal should not be to accommodate higher traffic but to maintain the quality and beauty of our mountains and recreation. This is the appeal of our home! Expansion is not desired by anyone or anything but the resort owners wallets ! NO GONDOLA NO GONDOLA NO GONDOLA

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27709	Leroy And Dianne Anderson	While we appreciate the difficulty of your job, we are disappointed with your decision to build a gondola in Little Cottonwood Canyon as a means of reducing traffic. Since you are choosing to build the gondola in phases, we hope you'll still give attention to alternative plans, such as carpooling, to help the congestion in that canyon. Thanks for listening! LeRoy and Dianne Anderson
27710	Vincent Desimone	This does not provide for public access to other recreation lands in the canyon. It only benefits the ski resorts. Let them pay or if public is paying provide more bus improvements. Environmental impact of the tram system is important. That impact is likely to be high.
27711	Mary Paul	I am writing to voice my opposition to the proposed Gondola plan for the following reasons: 1. The risk is too great. The impact of constructing the gondola will do irreversible damage to our wilderness, its flora and fauna inhabitants, and our precious watershed that MILLIONS of citizens rely on. 2. The math doesn't add up. \$550M for a transportation method that only serves the ski resorts and will generate a maximum for \$7-8 M per year max? Assuming no interest, that's still more than a 78 year payout. It also fails to serve a majority of canyon goers. It's an elitist solution that further divides access to our wilderness between the haves and have nots. If someone has Medicaid or Social Security, will that act as a free pass to access the gondola? Instead of spending \$550 million dollars on one gondola ride that only serves two businesses, why not invest in transportation hubs and infrastructure to move people in a more economical way that would benefit all Utahns, not just skiers. 3. It's the most invasive of the transportation options available. Instead of a gondola, let's build our local economy and hire more people to help manage parking hubs, drive busses/shuttles, and relay transportation updates in real-time to maximize the efficiencies of available transport, parking spots, and ensure popular areas are safe and accessible. 4. It's unjust. Right now, people with money get more opportunities than those who are unable to pay. Full stop. We all pay taxes, we should all receive access. Build a reservation system like Arches did. It's a fantastic model that allows for both planners as well as those looking for same-day options. We all deserve to enjoy our beautiful wilderness. It is absolutely a human right.
27712	Garry Fratto	I am a long time Sandy resident and business owner. I am also an avid outdoor person and use the canyon a lot. I am OPPOSED to the Gondola for little cottonwood canyon for the following reasons. 1. first off cost of \$550 million is way to high and the final cost will be much more than that. 2. The gondolas require lots of maintenance. 3. The towers will ruin the pristine view of the canyon. 4. The traffic congestion at the bottom of the canyon will be terrible. 5. A good solution would be an express lane with electric buses. and widening the road a bit to allow for a lane switch 2 lane going up in the morning and 2 lanes going down in afternoon. The buses would not create pollution in the canyon. 6. The other thing that bothers me is that the deal seems fishy with the developer. I think the cost and impact are way understated. Again, we are totally opposed to the gondola. Sincerely Garry Fratto.
27713	Melissa Meyer	Using a gondola as a solution to the mega transportation problem Little Cottonwood has isn't going to be enough. People will still want to take their cars. Other incentives will still need to be done to get people to stop driving. Other limitations will need to be put in place. The gondola is an expensive endeavor that will still not fully fix the problem while it will wreck some climbs and visually be an eyesore.
27714	Craig E Weir	There should not ever be a gondola in Little Cottonwood Canyon. The resorts in LCC are already over crowded There should be a limit to the number of vehicles allowed up the canyon each day. When that number is reached only allow buses to access the upper canyon.
27715	Charlie Sturgis	First and foremost this gondola doesn't look like a public/private partnership but rather looks like a gift to a private corporation. Second, the numbers don't support an efficient movement of skiers uphill in a timely manner for a good ski day(960 per hour) Third , are we really decreasing auto traffic or are we just putting more skiers in the canyons? Fourth, LCC is a beautiful canyon as is , it doesn't need the longest gondola in the world dropped into the middle of it. My vote is no gondola. Thank you
27716	Jillana Laufer	UDOT acknowledged the need to start with a phased approach, and now, the phased approach will have years to prove its effectiveness. UDOT's goal is a 30% reduction in traffic in the canyon and if that can be achieved with carpooling, bussing, and a parking fee at ski areas, which has already proven to be effective, then the gondola isn't necessary.
27717	Ali Wolpern	Please consider revising the decision to putting in a gondola. Having busses, encouraging car pooling, ride sharing, and paid ski parking have all decreased congestion in little cottonwood canyon. Instead of disturbing the wildlife and nature further, could we try a pilot phase to test other decongestion methods before building another transportation method.

27718	Danny Richardson	<p>The Gondola is a pipedream, in that IF the feeling is, that it will solve the Little Cottonwood transportation, i.e., Winter road problems. It will not. Really bad highway days? Maybe a dozen times a year - Winter only.</p> <p>It will offer a narrow alternative for Snowbird skiers - Alta skiers will show lukewarm acceptance at best. With the proposed fares, many/most frequent patrons will choose to drive or take the bus. The Gondola will offer essentially nothing for back country skiers, especially those that might be choosing White Pine and other intermediate trailheads. It will be a novelty at best in the Summer - an expensive scenic TRAM ride if you will, offering zero access to everything except the Snowbird terminal. The expense - for the return, is not even close to being justifiable.</p> <p>Better? Incremental improvements for LCC (and BCC as well): tolls; carpooling incentives; parking "passes"; select/specific road alterations and improvements; support for electric buses.</p> <p>The price/reward is not justifiable. Local skiers will shun it after 1-2 expensive rides, it might make Big Cottonwood much worse, and ultimately, will not solve the road issues it claims to be addressing.</p> <p>So - a firm, educated, years in the Utah ski industry, well thought out - NO for the Gondola.</p> <p>IF making the "big decision" an incremental, other steps first: road improvements, tolls [electronic pass-drive through lane], carpooling, parking solutions first / wait and see - maybe not / no funding from the legislature/(scapegoat) - process, then OK. But the Gondola should not be the final solution.</p> <p>Thank you. Danny Richardson</p>
27719	Erin Doyle	<p>I have called the Salt Lake Valley home for the last 4 years, and proudly call LCC my ski home. I personally have experienced the traffic and tourism issues that face all Utah canyons (not just LCC) and I understand the need for change. I am thrilled that UDOT has decided now is the time for change, because it is desperately needed! I am also pleased by the careful timeline and thoughtfulness this process has used. However, I and many, many other Utahns have expressed our desire for a solution other than the gondola. I am disappointed first by the lack of weight the opinions of taxpayers and canyon users carried in this decision making process. Second, I am upset that time and time again state organizations make decisions that side with massive corporations and extremely wealthy residents. Why should the La Caille family make millions of dollars on this deal, while other middle class Utah residents fund this through their taxes?</p> <p>I am also concerned by the claim that the gondola will allow skiers to bypass 210 in hazardous conditions. I think many pro-gondola supporters understand this to mean the gondola will take people up to the resorts while it is avalanching. However, this feels 1. unsafe conditions to run transit in. We know how powerful and destructive avalanches can be. 2. Many resorts limit terrain and accessibility during dangerous days. How will this work with the gondola?</p> <p>Finally, I urge UDOT to reconsider less invasive options. There are ways to increase safety on 210! There are ways to more effectively bus skiers and outdoor enthusiasts up and down the canyon! There are ways to make this plan more economical, and less permanent on the landscape. Affordable electric busses, limiting public access to 210 on high traffic days, and providing effective transit to and from the mouth of the canyon mean there doesn't need to be parking spots built, there doesn't need to be \$500 million in infrastructure constructed in a precious watershed, and it allows for more well rounded, all season use of the canyon by ALL Utahns and visitors.</p>
27720	Pam Stegerwald	<p>Let's save money. Save the canyon and provide access for our community. Last year Alta's parking plan worked. Why is there no acknowledgement of that? If Snowbird made the same plan, there would be additional effects. Public money is not free, we don't want to spend our taxes on the gondola. Spend our tax dollars wisely. Housing for low income people or pay our teachers more. There are tons of projects. that was benefit our community. People do not want the gondola. I'm a skier and hiker and I don't want the gondola. The gondola will also put more people up there and the canyon will not be able to sustain all the people that the gondola will be able to deliver up the canyon. Please be honest and listen to our wishes. Thanks you!</p>
27721	Nicole Maxfield	<p>Do Not build this gondola! Our beautiful mountain does not need this monstrosity in it! Do not ruin our mountain with this!</p>
27722	Michael Bell	<p>I oppose the Gondola project for the following reasons:</p> <p>Gondola Project risks:</p> <ul style="list-style-type: none"> - Earthquake prone area - One of the most active avalanche areas. Look at how the Provo canyon Bridal Veil Falls Gondola project works. Oh wait you can't; an avalanche wiped it out in 1996 - High winds - Longest 3-cable gondola system in world (8 miles) - Will require 20+ towers; 10 of which will be over 200' tall. (Each tower will need a road built to access the tower for construction and ongoing maintenance), so lots of additional permanent roads - The proposed system is designed in Germany; so all the maintenance and parts have to come from there - What is the solution for passenger rescue when the gondola breaks down? Or loses power? - Given all these risks, the proposed budget I think vastly understates the construction costs. I would not be surprised to see a DOUBLING of the construction costs. <p>Preferred alternative:</p> <ul style="list-style-type: none"> - Toll road with variable tolls (with exemptions for local residents). - Or shut the road down entirely and force everyone to use the bus (as is done in, for example, Zion's Park) - Free bus (paid for by the tolls) - Almost no risk. - No idea how the "claimed" 48 busses will be needed. If I did the numbers correctly, that means 1 bus every 1/3 of a mile?

27723	Erik Sahlin	YESSS!!! SO GLAD UDOT CHOSE THE GONDOLA TO GO FOWARD!!! The Gondola is extremely vital to the future of Little Cottonwood Skiing and Tourism. Those "Friend of Little Cottonwood Canyon" are dead wrong! None of their comments make any sense!! They only make me wanna love the Gondola more. They are wrong because the gondola towers can be as far as 2,000 feet apart from each other as well as the stations. The Gondola would also design it's path to avoid sensitive vegetation, wildlife, boulders and anything Watershed related. Gondolas are evolving with new technologies that benefit the quality of life even more. As a Gondola Advocate myself and as one who loves Snowbird and Alta, the Gondola must be built. It will be one of the biggest gondolas ever built in the world!!! Europe's Gondolas benefit well over driving, cleaner air and also run on electricity!! GONDOLA FOR THE WIN!!!
27724	Carol Fudyma	Vehemently against gondola or cog train - gondola changes naturally beauty of canyon and takes too long to travel from parking via bus to gondola loading. Cog railway costs too much money. Strongly support enhanced bus but if you really want people to ride the buses, make a designated Alta bus and a designated Snowbird bus. Also make the buses electric. Push people to ride the fast buses by either charging high car fees or prohibiting car traffic up the canyon during morning rush hours - like from 0600 - 1100.
27725	Nate Jackman	The Gondola is the worst idea. The ski resorts should remedy the traffic to their business as opposed to having the taxpayers pay this expensive tab. Just adding a toll both to LCC alone would cut the traffic and add funds to the canyon. I don't think that even the most minor steps have been taken to solve this before we spend \$500++ million dollars on a Gondola. The amount of days that the gondola would be needed, is a colossal waste of money and unneeded destruction to the mountain.
27726	Maryann Anderson	The gondola is a HORRIBLE IDEA!!! Why should the taxpayers pay \$500 million for something that destroys the beauty of the canyon and only benefits the ski resorts. UDOT is programmed to ram this through. STOP!!
27727	Josh Denys	<p>I am very disappointed in your decision to make a gondola the preferred solution to Little Cottonwood Canyon's traffic woes. I will list my four main concerns with the gondola concept and then offer a simple solution.</p> <p>Concerns:</p> <ol style="list-style-type: none"> 1) Ugly- a gondola would irreversibly mar the unique beauty of the canyon 2) Expensive- this should not be a taxpayer funded initiative. It is outrageous to ask taxpayers to foot the bill for something that primarily benefits Alta and Snowbird ski resorts 3) Drinking water- during construction, the gondola would likely have a negative impact on water quality in the canyon 4) Ineffective- even with a gondola, most people will still choose to drive personal vehicles up the canyon <p>Preferred Solution: Simply provide economic incentive for people to leave their personal vehicles and ride the bus:</p> <ol style="list-style-type: none"> 1) Paid parking- require ski resorts to charge additional fees to park private vehicles 2) Toll- charge a toll for each vehicle to enter the canyon (similar to Millcreek but it would be more effective to charge upon entering the canyon instead of exiting) 3) Enhanced bussing- use revenue from parking and tolling to heavily subsidize bus service in the canyon. If busses are convenient and cheap, more people will use them. Busses need to come more often. We should have express busses to the ski resorts and also "local" busses which would stop at trailheads along the canyon. <p>The beauty of my proposed solution is that it won't cost anything and you can easily limit vehicle traffic to desired levels simply by increasing the toll- if five dollars per car doesn't yield the desired result, ten dollars or fifteen dollars per car will. If the cost of driving a personal vehicle is high enough and the alternative bus is convenient and cheap enough, people will choose it.</p>
27728	Robert Woodruff	I oppose the costly gondola project. It would spend way too much money to service way too few people. It is disturbing that this project is even being seriously considered as viable.
27729	Aliz Deppe	No gondola! Why should tax payers finance something most locals do not want!
27730	David Ekstrom	I am a Cottonwood Heights resident and have enjoyed both big and little cottonwood canyons for 40+ years . I DO NOT support the Gondola proposal.
27731	Don Schulthies	I own a time Share at Snow Bird it is important to use my vehicle for move in and move out. Will we be able to drive up with luggage to stay at the resort? I think the Gondola will work great if access to the Canyon is possible by car for staying at the resort and camping and hiking in the canyon. Thanks

ID	Full Name	Comment
27732	Nathan Brown	<p>I use the Cottonwood Canyons year-round and appreciate the work UDOT is doing to explore transportation solutions for these special areas. I do not think a gondola is a fair, effective, or environmentally sound solution. Instead, I'd like to point you to the Connected Transportation Concept done by Save Our Canyons: https://experience.arcgis.com/experience/47227db0d7844ee29e1d45aa446b0d39/page/Map-App-3/</p> <p>Some key points from the study:</p> <p>"We need to better utilize the infrastructure we already have in the urban areas, to connect our communities to the Wasatch, without destroying what makes these canyons unique. We can do this with buses. A flexible YEAR-ROUND bus system that focuses on getting people out of their cars, nearer their origins will protect the Wasatch and improve access and the canyon experience. Driving private vehicles to access recreational opportunities is deeply ingrained within our community. However, if you want the "red snake" to end, protection of our public lands for future generations, and clean water - we must change our patterns of behavior when accessing our shared resources.</p> <p>This concept includes at minimum the following:</p> <ol style="list-style-type: none"> 1. UDOT's goal of 30% reduction in private vehicles could be accomplished without major construction but requires higher vehicle occupancy during peak hours, weekends and holidays. By requiring 4 or more people in cars that enter these canyons, you could remove 50% of the current vehicles in the canyon, 20% more than UDOT's \$500 million+ solution in search of a problem. 2. A flexible YEAR-ROUND bus system that gets people out of their cars, nearer their origins (homes, hotels, work, etc.), aided by canyon centers across the valley where you can park your car, visit outdoor shops, get food and drink, even have affordable housing. 3. Increase enforcement of the UDOT Cottonwood Canyon sticker program to ensure vehicles are compliant with snow tire and chain requirements under the Traction Law, making the traction inspection part of vehicle inspections. Some weather events (or known busy days) may warrant banning private automobiles in the canyons. 4. Innovate and implement an occupancy-based toll to increase vehicular occupancy from current 1.7 people per vehicle to 4. 5. Big Cottonwood Canyon users parking at "LCC mobility hubs". If people going into Big Cottonwood Canyon make use
27733	Jeremy Handly	<p>To whom it may concern,</p> <p>I'm writing to express my concern on the decision to move forward with the gondola in Little Cottonwood Canyon. I don't see this helping the congestion in the canyon. As taxpayers, we will have to front the exorbitant cost of the project. And, this will ultimately scar the beautiful scenery of the canyon, as well be detrimental to our precious watershed. And, it seems as though it will only benefit Alta and Snowbird, not providing access to the rest of the canyon's many areas for other activities such as climbing, hiking, picnicking, etc.</p> <p>There are other more reasonable and cheaper alternatives that will have more of a lasting impact without such a drastic change to the landscape. Run more bus routes up the canyon, as well as to the canyon, incentivize car pooling and ensure those that do drive up the canyon, have the proper tires and awd/4-wheel drive so traffic moves efficiently and safely. At the least, it would be ideal to implement some more cost-effective and less impactful measures first to see the potential positive effect prior to building the gondola.</p> <p>I hope that you can put the residents of this valley's best interests at heart, as well as make the beauty of this special canyon a priority over the profits and benefits of a chosen few.</p> <p>Best Regards, Jeremy Handly</p>
27734	Ileana Anderson	<p>Public funds should not be used to fund a project that will benefit private, for profit industries (Alta and Snowbird). The environmental impact on the canyon would also be devastating. The bus is the best option. Charge a \$30-\$40 toll to enter the canyon in a private vehicle and improve the bus system to incentivize canyon users to carpool, or take the bus.</p>
27735	Tere Hoffhine	<p>There's got to be less expensive way (for the taxpayers) to help out. A gondola is not the answer!! Sure, it'll line the pockets of a selfish few, but overall, it's a colossal waste of money, especially for those that rarely use the canyon!</p>
27736	Ian Burson	<p>Please do not go through with the gondola. I do not agree this is the best method.</p>
27737	Peter Ferriello	<p>Please DO NOT use our tax dollars to fund a project for two private ski resorts. They should be responsible for the project. The gondola footprint will ruin the canyon for future generations. Limit LCC travel and use buses. Put an automated toll at the base and control the flow of traffic. Vehicles should be REQUIRED to have snow rating as the current UDOT system does not enforce compliance as the controls have not been instituted at the canyon entry. The attempted remedies were half-fast at best. Please reconsider the gondola plan and don't ruin our pristine landscape. Thank you for your consideration.</p>
27738	Bart Reuling	<p>I know this has been a long and difficult road, but one that has come up with the reasonable solution in the end. Barring one little item. You are forgetting that the people of Salt Lake do not want to pay for all of this solution. Where are the negotiations for the Ski Resorts paying for a greater portion of the Gondola and maintenance and operation, with the state, county cities helping to fund the parking and valley mass transportation end of the project. Hope you haven't spent all the 60 million bickering between yourselves, going to court, meetings and lunches, lobbyist [lobbyist] etc.</p>
27739	Jonathan Nielsen	<p>Please no ugly intrusive gondola in Little Cottonwood Canyon, it's not necessary, everything else should be done in order to prevent this monstrosity.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27740	Alison Harrington	I am concerned that the gondola is not the answer. In the winter, since the resorts are requiring parking the traffic has decreased. Hopefully both resorts will require parking [passes] this winter and the traffic will further decrease. Enhanced bus service with bus priority is also a good idea.
27741	Sarah Inwood	I am strongly against the gondola. Please consider a solution that is more comprehensive: 1) enhanced bus service in conjunction with bus lane, 2) dramatically restricting vehicular traffic to residents on weekends, holidays, powder days, and possibly more, 3) modifying the road to avoid avalanche pathways and high erosion areas, 4) charging vehicle fee to be in canyon, 5) charging for parking including parking reservations in the canyon, 6) providing reserved parking at multiple bus-only parking lots located in strategic locations in the valley. and more. NO GONDOLA. thx for your hard work on this highly contentious, but very important matter :)
27742	Greg Guymon	Im a big fan of this project. Im sure there will be many environmentalists opposed but I consider myself an outdoorsman and conservationist and believe the benefits to the community outweigh the negatives. Lets make this happen
27743	Ronald Barron	<p>I can appreciate all the aspects of this project you folks said to have considered. I understand that just because UDOT wants to build gondola B plan it may not happen due to funding issues. That being said, the phase in approach can still have a big impact on the issues surrounding Little and Big Cottonwood Canyons.</p> <p>To that end, as a user that would currently be very happy to take bus transit up either Little OR Big Cottonwood Canyons, I can comfortably say the canyon bus system needs to be significantly enhanced. There needs to be MANY more parking spaces near the mouths of the canyons, making the trip on the buses as short as possible. There needs to be MANY more buses, just up and down the canyons as well. Non resort users must be considered also by providing trailhead bus stops/shelters, or on-demand stops. It is very dangerous for a winter back-country user to exit a drainage only to have to wait a half an hour along the road for a bus. I won't do it. I wouldn't expect anyone else to do it. No shelters, in the cold? NO way. I hope you'll address ALL these issues soon.</p> <p>Thanks. rb</p>
27744	Don Webber	UDOT, please, PLEASE don't allow this. Once it's altered, its altered forever. Less invasive options ARE available. The gondola services 2 privately operated ski resorts. This canyon is SO much more than these 2 resorts - it's peaceful, quiet and relatively unscarred. Vehicle tolls, increased bus lines, limiting private vehicles on popular ski weekends are all less dramatic and less EXPENSIVE solutions for the taxpayer. Please don't do this. Listen to the vast majority of your constituents. In the words of Thoreau: "a man is rich in proportion to the amount of things he can afford to let alone." Just let this alone, UDOT. It is what the majority of people want.
27745	Terry Heinrich	A question has always been why is UDOT Deciding on all of these changes. Widening Wasatch Blvd, putting in a 2500 parking spot garage, and a Gondola when 80% of Utah's surveyed do not want to Gondola. Do you people at UDOT ever look at social media? If you go onto the Nextdoor app if you go onto Gondola works video and look at the comments after that video you can see most everyone is against the gondola. Why are you deciding that you want this when all of the Utah does not want it. If you're going to put in snow sheds and they don't work 100% of the time then that is hard to digest. And if you think there isn't going to be any road congestion because you're going to put two lanes past the high T to the parking garage then you are not aware of the every day traffic. There will definitely be slowed traffic going into that parking structure. Have you ever gone downtown to the Marriott hotel and waited in a queue to get into their parking structure? Or have you ever gone to the mall downtown City Creek and got into their parking lot? These are the issues that are going to be extremely important and they're going to slow all the traffic down. And if your whole entire concept is all about commuter traffic then why are we even considering the gondola why don't we just stick to the commuter traffic. And you also said in 2050 that the traffic on Wasatch Boulevard Would be very much increased. Well by 2050 don't you think that ski traffic will be decreased ? we will not have as many skiers because skiing has decreased over the years. Finally I still don't understand how UDOT In good conscience can make this decision about the gondola. Please remember that it isn't too late. We can have a better solution & work harder to save the beauty of LCC. It's not always about the money.
27746	Leslie Woods	I am a Utah resident that has been enjoying outdoor activities in LCC, actually all three of the main canyons along the Wastach Front for 40 years. I like the fact that you want to decrease traffic up LCC by 30% and I feel this could be accomplished by encouraging and educating people as to why we need to car pool and use the busses when heading up the canyon(s). Plus during the winter all of the ski resorts should have a parking fee for the same reasons listed above. I was very disappointed when I heard that UDOT wanted to pursue the gondola option and maybe with the solutions mentioned above this could be achieved prior to beginning the gondola option, which in my humble opinion will have a negative impact on the culinary water for the SL Valley, backcountry skiing, snowshoeing and hiking trailheads in the future since the gondola's first stop would be Snowbird. This does not make sense to those of us that like to utilize the lower parts of the canyon. Someone will be making a lot of money off this deal and that is not fair. If Snowbird wants the gondola to cater to mainly out of state tourists then they need to foot the bill for having the gondola. Please listen to what the locals are saying and have been saying as long as this issue has been around.
27747	Sam Liston	I haven't found answers to two fundamental questions that I have not found the answer for: How much will it cost to ride the gondola; and how do I get to White Pine trailhead.
27748	Nicci Tait	Please reconsider the gondola project for the canyon. There are far more sustainable solutions that would not require a gondola obstructing views of the canyon and tearing away at the landscape. I have heard of electric bussing possibilities that may be a better decision- please take more time to consider the best decision for the future of the canyon.
27749	Ruth Ann Glade	I am a local resident who has been skiing for 40 years. I am not in favor of the gondola. Those that want it do not ski - they are the ones who will make money from the gondola! The cost to park and ride the gondola on top of a ski pass will out price the local skiers. Not to mention the tax burden to build the gondola! As a local I will not ride the gondola. There are other solutions...such as certain hours use both lanes to drive up the canyon. Set hours to drive down using both lanes. Why don't you run the resorts like Disneyland? Have Local discounts days and weekends with others blocked out for tourists. Lastly, cap the number of skiers to accommodate the traffic. Thank you for considering these ideas. The gondola is not the answer!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27750	Patrick Marrinan	Please do not go with the gondola!!! The canyon needs to be preserved for the good of everyone, not upgraded for the resorts!
27751	Philippe Blot	Why should the Utah tax payer pay for Alta and Snowbird business growth plans?
27752	Robin Dale	I've skied primarily at Alta for 35 years, raised my kids skiing there, and live in White City to be close to this beloved place. Why would you ruin this place with a gondola that's mostly benefiting the capitalists? A preferred option is multiple express buses directly to Alta without a Snowbird stop or express Snowbird buses from parking lots near the freeway. Why would you invite so much traffic to park and pollute the East bench? To ride the gondola it will take over twice as long to arrive as carpooling up there from my White City home. Is this Gondola even a transportation solution or is it a capitalist boon? Please respect Little Cottonwood Canyon. It is not Disneyland! What a mistake you all are making. Respect the citizens that live near the canyons as well.
27753	Jean Ferguson	No to ruining our canyons with a gondola. If the canyons cannot handle capacity then limit travel with a reservation system to limit number of vehicles going up.
27754	Jean Bayles	Against the gondola construction.
27755	Kimberly Johnson	NO to the gondola! No to public subsidy of 2 businesses for 15 days per year. NO to towering structures that don't benefit hikers, climbers, xc skiers. NO to widening the road. These are terrible ideas, invasive and irreversible. Yes to more bus service and mandatory bussing days!
27756	Janet Johnson	Gondola's are not the answer. It serves two locations only. This does not address the traffic issues for summer canyon usage. With the reduced snowfall in our region, this is very short sighted. The funds could and should be better spent else where. The population is growing, and shows no signs of stopping. the resorts are going to have to manage the usage by reservation and paid parking only, making car pooling more attractive. They can't be so greedy as to not put a limit on skiers at any given time on the mountain. if the gondola goes forward, will cars be restricted going up the canyon? will the cost of the gondola trip be cost prohibitive to most people, or will it continue to make skiing only accessible to out of towners? what happens when the gondola breaks?
27757	Kyle Callahan	While the Gondola may have many benefits it still disproportionately benefits the private resorts and other private entities. If public transportation funds are being used then it needs to benefit the public overall not just the resorts at the top of the canyon. Looking at how Zions national park went about moving people from being able to drive the scenic route and limiting other parts of the park to just shuttles allowed them to minimize impact with other grossly over complicated Gondolas.
27758	Jason Jemison	Despite one of the main goals being "Maintain existing visual experience" I do not understand how building a gondola within LCC is a viable option. In no way, will one of the world's largest gondolas maintain the existing visual experience. Is will be obstructive from the base, top, and within the canyon. Also, the goal "Consideration of all canyon users, not just resort visitors" does not apply to the gondola. There are no planned mid-canyon stops, making it a poor solution to other canyon users; hikers, climbers, backcountry users, photographers. It only adds use to the resort users, and even them, is marginal. To make the gondola a viable option, parking, transportation, and other infrastructure needs to be added to the base of LCC, which also poses its own issues and restrictions. Where is the land coming from? How are people getting to the parking? I personally think the Gondola is not a viable option for improving transportation within LCC. Options such as improved buses within the canyon are a far more viable option, that align with the goals set at the beginning of the study. It adds accessibility for all users of the canyon, while maintaining the look of LCC.
27759	Anne Clayton	I am opposed to the gondola. It will completely change the view of the canyon. It mostly benefits two private companies (Alta and snowbird) at huge cost to us taxpayers.
27760	Gigi Thorsen	NO to the gondola or anything like it. Use electric busses, every few minutes, and charge for cars. Don't destroy that delicate canyon with a gondola.
27761	Fredric Saunders	Please do not go with "gondola" as the solution. The only people that benefit from a gondola are a few rich developers. Their commercial says "nobody wants to ride a bus." A better question is "who wants to ride a gondola" [at \$50 estimate I have seen. One way?? \$100 round trip to ride?? Who can afford even \$50 to ride it?] A gondola is a permanent scar on the beauty of the canyon. Bad solution for a problem that only exists a few days a year. A better solution is to limit the number of cars that can go up during ski season.
27762	Lori Onsaе	Please really consider who this gondola supports, and it is not the general population. Please spend time and monies on things that are intended for public use, all public. Please consider bussing from a parking location, such as the Southtown Mall, that already has space. Gondola fees or roadway fees will exclude many families from access to our canyons. I would hope you would want to be inclusive rather than cater to the skiing population.
27763	Tony Peeters	As a long time user of both little and big cottonwood canyons, I agree something must be done to ease congestion in the canyons. I don't however think the world's longest gondola is the answer. For one it would be an eyesore. Additionally, I feel like not only would it not address big cottonwood canyon, I also don't think it would help much in little. Reasons being one, the canyon only really gets congested on weekends and powder days and many of these times there are high winds and bad weather that would hinder the operation of the gondola. Two being the cost. The overall cost to build and the price it would be to ride gondola. Skiing has already be one extremely expensive and a \$30 to \$50 gondola ride is not feasible to most skiers. I think ultimately a light rail would be the best answer but also feel a easier and much more cost efficient plan would be electric busses running from multiple stations around town with direct routes to ski areas. With additional shuttles between resorts. Also dedicated flex lanes and bus only lanes to get around traffic congestion in times of heavy traffic. if busses were readily available and had non stop routes and could bypass traffic buildup, many more people would be inclined to take bus. Thank you for listening and please come up with another plan that would resolve the problems I both canyons.
27764	Michael Walterscheid	I am not supporting the gondola project for Little Cottonwood. Find other alternatives.

27765	Jesse Knight	THE GONDOLA IS A TERRIBLE IDEA! If the whole idea is to provide the least impact to the environment how is completely abolishing over 150 climbing routes ethical!? NONE of the solutions brought to light are the answer. No gondola, not more buses, no avalanche barriers over the road. None of that will work! We need to turn LCC into something like Zion Canyon. NO PRIVATE VEHICLES! AT ALL! Just load the canyon with multiple buses and have them come every 5 minutes. THE GONDOLA IS A TERRIBLE IDEA!!
27766	Eric Jacoby	These days more development and construction is not the answer - especially in our canyons. Please don't build a gondola. Regulate the automobile traffic. Enforce a tire traction law. Regulate the amount of ski are passes sold. Provide direct busses to ski areas from broader pickup locations. Restrict additional development at the ski areas.
28137	Robert Elizabeth Steele	Do not build the gondola! It's a fragile environment and will suffer from such a plan!! Wouldn't it be better to do what Zion Nat. Park has done -- have people reserve a bus time, close the road to private cars and allow only shuttles (busses) to access the road up the hill. We'd save wear-and-tear on the road, and we could limit the number of people, so that lift lines wouldn't be horribly long. (I know people who are already giving up on skiing due to the long lines.) And, NO, do not allow cars up for an extra fee. That just allows the rich vacationers more access than the locals. It's also time we started realizing we can't have unlimited access to the canyon with unlimited numbers of people if we want the canyon to remain what it is. What about the people that are not skiers but want to go up and enjoy the canyon? The canyon is being defaced, & the quietness of hiking or camping have now been changed for skiing. I don't believe Alta and Snowbird own the canyon."
27767	Janet Lopez	I am opposed to the Gondola Alternative B to the traffic problems in Little Cottonwood Canyon. This solution has only two load/unload areas that will primarily service only the two ski resorts at those locations. This is an extremely expensive tax payer expense to serve only the two winter ski resorts that primarily serve only a privileged few who can still afford to ski. I prefer the option that provides traffic relief that will serve the entire canyon area with load/unload areas along the canyon road for summer and winter sports and recreation. Please listen to the residents who will pay the cost of this construction and not just a few elected officials and their donors. Thank you for your consideration!
27768	Roni Ocallaghan	With cost the same, electric buses or a train rail would be a more progressive choice. Electric buses throughout SLC and canyons would make SLC an environmentally conscious global city. The gondola is a very small solution only benefitting 2 ski resorts to a very large city wide transportation problem!
27769	Tanner Carlson	I disapprove of this project. Our canyons are already overdeveloped. This is a poor use of public funds to service and benefit a few private entities. Widened roads, or increased bus service during peak times would be a better option for our community. Additionally, the likely price of riding the gondola will be cost prohibitive for all but the wealthiest individuals. If the resorts want this, they should be forced to maintain it, pay for some of the build, and there should be a public cap on price that would be similar to a bus ticket.
27770	Rebekah Lawlor	I think this decision is premature. The reservation system Alta implemented this last year COMPLETELY changed the traffic situation (in a good way!). Allowing people to move up the canyon in a more spread out manner since everyone wasn't vying to get up there in time to get a parking spot. This shows that out-of-the-box thinking can provide inexpensive and more environmentally-friendly options. I also think you'll still have trouble converting people to ride the gondola. It's the same hassle as a bus. I have to park, get my ski gear out of my car, on the gondola, etc. and it limits the stops to Snowbird and Alta. More transit with more stops along the way, build tunnels (less expensive) for snow sheds, and use reservations and other methods to stagger traffic. THE GONDOLA IS NOT THE ANSWER.
27771	Lorin Astin	The Gondola proposal is something that should be scrapped. There are other less costly ways to reduce traffic in the canyon. The Gondola only benefits very few people. If the ski resorts want this they should be the ones footing the bill not the tax payors of Utah. This is an issue that should be placed on the ballot and the legislator [legislature] should not be the ones to determine if the Gondola should be built.
27772	Kane Walsh	The gondola proposal has been shown by multiple studies as an outrageously expensive and ugly alternative that will forever destroy the canyon's natural beauty. The only benefit I have been able to figure out is that it will make some rich people richer. My tax dollars hard at work enriching more rich people. I think this decision amply demonstrates that UDOT is corrupt. A billion dollar rip off. I am so completely irritated and not even a little bit surprised by this. So totally sickening. Congratulations to the misers who will reap the benefits of this, at the expense of us little people and more importantly at the expense of the canyon you will be destroying.
27773	Dennis Ransom	Completely against this move of forcing on the public this business decision without consulting the majority opinion of this project. With the majority of the public against this gondola it should be put to a vote in the up coming election cycle. UDOT is a "company" only looking out for it's interests, capitalism, and not the well being of the environment. The fact that the only stops are at the ski resorts is saying enough of the driving force behind this idea. What is wrong with having the resorts build at their expense a multi level parking garage on the land currently used for the parking at this time? Truly silenced and speechless by the bureaucracy.
27774	Dennis Foster	My wife and I have lived at our home in Sandy for the past 40 years. We love recreating in the canyons mostly during the summer months. We are both retired and no longer ski due to our age. We would prefer not to have a gondola system in Little Cottonwood canyon as the 20 plus steel towers would contaminate the beauty of the canyon. The gondola would not benefit us since it would only serve the two ski resorts. Furthermore we understand our property tax as residents in Salt Lake County would increase which would be a major burden on our fixed income as retired seniors. We would much prefer an improved toll road up the canyon as a traffic resolution. Thank you for your consideration of our input in this matter.
27775	Mark Boschert	This is a terrible idea with limited utility. We should be extending light rail up the canyon replacing the road to minimize emissions and hold more people. It should be linked to the other UTA lines as in Europe. This would be more durable and prevent traffic jams in the canyon.
27776	Rose Olds	I do not want gondolas. Monstrosities! I would like to have reservations for use during ski season.
27777	Larry Dean	Why is UDOT moving forward with the plan to build a gondola up Little Cottonwood canyon? Given the rapid changes to our climate I'm not sure there will be enough snow to attract skiers. And if they do come to ride the gondola, they should be expected to pay for it. Utah taxpayers should not be expected to foot the bill for a bunch of spoiled skiers. Once this monstrosity is built we will be stuck with it forever. There are other solutions that add value for more than skiers in the winter.

27778	Brynne Udy	Please do not build the gondola. It will ruin many things that make Utah my home and a place I love to live.. along with many others.
27779	Michael Peck	Thank you for your efforts to solve traffic problems in Little Cottonwood Canyon. Having grown up nearby, this is the canyon most dear to me in our Wasatch area. After reading all the commentaries available, it seems to me that a gondola is not the true solution to the problem, and I would feel troubled if UDOT carries it through. Please do not pursue this action.
27780	Brock Wood	Worry about the Great Salt Lake drying before you think about this, are we even going to have snow in 5 years?
27781	Cat Miller	A gondola would only increase traffic at the base of the canyon as many cars would be trying to enter a parking lot at the same time. The majority of the public has time and time again voiced concern and distase for the gondola. Please listen to us.
27782	Mary English	Don't destroy this beautiful canyon with gondolas. Use the sensible electric bues.
27783	David Hiestand	It would appear to be a done deal before the 2 "alternatives" were made public. Great job trying to defuse public push back on the money grab. Just wish the money grabbers had some skin in this game. Maybe they will when it doesn't pan out with over runs and low rider ship. Wouldn't it be surprising if the interim measures prove cheaper and more effective than the :solution". You all better make that someone's full time job to make sure they don't end up looking that way cause that would be embarrassing for udot and you buddies you are in bed with. Have fun living on the backs of the masses u don't really listen to.
27784	Melodie Jacobsen	I am writing this in hope that the Insanity of building this monstacity of the Gondola up Cottonwood Canyon can be stopped. \$550 Million tax dollars can be used for Other projects that can better help Utahns in so many other ways. To spend this money to benefit the ski resorts is Insanity Run Amok! Please, Please deny this Monstacity of a project. Thank you, Melodie Jacobsen
27785	Brooke Young	I am not in favor of an expensive gondola that just serves the ski industries. The canyon is used by a whole lot of other people to rock climb, to bike, to hike and a gondola is a terrible solution for non ski recreation. Also, it is 106 degrees in September- are we sure there is going to be snow in the winter long term?
27786	Joseph Wiggins	I do NOT support the construction of a Gondola Line. some of the reasons include: <ul style="list-style-type: none"> - Cost - irreversible damage to the canyon when a rollback happens - climate change is impacting the snow we receive https://www.weather.gov/media/slc/ClimateBook/Seasonal%20Snowfall%20by%20Year.pdf further, with the drying up of the Great Salt Lake, snow totals will be further reduced due to elimination of lake effect <ul style="list-style-type: none"> - while not popular amongst many, a simple alternative would be to mandate that all travel on snow days has to be done through public transit.
27787	Cait O'brien	I have lived at the mouth of little cottonwood since I was 2 years old. I have spent my life hiking, climbing, and enjoying this beautiful landscape but I have never skied at the resorts here. A gondola will not stop my car from being on the road here as it would not service any if the activities I do while in the canyon. It is too expensive to justify the small result we would get from it.
27788	Beatrice Jackson	Parley's Canyon has never been the same since they widened the road. I fear Little Cottonwood Canyon will never be the same after these major "improvements. How about a ski reservation system to keep use to a sustainable level? The proposed plan will significantly impact Sandy City. The Sandy City mayor has some worthwhile ideas. Perhaps you should seriously listen to her
27789	Kirsten Allen	I am a heavy user of Little Cottonwood Canyon and have been for many years. The prospect of a gondola is absolutely devastating. Choosing such a showy, ecologically and aesthetically altering option when much less drastic alternatives exist is wrong, and future generations will never know the wonder of the canyon we grew up with. I am also an attorney in Salt Lake City, and I find it telling that rich individuals and pro-business colleagues frequently support the gondola, while backcountry users, hikers, bikers, and average Utahns do not. Corporations stand to benefit from the gondola, not average Utahns. It is heartbreaking that those interests win out over average users and the environment. I wish I was more surprised. Please consider and select a less harmful alternative Sincerely, Kirsten
27790	Payden Tanner	I spent over 2 months in little cottonwood canyon over the 2021-2022 ski season. I constantly took the bus. There is absolutely no need to put a gondola in this canyon. The bus was inconvenient at times, but that is the service to improve/incentivize so that the public will be more willing to take it. The gondola will not help the solution, but rather mask the problem!!!
27791	Sam Pirayesh	Gondola is not very smart and we don't need. My suggestion for just few day each year we some traffic, close the road to cars and use extra buss to take people up. This is tax payer money for befit [benefit] of few. Very very bad idea
27792	James Pramick	Please no gondola!! It is not the solution that people want! It only helps ski resorts and will be quite the eyesore year round. Not to mention the horrible headache of the construction, and the crazy high cost to taxpayers. Nothing about the gondola makes sense! Please no gondola!! Charge a toll, start there and go from there. Don't jump to this crazy and permanent terrible solution.
27793	Robert Mehregan	I do not wish to see Little Cottonwood destroyed by a senseless gondola when there are much more reasonable options for all users of the canyon. Increased bussing, tolls, stricter traffic/weather enforcement are all great mitigation techniques that were overshadowed by a lengthy campaign by the private respites that do not benefit all users.
27794	Anna Rasmuson	I strongly encourage UDOT to consider options besides the gondola. A shuttle service similar to what is done at Zion Ntl Park would be far more cost effective and less environmentally impactful than the gondola. The gondola only serves ski resort customers and is not the best option for the public. Most importantly, the gondola would permanently impact our drinking water resources that are already strained by our rapidly growing city. We should not risk contaminating this valuable resource just to accommodate the ski industry.
27795	Todd Stevens	DO NOT BUILD THE GONDOLA!!!! WE NEED ELECTRIC POWERED BUSES AND WIDENING WASATCH. NO ONE WANTS THE GONDOLA. THE ONLY REASON YOU GUYS WANT IT IS BECAUSE YOU WILL GET RICH FROM IT. honestly, think about how beautiful our canyon is and how ugly it will be with a gondola

27796	Holly Harrison	There are few places as beautiful and accessible as the Cottonwood Canyons. While I can understand the challenges of congestion, the solution is not more congestion from different sources...and simultaneously destroying one of the most precious resources of Utah. Rather than encourage usage, you will turn away those who value the wildness and beauty of the space and commercialize it. Please consider other options...and protect the amazing spaces we have been granted.
28135	Jim Robinson	I am strongly opposed to the gondola in little cottonwood canyon.
27797	Jennifer Thorn	I am against the gondola. It's expensive, Will crowd neighborhoods, parking will still be an issue, it limits access to wilderness area we pay tax dollars for. It's an eye sore and not needed. Only benefits the resorts which are already too crowded.
27798	Jake Peterson	To alter the canyon in such a hideous way to benefit a couple of ski resorts is disgusting. Get creative. Build parking terraces up at the resort, create a lottery system for parking access, force the use of buses. What a waste of resources! It will completely destroy the beauty of probably the prettiest canyon in the state.
28134	Tyler Yeates	I am writing in opposition to the decision to build an expensive and intrusive Gondola. I think that money could be better spent, and more importantly, I urge you to please protect our canyons. Thank you.
27799	Jack Seebohm	I am a resident of Summit County and an avid outdoorsman. It is only my 3rd year playing in the Wasatch, but I have quickly fell in love with its solitude and beauty. I am afraid the approval of the gondola in LCC is only the beginning of a corporate takeover of our beloved range. I understand the public value in allowing more people to access the Wasatch, but I wonder at what cost to the environment and if it will stop at a gondola. Once you give the corporate interests more revenue, they will continue to lobby for expansion into different areas of the Wasatch at the detriment of the local users. I am still young, and I hope to be able to share the untouched beauty of the Wasatch with my children in the coming decades. I ask that you not think about the corporate interests that will bring unnecessary dollars in the pockets of the wealthy, and rather the great value in preservation of our beautiful mountain range.
27800	Lauren Mcmillan	Hi, back again. The gondola isn't a solution the people want. It's for one short season a year, and it only serves resort skiers. Every other visitor in the canyon that doesn't resort ski, visits the canyon at other times of the year, will have to look at an expensive gondola that they don't even use. People have spoken that they want a bus system like Zion.
27801	Maria Schnurpfeil	Dear UDOT team, Since carpooling and bus traffic have proven to be an effective alternative, why waste money on building the gondola. Much more cost efficient would be improving the current system. Decaying forsaken shopping mall spaces could be used for garage/ parking spaces.
27802	Larry Daines	We shouldn't do the gondola. It's too disruptive to the watershed and canyon, and we shouldn't subsidize 2 private corporations who are more than capable of paying for it themselves. Enough corporate welfare that only benefits a few. You should be charging tolls and access fees and giving lockers to skiers who use the bus. Thanks
27803	Peter Millson	The gondola only serves the ski resorts. Using taxpayer money for a project only benefiting private companies is insane. A toll road would be so much better for everyone. The canyon is already [redacted] near ruined from an overpopulated valley, don't ruin it even more just to line your own pockets.
28133	Steve Aldous	Dear UDOT, The gondola should be a very last resort. The visual impact alone is unacceptable. Most of LCC is still beautiful and natural looking. This should be preserved. But we already have to endure the visual impact of a tram, and countless lifts on the upper south side of LCC. The gondola would spread the eyesore that is Snowbird and Alta infrastructure along the entire length of the canyon. Forever. Altering the look and feel of the entire canyon for the sake of moving skiers on peak days is unnecessary, and wrong-headed. All portions of the enhanced bus alternative WITH shoulder lane should be tried thoroughly before any decision to move ahead with a gondola. This includes peak period tolling, snow sheds, all of it. This alternative also provides considerably faster peak transit times than the gondola alternatives. Thanks you for your consideration in this matter. Steve Aldous
27804	Lance Meyer	No Gondola period. Too much money for tax payers and more people flooding our precious mountains. At the end UDOT needs to publish the vote in who is in favour and not???
27805	Michelle Feolo	I am hopeful the gondola plan goes through. I feel like this is the right project for traffic control. I have ridden the bus in the past and it's a nightmare. I'm hoping less cars in the canyon will equate to less pollution from carbon emissions.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27817	Amber Scholes	I don't want the gondola in my backyard. I don't like the impact it will have on the look of the mountain. I don't like the idea of it sitting, wasting away as I don't believe people will want to use it as much as UDOT is trying to tell us. The cost is too much with too little benefit.
27818	Andrew Burns	As a Colorado resident who visits Utah to ski Alta I would discontinue these trips if a gondola was installed in the canyon. This is a bad option in an amazing place that would be ruined.
27819	Robert Machol	I am absolutely against building a gondola up Little Cottonwood Canyon. Not only would destroy many areas that I and others enjoy to hike and climb, the proposed gondola would not allow access to said areas. The gondola project would only provide for those who's ultimate destination is the ski resorts. As a back country skier, hiker, climber and mountain bike, this would not provide the access i need to the canyon. This would be like only providing transportation in New York City from Midtown to LaGuardia airport. While that would help out many, it would not help out all those who need transportation around the city. I would like to put out that I am speaking on behalf of many people in my community who access Little Cottonwood, But who do not ski at the resorts. These are the people would be paying taxes to provide the money for a project that we would not use or meet our needs. What do backcountry users need is some system that allows for multiple drop off AND pick up areas all along the canyon corridor. Currently, there are buses that I can ask the bus driver to drop me off at various destinations, but there are no pick up areas in other destinations. I am often forced to drive to these areas because there is no other way to access these areas. I would also like to point out how little and big Cottonwood are call existing. What happens at one canyon will affect the other canyon. Already, the mandatory parking pass up a little Cottonwood Canyon has negatively impacted big Cottonwood Canyon with much more traffic than there has been in the past. Not only that, but we need to address summertime traffic as well as winter time traffic, as this is also a large issue that is only getting worse with the growth of our city.
27820	Zuzana Stehlikova	I believe that this project doesn't benefit majority of Utah citizens. Extremely expensive, environmentally destructive project, benefiting only few - mostly businesses. I am against supporting this project.
27821	Jessica Feemster	Consider a few structure or capacity limits prior to starting a gondola project.
27822	Valeriya Yukhimova	As a former snowbird employee and climber, hiker, camper, skier, I have experienced the transportation problem in LCC for 15 years. However, I strongly believe that pursuing other options that have been proposed time and time again is the better option at this time. Give these options an actual hard try before causing irreversible environmental impacts to LCC. This canyon is for everyone, not just visitors of snowbird and Alta. This project impacts local recreation which the majority of out of town skiers/visitors won't have to experience the fall out from.
27823	Leanne Simon	The gondola is an over priced and ineffective solution that only benefits the resorts. The same amount of traffic will be present for those of us that use the backcountry and trailheads. Listen to what the majority of people are providing their feedback on.
27824	Amanda Quinn	It's not your sky to ruin. It won't solve the problem. It's literally a bus in the sky. Please create more park and ride parking, additionally bus routes that not only serve the resorts, but the trails and climbing areas. NO ONE HERE WANTS THE GONDOLA.
27825	Derek Taylor	Please continue to follow through with this phased approach. Dedicated bus lanes have a bigger environmental impact than a gondola, and very few of the people clamoring for expanded bussing are actually going to use the bus. One thing to consider, is please allow people to load and unload at the angle stations to provide better access to trailheads and other sites that are not accessible from the ski areas.
27826	Elsa Dillman	Hello, I am a lifetime SLC resident. I'm deeply concerned about the proposed gondola in little cottonwood canyon. This is an outrageous solution to the canyon traffic issue. It doesn't serve the residents of this state. It well negatively impact many recreational opportunities in the canyon (there's more than just skiing). It moves congestion further downhill which is incredibly bad currently even without additional issues that the gondola would create. The gondola will impact climbing as well which is a prize that we should cherish. It is short sighted. There are other ways to improve traffic and accessibility without destroying the environment. For instance, we could implement a better bus system, more frequent with busses designated to skiwrs, climber, hikers, and bikers. We could impose a road toll for single passenger vehicles, parking fees.... The residents of the area are begging you to be more creative in the solution. We love our canyons and a gondola is not the answer.
27827	Kelly Nolan	I live in CW Heights. This will be a enormous waste of taxpayer dollars. The resorts who would benefit from this gondola traffic ought to pay a large proportion of this project first off, but the bigger problem in my mind is going to be convincing people to park and use the gondola. Drivers from all around the SL Valley will not be inclined to get out of their cars. If you build a east-west trax line and/or a east bench trax line that would actually get people to the mouth of the canyon without their vehicle, then they could transfer to the gondola or whatever solution you decide upon. Gondola also doesn't solve the building traffic problem all winter in big cottonwood canyon. Better trax also solves the big issue of the parking problem that will be created by this gondola. That trax line would go even further to decrease the enormous pollution problem of the SL Valley as it would get people from the CW heights area onto public transportation when they go downtown too, which is a yearlong benefit to our precious environment. I would love to be able to hop on TRAX to get downtown from this part of the valley which is very poorly served by public transportation. If first you get people there, then I think the gondola or other option would actually get used and would be worthwhile in decreasing canyon traffic and help to decrease pollution year round as opposed to just during the busy winter months which is the only time the traffic issue exists.

Comments on Little Cottonwood Canyon Final EIS

27828	Scott Howe	<p>The little cottonwood canyon road is the main issue related to canyon access. It has a history of incidents including vehicle accidents, avalanches, rockslides and more. It is in serious need of widening, protective barriers, pullouts and passing lanes for the safety of its users and efficient travel. Many users need this canyon road for various transportation that a Gondola cannot provide. Since the road already exists, there is a duty to maintain and improve it for the benefit of all users and the canyon in general. These improvements will be necessary and much less impactful to the canyon existence than a gondola. Even if a gondola is built, the canyon road will still need much improvement. It is relatively easy to add more efficient bussing to the canyon. How the decision to build a gondola has overcome these basic priorities raises significant concerns about the corruption of the decision making process and those in a position to come to the conclusion that a Gondola is the best option. The Gondola is poised to benefit the ski resorts more than any other user group. Despite all the money and influence that these resorts have, it is staggering that they expect the tax payer to fund such an unwelcome intrusion to our outdoor landscape. Despite the years of overwhelming opposition, and recent troubling times the idea that this project might move forward in the direction of a gondola is outright scary. There is little option to social distance in a gondola. It likely cannot be operated safely in extreme weather and wind conditions. It will cause traffic, parking and cost issues of its own. The construction of this magnitude is a large undertaking that will have many major impacts to the canyon environmentally. The costs are likely not accurately measured as has been seen time and time again by UDOT and for projects like this it is easy to anticipate that this will take longer and cost more than proposed, as well as other unintended consequences. This unwelcome eyesore will obscure the vision of the Wasatch front for the future and such poor judgement will be unforgettable.</p>
27829	Dawson Furner	<p>Hi there. Please reconsider other options for Little Cottonwood Canyon. The gondola only addresses resort traffic and is not useful for backcountry users. This is not the best plan. Please reconsider, this would be a permanent mistake.</p>
27830	Jason Corless	<p>The gondola is NOT the right thing and would be a huge mis-use of taxpayer money</p>
27831	Jonathan Cheever	<p>I'm okay with my tax money alleviating traffic. I am strongly against my tax money directly helping for profit, private companies get more money. The gondola is a joke. It is not a solution.</p>
27832	Tom B	<p>No gondola please. Stupid idea.</p>
27833	Bret Goering	<p>This is unacceptable. You quite clearly did not listen to the will of the people or at least your local constituency. This decision only benefits tourists and ski resorts at the expense of the Utah tax payer and our environment. This is unacceptable and I plan to vote for politicians who will stop this projects.</p>
27834	Robert Walker	<p>Haven't seen this suggestion yet although it has probably been made because it seems so basic of an idea. One way traffic going up in the AM and same coming down in the PM. I for one am incensed at the prospect of my tax money being used to the benefit of a small group of people that ski and two privately owned ski resorts. Terrible idea.</p>
27835	Trudy Zufelt	<p>I'm an avid hiker and trail runner and use the Millcreek, Big, and Little Cottonwood Canyons a lot. Our canyons are being loved to death and there is often not enough parking to accommodate those who want to use the canyon. However, the gondola proposition is the absolute worst solution to the problem. This is the one thing that only benefits the ski resorts and NOT the Utah taxpayers. It is ludicrous to expect me and other taxpayers to pay for a gondola that only drops skiers off at the ski resorts but does nothing to eliminate problems in the spring and summer. Your proposal has Utah residents paying for out of state guests with nothing to gain from the taxpayer. If you are to pursue this option, it should be 100% funded by ski resorts and the skiers who would use this. Increase bus service for not only winter but summer also would be a better option. It would cut back on the number of cars who use the canyons and parking could be built in areas that would not ruin the beauty of the canyon. I'm also willing to pay a yearly fee to use Big and Little Cottonwood canyon and to park there like they have in Millcreek. I am super frustrated that I have to continue to pay high taxes to live in the area affected and have to have those tax dollars pay for something I will never use nor benefit from. Please, come up with a better option that doesn't ruin the canyon and that won't be paid by taxpayers. Consider adding a fee to every ski pass sold to cover transportation issues so Utah taxpayers don't have to foot this bill</p>
27836	Robin Hose	<p>No, no, no! I have lived in Cottowood Heights for 35 years and our area is not yours to ruin!!</p>
27837	Ryan Forney	<p>I believe that the LCC gondola should NOT be built. This seems like a massive financial/environmental undertaking that is for the most part excessive and unnecessary. Awful canyon traffic is realistically an issue about 10-25 days per season. Mainly on weekends during snowstorms. I think an expanded bus system should be utilized. It would not even require the road to be widened. Just offer more busses and require people to take them (even if just on weekends!) If this is funded by the public, and supposedly for the public, then why will the gondola only make two stops at privately owned ski areas? This seems unfair to those who use the canyon for other activities and a lopsided benefit for the owners of the ski areas. Take for example Zion national park. You cannot drive to the main attractions. It is bus/permit only. It works because it acknowledges capacity and saves a pristine natural wonder, from clueless tourists and inexperienced drivers, a very similar situation to our canyon. Why not issue a limited number of drive permits for mission critical employees and residents. As well as a limited local salt lake area resident only lottery/permit system available for others who wish to drive the canyon. If you are not part of those permitted then you would be required to take the bus. These types of systems already exist in our own state and around the country and world! They work great! Just expand the bus system and build a parking garage(s) at the base of the canyon and other stops along Wasatch blvd. The buses work great I take them all the time in the winter. Now you just have to expand an already efficient system and force people to use it. Please for the sake of our pristine canyon, watershed and fairness to taxpayers who do not ski at Alta or snowbird, make the right decision and say no to the gondola. Also, what about BCC? The traffic there isn't as bad? It's arguably worse. This is so obviously crooked and the balance is hanging heavily in favor those few developers, execs and big wigs lining their pockets at the expense of our canyon and a bogus gondola that doesn't make any sense. This will be the longest gondola in the world. This gondola will work in high wind situations? None of the towers will be in avalanche prone slide zones, of which there are 50+ along the road. Save our canyon, YOUR CANYON, and do not build this thing guys. Do not let greed win. Make a decision that truly benefits the public, Not just ski area execs and clueless tourists who dont have any stake in what gets built in our backyard aside from the one week they visit and trash it. SAVE OUR CANYON. SAY NO TO THE GONDOLA.</p>

27838	William Taylor	The Gondola serves only the two ski resorts in the winter. A transportation solution that serves the entire canyon is the solution we need. Widen the road, build snow sheds, have dedicated bus lanes, don't widen the road where two lanes any direction already exist, just make one dedicated for busses and expand parking at the base of the canyon.
27839	John Rich lii	Do not build a gondola in LCC. The public cost is too high to subsidize Alta and Snowbird. The fare will not be free driving up the cost of an already very expensive ticket for a family. I don't know if it is correct but I've seen cost estimates of 30\$ for a ticket. That raises the cost of going skiing for my family by \$180. I am not going to ride the gondola for that or really any price. I also don't see how this doesn't just shirt [skirt] the problem from traffic in the canyon to traffic in the neighborhood. This is a poor solution to a problem that has better solutions. Build snow sheds to protect the road in avalanche paths. Increase bus service with a dedicated bus lane and drop off at mid canyon trailheads. That's my preferred. This is the worst solution of all that were originally proposed.
27840	Charles Manning	I have been coming to LCC from New York for the last 15+ years at least once a winter sometimes twice. I have zero desire to go up the canyon in a gondola. I would rather take a bus or perhaps an underground train up LCC rather than be in a gondola. It really doesn't make any sense to build a gondola and the lasting effects of such a project will be felt by generations to come. UDOT, I hope you can understand and I know you will make the decision to preserve one of the Most beautiful places on earth. Thanks Chuck
27841	Audrey Rich	Gondola = NO !
27842	Heather Van Leeuwen	The gondola is still not the right answer. I do not like the Canyon turning into a playground for the rich only. Those on a fixed income can't pay to ride. Those with disabilities will also be discouraged from riding. A wheelchair accessible car ride is much more convenient for them. You are catering to the rich. And making a muck of the scenery. Don't do this. Please!!
27843	Bailee H	I am avidly against the possible build of this gondola. Not only will it take a toll on people wanting to backpack, climb, hike etc. Nothing has really been done to explain in depth as to how this gondola system would even work in the first place. Will we still be able to drive up canyon and park at the resorts? Or are we going to be forced to wait in an hour plus line to hop on a gondola that holds maybe 20 people tops? Also, what about the people that work up little cottonwood canyon? Are they supposed to take the gondola also? Will we not have just as much congestion in parking areas outside of the canyon as we do now? This seems a bit premature and more of a temporary fix to a problem that could be better managed if the local police would enforce parking on the streets up canyon. And also enforcing the 4x4 laws. Even charging for parking sounds a better solution than spending \$550 million dollars for something that will congest the entry to the canyon more than cars ever would. Have they set proper line barriers for people when the cues start to happen? Or do people just form a line out onto the streets while they wait for the 2-5 gondolas to pick you up. These are just a few of the many concerns I have as someone who avidly utilizes these resorts as a local born and raised. Thank you for your time
27844	Susan Wallace	We don't need to spend tax \$ on this! Let then ride the bus! We could spend this money on finishing Mountain View or many other projects, that will benefit more Utahns.
27845	Avery Pitcher	Zions National Park has run exclusively on buses for decades. The amount of people at Zions is way more than those up little cottonwood canyon, yet buses have proved to be effective. The same could go for little cottonwood canyon if planned effectively.
27857	Alex Rej	No gondola
27860	Jerri Vigos	Absolutely do not want to see a gondola projected to go up Little Cottonwood Canyon!
27861	Jase Hoover	Do not put up the Gondola. It is going to ruin our canyons.
27862	Cheryl Stout	I am fully against the gondola being built before other options have been explored. This benefits ski resorts ONLY and seems like a very perfect example of public funds being used for private use. Not okay!
27863	Taylor Ballstaedt	I do not!! (Repeat) do not want a gondola in that canyon.. I think it's financially and civically irresponsible to push this through at a price tag of 500M.. so that two very small business may benefit.. continue doing reservations for parking at the ski resorts and exhaust all the other resources.. there is a reason why that canyon was made and is the way it is.. it's special and one of a kind!! And you want to ruin that quaint exclusive canyon like this!! All of you should be embarrassed for even considering such a reckless way to spend tax payers money but to ignore the local residents..
27864	Cade Barnes	Save the canyon
27865	Marcus Sorensen	I just want to voice my support for the gondola plan. I think the information that has been given out over the last few years makes it sound like the logical choice. I am a local and spend a lot of time at Alta. Just feel I need to provide a counter balance to the vocal minority.
27866	Skylar Casey	I'm disappointed that UDOT chose the gondola option. I am a skier and do believe that action is needed to reduce skiing traffic on busy days. However, I'm also a rock climber and hiker that uses the canyon several other times of year. I'm concerned that the gondola would ruin the viewscape of the canyon and remove some of the iconic boulder problems. The proposal also invests a lot of taxpayer money to address the problem of private corporations (ski resorts). It also seems the impact of climate change on skiing days was not accounted for in this proposal. I think traffic in the canyon can be addressed through incentives to carpool and increased access to public transportation. I happily take and will continue to take the SkiBus into the canyon. There's also more pressure for the private companies to take more action by reducing lift ticket prices on non-weekend days and incentivizing public transportation. There's a way to meter traffic to avoid the clustering that happens on these ten weekends a year, but not have a permanent gondola deface the canyon for the rest of the year.
27867	Max Jones	Beyond obvious that the people do not want a gondola! Stop being shills, do your job and listen to the people! Benefits nobody but the resorts!

27868	Nelson Wetmore	A gondola is NOT the correct choice. As someone who enjoys all the outdoor activities Salt Lake has to offer, we can not let the solution be one that will only benefit the ski industry while hurting the climbing community. We must preserve the climbing areas as they are a huge part of the culture we have in Salt Lake and Utah.
27869	Tracy Gorham	Do not build a gondola. We do not want the expense or the eye sore. It only serves a few billionaires not the community. This is completely against all of the community's wishes, needs, and wants. Put this to a vote. Do the right thing.
27870	Vivian Grant	Please don't do this. Save the nature.
27871	Michael Claffin	I understand the desire for a gondola but it simply doesn't make sense. Before turning to a gondola to solve all. Our problems there needs to be incremental changes implemented before we irreversibly alter the canyon with a financially irresponsible project that only benefits corporations and not the public. The Gondola only would serve the community 4 months out of the year which simply does not justify the cost.
27872	Danielle Irvine	This is not a good use of tax dollars as it benefits only the few and not the majority.
27873	James Martin	The Gondola makes sense and I support your proposal.
27874	Dallin Ballard	Please don't go through with this operation. I need my bouldering up little cottonwood
27875	Mlisa Long	A gondola is a terrible idea that should only be considered after other less intrusive options have been tried and given a chance to work. I addition, the fact that tax money would be used on something that will basically prosper private industry is welfare at it's worst
27876	Stephen Moyes	Theodore Roosevelt created the National Parks to protect the land forever. We need to do the same by not adding a gondola to the canyon. It is not in our communities best interests. As a resident of Cottonwood Heights, I am opposed to the Gondola. It's our duty as citizens to be good stewards of the land God has given us. A Gondola would have irreversible impacts on the nature of the canyon and its natural beauty. And for what? Please leave the canyon alone and restrict further expansion of traffic lines. It's pristine for a reason. We can still protect what we have.
27877	Heidi Moyes	I live in Cottonwood Heights and I do not want the Gondola. I don't think it would be a benefit as much as an inconvenience and a huge cost
27878	Jim Ford	I think that we've done without toll roads up the canyons all these years I don't see why we should start now.
27879	Kyler Cooley	I don't think the gondola addresses the long term problem in a fically responsible way. It doesn't allow people to utilize all of the canyon and assumes that everyone is headed to a resort. There are far more people headed to a hiking spot or touring location. It also has a large environmental impact and eyesore impact. It would allow people to access the resorts during avalanche conditions but those are only a fraction of the days per year... maybe 30? It has a huge cost and isn't scalable. Widening the road and utilizing a bus only lane or flex lane seems more effective, less eyesore, allows people to utilize the entire canyon and will encourage them to use public transit if that lane is used just for a faster bus option to the top. I did. Think the gondola is a good use of funds or time or natural resources.
27880	Tyran Mahoney	Don't throw 550 million at something just to be selfish. The resorts don't need the extra help to make stupid money.
27881	Jacob Jensen	This doesn't fix the issue for any users other than those at 2 very expensive ski resorts. Arguably not needed in summer . Will cost so much for so little return. I'm not in favor and feel a well tuned transit plan should be tried and implemented first. Either way stops along the way for back country users are still needed .
27882	Abigail Van Wagenen	Widen the road & create an improved bus system, similar to Provo/Orem! Employs more people & preserves the canyon. The gondola is a joke & will ruin one of the most spectacular views in the country.
27883	Mike Austin	I fly from Europe every winter to backcountry ski in and around the Wasatch. I will find other places to spend my time and money if this ill thought out gondola proposal goes ahead. It advances the land grab of the ski resorts and disadvantages every other user group in the canyon.
27884	Kathryn Handy	Please listen to "the people of Utah" No Gondola, we carpool and ride the bus. Educate the tourists and stop this madness
27885	Jacquelyn Barnes	Please don't put in a gondola. It's the wrong thing to do. Period.
27887	Doug Durboraw	1/2 billion dollars for a select few for five months or so? NO NO NO
27888	Linda Katz	I am a ski instructor at Alta and own a condo at Powder Ridge. I oppose the gondola. It is unnecessarily expensive for tax payers. It will be unattractive and slow. The parking reservation system WORKED last year. Combined with tolling, carpool incentives, and expanded bus service there is no need for the gondola. The canyon is small and fragile, and can only handle as many guests as the parking lots can hold. I do not know anyone who supports the gondola other than ski area leaders which makes me think all the comments of tax payers and residents are not valued. Thank you
27889	Mike Katz	As a resident of powder ridge at Alta I am very concerned about the view shed up the canyon and I think it would be effected negatively by the gondola. As a tax payer I have to imagine we have better use for our money than to support this project to help to reduce traffic on between 5% and 10% of calendar days a year - seems irresponsible. As someone who cares about the environment, electric cars and busses are growing at such a rate that in 10 years 25% to 50% of the traffic up the canyon will be electric thus reducing the negative local effect of carbon emissions on the canyon. Please do the tolling and enhanced bus service first and measure its effects and put this on hold until we know the answer to that and can see the electrification of our vehicles take hold - no need for this.
27890	Charles Williamson	How do we allow countless cars with just one driver on a Snowbird's infamous Saturday Shows to enter LCC. The days of driving solo up the canyon for 2 hours of skiing must end. Bus schedules must be enhanced. And when the next pandemic strikes are we going to allow 12.5 people on the mega gondola??? I do not envy your decision but please fight before you run to your escape pods.

27891	Lea Lazaris	As someone who uses LCC for not only skiing, but climbing and hiking (along with most other people in Utah who access the wasatch in all seasons), I cannot stress enough how disruptive creating a gondola will be. There are a variety of things we could do first to combat ski season traffic. Toll the canyons, require parking reservations for all resorts, simply get off the Ikon pass (as that is clearly what has caused the traffic to worsen). There are many many options we could trial before building a gondola, instead of ruining the animals homes, cliff faces for climbing, and the overall infrastructure of the canyon.
27892	Melarie Wheat	A gondola only serves skiers and ruins the natural beauty of this narrow canyon. As a non skier I don't want to subsidize a sport that is only available to the rich. Try other options first like electric buses..
27893	Andrea Cebrio	As a skier that go most of the winter days to Alta, I saw a lot of improvement in the traffic issues with the implementation of parking reservation. In reality there are just few day in the year that the canyon is busy, I don't think the Gondola was a good option. Parking reservation works.
27894	Steve Santora	No gondola up LCC
27895	Allison Migun	The overwhelming majority is saying no gondola so why are our voices not being heard? The gondola is detrimental to the canyon environment, and the damage it will do will never be undone. There are many other solutions to fighting traffic conditions, and the gondola is not it. Please please please hear our cries, and PROTECT OUR CANYONS. It's unjust that the people who will decide the canyon's fate are the ones with money and power- and those people probably do not recreate in the canyon regularly like the rest of us. Keep our canyon's natural beauty intact, and don't ruin it with a gondola.
27896	David Taggart	Please reject the plan for the gondola,as it will not solve any transportation problems and will only harm the environment.Thank you.
27898	Alec Penttila	It is apparent that Utah government is more concerned about profit than it is with its local population. Long time residents are being overwhelmed by the massive influx of transplants, predominantly from California and Texas, driving the cost of living through the roof. Construction of the LCC gondola would degrade the property value, ecosystem, and livelihood of those living in and around LCC. The gondola is not the answer for the destruction of the ski resorts caused by the Ikon pass bringing people from across the US into the LCC far beyond its capacity. There is no perfect solution to the environmental crisis we are having in the bonneville lake basin and surrounding mountain ranges; however, the reduction of the number of people allowed to populate the overcrowded valley would decrease the strain enacted on SLC, BCC, and LCC. Solar powered UDOT facilities that can store energy obtained through the summer may provide enough power to drive bus transportation throughout the winter. This combined with mandatory bus use for vacationers as well as local only parking passes may alleviate the stress on the canyons. The gondola will look lovely transporting metric tons of humans to the top of our year-round barren peaks as the current global and local climate trends suggest we will not see snow accumulations in the Wasatch front by the end of this century.
27899	Barbara Wheat	Gondolas are small and slow. No one will wait in the probable long slow line. They will drive anyway. UDOT, ELECTRIC BUSES. The costs and impacts are much too great for the few days that are excessively busy.
27900	Teresa Walton	NO gondola! Spend those tax dollars on those who pay them, not the few who ski!
27901	Jim Paull	I'm a skier and a hiker and use LCC. Unless the Gondola operates in the evening in summer until about 9 p.m., I can't use it in the summer season. As far as skiing goes I'd use it if it were heavily subsidized. The environmental degradation is just too great for this Disneyland like alternative.
27902	Madeline Halperin	Pleas no gondola. This destroys this iconic canyon without helping the situation at all.. by shuttling more people up there, we are going to have longer lift lines, bad highway congestion, and overcrowding at the ski resorts. The gondola damages so much of what makes LCC special - the view of Salt Lake Valley, epic bounding and sport climbing right off the road, and so many natural wonders that have been left untouched so far. Please find it in your hearts to respect this land and find another way to make money of tax payers!!
27903	Joseph Remes	I simply don't see how this is going to fix the traffic problem. I applaud the effort but it will just bottle neck further down the hill and still take forever to get to the resorts. Seems like an awful lot of money, negative impact to the environment for not a lot of upside, if any...
27904	Brandon Eveson	DO NOT PUT A GONDOLA IN.....IT WILL BE THE BIGGEST MISTAKE FOR MANY REASONS. THERE ARE BETTER ALTERNATIVES
27905	Jake Scheid	I am in favor of the gondola solution. I would love to be able to use a gondola all year to access the canyon with my kids. In fact, I think we should develop a network of lifts and gondolas that go from Park City all the way to Mt. Timpanogos. Imagine the terrain that could be accessed year round, and especially during the winter season for skiing/snowboarding.
27906	Julia Dalesandro	Gondola is not the answer. We will be getting less snow and we need creative broad solutions instead of just looking at traffic jams 20 to 30 days of the year.
27907	Michael Frogge	I support the gondola. It's the only way to get cars off the road.
27908	Jonathon Nichols	I applaud UDOT for considering a phased approach but I implore them to carefully study the improvements to traffic with the increased bussing and tolling before moving forward pursuing funding for the gondola. I'm concerned about jumping to this option at enormous cost to tax payers for the benefits of only two private organizations and at the detriment of one of our most valuable resources, the natural beauty of Little Cottonwood Canyon. I believe the phased improvements shy of the gondola will do much to improve the traffic in the canyon without the need for a government handout to private businesses.
27909	Rick Walton	No project is more wasteful than the gondola. It will cost over \$1 BILLION, not \$550 M as is claimed. It will NEVER pay for itself; do the math- will you get 1,000,000 users a year? It will take 1,000 years to pay it off. Simple arithmetic. It will ruin the beauty of the canyon. If it's built I will avoid Little Cottonwood altogether. What a waste.
27910	John Andersen	I can't believe that the gondola has been found to be the preferred option when I haven't met a person that prefers it other than the ones that stand to gain from it financially. I'm disappointed and unimpressed.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27911	Cassidy Wasko	I am vehemently against the gondola option in any form. It would be a blight on the canyon, all local taxpayers (me included), and on Utah's reputation. It's simple to increase bus availability, more affordable, and more reliable. It's more environmentally friendly if the busses are electric. It's more egalitarian, and provides better access to all areas of the canyon, not just the resorts. The government has an obligation to represent the people - overwhelmingly, we do not want a gondola!
27912	Bradford Ence	I oppose the creation of the gondola. This will further damage the natural beauty of the canyon. We need to make more efforts to preserve the canyon and reduce traffic, not build an expensive new ways to increase the traffic.
27913	Michelle Benak	Please listen to the people!! We don't want a gondola !
27914	Evette Jones	As an avid European skier using multiple modes of mountain transport I initially thought the Gondola Project was an an amazing idea. After some thought it is not! For most of those European resorts the entire town and surrounding areas benefit from the gondola, train, etc.. Due to it's secluded location the proposed remote base area is of no benefit to the local community. It will only benefit a few insider investors willing to squeeze \$'s from the tourists willing to use it. I moved here after visiting and skiing these mountains for over 30 years. Utah's idea of highways and public transportation is a joke. Nothing done since the Olympics and the TRAX was not very well planned, poor pickup locations, almost always empty and does not have the hours to support real world use.
27915	Aaron Fisher	your greed. The canyons are more than just ski resorts. your greed and you even more for not listening to the will of the people that actually spend time in the canyons, instead of some tourists who disrespect everyone and we're upset they had to sit in their rental car a little longer on their 1 week vacation. Your priorities are
27916	Joseph Hobby	UDOT, I am extremely disappointed in your decision. I am local and homeowner who resides at the base of the canyons (Your decision is impulsive and negligent, thinking only of tourism and convenience not efficiency and long term resolution. How is the gondola going to help with the 200 cars parked at White Pine TH each weekend in the summer. How is a 550 million (which will probably be 1 billion given how projects like these typically end up) project going to be rationalized when there are more important issues like finite water in this valley, poor air quality and a drying lake, all of which that could benefit from this money instead. Easiest solution... take a look at Europe and the Alps or even solutions within this very state in Zion NP. Buses are used all around the world and make the least amount of impact with the greatest amount of flexibility and efficiency. If it requires closing the canyon (like ZION NP) I am all for it and would force all of us to use a parking hub and public transportation. I work as a Mountain Guide taking my guests backcountry skiing, ice climbing and teaching avalanche courses in the winter time and commute 5-6 days up the canyon each week most of the time taking the bus or carpooling with my clients. My guests would be happy to take public transportation and we will benefit ZERO from a gondola that only serves private entities of Alta and Snowbird, which will probably eventually serve Park City when you approve the Canyon Link(?) gondola project. Correction will serve capitalism and the filling of private entities pockets. Think about what you're doing, don't take the easy way out. Remember those passes you handed out a couple years ago that had a snowflake to show our vehicles were approved to travel up canyon but you not the police rarely checked at the mouth of the canyon. I understand that is a hard job and the gondola seems like it is not but a bus system would not be as well. The amount of times the canyon is closed due to avalanche activity is FAR less than due to traffic or a wreck. Think about it and don't change the landscape with this decision, we can NEVER go back once the land is changed to accommodate those towers.
27917	Amanda Figueroa	I am opposed to the creation of the gondola through this canyon. It will only benefit the ski resorts, while harming the existing environment for hikers and bikers. Buses and limiting private vehicles are a much more sustainable solution that will provide flexibility in the future if route changes are needed. There's no reason to spend millions on a permanent, inflexible solution that a significant portion of the population does not want.
27918	Hugh Paik	I am against the gondola.
27919	Heidi Asbrand	Please, please do not ruin the glory and beauty of Little Cottonwood Canyon by putting massive gondola towers up and throughout. The traffic is a pain, yes, but only for less than a month of the season, and this will not address the issue of people going up that are not skiing. It is not worth 500 million dollars of our taxpayer money to help TWO ski resorts, when we are struggling with so many other things. What an outrageous way to spend our money. Please consider bussing or other solutions.
27920	Salam Mahi	I have lived in Cottonwood Heights for 12 years. I am very dissappointed in UDOT supporting the gondola. I believe buiding the gondola does not solve the transpotation problem. It also does not help the people who want to use the canyon for hiking or climbing in the middle of the canyon. Please consider using more public transportation, focus more on parking lots and structures at trail heads and ski resorts. I believe tunnels at major slide paths would be helpful in keeping the road open in winter. As a Utah citizen I am against building the gondola.
27921	Taggert Christensen	the gondola is not a good.
27922	Catherine Sharpsteen	I am opposed to building a gondola in the Cottonwood Canyons, and I am especially opposed to using public money to do so. I go into the canyons to hike, and the gondola would not help me and millions like me at all. Instead, there should be convenient, economical and frequent bus service that departs from various parts of the Salt Lake Valley, supported by storage options for skiers at the resorts. Buses should run year around with some express routes and some that serve trailheads and picnic grounds. Some sort of reservation and fee system needs to be set up to prevent over usage of the canyons. This would also reduce traffic.
27923	Natasha Salaria	I say no to the gondola!! There's no point to it, when traffic isn't even that bad. It's going to damage our environment and do things that are going to be interchangeable.
27924	Earl Johnson	You are an irresponsible person if you are for the gondola. Building the world's longest gondola up a narrow pristine canyon (gondolas in Europe exist not as road replacements, but to get to the top of mountains), would be fiscally irresponsible and a glaring misuse of taxpayer funds. It reminds me of the "Bridge to Nowhere" in Alaska and would lead to a similar national embarrassment.
27925	Edward Horoma	I hate the idea of this new Gondola. Very unnecessary for our canyon. The traffic isn't even that bad most of the time, only on crowded mornings during ski season. It will cause much environmental damage, pollute our groundwater, mess up the soil, etc. it will look very ugly as well. I don't want to drive up the canyon and see 200 foot tall ugly pieces of metal.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27926	Jessica Carlson	This is not what the people (tax payers who will pay for this) want. This does nothing but offer wealthy access to ski resorts while taking away cost-effective activists [activities] like hiking for the community. The bus system should be the focus. Please do not disrupt this canyon for the gondola. The community already said fully who's they do NOT support it.
27927	Cj Sowles	I don't agree with the gondola being built. I really think there are better alternatives than ruining our canyon with such an eyesore and effecting surrounding wildlife.
27928	Lauren Mcmillan	I don't want to have to pay to get on a gondola to go ski. Skiing is already expensive enough. I love the bus system, it's been great.
27929	Trevor Katz	Now we're really angry. As a canyon resident, we no better than anyone that this place can't handle more people than the lord can hold. We've said NO GONDOLA and we will continue.
27930	Bridget Brown	I don't think that a gondola is the right choice to make when dealing with the traffic problem in little cottonwood canyon. Not only is the gondola a waste of money but it will critically affect the ecosystem of the canyon as well as the watershed, which will most definitely affect the environment of both humans, plants, and animals negatively. The cottonwood canyons are known for their beauty, and the gondola will take that away. Lastly, little cottonwood is not built for a gondola. The reason why park city and canyons resort have multiple gondolas is due to the fact that the resort is huge and needs transportation to get to the mountain. Snowbird and Alta are not big resorts. The amount of traffic into the resorts would greatly increase, and because of that the resorts and the environment will be drastically affected. Before you jump into the gondola plan, take the time to think of better alternatives such as fixing the intersection at the mouth of the canyon. There are much more cheaper options than putting in a gondola.
27931	Cathy Riall Reed	I oppose the gondola plan. This proposal that primarily benefits two private companies is hostile to families for both ticket expense and physical effort to make multiple transportation transfers. It does not solve convenient parking issues. It does not help open more of the canyon to safe, structured recreation all year.
27932	Riley Nevins	As someone who enjoys recreating in little cottonwood canyon beyond Alta and Snowbird, I am very opposed to the gondola. An increase in buses and a limit to visitor traffic is what I'd prefer. The gondola is unsightly, forever will impact the landscape, and is extremely expensive. If we really want to invest in Utah's future, tourism, and ski industry SAVE THE GREAT SALT LAKE. Without the lake effect we can all say goodbye to the "greatest snow on earth."
27933	Aurelius Mlynar	I don't think that building the gondola will be worth it. The construction will have many negative effects on the canyons wild life and after it's built the easier access to ski resorts will cause massive wait times.
27934	Stephanie Ruesch	I am a climber, a Porcupine employee, and a resident of Cottonwood Heights. The Gondola project will not benefit me or our neighborhoods and businesses in any way and should not move forward, it will be a detriment. Climbing areas obstructed, views obstructed, my taxes to pay for it, MORE traffic to see the spectacle. It is a canyon worth preserving with a rich history in recreation. Imagine graffiti ON the eye sore of the gondola. No more buildings or structures worth visiting leave the canyon with the people who enjoy it all year long. Toll people at the bottom to protect the nature we have left. Save the thrill rides for Lagoon. A clockwork electric bus system will work. It's gotta be reliable and systematic for people to want to use it. UDOT get your [redacted] hands out of Snowbird and Altas back pockets. 14,000 comments and we are STILL considering the gondola? It does not make sense to move forward when the masses are saying NO WAY! Do something in the city for your expensive projects.
27935	Jim Pagoaga	I would like to express my opposition to the development of a Gondola in Little Cottonwood Canyon due to the negative impact it would have on the environments aesthetic/beauty of the canyon and the additional problems caused by traffic congestion/parking volumes it would cause along Wasatch Blvd and surrounding areas and neighborhoods. There has to be a better option than an unsightly gondola with 200+ foot towers and huge cables running up and down the canyon!
27936	Kevin Schaefer	Are you [redacted] retarded??? Why are we taking tax money to support private business? The gondola only runs in winter. Doesn't stop at trailheads and to top it off, there isn't the capacity or infrastructure at the bottom of the canyon to make this not a [redacted] show. How about go get [redacted] Who is in charge of this? Have you listened to the public at all? Here is an idea- build tunnels over the road in common slide paths like the rest of the world has done such as rogers pass and all of Europe. I know, we're America, and we do things our way, but maybe instead of being thick headed and ignorant we actually do something correct the first time and follow the rest of the world. Build snow tunnels. ?
27937	Kevin Edman	This project is just way too expensive, and benefits essentially 2 private companies. No to the Gondolas.
27938	David Lofgren	With the ski season shrinking because of climate change. Why do we not put our efforts and cash into things that help the PEOPLE like better mass transit in town, or better air quality. Enough [redacted]
27939	Lee Walker	NO. Absolutely no to both gondola and road widening.
29472	Kirk Baggaley	Yes, this is Kirk Bagley. I live in West Valley City and I'm calling that I wanted to say that this is a project that is of only local importance and should not have General State Tax funds applied to it. It should be self-sustaining a project like that that to help two businesses in Little Cottonwood Canyon is disproportional for its cost we have much in more important projects that state tax funds need to be used for then simply taking care of one local traffic problem. That needs to be paid for by its users and so charged every vehicle that goes up there and make the if you're going to do the gondola you'll have to get bonds. Be able to pay the retirement funds on the bonds and the interest out of that which you collect on the actual fees charged to people who ride it and all of the going up the additional cost of going to the canyon needs to be paid for by the users of it not by General taxpayers. Thank you.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27940	David Baird	I oppose the gondola. It will not meaningful impact road traffic. It will destroy the beauty of Little Cottonwood Canyon. I am a resident of Sandy, UT. The owners of the land on & adjacent to the proposed gondola station site are connected insiders who were involved with SB71 & chair of the CWC. I support the 'take no action' alternative.
27941	Andrew Fowler	I plead with you to actually regard the voices of community members- the gondola is not at all a suitable option for Little Cottonwood Canyon. It disturbs the environment, pushes out locals (particularly those who aren't wealthy) and still neglects to address any of the reasons a transportation solution was sought in the first place.
27942	Paul Montano	The Gondola is a obscene waste of money and has a huge negative environmental impact! No Gondola!
27943	Joe Rylant	I think the gondola ? project would be awesome. It would be great for local as world tourist. It Would help ease vehicle pollution as well as congestion, if you still wanted to drive the canyon for recreational use.
27944	Tamra Ashby	Why is the gondola being paid for with public funds when it's only stops are private ski resorts? I do not support paying for this with public funds. The ski resorts should be paying for this or it should not be happening at all. On top of using public funds, which is wrong, it permanently destroys the land and our views for those of us who use the canyon for purposes other than skiing, yet again the only benefit appears to be to the private ski resorts.
27945	Lee Walker	This is a tiny space. It does not encourage in depth discussion of anything, or cause and effect explanations, or comparing and contrasting. Certainly does not facilitate commenter proof reading his or her own statements.
27946	Nathaniel Watson	I am begging whomever reads this to please reconsider ruining how this canyon looks, so the rich can get richer. It WILL be an eyesore, it is NOT a community friendly option, and I am extremely disappointed this matter has not been considered more thoughtfully. I grew up minutes from this canyon and the idea that there's only these two solutions to the traffic problem is so wrong. PLEASE DO NOT BUILD THIS GONDOLA!!!
27947	Seth Brown	I oppose the decision to build the gondola in little cottonwood with the use of over \$500,000,000 in tax dollars. I propose a toll fee for those going to the ski resorts, or a mandatory cap on how many lift tickets are sold at the resorts as this is what ultimately is causing the issue. A costly gondola that will be an eyesore and in no way improve the situation/quality of life for those not going to the resorts is not the solution. Thanks
27948	Lee Walker	30 year life cycle?! Then what? Abandoned towers? Tearing down rusting steel towers and hauling them out? Storing the refuse at the base building? Selling the steel to recyclers?
27949	Chelne Glavas	Please do not disrupt our beautiful canyon with a gondola that'll have 0 impact on traffic conditions. Unwanted and unnecessary!!!
29465	Anonymous	Hi, I'm just I'm calling about the gondola. First of all, I'm against the gondola. I don't think taxpayers should have to pay for something that benefits the ski resorts more than any of the residents of Utah. I think a toll road and increased bus service would be a better place to start before you build the gondola and I know you're kind of beyond that. But I just want to know what the options are for Utah residents. You know, what about summer you said there doesn't seem to be any talk about anything other than the ski resorts and if the gondola only goes to Alta and Snowbird, what about hiking and summer youth? anyway, I don't know if toll roads have been considered and something that like Utah residents could get you know passes for both canyons for the toll roads and you know to use your round. and Anyway, my preference obviously would be no Gondola or the ski resort to pay for the gondola cuz it benefits them not the rest of the community and I just think the impact of the canyon and all the people that live in the area. It just creates problems. So anyway, I don't know if you guys will even change your minds at this point. I know you're pretty Pro Gondola, but I know a lot of people in my neighborhood and my community are all a hundred percent against it and would prefer to see better bus service and possible toll road. Maybe that would get more people to take the buses and a pass for Utah residents to be able to buy so they kind of like Fastpass that they have on toll roads in California that we could buy that would work year-round for us. And anyway, thanks. Bye.
27950	Steven Rasmussen	The resorts make HUGE profits from tearing up PUBLIC LANDS they Pay NOTHING FOR. THEY should provide ELECTRIC BUSES that their skiers must pay to ride or be included in their pass. WHY should taxpayers cough it up for ENTITLED SKIERS and RESORT owners to have a Gondola that goes slower than their cars--so they won't take it. Hikers and Rock climbers won't be able to take the Gondola either. SOMEONE is trying to Make a FORTUNE off the Taxpayers AGAIN.
27951	Galen Schuck	NO Gondola.We need year round traffic solutions for one.Nobody wants to look at towers up our beloved canyon for the rest of our lives.I say Electric Busses year round with some lane expansion.They have been proven to work in the canyon with the regenerative brakeing the busses will recharge on the way down keeping electricity charging at a minimum. Don't let greed decide. Do whats right for the people and our canyons.
29466	Galen Schuck	Yes, hi. My name is Galen Schuck. I'm in Sandy Utah. I just wanted to comment about the gondola. I do not want to see a gondola built up that canyon, I think it would be a real eyesore and it's only going to profit the ski resorts. It's not or year-round solution. Thank you.
27952	Cade Ewell	A gondola would ruin the chill vibes of the canyon.
29142	Galen Schuck	No gondola up Little Cottonwood Canyon. We need your around solutions to get people to the resort in the winter and trailheads in the summer.
27953	Erik Sahlin	Sorry to submit another comment, but if UDOT makes the gondola a final decision, there are so many ways. Doppelmayr today released a new type of gondola called the TRI-LINE, it has compact terminals, construction and maintenance friendliness in mind and can carry up to 8,000 an hour in any direction as well as more, farther apart towers for environmental protection!! But it's UDOT's choice tho it's still okay if you guys choose the regular Tri Cable Gondola.
27954	Kelsey Udy	Hello, my name is Kelsey and I have lived in Utah my entire life. I am an avid skier, climber, biker, and all other things Utah has to offer. I understand that the proposed gondola is meant to help alleviate the traffic congestion and improve air quality, but why not try something more affordable and less invasive to our canyon first? We could offer more buses going up and down the canyon, incentives for carpooling/riding the bus, etc. I am also concerned this will bring even more people up the canyon, which will congest the lines at the ski resorts even more. It is already getting to the point where it's unbearable standing in the lines on weekends. The gondola will destruct many climbing/bouldering lines that are loved by many. It could disturb the land and wildlife. It will change the entire look and feel of the canyon I love so much. Please consider other less invasive, more affordable options that does not include building a gondola. Thank you.

ID	Full Name	Comment
27955	Jennifer Cottam	<p>Thank you for soliciting comments on this most important issue.</p> <p>It is unfortunate that this expensive project is proposed to serve just two businesses. I work at Snowbird on Tuesdays and after going up every week for about 10 years, I have only had 1 day where it took me over an hour to drive up. It's seems to me to be a very expensive and invasive plan that basically remediates traffic conditions that occur just 15 - 30 days per year. And let's face it, if there are that many people going up the mountain then it's too crowded. Once it is full, then why keep bringing people up? At any rate, this project seems to be proposed about 50 years too late. I am, therefore, opposed to the proposed Gondola B project for the following reasons:</p> <ul style="list-style-type: none"> -One glaring omission for this project is that it should be proposed in light of what would also be envisioned for Big Cottonwood Canyon (BCC), as well. For example, in the future will it also be envisioned to serve the needs of the two resorts in BCC by extending the gondola from Alta to Solitude and Brighton by a taxpayer funded additional extension? As such I would be most opposed to any further construction resembling a ski-interconnect. -I do agree that easier, less invasive options should be implemented in LCC before the gondola construction is considered, like tolling and limiting single occupancy vehicles on snow days, building the snow sheds, enhancing trailhead parking lots and enhancing the bus service with more, cheaper rides, flexible schedules and better buses. <p>I would then propose that the schedule of the project be paused for at least two ski seasons to conduct traffic studies to determine if further measures are needed to bring traffic congestion down to acceptable levels. After that, any additional needed improvements should be considered and designed. Such preliminary measures may potentially save the state lots of money. Such evidence of this needed traffic mitigation is already apparent with various resorts' implementation of parking requirements and the recent UTA Free Fare February which reduced the traffic loads in the canyons. There are plenty of other large resource needs, like saving the Great Salt and Utah Lakes, mitigating the homeless problem, and addressing air quality and climate change problems, than to spend significant resources on a declining tourist issue.</p> <ul style="list-style-type: none"> -Gondola service during adverse weather conditions may be spotty and inconsistent, causing it to be less dependable. For example, service may be halted during avalanche mitigation work and high wind conditions. -The road already exists and will always be needed to service the canyons. It has the potential to service all canyon users for the entire year with only slight improvements, the snow sheds and better mass transit, all at much less expense than the gondola. -A full length canyon gondola will greatly diminish the view shed, is too long and expensive a ride to continually attract tourists, and will likely be much less needed by the time it's completed. <p>For those who want a tourist attraction in LCC, one already exists, with the Snowbird gondola which has great bottom and top facilities, fantastic views and is not too long or expensive a ride. It is also positioned to the side of the canyon, which is less intrusive to the canyon view shed.</p> <ul style="list-style-type: none"> -Installation of a 2500 car capacity parking garage, with its ancillary businesses, will create a traffic congestion problem in that part of Hwy 210 and the area around it, intensifying the exact problem we are trying to avoid.
27956	Patrick Cory	I think there should be a more phased approach starting with busses and evaluate effectiveness over the year
27957	Brian Keller	Considering its economic and environmental costs, the gondola is a subpar solution to a problem which has many approaches. Notwithstanding the fact that the gondola itself is an imperfect solution to both parking congestion and various trailheads throughout the canyon.
27958	Claudia Wiese	I find it problematic that the FEIS does not outline how the phased approach might affect the final construction of the gondola. There should be a plan to measure if approaches are effective enough to discount the need for a gondola and the use of a billion taxpayer dollars.
27959	Anna Blanchard	The gondola is does not make sense for a traffic solution. We need different solutions that don't have a huge impact on our environment as well as our tax payers money. This is outrageous.
27960	Kurt Gee	What a sham! As if you care about what the public thanks!? Everyone involved in this should be ashamed! The almighty dollar wins out again!
27961	Leslie Kovach	Wasatch Blvd. is included in the EIS, the road design needs to be the design that Save not Pave is putting forward which will meet all of the citizens needs for recreation and flow of traffic. No 6 lane highway needs to be built.
27962	Emily Pitsch	There is no proper outline of what the "phased approach" means. The gondola is still the end goal but UDOT admits that buses and more parking will work. A logical solution would be to evaluate the success of buses before building a gondola or even obtaining money for a gondola. There is no way the public can properly evaluate a "phased approach" without a transparent and accurate explanation of what that means.
27963	Karli Anderson	I am writing against the gondola in Little Cottonwood Canyon. This decision will be a detriment to not only the environment, but all individuals throughout Utah and the Salt Lake Valley. This decision will ruin so many great things in the canyon.
27964	Audrey Singer	I am against the gondola! It is a waste of taxpayer money and only focuses on a few resorts. Don't ignore the other transportation methods that are cheaper and help more people while also being more effective for the general public.
27965	Victoria Brown	As a psychiatrist and environmentalist, preservation of nature and it's impact on public health including mental health outweighs the prioritization of profits from a gondola that serves privileged, predominantly white interests that only take place during ski season which is likely to change in the face of ongoing climate change.
27966	Andrew Wike	Building a fantastically expensive transportation solution that only serves privately owned ski resorts does not represent progress by any definition that I recognize. Having a real conversation about maximum canyon capacity, tolling, and improvements to the bus systems is the way forward. Nonresidents and ski tourists should be directed toward public transportation solutions, and discouraged from taking their vehicles up the canyon with tolling prices. Please do not ruin the canyon with this boondoggle.
27967	Gabrielle Kardon	I am strongly opposed to the gondola option. This only benefits the two ski resorts. However, it is not beneficial in the winter to backcountry skiers and the rest of the year, it will be a significant eye-sore to the canyon and those hiking or enjoying its natural beauty. Given climate change, the likelihood that these ski resorts will even be functional in 30 years is low. Why are we spending public dollars to support a profit-driven private, unsustainable industry? I have no understanding of why we should support this terrible plan. I am adamantly opposed to this plan!
27968	Alyson Lantz	Please do NOT build this gondola. It does not benefit the majority of the population and destroys our beautiful canyons!

27969	Travis Stillson	<p>The amount of effort and planning that has gone into this multi-year has been substantial, and I appreciate the apparent eye for detail that has been put into this. However, it is highly concerning to me, as a frequent recreational user of LCC and also a degreed engineer, that you fail to provide any sort of raw data. While most Utahns likely lack the technical ability to digest statistics it is still in your best interest to provide that information if the data you collected is honest and technically accurate. For me, what I see at this point in time is a conglomerate of corporations that are maneuvering to ensure the longevity of their business through a tax-paid windfall of cash. Any of the figures or work that you have done up-to this point illustrating how the gondola installation and operation is the preferred option is absolutely meaningless without transparency in how the information was collected and compiled.</p> <p>Please don't █████ Utahns into thinking that UDOT was ever going to select anything other than the gondola with the EIS statement and deliverables. This was the decision from the beginning and it appears you have simply collected data that confirms your bias. Release the raw data. Release the methodology for how you arrived at your decisions and make it known to the public.</p>
27970	Dan Mauss	<p>I have lived at the mouth of all our glorious canyons for all of my 70 yrs and here at the mouth of the Cottonwood canyons for 45 of those years. I have grown to have a fond appreciation for these canyons, their beauty, their serenity and their seclusion. When I look at the proposed gondola option that would tarnish the beauty and serenity of our beautiful canyon I say to myself : "what are we thinking?" A gondola is meant to invite the whole world to Little Cottonwood Canyon. This canyon was never meant to facilitate the whole world! Those who want to find it and enjoy it are always welcome here but will need to work within its parameters with the rest of us. We that have lived here all of our lives don't want all of the commercialization that comes with the towering steel structures that would desecrate our canyons. There are ways to widen the road and facilitate the traffic necessary to get people up the canyon without going to the extreme that a gondola represents. To say nothing of the select few owners of the facilities up the canyon that will benefit inordinately with our tax dollars. There is an old acronym "KISS"....that applies here - keep it simple stupid. Bigger isn't always better and more people isn't always a good thing. Wake up UDOT, listen to the majority of the people you represent. The gondola represents a way of life and the accompanying problems that are not welcome here. There is a better and much less intrusive way.</p>
27971	Mikayla Hamelin	<p>The gondola is quite possibly the worst alternative transportation option I've ever heard of. This gondola would only be useful during the winter, and would only serve private resorts, not the people trying to enjoy nature and canyon recreation. Speaking of which, anyone who uses the canyons for anything other than skiing is now going to have to deal with the gondola ruining the view, ecosystem, and existing trails, all for a transportation system that wouldn't benefit them anyway, because of the limited stops the gondola takes. This is going to be harmful to the ecology of the canyon. I also think this is going to cause more transportation issues, especially along Wasatch blvd, as people will drive to the base of the canyon anyway and cause traffic trying to get on the gondola. This would be an enormous hassle as most traffic would be redirected to the main road all locals use to get to and from work and school. This just feels like an attempt at installing a flashy piece of equipment instead of actually helping the people who want to enjoy the canyon and who live in that area.</p>
27972	Earl Lewis	<p>While the work of UDOT and other study participants is broad and quite thorough it is clear, by UDOT's own admission in responses to comments, that many factors that affect long term use of the sensitive corridor of Little Cottonwood Canyon have not been considered (e.g. environmental impacts outside of water, use by other user groups during and outside of the ski season). Therefore, it's fair to assume that the focus of this study and the project proposals is too narrow for long term planning purposes and the UDOT EIS should be but one of several studies undertaken to develop the best long term transportation, parking, facility and use plans for LCC.</p>
27973	Jacob Lamb	<p>This is ridiculous way to solve a problem that realistically occurs 15 days out of the year. The benefit of this side heavily on rich, privileged individuals at the expense of the remaining populous. Traffic issues can't be abated by making it easier for people to get up canyon, only by making it more painful can you see an ease in the issues we have today. The eye sore that the gondola will be is a tremendous loss for the tens of thousands that utilize the canyon for anything besides resort skiing.</p>
27974	Alex Wight	<p>As a skier and rock climber who grew up in Salt Lake City I can only say that the gondola is a horrible idea that will forever tarnish the beauty of Little Cottonwood Canyon. It only serves a couple of private corporations and only for a tiny minority of the year - something not worth destroying our beloved canyon over.</p> <p>Implement strict automobile limits during the ski season, and run buses every 5 minutes, and voila, problem solved.</p> <p>DO NOT PROCEED WITH THE GONDOLA! PLEASE!!!!</p>
27975	Lori Wagner	<p>No on the gondola. Buses or light rail instead.</p>
27976	Cathryn Cordray	<p>I am against the Gondola it is a public subsidy of two ski resorts and the future of the skiing industry is at serious risk due to climate related warmer winters and diminishing snow pack. A gondola does little to reduce canyon traffic generated by non-skiers, and it will only push the congestion further down into Cottonwood Heights.</p> <p>The 262 ft towers would be a permanent blight on the beautiful, natural scenery that is the canyon's greatest, and irreplaceable public asset. The blasting, digging, and construction of the gondola will contaminate the water in the stream.</p> <p>There are many better things, with real benefits to the public, that half a billion dollars of taxpayer money could do to reduce our air pollution.</p> <p>Utah is always talking about local control however they ignore the locals and the county as the majority of Salt Lake Couty councilmembers disagree with building a gondola. Better solutions to congestion in the canyon, like a bussing system, have been proposed. Flexible solutions should be implemented first.</p>
27977	Bee Lufkin	<p>Please do not construct the gondola and expect our children and grandchildren to pay for it for years - initial costs and maintenance are high. There is less and less snow each year - and having ordinary taxpayers support privately-owned ski resorts that cater to the wealthier among us doesn't make any sense. Let's look at buses or user fees like in Millcreek Canyon - or, God forbid, limiting the amount of private vehicle traffic up the canyon on the few days each year with lots of fresh snow.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
27978	Sarah Larsen	I hate the idea of the gondola. Our canyons need to be left in as much of their natural state as possible. So what if there is a little traffic a few days a year? The damage to the scenery (and probably the environment) will be much worse and will be 24/7/365.
27979	Josh Greer	The gondola only benefits the skiing industry at taxpayer expense. The gondola will ruin the beautiful canyon. It is simply not fair for the taxpayer to fund this project. I myself am an avid skier and love skiing up there and hate waiting in traffic. However, this is not the solution.
28129	Sarah Diener	Hello as a SL valley resident I would like to formally state my opposition to the proposed ski gondola. The Hinkley institute poll shows that 80% of Utahns oppose it. Instead looking at creating more electric or fuel efficient buses as is being done anyway in the interim is much preferred by the outdoor enthusiasts, environmentalists and tax payers. Listen to what the people want. Best, Sarah Diener
27980	Cris Barbero	Please don't waste taxpayer dollars on the gondola that will only benefit 2 ski areas and not alleviate traffic congestion for other users of the canyon. This proposal is short sighted and wasteful.
27981	Katlyn Foley	Gondola is the wrong choice! As a backcountry skier and climber, I believe this canyon must be preserved for all users, not just resort skiers. We should strongly consider the capacity of the canyon - it has a limit and we can't keep shoving more and more people in it. There are other better options that don't require taxpayer money to fund a huge, disruptive, ugly project that benefits wealthy resorts.
28128	Anne Denk	I do not feel a gondola is the best solution to traffic in LCC. It will not help hikers or anyone who uses the canyon other than skiers at Alta and Snowbird. We need a better year round solution for everyone. There is not enough parking at trailheads for hikers or cross country skiers. More buses that stop at trailheads all year would be a good solution.
27982	Michael Marcy	DO NOT ALLOW A GONDOLA. It will create irreparable harm on the canyon and the environment. Tolls would be a better solution or limited day use passes.
27983	Brandon Oquendo	Very opposed to the Gondola up Little Cottonwood Canyon. It's evident the majority is opposed as well. There are alternative initiatives that serve the community better without the cost.
27984	Don Brown	I like this option, having just returned from Murren Switzerland. How much will they plan on charging for passes?
27985	Renee Leonhardt	NO gondola. This is crazy. There has to be a better way. Everyone I have talked to is against it. We do not need this. Are you afraid of putting this up for a public vote. This is my money you are trying to spend with out permission. Put it up for a vote and do what the majority of Utah wants.
27986	Florence Reynolds	I object to the gondola decision. Construction and operation of a gondola will impact the canyon. No purpose other than ski resort access is accomplished. General use of the canyon for alternative recreation is not given full consideration. Yes, the ski resorts bring in the money, but the canyon provides more opportunities that will not be addressed with a gondola. I would sooner see a toll gate and a reservation system for access to reduce traffic.
27987	Jessica Pleyel	No gondola. It will destroy nature as well as world class rock climbing. It only benefits wealthy skiers
27988	Diane Gentry	this is terrible idea..just because you get people up hill faster. the slopes will be so crowded you won't be able to ski. Locals only no Epic or Ikon passes.
27989	Meg Merkley	\$35 cost is expensive for a family of 6. This is going to benefit the wealthy and the resorts. Why isn't is cheaper and running all year long? Please reconsider a different option to help with traffic congestion.
27990	Joni Wirts	Public funds should not be used for private enterprise. The gondola only benefits Alta and Snowbird and their tourists, there is no benefit to Utah residents; particularly those who use the canyon for uses other than resort skiing. Constructing a gondola up Little Cottonwood Canyon will permanently and irreversibly damage it - one of Utah's greatest values. Degrading the aesthetic and natural ecosystem of Little Cottonwood is a mistake that will hurt the majority of Utahns now and all future generations.
27991	Brandie Schulz	A gondola IS NOT the solution to our canyon traffic problems. Increase bus service and keep fares low AND charge every non-employee personal car AT LEAST \$20 (or the future cost of a gondola ticket) to drive their car up the canyon. If they are a private shuttle company or cannot show a Utah DL, charge them \$50! People will carpool and ride the bus. It is ridiculous to spend that much tax payer money for two ski resorts. Not to mention the damage it would do to our precious watershed. NO GONDOLA!!!
27992	Mary Jean Jones	I am 100% in favor of a gondola and am honestly surprised that so many of my peers are against it. Gondolas can run much more easily off of renewable energies, cut down on the amount of cars in the canyon, and are a much more reliable form of transportation, which is especially important for employees and employee retention. Having gondola towers in the canyon will cut down on the serene wilderness; however the lack of cars will have the opposite effect. Either way, parking needs to be more accessible, such as multiple garages at the base of the canyon.
27993	Eileen Naughton	I oppose completely oppose this solution to the traffic in the canyon. Our beautiful canyon should remain as close as possible to how it is. I can't believe you have a majority of citizens behind this I'll thought out idea. We should keep our unique assets unspoiled as much as possible.
27994	Lyle Olsen	Gondola, stupid idea no wants to see 120 ft towers plus numerous cables to interfere with the view to serve only two multi million dollar private resorts. Why?
27995	Jacqueline Kennedy	Please don't permanently destroy this beautiful Canyon with this gondola project. There are a myriad of other options to control traffic numbers. The Canyons belong to all of us, not just the ski industry.
27996	Eli Primmer	Please no gondola that is taking advantage of taxpayer dollars for the benefit of the executives of Alta and Snowbird.
27997	Sarah Tibbitts	No gondola please! I'll take the traffic!
27998	Justin Morgan	I am firmly against what you are doing. I am extremely disappointed that you all said the public choose that option. We didn't, we weren't heard. Corporate greed wins again and you should be ashamed for supporting them instead of the people. I really hope you all listen before it's too late.
27999	George Fraser	I am a cottonwood heights resident who plans to make use of the Gondola B alternative, I would like to see the cycling infrastructure implemented for those of us that live close enough to bike (theres only 2 mentions of bicycling in the EIS summary). If you're planning to ease congestion, i believe that covered cycle racks and protected bike lanes (can even be with bolt into the ground road markers) around the mobility hubs would help immensely. Bear in mind that people will likely be cycling with their skis and snowboards so consider making it cargo bike friendly too!!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28000	Janet Mueller	Little Cottonwood Canyon is one of the jewels of the Wasatch Mountain Range, 20 million years in the making. Once disturbed, it can never be recovered to its pristine state. The destruction entailed with building the gondola will alter this fragile habitat forever. The gondola addresses visitors to two resorts, but does not address transportation for climbers, hikers and skiers in other areas of the canyon. The cost would be a burden on the backs of all Utah citizens only to benefit the indulgence of an elite few and primary the Alta and Snowbird Ski Resorts. No gondola. There are better more cost-effective solutions that serve all who use the canyon.
28001	Emily Boman	I am deeply disappointed in UDOT deciding to prioritize corporations profits over the overwhelming opinion of Utah residents. It is really disheartening to be told to provide comments, only for our comments to be ignored. I wonder if UDOT has considered the fact that this gondola would absolutely devastate our pristine canyon. I wonder if UDOT has considered the fact that this will not reduce traffic, it will simply just get a couple more people to the resort while traffic remains the same. Additionally, I am wondering if UDOT has considered the fact that this problem is really not that big of a problem, considering it only is an issue on powder day weekends during a few months of the year. This is not a constant, every day issue. UDOT is seeking to force taxpayers to pay for Alta & Snowbird's pet project to give them more profits, while tax payers do in fact not benefit at all. As a life long Utah resident, born here and still living here, this makes me so immensely sad. UDOT could truly destroy one of, if not the most scenic and beautiful places in the entire country, just to make Alta & Snowbird CEOs happy and even more rich. It is a sad, sad day for the state of Utah when our transportation department does not actually value what citizens want.
28002	Hannah Sutherland	No gondola! Building it is inconsiderate of locals, climbers, taxpayers, wildlife- flora and fauna and on and on. This absurdly expensive idea serves out of towners and private companies. End ikon in LCC, try rolling [tolling], reservations, anything else! Before implementing such a costly mistake. Gondola is an eye sore at best for the rest of the year and will collect rust in summertime. Please care!
28003	Tiffany Xaysana	If any of the below are true I'm against this. Gondola: - only runs in the winter - only stops at private ski resorts - only benefits private ski resorts - paid for by public funds - won't reduce traffic or parking congestion - permanently destroys canyon lands and vistas
28004	Lee Walker	30 year life cycle?! Then what? Abandoned towers? Tearing down rusting steel towers and hauling them out? Storing the refuse at the base building? Selling the steel to recyclers?
28005	Lee Walker	This is a tiny space. It does not encourage in depth discussion of anything, or cause and effect explanations, or comparing and contrasting. Certainly does not facilitate commenter proof reading his or her own statements.
28006	Lee Walker	NO. Absolutely no to both gondola and road widening.
28007	Bernard Stoppi	Building a gondola in Little Cottonwood Canyon is a terrible idea. It will not solve the problem of skier traffic.
28008	Philip Philippides	I am very much opposed to building a gondola in Little Cottonwood Canyon. Please do not ruin our canyon with this monstrosity. The widening and road safety measures with increased bus options and increased parking charges are enough.
28009	Megan Pepin	Please no gondola!! Is the traffic even really a big deal? A gondola would destroy the canyon and wouldn't even run on the good snow days, aka storm days. So what's the point??
28010	Matt Bongard	Absolutely opposed to the gondola and wasting taxpayer money to benefit Alta and Snowbird. The goal of the EIS should have been to make public transportation so convenient and efficient that people would only use that to go in the canyons year round. Instead Udot and the resorts are pushing for an expensive gimmick that won't solve the problem of congestion in the valley and also would destroy the canyon. If Udot wants to spend half a billion they should use that for all public transportation and make Salt Lake a cutting edge public transportation trend setter to help clean our air and water.
28011	Adam Erickson	Please stop the gondola. Expand busses. Explore light rail options. Toll road to offset cost's. Encourage car pool.
28012	Jess Lofland	It is disheartening that the results from the EIS showed approval for a Gondola as the preferred transportation choice. It's clear by this decision that investors have a heavier hand in the decision-making process than the residents and recreators who live, breathe, and thrive throughout Little Cottonwood Canyon (LCC). I implore that UDOT reconsiders its decision to move forward with the Gondala proposal in LCC. In 100 years from now, there won't be decent enough snow for skiing in the canyons. But there can be lush protected forests, wetlands, and mountainscapes for people and wildlife to enjoy. The fragile watershed that sustains this city and most of the people in Utah, is too delicate of an asset to throw away for a current lack of funding for an alternative transportation option. Please, reconsider.
28013	Katherine Dayton-kistler	I don't approve of spending public money for the profit of ski resorts and the pleasure of those who can afford this 3 month sport. I do not approve of marking the gorgeous canyon with gondola installation. There are many better, cheaper, less invasive and less destructive options such as fewer skiers, more buses, ski slope owners paying the freight.
28015	Bill Schjelderup	I've had a Snowbird season pass since 1972. I don't fight the traffic any more, so I only go on days I think won't be busy. Wasting time parking, riding the gondola, carrying skis etc, when I can only ski 3+ hours due to my back. Sure I hate all the traffic and crowds, but this seems like a huge waste of money, when far cheaper alternatives are available. Why spend over 500 MILLION, assuming no cost overruns for such a little benefit. If they put this in and force usage, I won't be skiing Snowbird, with the wasted time riding it, I'll just drive somewhere else, even if it's further away. I also wonder WHO is going to pay for this, clearly the skiers in the long run.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28014	Jeff Heaton	<p>Dear UDOT,</p> <p>To say I'm disappointed with UDOT's decision is an understatement. How can a recommendation in spending \$500 million in tax payer money to address a solution that only benefits two business (Alta and Snowbird (plus Niederhauser and McCandless) be justified? This solution will truly only be utilized on "snow" days, which the EIS calculates at 50 days a year. What about the other 315 days of the year? Why destroy the canyon and the neighborhood at its base for so few day a year? How does moving the traffic out of the canyon and into a residential neighborhood solve the problem? It doesn't. I would assume that UDOT can admit that we, as Americans, will always defer to using our automobiles first and foremost. As long as the canyon remains open to vehicular traffic we will simply bypass the gondola whenever possible. I don't see this \$500 plus Million expense as justifiable.</p> <p>Assuming that the surveys are correct it appears that there was overwhelming support for solutions other than this eyesore of a Gondola. This would be a massive failure for our community and state. We can do better!</p>
28195	Bob Brown	<p>It seems to me that only skiers would benefit from the gondola. Why invest in a gondola for a problem that only occurs maybe 5 months out of the year.</p> <p>I don't believe having to wait for avalanche control is that big of a deal.</p> <p>There are limited amount of ski runs that one person can do in a single day. This will be even limited more with an increase of skiers. That would seem to have a negative impact on the skier's experience.</p> <p>it would seem to me that a reservation system would benefit all. Better experience on the mountain and less traffic.</p> <p>The road won't be closed to traffic so it would seem that the gondola would only add to the detriment of the canyon.</p> <p>The gondola would do nothing but take away from the enjoyment of those who would still drive up the canyon to hike and climb .</p> <p>People are going to have to take a bus anyway from some parking lot to the base of the gondola so why not for go the gondola and keep the bus going up the canyon.</p> <p>I'm sure I'm not the only person who sees that if the gondola is built; it's only a matter of time before it is carried over to Big Cottonwood Canyon and then to Park City.</p>
28196	Walt Winters	<p>I do NOT want the Gondola Project built in LCC. I think it will destroy its natural beauty.</p> <p>Vehicles will still need to get to an access point at the bottom of the Canyon. Surface streets will be backed up for miles to get to a parking structure to access the Gondola. I think that Snowbird and Alta should cap the amount of skiers per day with a pre-registration system. There should also be a large toll for vehicles that decide to drive up LCC. Enhanced electric/Nat gas buses should run every 10 minutes at peak times.</p> <p>Multiple bus hubs can be utilized around the area to decrease surface street overcrowding. Please confirm that you received my input.</p>
28016	Scott Groux	<p>Please, do not build this gondola. It is not worth the harm to the local environment. It has nowhere near the capacity to greatly alleviate congestion. There has been no determination on how to pay for it. This will be an expensive waste of time that will cater only to skiing in a multi use natural wonder.</p>
28199	C. Wailes	<p>Please do not ruin the beauty of Little Cottonwood Canyon with a Gondola. The ski resorts need to pay up not at the taxpayer's expense</p>
28017	Allyson Armstrong	<p>As a frequent visitor to little cottonwood canyon year round I would like to make the case to stick with enhancing the bus service. The bus service is the best option as it allows the existing infrastructure to be utilized without adding people to the canyon. The risk of the gondola is that it in itself will become an attraction increasing visitation overall. The gondola will not service all trail heads like the enhanced bus service is. I think increasing access to busses through increased parking and frequenting of routes while also discouraging personal drivers through high tolls the bus service could meet the safety needs of the canyon. The gondola does not provide access to many of the summer trailheads in the lower part of the canyon. More over there are many days weather could prevent the gondola from operating. Adding snow sheds could help busses continue to run in the winter because of avalanches. We only get one shot at this, please do not let the ski resorts bully you into the gondola.</p>
28018	Nila Haertel	<p>STRONGLY oppose gondola. Let's try a simpler solution, buses and reservations. This is corporate welfare and transportation for rich people. Why should we pay for Snowbirds customers? This is unsound and preposterous. How about listening to the people?</p>
28019	Carrie Reilly	<p>Please don't do this. There are better solutions that will care for the environment and recreation.</p>
28020	Chris Reilly	<p>This gondola is a terrible idea. Overpriced, and less useful every year as climate change shortens the ski season. Please rethink this horrible idea immediately.</p>
28021	Kayla Danks	<p>A gondola would only increase mountain traffic and would ruin the canyon and skier experience. A bus lane is a much more viable option and should be explored before permanently destroying the natural environment that makes Utah skiing so unique.</p>
28022	Brandon Edmondson	<p>Please stop this gondola plan! This will only benefit ski resorts, and negatively impact every other use of the canyon. We should preserve our beautiful canyons at all cost!</p>
28023	Meagan Oltman	<p>The gondola won't be effective or necessary since UDOT's goal is a 30% reduction in traffic in the canyon can be achieved with carpooling, bussing, and a parking fee at ski areas, which has already proven to be effective. No to gondola!</p>
28024	Brian Mehregan	<p>The proposed gondola solution has many flaws but most seriously it does not reduce friction in the travel to and from the top of Little Cottonwood Canyon. In order to make the gondola a viable and useful solution, it would need to be more convenient than the current options, such as a car. PLEASE consider other options with less impact before spending nearly half of \$1 billion of Utah taxpayer money.</p>
28025	Jason Thomas	<p>NO GONDOLA</p>
28026	Robert Frattin	<p>Don't do it!</p> <p>Improve bus, control road to 4x4 good tires !</p> <p>Take snowbird off 210 parking and have them implement a reservation system like Alta!</p> <p>In the early 1980s there could have been larger parking lots at the base, and now you must Eminem [eminent] domain areas for parking!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28027	Tammy Spicer	Tax payers shouldn't be paying for this as it will be utilized to benefit the ski resorts. Manage traffic with parking reservations and busses. Limit the amount of traffic on the road rather than tearing up the environment. Moreover this is exclusively to cater to rich lite [elite] not average utahns. Be more responsible UDOT.
28028	Alyssa Erickson-wayman	As a frequent user of the little Cottonwood Canyon I'm extremely concerned about the proposed gondola. This seems like it solution that will only help a very limited number of people. This does not seem address the issue of how to get large quantities of people up the canyon and will make the use exclusive and inaccessible to most. It is inconceivable to me that the gondola is more financially viable than improved public transportation with buses and increase d parking. This truly needs to be reconsidered for the people that live in the Wastach front, the health of the canyon and cost.
28029	A W	This is the absolute worst idea. Beyond the environmental impact it does NOT solve any current or foreseeable problems traveling from the valley to a resort in Little Cottonwood Canyon. This is simply a way to line the pockets of politicians and their construction buddies.... PLEASE, PLEASE, PLEASE DO NOT MOVE FORWARD WITH THIS PROCESS.
28030	Anita Bowler	As a skier at Alta, I am against the gondolas. Would prefer increased buses and parking preferably where the old cottonwood mall was.
28031	Maddie Mcentire	Please please please don't make such an enormously expensive and permanent decision right now. The people who use the canyons the most have spoken!!!! No Gondola!!!!!! Let's start with something more simple like shuttles before we skip over to the most atrocious and gaudy option.
28032	Gandhi Zapata	I don't support the gondola nor My family, bus enhancements more buses early on the morning on powder days and more parking at Mouth of canyon. Also we don't want connections of roads or rail system or gondola or chairs between Little and Big Cottonwood Canyon, leave open areas as they are. The wasatch is not Europe and a gondola only catering Alta and snowbird is not going to solve traffic issues and parking issues.
28033	Joseph Johnson	There has to be a better solution. Where are all the cars going to park for this. It's not going to relieve traffic. It's pricey. How are you going to protect nature in the canyon? I'm against this!
28034	Aids Duffin	Too expensive for Utah residents since you are funding it with tax money. Visitors can pay more. Residents a fraction of the cost. \$5.00 or less
28035	Maxwell Johnson	I don't support it. It's financially and environmentally irresponsible. Tax payers shouldn't be left holding the bill. It's excessive. It would be the worlds longest gondola by a landslide because it's an absurd proposal.
28036	Mark Christensen	Prioritizing and improving UTA bus service in the canyon will need a far better option that benefits more of the public. A gondola system won't help people visiting the rest of the canton besides ski resorts and will be an unnecessary development.
28037	Warren Schroer	Having lived at the mouth of LCC for 25 years, I can tell you that the only days in question are powder days at 8-9am. This equates to maybe at most 30 days per season- the canyon is closed for avalanche work and everyone is primed for a big powder day so the roads into the canyon Big and Little are clogged up. Making people wait to park in a different lot does absolutely nothing to alleviate this congestion but in fact makes it a longer more expensive day for all, not to mention the EYE-SORE forever more in the canyon- talk about destroying the canyon and at a cost (low end I'm sure) of 550m it certainly seems ill thought out. Taxpayers should not be on the hook for a 20-30 day solution to skiing the canyon. The ski resorts should charge BIG BUCKS to any Ikon pass holder to park and require all skiers to have passes to use the canyon- in other words- limit the amount of tickets sold, restrict the canyons to prepaid skiers, and you have solved your problem while enhancing the "on mountain" experience to Utah skiers. I've skied LCC for 60 years and what you have planned makes my skin crawl. JUST SAY NO!!!!!! Dick Bass would agree this is stupid- Snowbird has gotten very greedy and I'm very surprised that Alta would in anyway go along with this- Alf Engin would shudder in his grave at this proposal- We are not in Europe and frankly, don't want to be forced there. I am against the gondola- please can this idea.
28038	Danielle Cummings	Lets face it, consideration of a gondola being built on Little Cottonwood is only about money. Why else would it be built? What's more important than money? Everything. The Utah community will no longer be able to use this area for recreational purposes. This will cause Habitat destruction. More traffic in the area will cause more congestion and ADD to the smog that is already consuming Utah. Do community members mean anything to you? Does habitat destruction mean anything to you? Does climate change and increasing pollution mean anything to you? All for a gondola so tourists can come see the "beautiful mountains" that were destroyed to build the gondola in the first place. Be smart. NO TO THE GONDOLA
28039	Tim Bonnett	I do not think that a gondola is a good idea for the canyon. There should be other ways to mitigate traffic (usage fee , even / odd day access, etc). I am not for more visual pollution in our canyons.
28040	Janice Byington	We do not want a gondola. You can't take a bike or other items on the gondola, It can only be used abt 4 months out of the year. Please, please decide in favor of buses because they can be used all year and allow carry-on equipment like bikes.
28041	Megan Anderson	I still can't believe that you would ruin rock climbing up Little Cottonwood to make the ski resorts more accessible. This is absurd, especially considering the majority of Utah residents don't ski. You are going to sink probably 600,000,000\$ of their money into this invasive trash that will tear up the precious canyon, endanger watershed and wildlife. This disgusts me.
28042	David Carbine	the gondola is not a good idea, it ruins the canyon for everyone but resort skiers. an enhanced bus service would make more sense for the people, the environment of little cottonwood canyon and the overall view shed.
28043	Wes Pancoast	I oppose the gondola proposal for LCC. Based off of the numbers I've seen, the gondola's impact would be negligible if not make the canyon traffic worse. This does not justify the significant cost of the gondola and a better alternative is surely possible.
28044	Jude Zaugg	I think the gondola would be very beneficial. There would be far less traffic, which means less accidents. It would save so much time going up and down the canyon. I think it's a great idea.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28045	Trischa Thorne	A taxpayer funded gondola that only stops at ski resorts is utterly ridiculous. Parking at trailheads is always crowded making roadsides hard to navigate when people park illegally. We need a solution that works year round and stops at trailheads and not just a ski resort. If you could have the gondola stop at trailheads at least it would be useful.
28046	Tyler Daynes	Please do not construct the gondola. This idea is flashy for tourists, but will do little to actually solve the traffic issues Little Cottonwood Canyon faces. The gondola will lead to long wait times and busy parking lots at the bottom of the canyon, only service the ski resorts, and it will disrupt the beautiful scenery in the canyon. Simply improving the bus service by increasing the amount of buses and creating priority transit lanes will drastically improve traffic conditions and provide additional benefits to those not visiting the ski resorts. Traffic could be improved even further by restricting the road to workers, emergency vehicles, and buses. While the gondola may be the most economical option, the benefits from improving the bus system drastically outweigh the limited options provided by the gondola. The gondola is a bad and unpopular idea that is clearly being pushed by special interest groups. Many Salt Lake County residents, including myself, will be incredibly disappointed if our tax dollars are used to fund this waste of money. Please reconsider this decision.
28047	Seth Bradley	I have lived at the mouth of little cottonwood canyon for 45 years and have chosen to live here because of the area and unique recreational opportunities it provides. I ski, rock climb, mountain bike, hike and camp in the canyon. I understand that traffic is increasing, but building a gondola that impacts the canyon with irreversible consequences and only serves 2 private business and is paid for with tax payer money is irresponsible and short sighted. Please reconsider before permanently impacting the canyon in a negative way.
28048	Stan Pugsley	I am so excited about the gondola. I think of it like the Eifel Tower of Salt Lake City - there will be doubters at first, but we will grow to love it. It is clean, quiet and scenic. I think it will make the canyon a world class destination.
28049	Cam Clarke	I would prefer this over a parkway or Provo canyon highway. As long as driving a car up the canyon is allowed before 7am.
28050	Rachel Helms	We do not want you to build the gondola!!! Please kill this wasteful project. We do not want it. There are much better and cheaper solutions for the problem at hand.
28051	Nicola Lanier	da gondola
28052	Ryan Kelly	The Gondola doesn't serve local interests or the environment. It's pricey, dangerous and serves only deep pockets. Stop the ikon and epic passes from ruining our resorts. Please and thank you. A concerned local skier for more than 40 years ?
28053	Amishi Rohaj	Do not do this, it will not help the world. I promise. How much money will this cost in taxpayer..?? Exactly
28054	Judy Ford	No gondola! No need as shorter ski season d/t [due to] less snow. \$ needed to take measures to STOP CLIMATE CHANGE!
28055	Chris Ashby	Please don't build the gondola.
28056	Amie Jenkins	The residents do not want a gondola. Please listen to the local people. The ski resorts can only support a limited number of people and increasing transportation will not increase capacity. The landscape will forever be changed and impacted. The earning potential of large ski companies should not override the natural resource of our canyon that will never be reclaimed once tainted with cables and posts. Put in a parking garage below the canyon and mandatory bus routes instead. This is much more cost effective and will persevere the natural landscape.
28057	Isabella Eskelson	The gondola is going to wreak havoc on the beautiful simplicity of our valued canyons. Not only will it be an eye sore to many who embrace and see the importance of the utopia our canyon brings, but it will have potential negative affects on our soil, drinking water, animal migration paths/homes, ecosystems, and more. It will tear apart the wonder of our canyon's beauty. Many could argue that it will help our environment and reduce pollution, but there are more reasonable means of transportation or the prevention of congestion within the canyon. From personal experiences I have never suffered a long wait due to exceeding traffic in our canyon. Many even find it more plausible to carpool as is which significantly reduces the traffic we see. If we truly value the life and love this canyon brings then why would we be putting nearly \$600 million dollars into building this gondola when taxpayer dollars could make a more impactful difference being used somewhere else? If we value life then why put our canyons life in danger. The construction of the gondola will be displacing many animals. This is their home, haven't we invaded it enough? Why use this opportunity to disrupt their natural ways of life and ecosystems more so then we already have. The building of the gondola also has a significant effect on our local citizens as well. If anything won't this installation be causing more tourist traffic which will cause an increase in pollution rates? Tourists may not be emitting pollution by their drive up the canyon, but what about the surplus of people traveling to get to the gondola? Not only that, but homes of many will be bought off and torn down due to the widening of one of the main roads. There are so many ulterior options such as tolls, public transportation buses, etc. The sole purpose of the gondola.... At least at this point seems to be the lining of sky resorts pockets. So what is the real reason we are planning the installation of the gondola? From my point of view, and the point of view of many of my fellow citizens, it seems to be another selfish act of humanity to further the profits of already exceedingly wealthy resorts. Thank you for your time, Isabella Sidney Eskelson
28058	Judy Lord	Please reconsider the construction of a gondola up Little Cottonwood Canyo. It would be only a partial fix and a permanent eyesore.
28059	Sally Aerts	I do not feel the gondola is the correct choice because it doesn't allow for the flexibility to add pickup and drop off sites to accommodate snowshoers, backcountry skiers, hikers and bikers. The climate is changing bringing warmer temperatures and reduced snow pack. A public transportation system in little cottonwood canyon should be able to adapt to potential change in recreational activities in the canyon. Buses provide that flexibility, a gondola does not.
28060	Satu Hummasti	NO Gondolas in the Canyons!! Please consider the negative environmental impact on our public lands and do not add the Gondola. Please consider using Electric Buses subsidized by the ski resorts and skiers themselves. Do not tear up our public lands for the gondola!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28061	Nicole Salazar-hall	A gondola is premature and incredibly expensive when we haven't tried other options yet. The only people who will benefit from the gondola are people patronizing the two ski resorts. People who don't ski those resorts or only use the canyon for hiking and camping will have to pay for a gondola they'll never use.
28063	Michael Lothridge	I frequently use Little Cottonwood canyon and do not ski or snowboard at the resorts. Please don't do this. Thanks!
28062	Ashley Sand	I moved to this state for college and I was drawn to Utah for its activism in environmental issues. This is absolutely atrocious and I refuse to contribute my own money to damaging ecosystems, creating more greenhouse gases and building more infrastructure and our beautiful outdoors. I am fully ready to move my residency elsewhere in order to avoid paying for this million dollar eye sore.
28064	Rebecca Linch	I do not believe that taxpayers should be subsidizing access to ski resorts. The resorts need to manage their capacity constraints, not UDOT.
28065	Charlie Spring	Please DO NOT build the gondola in LCC and [instead] explore other options. Can we explore a toll for each car like in millcreek? Can we improve the bus system and make it even easier for people to take public transit? There are options out there to curb traffic without impacting the beauty of the canyon. I understand that a gondola will be able to transport people on high avy [avalanche] danger days but even the resorts may be closed on days like that. Please explore other options!
28066	Caden Collins	Stop destroying the environment!! There are much better ways to achieve cleaner air that don't involve ruining some other part of our environment!
28067	Matt Taylor	Please no gondola! Tolling, snowsheds, bud system that runs late so employees can get home later than 6 are all better options. Let's not screw up this canyon.
28068	Kirk Mendenhall	<p>This week UDOT announced their preferred alternative to handle traffic congestion in Little Cottonwood Canyon was a \$500 million gondola, an approach that underscores UDOT's continued lack of concern for anything other than traffic flow. Unfortunately, that option is still the worst possible solution.</p> <p>It is a public subsidy of two ski resorts, coming at a time where the future of the skiing industry is at serious risk due to climate related warmer winters and diminishing snow pack. The congestion is only a problem for 15-20 days a year, and as the skiing season will undoubtedly continue to contract in the future, the problem will become even less frequent. A gondola does little to reduce canyon traffic generated by non-skiers, and it will only push the congestion further down into Cottonwood Heights.</p> <p>The 262 ft towers would be a permanent blight on the beautiful, natural scenery that is the canyon's greatest, and irreplaceable public asset. The blasting, digging, and construction of the gondola will almost certainly contaminate the water in the stream.</p> <p>There are so many better things, with real benefits to the public, that half a billion dollars of taxpayer money could do to reduce our air pollution. I am firmly opposed to the gondola boondoggle and agree with SL County Mayor Wilson that this idea should die.</p> <p>Sincerely,</p> <p>Kirk Mendenhall Magna, UT</p>
28070	Joe Bowers	<p>I am a long time bus rider to the ski resorts.</p> <p>Gondola is an eye sore and not effective.</p> <p>Provide parking and more buses.</p>
28071	Carolyn Chavez	No gondola!!
28200	Bob Janzen	<p>I am against a gondola in little Cottonwood Canyon. I support widening roads up the canyon.</p> <p>Robert Janzen</p> 
28072	Kenneth Frisch	This is such a bad idea. Why are we using public funds to support just 2 ski resorts. It would be one thing if the gondola would stop other places but it won't. Also your environmental impact survey was wrong. There are birds listed there that don't live in the canyon and other like Black Swifts do nest there and it is the only spot in the county where it does. Please pull the plug on this insanity. Stop lining the pockets of insiders.

ID	Full Name	Comment
28202	Bob Petersen	<p>I'm a 54-year old resident of Holladay, UT who was born and raised in Salt Lake. I'm married, attended the University of Utah, was appointed as the first Director of Outdoor Recreation by Governor Herbert in 2013, and have a vested concern for the future of my two daughters. Furthermore I recreate up LCC throughout the year and understand the various impacts of the different solutions. AND I REMAIN OPPOSED TO THE GONDOLA.</p> <p>While it sounds like a great tourism idea, I learned while working for Governor Herbert and collaborating with the Utah Office of Tourism that the State has a history of over investing in "tourism" related assets that end up degrading the user experience. For example, the State contributes \$25m+ towards the Tourism Marketing Performance Fund to market gateway communities that have become overrun and loved to death. I attended meetings with the Mayor of Springdale where he pleaded to quit promoting their community. More is not always better.</p> <p>In this case transporting more people directly to Snowbird and Alta may sound like a great marketing plan that will further promote the state under the guise of a "transportation" solution, but it will only degrade the user experience at the public's expense, without solving the traffic issues inherent to the the entire LCC corridor.</p> <p>I believe that electrified buses with direct feeds from various parts of the city would a) disperse the traffic/parking issues that will be exacerbated at the base of the canyon with the gondola, b) will improve traffic related congestion throughout the Canyon, like near the White Pine parking areas c) will benefit all of the user groups, not just skiers going to two resorts, and d) will minimize the impact on the Wasatch Front watershed, which continues to increase in relevance.</p> <p>I hope that you'll seriously consider the public's comments and not just dismiss us as uninformed citizens. I have a profound respect for Dave Field's and remain friends with him, but in this case, do not believe a gondola is the right solution.</p> <p>Thanks, Brad, Sheila, Sage and Sienna Petersen [REDACTED] M</p>
28073	Peggy Kulpaca	I fully agree with Sandy mayor Jenny Wilson's views. I realize that traffic is sometimes a problem, but I feel that every effort should be made to maintain the beauty of the canyon before widening the road or building the huge unsightly gondola.
28074	Thomas Jackson	I don't want the gondola, it will ruin the granite canyon walls. Carpools are the answer along with busses.
28075	Jeff Kadrmad	Bring it to a public vote For me not a fan for the project only caters to the resorts, so waste of taxpayer money
28076	Ben Neibaur	Please do not allow a gondola system to be built in Little Cottonwood Canyon. Tolling, reservation system at the resorts, buses, are all better solutions than a gondola that only stops at the resorts , is so expensive to build, and mars the beauty of the canyon. Thanks.
28077	Aaron Wight	As a Cottonwood Heights resident I support the gondola plan
28078	Michael Polei	No gondola! If there was somewhere to park near the mouth of LCC, people would use the bus system a lot more than it has been used in previous years. Just create a parking lot and run buses. Maybe even electric buses, and preserve the environment! I do not want to pay for this gondola.
28079	Mitch Jones	No gondola!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28080	Courtney Howard	<p>This comment is a statement of my strong support for beginning with tolling and enhanced bus service. I am truly BAFFLED and disappointed that UDOT's stance towards this option is not "let's try this and see," but rather "Let's try to make the gondola happen regardless of the tolling/busing results."</p> <p>It seems negligent that the end user cost per rider of neither the buses nor the gondola has been mentioned so far, as this not only pertains to socioeconomic equity, but also the likelihood that anyone at all is going to use these things. Nobody can make an informed decision without this information... For example... if it is going to take a few hours waiting in a line (because do the math on a powder day) to take the gondola AND \$100 for a family of four, I'd argue most people are still going to drive their minivan up the canyon and wait in that line instead. How many of the comments pro-gondola are locals or people resorts have pushed comment links to from outside of our city who don't actually understand the complexity of year round canyon recreation and users.</p> <p>A HUGE oversight of the gondola that continues to be ignored is that there are no alternative stops anywhere except the ski resorts. This despite the fact that UDOT admits it has registered significant amounts of comments demanding "consideration for all canyon users, not just resort visitors." Remedying this with buses requires no additional resources. Simply give bus drivers permission to pick up and drop off at existing trailheads on signal. A solution that benefits only ski resorts is not a solution for our city, our people, and future generations who want to enjoy the canyons in winter in a multitude of ways NOT in the resort (snowshoe, backcountry, sledding, fishing, hiking, birding, not being in long lines at the resort).</p> <p>UDOT continues to tout the environmental benefits of the gondola vs. diesel buses, but fails to compare the gondola vs modern electric buses despite recent evidence that fully loaded electric buses do a fine job of moving up and down our canyons. Why are electric busses out of this discussion entirely?</p> <p>While eliminating roadside parking beyond entry 1 is done for honorable reasons, it disproportionately affects user groups other than resort visitors while providing no alternative. This again flying in the face of many comments you have already received regarding user group equity.</p> <p>I'm calling justice from deep pockets of ski resorts dictating irreversible damage and obscene costs without trying more obvious and effective solutions. You can decide to protect our canyons and their wildlife, connect recreationalists of all disciplines, and use common sense or you can live with being strong-armed into a gondola that is destined to fail.</p>
28081	Constance Cooley	<p>When a teenager comes to a parent and says, "Hey, my 1999 Toyota Camry isn't functioning well. I need a new one so I can go to school." No, I don't want toll roads, we are already paying taxes for these roads and uta can make money some other way!</p>
28082	Shaen Gutzman	<p>Are you kidding? You are going to use half a billion dollars of taxpayer funds from the entire state to fund something that should be paid by the ski resorts or the county? Shame on you.</p>
28083	Patrick Wilson	<p>There has to be an alternative to have a gondola in the middle of our beautiful canyon , it's going to ruin the natural beauty of the location</p>
28084	Terri Ann Petersen	<p>After riding the gandolas in Whistler and hiking for three weeks in the Swiss Alps, I am sold on a Gandola for Cottonwood Canyons.</p>
28085	Aaron Ellis	<p>This really seems to only benefit the ski resorts and not recreation as a whole. If this plan also allowed for stops at various trailheads then I would see it as more of a success in eliminating roadside parking, but without that it's really just getting people to the resorts and that's it.</p> <p>Please add additional stops to the plan to make it more useful for a wider range of people throughout more of the year.</p>
28086	Jonathan Wolf Wolf	<p>This solution only helps the ski resorts? It will be the death of a beautiful canyon. If you want to see the future of the gondola look at Squamish.</p>
28087	Mary Cook	<p>I am violently opposed to this project! It's not the solution!</p>
28088	Diane Long	<p>I am opposed to putting a giant gondola in this beautiful canyon.</p> <p>I am appalled that the UTA has ignored the public outcry, and pushed this plan ahead.</p>
28089	Mauricio Robles	<p>Have all the hotels and resorts pay for this project. Stop subsidizing big business. Let them pay fot it if they want it.Do not increase my taxes, i live in Kearns and don't want to pay to accommodate some rich people and tourist's pleasures. Use the money to pay for competent teachers or to give better salaries to police, crime os getting out of control in SLC. We don't need no gondola for three or four days of heavy snow in winter season. They are promoting only one side of the story os radio and TV. We don't want more taxes for leisure projects to accommodate rich people. don't tax me and don't use our money for these project.</p>
28090	Daniel Carr	<p>The gondola is a terrible idea. Not only will the towers and cables permanently mar the visual appearance of one of Utah's most beautiful canyons, it is socializing the costs and privatizing the benefits to a relatively small and affluent group of people.</p> <p>As a young person growing up in Utah, I only went skiing two or three times; my father was a public school teacher and my family simply could not afford it. Now, I am very fortunate financially and have annual ski passes in the Cottonwoods for my family. Why should the next generation of school teachers have to subsidize my recreation? Let Snowbird and Alta fund the lion's share of a gondola which is being constructed primarily for their benefit.</p> <p>Before moving forward with a gondola (or road widening), implement HOV / toll requirements in the canyons. Utah residents could pay one rate, and out-of-state tourists a higher rate, with free passage available to 3+ or 4+ occupancy vehicles. This would significantly alleviate traffic pressures in the canyon and would be revenue-positive, instead of revenue-negative, and the costs would be borne by the users of the canyon, instead of all Utah taxpayers. If tolling doesn't work, UDOT can always revisit the gondola or other expensive options. Instead, the decision to build a tram has been made seemingly without trying other, much less expensive solutions first.</p>
28091	Denton L. Mecham	<p>I do not want the gondola</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28092	Sherry Mecham	I do not want the gondola
28187	Wendall Allsopp	Traffic equals population buses must be electric soon electric grid can't keep up with basic electricity now and you going to add all electric vehicles gondola is best
28093	Andrew Gardiner	I am 100% in support of the gondola! We need to solve the traffic problem in the canyon, and widening the road would be costly both monetarily and in terms of ecological damage. Riding up to a ski resort in a gondola would be a much more pleasant experience than driving there.
29146	Anonymous	<i>Submitted via UDOT Click-n-Fix</i> The gondola will harm the environment and add unnecessary financial strain to Utah citizens, many of whom are unable to afford to ski at resorts like Snowbird and Alta. The business deals behind the land ownership are also seedy, and lead to further public mistrust in the project. The bus from the parking structure to the gondola stop will dissuade tourists from using the gondola as well- why not just start on the bus up the canyon instead of transferring? This will also take much more time than being stuck in traffic. Stop the gondola
28094	Erica Lengvarsky	While a gondola may be a tourist pull, it isn't the best solution year round. An electric high speed train that makes a loop from Cottonwood Heights/Sandy, up to Park City, then back down through Ogden Canyon connecting up with Front Runner/Trax is the best option. Yes it'll be expensive, but the increased ability to move people across the Wasatch front will do wonders for recreation, commuters, and even big events like Sundance. Please look into doing this.
28095	Grant Burton	Figure out the capacity of the canyon and limit access. Instead of giving in to developers and Ski Utah think of the natural area you're proposing to unnecessarily destroy.
28096	Caroline Himbert	First, i would like to make clear that i strongly believe the increase in bus services, especially e-buses will be the best option to solve the traffic issue in LCC. Parking reservations and paid parking over the past season at Alta and Snowbird have already shown a substantial effect on the traffic and show that it is NOT needed to spend a billion dollars to build a gondola. Although, I recognize that the UDOT team has made an effort to accommodate concerns regarding building a gondola in LCC, they do NOT eliminate major issues and risks for our canyon. Let me summarize my arguments against a gondola: - Costs: A gondola is cost-intensive to build. Although the organization believes that it will save money in the long-term, I strongly believe that the organization misses an important aspect: If individuals have to pay for the gondola + parking at the gondola while the road remains open, people will still take the car up the canyon and not use the gondola leaving us with a destroyed canyon with an empty gondola and same traffic issue. - Accessibility: Charging for gondola rides and parking on bottom of gondola limits the access to our canyon to those who can afford paying for a ski pass plus gondola ride (mostly tourists from out of state) - Recreation: Building a gondola will have a tremendous negative effect on the recreational areas in LCC. 20 gondola towers will not simply be flown into their place, construction roads will be required to each one of them and destroy any nature and habitat for many animals around them. Climbing areas will lose their privacy and have a gondola car pass by every 2 minutes staring at them climbing. - A gondola will only be beneficial for a very short amount of time during the year while have such a huge impact on the canyon.
28097	Andria Irvin	I don't know what gave you guys the crazy idea that the gondola was the answer to the fact that one company has pushed this idea since the beginning because they want to build a [redacted] gondola you're supposed to be representing the people not this one [redacted] company. this gondola will have huge environmental impact that you don't seem to recognize, the fact that it will have major interfere with wildlife that live in the Wasatch mountains doesn't even seem to phase [faze] you. The idea that putting a gondola is the answer is the dumbest [redacted] I've ever heard , figure something else out!!
28098	Lendy Gillespie	I am extremely disappointed with UDOTs conclusion due to the fact that other less impactful methods (more buses, tolling, and carpool incentives) have not even been tested. This feels like a huge waste of tax payer money when only about 20% of locals endorse this endeavor. The magnitude of change to the environment in LCC would be huge and I do not feel UDOT has done their due diligence or is in fact capable of doing so. I am very opposed to the gondola!
28099	Andrew Conlon	More development in our natural spaces is never the answer. Please do not build this gondola. One's experience taking a gondola over a bus is not going to be that different.
28100	Andrei Kachurin	No handball. Never. One additional road line and electric buses are needed.
28101	Andrei Kachurin	No gondolas. Never. One additional road line and electric buses are needed.
28102	Leslie Kovach	This is a boondoggle that takes Utah tax payer dollars for transportation an gives it to 3 private businesses. 1 billion dollars could go a long way to fund other much needed projects in the state rather than a project that less than 7% of the utah population will use.
28203	Galen <> Schuck	Everyone I've talked to has not agreed with building a gondola up our canyon. Who wants to look at ugly towers for the rest of our lives. Electric busses would be a year round solution to our ever growing population of outdoor enthusiasts. Getting people up and down both Winter and Summer. Don't let greed decide. Do whats right for the people and the canyon. Galen Schuck Sandy UT
28103	Kelly Stewart	I am an avid skier, both resort and the backcountry and I strongly feel the gondola is absolutely NOT THE ANSWER. It requires massive tax-payer money to serve only a small segment of the tax-payer base and does not even accommodate all users of the canyon. Furthermore, there are better uses of our tax-payer money than funding convenience for skiing for the rich. Additionally, it destroys parts of our beautiful canyons.
28104	Rubina Halwani	I would like UDOT to disclose who is paying and for what, specifically. Snowbird businesses should fund this to some extent. Also, what is the plan if there are hazardous conditions where the Gondola cannot travel up or down? What is the safety plan for potential hazards?

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28105	Joshua Ehrlich	<p>I am writing to oppose the proposed gondola plan for several reasons: -the plan preferentially privileges two businesses (Alta and Snowbird); -the plan preferentially privileges alpine skiers at the expense of climbers and hikers (some routes will be adversely affected) and without concern for backcountry skiers; -it may remain easier for skiers to drive given the 0.75 mile walk from parking lot to gondola in ski boots and the time required to ride the gondola. In this case, the overall environmental impact of the gondola is higher than estimated;</p> <p>I believe that a much better option would be to restrict private car traffic into the canyon at all times, or at least at key traffic times (weekends, early mornings/late afternoons). Providing robust electric powered bus service in lieu of allowing private cars would: address the traffic problem; not require considerable additional infrastructure that disturbs the canyon's ecosystem and creates runoff into streams; would decrease carbon emissions; would preserve the canyon for all and provide more equitable benefits.</p> <p>No solution is perfect and all require sacrifices. The benefits of bussing - instead of allowing private cars or building a massive gondola - are much clearer and definite.</p>
28107	Kevin Lockwood	No Gondola. Terrible decision. Start Over.
28108	Laura Lockwood	I do not want the gondola and it is not the correct solution to this problem. In speaking to those in my community I know no on who has wanted this. I am not clear on how you came to your results on choosing this as your option. We DO NOT want the gondola. This would ruin cherished climbing areas, hiking, and in the end would not solve the issue. Please do not do this and listen to the people.
28109	Saloni Shah	Please, for the sake of our environment, our children, and our grandchildren, NO GONDOLA. Please improve public bus transportation.
28110	Amy Courtois	I, as well as the majority of the community, do not want this gondola ruining our beautiful canyon. This is not what we voted for and will not solve the issue.
28111	Alexander Cole	Although, I do not live in SLC, I frequently visit to ski the cottonwood canyons, as well as climb, skitour, etc. You could say that I am part of the problem, being a tourist. That being said, I am whole heartedly AGAINST the building of a gondola up LCC. I do not believe it will limit traffic, as people will still choose to drive rather than ride a busy gondola. Additionally, the lack of stops besides the ski area means that anyone who chooses to use the canyon for other recreation will still have to drive. In the summers, this will be even more prevalent. UDOT should rethink their plans for the Gondola, and choose not to build.
28112	Jeff Bowen	I understand that the need to reduce traffic is very important in the cantons. However, this gondola will ruin cherished climbing and hiking areas, cost an astronomical amount of money, and again not solve the issue. Please do not move forward with this plan.
28113	Austin Ziegler	Other measures can be taken to solve the traffic issue in little cottonwood canyon. The proposed gondola will cause damage to the natural landscape that will never be restored. An increase in bussing with a limit of cars allowed up the canyon will solve the issue. Going forward with the gondola is going to come at the expense of many tax payers who don't even ski. Please consider other options before going forward with the gondola.
28114	Morgan Keller	While I understand UDOT's mission in building this gondola, it seems to be a short term solution that introduces even more problems. Utah's number one priority should be the health and happiness of it's citizens, and maintaining the natural beauty of the landscape is pivotal to that priority. The lasting impacts of this gondola outweigh any immediate relief it might provide. I believe UDOT can do better and find a solution that benefits everyone, from locals to tourists, skiers to snowboarders, bikers to hikers. But this isn't it.
28115	Isaac Murri	Why is this not put on the ballot? This is what democracy is all about. I have grown up right below Little Cottonwood Canyon my entire life, and still live here today. I am an avid skier and anyone who cares at all about skiing or what it means to be a Uahn would never allow this to pass. The Gondola is an eyesore the length of the canyon long. Also why are Alta and Snowbird not paying for this? Over 500 million dollars of taxpayers money being used for this is a complete joke. I could not be more dissatisfied with this idea. When conservation is an increasing problem and with Little Cottonwood Canyon being a critical watershed, allowing thousands more people up the canyon daily is a great sin. At some point there is a reason why the canyon is packed, it is because it isn't meant for so many people simultaneously. Instead it should be limited and ski resorts which are already extremely crowded should have a capacity. If it is full it is full, and if people had to take a bus then so be it, that is the sensical matter instead of destroying beautiful views with our own money. Yes those of us that use the canyon year round, why are we not consulted? I am a Mechanical Engineer and I can see no way that this budget isn't exceeded. Our road construction projects are already a joke and this will be once again. I am extremely disappointed why the lives' of those affected are not being taken into consideration or being consulted. Are we out of touch with our citizens?
28116	Robert Thompson	Leave the canyon the way it is . No gondola. No widening road .
28117	Bryan Gibson	I am opposed to the development of a gondola in little cottonwood canyon. This project will take years to complete (while the issues goes unaddressed) will be very expensive , and will have limited impact on the traffic its seeks to alleviate. In addition the building of the gondola will have significant environmental impact on the canyon and it will only serve one user group of the canyon- resort skiers, other better options exist. Much simpler and more cost effective solutions exist. For example requiring the ski resorts to charge for parking (on a sliding scale so that more people in the car = less cost) and using 100% of those proceeds to subsidize and increase in buses would be a simpler solution that could reduce traffic much sooner and at much lower cost. Increased buses could be combined with a ban on parking outside of designated parking lots (at least on busy weekends) and if needed, on the busiest weekends an absolute limit on the number of cars in the canyon with a "one-in one-out" policy
28118	Kathleen Alleman	As a >50 year tax payer, I think there are much more legitimate problems in the SL valley that need the 1/2 billion dollar remedy. Don't waste our hard earned dollars on such a focused minority problem.
28119	Sue Whitney	Sorry, but this is a special interest issue, only benefiting the ski resorts, the skiers and those who will built this gondola. I am against this at all costs. There are better uses of our money in trying to make cleaner air. I vote NO.

28120	Maryanne Siegendorf	<p>No gondola! Why are we paying for something that benefits few! Plus we don't have snow anymore Super short season Take a bus!!!! No money for the eye sore! Keep are canyon view No ugly gondola!!!!!!</p>
28121	Taylor Reis	<p>I am disheartened by the decision making process and the influence that outside political and financial forces have had on the outcome. I present a few brief points to consider:</p> <ol style="list-style-type: none"> 1. We don't need the perfect solution years from now, we need a good enough solution this winter. Why have common sense approaches not been considered and tested yet? Utah is a state full of pragmatic people. What about starting with a toll and using that to fund further decision-making efforts - won't this drive people to reconsider the existing public transit options? What about mitigating avalanche closures by building sheds over the existing roadway in avalanche paths? Surely starting with low-hanging fruit will deliver the impact we are looking for sooner rather than later. 2. The Wasatch front extends beyond just Little Cottonwood Canyon; why has Big Cottonwood Canyon, a busy road that struggles with the same congestion, not been considered in this process? These roads start from nearly the same neighborhoods, and come very close at their winter terminals. Why has the bigger picture surrounding longterm cottonwood canyons winter access not been considered? There are amazing ideas floating around that could solve our longterm traffic and conservation problems in both of these canyons. 3. Storms are what drive people into the canyons, not away from it; how will this solution deal with adverse wind conditions? What guarantees will canyon travelers have to its availability during inclement weather? 4. How will this solution scale beyond the demand that the state currently forecasts? Once put in place, this solution will provide a static, fixed cap, for the number of travelers per hour in the canyon. Will we not find the same bottlenecks again?
28123	Cary Piotrowski	<p>While I initially was in favor of a "european-styled" gondola solution to support traffic challenges in LCC and the Wasatch overall, I can no longer favor either UDOT's Plan B solution or a gondola solely focused on LCC. The only way a gondola works for Utah residents and LCC/BCC is with a solution that extends from LCC into Park City. Anything short of that only supports the greed of the La Caille Business owners (former politicians who snookered their way into profiting from it and should likely be charged with racketeering) and Snowbird / Alta. parking or the fact the same number of cars are likely to be at the top of the canyon each busy day/weekend already.</p> <p>My support is for increased busses, more than every 5 minutes, less vehicles in the canyon (through a combo of tolling, metering and proper capability like no rentals) and investments in snow sheds to minimize avalanche risks and road closures.</p> <p>Thank you, Cary Piotrowski</p> <p>Furthermore, I feel the EIS is flawed in thinking that "peak volume of cars by 2050 will be 1500/hr". What is that based upon? It is an irrelevant statistic as what should be considered is what the parking capacity at the top of LCC truly is. THAT is the rate limiter in this discussion. There are only so many cars which can park in the canyon. This value has already been eclipsed by current demand on peak days and there doesn't appear to be any efforts being made to expand, so our issue is addressing the needs NOW! 2050 projections are useless. The ONLY option that truly makes sense at this point is expanded bus use with tolling or extremely limited access to private vehicles. I do applaud UDOT's desire of a phased approach and believe everyone should maintain an open mind as the proposed incremental adjustments may further identify options to support ingress/egress from the canyon. Without a gondola that can enable people of UTAH to avoid driving up/down canyons to enjoy THEIR state beyond just LCC, we should not be funding a "traffic solution" that does very little but enrich a very few and ultimately not solve the defined issue - too little parking in LCC and roads that cannot support today's demand.</p> <p>As I live 3 miles south of the canyon off of Wasatch Blvd, none of your proposed solutions are likely going to dissuade me from driving myself to enjoy the primary reason why I live in Utah in the first place. I'm not alone - the only way to address this is to create an alternative that is more attractive to me (both in time and cost) than to do what I currently do - which is drive up the canyon. The current proposals do nothing to encourage me to change my behavior except to jump through some extra hoops or arrive in the canyon earlier - neither of which addresses reducing pressure on</p>
28124	Taylor Wilson	<p>This is an awful idea. With it only helping a small population of Utahns who life to ski as well as out of state skiers. This is nothing more than an incredibly expensive gift to ski resorts. Don't do it.</p>
28125	Kynzie Henriod	<p>I feel like the bus transportation is the best option because its not damaging our canyons and the enviornment even habitats. it also wont be shut down for a long period of time so people will be able to visit.</p>
28176	Erin Tregaeagle	<p>NO GONDOLA! We are over tax burdened as it is. If the resorts want the gondola they should pay for it and UDOT should not acquiesce to wealthy land developers!</p>
28126	Jackie Detmers	<p>I am not in favor of spending tax dollars to benefit the private ski resorts.</p>
28127	Robert Elswood	<p>I do not favor the Gondola solution. It still doesn't solve the car traffic, parking , and air pollution caused by the traffic getting to the gondola terminals. Electric Bus fleet is a far better option. With the buses available from multiple locations including the Airport and downtown hotel locations. The aerial tramway is too expensive and destructive from the start and would be very expensive for users, maintenance, and employee costs on an ongoing basis.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28130	Charles Hardy	I oppose the gondola. Congestion pricing is a better alternative that won't damage the canyon scenery and won't cost the taxpayers like a gondola will.
28132	John Pickford	I am strongly in favor of the Gondola as the best approach to the Little Cottonwood transportation issues. The gondola will have significantly less impact on the environment than widening the roads, adding busses and increase auto traffic. The gondola will not be impacted by unfavorable road conditions, snow, ice, traffic accidents The gondola will not be impacted by road closures for avalanche control or avalanche debris The gondola will be able to safely bring people down the mountain in big snowstorms where they would have otherwise been interlodged The gondola will be a rear round solution to traffic - not just ski season and will be a tourism destination in itself. Please approve the gondola project and funding for Little Cottonwood Canyon John Pickford Draper UT
28131	Ryan Kelly	Please don't waste this money on such a large project that really doesn't solve the problem. Just do the best to maintain road service up the canyon, without expanding the roadway or adding a novelty item like a gondola that will see very limited use. Cost estimates are always way too low, and estimates for numbers that might use this are always way too high. It doesn't make fiscal sense, nor does it really solve the problem. Folks I ride with will still be driving their cars up the canyon, so I don't know who you expect to use a gondola, particularly outside of the short winter season.
28138	Thomas Copeland	Please, NO Gondola! There has to be better solutions. Why go zero to 100 right away? I've lived in Utah all my life. You would be absolutely destroying a beautiful canyon to serve two resorts for only a portion of the year. Please don't choose money over the purity and sacredness of our beautiful cottonwood canyons. I implore you to choose a better option. Please ?
28144	David Rasmuson	I like that you are phasing in improved buses, tolling, enhanced parking and snow sheds. But why not stop there. I think that with these implemented tools we can enhance the safety and usability of little cottonwood canyon without the gondola. I'm born and raised in SLC and I don't want the gondola. It's expensive, an eyesore, and it only serves people who are from out of town going to the ski resorts. Please no gondola! Thank you, David
28145	Cameron Moore	I am very concerned and very dismayed by this project and the decisions that have been made. How can UDOT choose to expend millions of dollars to on a project that surveys show has less than 30 % of the population in favor of such a project. If we, the tax payers, are going to paying for this extremely expensive project that fixes a problem for a limited number of people for a small number of affected days. It would seem appropriate to have a public vote on the general ballot. Please don't force a solution that so many oppose.
28159	Kathryn Lindquist	I'm disturbed -- more outraged -- that UDOT would choose a transportation method up Little Cottonwood Canyon that would 1) damage the aesthetic and visual appeal of the canyon and 2) be so outrageously expensive for taxpayers when those who would benefit are the ski resort owners. Surely there is a less intrusive and expensive alternative.
28163	Jim Fowles	The gondola needs to happen. The road is too small for today's traffic. A gondola fee can be paid to help offset the costs. Skier's could have the fee waived, with a current pass. The gondola would keep the canyon in its pristine condition and far less traffic and pollution. Let's build it!
28168	Peter Vars	Please do not build the gondola. This proposal does not seriously address the traffic issue. People will still drive up the canyon and fill the parking spaces (or did I miss that the resorts are eliminating parking capacity?). The gondola will only really provide driving/parking overflow capacity (really just an amusement ride/marketing gimmick), but will also provide new congestion points in the valley actually making traffic worse. The ski areas are already over-utilized with the ski experience in sharp decline in recent years from liftlines and crowded slopes. We are past the point that these resorts, operating on our nation's public lands, should be allowed to grow and degrade the natural landscapes further for profit. That taxpayers are subsidizing two private businesses to the tune of \$600 million is insanity. The gondola will be an enormous eyesore in the currently beautiful LCC. There are much more effective and cheaper options that have been ignored. Strictly enforce the 4x4/AWD/chains laws. Require parking reservations. Strongly incentivize public transportation and carpooling by providing free busses (or even a coupon for a discounted lift ticket) and charge tolls for cars (less for carpools). Both lanes up in the morning / both lanes down at the end of the day. Et cetera! I also think it's criminal that you guys have disregarded the overwhelming public opposition to the project and just went ahead with this horrible plan.
28191	Mary Ann Morgan	I feel quite against the gondola--too expensive for too few people, aesthetically not good for the canyon I am in favor of Mayor Wilson's suggestion of satellite parking lots throughout the city and use of electric buses.
28192	Anthony Morgan	We really need more detailed cost estimates of the options and a proposed plan of financing. Plans are somewhat meaningless unless there is a plan of financing. User fees? Ski resort participation? Taxpayers?
28193	Caroline Bradley	Please do not destroy the natural beauty of this Canyon with an eyesore that we don't even know will be totally utilized. There are many other steps to reduce congestion versus this option that many, many of the residents are openly not a fan of. I urge you all to please redirect your course and think of other solutions first.

28194	Diane Walker	<p>I am against your "preferred alternative" of a giant, ugly gondola that will probably need to close down due to safety reasons on the best snow days. When it does work, how much blasting and clearing will it take? How will the watershed be protected so that a few 10s of people per hour can take a joy-ride? Your poor reputation and history of colluding with developers in the legislature makes you the worst entity to be making decisions for the people of Utah. The quiet purchase of land by the corporate ski resorts last month stunk to high heaven. I wonder how they were so conveniently made aware of your forthcoming decision. I have no faith in your opinion as you show time and again you are not an unbiased decision-maker. Saddling the public with what amounts to corporate welfare seems to be your play every time. You unelected people know nothing about fairness or public integrity. Your opinion is never in the public interest and this poorly reasoned decision is no different. Someone in power is always lining their pockets at UDOT. Stick to building highways and stop telling taxpayers to subsidize out-of-state corporations that could care less about locals and seek only to shove more people up those canyons without a care to the impacts on our quality of life. It's all about money. The ever growing crowds of people is the problem. Limited access is the solution, but you are too blinded by greed to see it. Only a few will benefit. The rest of us suffer.</p>
28198	Paul Zuckerman	<p>Hello, I oppose the gondola plan for the following two reasons: -Public tax money should always be spent on doing the greatest good for the largest number of citizens of the state. This option is the antithesis of that principle. It will deliver customers to two private businesses, for only several months each year and for many who travel from other states. This is a classic case of public assumption of risk paying for private profit. If future conditions change, we will be left with a permanent and ugly relic in our canyon. - It has been proven in numerous cases before (ex: the GSL pumps) that permanent structures addressing flexible needs is counterintuitive. There are so many other solutions to employ first such as a reservation system or an odd even license plate car entry policy. Or instead of a "train" in the air with only two stops, why not create a frequently departing number of alternative fuel buses that can be express for skiers in winter and local for canyon visitors all year. Zion National Park uses buses and now Weber State University is introducing an electric bus shuttle service. - The road already exists. Improving it, including a dedicated bus lane, would be far less impactful to the natural beauty that is Little Cottonwood Canyon. It is proven and flexible. Adding a gondola to the existing road does not solve the problem of moving resort patrons, it creates even more crowding, necessitating a never ending and unsustainable progression of man-made intrusions into a natural landscape. I want my tax dollars spent on needs more pressing than someone's ski vacation. Respectfully, Paul Zuckerman Salt Lake City</p>
28197	John Constantine	<p>Is it a good idea? Yes. Cutting down on traffic going up the road during winter season is a good idea. cuts down on pollution, etc.</p> <p>However - as someone who doesn't Ski, or go up there on a frequent basis, why are tax payers flipping [footing] the bill for this? this benefits the skiers and ski resorts, and people who go hiking up there frequently, that seems like a small subset of the population. Are they going to flip [foot] most of the bill? it would seem to be logical from that standpoint.</p>
28201	John Hillyard	<p>I think it's a terrible idea to put a gondola in Little Cottonwood Canyon. In the first place, much cheaper alternatives have not yet been tried. These would include a mandatory reservation system at the two ski resorts for people to park. With no reservation, you don't enter the canyon. This would encourage more people to use buses. If you didn't or couldn't get a reservation or don't want to use the bus, go to a different ski resort and too bad for the out-of-state skiers. Another untried alternative would be to have a tolling system in the canyon and make the tolls on so-called "powder days" very high. Any of these alternatives would have the people actually using the canyon pay for it. The idea of putting all the towers in the canyon and stringing cables between them for the gondola would absolutely and permanently ruin the canyon forever. The money needed to build this monstrosity will certainly be more than your estimate and the billionaire owners of the two ski resorts shouldn't get corporate welfare to build this anyway. I think it's shameful how they have been buying ads on TV and elsewhere to try and sway your decision at UDOT, but it looks like it worked for them. Why don't you put this up for a vote, or does big money know it would lose? I intend to lobby my state representative and senator to ensure that this project never gets funded by the legislature. Thank you, have a nice day.</p>
28204	L Samuels	<p>As a resident of the [redacted] neighborhood, I am strongly opposed to the gondola. Why are we still considering spending \$550 MILLION dollars to build a gondola that only accesses two businesses and that will result in more pollution and traffic on 9400 S and Wasatch Blvd as potential users of such gondola fight to access the parking lot to search for parking spots? Why not encourage more users to use buses from their neighborhoods/ communities thereby limiting the number of cars on ALL Utah roads - not just in the canyon? If we toll at the base, create reservation based, pay to park lots in the canyons and increase the transportation hubs for buses throughout the valley, we can positively impact the air quality throughout the state. The LCC gondola will only serve to move the traffic from the canyon to the nearby roads, negatively impacting all nearby residents as they try to commute from their neighborhoods, while also costing taxpayers a ridiculous amount of money and ruining the beauty of LCC. STOP the gondola now, before it's too late!!!</p>
28205	Lake Kreklewetz	<p>I think that the gondola would be a great method of transportation between resorts!</p>
28206	Matt Farrell	<p>This is a terrible decision. Unless the resorts fund 100% of the construction themselves, this is just a giant corporate handout to the resorts and rich developers, paid for by the citizens of Utah. This is a very obvious case of extreme and bald-faced corruption. The best decision is clearly hybrid or electric busses, possibly with some snow sheds or other improvements to the road. Spending a half billion dollars of the citizen's money (which we all know will turn into 750m or more by the time the project is done) is insanity.</p>
28207	Adam Winters	<p>What happens when you load up the mountains for the day and a storm rolls in with high winds? At what wind-speed do you have to shut down the gondola? And how would you get everyone back to town if it can't run?</p>

28273	Jessi Starley	<p>Hello.</p> <p>I do not agree with the gondola. There have not been enough other solutions tried to make such a massive, invasive decision such as this. Especially without support from locals who actually care about the neighborhoods and canyons. We also pay the taxes and vote.</p> <p>There should never be an issue with political "representatives" owning land and benefiting from the sale of precious land. No sane person is going to trust anything being done when it is already a shady deal. How embarrassing for them/you/the office.</p> <p>These concerns are not being addressed and the "representatives" that think they know better than anyone else needs to take a step down from their pedestal and realize that they have to live with this decision too. Or maybe they'll make enough money to love [move] out of town and forget about it.</p> <p>I have been silently watching this debate and I am appalled with the lack of care and concern that the committee has.</p> <p>Why hasn't anything else been tested? Paid parking, tolls, reservation systems? Let's see the plan of the village, who's benefiting from that? Not Cottonwood Heights. Why aren't the ski resorts paying for a gondola or other updates? They are the ONLY ones benefitting from this.</p> <p>I am asking for you to look at other solutions. The gondola is not the answer.</p> <p>Thank you.</p>
28274	Richard Davies	Please send me the link to comment on the gondola. It reads "site cannot be reached "
28275	Zuzana Stehlikova	Gondola project does NOT benefit majority of Utah citizens. Extremely expensive, environmentally destructive project, benefiting only few - mostly businesses. Lot of conflicts of interest in those that are making decisions. I am against supporting Gondola project.
28208	Collin Mcgill	I don't want \$400 of MY tax dollars to support the corporate owned ski resorts. Who benefits here? Definitely not the working Utahn...
28209	Nate Gibby	The gondola is a great solution to the transportation problems in Little Cottonwood Canyon. I hope we can make it happen.
28210	Pamela Cotter	Please no more building, no towers, no gondola! More buses and even mandatory carpool would be better! We need to protect what is left. Also lower income could never afford gondola fees. I understand they aren't the bulk of the problem, but are still important.
28211	Matthew Dominesey	<p>The preferred alternative Gondola B is the poorest choice of all alternatives. The only winners with Gondola B are the private entities Snowbird & Alta, and private citizens with land holdings within the plan. The planned alternative Gondola B reeks of corruption with the same players present as other projects along the Wasatch Blvd corridor . UDOT's reputation and credibility may never recover from such an outlandish plan as Gondola B</p> <p>As a long time local resident along Wasatch Blvd corridor, the traffic congestion in the canyons has only become an issue with advent of the IKON Pass. Road closures are a fact of life in LCC. As a former LCC resort employee who travelled LCC daily for more than 20 years I can tell you that the traffic congestion is a result of the LCC resorts increasing their skier count. What is the capacity of the canyon and should the resorts consistently try to maximize that number for their own bottom line at the expense of the public good? Should they bare more responsibility as a steward of the canyon and watershed as well as protect the individual experience whether they recreate at the resort or not?</p> <p>The answer is to limit and regulate the skier count at all Utah resorts just as they limit capacity in a theatre, restaurant, classroom, church, or even city hall. Don't widen the road, build snow sheds, rails or anything of the like. Simply Enhance the dismal bus service with an eye on a future transportation hub at the gravel site at BCC.</p> <p>There are so many reasons why this Gondola B will ruin and I mean ruin LCC. It is a terrible choice skewed by subjective economics and I know that the public comments have expressed all of those points. My hope is that UDOT will actually listen to the overwhelming opposition to this project. This planned alternative is not a forward thinking or progressive plan. It's regressive in its very nature by limiting access to the haves vs have nots.</p>
28212	Mallory Mcneill	It is very clear that the Enhanced Bus Service Alternative is the way to go. Much cheaper and Minimal to no damage will be done to the surrounding area preserving the canyon. There is currently no funding for the gondola and we already have shuttles. Instead of buying and building a whole new system just enhance our current shuttle situation. No to the gondola!
28278	Patrick Montoya	<p>A gondola system is not the answer to canyon congestion. It maybe clean energy running. Is it?</p> <p>I can't imagine all the trees that will need to be permanently removed just to get the cement there for each tower. (Roads, parking for the workers) A lot of money for you and the tax payer, to benefit a few. This will take years to build, you have to address the congestion/bus situation immediately anyway.</p>
28213	Kurt Wiesner	I believe that a gondola is not in the best interest of the general preservation and use of the canyons. I think Robert Gehrke's September 1st op-ed in the Salt Lake Tribune is correct: we should have increased bus service; tolls both to enter the canyon and at the trailheads; a more comprehensive reserved parking system; and set realistic data-driven capacity targets" before moving to such an expensive and disruptive project in our canyon.
28214	Sydney Stoner	I strongly oppose building a gondola in little cottonwood canyon. There are a number of reasons for my opposition but first and foremost this build will destroy nature, the natural beauty of the canyon, destroy bouldering areas, not service other sections of the canyon besides two wealthy ski resorts that would benefit from taxpayer dollars funding this project. I'm mostly opposed because of the environmental impact but the greedy ski resorts (that I grew up skiing at) could find their own project if this was the final decision. There has to be a better way- toll, bus, limit the number of cars should be considered first! Please do NOT destroy the beautiful canyon!
28215	Olszewski Kristina	I am fully in favor of the gondola

28216	Ryan Mazelli	Hello, as a resident of Sandy and an active user of LCC, I want to strong oppose the gondola proposal. While I would love this as a resort skier, this is only a fraction of the canyons usability. I would like to suggest an option that costs significantly less and minimizes the overall impact while also facilitating a different outlook to people looking to recreate in LCC. The use of tolling for private cars will increase occupancy in cars and decrease overall supply of cars. Additional busses from areas all over the valley to take people up who may not have the means to drive, pay a toll, etc. There has been a lot of focus on avalanches. The problem is if there is significant avy [avalanche] danger on the road, that also means it dangerous at the resorts, trails, and backcountry too. This limitation, while Its convenient, helps with keeping people safe. The only ones who really suffer are the resorts. No paying customers because the road is closed. I'm in favor of adding additional solutions to help the increasing demand to use the canyon. I am not in favor of providing a solution to only Snowbird and Alta resorts. A multi phased approach of incremental changes will allow the truth to reveal itself on what is working. Thanks for providing a place for comment.
28217	Nathan Evans	<p>The current and future problem of congestion in the canyon doesn't merit the significant funds that are being proposed.</p> <p>At \$550M, the time savings of those visiting the canyon is place at over \$100/hour (1 hr/person, 10k people/day, 50 days/year, 20 years). For a car of 4 people, I don't believe they'd be willing to pay that much to save the hour round trip (85 minutes down to 55). If they are, a variable rate toll at the canyon entrance with a fee that high would certainly incentivize car pooling and would require those using the canyon during peak times to pay for it. Based on the experience of many people I've talked to, the number of days impacted is far less than 50, and the resorts cannot accommodate more people visiting.</p> <p>My family visits Little Cottonwood Canyon 5-10 times per year, and we only go as far in as Snowbird every few years. The gondola only benefits those going to the end of the canyon, ignoring the congestion in the other areas.</p>
28218	Ryan Hermansen	A gondola would NOT serve the members of this community or Utah as a whole. As a resident of this area for almost 20 years, a gondola would be a stain on the scenery and beauty of the canyon as it stands. Increased congestion, traffic, and crime would take place as parking would dramatically increase at the bottom of the canyon. This would greatly impact residents of the area and only limit who has access to the recreation available by car or bus. Please reconsider NOT installing a gondola and preserving the natural skyline of Little Cottonwood Canyon.
28219	Daniel Conner	I've been climbing and ski touring in little cottonwood for 17 years now. I love the wasatch and all it has to offer. A gondola takes away from the wasatch mountains, and does not add any qualities to the canyon itself. This solution is destructive to views, Bouldering and climbing access, and is insanely expensive for taxes to cover, when it mainly benefits resorts and tourists. A trax line from the airport to the cottonwood resorts, using the existing roadways, with a stop every half mile, and an emergency lane for ambulances, makes more sense. Trains can be equipt with snow plows as well. Increased bus access and parking makes sense too. But a gondola seems superfluous. I can only imagine how long the lines will get, and what the emergencies will look like when the gondola breaks down, or goes on wind hold. Not a good or helpful or well rounded solution.
28220	Michael Knaeble	The gondola is a terrible idea and would effectively ruin Little Cottonwood Canyon... please don't build it.
28221	David Ballard	The Gondola is a bad idea. Closet the canyon to Travis except reserved parking and busses. Have everybody pars at local high schools and that will ease the traffic around the mouth of the canyon and be an immediate fix. This is a benefit for 2 companies. How much are they going to contribute? 1/2. All of it? Not likely. The taxpayers are paying for it. For a republican controlled state you would think spending this kind of money would be discouraged. Oh I forgot. There is money that is being made by the very legislators that are pushing this through. This just stinks to high heaven. My vote is not in a million years
28222	Candy Stetler	Taxpayers should NOT be paying for this. Financing should be required from the ski resorts PROFITTING from the gondola!
28223	Todd Blake	I am an avid skier. Building a gondola is a terrible idea. The resorts are already too full to be considered safe. The resorts don't need more people. Furthermore, the traffic is only bad at open and close times. The gondola will never get enough use to justify the cost.
28224	Laura Grzymkowski	The gondola is a long way away. In the meantime, how about this? Perform metered access into the canyon via a station at the bottom of the road. When the canyon is full, divert people to a bus lot. Latecomers will soon understand that their chances of driving up the canyon is slim and they will just stop at the bus lot. The building of an improved parking lot is already in the plans, so do that first. It is also imperative to improve the bus schedule, especially in the afternoon. No one should have to wait over an hour for a downhill bus, but that currently occurs in the afternoon. Let's try this first. It's fiscally sound, environmentally friendly and won't attack the dedicated skiers of Utah with an outrageous cost to simply get to the resorts.

28225	Lucas Aragon	<p>(Short answer: I am against the gondola) I want to start by saying I don't live in the neighborhoods which would be negatively impacted directly by the building of a gondola over their roofs. As a skier, I do want to see solutions to the road congestion in little cottonwood. I currently happily use the shuttle busses and encourage everyone i know to use the shuttle busses. But I don't see myself actually using the gondola. I believe overall public adoption of the gondola to be low. Shuttle Bus service is significantly more convenient and quicker than a gondola option. (especially if bus options are expanded to support more users and things like single occupancy car travel up the canyon is banned) Additionally, I would hate to see the pristine canyon view and experience changed forever by the unavoidable obstruction that an overhead gondola would pose. The canyon is a world renowned location and adding a gondola will forever scar the landscape. Please please please do not make the gondola and instead invest in adding additional bus service and bus pick-up parking lots around the area. Spread out the traffic by allowing people to get on shuttle busses from more areas. Electric buses would help the carbon impact.</p> <p>Again. Please do not build the gondola. Ban single occupancy cars and add a bunch of bus infrastructure...I assure you those of us who love the canyon will use it and the public habits can be changed to make bussing up the canyon the expected and obvious choice.</p> <p>Thank you! Lucas</p>
28226	Lily Prentice	You are DUMB and I DO NOT like you.
28227	Andrew Evans	I live at the mouth of little cottonwood and 95% of people do not want this. There is not even capacity at snowbird or Alta to allow additional skiers/snowboarders. If this does somehow go thru with taxpayer money, Alta needs to allow snowboarders especially considering it's on national forest land.
28228	Phil Casper	I hate the gondola plan. Way too aggressive and costly before alternatives are explored. If it was to be explored, let Snowbird, Alta, and the Epic and Icon pass companies pay for it. It shouldn't be on the shoulders of tax payers. Why not build a booth and the mouth of the canyon, and on high volume days man the booth, and charge every car with 1 person in it \$30, every car with 2 people in it \$20, 3 people in it \$10, and any car with 4 or more can drive up free. I guarantee you this would fix the problem overnight.
28279	Phil Casper	<p>I strongly oppose the gondola plan. Way too aggressive and costly before alternatives are tested. If the gondola was to be considered, why not let Snowbird, Alta, and the Epic and Icon pass companies pay for it. It shouldn't be on the shoulders of tax payers.</p> <p>A better plan. Why not build a booth and the mouth of the canyon, and on high volume days man the booth, and charge every car with 1 person in it \$30, every car with 2 people in it \$20, 3 people in it \$10, and any car with 4 or more can drive up free. I guarantee you this would fix the problem overnight.</p> <p>Phil</p>
28229	Nancy Jarvis	I am against the gondola. We must preserve the wildness of these beautiful canyons that are already so impacted from the ski industry. I am a skier, a hiker, wildflower festival guide, but we must reverse our impact even though the populations Armand development is exponential here in Utah. We must think of not only ourselves but all living things that we share this corner of the world with. Thank you., and choose to protect, not destroy habitat.
28230	Steve Martin	Terrible Decision, Little Cottonwood Canyon is a work of art and a Gondola in the middle of it will ruin it. The public wants more buses and a wider road. I spend a ton of time in the canyon and it will make things a lot different for the remainder of the year in the non-ski season. Charge a toll, require a pass, but don't build a Gondola.
28231	Ross Thompson	the entire public doesn't want this gondola, and you selfish fools are doing it anyway. i don't think these comments will make any difference on the final decision. i am completely outraged about this, and this is contributed to the downfall of SLC. if this gondola goes through, i will start making my exit plan, and i can guarantee you many other long time SLC locals will do the same. you are doing wrong against the local people that do not want this abomination. how about you take the 500 whatever million and put it towards fixing our issue with the lake drying up? because when that's gone there won't be much of a city left, or at least one that people will want to live in. plus, the gondola isn't even going to be useful in 10 years with climate change. shame on you, people. serious shame.
28232	David Caron	So if we are to build a gondola (or anything else) to serve the ski resorts, how much exactly are they going to pay for it? After all, it seems apparent that they are the direct beneficiaries of such a system. If so, they should pay for it.
28233	Gregory Rickenbacker	LCC should consider combating congestion with conservative measures. Tolling of passenger vehicles could incentivize ride sharing by charging \$25 per vehicle with driver only, \$15 for driver + one passenger, \$5 for driver + two passengers, \$1 for driver + 3 or more passengers. Revenue from toll booth could subsidize a shuttle bus system (akin to what is implemented in Zion NP), so that folks riding the bus serving the park and ride and select lots on Wasatch Blvd can access the canyon FOR FREE. This (or similar) system should be at least TRIALED before embarking on such an expensive, destructive, irreversible project.
28234	Eric Johnson	It's an absolutely awful idea, and outrageously expensive. Why the expense for just a handful of businesses? Not to mention the cost of operation and maintenance. Why aren't they paying for it? Are they paying for any of it? What is the actual cause of the bottleneck in the canyons? Why not build parking structures at said ski resorts at a fraction of the cost, then people won't be parking in the roads plugging things up, this is one of the worst, not thought out decisions ever.

ID	Full Name	Comment
28235	John Murray	<p>Greetings,</p> <p>I've been living in SLC for the past 8 years and throughout this time I have been an avid user of Little Cottonwood Canyon, both in the winter for skiing and the summer for mountain biking and rock climbing. I've experienced the massive lines of traffic going up to the ski resorts on powder days so I can speak personally to the value of reducing this traffic. But I've also witnessed the traffic up LCC on days that aren't powder days, or even just a few hours after the morning of a powder day, and the traffic isn't bad at all. One almost never needs to stop their car during off hours. The traffic chaos is caused almost entirely by patrons of Snowbird/Alta, whereas other users of LCC (hikers, backcountry skiers, ice climbers) generally don't come in such great numbers that they cause traffic problems. I buy a pass for the LCC ski resorts every year, and I love the resorts. But in my mind, this is an inappropriate use of taxpayer dollars to subsidize private companies. Really, the people that are benefiting from this are mostly ski resort pass holders and the ski resorts themselves, rather than the general public.</p> <p>As far as cost effectiveness, \$550 million dollars seems like a lot to spend on improving traffic flow for ~36 weekend days per ski season. When thinking about long term efficacy of this solution, I question how many more decades our city will have such demand for skiing in the context of global warming, loss of snowpack, and the disappearance of the Great Salt Lake. It is also concerning that this spending is predominantly favoring recreation for the rich. Seeing that high of a price tag makes me wonder what sorts of improvements to the public transit system in the Salt Lake County area could be done for a similar price, in order to reduce rush hour freeway traffic. This would both improve pollution in the valley and also benefit a larger portion of the general public by reducing gas consumption.</p> <p>The gondola, as proposed, will likely not move enough people when demand is high. The proposed plan has a gondola that can move 35 passengers every two minutes (17.5 people per minute). Snowbird's tram moves about 125 passengers every 10 minutes (12.5 people per minute), but their tram only services ~1/4-1/3 of the Snowbird resort-goers. And the line for the Snowbird tram on powder days can take in excess of 45-60 minutes to get through. The proposed LCC gondola only moves 40% more people than the Snowbird tram, but it is servicing two whole resorts and the line will likely be very long and cumbersome. The estimated 45 minute trip time of the proposed LCC gondola is likely overly optimistic.</p> <p>I think that giving buses priority over cars to get up the canyon by providing a dedicated bus lane and forcing cars to stay in a single lane, will make the buses much more effective and favorable over driving private vehicles up. This restriction would only be applicable during rush hours, whereas cars and buses could use both lanes all other times of the day. Turning LCC road into a three lane road with the middle lane changing direction depending on the time of day (uphill only in the morning, downhill only after 1pm, many cities have roads like this) would be a reasonable way to minimize the</p>
28236	Jake Miller	<p>Listen here please folks: The crowd against the Gondola are forgetting how hard global warming is upon us. Sure, adding more busses would help the traffic, and sure, keep the canyon view free, but we have to remember our mother nature and her beauty. Busses emit carbon dioxide, most cars emit carbon dioxide, and making the road wider has a larger effect on the canyon than building a gondola. If you listen to the environmentally friendly group about carpooling more, the answer is no, we are sill burning fuel.</p> <p>People also need to remember that Aerial Ropeways are used heavily in the ski industry, and are basically the eco-friendly machine that makes the sport possible. It is not like we are trying to add an urban monorail system to the canyon. It is simply another ski lift.</p> <p>Everyone needs to forget about politics, forget about money, and think about the future of our kids and of our beautiful earth. We really need a change desperately, and a gondola would be the perfect fit. Good work UDOT.</p>
28237	Howard Niesen	No way. Only works for resorts. No tax dollars for this.
28239	Georgia Clark	Do not want or think the gondola is a viable solution for transportation in the canyon. Better bus service with electric buses is a much better solution.
28240	James Davenport	I oppose the gondola system. I would recommend limiting the amount of cars to a daily minimum with automatic gates. Once it is full it is full for the day
28241	Tanya Wadley	A gondola is unbelievably obscene impactful and expensive solution to a intermittent problem. This doesn't even begin to address the immoral natural of building such a reckless thing to benefit 2 private enterprises. How dare you? You are either incomprehensibly corrupt or incomprehensibly incompetent. Go to hell.
28242	Sandra Flodin	I don't understand how people will be willing to use the gondola when it takes much longer to get there than to drive. I also don't understand how this is still an option given much of the population is against this idea. I am against the gondola. People are not going to take an alternative mode of transportation that takes longer to get to where they want to spend their time off from work. They want to get there yesterday and have all the time in the world to enjoy the environment. Also, given that the natural snow pack that we have enjoyed in the last 30 years or so isn't being produced, I don't see how Utah can still claim to have the greatest snow on earth. I don't see how the man made snow is better than the natural snow we used to get. In all, this is a waste of money. Don't approve the gondola. Thank you.
28243	Aysha Williams	It's strange to me that UDOT will go along with completing the gondola with so much opposition. Many locals do not want the gondola. To me, increasing bus service and having a dedicated shuttle to and from the nearby park and rides, along with a parking garage at the park and rides, would change a lot of the traffic that occurs on big traffic days.
28244	Josh Lukas	The gondola is a truly horrible idea. Please do not waste half a billion dollars and dynamite beloved outdoor opportunities for something that almost certainly will not work.
28245	Morgan Wilson	This should be put to a vote. There are much bigger transportation concerns that impact all citizens not just a few
28246	Paulette Welch	I am apposed to the gondola in Little Cottonwood Canyon. It is exclusionary expenditure and only serves the ski resorts and the wealthy. It is using tax dollars to make the rich richer and promotes making the canyon a single use recreation area.
28247	Jan Bigler	How could you possibly approve a gondola (!) for this problem? Are you out of your minds? How will the thing support itself in the future? What happens on non busy days when no one takes? Who will pay the operating costs? Just lump it on to the tax payers? Are you totally [redacted] crazy?

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28248	Lucia Irazabal	I do not support the gondola. A solution that maximizes the number of people who can make it up the canyon is not what locals are looking for. The resorts are too crowded. Why would I go through the trouble of riding a gondola when my experience at the resort will end up being even worse? How is traffic at the base station parking lot going to be controlled? Lines? It seems as though the problem is just moving downstream. This solution doesn't represent the needs of salt lake residents who view the canyon as their backyard. I hike, climb, boulder, bike, backcountry ski up little cottonwood. It is not a resort skiing destination only. You are limiting access to our backyard while funneling it to the resorts. Local residents are supposed to take a gondola with all of our gear and get off at some stop and walk up and down the road (that isn't made for walking) to access these areas? You would be forcing us to be tourists in our own home. You are knowingly making access harder. Please do not build a gondola. It sounds like a project that will take a long time and a lot of money, and I can already picture its failure in the long term. Sitting, unused, like a relic, as it doesn't address the needs of residents. Salt Lake City grows from people who move here, not from tourists who are here a few days a year. This solution doesn't prioritize residents or future residents, just resorts and tourists, who don't love or frequent the canyon like we do.
28249	Eric Cambria	Yes to the Gondola. Put a heavy toll for the canyon vehicles even with the Gondola. Widening roads and busses will have a more negative impact on the environment than a Gondola and it will create jobs. It will need year round operators and maintenance.
28250	Matt Murphy	You are corrupt, a vast majority of the state tax payers do not want this, nor does our elected governor. LISTEN TO US. Do not do this to our canyon. Make the tax payers pay for private businesses to be enriched even more. They don't pay their employees a living wage nor do they intend to do anything to make this gondola a viable option for families. No ski lockers means no one will use this thing. No one is going to carry 4 sets of boots, skis, poles, food, and drink in this stupid gondola. This is a money grab and your government organization is looking more and more like the NYTA asking for \$100+ toll fees to ride something UTAHNS are going to pay billions for. (we all know the budget on this project will be blown up in 6 months.
28251	Scott Wood	Stop this gondola. It will not help those who live and use the canyon. Buses are a much better solution as was stated in the environmental studies and by the resident survey. Not sure why this push for a gondola keeps going.
28252	Ross Bartholomew	No Gondola! A gondola serves relatively few people. Leave the canyon alone.
28253	Martin Gelman	This a tax payers boondoggle to benefit Nierdhauser and ski resorts.. I am an Alta season pass holder and see no need to spend my tax paying money to benefit elitists.. Ski resorts need to build a parking facility so bus riders have better space to change and store their boots and more reserved parking. On weekdays there isn't traffic..Besides with climate change you won't have powder days..
28254	Harold Blum	The natural beauty of Little Cottonwood Canyon is a precious recourse that cannot be replaced. I am horrified that UDOT wants to use tax payer funds to desecrate the canyon by building a gondola. Generations of Utah's will be harmed by building a gondola. There is already a very simple solution to the problem of traffic in the canyon. -Charge a \$20 toll for entering the canyon (or make resorts charge \$20 for parking) -Use the funds from the toll to pay for expanded bus service and building parking structures outside the canyon. I find it ridiculous that UDOT wants to build a monstrosity with my tax payer money, rather than implement the above common sense solution.
28255	Richard Sandberg	NO gondola! I don't want to see the thing when I'm in the canyon.
28256	Laurie Karlik	Why is Dopylmyer, who makes the cabs, the source for what type of bus can make it up and down the canyon? The gondolas in Tahoe are \$60 for a round trip. Even with the price of gas, people will drive or bus rather than pay that price. UDot will need to charge that much just to cover the insurance, and by UDot, I mean me, the tax payer! Take a gondola up, then bus down to a trail?! Does anyone see the lunacy in that?! You spent 36 minutes in the cab plus let's say 5 minutes per side to load and unload for a total of 46 minutes. This time will be repeated for the trip back down so now we are at 1 hr and 32 minutes. Now get into the free shuttle (bus) to ride to a trailhead, let's say 10 minutes of waiting and a 5 minute drive which will occur both directions for a total of 30 minutes. Total now 2 hours and 2 minutes added to your day for your hike. Or you can drive your car to a trailhead from the gondola base, 6-8 minutes. Struggle to park, and walk to trailhead, 15 minutes. Total 46 minutes round trip for the same hike. Hum. Not a hard decision for me as to which use. Sure a vacationer will like it, but not a local! I live on [REDACTED] It takes 14 minutes from our garage to the Snowbird parking lot so I base my data on facts.
28257	Jennifer Coyle	Our home has been in Sandy at [REDACTED] since 1978. As long-time residents, we oppose this proposal of the gondola system.

ID	Full Name	Comment
28258	Garrett English	<p>There are several items about this project, as currently presented by UDOT, that raise concerns about the function and financial viability of this project. As a year-round user of Little Cottonwood Canyon and homeowner in the Salt Lake valley, this project appears to be ill-conceived, exclusionary, aesthetically & ecologically damaging, and one with potential for massive cost overruns.</p> <p>1) The gondola is proposed to have an uphill capacity of 35 persons per car, with a car departing every 2 minutes. This provides an uphill capacity of approx. 1,050 persons / hour. The tram at Snowbird ski resort has an uphill capacity of 1,000 persons / hour. How does UDOT reasonably expect this capacity to serve both Alta and Snowbird ski resorts in an effective manner and capacity? The backlog of uploading and downloading skiers, workers, etc. will be unsustainable based on this simple calculation.</p> <p>2) (Please note mm is used to as shorthand for millions of dollars, ex. \$600,000,000 is represented as \$600mm). At a proposed cost of \$600mm (as estimated by UDOT in 2021) the project seems irresponsibly fiscally, but as a professional in the architecture, engineering, and construction industry I suspect cost estimate is significantly under actual project cost. The approx. 17.5% construction costs increase due to inflation for 2022, estimated by the US Census Bureau, would add approx. \$105mm to this cost, bringing it to \$705mm. Additionally, using a similarly ambitious transit gondola project, Panorama Mont Blanc, as a R.O.M (rough order of magnitude) cost basis of analysis, I argue that this project would cost far more than just the initial estimate plus inflationary increases. Completed in 2015 the Panorama project cost \$138mm for an approx. 2 mile long gondola. The proposed 12 mile Little Cottonwood gondola, at 6x the length, and using a conservative 25% inflation rate since 2015, would theoretically cost \$1,035mm (nearly twice the UDOT estimate). This project however has other unknown cost factors, at twice the length of any currently existing gondola the engineering and construction costs cannot reasonably be based on comparable projects as there is no comparable. I would argue this project is as ambitious as something like the Boston I-95 'big-dig', which had an initial cost estimate of \$2,700mm but an actual cost of \$25,000mm! I don't suggest this will be the cost of this project, but when construction something with no equal for scale the potential for unknowns to significantly increase cost must be accounted for, which I do not believe the UDOT estimate does.</p> <p>3) What is the access plan for construction of the gondola tower foundations? The scarring on the hillside and impact to the creek basin will be irreparable. I would argue that adding to the impact of the existing road with snowsheds, etc is significantly less impactful since this is already an existing engineering scar that could be expanded, not an entirely new impact.</p> <p>4) This project is exclusive to the benefit of the private ski resorts. Backcountry and other trailhead users are excluded and</p>
28259	Leah Smith	No gondola! Make the canyon bus only
28260	Duane Rees	If we don't get any snow or less snow, we won't this expensive and wasteful gondola.
28261	Ed Dukette	<p>Please do NOT build a gondola in LCC.</p> <p>As someone who moved to Utah specifically to live in close proximity to LCC and an avid skier/backcountry skier, I promise that I will sell my home (Sandy resident) and leave the state if the gondola is built.</p> <p>Of the proposed solutions, a gondola is the least convenient and the least beneficial for any recreationist who's not skiing at AltaBird that day.</p> <p>In a Republican-run state, the greatest impression I can leave for decision makers relates to my impact on the economy. With that said, I vow to sell my home and leave the state if a gondola is built in LCC. My spouse and I (30 years old and 6 figure incomes) bought a house in Sandy specifically for close proximity to LCC. Many of our friends within the outdoor recreation community feel just as strongly, though I can only speak for myself and my family. I love LCC, I've experienced many traffic delays/ road closures, and I could not be any more opposed to building a gondola.</p>
28262	Mitzi Fox	Please no gondola!!
28263	Stella Mosher	<p>The gondola is a colossal waste of taxpayer funds that will support a private business and only select members of the Salt Lake and tourism community. This project will not only cost millions of dollars, but will take years, will damage the natural beauty of the canyon and will not serve the interests of others recreating in LCC such as climbers, hikers, snow shoers and bikers. There is no substantial evidence that this project will solve the problem, which is really the bottleneck at the base of Big Cottonwood Canyon and congestion along Wasatch Blvd. Increased bussing from town, reserved parking at the ski areas and seasonal tolls at the mouth of LCC seem like better, first-stage choices. This project feels like institutional corruption seeking to benefit multi-million dollar private industry and shareholders at the expense of Salt Lake residents - maybe of whom value LCC for his natural beauty and close access. Please reconsider your gondola decision to protect the canyon for all those who recreate there for generations to come.</p>
28264	Richard Pimentel	<p>I am writing to oppose the preferred solution of a gondola in Little Cottonwod Canyon. I would to make the following points:</p> <ol style="list-style-type: none"> 1. The aerial tramway has been heavily promoted by Snowbird and Alta because they would be the sole beneficiaries of this \$500 million project. 2. Its rate of moving people is way to slow. It would take 1-2 hours to get all the people up from the parking area. 3. It has only two stops both of which do not support dispersed recreation. 4. The gondola would be of little use when the resorts are closed which is most of the year. 5. The gondola would not operate during storms or when avalanche danger is high. <p>The only reasonable approach to traffic concerns in LLC would a phased approach starting with increased busing, larger parking for bus pickup, and canyon passes to park.</p> <p>The climate is changing rapidly, and skiing in LLC will eventually be unappealing but we will be struck with gondola forever. I am against using taxpayer money to subsidize private businesses.</p>
28265	Ryan Hatch	Not happy! I live down the street from the canyon and traffic is never that bad. Insensitive buses. Make it free to ride and put in a heavy traffic toll booth. It will still cost millions less and minimize damage to the canyon.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28266	Karla Burkhart	I am sad about the decision. It will be a great burden to people who do not ski but love the canyon. To build an eyesore that will be used a short time of the year and cost billions seems unwise.
28267	Jocelyn Cuthbert	<p>I am a resident in Cottonwood heights in between being and little cottonwood canyon off Wasatch blvd, and am incredibly concerned about the construction of a gondola. I bike in the canyons all summer, and ski there all winter, both in big and little cottonwood and in the resorts and backcountry. I have not seen any user group that has any interest in a gondola, beyond the corporations of the ski resorts that stand to profit off of this project. The gondola would take the traffic that works its way up the canyon and re-direct it to my backyard, making it difficult to commute or recreate elsewhere due to the stand still ski traffic. At least if you are headed up the canyon, the impacts of traffic are more limited to those who are recreating or working at alta or snowbird. As the traffic works its way down wasatch, it will be making those neighborhoods unlivable for those of us who still need to drive into work on a powder day or any saturday morning.</p> <p>Based on my own biases, as well as listening to fellow skiers and looking at the comments on any social media post on this topic, I don't understand how the most hated solution seems to be the choice? There is almost no public support for the project, because the people that live near or recreate in LCC care more about keeping what wild places we have access to wild and as pristine as possible than sitting in an extra 30 minutes of traffic on the way to ski.</p> <p>There are much less expensive ways to try to solve this problem that are not permanent eye sores in the canyons year round, and that would not require construction that would destroy so much of the existing canyon. The Wasatch is small, and there is simply no need for a gondola to destroy the pieces of it we have left.</p>
28268	Kenny Schmaizl	Who in their right mind thinks this is a good idea. What a waste of money. One of the main reasons I'm moving . Make Alta/Bird solve the problem they create instead of making more profit of if this stupid gondola. How has it even gone this far. \$750 million for something that is needed 30 days a year and will sit empty and used the other 335. WOW the insanity
28269	Michael Neibaur	<p>I'm fully supportive of the gondola option.</p> <p>I believe it's the best way to get skiers and hikers to and from Alta and Snowbird while reducing traffic congestion and pollution.</p> <p>Thank you.</p>
28270	Gregory Wallace	I support any and all of the proposed options to alleviate congestion in Little Cottonwood Canyon. Furthermore, I propose that expanded bus service with stops at trailheads along the route be included as a vital component of all the proposed options. It is important that all users of LCC, not just ski resort customers, have a safe and affordable way to access the Canyon.
28271	Ted Fridirici	I respectfully submit the following comment. A Gondola is NOT the solution. It will not get enough people up the canyon fast enough. It will be insanely expensive. The environmental and social disruption/impact at both the top and bottom would be HUGE. Instead PLEASE strongly consider more and more frequent bus service using solar charged UDOT electric or otherwise eco-friendly buses especially during ski season but also in the summer. Expand existing park and ride lots and include incentives and dis-incentives for driving up the canyon by yourself. Limited lane widening and some avalanche tunnels/deflection devices would help. Thank you for the opportunity to comment
28272	Dean Ellis	<p>No gondola please. The few times that the canyon has traffic do not warrant the cost and environmental impact of adding a gondola to this small canyon.</p> <p>Only the ski resorts want this so they can make more money while tax payers like me pay the bill for the gondola to nowhere.</p> <p>Please vote no gondola.</p> <p>Thank you</p>
28276	Peter Van Alstyne	I may be mistaken, but it seems, over my 70+ years of observation, that engineering solutions to critical public policy issues tend to obfuscate the "human elements" detrimentally affected by their engineering feasibility and cost-benefit studies. Building a tram up Little Cottonwood Canyon may be quite feasible financially and engineering-wise. But it truly does not establish that it is the right thing to do! A bridge over the Grand canyon can is feasible, and even quite convenient, when traveling to Phoenix from the Wasatch Front. I implore, beg, petition, duplicate, plead and pray you will retract UDOT's ill-conceived notion of supporting a tram. The human cost thereof is gigantic and forever. I sincerely cannot understand how calm, rational and well-meaning thinking can produce such a destructive selection by UDOT. The human cost is beyond measure.
28277	David Black	There needs to be a large parking lot at the base of LCC, with camera's and security. Then regular shuttles up the canyon. Stopping at all the locations people need to stop to ski or climb.
28280	David Blair	I disagree with the gondola proposal. It does not make sense to me to have infrastructure like that tarnish the canyon view, only have 3 points to enter/exit and be infrastructure that remains all year to solve a problem that only exists in winter and mostly on fresh snow days and weekends. I would rather see restriction on cars when needed and supply a solution that is flexible like electric busses. That would also provide options for the many people that are not stopping at the two for-profit ski resorts the gondola will support.
28281	William Bowerbank	I am so not for this gondola. In spite of efforts to provide better alternatives, UDOT ignored them all and didn't allow the citizens to vote. I AM NOT IMPRESSED WITH THE ACTIONS OF UDOT!!!
28282	Emily Tarr	<p>The building of a gondola in Little Cottonwood Canyon is the wrong decision, and I don't believe it will solve the traffic problem in the canyon. The building of the gondola will lead to over-commercialization of LCC, have negative environmental impacts, and just create new traffic congestion further down into the Salt Lake Valley. The gondola project will only serve the interests of corporate Snowbird and Alta, and will fail to serve the public in the way that UDOT says it will. The gondola project will be taxpayer funded, therefore, public opinion should be taken into account. So far, the public's voices have been ignored. It is clear that UDOT seeks to pander to rich corporations rather than serving the public. An expanded ski bus service and more parking at the ski bus stops would better serve those who love to ski in Little Cottonwood Canyon.</p>
28283	Garrick Peters	I disagree with the plan and don't want a gondola in little cottonwood canyon. I use the canyon regularly and have not seen any significant problem that would justify this preposterous idea. I suspect it has something to do with powerful government leaders benefiting their circle of wealth.
28284	Robert Healy	Gondola.....YES-YES-YES.....safer for everyone

Comments on Little Cottonwood Canyon Final EIS

28285	Mary Cox	I do not agree with creating a gondola transportation system in the canyon. It will be available mostly for visitors going skiing in the winter. Global warming is making ski seasons shorter anyway.
28286	Claudia Peason	This atrocious gondola idea supports tow[private businesses at the top of the canyon. It destroys trees, wildlife habitat and cuts into the mountain. and is used primarily about 3 months of peak season of the year. When the canyon is full to capacity of humanity for the day, close it at the mouth of the canyon until there are spaces open for more traffic. Clean bus service and entering via reservation is the solution. We do love our canyons and parks to death....Lets not support their demise.....
28287	Debbie Rohovir	Please don't build the Gondola! Wouldn't it just be easier (and cheaper) to do a reservation system to enter the canyons?(like many of the national parks are doing)? I would much rather do that then disrupt the ecosystem with all of that construction. Also the cost!!!
28288	Erik Galbraith	I do not support the Gondola plan. These canyons are only busy on very select winter days and these gondolas will only benefit the resorts. While the canyons are very busy a few days each winter it is much more important to keep them natural and beautiful rather than stream lines and efficient for resort patronage. I support increased shuttles and buses up the canyon and requiring snow tires as a preferred alternative.
28289	Jon Gubler	Big supporter of this initiative, but parking at the mountain needs to be priced to get as much use out of the system as possible.
28290	Laura Western	This option is going to ruin the beautiful canyon. It doesn't meet the needs of many and most will still prefer to drive. I feel more busses and the parking systems that reserve parking have helped. Please don't ruin our canyon!
28291	Robert Wold	I love the idea but only if there's going to be public transportation options to take to the tram.
28292	Kendall Van Horssen	I am vehemently against building a gondola that only serves two ski companies located at the top of the canyon. This gondola will ruin the unspoiled views of the canyon and will not eliminate the traffic issues in the canyon since it's likely to cost money and time that most people wanting to travel the canyon are unwilling to accept. This entire plan is only going to cater to the rich and those very few that claim they are for this gondola.
28293	Kelly Loosli	As a life long user of the Canyon I am shocked that we will ruin the look and view all to serve a couple of ski resorts. What about all the other people who use and love the canyon. I am sorry but for those 3 to 4 months I am perfectly fine to wait in traffic to get up the mountain if that means the rest of the year we keep the canyon open and free from the visible obstacle of the gondola. From hikers, to climbers, to photographers and the casual day user the pristine nature of the canyon should be preserved. Winter bus use seems like a far better option with similar capacity and way less impact on the canyon itself.
28294	Mary Vaughan	You scamming good old boys are grifting the citizenry and paving paradise. You did not pull a fast one, we all SEE you. Scamming greed driven corrupt liars.
28295	Daniel Peterson	The proposed gondola is not an actual solution to the problem. The only real solution is limiting the number of people (through lottery or some other means) of people actually allowed to enter the canyon during peak times. The current solution is drastically unethical: it will create environmental hazards, and financially benefit the resorts at the cost of the common tax payer. The fact that the board Members of these resorts are also board members of the Gondola Works company is abysmal, this is a major conflict of interest. Building the gondola will only enhance the problems by bringing more and more people to the area, we need to practice restraint and moderation, not excessive expansion. Thank you.
28296	Matt B	The solution to a crowded limited resource is not to spend a bunch of money to make new ways to cram more people in. Taxpayers should not be paying billions to provide expanded access to private ski resorts. These gondolas are not an effective or environmentally friendly solution to overcrowded canyons.
28297	Benjamin Beesley	This gondola program should not be implemented as proposed. The study shows at best this moves 900 people per hour up the canyon and ride times are significant. The proposed gondola only makes 2 stops once at each resort. The gondola will be utilized at best 50 days a year. Flex lanes and Avy sheds which would allow more people up the canyon along with ability to pick more than 2 destinations.
28298	Jon Last	I fully support the initiative to help resolve the current problems associated with vehicle traffic in LCC, by building a gondola. I fully support this solution as the best possible scenario available.
28299	Leslie Ellison	The Gondola Alternative is unnecessary, extremely expensive and unfortunately not the proper solution to the traffic issues in Little Cottonwood Canyon. If the following is initiated over the next couple of years it will be manifest that a more efficient and dramatically less expensive solution will work: 1. Increased bus service to satisfy demand. 2. Intermediate canyon stops (Mouth, Gate Butress, White Pinetrail head.) 3. Widening of road at these stops. Not necessary to widen the current configuration. 4. Transit center with extensive parking. 5. Special canyon pass for a reasonable fee or free with pass. Relatively simple and cost effective Respectfully, Leslie Ellison

ID	Full Name	Comment
28300	Carolyn Clark	<p>Gondola Comment 2022 0809</p> <p>UDOT has chosen Alternative B Gondola as your preferred transportation alternative. I urge you to reconsider this choice.</p> <p>Reasons to Gondola is a bad choice:</p> <ol style="list-style-type: none"> 1. The Gondola would be prohibitively expensive. It is imprudent to waste so much money on an unnecessary solution, especially when the future of the ski industry is in question, due to climate change. 2. The Gondola is ugly. Why ruin the beauty of our scenic Wasatch Mountains? This is way more infrastructure than needed in our cute little mountain range. This unaesthetic view will detract from the very beauty that draws us to the mountains. 3. The Gondola wouldn't really solve the transportation problem. Cars and buses will still be required. <ol style="list-style-type: none"> a. It only serves one of the Canyons. b. It doesn't serve stops that are in-between the main gondola stops. 4. The Gondola wouldn't allow flexibility in case of changing conditions. 5. The Gondola is a rich-people's toy. It wouldn't help improve equal access to folks of all income levels in the canyons. <p>Reasons why bus service remains the better choice:</p> <ol style="list-style-type: none"> 1. Cost-benefit ratio!!! Buses provide much greater value to us all, in return for amount of money that would need to be spent. 2. Buses would leave less visual impact. (TV ads are misleading when they show gondolas, snow & mtns, with NO ROADS. Because there would still need to be roads, cars, and buses, even if gondolas were to be built.) 3. Buses can serve both canyons. They can stop at alternative locations. They can originate in various locations across the SL Valley, to reduce the need for huge parking areas near the mouth of the canyons. 4. Buses are flexible to meet increased or reduced demand, or changing weather, or changing location needs. In case of another pandemic, buses can be set up to allow just one person per seat, etc. 5. Buses are more affordable for all. <p>Proof that buses can work:</p> <ol style="list-style-type: none"> 1. Car traffic has already decreased due to parking reservation systems, without decreasing access for skiers. 2. Programs such as Backcountry Alliance shuttles have already been very successful. 3. Tolling is a popular choice, but hasn't even been tried yet.
29143	Galen Schuck	No gondola.
28999	Galen Schuck	<p>We want year round transportation options for our canyons. Do not let the shortsighted greed of the resorts talk the taxpayers into building them a gondola.</p> <p>Start with a few electric busses and a widening of the road where feasible or just run busses every 10 minutes during the ski seasons rush hours.</p> <p>No ugly cable towers and lines in our tiny canyon.</p> <p>Galen Schuck Sandy, UT</p>
28301	Delaney Carkhuff	This will not be a wise addition. It will be counterproductive in the long run. Let's save the planet in a different way!!:)
28302	Dan Corbett	The gondola, although expensive, is the right choice. For a successful example, look at the free public gondola that connects mountain village to the town of Telluride. It is one of the cleanest and most efficient ways to move people between two places. Not to mention that visitors and community members love it. The ride itself is a popular activity, but it is the ease of use that sets it apart.
28303	Abigail Taylor	Why should billion dollar businesses continue to get taxpayer money to fund their business ventures? If Snowbird wants a Gondola, and UDOT sees this as a solution, then Snowbird and other stakeholders should be paying for 100% of the gondola. This is neither a short, or long term solution in regards to traffic in the canyon. Implement bases, carpool only, have a toll booth at the entrance that is manned from 6am to 6pm. There are so many things we could do to protect this canyon, but clearly UDOT and the ski resorts care more about dollars than the public or environment.
28304	Andrew Koehler	I am very much against the Gondola for little cottonwood canyon because I don't think it will solve any of the problems that it supposedly will solve. I also think that it is a RIFE opportunity for corruption and theft from the people who would have to pay the bill.
28305	Jessica Kemper	<p>I am against the gondola. I think it's really heartbreaking that anyone could think this is a solution to the congestion problems in little cottonwood canyon. We need a solution that will help traffic, be accessible to all, and serve the largest majority of people, and makes the smallest environmental impact. The gondola does NOT do any of those with only servicing two large for profit ski businesses. I would suggest at least trying a year-round bus system before jumping into a half a billion dollar construction project that tax payers fund. It's unfair that tax payers should shoulder this when it will mostly be used by wealthy skiers and tourists.</p> <p>None of this even mentions the toll this gondola takes on the beauty and serenity of the canyon. Nobody wants to see a gondola when they are trying to enjoy the outdoors.</p> <p>PLEASE do not install a gondola in little cottonwood canyon.</p>
28306	Mark Gassinger	Putting over 200 foot towers in lcc and ruining the majesty of this canyon forever over traffic is ludicrous it only stops two places and will cost to ride it, how about we spend the half billion dollars on fixing Slc street's

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28307	Charles Johnson	I'd like to see a formal review of the effects of the initial phases of increased bus service and traffic restrictions before advancing to gondola construction. Congestion metering and bus service allow for much greater flexibility in response to changing demand and conditions as the effects of climate change become clearer in the canyon. A massive capital project with a 40+ year lifespan will need relatively stable or at least predictable conditions over its term in order to assure good returns.
29000	Lynn Whittaker	Please reconsider the decision to go with a gondola. This is not the best option for citizens or the environment. Go with electric or hydrogen fuel busses.
28308	Stephen Leeflang	I live close to LC canyon, am a regular and year round user of LC for skiing, fishing, Hiking. I am opposed to the gondola and opposed to road widening but would gladly use improved bussing service if adequate parking existed at or somewhere near the bottom of the canyon. My resistance is based on my experience that winter gridlock can be a challenge but is exaggerated, the canyon is already full, I don't want to see the towers, and I don't want the damage to the canyon that comes with widening. I don't want to see Alta and Snowbird grow to their limits a la Park City and I think its odd that in such an important watershed where dogs and water ingress are not allowed we see no problem with adding thousands more people. I am fine with a toll
28309	Patricia Casper	I am really frustrated that you want to spend so much taxpayer dollars on a gondola when we have so many other infrastructure issues in Utah that would benefit all the people of this State, rather than two ski resorts. I live right off Wasatch between Big and Little Cottonwood Canyons and I don't see all the traffic that would warrant widening the road, not to mention damaging Little Cottonwood Canyon with 22 towers and what it would do to the beauty of the canyon, not to mention the wildlife. Please reconsider alternatives such as better bus service. Thank you.
28310	Brian Summers	Enhanced bus in phased approach implementation should be done just like was planned in enhanced bus service without the roadway widening so that we can be more effective faster. We may find that we may not even need the gondola if it is done right!
28311	Jana Gold	No tax payer dollars should fund the Gondola. Increased winter bus service, should be paid directly by winter consumers, with no increase in summer service to resorts.
29002	Janice Kanaley	I am a concerned Sandy resident. I am highly opposed to the installation of Gondolas in Little Cottonwood Canyon. We spend a lot of time hiking,biking and skiing in this canyon. I can't imagine having those "eye sore" towers in the beautiful mountain landscape with Gonodolas of riders going overhead. What a sad state of affairs we are in if we allow this to happen. We go to these mountains to escape signs of encroachment. With the addition of these gondolas upon our beautiful backdrop of mountains, the mountain landscape will never be the same. Soo sad. Please add my name to the "NAys" against Godolas. Janice Kanaley
28312	Adam Loomis	Dear UDOT, Thank for opening another comment period. I am happy to see that the first part of the plan focuses on enhanced bus service. I believe that this is part of the most responsible plan for traffic in Little Cottonwood Canyon. I also stand firmly against the proposed gondola. Like so many others, I utilize the canyon for a variety of recreation: hiking, backcountry skiing, climbing and more. Resort skiing is a very small part of my time in the canyon, and I rarely need to get to the top of it. I do not think that a plan that only goes to the resorts is the best solution. Bus service with stops along the way at key recreation sites is my preferred option. Thank you, -Adam
28313	Matthew Corapi	This is such a bad idea, ruins the most beautiful canyon in the Wasatch for a few days a year when we get powder. The problem can be solved my limiting the number of people that can go up the canyon, not unlimited people riding in a gondola.
28314	Joni Dykstra	I'm disappointed with the gondola choice. By the time it gets underway (if it's funded...) many of us will no longer be skiing. Let's get to work on the problem NOW and get some real solutions instead on something that will take decades.
28315	Mitchell Potter	This preferred alternative is deeply disappointing. It not only is wildly unpopular with the majority of the population in Salt Lake, it is also completely misrepresented as cheaper than it really is going to be. There is no way that this project will provide any real solutions other than hampering traffic at the mouth of Little Cottonwood Canyon. I cannot, in good faith, trust the judgement on the decision makers of this project when there is so much going against the idea of implementing a structure that serves nothing more than an amusement ride for tourists. Deeply dissappointed, Mitch Potter
28316	Mark Bosworth	I am against my tax dollars for a gondola that benefits the owners of two ski resorts and still costs me more to use than carpooling with friends and will make already too long lift lines even longer.
28317	Scott Woller	The gondola is best. Building snow sheds or buying more buses is wasteful. Press the gondola builders to make units that hold 70 instead of 35 to optimize efficiency and comfort--they can do it!
28318	Eric Bogin	YES! Gondola is the only relatable answer. Thank you for making the right choice and not submitting to political pressure.
28319	Adam Diamond	I support the gondola option A from the mouth of LCC, with buses feeding the terminal. I suggest the first item to put in are the snow sheds. I also suggest a terminal at White Pine. Mountain bikes need to be allowed. Needs to operate 365 days a year.
28320	Tenzin Youngtok	Looking forward to a gondola up little cottonwood. Hope to see it sooner then later.
28321	Larry Hardebeck	The gondola is a poor plan as it is very limited to only two ski resorts. the plan for expanded bus service allows for much more flexibility and access to many other places in the canyon. Limiting the amount of skiers on the weekends, holidays, etc. would also achieve the goal of limiting traffic.

28322	Ben Thorn	It would seem that the powers that be want the gondola in spite of little to no support from the public. Just because you can force this down our throats does not mean you should. This is a bad idea, the safety and dependability of a gondola are greatly exaggerated. Please listen to the people of Utah, Sandy, and Cottonwood Heights, this is not something anyone wants. There are solutions that are free to the tax payers of this State that have not been tried.
28323	Rob Beers	No gondola possibly the worst solution available
28324	Fred Ash	<p>If I were part of the government entity assigned to make the decision, what would I have to do? First I would need to identify the scope of the problem. Then I would need to find out what people on all sides of the issue have been proposing to solve the problem. And then I would have to make a decision.</p> <p>So the first thing I did was take my wife on a drive up the beautiful Little Cottonwood Canyon, on a cloudy Friday afternoon. We were amazed at how many cars were parked along side the road wherever there was room to park, and in the several small parking areas, cars obviously belonging to hikers and fishermen. At the top of the canyon there was little available parking near the ski resorts. One could only imagine what it would be like on the weekends, especially in the snow season.</p> <p>Then I started research on the traffic problem in the canyon. I learned that year-round, Little Cottonwood Canyon visitors enjoy unparalleled access to some of Utah's greatest outdoor attractions, including hiking, climbing, skiing, snowboarding and more. Little Cottonwood Canyon alone sees "1.2 million vehicle trips into the canyon per year. Up to 7,000 vehicles (cars, trucks and buses) go up and down Little Cottonwood Canyon per day on the busy days in the winter.</p> <p>Another very important thing I learned was that skiing accounts for only about half of the canyon usage. Hikers, fishermen, and tourists account for the rest, and from what my wife and I saw, there is not room for many more parking places along the road. It is good that UDOT favored the Gondola option over the option of expanding the highway, which would have eliminated much, if not most, of the parking for hikers and fishermen.</p> <p>But the gondola plan includes drop-off stations only at Alta and Snowbird. So, while I feel it is the better option of the two options, it is clear that it mostly benefits workers, skiers, and visitors to the resorts. It would definitely improve traffic on the highway, with the fewest impacts and disruptions, and the ride could become an attraction in its own right, as one person noted.</p> <p>The Gondola plan is clearly an off-shoot of the problems brought into our state by those who have been doing everything they can to increase our population with financial incentives, promises of access to our beautiful canyons, quality education, etc. It is too bad those newcomers didn't check the facts before signing in.</p> <p>I like to follow the money. It is clear that no hikers or fishermen are about to get rich in this plan. But there is a coalition of individuals, stakeholders from the ski industry, public relations firms, and real estate firms that stand to make a ton of money.</p> <p>There are some questions that should be answered: Who will pay the bill? Whether the funding will come from state, federal or a private entity is unclear at this point, UDOT says. Funding from the State will require approval from the Utah Legislature. Now that UDOT has announced its choice to be the Gondola option, as the two private owned ski resorts at the top of the canyon are the only ones to be served by the gondola, shouldn't those two ski resorts be covering most of the cost? Is it wise to use over half a billion State or Federal dollars for such a project when that money could be better spent for public education and or other public needs? Is it a good idea to use State dollars to cover the cost of a project clearly geared to benefit two specific private owned ski resorts?</p>
28325	Patricia Schreiber	Please do NOT build this monster of a gondola. Please, Please, Please DO NOT BUILD!!!
28326	John Annunziata	I support the gondola proposal
28328	Roland Gilmore	extremely unrealistic that you think me and my 4 year old can take a bus to the gondola with all of our equipment, extra clothes and food for a few hours of skiing. where would the thousands of people store shoes, food, extra clothes etc when they get there. honestly if you have kids or ski you can see how unrealistic this is.
28327	Jeffrey Delong	I am not in favor of the Gondola. It is an expensive solution to a manageable problem, which if implemented would take away from other needed infrastructure projects. I am in favor of a combination of metering, paid / reserved parking at the resorts, earlier snow removal, and better enforcement 4WD / AWD with 3 Peaks tires on snow days.
28329	Chad Van Ginkel	I am not in support of the gondola. It is a permanent, expensive solution that serves only a small portion of LCC utilizers and does not address all of the winter recreationalists, such as backcountry skiers. This will become eyesore in one of the most beautiful canyons the country. We need to at least explore all bus options before we permanently alter the landscape.
28330	Molly Mcfadden	Whatever alternative is enacted will need more parking at the base of the canyon. Why not experiment with enhanced bus service with more convenient parking before embarking on the very expensive gondola plan?
28331	Jeffrey Clarke	I know that there is plenty of controversy. But I fully support the gondola b proposal
28333	Adam Figuracion	Little Cottonwood Gondola benefits a relatively small group of canyon users for the winter season. It does not make sense to destroy the landscape and the climbing boulders in order to only service two ski resorts. There are many people who want to utilize the canyon at backcountry skiing spots. If you put in the gondola, then you have to create more infrastructure to accommodate the traffic to the gondola. I think adding more busses, restricting car access, potentially limiting the amount of skiers per day at the ski resorts, and widening the roads for busses is a better option.
28332	Todd Green	<p>This proposal costs hundreds of millions of dollars and has millions of dollars of annual maintenance, yet only serves private business and only for a very short period of time out of the year. Yet it negatively impacts others who use the canyon. Furthermore aren't the ski slopes crowded as it is on peak days?</p> <p>How is getting more people into an overused resource a good thing? I'm strongly against this proposal in either widening the road or adding gondolas.</p>
28335	Hermann Ramcke	I am in favor of the gondola.
28334	Rudy Baron	Love the gondola!!
28336	Derek Johnson	I'm glad to see the Gondola, I used the Gondola at Heavenly Ski Resort many times! From the parking garage near the shores of South Lake Tahoe, up to Tamarack lodge. Worked great. I'd trust dropping my kids off at the parking structure to take the gondola up to the resorts. I prefer that much over the smelly noisy, slow diesel (or even electric) buses! That just creates more congestion on the roads! I don't really see what the comments are about this time. One issue I see is that the skiers coming down from Alta may never get a ride on the tram, as they will probably be full before getting there. or vice versa if starting at Alta, those at Snowbird might not get on. I hope that is somehow taken into account by the gondola! This would be the same problem as with a bus!

ID	Full Name	Comment
28337	Aaron Cook	Please no gondola!! This will RUIN the beauty of Little Cottonwood Canyon it and will never be the same. It is asinine that we would spend 1/2 billion of tax dollars to support two businesses Alta and Snowbird. What a bunch of corporate welfare out of our pockets!
28338	Kevin Buckingham	Trailhead access is my primary issue. Please improve parking or provide transit which connects all trailheads.
28340	Ron Martin	I have lived in Salt Lake my whole life I don't like the idea of of a gondola in this canyon leave it the way it is maybe more buses let people drive up and down the canyon first come first served check tires at the base of the canyon also 4 wheel drive or chains in bad conditions most people don't want a gondola ?????
28339	Yvonne Maros	NO Gondola!! This is the most expensive alternative, is the worst looking alternative, and you don't have the funds for it so the taxpayers get to foot the bill!?! Make Snowbird and Alta pay for 100% of it and then maybe locals will agree to do it. Until then, NO GONDOLA!!!
28341	Diane Schnarr	I don't think Wasatch needs to be 4 lanes unless the gondola goes forward. It would be a terrible waste of taxpayer money. Do not widen wasatch to 4 or more lanes until after funding is approved (which I don't believe it should be).
28342	Julie Jones	The preferred alternative I would like to see is to have a bus system during the winter ski season that would come every 3-4 minutes. This would encourage people to take public transit by eliminating the need to plan or wait a long time for the bus to arrive. Because this would increase bus traffic in the canyons I would also limit the number of cars allowed to drive in the canyon with a toll both system that would count the cars and have a gate for when the limit is reached.
28343	Karla Rogers	Very well thought out, fair and logical answer to a situation with a much needed response.
28344	Elizabeth Murray	I am not in favor of a gondola in LCC, it would be a detriment to the environment, the view, and everything locals like about LCC. i don't believe it would help the traffic situation, as it would be rendered unusable for many days of poor weather.
28345	Ellie Cutting	Please find a less intrusive alternative to the gondola in Little Cottonwood Canyon. Please consider all other options first, like better public transportation (that actually ends up in residential areas), or any other solutions that can be easily changed. This is much too permanent, especially if it doesn't work as planned and we end up with a huge eyesore.
28346	Bradley Saiki	this should never happen, please do not do this ever.
28347	Frank Whitby	Gondola is a BIG scam and a BIG mistake driven by nepotism and political favoritism to interest construction and political parties who stand to make money by pushing the deal through. STOP the Gondola!!!
28348	Nickolai Borba	No gondola. I don't want to see it in the beautiful canyon or pay for it. It will never make money, be ugly and a massive expense for a small problem. No hiking access. The developers purchased the land already. Feels like a sham fir the tax payers. No no no gondola.
28349	Rick Service	Hi I strongly want the Plan B. The gondola.
28350	David Swanwick	The Gondola is a terrible idea. This will NOT solve the problem with only 1900 parking spots and massive cost. Let's make a dedicated bus lane and when the busses get to the slopes first, people will opt for that as the fastest way up the mtn. It is completely unfair to say that people don't use the busses now, there is no incentive to. Humans are incentive based creatures and skiers are incentivized mostly by getting to the mtn first. We are talking about 19 days a year, when a solution is needed and a dedicated bus lane with additional busses solves the issue. The gondola moving the 1900 vehicles worth of people does nothing more than line the pockets of the select few developers who are actively pushing this effort.
28351	Ryan Snow	The gondola solution doesn't really address the main issue of congestion. All the gondola does is move the congestion from I-215 to the base of the mountain. The parking garage will not accommodate sufficient patrons. Instead of spending 2 hours driving through the canyon you will now spend 2 hours getting to the gondola base. The team has failed to provide a solution that considers transporting the volume of people visiting the canyon from all over the the valley. Only the LRT/Cog rail solution utilized the entire mass transit network in the valley. The proposed solution will be burden the tax payers but not improve the congestion. Ultimately only benefiting the provider.
28352	Ethan Robb	No gondola. I do not need my tax dollars to pay for two private resorts that limit public land access.
28353	Michelle Bushnell	I am sad to see that the views of the people are not being heard in this decision making. I think it has been extremely obvious that locals and residents that will be affected by the construction of the gondola are NOT in favor of a gondola being built. It will only increase traffic near the gondola station, complicating the lives of locals who aren't able to commute to and from their houses during ski traffic times. I believe that enhanced bus service is the only way to go. I believe that cars without proper snow tires should not be allowed to travel the canyon at any time during the winter season to prevent accidents and backups on the road. I am not in favor of tolling, but if that is necessary to ease traffic it would be far better than damaging the beautiful views of Little Cottonwood canyon by installing gondola stations all the way up the canyon. I am not in favor of tolling because I think it prevents lower income residents from enjoying our beautiful mountains. Everyone contributes through their taxes, everyone should be able to go. Please reconsider the gondola. Listen to the taxpayers who are going to end up paying millions instead of the resorts and ski industry professionals who only stand to benefit. I firmly believe if the ski industry really wants the gondola then they should be the ones paying for it, not the taxpayers.
28354	Jennifer Bagby	How does this gondola help any other parts of the canyon besides the ski resorts? What about hikers, back country skiers and others that could be aided by the bus lane system. As a tax payer I do not believe this gondola is a good idea for the ENTIRE canyon. I'm a skier, but I'm also a hiker and snowshoer and this gondola doesn't help me do anything that isn't at the ski resort. Also how will a gondola grow with the population like a dedicated bus lane can? Please do the dedicated bus lane. I'd really like to see the public opinion that was so in favor of this gondola because everyone I talked to is NOT.
28355	Noah Flint	The gondola is a terrible idea that will no mitigate the issue. It doesn't have the capacity or the parking area necessary to make a significant impact. Toll the road to single cars and make the busses easier to use and have priority.

28356	John Schuhmacher	Please stop this insanity. Skiing in this canyon since 1970. This will destroy winter skiing. It's all about money and destroying the environment.
28357	Loretta Markham	The alternatives analysis did not adequately analyze a bus only option that considers various funding and operational scenarios. Although bus only at this point would require funding, operational scenarios that do not appear feasible by current decision makers- the reality of this technology and the political horizon of decision makers is rapidly changing. Increased bus service phasing to automated bus technology + constraints with signal occupancy vehicle could better solve the problem with less impacts than the gondola. The gondola - including long term maintenance and required access to the gondola is a larger footprint than evaluated. The decision of the gondola - even as a phased option is a gross statement by our state to cater to several private entities that will have financial gain in the short term on a lasting impact to this canyon and the community. What a shame. What a gross misuse of the regulatory process.
28358	Mitch Johanson	I'm going to keep this civil so it's not deleted. UDOT and the crooks that thinks this is ok on my dime while destroying the canyon for the all mighty buck should be ashamed of themselves just pathetic greedy fools!! I'm a 4th generation that's lived here there whole lives and watched get just destroyed so I'm retiring soon and leaving this hell hole
28359	Marsha Olsen	I do not support a gondola as a fix for traffic up to the ski resorts. It is an unfavorable solution. Supporters of this method need to be honest and let the public know how much it will cost them per ride. It would put the cost to ski out of reach for many. A better solution is to put the money toward electric buses. I live [redacted] on Wasatch Blvd [redacted] and the ski buses are packed to the max with skiers, especially on weekends. The ad favoring the gondola option that indicates no one rides the buses is a lie.
29003	Dewayne Pond	put in an electric train up the canyon then tunnel through mountain to park city and to brighton
28360	Robert Gorham	\$550 million is ridiculous expense for an amusement park eye sore. Any person who has used Tesla's self driving AI knows that full autonomous driving will be available to the general public within a year or two. A fleet of BEV busses would be a fraction of the cost of this fat cat pocket padding fiasco. A BEV bus fleet could be easily retrofitted for autonomous driving hardware when available and could move the same number of people up the canyon. UDOT should instead allocate these 500 million dollars for reusable, sustainable, and future forward transportation solutions that can be strategically deployed state wide.
28361	Benjamin Reece	I am an owner of two properties in Cottonwood Height. I am a supporter of the Gondola and think that will become a 100 year investment in our mountains in a financial and environmentally positive way.
28362	Cynthia G. Dechart	A cog railway would less unsightly for the neighbors, would be cheaper to ride,, would hold more people---Cynthia Dechart
28363	Kris Crockett	Please no! This only serves the resorts and drives them to make more money. This has be benefit to residents of sandy or anyone looking to utilize anything in LC canyon besides the resorts. This will turn into a tourist trap and nuisance and an eye sore for all Utah natives.
28364	Eva Gisseman	I've had a time share in snowbird for 50 years. I love the Gondola idea. Pleasing earth tone collars on the cars and aesthetically they will be great!!!! Good job guys!
28365	Skylar Baird	With the number of out of state residents riding the gondola ? \$10/ person you should be able to offset the cost of the gondolas operation and not charge locals or at least not charge residents of Brighton or cottonwood heights.
28366	Ken Stern	How can an alternative be selected WITHOUT FUNDING. That's ludicrous. My suggestions: Expand bus service Have buses stop at the trailheads (important for summer) Have a limited number of paid day passes to use the road in winter. That will force bus usage. Those alternatives have funding now
28367	Susan Grant	I support the gondola plan!
28368	Karl Bahr	I think the gondola is a wonderful idea! I'm looking forward to riding it in the summer & seeing some gorgeous views of the canyon! I'm glad this proposal was accepted, because more busses & wider roads are idiotic ideas. This is the only plan that will actually take traffic off the canyon road. Plus if there's an avalanche, people will still be able to get down the canyon & home. The gondola is definitely the best way to go.
28369	Ellie Mitchell	The gondola will ruin the wildlife that Utah has to offer. I know that it will bring more tourists/money But, in the long run, this will run down our wildlife and less people will ride the gondola which in turn makes less money
28370	Alyssa Warner	I am very against the gondola. And very for an expanded road and a bus/shuttle system. Even better would be a dedicated lane for the bus and for the busses to be electric. This would preserve the canyon better than a gondola. The gondola would displace wildlife and create a bigger human footprint with not only the tall towers, cables, but with maintenance roads and access points. The bus also makes the canyon more accessible for all, which is what this whole thing is about. Allegedly. Those who cannot drive for whatever reason would be able to enjoy the canyon. A bus system is a tried and true, financially sound system. A gondola built to the proposed specifications is untested, and sounds like the pet project of a rich person who is well connected with the Utah legislature. If a bus system is good enough for Zion National Park, it should be more than good for us and our canyon.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28371	Adrienne Aldous	A majority of residents do NOT want this gondola. I do not think this is a solution to our problem. As a resident of BCC, the traffic and parking issues are growing rapidly. This will benefit the ski industry only. Shows you who has the voice. Having lived I. Europe for many years, a cable car or train would benefit the entire stretch of the canyon, not just the resorts. And the fee station in BCC several days a year is an insult to our grave problems. Please to not put in a gondola.
28372	Doug Friend	How would this affect skiers arriving from the airport with all their luggage and need to be dropped off at a specific address? I do love the idea of the gondola, seems like a lot of wasted gas with all those cars going up the hill. The frequency of arrivals seems excessive at every 2 minutes, need that in the am and at closing but seems like when things slow down could take some cars off. will there be an attendant on board or will they be monitored with cameras?
28373	Kerry Lehtinen	Let the resorts like Snowbird and Alta pay for the [REDACTED] thing. It will still ruin our canyon.
28374	Jeff Buege	In January of 2020, I visited Salt Lake City for the first time. I was blown away by the Wasatch Front, especially how the sunsets light up the mountain side. I drove through Little Cottonwood Canyon and couldn't believe the beauty I saw. The incredible scenery of places like Little Cottonwood Canyon is what drew me to move to Salt Lake City. The beauty and multitude of outdoor recreation make that canyon a place we need to preserve, not mar with a shortsighted gondola project. Enhance the bus system and incentivize carpooling. The gondola benefits the ski resorts, but they will bear none of the costs. This project will destroy the beauty of the canyon and not fundamentally solve the problem it claims to fix. Don't build the gondola.
28375	Teri Klug	I firmly believe the gondola is the best solution for the least environmental impact over time and being able to load and unload the canyon effectively. Reducing the impact of so many cars and parking, and all the mess that occurs on a big powder day. Besides it allows for a wonderful summertime and wintertime solution for visitors around the world to get a birds eye view of our amazing canyons! It will activate the La Caille property and bring it back to a well utilized apres ski amenity as well.
28376	David Mastroianni	NO! Prefer other solution...more buses, incentives to use bus or carpool
28377	Martha Scott	I'm not in favor of a gondola. I don't see how the traffic getting to the canyon will be any better. There will just be chaos getting to the parking. Where are rider's supposed to store/change into ski gear? If Alta and Snowbird are on board why aren't they paying for this? I haven't heard anything about the cost to ride the gondola. This is a bad idea!
28378	Meredith Spackman	Don't let the phone number confuse you, I'm from Utah. You know [REDACTED] well no one wants that [REDACTED] gondola.
28379	Steven Mills	No gondola. I would not want it going over houses and the parking lot would take up to much space. There is a better option to be found.
28380	Sid Tanner	Gondola! Please. Thank you
28381	John Carlson	This is the best alternative for traffic up the canyon. People mover, sightseer, a cheaper way of goods and services up and down the canyon.
28382	Mitchell Brower	You guys really need to reconsider this gondola nonsense. Haven't seen any evidence that anyone wants it. 100% opposed to constructing a gondola. Snowbird and Alta have no problem getting over capacity. There is no room for more people up there. Be real and release the previous comments.
28383	Molly Swonger	I agree with the expansion of bus service. I am still highly concerned about the Gondola. I am not sure where we will get the cost to build it or continue to operate it. I worry we will get partially through building and not be able to finish. This would completely destroy the landscape with no benefit. Also the Gondola does not completely solve the avalanche concerns.
28384	Dennis Weaver	This is not an easy process to satisfy everyone. As far as it goes I am in favor of the gondola, but.....where are you going to park everyone? Even if you used buses you would need to park the cars. I can only imagine miles long lines coming from both directions in order to park and then walk with gear to gondola. I hope you are figuring it all out.
28385	Barb Hansen	This Gondola plan is so short sighted. And it is clearly a plan to put millions of dollars in the land owner where the current base & parking are planned. UDOT needs to look at more ideas than the plan the landowners have come up with an presented to UDOT. As a taxpayer I do not want my taxes spent on a project to make a business/land owner rich off land they can't use right now. Moving the congestion a block out of the canyon is ridiculous. Unless the parking and riding the gondola are free skiers will not use it, choosing to drive to the resort and PAY to park up there. Employees, campers, hikers, CC skier, tourists, cabin & condo owners, bus, delivery vehicles ALL still all NEED to drive because the gondola goes straight to the resorts. The idea of having the gondola base parking only puts money in the land owners pocket by creating a business center for them, creates an unaddressed need for an intersection for the traffic the parking cause & only blocks from the mouth of the canyon. A longer term solution would pull the base Out of the canyons, and Closer to bus routes, Perhaps a structure where there is already parking at the mouth of Big Cottonwood canyon, OR parking and a base where the gravel pit is now. This 1, moves the congestion out of the canyon and 2. Allows space for the gondola which is still a stupid idea, 3, and if Big cottonwood canyon ever needs a solution this structure is in place. OUR CANYONS ARE FOR EVERYONE AND THEY SHOULD STAY THAT WAY!! And they are bEAUTIFUL & they should stay that way too. A gondola the length of the canyon ruins the beauty of the whole canyon.

ID	Full Name	Comment
28386	Oskar Bates	These plans simply make it clear that your government doesn't believe in, or refuses to make any changes in the face of, the climate crisis in which we find ourselves. These discussions of pursuing the skiing industry into exponential futures are ridiculous in the context of the future as it stands. We could change things but only if we invest our energy in concepts that change how we relate to nature. I would love to know where you are going to build this 2500 car lot, it is going to destroy the existing forest and hills at the mouth of the canyon. Everyone will still be waiting in line, I don't see how waiting at the bottom will make people happier than waiting on the canyon road. Cringe.
28387	Cindy Pixley	Double Decker busses. Don't put in gondolas, It will make the canyon ugly. AND RAISE TAXES GOR EVERY WITH NO PAYOFF DATE. UTAH CANT AFFORD IT.
28388	Nick Fontaine	Little Cottonwood was the place where I found myself. The canyon was where I learned to climb and discover myself and my character. Part of the power of Little Cottonwood Canyon is its beauty. Pushing myself in such a landscape has always been a privilege and now under attack by the possible construction of a gondola. For more than 75% of the year there is no problems with traffic. The other 25% of the time there are so much effective and financially reasonable means of transportation. Placing a metal monstrosity in the middle of the canyon only serves the extremely wealthy tourists who use are canyons but give nothing to our community in return. The tram is merely a spectacle for the consumer, but parts ways with who we are as the citizens of Salt Lake City and our spiritual connection with the local environment as it is, undisturbed by the gross construction of man.
28389	Robert Petersen	I'm glad to see that the gondola is moving forward. That is in my opinion the best long range solution. I worked the Sheriffs Office canyon patrol for 14 years and saw firsthand how dangerous the roads can become in the winter.
28390	Blair Porter	Please do not make tax payers pay for this gondola. I only use this canyon in the summer to hike and it is so absurd that a privileged few, in the greater scheme of things, use this canyon in the winter and we all have to pay for it. How is this fair or equitable?! Also ruining the gorgeous views of this canyon with an eye sore of this nature is just heart breaking. Absolutely crushing that Utah is choosing this route
28391	Ryan Brinton	Gondola!! I hate driving up and down that road during ski season. Being on the gondola just sounds way more pleasant than a bus haha
28392	Benan Zahawi	UDOT's argument for a gondola is not strong nor is it convincing. People can be educated to be more responsible in using transportation if they want to go to the resorts . Natural beauty seems to be put on the back burner . Once the gondola towers go up , the canyons we know will no longer exist and it is an irreversible process. If UDOT and all other stake holders truly want to preserve the beauty of Utah's landscape, the best thing to do is take a step back and rethink this decision. Our future generations deserve this and they deserve to see the beauty we currently enjoy
28393	Kathryn Torello	I DO NOT SUPPORT THE gondola. I live in Sandy & have skied LCC for 25 years. I support improvement to busses.
28394	Elizabeth Finke	I am against the gondola for sooo many reasons!! This is just making a few people very rich and only supporting Alta and snowbird! Utahns love their cars so most are still going to drive up there in the winter. In the summer it will not stop at any popular hiking/climbing trails. It will ruin some popular hiking trails and disrupt the wildlife in those areas! We do not want to see huge towers going up our beautiful canyon and have it under construction for years and as a Sandy taxpayer I don't want to pay for it! This will not fix the problem! The parking/carpooling that the resorts implemented are helping. I think we need to start with smaller ideas like these before we jump to a 500 million dollar mistake! We certainly don't want to add a Disneyland attraction just to move lots more up our canyon, we need less people going up there to preserve our beautiful canyon. Bottom line...Utahns love their cars and this is way too expensive and not the answer!! We need to try other things first!!! Please listen and do not let this go through!,
28395	Mike Kaserman	The proposal to build a gondola from the base to the top of LCC is proposing that we all subsidize the Snowbird and Alta ski areas. It'd be a windfall for them, and an expensive insult for the rest of us. Yes, it would decrease traffic in the canyon - by the number of people going to those resorts. In the summer, how much of the canyon traffic is heading there? Most of us are heading for areas lower in the canyons, for the fantastic hiking and climbing. Even in the winter, many of your voters are going backcountry skiing, or ice climbing, or hiking. The gondola would mainly serve out of town visitors going to ski Snowbird or Alta. At your voters' expense.
28396	Linda Shon	I applaud your Gondola B choice. It is the clean, green and dependable solution to the canyon's congestion. Although many of us may nostalgically yearn for the Little Cottonwood of the 80s, that is impossible. This option is an elegant way to utilize as well as preserve our beautiful canyon for generations to come.
28397	Marvin Jensen	Great idea! I love the gondola plan! Don't let the haters discourage this plan.
28398	Frederick Johnson	I'm generally supportive of the preferred alternative but I'm concerned that the total hourly capacity is insufficient unless Alta and Snowbird agree to limit skier numbers on their slopes per day as other major resorts are now doing. Also, I'm not sure that spending half a billion \$ to benefit mostly two ski businesses is a wise use of tax dollars if those two resorts are not contributing substantially to paying for the project. It's good the gondola will reduce the pollution caused by increased vehicle traffic up LLC. As part of this transportation project, why not include electric vehicle charging stations in the new parking lots and gradually increase the preference for electric vehicles? As EV's increase in market share and auto manufacturers phase out internal combustion engine vehicles, why not gradually ban ICE vehicles from using the highway up the canyon to lessen pollution?

ID	Full Name	Comment
28399	Andrew Ray	<p>I'm very excited about the option selected. Best overall balance that solves the traffic issues over the long term. I reject the issues raised over the visual impact. Surely less of an eyesore than a traffic jam giving off tons of pollution! I believe it's only raised as an issue because we are so used to "the car eyesore". In any case it's no worse than the mobile telephone masts at the top of Big Mountain. Precedent is set in that respect. If it's really needed why not plant trees near the masts to help reduce what little visual impact there is?</p> <p>My parting comment is how we can do this sooner? It's sorely needed</p>
28400	Don Lambson	Science is real. Build the Gondola! it's benefit is greater than we can even imagine.
28401	Leo Beecher	I understand that funding has not been determined. If taxpayers are expected to pay so a small minority in the state can use the canyon, the matter should be on a ballot for the whole state to consider.
28402	Hank Tauber	Gondola seems like the most logical access solution.
28403	Megan Sieverts	I think it's interesting that the public wanted consideration of all recreational users, not just the resorts, but the CWC is in the end just supporting the resorts. The gondola only stops at the resorts and only runs in the winter. How is that considerate of all?
28404	Brandon Russell	Gondolas all over the Alps, and people still think they're beautiful. Look forward to better transit options. Thanks for moving ahead!
28405	Judy Tukuafu	I am against a tram Do not use tax dollars for this
28406	Cheryl Walczak	Agree with GONDOLA and need for phased implementation. BUT, get some funds NOW to get started on designing/siting/land prep for the parking garage an Wasatch Blvd. That is key to changing folks attitudes on public access, not private access to the canyon.
28407	Andy Haley	No to gondola. Other options exist with less economic, environmental, social impact and more equity to users and non-users. LCC Gondola is not the answer.
28409	Richard Schlesinger	You people are sick. Besides the many other comments you have received over the years I guarantee the godola will cost closer to \$1 billion dollars, accomplish nothing except be very expensive for users and is a mechanism to make enormous profits for many corrupt politicians and other proponents.
28408	Andy White	<p>Key studies have shown that skiing has been suffering from declining participation over the past decade. <https://newtoski.com/is-skiing-becoming-more-or-less-popular/> (Alaina Johnson, June 24, 2022)</p> <p>According to the National Ski Areas Association the number of active ski and snowboard participants in the US has been falling since its peak of 10.1 million in 2010-11 to just 8.4 million in 2015-16. The skier visit statistics paint a similar picture - declining by over 7.7 million between 2010 and 2016. <https://www.originoutside.com/insights/is-our-obsession-with-conversion-killing-the-ski-industry/> The Covid years have changed the trend, or at least provided a bump.</p> <p>I'm a skier. Bought my first pass at Alta in the early 70s and my most recent one last year.</p> <p>I also pay taxes which I would like spent to enhance the health, friendliness and warmth of humanity, only a small part of which is subsidizing recreation for those making 160% of the local demographic (Oregon skiers in 2012, had a median income of \$82,000 while Oregon residents as a whole had a median income of \$49,000 <https://scholarsbank.uoregon.edu/xmlui/bitstream/handle/1794/12578/Ski%20Oregon%20Econ%20Impact%20Final.pdf;sequence=1></p> <p>According to the national weather service (https://www.extremeweatherwatch.com/cities/alta/most-yearly-snow), the most snow Alta has received since they began keeping records was 875" in 1983. Number 10 on the list of big years was 554" in 2019. Numbers 13,14, 15, and 17 are the only others in the top 20 since then and their totals hover around 500 - 525" contrary to old promotional material that claimed Alta averages 550" per year (https://www.nationalgeographic.com/adventure/article/10-ski-resorts-deepest-snow).</p> <p>Data from a university of British Columbia research project <https://blogs.ubc.ca/michaelpidwirny/season-length-mammoth/> shows temperatures between 1951-1980 were about 1.5 degrees C (2.7 degrees F) cooler than they were between 1981 and 2010. If those thirty years trends continue . . . ? <https://www.climate.gov/news-features/climate-and/climate-skiing> predicts there will be a greater than 75% change in ski season length by 2050 if we follow a moderate versus a high pathway of carbon dioxide emissions. They don't predict it will get longer.</p> <p>In 2016 the Denver Post reported that skier demographics was changing. It's the older people who skied more (9.5 days per year for those over 68.) Boomers of that year also skied more than the national average of five times per year, according to a National Ski Area Association survey released that August. Those ages 45-54 made up 20 percent of skiers, up from 14 percent in the 1997-98 season; the 55-64 age group made up 12 percent, up from nearly 5 percent, and those 65 and older rose to 5.5 percent from 2.5 percent, according to the NSAA study. That's almost 38% of the skiers being 45 or older. They are the ones who can afford it now, but they probably started skiing when they were much younger and have worked their way up into \$125+ per day tickets . Where is the sustaining young blood?</p> <p>Will the resorts' winter business be obsolete before a gondola is even paid for?? Will it's primarily winter revenue source be of significance as the winter recreational seasons shorten? Buses have a flexibility a gondola doesn't. Consider the possibility of sharing the capital costs of buses with the big five</p>
28410	Colby Lapidus	No to the gondola. There is overwhelming disdain for this project. It will ruin climbing, skiing, and many other recreational activities in the canyon. Funding this project with taxpayer money to benefit two corporations is insane. [REDACTED] the gondola.
28411	Joel Harris	\$550 Million plus \$90 Million in maintenance will avoid 20 days of snarled traffic per year over 30 years. That works out to be \$1 Million per bad traffic day over the life of the gondola. All this to benefit two ski resorts which may not be operating beyond 10 years due to climate change. This is outrageous. Furthermore, it will make permanent damage to the vistas of the canyon. It does not serve dispersed recreation on the USFS lands, but only the interests of the ski industry in the canyon. UDOT should be denied funding by the Legislature for this boondoggle. It's more than the cost of the new State Prison. What was UDOT thinking?!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28412	Robert Kosinski	I am strongly against the gondola plan. It is very expensive, supports two private businesses, and does not sufficiently meet the needs in LCC. A bus plan with tolling and expanded parking at the base is the best solution for traffic in LCC. The bus solution makes the most sense to get the most people to the most locations in the canyon; while the gondola will drop off at two locations, busses can drop off at ski resorts, trailheads, climbing areas, and multiple parking areas. As a member of the Cottonwood Canyons community, both as an employee and resident, I strongly oppose the gondola and hope to see a more sensible solution using busses implemented in the coming years.
28413	Greg Snyder	Why should I submit another comment? I felt like all of the comments before were not heard, 16,000 pages and the decision was to make the gondola. If there were 16,000 pages, were are the 17,000 pages that are for it?? Why make tax payers pay almost one billion dollars for something that only really benefits two private organizations. One of which only allows skiing. If this is really for environmental impact then udot would cap X amount of the cars up the canyon a day. People want to bring food, grills, and beer to the resorts to enjoy their day because they just spent \$150 on a day pass to enjoy a day on the hill. You can't do that with a gondola. Plus what happens when you've only solved half the problem with one gondola, that is if it solves anything. You do realize there is another canyon with the same problem if not worse. Big cottonwood canyon can't sustain one there's no possible way. If you can't solve the problem in both canyons then you shouldn't build a gondola in just one of them. Another thing to realize is how much advertising dollars were spent on trying to promote the gondola only to still receive 16,000 pages of comments. My true question is will anyone really ever read this?
28414	Troy Murphy	I do not believe the gondola is the best option here. #1. I believe it will greatly impact the beauty and natural feel of the canyon, permanently altering the environment and reducing the awesomeness of the canyon. #2. Gondola's such as this have already been proven to be inefficient. Videos and photos emerged last winter of horrendous lines at the public gondola in Breckinridge, which much like the proposed LCC gondola transports people from the parking lot to the base area of the mountain. The thought of the entirety of LCC's recreation population gathering in one lift line to board the gondola is anxiety provoking in itself. The line will almost certainly be horrendous and will be a major turnoff for both locals and tourists alike. I believe optimized roadways and enhanced public transportation by way of bus to be the best option here.
29004	Kevin Sheffin	I support construction of a gondola up Little Cottonwood Canyon. Kevin Sheff 
28416	Anthony Kiesel	I cannot imagine a situation where building the world's longest gondola is a preferable alternative to adding buses and limiting the number of cars allowed up the canyon at a time. If UDOT is concerned about people having incentive to take the bus, simply limit the number of cars allowed each day. If it comes down to whether or not somebody can go up the canyon for a ski day on a bus or the alternative of staying home, skiers will take the bus. Additionally, incentives to take the bus could be given, like being allowed up the canyon an hour earlier on a fresh powder day. The construction and maintenance of this gondola will require moving heavy equipment in and out of the area, causing environmental damage that simply cannot be ignored. I do not believe that the alternatives have been fully considered. This cannot be the best option.
28415	Gaby Kingery	I originally submitted a comment in favor of the gondola in the first round of inquiry. But I have found that the reservation system at the ski resorts has cured congestion and traffic on Saturdays to a satisfactory level, which traffic only existed on weekends and powder days. I am against the gondola now and see it would have little use since Covid is over and all the many out of towners have gone home. Please don't build it. Let's try all the other possibilities first. The cost is not justified and impact terrible on the canyon. A lose/Lose. Both resorts should have a reservation system for the weekends.
28417	Brad Rickards	There is no perfect solution. However, this solution could be more robust if, in my opinion, allowed for the following options: 1. It had midway stations to more popular spots for hikers, bikers, and climbers. 2. It was expandable to include a transfer to a gondola serving Big Cottonwood Canyon, and 3. It is expandable to include Park City and Deer Valley To me this solution hits the mark if it can provide access to all these adjoins canyons and meet the needs of skier, boarder, hiker, climber, and nature walker. If not, it's not worth the investment the State is making. Also, I find it hard to understand how UDOT gets everyone all worked up only to discover there are no funds for this project. That makes no sense to me. Finally, I think ski resorts should help defray the costs by investing in infrastructure at their facilities to handle on and off loading. UDOT will never get them to pay for the gondola itself but they should be held to making the transition to their facilities smooth and uncomplicated. Good Luck
28418	Caitlin Murphy	I will be chaining myself to a boulder in little cottonwood if you plan to go through with this.

28419	Beat Von Allmen	<p>Regarding the Gondola:</p> <ol style="list-style-type: none"> 1. At least one additional midway stop, serving summer recreation and backcountry ingress/egress should be considered in the gondola layout. That is easily possible and would find broader acceptance. - That is missing in the analysis ! 2. The unusual tower heights are aesthetically unacceptable and the proposal glorifying a 3S Gondola over a lower key Gondola system that could be better integrated in the environment. - That is possible but missing in the analysis ! 3. The proposed gondola between Snowbird and Alta is not viable as a 3S system: It is highly wind exposed and unsightly. - An alternative lift system could be considered, replacing that 3S gondola section with another lift system. 4. Alta-Snowbird deserves a base to base area connection by lift now. This is desirable and feasible within USFS visual guidelines applied to USFS special use permits and may become a separate project altogether. <p>Regarding the Rail Option.</p> <p>UDOT has forced a rail alignment on the uphill side of the right of U210, which is completely unfeasible. That has been recognized. A more comprehensive analysis would suggest:</p> <ol style="list-style-type: none"> a) To consider an optimal railway alignment that is less dependent on the UDOT corridor, and will benefit from better slope and trailhead access without highway traffic interference. b) To assess in greater detail environmental impacts resulting from rail versus highways corridors. Rail can easily be elevated in sensitive areas, the rail footprint is much less than one highway lane and no salt, slag or chemical treatment is required. Special railway construction techniques allow a minimal construction footprint and warrant discussion. The EIS avoided any technical discussion in favor of the rail, which is showing a bias in the analysis. c) To propose snow sheds for rail only, for various reasons: safe rail sheds, versus accident-prone road sheds, significantly lower cost, lower visual impact. d) To imagine that during winter, the Canyon could be opened without any salt/slag/chemicals - safely. e) The rail alternative has been outmaneuvered and prematurely eliminated: Life Cycle costs are best for rail ! <p>UDOT may have been the wrong agency to have conducted the analysis in the first place. The EIS is still inconclusive offering a compromise and thus produces a Record of Decision that is counter-intuitive. The Forest Service must challenge this EIS, despite the urgency of finding a solution to air and water pollution. The urgency for acting to reduce global warming calls for different leadership than UDOT. This EIS is void in many aspects.</p>
29006	Vicki Wilson	<p>I am a native Utahn and I love the Cottonwood Canyons and have spent countless days skiing and hiking in those mountains. I care very much about the Cottonwood canyons.</p> <p>Please do not destroy the natural beauty by building a gondola and all the needed parking. This will cause Irreparable damage to our beautiful canyon to benefit the wealthy and for-profit resorts. Plus, what will it cost for a gondola ride? I suspect it will be significant and add to the expense of skiing - which further limit middle to lower income residents from accessing the ski hill</p> <p>There is another alternative! Consider how Zion National Park handles traffic during peak season. They require all visitors to ride a shuttle. We could do something similar with electric busses, shuttles or some other transportation. Special passes could allow some to drive - possibly employees, car pools with 4 or more, residents who live in Little Cottonwood Canyon, etc. If we invested in a good shuttle or bus system we wouldn't need the gondola nor would we need to widen the road.</p> <p>Please do not ruin this natural resource with a gondola or larger roads. Learn from Zion's example. It works well.</p>
28420	Robin Tracy	<p>I'm so happy you chose the gondola! It will be a fun addition to the area, and will allow for transport up & down the canyon in poor weather and even in the event of avalanche or road closure.</p>
28421	Greg Poirier	<p>-gondola =huge visual impact -gondola should have a mid unload station with shuttle service to multiple trailheads -resorts should partially fund construction -enhanced bus service should be implemented and assessed prior to construction of a gondola</p>
28422	Steve McCormack	<p>I am 100% against installing the gondola. This is a horrible recommendation that will permanently ruin Little Cottonwood Canyon. The gondola option only benefits Alta and Snowbird, and as a taxpayer I am not paying for the gondola. It is disturbing UDOT is pushing the gondola.</p>
28423	Elizabeth King	<p>No on widening Wasatch no on gondola. Redesign for humans, not cars.</p>
28424	Eran Rosines	<p>I agree with the determination that a non-car transportation system like the proposed gondola is the best available solution. However, this is expected to be at least a 50 year solution and therefore minimizing transport time will be critical for people's decision to choose to use the gondola in the future. In this interim period, please consider new technologies or improved gondola systems that can offer faster transit times than the systems that have been used for the past 30 years. Please consider enclosed mag-lev transportation type systems. It is okay to be the first of its kind if you are offering a transportation system that will definitively solve this problem for many decades.</p>
28425	Kevan King	<p>This is a lot of money for some thing that will benefit a very few people who have bought up land around la Caille No on widening Wasatch you need to redesign the road. You need to put in plants and dividers so people will slow down and people can walk there and bike there and have a decent life.</p>

ID	Full Name	Comment
28426	Stephen Rackers	Hi and thank you for this comment opportunity. I am in favor of a gondola as opposed to adding a bus lane to an already narrow road. But why are these the only options. I would love someone yo explain to me why the following option isn't the most sensible and cheapest. Do not let day trippers drive their own vehicle up the mountain on a ski day, period. Have them park at the bottom of the canyon and be required to ride buses that run back and forth from the parking lots to the resorts. People who are staying overnight at a resort, live along the canyon road, operate a commercial enterprise are the only ones who get to drive there own vehicle. This is similar to the way it works at Zion National Park. I'm not sure any personal vehicles are allowed up the canyon road. This would greatly reduce the traffic on the canyon road and could be easily be inforced with car stickers and hang tags. Please tell me why this is not a better solution. Sure it may need some tweaks, but it's got to be a lot cheaper than the two options that were being considered. Thanks again for the opportunity to comment.
28427	Paul Maeder	I am STRONGLY in favor of Alternative B. Great that you came up with the solution that clears the road and reduces the wear and tear on the ground and nature. Let me know if I can do anything in support of your plan.
28428	Aviana Cox	The construction of the gondola will destroy trees and habitats for animals living in the areas where the gondola will be placed. Getting a construction crew up there will also create more traffic and tear up the earth which will again disrupt the ecosystem!!
28429	Lovevasilyeva Lovevasilyeva	—Ä—µ—Ç—¶—Ñ—¶—¶—∞—Ç—Ñ—æ—Ç—æ—Ä—µ—Ä—Ä—¶—é—°—ü—±
28430	Ryan Rodriguez	Installing a gondola is an in appropriate use of public funds and detracts from common activities in the canyon.
28431	Janell Mcpeak	XY
28432	Erik Dayvie	I am happy with the proposed solution. I think the gondola will bring many benefits to the area long term and the phased implementation is sensible. Excited to experience the positive impacts of this project.
28433	Richard Schatten	I think so called phased in solution is best.
28434	Martin Cole	build the gondola now, get it done. it's the only option and best environmentally
28435	Josh Steenblik	I'm against the gondola. I believe a reservation system or fled lanes are worth a shot prior to spending so much money. Clearly neiderhauser and the developer have huge incentives. It's simply going to push the congestion from the canyon to the. Parking structure. How many entrances and exited will the structure have? It's simply compounding the problem in my opinion. Resorts already have huge lift lines, now we're throwing more people onto an already overcrowded mountain? Makes little to no sense for me. I'd like to see real studies with real dollars, fees and wait times. Josh
28437	Taylor Lyman	I've been in this canyon my entire life. The amount of traffic in the winter is unreasonable. The gondola is a good solution. Im in favor of the gondola. I hope UDOT is thinking of the future and allowing for add ons if necessary. It would make sense to connect the gondola to big cottonwood canyon as well.
28436	Jorae Kay	When is UT going to realize that by "selling" UT to the world is only taking away our quality of life? The ski resorts have already been handed over to the rich and famous and becoming totally unaffordable for most UT residents. Our \$\$ should be spent on the people who live here/not cater to rich tourists! The reasons we love UT are rapidly vanishing! I vote NO to The entire project.
28438	Joyce Cragun	There is absolutely no way on the earth I would ride a gondola up to ski. I would ride a bus up to ski. The gondola is a horrible waste of a huge amount of money I do not know how this pasted!!! I do not want a gondola!
28439	Bruce Edgar	We are so glad you chose the gondola! It's a modern alternative that will be an excellent investment for the future. We wish you the best in securing funding to get it done!
28440	Benjamin Burch	This new option is not "finding a middle ground", but simply ignoring the simplest solution to encourage the use of public transportation in and through LCC. The construction of this gondala will merely shift traffic slightly from inside the canyon to at it's mouth, while putting the beauty on natural resources the canyon has to offer at risk. more cost effective ways to remove this congestion exist, and should be used instead
28441	Tyler Robinson	I think the Gondola is the best solution. After visiting the Alps this year, it's clear to me that's the best option for the environment and solving the transportation issues.
28442	Richard Maxfield	The gondola plan only serves the needs of ski resorts, not canyon users. This plan delivers provides no access for hikers, bikers, or other users of Little Cottonwood canyon not using the ski resorts.
28443	Julia Kammel	I live in cottonwood heights and am an avid skier, hiker and climber. I would hate to see a gondola placed here. I oppose the gondola and would much prefer a better bus option. Also, unless we address global warming it will be of little use as we will not have snow to ski on.
28444	Susan Dunlap	I live 3 miles from the base of LCC and although not a skier, use the canyon for hiking, reflection and snowshoeing. I am concerned that the gondola option does not serve anyone but skiers. If you are not stopping at trailheads, campgrounds or other heavily used sites, this is not an option that can be used for people using the canyon during the non-ski months. I would gladly pay an annual fee (like Millcreek) for canyon access and support and would ride public transportation/shuttle if it had stops prior to the 2 ski resorts. Do not build an expensive, invasive gondola that does not serve the majority of us who live in the valley.
28445	Alana Palau	I am confused how constructing a base station of 2,500 parking spots, a gondola hub, multiple towers throughout the canyon, and cables running over 9+ miles of canyon is the best choice that will "alleviate visual and auditory impacts". Have you seen Disney? It is a parking lot. Are you interested in opening DisneyUtah? Because this gondola will be exactly that. It is also another cost-limiting option for lower income individuals that want to visit the canyon, and is another form of gatekeeping anyone but those who afford a \$800+ ski pass out of the mountains and into the public lands of Utah. I do not support the gondola in any timeline.
28446	Devin Walker	You have got to be kidding me. 14,000 comments? There has to be way more than that. I live in Sandy and only a few miles from LCC. I don't know how you can still think the gondola is the only option. I've talked to many of my neighbors and none of them are for this Gondola. It seems like udot isn't for actually listening to the public. I'm not quite sure what the point of having the public comment if you don't actually listen to their comments. No one wants the Gondola. Its clearly not the best option either. Also neither Snowbird or Alta have answered questions on how much they are kicking in on this terrible idea. This isn't a tax payers responsibility. This is a ski resort responsibility. So many things reek about this entire situation. Many feel as do I, that udot is not operating on the up and up.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28447	Robert Bohman	Where are the massive towers supporting the cables in the gondola renderings? The gondola project is nothing more than special interests and self-serving politicians using government and public funds to enhance their self-worth. What is the personal costs of a family of five riding up the canyon in a vehicle compared to parking and riding the gondola? Snowbird wants \$40 per person to ride their much shorter tram. This is nothing but a special interest project that will change the character of the entire canyon, increase public costs to access the canyon, and increase the time and inconvenience to get up and utilize the canyon over other options.
28448	Robert Wilhelm	So I am not a skier. Will my hard earned dollars get taxed to pay for something that I will never use in my lifetime. Make the ski industry foot the cost. They are the ones that will ben
28450	Brandon Davis	I'm a 30 year Sandy resident as well as a regular Little Cottonwood Cayon user . I was both surprised and sickened to hear about UDOTS decision to move forward with the gondola. My days in the Canyon include every aspect of the canyon except the resorts. I'm completely heart broken that this obtrusive eyesore will now affect not only every aspect of my recreation but also my view of the canyon from my Sandy homes front porch. It's a incredibly sad day when corporate greed drives the decisions that affect us all. I would gladly pay tolls or even happily be excluded from entering the canyon on crowded days rather than look at this eyesore for the rest of my life. Please reconsider and keep the canyon as is. Limit car numbers and for once respect one of the natural treasures we have rather than destroy it in the name of money.
28449	David Herron	As a Salt Lake County resident, I support the gondola. I think it will provide better safety, lessen road congestion and be somewhat of a draw to visitors. Utah ski resorts need to stay competitive and keep visitors safe. The gondola is the best option.
29007	Bryan Edelman	Hi, I am in favor of shared transportation models in LCC such as the Gondola. I am concerned that these will not be utilized by all due to the apparent focus on winter resort users. I would ove to use this in summer, fall and spring. To see wildflowers on hikes, reduce traffic and parking issues at existing trail heads, and enable mountain biking. Summer activities users are growing! You don't have to look for, Park City trail head parking is now insufficient for trail users and they have a bus program for hikers and bikers. What is built in LCC should be everyone, and should be built to withstand demand for 30 years, not just solve a specific issue we see today. Thanks
28451	Julie Miller	The reason the canyons are so crowded is because of sll the tourists that come to ski. We should be charging tourists a fee, like a big fee, to be using our canyons. Making the locals pay for the tourists and the ski resorts benefit just isn't fair. It will be taking away the view in our beautiful canyon. The gondola would only benefit tourists and the ski resorts and the locals would be left with an ugly canyon and the bill. I am against the gondola. Why don't you just transport people up there by helicopter? That makes just about as much sense. Please think of the local people and the beautiful mountains and not just all the money that will be made.
28452	Michelle Ricketts	There is a reason that Zion National Park doesn't have a gondola or anything that takes away from the views. LCC should be looked at this the same way. I understand the need for mass transit. I understand the time and research it has taken to get to this decision. I'm concerned that what this will do for the view and experience daily of all the people that make this place home. I'm concerned that the people involved in making the decision and putting money towards advertising will benefit greatly financially, which is WRONG. I'd like to see a public vote on this decision. I'll say it again. Zion National Park doesn't have a gondola and there is a big reason. A Gondola will drastically change the canyon in a very negative way. A gondola is a bus in the sky. Costs more. It's wrong..
28453	Russell Farr	NO GONDOLA please!!!! I frequent the canyons not the resorts. People need access to trails and other amenities the canyons offer besides the resorts. A line of clean energy buses that can stop at numerous points in the canyon make more sense. NO GONDOLA
28454	Matt Painter	I am a resident of Sandy and am opposed to the Gondola. The ski resorts and ski utah should use the existing roads to bring skiers to their bases. There is already too many people using the canyon. They need to find solutions, not the taxpayers. 1/2 billion dollars to subsidize the ski industry is ridiculous. All of the gondola works ads show the gondola skimming the ground. They do not show the massive 250' towers the gondola requires. Why even bother with these comments if you proceed in a different direction after hearing them?
28455	Stephen Montgomery	Many public works projects seem to run significantly over budget. Examples of projects where I have lived are the Big Dig in Boston, the Bay Bridge in San Francisco, High Speed Rail in CA. Who will be held accountable when and if this project comes in over budget. Who will lose their job/s for putting forward a proposal, that, after cost overruns, is not viable?
28456	Jonathan Fischer	This decision represents a loss of what makes Salt Lake City so special. I live here because I love being able to enjoy pristine and wild nature so close to the city. There is no way to build a gondola and also preserve that. To me, this means the end of Little Cottonwood Canyon. I sincerely urge you, as someone who deeply values using the Canyon year round for biking, hiking, climbing, and skiing, to reconsider this plan and create one that lets the canyon stay wild and serene.
28457	Cody Googin	I am not happy with the decision to build the gondola. I feel that it will greatly ruin the natural features of the canyon and does not reflect the wants nor needs of the community. Please try to find another solution
28458	Jean Pfoutz	I support the Gondola because it is less negatively impactful on the environment and wildlife. I hope that the wealthy that live at the mouth of the canyon do not get a larger voice in this than the rest of the community.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28460	Dawn Rohde	Whatever is the choice traffic will always be backed up due to avalanche safety procedures being implemented before they will allow the public to come.
28459	David Thieme	Gondolas [redacted] monkey [redacted] Electric buses don't [redacted] as much.
28461	Rachel Godfrey	I'm all for the gondola!! Anyone who has skied up Little Cottonwood or attempted to take a hike on a holiday weekend knows parking is a nightmare, even when there is plenty of space on the trails and slopes. This will help more people be able to enjoy the canyon without the fear of having to just turn around because there is no safe place to park. Also, weather conditions can make it extremely dangerous to drive up or down the canyon. I myself have been stuck up at Alta ski resort after-hours because the traffic was a full bumper to bumper "red snake" all the way down the canyon due to heavy snowfall and ensuing car accidents. Luckily the day grill stayed open late to keep everyone warm, but it was crowded and they ran out of food. I don't know what I would have done if the canyon had to be closed because of too much snow fall. The gondola is a great option to improve traffic flow in Little Cottonwood and keep our canyon open for all.
28462	Mike Peterson	You guys have severely disappointed the public community by serving special interests including Alta, Snowbird, POWDR, CW Managment, Niederhauser, McCandles, etc. Please at least don't shut down roadside parking in the canyon. If you do so, you [redacted] over many climbers, skiers, hikers, etc. (not only the tax payers who are funding this project which aims to serve the aforementioned private entities and individuals). It's easy to see the dirty politics behind this decision.
28463	Jessica Eyink	I do not support the gondola plan. First of all, it has pushed through by unethical politicians who stand to benefit financially. Second, I do not think taxes should be imposed to pay for it, which has not been ruled out. Third, at some point, we have to ask ourselves if shipping more people up the canyons and on the resorts is really what we want. Can the resorts actually support more skiers? They're too crowded already.
28464	Nick Mceachern	In the responses to comments, udot made it abundantly clear that they are responsible for moving people safely and efficiently. Even if the Gondola is the best way to do this, which it is not, this rationale does not give UDOT clearance to ignore ten thousand public comments rejecting the gondola. Additionally it does not give UDOT the clearance to ignore the environmental degradation of a gondola. Please consider abandoning this project all together and turn over the EIS to the USFS, the public land managers who act with everybody's best interest in mind.
28465	Jill Lackey	I'm for it.
28466	Shane Duncan	the gondola is a terrible idea. it only benefits skiers. it will destroy the beautiful canyon. it will ruin climbers experiences on the walls of the canyon. it is way to expensive, and all taxpayers will be footing the bill for something that does not benefit everyone. an alternative is to not allow cars up the canyon in winter. run shuttles like in zion national park. there could also be private shuttles for those lodging at the resorts, like canyon transport.
28467	Sam Shephard	What a boondoggle. This is a horrible idea. I backcountry ski weekly in the canyon and this didn't serve anyone else except so resort skiers. For 4 months out of the year? This is such a waste of tax payers monies.
28469	Itay Neumann	I think building this Gondola will serve nobody but the contractors and other profit-making entities. It'll forever scar LCC and the surrounding area, increasing traffic to an already busy recreation area, and impact the lives of the local residents negatively. It's also unnecessarily expensive, compared to the simple option of increasing the frequency of bus-service. I hope this will never get funding as it is a horrible solution that serves none of the local residents.
28468	Nancy Starks	Taxpayers should not be burdened by this gondola project. Transporting more and more people to two profit-making businesses for a shortening ski season is not good planning. I believe that better bus service is the answer with parking availability upgraded. When the canyon is full, stop admittance, like Arches National Park. A gondola would forever devalue what the canyon offers through its beauty.
28470	Lindsay Davis	Why ate we not considering permits and/or reservation system for people going up the canyon along with increased number of ski buses? We should do what it least destructive.
28472	Richard Boyce	I am totally not in favor of the gondola. Parking congestion is going to just move down the canyon. The base proposed parking garage is in the wrong location and will cause massive traffic jams trying to get to parking
28471	Tina Brown	I am opposed to taxpayers funding a gondola that only stops at 2 ski resorts without serving hikers, campers or the thousands of others visiting this beautiful canyon outside of ski season.
28473	Marie Barnhurst	It does not matter what anyone says who is not in favor of this gondola project. It will go ahead anyway. No one listens to or cares about what we the people really want anyway. NO GONDOLA!!
28474	Sven Joergens-kokate	Would rather see the resorts manage patron numbers and an increased bussing system.
28475	Kevin Woolley	The preferred alternative is by far a better alternative to the proposed gondola and I strongly support it.
28476	Nancy Seamons	I applaud UDOT for making the most environmentally conscious and economic solution to the traffic congestion in Little Cottonwood Canyon.
28477	Kristen Vardanega	There HAS to be a lower impact solution to traffic. NO GONDOLA
28479	Douglas Kahler	The gondola is not the preferred choice..... the public is overwhelmingly against it..... mainly because it's a stupid idea! Only way this gets picked is because of backdoor money deals. The fact that anyone would seriously consider this is those that are galactically stupid! And good luck on people traveling here for this mess! Kiss off tourism!
28478	Scott Lake	If you are going to spend a 1/2 billion dollars .. go all in; run it year around, charge for vehicle access to the canyon. Put a stop at White Pine trailhead, encourage use of the tram, Protect the Canyon by reducing traffic.
28480	Rachel Stucki	This project has absolutely no transparency. There needs to be more cost effective options and more environmentally friendly ideas. This would not do anything for the traffic problem as the line to get on would be huge. I think only the tourists would wait in line and people would still drive.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28482	Matt Jeglum	The thing that troubles me is that the whole motivation for this seems to be a perception of crowding by the legislature. Where is the analysis of the true extent of the congestion? Where is the cost/benefit analysis? You say the legislature wanted a study, so therefore it's worth spending \$550M? I ski in the Cottonwoods a lot. It seems to me that the 54 minute travel time from the mouth of the canyon will be significantly longer than all but the worst days of congestion. I can get to Alta in less than 54 minutes from the mouth even when the canyon is very congested. I really think all the proposed options are excessively expensive when you consider the benefit of sitting for a long time in a gondola will accrue to a small number of tourists on a small number of days. My vote is that no action is taken. If the resorts care so much about getting people to their resorts without personal vehicles, let them fund some buses themselves.
28481	Kathryn Ladig	Finding a solution that doesn't have feasible funding isn't a solution; it's kicking the can down the road. There isn't support for the gondola from the impacted cities, counties, or the public. I'm glad to hear of increased bus service beginning immediately. This is an efficient, enactable plan. Please continue to look at increased bus service and the use of electric busses, as well as the parking infrastructure needed at the base to make them viable options for the public. There need to be busses that route from Big Cottonwood to Sandy and those that allow the rider to park in a lot and then choose which canyon they enter. Bus options in Big Cottonwood are abysmal.
28483	Craig E Weir	Before UDOT finalizes "Gondola Alternative B" for Little Cottonwood Canyon and forces it upon the Utah taxpayers, there should be a study of an alternative route for the Gondola from the Wasatch County side of the mountain. It is a less challenging/destructive route to build the structures required to carry the gondola(s). Wasatch County has far more land available for parking etc. with a large portion of the gondola route passing through Wasatch Mountain State Park rather than up through the fragile and protected watershed of Little Cottonwood Canyon. The recreational quality of Little Cottonwood Canyon is already degraded by overcrowding. It shouldn't always be about how much money can be made by a few. An "alternative" should be about what is best for the canyon, preserving the scenic beauty, critical watershed preservation, and the visitor experience and not what will most benefit the ski resorts and condominium associations.
28484	Mike Gillett	Expand or change the bottle neck of the 25mph turns in the canyon. Force Snowbird to start charging for parking like Alta does and stop the extremely dangerous parking situation at Snowbird through tickets. The ski resorts are already at capacity for the mountains and this probablen should be on the resorts to properly limit capacity, not the state to pay the developers for a broken solution. Tax payers already have no budget for entertainment. That's why they hike the canyons. You are taking away perks of being a tax payer living here from the middle and lower class. This action has never worked out and will result in more criminal activity to get around it. You are making a bunch of rich developers richer while hurting the community. Shame on all of you for letting this get this far.
28485	Lindsay Davis	We should follow our national parks' example of requiring reservations for lift tickets and parking to go to the resorts. There should be a maximum occupancy for everyone's safety and enjoyment.
28486	Jaxson Stewart	As a lifelong Utah resident, I don't like the growth. I don't like how busy the canyons, lakes, and ski resorts have become, but we can't stop. It's vital for our economy to accommodate the natural increase in population and subsequent use. We were all outsiders at one point. People complain about the gondola, but they don't have a better solution to accommodate the growth and better serve the residents and visitors of this amazing state. I'm in full support!
28487	Brian Summers	Concerning tolling in Big Cottonwood Canyon. I have heard the tolling gantry will be above the spruces. There are quite a few residential homes above the spruces in Big Cottonwood Canyon. Property taxes are high on these properties. Water companies are private as is the sewer and power. The only public infrastructure we see as a benefit of our taxes is the road. I do support both canyons being tolled at the same time to keep traffic more balanced between the two. But we shouldn't have to pay to drive home. Property owners above the gantry should get a toll pass. There are also other reasons we may need to drive around the community being residents of the town of Brighton. We shouldn't have to pay twice, Or more, for the road we already pay for.
28489	Hallie Elich	The majority of local Utahns do not support the Gondola. Do not build it. It is unreasonable to tax Utahns for something only select few would use.
28488	Camille Brinton	The gondola should not be considered until all other options have been exhausted. There are many options that have not been tried. Shuttles, forced carpools, more buses, more park and rides. This decision seems hasty, expensive and will destroy little cottonwoods environment
28490	Garret Nuzzo-jones	I do not support any form of a gondola in LCC. Your own internal numbers are not realistic with regards to how many people it will move up the canyon in comparison to a bus or no alternative option (2500 parking spaces and 10000 people per day? Nobody carpools that well, nice try). An enhanced bus system combined with tolling at the resorts will fully manage the traffic situation in LCC. Half a billion dollars pays for a lot of buses.
28491	Brendan O'leary	Do not build this stupid, ugly, unnecessary trash in my canyon. Thank you.
28492	Sawyer Pangborn	<p>This plan to go forward with the Gondola does not serve the needs of Utahns - it serves the needs of two ski resorts. If those ski resorts wish to have this gondola built, it should be entirely paid by the resorts themselves. To use taxpayer money to build such an expensive project that only runs in the winter and only services the ski resorts (not any of the other recreational areas), is a boondoggle for taxpayers and free money for these corporations who already make money hand over foot.</p> <p>To save taxpayer money, UDOT should have invested in a proven public transit option - ski busses. Run more often and built out to serve skiers, these solve nearly all of the issues recreational skiers have with getting to the resorts. Another approach would be to restrict car traffic in the canyon to employees, citizens of the canyon, and the disabled. These busses could also be run all year, reducing car traffic in the canyon year-round - especially useful for events like Oktoberfest where people are potentially drinking and driving.</p> <p>If the true goal is to reduce traffic and get folks into the recreational areas (as it should be), a bus is a far better solution and is significantly more in the interest of the public.</p>
28493	Robert Swenson	No gondola, I have lived here for over 70 years an I don't want my tax money going to support snow bird, by the way there the only ski resort I've haven't skied at.

ID	Full Name	Comment
28494	Meggan Mosyjowski	NO Gondola! For once listen to the community. The gondola is not a green option. The coal and energy used to run it negates the whole purpose of it. Summer and September temperatures at over 100 degrees is already stressing the electrical grids out. This will add more stress and become dangerous. People will ride the gondola as an attraction, but not to ski. The same amount of cars will be going up the Canyon. I'm also not paying for a ski pass, parking, and \$70 for a Gondola ride. LISTEN to the people and climate change!
28495	Ashley Anderson	<p>Hello-</p> <p>I am against the Gondola for the following reasons:</p> <ul style="list-style-type: none"> - It is a high cost for something that will only be used a couple times a year. Unless you shut down driving in the canyon completely on weekends and holidays, the incentive to ride the gondola will only be on avalanche days - It does not solve the traffic issue. You are putting the base at the highest traffic area. In order to accommodate the flow of traffic you will need to widen the road. Once cars get into the canyon, traffic flows well. The main points of traffic are wasatch blvd and 9400 leading up to wasatch. - it will take too long. We need a solution now. -The ski resorts can only hold so many people. Alta has about 7 chair lifts. Unless they are looking to expand their terrain, there is only room for so many skiers. At some point they will have to cap skiers and the gondola will be unnecessary. <p>Solutions</p> <ul style="list-style-type: none"> -move parking to the Walgreens parking lot on 9400 south and 20th east and run bus routes from there. This will pull traffic away from big cottonwood. That area already has 4 lane roads. You can turn this area into a parking structure that can hold 2,500 cars. -make snowbird only and Alta only buses shortening the time to each resort. -close the canyon to cars on weekends/holidays or require parking reservations. This has been working extremely well for Alta. It allows for a flow of cars throughout the day and avoids the mob mentality trying to get up the canyon first thing in the morning to get a parking spot. - get zero emission busses. This will greatly reduce the carbon footprint. <p>We need solutions now that will work rather than waiting for a long term project to be implemented.</p> <p>Thanks! Ashley Anderson</p>
28496	James Kissell	<p>The following items were not addressed but should:</p> <ol style="list-style-type: none"> 1. The phased approach is great but no where does it discuss the "milestones" or metrics needed to justify taking the "next step" in the plan. Building the gondola should not be approved only if the budget is acquired. We should not seek budget for a gondola until we know that other measures aren't working. But we need to know what those metrics are. And UDOT needs to be very transparent publishing this data. If the milestones aren't hit then the next steps in the phased approach should not be pursued. Utah might not have any snow at the rate of climate change! We could unnecessarily spend millions of dollars fixing a problem that is already fixing itself. We need to see milestones and metrics. Not budgets. 2. The stated objective is incorrectly written in the executive summary. The objective of this project is to increase revenue for the state through tourism. Safety, reliability, and dependability are all factors. But do not hide behind the real reason. 3. Tolling needs to happen at the mouth of the canyon not below snowbird. Everyone accessing the canyon on a peak day should be subject to the same fees. Residents, employees, etc should have waivers. Toll prices should be dynamic. On peak days, prices should high enough to make people consider alternative options than driving. Tolling should also be enforced for carpooling and decrease based on the number of passengers. The toll prices need to be directly correlated to bus fares or gondola fares. For example, a car with four passengers should cost the same as four fares on the bus or gondola. A car with three passengers should be 150% more than three fares on the bus. Two passengers 200%. And one passenger 250-300%. The bus and gondola take too long compared to driving and people want their car for flexibility and storage. If a bus fare is \$10, a single passenger vehicle should pay \$30 to enter the canyon. Sadly, I don't think that's enough. People will still pay to have their own car. 4. Tolling needs to be accompanied by heavily enforced chain inspection points staffed by police or UDOT to ensure no vehicle goes up the canyon with out properly fitted chains or four wheel drive. Chain enforcement is a joke in LCC today. The state doesn't even plow the chain installation areas for people to install their chains!!! The warning lights don't work and the police arrive too late. The state needs to make sure no vehicle that shouldn't be going up the canyon goes up the canyon. California does a great job of this on I-80 over Donner Pass. It causes delays but it's safe. And California isn't trying to spend hundreds of millions of dollars building gondolas to fix the problem! 5. Project costs need to be reassessed. At current inflation prices, \$550M is no long accurate. UDOT needs to be transparent and update the real costs.
28497	James Arnold	I don't understand why a toll road / bus option couldn't be tried first. Low initial investment, reusable infrastructure.
28498	Michael Zaccheo	A substantial portion of the cost of ensuring that the maximum number of people can be transported to ski resorts should be paid by ski resorts. Citizens, skiers and non-skiers, shouldn't be forced to pay for the construction and maintenance of infrastructure that disproportionately benefits one industry. If that industry isn't adequately profitable independent of state welfare support, then that industry should change its strategy or be replaced.
28499	Jon Boltax	I am against the gondola. I do not think it will solve the traffic problem in LCC. I am equally disturbed that Wayne nurse Haydee is the direct beneficiary of the gondola as he usher the plan while the senate president.
28500	Linda Petsche	I am adamantly opposed to the gondola project. Surely people could be incentivized to ride electric buses.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28501	Will Meyer	I do not believe the gondola is the. Est option for the environmental impact of the canyon micro climate. I am a no to the gondola. The best option would be increased busses, making parking at the resorts reservation only online. Implement tolling based off occupancy as well as require you to show your ski pass to get in. And limit parking options
28502	Kent Green	Rebuild the road. Make it wider and more parking. You can't get up the canyon in summer.
28503	Liam Snihurowych	Bad idea. It will ruin the canyon, waste millions of dollars and it won't solve the traffic problem because there will still be traffic for the gondola line and lastly, Alta and snowbird and small friendly resorts and if you put in a gondola it will flood them with tourists and it will ruin locals only resorts like what happened at Park City.
28504	Andrew Jorgensen	The Gondola appears to be a boondoggle that the Resorts want, but the Public does not want, and certainly does not want to pay for. Public opposition is overwhelming despite widespread advertising by the "Gondola Works" group. If they have such deep pockets that they can pay for TV commercials - perhaps they should pay the \$600M themselves and not the residents of Utah?
28505	William Dujardin	Thank you for making tough choices for the best alternative for our community. The gondola is the best way to lower carbon emissions by minimizing vehicle traffic up the canyon and providing a reliable and safe travel option up the canyon.
28506	Aleen Fuelling	Are you even going to consider the public's input??? No one wants the gondola!!! The only ones that do are those that work for/with Snowbird. It would be nice and a miracle if what the public/tax payers think about this were actually heard. THE GONDOLA IS NOT WANTED!!! LEAVE THE CANYON ALONE!!! The reservation process worked last winter. Stay with that!!!
28507	Kim Justice	I disagree with the gondola as a solution to the traffic. The gondola only benefits Snowbird and Alta and should not be funded with taxpayer money. There are many more broadly effective and less expensive solutions that can be put in place. 1. Build snow sheds over the roadway in high risk areas. 2. Increase parking areas at the base of the canyon for bus travel. 3. Increase buses in the canyon, including in the summer. 4. Restrict vehicles without 4 wheel drive and snow tires from entering the canyon with a stop and check in the winter. 5. As traffic continues to increase, move to carpool only unless residents or bus when busy. With climate change and the drying lake bed, the future of skiing in the canyons is less certain. It makes NO sense to spend so much money on a gondola. Regards, Kim Justice
28508	Scott Rowley	The whole idea of a Gondola is ridiculous and it should never be built!
28509	Erin McCormack	I oppose the gondola and strongly support a combination of enhanced bus service that stops at trailheads and a hefty toll for car traffic (except when it contains four or more passengers).
29008	Richard And Linda Davies	<p>Comment on Gondola:</p> <p>Since this is a tax-funded proposal, it needs the voice of the people. Why is it not a referendum issue for all Utah? My perspective is that this sounds like a proposal for a small part of the population, the skiers and the ski resorts who should pay a significant amount of the cost.</p> <p>If the issue is really about pollution and not just making it easier to get to the ski resorts, why don't you keep buses (EV) in place and have sufficient free parking and ban private vehicles. Have permits at a reasonable cost for commercial vehicles such as deliveries to the resorts, for people who live and work there, and taxis and ride shares. If it is really about pollution give EVs a free pass. Heavy fines for parking in residential areas.</p> <p>Alternatively, allow private vehicles but charge a lot to those who wish to drive up the canyon but regulate the flow to avoid gridlock. Keep buses running. Permits as above.</p> <p>The gondola proposal seems to allow people to drive the canyon in personal vehicles. How does that help pollution?</p> <p>When the parking volumes drop after the ski season, return to the current patterns.</p> <p>Richard Davies Bountiful Utah</p>

ID	Full Name	Comment
28510	Franklin Aguayo	Hello, As a Utah native, and diehard snowboarder. Little cottonwood has always had a piece of my heart. Seeing the traffic over the years has been a major problems, but no matter how bad the traffic, the beauty always remained. I could always be happy I was stuck in one of the most beautiful places in the world. A gondola would simply ruin the beauty of the canyon, and ultimately is a terrible way to combat this problem. I urge you to reconsider a way that would not impact the canyon in this way. There are much better options and hope between me and the majority of Utahns find a better solution. Thank you.
28511	Dan Myers	I'm highly concerned that the gondola will facilitate traffic to ski resorts, but not to many other destinations up the canyon for hiking, rock climbing, snowshoeing, etc. for that reason, I oppose the massive investment of public funds in a gondola because it seems to cater to only a select group of canyon users. I believe other, more equitable, flexible solutions should be reconsidered.
28512	Alan Reese	Fully support the gondola and look forward to using it.
28513	Travis Pitcher	I completely disagree with the installation of the gondola. It only supports corporate growth and profit (particularly CW Management, UCAIR, POWDR, and Niederhauser). It does not have the interests of the public, nor the environment in mind. There is congestion, but less than 10% of the year. LCC is a whole environment and ecosystem, that is more fragile and important. I agree with a parking lot and bus system, which could eventually become an electric bus, much like Zion. That would solve much of the problem on the days where there is heavy congestion and keep it open all of the other days of the year for the public to enjoy the public land. Please consider what this will be in 100 or 200 years. This can be preserved for our great grand children, or turned into a millionaires haven, expensed out from the general public. As SLC grows, we need to preserve the natural areas for water, clean air, and for our own natural recreation. Please, don't put a gondola and please preserve the environment and access to this area for the public.
28514	Kyle Goodart	I live less than 3 miles from La Calle and just off [REDACTED] I strongly oppose the Gondola for several reasons. First and foremost, the area in which I live and purchased an expensive home will decrease in value, and or add more money to my current taxes. I already have significant traffic issues getting into and out of my neighborhood (Sunset Ridge) due to canyon traffic or parking during the winter. The increased parking lots will negatively impact the natural beauty of the area and increase parking along my commute. Skiers and others should continue their own travel/commute up and down the canyon without negatively impacting those of us who already have paid and live in this area. Please note that if this gondola proceeds, rest assured I will do everything in my power to ensure all politicians involved will not be re-elected.
28515	Cathy Grady	I am against the gondola.
28516	Matthew Walch	I am deeply concerned at the prospect of a gondola being built in Little Cottonwood Canyon. Why are public funds being used for the benefit of two businesses? How will the gondola help people who want to go snowshoeing at White Pine Lake? How much will the gondola cost for a round trip ticket? A much better alternative would be to have busses that leave from different parts of the Wasatch Front, utilizing large parking areas like Rio Tinto Stadium and Rice Eccles Stadium as a park and ride. Please stop to consider the enormous cost, maintenance cost, and environmental cost a gondola would create. A bus system would provide a much more environmentally friendly and cheaper solution to traffic mitigation.
28517	Sonya Miller	We do not feel the gondola is going to be a good alternative. Between parking costs and the cost to ride the gondola people are still going to choose to drive their own car or take the bus to avoid such extreme costs of traveling up the canyon. Not to mention the eye sore of having a gondola up our beautiful canyon.
28518	William Rice	Spending an enormous amount of money is not the answer to the fundamental issue, which is there is only so much room for so many skiers in Little Cottonwood Canyon on the most popular ski days. Requiring/increasing fees for parking, increasing incentives for using the bus and carpooling, and perhaps ultimately, implementing an Arches Nat'l Park type reservation system is the only way to manage the ever increasing number of people who want to enter the canyon.
29009	Cc Williams	I truly think that is way too much money to service mostly skiers and resorts. That money could be put to much better use throughout the area. Our taxes are higher, our cost of living is higher with food and gas. And that will surely result in an increase in taxes to do it. So the timing is wrong as well. If you're going to fund that, it needs to come from the resorts, prices of ski tickets, Etc. Not from the average person. So I don't like either solution. I think the gondola ruins the view. And frankly there are many of us who don't want to pay for it.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28519	Douglas Hunter	<p>I am a resident of Taylorsville and as an avid climber, skier, and trail runner I spend several days each week in Little Cottonwood Canyon on a year round basis. I am writing to let you know of my absolute opposition to the gondola proposal. I know the canyon very well, I have summited every peak in the Wasatch multiple times, I have hiked almost every trail in the canyon, I have spend many hot days relaxing by the river, and skied many days at the resorts. I consider Little Cottonwood Canyon part of my home. I understand the scope of the traffic issue facing the canyon, and I have also used the existing bus system in the canyon on busy winter days. My opposition in based on the following:</p> <ol style="list-style-type: none"> 1- The gondola is a dramatic, expensive, permanent, and static solution that will forever change the nature of the canyon, yet the problem it is trying to solve only occurs a few days per year. 2- The gondola does not consider what is best for the canyon itself, it does not address what is best for the wildlife in the canyon, it's the highest impact solution possible, and it sacrifices the canyon itself to the interests of two private companies. 3-ALL other user groups of the canyon, including climbers, hikers, photographers, Mt. bikers, back country skiers, birders and others are forced to sacrifice the quality of their experience in the canyon every day, year round forever for the sake of skiers who come to the resorts during the busiest winter holidays. The impact on climbers is particularly high in that many of the most beloved bouldering areas in the canyon will be destroyed completely. Essential resources relied upon by one group will be wiped out to provide access for other users to a different resource. <p>Please scrap the gondola plan immediately! The criteria for a real solution must include the following ideas:</p> <ol style="list-style-type: none"> 1- The solution needs to be dynamic, meaning that it can be applied when needed, but not be detrimental to the canyon on days when there is no problem. 2- The solution needs to keep preservation of the canyon, its wildlife, and natural beauty as a top priority. 3- The solution must not pit different user groups against one another. Groups must be treated equally and it must be understood that destroying resources used by one group for the sake of another group is unacceptable. <p>The problems facing Big and Little Cottonwood Canyons are significant, it will take our best efforts and most visionary thinking to address them. We should not accept anything less. The canyons themselves, the wildlife, and people who use the canyons deserve the best, and the gondola is far from the best we can do.</p> <p>thank you for considering my comment. -Douglas Hunter</p>
28520	Andrew Clevenger	<p>First off, I used to be pro-gondola. However, my views have changed partially due to the shady land management around La Caille. Also, I have yet to see any evidence that the gondola would be utilized outside of a diminishing number of powder days, maybe 10-15 days from last year, and that's generous. So once the gondola is completed, we will all have an eight-mile road to nowhere that won't get used because I can drive up twice as fast in my car.</p> <p>If you're going to do this, and from the looks of things it's going to happen, it needs to be done properly. That means you need to work hard to strike a balance between traffic on the road and traffic at the gondola. There needs to be some solution through tolling or carpooling. And you need to incentivize gondola transit, otherwise, no one will use it outside of those aforementioned 10-15 days. I love to ski Alta and Snowbird. However, the resorts need to be picking up the tab to help get people to their mountains. Utah taxpayers will be funding this operation, and they have to get something in return.</p>
28522	Rob Schocker	<p>The gondola is an awful idea! Ive lived in the [redacted] area of cottonwood heights for 20 yrs. There only became an issue with traffic at a standstill on Wasatch when the Ikon pass was initiated.</p> <p>If there was a giant parking structure at the base of little cottonwood, there would still be mass traffic jams on Wasatch waiting to get into the garage in snow days.</p> <p>Why should the public pay for so called improvements to a canyon that would only serve two private companies. Snowbird and Alta.</p> <p>I'm VERY opposed to the gondola!!!</p>
28521	Kevin Clarke	<p>This is a terrible solution to an over exaggerated problem. Please do not build a gondola. A toll on the road would be a better solution. It would insecticide people to take the bus And generate revenue. The gondola would only be used a few months of the year. It won't generate any benefite for residents since the cost is so high. There is only limited space on the slopes, building a gondola doesn't make any more room on the mountain. It wouldn't increase tourism. Why should tax payers foot the bill.</p>
28523	Alyssa Jahner	<p>Tolling! No gondola</p>
28524	David Pedersen	<p>Every Utah Resident I've talked doesn't like this idea. They also say they are not going to pay the high price to use this. It's slower it's not going to improve transportation. So many resident are disappointed.</p>

ID	Full Name	Comment
28525	Ben Johnson	<p>I am writing in regards to the final EIS for Little Cottonwood. As a longtime Utah resident I appreciate all the time and effort that has been spent on this challenging issue. I am an avid outdoorsman, both in summer and winter activities. I have been skiing at Alta and Snowbird for 37 years as a Salt Lake resident. I have been ski touring, mountain biking, hiking regularly and trail running in the cottonwood canyons for 20 years. I am very concerned about the decision that UDOT has made with plans to place a gondola in this canyon. I'm well aware that traffic is a problem in the cottonwood canyons and have waited in lines on weekends and powder days since college. This is an unfortunate problem that afflicts our beautiful canyons. This problem really afflicts the canyon on about 40-50 days per year. This includes winter weekends and great weekday powder days. The solution UDOT has offered places a never before done gondola at huge cost for a problem that afflicts a limited number of people for 50 days a year of recreation. I have skied in European countries with avalanche problems and crowding issues. None has attempted an 8 mile eyesore of a gondola. They use buses and trains with great success. Our national parks across the country suffer from overcrowding for months on end and have found good solutions with shuttles, buses and reservation systems. None has considered a lengthy gondola. I think a major reason for this is they lack the special interests that are pushing so hard for this gondola. Alta and Snowbird stand to make huge profits from a gondola. Their parking requirements at the resort will decrease so they can build more restaurants and hotel rooms. Snowbird has bought property at the gondola base station where they hope to make additional profits. Placing a gondola puts the interests of these private companies over the canyon users and taxpayers across the state. This is absolutely unacceptable. Weekday recreationists will suffer from the limitations of a gondola. Non-skier recreationists will suffer from the limitations of a gondola that is designed to take the masses to pricey ski resorts. Summer recreationists and 95% of weekday recreationists have no need for a gondola. My understanding is that in polling and comments, approximately 80% of residents oppose the gondola. So why is this the chosen solution? Our state is putting the interests of two private companies before its citizens and taxpayers. I plead with you to reconsider this decision. Look around the nation and world and previously successful and financially reasonable solutions to traffic issues. Thank you. --Ben Johnson</p>
28526	Scott Collins	<p>I do not want several stinky buses up and down the canyons. Gondola is a no brainer!</p>
28527	Susan Collins	<p>NO Gondola. I do not ski and do not want tax dollars funding and benefiting a private entity like two ski resorts. It is only needed a couple times a year for big snow dumps. At this rate our snowfalls have been less and less. Don't need this eyesore in my backyard. Hoping my opinion counts.</p>
28528	Travis Bellantino	<p>It's pretty clear that nobody wants the gondola! We shouldn't even have to waste our time commenting about this! If this goes forth it's pretty clear that it's only about money and we all know money always wins! We as tax payers shouldn't have to pay a dime for something that only benefits the ski areas and serves no benefit to backcountry users of all types!! NO GONDOLA</p>
28529	Pieter Blauvelt	<p>I sincerely hope that implementation of a toll along with limited road improvements (snow sheds) and an improved bus system is seriously developed as part of a phased approach. Along with the toll, UDOT should allocate resources to enforcement of the traction law. I believe that these developments, if implemented, could vastly improve the situation today and for a very long time into the future. A phased approach should be implemented which evaluates the effect/improvement of the early phases before committing to a final phase - implementation of the gondola.</p> <p>The gondola solution sounds good at a high level, but when you study the details there are serious flaws in the current proposal that need to be addressed:</p> <ol style="list-style-type: none"> 1 - Most skiers will not want to put on ski boots in the lower gondola parking garage/base station, more than an hour before they have actually arrived to load one of the ski lifts at Snowbird or Alta. The exit points for the gondola stations at Snowbird and Alta are not conveniently located near any existing lodges. This will require additional transport solutions and time to travel to the lodges. 2 - Same issue as (1), except with return trips down canyon at the end of the day. There need to be accommodations made for skiers to remove boots/gear in one of the ski area base lodges and prepare for the gondola ride back down the canyon before entering the gondola station. 3 - Avalanche mitigation activities at Alta and Snowbird will continue to prohibit individual travel outdoors for periods of time in the morning (INTERLODGE). This will be most effectively managed by NOT allowing gondola loading to occur until avalanche mitigation activities are completed. Thus gondola loading will be delayed on heavy snow days regardless of UDOT avalanche mitigation activities. This will result in a backup of people waiting to load the gondola. Waiting in line with ski boots/gear on will not be desirable, many will opt to wait in their idling vehicles. A solution needs to be developed that allows the gondola to operate during avalanche mitigation activities with upper station capacity to allow INTERLODGE enforcement while the gondola operates with passenger arrivals. 4 - The Gondola B option is designed to encourage car traffic going directly to the base of LCC. The parking garage capacity has been increased to 2500 with Gondola B option. The parking garage structure has been increased to a much taller structure Gondola B option. Yet it was apparently determined that these changes are not significant in terms of environmental and community impact. This is a false determination and further study should be required regarding these changes. I believe that these changes are significant and detrimental. Also, these changes detract from achieving a long term goal of incentivizing public transportation use rather than increased individual automobile traffic.
28530	Jan Pazzi	<p>The gondola is not the best solution for Little Cottonwood Canyon. Parking will still be impacted at the bottom of the Canyon. It is costly to install and maintain and there will be environmental damage done for installation of the gondola. Electric buses would be the best alternative for long term environmental and cost factors.</p>
28531	Heather Jackson	<p>I support the gondola</p>
28532	Lori Vellinga	<p>I support a reservation system, along with cost-effective and efficient road improvements. I do NOT support the gondola system. It is expensive and unnecessary.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28533	Daniel Pierce	The gondola is a very poor idea. It will cost significantly more than current estimates and only benefits the ski resorts. If the ski resorts have to contribute, which they should, the increase in lift ticket prices will become prohibitive for many people and leave an empty, expensive gondola. I predict it won't be used and if it is, the traffic jams will shift into the valley waiting for parking places and further add to pollution. When another pandemic occurs, what will happen then? Or when the gondola inevitably breaks down? I believe the best cost/benefit would be to increase the road to three lanes, two lanes going up in the morning, two lanes coming down in the afternoon. Better methods for avalanche control would also improve traffic flow. Plus, will there even be much skiing in the future. The number of storms and snow quality have diminished significantly in the last 4 to 5 years with falling lake level. This needs to be considered in planning.
29467	Dean Germer	Yeah. Hi there. This is Dean Germer calling, I live at [REDACTED] in Sandy and I was just looking at the EIS proposal and I just think it's remarkably great. It's very forward-thinking. I think it's well thought out and gosh, let's get to it. Unfortunately these because of all the all the stakeholder. The stakeholder things these things can take forever and I sure hope that that's not the case. Is there anything I can do as a private citizen, please Don't hesitate to give me a call when I get my first name is Dean. Last name is Germer, g e r m e r and my phone number is [REDACTED] [REDACTED] and my email is [REDACTED] again. I think this is a fabulous plan. Let's get her done. Thank you so very much, bye-bye.
28534	Marlene Deer	NO to building a gondola system in Little Cottonwood Canyon. Rather than using that half billion dollars to benefit a couple of ski resorts, use it for projects that will attack our dirty air problem!!!
28535	Gus Bandera	The gondola will ruin the beauty of the canyon. Electric busses for everybody that is going to ski up the canyon are a better solution.
28536	Lois Remington	The gondola is not multiple use. I am a climber and a back country skier and this gondola only helps the ski resorts. White Pine is a very congested lot both summer and winter. There should be a multi use option with 3 or 4 stops in the canyon to accommodate the Salt Lake population
28537	Dan Housley	I'm supportive of gondola option with the caveat that I think snowbird and Alta should their fair share of the project as well as annual cost as the primary beneficiaries of the solution. I'd recommend running it summer as well. I also think that the true solution will require multiple solutions in he future. I don't believe the Gondola will fully solve the problem. We'll need to widen the road and provide a bus only lane as well with increased frequency.
28538	Steven Morris	Will the Gondola have enough throughput to handle a crowd for an Olympic Venue?
28539	Chris Burke	I have lived at [REDACTED] for 32 years. I do not want our street turned into a highway. I have commuted north and south, morning and evening and there is no commuter traffic problem. Do not build a parking garage at La Caille. Build a parking garage at the gravel pit at Fort Union and Wasatch. Use electric buses to transport skiers up both Big and Little Cottonwood Canyons. That way, you won't have to ruin our neighborhood by widening Wasatch Blvd.
28540	Daji Landis	The gondola is going to be an expensive disaster that will take forever to implement. Just improve bus services and see how it goes. I know you want to be like some cute little European town with a sexy gondola, but it's not going to be as effective as just having busses. I get it, they're not sexy. But they will work.
28541	Alexandre Lemieux	<p>I am against UDOT proposals for these reasons:</p> <ul style="list-style-type: none"> > DOT's proposals are designed to serve ski resort users on the busiest winter days (an estimated 25 days/year), ignoring dispersed recreation and other year-round canyon users (e.g., climbers, hikers, runners, etc.) - Both proposals have unacceptable impacts to dispersed recreation and fail to solve the CC transportation problem. <p>These proposals involve the destruction of irreplaceable world-class climbing resources at risk of being impacted or completely eliminated.</p> <p>—</p> <ul style="list-style-type: none"> - The proposals are fiscally irresponsible, with initial construction costs estimated at \$500 million each. - These proposals permanently alter the canyon, impact the iconic natural character, and our watershed. - - They result in unacceptable impacts on Little Cottonwood Canyon's invaluable natural resources and environment, including unacceptable cumulative impacts to the Wasatch Front watershed. > Ease of access to climbing will be compromised by parking lot alterations and removal of roadside parking. <p>Alexandre Lemieux</p>
28542	Rich Karen Bergan	We're in support of the little Cottonwood gondola.
28543	Madi Jepperson	This plan will destroy the beauty that makes up all of Utah and is extremely greedy. This is not for the betterment of the community, it is all about money. This should be thrown out immediately
28544	Kendra Stewart	I hate this.
28545	Danielle Davis	I think alternative options should be looked into like making reservations or something. A gondola will ruin the canyon.

ID	Full Name	Comment
29010	Bernadette Nelson	<p>I'm so glad that the gondola B option has been selected. Less impact on wildlife and less visual disruption. Good, faster access to ski resorts.</p> <p>Just wished U-Dot could start implementing this solution immediately. Hopefully private and government funding will happen quickly.</p> <p>Bus service proposed alternative doesn't really solve the traffic and parking issues. Building/upgrading parking hubs only increases the expenditure of funds that could be use to start immediate work on the Gondola. Temporary solutions have unfortunately a tendency to become permanent.</p> <p>I look forward to riding the gondola. - B.</p> <p>===== Bernadette A. Nelson C: [REDACTED] Midway, UT =====</p>
28546	Jon Cargeeg	<p>Pure Corruption from UDOT and the State official's to shove this unnecessary project down tax payers throats with out a true vote.</p>
29011	Patricia Kimball	<p>Dear Transportation People,</p> <p>I am very much against the decision to build a gondola up Little Cottonwood Canyon. Three reasons:</p> <ol style="list-style-type: none"> 1. It seems to be an extremely costly solution that ignores the radical and irreversible environmental and visual impacts on the canyon. The benefits for a narrow minority of the public-skiers and two private ski resorts-by no means justify the financial and environmental costs. 2. The decision ignores the decline in snowpack levels we can probably expect given the current mega drought and a shrinking Great Salt Lake, a major contributor to the Greatest Snow on Earth. Why not wait and see what happens snow-wise rather than commit now to such an expensive project? 3. Finally, it seems to me that though you have asked for public input, that input seems to be largely ignored. I feel you are paying more attention to greedy developers and other private financial interests and the legislators in their pockets than to the public you supposedly serve. <p>I urge you to reconsider your decision and look for a more reasonable solution that will benefit the public more broadly.</p> <p>Sincerely, Patricia Kimball</p>
28547	Alexandria Lambert	<p>The motor problem started with the Ikon gaining traction. Since then we have watched our cottonwood heights neighborhoods and streets get overrun with skier traffic. On the Ikon black out dates there is little to no traffic for little cottonwood canyon. I can't speak for big on those days as I go up little cottonwood on those days. The problem not only affects little, but also big cottonwood canyon. Pumping all our money and resources into one canyon will not fix the problem posed for both canyons, which both desperately need solutions. Why not look at both as a whole? There has to be a better solution that can involve solving big cottonwood canyons problems also. Limit the Ikon pass have the ikon pass holder pay the extra price for access to the canyon. Don't make the loyal locals pay the price.</p>
28548	Charles Rosett	<p>The gondola will be a colossal waste of taxpayer money that go unused for most of the year (kind of like Trax trains). It will not address non-resort uses of the canyon, and it will not have enough capacity to materially improve traffic on the busiest days. This project will serve to enrich some well-connected interests while doing little good for the taxpayers who fund it. It will be an eyesore in a beautiful setting. The only way to improve traffic in the canyon is to toll for use on high traffic days. The marginal cost of using the road on busy days is too low, and a toll will reduce demand.</p>
28549	Jeanine Kuhn-coker	<p>The gondola is a huge waste of taxpayer money and a poor choice as far as the flora and fauna and overall environment of the canyon!! Please se that buses are the right choice as it has been proven in Zion. Don't be a pawn on rich lawmakers pockets!</p>

ID	Full Name	Comment
28551	Michelle Frazier	<p>I am really invested in this transportation decision for Little Cottonwood Canyon. My family and I live 10 minutes from the base of Little Cottonwood Canyon and access the canyon from 9400 South. My large family gets season passes to Snowbird every year. We're familiar with traffic and road closures. And, my home and many of the areas I enjoy and recreate have a beautiful view of Little Cottonwood Canyon.</p> <p>As a resident of Sandy, I've followed this development. I just watched the videos and read a few of the other documents about the Final EIS. I understand the reasoning for the gondola. On paper it makes sense. But, despite really trying to consider the gondola and be open to it, at the end of the day, I cannot support it. To me, the beauty of Little Cottonwood Canyon is such a big part of my life and our community, and it breaks my heart to imagine the skyline being broken up by a gondola. I also have some other concerns. Because of where I live, riding the gondola will add a significant amount of time for my family to travel up the canyon. I would prefer to catch a bus from the park and ride lot close to us on 9400 S and Highland Drive. Also, in my family's experience, it's only a handful of Saturdays a year that we have to face the bad traffic. Part of that is because we've learned not to travel at peak times. So, maybe we could find another incentive along with the toll to encourage people to spread out their travel times. Also, in the video, it is mentioned that it's about 50 days a year that there are problems with traffic in the canyon. To me, it is not worth building a gondola for 50 days a year.</p> <p>I support every other option that is presented in the phased approach. One thing I think should be done differently is that anyone who wants to go to Snowbird or Alta during peak season should be required to ride a bus (with some exceptions, like if they work there or have conditions that make a bus ride difficult, such as a disability). I currently don't ride the bus. I have a large family, so it's often more convenient to drive. But, I will ride the bus up the canyon for the rest of my life if it means we don't have a gondola built up the canyon.</p>
28550	Bryan Skalsky	<p>The gondola should have multiple stops in the canyon to facilitate access to existing recreational areas in addition to the ski resorts.</p>
28552	Dan Reese	<p>We don't want the gondola!! Please listen to the community. There are over 1000 comments on your Instagram post NOT IN FAVOR of the gondola. Listen to the community. We do not want it and we do not want to pay for it with tax \$\$\$\$. Please implement more busses (preferably electric) with a bus-only lane up the road.</p>
28554	Moushumi Anand	<p>The gondola is a giant money pit... as a resident who stays on Wasatch boulevard, I know that the traffic is bad only 10 days in the year. With resort opening later and later in the year and closing earlier in spring because of lack of adequate snow, the validity of a gondola makes no sense. As a resident who accesses Wasatch 12 months a year, I see no reason to spend \$1bn of tax payer money on a problem that lasts only 10 days a year. And it only helps 2 resorts. Many of the employees are not local but from South American countries. And you are going to charge me \$30+ to ride the gondola. The state needs to use tax payer money more wisely.</p>
28553	Shawn Mcpherron	<p>No public transport solution is viable until they solve 2 issues. First, there must be made available lockers for storing gear at each destination. Today, very few short term lockers are available and rental of a long term locker has a multi year waiting list. 2nd, any solution must be capable of operating during 90% of avalanche conditions. Stopping a gondola, or the road during avalanche abatement is never going to reduce the traffic that impacts the mouth of the canyon.</p>
28555	Thomas Chapman	<p>This seems like an elitist, moneyed proposal that ignores all uses of the canyon but winter skiing. Do we even know how many people use the canyon for summer hiking, picnicking or rock climbing that would be left totally out of this? In addition, with so much needing to be done with transportation in Salt Lake County, this seems an indefensible expenditure of public funds.</p>
28556	David Christiansen	<p>A couple advantages with the gondola over mote lanes of travel.</p> <p>The fewer cars going up, the less pollution. This goes from noise, exhaust fumes, and trash thrown out windows. Another pollutant is that engines leak fluid, such as radiator, gas, oil, and transmission fluid. The fewer leaks means less of this in the river.</p> <p>The other advantage is in the winter, when there is an avelanch covering the road, there is a secondary exit available.</p> <p>People think the cars ih the air will spoil the view. Wider roads do that as well. You can go up most canyons and see scars where the hillside was taken away for a road. To widen the roads more, in some places, you will find a number of other ateas where this will happen.</p>
28557	Ed Davies	<p>I have been driving the canyon since 1970. We have a place up Little Cottonwood Canyon and my son owns a house on Holladay blvd. [REDACTED]. Thank you for selecting an option that is a long term solution to the traffic problems in this area. You have our full support from a family that has been impacted by this problem for years.</p>
28558	Jade Velazquez	<p>I am disgusted by the conflict of interest with Neiderhauser and McCandless owning property nearby and influencing this project into being. I live right on [REDACTED] and there is NO traffic that would warrant 5 lanes expansion. It's dangerous and people are already dying on Wasatch. It's horrible for pedestrians and bikers. We should explore parking, tolling, or other traffic calming initiatives. I also am not interested in using tax payer dollars for this project that will certainly cost more than \$500m and destroy the canyon. This is a terrible project.</p>
28559	Gabriel Velazquez	<p>I hate the gondola</p>
28560	Steven Kerr	<p>Gondola is a bad idea and any proposal for Little Cottonwood Cyn. Should be majority funded by the resorts and cyn. residents. In meantime, quotas on traffic should be implemented.</p>
28561	Carey Roberts	<p>I have been a life long skier and I was only able to ski once last year due to the very high cost for the day, equipment, pass and lunch. It is no surprise to anyone that skiing for the most part is an elite sport. Let the skiers and the resorts pay for it NOT the average tax payer that would never use it! I think you should try better bus system and not clutter our ski line!</p>

ID	Full Name	Comment
28563	David Nix	No! This is the worse option! 1/2 a billion dollars plus cost overruns to benefit two commercial ski resorts. Are you nuts? What about backcountry skiers? What about hikers? What about runners? What about birdwatchers? What about the other 90% of canyon users who DO NOT SKI at those resorts? This is a massive waste of tax payer dollars on a scale we've never seen. Think about what you are proposing, it's frankly [redacted] and serves no one but the dupes that shell out hundreds to ski at those two resorts. So disappointed in UDOT and UT Gov.
28562	Miguel Alpizar	The gondola is and will be a massive waste of taxpayer dollars. It is blatantly obvious that this "identified preferred alternative" is nothing more than corrupt officials trying to line their own pockets as well as the pockets of the landowners and those that will be building this unnecessary and inefficient mode of transportation. Please listen to the voices of the majority and look at other alternatives. Look for alternatives that will benefit us all instead of the one that is quite clearly a cash-grab for the few that will be involved.
28564	Julynne Atkinson	I would like to voice OPPOSITION to UDOT's decision to implement a gondola for Little Cottonwood Canyon. I am opposed to this decision for the following reasons: 1. There are many more effective and less expensive options like shuttles buses, minimum occupancy for vehicles, and parking reservations. 2. The gondola does not allow access to the whole canyon, only Snowbird and Alta Resorts. 3. The cost is exorbitant to build. The cost to use the gondola is expensive and is not proven that people will use it. 4. This project benefits private enterprise and only a very small percentage of Salt Lake County citizens. 5. The gondola would change the natural beauty of the canyon. I am asking you to reverse your decision to build a gondola. Listen to all the citizens of Salt Lake County, not just a select few. Do not take drastic measures with our natural landscape that cannot be reversed once they are implemented. Also, do not use taxpayer's money for this project.
28565	Holly Dwyer	This gondola will impact the environment very much while being built. The parking structure will be an eyesore. Other options such as reservations, passes, discounts for full car loads on passes/ reservations, busses that have preferred stops, are all better options than disturbing the environment by building the gondola. Our wildlife will be impacted, while ski season is relatively short and over time may become even shorter with the impact of our changing climate. I do not believe that this has been given enough thought and time to process. Please consider the change it will make in the canyon and how our wildlife will be impacted. Don't you think they have suffered enough? Please reconsider your option for the gondola. I oppose. Thank you for your time, Holly Dwyer
28567	Danielle Duncan	This gondola is a terrible idea. It will cause more damage to our Canyons and benefit only those who use Alta and Snowbird for a handful of weeks. Using taxpayer dollars on a rich person's pet project and making the canyon inaccessible to those who cannot afford the gondola is ridiculous. On top of this, it will push more traffic into Sandy with little to no parking solutions. No gondola.
28566	Kayla O'toole	Please do not move forward with the gondola. It will forever harm the beautiful landscapes in LCC and the majority of the public are not in favor. Please listen to the public and not the \$\$\$.
28568	Tena Rohr	No to gondola. Payout to the ski industry, doesn't help hikers, picnics or others wanting to enjoy the canyon. Electric buses are more beneficial to more people. Put bus pick up areas in every city.
28569	Laura Anderson	I support the gondola model of relieving traffic congestion and minimizing environmental impacts of additional traffic and activity in the canyon.
28570	Kerry Groebs	So as I see it with this plan and the phased construction the only thing different than the other alternatives is the addition of the gondola. Interesting. I'm the original eis the alternatives were very different. The gondola option did not include enhanced bus service and snow sheds. Now it does with the phased approach. Sounds like a bunch of bureaucratic bull crap talk to me. We dont need a gondola if there will be enhanced bus service, snow sheds and transportation hubs with other enhancements to wasatch Blvd as well. The cost is exorbitant. Choose one or the other not a combination of both. This was not in the original eis. The only thing that is not being done as I read it is widening sr210 all the way up the canyon as was proposed with other option with enhanced bus service and snow sheds. This option you have decided on is not the best option. Should have been alternative of enhanced bus service, a ow sheds and widening road. This would also accommodate climbersand hikers better, not just ski resorts. What a mess! And we the tax payer will be stuck paying for it as well as maintenance and crazy expensive operating costs. Plus I'm sure there will have to be a serious fee to use the gondola. Come on let's be reasonable.
28571	Russ O'brien	I am opposed to a gondola in Little Cottonwood as I'm particularly concerned about the impact on the environment namely to rock faces and features that would need to be destroyed to put in the infrastructure to support gondolas!
28572	Kenneth Garner	Gondola B and 5 lane expansion allows increased traffic on Wasatch Blvd. this further divides our city of Cottonwood heights with a high speed highway. Mobility should not be more important than safety and noise concerns. Bith Gondala pposals do not accommodate as many summer use trailhead stops. If a Gondala is built it should be built to accommodate the trailheads Finally the preferred alternative is too expensive, focusing solely on one canyon means other transportation projects go wanting.

ID	Full Name	Comment
28573	Adam Laurenzo	<p>I'd like to voice my strong support for beginning with tolling and enhanced bus service. I am only disappointed that UDOT's stance on doing this is not "let's try this and see," but rather "Let's try to make the gondola happen regardless of the tolling/busing results."</p> <p>It seems negligent that the end user cost per rider of neither the buses nor the gondola has been mentioned so far, as this not only pertains to socioeconomic equity, but also the likelihood that anyone at all is going to use these things.</p> <p>To echo Josh Van Jura's words in the video, neither alternative stops anywhere except the ski resorts. This despite the fact that UDOT admits it has registered significant amounts of comments demanding "consideration for all canyon users, not just resort visitors." Remedying this with buses requires no additional resources. Simply give bus drivers permission to pick up and drop off at existing trailheads on signal. A solution that benefits only ski resorts is not a solution.</p> <p>UDOT continues to tout the environmental benefits of the gondola vs. diesel buses, but fails to compare the gondola vs modern electric buses despite recent evidence that fully loaded electric buses do a fine job of moving up and down our canyons.</p> <p>While eliminating roadside parking beyond entry 1 is done for honorable reasons, it disproportionately affects user groups other than resort visitors while providing no alternative. This again flying in the face of many comments you have already received regarding user group equity.</p> <p>The gondola, as you present it, is designed to remove 30% of canyon traffic from two private resorts on the busiest of days and will likely have spotty ridership on all the others while we still have to deal with all of its visual, financial, and infrastructural impacts. Buses, on the other hand, can be tailored to demand by the day or by the hour.</p>
28575	Summer Cox	<p>The gondola it entirely only benefit for the two ski resorts and will only be beneficial for at the most 90 days out of the year. I disagree with this option. Why not close the canyon roads to all vehicles and only allow busses? This would reduce traffic congestion. And have zero cost.</p>
28574	Collin Wailes	<p>Being a long time resident of Cottonwood Heights and a skier. I oppose a Gondola on the taxpayers backs. If Alta and Snowbird want to help pay for and maintain then a Gondola might be feasible. I recommend widening the road with increased bus service for a better idea. I know a road might not be feasible with the environmental impact of the Canyon and stream. The news article points out some fishy development companies within the state ledgister. I don't want a another Terry Deil problem on our hands.</p>
28576	J Chapman	<p>Good decision, fully support.</p>
28577	Emily Sherman	<p>I am opposed to the gondola in Little Cottonwood Canyon It will cost a fortune and really only benefit the ski resorts It will detrimentally alter the look of the canyon and will be expensive for users It would be better to charge tolls for cars, limit parking in the canyon, and increase bus service</p>
28578	Luc Brand	<p>The gondola will ruin the look of the canyon, if the gondola will be put in it should not be at such an exuberant rate.</p>
28579	Philip Keeve	<p>Grateful that UDOT is taking this seriously and examining environmental impact for a long-term solution. Gondolas help move thousands of people in mountainous towns in Europe and mitigate road traffic and air pollution. Operation of such a system year-round will be great for canyon sightseeing, safe travel, and pollution.</p>
28580	Matthew Petersen	<p>Yes to the Gondola!</p>
28581	James Cherry	<p>To spend this kind of money, in this way, is an absolute irasponsible use of public funds.</p>
28582	Michael Kotok	<p>The proposed gondola is not a solution. It's not practical. The ski areas due to benefit from this plan have put more and more skiers on the hills, inviting more and more danger while skiing and riding. This proposal serves to allow them to continue to exceed a reasonable capacity of skiers - on taxpayers' dimes. This is corporate welfare in Utah. Further, the traffic flow from this gondola will serve to make traffic worse in Sandy, Cottonwood Heights and Wasatch Blvd in Draper! This non-practical "solution" is actually going to lead to further problems on already congested roads; RT 215, 6200 S, Fort Union, Wasatch Blvd., Danish Road and 9400/9800 S. What will the solution for that be? Another \$660MM gondola from W Sandy? Also, the governance for this project is corrupt: You have two well-connected modern day con men (one former State Senator who sits on Cox's cabinet) involved, one who led the CWC to recommend the gondola on property next door to their restaurant where they are planning on building a "resort" hotel. What's needed? A transit solution for their customers. Utah, UDot, Sandy and Cottonwood Heights should be ashamed by this colossal flaw in governance. This is not a solution, this is the apex of more problems.</p>
28583	Juan Carlos Luciani	<p>Hello</p> <p>The proposed Gondola up to the ski resorts amounts to corporate welfare. Why should the people of Utah pay half a billion dollars to benefit two bussineses at the top of the canyon. This does not make sense.</p>
28584	Mightymite_ny@yahoo.com Kellie	<p>I do not want to see a gondola. It is a waste of tax dollars. Especially when I will never beable to ride it, since it is supposed to cost \$35 to ride and since it only takes you to Snowbird. So Snowbird and the developer - a former legislator make ton of money. I would love to see something that serves all people and does not ride over others backyards. I would love to see an option that drops me off at trail heads or camp grounds, and is more friendly to all canyon users.</p>
28585	Sheri Schmidt	<p>I do not want a gondola. My family will not be able to afford the ride. Tax payers money should not benefit private businesses. I would support a toll booth, or busses. I want to be able to stop along the roadway and hike, take pictures, camp and enjoy nature. Let the big businesses kick in to help cover the cost of improvements to the canyon.</p>
28586	Scott Nielsen	<p>A condo doesn't solve the problem for anyone but Snowbird and Alta At the expense for the tax payers of Utah. I've lived near the mouth of the canyon my whole life and think a gondola is the worst thing that could happen to Little Cottonwood. Very few people support the gondola that live near the canyons and will be impacted the most. Don't let big money ruin our canyons.</p>

28587	Ryan Erickson	As a Sandy resident that lives within a mile of LCC I am saddened by this decision. Our community has spoken and voiced that we are not happy with the gondola. Too much political influence and private funding seems to have made its way into this decision. We want to build a tourist attraction instead of trying to solve for the issue. The issue is that there aren't that many days where traffic is congested. So the problem has been focused on the wrong thing. 15-20 days MAX of traffic issues which all are during the winter. Charging residents tax to fund this project and to pay for annual costs too isn't right when only a niche demographic use these two ski resorts. Charging all residents tax to pay for something that very few use isn't the right approach. Putting a toll booth, similar to milcreek canyon, and charge during peak times a premium will require those who contribute to the issue to pay a higher price to use the canyon. Otherwise use the bus. Again, as a resident I am very saddened and disappointed with how much public push back there has been that our voices were factored. Which means that the inside influencers are telling a better story why this should be developed. Tourist attraction is all I have to say. Sad that we are trying to capitalize on money at the expense of residents' voices and local disapproval.
28588	Jacob Jenkins	I understand the want to serve the ski resorts but would like an added couple of stops at key locations for hiking/biking/camping purposes. I would gladly pay a few to use the gondola vs having taxpayers fund it. Maybe a bond with a payback to bond holders based on fees generated would be appropriate.
28589	Robert Wily	I would love to see the gondola project implemented in Little Cottonwood Canyon. I think that it would be a great benefit to our community and a significant tourist destination.
28590	Ginger Mcneill	I have lived in Salt Lake for 65 years. The first 20 were in a small town called Granite at the mouth of little Cottonwood canyon. I cannot even imagine why ANYONE would want an ugly gondola running up the beautiful canyon. I realize many of our legislators love developing anything, anywhere to make even more money. What will happen is they will get this monster running, charging more and more each season, while busses and cars still continue up the canyon. Why can't we continue with reservations and/or tolls? When we want to visit the ocean for a time, we need to reserve a place to stay. Busses are provided for anyone. NO gondola please.
28591	Shannon Dubruille	The gondola would be an absolute monstrosity to the canyon. This is the WORST idea ever.
28592	Robert Larsen	I think the best option is to have Bus only service during the weekends is the best solution. I think the Gondola idea is a big waste of taxpayer money.
28593	Scott Couser	I like the idea of a gondola, but the cost is outrageous...maybe it had more stops for hikers not going to ski / snowboard. My question is, will Big Cottonwood Canyon be next?? Will owners of Brighton and Solitude complain and want a gondola there too? My two cents is no to a gondola
28594	Eric Lyman	I am in favor of the gondola! I believe it will be a longer term solution. I have been using LCC for 57 years.
28595	Greg Parker	I wholeheartedly support the proposal of constructing a tram up little cottonwood canyon. I feel it is the best and most environmentally friendly option available. I look forward to supporting the project by planning to use the tram when it is completed.
28596	Josh Wills	The gondola is shortsighted and will only enrich the resorts and the person who owns the land where the parking lots will be built. Please consider more egalitarian solutions like a season road pass and especially expanded busing. Climate change is only going to shorten the period of time where we'll need gondolas anyway. You're going to create an environmentally wasteful piece of infrastructure that will be costly and quickly obsolete.
28597	Becka Roof	The gondola seems like a reasonable (if expensive) solution to me. HOWEVER, please take another look at alternatives to widening Wasatch Boulevard. If that is common to all alternatives, then you didn't really consider an alternative for that part of the project. Can strategic transit from locations across the valley be used instead of widening and building parking for 2500 cars?
28598	Jonathan Jensen	I vehemently oppose UDOT's preferred alternative of a gondola, and urge the agency to withdraw this preference, and instead favor an expanded, affordable bus service on the existing road (without widening), plus fees and other disincentives for private vehicle use.
28599	Levi Marsing	Don't build a [REDACTED] gondola.
28600	John Labrie	I think the people have spoken quite clearly about this - NO TRAM! The reserved parking solved most of the issues we had, so adding the avalanche sheds plus more bus service is all that's needed. Imposing a \$25 toll to drive up the canyon is a horrible idea - unless you are rich and money means nothing to you (if so go heli skiing) . Enough with the Tram already - we do not want it!
29012	J Wyman	Also very concerned about the gravel pit up parleys. Developers seem to have no conscience
28601	Collier Reid	I am in favor of this proposal with the exception of the plan to toll single car users. As a senior skier I don't have anyone to ski with regularly. I enjoy the solitude on the mountain. I fear you'll make the experience unaffordable for people like me on a fixed income.
28602	Karl Sowa	I am in support of the chosen alternative - the gondola makes the most sense. Thank you!
28603	Adam Bean	I would like to know more about why the gondola is chosen for the best option and why Snowbird was allowed to buy the land under a different company.
28604	Garland Davis	No, as I believe, less costly alternatives should be attempted first: enforce mass transit, annualized user fees/permits, restricted use. None are long term solutions as UT population grows, but neither would be a gondola. Traffic is like water, it follows path of least resistance, until volume exceeds capacity. Therefore restrict/limit access for the benefit to all.
28605	Hugo Lerner	I disagree strongly with the expense and time that would be used for a gondola. I believe noncombustion based (electric, hydrogen, etc) busses is a better solution.
28606	Rich Briggs	Hey pinheads! You do realize that unless you eliminate cars in the canyon altogether, as well as eliminate parking at Alta and Snowbird, all this does is DOUBLE the amount of people in the canyon. People will still drive, AND be on the idiot gondola on big pow days - there will be even more traffic and even more bodies up there. You didn't solve anything you stupid imbeciles. Oh and you did this to benefit two private businesses all with taxpayer funds. Oh and you caused hugely invasive construction in SLC watershed, oh and you built a project that has zero hope of sustaining itself financially. Oh and on 85% of days when it isn't crowded, you just built a \$1B project that won't be collecting any \$\$ for riders because everyone will be driving. Oh yeah and did you know you are complete idiots?

28607	Mark Persons	<p>I am opposed to the Gondola. As UDOT does not have the funding in place to move forward with this project, a phased approach is a recipe for failure. In addition, your annual maintenance costs of \$7mm would require 1,400,000 riders each year or 3,835 riders per day at \$5.00 per ticket. I do not believe that you have "done the math" to determine if the "gondola solution" is economically sound. You also claim an every 2 minute wait time, But time of day demand, AKA passenger rush hour, makes that promise unrealistic. The bulk of the users will be waiting in line in the morning and evening during ski season, delayed for hours as they wait for a system that can not meet the known volume demands. Your ridership models are flawed as they assume that passenger volume will be evenly spaced throughout the day and current passenger demand does not fit your "every 2 minute promise." I believe strongly that the UDOT leadership has a bad case of cognitive dissonance when it comes to this project and their desire to build a "Cool Gondola System" is blinding them to the realities of the negative economic and environmental impacts of this proposed solution.</p> <p>I support the enhanced bus proposal over the gondola boondoggle.</p>
28608	Robyn Steele	<p>I am not exactly sure why you are asking for comments since the final decision has already been made. 90% of the comments all along have been opposed to a gondola. I am strongly opposed to a gondola in Little Cottonwood Canyon. Following the money it is clear why this option is being pushed and it is NOT to benefit the taxpayers or the people of this state, but to line the wallets of a few. I was not surprised at all to find that former legislator Niederhouser is behind much of it and will benefit significantly. This reeks of special interests and once again of fleecing the taxpayers. No gondola and no tolls in OUR (the people's) canyons!</p>
28609	Mark Louie	<p>No one is going to take the 45 minute gondola when it takes 15 minutes to drive.</p>
28610	Robert Houk	<p>This project is doomed. It benefits few and doesn't improve the access or impact. The answer wasn't even a consideration. Look at how the Swiss have handled the issue</p>
28611	Lisa Latoni	<p>Do not put in a gondola. Skiers don't want it. Just add more buses and put in more parking near highway exits and near the base of the mtn or do nothing and let those of us who ski deal with being in traffic a few days a season. This is an overkill solution for a small problem.</p>
28612	Jayadatta Narasipura	<p>What is the problem UDOT is trying to solve by building the Gondola? Does recreation sports in one season need so much attention and resources?</p> <p>Everyday people spend hours driving to work and home on the clogged east to west roads, shouldn't that need to be addressed? Is transporting more skiers faster to Snowbird on 25 days in a year more important?</p> <p>Ski season is about 3 months, that is 12 weekends, about 25 days. Does transporting few thousand people up the canyon for skiing needs so much of attention? Is it worth spending 600 million to fix a non-existing issue? Skiers (less than 1% of people) will find alternate ways to spend their weekends or they will spend more time in car. It is up to them to decide on how they want to spend time on their day off.</p> <p>Don't we create a new problem by transporting more people fast to Snowbird? There are limited ski lifts in the resort. Skiers needs to wait for 90 to 120 minutes to catch the ski lift. They can ski two or three times in a day. Snowbird makes more money by attracting more people but will any skier like the new waiting time in the cold weather to ride on the ski lift? Snowbird will be new Disney world.</p> <p>We all know that the amount of snow falling has significantly reduced which in turn is causing water problems in the valley. One of the reasons being that the lake effect snow has come down. Senator Romney has called for everyone's attention to spend few billions to fix the water level. Shouldn't we wait for few years to watch the amount of snow that falls on our mountains?</p> <p>Last time when UDOT opened the same topic for public comments, 60 to 80% people said NO, but the final EIS was as expected. Very few powerful people have already decided, comments from the common citizens do not matter. Now again UDOT is asking for the public review and comment. Not sure if our comments matter when the decision to build gondola is already made. It feels like a sham. But I still believe that the public opinion matters.</p> <p>Even if this is approved, shouldn't snowbird spend all 600 million to build the gondola which helps their business? Utah is a fiscally responsible state, why should taxpayer's money be spent on this project that helps one private organization? An average Utahan do not ski in this expensive ski resort which represents than 95% people in the state.</p> <p>Thanks</p>
28613	Craig Reid	<p>I have an issue with the gondola being used mostly 5 months of the year benefiting the ski resorts at a cost that will continue to accelerate and no funding in place</p>
28615	Jeff Stewart	<p>Increased skiers going up the canyon benefits the resorts, hotels, airlines, and restaurant industry with more profits. They need to pay for this with their investment and taxes already levied on their services. Do not raise our state or sales tax for this! My family doesn't even ski!</p>
28614	Lena English	<p>I am against the gondola. I don't like that it passes over private yards, and that it only services ski areas. As someone who does not ski, but often visits the canyon for other areas, I do not want to pay for something I will never use. I am also terrified of heights and would never choose to ride the gondola even if I was going skiing. Do not build this gondola.</p>
28616	Adam Erickson	<p>No gondola. Consider light rail. Implement toll road. Encourage car pool.</p>
28617	Brian Stillman	<p>I am in the most support of Proposed Phased Implementation of Gondola Alternative B.</p>

ID	Full Name	Comment
28618	Michael Kessler	<p>Tolls and paid parking in the entire canyon are the only answer. Little Cottonwood Canyon doesn't have a throughput problem. It has a capacity problem that is unsolvable. Every additional person that uses the canyon on any given day diminishes the experience for every other person that's up there. And demand is only going to grow, due to population growth and the progressive impact of climate change in lower elevation ski destinations. When supply is fundamentally limited by geography and negative externalities while demand is rising the only way to achieve equilibrium is to increase the price. No one should be able to use LCC without paying.</p> <p>That being said, if you feel like you absolutely have to do something about throughput, a gondola isn't the answer. Once people understand how inconvenient and time consuming it is, they won't use it. My ballpark estimate is that from my house in Draper it will take nearly 2 hours door to door to get to Alta via the gondola (including parking, bus from parking to gondola base, waiting in line, and the actual ride), versus a 30 minute drive today. And then the same on the way home. Having to spend 4 hours of total commute time instead of one is ridiculous and not a solution to anything. Build avalanche sheds and provide strong financial incentives for carpooling. That's the best option for throughput.</p>
28619	David Brown	<p>I oppose this Gondola B plan. For one, with global warming we don't even know if these resorts will be open in 2050. Secondly the problem is caused by the resorts, so if they want to fix it they should foot the bill, not the taxpayers. Lastly building these giant gondola towers will have a lasting impact on the canyon. If the resorts are causing all this congestion they should try having longer hours so that everyone isn't trying to leave at the exact same time, encourage electric vehicles and busses</p>
28620	Jamie Hansen	<p>I am not in favor of this plan. It benefits the resort far more than it benefits the public. It needs to be revised to benefit anyone accessing the canyon not just those going to a resort.</p>
28621	Jeff Kadrmas	<p>Not for the gondola Taxpayer money would be better spent doing the parking structure at the base of the canyon then up grading trail heads and the roads to implement busing to the trail heads and to the resorts For if the gondola does nothing for the general public going to trail heads etc then what is the point You are going to make the general public pay a toll to go to a trail head but you can't ride the gondola to get there also Seems not a wise move with taxpayers money</p>
29013	Thomas Scharlow	<p>Please, no gondola, no highway widening. Find a better way.</p>
28622	Tony Caligiuri	<ol style="list-style-type: none"> 1. Road design that promotes a slower speed (roundabouts, etc.) 2. 3 lanes at most 3. Protected bike lanes 4. Pedestrian paths on east and west side of Wasatch Blvd 5. No pedestrian bridges, like to see tunnels or ground level crosswalks
28623	Jennifer Hunter	<p>I am against building the gondola.</p>
28624	Ak Erickson	<p>Has anyone done a study on how often the gondola would stop running in due to wind? Those cabins are like kites and from experience working at a ski resort, they are the first lift to go on wind hold. What about the evaluation process? Why don't you tell people about that? My vote is for the tunnel, which no one has talked about. We need options and just advertising two of them isn't right. European's have the experience, with tunnels and trains. We don't need put lives at risk with a gondola!</p>
28625	Lesley Sheppard	<p>I stand by my earlier comments that it is the wrong direction to create a situation where more people can be brought up into the canyon. I still feel that limited the number of people will be better for the environment. This can be done via tolls and buses without the need for gondolas and widening the entire highway. With the Great Salt Lake shrinking rapidly due to over-allocation of ever decreasing amounts of runoff from the mountains, there will be less snow to enjoy anyway and thus, fewer people should be allowed into the canyon.</p>
28626	Gene Reu	<p>As a resident of the city of Sandy, I fully support this alternative as the best possible option</p>
28627	Chantelle Kadlec	<p>The gondola is unnecessary, a disruption to wildlife and migratory birds and really will only alleviate canyon issues for a few snowy days a year. Other options of tolling, required carpooling or using electric shuttles should be further considered. So many cars going up the canyon only have 1 or 2 people and requiring a carpool minimum would reduce traffic by half. There could be a stop at the bottom to pick up single riders or if that's uncomfortable there needs to be more bus/shuttle options. The gondola is just padding the pockets of snowbird and La Caille.</p>
28628	Robert Weir	<p>Snow sports are a vital part of the lifestyle and economy of the Salt Lake area. However, so is clean breathing air and the need for the GSL (especially for our famous lake effect snow). Rather than spending an insane amount of taxpayer money to offset a tourism problem that affects no more than a few weeks per year, we can and should put that money toward efforts to make our great home a place that will not become an unlivable wasteland with our property values declining into the dirt.</p> <p>As such, as a taxpayer and concerned citizen I would rather see this money go toward clear air and GSL preservation solutions.</p> <p>Thank you.</p> <p>Robert A. Weir, M.D.</p>
28629	Kenneth Levine	<p>boon→Σdog→Σgle /ÄäboÖüonÄäd\\$. . . .öl/ INFORMAL-NORTH AMERICAN noun: boondoggle; plural noun: boondoggles</p> <ol style="list-style-type: none"> 1. work or activity that is wasteful or pointless but gives the appearance of having value. "writing off the cold fusion phenomenon as a boondoggle best buried in literature" 2. a public project of questionable merit that typically involves political patronage and graft. "they each drew \$600,000 in the final months of the great boondoggle"

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28630	Ana Weiss	NO GONDOLA! IT's A WASTE OF MONEY AND WILL PERMANENTLY MAR THE NATURAL BEAUTY OF THE CANYON.
28631	Jennifer Watts	Let the ski resorts pay for it. It benefits the resorts. Where at the mouth of the canyon will all the cars park? Public funds should not be used for this.
28632	Bonnie Fry Rothman	I oppose any gondola to access little cottonwood canyon. I believe that such an option would be ineffective, too expensive, and ultimately underutilized. I support taxes on cars entering the canyon, and enhanced bus service.
28633	Patrick Lang	I can't wait until the IRS gets its 86k new agents; 'cause I'm going to complain every day of the week until they assign at least 10 agents to look at EVERYONE involved in this scam. This is fraud. All they have to get is one thief. Who's it going to be?? There's no other way to describe using 650+ million in taxpayer dollars to build something that'll only be useful for 20 days a year, and only serves two locations in an 8 mile long canyon. All this jerk at Snowbird sees is 6k dollar signs an hour coming up to his resort. What he doesn't see is the bad rep his lousy resort (Alta blows Snowbird away) is going to get because of the three hour lift lines. Greedy people go to [REDACTED] The parking res thing at Alta worked! Give it a chance. Do the snow sheds. The dudes standing at the mouth of LCC on powder days, turning anyone around who didn't have a reservation, worked! I hope everyone involved in this scam gets run out of Utah. Jerks.
28634	Jaime Hirsh	I am an Alta/Bird passholder and please, no gondola. Nobody wants this outside of tourists and the ski resorts. We do not need to spend taxpayer dollars on a solution that will benefit private businesses 50 days a year. It is absurd. We can manage the need with added bus service and capping the capacity of the canyon.
28635	Spencer Allen	You [REDACTED] better leave our [REDACTED] canyon alone. ????
28636	Cindy Remke	I am opposed to the gondola. It will ruin the wildness of our beautiful canyon. It will increase the profit of Alta and snowbird at the cost of taxpayers. That is so wrong. If they want a gondola, have the ski resorts fund it not the tax payers. Or the skiers. Charge more for parking. Limit the number of ski passes sold like powder mountain. Do more to protect our forests.
28637	Scott Chandler	I feel this is not just a skier issue. LCC and BCC are SLC tourist attractions. Maybe we do or don't want them to be tourist attractions. But that is what they are now. As such, many businesses benefit from them directly and indirectly. This is what tourist attractions do. Sometimes, many times in-fact, tourist attractions are good for an area and bad at the same time (think Orlando). I believe the issue is larger than if more buses or a Gondola is best for LCC. The issue is how much tourism is SLC wanting and willing to handle. Personally I think more buses [REDACTED] A Gondola might be very attractive in a European sort of way. Now this is just dreaming: But if we really wanted to do up things right get the Boring company in here to tunnel from SLC to Park City with stops in both the LCC and the BCC.
28638	Janet Simpson	I am opposed to the gondola. Climate change is altering the snowpack. Let's not tear up the canyon and invest billions in an industry that may not survive.
28639	Peter/maria Bsumek	Years ago I learned from a Prof. at U of Utah that Figures don't Lie, but Liars Figure. That said we believe that the entire Gondola episode is based on inaccurate information and facts to support your foredrawn conclusion that the Gondola is required and desired, and that such will be supported by Taxpayers. Zion National Park visitation during the high season was 1,583,293 persons all shuttled into the park in Buses. No cars allowed. Alta/Snowbird that same year had 782,100 skier days during their high season. Yet you insist Buses won't work. Gondolas have to shut down when experiencing wind gusts of 40+ Km/Hr., which does happen during the winter months. Your figure of \$510M as stated is total cost. Preliminary estimates are at best a good guess, as we learned from recent construction of Utah Prison, and Airport. Widen the road where required and use buses.
28640	Bc Bawden	In 1889 the first electric trolleys began operation in Salt Lake City. By 1941, trolleys stopped running and tracks were torn up. UDOT should plan ahead and NOT do any irreversible damage to LCC by building a gondola or widening the road. Let the resorts handle their own parking problems. The parking reservation system works. Save the taxpayers a lot of money. Save the canyon. Don't build a gondola.
28641	Brent Ruhkamp	I recognize that the gondola is not a perfect solution; such a thing does not exist. That being said I think that a problem screaming for a multimodal solution cannot be addressed by simply adding more of a preexisting mode (buses). That being said other enhancements should also be explored. These include such ideas as variable tolling, parking reservations/caps, bus-only time periods, etc. In the end, I think we're going to need to utilize several options in order to improve the traffic in LCC.
28642	Jedidiah Sky	PLEASE DONT BUILD THE GONDOLA - it's permanent, incredibly impactful, and by only transporting 3,000 people per hour ISNT AN EFFECTIVE OPTION TO DEAL WITH PEAK TRAVEL HOURS in the canyon!!!! PLEASE give improved bus services an honest effort. Give the bus solution a chance to succeed/alleviate the transportation problem. THERE IS NO HARM IN GIVING THIS OPTION A TRY. There is nothing permanent about the choice of improving bus services. There are no long term consequences with giving the bus option a chance! The problem isn't going anywhere soon - so don't rush the solution!!
28643	Karen Hammer	Please do not build the gondola. The beauty will be forever marred. Let us try to really get a bus system that won't take someone from the U. of U and hour and a half to get to tha resort in LCC. Let us make a toll required for single-person-occupied cars, there is so much more we can do before even considering the expensive, view-maring gondola. Please reconsider this decision.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28644	Jenelle Newman	Gondola would be amazing. Please do it. It reduces traffic and canyon accidents.
28645	Jim Sarver	<p>There are some needed improvements for parking in the canyon; especially at the Red Pine trailhead. However most of the benefits of reduced travel time will be seen during the winter when a different set of users frequent the canyon. The problem with this project is equity. People who use the canyon for hiking or climbing don't need the expensive alternative. The benefits of this project will be to winter users with expensive pursuits. The others who benefit the most are those who make money at the upper end of the canyon.</p> <p>Costs need to be assigned to those who accrue the benefits; the skiers are upper canyon dwellers and businesses. If there is a toll, it should be surge tolling with a much higher charge when there is snow on the ground at Snowbird.</p>
28646	Matt Evans	<p>I support the gondola proposal and feel it is the only true long term solution. Further I believe if other options are chosen in time the gondola will still be needed and implemented. UDOT is correct and this needs to be built.</p> <p>Thanks</p>
28647	Tim Zimmerman	<p>I support the gondola option. It makes much more sense than widening the road and running a fleet of buses both economically and environmentally. The gondola is the only option that has the ability to keep people moving even when the weather becomes bad, or if there are snow slides. It will put far less rubber particulate from tires/wheels into the environment, and will involve far less disruption in the canyon to install. Plus it will last much longer than a bus. Gondola is the way to go. I am a 50 yr resident of SLC and user of Little Cottonwood Canyon.</p>
28648	Brenda Fitzpatrick	I am against the gondola. Please stop this ridiculous eye sore.
28649	Alek Konkol	<p>We really need to utilize Bus Rapid Transit options before the gondola. Make private vehicles a rarity in the canyon, reserved only for employees, residents, and essential services. Everyone else can take a bus. Let's have busses run every 2-3 minutes with stops along popular bouldering and hiking spots in the summer. In the winter, we could have snowbird/Alta direct busses mixed with busses that serve trailheads for backcountry skiing and snowshoeing. A gondola is an expensive option that puts the needs of the ski resorts in front of the needs of the environment.</p>
28650	Matt Fischer	<p>My question, and comment, is why do you not look at expandable solutions, I have an a tunnel which has been done in Europe for years and throughout the globe, you are able to connect into public transportation and have a start of a system that can be expanded as Utah! grows. I put a little information about it up at lcctunnel.com. Although they have denied the tunnel in My conversations with Udot. Largely because we both looked into doing a tunnel with the boring company. Which their costs have come down, but in reality we need to be looking at other tunneling Companies as well who have a large track record. Then of course you talk about the biggest misconceptions that both the locals and politicians have not looked into, Can a tunnel withstand an earthquake? Because it moves with the earth in an earthquake, in the 1981 earthquake they use tunnels in the bay area for emergency responders because it was the only thing operating after the bridge collapsed. Will a tunnel affect the watershed? In many watersheds in Europe tunnels have not affected them, Also with tunnel construction, it is a sealed process so as long as they do a proper EIS study and build around the watershed veins they are ok. I am happy to connect you with the leading watershed authorities in Europe who I briefed on this small project here in Little Cottonwood Canyon. Finally, will the weather affect the tunnel? Such as Highwinds, avalanches, and other environmental problems? These are all things that are concerns with other alternatives. My recommendation is that despite local political pressures, and local politicians with vested interest in the project, and And those who are looking into 2050 with a non-expandable solution for future traffic as a whole, (gondola vs tunnel which is expandable) but they should be looking at how tunnels and other alternatives Can be a win for the people and the state. I know That this is not how politics works, it's more about power, pride, Prominence, Funneling money through special interest groups, finding local businesses and developers to benefit from decisions. Unfortunately my suggestion does not benefit those who use the political system for gain. But it is a solid alternative for the expanding future of Utah.</p>
28651	Susan Beck	<p>Are we really going to spend all this money on a project that will only benefit a privately owned company. I guess that is business as usual. This is a fragile canyon and part of our drinking water. Given the issues we have with the environment already, this seems like a foolish idea. This is for recreation not for sustaining the life and health of our city!!! Aim to reduce the activity in the canyon; there are number of ways to do this. Time to get creative and put the health of the canyon first.</p>
28652	Evelyn Payne	<p>It seems to meet the needs of the ski resorts more than the general public. Let them build it at their expense and use public money to expand surface access so as not to exclude, hikers, climbers, picnics and others.</p>
28653	Margaret Hoffman	The environmental impact of this going up, is not something I see worthy of building. I am against this 100%.
28654	Daniel Croft	<p>Hi UDOT,</p> <p>It shocks me that we're looking at spending that much public money on a transportation solution that only benefits private companies. I live in Sandy, UT. Snowbird is my favourite resort. I've used the bus service up the canyon a number of times. I *STRONGLY* oppose the Gondola as a single use, publicly funded, private, transportation solution. This concern could be mitigated by adding other stops that support other public uses of the canyon. How does UDOT plan to recoup costs during the non-peak traffic periods? What are the operating costs and how much will be covered by the private businesses that this solution serves.</p> <p>I'm extremely disappointed in this decision.</p> <p>Dan Croft</p>
28655	Charlie Schaul	<p>I believe the gondola is for the benefit of snowbird and alta only. As a long time skier there's just no more room on the slopes of either resort to handle anymore people. Yes, the traffic on premium days is frustrating but it does keep all of the masses from being on the slopes at the bell. As a tax paying resident and lover of everything Little Cottonwood Canyon provides I oppose the gondola concept. The simplest solution is more buses. I've tried several times to ride the bus from 9400S and Highland with the same results. The buses are over capacity by the time they get to this stop. I gave up and continue to drive myself and anyone I can get in my vehicle. The other side is that most of us early to rise skiers are only on the mountain for 2-3 hours then we go about our lives. The gondola will not help this large group of patrons.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28656	Scott Barlow	Please no gondola. I would rather see a trap system with tunnels run in both canyons over to PC so that it can operate similar to a subway system with no need for clearing roads. Tunnels are safe and the trains can run with minimal people and last a very long time.
28657	Sharon E Johnson	Find a way to limit drivers up the canyon in ski season with tolls and reserved parking. Make Snowbird and Alta pay for road improvements or the Gondola . How can you justify \$500 million to enhance a rich person's sport when affordable housing is in such short supply. You're just lining the pockets of the developers and contractos]
28658	Kathryn Marti	I support common-sense solutions to transportation in Little Cottonwood Canyon. Specifically, I think we should be looking at enhanced bus service without even expanding the road. We also need to institute other transportation management techniques such as incentives for carpooling. The gondola towers will mar the beautiful canyon landscape. And the cost to taxpayers is prohibitive. Bus service could also be expanded to year-round service and include many trail heads in the canyons. We are also fortunate to be seeing the development of electronic buses that can help cut down on carbon emissions in the canyon.
28659	Vasyleah Green	I am AGAINST the gondola
28660	Brie Houston	The gondola won't solve anything. Please don't do this to the canyon. Preserve the natural beauty. Humans don't deserve it, nature deserves it. STOP THIS PLEASE!!!!
28661	Toby Kravet	Climate change predictions I have seen indicate the disappearance of skiable snow in 35-60 years. This would make the gondola alternative financially infeasible. We are probably the last generation to ski Little Cottonwood before Alta and Snowbird are forced to close due to lack of snow and this makes the investment in a gondola, in my judgment, a colossal waste of money.
28662	Caroline Brophy	Do not build this.
28663	Kyle Mahoney	There should be no gondola in little cottonwood canyon. Any gondola would be against the wishes of the majority of residents of the salt lake valley. Any decision to begin construction would be a decision that only caters to the corporations that run the resorts hoping to increase profit at the expense of the natural beauty of the canyon and the environmental impact that construction would have. If Utah state legislators continue to pass policy that does not represent the wishes of the majority of its constituents there will be consequences
28664	Henry Kozak	I think it's a good idea that includes everyone.
28665	Austin Woo	No gondola
28666	Jacob Wimmer	Seems insane to spend so much money on this when traffic in LCC is only a problem for maybe 20 days out of the year. Just ban cars up the canyon on those days and run busses. It will also be an eyesore.
28667	Pradeep Khakural	Our family does not support the gondola. We feel this is not beneficial to the community and benefits politically connected wealthy people the most. Wr had no problem going up and down cottonwood canyon without any issues. This a bridge to nowhere, a gondola without purpose. Please preserve cottonwood canyons by keeping it as it is and prevent this gentrification via gondola. Please say NO to the gondola.
28668	Sydney Grossman	As a local Salt Laker, and frequent skier & hiker in LCC, I do not believe a gondola is the best solution for the LCC traffic issues. To put up tens of millions of tax payer dollars to fund an already cost prohibitive sport doesn't make sense. The gondola only supports private businesses, and the population that can afford to ski. There are thousands of local Salt Lake residents that don't have access to public transit routes, and do not use the ski resorts, yet their tax dollars are going to fund a problem they don't encounter. I don't think we should be funneling tax dollars to aid private companies (Alta & Snowbird), while we have a host of problems to solve in the valley (housing crisis, air quality, drought). To solve the LCC traffic problems I propose instilling a toll for drivers and running more ski busses on powder weekends. I do not support the extreme measure of building a gondola that will only aid skiers while disrupting the natural environment. Why do we need to jump to building a gondola, can we instill a toll & add more bus routes to gather data on that solution? I believe we should exhaust all cheaper options before the gondola.
28669	Brady Thorne	A covered train system with a road built on top. This way the trail can run regardless of snow conditions.
28670	Frederick Adler	The gondola is an extremely expensive way to serve two ski resorts without significantly addressing the many other users of the canyon. A fleet of electric buses that stopped at trailheads would be a much more equitable approach.
28671	Chris Bryan	I'm extremely opposed to the tram proposal. In every way, shape and form. I hope it doesn't pan out. It's going to be horrible for the environment. Permanently destroy recreational areas for rock climbing and so on. Bottom line is going to ruin a gorgeous landscape with skyscraper monstrosities.
28672	Kathryn Phillips	My concern is for sustainability. How much greenhouse gas will be emitted as a result of the gondolas and is there plan to make it run on renewable energy?
28673	Royce Hackett	I like the gondola plan, but I think the resorts should pay a percentage of the bill to build it, as they'll profit from it.
28674	Abbey Ostrander 5520 S Springtree Ln	I'm for tolling the canyons and incentive car pooling with people on weekend. I do NOT want to see a gondola in the canyon.
28675	Jackie Jones	No to this project. It is too expensive. This is a horrible way to spend tax payer money. And it does not solve all the problems. We DO NOT support this project.
28676	Michelle Feolo	I fully support the gondola and feel like it's long over due. I have ridden the bus and its awful.
28677	Traci Judd	As a resident of Utah for 60 years, I do not support the gondola project. It is not necessary and will ruin the beauty of Little Cottonwood Canyon. Just limit the number of vehicles that can go up the canyon on ski days!
28678	Brooke Shirts	I live in Washington and come to Utah on vacations. A gondola will NOT attract my tourist dollars -- it will make me avoid such an eyesore on one of my favorite canyons! This is an elitist cash grab. Please protect the Wasatch Front from those who want to exploit it.

28679	Emily Hyde	Building a gondola is not going to fix the traffic problem of little cottonwood. Unfortunately people will still be driving their cars because of the inconvenience of driving and trying to find a parking spot in the gondola lot, especially if that's completely out of the way from where they live. What building a gondola will do is cause more people to end up in little cottonwood canyon whether they drive or take the gondola, making the resort LIFT LINES absolutely horrendous and unbearable, I'm sure that's not a problem for Alta or Snowbird because that's more money for them in the long run. Nobody wants to see beautiful little cottonwood canyon destroyed by a horrific ugly gondola that's only being built to feed the resorts more money. Also what about the traffic that will be caused while building the gondola? Haven't we already destroyed and altered the mountains surrounding Salt Lake enough? When the salt lake eventually dries up there will be no snow to support the ski industry and all this money spent on a gondola will be for nothing. Maybe instead of trying to figure how to maximize profits of shuttling people to the ski resorts we should be figuring out how to save our water supply and replenish the great salt lake so we actually have snow in the future.
28680	Patrick Koenig	As an avid backcountry skier and rock climber who enjoys taking destination ski trips the LCC gondola will significantly impact my thinking about where to visit. One of the things I enjoy the most about backcountry is the feeling of remoteness and the gondola takes away from the experience while providing no benefits to the backcountry skier or climber. LCC is one of the top destinations in the country for these activities and this will permanently change the landscape and the experience for the worse. While the purpose of the project may be to improve the experience of using and accessing LCC for locals and visitors alike, this solution would definitely cause me to consider other vacation destinations ahead of Salt Lake for future travel.
28681	Luke Hesel	This an incredibly terrible decision. There is no way that the public has chosen this as the preferred alternative. A massive waste of money that will benefit two private businesses. You will ruin the canyon with this option.
28682	David Boettger	I live by Wasatch Blvd which is the only north-south corridor along the east bench and serves as a busy commuter route. So why would you consider spending \$500 million on a stupid gondola to solve an intermittent seasonal traffic problem that affects few county residents before you widen Wasatch Blvd? Answer. You should not. Furthermore, that money would be a nice start to establishing an east-west freeway mid valley. UDOT seems to want to completely ignore this issue which would benefit far more travelers by 10,000 X. Work on these priorities, promote more canyon car pooling and bus ridership, consider a toll for big and little, but otherwise leave the canyons alone.
28683	Grady Mellin	Please don't build the gondola!
28684	Jonathan Cooke	The overwhelming majority don't think a Gondola helps the traffic issues you reference, doesn't serve anyone but the ski resorts and reeks of corruption. Someone needs to find an endangered toad somewhere in the way of the construction plans that holds this all up for decades or something. Doing something with taxpayer money that is so wildly unpopular will have catastrophic impacts on the likelihood of even successfully building this thing. Such a dumb idea. If you are going to build something to solve the "problems" the ski resorts created then you need to look at servicing a larger number of people per day and servicing more than just resorts.
28685	Lauren Todd	Please implement a better plan for buses rather than widening and marring LCC. we do not want the gondola. I've been a resident of salt lake my entire life. The gondola is the wrong choice. We do not want this. Implement tolls, improve bus systems, but NO gondola.
28686	W. Alex Evans	I strongly oppose the plan to build a gondola in Little Cottonwood Canyon for many reasons. I am a frequent visitor to the canyon. A gondola would be a horrendous scar, would not solve problems with overcrowding and is otherwise outrageously expensive and frankly stupid. Please reject this option. Please consider that traffic has been manageable since Alta implemented parking reservations. Thank you for considering my comment.
28687	Sarah Beesley	I absolutely agree with enhanced bus and would also do tolling during this period. We may not really need the gondola which I still think is a terrible idea that would ruin the canyon during construction and is not practical to get skiers up. If it is going to get enough skiers up then it's certainly way too invasive. Please try to avoid the gondola if at all possible. I'm happy to hear there isn't funding for it and hope the other solutions of enhanced busing and tolling will address the issues
28688	Todd Troxell	Absolutely wrong Provides no access to the canyon except the ski areas. Unless cars are prohibited or severely limited the gondola will be underutilized most days. If this goes forward, it should be essentially the only option to get up and down the canyon except for residents and contractors/ delivery vehicles. Unless you make it very painful to drive up or so quick and easy to use the proposed alternative this is doomed. Still will be hampered on big snow days. Unsightly, impractical corporate subsidy. Trains, tunnels seem like much more viable options. Don't do it!
28689	Penny Jameson	An idea preferred only by the developers! I would prefer car access limited by road conditions and available parking with improved bus service.
28690	Alex Carrington	Please don't build this.
28691	Bradley Hardy	I would like to add my support for UDOT's decision to go with a gondola in Little Cottonwood Canyon! This is a no-brainer, a gondola is the best option and will serve our community for many generations to come! Go gondola!
28692	John Drew	The citizens of the State of Utah should not be spending a half billion dollars to build a gondola to service two privately owned ski areas. If the ski areas feel the need to build alternative access to their resorts, they should pay for it. Public transportation throughout Salt Lake City and County would be a much better investment for citizens and the environment.
28693	Brian Kahn	Go for the gondola. Show the world that Europe did it 100 years ago and now it is time for Utah. For all the backcountry skiers who say no, ask them if they will trade pollution and global warming and no snow versus getting with the program and getting traffic and pollution levels down. Get this approved. Get the Olympics. Get federal funding and get it done
28694	Robin Davis	I am strongly opposed to the gondola because 1) it will cost far more than simply increasing bus transport. Moreover, electric buses are already coming online, 2) a gondola will forever scar the natural beauty and pristine canyon.
28695	Esli Morales	I am in favor of the Gondola. Not that buses are not a solution, but we are trying to open roads and lower CO2 impact. The cost may be great but is likely more feasible in the long-run.

28696	Shane Viola	I appreciate all the effort to identify solutions to the issue of Little Cottonwood Canyon traffic. Unfortunately, I do not believe the Gondola is the best option and does not serve the overall population of Utah. This should not be an expense put forth on the taxpayer as the Gondola is only there to serve a select few members of the population that attend the ski resorts. The Gondola will be too expensive, and ultimately take too long for skiers that want to get up the canyon quickly to park in the structure and walk to the loading zone. The Traffic concern that is trying to be addressed covers a grand total of 10-15 days total in the winter based around big storms that happen to hit around a weekend. On these days, Powder chasers are not going to drive to the parking structure, walk to the loading zone for a Gondola and travel for 45 minutes to get to a resort. Those individuals will continue to travel by car as its most convenient and quicker in regards to getting on the mountain. There are multiple solutions that should be addressed first, and the primary example is paid parking. To alleviate the traffic, all ski resorts should have a mandatory parking fee that is more in line with high end ski resorts around the \$35 to \$50 range. This larger amount will force users of the canyon to utilize public transit, carpool, etc to immediately alleviate congestion in the canyon. 80% of canyon users have stated they don't want the Gondola for various reasons outside of my own. This gondola should not be an option for the select few that will profit from the Utah Tax payer.
28697	Jason Sehloff	I would strongly encourage UDOT and all other interested parties involved here to NOT support the gondola. Spending a preliminary estimate of \$550 million (which is not realistic, this will be double that) for a "solution" that will only be used two dozen times a year is irresponsible and unnecessary. That's my biggest concern is why are we building this - we don't have that many powder days or avalanches that truly require an alternative means of transportation that will otherwise side idle or empty for most of the year. A more effective means of fixing traffic in that canyon would be to toll the road on weekends, holidays, and the random powder days, while simultaneously increasing buses on those days. For avalanche concerns, if the road is bad enough that people can't get up to the resorts, then the resorts probably aren't going to be open anyways! Which just reinforces how unnecessary this entire venture is. In conclusion, this is a colossal waste of dollars (regardless of who pays for it, but especially if it's taxpayer money), all for something that will garner minimal use, destroy the beauty of the canyon, and simply should not be built.
28699	Susan Egbert	The taxpayers do not need to pay for this horrible gondola that will ruin our canyon to help only 2 business for 3 months of the year. You need to take care of this with busses or limit the amount of single cars going into the canyon. WE DONT WANT THE GONDOLA TO RUIN OUR CANYONS. NOT RIGHT FOR ONLY TWO SKI RESORTS.
28698	Jordan Hamann	I support this plan and hope that it gets implemented before any possible future Olympic Games in Salt Lake City. This will make Little Cottonwood Canyon both more of a destination and more accessible.
28700	Max Angle	As a 25 year Salt Lake City resident, avid snowborder and user of the canyons year round, I fully support the Ariel tram proposal.
28701	Kaileen Balzano	I do not support the Gondola. Why should taxpayers be responsible for paying millions of dollars for a project that mainly supports private businesses and only operates in the winter. The canyon traffic problem exists year-round and we need a solution that also exists year round. If snowbird and alta support the gondola, they should be paying for it. There are better uses for tax payer dollars in this state including, better school funding considering we are one of the lowest in the country per pupil.
28702	Kevin Nichol	<p>Thanks for sticking with the facts and selecting a preferred alternative that best meets the purpose and need for a LONG-TERM transportation solution and not being swayed by the emotional responses of its detractors. I love Little Cottonwood Canyon, having been skiing, hiking, climbing, and camping there for over 60 years and I am amazed at the traffic issues RIGHT NOW that have become untenable in just the past few years.</p> <p>Yes, there will be visual impacts from the gondola, but I think it will be far less noticeable than people are claiming. And widening the road to increase the frequency of noisy, smelly buses will make permanent, irreversible changes to the character of the drive up the canyon. There is a boulder that my father pointed out to me when I was very young that was "propped up" by a stick. People have been religiously maintaining that stick and that little tradition for the six decades that I am aware of, and probably for many years before that. It is an integral part of the canyon drive. I am quite sure that we would lose that boulder and that tradition would be swept away if we widen the highway.</p> <p>The current Sandy mayor opposes the gondola, in part because of up-front cost. I might point out that the previous Sandy mayor opposed the original TRAX line, for much the same reason, and wouldn't allow the line to go through the planned downtown area on State Street and 10000 South. Later, when TRAX was more successful than even the rosiest ridership estimates, he reversed course and wished there was a stop in downtown, rather than east of the high school and east of the Expo. I'm sure the gondola will be an asset to the canyon and the community.</p> <p>I was lukewarm about the gondola in its original form, because of the bus transfer needed, but when the revised version with the La Caille station was proposed. I knew it was a winner.</p> <p>I look forward to the progress.</p>
28703	Kyle Wright	As a resident of West Jordan, UT, and a frequent user of Little Cottonwood Canyon, I am firmly opposed to putting a gondola in the canyon. The proposed solution is not a solution at all. As an Alta skier, I know that I will not use the gondola unless it is cheaper and faster than any other alternative. It is clear that the gondola will be expensive to ride and expensive to park at the base, which will disincentivize me from using it. I will always choose the cheapest and fastest option to get to the mountain, thus I will continue to drive or take the bus. Additionally, I am firmly opposed to using tax-payer dollars on a project that very clearly benefits two private businesses. The proposed gondola will not solve any problems. It will ruin the view of a world-famous canyon. It will ruin other recreation areas such as climbing and hiking. It does not address the needs of all canyon users in any way, shape, or form. Please, do not ruin Little Cottonwood Canyon with an ineffective eye sore.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28704	Rachel Casey	I oppose the construction of a gondola in Little Cottonwood Canyon. There is little evidence that canyon users will use the gondola over other methods of transportation. I ski at Alta 2-3 times per week during the season and will continue to drive or take the bus because those are the cheapest and quickest options. Further, the gondola does not benefit all canyon users (it clearly benefits Alta and Snowbird). Our state should not force taxpayers to pay for something that will benefit only private businesses. Finally, Utah should first try less invasive and less permanent options to alleviate the traffic in the canyon (toll, invest in the bussing, incentivize carpooling, limit parking at resorts, etc.)
28705	Lauren Jolly	I am 1000% opposed to the building of this Gondola, especially with taxpayer money, as are most of the locals who live in Salt Lake. From what I understand, the gondola would only run in winter months, and will not be taking any visitors up the canyon to recreate outside of those times, nor will it make any stops along the way except at the very top for the two resorts, who will be the ones to truly benefit from this "free for them" tram. So in the summer we will just have an ugly eyesore that does nothing for us. I suspect this plan will also drive people to recreate more in Big Cottonwood Canyon which already sees too much traffic without any viable solutions on the table. My hope was to see mandatory bus transportation for BOTH canyons during peak days/times/holidays during the winter months, with the heavy investment put into building the necessary parking structures to allow for everyone to take a bus. No widening of the road needed either, if it's only buses going up and down. Please re-consider this because it will completely alter everything about this canyon for the future, and cost taxpayers an ungodly amount of money to benefit a few.
28706	Davis Lentz	<p>Goodmorning UDOT Team,</p> <p>My name is Davis Lentz. I've been a Utah resident for 8 years, and an avid user of Little Cottonwood Canyon during that time. Though mainly a skier, I've grown to enjoy the many other opportunities of the canyon including summer hiking and trail running.</p> <p>Upon learning of preferred alternative of the Gondola, I became dismayed. Though I'm an active skier of Alta Ski Area, the gondola really only serves people going to Alta or Snowbird Ski and Summer Resort. Additionally, there are only about 11 peak days in which the road will be well above capacity- a problem that should be solved with much less than \$500M.</p> <p>I would urge you to please reconsider, and the interim focus on increasing the efficiency of buses in LCC and all the way down to the valley floor along with carpool incentives and/or fees.</p> <p>Finally, I would like to note that our state and it's biggest industry are under great threat by the receding Great Salt Lake. At a time like this, it feels irresponsible to be allocating a great sum of money to a problem far less pertinent. Please consider diverting the funds to efforts in saving the GSL.</p> <p>Sincerely, Davis Lentz</p>
28708	Melinda Mcilwaine	The impact of a gondola system in LLC to be built with taxpayer money is a huge boondoggle and give away to the ski resorts. While climate change is a death knell for the ski industry in not many years the gondola will be an eyesore in the canyon for millenia. The disturbance in the bottom of the Canyon will be huge and the impact on wildlife severe. There are much less impactful solutions. As a user of the canyon who does not frequent the ski areas, I object strongly to this project that will just expand the ski industrial zone.
29014	Utah Day Spa	<p>Build the parking lot for cars to park. Wrap the busses with a picture of gondolas.</p> <p>It seems to me UDOT solved the transportation problem by offering bus rides up the canyon. If we have more people, UDOT will offer more busses. Problem solved.</p> <p>Next complaint we will have will be "pick me up at my house, I am too lazy to get to the bus stop."</p> <p>The canyon is beautiful just as it is. We need to learn to change our habits not change the world to adjust to me. I have lived here for 67 years. I may not like changes, but I love Utah. Want to ride a gondola, go to Deer Valley. They have destroyed an entire mountain by the Jordanelle. But there is a gondola . . .</p>
28710	Kenneth Shifrar	<p>NO GONDOLA!!!!</p> <p>Stop shoving these projects down the public's throat and stop funding private enterprises profits with our taxes. Put it to a public referendum, we do not want or need a Gondola.</p>
28711	Nate Stevens	When I first heard of the gondola idea, I thought it sounded great. Now though I have had a change of heart and am very much against it. I see how it could be good for skiing, but every other sport up the canyon it's bad for. The cost alone will be crazy, it'll destroy the view from my house looking up the canyon. Please please don't do this.
28712	Anthony Sudweeks	Please build the Gondola! I live at the mouth of the canyon, and I'm tired of the traffic (sometimes my commute to work is doubled due to the roads being at a standstill because waiting for the canyons to reopen). Also, it would be an amazing tourist attraction all on it's own.
28713	Mary Jean Jones	I already submitted a comment, but I wanted to add a couple things. Having a gondola would pleasantly cut down on road noise and the smell of brakes, making the canyon more enjoyable.
28714	Bill Woolston	For the past 50 years I have enjoyed every winter skiing up little and big Cottonwood Canyon. I strongly oppose building a gondola in this pristine beautiful and unique canyon. I have paid taxes for 30 of those years and do not want my tax dollars to go to waste and only benefit two ski resorts. Please consider limiting the number of users up the canyon during peak season. The ski experience will be forever damaged by forcing more people of the canyon via a tram system. Promoting more bus use and capping the amount of users per day will benefit the skier experience and the commute experience.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29015	Matthew Norton	<p>Hello,</p> <p>I own a home at the mouth of the canyon. The primary reason I support the gondola is that it should make it possible to easily get in and out of my home when the canyon is closed. It's currently a nightmare when the road is closed.</p> <p>I also think the gondola will be good for Utah as an added attraction. Even running at a loss in the summer would likely pay for itself multiple times over with added tourism and interest.</p> <p>Last point.....I think the cost should be more clearly differentiated to cut the gondola from the roadway work. Sounds like \$160 million of the price tag is really not driven by the gondola.</p> <p>Thank you,</p> <p>Matt</p>
28715	Christian Johnson	<p>Choosing the Gondola B option for the Little Cottonwood Canyon transportation is the wrong choice for the following reasons.</p> <ol style="list-style-type: none"> 1. It does not address transportation solutions for non-resort and non-winter users. 2. A taxpayer funded solution that only benefits two, for profit companies is egregious. 3. Permanently destroys premier rock climbing areas. 4. Permanently destroys the viewshed in the canyon. 5. The price tag will be nearly double the original \$500 million estimate provided given current inflation and construction costs. <p>I am encouraged by the "phased" approach and hope that the improvements will work well enough that the gondola will not be necessary.</p>
28716	Hudson Guttman	<p>I hate the gondola idea!!! I like nature not machines. I would rather have a good public transportation system instead.</p>
28717	Lisa Merlotti	<p>I vote no on the gondola. Skiers come to visit which is great but it will spoil all our gorgeous views for summer hiking. I vote no.</p>
28718	Emily Pitsch	<p>UDOT has acknowledged that parking is the limiting factor to getting people on the current ski bus service. It makes no sense to pursue a \$355M gondola when a parking lot would be much more affordable. I am extremely opposed to the gondola because of the abuse of taxpayer dollars.</p>
28719	Jake Hayward	<p>With everything going on, how is this the best way to spend such an extreme amount of money? Something like this benefits only the users of the canyon and its respective businesses. How much better would this money be spent on the homeless? The Salt Lake drying up? Education? Heck, even land preservation? I received a mailer from the manufacturer of the gondola about how positive it would be, and it deeply frightened me. If they were willing to spend marketing budget on mailers like that, were they involved in the decision process?</p>
28720	Jared Jenkins	<p>To whom it may concern,</p> <p>Thank you for the opportunity to comment again on the proposed transportation plans for LCC. I am very thankful that you have listened to some of the concerns of the many recreation users of LCC and have protected some of those opportunities. I am very thankful that you are protecting the world class climbing boulders that litter the canyon and draw many visitors each year. This is an un-renewable resource that has made Utah a world class destination. So thank so much for protecting the climbing boulders.</p> <p>In contrast, I would like to register my continued disapproval of the Gondola. I believe this option for solving the traffic issues in LCC is driven by big ski dollars and has not really taken the voice of the local people into account. WE DON'T WANT THE GONDOLA. The gondola will be a forever eyesore on the canyon, and removes much of the outdoor feel of the canyon in favor of a carnival-like ride for wealthy ski customers from out of town. UDOT, Ski-Utah, and resort owners need to grapple with the fact that you can't keep putting more people on the mountain to increase profits while not serving your local community. The experience of skiing in the Wasatch is nothing like what it use to be. High ticket prices, too many people, paid parking, have all made the experience very unpleasant. I feel the Gondola only caters to this big business mentality to increase profits no matter what the cost.</p> <p>As a backcountry skier myself, we are still left with no place to park and high priced tickets for transportation up the canyon on an overpriced carnival ride. This is not what the Wasatch is about. Locals and many have moved here to enjoy the beauty of the outdoors on their own terms without dictation by big ski companies.</p> <p>I am still an advocate for a mandatory bus system for peaks seasons that has a large base somewhere on 94, or 90th south, or the gravel pit at the base of BCC (Turn that eyesoar into something useful). Build a large parking structure and have buses that run ever 10 minutes. This would not require the widening of the road, and provide good clean, transportation. You can build a really large parking garage, add many CNG buses for way less than what the eys soar of a gondola would cost.</p> <p>Finally, please provide some way for backcountry skiers to enjoy LCC. Currently there are 5-6 spots designated for backcountry ski parking up at Alta. This is a joke. This does not serve a major user of the canyon and again caters to paying out of town customers.</p> <p>Please don't destroy the beauty and feel of our cherished canyon with the Gondola.</p>
29016	Melinda Mcilwaine	<p>I am submitting a comment regarding the proposed gondola in Little Cottonwood Canyon. This outrageous idea places Snowbird's interests above those of other canyon users and promises to be a huge environmental impact on water and wildlife. The ski industry will soon be obsolete due to climate change but the impact of this project will last for years and years.</p>

28721	Zachary Beucher	I was fortunate enough to enjoy working at Alta during the 2018-2019 season. I could not have imagined the way this season turned out for me; This was a year for the record books. I enjoyed two "country club" days with one resulting in the most spectacular power day imaginable. No COVID, no parking rules and no decision on a gondola. The biggest concern from everyone was that powder days seemed to be skied out faster than they could remember. I can say I did not share the same concern. A day at Alta for me is getting up the canyon, viewing the beauty of the scenery, getting to enjoy a few turns of the greatest snow on earth and sitting down at the end of the day enjoying a nice cold drink. I'm in no hurry to get on a lift and no hurry to leave. This canyon has snow for everyone to enjoy any day, any time. If this gondola makes it easier to enjoy a day at Alta with less headache of finding parking and dealing with road closures I'm in support of it. But to be honest it seems like this gondola is just funneling traffic congestion to gondola line congestion.
28722	Meaghan Mckasy	To say I am opposed to the gondola in LCC is an understatement. I completely agree that the traffic and crowding must be addressed. The increase in the last decade is astonishing. That being said, a gondola that only serves the two ski resorts for a limited time of the year, is not the answer. This is not a good use of taxpayer dollars. Improvements to public transportation and financial incentives for carpooling should be prioritized. Please, do not install this gondola to serve two private organizations in an industry that may not exist in our lifetimes due to climate change. Put the public and our planet first.
28723	Daniel Schmidt	I am a season pass holder at Alta. I also hike in the canyon in the off season. Despite the advantage to me of having a gondola, I am against the proposal. I know there have been many thousands of hours put into planning, by some very good people, But I see this as a serious mistake, one that will have immense costs financially, and not produce a positive result for the public.
28724	Skip Branch	The problem is traffic....too much of it. The Gondola doesn't help mitigate traffic....it will still be a cluster of cars because the gondola is too limited (in numbers of people it carries) and moves too slowly
28725	Jamie Dowdle	NO GONDOLA!!! This project only serves a few but costs everyone. I understand the importance of tourism income but this money could be better spent elsewhere. A frontrunner line to Provo, more tram lines on the west side, and so on. If this serves the resorts only, then the resorts should pay for it. I spent my childhood skiing. I can no longer afford to pay for skiing for my children. Costs for daily tickets have skyrocketed. I should not have to pay for a GONDOLA that I can not afford to use. This DOES NOT serve the public. PUBLIC FUNDS should not be spent funding private projects!
28726	Marc Peterson	I am both a skier, (I've held an AltaBird pass for the last 6 years), and a local resident ([REDACTED]). On heavy ski traffic days, when the road is not closed from an avalanche, the lines to ride lifts at both Alta and Snowbird can have up to 30 minutes or more in queue time. So, the current road capacity can exceed the desired ski lift capacity. I'm not interested in increasing the number of people at each resort only to increase the wait time at the lifts. I am, however, in favor of reducing the time the canyon is closed due to avalanches across the road. I think building snow sheds in the avalanche prone areas, as identified in the current UDOT recommendation, will solve this issue.
29017	Mary Beacco	I am opposed to the gondola option for LCC. 1) This solution seems like a big tax subsidy for Alta and Snowbird. I do not want my tax dollars spent this way. 2) I don't think this option will work in easing the traffic congestion. Because the gondola trip takes so long, I feel few people will choose this option. 3) The parking structure proposed for the gondola will make traffic congestion on Wasatch Blvd. worse, in my opinion. 4) Finally, one thing that might help is to have Alta and Snowbird stop selling IKON passes!
28727	Carlos Resto	I don't think that tolling the entrance will help the traffic problem. I'm pro Gondola
28728	Tina Bagley	The gondola is not the answer to addressing congestion in the canyon. We should consider a fee based system similar to what Millcreek Canyon and some of the National Parks do such as Glacier National Park. Limiting the number of people who enter the canyon is the best approach.
29018	Steven Johnson	I am against the gondola option to ease the congestion in LCC. I feel my tax dollars would be better spent in other ways. It seems the gondola would only benefit Alta and Snowbird. The gondola would be a huge gamble that may not work at all. I would not ride a gondola due to the length of time it takes to get to Alta. Wasatch Blvd. would be even more congested with a large parking structure proposed. Finally, the view of LCC would be so negatively impacted! Steven Johnson

28729	Rob White	<p>Comments on UDOT EIS for Little Cottonwood Canyon Sept. 12, 2022</p> <p>The UDOT EIS for Little Cottonwood Canyon makes a critical error. When it was begun, four years ago, traffic was increasing rapidly in the canyon due to (probably) the change in the ski industry from a ticket revenue model to a subscription model (IKON etc.).</p> <p>UDOT's assumption, their critical assumption, the assumption that their entire study is based on, is that canyon traffic will increase at some rate until 2050, by which time traffic will be truly awful on winter mornings.</p> <p>But that is impossible.</p> <p>The number of cars that the two canyons can accomodate on a winter morning is exactly the number of parking spaces in those canyons. This bears repeating. The number of cars that the two canyons can accomodate on a winter morning is exactly the number of parking spaces in those canyons. Canyon traffic movng forward in time will be stable at the capacity created by the number of parking spaces. If it is well-managed, and it is now, it can't get worse year by year.</p> <p>The resorts and UDOT started to figure this out after a couple of horrible traffic winters three or four years ago, and they have all been experimenting with mitigation strategies ever since. All four resorts now have parking strategies, each of them different from each other. What they have in common is that the resorts tweet real time parking capacity. Now we know that by 10 am on a busy morning, resort parking is full, or close to it. UDOT retweets this information and adds their own helpful real time reporting on traffic conditions in the canyons. If the resorts and trailheads in Big Cottonwood are full, they close the canyon to uphill traffic for a few hours.</p> <p>Folks know how to get to the resorts early if they really want to, and they know they can wait until noon or so if they don't want the rush. In other words, the traffic is being managed.</p> <p>Massive projects to increase parking capacity at the resorts seem to be off the table. If there is no more parking, there can be no annual increase in traffic and there is no need for big new infrastructure. UDOT's preferred alternative almost seems to recognize this by punting the gondola into the future and focusing on incremental improvements.</p> <p>Rob White [REDACTED]</p>
28730	Rebecca Mclaughlin	Get it done!
28731	Alf Engen	You guys are a bunch of corrupt SOBs. Thanks for ruining LCC.
28732	Jane Garcia	I think your choice for the gondola is a terrible idea!! I do not think other, more environmentally friendly options have been seriously attempted. The gondola is not the answer!!!!
28733	Kristin Zakoworotny	No gondola! Why ruin the aesthetic of the canyon in the interest of the ski resorts. Add tolls to the road to limit traffic or limit # of cars per day. Even a train/ tram would be a better alternative.
28734	Christian Warther	<p>I'm sure there are many comments so I will try to keep mine brief:</p> <ul style="list-style-type: none"> -Has there been sufficient traffic modeling to show the gondola does not create a new choke point at the gondola base station? -Investment in buses and park and rides can be used in LCC and the eventual need in BCC. Investment in the gondola serves only LCC. -Though anecdotal, I have yet to meet anyone in the valley who is in favor of the gondola over bus it seems more people want the bus but louder, more influential people want the gondola... a shame for a system that impacts an entire canyon, not just ski resorts -I have seen reports that Snowbird created an LLC to purchase land at the gondola base which presumably is then sold to the state for the base station. This may be totally above board but at least consider the perception of this: the main proponent of the gondola makes money at the top and and the bottom with no consideration for what happens in between. -WE STILL HAVE NOT SINCERELY TRIED MODERATE IMPACT ALTERNATIVES. I see infrastructure expansion in Big and Little CC as inevitable (sad but true). Can we TRY tolling, additional bus service, using existing business parks for weekend parking lots. I have been a contractor for UDOT and have seen some of the brilliant problem solving that agency is capable of. I am seeing none of that with relation to the LCC solutions. <p>Please listen to the public and those that use the canyon most all 12 months of the year. Last item: The proposed gondola is only capable of alleviating the bottleneck that is LCC however bus infrastructure like</p>
28735	Joan Mills	I am very, very against the gondola. I do not want my tax dollars supporting ski areas. They should only be allowed to have the number of skiers that fit in their parking lots or ride the busses. Extra bus lanes and snow sheds are the answer.
28736	Michael Martin	I support the Gondola recomendation. I am a 38 year resident of Cottonwood Heights. To me the Gondola has always made the most sense for reducing air pollution and traffic congestion.
28738	John Dainton	I absolutely do not support the implementation of a gondola in LCC due to the disruption of the view shed
28737	Paul Hooper	<p>Turn the canyon into an eyesore Disney ride! Boooo!</p> <p>Pave paradise put up a parking lots. At least parking controlled the skier population. The ski lines will be so long with tram and vehicle travel. I support car pooling and adding more buses. DOT going to ruin it! Like going to a game either pay for parking or get there early. Gonna turn it into [REDACTED] Shame</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28739	Larry Ballard	I think the gondola solution is far to expensive. This seems like a very large amount of money for all of Utah to spend on a few ski resorts. If congestion is the problem, it seems that improving bus routes during congested times and restricting parking at ski resorts would be a much better solution. Zion national park didn't build a gondola from Hurricane to the park. They implemented a shuttle system. You can't fix crowding at a tourist attraction with another tourist attraction.
28740	Wynnette Erickson	<p>I am vehemently opposed to a Disneyland like gondola running up the most beautiful canyon Salt Lake City has. I know of no one that enjoys the canyon for skiing, hiking, or rock climbing that is in favor of the gondola. The vistas will be ruined. The canyon will lose the wild beauty that I an so many others have grown up with. Electric buses make way more sense and I feel that that is the poplular consensus of most of the people that live in the Salt Lake Valley. Why are we looking at spending millions if not billions of taxpayer dollars to appease Snowbird and Alta with a gondola that only tourists will want to use. It is total [REDACTED]</p> <p>Please do not make the mistake of the gondola ruiing the natural beauty of our canyon!!!!!!</p> <p>Why cannot this proposal be on a ballot so that you can see what the majority of people want??</p>
28741	Jeff Grathwohl	Please, no gondola. It's a taxpayer subsidy to two fat businesses. I can't even afford to ski at Alta or Snowbird these days.
28742	Brian Casper	Transporting 35 people every two minutes is the best case scenario and is not going to make a big difference and is certainly not worth \$700M - \$1 Billion. And who wants to be packed into a gondola with 34 other people? And wouldn't it be cheaper to just charter a couple dozen busses during the peak season?
28743	Hallie Yurick	During the temporary phase of enhanced busing, please consider employee work times and the 2 Alta bases that would benefit from more buses in the middle of the day when currently there is an hour or two when no buses depart. Also, please consider Alta only buses. I'm often tempted to bus rather than drive but because I can leave my house and get to Alta to work in 20 minutes, I choose to drive instead as I don't want to add 40 minutes onto my commute.
28744	Ed Mineau	<p>I support the gondola concept but am concerned that the explanations of other options are unclear as to whether tolling pricing and restrictions on canyon entry are stand alone items or in addition to the gondola. If they are in addition to the gondola, I do not want the gondola if it means that:</p> <ol style="list-style-type: none"> 1. Single passenger vehicles would be banned during peak hours. There are a lot of people who can only ski part day due to work requirements & may not have companions to share the vehicle due to different timing needs. 2. A toll of \$ 25- 30 per car is excessive and discriminates against lower income people . There are plenty of people who ski on a limited budget and could not absorb this much extra cost.
28745	John Unger	Opposed to any proposed changes
28746	Gordy Peifer	Boooo! You guys are criminals for ignoring public sentiment and going ahead with this ridiculous boondoggle. I wouldn't be surprised if it's sabatoged like they did in Whistler. The people responsible for this ridiculous, unnecessary blight in our state's crown jewel canyon should be prosecuted for this sham.
28747	Nick Firmani	<p>Regarding figure 7.4-1, vehicle backup lengths by alternative: the enhanced bus service option is nearly as good as any of the other alternatives. This should be considered as a separate alternative, and selected.</p> <p>Regarding figure 32E.2, can a winter time rendering (no leaves on trees) be provided? Providing a rendering that obscures the tower and gondola behind deciduous trees beguiles the view during a sizable portion of the year.</p> <p>Regarding chapter 32E.3, all of the figures have a point of view that intentionally minimizes the appearance of the gondola. Just because the tops of the gondola towers are below the starts of these climbing routes doesn't mean that they're not visible. Were these renderings the only ones that UDOT and the Utah State Historic Preservation Officer used to determine visual impact? Simply angling the point of view downward (Figure 32E.3-2) or to the right (Figure 32E.3-4) would substantially alter the character of the rendering, demonstrating the actual visual impact of the gondola.</p> <p>Overall, the gondola is clearly the wrong, more expensive, shortest lasting choice, and should not be prioritized. Enhanced bus service should be the only preferred alternative.</p>
28748	Luke Steadman	I oppose the gondola as it does not fix the problem of too many people in the canyons at one time. Remove the iKon pass and raise prices. I prefer the bus option/road widening.
29019	Henry Thomas	I stand with the 80% of Utahns that don't want a gondola. Why should the tax payer pay for something that benefits the giant multi-million dollar ski resorts? Why should we destroy the canyon irreversibly when we could simply build a better road and have many more busses. The construction that will make the gondola alone will contribute to so much pollution, and the busses will contribute only a fraction. Whose to say if the gondola will even work to carry the amount of passengers that it needs. Besides, busses are a lot less scary to ride. I am highly opposed and disappointed in Utah that they are building this monstrosity. Please STOP!
28749	Joseph Watkins	The identified preferred alternative is a terrible idea. Either fix the road increase buses or build a train.

ID	Full Name	Comment
28750	Thomas Walker	<p>What if we don't need extra lanes or a gondola to ease the congestion in Little Cottonwood Canyon (LCC)? What if a few rule and logistical changes could suffice? Here's what I mean:</p> <ol style="list-style-type: none"> 1. Prohibit private vehicles from LCC during peak season and anytime new snow is forecast to be 5" or more. 2. Significantly expand ski-season bus trip frequency up and down LCC. With no private vehicles on the road during otherwise busy times, both existing lanes become "Express" bus lanes. 3. Scrutinize existing city/county bus routes. Make adjustments to ensure that access to LCC-bound buses is available from key city/county bus stops, with no more than one connection to get to them from tertiary stops (thereby allowing most people access without requiring additional parking lot construction). Schedules should ensure ample arrival and departure (to/from the resorts) times. <p>UTA may need to buy a few more buses for the purpose, but I'd bet the associated cost would be less than the \$500 to \$550 million expected gondola cost by orders of magnitude.</p>
28751	Jeremy Cummings	<p>Thank you for all your diligence and hard work preparing the EIS. Even though I am disappointed that the Gondola is still being considered, I am pleased that the phased approach is being implemented. I am very pleased that the road will not be widened which would be very destructive to the canyon. My concerns with the gondola are many and some include, high cost, service to private businesses only, environmental destruction, and visual pollution. I am also concerned by those individuals who will profit from the construction. Ultimately, tolling, avalanche sheds, and increase bus service are the best option to improve the transportation issues in BCC.</p>
28752	David Curley	<p>I am opposed to the gondola and agree with the stance of Friends of Alta. Incremental changes with each phase undergoing a study makes sense to me</p>
28753	Annalise Bianco	<p>Enhanced Bus Service Alternative:</p> <p>I'd like to propose ideas to build off of the "enhanced bus service alternative" plan that will be effective this winter. As an employee of the canyon, I feel as if my biggest barrier in getting up and down quickly is the lack of buses and long bus times. For example, a bus wouldn't come to the Wasatch 3500 E Park and ride for hours after 2 pm. When skiing ends at 4 pm, skiers want to get there as quickly as possible. UDOT also has many other routes throughout the valley that restrict the number of buses up / down the canyon. Is there any way UDOT, Alta, and Snowbird can work together on a solution where there are specific ski buses for each ski area? Many other resorts like Big Sky and Aspen do this. Where, there is an Alta or Snowbird-specific bus that only runs up and down the canyon. Then, at the base or near Bell's canyon area, create a parking system that allows cars to park there to catch the bus. If a bus ran every 15 minutes from the base and back to the base until 10 pm, employees and skiers would be more likely to take the bus. This is especially because it makes the most sense economically with gas prices and the wear on cars. How can UDOT, Alta, and Snowbird incentivize this? Maybe there can be a way where people can receive "green credits" every time they use the bus instead of driving their car up the canyon. "Credits" can eventually build up to discounts at Snowbird/Alta shops, and restaurants, or even can be applied towards next season's pass. I am passionate about a bus solution to the traffic problem. Please feel free to contact me if you would like to discuss this further.</p> <p>Thank you, Annalise</p>
28754	Allen Hughes	<p>Why are we spending this kind of money on a transportation project that will benefit a relatively number of people? First, we, the people, do not have this kind of money. Governments only have tax dollars that have to be paid by "the people". Second, if we are considering spending such a large sum of money, aren't there other needs that are far more pressing? Housing, homelessness, basic services for low income households, improved city streets, etc., come to mind. PLEASE do not do this project.</p>
28755	Bob Bonar	<p>Thank you UDOT for moving forward with a plan that will improve transportation, improve air and water quality in the canyon and greatly improve safety on one of N Americas most dangerous highways. The citizens of Utah deserve to have improved, safe transit in this beautiful canyon and it is critical we act to improve air and our precious water quality whenever possible. UDOT has approved the only option that solves these long standing serious problems. Thank you, Bob Bonar</p>
28756	Kevin Bell	<p>Rich skiers should pay for anything related to transportation to their elite playground. Otherwise you're stealing from the poor to benefit the rich.</p>
28757	Angie Simmons	<p>I am against the Gondola because of the enormous cost that will be put upon taxpayers in the form of tax increases - and it will only benefit two ski resorts! The gondola itself will destroy the canyon view and scenery. And after all this I guarantee people will still prefer to drive to ski resorts because it is cheaper and faster. This is a horrible option that has only made it this far because people are making BIG money off of it. At the expense of taxpayers. I have been on the fence about this gondola but I am so against it now after learning about the enormous expense (in some places this may be as big as an 8% tax increase for taxpayers! All for a gondola!!)</p>
28758	Melissa Mortensen	<p>No Gondola. Keep canyon as is.</p>
28759	Donald Heller	<p>Buses and car pooling Are sane. So many drivers are solo or far less than full Going up and down. Not That hard to solve The problem with voluntary ride sharing and busing. A gondola will take one of the great and accessible Canyons of The world and turn it into a man made theme park. NO TO A GONDOLA !!!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28760	Nathaniel Shultz	I have been a full time Cottonwood Heights resident since 2008. I moved to SLC for access to our amazing canyons to ski and rock climb and have worked hard to create a life allowing me to spent most of my free time recreating in Little Cottonwood Canyon. I truly think that the proposed Gondola is the wrong decision to address traffic and canyon access. It seems to focus on only bringing visitors to the ski resorts and does not address the overall needs or diverse users of the canyons. I strongly urge you to reconsider alternate options. I believe a expanded bus service would be the logical next step. Please, please do NOT use tax payer funds to permanently alter the landscape of our precious canyons.
28761	Susan Thomas	Last year both ski resorts had a reservation system and it improved the parking and driving conditions. Operating the buses more frequently during the day should spread the traffic out. Little Cottonwood isn't the only problem area. The gondola service won't help the traffic that backs up into Holladay and I 215. More frequent bus service will. The gondola seems like a big engineering boondoggle. It will forever scar the natural scenery. The towers and cables sticking out everywhere will be an eyesore. And I haven't seen much about what it will cost for the skier. Gondolas in Europe are \$150 per trip. A pleasure trip for the rich.
28762	Blaine Moss	Very disappointed that we are considering a very expensive short term and long term solution of a gondola. Start with something that is immediately scalable like tolling and buses. I'm an avid skier but we don't need public money being spent to enhance 2 ski resorts ability to service a small clientele on a few "snow days". These resorts have plenty of money. They don't need public funds to gift them an expensive solution.
28763	Alex Fielder	I am very much opposed to the gondola. I don't think the good people of Utah should pay for something that would strictly benefit the ski resort. The only reason I like the plan as it stands is because improved bus service and tolling is being tried first. I pray that it works, and I think the gondola interest group is playing such an evil game to the public. I know UDOT is going to do whatever it wants anyway, so I have no clue why I wrote this, but despite this being a useless task, I would feel bad not speaking my mind. Be smart UDOT, please.
29468	Kenneth Peck	Hi, I believe this number is for the gondola make sense project team. I am going on record as being opposed to it. For four reasons. Number one. You're going to have to dig up the canyon for the tower construction and the maintenance so, how can you get around to doing that? It's the same thing as widening the road Number two you're going to ruin forever the view of our Glacier made distinct looking Canyon with ugly Towers going down it. Number 3, safety. How are you going to support a hundred or so Gonzales going up the canyon if I we have a great raging blizzard and it is 40 50 ,60 mile an hour winds. I've been on the gondola in Park City where it stopped because of the Winds, Its Scary, Its uncomfortable, its unsafe and finally the cost to maintain it over the next fifty years. Hows that going to be handled. I can tell you how it's going to be handled and I think it will be handled by the taxpayers of Utah, and I'm totally against that my name is Kenneth Peck. I can be reached at [REDACTED]
28764	Ira Goodsmith	I am furious with the decision that UDOT has made pertaining to putting a gondola up LLC. 70% of respondents to your initial poll were against this terrible plan for the canyon yet somehow UDOT still went ahead and approved this costly, and totally unnecessary plan. Taxpayer's should not be burdened with this plan that only benefits the developer's and the resorts. What kind of Bull is this! Who payed off who? The canyon facilities are already taxed with massive amounts of people and now you want to make it twice as crowded. LLC has a unique environment and must be cared for and protected at all costs. There are many other proposals that make more sense and won't make a mess of our beloved canyon. And what about Wasatch Blvd, 5 lanes, are you kidding me! 5 lanes down to 2? Parking for 2500 cars at a base station? Your plan is ALL wrong!
28766	Christopher Liechty	I am excited about the gondola for a little Cottonwood Canyon. I feel UDOT has done a thorough job In evaluating all the options. I support the Utah decision for a gondola option B.
28765	Stanley Rosenweig	Thousands and thousands of citizens have told you they are against the gondola and the 600 million dollar public cost. You continue to ask us, again and again, for comments and then go about your own business doing whatever you want. This will end up in court because you won't listen to the public. No gondola.
28767	Mary Warner	JUST STOP SUPPORTING THIS- NO LOCALS WANT THIS!!!
28768	Brian Negus	I have been skiing at Alta since the 1980's. It is my favorite ski area and my wife and children grew up skiing here. I think the Gondola is a terrible idea. It will absolutely ruin the appearance and the charm of the canyon. We have taken the UTA busses before and if we cannot drive our own vehicle, we would much prefer shared busses to this monstrosity. It will destroy what makes the area so special. I'd rather go to Vail. Horrible, Horrible idea.
28769	Mitchell Summers	Gondola will not tear up the creek. Avalanches will impact lanes for expanded bus service.
28770	Mitchell Negus	I learned to ski at Alta and come almost every year. It is my favorite area by far. The Gondola will ruin what makes this area so special. Please, please reject this horrific idea. I would have to find another area that hasn't been defaced and destroyed. ?
28771	Andrew Negus	I cannot believe this abysmal idea has made it this far and might actually happen. It will completely decimate the beauty of the area. I learned to ski here and love this area so much. My heart is breaking to think that it will be permanently damaged with this Gondola. I would never ride this boondoggle and would have to go to Jackson Hole instead. Idiomatic idea pitched by real estate developers, not skiers.
28772	William Negus	I learned to ski here and will always come back, unless this Gondola is built. It will completely ruin the area for me. We take the UTA busses all the time. Why deface the canyon when busses work? Soon there will be quiet electric busses. The gondola will permanently and irretrievably damage the canyon. Please reconsider this.
28773	Josh Brown	It's a good idea jus imagine how much dirt u would have to move to put 2 lanes on that road
28774	Tim Oettinger	Please NO GONDOLA, seriously no one who lives in slc wants it!
28775	Karen Adams	I am 100% against the gondola. Global warming is real. I do not feel that it is necessary to spend a 1/2 billion dollars , of tax payers money, on a gondola . There's there's a small portion of the Salt Lake Valley that would use the gondola. I would rather see the 1/2 billion dollars spent on issues that are important NOW. The air quality has gotten worse over the last few years. The inversion, smog, pollution, the influx of people have all contributed to the horrible air quality. I would like to see more, and better, transportation. Encourage people to get off the roads and get on public transportation. Offer more frequent transportation, more free fare days etc.. Also use the money to Offer higher wages for teachers, police, firemen, transit workers etc. We need tob breathe easy. Not build a gondola.
28776	Susan Ogilvie	Keep the canyon as natural as possible. No gondola. Spend the money where it helps more people instead of only those who can afford the luxury of skiing. Limit cars. Build parking at the base and provide buses. PLEASE NO GONDOLA.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28777	Joe Rhodes	Taxpayers should not be funding a project that only helps 2 ski resorts. Plenty of other options that don't cost taxpayers as much. If the ski resorts want to keep operating at overloaded levels, let them fund a solution. Residents near the canyon don't want a years long project tearing up the mouth of the canyon.
28778	Robert Dykman	No Gondola. The Public does not need to pay to fix the problem the privet business "ski resorts" are experiencing.
28779	Cade Dopp	I do not want my tax dollars to be used to help people with their ski trips. Let the resorts fund a solution to their problem of getting skiers up and down the canyon.
28780	Sandra Schmitt	<p>Utah Physicians for a Healthy Environment notes, "the state proposes a public subsidy of two ski resorts, coming at a time where the future of the skiing industry is at serious risk due to climate related warmer winters and diminishing snow pack. The congestion is only a problem for 15-20 days a year, and as the skiing season will undoubtedly continue to contract in the future, the problem will become even less frequent. A gondola does little to reduce canyon traffic generated by non-skiers, and it will only push the congestion further down into Cottonwood Heights.</p> <p>The 262 ft towers would be a permanent blight on the beautiful, natural scenery that is the canyon's greatest, and irreplaceable public asset. The blasting, digging, and construction of the gondola will almost certainly contaminate the water in the stream."</p> <p>There are so many better things, with real benefits to the public, that half a billion dollars of taxpayer money could do. there are a host of issues in Utah that could use \$500 million to ensure the most vulnerable have access to basic needs, such as housing, food, employment and utilities. Please abandon the gondola in Little Cottonwood Canyon and enable the state to prioritize the needs of people who are struggling.</p>
28781	Beckett Reed	Building a gondola is financially irresponsible and will trample the beauty of LCC. It is unnecessary and a waste of money, time and natural beauty
28782	Matt Brooks	Please stop subsidizing ski resorts & incentivizing more canyon traffic.
28783	Christalyn Pottenger	I don't feel that the gondola is the ultimate right choice for our canyon, but I feel it is better than destroying our canyon to make a 6 lane highway only to add cars and busses which will just jam up our roads worse than they are now, any time it snows. If we have no better option, I have to say the gondola makes better sense for the environment.
28784	Julie Epperson	I am opposed to the gondala proposed for Little Cottonwood Canyon. This is designed to support two for profit ski resorts and requires way too much taxpayer support both to build and to maintain. The parking changes put in place last year helped to minimize the crowds and road traffic. I suggest the additional bus service and some road widening is sufficient m.
28785	Stephen Gelb	Please please do not build this gondola in little cottonwood canyon. An environmental and operational distaster.
28786	Karl Bromfield	<p>I would like to express my support for the gondola. I believe it strikes the correct balance between transporting people and minimising the impact on the canyon environment.</p> <p>Please build the gondola!</p>
28787	Jenna Weber	Please do not destroy LCC with a gondola that will only benefit a few at the cost of many.
28788	Sean Mckenna	Please do not go forward with this gondola plan. This proposal is a drain of taxpayer funds.
28789	Kendall Goodman	The gondola will only make the crowding worse. It's unnecessary and none of the canyon's most loyal users want it.
28790	Jonathan Cassidy	<p>A more efficient bus system would be a better solution to your traffic and safety problem. Also having a worker check people's 4x4 and tires before they come into the canyon on a snowy day would be very beneficial to creating a safer commute as you all say you hope to do. You could pay whoever is checking the vehicles a nice hourly wage with all the money you save from not having to spend it on a multi million dollar gondola that will also require people to run it constantly every day. The gondola will ruin the landscape, and negatively impact the climbing community. The aesthetic will never be the same with such a large construction project. You could also require people who have not lived in Utah for 6 months or longer to take the bus, and explain to them that we require this to help with traffic, parking, and the environmental impact of tourism. There are better solutions than this, and it looks like a guise to make more money for the wealthy people invested in the tourism sector of little cottonwood canyon. I find it entirely unnecessary without first trying a multitude of other strategies, and it is obviously being lobbied for by very wealthy individuals who will reap all the benefits. You will be isolating and alienating the thousands upon thousands of long time locals opposed to this short sighted proposition if you don't try other solutions to this. The Wasatch deserves more respect, and the local community that will have to see this gondola every time they go for a scenic hike, climb, or backcountry ski run will forever be affected. Instead of a pure mountain scape there will be a huge gondola will be in the background forever. Like a Disney World. It's a shame.</p>
28791	Francesco Perri	I'm against the gondola. It's a waste of tax payer money that benefits only Alta and Snowbird while completely ignoring other uses of the canyon, i.e. hiking, climbing, back country touring etc. I'd rather have a toll to use the canyon or just have the resorts limit capacity. There's a limit to how many people you can put up there. At some point the answer has to be limiting capacity.
28792	Vasilyevaslusy Vasilyevaslusy	<p>Ñ-æ-Ç-æ-Å-µ-Å-Å-Γ-è-ς-Å-Ç-É-¥-Γ-Γ BOT</p> <p>-ø-µ-Ç-µ-Å-±-É-Å-¿</p>

28793	Henry Holland	<p>As a resident of Alta UT in Little Cottonwood Canyon, I have mixed feelings about the proposed Gondola.</p> <p>With that said, from an objective standpoint the only logical conclusion to solving the transportation issues up the canyon during the winter months is constructing the Gondola. First and foremost, it is unquestionably the safest transportation up and down the canyon. No reasonable person can believe that it is 100% safe to travel up and down the canyon during winter months with risks of avalanches, snow covered roads and ice no matter how hard UDOT tries to keep the roads safe for travel. It is only a matter of time until there is a devastating loss of life. The only alternative would be to build the snow sheds similar to European alpine areas, but this would be an unattractive solution that would not address the environmental concerns.</p> <p>From an environmental perspective it offers the only clean air solution to the canyon. Once implemented, the goal should be to make Alta a pedestrian zone and to restrict day travelers from using cars to reach the two ski resorts.</p> <p>Many of the Swiss and Austrian resorts have pedestrian zones and utilize gondolas for transportation. The hysteria from the opposition is unfounded and do not provide solutions that preserve the safety and wellbeing of the tens of thousands of travelers that use the canyon each year.</p>
28794	Teri Rousseau	<p>Just wondering if anyone has considered climate change and that by the time the gondola is built we quite possibly will not have enough snow to support our ski resorts and then what is the point of the gondola.</p>
28795	Luke Wendt	<p>Why is it felt to be a superior option? Gondolas are shut down routinely on the slopes for wind, severe weather, lightning, etc. those are the times when the cottonwoods are busiest and most difficult to drive. A gondola won't fix that. They are an eye sore to the beauty of the canyon, there isn't good enough parking, roads, etc at the mouth of the canyon for this whole expansive project. I would love for the members that voted on this to account for any disclosures, donations, or relationships they may have with the proposed builders of this project and land owned that will be used for this project. Little cottonwood was destroyed by our ancestors overusing trees, water, and now here we are again, planning to destroy it.</p>
28796	Lori Smith	<p>I am against the gondola . It's ridiculous to spend an exorbitant amount of money on the gondola without even trying some other options . Those options could be incentives to ride the bus , incentives for car pooling . The way global warming affecting our weather , in twenty years there may not even be enough snow to ski and then we're stuck with a huge, expensive eye sore . Now one even mentions the ghastly parking garage that will be constructed and the traffic in and around that . There is so much that the public doesn't know and most people don't even know that it will be tax payer money that funds this mess .</p>
28797	Randhir Jhamb	<p>As a home owner in Alta since 1995, I find the idea of an invasive gondola against all that Alta stands for, and represents to those of us who choose to live here. Towers and cables destroying the beautiful vistas that people come to enjoy in the Wasatch National Forest is something that's hard to envision. This is NOT the best option for alleviating traffic and congestion in the Little Cottonwood Canyon; please consider other alternatives!</p>
28798	Lori Stetson	<p>This is a fantastic idea and I fully support it. The revenue it will bring to the valley year round in tourism will be great. The environmental impact will be much less than the road expansion all the way up and avoids avalanche controls. I support this 100%.</p>
28799	Walter Roy	<p>I'm a retired, long time Alta/Snowbird skier who now skis 100+ days per year. As a taxpayer I vigorously oppose the proposed gondola, which benefits only two private businesses who can't handle the crowds they currently get on powder days (and to my knowledge aren't going to pay anything for it). The only time there is a problem is on snow days when traction laws aren't enforced. Install an electronic gate that allows only vehicles with a sticker that has pre approved it's compliance. Take a picture of license plates that enter without a sticker and send the owner a big fine. Why are we proposing a \$500+ million solution that won't solve the problem? The gondola will not stop people from driving improperly equipped cars from causing backups on snow days.</p>
28800	Kody Degen	<p>The funding we currently have is inadequate and will take many years to save up for, it's not worth it. It would take hundreds of millions of dollars. Yes, there may be less traffic once this is in place, but its not worth the wildlife being harmed or relocated. It's not the right solution</p>
28801	Ann Zieve	<p>As a practicing Catholic in the state of Utah, I believe that public policy decisions should be gauged by how they impact the most vulnerable in our communities. In Utah, just about every county is facing a housing crisis. Rural communities are struggling to maintain agricultural production that feeds all of us. Despite the Utah legislature's best efforts, the fossil fuels industries are discovering growing resistance to continued degradation of our air and environment. In other words, there are a host of issues in Utah that could use \$500 million to ensure the most vulnerable have access to basic needs, such as housing, food, employment and utilities. I am against spending \$500 MILLION to provide an easier ride for people who can afford to ski to get to the resorts. \$500 million of state taxpayer money to benefit the few and resolve a problem that really only exists for a few days each winter. Please do the right thing to help those who need it most. Thank you.</p>
28802	Julie Ewing	<p>I do not support construction of the gondola. I think it will completely wreck the aesthetics of Little Cottonwood Canyon. Any of the other alternatives which do not involve construction of the gondola would be better.</p>
28803	Mike Wagreich	<p>I have lived in Utah since 1974, and love these mountains. PLEASE stop the demand for growth. Require skiers to carpool! Add more buses! There is no need for a gondola that will ruin the natural beauty of the canyon!!</p>
28804	Katherine Allemeier	<p>As a Utah and Salt Lake City resident, I strongly oppose the building of the gondola. It WILL NOT fix the problems it is seeking to fix and will only cause greater environmental harm to the canyon. What happened to the rail line that was proposed and found to be the most efficient and cause the least harm to the environment?</p>

29469	Anonymous	<p>Dear Udot. Hello. As a lifelong user of Little Cottonwood. I'd like to strongly Advocate against the gondola and the Road expansion at present. To put it simply we only have one LCC and it's our duty to care for it and preserve it for future Generations. A gondola or four-lane highway are simply things that we cannot undo easily. These will indelibly alter this canyon. Furthermore these measures will mostly lie useless for the majority of the Year during which the current infrastructure needs to be managed effectively. Conservative solutions can work. As a regular skier, I've seen the powerful impact of the reservation system at the ski resorts and how an increase in carpooling can decrease Canyon traffic. We can come up with solutions that will improve access without harming the canyon as much as a gondola or a Road expansion. The end we can do these can be effective. Finally taxpayer burden is a major issue the projected \$500 million cost of the massive rather than the average utahn time during a time of inflation and the looming recession and represents corporate welfare for the ski industry it could be better used to help families and communities across Utah. I realize that this comment may come as too little too late, but if possible, I'd love to take some of you guys out and help you guys experience LCC as I am just majority of Utah and see it. Please. Feel free to get a hold of me at [REDACTED] Once again, [REDACTED] Please please reconsider. 00:00</p>
28805	Sierra Engle	<p>NO GONDOLA!!! Nothing should be passed if the large majority of people it would "benefit" don't want it. What about hikers wanting to stop at one of the many different trail heads? Or the fact that it will be a major eye sore, take forever to be built, and technology will be outdated faster than you think. Us tax payers should not have to pay for something that we don't want and only benefits the resort owners. Resort use fees have gone up drastically in the last 10 years. They have more than enough money and profits to pay for something that only benefits them.</p>
28806	Nicholas Koch	<p>Dear UDOT,</p> <p>As a life-long user of LCC, I'd like to strongly advocate against the gondola and road expansion at present.</p> <p>To put it simply, God has only given us one Little Cottonwood, and it's our duty to care for it and preserve it for future generations. A gondola or a 4-lane highway are simply not things that we can "undo" easily, and indelibly alter the canyon. Furthermore, these measures will mostly lie useless for the majority of the year, during which the current infrastructure meets user demand effectively.</p> <p>Conservative solutions can work. As a regular skier, I've already seen the powerful impact that the reservation system has had on increasing carpooling and decreasing canyon traffic. We can come up with solutions that will improve access without harming the canyon such as tolls for single drivers during peak months, expanded bus services, and snow sheds on the current road.</p> <p>Finally, taxpayer burden is a major issue. The projected 500 million dollar cost is a burden on the average Utahn during a time of inflation and a looming recession, and represents corporate welfare for the ski industry that could be put to better use helping families and communities across Utah.</p>
28807	Colin Rehkugler	<p>I am absolutely NOT in support of a gondola up LCC. This is a complete waste of the public's money. The use time is only really a few days of the year. In addition, I see no reason for anyone to take over 1 hour to go up the canyon when it normally is a 1 hour drive. PLEASE stop this nonsense and work on improving the infrastructure already in place to address the traffic issues.</p>
28808	Jacob Gardner	<p>Don't ruin nature.. traffic isn't even that bad unless someone gets in an accident..</p>
28809	David Tillotson	<p>Several comments have been made by myself and my neighbors for UDOT to reconsider putting a noise wall along the north side of 209 just west of the "V" and west of the bridge. There is a single loaded part of Canyon View place that already gets significant noise from 209 and it is sure to get worse with the added traffic a parking garage and base station will bring along 209.</p> <p>The comment was addressed by UDOT in response 32.11F - saying that "noise levels in this area did not exceed UDOT's noise abatement policy". Can we please get the results of that reading?</p> <p>Also for the gondola UDOT is considering impacts well into the future (2050), did UDOT consider the added traffic and noise / safety risk that will come with putting a 2,500 stall garage on 210? Surely there will be more cars and congestion trying to access the garage from 209 and then double back on 210?</p> <p>If you are going to ruin our views by putting in a gondola, the least you can do is save us from the noise pollution, actual pollution (cars idling), and safety risk to children.</p> <p>Thanks you for your consideration.</p> <p>David Tillotson</p> <p>And please send reference to UDOT's Noise measurements (and 2050 noise predictions) for this section of 209 in your response.</p>
28810	Trent Bucknam	<p>Enhanced bus & parking Only should be tried first, and lanes can be considered far in the future if needed, but I think that is unlikely.</p>
28811	Jennifer Blake	<p>We do not want the gondola! This will not help the problem at all. Why don't you start charging for parking instead? Or invest in electric busses? This is a HUGE waste of money and resources.</p>

28812	Anna Tillotson	<p>Several comments have been made for UDOT to reconsider putting a noise wall along the north side of 209 just west of the "V" and west of the bridge. There is a single loaded part of Canyon View place that already gets significant noise from 209 and it is sure to get worse with the added traffic a parking garage and base station will bring along 209.</p> <p>The comment was addressed by UDOT in response 32.11F - saying that "noise levels in this area did not exceed UDOT's noise abatement policy". Can we please get the results of that reading? Also what are UDOT's prediction on noise once the gondola and base station are constructed? Surely there will be more cars and congestion trying to access the garage from 209 and then double back on 210?</p> <p>If you are going to ruin our views by putting in a gondola, the least you can do is save us from the noise pollution, actual pollution (cars idling), and safety risk to children.</p> <p>Thanks you for your consideration.</p> <p>Anna Tillotson</p>
28813	Mick S	<p>This decision is disappointing. The Gondola will be outrageously expensive, and ultimately destructive to a canyon that is a Utah treasure and should be protected not exploited. The good news is that initially the phased approach with enhanced bus service will be implemented. Hopefully UDOT will see the light and make this a permanent solution, and abandon plans for the gondola.</p>
28814	Jeri Brummett	<p>I believe a gondola in Little Cottonwood Canyon would be the best environmental option and base this on the system in Albuquerque which has proven to be environmentally sound.</p>
28815	Ilysa Parker	<p>I do not feel a gondola will solve the traffic and congestion in Little Cottonwood. I am opposed to this idea and think the pursuit of other options are less costly and will keep more drivers from driving up on their own. I would rather get on a bus in a dedicated bus lane, with a place to park my car out of the canyon, to go skiing. The gondola will not provide the convenience and time people are looking for.</p>
28816	Don Polster	<p>I am 100% against using public tax dollars to build and operate a gondola that will primarily benefit two private corporations.</p>
28817	Diane Schnarr	<p>This is a canyon we want to preserve - not get more people into it. That's why we have Park City. We don't want to speed people up the canyon. Please find a better use for this money</p>
28819	Mark Snyderman	<p>I think a gondola up Little Cottonwood canyon would not work to solve the problem, be messy to construct, disturb animal habitat and be unsightly. Instead I favor improved bus service and snow sheds. It would also be nice if the busses were electric.</p>
28818	Matt Carey	<p>The gondola will not fix the problem, and will only relocate it to a new place. Beyond just moving the traffic from inside the canyon to the neighborhoods below, it will also create permanent damage to the forest lands where the gondola will live.</p> <p>Beyond that, this is a ridiculously expensive usage of tax dollars that will only benefit the skiers, snowboarders, and most importantly Alta and Snowbird.</p> <p>We need a solution that will benefit everyone, and the entire canyon.</p>
28820	Paul Schnarr	<p>waste of tax money will increase congestion on Wasatch blvd</p>
28821	Zachary Millsap	<p>Please do not build a gondola, little cottonwood canyon is beautiful and should be preserved.</p>
28822	Paul Huber	<p>Looks good to me. I'm a retired skier (82) but look forward to the new and improved LCC. What will be the fare to ride-with and without skis?</p>
28823	Steven Miller	<p>Hello,</p> <p>Thank you all for taking the time to consider the public opinion.</p> <p>I am an avid user of LCC primarily for skiing Snowbird and the backcountry, but also for climbing and hiking. I am also a local of SLC for nearly a decade and have seen the growth of the population, traffic times, etc. I reviewed your data and the chart for "alternative impacts summary" that had details of each solution was incredibly helpful. Thank you for preparing that information.</p> <p>I'm writing in strong opposition to the Gondola or any widening of the highway.</p> <p>Expenses over 500 million dollars and NEW construction in wilderness are unacceptable downsides when the benefit is to alleviate traffic on about 10-15% of the days of the year.</p> <p>Access to beautiful and special places often comes at a cost of time. I am okay with that. Eventually the population will grow more and access will be an issue again. Let us just accept that access to the outdoors is sometimes going to take extra effort and time, and that's okay.</p> <p>I oppose this in the strongest possible way. Review of your table that shows the expected results of "no changes or just enhanced buses" is most in line with stewardship of our environment and tax payers dollars.</p> <p>Ps. the carbon emission argument from cars is silly when kept in perspective. E.g. UDOT keeps widening I15 so people can live in the suburbs.</p> <p>Sincerely,</p> <p>Steven Miller</p>

28824	Kendra Van Horssen	Please do not destroy the beautiful canyon with cables and gondolas. As a local tax payer and resident my whole life in Utah. I am in support of Mayor Wilson's proposed Common Sense Plan. Please consider the technology over destroying the views for the profits of resorts.
28825	Jocelyn Kearnl	I am in favor of a plan that would serve all canyon users, winter and summer. The gondola seems too narrowly focused on skiers (and I am one of those so I would benefit from it) and creates visuals that are not in line with one of the most beautiful canyons in the world. With the uncertain impact of climate change on our future ski seasons, the gondola plan also doesn't seem in step with reality for an investment of that size (especially if it's 5 years down the road). Let's keep doing all the other traffic mitigation measures -- required parking reservations, carpool incentives, and more buses -- for both winter AND summer to maintain and conserve Little Cottonwood Canyon's beauty and qualities for the most people possible.
28826	Michael Eichorn	The Gondola is not the answer. People will still drive up the canyon, we are just increasing the # of people at alta and snowbird. traffic will move further into the valley, and become even more of a problem for locals in the area. Its an eyesore, and a giant waste of money. The real estate development deals that are going on in the background make me question motivations and wonder who really benefits. Tax payers shouldnt be flipping this enormous cost, ski areas should at least being paying their share. Please reconsider.
28827	Jeffrey Lunt	I love it. It is great to see alternatives to personal vehicles. Everyone I talk to about it who is opposed is also opposed to the widening and is also opposed to really any other solution other than "conservation." I get it, conservation is important, but also is access to these resources for those who want it.
28828	Christophe Diezma	What a horrible solution .. to sacrify little cottonwood canyon for the monetary gain of a few .. this is not ok to do. period. having large parking lots at the bottom of the canyon and e-buses going up and down every few mins should be the solution. Please reconsider ... thank you.
28829	Giselle Slotboom	<p>Parts good parts bad - NO gondola please - Enhance bus is GOOD (but I question the intentions of making the implementation effort 100%)</p> <p>My main concern with this 'phased' implementation is that the long term goal still is the gondola. With that I am worried that there won't be a full effort to making the Enhanced bus service work to its fullest possibility. And that that will effect the actual results of the bus service. Doing a minimal implementation of the EBS and then saying that you tried and it didn't work is a huge concern for me.</p> <p>On the other hand I do support the EBS and the consideration of all canyon users not just resort users. Please include enhanced parking facilities and bus line extensions.</p>
28830	Jessica Karz	This seems to go against what the general population desires as a solution for our canyons. This a solution that purely pleases the corporations and only 20% of the population that desires the gondola. DO NOT BUILD A GONDOLA. DO NOT RUIN OUR BEAUTIFUL CANYON!
28926	Krystyn Mace	<p>Dear Director Braceras,</p> <p>I hope you are doing well. Attached you will find a letter from the Salt Lake City Council regarding the proposed gondola from Wasatch Boulevard to Alta. A hard copy has also been mailed to your office.</p> <p>Thank you for taking the time to review the letter.</p> <p>Best Regards,</p> <p>Krystyn Mace, Salt Lake City Council Staff</p>
28831	Phillip Symons	The gondola is not the answer! And if people have to pay \$45 to use it, they are just going to drive up the canyon. Ask yourselves who this is serving because it's definingly not the people.

ID	Full Name	Comment
28832	Max Evans	<p>An alternative Solution to the Traffic Problems in Little Cottonwood Canyon</p> <p>After hearing that UDOT has approved the controversial plan to build a system of gondolas to serve the ski resorts in Little Cottonwood Canyon, and then traveling to Switzerland where I learned about and traveled electrified cog rail trains up and down mountains and from town to town, I began to wonder why not a cog railroad for the canyon? I also remembered that the railroads were built and existed from the 1870s to the early part of the 20th century to support the mining industry at Alta and other mining camps in the canyon. During that period, granite used to complete the Salt Lake Temple was moved from the canyon by rail.</p> <p>If the existing highway, the location of the original right-of-way, could be widened to accommodate a modern cog railroad it could carry all the skiers and summertime tourists to the resorts. The highway should be used only as a service road for the rail line, the resorts, the Forest Service, and residences' of the canyon. Think about how much safer the ride and cleaner the air could be.</p> <p>A parking lot dedicated to either a gondola, or a rail line, at the mouth of the canyon simply moves the traffic congestion to the roads and highways of Sandy and Cottonwood Heights. It makes more sense to invest in an east-side Trax line to serve commuters as well as skiers. When I lived in Cottonwood Heights, I would have gladly taken Trax to my job in Salt Lake City to reduce traffic on the freeways and improve air quality. Let us think of Little Cottonwood transit as part of an integrated whole.</p> <p>Imagine a Trax line from the airport to the resorts with just one transfer, to the cog railroad. Those at other locations served by UTA would have a similar experience. I can imagine a Trax line to the canyon beginning at the South Town Center in Sandy, a place with a good deal of parking and easy to connect to the existing Trax and Fronrunner lines nearby. Think of the retail traffic this could bring to that location. Another option might be to make the Point a destination with easy access to skiing and summer recreation. The possibilities are endless.</p> <p>The Swiss engineers building railroad cars at the new Stadler plant in Salt Lake City, could share their expertise and might even propose shorter but steeper routes for which cog railroads are made. In Switzerland mountain railroads use tunnels to reach their destinations. The ride to the Jungfrau, a mountain known as the top of Europe, terminates at the end of a tunnel.</p> <p>Clearly, my proposal is merely conjectural. Many, many engineering and other details will have to be worked out. But I hope that you will at least give it some thought and look into and consider the Swiss model.</p> <p>Max J. Evans, Lehi, Utah September 12, 2022</p>
28833	Rachel Frost	As a taxpayer, I don't want funds spent on this project that primarily benefits private ski resorts and provides little benefit to the community at large.
28834	Shelley Devries	I DO not want a Gondola blocking the view just for skiers at the resort. You are not catering to hikers, back country skiers, people going on a summer picnic just ski resorts. NO
28835	John Woeste	Please do not build the gondola! Tax dollars should not be used this way to serve Alta and Snowbird. They need to take ownership of the current too-busy days by limiting sales, creating a schedule of 4 hour windows to ski, or other options. The free market needs to be responsible, not the taxpayers. Let's be the conservative state we boast about and save money on cheaper solutions, including more buses. The environmental impact of the gondola is not acceptable. Do not build it to get the next Olympics either.
28836	Allan Payne	The enterprise article 9-12-22 headline is "UDOT says a gondola is the best solution for ski resort access" that is a narrow definition. that may be true but what about other considerations? like, will it be free to use as the road is free to use (other than taxes)? Is there room for parking at the base? what about retail concessions and restrooms? and what about lockers at the top for clothes and boots? how many days a year will it be needed? can we still drive on the road if we want to? what about additional gondolas for big cottonwood canyon or park city? Is the gondola the best solution for regular local people? have these questions been considered?
28837	Vasilyevaslusy Vasilyevaslusy	https://lovevasilyeva.ru/portraits
28839	David Baker	Total corruption to put public tram to service ski resorts. I will be joining the law suites and donating money to the process.
28838	Chris Utgaard	No gondola! On certain days during ski season, there is terrible traffic, but the gondola does not solve the issue. Most of the traffic happens prior to the merge at the base of LCC. None of that traffic will be improved with a gondola. However, the natural beauty of the canyon will be lost forever not to mention other environmental impacts during construction.
28840	Abbey Ostrander	I absolutely do not want to see little cottonwood canyon destroyed for the gain of 2 private business. This isn't to help traffic issues this is to put more momeh in the pockets of the resorts at the cost of the residences who live here.
28841	Emily Pitsch	<p>While I appreciate UDOT's intent to start mitigating traffic immediately, the "phased approach" outline by UDOT is misleading. The language was adopted, I presume, from SLCo's Mayor Wilson and later numerous community groups but differs greatly from what "phased approach" initially meant. We wanted to see simple solutions pursued first and their success evaluated before moving onto more serious steps. UDOT's intent to eventually build a gondola, regardless of the temporary bus service success is illogical and misleading. Why does the gondola need to be built at all if the bus service works? It also isnt entirely a question of if the bus service would work because 1) the bus system currently works very well, which UDOT has acknowledged 2) UDOT acknowledges the bus service will work to mitigate traffic pre-gondola and 3) the buses will be moved to BCC after completion of the LCC gondola, once again presumedly because UDOT knows buses improve traffic.</p> <p>It is also misleading how the cost estimates are reported. Initially Gondola B was estimated to cost \$592M. In the FEIS Gondola B now costs \$550M with the modifications. However, UDOT says before the gondola funds come around and the gondola is completed, UDOT will invest \$110M in parking lots and buses. So the real cost of the modified (from the DEIS) Gondola B is \$660M. The way UDOT reports the numbers in this FEIS is not entirely truthful and makes Gondola B look better/cheaper than UDOT is actually proposing.</p>

28842	Kim Thorn	Have you considered building the parking garage and using electric buses on the existing road (don't widen), while mandating all skiers/boarders to ride the buses on weekends, holidays, and big snow days? Big snowfall day alerts could be managed through the website. On weekdays, allow boarder/skier vehicles in the canyon, while offering the buses as an option. Buses on those days would be a reduced fleet. Staffing of the bus facility may be a challenge, but not unmanageable. I am 67 years old and have looked at the canyon as a rare jewel so close to the city. The options of widening the road, or installing the gondola will greatly reduce the beauty I have been fortunate to enjoy in my life. Hopefully future generations will do the same. I appreciate the opportunity to comment, and hope that whatever the final decision is, does not include 200 foot gondola towers or a widened road. Sincerely, Kim Thorn
28843	Josh Heilesen	As a local resident, I strongly urge that UDOT do not move forward with the gondola. There is little to no evidence that the gondola will be an attractive option for people who want to get up the canyon. The worst case scenario is that the gondola gets built and significant traffic problems persist, which is an issue that the data has yet to convincingly quell. Additionally, the little cottonwood gondola does nothing in regards to big cottonwood traffic. I suppose this same, extremely expensive solution will eventually be implemented in that canyon as well? A modern, dedicated bus system designed to be appealing to the average skier is a more practical and broadly implementable solution whose effects could be realized much sooner. At the very least, with the public's great interest and sensitivity to this issue, it feels appropriate that it be voted on by citizens. Thank you for your attention!
28844	Kathleen E Johnson	I am concerned that the gondola option benefits private business primarily, i.e., the ski resorts, and does nothing for people who chose to use public lands for other uses, ie, hiking, rock climbing, and related. It appears to be a misuse of public funds to build such a thing using any funds from tax papers. I'm not a big fan of modifying the road either, but at least that is fair to the public in general
28845	Nikki Cavin-grace	After all these years, the UDOT plan for Wasatch Blvd. remains the same. Comments are immaterial, UDOT doesn't care or listen.
29470	Nikki Grace	Hello, my name is Nikki Grace and my husband Tim and I have a property that Wasatch Boulevard has an easement across the back of our property. So therefore we are an interested priority and I would like to set up a meeting with the engineers and some Personnel to address our property in particular in regard to your new plans. We had a meeting with you some years ago when this all started it does not appear that anything has changed in your plans. I there was discussion with your personnel about the instability of the scarp at the back of our property and possible mitigating things that the engineers could do so. It doesnt appear that anybody cares or is there regarding our first meeting with you? So we need to have another meeting and make sure that everybody is fully aware of our property and the easement. So, my phone number is [REDACTED] Please call about when we can meet with the engineers [REDACTED]
28846	Klay Anderson	Although the road modification appears to be the lesser choice, the gondola is the absolute *wrong* choice. The Ikon pass and others have ruined the resorts for the locals and the gondola will continue this horrible slide. Not only is the gondola an eyesore that serves to enrich but a few, it will not solve the traffic problem. If any of you even skied, you'd know that the tourists that can *afford* a ski vacation to Utah will drive their own cars and not have anything to do with the gondola as it will take too much time to get to the resorts and the two stops are beyond inconvenient. Additionally, there isn't one local that will take the gondola for the same reasons. Reworking the existing road is the way to serve all. NO to the gondola.
28847	Raymond Mcdermott	As a resident of Sandy living next to Wasatch Blvd the n between little cottonwood and big cottonwood, I am opposed to the installation of a gondola. Although the traffic is bad at times, the proposed solution does not address the problem in an appropriate level to the cost of the project. I believe it could be a good option if it could be done in a much more affordable way, was free to use and park, and was not compromised due to the weather and avalanche mitigation that closes the road now. If these issues were addressed, I would be willing to reconsider my opinion on the topic. However, for now I am not in support of the project.
28848	Kristen Chapman	I don't understand why this project continues when the public does not wish for it. There are many, many, many more things I would prefer to see \$550M spent on. I would prefer that my tax dollars fund people, not things. I bet that would go awfully far to providing services for people with disabilities or education or assisting with our homeless population, funding substance issue programs. Instead, it seems we are lining the pockets of industry. They already have deep pockets. WWJD? Not this.
28849	Kurt Kohler	Even as a Skier I do not want my tax dollars subsidizing Ski Resorts (cooperate welfare) with a Gondola. The resorts will not even let us in to warm up and eat out own lunch inside (that is why I take my car). We need a solution that helps the citizens of UT in all seasons. Bus lane with ample parking in the valley. One way traffic at peak hours. Snow sheds. All buses Subsidized by the SKI resorts for winter travel to them. Ample accommodations for those who now do not have a car to warm up and eat lunch. Even a simple APP that you can pick up other skiers to fill up your car and get guaranteed free parking. Start there that is cheap
28850	Richard Sandberg	NO gondola! I don't want to see it when enjoying the canyon.
28851	Susannah Wixom	I am a lifelong resident of Salt Lake City and I completely opposed to building a Gondola transportation system in Little Cottonwood Canyon. I think this solution caters to the wealthy out state patrons of both ski resorts. It is a complicated and expensive option for locals who use the canyons on a frequent - even weekly basis. This option also makes it hard to access hikes and other areas of the canyon that are not related to the ski resorts. There are other options such as a parking garage at the bottom and a busing system. Please allow the residents of Salt Lake City have a voice in the decision that will affect an important part of their lanscape.

28852	Mara Abashian	<p>Hello UDOT team!</p> <p>I would like to advocate for expanded bus service, with expanded parking lots/structures, rather than the gondola option. Additionally, I fully support the ban of single-occupancy vehicles driving into/out of Little Cottonwood Canyon (except for super off-hours/times of year).</p> <p>My reasoning: \$550 million pays for a lot of buses (even, ultimately, electric ones) and a lot of parking lots (even small parking garages), and doesn't fundamentally change the landscape of our beautiful canyon.</p> <p>I'm sure the gondola would be really cool to ride - but I also understand the complaints from the homeowners over whom these gondolas would be looming from late fall to mid spring. I wouldn't want strangers constantly leering into my house/yard!</p> <p>I live near a park-and-ride for the ski resort buses, so I realize traffic will be increased at those locations if the bus option is chosen. But overall, I think it's a more cost effective and cheaper option, plus so much less impactful to the canyon itself.</p> <p>Please reconsider the gondola option - you're already planning to expand bus services as the first phase of the existing proposal! Please consider just further expanding the bus AND blocking single-occupancy car drivers, rather than pursuing the gondola.</p> <p>Thank you for your time! Mara Abashian (Holladay/Canyon Cove)</p>
28853	Vicki Corwin	<p>As a taxpayer, I'm offended that we would spend so much public money on a project to benefit private corporations and increase their bottom line. As a retired educator, to think our state would spend millions of public dollars to benefit a small portion of the population when schools cry out for additional funding every year to no avail. Why are skiers and businesses more "worthy" of funding than educating our children? As a Sandy resident, I am offended that you would turn the beautiful neighborhood near the mouth of the canyon into a parking lot and gondola loading zone is beyond comprehension. It seems, once again, the "public servants" of Utah are more interested in supporting developers and making money for private interests than truly looking at the best use of public funds.</p>
28854	Daniel Fritch	<p>The Gondola option should be built by businesses that will benefit. Additionally, it will not reduce traffic as the cost will be far more than driving up the canyon. Keep to a bus solution that can accommodate drop off and pickup beyond the ski resorts</p>
28855	Mary Copenhaver	<p>I do not understand why everyone is going to pay for a Gondola that really only benefits a small portion of the population. Why doesn't the owners of the ski resorts pay for this. Plus it will make the canyon less beautiful. Traffic on 9400 will increase people catching buses. Not a hood plan the cost alone should keep it from happening.</p>
28856	Val Oveson	<p>I'm delighted with the decision to implement alternative B. Once built it will serve us well.</p>
28857	Luke Klinger	<p>Please use a simpler solution ie fees/reservations. This idea</p>
28858	Colin Strasser	<p>Please do not allow public funds to subsidize an expensive gondola system that is not proven to work. Instead expand the road, a proven transportation conduit.</p>
28859	Anna Vasquez	<p>A gondola will only increase number of visitors going into canyon thereby eroding the canyon ecosystem. The canyon should be treated in designated numbers of people allowed to go into canyon through out the year: just as other national parks. A gondola would be an eye sore and visual pollutant to our national park.</p>
28860	Phyllis Mandel	<p>As a Cottonwood Heights resident, I strongly oppose both the building of the gondola, and the widening of Wasatch Blvd. I moved to this location because it is relatively quiet. Widening Wasatch Blvd would totally alter the nature of this neighborhood. It is a totally car-centric plans, and would have the result, not of alleviating traffic, but of bringing more cars to our location. It would turn Wasatch into another 1300 East or Highland. Let commuters use those streets, don't turn our quiet, meandering road into another major thoroughfare.</p> <p>The focus should be on making Wasatch safer and more attractive for cyclists, pedestrians and other users. Creating a road pattern that naturally slows the speed down to safer limits.</p> <p>And using taxpayer dollars to create a monstrosity that would permanently mar the beauty of LCC, so that the resorts of Alta and Snowbird can profit is an abomination. Let's think more in terms of preserving the beauty that brings tourists to Utah, not just of how we can get them up the mountain faster.</p>
28861	Dylan Bueche	<p>Absolutely no gondola please no gondola. It makes no sense to ruin the view throughout the whole canyon to serve private ski resorts. It's ridiculous and clearly won't help access anywhere else in the canyon! what about all summer? this is a terrible plan and what we really need is something that hooks up to existing trax and bus lines. NO GONDOLA</p>
28862	No Gondola	<p>NO GONDOLA. It won't help in the summer and it ignores the public access throughout the rest of the canyon. NO GONDOLA</p>

28863	Jared I	<p>I support Phase 1 of the proposal, except for the tolling. I do not support Phase 2.</p> <p>To add more details, I support increasing bus service to LCC and BCC, and increasing parking capabilities at the mouth of the canyons, as well as in the valley. I would also prefer a bus lane added to each canyon.</p> <p>I do not prefer tolling. Tolling heavily impacts frequent users (Utah residents) and low income users. While it will likely encourage additional carpooling or bus ridership, it won't do anything to help with the fact that the canyons and valley have a limited amount of infrastructure to help get users up the mountain.</p> <p>That is why I strongly support the increased bus service and road widening, particularly with expanded and new parking lots available in the valley.</p> <p>The primary factor limiting my current bus ridership is not being able to find parking at the bus stations.</p> <p>The second biggest factor is busses being full by the time they get to the lot I park at (which can be resolved with more busses overall).</p> <p>The third biggest factor is that when the canyon roads become full of cars, bus riders end up waiting in the same traffic as everyone else, but in the discomfort of a public bus. By expanding the road and having a dedicated flex bus lane, that issue is resolved.</p> <p>I do not support the gondola. The logistics to use the gondola are too time consuming, particular when bus transfers to the gondola base are involved. I also do not like that there are no stops for other canyon users on the gondola route, including snowshoers and backcountry skiers. Offering stops at trailheads could allow the gondola to also run outside of the winter. The gondola causes a negative visual impact to the canyon. I also have a concern that the gondola proposal just moves the concentration of traffic jams from the resort parking lots to the roads at the mouth of LCC that feed the gondola base, which might even be worse overall than the current situation. There is also a concern about the cost to ride. While the assumption is that resort passes will grant free access to the gondola, what if that subsidy goes away? No one will want to pay to ride the gondola each time. Plus, that means that canyon users without a ski pass are not going to be able to access the gondola in the same way, which feels unfair.</p> <p>A final thought is that there should be some consideration on limiting the daily users of the canyons rather than trying to put as many people as possible up them. Just because a bus system or gondola can move thousands of more people to the resorts doesn't mean that's going to improve any of the recreation itself. A lot of the canyon headaches were reduced</p>
28864	Sarah Lockhart	I am VERY much AGAINST this Gondola. I do not believe it benefits anyone but the ski resorts and I do not support it.
28865	Steve Duggins	<p>The gondola is a bad idea ;</p> <p>Its not scalable, the design is limited to resolving high traffic situations.</p> <p>Where busses can be implemented, during high traffic and then sent elsewhere when not needed.</p>
28866	Tjaden Sanders	The proposed solution to traffic in Little Cottonwood Canyon will change the experience that every person has when recreating in the canyon. People go to LCC to feel the magnitude and solitude of our mountains and having a gondola that runs through it will drastically change the scenery and feeling that many of us go there for. Traffic is of course a major concern with recent growth and the resorts that are drawing people can only sustain so many people as it is. I fear this solution will take away the character and rawness of what LCC offers and cause many of the locals that love and advocate for the protection of this wild place to recreate/relocate elsewhere. There are other solutions to improving access and traffic flow while preserving the aspects of the canyon that draw so many. Thanks for reading.
28867	Thomas Medwick	I am opposed to the gondola option for LCC. Why should tax payers have to shell out money to support Snowbird and Alta Ski resorts. I also think it would be an eyesore to a beautiful canyon. Where is the resorts going to make up the money for their parking fees?
28868	Andie Mueller	Hard pass on the gondola. What a complete waste of money. Please phase in more busses and leave it at that!!!
28869	Carolyn Pierce	As someone who lives on [REDACTED], I am very concerned about the implications of widening Wasatch and do not support this move. It will fundamentally change the area and it is already a safety issue that people treat that road like a freeway and drive incredibly fast.
28870	Noah Eldredge	What a complete waste of tax payors money. A train would be more efficient. Be able to take more people up and down the canyon.
28871	Jenifer Schake	<p>I am against the gondola.</p> <p>I am against widening roads and taking homes.</p> <p>This is a reckless misuse of taxpayer's funds to spend 500 million on something that benefits 2 ski resorts.</p> <p>I am for adding sufficient busses and closing LCC to cars during peak times and powder days. The gondola is overkill and seems almost criminal. Why is an expenditure of this magnitude not up for public vote? This is just wrong.</p>

It results in extraordinary public costs, limited benefit, and irreversible impact.</p> <p>UDOT will need to implement alternate modes of transit first on Wasatch Blvd before it can support transit up the canyons.</p>
28874	Jack Mcdonald	<p>Build the gondola! I'm a local skier, born and raised. Those who say the locals don't want this are very incorrect. I want to be able to ski my home resorts without sitting in traffic for three hours. The people who moved here and built a mansion near little cottonwood don't count as locals.</p>
28875	Crystal Chilson	<p>This is a money grab that hurts our watershed area. And only profits the ski resorts. Using the tax payers money. Pay for more bus infrastructure instead.</p>
28876	Louis Orlando	<p>UDOT ,. You have the responsibility to take care of UTAH roads ! You have no business trying to help out two ski resorts! These businesses need to fund their own Gondola themselves , or with the help of others that want to make improvements to their businesses. Tax payer money should be used for a projects that the whole state could benefit from .</p>
28877	Jeff Rowe	<p>I travel up the canyon 3-4 times per week in the winter, and live minutes from the base of the canyon. I love this canyon, but I don't think the Gondola is the right choice. First, the expense is exorbitant for the actual volume increase of people, not to mention the tax payers don't benefit, only the resorts. In the winter, there are a handful of avalanche paths which will consistently close the road, building shelters and a full time second lane alternating with traffic would ease the traffic problems. There is no reason to double or triple capacity that can get up the canyon, because to be frank, the ski resorts refuse to invest in infrastructure that would justify it. The lifts cannot carry more up the mountains. If the resorts want more people they need to be the ones to invest.</p>
28878	Benjamin Snyder	<p>No one wants a \$500m+ chairlift. Lol get real.</p>
28880	Alma Elkaz	<p>I'm opposed to the gondola. It will irreparably damage LCC and primarily serve the interests of resorts largely at the tax payers expense. Implement and enforce traffic control measures.</p>
28879	Alec Mcmorris Mcmorris	<p>As someone that has been recreating in big and little cottonwood canyon for the last 20 years. I am fully against the gondola project and the impact it will have on canyon capacity among other things. In my opinion the improved bus service, avalanche shed, and toll booths are much better options. If we were truly caring about the environment we live in, we would limit the capacity of people allowed in the canyon on peak ski days.</p>
28881	Brent Koldewyn	<p>Leave the canyon alone! No gondola</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28882	Kristine Ereneta	Don't judge my area code and throw this comment away. I lived in Alta at the cat shop for over 13 years. I'm very familiar with the traffic issues of Little Cottonwood Canyon. Please do the right thing and look at other options than the gondola. As an equipment operator for Alta Ski Area for almost 17 years I understand the type of impacts and footprint that is going to be necessary to complete the project you are endeavoring. Please I'm begging you not to do that to our watershed. I'm begging you not to do that to our natural space in Little Cottonwood Canyon. This is the only chance you have to back away from this disastrous prospect of a project. Please call me. I can in detail describe the type of impacts heavy equipment will have in these very sensitive zones. I have years of experience with the Alta Environmental Center and the studies we've done and the projects we've undertaken in restoration for the type of damage that I myself did to the mountain in the early years of my career at Alta. I will be very transparent with what it's going to take to bring heavy equipment into these very sensitive areas. There are other options. I'm begging you to take a step backwards. Get a bigger view of the true value of this incredible space. Thank you.
28883	James Henrikson	I think that the best solution to the traffic problem is to toll vehicles. I like this idea because it seems like it would require the least construction and also seems like the most cost effective option.
28884	Grady Lynch	I am concerned that this solution will not be convenient for riders and accordingly will not have the desired impact on alleviating traffic. How long will it take to park, bus to the gondola station, wait for the gondola, and then ride it up to the destination. Moreover, will there be huge lines to ride back down? It seems like electric busses are a better option.
28885	Mike Miller	This is a waste of time and money. It's funding should go towards studies, a better, safer and wider roadway with more lanes and/or parking structures/lots rather than something that won't be used during months without snow.
28886	S South	Let's not stack the deck and grease the palms of those seeking the almighty dollar. Listen to the residents - those that want to preserve our canyons and resolve the issue in other ways. This is another horrible idea. Our government is not representing the people of the state. Please listen
28887	Daniel Sandberg	Maybe this has been submitted already. But why have we not proposed putting in extension lines of Trax? Why is it either busses and roads or gondola?
28888	Diana Brixner	This is a bad idea, there are many greater needs than a gondola up LC for Utah to use \$500,000, 000 including the pollution, climate change, lack of water, equal access to education, etc. I am an avid skier and had a SB pass for thirty years, but this is not the answer, you are not solving the problem which is too many people up LC. The easy solution is to simply drop LC from the IKON pass, you dont need the revenue if you dont build the gondola and can use the money elsewhere. Why should taxpayers line the pockets of two private companies? If you really wanted to make a difference you should have considered a train up the side of canyon, or a tunnel from Park City to BC, LC.
28889	Emilia Whitmer	I support the phased implementation plan of Alternative B. I am hoping that UDOT will consider the impacts of these small changes this winter before committing to this drastic measure (both in size and in cost) that is the gondola.
28890	Jenica Barber	I am opposed to the Gondola B Option. There is no reason federal or state money should be used to benefit two businesses. Any money spent should benefit all people who recreate in the canyon, not primarily skiers. I am particularly frustrated that a former legislator who worked to set this up is going to benefit financially. It erodes the confidence of people in our state government. Implement the Enhanced Bussing Service and let the ski resorts provide their own private busses (and better locker facilities) if public busses are just too utilitarian for their taste. Busing can spread out the traffic with more park and ride lots distributed further from the mouth of the canyon. Developers and Snowbird can still try to make money off their La Caille speculation scheme, but they can do it without any public money. Finally, given the changes to our climate, how many ski days will there be when the gondola is finished?
28891	Lisa Gustavson	I remember when Parley's Canyon was beautiful. It was destroyed when the roads became highways. I support the gondola option because I don't want the same fate for this canyon. The drive up is so beautiful. Don't ruin it with a wide road.
28892	Bill Scott	i think the gondola the gondola is a bad idea. to have the government spend so much money to support private business is wrong. the bad congestion in little cottonwood canyon only happens about 10-15 days a year. there are many other potential solutions like a toll road, and many more buses that would run much more frequently. requiring more than one person in a vehicle would also be very helpful. there also seem to be some behind the scenes agendas by snowbird and members of the legislature that make one wonder what is really going on. there is also no place at either snowbird or alta to accommodate all the people arriving that will need to store equipment if they arrive on a gondola. in addition nobody has ever said what the charge will be to park a vehicle at the bottom of the gondola and how much it will cost to ride the gondola.i believe we need to slow down and rethink the whole proposal.
28893	Chris Lacombe	I don't support the gondola. The EIS preferred alternative of gondola B does not make sense. According to the EIS, the enhanced bus service option provides faster travel and is at least \$250 million less than gondola B option. It seems to me the gondola B option allows only 42 more people per hour to commute to Alta than the enhanced bus service option. That does not seem like a lot for a much more expensive option. If traffic congestion is the main issue, a toll should be implemented on Little Cottonwood Canyon Road during these peak use time which is high enough to create incentive for skiers to use mass transit rather than their own vehicle. In addition, a daily limit should be imposed on personal vehicles going up the road during the peak use time. As a resident of this area, the large parking lot at the 9400 South/Wasatch intersection as well as expanding Wasatch highway from 2 to 5 lanes will change the character of this environmental buffer zone between the Wasatch Mountains and the City of Sandy. This area is already high use given the popularity of the hiking trails to Sandy reservoir and Bell Canyon Falls. Finally, it is not clear to me how this project will impact Quail Hollow which is across the street from LaCaille. This area along the stream is immensely popular with hikers, mountain bikers and dog walkers. This large unimproved area is one of the very few areas where dogs can run free and children can ride their bikes without worrying about traffic. This unimproved area is owned by the City of Sandy. I am a strong "no" on the gondola and I have concerns of how the widening of Wasatch Blvd. and two parking areas will impact the area's character, particularly Quail Hollow.

28894	Jason Mcphie	The gondola is not needed for that cost to tax payers and to merely serve 2 wealthy ski resorts for traffic that only happens 15-20 days a year. There are so many important traffic and other projects that we could address as a state for \$600 million to a billion dollars. We can address traffic with tolls, busses, and other creative parking ideas near to resorts. We would simply be pushing the traffic down the canyon into the city. Make the resort pay for their parking needs. Make them build appropriate parking on their sites. We should preserve the canyon not build giant metal towers that destroy the visual beauty. We should not spend that amount of tax dollars on this topic. Let's spend it on better overall Utah serving issues. Do not find this!!
28895	Mark Folkman	Gondola. Everyone will love it after thuse it.
28896	Kevin Gmitro	As the co-owner of a ski shop in cottonwood heights it's hard to say but this gondola is a terrible idea. Yes it will bring more people into little cottonwood but it does little to solve the congestion in either canyon. Please reconsider the gondola
28897	Cortney Glenn	I applaud the efforts being made to mitigate traffic and congestion. As I see that there are plans to implement reducing single vehicle traffic I don't understand why there isn't already an absolute ban on single occupant vehicles on all weekends, holidays and powder days during ski season. As I have traveled the canyons on those types of days we have noted that roughly 30% of traffic is single occupant(driver only). Traffic could be reduced with very little cost(if any) Revenue for enforcement could be covered by fines and fees collected by violators.
28898	Arash Farhang	<p>I have a lot of thoughts and comments on the current gondola proposal and why it is not the best solution, and quite frankly a bad idea.</p> <p>1) It will ruin the beauty of Little Cottonwood Canyon (LCC) forever. Naturally beautiful places should be kept that way, with minimal additions. There are a lot of alternatives to the gondola, which will leave the canyon in a much more pristine state. All those should be exhausted before a gondola is ever even considered.</p> <p>2) One of the motivators for a gondola, is that LCC is incredibly avalanche prone. It has been argued that a gondola will remove cars from the road and allow for travel up and down the canyon even during periods of high avalanche danger (at least when snow is being cleared, but likely not during artillery work). My proposal is that we take care of a large burden of the avalanche issue simply by have snowshed tunnels at the already identified avalanche runout zones across the highway. This has already been done in places like Rogers Pass British Columbia, Canada, and across countless mountain roads in the Alps. If we are truly serious about avalanches being an issue and somewhat smart about addressing the issue, we would have already implemented these long ago. Let's get smart and actually implement them.</p> <p>3) Travel capacity up the canyon. The said gondola would only be equivalent to 6 buses going to each of the two resorts Alta and Snowbird per hour. This is pitiful. If we seriously want to increase capacity, we need more than 6 per hour per resort. Moreover, people need to be incentivized to carpool more. Do like other resorts like solitude is currently doing. Give people free parking if they have a full car and charge them if they don't. Implement things like that and buses. Not a gondola that only has one car every 2 minutes. That's barely even a gondola. That's closer to a tram. Lastly, good solutions to alleviate congestions and bottlenecks should not present more bottlenecks while fixing the original bottlenecks. That is why carpooling in addition to most buses is really the best way. People meet up at one person's house and all carpool together. That way we don't have so many people trying to go to one place to take one mode of transport like a gondola, thereby having causing a bottleneck trying to get to the gondola structure. Same goes for buses. They need to definitely stop at multiple park and rides in the valley and not just at the mouth of bcc or lcc, otherwise we have another bottleneck there. Not to mention not enough parking at all at those locations.</p> <p>4) Use of taxpayer money to benefit the resorts. Something like the gondola should not even be considered, because it is using taxpayer money to fund something that is benefiting 2 privately owned ski resort. They should be required to burden all of the cost of said proposed gondola, because it will only be used in the winter months to their benefit. I get that the ski resorts bring in tax revenue to the state, but so does every citizen of the state. They should therefore not get to benefit from taxpayer dollars for such a project.</p>
28899	Travis Giguere	Please don't move forward with the Gondola, there are so many lower impact options we can try before jumping to such an extreme. Help us preserve the canyons.
28900	Andrew Kee	<p>The gondola only poses benefit to the two ski resorts (Alta and snowbird) for a few weekends a year. Typically traffic is not that bad. Other options, such as busses or other public transportation (funded by the ski resorts) should be thoroughly investigated. The report states long term environmental impacts, however studies show that there will be very limited snow in 30 years, leaving less reason for the gondola.</p> <p>Parking and such is already an issue at the base of the canyon (the park and rides) for those few busy weekends. Perhaps more well thought out park and rides (perhaps reservations) could do some justice. The ski resorts as well should implement reservation systems. Alta has done this and it has already limited the traffic in LCC. If snowbird is to do the same, this could greatly alleviate congestion.</p>
28901	Margaret Adams	NO GONDOLA. Same problems could be fixed with that money going into more buses and possibly a toll booth. NO GONDOLA. This is not what the taxpayers want
28902	Mike Lavelle	Where are the hundreds,likely thousands of cars going to park for the gondola users?
28903	Alex Laugeman	There can't be any possible way the public is listened to in these comments. We need to use the infrastructure we already have FIRST, then if that doesn't work I will concede I was wrong. Also, why aren't we putting TRAX along that mess of I-215 construction to the cottonwoods, if traffic congestion is what we really care about??
28904	Erick Lawrence	<p>I am strongly opposed to the construction of an overly expensive gondola in little Cottonwood canyon. With these funds, we could expand bus service up the canyon in a way that had a greater service to the community, less environmental destruction, and would be the most cost-effective solution.</p> <p>If the gondola is still approved after this comment period, I will be convinced of the failure of UDOT to provide sustainable transportation options to the Utah residents and taxpayers that rely on them and fund them with their tax contributions.</p>
28905	Eric Tuday	I oppose the gondola project. I favor expanded surface transportation, tolls and HOV incentives. A billion dollar gondola to service just two sites in the canyon is not the answer.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28906	Matt Palmer	Please do not build the gondola. It will cause more harm than good.
28907	Rico Florez	Why don't you spend that money and fix our roads that are filled with pot holes
28908	Rico Florez	My last comment was typed wrong. It should have said. Instead of spending money on a gondola why don't you fix the pot holes that are abundant through out the salt lake county. Or raise more of bangerter highway so there are less lights.
28909	Daniel Hobbs	Very poor use of our tax dollars. Find homelessness, addiction services, mental health, children. This is a ridiculous use of our money.
28910	Tiera Kunz	I disagree with this project, not a good use of taxpayer money. Feed/house the homeless, help them get off drugs. Help the opiate addiction crisis. Help the mental health crisis. Put that money to good use ?? We don't need a gondola.
28911	Derek Pickell	No gondola. Increasing visitation will not reduce traffic and permanently scar the canyon.
28912	Alexander Hopp	Literally nobody wants a gondola. The whole thing screams conflict of interest almost to the point of corruption. The people have spoken so many times and nobody wants a gondola. I honestly thing there is nothing wrong with our current situation but if something has to be done it needs to be expanded the bus system with park and rides all across the valley.
28913	Kathleen Boynton	Opposed to gondola which will injure surrounding environment
28914	Derek Kristal	NO gondola !!!
28915	D K	No gondola !!!
28916	Ronna Cohen	No to the gondola. The current project cost will underestimate the final cost. The project benefits very few in the state. For profit stakeholders will benefit. The solutions offered seem to lack creative thinking.
28917	James Cahill	The gondola is not the solution to the problems that are plaguing LCC currently. All it will do is push more people up the canyon when the mountains are already nearing their capacity on a daily basis. The destruction of pristine nature is so unnecessary and would forever alter this canyon that I and many others hold so dearly in our hearts. I believe that through other solutions such as improved bus services and better accessibility to be able to park and catch the bus, paired with tolls can ease the load of traffic. I also think if UDOT better monitored the mouth of the canyons on restricted days so that cars are not getting stuck it would dispel a lot of snow day problems.
28918	Max Pilling	Your ruining lcc
28919	Elise Jackson	The gondola is not the correct solution. It will cost millions of taxpayer dollars for a service that will only benefit private businesses. The proposed phase 1 solution of additional buses and tolls is a better solution that will benefit more users and will help the overall problem in the canyon. The fact that the gondola was approved despite the public opinion to not have it is disheartening, and calls into question the integrity of UDOT and the overall decision making process.
28920	Sarah Johncock	Wasatch Blvd is already a dangerous street for our children, but really all pedestrians, to cross or walk/ride along. Widening it will only make this more dangerous for pedestrians and stupidly increase car traffic to get to the park on the east side of Wasatch due to safety concerns for pedestrian use. It will also negatively impact the noise disturbances and affect the ecosystem in our area. Do not widen Wasatch for a problem in the canyon that lasts a small percentage of the year. For those that live near Wasatch, we know that the problem is not a backup in traffic, it's the speed of cars on the road. Increasing lanes will only make this problem worse. Do NOT widen Wasatch Blvd.
28921	Rebecca Pace	NO GONDOLA, I have lived in Sandy since 1994., I use the canyon bi-weekly for hiking. We do not need or want this., Save the beautiful canyon. More buses for the skiers.
28922	Christian Godbout	I believe the phased approach would work only if all its components were not tied to an approval of all phases. The first steps of improved bus service, snow shed and tolling will surpass the objective to reduce traffic in the canyon. There is no need to get to the gondola for only a few days a year. The gondola will only benefit 2 private resorts and will also benefit the land owners at the mouth of the canyon. This is an unacceptable spend of taxpayer money. The solutions listed above will work. The gondola is not needed. Please be reasonable and stop listening to lobbyists. Their interest is not the common good.
28923	Hector Mercado	I do not support the proposed gondola project. My reasoning is that only a small minority of people who can and are willing to ski or visit that area will benefit from this tax payer funded project. Why should anyone who will never use or visit this are be forced to accept something that is going to negatively impact their economic situation? I propose to widen the roadway and raise revenues by taxing those who will use the roadways and bus system. That will include tourists. Why I as a tax payer have to economically support the whims and wants of others when I will not benefit at all. No on gondola project! Yes on improving the existing system and only funded by those who directly benefit from it.
28924	C D	From this non-denominational individual, I say bless the Diocese for being outspoken and articulate regarding the gondola; I wholeheartedly agree a gondola is ridiculous environmentally and morally. I pay so much in taxes I can hardly afford on internet purchases and food, and I see no benefit to myself or the community from paying them. Is this where regular people's taxes go, to luxury products for the rich?
28925	Dotti Gallagher	I am a skier, Snowbird employee, and Sandy resident. I am 100% in favor of the LCC phased approach alternatives and 100% AGAINST the gondola. The cost and environmental impact of the gondola should not be borne by taxpayers. If Snowbird and Alta want a gondola to get people to their resorts, they should pay for it, not taxpayers.
28927	Virginia Prowse	I do not agree with widening Wasatch or a gondola. I don't think Utahans should ruin my neighborhood and our mountains to overserve tourists for a small season of the year. Wasatch is not meant to be a freeway to ski resorts. If ski resorts want things, they should pay for it themselves because they are the ones benefitting. The public should not be the ones paying to cater to ski resorts. Please don't ruin our city of cottonwood.
28928	Amy Firth	I believe the Gondola should not be built due to environmental impacts and state funding shouldn't be used on a project that low income people won't access

28929	Keith Cubba	The phasing, given lack of funding, and I would assume, unless the money is raised privately, no public tax payer support for funding, is a great way to start tackling the problem. Traction law enforcement on every day for snow and ice will make a difference, please start there - it would have to be the cheapest step and it is enforced like 2 days a year historically. Who knows how many slide offs could have been prevented. The other thing is that any restrictions, tolls on single drivers, limitations of single drivers, has to be done early spring for the next year. Those are good ideas and could help, but it all has to be full disclosure for pass holders. Someone could buy a Bird pass and then pay 900 for preferred parking and only be able to go weekdays for a few hours by themselves because they work. They might not have time for the bus. They might not want to pay the tolls. They will have BCC and PC to chose from also. Needs to be early full disclosure to people can make informed decisions.
28930	Richard Haugen	I support the gondola plan. It is a forward looking solution.
28931	Jeff Moore	This plan will not do anything to relieve the congestion along Wasatch blvd. The number of parking spots that would be available to gondola riders does not match the per hour capacity of riders. By instituting tolling you would effectively exclude non resort users that want to access other parts of the canyon not located near resorts (white pine, etc). There is no chance that the construction process wouldn't affect the watershed.
28932	Andrew Gardner	I am not for the new gondola. This is not a solution. When the parking is full at the ski resorts, the canyon has hit capacity. Bringing thousands up on the gondola to a already packed ski area is not good for skiing, or the environment. No Gondola!!! Please.
28933	Andy Jones	The gondola is seriously the best option? Best for who exactly? The only people who seem to benefit are the owners of the resorts. If they want a gondola so bad then THEY need to foot the bill, NOT the taxpayers. The gondola will not improve traffic in the canyon and will destroy the beautiful environment of the canyon. All so the resorts can get more people on the mountain? Approving the gondola is absolutely unconscionable. UDOT should be ashamed of themselves. The gondola should be the option of LAST RESORT.
29471	Hector Mercado	Hello, my name is Hector Mercado, Im calling from North Ogden here in Utah. My email address is [REDACTED] My comment about, I was listening to/watching the EIS report, I cant remember if it was the report or what, but um my main concern is funding. I do not travel to Little cottonwood canyon, nor I ski, i dont visit the resorts and im sure that 1000s of people around Utah do not do it. So this project will plan and move forward without considering funding. I dont see anything that talks about funding. there was a blurb about funding and I dont want to end up paying for something I do not, Im not going to use. Most of this project, a lot of funding for this project has to do with all the expanding of Wasatch Blvd - never travel wasatch blvd, i have nothing to do with it, Why is wasatch blvd connected to this project? I think wasatch blvd can be separated, I want to push something like that cuz its a common roadway. But the project about little cottonwood canyon doesn't concern me, ya know, so I think this will be something maybe tourist should be funding for this, and maybe the people who are currently going to be using the gondolas or expanded busing systems or whatever. Um I'm concerned about this. I vote. I'm a citizen here, I pay taxes. I think the way this is being approached, planning for something that you don't even know how much its gonna cost... its like I want i want I want, and I need and I need and I need but do I have money for it. No I don't have the money so what kind of system is this? I cannot do that. If I want something and I have the money then I say ok well I'm gonna go and buy a pair of shoes, I have the money, but I don't go ok I want a pair of shoes, I don't have the money but I'm gonna still buy it. Or put it on a credit card maybe...
28934	Sheryl Scott	I strongly oppose building a gondola in Little Cottonwood Canyon, and strongly support increasing clean bus service in the canyon. I oppose the gondola because congestion is only occasionally a problem, making the gondola a permanent solution for a transient problem. If global warming continues, ski season may be so compromised that there will be no car congestion, and no need for the gondola. The gondola benefits 2 private businesses at tax payers expense. I do not want my tax dollars supporting these wealthy private businesses. The gondola will benefit only skiers, and not the many other people who enjoy the canyons. Lots of people who cannot afford or have no interest in skiing use the canyons. The gondolas will be a permanent blemish in our pristine canyons. Increasing clean bus service will benefit all users of the canyon and can be adjusted seasonally as needed. Stop the gondola!

ID	Full Name	Comment
28935	Alec Padan	<p>Hi there, I have a few concerns. I assume that other people and I in Utah will be paying for this as it will be using Tax dollars. I don't necessarily think that is fair when the resorts encourage more and more people to come to their resorts, and they charge like \$2000 for a season ticket and \$40 for lunch. I think Alta and Snowbird need to step up and help and, in this case, pay for the vast majority of the cost. It isn't fair to do all of this and pay millions which they are really the only people who benefit.</p> <p>I also see a huge problem with the parking garage at the base of the gondola. As I and many others leave the resort at the same time, they will subsequently be stuck in the parking garage for hours upon hours as cars go out, and it will be a hassle. I think you should widen Wasatch Blvd, which is a good course, but you also need to add a toll to the road. \$20 a car, and that would solve many problems as well as when you pay the toll you check for proper snow tires, etc. We don't need Kia's getting stuck and causing traffic. Also, the money from the toll can be used to pay for road maintenance and, most importantly, the immense cost of the avalanche work that needs to be done in this canyon. I personally am not a huge fan of the bus because the last time I rode the bus, I was stuck standing on the bus for 6 hours in my ski gear, upon which, as I got off, I still had to drive home from the base of the canyon so again a bus might be practical I just think that even if you upped the number of busses, there are like five seats on those things and most people who take it end up standing in their ski boots and nowhere to put skis, etc. so on a good day you end up standing on a moving bus in ski gear holding you skis for 45 minutes which isn't ideal and on a powder, day make that at least 4 hours.</p> <p>The real solution is to keep the same number of buses but add more features to make it more practical for skiing users and not just for riding them. Also, I think you should add a toll that is like \$20 a car or something, and when you pay the toll check for snow tires, etc. Also, the revenue can be used for road work and road maintenance, and the remainder can be covered by the ski resorts as they need to step up. That way, this costs \$0 in tax dollars, and you really have a solution. I think also that you could widen Wasatch blvd to alleviate some of the traffic when waiting for the road to open when avalanche mitigation is being performed.</p> <p>Again, I am not against the gondola I just think that the immense cost needs to be put on the ski resorts and not on the taxpayers. I don't even ski at Snowbird and Alta very often, so I don't want to have my taxes jacked up for something that benefits me in no way and only Alta and Snowbird. They need to "pay their fair share" and not have Utah taxpayers pay and even accept federal money. Maybe, if they were doing everything they could, but from what I am seeing, they are increasing prices massively, telling more people to show up, and then charging \$40 for lunch. Now, this is in no way negative against their business plan I would do the same thing, but just doesn't make sense to me.</p>
28936	Randy Gunter	<p>The gondola and it's outrageous price tag is the most insane idea being pushed on us taxpayers. This entire idea is to do nothing more than make Snowbird, Alta and the developers around LaCaille rich all while being funded by our tax dollars.</p> <p>It is also astounding to me that your're willing to spend \$500 million plus dollars for a need that only occurs a few days out of the year when skiers flood the canyon on snow days. The benefit to the overall public of Utah be [redacted] when the needs to the elite have to get to Snowbird and not have to wait in snarled traffic.</p> <p>This decision makes it clear that UDOT's focus is to do whatever it takes to make a very few people rich and happy and literally [redacted] the rest of Utah in doing so. I hope that the legislature can see this for what it really is and never provide any funding for this "bridge to nowhere".</p>
28937	Steve Klein	<p>I like the idea of a gondola it would be an amazing ride. I also find it hard to believe that at some point in the future of its existence it would probably severely damaged or destroyed by rock fall or Avalanche. You can protect it from all the known slide paths with snow sheds,Gozacks and other Avalanche control methods, but it's the unforeseen you can't protect against. The freak Avalanche where no one in recorded history has seen slide or the rock fall from a tremor. Even human error from an avalanche control mistake. Remember Bridl vail falls tram in Provo Canyon. Destroyed 2 times completely. Little Cotten wood is a very powerful spot the whole canyon is a slide path of rock or snow add to that an earth quake fault line. The Gondola traverses the bottom of the canyon under every slide path known and unknown that effects the road. This is just an observation from someone who lived in the Canyon for 20 years and also participated in Avalanche work there for 13 of those years. I believe the resort's should foot the bill not the tax payer. I also believe. Your transportation to the loading zone at the base is a huge problem. Bullet trains from the airport and also a parking terminal in the west desert would Alleviate congestion on the east side. I think the UDOT needs to Think Big in it's plan hire really smart futuristic thinkers, build the most expensive amazing high tec transportation system the world has ever seen</p>
28938	Eli Primmer	<p>I do not support building a gondola in LCC. Please consider tolling or increased bussing before committing to this expensive and destructive project.</p>
28939	James Fox	<p>The Gondola should not be paid primarily by tax payers. The ski resorts, of which will benefit from this invasive projects should be footing the bill. In addition, if this is the preferred method, considerations should be made to stop at backcountry trail head locations along the way. Ski resorts visitors are not the only canyon users. If that were the case, tax payers could pay for a larger percentage of the project. Should the federal government be providing funding as the gondola would be on federal land?</p>
28940	Brad Christenson	<p>Yes! to the gondola. It is the best option by far. Small footprint, clean, safe and beautiful views. Many tourist dollars, as it alone will be sought out activity to enjoy.</p>
28941	Lindsey Hale	<p>Please DO NOT put in the gondola. I know you have decided it is the best way to help the issue, but I feel there is overwhelming evidence that it does not. I'd rather teh money go to fixing my horrible road that is driven every day of the year! Please don't put this eye sore in, the wasatch is too small. Maybe make it like zions.</p>
28942	Debbie Bell	<p>no gondola...it's the most ridiculous thing I've ever heard. Do you care what that's going to do to the canyon. I drive up there all the time year round. It's only busy about 8-10 days a week. Have you thought about all the wind up there in the winter? What are you going to do with the swinging gondolas? Think...think...think..</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28943	Olivier Bock	The implementation of Gondola B would be a massively destructive project serving the interests of a few while ignoring the wishes of the majority. Little Cottonwood Canyon as well as the ski resorts at its end are unique and wonderful places and should be left as they are, as much as possible, and without the exorbitant impacts and expense currently proposed. It is possible, with methods already discussed (such as permitting and reservations) to manage traffic in the canyon without going to the extreme. Gondola B is extreme and would be a disaster that could never be undone. I am opposed to Gondola B.
28944	John Porter	<p>First, I'm glad UDOT is making changes and most seem positive except the tolling on local taxpayers. I live in Cottonwood Heights near Wasatch Blvd. (my phone number is left over from living in Arizona prior to Utah). The fact that parking at the destinations is not increasing gives your plans a chance. I participated in a transit study years ago that clearly showed that commuters will suffer almost any inconvenience to drive their personal vehicle if parking is available at the destination. And with all the gear needed for skiing, the mass transit option will not be used much if there are destination parking increases. Currently reductions are planned, but things often change. (Ridership on UTA is pathetic and always will be because most, if not every, destinations have parking available).</p> <p>The reservation system at Alta worked well last year. Traffic was way down on weekends. The worst traffic was no reservation powder weekdays. Snowbird should try reservations and we can see what happens to canyon traffic. ?A non taxpayer funded option trial would be valuable before committing the \$millions.?</p> <p>It seems the ski areas can help with parking restrictions/\$reservations. UDOT doing a toll is creating another new tax and piling on more burden to Utah taxpayers. And it won't change how many people head up. The clientele will just be the more well off. Everyone will be angry about the additional expense though. And I suspect it will contribute to skier rage complaints that seem more frequent even before this.</p> <p>The road widening and canyon road safety "tunnels" are probably really helpful. Careful on the gondola. Resistance to schlepping ski gear (it's not like riding a lift to slide back down) in a gondola will be very high if parking a personal vehicle is even remotely considered possible at the ski areas.</p>
28945	M Jeffrey Painter	Build the gondola.
28946	David Ullrich	I support the decision to proceed with Gondola Alternative B. It seems to provide the needed transportation with the least environmental impact and carbon footprint. Funding is always a challenge. Consider a surcharge on lift tickets to help cover the costs.
28947	Ronna Guidera	I oppose the gondola. This seems like a poor use of our hard earned money from tax payers. Also will be a negative impact for wildlife and ruin the beautiful views. This is only good for those few who ski. Senior transportation options would be a better way to spend our money
28948	Gitte Larsen	I live in Salt Lake City, and am a frequent skier at Alta and like to hike in Little Cottonwood Canyon. I am absolutely opposed to the gondola option after spending time thinking about and reviewing the various options presented to the public. I typically have taken the bus to go skiing the last couple of years because of the pressure on the canyon from cars and that has worked just fine. The buses are often full and it's perfect in terms of getting to where i want to go without having to worry about parking. Please listen to us and do not pursue this gondola option. The ski area will be served and everything else negatively impacted.
28949	Kyle Murray	DO NOT BUILD. TOU WANT TO TOLL US FOR DRIVING UP THE CANYON!?! This is insane and such a waste of money.
28950	Danielle Pearson	I've lived in Utah for over 20 years and we frequently use LCC. My husband is an avid yearly pass holder at Snowbird. He skis, my boys are climbers in the bouldering community and I hike and snowshoe often up this canyon. My husband has already said he will not pay \$35 to ride a gondola to Snowbird. He will go somewhere else or drive on the "off" days and just park. This proposal is being shoved down our throats using our taxpayer dollars for something NO ONE in my area wants or will use. How about Snowbird and Alta pay for it if they want it so much? It only serves a limited number of wealthy people that use LCC and most people in my area (I live at the base of the canyon) are so opposed to this ludicrous idea and the damage it will do to the canyon and the surrounding areas, including expanding Wasatch drive and the parking structure at the base of the canyon. Why are these wealthy investors so determined to ruin such a beautiful canyon with no regard to the future of its use. Again, my husband who skis several times/week and other skiers in the area see this a huge waste of money and have zero intention of using the gondola. The number of days that there is traffic is so small compared to the rest of the year. Since it seems to be a done deal (corruption at its worst) how about taxpayers show proof of residency and then they ride free since we are being forced to pay for this ridiculous idea anyway. We have loved our canyon for many years. We have thought of moving in the past few years since Utah has been growing out of control with no planning for infrastructure for the future. This gondola will drive people like us away to a new place where the government cares about its community and environment.
28951	Mary Golic	The gondola is the "preferred" choice by those who will get richer, but this isn't the choice of the general public, who will be paying for this environmentally damaging and ugly monster of a structure. The way to fix the congestion is by charging to get up the canyon. The fee should be based on how many people per car. Those with the most pay the least. Speaking of \$, do we know how much you will be charging us to use the gondola. I think people are under the mistaken impression that it will be free. I don't believe that for a moment! Why ruin BEAUTIFUL Little Cottonwood Canyon so a few people can get rich? I hate your decision. I think the public should vote on this. This is NOT for the greater good. It IS COERCION!!!
28953	Danielle Pearson	Also we fully support a toll similar to other places we've visited. Such a great system and does it does the least damage environmentally and those who actually use the canyon are the ones who pay instead of every taxpayer in Utah regardless of their use of LCC.
28954	James Frame	I still don't understand the economics for this. My understanding (and I could be wrong) is that Alta and Snowbird combined have an annual revenue of about \$70million. A gondola is not going to increase the amount of people staying in either resort so you aren't going to be increasing revenue there. So it is only ski passes and food during the day. Thus you might be able to increase their revenues by a maximum 25% or \$17.5million? Spending \$550 million on a gondola to increase revenue by \$17.5 million a year when we are in a recession? I wonder who the contractor is and what their connection is to the people making this decision as I really am trying hard to understand the economic sense. Not to mention people who live in Alta and Snowbird and residents at the bottom of the canyon are about 80% against this. Would love to have the decision makers to explain the counter argument and their economic justification?

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28955	Kevin H	This is a poor idea that enriches private companies while using public funds. Say NO to the Gondola.
28956	Samuel Bloom	Please do not build a gondola. The public is overwhelmingly against it and it is unjust to use taxpayer dollars to fund a project that will only benefit private resorts. There are many faults in the design including that it only serves these resorts, it doesn't account for inevitable low snow years when it is not possible to scale whereas bus service is. Additionally, it will be unlikely to get used at a high capacity on any day where traffic is not serious, therefore, it is a huge scar on the canyon to solve a problem that occurs for at most several hours each year. It cannot be reversed and will permanently mar our beautiful public lands that make the wasatch so special.
28957	Louise Lightner	Tax payers should not be funding a gondola that obviously benefits two ski resorts!!!! And benefits those that have secretly purchased property for such a project!! Where is everyone going to park?? Increase the buses. Encourage bus ridership by making it convenient quick and often. Free ridership on certain days. There's a lot more that can be done. For 2-3 months of the year for such expenditure is madness!!!'
28958	Courtney Cookson	1) The gondola would not decrease traffic in LCC, it is only moving more people to private ski resorts. Unless there is a serious initiative for carpooling or tolls, building a gondola will not fix the traffic in the canyon. 2) Tax payers funding the gondola. The citizens of SLC should not be paying for the construction and implementation of the gondola. Tax payer money should not be used to build a fancy new gondola when it has already been used to build a perfectly adequate road to get to the ski resorts. A gondola is luxury transportation and Alta and Snowbird need to be paying for it 100% (construction, maintenance, operations). 3) World class bouldering areas will be lost forever with the construction of the gondola. It would significantly alter the existing recreational areas and provides absolutely no benefit for the individuals going to LCC for any reason except to visit the ski resorts. LCC is so much more than two over priced mountain resorts that see bad traffic for a few days each year. 4) If the gondola is built with the taxes of the SLC people, there should be no charge to use it. I heard it would be an estimated \$400 per person in taxes to make the gondola happen. Why should we have to pay more than we already have? If the gondola is really considered "public transport" it should not cost anything because current public transport is actively losing money by implementing fares. I hope UDOT is able to see that the gondola is not helping the citizens of SLC or the canyon, it is helping the wealthy ski resorts. Snowbird and Alta need to pay for the gondola.
28959	Rudy Concepcion	Utah has a bunch of other issues, such as homelessness, a severe housing shortage, a drying up salt lake which is dumping arsenic into the air and our lungs, and a severe water shortage. But sure, let's build a gondola for rich skiers to use instead! Seems legit to me. Yes I'm being sarcastic, this is ridiculous. Put my taxes to better use!!
28960	Robert Polski	Can we recognize a few important facts? 1) There are many users other than those going to the resorts. Part of the appeal of LCC is its raw beauty, whether you ski, hike, bike, climb, or drive through. Large towers will require major construction efforts and be an eyesore on the landscape. And for what benefit? It's certainly at a cost to everyone except for possibly skiers. 2) The gondolas do not serve any purpose but to fill the resorts. The one purpose of them is to pump skiers into the resorts when the road is clogged, entirely serving the resorts. To climbers, hikers, backcountry skiers, and all others, the towers are nothing but an eyesore and in some cases will destroy boulder problems (really disappointing to me since I enjoy the unique bouldering experience in LCC) and remove parking for summer activities. Why do the resorts need so many more people? The lines are already long first thing in the morning, which is the only time gondolas would make a difference in the traffic. The bottleneck just shifts from the road to the lift lines. It wouldn't enhance anyone's experience. The purpose is only to add to the pockets of the resorts. 3) The gondola isn't exactly convenient. The ride will take about 40 minutes. This doesn't include parking and getting to the gondola, which will be a pain since the parking lot will be in the middle of a fairly small neighborhood. How many people will want to waste significantly more time using the gondola vs. just driving or using buses? Those who say they would use a gondola over busing are just starstruck at the novelty of it and won over by the idealistic advertising. They aren't going to use it on a regular basis. 4) The infrastructure is already there. There was talk over either using a gondola or adding bus lanes. But we haven't even explored the most basic improvements, those that do not require major infrastructure changes. I rode on the buses many times last year, and except during absolute peak hours, there was always plenty of room. The service, even with stops, was fast, benefited from distributed parking at a number of stops (so avoiding the problem of everyone parking at one gondola stop), and the 15-minute-or-so intervals were very reasonable. I never saw huge bottlenecks that wouldn't be resolved by waiting for just one extra bus. There are easy ways to improve the bus system even more that will improve traffic, allow more people to get up to the canyon, and involve none of the downsides of the gondola. First off, this is not Southern California. There are traffic backups and accidents, but those mostly result from cars that shouldn't be on snowy/icy roads. It's not because there are way too many cars. How about tighter restrictions on cars entering the canyons? To reduce the traffic, considering the future growth of SLC, how about incentivizing buses with a small fee for entry in the winter? Or resort discounts with a bus pass? For peak hours, increase buses to one every 10 minutes. Go to electric buses. There are easy solutions. Why do we have to go for the hardest, most destructive ones from the start?
28961	Michelle Hakkarinen	As a skier and resident of the area, I can not support the wasting of taxpayer funding on a gondola that would benefit far fewer people than you think. That money could be used in better ways to help those in need and a gondola will damage the natural environment. No gondola!

29140	Kirk Baggaley	<p>This us Kirk Baggaley. I left a voicemail but wanted to leave a text also. I dont know all the private interests that are involved in this project, but it appears that the project isnt just about a local traffic problem. It is also for the benefit of the ski resorts in Little Cottonwood Canyon. Tax dollars should not be involved in this since that is the case, especially of the magnitude of this project - \$550 million! For skiing! The patrons of the canyon must pay for it all, bond interest and bond retirement, upkeep and maintenance if the whole thing. The users get the benefit, they should pay the bill.</p> <p>We have far too many other projects for tax payer money. What if a project for the homeless would cost this? There would be an oitcry of not spending so great a sum. And besides, we know it will end up costing more than projected, government projects always seem to do that.</p> <p>That is my input. Thank you for considering my thoughts.</p> <p>Kirk Baggaley West Valley City.</p>
28962	Andrew Ehninger	<p>I do not want the gondola built. I have lived in the littkr cotton wood canyon area my entire life. Keri capitalist agendas away from the nationally protected forests.</p>
28963	Eliza Maas	<p>I think a better way to control traffic in the canyons is to simply limit the number of cars through a reservation system. If the canyon can't handle the current number of visitors it seems like, from an environmental standpoint, we need to honor that rather than trying to figure out new ways to accommodate the flow. Our environment is in crisis, it is critical to the future of Salt Lake City that we take drastic action to curb climate change...massive development in the mountains seems to be the opposite direction of environmental protection and care. Not to mention the massive public cost of a gondola that will only cater to those wealthy enough to ski at the some of the most expensive resorts in Utah. This proposal is both environmentally egregious and classiest. I cannot and will not support it.</p>
28964	Fred Gruter	<p>The \$550 million figure is totally outdated and I suspect current figures would be double or triple that. On top of that will be extra unforeseen costs incurred during construction which every large construction project has. This is a total give-away of taxpayer funds to enrich private industry. It will also put many more people on the ski hill, causing long lift lines and diminished skier experience. The Snowbird tram is shut down often because of weather which will probably be true for this gondola also.</p>
28965	Greg Kokeny	<p>Totally against this. First for the habitat in LCC and for citizens to enjoy the natural environment there. Second doesn't alleviate traffic on wasatch between the canyons. No one wants that to be 4 lanes. Third, the gondola would be most useful during a snow event which only happens at most 20 days a year. On those days the lifts will be on delay anyhow. Think of those lines when only one lift is open. Fourth, on all those other days who's gonna want to take 45 minutes to get to the resort? Spring Summer and fall ridership will be low. No options to stop at trail heads. The gondola idea in LCC would not work in BCC in any way. Big cottonwood has the exact same traffic problems as LCC. Why have two different isolated traffic solutions? Makes no sense other than an inside deal! Why haven't you considered the tunnel from the gravel pit at the bottom of big cottonwood? It's already a giant construction site. It's got great access via four-lane highway from 215 There's plenty of room for hotels restaurants and parking and the tunnel will not affect the surface environment in Little cottonwood Canyon. From there you can run buses or allow cars or a train or whatever. Please listen to the majority!</p>
28966	Denise Hudson	<p>I am against the gondolas completely. I dont think the tax payers should pay for the ski resorts upgrades. Why dont they quit selling the out of state include all resort passes, then it would not be so crowded. I used to ski all the time, now it is too expensive and crowded. There should be a locals discount at the very least. Maybe make the canyons a one way hwy for a couple of hours in am and a couple of hrsPM. This would solve the traffic problem. Dont ruin our beautiful canyon with a gondola. Our views are priceless. Thank you Denise Hudson</p>
28967	Andy Summers	<p>Taxpayer funded Moonshot to benefit two corporations. The citizens and the environment lose, the vacationers and the greedy win.</p>
28968	Shelley Reynolds	<p>The gondola is NOT the solution to the traffic problem in LCC. As a canyon user and a constituent, I do not support this proposal. If the ski resorts are pro Gondola, they should be footing the bill since it directly and positively impacts (\$\$\$) their businesses. It is not going to help at the trailheads as a one stop trip to the resorts.</p>
28969	Kara Sonntag	<p>I am a skier and grew up skiing at Snowbird. I now take my family to both Snowbird and Alta to ski. I also grew up about 10 minutes from the mouth of the canyon, in Cottonwood Heights. The increase of traffic really became an issue when the resorts started accepting the lkon and mountain collective passes alike. I try to avoid the crowds by going early. I DO NOT THINK THE GONDOLA IS THE SOLUTION!!!! I think it's a complete GIANT WASTE MONEY!! I'm a middle-class local and can barely afford to ski with my family. We work it into our budget to make it work. But there is NO WAY I would pay to ride the gondola with a family of 6. The gondola only serves the super rich that ski. That's it!! It makes me think there's a back door deal going down where some one is bound to make buckets of money. What a complete waste of precious tax payer monies! I taught school and left due to the poor wages and high stress of teaching. I honestly qualified for welfare assistance and I had a four year degree. Put the half BILLION dollars toward education and pay teachers a reasonable wage!!!! If the state can justify spending a half billion dollars so the super rich won't be so inconvenienced then why does the state claim it can't afford to pay teachers????!!! I don't trust UDOT and it's ability to spend money properly. I can't believe this is even a consideration. Let the resorts work out the problem. I don't want more people on the hill anyway. My faith in the Utah government will completely disintegrated if this goes through!!!! Pay teachers instead and the teacher shortage will definitely decrease!!</p>
28970	Ray Leavitt	<p>Close the canyon the private cars. Only allow busses in canyon. NO GONDOLA!!!</p>
28971	Egan Wint	<p>the gondola will be the nail in the coffin for skiing and snowboarding in the cottonwoods</p>
28972	Eric Moldenhauer	<p>The idea of any public money/taxpayer dollars being used for a gondola to get to two privately owned ski resorts is unthinkable. If anything, the profitable resorts who will be benefiting from this concept should be paying for the entire project. Having taxpayers fund a gondola that is only used by a fraction of Utah residents and tourists is absurd. That money could and should be used for other more important things such as affordable housing, mental health resources, domestic violence resources and more.</p>

28973	Lucas Leprey	Please listen to the people, no one in Utah wants this gondola running up our most prized canyon. We need to double down on buses and park and rides that won't affect the permanent landscape of our natural wonders. Let this year show that we can make busses work before we permanently impact the many ways we recreate in the canyon at all times of the year. If places like maybe national parks can make busses work so can we
28974	Collin Anderson	Literally nobody wants a gondola except the ski resorts. Gondolas are not efficient, and they are hideous. The best solution is to have better parking and buses. Don't tax us to death and destroy little cottonwood just so the ski resorts can make more money. I dare you to put it to a vote -- frankly, I think you know the answer, which is why you won't do it. This is universally panned by all who don't stand to profit from it.
28975	Frank Moore	I support enhanced bus service with road tolls, not a gondola. FYI, The EIS statement poorly justified the gondola over enhanced bus service.
28976	Heather Malovich	This is a terrible use of taxpayer dollars. It benefits a select few, and is ridiculously expensive.
28977	Eric Morgan	Very happy with your decision. I don't understand why everyone seems to be against the project. Just look to the hundreds of examples in Europe and even Colorado for proof of success. Long line the Gondola! One connecting to PC would be even better. Take cars off the roads!
28978	Andrew Wilson	<p>Bad deal for taxpayers. I'm going to assume a few approximate numbers. 3500 cars per day enter LCC over the course of a year. Of course, they also exit the canyon, so the same 3500 leave as well. They each carry about 2 people per car. The goal of the gondola or enhanced bus service is to reduce the number of cars by 30%. So, 30% of 3500 = 1050 cars per day reduction entering canyon.</p> <p>The proposed cost of each alternative is around \$550,000,000. The gondola would require an additional \$7,000,000 each year to operate, the bus service around \$12,000,000 per year. Over the next 25 years, the capital and operation expenditure for the gondola becomes \$725,000,000 and the bus service becomes \$850,000,000, or averaged out as expensed over time it comes to \$29,000,000 per year for gondola and \$34,000,000 for bus service.</p> <p>If you divide the yearly capital expense average and maintenance costs, then divide by the number of cars entering the canyon the project intends to reduce, it looks like this:</p> <p>Gondola - \$29,000,000 per year/ 1050 fewer cars per day entering (363,350 cars) = \$79.80 per car that enters the canyon.</p> <p>Bus - Same scenario as above, \$95.57 each car.</p> <p>That's what Utah tax dollars will be subsidizing over the next 25 years. And I can pretty much wager that the 1050 fewer cars per day will be replaced with more people driving up the canyon because the road won't be as busy and there will be available parking. Result is an increase in the number of cars and people in LCC.</p> <p>I would be livid to see my tax dollars being utilized for between and \$80 to \$95 per reduced vehicle that I must pay for. Imagine, the 1050 reduced cars in the below canyon parking lot at \$80 per vehicle to get hem to park there. That's \$84,000 per day in taxpayer dollars to park and ride - and it's your tax dollars that fill that parking lot, and it's your tax dollars that stuff the corporate greed of the ski resorts that will benefit immensely from all the added skier and other recreational traffic.</p> <p>And who do you think is going to come knocking on the Alta and Snowbird business office door when these resorts become this much more popular and profitable?? How about the conglomerates, Alterra or Vail Resorts, they will offer big money for our beloved Alta and Snowbird.</p> <p>Working on solutions to save a much more critical geographic component would be to keep The Great Salt Lake from</p>
28979	Lucas Leprey	Please listen to the people, no one in Utah wants this gondola running up our most prized canyon. We need to double down on buses and park and rides that won't affect the permanent landscape of our natural wonders. Let this year show that we can make busses work before we permanently impact the many ways we recreate in the canyon at all times of the year. If places like maybe national parks can make busses work so can we
28980	Cassidy Bryan	Hi! I was just curious as to how this gondola would be more beneficial to getting rid of traffic. From the sounds of it, it seems like the cons outweigh the pros. I personally believe that a bus system would be better for traffic, and pollution. All the work to set up the gondola would not make the addition more sustainable for the ecosystem than adding buses and carpooling would. I also feel like a toll for cars not carpooling could be a more beneficial solution.
28981	Deborah Bangerter	The first round of the comment period I added my support to the gondola project. But I have learned more about this project and have learned that despite tax payer money being used to build the Gondola, there would still be a charge to use it and it would probably only run to the ski resorts (thus benefitting them only). I like the idea of a gondola as long as it benefits all people of Utah without excluding any groups and as far as it allows access to all parts of the canyon - not just the ski resorts. Otherwise they should be the ones to build the gondola themselves. Please make some adjustments to the gondola project so that it benefits all Utahns.
28982	Arielle Gulley	A gondola is the last thing that many people desire for the canyon. It would actually lead to many people forgoing little Cottonwood canyon and instead spending recreational time in other canyons. Better options would be bettering the bussing system, larger roads, parking fines being imposed, etc. a gondola would hurt more than it helps if brought to the canyon, and it's too expensive to be warranted.
28983	Wil Thompson	Let's focus on solutions that don't disrupt the environment as much such as improved bus systems, tolls, etc. The gondola will just be destructive!
28984	Whitney Osborn	PLEASE implement a better bussing system! It's absolutely ludicrous to make taxpayers for a gondola that benefits the ski resorts and the resorts alone. Implement a toll booth system for single occupancy vehicles, make it easier for low-income individuals to access public transportation up the canyon. Please, PLEASE, do not destroy the beauty of this canyon with the towers of a gondola. Prove to your citizens that money doesn't rule every decision, and that the government works for the people of the community. We don't want a gondola.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28985	Paige Mangan	I do not agree with a gondola as the solution for LCC. Just as the rest of SLC, we need to be investing in public transportation!! Buses are the solution!
28987	Michael Ayre	<p>As a 20+ year season pass holder at Snowbird, I recognize the increased traffic in Little Cottonwood Canyon and the need to address.</p> <p>Any interim solutions until the preferred option of the Gondola is constructed should show preferential treatment to full season pass holders at Snowbird and Alta, which are the primary revenue generators and supporters of the two ski resorts.</p> <p>The single largest increase to traffic occurred with the addition of Snowbird and Alta to the Ikon pass. That first year saw such a dramatic increase to traffic, specifically on Saturdays or major snow days. Not only was traffic increased dramatically, but parking on the main road was also increased exponentially in Little, and Big, Cottonwood.</p> <p>Part of the reasoning for a season pass is for quick trips to the resorts when time allows - have a couple hours, make a few tram laps, then back to work or other activities, but many times that is single occupancy cars. Adding the time and hassle to transfer to a bus along with not being able to take with multiple skis depending on conditions will inhibit many people from not wanting to go up, punishing the season pass holders while also punishing those who don't always have someone to ski or ride with.</p> <p>Suggestions during the interim period until Gondola completed:</p> <ol style="list-style-type: none"> 1. High Occupancy Days Peak Hours Shift - move time from 7am-10am to 8am-11am (or at a minimum, 730am-1030am). Where the resorts do not open until 9 to 915am, this would incentivize spreading out of traffic for early birds to get up to the resorts before serious traffic occurs without punishing for single occupancy or a toll cost. 2. Tolling Exclusion for Season Pass Holders - provide a reader (like used on I-15) be included with a full season passholders to Snowbird and Alta for use at any time of the day going up and down the canyon whether single occupant or not with no additional fee. This would incentivize season pass participation, which is the primary revenue stream of any ski resort and shift the burden and cost to the Ikon pass users and single day ticket users not staying up at the resorts. In this case, peak hours' time would not need to be shifted. <p>Thank you for your time and efforts in finding solutions to the ever-increasing traffic issues with the canyons. Regards, Michael Ayre</p>
28986	Daria Anderson	Stop proposing to destroy the canyons. We DO NOT want a gondola. Please put it up to a vote!!! This is not a decision that should be made by anyone other than the population of SL County! Of course you won't do it because you know that absolutely nobody supports it.
28988	Kathy Reardon	<p>I am against the proposed Gondola in Little Cottonwood Canyon for numerous reasons including:</p> <ul style="list-style-type: none"> -it will destroy the recreational experiences for non-skiers who use and love the canyon for other activities (rock climbing, hiking, backcountry skiing, etc) -only benefits a relatively small number of taxpayers for a limited number of ski days but requires tax paper dollars from all Utahns -other options being considered and phased in would be more equitable with less environmental impact -Snowbird and Alta could and should help solve the problem by limiting the number of skiers per day. -Utah taxes should be used for the benefit of all, especially those in need, rather than the few with the means to ski <p>Thank you for considering my thoughts.</p>
28989	Carol Wilkinson	I have real concerns about the Gondola B option UDOT has chosen. As a skier and hiker, I do not like the visual impairment this option would create. Also, in my opinion, obtaining state funding for this project is problematic as the project only benefits a small percentage of the Salt Lake City population. Many of its benefits are for out of state visitors. Incidentally, how much do you project the cost of riding the gondola to be? I cannot imagine that Cottonwood residents are thrilled about having such a large parking structure at the base of the canyon. I like the Phase 1 option as being the way to move forward without Phase 2.
28990	Madison Villalobos	The environmental impact is monumental, there is little logical reason on why this gondola should exist and as a salt lake city native, I would be deeply displeased to see and witness the consequences of this gondola in my home canyons. Please do not continue with the gondola.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
28991	Stefan Niederauer	<p>When I began reading the final EIS report, I expected a presentation of the logical data-based decisions and rationale for selecting the Gondola B alternative recommended by UDOT over the other proposed alternatives. Unfortunately, the documents read more like opinion pieces with sparse reference to data that support the decision.</p> <p>It is extremely worrying that no summary statistics of public comments, reliability, or economic impact was made available in the final EIS report. While UDOT spent the time and resources to respond to specific comments, why was no effort made to summarize the wealth of public input to this project? If the public overwhelmingly supported the Gondola option, why not present that data to support the decision? Similarly, no specific data is given to support the rationale used to make the decision. UDOT cites the selection of Gondola Alternative B as its preferred option due the "best overall reliability", but no measurable metrics of reliability are presented anywhere in the Final EIS. The only direct comparison made for reliability occurs in Table 4 of the executive summary, where UDOT's own analysis states that the gondola would stop service if any part malfunctioned, but the cog rail would only stop service if a train malfunctioned in the 2-mile stretch of single-track. How likely are each of malfunction events and what would the impact be on commuters should a malfunction occur? UDOT presents arguments that the cog rail and bus alternatives are subject to reduced reliability from avalanche and mitigation activities, but overlook the impact the same winter storms have on the gondola alternative when high winds are present. Historical data from similar projects around the world could have been collected and presented, but UDOT fails to do this. Overall, it is difficult to conclude if UDOT was not provided the resources to conduct a thorough assessment of all these variables, or if other factors played a role in the decision that are not presented in the EIS. Either way, the decision appears highly subjective with weak support using quantified metrics, and creates suspicion and distrust of UDOT's decision, especially among the outdoor community.</p> <p>An overwhelming majority of the outdoor community that spends time in LCC away from resorts staunchly disfavor the use of the Gondola alternatives. Sacrificing the year-round recreation experience of devoted outdoor enthusiasts to mitigate travel congestion a few days per year to private businesses, who have made minimal efforts to improve commuting experience for their own customers, is far from an equitable decision. Trolling the outdoor community by selecting the very transportation option we decisively detest will likely only increase conflict and reduce cooperation to attain improved mobility sought by the LCC EIS.</p>
28992	Stephanie Gelman	<p>As a Cottonwood Heights resident I oppose building a gondola to Little Cottonwood Canyon. This will not solve the traffic problem and it will ruin the canyon. It will fin ancillary benefit the contractors and the resorts but not the residents of the area. Improving the bus system is the most appropriate way to solve the canyon traffic without ruining the canyon. Study the success Zion has had since implementing a bus system.</p>
28993	Ethan Hall	<p>I don't support the widening of the road or destruction of the canyons natural beauty. I wouldn't love to see less destructive alternatives like tolling and better public transit like busses.</p>
28994	Nicole Eddy	<p>Utah residents should not have to sacrifice our climbing , hiking , and scenic driving areas so a ski resort can sell more tickets for higher profit. Snowbird/Alta should limit daily capacity at the resort which honestly would be a better experience for resort goers and those who use the canyon. Build a larger bus shuttle and parking area at the bottom of the canyon to improve the bus experience. Force snowbird to require reserved parking and only those with a permit can go up. Do not spoil one of the best pieces of the Wasatch front with a tram.</p>
28995	Albin Tiley	<p>Strongly opposed based on the environmental impact and use of public funds.</p>
28996	Audrey Elias	<p>I do not support the gondola!</p>
28997	Casey Hyer	<p>This is absurd that we are doing this again. The politician who is pushing this to happen is clearly corrupt and should be removed from office asap. UDOT says the gondola will not reduce traffic. But only increase resort visitation and profits. While impacting the access to all the non-resort recreation in the area. This is being paid for with public transportation money. And only benefits a small percentage of Utah population.</p> <p>Make the resorts pay for their own parking issues.</p> <p>Also, let publish the names of the people who are responsible for the 4 round of the strongly apposed plan. So they can be held responsible for waist of public resources.</p>
28998	Jim Bass	<p>As a non-Utah resident who skis at Snowbird, I believe the gondola solution would be an ideal solution to the problem of traffic, safety, and reliability of transport in Little Cottonwood Canyon. In addition, it would be a breakthrough example for our country of how "ropeway" systems can address innumerable congested traffic problems (especially in highly populated urban areas) throughout our country. I have traveled throughout the Alps for many years where ropeways (and railway systems) have been used for over 75 years to address the kind of problem faced with car traffic and safety in Little Cottonwood Canyon. It has worked well for European countries and it is a low-CO2 emission solution that would be a good contribution to addressing the challenges posed by considerable global warming.</p>
29001	Madison Barney	<p>This should NOT happen. The gondola will only allow the laziest of people to get outside-my experience is that those who put in little effort don't care for the environment. If you increase the accessibility you have to come up with a solution to the littering. If the goal is to decrease emissions this won't help. Not everyone in Utah even ski's, smog levels on cars should be assessed not a giant piece of metal that's just going to scar the environment.</p> <p>Please listen to the people who actually live in Utah and enjoy LCC. Not to the tourists who don't care about the environment itself. Please..</p>

ID	Full Name	Comment
29005	Allan Schein	<p>Having read the Final EIS for the Little Cottonwood Canyon Gondola B alternate choice, I am amazed that there is absolutely no discussion of the impacts to our neighborhoods. Economic and traffic considerations seem to be a major driver to facilitate the ski areas to have a tentacle down canyon into the valley. But there is no indication this study and UDOT have considered what a massive industrial transportation hub will do to our neighborhoods. We're not zoned for a major industrial complex, did not move to this corner of the valley to have our living environment radically changed, and believe this decision was based on political, economic and preferential decisions that will forever diminish quality of life for residents in this vicinity.</p> <p>With the Gondola come the opportunists. The people that have bought the land on which to situate this out-of-place ski area attraction. No mention of the planned hotel and shopping center adjoining the base station is made. No mention of the size of the parking structure itself, or the base station, or how the influx of vehicles and people will affect the daily lives of residents. All the expansion and planned build-out will destroy the peace and tranquility of these neighborhoods. Make them more dangerous and radically alter the character of our community.</p> <p>The plan for Wasatch itself is ridiculous. UDOT is planning to funnel all traffic now, not through our neighborhoods but right into them. Widened roads, sound barriers, overpasses and more will now alter our neighborhoods with the overflow growth from and for the ski areas. And the attractive nuisance which the Gondola will prove to be. People utilizing it more in summers just for an activity. Mitigating traffic issues does not mean increasing it with the introduction of an amusement park style attraction.</p> <p>Not only that, but the economic rather than residential focus is a mistake from the start. Whatever happened to the concept of "quiet enjoyment" of our homes? UDOT and Snowbird want to run a major highway up to the canyon mouth and seem to have forgotten how Bangerter Hwy has destroyed and made neighborhoods radically different, and more dangerous thanks to the increase in traffic.</p> <p>Wasatch Blvd is a major recreation corridor. Runners, walkers, cyclists, and dog walkers rely on this corridor. The Tour of Utah bicycle race has been held on this route numerous times. Canyon recreation in general exceeds visits to the ski areas but the focus is on economic development. Residents should not have to suffer personal changes to their environment in order to allow the ski area expansion, which due to continuous growth have outgrown their useable boundaries.</p> <p>The extensive advertising Gondolaworks bought presented numerous exaggerations, half lies and outright [REDACTED] to the general public. The claim by Mr. Fields that the gondola will only require 2 acres is false, and the EIS shows a number greater than 200 acres required. Depictions of deplorable conditions riding buses were publicized. Yet, Gondolaworks's cable cars are sky buses, boxcars with seats suspended on a cable rather than wheels. Giving it a romantic name evoking some other culture doesn't change what it is.</p> <p>This entire concept is economic based with freeloaders looking to take a profitable ride on taxpayers money. It's not a solution unto itself, but a planned development designed to benefit the ski areas and land owners near base station while parading itself as a realistic traffic solution. It will increase traffic and the corresponding noise in our neighborhoods.</p>
29020	Dainna Stelmach	<p>The gondola is a bad idea. It is expensive, damaging to the natural habitat and beauty of the canyon and will not solve the problems of traffic. We should have more buses that are free with a pass and improved parking at the bottom of the canyons.</p>
29021	Brooke Lynn Phelts	<p>Please use alternate options. The small voices matter too. Climbing and having the mountains stay matter.</p>
29022	Andy Weuling	<p>After reading the Final EIS it is apparent by the numbers (clearly shown in the infographic presented) that Enhanced Bus Service provides similar if not the same transit time as Gondola Option B with far less impact on views, community, and the environment of the canyon. This solution can be scaled with changes in demand and population of the city as well. For example a weekday with poor snow conditions can warrant a scale back in bus service that day at a savings to UDOT. A gondola would be a fixed, permanent, high cost, and extremely high impact way to accomplish the same results. No matter if demand is high or low the gondola would remain a static entity. A convincing argument has not been made to show the gondola has a better environment impact than the bus, in fact the numbers show a higher impact. Reliability of the gondola is not promised and if anything is less likely than a well maintained bus fleet. If anything goes wrong with the gondola the entire line must be shut down. If one bus breaks down a repair crew can easily get to it while the other busses keep running. The report states the gondola does not have an environment justice impact. However, the cost of taking the gondola verses the bus will be far more expensive, thus pricing out lower income canyon users. On a broader social note, the job creation from the bus service exceeds gondola operation by a large margin. Finally, busses have the ability to serve locations other than the resorts including popular trailheads for winter non-resort canyon users. Thus car traffic in these areas is further reduced and accessibility is increased. The Utah community hopes UDOT will see the light and pivot to the clearly smarter and more publicly supported decision. Thank you for your time.</p>
29023	Matthew Tilford	<p>Accessibility: the quality of being able to be reached or entered.</p> <p>What steps has UDOT taken to ensure this new piece of public transportation will be accessible to all people no matter their ability. I live with a mobility disability that hinders me from navigating throughout the world like most of the population. The ADA was put into law over 30 years ago to ensure all people have equal access to public property and to private properties that serve the public. To be honest it needs a revamp to catch up with todays needs.</p> <p>Universal design is the design of buildings, products or environments to make them accessible to all people, regardless of age, disability or other factors.</p> <p>Will UDOT do the bare minimum or will they seize this opportunity to become a leader in accessibility by using universal design on this project?</p> <p>The Salt lake valley has 3 non profits and of course multiple city and county departments that focus on adaptive outdoor recreation. This shows we have a large population of people with disabilities that will be using this form of transportation.</p> <p>Please reach out to actual people with disabilities for help. We can do so much more and higher quality work when we come together.</p>

Comments on Little Cottonwood Canyon Final EIS

29552	Galen Schuck	A gondola is not a good year round solution. It would profit the ski resorts but not so much the public trying to reach trailheads without taking their cars up the canyon. The cost is massive. The resorts would get a huge amount of taxpayer money to build this thing. No- lets do Electric Busses and a few road modifications. That way a bus could run people up to the trailheads and resort year round. Galen Schuck Sandy, UT
29024	Elaine Larson	I am opposed to the gondola as a solution to the traffic in Little Cottonwood Canyon. There is a limit to how many people should go up to the ski resorts in one day.
29553	Fay Losser	Is this the best place to provide public comment regarding the proposed Gondola?
29025	Chandler Heppe	Modify the infrastructure already marring the beautiful canyon (the road) by closing it to private vehicles and making it bus only (hopefully electric someday), or some other way of not further damaging this national treasure while there is a perfectly viable road that will need to be there regardless of whether or not there is a gondola.
29026	Amanda Lingle	To spend tax payer dollars that only benefits higher income brackets is an irresponsible use of funds let alone the environmental damage this gondola will cause. This solution comes at the detriment of the community for using funds that could go elsewhere. The traffic in little cottonwood is going to become a problem but let's come up with a solution that does not take such a chunk out of taxpayers pockets many of whom this does not benefit and find a solution that is also more environmentally friendly. Build parking garages at the base, get more buses, make larger tolls for those who choose to drive up. There are better solutions.
29027	Rachel Jones	I'm curious as to whether the phase 2 gondola would proceed if the 30% passenger vehicle reduction target was met by phase 1 and the sub-alternatives. It would be great to see a version of this (or a disclaimer) that if expected reductions are met, the gondola would not proceed.
29028	Joseph Zieg	I think the implementation of a gondola in the LCC will not only be a complete eyesore, but a logistical nightmare and a complete waste of money. Traffic easing to resorts during the wintertime would better be handled by reduction in personal car traffic allowed in the canyon, and an increase in public bus transportation. A gondola would not add sufficient transportation bandwidth to solve traffic issues even at present, and if the expectation is that numbers continue to increase then it will just be a waste of money. No matter what an EIS will say has the least impact, carving up a mountain is not the way forward.
29029	David Frazier	This project feels like nobody wants it but it's still happening. This is a poor use of government funds funds and bloating our budgets. There are 20 different simpler ways to fix a traffic up a single lane road. Why don't you charge a toll or create an app with scheduling. A bus line directly from a central location where tracks meets et cetera
29030	Emmaline Russell	I STRONGLY DISAPPROVE of the gondola construction. We all know you're just getting fat checks from ski resorts this isn't gonna fix any traffic just make y'all more money. We're not gonna stand for it. I want increased bussing and limited canyon access. We will not let you take our money to fill your pockets. We will not let you prioritize tourism over local experience. You will not be successful in pursuing the gondola option.
29031	Aaron Lieberman	1000 people per hour is far too slow when Doppelmayr is debuting an 8000 person per hour gondola system. To make it actually worthwhile, the gondola has to be easier and faster than taking a car. Parking needs to be at the terminal, and the gondola should be able to move a days worth of skier up to the mountain in 2 hours. Additionally, the gondola should have stops at popular access points along the route to allow for off season use.
29032	Michael Wolfe	I have been skiing at Alta for over 60 years. This gondola will make skiing for me way to difficult and inconvenient. If it goes in I will ski somewhere else . I believe it will ruin the view am pleasant drive up the canyon.
29033	Van Halen Rockhill	Y'all know what you're doing. It's greedy, it's grimy, and it's going to destroy the canyon. Y'all are baby Vail and that money is going to run out eventually. I hope y'all get a good view of the canyon before you destroy it.
29034	Charles Christensen	As a lifetime resident of Salt Lake City, I absolutely OPPOSE the installation of a gondola up little cottonwood canyon! This is an egregious misappropriation of taxpayer funds that would only serve to benefit some of the wealthiest corporations and individuals while causing irreparable damage to the natural landscape that millions of us have always enjoyed. I would support closing the canyon to personal vehicles during the busiest weekends and holidays and put in place an expanded multi-point busing option with very short departing and arrival times from each location. This would disburse parking throughout the valley, cut pollution (especially electric busses), alleviate traffic, and put money into public transportation.
29035	Sophia Bartlit	As an employee up little cottonwood canyon and a lifelong skier in the canyon I think this proposal would be catastrophic. Not only to the environment of Little Cottonwood Canyon but to the people as well. On average there are 11 days a year in which there is bad traffic in the canyon, therefore a gondola is not necessary. Not only that I know for a fact the gondola would only attract more people to go up Little Cottonwood Canyon and not prevent the traffic. Locals will still drive, and so will the tourists. The best option to to have someone monitoring the base of the canyon 24/7 during the winter months. This way we can prevent people in unsuitable and unsafe cars to go up the canyon, preventing any crashes that cause the traffic backup.
29036	Callie Fairbanks	This project should not happen to preserve the natural beauty of the canyon.
29037	Alexander Gleason	The gondola is not a good solution. Any solution that involves destroying the rock climbing of the area is not acceptable. There are plenty of possible solutions that don't involve destroying lcc rock climbing
29038	Bryan Millerberg	I believe that this should be put to a vote. The limited time this would be needed, during snow and a very few weekends, does not deserve this much expense. The ones that stand to benefit the most are the resorts. Let them pay for it.

29554	Fay Losser	<p>To all it may concern,</p> <p>I have lived in the greater Salt Lake are for 60 years and currently live a mile from the mouth of Little Cottonwood. I grew up skiing in both Big and Little Cottonwood Canyons and we regularly enjoy picnicking and hiking during the warmer months. I remember a year when the snow at Brighton was well over the second story window of one of the houses in the village - all season long! That is a sight that has become almost nonexistent with advancing climate change. The thought of spending tax payer dollars to build a gondola to get people to a sport that may be obsolete in my lifetime seems ridiculous. I believe we should treat our canyons like national parks and require a reservation system. I think it is also fair to charge non-residents a fee to use the canyons. Residents should have preferred access during weekdays. Getting people up the canyon can easily be handled by buses using clean energy. If someone really wants to drive their own car they should have to pay a fee higher than the bus fair - and they should have to pay parking. Sadly - skiing has become an elite sporting event. I feel using tax payer dollars to build a gondola benefits the elite and takes resources from the poor and marginalized in our society.</p> <p>Please do the right thing and DO NOT BUILD A GONDOLA!!</p> <p>Concerned for the future of our canyons and our community,</p> <p>Fay Losser </p>
29039	James Matthew Rock	<p>Pathetic</p>
29040	Jasonged Jasonged	<p>Key studies have shown that skiing has been suffering from declining participation over the past decade. <https://newtoski.com/is-skiing-becoming-more-or-less-popular/> (Alaina Johnson, June 24, 2022)</p> <p>According to the National Ski Areas Association the number of active ski and snowboard participants in the US has been falling since its peak of 10.1 million in 2010-11 to just 8.4 million in 2015-16. The skier visit statistics paint a similar picture - declining by over 7.7 million between 2010 and 2016. <https://www.originoutside.com/insights/is-our-obsession-with-conversion-killing-the-ski-industry> The Covid years have changed the trend, or at least provided a bump.</p> <p>I'm a skier. Bought my first pass at Alta in the early 70s and my most recent one last year.</p> <p>I also pay taxes which I would like spent to enhance the health, friendliness and warmth of humanity, only a small part of which is subsidizing recreation for those making 160% of the local demographic (Oregon skiers in 2012, had a median income of \$82,000 while Oregon residents as a whole had a median income of \$49,000 <https://scholarsbank.uoregon.edu/xmlui/bitstream/handle/1794/12578/Ski%20Oregon%20Econ%20Impact%20Final.pdf;sequence=1></p> <p>According to the national weather service (<https://www.extremeweatherwatch.com/cities/alta/most-yearly-snow>), the most snow Alta has received since they began keeping records was 875" in 1983. Number 10 on the list of big years was 554" in 2019. Numbers 13,14, 15, and 17 are the only others in the top 20 since then and their totals hover around 500 - 525" contrary to old promotional material that claimed Alta averages 550" per year (<https://www.nationalgeographic.com/adventure/article/10-ski-resorts-deepest-snow>).</p> <p>Data from a university of British Columbia research project <https://blogs.ubc.ca/michaelpidwirny/season-length-mammoth/> shows temperatures between 1951-1980 were about 1.5 degrees C (2.7 degrees F) cooler than they were between 1981 and 2010. If those thirty years trends continue . . . ? <https://www.climate.gov/news-features/climate-and/climate-skiing> predicts there will be a greater than 75% change in ski season length by 2050 if we follow a moderate versus a high pathway of carbon dioxide emissions. They don't predict it will get longer.</p> <p>In 2016 the Denver Post reported that skier demographics was changing. It's the older people who skied more (9.5 days per year for those over 68.) Boomers of that year also skied more than the national average of five times per year, according to a National Ski Area Association survey released that August. Those ages 45-54 made up 20 percent of skiers, up from 14 percent in the 1997-98 season; the 55-64 age group made up 12 percent, up from nearly 5 percent, and those 65 and older rose to 5.5 percent from 2.5 percent, according to the NSAA study. That's almost 38% of the skiers being 45 or older. They are the ones who can afford it now, but they probably started skiing when they were much younger and have worked their way up into \$125+ per day tickets . Where is the sustaining young blood?</p> <p>Will the resorts' winter business be obsolete before a gondola is even paid for?? Will it's primarily winter revenue source be of significance as the winter recreational seasons shorten?</p> <p>Buses have a flexibility a gondola doesn't. Consider the possibility of sharing the capital costs of busses with the big five.</p>
29041	Abbey Freestone	<p>Cordially, this is a stupid idea. Utah is already facing white flight because there is no water here. Focus on the water problem first, then focus on traffic.</p> <p>Get people to stop watering their lawns with irrigation water that is disappearing. There won't be enough water in coming years for there to be snow for skiing.</p> <p>Make that your first priority over reducing traffic.</p> <p>Utah will be a ghost town in 10 years if you don't do something about the water situation and keep focusing on development.</p>
29042	Kendra Davis	<p>This plan still only serves ski resorts, there needs to be stops or improvements for other canyon users throughout the year including climbers and hikers. Furthermore adding the gondola still impacts climbing areas, introduces a lot of cost both upfront and for maintenance and can be an eyesore. Please get more creative, there are more solutions than just a gondola.</p>

29043	Tina Zak	I and most of the myriad of engineers at the U of U are adamantly against the gondola idea for the canyon. It is Not the best use of our tax dollars or any other funds. It does not meet any needs of the poor or disenfranchised and is way too expensive as a choice. No other canyon can take advantage of this choice. Busing is a much more fair and better use of funds. Look to the Engineers and and the greater minds from the UofU. These are the people you must listen too with the homework they have done, the numbers they have put together and the reasons they have put forth. Also Utah has to start spending money much more wisely. We are over looking the " what is Best for the most majority" scenarios and trying to make some sort of mark for Utah. We are becoming what we say we hate in other States . Stop the Gondola- it is wasteful and only helps a few people. Don't do it.
29044	Lisa Sullivan	I vote no to the Gondola!!!!!!!!!!!!!!!!!!!!!!
29045	William Frits	I think the Gondola is a poor choice to move forwards with. I'm sure it is challenging, but it would be interesting to see a public vote on this. Besides targeted ads on FB that are sponsored by Gondola Works, I really haven't see anything that suggests anybody likes this idea. Even all of the rich people who live at the mouth of the canyon have posters up saying they don't like the gondola. Just seems like the public at large is against this. And would it even solve the problem? People will always prefer driving their own car up. As long as their is parking at the top, people will wait in line hoping to get a spot. The gondola can take 35 people every 2 minutes? That's a much slower delivery system than cars. People are not going to wait at the bottom of the gondola line for 90 minutes on a powder day, when they could just sit in their warm car with the radio going. Imagine the line waiting to get back down the mountain. What if there are severe winds and the gondola has to stop? You can plow and salt an icy road, you can't just turn the wind off. I hope people will realize this was one of those ideas that initially had value, but with deeper review can be cast out.
29046	Ryan Avila	I really don't see how people in the area will benefit from this. Correct me if I'm wrong but won't only the resorts financially benefit from this? Also, as resident in Sandy, does that mean I'm paying for this gondola but I don't get to ride it for free? And by having a condola that just means more people from around the world are going to want to come here which means we're going to have even more traffic. Why not learn from Zion national Park and Arches National Park and those who want to go to the ski resorts schedule time so that way the canyons won't be so busy with traffic from people who did not schedule a time to go to those ski resorts. Because let's be real, it's only busy during the winter when people are skiing. Are there really no other alternatives to solving the issue of traffic in the winter time? Limiting day passes or having buses won't help? Here's the thing, I plan to run for office in the near future and I definitely am against this and I know many of my supporters are as well. If there's any way I could get involved with the decision or understanding why certain decisions are being made please let me know.
29047	Patrick Smalley	This project is absolutely absurd. I've been driving up that Canyon for over 30 years, a gondola is not needed. If the state really needs to think up dreamboat projects like this to spend money then they should be giving the money back to taxpayers. It is not your money to begin with, you are stewards of it and should be spending it wisely. Projects like this are evident that wise spending is not being done.
29048	Maren Bayles	We as a community don't want this. We need to preserve the canyon as is for this and future generations. The gondola will ruin much of the existing beauty and wildlife and will have a horrible impact on our environment.
29049	Harald Goeckeritz	Don't waste Taxpayer money, for things what only serve the rich. Leave it alone and let the skiers wait, the bus are empty now, because rich people want use it.80 percent can't even effort to skie.
29050	Thomas Hansen	The proposed gondola does not benefit the public, only the owners of resorts and slopes. Funding for public transportation should go to expanding trax or to helping subsidize costs to lower income people who use the bus or trax. A Frontrunner expansion to Logan would be exponentially more useful to taxpayers than a gondola to ski resorts.
29051	Carina C.	I'm #teamgondola!!
29052	Jasmine Nguyen	this is not only going to create more traffic problems, but harm the natural environment around this. do better.
29053	Noah Moody	Build the gondola. the stupid saying it's a bad idea. Public transportation infrastructure is never a bad idea, and less accidents benefits everyone.
29054	Marilyn Smith	This gondola is an egregious give away of public monies to companies that are making a hefty profit using public lands. The gondola will be of little use 3/4 of the year to the upper canyon. It will provide absolutely no benefit to those of us who use the many other trails in LCC. I strongly object to this give away to corporations.
29055	Richard Jaffe	The planned gondola destroys the scenic mountain corridor, does not have intermediate stops for rock climbers and hikers, and the large cost appears to be borne by the 98% of the populace that do not ski in Little Cottonwood Canyon. A very elitist idea borne by the Utah taxpayers. Richard Jaffe, M.D.
29056	Eric Bishop	The gondola option is the best option available if the goal of the project is to line the pockets of resort owners and destroy the beauty of LCC. In comparison to the expanded bus option, this option is more expensive, slower, more destructive, and less versatile. The bus option is a year round solution and services more canyon users including those not going to the resorts.
29057	Jess Green	Please do use my taxpayer dollars on the Gondola plan! It sounds like a lovely tourist attraction, but as a resident of the surrounding community I don't see the value in this option that benefits mostly private businesses (LaCaille, Alta, Snowbird), negatively impacts the environment and natural beauty of our canyon, and costs so much to only be able to access two stops in the canyon--only for those visiting the two private resorts and not for the many other canyon visitors. Anyone else would still need to drive up the canyon to access their destinations. Please look for seriously at improved bussing and incentives to ride the bus (such as a dedicated bus lane in wider sections of the canyon to bypass private transportation). Thank you.
29058	Ashley Jacskon	Little cottonwood is a one of a kind canyon. Not only for the resorts, but for all of the activities we can enjoy. By constructing a gondola, we limit the number of activities we can partake in and decrease the beauty of the canyon. One reason I love SLC is how readily we can climb outside and take a quick break from the hustle and bustle of the city. This ability makes SLC so unique and special to any other mountain city. We truly have it all here. The gondola would diminish this. Keep LCC and all the activities it has to offer.
29059	Vincent Migliaccio	There are better more cost effective alternatives to this issue. We do not need a 500+ million dollar gondola to effectively move travelers up and down little cottonwood canyon. If national parks can transport millions of people a year we can do that with a single canyon. We do not agree with or want a gondola in out canyons.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29060	Jennifer Welding	Wasatch should not become a highway. Slower speed is an easy fix More bus stops, more frequent busses. Major change for approx 12 to 15 days of heavy snow is not a reason to create a highway.
29061	Jack Ballash	No gondola..it is not an environmentally good choice or financially responsible one. It is an excellent example of corruption using tax payer dollars to build a system that profits a few individuals . You need to use eminent domain to build the parking lot and let tax payer use the gondola they paid for for free. Udot is clearly corrupt in taking this solution. No gondola
29062	Clark Vaughan	To spend what will likely end up being 1 Billion dollars on an eyesore gondola for 2 businesses that need help about 20 days year is ludicrous. Let them pay for whatever they need. We have kids that need advocates in the foster system, adults that are homeless with psychiatric problems not being treated, teachers who don't get paid enough, and many other problems that could use this money. I love skiing in LCC but hate waste more Also, this process has been extremely poor at explaining it's methodology for selecting proposals and explaining why the will of the citizens is being ignored We don't want a gondola. It's our money!!!!
29063	Lorrie Belcher	Regarding the gondola. We are in a severe drought. Where will we get the water to run the gondola? There is no grid. If I cant even water my lawn how can we run a gondola?
29064	Karissa Killian	Yet another way the ski industry favors tourists over locals. There is no thought given here to the quality of life as a local wanting to recreate in the public land close to home. Why can't an expanded bus service be considered instead? We are in a climate emergency and we should be trying to mitigate that as much as possible, not contributing to it with a huge development that will use tons of fossil fuels. Especially for an industry that relies on Utah getting a certain amount of snow each winter.
29555	Derek Hubbard	Hello, I wanted to add my input on the decision to put a gondola in Little Cottonwood canyon in an effort to alleviate traffic during the winter. As a frequent user of the canyon for all types of sports, I DO NOT SUPPORT the gondola proposal (sorry for the all caps, I wanted to make sure I was clear). Doing so will only change the bottleneck point. Instead of cars in the canyon, means will need to be provided for more and more parking at the bottom of the canyon. Not only will huge damage be done to our vast natural resources in the canyon (including but not limited to climbing, biking, rafting and hiking) but the parking areas necessary will take vast areas of already overcrowded land. Last but not least, the natural beauty of the canyon that has been and will be of great worth to everyone who has seen it will be disrupted. Stop the greed of the ski resorts and have them impose limits on daily and season passes. It has worked for years at Powder Mountain and they're the best resort in the Ogden area. Thank you, Derek Hubbard
29065	Mary Vaughan	Maybe you pull of this scam or maybe you don't but we ALL see the scam. NO GONDOLA
29066	Betsy Romney	We do not support the gondola or widening the road on Wasatch Blvd or Little Cottonwood Canyons. It seems absurd that such a large amount of tax dollars would go toward an insignificant problem. The canyon would be permanently disfigured and our community would be saddled with a burden that is unnecessary. The 100's of millions of dollars should go toward education and assisting the poor, NOT to "fix" annoying traffic.
29067	Mary Barton	I disapprove of the use of taxpayer funds to build a gondola. There is nothing equitable about this as a form of public transit. Widening roads and adding parking does not alleviate congestion in the long term. If you need a car to get to your public transit, your public transit is a failure. The gondola being low impact doesn't matter if it requires cars to get to it. Cars are not sustainable. If we have \$5.5m to spend, use it to save the lives of pedestrians and cyclists getting run over by cars.
29068	Melissa Brunke	Please do not put the gondola in. This is a permanent structure that will severely alter the look of our canyons and destroy the natural beauty. This gondola will only increase tourism in an area where we cannot sustain it. In Utah, we have a massive water shortage. This plan only benefits Snowbird and Alta who are already pulling in extraordinary profits. I am in support for an expanded bus system. Not even widening the road. Pay the employees of the busses a livable wage, toll the road and increase buses every 10 to 15 minutes. That is plenty and if a better solution comes up along the road, then you have the opportunity to change it. The gondola is a horrible idea in that it is a permanent and unmovable fixture that does not benefit hikers in the summer, nor does it benefit cross country skiers, backcountry skiers. The gondola proposal is missing a massive chunk of the people who use that canyon. Please think about the people of Utah and not the profits.
29069	Tyler Bytendorp	I don't want to see the gondola go up. It seems that it doesn't benefit most Utahns. I don't want it to affect the beauty of the canyons.
29070	Scott Biddinger	Don't do it. Tolling is the best way to preserve the canyon
29071	Jasonged Jasonged	Discount coupon websites
29072	Jorjann Peters	As a tax payer and resident, I see no need for a half-a-billion gondola when bus service and street widening will suffice. The canyon views will be forever gone as we know them today. We say we want to protect our canyons-then use any money to maintain the use for regular locals, like me, by preserving trails, improving roads and free bus transit, and expanding nature education/info centers for visitors. A gondola is extremely expensive for the few who will use it-and it will change the landscape forever.

29073	Jake Nicholson	The proposed Gondola plan B is NOT the best alternative for our future. To preserve the " value" of LCC as stated in your report would not include visual destruction by adding 20+ gondola towers. The traffic issue will only be pushed back further trying to get to proposed parking structure. I live on and monitor traffic on Wasatch and the majority of the time there are very few cars. Computer traffic along Wasatch Blvd. through our town all leads to single lane, 35 or 40 mph zones. Widening, and the gondola are both the wrong direction for the future. Zion, Arches, and Acadia NPs all have had success by regulating the number of visitors at a time. This is the only solution to preserving the value of LCC, quality of skiing, hiking, bouldering, and safety on Wasatch. Slow it down!
29074	Stacee Bellantino	I don't want the gondola! Its not fair for us tax payers to have to pay for something we don't want. Also I think If the resorts want it they should be the ones to pay for it. They make enough money for what they charge to ski nowadays its ridiculous!
29075	Morgan Millar	Please no gondola. It will ruin the canyon. It is an expensive unnecessary solution to a problem that only occurs a couple of weeks of the year. There are simpler solutions with less impact. Just increase busses and require cars to pay a toll during peak times. It's that simple.
29076	Justin Christensen	We absolutely don't need this and I don't want my taxes being wasted on a project I will never be able to use. The wealthy do not need anymore hand outs or things to help them.
29077	Elizabeth Ann Bartlit	There is NO reason for a gondola in LCC! It is unnecessary when only 10 days a year(give or take A few) the canyon is impacted with avalanches. Why should the UT tax payers be burdened with a tax that private ski resorts will profit from? Is UDOT getting some financial benefit from this??? Why is this overkill option of a gondola even a consideration when it is not only cost-prohibitive but will damage the natural beauty of LCC forever? The parking reservation systems at both Alta & snowbird worked extremely well when instituted over the past years. This gondola proposal is the last option that should be considered! Electric buses, LCC tolls and ski resort parking reservations are all better options to maintain the natural beauty of LCC! Please NO GONDOLA
29078	Maren Jensen	I don't believe in corporate welfare. This gondola will be paid for by the taxpayer and will aid in lining the pockets of a very few. Not to mention it will be a permanent eyesore. The canyon is not just for skiers. A shuttle service is perfectly adequate for the ski resorts.
29079	Joel Sheppard	No gondola. It only serves skiers and the resorts. This wouldn't stop for areas hikers, fisherman, hunters, picnics, and climbers want to go. I'm worried about the environmental impact. I'm worried it will hurt world-class rock climbs. Please just add a toll to the canyon for now. The toll can be higher on snow days. That will reduce traffic and help.
29080	Parker Marci	I don't understand why we would build a gondola and ruin all views if the canyon. I like to go hiking up Little Cottonwood Canyon and I stop at a variety of places to do so. I enjoy the canyon view while I hike. I do not want to see something obstructing those views, especially when an enhanced bus system can do the trick.
29081	Tyler Pirruccio	This is a very expensive answer to a problem that exists 15 days a year. Additionally the lifts at the ski resorts and the roads at the base of LCC get very congested currently. This gondola could potentially make all these current issues worse without large scale planning (especially roads leading to gondola). Basically we're spending a huge amount of money to wait in a line somewhere else. Last, this plan only benefits Alta and Snowbird and doesn't address the issue of BCC. Logistically it would make a lot more sense to make Granite mine at the bottom of BCC the base of said gondola. Use wasatch blvd as ski resort only traffic connector. Then wrap gondola from Brighton to Alta snowbird.
29082	Tricia Austin	I am very against the gondola. It is an enormous expense and will ruin the canyon. I love hiking and camping up there. I do not want to see this built.
29084	Jared Naumann	This may be the best idea I've heard from udot. This has the potential for being one of the worlds greatest attraction with the ability to bring tens of thousands of tourists coming to Utah. We love Utah and want to see it from the sky. European countries have thousands of gondolas and they bring wealth and beauty to their countries.
29083	Brittany Parks	An additional lane would provide similar increased access, incentivize bus usage and most importantly offer a safe and effective route for emergency vehicles. In case of a forest fire, citizens will not benefit from a gondola, whereas an extra lane would be critical and very likely save many lives. This is an astronomically large sum of money from taxpayers to support such few privileged citizens. I love gondolas, especially for year round access, but it only running in the winter demonstrates how this truly only benefits two resorts and their wealthy patrons. If the project were that necessary, the two ski resorts should team up to at least seriously offset or completely subsidize them, not average tax payers. If it is not lucrative for them to do so, than it is not necessary yet. Additionally, traffic jams in the canyon now, once resolved will just translate to increased traffic jams on the slopes. Thanks for your consideration.
29085	Alex Shingarev	Please consider alternative to gondola options (widen road with priority line for buses end EVs for instance)
29086	Jackson Dille	I understand concern over the visual impact of a gondola but it's kind of ironic given the point is to access an area riddled with ski lifts. There's huge value in avoiding potential back up on the road. Within a few years the gondola could become an attraction in and of itself, offering beautiful views of the canyon.

29087	Alain Ragoonath-mckenzie	<p>The gondola proposal would literally - not figuratively - take over 500 million dollars from taxpayers and give it to a cause that would only benefit 2 privately owned ski resorts. The argument that gondolas would ultimately benefit our community is ridiculous: 1. It would only benefit the population that skis and can afford to ski - there are far more Utahns who don't ski regularly than do, and the gondola proposal would provide zero benefit to them while using their tax dollars. 2. The idea that gondolas would increase tourism dollars in our community is also false, as any appreciable spending would likely only flow to the 2 resorts, and national chain hotels. 3. If those tourists were to indeed flock to the resorts, the effect would only be to crowd the resorts even more than they already are on a daily basis. 4. If "environmental impact" is truly a concern, Little Cottonwood canyon is already at capacity, evidenced by the long lines to go up during winter. The canyon itself is telling us that's enough. Why do we need to cram as many humans as we possibly can up the canyon? If the canyon size dictates its capacity, we have hit that benchmark, why not let it be? 5. There are hundreds of families at the base of LCC that would be negatively impacted, and the state would effectively steamroll over these families' real estate investments and lifestyles, all for the benefit of the resort owners and the land owners of the proposed gondola site. 6. The elephant in the room is that some local politicians actually own part of the land on the proposed gondola site, and they and their business associates are the only ones who truly stand to gain from the gondola proposal, and to the detriment of everyone else in the community.</p> <p>The gondola proposal is, quite simply, a land grab by private entities that would use taxpayer money for private gain at the expense of every surrounding community.</p>
29088	Presley Barber	<p>The little cottonwoods Eis should not have a gondola through the land, because we do not want to destroy all of the habitats in that canyon.</p>
29089	Carla Morelli	<p>The gondola is a GREAT option. The argument that the cost to build and destruction of our canyon is hypocritical! The opposition is suggesting to widen the road (destroys our canyon) along what has 17 avalanche spots along the road. The pollution from the cars, oil, maintenance of the road and the HUGE amount of people driving up our canyon is doing more damage to our beautiful canyon than what the gondola will do. Also, in the future, the gondola will provide clean air and our world is in the process of eliminating exhaust (pollution) as it does damage to our canyon more than building the towers to hold the gondola. The argument that the gondola will be a tourist attraction is ridiculous, we will always have the tourist attraction up the canyon with people who do not know how to drive in our weather. At least the gondola will remove that danger. Take a look around the world where gondolas have preserved the beauty of the mountains. We need to have Little Cottonwood to be preserved for future generations.</p>
29090	James Wright	<p>The gondola is a colossal waste of money that will provide benefit exclusively to two private corporate entities. Please consider the Utah Taxpayer who wants to use the natural space of LCC as your stakeholder. Widen the road. Apply tolls. Provide emissions free busing. Tax tourists coming to Utah. Reward the trust we place in you, our elected and public servants.</p>
29091	Chelsea Lindbeck	<p>I am pleased that UDOT is recommending a phased approach because hopefully it will demonstrate that there are effective solutions other than the gondola. For instance, I believe we haven't given bussing a fair chance to succeed (i.e. increasing service throughout the valley, increasing frequency, switching to electric, etc). There are also a variety of financial tools we can try to incentivize bussing like tolling and carpooling discounts. Without any of these in place, does it surprise you that bussing is not as popular as we'd like? I think we'll find that if we really throw our weight behind some of these creative tools, we can find a solution that works for everyone, preserves the beauty and ecology of the canyon and cost a whole lot less money.</p> <p>I believe the gondola is an expensive tourist attraction that won't solve the major issues in the canyon (traffic on Wasatch, increasing cost to recreate, access to lower parts of the canyon, safety on bad weather days, etc). I'm also opposed to the taxpayers taking on the entire burden when the resorts are the only benefactors. I understand their value to the local economy, but this really only helps the resorts.</p> <p>I ask that you please fully invest in testing other options that are cheaper, easier and more effective before committing more than half a billion dollars to the gondola plan.</p>

29092	Margaret Wolfe	<p>To Whom It May Concern:</p> <p>I feel very fortunate to have been living, working and recreating in and around Little Cottonwood Canyon for the past 38 years. Unparalleled skiing, climbing and hiking in this gorgeous canyon are what brought me to Utah, and without question why I remain here.</p> <p>I am OPPOSED TO THE GONDOLA for several reasons. First of all, It would be a horrible, irreversible blight on the landscape. Just this evening, as I was driving up 9400, I marveled at the up-canyon view as the late afternoon struck the canyon's granite walls and pinnacles. It made me very sad to think that one day, huge metal towers could be obstructing the natural, magical beauty of the place.</p> <p>More pragmatically, I am OPPOSED TO THE GONDOLA because it just doesn't make a lot of sense. Will the tax payers be expected to foot the bill for the project? What will happen to the area around La Caille? I envision traffic nightmares. Perhaps the gondola will alleviate some of the congestion on the canyon road, but at what cost to the people living at and around the base of the canyon? How many people will actually want to drive to some sort of "hub," ride a bus to the gondola, and then wait for an aerial car? How much will it cost for a skier to ride the gondola? What about a canyon employee? The expense of building and maintaining a gondola that will only operate for 5 months of the year, not to mention the destruction of such a pristine area, seems irresponsible and reprehensible.</p> <p>The popularity of LCC is only going to increase, and I understand that some things need to change. Alta's Parking Reservation System, initiated last winter, showed promise. Skiers were more thoughtful about their trips up the canyon, and they carpoled more. More people rode the SKI BUS. I would like to see Parking Reservations extended to include Fridays, and perhaps go to 7 days a week. I would like to see more ski buses, and perhaps some incentivization for Canyon Employers to run regular vans up and down the Canyon. Perhaps, it could become a toll road. We need to keep working on ways to improve the traffic situation in Little Cottonwood Canyon. A GONDOLA IS NOT THE ANSWER!</p> <p>Sincerely, Margot Wolfe Cottonwood Heights Utah</p>
29093	Mackenzie Rogers	<p>It's not likely you're even considering comments, or considering those who have paid a sizable amount to live in LCC. Widening of roads is dangerous to our children, us, and create a loud road near nice homes. This also ruins the aesthetic of the canyon. The gondola itself is a massive invasion of privacy, and no one will allow it. This will not happen easily.</p>
29094	Larry And Ruth Hoffmann	<p>The gondola is a boondoggle. it is wrong in so many ways, and it's efficiency has been misrepresented. It cannot run during avalanche control, just as road traffic cannot pass. An eventual dedicated bus lane with electric busses, substantial canyon use-fees, and universal reservation systems provides the best solution.</p>
29095	Jacquelyn Rawson	<p>I live in SLC and nobody I know is in favor of this. The fact that it was approved despite overwhelming and consistent rejection by the people sounds a lot like corruption.</p>
29096	Cy Schmidt	<p>Comments Gondola Project</p> <p>I am definitely opposed to the gondola project.</p> <p>Why should all of the Salt Lake Valley citizens, and maybe Utahans, pay for something that only 8-10%, at the most, will ever utilize. If the tax burden was carefully documented to the public, you would have many more letters of objection. We have many more critical places to put our tax dollars that would build the area, instead of cause harm. This is the wrong decision! The Gondolas do not alleviate traffic congestion. They only serve the resorts!! Not Utahans!!! They do not stop at the many destinations used in the Canyons.</p> <p>We do NOT want Gondolas to obscure the grand open view of these lovely mountains. This is not a resort like Disneyland. It is a NATURAL WONDER!! We want it to be a NATURAL wonder and resource for many, many years.</p> <p>It is our only source of water to this valley. With poor legislation and planning, the Great Salt Lake is disappearing. We give our water and environmental concerns poor consideration when we start talking big commercial money and influence. This will have a huge negative effect on the moisture that comes across the lake and into our mountains. We desperately need to secure our future mountain water resources.</p> <p>We also object to the devastation the building of the Gondolas will be to the floor of the Canyon. And to the many wildlife species that call it home. It will also be a source of pollution to our water system during the lengthy building process. There will be huge increase of dust, trash, foot traffic, machinery exhaust, machinery oil, and wreckage to plants, natural scenery and water. There will be noise pollution. There will be visual pollution. There will be loss of plant and animal species that may never recover.</p> <p>We do not believe the commercials. We do not believe the lies about only using helicopters for construction. Shame on you for letting the money of Snowbird \$\$\$\$ make the decision. People have not commented more because they tell me, "It is a done deal, there is nothing we can do to</p>
29097	Mark Baer	<p>UDOT decision - as it has been laid out; to wit, approving the gondola as a viable option demonstrates a couple of things. (a) UDOT had it's mind made up before the tens of thousands of negative responses to that proposal (b) UDOT views taxpayer input as mere window dressing (c) UDOT's cavalier attitude to constituent input is primary.</p> <p>Given these alternatives, please feel free to explain by return email, why individuals should participate in the UDOT process and not seek external means to stop this wasteful project?</p>
29098	Teresa Wu	<p>It is unbelievable that we can spend 550 million on a Gondola that will only push the problem somewhere else and not solve any issues. The UN on its whole only sent 145 million to the whole population of Pakistan for humanitarian purposes. This is a disgusting use of public funds.</p>
29099	Geraldyn Dreyfous	<p>I am in favor of the Gondola</p>
29100	Chris Gamvroulas	<p>Thank you! The Gondola B alternative is by far the best option UDOT could have selected. It does the most to alleviate traffic in both the short and long term. I can't wait to ride the gondola. It will be a great experience!</p>
29101	Barbara George	<p>NO to gondolas</p>
29102	Diego Zegarra	<p>Thank you for exploring alternative transportation solutions to mitigate for future traffic issues. I'm in support of the gondola!</p>
29103	Maria Guarnieri	<p>Agree!!!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29104	Scott Maizlish	A fantastic idea to get people out of their cars, this is a WIN, and hopefully a precedent for other resorts to do the same.
29105	Christine Coleman	I love the gondola idea. It will save time for people going into the canyon and also be better for our changing climate.
29106	Shawn Sandberg	There's no need for the state to accrue this amount of debt for a project that only benefits the ski resorts and puts the burden of taxpayers money on those who cannot afford to ski. If you can't handle the traffic or don't want to take a bus, then don't go ski! Do not do the Gondola!
29107	E Ingraham	<p>The gondola is for profit all the way down the line, from Neiderhauser / McCandless inception, to ski area participation</p> <p>THEY should pay for it, and not profit on the disruption and ruination of one of SLC's most precious places, while the rest of us pay the costs.</p> <p>There needs to be mandatory car pooling and / or bus riding before that canyon is torn up with a gondola or bus lanes. To do so before trying those solutions would be a vast crime against the public good.</p>
29108	Bryn Carey	I am in support of the Gondola. It will be the cleanest and most efficient way to move people up the canyon. It is an innovative approach and we support the decision.
29109	Kevin Douglas	<p>Tramways and gondolas are messy to install and will greatly impact the canyon as is today. Roads to each tower will be built and much grading and construction will be needed. I worked at the resorts for over a decade and have seen this personally.</p> <p>Improve the bus services and impose tolls on single occupant vehicles to encourage mass transit use. I do not support a gondola/tramway for the rich when there are so many other needed services in the valley. UTA could use the money to make mass transit in the valley better rather than catering to a small amount of the population for one quarter of the year while wrecking a beautiful canyon.</p> <p>Sincerely, Kevin Douglas</p>
29110	Erik Henrikson	<p>Hi UDOT team,</p> <p>Just reaching out to submit my comments about the Little Cottonwood Canyon traffic issue. It seems to me that there has been complete disregard about the public opinion, and has been pushed to the most expensive, environmentally degrading, visually disruptive, short term solution when other solutions haven't been tried yet.</p> <p>Let's try a proper bus schedule or toll booth for private vehicles before ripping the canyon apart for a gondola. It's such a huge expense for something that will only be utilized for 2 to 4 months of the year max that is serving 2 private business.</p> <p>While I understand getting people up and down the canyon is the issue, have you been up to the resorts on these busy days? The resorts are already at capacity, and increasing the amount of people that can get up there is only going to make it worse.</p> <p>Please listen to the public opinion.</p> <p>Thanks,</p> <p>Erik Henrikson</p>
29111	Blair Frank	I strongly support this.
29112	Jayme Worden	<p>Hello, I am a citizen of Sandy, Utah and an avid skier. I love this state and am grateful to live here.</p> <p>I do not support the Gondola. We have so many smaller solutions we can start acting on and testing before committing to a Gondola that will only be slower getting up and down the canyon. We don't gain efficiencies by adding a Gondola to LCC.</p> <p>But we can gain efficiencies by tolling our canyons in the winter, and improving the bus system slowly over time. This helps not only LCC but BCC and the rest of the valley. Improving public transportation across the Canyons impacts our citizens across the Valley. Versus the Gondola benefiting tourists and the wealthy.</p> <p>Let's be honest, with a 15 min addition to travel time (plus waiting in the cold, etc.) local Utahns will be driving anyway. Which does not serve the people. PLEASE think of other alternatives that can be paid for in increments vs a \$300M initial investment to just get the gondola.</p> <p>Also, this \$550M+ could serve the Great Salt Lake, the vital key to our incredible winters. Let's refocus these efforts and TAX dollars to keeping our winters alive. At the end of the day, if we don't have snow in 10 years the Gondola will be a waste of time, money, and resources and the tourist benefit will be null and void.</p> <p>Thank you for reading. I really hope you consider what the citizens of Utah want and not what businesses like Snowbird want. Please please rethink this decision. There is a much more innovative way to use the money and resources to help our citizens and our planet.</p>
29113	Ann Malcolm Macquoid	Hopefull and affirmative
29115	Jonathan Dainesi	The problem mitigates itself if Alta and Snowbird enforce mandatory parking reservations. This past season the traffic was worse for BCC and only Alta was enforcing parking reservations. Are the resorts expanding the in bounds terrain? If not, we should not be increasing the number of skiers and snowboarders up there.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29114	Peter Vitulli	I fully support the Cottonwood Canyon Gondola project. It is a fabulous idea.
29116	Annette Mahler	I for one believe that those in favor of the tram and any changes to Wasatch Boulevard are the ski resorts and ski industry. I have frequented Little Cottonwood Canyon as a born and raised Utahn living near this area my entire life. I do not ski but hike the trails. A gondola will scar the mountains and only benefit the ski resorts. Do away with the Epic passes and you will reduce traffic and congestion. Charge each car as in Millcreek and American Fork Canyons. Offer an annual pass for cars. This will reduce traffic and increase rideshare and bus travel. The gondola will not be used more than once by locals. We will be driving the same as I can be at most trailheads in 10-19 minutes from my home. Tram is one time only and then it's back to the car. Take other measures first and lets see how they work.
29119	Peter Cannon	I'm a sandy local and utah lover. I believe this gondola will make the south valley a mecca for visitors and the pride of locals. Driving the canyon is dangerous and unreliable. Please make the gondola so the fullness of our areas assets can be made more available.
29117	Stefani Kimche	Thrilled to see the gondola option has been supported by UDOT. Makes sense on so many levels and I fully support this option as well. Thank you for the hours spent to find the right solution. Stefani Kimche
29118	Mason Carter	This gondola is a wonderful plan and is the best option for little cottonwood.
29121	David Prey	I support the option: ENHANCED BUS WITH ROADWAY WIDENING FOR PEAK-PERIOD (SHOULDER LANE) IN LCC - The cost for this looks way over inflated to make it look the same as Gondola A and Gondola B. No way!, will I want to go into LCC if they build a Gondola along that creek - it will become [redacted] creek - haha.
29120	Ricco Cordova	The Gondola won't fix the "congestion" or "bottle neck" of traffic going up and down LCC. You're just moving it into the residential areas of Sandy and Cottonwood Heights. You're just relocating the issue so it's no longer "your problem." My favorite part of this is them trying to convince us that this is the best for the "environment." You don't care about the environment. If you simply did, you would take the \$500-\$550 Million dollars you want to use for this "tourist attraction" and invest it in the Great Salt Lake. Refilling the lake we produce lake effect storms that will contribute more snowfall and rain for our watershed. Sen. Orrin G. Hatch and several other key Utah congressional Republicans, including House Natural Resources Committee Chairman Rob Bishop and Rep. Jason Chaffetz have already show us they don't give two [redacted] about Public Lands back in 2017 when they argued for months that Obama should not have invoked his authority under the 1906 Antiquities Act to protect the site, as The Post's Juliet Eilperin reported recently, with Hatch claiming support from President Trump for undoing Obama's decision. Do not try and make this about the environment when all this is a "tourist attraction advertisement" to get your rich friends to come experience "the worlds largest gondola to the greatest snow on earth" in Salt Lake City, UT and use their IKON Pass.
29122	Jacqueline Vollmar Freshwater	This is an environmentally sensitive and watershed area. Tax dollars should not be used to destroy it solely for the benefit two private ski resorts. These greedy resorts assume they can rape a beautiful canyon and make money doing it. I say, NO.
29123	Francesca Ball	This is one of the worst ideas I've ever heard, as far as our beautiful nature is concerned! That's what I moved here for! And it's what so many people that I've met have also moved here for... Convenience isn't worth how nature, and its natural migration paths will be forever altered for stupidity's sake!
29124	Daniel Arellano	The gondola idea is the worst option we had. It upsets me the public will have to pay millions for only two PRIVATE owned resorts to benefit from the outcome. This true is the terrible. Improving the bus system and restricting vehicles from entering the canyon is far more valuable use of time and resources. If the gondola moves forward the community will be destroyed and the traffic problem will not be fixed. We need to improve the bussing system, make the system more appealing to travelers and locals. Make restrictions on vehicles entering the canyon and guiding the public to use the bussing system. If that's not the answer, trains could be an alternative option. The gondola will only destroyed the integrity of our local community.
29125	Ezekiel Tripp	The public is very outspoken that it is AGAINST the construction of the gondola!!! We have read the EIS and that it will bring MORE traffic into the canyon. WE DO NOT WANT THE GONDOLA IT WILL BE A WASTE OF TAXPAYER MONEY TO DESTROY THE CANYON
29126	Anna Thomas	Do NOT build this gondola with our taxpayer dollars. It will only exist to serve those who can already afford to ski or travel by private means.
29127	Kristen Yeo	We do not support any implementation of gondola. First it is very costly and I sure hope the taxpayers aren't paying for this. Second there will be hardly any snow in the years to come. The crowded parking lot will become a thing of the past and the gondola will just be sitting there unused and still require maintenance. The best path forward is to install a system that can alert drivers through an app that the parking capacity is full so that they can either carpool, take a bus or not come into the canyons. This will be more cost effective and have minimal impact to the environment.
29128	Nate Jessee	I am very disappointed in this proposal. UDOT clearly ignored public opinion in favor of resort interests. Taxpayer funded solutions should benefit taxpayers, not ski resorts. This does nothing for backcountry users, hikers, climbers, and the many others who recreate in our canyons. It is not even an efficient traffic solution. It is a flashy way to increase resort throughput, and UDOT should be ashamed.
29129	Lynn Russo	I am in favor of the proposed Gondola project.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29130	Rex Infanger	For those of us who own property up Little Cottonwood canyon the gondola solution does not seem to address that we have to bring materials up and down the canyon to get to stay at our property without paying a toll. We have already paid for a road that does the job to some extent, why not improve that road and skip the elite route of a gondola that will basically add windmills to the view we paid to enjoy. This makes the folks coming in more important than the folks already there
29131	Sheila Gelman	Waste of tax payers money..
29132	Kirsten Henderson	I fully support the gondola in little little cottonwood canyon!
29133	Shaye Henderson	I am supportive of the gondola
29134	Blake Henderson	I am wholly supportive of the gondola in little cottonwood canyon
29135	Mac Henderson	I support the gondola in little cotton wood canyon
29136	June Henderson	I support the gondola in little cotton wood canyon
29137	Neil Henderson	I support the gondola in little cotton wood canyon
29139	Nate Branch	The process completely ignored the overwhelming majority of comments rejecting the gondola, so here to say again we the citizens do not want a gondola in our canyon! Limit access to personal vehicles and expand parking in the valley and buses
29138	Jacob Jensen	As a taxpaying citizen, and a summer user of Little Cottonwood Canyon, I strongly oppose building a gondola. It is an extremely expensive project that disproportionately subsidizes two private businesses (Snowbird and Alta). Some money can certainly be spent to make improvements in the canyon, but such an expensive capital project with hefty long-term operational costs is ill-advised. Additionally, the gondola will destroy the natural beauty of the canyon. Please, please do not build the gondola. The fact that wealthy individuals and private companies are the primary supporters of the gondola project indicate that the main beneficiaries are not the general tax-paying population, but private companies and land owners. Long Time Skier 30 years 1972
29556	Tim Burkett Owner	I oppose the Gondola for 2 very simple reasons. 1. It will add huge number of new skiers onto the slopes of Alta + Snowbird. Do we need more paying skiers on weekends? Soon the lift lines will look like Vail or Aspen - or worse - Lake Tahoe - do we really want 40-minute lift lines just because we figured a way to jam more skiers up there? It will ruin the experience for everyone. If you have reached the limit on skiers already, then limit the access. 2. Electric Cars are coming - so the tail pipe problem goes away. So that does not make sense either. Also: It will look like a Disneyland ride going up the middle of the canyon. Avalanches will be able to hit the poles. At Snowbird they are on the ridges for a reason. What happens if a tower gets hit by an avalanche? Still going to run it anyway. Did you see what happen in Europe just a couple of years ago? Gondola not working properly started sliding backwards then fell, killing many. We live at bottom of canyon and would not like to see moving gondola every time i look up at mountains. Will increase the amount of time to go skiing by double. For season pass holders WHO PAY THE FREIGHT up there it's not good. Finally, DO NOT BUY OUT LAQUILLE and level it to put in some cement atrocity. My solution is to do what they did at the Olympics using parking lots around the valley that are empty almost all the time. Then lots more buses - electric if you have them to get people up and down. Eliminating a massive traffic jam at the bottom of the gondola when every car that normally would just breeze up the canyon now has to queue up and wait just to enter some huge building think of the parking mess downtown on jazz games same thing. I can't see cement and steel being the answer. Limit the skiers if you have too many in the future too bad, all those up there at once is NOT good for any skier.
29141	John Lawrence	Are there going to be Police or Gondola cops at the bottom of the canyon to check you to prove you are an owner or Long overdue! We have seen the impact of our increased population these last decades and mass transportation has so many long term benefits for all canyon users and for all of us who want to preserve the canyon for generations upon generations to come. It's safer, cleaner, more efficient, by far than what we are now doing. The assessment seems to illustrate how much the benefits far outweigh any opposition which seems based on individual convenience. Thank you for taking time to provide the study and willingness to consider comments
29144	Mathew Christensen	Spending half a million dollars on a project that benefits a small, privileged sector of the population is not only irresponsible use of taxpayer money, it's immoral, when so many mid to low-income people need resources in schools, food, housing, and public transit. I can barely get to SLCC in under 2 hours from where I live, 4 miles away. And I have to commute everyday. It's not fair that I have to walk in polluted air when I can't find a bus that runs less than once an hour. Then I hear how a gondola will be built for a wealthy-persons sport, to get people just a few miles up a canyon for a few months of the year. It absolutely makes no sense, and is very discouraging to know that's where my communities priorities lie. Please reallocate those funds to expanding public transit in the valley to reduce pollution and help people with things they NEED to do (get to work, school, groceries) not what people want to do for a couple times per year. Just a fraction of the population ski's, but everyone needs to get around their community. It's absolutely vital to improve necessary transit. A gondola that tears up a relatively pristine canyon for affluent groups that have to commute to their expensive sport is. It essential. After public transit is expanded and school have teachers than go ahead with a gondola. Please reconsider!

ID	Full Name	Comment
29145	Wieslawa Kwiatkowski	I'm AGAINST Gondola! No TAXPAYERS MONEY should be used for that project just for few powder days to enrich few. Estimate price is old, it will cost MORE than a BILLION just like it was WITH famous PRISON! Electric busses, improved road should be cheaper than this eyesore. Busses can serve many hikers, snowshoes, can stop along the way. Those money should be spent on poor, help seniors save Great Salt lake etc. Shame on our self serving Buffoons?
29147	Max Turley-conway	as a ski instructor at snowbird i view the proposed idea for a gondola an absolute money grab and seen more as another synthesized tourist attraction than an actual transit solution!
29148	Thomas Bergman	<p>I feel that the gondola does not benefit the community as a whole. While it will contribute to growing the ski areas and bringing in more revenue for Alta/ Snowbird, it does not seem to offer fair compensation for the people of the community of Alta, nor the people who own homes at the mouth of the canyon. The gondola will impact the community in a negative manner.</p> <p>I propose increased bus routes, and tolling on the road at which vehicles will be checked for proper tires/ chains. The tolling will provide revenue for the community as opposed to the community paying for a gondola that only benefits the ski resorts monetarily.</p> <p>It seems quite apparent that the majority of people, especially those impacted due to their close vicinity , are against spending 600 million dollars on the gondola. It is our taxpayer dollars, and we should be shown the respect of choice by listening to the majority. To build the gondola goes against what the majority of people want.</p> <p>Please listen to the people. It is simply unjust to make a decision against the large majority. It highlights a lack of empathy and consideration for those it will directly impact.</p>
29149	Danny Parker	<p>Will this gondola be proposed next in Big Cottonwood? Or will the 500 Mill spent in LCC be an excuse to further develop a commuter link into adjacent canyons? The public needs to know the full scope of these projects to make a fair assessment of their impact. Clearly one excessively expensive "solution" for only one of our canyons facing traffic issues (on less than a dozen days a year) Is not the full plan.</p> <p>How much taxpayer money will go into these projects? How much public lands will be overtaken? How much recreation will be removed or diminished.</p>
29150	Samantha Smyth	No. Not necessary. No
29151	Lessing Stern	Very much in favor of this initiative.
29152	Karen Tahmoreszadeh	Our taxpayer money should be spent more wisely. We need more police and traffic control. We need recycle every week. Help homeless.
29153	Cecilia Webber	No gondola. Electric busses would be better
29154	Jamestown Jamestown	—j—∞—±—μ— ^a —â —Ç—μ—ø— ^a —æ—z—æ—ø—æ— ^a —∞
29155	Leslie Snavelly	This is a positive move!
29156	Marc Davis	This plan would be useful people who travel to the depot locations only, will not benefit summer recreation, will create an eyesore on our wilderness and cost taxpayers money to transport very few people benefitting only the owners of the gondola. It is a huge mistake.
29157	Michael Clark	It's not worth the environmental or recreational impact
29158	Jason Portnoy	I am in favor of the Gondola B option, and very excited about it :)
29159	Nick VI	Thinking long-term, it needs to be done. Benefits outweigh costs significantly.
29160	Mark Angelides	I honestly don't understand why UDOT is spending so much time and money trying to figure out a way to get travelers to TWO ski areas in Little Cottonwood Canyon. If skiers aren't happy with the traffic in Little Cottonwood, there are plenty of other places they can go to ski. I'm guessing the major reason for UDOT choosing the gondola option is that they're getting a financial kickback from the ski areas in Little Cottonwood, who are really the only ones who would benefit by bringing more customers to their businesses. Find something else to do with your time and money, UDOT, like maintaining the existing roads in the state and getting rid of the trash on our highways.
29161	Dennis Carlson	<ol style="list-style-type: none"> 1. Please provide me the reasons as to why a simple controlled access to the canyon is not viable. This is being done all the time at various parks and camp sites. 2. What makes you think that people will switch to public transit to get up the mountain? 3. If one of the goals is to get more people up the canyon, what will happen to the quality of skiing? Already lift lines are long and ski runs are crowded and dangerous. How can this be good?
29162	Stephen Teske	A gondola would be a huge eye sore and only be useful to a small group for a small part of the year, at the expense of the majority of the people who use the canyon.
29163	Kimball Bitner	Build the gondola
29164	Jim King	The gondola would destroy the beauty of the canyon forever and ever. It's a terrible idea.
29165	Kristie Hilton	We have to destroy everything we touch... what happens to the wildlife and the natural mountains we all enjoy. This is about skiers and you expect the taxpayers to pay for whatever you do for a select group of people. We cannot replace what you intend to destroy ever! It's incredibly sad.

29167	Mitchell Creelman	<p>Although I agree that there is a pressing need to address the volume of cars that come to little cottonwood canyon on high-traffic days, i believe that the plan laid out by UDOT does not adequately address the underlying issues.</p> <p>If we are trying to reduce the amount of traffic that comes accross wasatch blvd, then we need to create a long-term plan that both incentivizes people to take alternative transit throughout the canyons and dis-incentivizes people to drive their individual cars.</p> <p>Creating a station at LaCaille and not running extended bus services to this station from existing park and rides creates a situation in which people are forced to drive to get to the ski resorts, thus perpetuating the cycle of car-dependent transit that is at the root of the traffic for LCC and the surrounding area.</p> <p>I truly believe that the most applicable solution would be one that starts with heavy car tolls and increased bussing, serving the resorts at 5-15 minute intervals and then serving the backcountry trailheads every 30 minutes. This strategy, coupled with resort bus lines out to the existing park and ride locations throughout the valley, would give people a car-free alternative to accessing LCC</p> <p>Additionally, this could be paired with, or executed by with light or cog rails. Though admittedly this would have an increased cost, it would serve to incentivize the use of commuter rails and expand on the already successful trax system in SLC</p>
29166	Susan Cluff	<p>I do not favor the Gondola for Little Cottonwood Canyon. I do not feel the taxpayers should bear the brunt of this cost to build the Gondola for an elite few. If the resorts want this, they should be willing to put up some money for it instead of causing a tax hike for all of the residents who live in the area. I do not ski and there are many people in the area who do not ski, why should we be burdened with the cost for this gondola. Expand the bus system, have people car pool, there are other ways to beat the clog up the canyon besides adding a billion dollar gondola that only a few elite and people from out of state will use. We do not want the tax burden!</p>
29168	Spenser Smith	<p>This whole thing honestly seems ridiculous. It has been obvious for awhile now that this is an option that the majority of Utahns do not support. The whole thing seems quite shady and like it is definitely motivated by certain people being able to profit from it. One local legislator seemed to pretty much say as much when asked if they would support the gondola. Our canyon is quite unique and quite beautiful. Both of these things would be greatly altered by a gondola that seems like it will benefit tourists and resorts far more than it will locals. Even though it's being proposed as being to alleviate traffic, the gondola will likely cause more traffic through the canyon due to the fact that it will undoubtedly become a tourist attraction in and of itself. I live in Sandy and don't support the gondola but also don't think that most the people in charge of making this decision really care what I, or any other Utahn has to say, if it gets in the way of them making a buck.</p>
29169	Charlie Delisi	<p>Please don't put a stupid big gondola up. I would never ride a gondola that takes 1 hour to get to the top of the canyon. That's ridiculous. I also don't think anyone from salt lake that has a vehicle that can make it up the canyon would park their car. Get in a long line. Then get on an hour long gondola to the top. Maybe some tourists that aren't staying at the resorts would ride the gondola. But most of the traffic up the canyon is caused by locals anyway. Their would most likely still be traffic and also a stupid, ugly, and expensive gondola.</p> <p>Please don't do that to the canyon. Maybe make some sort of snow shelters for the road over avalanche areas. Widen the road. Anything but put a dumb stupid ugly expensive gondola there.</p> <p>Thanks</p>
29170	Teplapidlogaren Teplapidlogaren	<p>—É—ø—Γ—Ç—á —Ç—μ—ø—ª—ä—π —ø—æ—ª—ø—ª—μ—Ω—æ—á—Ω—ä—π</p>
29171	Michael Kartman	<p>Resident of Sandy. My proposal is easy - just eliminate the IKON and EPIC passholders and that will cure the traffic congestion in no time.</p>
29172	Diane Schnarr	<p>I have lived in the area for over 40 years. I can't tell you how much LLC means to me and the neighborhood. It is pristine in the winter but lovely also in the summer. It's a treasure and shouldn't be open to total commercialism. There are many such ski areas. Let's preserve the special place that we have.</p>
29173	Sally Tauber	<p>This is such exciting news. Gondola is the best option.</p>
29174	January Held	<p>Before breaking ground on a giant gondola, I hope you consider that studies have determined that the west will likely face a low to no snowpack future in 35-60 years. The snowpack is expected to decline 25% by 2050. The future of skiing doesn't look good at this point and we may be seeing a peak in ski interest right now. If this turns out to be the case, the tolling and enhanced bus service without road widening may be sufficient to alleviate the current problems. If you're determined to build a gondola, it ought to stop at other points in the canyon besides the ski resorts so it can be useful in a low to no snow future.</p>
29175	Debra Yoshimura	<p>I support the Little Cottonwood canyon gondola</p>
29176	Jeff Webb	<p>No Gondola!!</p>
29177	Alex Fox	<p>I strongly oppose the gondola option on multiple levels. It creates a 500 million dollar taxpayer giveaway to ski resorts, a permanent visible landmark marring one of our beautiful canyons, and does not solve any issues for users who would like to go anywhere in LCC other than snowbird and alta in the winter. I urge UDOT to reconsider these options.</p>
29178	Ryan Hayes	<p>I don't want a gondola in Little Cottonwood Canyon. I use LCC year round, and particularly in the winter months which would make me someone who would end up using the gondola if it was built, but I think it would be a regrettable decision. Is the traffic up SR 210 terrible in the winter time- yes, but is it worth changing the scenic qualities of this canyon for the foreseeable future- no. This alternative is only effective for resorts in the winter. I think it's unfair for Taxpayers to help Snowbird and Alta sell a few more lift tickets and ruin this canyon forever. I think greatly improved bus system with mobility hubs throughout the valley, without widening the road is the way. How will the gondola help traffic in SR 190? Pls ease don't tell me there will be a gondola there too!? Despite being a tax payer, and the fact that the majority of people don't want this, I feel powerless in stopping this from happening.</p>

ID	Full Name	Comment
29179	Andy Agardy	<p>As I resident of the [redacted] neighborhood - I once again feel the need to comment on this issue. I am concerned that these comments are not fully considered in final recommendations - yet that does not stop me from chiming in.</p> <p>The gondola does not seem either a cost effective solution nor a practical solution to the traffic problems in LCC. If built - it will be utilized by a select few who can afford it - or wish to partake in the novelty of it. The majority of recreationalists will continue to drive and park - as the road will not be restricted. Parking will be a cheaper alternative than the gondola ticket.</p> <p>With the rapid increase in green transportation technology - in but a few years - electric buses will be the norm. Replacing the current drive yourself model with a free, mandatory bus will be a benefit to all. This technology will only improve.</p> <p>A few other overlooked issues... why should tax payer dollars fund this? What happens when it inevitably goes over budget? What becomes of the recreationalists who do not use either the Snowbird or Alta stations? Every year - the numbers of such recreationalists increases. What about our climate? Skiing will likely be pinched by global warming in the very near future.</p> <p>This seems a short sighted solution made by politicians who have become friends by the few that favor the landowners who stand to profit. This is 2022 - we need to be smarter than this.</p>
29180	Jesse Brewer	<p>I wanted to comment with pros and cons- the options available could use a few changes. Most of the options require a parking lot at the base of LCC. I'm concerned the parking lot will be an eyesore for the LCC community, so I would hope every effort is made to reduce the visual impact.</p> <p>Second, why no option for bus service only in the winter? This would eliminate the need for road widening and speed up the trips.</p> <p>How much per trip will the gondola cost vs enhanced bus service? I'm concerned these options will further price out those on the lower income spectrum, making an already expensive sport prohibitively expensive to all but the wealthy</p>
29181	David Swanwick	<p>Can we please widen the road to allow for a dedicated bus lane. Widening only needs to take place on approx 20-25% of the road, the rest is ready.</p> <p>A dedicated bus lane, will make busses become the fastest mode of transportation up/down the canyon and the ridership will sky rocket. The only incentive that truly matters to skiers is getting their first and easily. Add in the fact that, this will be the most cost efficient route and it is a no brainer.</p> <p>The gondola is a boondoggle.</p>
29182	Haley Dees	<p>As both an inbounds and backcountry skier, the current option does not give backcountry skiers access to the backcountry trailheads. There need to be bus stops at several places along the canyon to account for the fact that we can no longer park on the road in most areas and the number of parking spots are being reduced. Please take back country users into account when making the final plans! I am also devastated to think about all of the destruction the gondola will create, including the destruction to popular climbing boulders. We should be trying to limit the environmental impact as much as possible. Whatever we decide to do can never be undone. We are affecting the canyon permanently for every generation after us. Please try to preserve the canyon for everyone, not just inbounds skiers. Everyone should have the opportunity to enjoy the outdoors, and that can be easily accomplished by taking a bus! Thank you and I hope a decision is made that has the least impact on canyon.</p>
29183	Angela Wade	<p>To All concerned,</p> <p>The costs of the Gondola on the canyon, the people & our community moral is too high. Rather if you have those same interests in mind, just simply support phases that do not have such a controversial outcome. All parties can not see the future & need to consider the many ways we rush ahead at the expense of the resources we are trying to protect & improve. Don't be the billion dollar business bunny but rather the Utah desert tortoise! It will win the race for everyone! Use this as a chance to teach our youth & children how they can deal with the world we will leave them!</p>
29184	Justin May-west	<p>Little Cottonwood Canyon traffic has been an evolving issue in the past few decades.</p> <p>The solution of gondola may seem viable for 40,000 feet or if you are a shareholder of Snowbird, Alta, or said gondola company.</p> <p>However, there are many solutions that cost much less and serve anyone using the canyon and the SLC area as a whole. Instead of the few aforementioned groups.</p> <p>More bus service, automobile fees (higher for single occupant) seem like great places to start. Pay to play. All of us using the canyon (not just Snowbird and Alta!) would be happy to do our part.</p> <p>From there keep evolving the plan for the future instead of putting the burden in tax payers to further line the pockets of the few.</p> <p>If this is ignored, I feel as though LCC will transition away from locals and become just another glittery tourist attraction. Keep us local skiers, climbers, hikers, and more LOCAL!!!</p> <p>-Justin</p>

29185	Adam Strachan	The gondola is indeed the best option. We have learned time and time again that more rubber tires, more lanes, and more internal combustion engines are NOT the solution. Let's get it right this time with the gondola, and not only solve our transportation needs, but serve as a model to the rest of the nation!
29557	Linda Menasco	I think it a waste of money to put a Gondola in the Canyon as It will only serve the interests and pocketbook of a few. I would like to see NO Cars allowed in the canyon. All persons who want to use the canyon should only be allowed to enter via buses. That operate every 15 minutes. There should be a minimum fee only that would cover purchase of the buses, maintenance and salaries to drivers. The money we save by not having the gondola could be used for the initial bus purchases. Linda Menasco
29186	Glenn Wright	I am in general support of Gondola B alternative, but have concerns and questions about capital and O+M funding and believe there should be contributions in both areas from the ski areas.
29187	Daniel Gibbs	I oppose the gondola for Little Cottonwood Canyon due the visual and environmental impact. Shuttling more people up the canyon is not a priority for me. Maintaining the beauty while allowing an acceptable number of people to recreate responsibly is a priority.
29188	Leo Farnsworth	<p>Yesterday 9/13/2022 on the radio I heard Sandy City Mayor Monica Z express her opposition to the Little Cottonwood Canyon Gondola project. I want to express my support for this project. I usually would not feel the need to chime in, but the comments of Monica Z have inspired me to voice my opinion.</p> <p>I have lived in Sandy City from 1971 to 2013 when I moved to Riverton where I live now. I was a ski instructor for 13 of those years teaching at Solitude. Before that I worked for 1 season at Snowbird. I have driven both cottonwood canyons and used UTA ski bus service on a regular basis in the winter.</p> <p>When I take my family to go skiing, it looks to me like the infrastructure of roads and parking at the resorts is at capacity. On days when things are busy, there is a traffic jam both to get to and to get from the resorts. Many times have I been on the Ski Bus or in traffic in delays in the canyons that can often double the drive time.</p> <p>I absolutely LOVE the idea of a gondola in Little Cottonwood canyon. Parking at the resorts would take the same time to get to the lift as parking for the gondola, so that is the same. It may even be faster to take the gondola to get to the lifts at the resorts. No traffic jams on a gondola, only a line to get on. Imagine on a powder day when people are lined up at the mouth of the canyon to go up in cars or on the bus. If your car was already parked and you were in line for the gondola, then all you would need to do after getting off the gondola would be to go to the lifts while those who drove would need to park and get ready. Win for those who ride the gondola (and were first in line).</p> <p>An idea I have had is perhaps to have a separate line for employees of the resorts so they can ride together and have priority so they can get to work on time when things are busy, better yet to get home faster and easier after a long day at work. As a former employee, this sounds nice.</p> <p>Would it make sense to also have a priority line for those who have a season pass? Or pay a premium to get in a faster line? Like what Disney is doing at their parks? Just thinking out loud.</p> <p>The ride up little cottonwood would be much more fun with a better view from the gondola. Increased safety by taking the car and driver out of the equation when it comes to accidents especially on snowy roads. I believe that for people coming in from out of town, the gondola will be an added draw as it enhances the experience. In the future, I would love to see the gondola extended from Alta continuing on to Brighton & Park City. Linking all of them like they were all one big mega ski resort. How cool would that be? Stay in Park City and have access to Brighton and Alta with ease?</p> <p>Imagine the view in the fall when the leaves are changing. A view that is not available from street level. The gondola may be a draw unto itself.</p> <p>Environmentally speaking, a gondola system seems to have a lower impact than a bus, more lanes of traffic or a train. I mean a cog railway would be cool, but the gondola is much cooler! Gondolas don't need snowplows.</p> <p>The only downside I can see for this is that the resorts will be more crowded than they are now. Maybe they can expand and create more capacity. And if the gondola is popular, then there may be a line.</p> <p>And the road will still be there. It is not like the road is going away.</p> <p>As for the costs, could money be better spend somewhere else? I don't believe so with the current need in Little</p>
29189	Kim Agnew	I do not want to see a gondola up our beautiful canyon. It would detrimental to the canyon.
29190	Charlie Freedman	A thousand times no on the gondola. Please consider easier solutions than a \$600M gondola which will forever change the canyon and how we use it. Why not a toll booth that incentivizes carpooling? You all know last season with reserved parking at Alta made access and the red snake much more normal and enduring! No to the gondola.
29191	Vicky Hall	I am exposed to the gondola primarily because it serves only the ski resorts up the canyon. No matter who pays for it it is a very large expenditure to serve a relatively small number of people, most of whom are relatively wealthy. This will probably boost revenue for the ski resorts and unfortunately that may be a dying industry in light of global climate changes. I think other options are more reasonable for the greater number of people, for example: a reservation system and/or wintertime toll to limit the number of people going up the canyon. This has been done at some of the major national parks and seems the least invasive choice. Enhanced bus service, electric buses, snow sheds, judicious widening of the road may all be better options in the long run. Please do not select an option that offers service to only 2 private businesses, and primarily serves a relatively wealthy clientele. Your job is to look at ALL the constituents in determining a viable solution.

29192	Diantha Williamson	<p>I am not in favor of the gondola. It will have significant expense and drastically change the visual and recreation experience of LCC. I access the Wasatch canyons for snowshoeing only. I do not ski at the resorts. All of this impact and change only serves resort guests, which is important to consider given downhill skiing is a huge part of living along the Wasatch front, however, it does not help the rest of us.</p> <p>Why are resorts not required to follow a reservation or permitting system similar to other public lands to limit the number of visitors to their actual capacity? If everyone is soon to be required to have a permit or pass to recreate on the Wasatch</p> <p>I am greatly in favor of enhanced bus service and improved trailhead parking, especially during the winter when parking is further limited due to weather conditions. The only downside of a bus is everyone pours out to the trailhead at the same time, meaning we are clumped together when seeking a winter, solitude experience in the national forest.</p> <p>I am against measures that disproportionately affected the single user. I am single. I have no option other than to drive my single-occupancy vehicle into the canyons. Often I arrive before 7 AM because the resort traffic is so baad, even though I am not accessing the resorts. I would be happy to use a bus or ride-share service if the travel time was not significantly different. My observation is that currently buses do not stop frequently enough at THs unrelated to the resorts.</p> <p>Thank you for allowing public comment. Best, Diantha Williamson</p>
29193	Mary Wheeler	<p>Why can't there be a shuttle system like in National Parks instead of a gondola? The gondola seems excessive and too expensive.</p>
29194	Kevin Mcfadden	<p>I vehemently oppose the construction of a Gondola in Little Cottonwood canyon. The canyons along the Wasatch front provide a variety of recreational opportunities outside of skiing. Any project built to facilitate one opportunity needs to be balanced with how it impacts the others. The area around Alta has already been severely altered by having the skiing infrastructure present. The harm to the canyons natural beauty can be justified since other parts of the canyon remain relatively untouched. However the Gondola option would spoil the beauty of the remaining areas. It's the option with the worst impact on other recreational opportunities.</p> <p>That reason alone is enough for me to oppose the Gondola. In addition, the enormous price tag can't be ignored. Spending half a billion dollars to facilitate two private businesses is irresponsible when we face much more serious problems that deserve funding. Two bills aimed at preserving the great salt lake passed earlier this year totalling a combined 50 million dollars. This project would spend at least 10x more than that. The difference in proposed funding between saving the great salt lake and building this Gondola is a severe indictment of our priorities. The cost for the minority of wealthy Utahns that would benefit from the Gondola and the severe impact on the natural beauty of the canyon makes it impossible to justify choosing the Gondola option.</p>
29195	Stuart Silloway	<p>I have written on this subject before. Nothing has changed. The \$500mm is just the start. That estimate is old and does NOT include increases due to delays and, importantly, there is no estimate for completing the package. Bottom of canyon infrastructure, parking and buses from parking to gondola. Who is going to pay for all this. Utah taxpayers who always vote against the concept? The two businesses (ski areas) at the top of the canyon? Skiers who now pay nearly \$200 per lift ticket? Left unsaid is that this is a poor concept. Widen the road which is three lanes wide in much of the canyon, create one lane only bus lanes and get buses that are comfortable to make up for the inevitable delays. The road is still going to be there, we do not need a wide service land through the wilderness as well. Also, how will the gondola operate in the other months? More stops for the many hiking trails will cost more and slow it all down. Lastly, this is a disruption of LCC which provides culinary water to SLC and environs.</p> <p>This is an ill conceived project loved only by the developers who can see nothing but dollar signs accruing to their benefit.</p>
29196	Zach Seager	<p>DONT DO THE GONDOLA ?</p>
29197	James Hutchins	<p>Good buses, public building at Snowbird and Alta with lockers, lunch tables, restrooms</p>
29198	Randy Honaker	<p>I am extremely opposed to this project. No public money should line the pockets of the owners of the resorts. Let them and their customers foot the bill. This project does nothing for those who do not ever use that road or the resorts.</p>
29199	Joe Day	<p>Are there stops for other activities other than skiing at the resorts ? Stops other than snowbird and alta. What if I want to put my mountain bike on the gondola or go climb in the canyon. Who is paying for this project ? My tax dollars ? I certainly hope not. My 2 cents</p>
29200	Pete Iacobelli	<p>Having less cars and a relaxed way to enter LCC is an absolute plus for locals, tourists and the environment.</p>
29201	Patricia Russell	<p>This is such a ridiculous proposal. It would be better to run 10 times the buses up the canyon and build a couple of parking lots at the base of the canyons. Please do not move forward with this stupid idea. Terrible for the environment, terrible for our tax dollars, and terrible for traffic, hikers, wild animals, etc.</p>

29202	Jason Ehrhart	<p>I have been driving to and from Alta and Snowbird since the early 1960s and remember the two lane road that used to be Wasatch Blvd from before I-215 was built.</p> <p>The way my experiences have taught me, this problem can be looked at in two ways, ingress and egress to and from Little Cottonwood Canyon road.</p> <p>I'll begin with ingress issues and finish with egress. Both present issues, both sets of issues can be solved, or improved by utilizing alternative transportation. In a nutshell, the Gondola provides the only real relief from these issues.</p> <p>Ingress into Little Cottonwood Canyon when a much anticipated ski day, such as a blue bird powder day, particularly on a weekend, but in recent times, this includes nearly any day that will have good skiing. I currently live in the Golden Hills area, very near the mouth of Little Cottonwood, and when traffic is backed up to get into the canyon, we have for the past ten or so years, had an enormous increase in neighborhood traffic. These folks, while frequently Utah locals, more times than not, they are out of town folks, (based on the observed license plates), that are attempting to get as far into the front of the traffic as possible. They usually drive over 40 mph in our neighborhood which has posted speed limit signs limiting speed to 25 mph. These speeds are routinely ignored, and often there is fresh snow on the ground making this situation very dangerous. Additionally, many uphill vehicles are not prepared for winter driving, so once traffic gets allowed into the canyon, (post avalanche control efforts and clean up are completed), this becomes an uphill traffic issue with the lack of traction by these unprepared vehicles causing a traffic problem, until the law enforcement folks step in and inform the offending vehicle they must leave the canyon due to the situation they are causing. I have had unprepared vehicles cause traffic issues for ingress to the canyon spanning multiple hours, mostly caused by this unprepared vehicle issue. A gondola or similar solution, would allow those with unprepared vehicles to not cause the ingress issue, and at the same time, those folks would not be fighting to get to the front of the traffic, and it is my estimation, that the speeding traffic in the neighborhood would cease to be an issue, saving us in the neighborhood from having to call law enforcement, or having issues with vehicle wrecks due to speeding in our neighborhood.</p> <p>While the ingress into Little Cottonwood Canyon (LCC) can be a challenge from time to time, the real issue here is egress. If you frequently drive up and down LCC, you know this to be true. If you don't drive up and down frequently you may not be aware of the biggest problem. This is due to unprepared vehicles being permitted to drive up in snowy weather, that may be getting up before the weather gets really bad, or stopping due to a lack of traction, sometimes putting chains on in the middle of the road where they get stuck.</p>
29203	Susan Kertesz	<p>The gondola is the worst idea. It would negatively impact our water source as Little Cottonwood Creek is watershed. In order to build the gondola, maintain it and be able to get to it when in use, would require a road of some sort under it. If there is any wind in that canyon--which there frequently is--the gondola would not be able to be used and/or leave people stranded. It would obviously benefit only two ski areas. It would dump way too many people at these ski areas. Getting to the 2500 parking spots would be a nightmare worse than currently exists in the canyon. The gondola does not address Big Cottonwood Canyon. The bus proposal w/hubs around the valley, if done correctly with a lot of busses that run efficiently, could be the ticket for traffic issues up both Little & Big Cottonwood Canyons. Finally, this gondola would ruin what Little Cottonwood looks like, forever. How could the State of Utah even consider this option.</p>
29204	Nate Graff	<p>In full support of a gondola as a long-term transportation solution.</p>
29205	Dan Draper	<p>I think the Gondola is a terrible idea. I know you probably wants it because it's a "gee wiz, look how cool we are". Here is my suggestion to solve the problem:</p> <ul style="list-style-type: none"> - Improve parking at base of canyon (would need to happen anyway for gondola) - Charge a huge premium for the pleasure of parking at the actual resort! - Add more busses - With the millions you save- make a MTB trail that starts at the bottom of canyon and connects to snowbird. <p>Gondola is a terrible idea</p>
29206	Anne Russo	<p>I am opposed to the gondola project due to its cost. As a west side resident, I would prefer to see money spent to improve the traffic flow on the western side of Salt Lake City. The stop-and-go bumper-to-bumper traffic occurs every weekday, not just on snow days. The new Mountain View Corridor becomes more like a parking lot every afternoon during the week. It just isn't enough to support all the vehicles. Please spend money on improving our commutes before fixing a problem that only occurs a few days during the year.</p>

Comments on Little Cottonwood Canyon Final EIS

29558	Jeff Barrell	<p>My name is Jeff Barrell and I have been backcountry skiing in the Wasatch since 1985. I'm now living in Boston area and visit Utah 1-3X per year to visit family and bring friends to ski. For the past several years I have avoided driving either Big or Little cottonwood alone - either car pooling or riding the bus. The bus service has improved the last couple years - it was really bad before that and that reputation still exists for other skiers I talk with. There is still room for improvement as buses are jammed in the mornings and evenings.</p> <p>I am disappointed in the decision for a gondola in Little Cottonwood. The entire EIS process ignores similar traffic issues in Big Cottonwood. Will this be addressed in another EIS?</p> <p>I wrote in prior comments that this alternative does not help backcountry skier access to White Pine or summertime access to Tanners flat, a popular picnic area. The gondola alternative spends a lot of public money which greatly benefits only Snowbird and Alta resorts. What are these resorts contributing?</p> <p>One concern not addressed in the EIS is the person-capacity of these two resorts. The gondola and enhanced bus service will greatly increase the capacity to deliver people to these areas which are currently very crowded on busy days. Reducing cars is desirable, but increasing the number of people (and ticket sales) will make already crowded conditions worse and increase their impact in the canyons. Once out-of-state skiers like myself see these crowds, we easily take our business to other less crowded resorts like Colorado or British Columbia. Thus this huge public investment might bring an initial surge of interest followed by a drop back to current levels.</p> <p>I do like the fact that operating and maintenance costs are lower with the gondola and can operate with green electricity - important for a 2050 plan. However, my concern is that once this gondola is in place, then Big Cottonwood and Park City can easily be connected with gondola extensions. This is simply Ski Link in disguise. That plan was supported by ski areas and very unpopular with the public - this plan appears to be similar.</p>
29207	Jim Schallheim	I like the Gondola plan.
29208	Christopher Mitchell	Everyone knows the big money is going to shove this down our throats so how about giving us a little break and quit pretending you actually care what the people of Utah want, which we all know is NOT the gondola.
29209	Cory Shipp	I am against the gondolas, but I suspect the public has no influence here. Stop catering to the resorts, the mountains belong to the people, not the elite.
29210	Tiffany Casper	I agree the gondola is the best choice for the future. A fee per car (\$20) should be implemented while the gondola is being built. Also, daily visitors by car should be limited. The canyon(s) are being loved to death, overused, and worn out. Expanded buses and lanes would do nothing to protect the canyon from overcrowding.
29211	Robert Gurss	I am Utah resident who loves skiing at Alta & Snowbird, but I oppose the gondola option as an inappropriate use of taxpayer dollars. A better approach is expanded bus service with avalanche sheds and significantly more parking at the canyon mouth. This would provide improved year-round access to the entire canyon, not just the resorts. Parking at the resorts should be fee based, with some of the revenue used to pay for the enhanced bus service (which should be either free or priced well below the cost of parking at the resorts)
29212	William Lenkowski	UDOT has shown a complete lack of Environmental Awareness by selecting the Gondola Alternative. The amount of forest and terrain destruction that will have to occur is catastrophic! Please reconsider this alternative!
29213	James Cameron	I support the Gondola B with proposed phasing as preferred alternative. I believe the role of the automobile in our wildlands will be reduced in the coming generations. Alternative transportation like this gondola plan are very expensive up front, but I believe it will payoff with the majority of public opinion in the long run.
29214	Chad Larsen	As 47 year old lifelong resident of the Salt Lake Valley who both snow skies and recreates in LCC during the summer, I do not feel the gondola is the best solution for current transportation and parking issues in LCC. One it will only provide transport to Alta and Snowbird and totally disregards the growing population of backcountry skiers and summer recreation such as hiking and climbing and just hanging out in our beautiful canyon. Also it does nothing to address the traffic in BCC, or the traffic in cottonwood heights at the mouth of both canyons and along Wasatch Blvd. has UDOT Taken any of this into consideration, or are you just playing along with the developers and investors in the gondola project? I wonder how many hands have been greased in this deal? An improved bus system as well as parking areas seems to be a more feasible and less damaging to the tax payers solution, since trains seem to be off the table. I'm guessing the time I'm spending writing this is a complete waste though. Utah government does what ever it wants despite public input or votes.
29215	Brandon Davidson	I support the gondola. I would use the gondola. I'm against widening the road. I'm against the toll road. I don't really like the ski bus. It's slow it doesn't run all the time and have you ever been stuck behind it?
29216	John Schuhmacher	35 capacity is not a gondola. Don't do it don't need it. Big mistake. It will be a big flop. Thank you
29217	David Pringle	Such a long and expensive tram is a crazy idea. Just improve the bus service.
29218	Ross Miller	No Gondola! This is a taxpayer funded grab by snowbird and alta, will not serve the county or state and will mar a beautiful canyon. Please explore bus service in ernast and ditch the gondola.
29219	Shayne Anderson	I will just reiterate my opposition to the gondola. I do not want my tax dollars to go to an option that will primarily benefit two private businesses. While I appreciate the tax revenue generated by Alta and Snowbird, I would much prefer to just increase the number of busses, with stops at popular trailheads and climbing areas, and decrease the number of private cars allowed up the canyon. I would even support closing the road entirely to uphill traffic by private vehicles during peak morning hours. I live in the granite community and hate the back-up that occurs on great powder days or when the canyon is closed, but I'd rather put up with those handful of days than see a gondola ruining the natural beauty of LCC. Finally, I would also propose that two separate buses run, one that goes directly to Alta and one that goes directly to Snowbird. I've taken the bus frequently to and from the resorts and it seems like the biggest hassle is that it takes forever to get from Snowbird to Alta and then, if loading at Snowbird, the bus is already full from Alta riders.
29220	Pat Casper	All the emphasis seems to be on the gondola installation, whereas the widening of Wasatch is getting lost in the conversation. We should NOT widen Wasatch, other than install sidewalks on BOTH sides of the road, and definitely no pedestrian bridges. Listen to the people - we do NOT want the gondola, nor the widening of Wasatch, and we don't want to spend \$500 billion or whatever it will end up costing every taxpayer. It's like they say, "follow the money and you'll find who's going to reap the benefits" and it will certainly NOT be us, the citizens of Utah!!

29259	Tim Burkett Owner	<p>I have sent in 1 e-mail on this already but have been told you can send one in every day.</p> <p>When I saw some friends in line at Smith's on Bengal just yesterday, I told them that I sent in my objection to the Gondola.</p> <p>Everyone in line Howled at the very mention of the Gondola - all 4 of them [skiers] said they were not only against it, but would try any angle, scheme they could avoid using it if it were implemented, including paying lots of money to buy a pass for the road to avoid getting on it. Solitude is charging \$25 a day to park.</p> <p>Has that stopped people from going? No, they just go after 12 noon instead. Or they just pay the fee.</p> <p>I hope the EIS takes into consideration the massive % of people who are very much against it, and don't just implement it because they can.</p> <p>Thank You</p>
29221	Candace Davila	This is ridiculous! Why would anyone change LCC? I use the canyon strictly to see God's creation. I am handicapped and need to be near my own vehicle. Since we are talking stupidity, why dont you build a tunnel? That would solve the weather issues and other possible problems.
29222	Michael Cianelli	Yay gondola! Best choice
29223	Larry Migliaccio	Having people board and disembark at Snowbird is not a peaceful experience and favors the ski industry over the general public. Taxpayers should not have to fund this. Limit use of the canyon by even and odd license numbers, birthdays etc and improve roads and parking everywhere in the canyon.
29224	Scott Pickett	I appreciate the tremendous resources invested to date in determining the best alternative for long-term success and protection of the canyon. I fully support the 'gondola' option as the best solution on the table.
29225	Colin Rehkugler	PLEASE stop this nonsense. The gondola is a huge waste of taxpayer money. It will only be used in a limited manner and only 4 months a year. Our money will be better spent on upgrading the current infrastructure which allows easier travel and transit times of only 15 minutes on a normal day. The gondola will take over 1 hour and will be just a novelty. STOP wasting time and money on the gondola!
29226	Judith Handa	I SUPPORT GONDOLA B ALTERNATIVE POSITION.
29227	Josiah Peck	I hope that you'll seriously consider not building the gondola if the problem of traffic and congestion is fixed by enhanced bus service, single occupancy tolling, and reserved parking (Alta). The viewshed will be completely ruined, which is annoying since the top of LCC is one of the most beautiful places on earth!
29228	James Brady	The canyon is used by multiple other users besides skiers including climbers, hikers and nature enthusiasts. A gondola will permanently alter the area and make it less beautiful, peaceful, and natural for everyone else. The only reason this is passing is because the users with the money are the ski resorts. We do not want this. Please do not do this. Let the ski resorts pay \$550 million for this if its so necessary. Put it to a public vote.
29229	Yusuf Yunis	I think building a gondola would be an absolute travesty and would permanently mar the beautiful canyon in a misguided attempt to bring skiers to resorts. I would much prefer enhanced bus access that actually works.
29230	Eric Bready	The best solution is for Alta and Snowbird to limit the number of people on the mountain. Not force the public to pay \$550 million subsidy to the resorts.
29231	Michael Jaffe	I am OK with the gondola concept, if there is tolling private infilled cars, the continues to be a bus option, gondola capacity is maximized, it runs on weekends year round, parking fees are nominal, Wasatch road becomes 2 lanes in each direction, and if during the phase in period, if things are working we'll delay gondola. I do not think a road widening project alone can accommodate snow storm traffic. Use highway 210 car fees to pay for operation of gondola- which needs to be free to use.
29232	Jaycees Feliz	Please do not build the gondola. Little cottonwood canyon is a beloved place where people can go and feel like they're getting away from the city, vehicles, and loud machinery. Building this gondola will hurt many of the current loved places we as the community love to recreate in. I feel that by building the gondola it will hurt part of utahs heart. We love being in places where we humans haven't destroyed and building the gondola will bring unrepairable damage to the canyon. This money could be used in other places more useful to lower income families and other infrastructure within the city limits not in the canyon. I hope this message brings some clarity for what I know many of utahns want from their canyons.
29233	Steven Schwartz	I'm in favor of widening little cotton wood canyon rd. To accommodate a fleet of electric busses. V
29234	Carol Omeara	I have skied at snowbird and alta for over 40 years. I do not want the gondola. Our tax dollars should go to the poor not rich investors
29235	Diane Thinnes	This project benefits too few people for the high taxpayer expense. Only the wealthy and an extremely small percentage of the population will use the canyon. The ski resorts should fund and provide solutions to this problem.
29236	James Carlisle	I strongly object to any gondola. It will ruin the canyons due to the environmental impacts. It will be ugly and only benefits the resorts. It is too costly. Expanded bus service will allow incremental development and is scaleable. It will allow EV buses to be used. It will serve all users not just resort goers. Snow sheds could be added but are not necessary. Road widening can be done where needed and where it will not impact the environment too significantly.
29237	Michael Darder	I support the Gondola option.
29238	Blake Zimmerman	This proposal will only solve the traffic problem for a few days a year (10-20) and will do nothing to service and preserve the canyon during the summer or any other part other than the resorts. The environmental impact is relatively similar between this and the bus system, but the bus system is an actual step towards preserving the environment. The gondola is purely an idiotic stunt that will just be a disaster.
29239	Nicola Nelson	I support the decision for a gondola
29240	Don Johnson	Please, no gondola, I ski at both resorts in LCC and would love to just see tolls on single occupancy cars and a more robust bus service. It's a beautiful canyon and a gondola would ruin that and make Wasatch Blvd even more of a dumpster fire
29241	Jack Smith	I prefer alternate B the gondola which I proposed as the Snowbird planner and architect over 50 years ago.
29242	Michael Schmertzler	I am an Alta homeowner. I support the decision to build the gondola. I assume provisions will be made to permit Alta homeowners to drive to their homes from the mouth of the canyon.

ID	Full Name	Comment
29243	Dwight Clark	<p>While the gondola is an attractive solution for some, it really only benefits the skiers in the community (of which I am one). Is it reasonable to take public funds contributed by all Utah taxpayers to aid the few? Why not try the electric bus alternative which can be tailored to the demand in the canyon, unlike the gondola. It also contributes very minimally to any environmental concerns and has the advantage of improving air quality in the canyon. I don't think widening the road is a solution as having lived in California for years, they discovered the traffic always increases to fill whatever new lanes are created. A fleet of electric buses would make quite a difference in both big and little cottonwood canyons with much less expenditure. And it can be tailored to demand as well as provide access to other activities than just the ski resorts.</p>
29244	Fred Ash	<p>Some Gondola Plan Comments</p> <p>UDOT has now accepted the Gondola plan to deal with the traffic issues in Little Cottonwood Canyon, but they have allowed some comment time, so these are some comments on the issue, based on my research.</p> <p>It is clear that there is a lot more traffic up the canyon, especially on weekends during the skiing season, than in the past, thanks to the increase of the Wasatch Front population.</p> <p>But I learned that skiing accounts for only about half of the canyon usage. Hikers, fishermen, and tourists account for the rest, and it is good that UDOT favored the Gondola option over the option of expanding the highway, which would have eliminated much, if not most, of the parking for hikers and fishermen.</p> <p>Also, the gondola plan includes drop-off stations only at Alta and Snowbird. So, while I feel it is a better option than expanding the highway, it is clear that the gondola would mostly benefit skiers, resort workers, and visitors to the two resorts.</p> <p>I like to follow the money. It is clear that no hikers, fishermen, or tourists are about to get rich in this plan. But I learned that there is a coalition of individuals, stakeholders from the ski industry, public relations firms, and real estate firms that stand to make a ton of money.</p> <p>Whether the funding for construction of the gondola will come from state, federal or a private entity is unclear at this point, according to UDOT. And funding from the State will require approval from the Utah Legislature. So there are some questions that should be answered about who will pay the bill?</p> <p>As the two private owned ski resorts at the top of the canyon are the only ones to be served by the gondola, shouldn't those two ski resorts be covering most, if not all, of the cost?</p> <p>The gondola will definitely reduce traffic on the highway. The highway is maintained through State and Federal funds, so it makes sense that some of the construction and maintenance of the gondola should be covered by state funds, but the question is how much?</p> <p>Is it wise to use over half a billion State or Federal dollars for such a project when much of that money could be better spent for public education and/or other essential State government funded services?</p> <p>Is it a good idea to use State dollars to cover the complete cost of a project clearly geared to benefit two specific private owned ski resorts next to the Salt Lake valley, not government subsidized businesses? Would this be an opening for our legislators to use tax dollars to improve access or other needs of other private ski resorts or other private entities in the state, north or south of the Salt Lake valley?</p> <p>Once the gondola is completed, there will be maintenance responsibilities. How much of that expense will be covered by taxes, and how much will be covered by toll fees, ticket prices, etc.?</p> <p>This is not a simple issue.</p>
29560	Nancy Wilson	<p>This project is so costly it is unreasonable. Will people use it? Will restrictions on the number of vehicles in the canyon accompany the project? If not, not much will change. If Restrictions and good bus service can meet the demand at a fraction of the cost, why not do that?</p> <p>Nancy Wilson </p>
29245	Hunter Lyng	<p>A gondola is not a solution to the problem.</p> <p>Build more parking at the mouth of LCC and running more buses up canyon is a solution that will provide year round parking options and demand.</p> <p>Up canyon Snowbird and Alta can charge market price for parking by the day and by the season. If you don't have parking reservations you can't drive up.</p> <p>Spending half of a billion dollars on a whim driven by bad intel is not the only option</p>
29246	Austin Helton	<p>This is a very costly project to ask tax payers to fund when very few would benefit. If you want an alternate method have the wealthy ski resorts fund it. Also, it seems to be a major eye sore</p>
29247	Trudy Ross	<p>I am 100% in favor of building the gondola</p>
29248	Alex Klimaj	<p>I do not support the gondola as a resident of Cottonwood Heights and a skier. I would much rather see a vehicle toll for personal cars. Then use that toll money to build parking structures and run more buses. Build a parking structure on 9400 South and Highland Drive. Rent corporate parking structures off of 6200 South on the weekends.</p>
29249	Marcia Howell	<p>I am adamantly opposed to this idea. It will further divide those who have money and can afford the additional fee from the average people who want to enjoy a day skiing. Plus, it will affect the beauty of our canyons.</p>
29250	Tomorrow Osborn	<p>NO GONDOLA up Little Cottonwood Canyon. If anything, develop a suitable area near Park City for parking and put a Gondola there. From what I can gather, the distances are almost the same for the Gondola run. The parking may be easier to accommodate there, instead of at the base of the canyon, adjacent to LaCaille, which would be a huge shame to ruin that area. This whole process has not been very well thought out. Stop this madness before horrible harm is done!</p>
29251	Eric Reische	<p>I support the Gondola B alternative</p>
29252	Deborah Sax	<p>There must be another way. This seems a cost prohibitive and inefficient solution for locals and residents who moved here to ski, climb, ride etc.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29253	Mike Plaehn	Please do not destroy the canyons. No gondola! To reduce traffic the resorts need to stop creating insane situations via mega-pass deals like IKON. Why are they pushing for an infinite growth model in a limited space where the parking infrastructure is already packed. Before these pass deals like IKON the traffic situation was much less problematic. The resorts should change their model to relieve pressure on the roads, because they are causing these problems. We should not destroy nature & the beauty of the canyons to accommodate the resort's infinite growth model.
29254	Jadwiga Frasol	No gondola under any circumstances! No road widening under any circumstances! No tolls We pay enough already in state taxes Federal taxes and property taxes! Enhanced bus service only for skiers No gondola! Let the future generations to see, experience and enjoy the NATURAL beauty of our canyons! Any questions? Call [REDACTED] Sincerely Jadwiga Frasol
29255	Howard Wattleworth	I am seriously dismayed that this project is going forward. Are you so elite that you've become blind to the needs of the people of our state? Forget about those who are looking for a better way to access the canyons and turn to those who are looking for a way to both eat this month and pay their rent. But I fear you are beyond feeling. You'll respond that it's just part of your budget. Forget what you think you're entitled to and let our tax payer funds go to the ones suffocating with high rent, high food prices, and no medical insurance.
29256	Ashley Snyder	No to the gondola. Part of why we have such terrible traffic in general along the Wasatch Front is because public transportation can be very difficult and inconvenient. Can you really imagine a bunch of families taking their children up a gondola and having to carry skis and other things with them while sitting on a gondola for nearly an hour? Can you imagine many people, with children or not, really wanting to do that? Personal vehicles provide lockable space where you can store food and extra coats and gloves while skiing and that you can go back to during the day if you need something. Is public transportation always reliable? The pandemic has made some of us weary of public transportation, and while the pandemic is at its close (hopefully), new issues continue to arise with labor shortages, worker strikes, and other issues that can make it worrisome to rely on public transportation in general. The cost of the gondola is also very high for possibly little use. Perhaps a less expensive expanded bus system may be worthwhile if we need more public transportation. A toll during the winter season can help pay for this expansion. To avoid impacting local residents and businesses in the cities, the toll should apply to less densely populated mountain roads only. Give any residents or other locals who need continuous use of that road for residential or business purposes a special pass so they do not have to pay the toll all the time. Absolute NO to the gondola. Please consider an expanded bus system and toll or no changes.
29257	Alexander Gulledege	No gondola! All it does is shift the traffic problem to our neighborhoods as everyone drives to the gondola lots, in our neighborhoods!
29258	Christine Drage	I am in favor of this decision.
29259	Rockwell Rumel	Please preserve the climbing areas. If the gondola never happens, then people will have to deal with traffic. If construction destroys the environment then it will permanently remove things that people love.
29260	Sdvillpat Sdvillpat	< [REDACTED]
29261	Paul Oberkircher	Gondola is still best option. I will not use bus as it will get stuck in snow and traffic. Also bus creates exhaust fumes.
29262	Alisa Tank	I do not believe a gondola is the right decision for the canyon - for the environment, for the people paying for it, for the people using it. Because you have already identified working alternatives while money and plans are made for the gondola, why don't you just try those first? There is no need to create such a large, permanent installation in the middle of our beautiful canyon when other options exist. Especially considering this will not be used in the summer or for users not going to the ski resorts, it doesn't help a huge majority of users. Find a way that helps more people in a less permanent way.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29264	Anne Evans	<p>I'm really saddened that the Gondola has been chosen. In cost alone it is ridiculous, we could try other alternatives first like solar buses, reservation options (at some point the canyon is full!) before spending so much.</p> <p>The Gondola will completely ruin the look of the canyon, the views and aesthetics are why so many people choose to visit and this will ruin it.</p> <p>Also as a local I will not be spending the \$\$\$ to ride the gondola or the 45min it'll take. It says it will run in all weather but really gusty/high winds really? It'll stop running just like Snowbirds!</p> <p>Listen to the majority nobody wants this! I guess however those that have bought property & the vision of hotels will win out with money.</p>
29263	John Kern	<p>First off the massive expense to help 2 private companies add more people to the canyon is a waste of public funds that are needed in many other areas. The cost estimates will be incorrect by at least 25%. Having just returned from The Dolomites where every town, village and tourist trap had a gondola, chairlift or tram running up most of the peaks did nothing but put thousands of people all over the mountains, ridge tops and fields. I saw absolutely NO wildlife and very little diversity. No mammals, few birds and only cows and goats. In addition this plan does nothing to alleviate Big Cottonwood issues. I truly believe this is a bandaide for a problem that will drop out of the public's eye. Climate change, aging population dynamics and competition from other ski / recreation choices reduce the need to help Alta and Snowbird. Spend our public treasure helping fellow humans and our drying lake before you assist privileged ski and snow board recreationists.</p>
29265	Pete Griffen	<p>Unfortunately, due to population growth, both canyons on the Wasatch front arguing to have to come up with solutions to deal with increased traffic. The goal should not be to increase the uphill capacity of our transportation systems, but to create more efficient ones. A gondola nor is widening the road a more efficient mode of transportation. start with regulating parking, A reservation system, incentivizing customers to carpool, and a more efficient public transportation system via electric buses.</p>
29266	Cameron Griffiths	<p>The local Utah residents who frequent the canyon in the summer and winter do no want this piece of [redacted] ! It will serve absolutely no purpose in the summer but to only profit snowbird. Make those [redacted] pay for it if your going to go through with this since the local opinions have fallen on deaf ears !</p>
29267	Cameron Griffiths	<p>[redacted] the gondola !</p>
29268	Joshua Schmidt	<p>I do not think that 500 million dollars of tax payers money should go to something that is a "preferred method" when it is servicing private entities. The access to the canyon should be for all, and more equitable and sustainable solutions should be priority. This is especially true if increased buses, ride sharing benefits, and yearly canyon passes would be a more appropriate solution that servicing two entities that already limit so much access to other user groups.</p>
29269	Brent Hansen	<p>Hello, just think your taking the gondola up and you get stuck in it with 35 people. There is no way down, and it wouldn't be just one gondola from the base of snowbird to the top of the mountain. It is from the base of little cottonwood all the way to snow bird... are all of the areas easily accessible?</p> <p>The other thought is does the gondola have stops for all of the hikes. People hike in the winter.</p> <p>I personally think making the road carpool only and increasing bus frequency is the correct idea.</p> <p>Thank you Brent</p>
29270	Jennifer Gaia	<p>I think ski resorts should operate shuttle buses for their employees to the resorts multiple times a day. All employees should be required to ride. Also along with increased free bus service this canyon should become a toll road. The user impact on BCC and LCC from too many cars and people is degrading the canyon and water quality. Maybe local Utah state residents pay less of a toll.</p>
29271	Jennifer Gaia	<p>The existing gravel pit at the bottom of Big Cottonwood and Wasatch BLv would make a great location for parking structure and a transportation center. BCC and LCC should have bus service only up those canyons in the winter. Toll road for all others who want to drive.</p>
29272	Dan Wilcox	<p>Gondola YES!</p>
29273	Rick Brodersen	<p>This is to support private business during a very select period of the year. If our government is going to spend our money it should benefit us all not just some. Explore other solutions first and only come back to this if absolutely necessary in the years to come.</p>
29275	Lara Jennings	<p>When Alta implemented a parking reservation system last season it vastly decreased traffic in the Canyon. It would be better and more cost effective for the ski resorts to limit parking so there are not as many vehicles traveling in the canyon during the winter. People who don't get (or want) a parking spot can use the public transportation that is currently offered. The gondola is too expensive for what is essentially a ski resort problem. Parking reservations/fees are effective solutions that can be implemented for little to no money.</p>
29274	Joel Foster	<p>I am not from the area this plan covers and do not really feel that is not my place to comment on this plan but I do QUESTION: IS THIS REALLY NECESSARY ?? I have skied Alta, Brighton and Solitude and we never had any real problem there ..We do not go now due to the INSANE COST of a full-day ticket at these areas ...</p>
29276	Maggie Noonan	<p>I support this alternative and all the work. Thank you</p>
29277	John Lemnotis	<p>The gondola is not the solution for the Wasatch. We have a small mountain that will be permanently changed by this construction. Also, this option mostly benefits the the two ski resorts in LCC and does not actually address the problem of traffic in BOTH canyons and the valley below. Do not build a gondola in the Wasatch!</p>
29278	Thomas Kimsey	<p>Implementation of Gondola Alternative B should be expedited to ensure safety, mobility and reliability of SR210 are ensured for future generations. UDOT should consider this a Public-Private Partnership to raise the \$550MM necessary to fund the project.</p>
29279	Stephen Brown	<p>I strongly oppose the gondola. It is an expensive and inflexible solution that benefits only corporate ski resorts. This can be done with an intelligent bus system.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29280	Joseph Zazzara	I am an Alta home owner. I have been since 1981. What is this going to do to my access? When I bought my home my taxes were \$1100. They are now almost \$6000!
29281	Jace Hargrove	I strongly support the gondola, as long as the costs to end users are the same as a similar bus route would be. I believe the gondola will provide a substantially easier access point for skiers, while feeding up the road way for all other activities.
29282	Lisa Wilson	I am in favor of the Gondola
29283	Linda Kofford	I live on [REDACTED] just one block off Wasatch. Spending tax dollars for the proposed revamp of Wasatch to make it another race track for drivers which will leave cyclists and pedestrians in further jeopardy is an inappropriate use of federal taxpayer dollars. I oppose the gondola too. Why should taxpayers fund a project that benefits two privately owned ski resorts - especially as global warming leaves uncertainty as to whether there will be snow in the years to come.
29284	Crystal Rudds	Winter transportation in Little Cottonwood should serve all members of the public, not just those who can afford to recreate at Alta and Snowbird. I do not support a gondola because it prohibits me from having improved access to snowshoeing, walking, and enjoying nature anywhere else in Little Cottonwood Canyon during the winter. UDOT's recommendation to build a gondola will leave many people out, especially communities of color who already disproportionately rely on public transportation. Not to mention it's a huge expenditure that will kill trees and have an environmental ripple effect that the Valley is already struggling with. UDOT should exclusively support the Enhanced Bus option with no road widening to support full recreational use of all trailheads and recreation areas in the Canyon throughout the winter.
29285	Wendy Williams	I'm supportive of the gondola option for little cottonwood canyon. It protects the environment the best while allowing our mountains to be enjoyed and preserved. Utah's ski industry is critical to our state economy and solutions for this beautiful canyon are needed. Thx.
29286	Casey Mctaggart	Please, as a local climber and outdoors advocate, consider the damage to the climbing community and natural spaces that will happen. We urge to consider other options and not build a gondola.
29287	Josh Allred	Very disappointed about the decision for the gondola. Majority of the people don't want it. What's the point of having these comments.
29288	Bruce Remington	I don't think a gondola is the answer right now. I support the phased solutions in the next few years. Increased bus service which includes express buses to Alta, widening parts of the road, snow sheds, an extra lane up in the morning and then the same land down in the afternoon. *Still the biggest problem for Alta skiers is we wait while Snowbird lots empty out. THIS IS WRONG!*
29289	Sharon Kern	I am a skier and a hiker and I see Little Cottonwood traffic as a dilemma on some days. However we all have dilemmas in our life and we need to make choices/decisions. Such as is the traffic worth it on powder days or on sunny Saturdays, or should I leave a little earlier or later on on those potential high traffic days or maybe not go this day as traffic will be a mess. We make choices on these days. I drive up LCC 2-3 days a week in the winter, on 80% of those days, traffic flows easily. It truly is a "first world problem" and we are catering to a more wealthier crowd who don't like making these choices as they might seem entitled. The cost and up keep of building the gondola is one thing, there will also be the personal cost to ride the gondola up and down and quite possibly the cost to park in addition to the ski pass. I am against the gondola going up LCC! The money that will be spent will be ridiculous on one canyon and 2 private ski resorts. Salt Lake has many needs that never get enough funding...education, healthcare for noninsured, homelessness etc. This also does not solve, BCC traffic, traffic coming in and out of the 3 resorts in Park City. In fact, I sense having to take the Gondola up LCC will just put more pressure and traffic on these other roads going up to other ski resorts because people don't want to hassle or pay additional money to ride the gondola. It's time to take the blinders off and open up our hearts to think about what we can do with that gondola money to benefit more Utahans. Please, please do not build the LCC gondola.
29290	Adam Goff	No! This is a terrible solution! Why couldn't we have expanded the park and ride system? Provide more shuttles and more places throughout the valley to park? The gondola is going to ruin the views, be twice as expensive to build, and just as expensive to run. Plus it will ruin the views and harm the environment. Extremely disappointed that this is what UDOT chose to do.
29291	Jon Burke	The proposed gondola solution is the best option for safety, mobility, reliability, air quality and the environment. Safety: 210 is located in a narrow steep canyon that regularly experiences difficult driving conditions, getting people off the road is safer. Mobility: in all weather conditions the gondola can run and get people up and down the canyon, ot enough emphasis has been placed on the value of getting people down safely in the event of a catastrophic avalanche or rock slide that could occur. Reliability: proven technology will operate with minimal employees and without having to hire/train/retain bus drivers to drive pollution machines Air quality: obvious folks Environment: while any project will impact nature during construction the ongoing noise of additional busses and vehicle/animal crashes lead to the gondola being the obvious choice. Please get this done, the status quo is broken, it is governments job to fix broken public resources.
29292	Mark Gassinger	I do not know anyone who wants the gondola as the solution to the problem, 2 lanes up in morning 2 down in the afternoon seems like a good place to start, gondola to much money and destruction of the canyons majesty
29293	John Darcy	I am a frequent skier at both Alta and Snowbird but I do not feel that spending \$500+ million is a proper or good solution to the traffic problem in Little Cottonwood canyon for several reasons; 1) The tram will release road congestion to some degree but it will simply move the congestion onto the mountain by enabling many more skiers to get to the resorts. Lift lines will get a lot longer. I personally would prefer to put up with the traffic congestion rather than having a degraded skiing experience because of too many skiers on the mountain. 2) As a tax payer I object to having to pay for my share of a \$500+ million bond that doesn't really enhance my skiing experience (see above). 3) The primary beneficiaries of the gondola will be the 2 resorts and not the skiers. This is not right.
29294	Gary Commagere	To spend 500m to 1b of taxpayer money for 2 private ski resorts s obscene. Use the funds on buses that can be utilized for other public transportation needs. Expand trax

29295	Ruth Hoffmann	<p>I have skied at Alta for the last 20 years, and understand the problem with traffic in Little Cottonwood Canyon. However, I don't understand how so much taxpayer money can be spent for the benefit the smallest number of Utah taxpayers. The canyon really got crowded when the ICON pass was initiated. People using this pass are from out of state. ? Are we spending taxpayer money to pander to out of state skiers? Does UDOT think we need a gondola to keep up with other ski areas in the US and the world? Many Utah Taxpayers do not ski, but use the canyon to hike and bike in the 3 other recreation seasons. The gondola does nothing to alleviate the parking problems in the other seasons at hiking trails.</p> <p>There have to be other solutions that do not cost \$500 million of taxpayer money. People who use the canon, I am sure, would be willing to pay. Have seasonal passes for locals, and charge others a fee to use the canyon, especially during ski season. Have ride share vas available. Reserved parking at Alta seemed to work quite well last year. Have busses dedicated to each ski area, leaving the parking areas more frequently. Who wants to stop 3 times at Snowbird to reach Alta?</p> <p>Construction of the gondola would take many years. Who knows, by the time the gondola construction has destroyed the natural beauty of the canyon and compromised our water supply, climate change may have done its deed on the ski industry.</p> <p>Someone is benefitting from spending \$500 million on the gondola, but it is not the Utah taxpayers.</p>
29296	Mike Roskelley	I think the gondola is a mistake. It seems like an enormous amount of money that could be allocated to the preservation of the Great Salt Lake (the lake affect, remember). The bus in system used in Zions National Park has been very successful. It's a reasonable solution that requires no modifications to roads at all.
29297	Douglas Jensen	I fully support the gondola
29298	Douglas Jensen	I support the gondola.
29299	Mary Wright	No Gondola! It will wreck the canyon forever. Thank you.
29300	Franz Hebl	Good afternoon. I am writing in opposition to the plan for a gondola in the LCC as currently proposed. The gondola will not solve the problems resulting from the overcrowding of ski areas in the canyon. I am a 40+ day skier and feel that the citizens of Utah should not fund or operate a piece of transit equipment that will solely benefit a private corporation. Furthermore, this plan will not solve the core problem of overcrowding in the canyons.
29301	Bob Wassom	Maybe I'm naive and uninformed, but as a skier, local resident and canyon lover, I'm still in favor of a gondola over increased ground transportation. It seems to be cleaner and less invasive than more buses and more roads. I've spent too many two-hour trips down the canyon in a snowstorm.
29302	Ann Hallows	THE MAJORITY OF CITIZEN'S OF UTAH CANNOT AFFORD ANY MORE TAX INCREASES!! THIS PROPOSAL WILL ALLOW THE LOCAL RICH AND OUTSIDE VISITORS TO ENJOY THE MOUNTAIN RECREATION AND THE FAMILIES OF UTAH WILL NO LONGER BE ABLE TO AFFORD IT. THE DAMAGE IS IN THE STATE OF UTAH INVITING THE WORLD TO LIVE HERE WITH NO PLANNING AND LOW TO NO TAXES FOR COMPANIES COMING HERE!!!
29303	Ann Hallows	THE MAJORITY OF CITIZEN'S OF UTAH CANNOT AFFORD ANY MORE TAX INCREASES!! THIS PROPOSAL WILL ALLOW THE LOCAL RICH AND OUTSIDE VISITORS TO ENJOY THE MOUNTAIN RECREATION AND THE FAMILIES OF UTAH WILL NO LONGER BE ABLE TO AFFORD IT. THE DAMAGE IS IN THE STATE OF UTAH INVITING THE WORLD TO LIVE HERE WITH NO PLANNING AND LOW TO NO TAXES FOR COMPANIES COMING HERE!!!
29304	Timothy Tippins	<p>The environmental impact that would result from this proposed phasing passing would be extremely detrimental to the lands that helped raise us, as well as an extreme regression in the conservation of our public lands.</p> <p>This proposition can only hurt us in the long run, there needs to he a different solution.</p>
29305	Michael Powell	I am writing to express my opposition to the proposed Gondola Solution. This plan is way too expensive to build and operate and will only benefit very few for a short period each winter. There are simpler and less expensive options and \$600M would be better spent on issues that benefit a much broader base of people in The Salt Lake Valley and across Utah.
29306	Terri Edmunds	I think the gondola is a bad idea. There are other methods of transportation to get up the canyon. I would never use this and don't think that taxpayer dollars should be used for it. The ones that benefit the most from this idea are the ski resorts, so if they want it that badly, they can pay for it. They have plenty of money.
29307	Douglas Vogeler	The gondola and its towers will permanently destroy LCC, not make a significant impact on traffic like the phased in options would, jam skiers up at the bases when the resorts can't get them open after big snows, and are a billion dollar corporate giveaway at taxpayers expense and is totally unnecessary.
29308	Joy Nichol	LCC has been my favorite canyon over 1/2 century, i strongly want the best alternative for it. the gondola!
29309	Joy Nichol	LCC has been my favorite canyon over 1/2 century, i strongly want the best alternative for it. the gondola!
29310	Nancy Schutt	I resent that so many of my taxpayer dollars will be spent on a gondola that will really only benefit two resorts by increasing skier traffic while pricing out more locals who can't afford the costs to ride. While it may result in less traffic on the canyon road, the traffic that will build up on local streets from cars attempting to reach the parking hub will create a even more untenable situation than we already have and negatively impact the quality of life in the adjoining neighborhoods. Why not encourage car pooling by instituting a toll or requiring parking reservations I am strongly opposed to the gondola.
29311	Rebecca Ingraham	This is so disappointing and I say this as an Alta/Snowbird season pass holder. Keep the mountains natural and don't give in to special interests. Toll the road, expand bus services, and don't ruin one of Utah's gems.
29312	Kyle Doubrava	Unfortunately, this project appears to be a tremendous waste of taxpayer funds. Why not enforce a toll system in the canyon during peak tourism season instead? Additionally, the threats to the environment and the increased risk of avalanche as a result of building this project will not be worth the effort. There are more cost effective ways to address this problem. Enforce payment from only those who wish to use the canyon's roads (tolls), rather than make the entire state pay for something that few people will actually utilize.
29313	Chris Breen	The gondola is a travesty of a handout to large corporations and political interest. Please do the right thing with my tax dollars and just do the busses, maybe a train.

29314	David Timothy	I'm against the proposal for the gondola and cog rail. This whole debacle is looking like a outright grift, with McCandless and company feeding off the people of this state. Leave it a toll road if need be to reduce congestion or use improved busses, please.
29315	Patrick Hutchings	I am entirely opposed to the gondola. I don't have a car which means that, although I live in a community that celebrates the mountains and outdoor recreation, I can't travel to the mountains. In theory, during part of year, I could travel to the resorts but I still could not participate because skiing is unaffordable. If the focus of this project was on busses that connected to public transit, trail heads, and picnic sites (in addition to resorts) then I could be a part of the community and mountain recreation. I could improve my health, spend time with others, and connect with nature year round . You would be supporting greater equity, public health, and cleaner air, while still supporting the resorts and congestion reduction. The gondola is an discriminatory, unaffordable, limited- purpose, narrow-minded, attempt to address an issue; whereas busses are an inclusive, affordable, more sustainable, year-round solution that serves a variety of purposes. Absolutley no to the gondola.
29316	Robert And Georgene Bond	It seems foolish to spend huge amounts of money on a gondola system when climate change could severely limit snowfall. Also, with the Great Salt Lake greatly diminished in size the "lake effect" would also be reduced, further reducing snowfall in our canyons.
29318	Radisa Peric	This is trully corrupt project. 500 +millions!!! I ski and live in Sandy. I will never ride it. We need that money to save Salt Lake. Withuit it there will be no skiing.
29317	Heather Coleman	I agree the gondola is the best choice, however it needs to be designed to provide access to climbing, biking and hiking areas for summer use also. Therefore there needs to be terminals to allow this. Not worth the money if it is for just winter use. There also needs to be major restrictions on personal car use!! Everyone needs to take the gondola & / or bus, no special privilege's for those who think they are to good for public transportation. I also don't like the idea of standing on a bus with 50 other people, but I do it to go skiing and lessen my impact on the environment. Big Cottonwood also needs a gondola system. If a main terminal that served both canyons was was built at the gravel pit, that is large enough for the terminal and parking for both canyons with bus service from other parts of the valley bringing passengers to the main terminal.
29320	Gail Goldstein	I'm in favor of the gondola
29319	Kelly Schimelpfening	Don't do the gondola. It's too expensive and almost exclusively benefits private companies and high income individuals. This money could be used to improve the existing UDOT infrastructure and services for the whole metro area, which would decrease general traffic and pollution if it worked better.
29321	Aaron Masover	<p>never drive in Taylorsville and move to ski in Little Cottonwood Canyon. In general I strongly support public transportation in Little Cottonwood canyon, and in the Salt Lake Valley in general.</p> <p>I previously submitted a comment in support of the gondola alternative. However, since I learned about Stadler's cog rail proposal that they presented in 2021, I currently support that option more for the following reasons (some of which are mentioned in the presentation):</p> <ol style="list-style-type: none"> 1. Stadler proposed a south side rail alignment that would be cheaper than the north side alignment, and avoid many avalanche slide paths. However, it looks like UDOT has only been considering a north side alignment. Stadler does not seem to be recommending snow sheds for a south side alignment. 2. Stadler puts the total cost of a cog rail at \$488m (subtracting their parking garage estimate, and assuming electrification). This is about 1.5x the cost of the \$335m gondola option. 3. Stadler proposed an additional \$487m rail connection to the Frontrunner along 9400s. This rail connection could directly connect to the cog rail line (using the same train cars and same track). 4. A cog rail would have the ability to make whistle stops for other canyon recreationists (hikers, rock climbers, showshoers, backcountry skiers, etc). On the other hand, the gondola would only go to Alta and Snowbird. 5. The south side alignment cog rail proposal from Stadler would have an estimated capacity per hour of 3000-5000 riders. 6. The O&M costs of a cog rail are about \$1.4m lower (there is an extremely long period for this to break even, but I still thought I would list it). <p>I think that we ought to be supporting more public transportation throughout the scope of the entire Salt Lake Valley. So despite the 1.5x cost of the cog rail, I still currently prefer the option because it more directly supports public transportation goals compared to a gondola. I also do not support any road widening project, or parking garage project. These are band-aids that will only increase traffic and congestion later on.</p> <p>We need a stronger focus on making the majority of a trip to Little Cottonwood canyon possible via public transit, rather than a "drive to take public transit" sort of situation.</p>
29323	Chris Mikell	Hate the preferred alternative!!!!!! It [redacted] and you already know why cause you've just ignored 8 years of public comment to not pick what we want. It sure ain't a 2 hr ride to the mtn with multiple transfers! Preferred alternative doesn't solve any of the problems for anyone else using the canyon, like hikers bikers. It is in essence a publicly funded solution that only benefits the ski areas. Of course they love that. Make the ski areas pay for the whole thing - no public money - if you going to be such [redacted] and not listen to what the local public wants.

Comments on Little Cottonwood Canyon Final EIS

29322	Cynthia Crass	<p>It annoys me no end that anyone would even consider a half billion dollar corporate handout to Alta and Snowbird, especially when our snow seasons are so tentative. I have and always will support an enhanced electric bus system with a dedicated bus lane during winter. That dedicated lane should be used for bikes during other seasons. Building inadequate parking at the mouth of the canyon is just ridiculous. All it will do is create a bigger traffic jam and the canyon mouth. I will never support an expensive, eyesore boondoggle.</p> <p>I am also annoyed by the Gondola Works advertising. The gondola they show is not up the canyon but is a photoshop at the top of some resort. People will ride the bus if it's convenient, recurrent and saves parking charges. Please please don't put that ugly thing in our backyard.</p>
29324	Fiona Mcgann	<p>don't build a [REDACTED] gondola plz and thx</p>
29325	Grzegorz Bulaj	<p>I strongly oppose building gondola as means to improve traffic to Alta and Snowbird. The most preferred way to reduce traffic to Alta and Snowbird is a combination of tolling (e.g. Millcreek Canyon) and improved bus service. Gondola would be underutilized for a larger portion of a year (please see statistics for powder days and holiday/weekend days in the winter). Gondola would be useless if/when wildfires damage upper LCC, hence discouraging people to visit Alta and Snowbird (risk for wildfires increase each year). There is no need (other than private profit) to increase number of visitors in LCC, while tolling can reduce number of unnecessary cars. In addition, Alta and Snowbird can offer free UTA bus rides. Building gondola will increase: (1) carbon footprint, (2) noise and visual pollution in the LCC, (3) public spending that benefits private companies, (4) negative impact on wildlife and wilderness. Thank you for taking these points for consideration.</p>
29326	Michael Wasserstein	<p>Little Cottonwood Canyon is a special place, and I consider myself lucky to have such amazing outdoor recreation opportunities so close to my home in the Salt Lake Valley. I fear that a gondola would ruin the splendor and magic of LCC, create traffic woes in the Salt Lake Valley, and be a poor use of a substantial amount of money. I'm also concerned that it would only operate 1/3 of the year, impacting summer recreation in the valley. I urge UDOT to reconsider its thinking about building a gondola in LCC.</p>
29561	Shauna Archer	<p>I support the Gondola but do have concerns still about continued high traffic in the canyon. While the Gondola provides a means to get from the bottom of the canyon to the ski resort areas it will not be able to stop at other areas of high use for hiking, rock climbing, camping, picnicking etc. I still feel it is important to request an entrance fee for cars. Bus transportation option with stops at trailheads and a minimal fee for bus use would be great for those recreating in the canyons. Those bicycling/walking in the canyon should not have to pay as their impact for canyon entrance is minimal.</p>
29562	Steven Day	<p>In my opinion, the tram will be wasted tax money. As long as driving is the quickest route, people will drive. What is needed is a limit on use of the canyon. The idea that the bus is an undesirable form of transportation is just a false notion the gondola supporters are promoting. The only difference is that the tram will be off the ground. The resorts will survive, they can just charge more money, the wealthy are the only ones who can afford to ski anyway. They can afford a little more if that is what the resorts need.</p>
29327	Jill Blevins	<p>No Gondola! We live in Cottonwood Heights and have been carpooling for years to ski and hike in the canyons, BCC & LCC. Education and less intrusive environmental impact options must be given their chance to succeed before we built something we regret. Sound reason must prevail; use this time wisely to rethink better solutions for our canyons and our communities.</p>
29563	Charlene Peters	<p>I am writing this email because I strongly oppose Having this in our canyons</p> <p>I am not a skier as well as many are not in Utah</p> <p>I am a avid hiker and walk up canyon quite a bit</p> <p>I see no reason to tear up the canyon for a lift only to run during ski season</p> <p>The cost is also a big concern to all of us on fixed incomes. Who pays for this? We all know the answer to that</p> <p>Please listen to the voice of the people in our state that care</p> <p>Thank you Char Peters Sourh Jordan, Utah</p>
29328	Hans Turba	<p>The gondola is not the way to improve traffic up LCC. The proposed budget is ridiculous. And the gondola only has drop off points at a few resorts. It doesn't help general traffic. Adding additional lanes and a bus lane would be a much better solution.</p> <p>The gondola is an eyesore and it only benefits the resorts.</p>
29329	Craig Rollins	<p>We support UDOTs decision to implement the Gondola option. Thanks for all your hard work.</p>
29330	Dioni Johnson	<p>GONDOLA IS NOT THE ANSWER - MORE DISTRUCTION AND OBSTRUCTION.</p> <p>The gondola only proves to destroy existing recitational spaces by altering the canyon. Long standing boulders and climbing routs will be taken out. Hiking trails may be significantly effected. Most of all, the beautiful views we all love from LCC will be forever obstructed by the gondola lines.</p> <p>UTAH CITIZEN OPOSED TO THE GONDOLA</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29331	Kathy Neumann	I do not support the Gondola plan. Parking lots in the valley, electric buses, carpooling, and ESPECIALLY reservations are more fiscally responsible solutions. I say no to the gondola solution with its half billion+ price tag that will destroy the canyon and leave taxpayers to constantly bail it out, which you know will happen long after the developers have taken their profit and run. The canyon cannot support an unlimited number of people. Reservations should be implemented asap for starters. The people have overwhelmingly said no to the gondola. We elected our officials to listen to our viewpoints, so please take this into consideration. Thank you for you time.
29332	Olivia Monosson	As a canyon employee, I know that the resort of snowbird alone parks at least 2,000 cars. How is a parking lot of 500 supposed to help traffic?
29333	Hannah Gebauer	How are people supposed to prioritize using the gondola when it will take a hour to get up the canyon, while the drive from base takes about 20 minutes. As a canyon employee I would have to agree this is a bad suggestion for traffic congestion.
29334	Jacob Levine	I commented twice during earlier phases and feel as though based on the hundreds (no, not all 14,000) but hundreds of other comments I read that the "themes" cited by our comments do not reflect popular opinion, but rather what is wanted to be showed to push this gondola concept regardless of what the public actually wants. I am not in favor of the gondola, and I don't believe this process is doing more than providing a show. I also feel that the concerns I wrote in my previous comments were never considered. On the days when traffic is an issue because of heavy snow, transportation is a problem in the whole region, not just LCC. A "mobility hub" at the bottom of LCC will only worsen congestion on all routes near that hub that you will still have to get to somehow. A gondola only stopping at the resorts doesn't address how many of us use LCC. I'm in favor of enhanced busses and snow sheds to protect the road on avvy prone areas. For the projected expense (which appears understated) the scope of the solution should be widened to the region, not LCC. I love LCC, I've been to Europe where towns are connected by lifts, but we don't have the same dynamic here. I've also been to Japan and snow sheds work great there. Please do not build this gondola.
29335	Andra Ghent	Please do NOT build the gondola. The gondola is a terrible waste of taxpayer money. We need to first try and exhaust much cheaper options such as 1) charging passenger cars a fee to go up LCC (perhaps \$20 on non-snow weekdays, and \$40 on snow days and weekends), 2) running much more frequent bus service to the resorts from downtown SLC and the base of LCC. If we try this for a full year and we still don't see any improvement in traffic, we clearly need to charge more for passenger cars going up the canyon. There is a price that makes the existing infrastructure work, we just need to find it.
29336	John Krystof	I find the gondola idea an appalling way to destroy natural beauty. This will be a black eye on our state just as the mining up Parleys Canyon is. Please reconsider this horrendous idea.
29337	Spencer Riehl	Please just build it. I ride the ski buses from Midvale Ft. Union and anything is better than what we have now. In my preferred plan, SR 210 is only widened to add one additional lane, which is a flex bus only lane that allows buses go up the canyon in the morning and down in the afternoon. But that's not on the table. So build the Gondola. While we are at it, I wish UDOT would think outside the private car for more transportation needs and really start helping UTA build out world class BRT lines.
29338	John Martin	The only way I'd support the gondola project if it cost less than five dollars to get up there if it's going to cost over 30 that's ridiculous I don't want to pay taxes for some thing that's a rip off. On top of that it seems the general public consensus is entirely against it
29339	Patrick Dewaal	Do NOT do the Gondola. It will RUIN the beauty of the canyon. I don't care about what the ski resorts say. They want money, not preservation!
29340	Kriss Gebauer	No!
29341	Aicha Konte	Building a gondola at Little Cottonwood Canyon is a restrictive and inequitable act to underprivileged population thus restricting access to nature which is an injustice in itself.
29342	Donovan Lynch	I cannot believe that UDOT is supporting any alternative that includes a gondola. A gondola in LLC will severely disturb the ascetics of the canyon, it will relocate congestion from the canyon to the surrounding neighborhoods, and it will only benefit the profits of the ski resort. Jamming more people up the canyon will eventually destroy it. Let the road be a filter on how many people can be in the canyon at any time by removing the gondola as an alternative and instead support enhanced bus service.
29343	James Thompson	NO GONDOLA!! If the Gondola was truly going to serve general public and not rich skiers (i.e. out of state tourists) or Snowbird and Alta, then special discounts should be available for Utah citizens and there should be a station at the White Pine trailhead. How much are the ski resorts contributing to the construction costs? I bet not much--this seems like such rip-off for the Utah taxpayer.
29344	Judith Klinger	I fully support UDOT's decision to implement the Gondola B plan. Any plan that calls for additional cars in LCC would be a tragic and irreversible climate disaster. The use of gondolas is commonplace in Europe, UDOT would not be inventing the wheel, they would be benefiting from learning what has been successful in Europe and bringing that to the Wasatch.
29345	Laura Peterson	I am against the gondola. This solution is only for the part of the community that skis. The traffic problem is mistly caused by the same. The Gondola will obstruct views in the canyon. I feel a better solution would be scheduling time slots for skiing, just like some of our national parks are doing now, to control traffic flow. I do like the idea of a big parking lot and busing. Offering an incentive to use busing, like a discount or credit towards food or merchandise would encourage skiers to use the buses. The gondola solution benefits only skiers taking the canyon away from everyone else.

ID	Full Name	Comment
29346	Megan Ross	<p>I am strongly OPPOSED to the gondola. There is not a comment space long enough to list my reasons, so I will list my top two. First, building a gondola in LCC is not a long term way to improve local economy. Will a local construction company be hired? Or a company outside of Salt Lake County, whose workers will not even spend the money they earn in our local economy. Why do I, as a local taxpayer, must subsidize a private corporation? If we are for a free market, allow the ski resorts who are the only ones benefitting foot the bill. Allow permits and regulate the construction, but tax the hell out of these resorts instead of paying them! They will not up and leave for "tax haven" ski areas that don't exist. Also, the direct impact on amount of tourists to LCC would likely not be significantly increased as those interested in skiing are still limited by canyon parking and resort capacities - once again, no change in local economy and therefore a waste of my hard earned but easily spent tax dollars. For second major concern, the environmental impact is astronomical. Part of the allure of Utah and particularly our canyons is the beauty God has created and the wildlife it attracts. Construction would be a huge burden and deterrent to our wildlife during and after construction. Don't forget the nasty cell phone tower-esque uprights to support the gondola. Don't you just love being constantly reminded that industry is more important than the beautiful earth God has provided us with? Ask yourself, do you prefer to look at a beautiful environment we can choose to preserve as best we can, or your own corrupt bank account in the black? This gondola is good for the elites only and at the cost of those of us who choose to love and live in Utah (wildlife included). Say NO to the gondola!</p>
29347	Michael Hertig	<p>Big waste of money as most people will skip it in preference of their car, even with the associated fees. I know I will. Whether we like it or not, we're a car-centric place. Who is gonna add an hour to their trip on both ends to park, unload all their stuff, walk to the gondola, load all their stuff back up, and head up the hill (in a slow gondola) with a bunch of strangers (especially sweaty, smelly strangers on the way back down at the end of the day), when you can drive up and pay a fee. I know I wouldn't, and my bet is the vast majority of other people won't either. Widen the road and build big parking structures at the resorts. That's the only thing that's gonna work, whether you guys want to admit it or not.</p>
29348	Sterling Warnick	<p>I think that any other alternative is better than the gondola I do not think a gondola is worth ruining the natural look and feel of the entire canyon. I also don't like that the gondola is a solution only for people trying to get to Alta or snowbird. I travel to all parts of the canyon in all times of the year. I prefer any of the other proposed solutions to the gondola. I also believe that little cottonwood is only so big and personally I think having the two lane road restricts too many people from Getting in the canyon in one day. Largely Increasing the amount of people that can get into the canyon in one day could easily ruin the experience of little cottonwood by over crowding so maybe a better solution is to do nothing or just limit how many people can even drive up the road on a busy morning. Overall I just don't think a gondola is helpful especially considering how intrusive it is.</p>
29349	Jessica Poolt	<p>The gondola is a terrible idea.</p>
29350	Richard Smith	<p>I am very concerned with UDOT's decisions to propose the Gondola B option for the following reasons:</p> <ol style="list-style-type: none"> 1) You admit that this option currently has no funding. The \$550 million cost for this project can not be justified by Utah taxpayers, particularly when the primary beneficiaries are Alta, Snowbird, La Caille and other owners of property that will be purchased for this project. The \$ 550 million estimate will most likely end up being much more expensive and will take far longer than planned. There are far better uses of this money for Utah taxpayers to invest in. 2) This project will definitely damage the beauty and environment of the canyon, despite your comments to indicate otherwise. 3) You have recommended building a 2,500 car parking garage in an area that is surrounded by many neighborhoods. This will concentrate the "traffic" you are trying to minimize and have an adverse impact on those neighborhoods. On top of that, the gondola base and towers will be eyesores and noise producers impacting these neighborhoods. La Caille also intends to put a hotel in what is a residential area. 4) A recent poll by Deseret News/Hinkley Institute indicated that 80% of Utahns don't support the gondola. Local officials in Sandy, Cottonwood Heights and other impacted cities/towns are opposed to this project. Officials of Salt Lake City and County have expressed their concern with the expense and have proposed that a more measured approach be taken with electric buses, road widening, tolls, etc. These are the interim steps that UDOT proposes as well, so UDOT should focus on these reasonable steps and not support an expensive gondola project at this time or in the future. 5) You indicate that the gondola will only address 30% of the traffic that is expected in the future. The capacity of the gondola appears to be insufficient to address the typical number of people who want to get to the slopes by 9 am to 10 am. You indicate that the gondola will operate in adverse weather conditions. It is my experience that existing gondolas often have to shut down for safety in these weather conditions. How is this solving the traffic problem? 6) The gondola does not serve the many other sites in the canyon that people utilize in the spring, summer and fall. Again, you are proposing a project that is very expensive and only serves a very small segment of the population. 6) Given future climate changes, it is not prudent to invest in a gondola for a local ski industry that will probably suffer from declining snow levels and attendance over the 30-year life cycle you propose. 7) As for air quality, electric buses and personal EVs will be a steadily increasing solution to air quality over the 30 year life cycle. The State of Utah and UDOT should incentivize the purchase of EVs and use tolling and carpooling requirements to drive the use of EVs in the canyons. This would be far more effective than a gondola. <p>Best regards, Richard Smith</p>
29351	Dallas Killpack	<p>The gondola destroys the natural environment and increases taxes. This only benefits the resorts. If there is really such a concern for traffic and such, then come up with better ideas that benefit the many and don't ruin the environment anymore than we already have. Maybe the canyons weren't meant to house the Utah population and the Californian population all at once. Maybe they should go back to their own mountains.</p>

ID	Full Name	Comment
29352	Jim Kennedy	<p>Gondola is a great idea - the huge jams and many hours long drives aren't going to be fixed by a magic bus system or car pooling.</p> <p>It's not 20 years ago and we aren't going back to those easy travel days. SLC is a tourism center and LCC is a key part of it. so let's accept that and build the infrastructure</p> <p>Car park at the base, gondola to the top. Easy, quick. user pays. we need to look towards a sustainable future.</p>
29353	Tim Naylor	<p>The Gondola has its merits; however, it is not in the best interest for the people who live in the State of Utah.</p> <p>A Gondola is not sustainable. The Gondola will only qualify for Utah money and private donations to build and limited resources to sustain. The Gondola has limited passenger load and throttled passenger movement.</p> <p>Expanding SR-210, with road and a future railway (possibly Cog) will allow SR-210 to be eligible for Federal Funding along with Utah State Money. And when we hold the Olympics, this corridor will become eligible for additional Federal Money.</p> <p>Gondola Works states the following: NOTE: Gondola Works Statements in Bold Bullet Points-My Comments are in Hollow Bullet Points</p> <ul style="list-style-type: none"> - It will reduce the congestion in Canyon and Neighborhoods o People still have to get to the Gondola; how do they do this (Car or Bus and in the future, Rail)? o The Gondola will only hold 35 people, Gondola Works states that a Gondola can be available every 30 seconds-How long does it take to load a Gondola (over 30 seconds). Does the proposed cost include 72 Gondolas to meet 30 second headway time? o If the Gondola is served by Rail, there is no way the Gondola will be able to handle 90 people per car and there could be up to 4 cars (360 people). Buses hold up to 70 people. o We need a system that is seamless, providing the ultimate sustainable experience for our community and visitors. - Weather & Avalanche Resistant o Building Sheds and Retaining Walls in Avalanche Areas for road and railway will allow for consistent and safe ingress and egress. - 36 minutes from La Caille base station to Alta o With a Bus and Rail Service, conveyance will be seamless making the trip quicker, easier, and better. <p>Carbon neutral.</p>
29354	David Huston	<p>I support the gondola - look no further than the Alps as a positive example - it doesn't ruin anything (watershed, sight lines, back country, etc.). In fact expand the plan to get us to PC without burning up gas and the environment. I live the area (CWH) and have for nearly 20 years.</p>
29355	Adam Mcfarland	<p>I support UDOT's preference for the gondola as proposed. Traveling through the Alps, I've seen many areas that have used each of the recommended solutions, road with avalanche sheds, trains, and gondolas. The gondola is by far the least invasive of the three options. I think the cause of congestion in LCC is due to under development. If we continue with this line of thinking, minimal change to current infrastructure, instead of finally acting big, we will continue to suffer from grid lock in the canyon and the surrounding neighborhoods. For example, I'm currently hesitant to take the bus because the base facilities are overcrowded, causing me to rely on my car for storage and as a place to take a break during the day. Ironically, organization like Save our Canyons have continually fought and won limited development at Snowbird and Alta's bases. Their "wins" have caused more traffic in the canyon. We need to acknowledge the draw of LCC and the number of people who will travel there and enjoy it, regardless of the congestion. We need to manage this demand through appropriate development and recognize that small changes, like appropriate base facilities, adequate public transportation, and developed facilities at trailheads, will help people enjoy the mountains and wilderness rather than detract from it.</p>
29356	Laura Bass	<p>As someone who skies at Snowbird every winter, I am thrilled about the idea of a gondola. It is the most environmentally friendly solution for sustainable mountain recreation for the next 30-50 years. The development that Utah is considering is inspiring.</p>
29357	Daeton McClure	<p>This is an outrageous use of funds and should not even be in consideration. Maybe work towards saving the great salt lake instead of putting more money into hurting the environment.</p>
29358	Aaron Littlefield	<p>Gondola is the worst of the proposed solutions to traffic in Big Cottonwood Canyon. Best solution is enhanced bus service and parking management.</p>
29359	Adam Imbriglio	<p>I am a cottonwood heights resident, the gondola is the correct solution in my opinion. You have my support and my family's support. Thank you.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29366	Micah Rosenfield	<p>I appreciate all the time and effort that has gone into this EIS. And I am delighted (and a little surprised, given the vitriolic and vociferous commentary contrary to the plan) that the gondola option has come out as the preferred alternative. I have travelled extensively to the Alps and certainly cable transport such as this is used extensively and effectively to transport people to the mountains. I believe a gondola will not detract from the beauty of the canyon, and I'm pleased to see that it is the lowest cost (over 30 years) alternative.</p> <p>I would like to see that there is plenty of public transportation options to get to the gondola base -- busses at the least, but ideally a Trax alternative as well.</p> <p>Why not make the 5 lane expansion of Wasatch Blvd a flex lane route, similar to 5600 South in Taylorsville? This would allow the number of lanes in either direction to be increased during periods of high traffic.</p> <p>I would favor MORE gondola cars be available got increase the hourly carrying capacity of the system.</p> <p>And I wonder what modifications might have to take place to allow people to get off and on the system at one or both turn stations.</p> <p>I love the idea of a gondola as an alternative to transport up the canyon. I look forward to using it.</p>
29367	Jack Garzella	<p>I think the gondola is the best "medium" term solution and agree. Expanding the canyons to 4 lanes (in my opinion) is the best "long" term solution but that is expensive and potentially bigger environmental impact than the gondola.</p>
29368	Colby Rollins	<p>Gondola is the only solution to canyon transportation. Improved safety, reduced pollution, increased capacity, and a great benefit to the state of Utah.</p>
29369	Lee Jenkins	<p>Excellent proposal. Please do it!</p>
29370	Rebecka Olivares	<p>I am disappointed in UDOT choosing Gondola Alternative B as the solution to address Little Cottonwood Canyon traffic. This decision is a permanently impactful one and is not scalable (can't just go back if doesn't work). It is also the least desirable in terms of cost. Canyon users should not have to pay \$35 (in addition to all the taxes) just to access LCC. This primarily serves the resorts and should therefore be paid for by them. Enhanced bus service is a more economical and more scalable alternative.</p>
29371	Lori Reichard	<p>No gondola! Don't use tax payer money for two ski resorts. The gondola is ugly and the problems are only occasional. The bus is better.</p>
29373	Kathryn Allen	<p>You should consider using the monies on saving the Great Salt Lake. When it dries up, there will be no snow and no need for a gondola.</p>
29372	Oren E Hopkins	<p>I lived here in Utah since 1978, and skied at almost every resort, holding a season pass at Snowbird for a majority of that time. I have also enjoyed the Wasatch Front and have run and hiked literally thousands of miles over the years.</p> <p>I believe installing a gondola is a bad idea for the state/community. I've skied at Alta and Snowbird 100's of times over the past 40 years and have seen the crowds ebb and flow up the canyon. I believe there is a finite amount of skiers you can put on those two mountains and still have a pleasurable experience. I grew up skiing back East in the 60's and 70's and the lift lines were commonly 45 minute+ long. The technology to move people up and down the slopes has increased dramatically, but again, the mountains can't accommodate unlimited amounts of people.</p> <p>I think the elephant in the room is who is REALLY benefiting from this (either one of the proposed options) and MORE importantly WHO is going to pay for its construction. The estimates of 550M are a pipe dream and it won't be built (hopefully it won't) for that amount of money several years from now.</p> <p>I'm glad you are pausing and starting to make adjustments with can all live with now. Gas buses, more bus routes from various parts of the City, reservation systems for parking, etc.</p> <p>Skiing is on a significant decline as boomers are skiing less and younger people/families are not as interested, in large part due to the costs involved in visiting these two resorts.</p> <p>The owners of Snowbird and Alta are the people that stand to benefit from getting 'more' people of the hill quicker. The consolidation of the ski industry and the creation of the ICON/EPIC passes have only increased the pressure on these mountains. Show the tax payers how much state income taxes these two resorts contribute to the Utah State bottom line. There is limited hotels and retail space available (unlike Park City, Deer Valley, etc.) that would contribute to the increase in revenue.</p> <p>I urge you to reconsider this decision, listen to the majority of Utahans, and look for other options.</p> <p>Thank you, Oren Hopkins</p>
29374	James Webster	<p>I realize UTOT'S primary qualification is pandering to GOP bias, including fostering corporate welfare at the expense of Utah taxpayers. This bigoted attitude has no regard for the impacts on our socio-economic welfare, but UDOT's arrogant disregard of the public trust and is unjustified. I wrote the 1990 UMTA "Inter-Resort Transportation Study", that rated 16 alternative means of transit techniques and have lived in Switzerland. UDOT's unapologetic disregard for the full spectrum of Little Cottonwood Canyon users defies sound economic principle. The attraction of a gondola for tourism is minimal and likely represents a significant deterrent. Covid will be a perpetual public health risk that will only be amplified by subjecting local and tourist visitors to a closed, unregulated capsule having no air exchange. The gondola option excludes all others except downhill skiers and fails to serve the general taxpayer population who UDOT would compel to fund this option. The heat island impact of the proposed parking structure, especially when not in use has not been studied for mitigation.</p>
29375	Russell Boltz	<p>A Gondola is an expensive gadgetbahn which will only really serve the resorts who will profit from public spending.</p>
29376	Scott Brady	<p>I think a toll booth should be opened at the base of LCC and every car should pay \$10 - \$20 each time they go up the canyon. I feel that would push a lot of people to ride buses and also motivate more people to carpool. Charging \$10 to park at Alta for back country skiing reduced the crowds significantly last year and I think this approach would help lower traffic in LCC.</p>
29377	Travis Wilde	<p>This is a horrible idea. Tax payer dollars could be used for so many other projects. This would benefit a select group that use this Canyon. Certainly fees will eventually be charged for use limiting who can use the gondola. Please keep our canyons free. Look at alternatives like rapid bus options and rewarding those who car pool.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29378	Ronald Roberds	<p>Do not widen Wasatch Blvd. There is too much traffic on it already all year. It needs roundabouts so the traffic will stop breaking speed limits and to force large trucks to use alternative routes. I have lived on Wasatch for 19 years and know what traffic does in this area. I have been a skier for over 50 years. The public should not have to pay for skiers access to resorts nor should government collect payment for canyon access. Gondolas would be an eyesore for those who have to live where it would be visible. Maintenance roads for the gondolas are unsightly and intrusive in developed areas. Using the gondolas is a hassle for large families with small children; I have experienced that in Europe.</p> <p>You should leave the road "as is", but add snow sheds.</p> <p>Each resort should mark all parking spaces on their property and require customers to buy a parking ticket before they go up. UDOT should do the same thing for customers who want to have parking access to terrain outside the resorts including the selling of parking tickets. Hotels could offer refunds to guests.</p>
29379	Michelle Hernandez	<p>I am against a Gondola project for Little Cottonwood Canyon. My property taxes are increasing each year but my block remains without sidewalks or appropriate street lighting. The pool in our neighborhood closes early and often. The schools are under performing. Traffic is getting more dangerous as there are more cars on the road but less policing. This project would require more of my tax dollars with ZERO benefit to me. Essentially this is a theme park ride for the wealthy paid for by those of use struggling to literally put food on the table and gas into our cars so we could get to work. NO THANK YOU. This would serve non residents who don't care because they are only here temporarily and the wealthy who can afford the expense and even throw parties in the things making them even harder to access.</p> <p>What we need is a road for buses ONLY and plenty of bus service. Our snow belongs to EVERYONE not just those who pay top dollar and play golf with the Utah state representative class. It's EMBARRASSING that this is the project UDOT picks but why the surprise? You guys also approved more idling truck traffic for one the most polluted states in the union. Utah has enough natural beauty and kindness of heart in it's population to draw travelers from across the world. We are already feeling the effects of too much tourist travel. We cannot put the genie back in the bottle. All we can do is expand the current services we have and make them as equitable and air pollution free as possible.</p>
29380	Jacob Padwa	<p>Do not waste \$550m of taxpayer money on this pointless toy that benefits very few people, most of them tourists. I am skeptical that if approved it could be built, and skeptical if built it could survive well meaning citizen's attempts to maintain Utah's natural beauty and splendor</p>
29381	Allen Pettee	<p>The gondola is the most sensible solution to the traffic gridlock up the canyon. Americans will not accept riding a bus in sufficient numbers to make a bus alternative successful.</p>
29382	Karen Pearce	<p>No gondola! It'll ruin the canyon, and it belongs to all Utahns, not only fir skiers! Does the Gondola accommodate ppl for hiking or flower gazing? This is another corporate welfare while Utahs are left uneducated, homeless and sick. Where us the giant church Christian influence on this state to do the right thing!</p>
29383	Erik Johnson	<p>The community has spoken - no gondola! We cannot justify spending \$500 million on a project that will only benefit rich skiers and a few land owners while permanently defacing Little Cottonwood Canyon? I'd rather invest the \$500 million into our failing schools and for housing for our vast homeless population. The gondola is a taxpayer gift to the rich and to the ski resorts. No gondola!</p>
29384	Joel Meza	<p>The gondola will absolutely destroy the canyon. It will be an extensive and destructive construction period, and then spoil our pristine views just so ski resorts can line their pockets. Don't use our tax dollars to pad their bottom line. A wider road will be orders of magnitude less destructive to this gorgeous land</p>
29385	Joseph Vickroy	<p>I agree with the Utah Department of Transportation's decision and I support the Gondola (Alternative B) as the best alternative.</p>
29386	Morgan Meza	<p>I am strongly opposed to the gondola. I oppose using half a billion of our tax dollars to destroy our canyon to allow ski resorts to line their pockets with more visitors. The construction will be devastating to the environment, and our pristine canyon will be forever spoiled with massive towers. A wider road will be orders of magnitude less detrimental to the longevity and beauty of our canyon.</p>
29387	Andrew Mohr	<p>What type of funding is coming from the resorts that are benefiting, Snowbird/Alta?</p>
29564	Kelsey Oliver	<p>Dear EIS Team in Little Cottonwood,</p> <p>I strongly urge you to support any alternatives to the gondola idea. This could include improving the transportation-related safety, reliability, and mobility for all users on S.R. 210 from Fort Union Boulevard through the Town of Alta. UDOT mud also consider an alternative's environmental impacts, which includes impacts to water quality, air quality, and visual and noise impacts, among others.</p> <p>I'm a backcountry skier and Grew up in Utah. I have so many fond memories of enjoying the wilderness. Gondola construction will not play out the way UDOT sees it. There may be a flurry of use at the beginning, but tourists will stop using it often and locals will want to use other alternatives. This is also the worst time to install a gondola. With snowfall dwindling every year, how can we think of enhancing our tourism industry if there's not much snow to ski on in 15-45 years?</p> <p>The gondola will be a huge waste of resources and public land, land that is already used for recreating for backcountry skiers, rock climbers, trail runners, and trekkers. UDOT must prioritize other options and Utahns themselves for this decision.</p> <p>Thank you for considering my comment,</p> <p>Kelsey</p>

ID	Full Name	Comment
29388	Robert Osborne	<p>I recommend modifying the Gondola B option as follows: remove Phase 2 "Gondola Implementation" from the Gondola B option.</p> <p>Rather, in Phase 1 add: 1) construction of a multi-level parking garage at 9400 S/Highland Drive to expand parking stalls there to 2,500 parking stalls; 2) construct snow sheds in Big AND Little Cottonwood Canyon roads in sections where the avalanche risk is greatest (this has been a proven solution in European mountainous / ski resort regions); 3) widen Wasatch Blvd. in Phase 1 of Gondola B option; and 4) require the private ski resorts (Snowbird, Alta, Solitude, and Brighton) to make investments in improving their parking stall shortages (i.e., there is plenty of room at each resort to invest in and construct multi-level parking structures as any business would do to maintain a level of service their customers have come to expect from them). What we are really talking about is a parking problem at the resorts. As such, regarding the future funding of any such parking improvements, these are not public tax-payer problems to solve - they are problems each business must solve like a developer would be required to make enhancements to roads in and around a new residential or commercial development. Developers would be required to fund them and generate a return on their private investment.</p> <p>Additionally, rename the Gondola B option as "Cottonwood Canyons Transportation Improvement Plan." This is a much more inclusive name to address problems facing both Cottonwood Canyons, not just LCC. Trust me, I have been on Big Cottonwood Canyon road on sitting in traffic between Solitude and Brighton for nearly an hour.</p> <p>For the following reasons, I do NOT support Phase 2, in its current form: 1) construction easements most certainly necessary to build each gondola support tower will be unduly disruptive and damaging to the canyon environment, and 2) gondola support towers would detract from the natural beauty of the Cottonwood Canyon valley.</p> <p>Thank you for your consideration of my input.</p> <p>Rob Osborne Sandy, UT</p>
29389	Chad Van Orden	<ol style="list-style-type: none"> 1. NO to taxpayers paying for this solution. If Snowbird and Alta want this solution, they should pay for it. They should run it for profit and pay for its maintenance. 2. When the parking lots are filled the resorts have more than enough skiers on the hill. Why wasn't users capacity addressed during this discussion. 3. When I travel I15 there are many more days when traffic is slowed and inconvenient, what is the difference in the canyon. Travel at non peak times. 4. I find it interesting that a couple of former legislative leaders have had a controlling interest in the property being discussed. 5. The fix was in, another insider deal for the great state Utah.
29390	Brown Kevin	<p>im very against taxpayer money going to help the commute to a private resort most people dont use!</p>
29391	Paul Mecham	<p>Let me argue against both of the two existing solutions. Let us open the project to private proposals on either or both alternatives. The overriding requirement would be that not one penny of the cost would come from taxpayer funds, at any level, at any time. The total funding would have to be private investment and later user fees. My best guess is that no private contractor could or would ever even think about putting his own money in this without huge government backing and/or guarantees.</p> <p>Now to my proposed alternative: I propose that the state convert the road up the canyon from near the mouth of the canyon to the top, into a limited access highway. There would be a barricade and booths at the start that would allow only properly ticketed vehicles to enter the canyon. Tickets would be sold by the state by internet or even drawings. Allowance would be made for permanent residents and employers with specific limits on number of entries per day and number of passengers per vehicle to prevent them from gaming the system by becoming their own taxi company. Other users (skiers, tourists, etc.) would have to obtain their own tickets. The total number of tickets that would be made available for sale would vary from day to day, based upon season, weather, road condition forecast, etc. Bad road conditions would mean fewer tickets available, fewer vehicles and, therefore, manageable traffic flows. Income from ticket sales would cover road maintenance, booth staff, ticket sales costs, and ticket number forecasting. Road maintenance would be limited to its present footprint. No funding would ever flow from the limited access highway to the state general fund. Nor would any funding ever flow from the general fund to the limited access highway. The administrative organization would probably remain a state agency.</p> <p>End result: The users will be the ones to pay for the highway travel (along with having some inconvenience). The taxpayers who are not users will never have to subsidize the users (nor be inconvenienced). If any of these want to be tourists, they can become a user for a day and buy their own ticket. The canyon appearance will not be damaged beyond its present level. Startup cost (booths and system) is minimal (and reimbursable from the highway organization). Continuing outlay for taxpayers is zero. Money saved over the other proposals can be used on something that benefits all citizens of Utah, not just the canyon users, like saving the Great Salt Lake.</p>

ID	Full Name	Comment
29392	James Abbott	<p>I am a long-time season pass holder to Snowbird, and have formerly skied whole seasons at Alta, Solitude and taught skiing at Deer Valley for two years. I am also a former Wall Street equity analyst and I am a senior executive at one of Utah's largest employers. Thank you for allowing me to share my view; I hope I might bring to light some considerations which I believe make the Bus approach the superior one, based upon reason alone:</p> <p>Simply stated, the Gondola plan costs more, as you've noted in your comments to the media on the subject. As a former Wall Street equity analyst, I've analyzed more than 100 businesses and evaluated their business models. Cost is not the only factor, but it is a considerable one. The Gondola costs approximately 20% more than the Bus+ proposal (busses, plus the widening of the road), and therefore one must consider carefully if the extra cost comes with an extra benefit. I strongly question whether it does: the cost of the debt service alone on the additional \$3 million a year more than the bus solution, immediately eliminating the lower annual operating cost benefit of the Gondola. A final note on dollars and cents: we all have watched big projects such as the Gondola run over budget - sometimes by 2x and 3x; with busses, the costs are reasonably certain. Unlike the Federal government, if local and state politicians have to raise taxes to balance project overruns, then there are almost certain political consequences to such an unpopular moves.</p> <p>Nine (9) hours and 54% less efficient. What is the value of the citizens' time? How much is the value of nine hours, per person, per year? The Gondola takes 54% more time - 13 minutes longer - each way, when compared to a Bus. A typical skiing family that visits the resorts 20 times per season will spend approximately nine hours more sitting in the Gondola than they would on a Bus. In percentage terms, the duration of the Gondola is 54% longer (37 minutes to Alta) than the Bus (24 minutes to Alta).</p> <p>Avalanche delays are still highly likely to persist. The Gondola Works folks will tell you that the Gondola will work even when there is an avalanche closure. I would question that very heavily. It is commonly said that SR 210 (aka Little Cottonwood Canyon) is the only road in North America where it is legal to shoot heavy artillery over the road; I cannot imagine the Gondola - or busses - running while such mortars are being fired across the path. That means the Gondola will be sitting idle, awaiting the completion of avalanche control work, just like the busses and cars. And for the one or two times every five years that an avalanche blocks the road (and the Gondola would likely still be able to run), please consider the other disadvantages of the Gondola that are continual and recurring, rather than the episodic road closure.</p> <p>Wind and lightning holds. If you ski Snowbird regularly, you'd be very familiar with wind holds on the Aerial Tram. This even applies to chairlifts. And lightning holds (less common in the winter, but not uncommon during the other seasons). Although Gondola Works delights in highlighting the lack of stopping the Gondola due to avalanche holds (which I am not at all ready to invest in this narrative), Gondola Works fails to acknowledge the continual wind holds that occur for all aerial tramway.</p>
29395	Russell Mower	<p>I don't want to subsidize a private industry with my tax dollars. I the resorts want something they should pay for it.</p>
29400	Amanda Maze	<p>This is not a solution that will solve a traffic problem. Destroying the land to build this eye sore of a structure in nature is not how people want to view this canyon. Destroying climbing areas for ski profit is not the solution. Limit access and create a way to not allow everyone to be able to ski. Fix the great salt lake water issue to even think about the future of being able to ski. The first Gondala was not the solution and neither is this one. Listen to the people, not everything should be about profits.</p>
29401	Charles Ayers	<p>I am opposed to the gondola proposal. I live near the mouth of Big Cottonwood Canyon and bike, hike, and ski the canyons, and experience the traffic issues. I favor shuttles and fees and regulations on car use and feel a gondola would be an expensive and unsightly gift to the ski resorts that would be the sole beneficiaries. The ski resorts may have to understand that their is a limit to the number of skiers they can accomodate in our canyons.</p>
29402	Matt Bergman	<p>No gondola!</p>
29403	Josiah Kawamura	<p>DO NOT BUILD A GONDOLA UP THE CANYON. IT IS A WASTE OF TAXPAYER MONEY AND WILL RUIN THE NATURAL LOOK OF THE CANYON. I WOULD RATHER WAIT IN TRAFFIC THAN HAVE THAT THING BE BUILT.</p>
29404	Jason Stowell	<p>I fully support UDOTs thoughtful conclusion to proceed with the Gondola. Utah leadership and UDOT have concluded there is a need to improve transportation in the canyon. As I study the opinions of critics, I concluded that their real desire is to restrict transportation. Arguments for no changes or modifications to bus service are valid if the end goal is to constrain access. The canyon is dangerous and can only handle a limited number of visitors that are comfortable driving in the snow and will sit in their cars for hours.</p> <p>The silent majority of Utahn's feel differently. We want efficient access to the resorts on the weekends, we want thoughtful methods of transportation, and we want a higher level of experience. This includes (i) a solution that works on snowy roads, unlike busses, (ii) lowering our carbon footprint, (iii) limiting the impact to the environment, unlike more paved roads, and (iv) creating an alternative form of egress.</p> <p>UDOT has shown that its leadership and citizens are looking towards the next generation and that we are open minded and willing to consider all forms of transpiration. This is a great step for Utah. I support the higher level thinking and look forward to new proposals on improving Utah's transportation.</p>
29405	Daniel O'connor	<p>This is graft on the highest level! Using taxpayer dollars to ONLY benefit 2 ski resorts? Honestly it is hard to believe and everyone knows the initial cost estimates will be at least quadrupled by the end of the project. Typical good ole/mormon boys contractor network in action here in the once great state of Utah. A complete travesty at minimum.</p>
29406	Thibaut Mounier	<p>How is it possible to make such a poor recommendation? This gondola will not provide the flexibility required to adapt the capacity to the need of the flow of people. A gondola can only move a fixed number of people per hour, what ever day of the week, whatever hour of the day and whatever day of the year. Committing such a massive amount of dollars to a suboptimal solution is a shame for our public authorities. Once again, this is definitely not the best transportation solution. Visitors of LCC deserve the fastest, most affordable and least impactful way to reach their destination (which is way more than 2 private ski resorts) and the proposed gondola fails on each and every point.</p>

Comments on Little Cottonwood Canyon Final EIS

29407	Michael Virdone	<p>I strongly oppose the gondola, this will be an eyesore in the canyon. It only benefits the patrons of two resorts. It will see minimal usage outside of a few days a year. As a UT tax payer, this needs to be paid for by the resorts, not the residents of the state.</p> <p>Add more busses and make it more convenient and appealing to use public transit (and less appealing to drive on crowded days). What about restricting access rather than continuing to allow growth? The national parks have figured this out with reservation systems (Arches) and required shuttles (Zion). We can do better.</p>
29408	Beverly Boyce	<p>I do not support the gondola at any time. I favor limiting the number of skiers allowed up the canyon. Implement reservation system for canyon access each day, and or charge for access. The future of skiing is not guaranteed in our canyons. Climate change may make the gondola superfluous sooner than we think. It doesn't solve traffic problems, only moves them further up Wasatch. We need to limit daily use of the ski hills, via limited number of reservations. Thank you</p>
29409	Morgan Anderson	<p>Better, more convenient buses please. Once you build this gondola which does not serve the tax base (except for a very limited few) there's no going back. NO GONDOLA!</p>
29410	Warren Miterko	<p>To direct substantial public money to a project that only benefits two private companies, while also exclusively serving people of well off means is morally politically despicable. Once again we see that our "representatives" are developers first and legislatures second. Utah wants to be the "leader" in so many things, but the nation at large views us as the leader of backwards policies in which true representative decision making is non existent. We are a joke, and the only ones laughing are the developers while the public holds the bag.</p>
29411	Melanie Topham	<p>It would be gross misuse of our natural and financial resources to add an extravagantly expensive and enormous eyesore gondola to Little Cottonwood Canyon. Already the canyon has more than enough weekend visitors; each person's experience would be improved by reducing usage, not increasing it. Consider implementing fees for cars, reducing the human impact by educating people on proper watershed usage, adding summer buses to reduce vehicle pollution and noise, and generally working to keep the canyon scenic and healthy. The priority should be the beauty of our ancient canyon, not monetary gains for shortsighted corporations.</p>
29412	Scot Chipman	<p>The tax payers have spoken, a majority of us want improved/widened roads and expanded bus service. Widen the road to three total lanes, use two lanes for uphill travel between 1am and noon, two lanes for downhill travel between 1pm and midnight. Make the second land a bus/carpool/toll lane and run it just like you do on I-15. Install a few snow sheds for the most prone avalanche paths. This is what a majority of us tax payers and long time users want.</p>
