29413	Robert Thomas	<p>Enhanced bus service - fantastic! tolling + required bussing or carpooling - fantastic!</p> <p>GONDOLA = HORRIBLE IDEA. huge misuse of taxpayer money to benefit 2 private entities while absolutely destroying what makes LCC unique. Sure Europe has massive trams criss-crossing the Alps - but they are massive - not the narrow, constrained landmass we have to work with in the Wasatch. This is a case of supply and demand. LCC has more demand than supply can keep up with. what happens anywhere else this is the case? you raise the cost, in this case, of entry. the gondola does not do that. Busses can raise the effort of entry without increasing the cost - leaving a ton of equitable access.</p>
29414	Jared Barney	<p>The gondola option is not the answer guys. \$550 million (which we all know will go way over budget) to fund a funnel that will deliver customers right to the ski resorts (private businesses) front door? 99.9 percent of the time there isn't a back-up of traffic congestion in the canyon. This option is literally to alleviate traffic that happens less than ten days a year! Skiers are only one demographic that uses the canyon, what about the rest of us climbers, hikers, the wildlife etc etc etc. This monstrosity you have recommended as the "best option" is only the "best option" to get people to the resorts. There are literally two stops, Snowbird and Alta! There are many other options that would leave less of an impact on one of our most treasured state assets. The fact this has been approved is lazy. Why not have a ticketing system at the mouth of the canyon on those days we know will be a problem where you must have your pass scanned to be let in and once the parking lot at the resorts are full, you MUST ride a bus or you can't enter. What about LIMITING the amount of people that can ski at the resorts on those days. Oh the resorts might not make as much money if that were the case? WHO CARES? A Let them suffer a little bit for 10 days a year so that the rest (including our wildlife) don't have to suffer for 365 days a year. Do the right thing!</p>
29416	Trisha Terry	<p>We do NOT want the gondola in our canyon. We as tax payers don't want to pay for it. We believe the few days a year that are heavy traffic can be alleviated through extra bus services, etc. The gondola will be expensive to ride and will not help who the what my family uses the canyon for- which is backcountry skiing and hiking. Please stop the gondola!!</p>
29415	Marpraits Marpraits	<p>Order Cialis online from Mexico and you can get the same quality for similar per-pill prices with Cialis Mexico cost real cialis no generic</p>
29417	Michael Carroll	<p>I have lived in Park City for 20+ years and have seen the traffic and congestion increasing exponentially each year. I am in favor of and believe the highest and best use of funds and long term viability to the environment and overall public safety is to construct the Gondola as quickly as possible - thank you for the opportunity to comment</p>

29418	Randall Lalonde	<p>I'm disappointed and opposed to your recommendation of building a \$500 million gondola as a way to relieve traffic in Little Cottonwood Canyon, especially when traffic is really only a problem for 15-20 days per winter. It seems that UDOT's only concern is traffic flow, and the gondola proposal is a public subsidy of two ski resorts. As climate change and drought diminish our snowpack, the problem will become even less frequent. This is nothing more than a boondoggle, and it will do next to nothing to reduce non-skier traffic in Little Cottonwood. Why should Utah taxpayers have to subsidize two ski resorts?</p> <p>If this gondola were built, where would it stop? Only at the ski resorts? What about all the other places that backcountry skiers, rock climbers, and hikers like to frequent? How would a huge gondola not detract from 'maintaining the existing visual experience'? Also, who will enforce parking restrictions along the roadway near the ski resorts, or will this really be voluntary? I just don't see the need to build a \$550 million gondola that will only benefit the few.</p> <p>Thank you. Sincerely, Randall LaLonde</p>
29419	Maria Crowder	<p>Upon initial proposal of the gondola, I originally submitted a comment of support. I would like to formally retract my support for the gondola. I am opposed to the gondola. This is a tax-payer paid subsidy of two ski resorts, both of which have concerning futures given the state of climate change and the prevalence of our famous snow being uncertain. If we continue to have less and less snow days, the traffic problem (which is at its worst maybe 15-20 days a year) will solve itself. After seeing the rendering of what it would look like in the canyon, the towers would be permanent eye-sores on the beautiful scenery of the canyon. We need short-term, flexible solutions now for the high traffic days, while still preserving and maintaining the beauty of the canyon. Please go back to the drawing board on this.</p>
29420	Shirley Pryor	<p>I do favor the gondola system. We should made it available in the summer and the winter. A fee for driving as well as riding the gondola would be fare. Please build the gondola asap so I can ride it with my grand children and let them enjoy the beauty of this great canyon!</p> <p>Thanks</p>
29421	Rob Reinfurt	<p>Thanks for taking the time to listen to our input.</p> <p>As a 21 year resident, homeowner, business owner in Cottonwood Heights and pass holder in LCC who has traveled up the canyons thousands of times, I have a good idea of the traffic 'problem' that we experience on a select 25-35 days a year mostly during the winter.</p> <p>While I think a solution for LCC would be nice, I think we need to take a macro approach to solving this 'problem'. The proposed solution is designed to alleviate traffic in LCC only.</p> <p>The future requires a solution for BCC, LCC, and Parleys. There is an opportunity to get this right the first time which will save the taxpayers millions and create billions in revenue.</p> <p>As the community is clear in not supporting the gondola, I don't think re-stating all of these cons is necessary. So, I want to propose a more encompassing solution instead of hating on the gondola.</p> <p>Americans and Utahns are time conscious and enjoy the luxury and ease of using their vehicles to get to and from the resort. We have been trained to do so and that consumption habit is not easily going to be changed. 90% of the time, driving up to Snowbird from the proposed gondola base station takes 18 minutes. Do you think anyone wants to trade that for a 55 minute commute? No. Do you think a family of four skiers want to figure out how to lug all their gear up LCC (having no place to store it except for small paid lockers) instead of having the luxury of using their car as their homebase where they can keep lunch, dry shoes, and extra gear for their kids? No. The gondola is a solution for the 25-35 days a year when the canyon is experiencing significant delays, but the gondola can not run when avalanche mitigation is in progress, rendering it even more useless. Bob Bonars public statements as a 'ski patroller' were baseless and we all know he has not been a patroller in decades. He was speaking as the President of Snowbird.</p> <p>A solution simply needs to save people time and give people safe access to the canyons during bad weather/avalanche mitigation. That is the problem we are talking about.</p> <p>That solution is a train that interconnects BCC, LCC and PC through existing mine tunnels which connect all of these areas underground making stops between these resorts and towns only a few minutes apart. A longer train could run a BCC/LCC service creating a solution for both major canyons and a shorter train could make stops between Solitude, Brighton, Deer Valley, Alta and Snowbird creating a truly interconnected resort experience like many ares in France, Switzerland and Italy.</p>
29422	Taylor Anderson	<p>Don't build the gondola.</p>
29423	Janelle Johnson	<p>I would like to start by saying that I am adamantly against the gondola up little cottonwood canyon. I am at a loss for how this decade long, expensive project is in the best I interested of Utah residents. What cost is this to us tax payers? How does this construction positively impact the environment and stability of the canyon? What does the environmental studies say this will do to our wildlife in the canyon? Why can't you enforce tolls for the canyon like we've done in millcreek? I have her to meet a Utah resident who is on board and excited about a gondola. Instead, we are devastated to see UDot and the state of Utah make such a terrible environmental decision that affects the residents, the integrity of the canyon landscape, and the devastation this will have on both wildlife and the canyon earth. Please reconsider and listen to us.</p>

29424	Forrest Vargyas	<p>The issue in Little Cottonwood Canyon is that there is too much traffic on the road. Too many people driving up the canyon. The gondola does not solve this issue in an effective or efficient manner. The gondola will serve to get more people into the canyon and to the ski areas, but will not actually solve the congestion on the road. As a SLC local, I know what it is like. No one is going to want to ride a gondola up when they can just drive. It's easier to drive up in a nice warm car with your music than it is to deal with skis/boards at the mouth, sit in a cold box for a while, and then have to do it again at the end of the ski day. It doesn't make sense. A gondola would be a novelty item that would soon fade as a preferred method of travel to the majority of users. The gondola would not fix the root of the problem.</p> <p>Another issue with the gondola is that there is no room for error with this decision. Even if it is thought to be possibly viable, hundreds of millions of dollars (taxpayer dollars!) will be put into this, countless natural resources and trailheads will be ruined forever, and the man-made eyesore in the viewshed will never be recovered from. Is this really worth it just for a chance of solving the problem?</p> <p>Thirdly, the gondola does not help whatsoever with anyone who isn't going to the resorts. Anyone wishing to backcountry ski, hike, backpack, climb, boulder, trail run, see the sights, mountain bike, etc. will not be helped by a gondola in the slightest. In fact, many of these activities will be negatively impacted by a gondola.</p> <p>Finally, none of this would matter if there were not a better proposal. But there is. I know a better bus system isn't perfect but incentivising less traffic to create less traffic makes sense. I think the most important part about choosing an alternative solution, like better buses, is that it is adaptable. We know that we can't foresee every issue. We know that in 20 years the traffic problem will be very different. We know that people and ideas change. So why choose a \$550,000,000 solution with no adaptability? It just doesn't add up.</p>
29425	Marly Kapacinskas	<p>From a public standpoint, I do not support the gondola. As it will only serve Alta and Snowbird, the intentions are clear: provide access to the canyon for those who can afford it. It's absurd that this project will be funded by the public, when all persons and wallets on the gondola will be deposited at the doorstep of the resorts.</p> <p>I understand that property has been purchased for a parking lot at the base of the canyon, but what happens when that lot is full? Traffic does not originate in the canyon, it originates in the valley. We must integrate our approaches with local and regional transportation objectives! Otherwise the mouth of LCC will become an absolute zoo as people once more fight for parking, and residents and those seeking other forms of recreation are impacted.</p> <p>Where is the money from Alta and Snowbird to mitigate impacts both in the canyon and in the neighborhoods around it? What are they doing to help our communities? Great, a free gondola pass. But WHAT ELSE?</p>
29426	Munro Alley	<p>The decision to build the gondola is extremely disappointing. Not only does it fail to fix the traffic problem in little cottonwood, it's expensive and only serves to further crowd and already overcrowded canyon solely for the sake of profit. If we keep making decisions to alter the land like this there won't be anything left. Buses are a vastly preferable option. Please don't do this.</p>
29427	Dan Wheatley	<p>As a state known for outdoor recreation and preservation, the proposed gondola would be hypocrisy at its finest. There are other cost effective and environmentally friendly measures currently in use at other ski resorts across the US. The resorts in and around Aspen, Colorado are a great example. They have a large parking lot at the base and skiers are bussed to the respective resorts. We have a responsibility to protect Utah. Let's do the right thing.</p>
29428	Dan Wheatley	<p>As a state known for outdoor recreation and preservation, the proposed gondola would be hypocrisy at its finest. There are other cost effective and environmentally friendly measures currently in use at other ski resorts across the US. The resorts in and around Aspen, Colorado are a great example. They have a large parking lot at the base and skiers are bussed to the respective resorts. We have a responsibility to protect Utah. Let's do the right thing.</p>
29429	Sarah Ricketts	<p>I've read the emails and watched the 2 videos. I really like the phased approach and vehemently disagree with the gondola. Is it possible to start with the first phase (enhanced bus, tolling, snow sheds, improved trailhead parking, eliminating roadside parking near Snowbird and Alta) then make a decision on the gondola? It seems to me that those other methods would greatly improve conditions in Little Cottonwood and might make the gondola option less desirable.</p> <p>I oppose the gondola for many reasons. Firstly, it is a huge amount of money to spend on a system that only benefits Snowbird and Alta (private companies), ignoring the needs of all other public lands users. It is a huge amount of money to spend on a system benefiting private businesses and on something that will only run in the winter. I would rather see that large chunk of money go to improvements that will benefit all users of the canyon all year round.</p> <p>I support the effort to improve the traffic situation. If there was enhanced bus services (more frequent buses with more space for passengers) and tolling, it would incentivize more people to take public transportation. I'm afraid parking at the base to unload then board a gondola will not incentivize people away from driving then we have spent significant money on an option that is not helping.</p> <p>Lastly, the visual impact to Little Cottonwood Canyon is unacceptable. We have a magnificent canyon and the gondola will mar the views for all. The visual impact should be taken into consideration along with the environmental and user impacts. Again, I support tolling and enhanced bus service and improved trailheads and maybe even snow sheds. NO GONDOLA.</p>

29430	Clara William	As an active user of little cottonwood canyon, I am struggling to see how a gondola will provide any solution. It will be environmentally destructive, take time and resources to build, and will only serve to increase the tourism in the canyon by presenting a big shiny unique attraction. I have several questions regarding the gondola. Will it cost money to ride? If it costs money, where will the ticket revenue go to? What is being done to ensure native Utahans can continue to access the canyon without being priced out? Unfortunately, it is portrayed that only the private companies of snowbird and alta will benefit from millions of tax payer dollars, which is irresponsible on the part of UDOT. I am staunchly opposed to the gondola.
29431	Rachel Wheatley	We do not need a gondola up Big Cottonwood Canyon. There have to be better options
29433	Parker Landgren	This issues goes far beyond safe travel. The canyon is already too packed with people. it is unfortunate but its the reality we live in. If the issue is the canyon is overcrowded why would a gondola which will bring in more tourist and almost double the amount of people in the canyon be the best option? On top of increasing the crowds at the resort the only people that gain from this are the ski resorts relying on the tax payers dollar to increase their revenue. We the tax payers should not have to pay for something that only helps these resorts who are the reason fo this issue in the first place.
29438	Connor Ottosen	I strongly encourage UDOT to reconsider the gondola. As we go into the mountains to enjoy nature, I would hate to have spent tons of money to have large pillars and the gondola mar the canyon.
29441	Donald Green	I would prefer no gondola. I think the gondola will ruin the canyon for its natural views, creating more traffic while building S will bring more attention to the resource which will clog up the canyon. Even more. I think we should get rid of the iKON pass, bringing in way too many people around the world more attraction I don't want to camp at tannerflats and see a giant metal box floating above me I almost ran to the campsite it doesn't give it a natural fill you're taking away the natural view and beauty of the canyon. NO GOndola
29443	Kristine S	I'm against spending public funds to fund a gondola in Little Cottonwood Canyon! I very much favor expanded bus service and think that the gondola is tantamount to subsidizing private ski mountains
29444	Maya Parsons	Why choose a gondola over better bus systems and widening wasatch? Thi is only for resorts to make money and is not what the residents of salt lake city want. Our tax money is going into this and the majority of residents DO NOT want it.
29446	Maryann Webster	The visual impact of a gondola in the canyon would be devastating to everyone who loves the scenery in Little Cottonwood. An example of this negative impact can be seen in Albion basin which I feel has been visually ruined by the additional ski lifts there to the point that I no longer wish to hike there. We stand to destroy the visual impact of the canyon if we allow too many people there, which a gondola would do. This appears to be a naked ploy to benefit the ski industry with no benefit to the precious resource of Little Cottonwood Canyon
29447	Rebecca Mchaas	I have lived in Park City for 14+ years and have seen the traffic and congestion increasing exponentially each year. I am in favor of and believe the highest and best use of funds and long term viability to the environment and overall public safety is to construct the Gondola as quickly as possible. Thank you for the opportunity to comment.
29448	Joan Moellmer	I cannot believe that developers are going to tear up areas of Little Cottonwood Canyon for the towers required to put in a gondola!!! We currently have roads that carry cars up and down the canyon. Yes, it is crowded, but let's address ways to control traffic, have more buses, and work with the infrastructure that we already have. The gondola mainly serves the ski resorts and we, the public, pay in taxes and destruction of the natural habitat of the wildlife that inhabits the canyon. Please do not build a gondola!!
29449	Steammus Steammus	download steam guard authenticator
29450	Matheson Harris	I am very against the construction of this gondola for the following reasons. #1 Cost: The very high price tag for a limited solution to over-crowding in the canyon, while so many more pressing problems need state funding (i.e. the Great Salt Lake) is an egregious error. Spending tax-payer dollars to shuttle skiers to two private businesses when you haven't tried bussing or tolling is short-sighted and looks very clearly like you are caving in to the whims of local developers. #2 Need: As someone who lives right on Wasatch, I've noted a huge decline in powder days that are over-crowded. Since Alta instituted it's reservation system for parking and Snowbird also limited parking, the volume of cars driving all at once up the canyon is hardly an issue. We skied 30+ days this winter and never waited more than a few minutes. Better study of parking and reservation systems could likely solve this problem for a fraction of your budget. #3 Environmental impact: We have one canyon, formed by a glacier over millions of years. We've already partially spoiled it with a road. Why add more blight with huge towers and acres of cleared land to build them. It's a travesty. Please don't allow the greed of a few to spoil this beautiful canyon for generations.
29451	Bonnie Stout	I don't understand how this project is moving forward with the gondola being the preferred option. There has been so much public comment already opposing spending the exorbitant amount of money that the gondola will cost. It is not financially sound to put that amount of money towards a project that a very small number of Utah residents will utilize. Period. It's just not a sound financial move. For example: changing Little Cottonwood Canyon to a toll road will help decrease the number of vehicles that travel the canyon; reservation system at the parking lots of both ski resorts will help control traffic patterns; increased number of buses to both ski resorts. There are just not that many days each year where traffic is bad enough in the canyon to warrant spending the amount of money the gondola will require. Yeah, it's a very cool idea to have the gondola. It's just not financially sound, especially now as many cities / municipalities are increasing property taxes already. Don't create another reason to increase everyone's property taxes that much more. Please.
29452	Kaitlin Owens	There are so many other places that people frequently go to in the canyon aside from the 3 proposed stops. The gondola would really only benefit ski traffic. Backcountry skiers and hikers will have to pay tolls to get up the canyon. It seems like a strategy that is really only intended to benefit 2 private businesses in the canyon. I think there already is a bust system in place and it works well. Adding more busses and more frequent trips could really help to reduce traffic and would also help everyone, using the canyon for every activity to get up the canyon.

ID	Full Name	Comment
29453	Leah Richardson	<p>I do not support the proposed gondola for the following reasons: *huge taxpayer burden for a benefit to a few ski resort customers *the negative visual impact on one of the most scenic places in Utah *this will not do much to alleviate summer traffic of hikers and tourists who need to access trails in the canyon *wildlife impacts due to construction Thanks!</p>
29454	Edward Spencer	<p>This is an extremely poor choice. For one thing, it is extremely expensive. It will do nothing to reduce the neighbors' irritation caused from traffic approaching the canyon during ski season. It will have a very negative visual impact on the beauty of the canyon. It will not speed up access to the canyon for skiers because there will still be backups and delays from the satellite parking to the gondola launch location than getting to the resorts now. The Gondola can only transport a fixed number of riders and people will be delayed and waiting in line to go up. It makes much more sense to add busses or lanes or to charge for driving access and you can move more people up the canyon.. There is only a traffic problem during 3 months out of the year. The Gondola will only add expense and delay and make it unaffordable for all but the most wealthy, The tax payers who don't ski or can't afford to ski will be paying and not the resort or the developers. There will be no air improvement in our valley.</p>
29455	Cynthia Spencer	<p>This is an extremely poor choice. For one thing, it is extremely expensive. It will do nothing to reduce the neighbors' irritation caused from traffic approaching the canyon during ski season. It will have a very negative visual impact on the beauty of the canyon. It will not speed up access to the canyon for skiers because there will still be the same backups and delays from the satellite parking to the gondola launch location than getting to the resorts now. The Gondola can only transport a fixed number of riders and people will be delayed and waiting in line to go up. It makes much more sense to add electric busses or lanes or to charge for driving access and you can move more people up the canyon. There is only a traffic problem during 3 months out of the year. The Gondola will only add expense and delay and make it unaffordable for all but the most wealthy, The tax payers who don't ski or can't afford to ski will be paying and not the resort or the developers. There will be no air improvement in our valley.</p>
29456	Jolynn Darton	<p>UDOT is saying they are trying to meet the needs of the community while preserving the Wasatch Mountains, but the gondola flies in the face of both of those precepts. The gondola won't serve the community, only the Ski Resorts. A gondola can't alleviate the overcrowded parking lots in the summer. Hikers who want to go to Lisa Falls, Quarry Trail, Tanners Flat and Red Pine or White Pine Lake. Gondolas only serve ski resorts in the winter, and Snowbird's summer corporate retreats. Gondolas don't help preserve the Wasatch. The environmental impact of the large gondola structures, not to mention the gigantic eyesore of a gondola, will devastate the canyon forever. PLEASE, PLEASE, PLEASE try less invasive measures first. More buses, buses that have the right of way up the canyon in the mornings, and down the canyon in the afternoon. More parking agreements with Alta Canyon and Sandy City with more bussing options from these locations. The propaganda that buses are running up to Snowbird and Alta empty are just not true! Every winter, every bus going up the canyon is full! Gondolas will not be impervious to avalanche either. You can't carry people up the canyon when an interlodge order is in effect. The entire gondola idea smacks of corporate corruption and is reminiscent of UDOT's Terry Diehl days. The citizens of Salt Lake County DO NOT want a gondola. They don't want to look at it, and they especially don't want to pay for it!</p>
29457	Jack Darton	<p>I believe the gondola only serves patrons to Snowbird and Alta. Funding should not be provided by the public for a solution that does not meet the needs of the majority of canyon goers. We need to not only alleviate parking and traffic at the resorts but also each trailhead and public area along the way. Please fund a solution that serves hikers, climbers, cyclists, and skiers alike.</p>
29458	David Shaw	<p>We really can't come up with a better solution than a gondola? You added extra buses (after the number of stops has been reduced for years) and tolling. Why not try that first so there is real incentive to take the bus? Won't the lack of incentive to ride the bus just transfer to the gondola without the tolling? It's slower and has a cost per ride that at this time won't be included in a ski pass like the bus currently. Also this does nothing to fix the BCC traffic which is usually worse than LCC. Also this only really benefits two private companies but it requires at LEAST \$500 million dollars of tax payer money? You know those rich people all along Wasatch and in the mouth of LCC are going to sue UDOT to stop this from going forward. This is going to continue to drive up the cost before any construction ever takes place. What happens when no one takes the gondola? Does it ever recoup that money? Or are taxpayers just stuck with the bill for a mediocre transportation method that only solves problems in LCC a handful of days a year. There has to be something better than the gondola.</p>
29459	Camden Stewart	<p>I believe a gondola is not a good solution because it is proposed to only serve day use skiers at high volume days only during the winter. This gondola affects every other user of the canyon year round and does not serve the outdoor experience due to many locations requiring lots of gear and thus cars to transport that gear. It is also a high cost and only serves to transport to certain spots up the canyon which is awesome if you like biking only downhill but for everyone else it is a pollutant to the core of the natural outdoors</p>
29460	Sean Paton	<p>I moved to salt lake largely because of the beauty of Little Cottonwood. If I'd known that skiing interests would motivate the building of an obstructive, and ugly gondola, I wouldn't have come. This gondola will be GRATING on the LCC aesthetic frame. I trail run, i boulder, I bike. All of these things would be ruined for me and my friends with this gondola. I know you've read thousands of comments just like this. The community of LCC doesn't want this.</p>
29461	Jag Kudale	<p>My concerns are cost and environmental impact that cannot be reversed for generations to come. Let's not hurry and try electrical buses first, even on a small scale. let's not destroy the planet, take a deep breather.</p>
29462	Jennifer Kreutzer	<p>I am totally opposed to this Gondola. What an eyesore for our beautiful canyon. Having a parking lot at the mouth of the canyon will do nothing to alleviate traffic congestion on Wasatch Blvd or 9400 S. It will just stop at the parking lot instead of the further up the canyon. Why not charge to enter the canyon? Increase paid parking at the resorts? Offer incentives for flexible ski hours to pace the traffic. Run additional nat gas buses. Very apparent decision is based more on monetary gain for a few than on environmental preservation. Bad form.</p>

Comments on Little Cottonwood Canyon Final EIS

29473	Baylee Vogler	I do not believe the gondola is the right answer to addressing congestion in Little Cottonwood Canyon. The amount of resources and infrastructure it would require would be significant and the ecological impact would be substantial and irreversible. A more sustainable alternative would be to use our current infrastructure and implement improved busing services using EV buses rather than invest in infrastructure that would impact the canyon forever. Another red flag in this is the fact that the Great Salt Lake is drying up and it's water resources are directly related to the amount of snow the wasatch receives. These efforts should be focused on saving the lake to ensure that there actually is snow in 10 years, not focusing on getting more people up the canyon.
29474	Indy Li	To the UDOT and partners working on the Little Cottonwood Canyon EIS, I add my voice to those opposed to the Gondola option. From every report shared with the public it is abundantly clear this solution addresses mobility in the canyon for a select population of outdoor recreators and only for a portion of the year. I'm appalled that the State would consider wasting tax payer dollars to fund a project that benefits private corporations.
29475	Jason Barney	The gondola is not my preferred solution and would like to be counted amongst the local residents against it. I believe that heavy traffic during the winter season doesn't justify having an eyesore year round. Please consider other alternatives like charging tolls on high volume days. This idea does not serve those of us who do not ski. Please don't scar the gorgeous view I grew up loving.
29476	Barbara Hughes	I am a active voter, I vote NO. Taxpayers are going to have to pay majority of costs and services very few people and times of the year limited. No a good solution.
29477	Jed Whittaker	I am appalled by UDOT's decision to fund developer investments to the tune of HALF A BILLION DOLLARS in taxpayer money. The gondola will not benefit LCC users or Utah residents in general. It will only benefit the developers who own the land around La Caille. They have pushed for this because it will make them astronomically rich. They will build hotels and claim success as they float around the Pacific on yachts. If they want it built so bad, THEY SHOULD FUND IT. They won't, because it's an economic loser for the funder. You all are trying to solve a non-issue with LCC traffic. DO NOT BUILD THIS GONDOLA, PLEASE!
29478	Mike Groth	The gondola option is a bad idea and an eye sore. A combination of other options is a better idea. A lot of us in Sandy moved here to be close to the resorts and go to them anytime. The traffic congestion only happens a few times a year, the gondola is an over reaction.
29479	Lexi Hoggan	This is such an AMAZING idea! The gondolas in the European countries are massive tourist attractions & I can't imagine a better/ cooler way to be transported up the canyon - this is going to be so cool during the fall to see all the leaves. BUILD THE GONDOLA!!!!
29480	Richard Thompson	The Gondola Works website states that "Little Cottonwood Canyon is in danger...". This is the only instance where reporters have accurately informed the public, however the threat is much different than the article states. This Gondola hosts a large threat to the natural beauty and features of little cottonwood, as it may impact the climbing, backcountry, hiking, walking, cycling, and exploring of the natural space. The Gondola Works website States that that paving more roads will end in 50 acres of destruction, whereas there is no mention of the destruction involved in moving Tons of Metal pillars and machinery into their positions on the mountainside. How many years before those tarnished habitats and areas are able to regrow? I'm sure its more than the gondola will be able to operate. The Gondola Works website also claims that the implementation of this gondola will decrease the flow of traffic up the canyon, and make it less of a mess. However, the only thing the gondola is allowing is for more people into this place, creating overcrowding issues and turning what was wild and free into a metropolitan lockdown, where too many people are all in one space. There will be no less traffic flow, only more traffic. The Gondola Works has had many marketing campaigns, explaining the benefits and the good deeds that it brings. This gross use of media and reporting has deafened the cries of those that may understand its true impacts and ideas behind the construction. Hopefully this cry does not fall on deaf ears, and that we have reached an understanding to keep this sacred place wild and free. One day I hope that I may teach my children the beauty of this canyon, and all the joy it brings up and down, without the Gondolas shadow looming overhead. Signed: Your Future Generations
29481	Cortney Buxton	Never what the people of the state wanted . Shame on you all . I wish there was a way to hold you accountable. This should have been on a ballot . Not forced on the citizens of this state .
29482	Sam Nelson	I strongly oppose the recommendation of Gondola Plan B. I've read the Environmental Impact Statement and feel many points are minimalizing deleterious effects this will have on the ecosystem. The cost and length of construction will be detrimental to wildlife as well as neighborhoods and communities in the area. If it attracts additional users to Little Cottonwood Canyon, then it will not reduce traffic--it will worsen it. Given the issues of the Great Salt Lake drying up (and climate change), we may also have less snow on the mountains. Let's focus on that instead of expensive, frivolous transportation projects .
29483	David Lee	I am against a tram/gondola system in the canyon. I support increased bus service to reduce automobile traffic. I support possibly widening the road if the cost will be paid by Snowbird and Alta resorts.
29484	Jan Walker	UDOT. Please listen to the public.
29485	Virgil Lund	I do not think that the gondola is the best option for the canyon. What about the poor people who do not ski or snowboard, why are their taxes being used to pay for something they are never going to use? Why doesn't alta or snowbird help cover the cost, they are the ones who will be benefiting the most from the gondola, so they should cover some of the cost.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29486	Doug Geraghty	One thing I have mentioned to friends who talk with me about this issue is no the mode of transportation, but more a need for storage space. The majority of people who travel up the canyon regularly do so in their private cars or with friends. We suit up and put all our gear on at the car and when we are done with the day feel comfortable out of our gear and in our cars driving down. Using the bus service or even a gondola people will fill most comfortable if they have an option to store their gear at the resort they bought a pass to or like to visit the most. This allows for a more comfortable ride on the bus especially when there's traffic and it can take hours to get down. But even on a short ride on the gondola. There maybe an increase for lockers but they need to be plentiful and affordable without a years long waitlist. I just speak of this as my own experience, as an employee up canyon I have the privilege of being able to store my gear up canyon. It allows me to take the bus with ease on my days off and travel back down in comfort.
29487	Matt Champion	I agree with the move to put a gondola in the canyon to ease traffic flow. I have driven up there in both in the summer for hiking & the winter for fun & the traffic is just horrid. A gondola would certainly ease traffic flow & have minimal impact on the environment.
29488	Kris Scott	Do not use taxpayer money to build a gondola.
29489	Jake Neilson	As an avid rock climber, i would hate to see the gondola ruin so much iconic bouldering area in little cottonwood canyon, however, if there was a way to disturb as little of the bouldering and rock climbing i. The area, this is the best option.
29490	Shauna Ericson	this is the stupidest thing ever. you build something that only the rich can afford to do? at least a bus everyone can afford it. do what zions national park has. and do this for the skiers. Its like you are only making it that only the rich can ski. I personally will never ride the Gondola. its to rich for me.
29491	Calvin Dittmore	This appeases companies and does not help our community. Create an electric bus shuttle lot. Wasting money on a gondola that will support a drying industry.
29492	Nathan Wiest	As someone who has to drive a large truck up little cottonwood every week, I ask that the gondola have the ability to move heavy pallets of goods up the canyon, maybe have one gondola be designed like a freight elevator, also a several stall unloading dock at the base of the canyon.. preferably on the opposite side of the building away from riders and their vehicles.
29493	Justin Hamula	I am a skier and snowboarder. I love the skiing in little cottonwood canyon. I also am disappointed that I can't enjoy skiing as we once did in the 70s and 80s with relative solitude. I understand why people want to come and ski here. These crowds have been growing rapidly over the past few years due in part to the consolidation of ski resort ownership and the season passes held by people from all over the country. I strongly oppose spending any tax payer dollars for a gondola to help mitigate the traffic in little cottonwood canyon for such a small group of tax payers. There are so many more issues we need to address across this state that could benefit a broader population than this. We do have traffic problems in the cottonwood canyons during the winter months but the cost of mitigating efforts of this traffic should be on the shoulders of those who use the canyon and not the general public. Ski resorts and skiers should pay for these traffic mitigating efforts and not the tax payers of this state.
29494	Cynthia Blair	Please reconsider. I am strongly against the gondola option, as are the majority of my friends and neighbors here in Cottonwood Heights. It benefits the ski resorts ay the expense of the tax payers. I would prefer reservation, carpool, and bus incentives
29495	Rosalyn Roberts	I'm a senior on fixed income. Use your own money! you have money to burn. I don't.
29496	Jane Arhart	I am a Snowbird pass holder who is NOT in favor of the gondola. I believe it will be an environmental and aesthetic disaster in the fragile and natural LCC. I would prefer mandatory and more frequent bus service.
29497	Bryan Owens-baird	I am disappointed with UDOTs decision to continue pushing the gondola option in Little Cottonwood Canyon. As I mentioned in my previous comment, I believe this is a gross handout of public money into a project that has many downsides and limited benefits. A better alternative is to limit traffic on the weekend by instituting mandatory bus shuttling on the weekends, while leaving weekdays unchanged. And in the meantime work on road expansion that will benefit canyon users both in winter and summer seasons. Please do not ignore the comments and public wishes on these matters. Thank you, Bryan Owens-Baird
29498	Sasha Jovanovic-hacon	Nobody wants the gondola. 14000 comments and you keep ignoring the facts. Stop the gondola!
29499	Georgann Lloyd	Please don't go forward with gondola. Enough visitors come to Utah without that being touted as an attraction. As a lifelong Utahn and Salt Lake County resident I have loved the pristine look of the canyon. I feel that the gondola would ruin that and is not necessary.
29500	Jamie Lorenzo	The gondola is not only awful for the environment, it is unfair to make the taxpayer of Utah pay. No one wants the gondola. Bring more electric buses and provide incentives for people to ride the bus. NO GONDOLA.
29501	Kyler Mcgee	Yay! Thank you!!!
29502	Steve Achelis	I want my grandchildren to enjoy Little Cottonwood Canyon as I have. I can't imagine 20 towers going up the canyon. That will affect the view and tranquility from everywhere within the canyon. Please don't destroy this gem of the Wasatch!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29503	Daniel Steenblik	<p>To whom it may concern,</p> <p>My family and I live near Wasatch Boulevard and are frequent users of all our canyons throughout the year.</p> <p>I agree that we need to address safety and traffic congestion concerns in the canyons and along Wasatch Blvd, but the gondola plan does not solve those problems for (at least) the following reasons:</p> <ul style="list-style-type: none"> - It only addresses one of several canyons with congestion problems. - The gondola cars cannot carry enough passengers to cut down the number of cars in Little Cottonwood. What problem does it solve? - The gondola would exclusively serve a few businesses at the top of the canyon, but doesn't provide access to other parts of the canyon. - It would actually increase traffic to the gondola parking area, since passengers would need to get to the base of the gondola instead of parking at more dispersed lots like the do for the buses today. <p>The gondola plan is a transparent act of greed and corruption that won't help our community and isn't wanted by the locals. Please shut this plan down!</p>
29504	Christi Judd	<p>I believe UDOT has chosen the Gondola option without adequate research and time to see how other mitigation options can affect traffic for the better. A Gondola is unwanted by the VAST majority of people in the Salt Lake valley. We implore you to rethink this idea and listen to the people and the experts on the damage the Gondola would do to our canyon. I am happy that a phased approach has been chosen and I strongly believe that if the effort is put into the early phases a Gondola will never be the answer.</p>
29505	Thomas Walker	<p>What if we don't need extra lanes or a gondola to ease the congestion in Little Cottonwood Canyon (LCC)? What if a few rule and logistical changes could suffice? Here's what I mean:</p> <ol style="list-style-type: none"> 1. Prohibit private vehicles from LCC during peak season and anytime new snow is forecast to be 5" or more. 2. Significantly expand ski-season bus trip frequency up and down LCC. With no private vehicles on the road during otherwise busy times, both existing lanes become "Express" bus lanes. 3. Scrutinize existing city/county bus routes. Make adjustments to ensure that access to LCC-bound buses is available from key city/county bus stops, with no more than one connection to get to them from tertiary stops (thereby allowing most people access without requiring additional parking lot construction). Schedules should ensure ample arrival and departure (to/from the resorts) times. <p>UTA may need to buy a few more buses for the purpose, but I'd bet the associated cost would be less than the \$500 to \$550 million expected gondola cost by orders of magnitude.</p>
29506	Marika Xydes	<p>absolutely beyond disgusted by the gondola proposal. this doesn't fix ANYTHING for ALL the ways in which the canyon is used year round! It's just a massive government funded stipend to the already wealthy ski resorts. What about mountain bikers? hikers? cross country and backcountry skiers? just all them apparently? absolutely disgusting. I refuse to ever again vote for anyone in local office who supports this measure.</p>
29507	Vicki Wilson	<p>Absolutely NO GONDOLAS in Little Cottonwood Canyon to resorts. Please!!!!</p>
29508	Mike Anderson	<p>My wife, Diana Anderson, and I are both opposed to the proposed gondola in Little Cottonwood Canyon.</p>
29509	Nathan Iverson	<p>I do not support implementation of a gondola in LCC. This is not a long term solution to the traffic issues in LCC and would wreak havoc on the natural environment that we all enjoy.</p>
29511	Erin Stearns	<p>The gondola will not only be an eyesore for the canyon, but it will also create more congestion at the ski resorts which are already at their limit. If the gondola ran year-round, maybe there would be some benefit for overall canyon use, however instead, running only part of the year it will sit unused. Not to mention the climbing areas the gondola posts will destroy. Overall, I think this will be an exorbitant expense for something that will only benefit some people, some of the time. Push more busing in canyons, encourage carpools - the reservation system IS working.</p>
29510	Jesse Kenyon	<p>Please do not construct the gondola. There are so many better ways of getting people to their preferred location in the canyon than destroying boulders, roadside parking, backcountry skiing access, and the beauty of the canyon. Take a stand against the ski resorts bullying you and coercing you into a decision that only benefits them.</p>
29512	Gordon Gardner	<p>The problem is too many people trying to go up this particular canyon. That is the problem that needs to be solved....not how to get as many people and their money up to Snowbird and Alta. Please address the problem. Canyon fees, quotas, limits, reservations, lotteries? Please find an actual solution, not another tourist attraction.</p>
29513	Mike Kraz	<p>This is a terrible idea, it will forever ruin the integrity of the canyon. How could this be the solution?</p>
29514	Brian Mcguire	<p>BUILD THE GONDOLA!!! I love how it will reduce traffic and keep the canyon more clean and peaceful.</p>
29515	Brent Tucker	<p>A gondola in LCC is not a cost benefit. It's a budget-busting perk to serve only 2 ski resorts in the winter season. The better solution is increasing bus service, tolling the canyon entry and keeping reservations for skiers in place. The gondola is not the solution.</p>
29516	Craig Sturm	<p>Initially I supported the gondola. I do not support the burden placed upon the taxpayers. The resorts should take on a larger financial burden of the overall cost. Unless they do, I am withdrawing my support of the gondola initiative.</p>
29518	Justine Perry	<p>This should not be funded by tax payer dollars</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29517	Linda Johnson	If a plan to improve traffic in Little Cottonwood Canyon is to be implemented, and if it is found suitable to spend the money it will cost, I believe the gondola solution is the least environmentally impactful for the area. It will not pollute the air in the canyon, will be mostly avalanche-proof, doesn't interfere with wildlife, and is fairly quiet. I do not like the plan for more pavement and more snowplowing, although I know that will continue. I think the opportunity to serve tourists in the summer is a major advantage, would like to see the resorts contribute to the cost. I am not sure the expense is justified if the Great Salt Lake diminution, and climate changes will destroy the skiing.
29519	Tony Field	<p>I support a wild and healthy ecosystem that provides our water, supports 1,200 species of plants and animals, and is depended upon for healthy outdoor recreation by millions of people both locals and visitors each year. We don't need elaborate gondolas or expansion of the roadways that damage the magnificent Wasatch Mountains. Below are five actionable solutions that will meet or exceed UDOT's goals, all the while protecting what makes the Wasatch unique and inspiring.</p> <ol style="list-style-type: none"> 1. UDOT's goal of 30% reduction in private vehicles could be accomplished without major construction but requires higher vehicle occupancy during peak hours, weekends and holidays. By requiring 4 or more people in cars that enter these canyons, you could remove 50% of the current vehicles in the canyon, 20% more than UDOT's \$500 million+ solution in search of a problem. 2. A flexible YEAR-ROUND bus system that gets people out of their cars, nearer their origins (homes, hotels, work, etc), aided by canyon centers across the valley where you can park your car, visit outdoor shops, get food and drink, even have affordable housing. 3. Increase enforcement of the UDOT Cottonwood Canyon sticker program to ensure vehicles are compliant with snow tire and chain requirements under the Traction Law, making the traction inspection part of vehicle inspections. Some weather events (or known busy days) may warrant banning private automobiles in the canyons. 4. Innovate and implement an occupancy based toll to increase vehicular occupancy from current 1.7 people per vehicle to 4. 5. Big Cottonwood Canyon users parking at "LCC mobility hubs" - If people going into Big Cottonwood Canyon make use of the LCC mobility hubs demand and crowding will increase, but this hasn't been included in UDOT's scope. <p>Year round visitation whether to a designated ski area or summer time trailhead should never be served by a gondola with two terminous areas at Alta Ski Resort and Snowbird Resort. That proposal is too intrusive and expensive and should be taken out of consideration.</p>
29520	Nancy Tucker	The gondola plan for Little Cottonwood Canyon is nothing but a windfall for two ski resorts for 4-5 months a year when climate indicators herald an ever shrinking ski season,, an eyesore on the mountain landscape, and a lack of return on investment. The Canyon should be tolled, bus service enhanced, and better parking arrangements at the mouth of the Canyon. Give skiers more incentives to relieve the problem without the gondola.
29521	Andy Church	The gondola is NOT the answer to LCC traffic issues. A combination of reduced traffic and increased bus service as well as road improvements is better than a gondola that the public is obviously against.
29522	Markell Kolendrianos	Installing a gondola in LCC will ruin the environment, including the plants and animals living there. I gondola will not help with traffic nor will it be safe during heavy storms including the prevalent amount of avalanches that occur in LCC. We must protect our planet and installation of more man made devices is not going to help, it'll only hinder based on the damage it will cause. I implore you to consider alternatives aka free bus rides with ticket and more buses frequenting the canyon. As well as easy access from downtown.
29523	Max Hoagland	I am opposed to a gondola up little cottonwood canyon. While I don't think it's a horrible option, the fact that 80% of people oppose it makes me think building it is not very democratic. Listen to the people and don't build it. The other option of widening the road and expanding bus services seems a lot better, especially since I have heard that in the summer the extra bus lane could be used for Bicycle road space. Little Cottonwood is one of the jewels of the Wasatch and of Utah; please don't muddle it up.
30966	Joan Ishimatsu	Mailed comment
30961	Larry Stucki	Mailed comment
29524	Ken Ward	We do not want the Gondola option. Buses are the right solution.
29525	Grazyna Wojtczak	Gondola, a very expensive proposition, is perceived to help 2 ski resorts for a 2-week congestion during Christmas holiday. It will not help all other users of the canyon in the summer. This massive structure will damage the canyon. Taxpayers should not pay the bill. Gondola will take up to 1 hr to get to Alta and will be unpractical for a family with children. Start with electric busses, no need to widen the road.
29526	Nick Como	<p>The gondola is a permanent solution that will only create more of the problems it is pitched to solve: traffic and congestion. There is not enough parking at La Caille. The trip time is too long. It will be rarely used on non-snow days (Vail themselves say there is no such thing as Chairlift tourism").</p> <p>Meanwhile, expanded bus service, widening the road, allowing traffic to move uphill only in all lanes for a few morning hours and downhill only on all lanes int he afternoons would solve traffic problems with no viewshed impacts and no permanent structures.</p> <p>The beneficiaries are two private businesses. - if it is such a good idea have them apply to build this lift and pay to bring their customers up the canyon.</p>

ID	Full Name	Comment
29527	Morgan Williams	This decision is hugely disappointing. It was clearly made with wealthy stakeholders in mind and only the ski resorts and their profits in mind. It is widely unpopular with the vast majority of people in Salt Lake and Utah as a whole. I am saddened and disappointed that UDOT caved to monetary pressures rather than listening to the public and reason. This is obviously the wrong choice and it is clearly being done for financial gain. I have loved this canyon my whole life and I cannot imagine or fathom it being destroyed by such a disgusting and gross abuse of power.
29528	Josephfoli Josephfoli	±æ°ð—Ä—É—ª—µ—Ç—]—∞ —æ—Ç —Ä—É—±—ª—è
29529	Spencer Thomason	I fully support opposition to this project as outlined in public arguments made by the Catholic Church, Friends of LCC, and others. In addition, I oppose the destruction of what constitutes a public good: the scenic beauty available to all who live and recreate in the Salt Lake Valley and LCC. The development of a gondola will negatively impact Utah citizens far more than any of the other proposed options simply by destroying a space that feels wild, scenic, and beautiful.
29530	Eli Primmer	I am once again asking you to NOT build a gondola in Little Cottonwood Canyon.
29531	Scott Claffey	No way am I paying for a gondola. Half a billion. NO! There are 365 days in a year. Big powder days are drying up and there really aren't that many of them out of those 365 days. Remember the Great Salt Lake pump? How's that going? Snowbird and Alta can do a reservation system. Charge \$100 to park. Or skiers can take a bus.
29532	Stephen Barrett	I object to the gondola option. A bus option using 2 lanes up bound until 1 pm alternating with 2 lanes down canyon after 1 pm would require some additional road construction but would not marginalize other canyon use . The gondola would be expensive for users, require extensive and expensive facilities at the base and terminus. The towers are very high and ruin the views in the canyon. Taxpayers should not subsidize the resorts and former legislators who are involved and stand to benefit with the gondola base location.
29533	Jon Whipple	I agree with UDOT's assessment that a gondola in Little Cottonwood Canyon is the right solution to unique problems of that canyon. I support the gondola.
29534	Lawson Scott Reichard	Dear UDOT and UT Legislature, Thank you for the opportunity to comment. My suggestion is to please look at a Total Return on Investment (ROI) before committing to a half billion plus, plus project. Also, create a Taxpayer ROI. First please compile all the costs from planning, construction, maintenance, years of legal battles, water quality mitigation, delays, etc... there are many more. Second, quantify realistic benefits and revenues for reduced congestion in the canyon, tourism increases, additional jobs, and taxes generated etc...there are many more. Then create an estimated baseline ROI. Next, you need to do a similar exercise for other Staged Options. Stage 1, minor improvements to LCC road, adding tolls, increased snow tire checking, carpooling, improved buses and schedules etc... and many more. You also need to measure select data and quantify results. Stages 2 & 3 would include bigger investments with continued measurements. Compare ROI's. Then create a Taxpayer ROI by comparing the Gondola ROI to similar cost Infrastructure improvements to I-15 that gets folks to work more efficiently with less pollution. Or homeless shelter solutions that get people back into the system or select education improvements to created an even stronger workforce. There is no way you could fudge the numbers to the point where the Gondola wins. Lawson Scott Reichard [REDACTED]
29535	Cameron Meikle	I firmly believe that the little cottonwood gondola is a handout towards the two ski resorts at the top of Little Cottonwood Canyon. The cost (surely over the projected 600 million) is coming directly out of tax payers. Moreover, that money could be used for developing schools or other areas that prove to be have better economic development than a gondola. From the environmental perspective, the gondola will be detrimental to an already precarious watershed for Salt Lake City. The head of public utilities has already voiced water concerns over the project. And, sadly, the EIS passes over the superfund site at Tanners Gulch and how the gondola is going to deal with the station that needs to be built there. UDOT needs to re-review this EIS statement and understand that it does not fully paint the environmental impact nor the economic impact (or lack thereof) of the gondola. Truly a waste of a watershed and tax payer money.
29536	Boyd Anderson	The gondola is a great idea.
29537	Alex Spencer	UDOT....What the hell is the problem. Your not listening to the people.... already. [REDACTED] off Gondola!
29538	Vickie Eastman	I strongly disagree with the gondola proposal for Little Cottonwood Canyon. I feel it will disfigure a national treasure at public expense while benefiting private ski resorts. Please back away from this bad choice.
29539	Nick Harrison	Utah is going through a massive turning point at the moment. With the influx of new people moving here, the city landscape constantly changing, the lake drying up, life here has changed drastically in the last decade. Little Cottonwood Canyon has been a sanctuary to me for the 31 years i've been alive. It's home to some of my fondest memories and after traveling around the world, is still in my mind, one of the most beautiful places i know of. Which is why it should be preserved. Nowhere else in the country compares to the accessibility and pristine nature of LCC, which is why we need to respect this fact. The gondola is not the answer. It's unfair to the people of Utah who do not use the ski resorts but who are fronting the bill for this massive eyesore. Rather than permanently marking this beautiful place to cater to the resorts, we need a solution that benefits everyone. The gondola would massively change the quality of this unique canyon. Backcountry users would not benefit from this proposal as well. Instead of creating this massive gondola, existing infrastructure should be used. Use more busses and toll cars that want to drive up the canyon. This would incentivize carpooling and using busses. This would dramatically decrease traffic in the canyon, making it safer and less congested. In todays day and age where places as beautiful as LCC are hard to find, we need to keep this place as untouched as possible as the wild nature of this place is its most sustainable resource.
29540	Sarah Hall	VERY SUPPORTIVE OF THE GONDOLA!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29541	Amber Schiavone	I do not support the gondola as a solution to canyon traffic. I do not support 550 million dollars going into infrastructure that only serves two ski resorts.
29542	Lara Cates	The gondola is a terrible idea. Require rides on electric buses in the canyon year-round. Or put in a train line.
29543	Monique Mezo	As a resident of Sandy for more than 30 years, I've seen my share of canyon backups. For the few days/year this happens, it would make more sense to offer incentives for bus riding/carpooling and NOT a Gondola. It will be a novelty to ride it ONCE, then people will go back to their cars. Just like everything else in life, the "first come, first served (reservation system)" will DO more and COST LESS! NO GONDOLA, PLEASE!!!
29544	Howard Bornstein	I agree there is a traffic problem. However, I have a few concerns with the suggested solution of building a \$500 million tram. 1. Why should taxpayers pay the whole bill? This is a solution to help Snowbird and Alta. Let them pay for it---they will just charge users. 2. The proposed tram will not help those who don't want to ski. Hikers won't be able to use the tram since they desire to "get off" where there are no stops. 3. Buses could be such a simple solution. Buy electric buses. Force people to use the buses. Make the bus schedules frequent. 4. Charging people to park will stop some people from driving up the canyon, but so many people will just pay the fee--no matter what it is because they have lots of money. Force those rich folks to ride a bus.
29545	Michaela Mitros	No gondola please!
29546	Michelle Callister	I am sadden to hear of UDOT's decision as you really haven't taken into consideration what the community wants. I have talked to many of people in the community and no one wants the gondola option. It is sad that my representatives are not listening to what the citizens want. Also, I want to comment about the current Traction Law. As it is written, it does not go into affect until snow has started to fall, yet we have data that provides us with information as to when snow storms will come. Cars would be better equipped if the Traction Law was in place from Nov. 1 thru May 1 in the canyons and not only when there is snow falling. There are better was to deal with Canyon Traffic and the people that live here in Sandy have not be listened to.
29547	Taylor Jensen	Hi - Please do not ruin our canyon with a gondola, there are may cheaper alternatives that would be better for the environment and our canyon. 1. Have the resorts limit ticket sales - there is no reason the resorts should be allowed to cause absolute chaos in the canyons and continue to have unlimited ticket sales, and prioritize unlimited profits while making agreements with IKON and other collective passes. Put some of the ownership on them, they need to limit ticket sales if they are ruining public roads and putting people in danger with gridlock up and down the canyon. 2. Implement tolling for single passenger vehicles, if folks want to drive up alone, fine, but charge them for it. This will discourage the behavior. 3. Ramp up the buses, if buses ran every few minutes, were less crowded more people would take them.
29548	Taylor Jensen	Hi - Please do not ruin our canyon with a gondola, there are may cheaper alternatives that would be better for the environment and our canyon. 1. Have the resorts limit ticket sales - there is no reason the resorts should be allowed to cause absolute chaos in the canyons and continue to have unlimited ticket sales, and prioritize unlimited profits while making agreements with IKON and other collective passes. Put some of the ownership on them, they need to limit ticket sales if they are ruining public roads and putting people in danger with gridlock up and down the canyon. 2. Implement tolling for single passenger vehicles, if folks want to drive up alone, fine, but charge them for it. This will discourage the behavior. 3. Ramp up the buses, if buses ran every few minutes, were less crowded more people would take them.
29549	Jeanine Kuhn-coker	The gondola will not provide the answer for everyone on the community! Taxpayer money will be used to appease skiers and resorts,
29550	Joni Wirts	I have been a Utah native since birth. Skiing at Snowbird is what attracted my dad to Utah, and the reason I exist as a result. I have skied Little Cottonwood Canyon 80+ days annually for the majority of my life. I will be bussing and carpooling every single time I access LCC from here on out. I DO NOT want a gondola built in the canyon that means so much to me and my life story. I find it grossly inappropriate to use public funding for such a project that is blatantly for the benefit of private enterprise (ski resorts). Locals and tourists alike need to alter their behavior to save our canyon. Our leaders need to encourage this change through improved bussing and parking fees for resort parking. Thank you.
29551	Barry Makarewicz	I am vehemently opposed to the Gondola Alternative B choice for how to deal with the traffic problems in LCW Cyn. I believe that the gondola would permanently damage the character of the canyon and further degrade the experience of the canyon users. The final EIS does not seem to take into account the future loss of winter weather and snow due to climate change. This inevitable loss of skiable days will make the main beneficiaries of a gondola (Snowbird and Alta) less viable and undeserving of such an outrageous taxpayer funded monstrosity. The better solution is to set a hard limit on the number of people in the canyon to preserve the quality of their experience and the natural resource itself. I think we may already be close to that limit during some winter days already. Then implement a tolling system on private vehicles and expand the bussing system which would service many more stops along the canyon road besides just the ski resorts. A gondola would mainly benefit Snowbird and Alta while neglecting the local year-round users of the canyon. Please consider what the future of this very special natural resource will be like if visitor-ship continues unlimited and permanent eyesores are built to mainly service a dying industry. Reconsider the selection of the gondola alternative and make a plan that has the natural resource as the highest priority and not the ski industry. Sincerely, Barry Makarewicz

29565	Heather Dance	<p>I believe this decision made by UDOT is very irresponsible in taking care of the community and land at large. Our canyon will NEVER go back to where it was before a gondola was put in.</p> <ul style="list-style-type: none"> - Tax payers should never be funding this! It benefits the ski resorts 100%. - There won't be enough stops for other canyon users to stop and enjoy the free outdoors - not everyone going into the canyon goes up to Alta and Snowbird. Hence the point made above. - Our watershed will be affected. I don't know how many studies were shown to produce the results you needed to hear. - Global warming is a thing! By the time this is funded and built, there may not even be enough snow to enjoy. Then what happens to the gondola? - Who can afford to pay for gondola rides when canyon access should be FREE to all? Not only the elite who can afford large amounts of riding the gondola. This cuts the outdoors off for many people!! <p>Implementing paid parking/parking reservations at the resorts will and has minimized traffic. Fees to enter the canyon like Millcreek Canyon has are options to minimize traffic and encourage carpooling as well.</p> <p>Many highways in the US have snowsheds built up and over roads where avalanches are problems. Why is this not more of a focus?</p> <p>Even with implementing the above and the possibility of these steps taking drastic action, UDOT still plans to build the gondola. Why is UDOT not more upfront with everyone? Who exactly are the investors and backers that are going to profit from this gondola? "Josh Van Jura UDOT's project manager for the Little Cottonwood EIS confirmed to Councilwoman Birrell that if UDOT gets the funding for the gondola B from the Utah State Legislature, a gondola will be put in no matter what."</p>
29566	Josephfoli Josephfoli	
29567	Royal Rose	<p>the TRAM is a boondoggle. it will be a waste of time and money. people will not ride it. it will be a rusty eyesor.</p> <p>just add an extra lane and be done.</p>
29568	Cristina Balent	The gondola is not the right solution and should be considered as a last resort. There are MANY other solutions that should be tested or vetted before charging tax payers millions of dollars unnecessarily.
29569	Ej Stockley	This gondola is going to solve nothing and is a complete joke. It's a waste of resources and is completely irresponsible.
29570	Mike Brooks	Build the tram. Less impact to the canyon and safer especially in winter.
29571	Benjamin Gartenstein	As a resident of Cottonwood Heights, I do not want my tax money spent on a mode of transportation that will only service two resorts, provide no benefits to summer recreators, destroy sections of forest, and forever ruin the integrity and sight-lines of Little Cottonwood. I support the use of tolls and expanded bus service. It is worth noting that the 2021-22 season didn't see nearly as many backups as the canyon has in the past, seemingly because of the required parking reservation from the resorts. If simple parking restriction can make such an impact, the gondola is even less necessary.
29572	Crystal Bruner Harris	<p>I am a Utah resident and I am not in support of the gondola in Little Cottonwood Canyon nor the expansion of Wasatch Blvd. My sister lives near Wasatch and already, as the street is, it is unsafe for her and her children to walk and bike out of their neighborhood to access school, church, or recreation.</p> <p>Expanding the road will make the road even more dangerous for the neighborhood. The gondola is not what the residents of Cottonwood Heights want. The canyon's winter traffic problems have already been resolved by the parking reservation system Alta and Snowbird put into place last winter. Wasatch Blvd does not need to be expanded. The gondola will harm the land, the wildlife, and the nearby neighborhoods.</p>
29574	Jess Rubin	Please don't destroy the beautiful canyon for monetary gain. It would ruin the canyon for decades with construction & the destruction of nature.
29573	Mark Leone	I am opposed to the Gondola planned for Little Cottonwood Canyon. The cost and environmental impact are more than we can afford. This is a boondoggle that benefits a few wealthy business and poorly serves hikers and other canyon users other than skiers. We should use free shuttles to democratize access, and we should use economic incentives to encourage ride sharing and reduce personal vehicle traffic. Above all, we should conserve the canyon in its current state. Moving hordes of people into the canyon for profit will degrade everyone's enjoyment and have major environmental impacts.
29576	Jennifer Kuhlmann	A gondola is not the answer to over crowding in the Canyons. The real cause is people and over use. This area is in need of protection and the respect it deserves, like protecting drinking water, granite climbing areas and unique wild flower species requires a plan similiar to how Zion Canyon in Southern Utah is protected. A senstive canyon ecosystem is not a place to make money, its a place of unique beauty that needs protection and smart choices in access.
29575	Seamus Dolan	DO NOT BUILD A GONDOLA UP LCC.
29577	Jones Harris	I oppose the gondola and the expansion of Wasatch Blvd. As a resident of Utah and with family living directly off of [REDACTED] near Little Cottonwood Canyon, this is not the best solution and won't solve the problem. The proposed plan benefits two parties and not the community.
29578	Eric Wiaderny	First off this project won't do anything for traffic problems, second it going to destroy many trees / the nature aspect of the areas land scape, and lastly this is just waste of tax payers money for something that will take forever to complete and be completely outdated by the time is finish. Set up more busses to resorts.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29579	Lauren Steele	<p>Hi - It's a deep hope of many Utah residents that these comments are indeed read, and, more importantly, heeded. Creating new travel infrastructure in a canyon is an irreversible decision and one that should be made with the majority of stakeholders in mind. The majority of stakeholders in this case are users, not developers or ski resorts.</p> <p>Looking at other regions in the Intermountain West that have similar geography and recreational use interests, we see that there are several more efficient and more conservative options that can be optioned in lieu of a costly and largely inefficient gondola. Consider Maroon Bells Wilderness in Aspen, CO. This is the most-photographed mountain vista in the US. In order control traffic congestion as well as provide funding for national forest and highway 13 maintenance expenses, Pitkin County requires all travel up Maroon Creek road to the wilderness portal to be on ticketed public shuttle buses. No unpermitted private vehicles are allowed on the road after a certain morning hour. I strongly encourage UDOT to consider a similar shuttle option or tolling for private vehicles with snow tire/chain enforcement at the gates in lieu of the gondola. Please.</p>
29580	Sue Harper	<p>I am appalled that UDOT does not listen to the majority of the citizens here.... the vast majority DO NOT want the gondola, not to mention local mayors and even the Catholic Church ! A total waste of taxpayer money, that could far better be spent! I will fight long and hard to stop my tax dollars from funding this! Required bus ridership would easily solve the canyon congestion period! I have lived here all my life and used the canyons thousands of times . I am tired and very angry, people are not listened to! Once again back door deals and under the table shenanigans, seem to rule and reign in this state. Shame on you!!! The fight has just begun....</p>
29581	Lauren Steele	<p>In addition to my previous comment, I would like to add that I don't see the proposed Gondola B option as a convenient travel option. I would never gravitate towards a travel option as slow, uncomfortable, and expensive as this option will be.</p> <p>Gondola B is a rushed and ill-researched option. There is simply no reason to invest \$550 million in a permanent project with so many potential issues and oversights being flagged at present.</p>
29582	Anna Ratliff	<p>The gondola is a bad idea that does not consider big cottonwood canyon traffic or public opinion. We need to explore other options like reserved parking (a few more years of trials), pay to access the canyon, increased buses that are available on weekends year round to reduce road congestion and parking difficulties in BOTH canyons without permanent impact. We cannot just give the ski resorts what they want while finding it with taxpayer money. This is criminal.</p>
29583	Andrew Dawson	<p>I think that the gondola is a great idea. Utah is growing and all of the people moving into the state will only add to the congestion on the roads. The need for public transportation is clear. If the Gondola is built and maintained in a financially sound manner, then i whole heartedly support it.</p>
29584	Doug Krause	<p>Recently, UDOT announced the gondola as their preferred alternative for Little Cottonwood Canyon, but with a phased approach first. While we are disappointed they are still considering the gondola after 14,000+ public comments were submitted - we see the bigger picture in their announcement: we have time to prevent the gondola.</p> <p>UDOT acknowledged the need to start with a phased approach, and now, the phased approach will have years to prove its effectiveness. UDOT's goal is a 30% reduction in traffic in the canyon and if that can be achieved with carpooling, bussing, and a parking fee at ski areas, which has already proven to be effective, then the gondola isn't necessary.</p> <p>While we unwaveringly know the gondola isn't a solution to the problems Little Cottonwood Canyon faces, year-round. The phased approach provides opportunity for those who actually want to solve issues confronting Little Cottonwood Canyon. What can you do to stop a gondola?</p> <p>Take the bus. Carpool. Every person visiting these canyons has the opportunity to stave off a gondola by changing their behaviors.</p>
29585	Gary Rosenkrantz	<p>Im for gondola</p>
29586	Ellis Jensen	<p>A gondola is not better than restricting car traffic. Buses in that Canyon would do a much better job for so much less money than a gondola. The gondola very much benefits whoever builds the gondola, but not the voters and citizens of Utah.</p>
29587	Romain Astie	<p>I do not approve of the current plan to build a gondola in Little Cottonwood Canyon. A solution featuring only increased bus service, and no gondola, is vastly preferable for environmental, economic, and preservation reasons. Please reconsider your proposal, and do not build the gondola as proposed.</p>
29588	Daniel Cannon	<p>Gondola decision shows Local gov and ski brands don't care about residents. Resorts need parking garages and reduced or eliminated parking costs because street parking causes a lot of the delays. Better flow of traffic from increased parking availability will help the bus system as well.</p>
29589	Kevin Cummisford	<p>This is a short sighted give away to business. It does nothing to support transport in spring/summer/fall and not allows user a bottom to top (snowbird/Alta specifically). The other alternatives support year round and entire canyon usage which would help spread people out</p>
29590	Ally Armstrong	<p>As a tax payer I don't want to fund a gondola that will knit serve the ski resorts. There is still a lot of traffic in the lower part of the canyon. This is fiscally irresponsible. Use the money for a bus system.</p>
29591	William Hahnenberger	<p>The gondola is only A partial solution therefore it is not a solution. Too many people and uses are not addressed. It is only a ski area boondoggle. I am a skier and ski 75 to 90 times a year in the cottonwoods. I use the cottonwoods another 25 times outside of ski season.</p>
29592	Odessa Winter	<p>Building a gondola is an irresponsible "solution" to the traffic issues in LCC. Along with being financially irresponsible, the gondola will have irreparable environmental impacts. Utah has such great outdoor recreation access, we should be a leader in responsible recreation. By implementing a better bussing system we can not only alleviate traffic, but set an example for what public recreation transportation can be. I personally like the idea of canyon shuttles that leave from a park and ride in town and take you straight up the canyon. And this is just one idea. If as an outdoor community we can come together and put a plan in place that will work and serve the people of Utah, we'll be better for it. The gondola isn't a good option for anyone except the greedy ski resorts at the top of the canyon.</p>

29593	Brittney Condie	I don't want a gondola it will benefit companies but not everyday people. If they want a gondola they can fund it. However they are unsightly and not cost effective. Keep the buses and private car access. Buses don't cost as much and have done the job for many years. No gondola they are not wanted by tax payers.
29594	David Odell	As a property owner and property tax payer in BCC, I don't think those of us in this situation should have to pay a toll. Also, similar to Millcreek Canyon, the toll booth should be placed lower in BCC and all vehicles should pay for canyon access year-round.
29595	Yicheng Zhang	I don't think gondola will help the traffic for couple of the reasons: 1. 1000 pph seems too small to create a big dent in canyon traffic. 2. Gondola will only benefit who ski alta and snowbird in winter time, what about other people who want to stop in the middle of the canyon like climbers and hikers? 3. From gondola parking lot to gondola there is 0.75 mile walk. How many people would walk in the winter in their ski boots with their skis or even their kids' skis? 4. How long will take for people to take gondola compared driving? If gondola takes more time, it's really hard for people to transition to gondola. Some suggestions: 1. Enforce tolls for cars with single person (not carpooling), or even all cars 2. Add more buses and stops, or even only allow bus in the canyon 3. If we have to go this gondola route, add gondola stops for known hike and climb spots which will benefit more people
29596	Jana Nelsen	I am opposed to a gondola for many reasons. This would cause irreversible harm to the beauty and serenity of LCC. This decision has been made way to quickly and without the consent of the public it affects and who use the canyon. NO GONGOLA
29597	Alisha Matthews	Increase busses. Definitely no to the gondola.
29598	Brett Nelsen	If a gondola is the proposed solution I don't believe that public tax dollars should be used to pay for the private interest of the ski resorts in LCC. If the gondola doesn't stop at all trailheads and campgrounds along the way it looks very much like public funds going to keeping up on a very expensive system that is for private interests. I do NOT agree with the gondola being the right solution.
29599	Cameron Badger	Don't ruin our canyon. It's not worth it. There's many other ways to help this problem. No one wants it.
29600	Don Rausch	I'm in favor of the Gondola
29601	Isaiah Wood	I don't agree with the gondola, and it's affect on the canyon.
29602	Christopher Koester	Absolutely NO to permanently scaring LLC for the financial gain of two resorts owned by Billionaires. The gondola willnot solve the traffic problem in the canyon and will definitely not solve the traffic problem leading to the canyons. Put put parking structures down along the tracks line run natural gas buses, for now, electric in the future up both canyons. Charge \$50 plus per car to park at the resorts and a fee for anyone entering the canyon in a private vehicle just as you do in Mill Creek Canyon. Much less expensive and you aren't destroying the canyon. I am sure you realize there are going to be lawsuit after lawsuit if you try and go forward with the gondola. Every single person that lives there along Wasatch boulevard from the mouth of big cottonwood Canyon out past the parking for bells Canyon reservoir is going to sue for loss of property values. Allowing developers to decide where taxpayer money goes is completely unacceptable. I believe we need the attorney general of the state of Utah to get involved and investigate the payoffs that are going on to move this project forward. If the State attorney general won't do it then the United States department of Justice will. Absolutely no to permanently destroying Little cottonwood Canyon.
29603	Peter Jorgensen	The Gondola solution only really benefits the ski resorts. If they want to fund it it could be considered but it doesn't make sense as a publically funded project just to deliver people to and from a private ski resort. I'd rather see a separated bike/ebike lane, a toll booth, and fleet of electric busses. That would provide individual accomodation to more canyon users than just resort pass holders.
29604	Paul Paret	I am against the gondola. This is a very bad idea that spends public money to help two private businesses (Snowbird and Alta) without alleviating the traffic situation in any meaningful way. An expanded bus service by contrast is much more flexible to serve needs of everyone who uses the canyon summer and winter. I am a resident of Salt Lake City
29605	Tim Chiodo	I don't believe the taxpayers of Utah should be paying for a private industry to make more profit. If they want the gondola, alta and snowbird can pay for it.
29606	Ryan Szczerbinski	Please don't build the gondola. Focus on bussing. Preserve the beauty of the already busy canyon. Skiers are already a privileged bunch and sitting a little longer in their car on a snowy weekend is not the end of the world.
29607	John Trout	100% against a gondola in the canyon for a multitude of reasons but I'll name the first two: 1) the towers and gondola cars are obtrusive. 2) No public money should be used for a project of this sort.
29608	Sydney Dowben	As a long-time Utah resident, I think that building this gondola is a disastrous idea. What makes Salt Lake City special, compared to any other city in the US, is the ability to easily commute into nature -- to get away from the noise, smells, and sights of the city. This gondola presents a threat to those who are simply trying to enjoy the sounds and sights of nature. This city faces losing its charm, and the connection to its Founders, by installing an eyesore that only serves the wealthy.
29609	Brandon Patterson	As a community member who lives and works in Salt Lake and recreates in Little and Big Cottonwood, I would be supportive of increasing transit infrastructure east west and north south before putting in a gondola. For instance, could the s-line in Sugarhouse connect to a transit hub leading to the canyons?
29610	Charlie Dehner	Irreversible and rushed decision. You want tax payers to help pay for this. It only supports two private businesses. Environmental and fiscal nightmare. Consider limiting/removing Ikon pass and improving bus services first. This is our watershed, not Disneyland Resort
29611	John Howe	I am AGAINST the building of a gondola. This is an irreversible and rushed decision that only benefits the resorts at the top while not actually addressing the core issue of overall traffic in and around the mouth of little cottonwood. It seems like enhanced bus service on the existing roads is a step in the direction we need to be heading in, not spending an enormous amount of taxpayer dollars to forever scar our beautiful canyon with a hack "solution".

Comments on Little Cottonwood Canyon Final EIS

29612	Renee Yeoman	This is the worst solution for the canyon. Tax payers should not have to fund a project that only benefits snowbird and Alta. We don't need more people in the canyon. We need less. Put a toll booth. No gondola. Preserve the wilderness.
29613	Mary Walton	No gondola, please.
29614	David Walsh	As a previous bus rider up and down big and little cottonwood canyon, I can attest to the fact the buses are the best option for transporting snow riders to the resorts. I have found that the buses are rarely full, and they lessen the carbon footprint up the canyons. Buses also lessen the impact on parking at the resorts. The buses also have a natural limiting effect on the resorts. Namely, that when it is predicted to be busy or snowy, one will chose NOT to travel up and down the canyons. One will opt out of participating. As for the gondola, I feel it will be expensive, both with construction costs and operational costs (fare tickets to the users). What if global warming has a devastating effect on Utah winters, and we have built a gondola, then what? We will be stuck with an expensive conveyance with limited useage. Thank you for allowing me to offer my point of view.
29615	Arthur Henry	Having skied in Europe where you can take a train or a gondola to the mountains, I believe that an alternative to the automobile is a good choice. It will help with both summer and winter travel. It would be good if the cost was close to the cost of driving a private car.
29616	Diana Gessel	As a lifelong skier and lover of Little Cottonwood Canyon, I am 100% opposed to building a gondola. (I am also opposed to widening the roads for buses.) Try a reservation system. I am opposed to the gondola because I think it permanently ruins the canyon. I keep imaging the Grand Canyon or the Tetons with a gondola. Yes it would be a beautiful view, but it would ruin the view for everyone else. As I drove up and down the canyon this summer I kept imagining big poles and a gondola cable above me. We don't need it. Don't permanently spoil the canyon! In addition, I don't believe it would be used nearly enough to justify the expense. There are 10 to 30 days a year on which the canyon is super crowded. We just need to take turns. I am an avid skier, my 4 kids are avid skiers, but we are willing to take turns. Frankly, the crowds at the resorts have changed the way we ski already. Getting more people to the resort is not my goal. No one in my family is interested in parking at La Caille, waiting in line to get on a gondola, riding it to the top and then waiting in line to take it down at the end of the day. We would still drive. The gondola does nothing to help traffic going to other locations in the canyon-backcountry skiing, hiking, etc. A gondola mainly benefits the resorts. Utah taxpayers pay for it, theoretically they get more skiers, sell more tickets. No way can the expense be justified for the number of people it serves. Please don't permantly ruin the beautiful, priceless canyon views!
29617	Gary Uzzell	I am AGAINST ANY Gondola plans, ideas or realizations of this misguided folly. There are other acceptable ideas to move people up and down the canyon to accommodate winter sports for the few months it's necessary.
29618	Brad Wilson	NO on the Gondola!! I'm much opposed to the concept. I think there's many better ways to address traffic flow up/down canyons. Including: improving/widening roads while preserving landmark concerns, nature and as much of the beauty of the canyon as possible. I think the gondola is massively expensive project, an eye sore, and will NOT solve the problems here. A gondola may alleviate the traffic stress of the canyon for potentially for only the 1 or 2 busy months of the year... That's it!!! No one would ride the gondola when you can drive in 15 minutes... vs. the 40 min ride and \$30+ fee. The bigger issue is the OVERCROWDING at the resorts. For EX., I live in Draper, UT. I didn't even ski last year because the resorts were too busy and crowded. Parking is a mess. I did not want to pay \$200 just to go stand in the lift lines for half of the day. I can only imagine what overcrowding a gondola would add. Seems like resorts should be limiting the number of people so that all have a decent experience not experience of frustration due to lift lines. Parking issues can be managed with parking structures, carpool incentives, bus options etc costing much less than gondola. A Gondola certainly doesn't address back country skiers or other canyon activities like rock climbing etc. The gondola concept is outrageous expensive and disruptive, and will only be used potentially for 1-2 busy months of the year and will only add to the overcrowding at resorts. Tourists who have hour long lift lines and overcrowding experience at our Utah resorts will NEVER return. I hate to see projects like this get pushed forward at taxpayer expense for virtually no value-add for only the possible two busy months of the year in question.
29619	Katie Schmucker	I would be against the Gondola plan for little cottonwood canyon . Want to keep it as is .
29620	John Nestler	Please do not proceed with the plans for the gondola. The costs associated with building such infrastructure as well as the environmental impact would be huge. I firmly believe that building upon current infrastructure with the park and rides and increasing bus service within the canyon would be the simplest, most cost effective, and scalable option for the long term. Please keep it simple.
29621	Tatjana Kanashiro	I am strongly opposed to the decision to build a gondola. There are simpler, cheaper, and more common sense solutions to the congestion issues, and you need to listen to the people here. Try things like reservation systems, enhanced bus service, tolling, and better enforcement of traction laws before doing irreparable damage to a canyon that is one of SLC's greatest treasures.
29622	Susan Mckeon	Absolutely not! Offer more bus services up the canyon.
29623	Moushumi Anand	Please don't spend my taxpayer money on the gondola and change Wasatch blvd. this is my neighborhood and for 2 resorts for 15 days a year, you will change my neighborhood.
29624	Chris Wadsworth	I fully support the gondola plan - do it!
29625	Jeffrey Edmondson	I support the gondola plan as long as adequate parking is provided at the base

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29626	Brian Nordberg	<p>The preferred alternative appears riddled with technical errors. Somehow the time it takes for the gondola to travel from La Calle vs the LCC PNR is less. The gondola traveling a further distance in less time, is an error in the analysis and falsely makes the La Calle option better. All other options are quicker than the gondola, proposing a slower option is a mistake for a department of transportation and shows the bias in choosing the preferred alternative. There is no mention of fees charged to a rider. Will the gondola cost each rider the same amount as a different method? If the gondola will cost a rider more than a bus or private transportation, then the impact is invalid. Riders such as myself will not pay more than it costs in gas to go up the canyon. Even current bus fee is more expensive (vs carpooling), so we do not use the bus. The EIS also disregards users that are not destined for a ski resort. The preferred alternative only stops at ski resorts. As ski resort traffic is NOT the only traffic in the canyon, the preferred alternative does NOT present a full solution for the canyon. Users stopping at trailheads represent significant use of Little Cottonwood Canyon, yet, this usage is not addressed in the preferred alternative. Maintenance costs are also incorrect in the EIS. Somehow, maintaining the area to La Calle vs the Park and ride is significantly less. This is an error in the EIS, as the distance is greater to La Calle. Further distance will require extra wire and supports, this increases maintenance costs, the EIS incorrectly reports this a reduced maintenance. The LCC watershed will be impacted with erosion and increased run off from the concrete pillars and construction roads required to create the gondola infrastructure. The EIS does not adequately address mitigation of erosion, loss of vegetation and ultimately reduced water quality in our watershed that comes from the gondola alternatives.</p>
29627	Braxton Snarr	<p>DO NOT DO THIS. So sad our State cares nothing about what the citizens say and more about what the corporations with big pockets want.</p>
29628	Jeanmarie Todd	<p>Don't do it! This is an expensive boondoggle. Increase bus service to the resorts, from the airport and other major locations.</p>
29629	Steve Hegerfeld	<p>I am in favor of the gondola</p>
29630	Wendy Blankenship	<p>Please commit to fees, increasing bus service, and limiting the amount of people who can enter the canyon first. See if those things work. Please do not build a gondola before trying all other options that are less impactful on the environment.</p>
29631	Alan Wheelwright	<p>This is a horrible idea and a permanent blight on the canyon. Spending >\$500 million on a project to subsidize 2 ski resorts is not a good use of taxpayer money. A better solution would be to force people to carpool with tolling and increase bus service. NOT A GONDOLA!</p>
29632	Stephen Bain	<p>I hate the idea of a gondola ruining views from well established hikes and climbs. It is nothing more than a rich people toy for the ski resorts, and solves none of the traffic or parking concerns. These are numbers from your own study. I am 100% against the gondola and 100% in favor of increased public bus/rideshare transit, tolling, and other alternatives which do not waste taxpayer money or ruin our beautiful views.</p>
29633	Heidi Memmott	<p>I disagree with a gondola in Little Cottonwood Canyon. It is not a reasonable method of transportation for skiers. The cost will be to Utah taxpayers for the enjoyment of out of town visitors. How about electric buses like Park City? We should use taxpayers \$ for improving lives of people who live here, and the undeniable climate change impacts on the wasatch front.</p>
29634	Doris Memmott	<p>I don't approve of the gondola. Why should Utah taxpayers subsidize rich out of towners, when I can't even afford to ski?!</p>
29635	Kip Walter	<p>I can appreciate UDOT putting in the effort to study the traffic problem in Little Cottonwood Canyon that is created during ski season on powder days. I however disagree with the outcome and decision of this study.</p> <p>In speaking with many friends, some of which who work at the ski resorts one of which is an avalanche control expert, there are roughly 30 powder days a year. Those are the days that create the traffic jams that many people complain about. Stretched out over a ski season of 5 months, on average from mid January to mid April, that means there are six traffic days a month. Higher in some months lower in other months granted. Yes, there is significant traffic in Little cottonwood canyon. But, over the years I have seen that people begin to self-regulate. People go earlier and earlier in the morning, or in the afternoon. The fact that both Alta and snowbird have begun to charge for parking, has somewhat eased this problem. Skiers can now decide when they want to go knowing that they have a reservation to park. This has helped to alleviate the traffic in the canyon. As an avid skier of more than 45 years I have seen the change. It has changed me in the way that I access the canyon in the winter.</p> <p>The prospect of spending \$600 million to install a gondola is quite disturbing. First, as a general contractor, I am sure these are today's dollars. By the time this project begins, after all the lawsuits which are sure to come, the cost of the gondola I would guarantee is more than 1 billion dollars. That's 1 billion dollars of taxpayers money. All to solve a 30-day problem.</p> <p>Second, the gondola benefits mostly Alta and snowbird, two entities that will have little if any financial responsibility for the gondola. That bothers me to my core. The gondola will increase tourism and activity at the ski resorts which in turn will cause them to request permits to provide more amenities for tourists destroying more of the natural forests.</p> <p>Three, as an avid outdoorsman who uses the canyon all year long, I am bothered by the fact that most likely I will still be charged a toll to use the canyon that I use nearly every week. Because the gondola will not be able to stop at those other places that I frequent.</p> <p>Fourth, having to build a thousand car Plus parking structure in cottonwood heights will create its own set of traffic problems. Not only will Wasatch boulevard need to be improved in order to access the parking structure but it will significantly increase the traffic on the Wasatch boulevard corridor. So in essence, the traffic problem has only shifted from up and down the canyon to along Wasatch boulevard. Not eliminating the problem at all or having very minimal effect.</p> <p>Fifth, as a general contractor in town, I have built many parking structures. I can guarantee you that the life cycle of this parking structure will be significantly minimized because of the use of de-icing solutions in the winter to clear roads. Post-tension concrete parking structures crack. That is a fact. The de-icing solutions seep into the concrete and will weaken reinforcing in the slabs. Post tension cables will also wear over time due to the weight and frequency vehicles traveling on the deck. There will be extensive maintenance required to keep the parking structure safe.</p>
29636	Nicholas Metherall	<p>Please don't build the gondola. You are going to destroy places that many of us have become attached to over the course of lifetimes and you are going to use our money to do it.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29637	Benjamin Robison	This is a huge allocation of funds that will only benefit a small portion of the population. It would be far more cost effective to use electric buses to help reduce congestion. Please alter your plan to better serve all of the population.
29638	Woodrow Lash	Hello , I have worked at snowbird ski resort from 2014 thru 2020 . I have been enjoying little cottonwood canyon since 1994 and I have seen the growth first hand. The proposal of a gondola is ridiculous to say the least, people do ride the bus and yes the canyon does get backed up from time to time . Putting in a gondola will not change the traffic. People will still drive up and wait in line especially on snow days. The best option is to do nothing except maybe more buses. Sorry but the gondola is nothing more than a tourist trap/ attraction that the people of Utah will pay for. Do the right thing and stop the gondola. Help save the canyon for future generations. Thank you.
29639	Emalee Gonsalves	I was born and lived in Salt Lake area over 65 years. The traffic has definitely increased everywhere but putting a Gondola will ruin the beauty of the canyon. I hope it really matters what the public comments on but I'm not sure it will. I sincerely hope this decision would be put to vote! I don't agree with the decision already made.
29640	Christian Madsen	I don't want my taxes spent on a sport I don't participate in that is tailored to the rich. I also don't want my favorite hiking and photography area destroyed by a dumb Gondola. NO GONDOLA!!!!!!!
29641	Thayne Hoole Taylor	The gondola will destroy a precious and beautiful area-- a bus system will always be the best, even when it all is too much for the environment.
29642	Cory Nettleton	The gondola is a terrible idea for so many reasons. The main reason I want to highlight is there is flexibility in the pickup and drop-off locations of a gondola. This means that it is 0% future proof and will require 1 massive parking structure at the bottom which will only lead to more traffic. I'm guessing the dropoff spots will only be at Snowbird and Alta, meaning the gondola will only benefit the resorts, not the people. No dropoffs anywhere else in the canyon. The answer to this problem is very simple. Use electric buses. The buses will allow pick up zones spread out throughout the entire valley and drop off areas anywhere in the canyon with the ability to change routes as time progresses. The problem with the bus system now is that there are way too few buses and because of that there is too much traffic in the canyon which therefore throws the bus schedule completely off to the buses are almost impossible to catch. If the number of buses was quadrupled or more they would be less people in the canyon because there is more availability on the buses and therefore the buses wouldn't have to sit in traffic and could actually maintain their schedules. This is already been shown to work it's several other locations throughout the country. Electric buses going up the canyon will also be able to charge on the way back down the canyon and will therefore have a very small environmental impact. Increasing the number of buses and therefore reducing the number of cars will also not require widening of the road. If a bus leaves say every 5 minutes to go up the canyon that will be more than enough uphill capacity to meet the current needs and future needs. The gondola is not the answer and you know that.
29643	Damian Floring	I would like voice my displeasure in this initiative to incentivize to private companies with public money I do not think a gondola is the answer and that maybe the government widening the road and adding an express bus service with more buses could be a better cheaper solution
29644	Crew Mitchell	Put in the gondola. It's a great idea!
29645	Roxanne Luke	I am assuming we have considered the long run impact on near residents and the environment. Other resort towns have done this, how did it work out? I don't know how well a gondola would work give extreme weather. Would it be shut down often? How does that time loss effect the resorts and public? Does that equal current average time? How long will this take to build? Climate change projections could be dire in possibly 40 years. I feel these are all legitimate concerns and really just off the top of my head. This has become a political headache. Is the "anti-gondola crowd" mostly impacted residents? Or, is it a mix of people? It would be nice to know these things. So you can not be blinded by special interest when making an educated opinion.
29646	Mike Mccartan	Please reconsider the gondola as the preferred approach. This challenge can obviously be solved with less intrusive means, easily identified as tolls and a large increase in busses, buttressed by avalanche "bridges" like those of red mountain pass. Thank you

ID	Full Name	Comment
29647	Evan Johnson	<p>I do not support the gondola alternative due to visual and land footprint impacts (put more buses on the existing road!), but I appreciate the thought going into the process - including recognizing the need for "phased" solutions that can be ready today, sooner than the gondola can be completed.</p> <p>I propose adding parking at the base of the canyons be the #1 priority during phasing. All transportation alternatives require leaving your car to get on a bus or gondola, so we need that parking. It would help with carpooling too. I suspect things will be surprisingly improved once we get more places to park, and add more bussing (with tolling to discourage single occupant vehicles from still driving). It helps both canyons. Then add the snow sheds, to improve road winter safety as the #2 priority.</p> <p>I'm surprised that the assessment shows buses being more expensive to operate than the gondola in the long run (should we replace all city buses with gondolas?). But I am hopeful that as electric vehicles improve, perhaps electric buses will be an affordable alternative that is cheaper to operate than the gondola, saving us the capital outlay of building a gondola.</p> <p>This whole project, and the gondola alternative specifically, benefits Snowbird and Alta much more than it benefits any single taxpayer. Even taxpayers who are devoted LCC ski bums (which is a vanishingly small percentage). A few people "live" up LCC, but really this is all about resort recreation access. And there are more important infrastructure projects our tax dollars could be going to, which benefit more people than privileged "powder hounds" like myself. I forget the potential breakdown of how much ski resorts might contribute to the construction and operation of the gondola, but I want to stress: the cost burden must be heavily on Snowbird and Alta. This is not a typical UDOT road improvement. This is non-skiing taxpayers paying to build a cool new ski lift for private corporation-owned resorts, which is ridiculous.</p> <p>Thank you for engaging so much during the long EIS and comment periods. I look forward to some improvement to the power day traffic jams, so I can go skiing again without worrying about being stuck in traffic for hours with my young children. I have been avoiding the canyon altogether, basically, and I miss Snowbird.</p>
29648	Layne Papenfuss	<p>I completely disagree with the proposed alternative. It barely makes a dent in ski traffic, the capacity of the gondola is FAR too low to handle the thousands of people trying to get up the canyon in the rush hours. 1000 people per hour is almost farcical compared to the amount of people piling into the canyon on a weekend or holiday, especially powder days.</p> <p>I resent that it caters to the needs of the resorts while completely ignoring all of the summer trailhead traffic that doesn't go to a resort. The gondola will be an eyesore plaguing our community for decades to come. Either make the resorts pay out or drop this insane proposal.</p>
29649	Colette Engle	Absolutely against the gondola.
29650	Dominic Fratto	This is a horrible plan. We can do better. This will destroy the serenity and beauty of the canyon. Please listen to the citizens, not the ones profiting from this.
29651	Samuel Maddox	The gondola has to be free with a ski pass or pretty cheap. If you don't do it put a ski rack on the bus so skis aren't going all over the place. Tell the bird they gotta make more lockers
29652	Matt Vukin	I am writing to express by staunch opposition to ever considering a Gondola to shuttle people to the top of Little Cottonwood Canyon. It ignores the valuable sightline which is so valuable in this canyon and would only congest further an already crowded resource (ski resorts Alta and Snowbird). It is tax payer subsidized and implicitly only benefits these private entities as well which is not how I want my funds spent. It also ignores conversation about the finite human capacity of this canyon which is already densely populated in the winters changing fundamentally the wilderness experience there. I would prefer tolls, fees, bus only proposals all as alternatives - or simply capping the number of people allowed at one time.
29653	Amy Hansen	No gondola!!! It's a terrible idea that costs far too much money and ruins our landscape. Please stop pandering to big business. There's better alternatives that can work for everyone and not just the ski resorts/special interest groups.
29655	Joshua Sjogren	A gondola will remove more trees and vegetation and greatly impact our watershed. As we continue to drain our reservoirs it's our own greedy government allowing growth in our mountains causing future stain on all of us and my kid's future. Tax payers should not have to pay for a gondola that only services two ski resorts - for profit corporations that directly benefit from its use - while the majority of tax payers footing the bill do not.
29654	Craig Caro	<p>I'm concerned about the current plans to build a gondola system. Seems like a lot of money for something people wouldn't want to use. I'd be scared to use it in windy situations. I also heard gondolas are all built in Europe. I would rather my tax dollars stay in the US.</p> <p>A train (perhaps cog wheel system) or dedicated bus lane would make a lot more sense to me.</p>
29656	Rebecca Rogers	This is not the time to buy an expensive gadget for affluent tourists. Let them pay for it through price increases.
29657	Kevin Jones	I do not like the plan for the gondola. Those in favor say that buses only work if people will ride them. The gondola will only work if people will ride it. There is no proof that they will ride it. If you build it and it is a bust it will either become an eye sore for decades to come or go the way of the Bridal Veil Falls tram. The buses are able to increase and decrease as demand requires. When they are not needed they are not there, you don't see them. The gondola towers and cables will always be visible, ruining the views in all of the canyon. Also there will not be enough stations for all of the places that people want to stop in the canyons. Please do more to prove that this is the option that the public wants. Not just the option that leadership at UDOT wants. Please do not be doing this to pad a resume.

Comments on Little Cottonwood Canyon Final EIS

29658	Alea Nielson	<p>It seems as though UDOT has done it's due diligence in choosing an option that will balance the needs of the environment, finances, and accessibility for the whole community to enjoy our beautiful canyon. In other mountainous regions in the world, such as Switzerland, gondolas and other public transit options have been successfully used for many years. The gondola will create a reliable way for everyone to get up the slopes to ski, while limiting our growing populations interest in skiing. The worst thing I can think of, would be to widen the highway up the canyon and essentially create a cars only access to the top of the mountain. This does nothing to improve the wildlife, or keep the canyon usable and accessible to all.</p> <p>The added benefit that this is the most affordable option long term makes this choice a no brainer. Let's all enjoy the canyon without a 2 hour wait in traffic and keeping our environment accessible to our wildlife.</p>
29659	Christopher Cook	The Gondola was a great choice. Thanks
29660	Jason Pham	I honestly do not think the gondola is a good idea. It is an expensive plan that only has a large benefits during the winter and for people that can afford to ski. For the amount of money and time it'll take to build it does not seem worth it for the low income. I think increasing the amount of electric busses going up to the resorts and limit parking would be a faster, cheaper and more beneficial for everyone
29661	Chris Meinzer	I've live in salt lake county and have been an avid visitor of both big and little cottonwood canyon. I, as well as my friends and family oppose the gondola completely.
29662	Zac Pond	There's not much I can say that you haven't already heard, but know that I strongly oppose the Gondola. The gondola caters only to resort skiers while inflicting irreparable damage on a pristine canyon. Strongly oppose. If this issue was raised to Salt Lake voters I'm certain you would not have the support of the majority, so how can you justify proceeding?
29663	Josephfli Josephfli	Ä—É—ª—µ—Ç—∞ —∫—Å —¿—æ
29664	Paul Ricketts	NO GONDOLA! Just use busses or other ground transportation. The canyon is destroyed enough as it is. Gondolas are nothing but a pet project and a waste of money.
29665	Kyle Koopman	Please do not destroy more of the natural area. ? No gondola!
29666	Melanie Lambert	I do NOT want the gondola! I have lived on the East bench my whole life and this proposal makes my heart hurt!!
29667	C William Merten	<p>The proposed solution to overcrowding on Route 210 is ludicrous. The primary beneficiaries of the proposed gondola to Alta and Snowbird are Alta, Snowbird, and Alterra. This gondola does not serve the general population, just a small sliver of it at a horrendous cost. The solution does not take into account the root causes of the over crowding. These are in no particular order, the pandemic, the work from home movement, and the Ikon pass. There is nothing anyone can do about the first two. The third can be addressed by limiting the access to Ikon pass holders to a specific number of pass holders per day. The aforementioned overcrowding does not just occur on Highway 210. It also occurs in the ski areas and in my experience has resulted in increased dangerous behavior on the slopes, some times resulting in collisions that cause injury and worse. I am well aware that my comments will have no bearing on the final decision, but they need to be expressed. I have been skiing almost exclusively at Alta for 33 years, traveling cross country to spend four weeks a year there. My family and I are actively pursuing other options for skiing both in the states and abroad that circumvent the kind of crowding that has been allowed to occur in the Little Cottonwood Canyon. In large part, it's the experience we come for and that has been in the process of being destroyed over the past five years.</p>
29668	Ryan Borzea	Please, No Gondola!
29669	Birky B	no. Traffic is gonna be bad no matter what. A stupid gondola will jus with nature and obstruct the best view of your mornings. Don't ruin it with a stupid gondola.
29670	Brian Perkes	Absolutely NO gondola please! What an eyesore this would be for Little Cottonwood and a waste of money. Other solutions should be implemented long before we destroy the beauty of this canyon.
29671	Josh Decola	Ski resorts should pay half of the proposed 500 million gondola project. Or half of whatever the final bill comes to.
29672	Jane Petersen	<p>My input as follows:</p> <p>NO to the gondola proposal for Little Cottonwood Canyon</p> <ol style="list-style-type: none"> 1. The gondola will NOT solve the transportation problem. Parking hubs, electric buses, carpooling and reservation systems are better solutions. 2. The cost to taxpayers for the gondola is very exorbitant to build, and Alta and Snowbird will be charging us even more after being built. 3. Gondola Works' advertisements are misinforming Utahns. Studies show the gondola is in fact harmful to the environment since the power will come from coal, and it's not accessible because it would have an additional cost. 4. The gondola will ruin the beauty of the canyon with more than 20 steel towers as tall as sky scrapers.
29673	Cody Cardon	We do not want a gondola in little cottonwood canyon come up with a different solution
29674	Kyle George	It really saddens me that the gondola is a preferred alternative that only benefits a select user group in LCC, and additionally impacts the user experience for hikers, climbers, backcountry skiers and cyclists. SLC has numerous other traffic issues on the west side particularly that could benefit from some of the funds being proposed for the gondola. At the current rate of climate change skiing isn't going to be a reliable commodity for much more than ten years. It seems we should allocate "our" money to more forward thinking alternatives.
29675	Jacob Harrington	Build more buses and ban personal vehicles on busy weekends instead of spending almost a billion dollars in taxpayer money that only benefits two private companies

ID	Full Name	Comment
29676	Mark Johnston	<p>If we are truly concerned about the environmental impact of the high volume of traffic entering the canyons (and watershed) to ski at overpriced resorts, then we must admit that capping or deterring some of that traffic needs to happen at some point soon. Environmentalists who are clamoring for a solution to traffic jams and pollution, while insisting we continue holding open the floodgates to the endless stream of skiers crowding the resorts and backcountry, are not truly environmentalists. As the population of the Salt Lake Valley expands rapidly, and popularity of exploring our beloved outdoor havens grows, the impact they have will worsen and the conditions of the canyons will deteriorate. Therefore, "solutions" that simply ensure a high volume of traffic can enter the canyon are not viable long-term solutions. And any decisions that clearly benefit only the resorts without truly considering the environmental impacts on the surrounding landscape and ecosystems, should and will be examined with great scrutiny. Before we jump into the most exotic and expensive supposed "solution," let's continue experimentation on controlling traffic without massive overhaul to the landscape. Charge a high fee for all vehicles entering the canyon (high enough to deter single occupant vehicles and encourage carpools) and provide free, regular shuttles, subsidized by the POV fees. The solution is simple and equitable, at least equitable enough for those still wealthy enough to pay for the gas, equipment, and lift passes that afford them the luxury of skiing. We must admit that a strict cap to canyon vehicular traffic on high volume days is the only solution that will benefit those trying to enjoy the canyons. And this plan would offer a good first experiment at implementing such a cap.</p>

29678	Travis Timer	<p>The gondola is the wrong decision. It's irresponsible to spend tax dollars to build a gondola that only services two private for profit ski resorts. It's going to destroy the beautiful mountains and peace and quiet people go to the mountains for. This decision is being pushed through because of some kind of kickback and every government employee involved in this decision needs to be investigated fully for conflicts of interest or bribes. Re think your decision before you do irreversible harm to our wastach mountains. No one wants the gondola other then the two private ski resorts. The answer to the problem is to change the forest service permits with alta and snowbird and only allow them to sell X number of tickets per day based on their parking capacity. Because this is federal land you can to do. They should not be allowed to grow indefinitely.</p>
29679	Michael Falk	<p>I worked for snowbird in little cottonwood canyon for 38 years. For 26 of those years I worked on the mountain doing the electrical maintenance on the tram and chairlifts. I have serious concerns about this proposed gondola project. I'm not concerned about the technology it takes to keep it running. The Europeans have people moving down to a science. What i am concerned about is the operational problems that will occur. In lcc Mother Nature is in charge and she will do everything she can to disrupt operations of an 8 mile long gondola. I don't udot realizes the scope of the problems. I can't believe that an evacuation can be done from a gondola cabin That's 150 ft above ground with 40 mph wind 0 degrees on a January night. That's life threatening for the rescuers and the public.</p> <p>I'm not against socialism but this is Socialism at its worst. Using tax payer money to pay for this project witch will benefit two resorts and very few Utahns is wrong.</p> <p>Thank you.</p>
29680	Jonathan Vickers	<p>Hello,</p> <p>I have a myriad of issues with the proposed gondola, but the haste at which this idea is being pushed forward is my greatest concern. Especially considering that I (and others) don't believe more guests to our canyons is even beneficial. Despite the ever-growing list of things that detract from the idea of a gondola, my most immediate problem with this idea is that expensive infrastructure is being considered before less invasive options focusing on social behavior. These options must be tried and given every opportunity to succeed before tax payer dollars should even be considered for a gondola. This could take years, but in that amount of time we could adjust our behaviors as users, wait for better technologies that provide more options and evaluate what is going on with our warming climate. Given the context of an ever-warming earth, perhaps these funds should go toward helping to save the snow we all love in the long term, rather than filling the pockets of the resorts in the final dwindling years of snowfall.</p>
29681	Sean M	<p>Spending hundreds of millions of dollars on a gondola up Little Cottonwood is a terrible idea. It will be an eyesore in the canyon and only benefits the resorts. The number of days that traffic is actually a significant problem is so limited (basically only some winter weekends) that it makes zero sense. An easier and cheaper solution would be to install avalanche bunkers over the road, like they commonly do in Europe. Then if necessary, close the Canyon to cars on weekends and just run busses up and down. The gondola is the worst idea. If you are going to spend that much money, put in a train and close the canyon to cars permanently.</p>
29682	Jerry Adams	<p>Just so we're clear the county has a problem with homeless the streets and roads are a mess we need more officers and no I don't want a gondola that a few people use.</p> <p>That's ridiculous we could spend that money on something to improve the communities this does nothing for that.</p> <p>Again no I don't want to see this.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29683	Tina Lewis	NO!! To Gondola!! Easier much more economical ways to improve the canyon traffic. It will destroy the beauty of the canyon. Utah tax payers Do Not want to pay for this type of project when we have more pressing issues.
29684	Campbell Tom	Why make tax payers pay for a traffic problem that only happens about 8-12 times a year and then has no usefulness for 7 months? Ski areas want it. Make them have a LOT of skin in the game. Instead use more buses every 5 minutes on weekends and powder days. Enforce traction- Snowbird law.
29685	Claudia P	I oppose the gondola and am adamant that tax payers not pay for such a ridiculous idea. Clearly lead as amo try maker for UTS and 2 private owned ski resorts. Please leave our canyons alone. If they r full close entrance until an opening is available. Use a reservation system. Seems to work for national parks. Steel towers, more pavement, destruction of wildlife n trees in unforgivable.. Filling canyon with mote humanity is not a solution. Cottonwood heights residents do not want this gondola, t nor the traffic it brings. Love our canyons, UT on e we have destroyed them, they cannot be replaced
29686	Finn Navidomskis	The gondola is being advertised as a "traffic solution." However the EIS says that the gondola will not decrease traffic in the canyon. The effect of the gondola is only to increase the number of people who reach the resorts. It is therefore not a solution to the problem, and should not be advertised as such. This increase in people at the resorts only benefits the resort companies. Why would the people of Utah pay for the most expensive gondola in the world when it won't reduce traffic and will only increase profits to two private companies. Since the these companies are the only ones who benefit, they should be the ones to pay. Us Utahns have other uses for our tax dollars. Other roads to fix, schools to fund, and a real homelessness problem that needs more public funding. It would be irresponsible and unethical to spend so many tax dollars to make a couple private companies richer.
29687	Luana Guymon	I am not in favor of the Gondola
29688	Finn Navidomskis	The goal of the gondola is to be a transportation solution for the estimated 25 days per year with high traffic. However there are 365 days in a year. The majority of the year there is no skiing, and absolutely no traffic problem. I read a study that said 77% of the canyon users are not going to the resorts at all. Ironically, this "transportation solution" only provides transportation to the resorts. There are no stops throughout the canyon at the various trailheads and outdoor recreation areas separate from the resorts. The gondola is therefore not a "transportation solution" for the majority of canyon users. Even more frustrating, is that these non-resort users will be bearing the brunt of the damages to the canyon. Since the resorts are at the top, the gondola's construction will mainly be in the lower and middle sections of the canyon. That is where the other recreation areas are within the canyon. All of the construction damages, gondola towers, destruction of recreational areas, and loss natural aesthetics will be affecting the 77% of canyon users that don't even benefit from the gondola.
29689	Francine Wirtz	Hello, I do NOT support a Gondola. I agree that a handful of days in the winter, the roads in the cottonwood canyons take much longer than usual. Little Cottonwood is narrow and cannot accommodate the number of people that will be able to flood into the Snowbird and Alta areas if a Gondola is added. Already, they are packed to capacity at busy times. Most days the Cottonwood Canyons roads are fast with no traffic, unlike Park City, which has traffic all winter (and summer). I feel that with the huge amount of money the gondola will cost, the current bus system and increased traction/weather restrictions can be upgraded tremendously and will help solve the traffic issue. A large problem with any proposed mass transit system is the lack of a "base" or "hub" at the ski areas. Here is an example: We work and live at a lodge in Alta. My in-laws would come and stay in Cottonwood Heights for 3 months in the winter. They would leave their ski gear in our room in Alta and take the bus up and down the canyon. They were able to walk to the bus stop on Fort Union and about 1900 E. They would ride the bus up to Alta, come into our room to get dressed, put their boots on and get their skis. They did not always end their day at the same time. - They were able to walk to the bus stop, so they did not have to drive to a park and ride and they could go home at different times. - They wore normal shoes or boots so they could walk more safely both in SLC and in Alta, instead of wearing ski boots, which are very slippery. - They did not have to wear or carry all their ski clothes or any extra layers they might need. - They did not have to carry their skis, boots and poles along with helmet, ski clothes and lunch. - They could leave their backpacks, shoes and extra clothing in our room and did not have to ski with them. - They had a warm, dry place to use the restroom, change in and out of gear and wait if there was a road closure or delay or until the bus pickup time. It worked well for them and without this amazing situation they would not have been able to ride the bus. There is no way they would have ridden the bus if they had to carry all their gear. Now, the bus routes are so limited, that they are not able to ride the bus without a car to get them to the park and ride. Once all the gear is loaded in the car, it is quicker and easier to just drive up the canyon, especially when the park & ride lots fill up. My point is that there needs to be a place for people to hang out if they take the bus (or Gondola). The busses are an incredible service and should be expanded. They don't seem to work well currently because all the parking fills up, the schedules are routes are very limited and there are no 'hubs' or waiting areas at the ski areas. Snowbird has the Snowbird Center and Creekside, but there are very few places where people can change, stay warm, leave their shoes and other items, take a comfortable break and eat their lunch. Most places don't like people to use an indoor table unless they purchase food. Seasonal lockers are expensive and for people who only ski that specific mountain. Alta has basically nothing. The Albion Grill has been a mess in the past with backpacks stuffed in corners and along walls. Items are not Hello, Please go with Proposed Phased Implementation of Gondola Alternative B. Emchated bus service will be enough. The environmental impact of the gondala makes no sense for just 2 ski resorts. I would hate to see the beautiful Canyons I have grown up in destroyed by such a unimportant money grab. Dissapointing that I even have to be writing this letter. Keep our canyons natural. Emma Slikker
29690	Emma Slikker	Hello, Please go with Proposed Phased Implementation of Gondola Alternative B. Emchated bus service will be enough. 29691	Steve Ipsen	Please no gondola, what a wast of taxpayer monies. All because of corrupt politicians and developers!
29692	James Carroll	Absolutely no the the gondola, it is too costly, it only benefits the skiers, not the entire community!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29693	Suzann Nowels	<p>I say NO to the gondola. We do not need to finance a mode of transportation that only benefits those who can afford the luxury of a winter sport such as skiing and snowboarding. The location of departure is only at the resorts. The issue is traffic in the canyon ALL year round. We need hub stations for mass transit (buses) that could have multiple stops in the canyon for the benefit of ALL to enjoy the canyon and what it offers. The gondola is short sighted and invasive to address an issue that is limited to only winter and one sport for the wealthy.</p> <p>Please DO NOT support the gondola! Look for alternatives that are not backed by folks who will lobby with their money, not citizen benefit, to get it.</p>
29694	Colby Kalian	<p>I don't think the gondola is a great option. It is way too much money for a problem that is only really a problem a few days a year.</p> <p>It would also effect they view down the canyon.</p> <p>It could also potentially become obsolete in coming years of snow totals continue to decline the way they have over the past 20 years.</p> <p>Don't do the gondola.</p> <p>Thanks.</p>
29695	Brandy Wright	<p>Don't build it, don't widen the road. Restrict cars and add busses. DONE, no billion dollars to support 2 private companies. The gondola only moves 1,000 people per hour, that's not near enough to support the two resorts.</p>
29696	Jeffrey Lewis	<p>The preferred alternative B gondola is a sound well researched option. This will be a very good path to the future. It needs to happen ASAP.</p>
29697	Colin O'connor	<p>Hello,</p> <p>A gondola to the top of little cottonwood canyon is not how transportation tax dollars should be spent. There plenty of roads all over the Salt Lake valley (primarily on the west side) and in the State that are in desperate need of upgrades, or safety improvements. The other options of easing canyon congestion and safety have not properly been explored or given a chance to help. As a winter sport enthusiast, I see the need to improve safety and congestion in the canyon, but toll roads, parking reservations, and more park and ride options could help and should be explored first. The environmental impact and disruption to the spectacular views of the canyon should not be put at risk because a wealthy minority wants to building something "cool". This benefit is only to a small minority of people that can afford to be involved in a winter sport that costs more than \$100 per day to participate in. This has very little benefit to the state as a whole and will do nothing to make the laves of all Utahans better.</p> <p>Colin O'Connor</p>
29698	Greg Taylor	<p>I support the gondola selection along with many of the proposed alternatives such as improved trailhead parking and snow sheds. It would be great if the gondola towers were not simply unsightly high tension power line towers but rather something more minimal and appropriate for the surroundings. Also, I would hate to see the phased approach of just adding more buses become the final step with funding being the excuse. More buses will just add unwanted congestion and noise to the canyon. In addition, as a cyclist, I would request that the widening of Wasatch be kept to a minimum and the speed limits on Wasatch be reduced to provide increased safety for all users. Lastly, it would be great to have the gondola run all year with the capability to transport bikes up the canyon.</p>
29699	Jessica Mertlich	<p>I do not support the gondola plan, due to the high impact both visually and environmentally to our canyon. I would ask that UDOT is more transparent as to how they determined level of demand that would exist for the gondola. It is difficult for me to believe that there will be a significant number of individuals who would consider utilizing the gondola (particularly on a regular basis) given the personal inconveniences it poses. It will be a parking headache, same amount of traffic on Wasatch, and a significant increase in travel time both directions, even during peak hours (and even more so during non-peak hours). During winter weekdays and the entire summer, it seems the gondola will completely underutilized.</p> <p>Given the scale and impact of the project, the justification does not seem high enough to warrant this proposal.</p>
29700	Thanh Luu	<p>I would like tolling instead of the other options</p>
29701	Marie Fontaine	<p>Not only is a gondola NOT needed; a gondola would be an eyesore in our beautiful canyon, it is not cost efficient, and most importantly it is horrible for the environment and wildlife. It would also set a dangerous precedent... we all know that it would only be the beginning to further expansion. Please think about where it will lead and think of future generations that deserve to enjoy outdoor spaces free from destruction. The Gondola would quickly become a tourist trap, bringing many more people to the canyons, along with much more trash. I'm not blind to the fact that this is seen as a positive to some who want to capitalize on the gondola project. We need to put people and the environment before profits or we will lose what makes Utah so beautiful and what makes Utah a great place to visit. Make the right decision!</p>
29702	Stephen G Spencer	<p>I am against the gondola idea. I think it will not properly address the problem of traffic and congestion in the canyon. It would cost alot more than to drive up the canyon, so people will drive, unless we limit the numbers who can use the canyon. I think the better alternative is limiting the total usage each day by some type of reservation system. Gondola would be an eyesore, very expensive (whose paying for it?), and underutilized.</p>
30967	Randy Long	<p>Mailed comment</p>
29703	Linda Smith	<p>I oppose the Gondola as an alternative fo transportation in Little Cottonwood Canyon. Cheaper and more effective approaches should be tried (eg. busses). The Gondola will fail to transport people to many places they wish to go in the Canyon, just serving the interests of the ski resorts. Moreover, it will harm the view shed forever. And it is too expensive. Please rethink this plan!</p>
29704	Patricia Todd	<p>No.</p> <p>This benefits only the FOR PROFIT ski resorts. NOT the local (taxpayer) community.</p> <p>Don't ruin our canyon for the moneygrubber wealthy.</p> <p>This should have to be voted on by every Utah citizen...but so should have NSA, the 1.7 million gallons of water wasted per day company. Amazon. The Inland port...</p>

ID	Full Name	Comment
29705	Marty Kraft	I vote no bad idea ? if you will probably do it anyway
29706	Grant Amann	<p>Environments Where Bus Infrastructure May be More Effective Than Rail</p> <p>1) Corridors of Low Human Population Areas that have low density simply aren't able to fill trains to capacity. Due to rail transportation's ability to carry more passengers than buses, they are literally designed to work in cities of high density. Buses can be smaller depending on the size of demand and can run more frequently if demand increases. In cities with low populations, rail construction will be excessive and unnecessary.</p> <p>2) Areas that Require More Miles of Infrastructure In locations that suffer from sprawl, public transportation networks require more lines and more miles of track to be able to reach individual neighborhoods. If two neighborhoods are too far apart from each other, they might both require a separate rail line. Sprawled cities require more miles of infrastructure. When more miles of infrastructure are needed, bus networks are cheaper per mile than rail networks. This is because bus networks can utilize the same infrastructure that automobiles are already using, whereas rail needs completely new development. The head of a transportation center at the University of South Florida claims "you can build up to 10 Bus Rapid Transit lines for the cost of one light rail line" (Dennis Hinebaugh). It should be noted that some improvements to bus networks, such as Bus Rapid Transit are comparable in some cases to construction costs of Light Rail in some cities. Boston, however, claims that 25 miles of BRT infrastructure would be the same cost of less than 4 miles of light rail.</p> <p>3) Areas Where Buses Have Already Been Given the Priority In areas where buses have already been given the priority, it will be difficult for cities to build successful rail transportation networks that integrate well with their bus systems. Usually cities will have one mode of transportation that has the majority share of public transportation infrastructure. If this mode of transportation is bus, then many argue that money spent on new rail infrastructure could go to improving existing bus infrastructure.</p>
29707	Amy Vanderveur	No gondola! It will not help the people who live and work here. It is too expensive. NO GONDOLA!
29708	Nichole Farrior	Winter transportation in Little Cottonwood should serve all members of the public, not just those who can afford to recreate at Alta and Snowbird. I do not support a gondola because it prohibits me from having improved access to snowshoeing, walking, and enjoying nature anywhere else in Little Cottonwood Canyon during the winter. UDOT's recommendation to build a gondola will leaves me with no way of enjoying Little Cottonwood Canyon throughout the winter and spring seasons. UDOT should exclusively support the Enhanced Bus option with no road widening to support full recreational use of all trailheads and recreation areas in the Canyon throughout the winter. Without exclusive support of this option, I will have no way of enjoying Little Cottonwood Canyon throughout the winter and spring seasons.
29709	Andrei Malyuchik	<p>First, what about the gear storage at the base of the resorts? If I haul my family up there in a Gondola, where do I keep my stuff and does it mean that I would have to pay a bunch more money on top of the gondola ticket and the ski tickets and will I be forced to buy food at incredibly inflated prices instead of brown bagging my own lunch?</p> <p>Second, what if I would like to access the public land to go Backcountry skiing say Mount Superior or Emma's ridge? Or use those to access the Big cottonwood drainage?</p> <p>Will there be an option for locals to buy yearly passes to access the upper canyon to go backcountry?</p> <p>Lots of people go cross country skiing or snowshoeing up there, what about them?</p> <p>If you don't have answers to these questions, who would?</p>
29710	Rachel Christensen	The Little Cottonwood Canyon gondola is not something that the majority of Utahns want. And the cons seem to vastly outweigh the pros. How will this help traffic congestion during the extensive construction period? Where are all the cars going to park that are bringing the riders up to the mouth of the canyon? How much will a gondola ticket cost? Would it be included in a lift ticket or separate? Why are taxpayer dollars paying for a additional and unnecessary barrier to the mountain. If the ski resorts feel so strongly that a 2-stop, 8-mile gondola needs to be put it they should be paying the half-billion dollars themselves. This is a horrific play at limiting citizens access to the canyons and to nature.
29712	Tim Hendrickson	Agree with Gondola B. There is no perfect solution but the status quo must change and we must look to the future on how to improve Little Cottonwood Canyon. It will be a change and will take getting used to but people will adapt. The Gondola B solution is a reasonable and well thought out. The parking in La Caille parking area is critical to have ample parking close to the bottom of the canyon. Sure some refining will be needed over the years but great work the key issues planned and keep moving forward as quick as possible. Don't let doubters, deniers and lawsuits keep meeting the objective. Thank you!
29711	Jason Carr	Anything but a gondola. We have such a beautiful mountain-scape and this will permanently scar it. In addition, it only exacerbates the lack of parking at the base without addressing the true underlying issue which is a lack of wholesale investment in mass transportation and advanced infrastructure that would actually facilitate additional growth

ID	Full Name	Comment
29713	Will Rossiter	I love little cotton wood canyon. It is a beautiful natural resource that should be preserved. I ask that you please not install a gondola as this will destroy much of the natural beauty of the canyon. Additionally, the canyon will lose some of its most prized boulders and rocks which are part of what make the canyon great. Separately, the impact on the air quality in the salt lake valley will be very minimal from the addition of a gondola. Much of the air quality issues stem from unrelated sources such as wild fires and pollution related to production and agriculture. I do not believe that air quality improvements from a reduction of car traffic in the little cotton wood canyon warrant the degradation of the canyon via the addition of a gondola. Please re-consider. I do not want to see the addition of a gondola in little cottonwood canyon.
29714	Finn Navidomskis	<p>One of the largest unintended consequences of the gondola project is the damage to the climbing resources of little cottonwood canyon. Little Cottonwood canyon is a world famous climbing destination, largely due to its many high quality boulders. Due to the gondola's construction, many of these boulders would be damaged or destroyed. Though UDOT's EIS says the damage to the climbing resource would be minimal, I believe they are misunderstanding and dramatically underestimating the damage that will ensue. The Salt Lake Climbers Alliance estimated that 64 independent boulders would be damaged or destroyed resulting in the loss of 273 unique climbs. This would be a huge loss for the climbing community. These are one of a kind, completely unique boulders that can never be replicated and don't exist anywhere else in the world. This climbing resource is also a tourism attraction for the nearby communities. People come from all over the world to climb on these boulders. Climbing is a rapidly growing sport and industry. Each year, more and more climbers come to Little Cottonwood, and that number will only keep increasing.</p> <p>Due to climate change, the winters in Utah are only expected to become warmer and drier. This will result in shorter ski seasons with less impressive snowfall. One day, The Greatest Snow On Earth, will be gone. When the snow goes away, so will the tourism associated with it. This is not true for the climbing. Climbing will continue to grow as a sport and Little Cottonwood will only become more popular as a climbing destination. As the ski seasons get shorter, the climbing seasons get longer. Why would we sacrifice the boulders, a resource that we can never rebuild and one that will continue to provide recreation forever, to build a gondola that provides access to a resource that is in rapid decline? It is simply a bad investment.</p> <p>Still the boulders of Little Cottonwood Canyon are more than just a tourist attraction. They hold extra value for the locals of the Salt Lake Valley. Many of us have climbed them for years. Some of us learned to climb here, others moved here to climb. All of us love and cherish the boulders and the time we spend climbing them. It would truly be a tragedy to have these unique boulders that countless climbers know and love be destroyed for the profit of private companies.</p>
30210	Kevin Peterson	Why push for a Gondola? We need more important things like getting the lakes etc filled back up and restored so that we don't lose them. Please consider this over the gondola. Thank you
29715	Katherine Yi	I am against the proposed gondola for many reasons. I live near the base of LCC and am a climber. I would hate to see the natural beauty be destroyed by a half baked and costly solution. An improved bus system would accomplish the same thing at lesser cost. Also many of the popular bouldering spots would be eliminated by the construction of the proposed parking center. This seems to have been rushed through by the developers. This benefits only 2 ski resorts while the whole city benefits from the untouched nature of the canyon.
29716	Matthew Monosson	Hello, I am writing you guys and telling you to please not go forward with the gondola. As someone who grew up at the mouth and recreates up LCC 200+ days a year it doesn't make sense to ruin the canyon to provide no benefit to anyone, especially the canyon. It's only going make the canyon more polluted. It doesn't make sense to waste taxpayers money on something that 1.) no one wants 2.) costs half a billion dollars while who knows how long the winters will go around. 3.) only benefits the wealthy people, not me who is a college student. The best option in my opinion is to roll the road, this will keep traffic down while maintaining the natural beauty
29717	Richard Morrey	I strongly SUPPORT the gondola and toll road configuration
29718	Kristin Blanchard	Have you ever stood in a long line to wait for a gondola? It's maybe even more annoying than waiting for traffic. Please please please don't let this porky boondoggle of a project mar the beautiful canyon. There are myriad things UDOT should try before even considering a gondola, including enhanced bus service. As a skier and outdoorswoman I dislike the traffic but this option to address the traffic issues is ludicrous and everyone who isn't set to make money off of the gondola knows it. Please do the right thing.
29719	Jacob Hutchinson	I spent 30 years in ski area operations with multiple gondolas, this may be the most trouble prone and hard to manage solution you could have imagined. Unfathomable you could consider this as reliable transportation with a straight face given the weather and avalanche concerns in Little Cottonwood Canyon, not to mention the lack of parking and the out of canyon congestion that will cause.
29720	Sara Wiebke	After reviewing the plan, it feels like skiers are the main audience for this, which is ignoring a lot of other canyon users. In addition, this canyon is beautiful so adding a manmade feature in the sky takes away the beauty of it. Please consider all canyon users or have it only for resorts and make it a helicopter which isn't a permanent feature in the sky. Please do not make the experience worse for hikers and backpackers and please do not permanently block the beauty of the canyon with wires and hanging busses. Thank you.
29721	Randy Tucker	So what is plan B when the condola breaks down?? And it will.
29722	Joy Davidson	Why are we wasting all of this time and money so a small privileged segment of the population can recreate for a few more years until we no longer get snow? Please get real. If you must carry on please waive tolls in summer for those of us who can't afford to ski but might live to go for a hike and enjoy what is left of nature between the runs. https://www.nationofchange.org/2021/12/07/a-future-with-little-to-no-snow-what-that-means-for-the-west/
29723	Shane Day	God awful wasteful idea that needs to be canceled Immediately. Electric or even hydrogen buses should be used.
29724	Dennis Bright	Putting a gondola system up Little Cottonwood canyon is the worst thing that could be done. The gondola benefits only the ski resorts in the canyon, not the general public. The road in the canyon will still have to be maintained, whether the gondola is built or not. Use the money that would be spent for the gondola to improve and upgrade the currant roadway. Everyone would then benefit (not just the ski resorts) whether you use the canyon in the winter time or at other times of the year. The gondolas and their towers will create a huge eye soar of the views of this beautiful canyon. No one wants to drive up the canyon and see the towers, lines, and gondolas overhead blocking the views of the canyon.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29725	Tamara Springer	Taxpayers should not be saddled with paying for this project. The resorts will benefit so they should secure financing.
29726	Kailee Sendle	Dear UDOT, I oppose the gondola because of high capital costs, the high environmental impact compared to not constructing in LCC and the negative repercussions for out drinking water.
29727	Robert Norbutt	I am very much against a gondola. Utah is not a Disney ride. What will happen to backcountry access with a gondola? A lot of people use the canyon that do not go to resorts.
29728	Will Springmeyer	Building a Gondola in Little Cottonwood Canyon is an absolutely terrible idea. A gondola would ruin the viewscape of the canyon and not serve the needs of users who are not skiing or snowboarding. You must not bow to the corporate greed that would make millions off the gondola. Listen to the people and consider other alternatives. DO NOT BUILD THE GONDOLA!!!
29729	Lars Johnson	Please do not proceed with the Gondola. The gondola will make a ski day more expensive, longer duration in transportation, and burdensome experience, and it will saddle the locals with higher taxes to pay for it. I'm a happy owner of an AWD electric vehicle that we often use to drive to and from the mountains for various summer and winter activities and wish that more folks would drive EVs. It is great at keeping pollution out of the canyons, but what i like most is regenerating the battery on the descent and saving the energy.
29730	Craig Jacobs	I suggested building it "three times bigger!..Mabey running it up over the canyon top and down into Heber valley..make it an attraction instead of an detraction they will underbuild it like our freeways and everything the gov. touches. We will soon outgrow it and it will be lame.. especially for 30 or \$40 a wack!
29731	Chris Brosky	!!NO GONDOLA!! Leave the natural environment and the beauty of LCC the way it's meant to be, NATURAL. Spending taxpayer dollars to provide the already overpriced ski resorts with the means to transport seasonal customers to THEIR doorstep so they (ski resorts) can rake in millions is egregious. All this accomplishes is the destruction of the canyon's beauty so rich people can recreate when it snows. The other 7-8 months of the year traffic is not an issue at all! How about UDOT enlarge the parking lot for bus riders and then charge a heavy toll to all the skiers who are far too important to ride public transportation up to the lifts? !! NO GONDOLA !!
29732	Andrew Bosco	Can't wait for gondolas! Keep up the good work!
29733	Julia Stegvik	I oppose the gondola because it will destroy the environment and the view shed of Little Cottonwood Canyon
29736	Ray Manning	Can you imagine a gondola in Zion Canyon? It's time to limit travel to the canyon. No gondola no bigger road. Limit traffic... the all mighty buck for the tax dollar continues. Limit the improvement.... Please... you are allowing destroying the canyon!
29734	Charlie Maulding	Against gondola. However, I'm also ok with it. Parking at base of both cotton wood canyons is necessary in order to improve alt transit up canyons. Pressure state of Utah to purchase Geneva rock property or alternative property to build parking.
29735	Jahn Curran	It's time Utah caught up with Europe when managing large numbers of people and still keeping nature-- whether for summer hikers, or winter skiers. A gondola will attract those with money, and be FAR better for the environment than stupid smoke-emitting buses-- even electric busses will take up space from private vehicles and add to traffic jams, cost of road maintenance, etc. Yes for the Gondola!
29737	Daeton McClure	This is a waste of tax payer dollars on something that will only benefit ski resorts and damage our environment and natural beauty
29738	Mark Opasinski	Do it without taxpayer dollars. Add a tax to lift fees so the people that use the gondola will pay for it. Forcing everybody in Utah pay for this easy playground access for the rich is as bad as making everybody in Utah pay off student loans. If the ski resorts want gondolas, let them build and pay for them. Large expenditures of public resources to only benefit a few private businesses is ridiculous. Zero public funds, no tax breaks, and no public land grants either . . . sell the needed public lands at fair market value. Do not feed us lies about job creation, tax benefits, civic pride or any other . . . Public funds for private playgrounds is always a loser for the public. Taxpayers busting their hump to raise a family on barely over minimum wage, who will never ride this gondola, should not have to pay for it.
29739	Marilyn R. Johnson	Once again it seems that money talks and the voice of the people doesn't matter. I thought that when the majority of people pooled on an issue were against the gondola concept since it would have a major impact on the aesthetics of the canyon let alone the wildlife living there. Utah is an outdoor sports state for hiking,biking, water sports, skiing, boarding, fishing, climbing, etc. A pristine canyon setting is what we currently enjoy for all of SLC's canyons. The majesty of our granite peaked mountains and easy access to the canyons is inviting to everyone, whether residents or visitors. The beauty would be obliterated, cluttered with aerial lines, support poles jutting out of the mountainsides or on the roadsides, obscuring the canyon's natural beauty. Mountain climbing is of growing importance in LCC. Don't those of us who like to hike, mountain bike, drive into the canyon have a say? Are we expected to stand by as our mountains are raped because of greedy ski resort owners and the UTA? What happens when there are mechanical problems with gondola operations in high winds? What about stabilizing support poles and lines that would mar the landscape? What about routine operational costs to maintain and repair the lines/gondola cars? Road blockages would occur for repairs to take place impacting those of us who use the mountains throughout the year. The financial impact to the residents of SL County would result in increased taxes to support UTA, all for the sake of profits for the ski resorts. This gondola plan would ruin the canyon forever. Collusion among greedy ski resort owners and the UTA will probably win. WHY ARE THEY DOING THIS? For greed, plain and simple. Let's not ruin what we have for the sake of a few bucks.
29740	Jeff Hansen	Don't ruin this canyon with a gondola. And don't spend any tax dollars on it.
29741	Cathy Austin	PLEASE "NO" ON MOVING FORWARD WITH THIS GONDOLA IDEA...NOOOOOO!!!
29742	David Crane	We don't want your ugly eyesore of a wildlife terrorizing machine, that's only for the rich and by the rich!!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29743	Pattie Johnson	No no no. Please do not build this! I grew up here skiing all resorts as early as 1976 & believe this will be detrimental in more ways than one. If it's constructed our Canyon's will be flooded more than ever!! with way too many people - the mountains WILL NOT BE SAFE to ski one- lift lines will be even longer, pushing the line way down into the valley. It's sad it has come to this. Reservation skiing is the only way now.
29744	Sarah Woolsey	I am against the gondola and favor buses, clean versions, and no large parking lots in the Cottonwood area. We need to minimize impact to the forest.
29745	Katelyn Anderton	Do not toll the canyons. I can't think of a worse consequence for Utahns than not being able to afford to go into their own mountains. We use the mountains as a REAL and powerful mental health strategy. I cannot emphasize that enough. Do not toll nature or our access to it!
29746	Kevin Peterson	Please don't ruin the canyon for all to maximize profits for a few. There are better ways to manage the traffic.
29747	Mark Tesetarits	The gondola is a terrible idea!! It's hard to believe it was even considered! The potential damage to this fragile environment is unacceptable..... not to mention that this option does nothing to get people to other trailhead destinations! It is taxpayer dollars supporting 2 private businesses!
29748	Mark Hoffman	The gondola makes no sense. No locals are going to ride it. It will be an eyesore over backcountry ski zones and take away from the amazing landscape. Tolling is the obvious choice
29749	Jeff Moll	The canyon is for everyone, not those that pay UDOT. It's become obvious UDOT has no interest in addressing the actual issue, which is how the canyon can accommodate more traffic, not how can UDOT make more money. Put in an additional lane open to all. Make it two lanes up and one lane down until 1:00pm, then flip it, make two lanes down one lane up. Putting in a bus lane is pointless, we empty buses now. And by the way, a gondola is a bus on a wire. And last, to solve the traffic issue on Wasatch blvd address the canyon bottleneck, not put a road black at the mouth of the canyon!
29750	Jeremy Steck	<p>It disappoints me that the Gondola Alternative B has been chosen as the preferred alternative for improved transportation in Little Cottonwood Canyon. I am encouraged that the funds for the Gondola have not yet been secured and that in the meantime the Enhanced Bus Service Option will be implemented. This provides time for the transportation solution that I believe will be best for BOTH Little Cottonwood and Big Cottonwood Canyons to be implemented, if done right, this will be successful and eliminate the need for the Gondola Alternative.</p> <p>One of the biggest oversights of this entire EIS is that it is focussed solely on Little Cottonwood Canyon. The data shows that there are more heavy congestion days in Big Cottonwood Canyon than Little Cottonwood for the past several years, even outside of ski season. The Enhanced Bus Service should equally help the traffic congestion in both canyons if implemented effectively and will provide a year round traffic solution.</p> <p>The Enhanced Bus System will be most effective if it is made to be easier than driving your car to the resorts or any of the many trailheads between Wasatch Boulevard and the top of each of the two canyons. As such, it should be free or at least subsidized enough so that taking the bus is cheaper than the gas that it would take to drive up each canyon from the each mouth in a personal vehicle (including the parking fees being implemented by the resorts in the winter). Buses should be given priority over personal vehicles to enter the canyon. This can be done by creating bus only lanes on Wasatch Boulevard to allow buses to pass traffic and make the turns into each canyon. If the buses have priority over personal vehicles for entry to the canyons, they may still be a very attractive option to users if the cost is slightly higher than driving a personal vehicle because you will get there faster. Buses should be equipped with external ski racks to avoid the hassle of bringing equipment on to the bus and holding it for the duration of the ride. Buses should also be equipped with external racks to carry bikes, crash pads for bouldering and sleds so that canyon users other than skiers may also be accommodated. The bus should be able to make stops at any requested location between Wasatch Boulevard and the top of each canyon so that all canyon users can be accommodated year round.</p> <p>In order for the Enhanced Bus System to be effective, the amount of buses needs to match the demand on any given day. This also holds true for parking at the bus stations. In the past years, I have observed the parking availability to be less than adequate for the amount of people trying to ride the bus. Perhaps the parking lot for the Gondola option could begin early to provide more parking options for the enhanced bus system? After studying this for the past few years, we know the approximate number of users that plan to use the canyons each day throughout the year. We also know that the current amount of buses and parking areas do not match those numbers. The quantity of buses and associated parking lots must match the demand for the enhanced bus system to be a success.</p> <p>If the number of buses are adequate, and they are given priority to enter the canyon over personal vehicles, and they are</p>
29751	Gary Beckstrand	Please count this comment as negative against the proposed gondola project. The cost is too high for the benefit of an affective return. The gondola will only be needed a few days per year by a very small user group. This is not a good use of tax dollars. The impact to the water shed is negative and not worth the risk as well as the towers and cables impacting the canyon view. Increase bus service and limiting single use vehicles and/or a toll road should be better solutions.
29752	Marie Barnhurst	This is futile I know. No matter what the majority of residents comments here or on Facebook, the people with the money who want this monstrosity will prevail. We do not want this overpriced gondola project. It is a travesty to use taxpayer funds for something that so few will even use! What a terrible idea. No! to this gondola travesty!!!
29753	Diane Schnarr	I have commented before, but feel I have to re-iterate my concerns after reading the article about SLC future water resources. We are already pushing our canyons to the limit. We were smart enough to not include Little Cottonwood in the Olympics. Let's not try to get more people up the canyon. That is not the goal.
29754	Kurtis Bleeker	I am opposed to a gondola in Little Cottonwood canyon. It will destroy the canyon. And the taxpayer will end up paying for the destruction.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29756	Caitlin Fellows	<p>The proposed idea of a gondola in Little Cottonwood Canyon has a number of problems. The main reason is that it will cater only to the ski resorts, leaving people participating in the many other types of recreation in the canyon to still drive, and not really solving the traffic problem. Any solution considered should be accessible and inclusive to all people who recreate in the canyon for all types of reasons. A gondola is not accessible to many types of recreation, and favors only those who ski during the winter.</p> <p>Furthermore, while there was an EIS completed about this project, it still has the huge potential to disrupt the ecosystem of the canyon, not to mention ruining the natural beauty and views that draw people to Little Cottonwood in the first place.</p> <p>As a resident of Salt Lake City and a frequent user of Little Cottonwood canyon outside of the ski resorts, this proposed gondola would not make the canyon any more accessible to me, and would ruin my enjoyment of the canyon in the process. Please reconsider this idea.</p>
29755	Joshua Davis	<p>Save the canyons. There is no need to destroy the canyons just for conveniency. It is unethical and will destroy so much. Do you see his many people are against it? It's not for the good of the people if everyone is trying to stop it</p>
29757	Daniel Mervine	<p>Good morning, I'm sure you've heard comments similar to this but I'm another outdoor enthusiast who believes that there exist better solutions than the gondola. Increasing the number of busses for instance or making taking the bus more convenient and cheaper than driving. There's more solutions that can better protect the environment, the climbing, and save money while also clearing the traffic issue. Thanks.</p>
29758	Carla Amis	<p>I can't believe the power we have given ski resorts. The damage and contention this is doing to our community is amazing to see. My family works in the ski industry and has for over a decade. It is a selfish and greedy world. Wish we could push the clock back and get rid of both Snowbird and Alterra. This is our last season in that industry. On retiring in a few yers I had considered moving to Alta, not a chance now.</p>
29759	Jacqueline Wheeler	<p>I believe building the gondola is a huge mistake. Why is a train not even an option? What about the issue in Big Cottonwood? \$550 million and not even addressing the issue in BCC!!! The gondola will only shift and enhance the traffic issue at the bottom of LCC. Enhancing the buses and exploring the option for a more sustainable YEAR- ROUND option to sufficiently address the traffic flow issues for all users would be the more appropriate approach. The gondola is lacking foresight on many levels. I am not in support of the gondola.</p>
29760	Eileen White	<p>It would be a travesty and a tragedy to go forward with a gondola system. The real problem would be there'd be "no going back". Once one was in place, we could never capture the canyon as it was. Save yourself a lot of regret (not to mention criticism) for moving forward with such a plan.</p>
29761	Jose Ramos	<p>Save Little Cottonwood CANYON!!</p>
29762	Eli Davis	<p>There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws.</p> <p>We have seen parking reservations work throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon.</p>
29763	Eli Davis	<p>Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging.</p> <p>They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses.</p> <p>UDOT's EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts.'</p>
29764	Onno Wieringa	<p>Good Morning</p> <p>As an employee of Leitner Poma of America -- One of two builders in Utah that builds Gondolas -- I congratulate UDOT for two primary things relative to the recent step in the Little Cottonwood EIS.</p> <p>First is that I feel you continue to run an excellent EIS process that stuck to your stated objective of choosing the best alternative to improve safety, reliability and mobility. Second is that you made the choice of picking the Gondola B option. Leitner Poma continues to stand ready to be a source of expertise for UDOT as you continue to refine the gondola engineering.</p>
29765	Nicholas Kent	<p>I believe there is a better solution than a gondola bus lanes widening roads or tolling the answer I think could be found by incorporating the idea of a overland train much like what the military used in the 60s it would cost less than 10% of the gondola cost you would have to have one developed however modern technology has advance greatly from when the original overland trains were built in am positive you could incorporate running as a diesel solar hybrid it would be able run on the existing roads carry way more people than the gondola or buses could you run it like the front runner one every 30 minutes which you should be able to achieve with 3 possibly four trains running you still allow individual vehicles up under carpool restrictions and tolls that allows you cut emissions significantly. Another benefit of using overland trains would be if designed like the military's you would not need to worry about avalanches covering the road as those machines were designed to go over extreme terrain another benefit would be the lack of permanently scaring the landscape with towers, third benefit would be the possibly of using the existing roads and then just changing the traffic pattern to better accommodate the large vehicle. If done properly you could have a win on every side of the equation. As for operators it would be much like operating the frontrunner however you would want some one with semi truck experience as this is more of a large truck than a train. I strong ley believe that this could be the best option and needs to be seriously considered.</p> <p>Thanks Nick Kent</p>
29766	Bob Westover	<p>Big NO on Gondola</p>
29767	Jonah Flint	<p>A gondola would only service skiers and cause traffic at the beginning of the canyon for parking. A railway could be integrated into the existing rail network for greater utilization for everyone not just skiers. DO NOT BUILD THE GONDOLA BUILD A TRAIN</p>

Comments on Little Cottonwood Canyon Final EIS

29768	Jared Ables	<p>1. I don't understand how this is going to alleviate traffic in any way.</p> <p>2. I don't think that this should be taxpayer subsidized, if it clearly only benefits the ski resort</p> <p>3. If we do go through with this, can we at least open parking back up for backcountry access at grizzly gulch? Surely Alta should no longer need those parking spots with the gondola transporting people up.</p>
29769	Diane Cotsonas	No Gondola!!
29770	Olivia Dale	<p>I have been skiing at Alta for my whole life. My parents used to strap me to their back and ski down. Alta is like my home on skies. Now, as a college student, the idea of an expensive, time-consuming, environmentally damaging gondola is angering and depressing. The gondola price point (about \$30 per ride) would be impossible for students or lower-income students to afford. A drive that can take 20 minutes turned into an hour would waste everyone's time. The added infrastructure would also RUIN bouldering locations throughout LCC and negatively impact the surrounding environment. The proposed parking lot site would also pave a legitimate slice of paradise in Utah. Plus, this would result in increased traffic in neighborhoods. A better solution would be to have the cars parked down by the freeway. Bus the skiers directly to Snowbird or Alta on EXPRESS buses. Not allow any downhill traffic from 8-10 am and no uphill traffic from 4-6 pm. Using all the lanes to go either up or down packed with buses. . . just like they do on the West side for a few streets.</p> <p>I am already conscious of carpooling to the ski resort and actively protecting our canyons. I will continue to do so. The proposed plan for the gondola is asinine, especially with all the comments and feedback. Implementing this plan would negatively impact the joy and use of the canyon forever. There are methods that would allow for the same results without having such a negative impact and going against public opinion. Do the right thing.</p>
29771	Devin Zander	I firmly believe the Cog Rail is the best solution for the canyon of you are trying at all to be equitable. The cog rail would be exclusively used by those who have cars to get to it. A cog rail could eventually connect to TRAX. The other benefit would be reliable year long service. Please do not do the gondola.
29772	Adam Johnson	Gondola is a horrible solution. Please consider alternative options.
29773	Forest Felling	This will negatively impact little cottonwood canyon's environment, hiking, climbing, and natural beauty. It should not be done.
29774	Phillip Bond	<p>Why am I, as a tax payer, paying for infrastructure related to two private business? Alta continually blocks my access to public lands and now they want millions of dollars from us to pay for a direct service gondola to service their resort?!?!?</p> <p>What is their financial obligation as it relates to this project. I am 100% against this [REDACTED]</p>
29775	Gary Giancola	<p>In my opinion, the Gondola will be highly underutilized and not justify the huge cost and large footprint. I do not believe that there are enough days of backed up traffic to justify this large expense for taxpayers. I honestly think that visitors will be dissuaded from taking a 50 minute Gondola ride when it now takes 15 minutes to drive up the canyon. For the small amount of days that the canyon has traffic issues, the cost of this project simply cannot be justified. If the resorts and developers want this, they need to bear the expense themselves as they will be the primary benefactors. I am frustrated with how heavily the politicians cater to the developers in Utah. The tax burden for this overreaching corporate boondoggle should not fall on Utah citizens. There are better alternatives that are more cost effective, reasonable and have a smaller footprint.</p>
29776	Ryan Fray	<p>Facilitation of increased profit for two business at such a large expense to taxpayers is ridiculous. The simple fact that these resorts refuse to institute a maximum capacity model that would solve many of the problems that you are willing to invest over \$350 million dollars to help solve is pure insanity. Increasing our taxes so that we can allow them to profit while decreasing the overall experience by enabling over crowding of the slopes is completely irresponsible. No one seems to consider the increase in wait times in lift lines, the overcrowding of the runs that will increase injuries and decrease the ability for beginner skiers to improve in a safe environment. Skier retention should be the focus not enabling resorts to increase capacity at tax payer expense. This is simply not good for the future of the sport. The greed of more profit and ignoring future development of a more positive on hill experience is not the way. By limiting ticket sales traffic would organically decrease on its own without the need for such drastic changes.</p>
29777	Andrew Newton	<p>Would you mind having your various proposals and subsequent studies peer-reviewed by an independent panel? I frankly don't trust that this has been done with public utility in mind. I would feel more comfortable - as would all of us - if the economic and environmental impact reports could be independently assessed. There seems to be a severe lack of transparency in this process. Having been a part of some of the initial feasibility conversations on this topic at the University of Utah, a gondola fell almost near the bottom of the list. It renders existing infrastructure almost entirely obsolete, an immediate red flag. In virtually all economic planning, using or repurposing existing resources almost always generates a more efficient outcome. I'm skeptical that this is objectively the best outcome.</p>
29778	Michaela Murphy	<p>I just moved to Salt Lake City and the rock climbing scene was a big factor in my decision. It is devastating to hear that such an amazing and unique resource to the area is going to be destroyed to serve a single, privileged population of skiers. There are less wasteful options that should be implemented instead to preserve the valuable natural resources SLC has to offer the world for years to come.</p>
29779	Kenneth Fleck	<p>Were it not for the skiers and ski areas in Little Cottonwood Canyon, this project would not have been proposed or considered to be necessary by some. Skiing is an amusement for the wealthy, privileged, and entitled. The proponents of this project, the ski areas and skiers, should pay for all of it if it is constructed. Utah taxpayers who don't ski should not be asked to pay for a project that is only for skiers. Ski areas should limit the number of lift passes to reduce the impact of skiing activities and traffic. A gondola and towers in Little Cottonwood Canyon will further defile the appearance of the most scenic glacier-carved canyon in the state.</p>
29780	Jon Bischoff	<p>No on the gondola! Public money should not be spent on getting more people to 2 businesses! There will still be jams on the canyon road, but the gondolas only purpose is to get more people to 2 businesses to sell more ski passes. This is ridiculous.</p> <p>The pristine view of the glacial carved canyon will be destroyed with 200' towers sticking up. Crazy. Why this is even being considered is beyond me.</p>

29781	Brad Myers	<p>There are other, less intrusive options for dealing with the traffic concerns that plague the cottonwood canyons and connecting neighborhood roads throughout the ski season. The gondola should be the last pick, due to its greatest impact on the current undeveloped parts of LCC. Further development of the roadway for buses, avalanche overpasses, etc. should come first over disturbing areas such as the bouldering fields, forest, etc.</p> <p>Putting the gondola in risks access to these areas at worst (either by increasing or decreasing access/popularity) and at best disturbs the natural beauty of those areas in the canyon. People will now be able to 'look down' upon climbers, bikers, etc., further reducing the natural appeal of those sports in that area and causing increased incidents of localized overuse and vandalism in said areas.</p> <p>Keep the gems of LCC hidden. Keep the travelers of LCC on the roadways; don't elevate them. Don't expose these precious remaining areas of the canyon to overuse and possible damage.</p>
29782	John Curl	<p>Please don't go through with the gondola. Going through with it would not only affect Utah in a detrimental way but also lead to less professional athletes coming to salt lake from worldwide. The Mecca for outdoor enthusiasts and professionals would be very affected for the sole reason is a few skiers want it, when there are other cheaper, better, and more responsible options. Please don't go though with the gondola.</p>
29783	Rebecca Colley	<p>I oppose the gondola for many reasons. The tax increase that will be required of the citizens - a majority of whom do not utilize these facilities to the tune of well over \$500M is unreasonable given the ROI. Construction of the gondola would destroy both open space and wildlife habitat in one of Utah's most beautiful areas. It seems as if this is a pretense to develop the city's unique urban wilderness. The extensive building process would have adverse consequences with closures to picnickers, hikers, horse riders and other canyon users. There are more pressing issues to be addressed right now with our tax dollars than to hire study groups, analysts, and then spend the big bucks we all work so hard to provide to the State and hope and pray for fiscal responsibility. Ultimately, the gondola would NOT be transportation, it would be a ride - and that should not be borne by the citizens of this great state.</p>
29784	Timothy Myers	<p>Hello,</p> <p>I was born and raised near LCC and have seen the area grow in my forty years here. I understand the issue for a need to allow a growing number of people enter the canyon, but adding a gondola without experimenting with other options is so very reckless and upsetting. This plan will obviously only go to serve the ski resorts and provide development with funding. The public is so blatantly aware of this fact. We should all be outraged that tax dollars are being spent for private interests. Our climbing areas will be destroyed. The gondola will not serve those who enter the canyon to hike/ski in areas outside of the ski resorts. Perhaps the most upsetting thing is that a massive, permanent eye sore will be introduced to one of the most beautiful places on earth. We can't reverse that. I was raised to respect our environment and this plan is in direct opposition of that mindset.</p> <p>I vehemently oppose the plan to implement a gondola and would like to see options of adding a toll and/or expanding bussing. I implore you to reconsider this irreversible action to our public lands.</p> <p>Thank you.</p> <p>-Tim Myers</p>
29785	Stephen Weaver	<p>This type of project which will clearly impact the environment and the ecosystem contained within it is very clearly all about money and should be reconsidered for different and better options. The land which is utilized by countless species as well as recreational outdoor enthusiasts of MANY sports deserves to be preserved and not just exploited for white collar tourist magnets.</p>
29786	Sarah Newton	<p>The gondola is not an equitable solution it primarily it benefits the shareholders and snowbird and Alta. This is benefitting businesses and not the locals in utah. I think a better and more often bus system is a much better alternative. As a local who has lived here my entire life and loved exploring the mountains I would be heartbroken and disappointed to see the gondola installed. I have always been an avid user of the bus system and would love to see improvements on a shuttling the canyon.</p>
29787	Raymond Gillette	<p>Climbers and other outdoor enthusiasts from all over the world have enjoyed this wilderness for how it currently is. Some climbers are even world class now because of frequenting this area. It would be an absolute shame to ruin this beautiful place forever.</p>
29788	Laurel Newton	<p>I understand there's a problem needing to be solved. However, this to me doesn't solve the problems and adds more problems. This won't help with congestion. This has a huge environmental impact. There will be a parking issue with this plan. I don't think it solves any problems for families carrying a lot of gear up the mountain. It will destroy views. I think there is a better solution. Electric buses that go up the canyon every 30 minutes will be far cheaper, more environmentally friendly, and not block views. Also it could be fixed this winter if supplemented. To me it's the fastest, easiest, and cheapest option for the best outcome.</p>
29790	Keely Mccole	<p>Please do not build this gondola. I do not use ski resorts and do not want my tax money to go to funding this project. Thank you</p>
29789	Helene Cuomo Cuomo	<p>NO, please! to Gondola B alternative. Too many negatives such as cost, where will all the people park, lawsuits if any part of the gondola fails, eyesore to the beauty of the canyon, taxpayer expense versus alta and snowbird benefits, an iffy fix for less than half a year of use and a full year of hassle to see the towers, , pay for it, get to it, and the negatives go on...</p>
29791	Emiline Twitchell	<p>Please, no gondola. We need to preserve natural spaces and protect the environment we call home. Please prioritize the canyon in as much of its natural state as possible over profit.</p>

ID	Full Name	Comment
29792	Sarah Ricketts	<p>The gondola B alternative is the wrong choice for Little Cottonwood Canyon, Utah and the environment. The initial proposed phasing is worth the expense and worth trying.</p> <p>There are so many unanswered questions - so many much less expensive solutions that have not been tried. Why on earth is it a good idea to spend so much money on the gondola without trying those other solutions? Putting in a gondola requires significant infrastructure that can't be easily removed if this solution does not work.</p> <p>The initial phasing is a great way to tackle the problem in a more cost-effective and environmentally friendly way.</p> <p>Enhanced busing without the road widening seems like a no-brainer. Provide more options for public transportation. More buses = more opportunity for riding public transportation = fewer long lines and packed buses. Let's make it EASIER to take the bus. And if we are using buses, why not make them electric which is even more environmentally friendly? Several of our local leaders tested out electric buses and found they worked great up and down the canyon.</p> <p>If we are using enhanced busing, make it easier for riders with 'express' buses to Alta, 'express' buses to Snowbird and 'local' buses to stop at popular trailheads.</p> <p>Tolling will affect people's decisions to drive up the canyon and the funds can be used for road maintenance, avalanche control, sustaining the tolling system, etc. Tolling works in Millcreek Canyon - why not Big and Little Cottonwood Canyon too?</p> <p>Parking reservations at BOTH Snowbird and Alta are a great idea. If you don't have a parking reservation, you won't drive up the canyon! This is a proved solution!</p> <p>Enforcement of the traction law is also a no-brainer. Only allow vehicles up the canyon with the proper tires and AWD. This should be enforced leading up to a storm as well to reduce the numbers of cars slipping and sliding and getting into accidents.</p> <p>The addition of permanent infrastructure (20+ towers) makes me sick to my stomach. How can we even comprehend such a choice that would impact the land, the watershed and the views? We need to preserve the landscape AND the beauty and wonder of LCC. Building the gondola towers will permanently destroy the views. That infrastructure cannot be easily removed.</p> <p>Ultimately, the gondola only benefits a small portion of the population - a relative few who already have the means to ski. Taxpayers' money should be used to improve the lives of the state's most vulnerable (bolster things like low-income housing, food insecurity) or fight climate change or improve our public education system. The gondola is not a good use of taxpayers' funds.</p>
29793	Curtis Allred	<p>The gondola is a terrible idea that only benefits one user group, those skiing at the resorts on weekends and powder days. I frequently visit little cottonwood canyon for many reasons climbing, skiing, hiking and biking. Every one of those would be poorly impacted by a gondola. It would only give me access to one part of the canyon while visually being horrendous for the whole area. Waste of money that could be better spent on improved bus service.</p>
29794	Taylor Braithwaite	<p>I think we should have no gondola and no road widening. Instead have a well run bus system, with plenty of parking in the valley.</p> <p>During high traffic times, ie winter and weekends during the day charge \$100 to drive up the canyon. There can be no exceptions. If you work or live up the canyon, you must still pay the \$100. If you want your vehicle and you don't want to pay, then drive up during low traffic times.</p>
29795	Stephanie Owen	<p>This project is morally corrupt and will do irreversible damage to our beloved LCC. It couldn't be more obvious that this deal will be stealing citizens' tax dollars to benefit ski resort business owners. Aside from this gross misuse of tax dollars, it's our duty to be good stewards of this land. Once land is developed and damaged, you can't go back. Please think about future generations who will be continuing this stewardship in the future. Please demonstrate good business sense and ethics by employing less drastic measures to solve this problem first.</p> <p>Thank you.</p>
29796	Kestrel Spring	<p>If the goal is to "provide an integrated transportation system that improves the reliability, mobility and safety for residents, visitors, and commuters who use S.R. 210" than a gondola does not seem like the solution.</p> <p>I use the canyon a lot, year round, for hiking, skiing, walking in the woods. I value it for the natural beauty. A gondola will be a sore thumb in the canyon, and a large, permanent one at that. It also will not fulfill the stated goal as the transportation it provides won't address all the issues. The canyon traffic was greatly improved last year with just the few measures the ski resorts took. It seems wise to build on that success rather than head in a totally new, expensive direction like building a massive gondola.</p> <p>"Ultimately, the partners seek to deliver transportation options that meet the needs of the community while preserving the value of the Wasatch Mountains' A gondola does not hit that mark. A rail line on the road would be better. Or further incentives to car pool.</p>
29797	Kelli Jurgens	<p>Here visiting this beautiful LCC today 09/22/22... we traveled to the area from South Dakota to attend our son's celebration of life. Our son lost his life in the Gates Buttress climbing area last October 2021. It breaks my heart that destruction of such a beloved area to so many people is under attack. My son loved this Canyon, called it his "backyard". I say HELL NO on this proposed gondola. Leave the landscape the way the universe designed it. ¿ú?</p>
29798	David Evans	<p>The technology is already here. There is a gondola system from the Oakland, California airport to the Bay Area rapid transit system. It works, no bus driver, and no long wait for the bus.</p>
29799	Matthew Pyle	<p>The best possible solution would be to put a trax line that runs from university of utah stadium that runs up foothill drive and down the belt way all the way to the canyons. Then have busses or a gondola that goes up the canyon that people can access at the base of canyons.</p>
29800	Javaid Lal	<p>Gondola will only serve few people who just want to get to the resort as fast as they can. Have you looked at the ski demographics? - https://www.nytimes.com/2022/02/05/style/vail-ski-resorts-crowds.html</p> <p>SAY NO TO CONDOLA!!!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29801	Gretchen Quinlan	As SLC resident and a climber and snowboarder I'm in LCC frequently. I've also traveled to France, Switzerland, and Italy and taken some of their most iconic gondolas. They do not build them over traffic in their canyons, that is how they use gondolas. They build them where it would be difficult or impossible to build a road. Before destroying irreplaceable and historic world-class climbing resources please get more creative with this. Why not just discontinue the road and build a train that will move 3x the amount of people? Or a funicular railway? Thanks for listening! - Gretchen
29802	Will Mckay	<p>I do not believe the gondola is economically viable solution. I will not elect/re-elect an official that is in favor of this. It's too low capacity, does not operate in the summer, and is too larger of an environmental impact. My vote is that canyon traffic should be regulated to only buses Friday - Sunday. No cars except for those with residencies at Alta or Snowbird. General public must take buses. This would equate to an increase in buses driving the route and would not require a road widening or a construction of a amusement park-esc gondola that serves a purpose only a few busy days a winter season.</p> <p>I'm a mountain guide in the canyons and make almost my entire income taking people into the backcountry environment which people travel from around the world to experience. A gondola will taint that experience.</p>
29803	Kate Rasch	This seems unnecessary and like it will cause harm. No thanks :)
29804	Clint Hanni	I support the gondola approach. It would be reliable, not impacted by road traffic and conditions, and enjoyable way to go to Kenya. My only concern is what the cost would be to ride the gondola. If it would cost more than the typical cost of driving a car, then I don't think I would be as interested in the gondola.
29805	Erica Hsu	It would be heartbreaking to tear up the canyon to place a gondola. There is so much history in climbing in LCC and to remove that just to please rich ski resort owners is outrageous. We should focus more on what we can do to mitigate climate changes that are affecting SLC as a whole.
29806	Katie Nelsen	The gondola only serves resorts, not the public. It would cause irreversible damage to the landscape & ecosystem of the cottonwoods. I am deeply opposed to the gondola and disgusted with the disregard for the public and taxpayer money.
29807	John Newton	<p>I am opposed to the gondola in Little Cottonwood Canyon. And apparently the vast majority of the population of Salt Lake agrees with me. The fact that the project is moving forward can only stem from two things: either the gondola is a great idea that somehow those pushing the project have not been able to express properly to the public; or else it's the terrible idea that the public think it is, but will make a small group of important decision makers a lot of money, so they are pushing it through anyway. In other words, the gondola idea has either had bad marketing, or is the result of major government corruption. Considering the pro-gondola group has spent large sums of money on marketing this idea and yet public sentiment just seems to sour even more, it seems like they've done their best marketing. That leaves the corruption being the main driver behind the gondola idea. Considering the track record of government in general, and the amount of money already invested into making this project happen, that seems like a very sensible explanation.</p> <p>If this gondola project goes through, I have no other option but to assume that my government leaders are horribly corrupt.</p> <p>Build a large parking lot by la caille. Get a fleet of small electric or hybrid buses and have them run the canyon. Make those buses free to ride, but charge cars tolls to drive up the canyon. Let the tolls from the cars pay for the buses. (That way you want to incentivize taking the bus and de-incentivize driving. Buses that cost money, but free driving does the opposite, making traffic worse.) Adjust the price of those tolls as necessary to reduce traffic and keep the buses free or affordable. No need to widen the roads. All of this would probably cost less than what the gondola plan has already spent on trying to market their terrible plan to a public that thank heavens is smart enough to see through some clever marketing.</p> <p>No one wants an expensive gondola that is an eye-sore in the canyon, an enormous burden on tax-payers, is too expensive to actually ride regularly, and isn't interesting or fun enough to actually be a tourist attraction. The views of the canyon from the road are excellent. A gondola doesn't give you better views. Instead, it spoils the already amazing views from the road.</p>
29808	Kara Esplin	As a born & raised proud Utah citizen, I have never had the privilege of holding a ski pass. Raised by a single mother who provided for her kids on a public school teacher salary, it breaks my heart to see this gondola project move forward. This gondola does not serve me. It does not serve all the lower-income Utah residents who love this state, yet have not even the opportunity to participate in one of the most famous Utah pastimes. Our tax money should NOT be used to serve those who can already afford the high prices of winter recreation. We should not be catering to wealthy resorts full of fancy tourists. I care about our environment. I care about Utah citizens. My priority will always stand here. Us Utahns are the ones who have to live here and suffer the environmental and taxation consequences. How can we justify such a large investment when teachers like my mother can't even stock their classrooms with basic needs? Put that tax money into public streets, electronic busses, etc. all things that'll actually benefit Utah residents for years to come. If I'm popping my tire driving on pothole filled roads in my community, you bet I'm going to stand against an unsustainable/catering to the wealthy gondola. Stand up for actual Utahns. Don't cave to half-solutions. Do what's right. The gondola is not the answer.
29809	Kara Esplin	The gondola is not the answer. Stand up for Utah residents and hear our voices. NO GONDOLA.
29810	Kenny Lee	This is a very, very bad idea. Unless the gondola will be made free for all resident, this is serving private interest. The better alternative is to incentivize more public transportation, better wages to the workers, more shifts, shorter intervals would solve the issue, building a gondola will not resolve the traffic issue if there is no incentive to use it
29811	Danny Komkov	The proposed gondola is a great solution for car traffic in LCC, but it completely restricts anyone who wants to use the canyon except for those skiing at two private ski resorts. It will be almost impossible or very difficult for anyone else that wants to use the canyon
29812	Tre' Nelson	I a-pose the gondola. It's expensive. It destroys the tranquility currently enjoyed in the canyon. I say get ██████ to anyone trying to build a ride for millionaires up to the ██████ ski resort. Get ██████ UDOT is what I am trying to say as well for pushing this ██████ to the next stage.

29813	Cynthia Costa	What a waste of tax payer dollars...only a limited number of people will benefit from this! Add shuttle service like Zions NP does and require it's use during ski season. Why should UT residents fund tourists & the limited UT residents that are inconvenienced by traffic delays to ski! Definitely focused on the 'haves' vs 'have nots'.
29814	Amelia O'Neill	Please do not ruin our canyon this way. Explore other options. Create a better bus system. This is in no way the answer. - Local climber, hiker, skier, trail runner.
29815	James Matthew Rock	See Instagram for black ball veto
29816	Loralee Schafer	I feel than an improved bus system would help to improve the traffic situation in the canyon. Buses are used very well in zion canyon and park city. Buses would be able to take passengers to many stops within the canyon. The gondola is expensive and would not serve the needs of as many passengers.
29817	Trenton Harris	Why would UDOT consider funding the gondola for private business(es) when it doesn't benefit ALL users of the canyon equally?? This should be funded by the companies that will directly benefit from it, or not at all! Furthermore, how will we accommodate all the vehicles parking at the mouth of the canyon? By busses?? If so, then why not just have the busses go all the way up the canyon? If UTA provided good, reliable, comfortable and economical choices to get up and down the canyon, people would use it!! I've used it recently (during ski season)! The problem is the busses are hugely unreliable, not that comfortable, and not economical!
30985	Nicholas Kent	-
29818	Kirstie Jorgensen	No construction whatsoever
29819	Diane Forster-burke	Dear UDOT board, I am strongly opposed to both the widening of Wasatch Blvd AND the gondola project for Little Cottonwood Canyon. I live on [REDACTED] and the commuter traffic is not bad enough to warrant any widening of Wasatch. We only need better spaces for pedestrians and bicyclists to use that is separate from traffic lanes. This road needs to maintain its curves and should have a lower speed limit than 50 mph. It certainly does not need to have 5 lanes plus bus lanes! The recently completed "escape lane" from Little Cottonwood Canyon is a nightmare for those of us who live near it. It has become a speedway for people exiting the canyon and motorists have increased the noise of their engines so that it sounds now like we live next to the Miller Speedway. Noise ordinances are violated throughout the day and nighttime hours. The gondola idea would be destructive to the canyon's natural beauty and is horribly expensive while serving only 2 ski resorts for perhaps 3.5 months of the year. It is a major corporate subsidy gift to Alta and Snowbird. It is NOT needed as other methods of restricting traffic through reserving parking and more electric buses would serve sufficiently during the ski season. I definitely have the feeling that UDOT is NOT listening to residents who will be greatly affected by these horrible projects. As you hope to receive tax dollars to complete these projects, please be advised that I have communicated my objections to state legislators. Thank you.
29821	Mary Giles	AGAINST the Gondola: As a resident of Utah, specifically Sandy, I am AGAINST the proposed gondola for the following reasons: Loss in revenue from the climbing community. Every year, climbers travel to Little Cottonwood canyon from all over the WORLD to climb here. Videos can be found online of climbers spending time in Little Cottonwood canyon for weeks trying to climb these boulders. Destroying this landscape would destroy this source of tourism and revenue for Utah and future generations. Destruction of landscape for current Utahns- current Utahns use these boulders to climb every season. They are renowned climbing spots for aged climbers and new climbers alike. Destroying a piece of climbing history. Limited use of the gondola for limited groups of folks: the time of year this gondola would be "put to use" and the number of folks that would use it does not outweigh the number of folks who use these boulders and landscapes to recreate for longer periods of time throughout the year (outside of just the limited winter season) With the projections of snow DECREASE in the canyons due to the destruction of the Great Salt Lake, more investment by UDOT should be done to benefit public transportation in the Salt Lake Valley instead of a gondola to benefit only a select few during a select time of the year.
29820	Steve Wyman	1) Why spend so much and permanently scar the natural landscape for a need only a fraction of the year? 2) It will also attract more tourism which only perpetuates the current problem trying to be solved. 3) The benefits only go into the pockets of those campaigning the idea while tax payers bear the brunt of the costs.
29822	Andee Thatcher	This is pure corruption. 70% of the people who will be paying for the gondala voted against it. This is the rich pushing their way onto the majority of the people and it is wrong.
29823	Ash Gambhir	The Little Cottonwood Canyon does not need a gondola. It needs mandatory shuttle (bus) transportation like the one in Zion National Park during peak months of ski-related travel (December - March). We need to preserve LLC for others who do not go to the resort and instead climb, backcountry ski, hike, trail run, or boulder in the canyon. It is a habitat for many animals and a source of water for us. You should be ashamed that you are trying to give away our hard-earned tax dollars to build a catastrophe Gondola on public land to Snowbird and Alta so they can make the big bucks.
29824	Dylan Day	If this impacts the climbing in Little Cottonwood we will be moving away from the stewards of the outdoors that we are. Please do not take this decision lightly.

29825	John Draghi	<p>Adding a gondola up LCC would be a comically expensive way to destroy the canyon for a partial solution to a problem that only exists for a few hours a day on a small % of days per year. Nobody likes sitting in traffic, but the other alternatives are both more cost effective and minimize environmental impact.</p> <p>Improved bus service, tolling and paid parking reservations at ski resorts will all help reduce traffic by encouraging mass transit use, carpooling and spreading out road use. There's less of a uniform rush to the canyon in the AM to ski if you know there's a parking spot waiting for you upon arrival (yes, the die hards will all want to get up there early anyway).</p> <p>With regards to bus service, improvements need to make it not [redacted] Simply adding more buses won't do the trick. The park and rides close to the canyon fill up early and taking the bus from further out (like Fort Union) takes forever. The bus is often too full to get on or standing room only. The bus sits in the same traffic cars do. Consider running express buses from larger parking areas further away. Consider a light system like those used for construction to allow buses to travel up portions of the downhill lanes at peak times or adding seasonal dedicated bus lanes BEFORE the canyon. Resorts should consider ways to incentivize bus use, like a preferential spot in line before lifts open, discounted tickets or concessions.</p> <p>Beyond environmental impact, it's insanity to even consider spending so much building a gondola with the myriad of other problems facing the state of Utah.</p>
29826	Slow De Assis	Suggest; add a bike lane both ways along 204
29827	Amarjeet Gambhir	<p>NO GONDOLA! The Little Cottonwood Canyon does not need a gondola. It needs mandatory shuttle (bus) transportation like the one in Zion National Park during peak months of ski-related travel (December - March). We need to preserve LLC for others who do not go to the resort and instead climb, backcountry ski, hike, trail run, or boulder in the canyon. It is a habitat for many animals and a source of water for us. You should be ashamed that you are trying to give away our hard-earned tax dollars to build a catastrophe Gondola on public land to Snowbird and Alta so they can make the big bucks. NO GONDOLA!</p>
29829	April Davidson	<p>This would absolutely destroy the beautiful canyon. So many people go here to enjoy nature of all kinds. It's bad enough there is pretty much a highway that goes through it. Don't ruin what's left! Save some sort of peace here.</p>
29828	Euresruoimb Euresruoimb	<p>É—Ä—Ç—∞—Ω—æ—≤—∫—∞—∞—ª—°—∑—Ω—æ—≥—æ—±—É—Ä—µ—Ω—∏—è hilti</p>
29830	Emily Pitsch	<p>The FEIS acknowledges the presence and potential issues with the Flagstaff Superfund site and how it relates to the gondola base construction. The site was removed from the EPA's NPL list because it was remediated appropriately for the status of the parcel at the time. In some locations soils deeper than 18' and under native vegetation were left undisturbed but remain contaminated.</p> <p>https://semspub.epa.gov/work/08/100011955.pdf</p> <p>I think it is absolutely essential UDOT evaluate this site further to understand the monetary and time commitments remediating this site will require. Excavation will lead to suspension of dangerous soils in the air and present a grave health risk for residents near the proposed gondola base. The FEIS neglects to address this.</p> <p>Furthermore, UDOT rationalizes choosing the gondola over the other preferred alternatives because, comparably, the environmental effects from the gondola are less. But it is impossible to compare the true environmental impacts of the preferred alternatives when UDOT does not even know the environmental consequences of digging into a site contaminated with heavy metals.</p> <p>Excluding the health and environmental impacts of construction on/near the Flagstaff Smelter is biased towards the gondola and negligent.</p>
29831	Marilyn Copeland	<p>A gondola on this site is wrong for so many reasons. It wastes taxpayer money to benefit the ski resorts, not the broad populace. It serves only the ski resorts, not the many people who visit the Canyon for other recreation (rock climbing, hiking, etc.). If dwindling snow amounts are a result of climate change, it will stand as a monument to stupidity. Don't do the gondola OR widen the road. Run electric buses on an efficient, handy schedule on the existing roadway.</p>
29832	Adam Hosterman	<p>I am more than a bit frustrated and disappointed by the final draft decisions outlined here. By the EIS' own findings, the gondola will not reduce traffic in the canyon during peak times, will only serve the resorts and bring in more money for them, won't run year-round, will cost users to ride it, destroy many natural features of the canyon including the view, AND cost taxpayer money. In addition, the first round of comments showed overwhelming disapproval of the gondola and yet it is still one of the top choices. Do better.</p>
29833	Oliver Lewis	<p>Why are taxpayers funding transportation for private resorts? It makes no sense and is far too harmful to the canyon itself.</p>
29834	Alex Rudd	<p>Dear UDOT, please explain to myself and every other citizen of Utah why we should be subsidizing private businesses. Underneath all the marketing, B.S., and other rhetoric all this really is is a way to get people to a ski resort. I don't think myself or all the other taxpayers should have to pay up to a billion dollars (let's be realistic here, your \$500 mil quote is just the start here). Ski resorts are private businesses, and should have to find their own solutions.</p>
29835	Brian Gallegos	<p>I am so saddened by the decision to go with the gondola up LCC. This is so short sighted and doing absolutely nothing truly address the traffic problem. The gondola is only another tourist attraction. What about locals? What about the natural beauty of the canyon? What about decision making that isn't benefitting the already wealthy land owners in the canyon? What about BCC? Shame on you. Science and common sense say this is a money driven choice and not about solving real problems. Shame on you.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29836	Alex Dencic	I don't believe the proposed gondola solution is the appropriate way forward. Use of existing infrastructure and increased bus service make the most sense financially and ecologically. Any traffic issues can be easily addressed through requiring ski resort patrons to ride the bus up the canyon, and allowing private vehicles only for backcountry and trailhead use. Please don't permanently damage our canyon when there are better transportation options available.
29837	Aaron Gaitan	Terrible terrible terrible idea. This serves two private companies and not the environment or the people... unless they have somewhere to park and access this gondola
29838	Laura Bloom	I do not support the gondola project. Doesn't matter to me who is footing the bill, I do not want a gondola. Ski resorts are already overcrowded. Piping more people via an ugly gondola is only going to make matter worse. Please listen to the taxpayers who have been making it clear for years that we don't want this.
29839	Michael Budge	I do not support my tax dollars being spent on this project. My family will not benefit from the gondola. We use the canyon in the summertime to access trails mid canyon and avoid the resorts. This is an eyesore and poorly conceived. UDOT does not have the support of the citizens of Salt Lake County. This issue should be brought up for a popular vote before a single tax payer dollar is spent or an inch of public land is used for this project.
29840	Matthew Seppi	The private resorts are already reaming the public on lift ticket prices. Now I have to give them my taxes too? No way.
29841	Steph Olsen	I don't want it! Instead use bus alternatives and toll. No to Gondola ruining our canyon permanently to benefit the wealthy tourists.
29842	Marc Lofgren	I am in favor of the gondola. I believe it to be the best option for the future. In fact I think we should build one that runs the length of Salt Lake Valley above State Street.
29843	Melissa Larsen	This project will ruin everything that we have loved all of these years. The canyon is not Disneyland.
29844	Sara Matlock	I don't want the state/county to be paying for rich people to have a fancier skiing experience. That's not fiscal responsibility. This is not an essential service. The county should be prioritizing other transportation projects that will actually improve people's everyday lives. Just give skiers more extensive busing.
29845	Misti Milner	The gondola is too expensive and only benefits a select few (ski resorts). The other alternatives (electric busses with priority service up the canyon, etc.) seem to make more financial sense. Very few Utah locals want the gondola. Why should we be forced to pay for something the majority does not want?
29846	Erin Fant	The gondola should not be built until the toll implemented pays for it. It doesn't make sense to spend this much money for a very small percentage of people. Don't commit to a gondola until everything else has been tried.
29847	Olivia Wilson	I do not believe that a gondola will benefit the area or the environment. Better investment from UDOT in buses and the van/limiting of private vehicles in the canyon would be effective, both in terms of cost and environment impact. Very few will use the gondola and only a handful of corporations will benefit. As a Salt Lake Resident, I see no benefit to myself or community from the proposed gondola and strongly oppose it's creation.
29848	William Haas	<p>I appreciate the effort from UDOT on finding the best transportation solution for the Cottonwood Canyons. However, I believe that the Gondola is the wrong solution for a few reasons. First I am a former LCC Canyon resident and current Cottonwood Heights resident, who now works every day between LCC and BCC. I work as an avalanche forecaster and backcountry ski guide, and use FS trailheads as well ski resort access throughout both canyons.</p> <p>I have a few concerns with the gondola alternative.</p> <ul style="list-style-type: none"> - One, this is a single canyon solution and does not address any issues with BCC. In my experience, BCC is now just as bad as LCC in terms of traffic and congestion and it seems incredible that UDOT would spend this amount of money and resources for a solution that only address LCC. - Two, from the EIS study it does not show how the Gondola alternative will reduce traffic and congestion in LCC and the surrounding neighborhoods by any significant amount, and that the enhanced bus service will account for the largest reduction in traffic build up. The addition of the gondola will only account for about 10% addition reduction in build up, on top of the enhanced bus reducing 67%. - Third, with this marginal reduction in build up from the Gondola, per the EIS, there is no reduction in total number of cars in LCC on busy days predicted so canyon traffic will remain. Keep in mind that LCC has a parking capacity, especially when traffic and parking rules are enforced and this capacity is predicted to be met on busy days even with the Gondola alternative. - Fourth, the Gondola only services the ski resorts and ski resort users with little use to other canyon users other than Gondola riders (essentially a tourist ride). This is interesting as the majority of yearly Canyon users are not ski resort users. - Fifth, because the Gondola seems to show no significant reduction in build up, nor is it predicted to lower the number of vehicles in LCC, nor is it showing to be the least impactful or cost effective, nor is the Gondola predicted to have quickest travel times, and the only service the Gondola is providing is to bring more people to Alta and Snowbird ski resorts as they are essentially capped by parking spaces and bus capacity, it seems hard to imagine that the Gondola option will help in any capacity other than to help the businesses of Alta and Snowbird and their tangential businesses. - Sixth, this Gondola's effectiveness is only based off of "predicted" future use based off of the ski and outdoor industry. The popularity of the ski resorts is not certain, and so this solution may not even be as necessary in the future. Because of the permanence of the Gondola, there is no opportunity to scale back if LCC use changes in the future. - Seventh, it seems incredible to not try and phased approach to solving the transportation issues of BOTH BCC and LCC. <p>I believe with reserved/paid parking, better Canyon enforcement, tolling, improved avalanche control with more RACs (I do oppose the snowbeds), transportation HUBS, and greatly enhanced bus services (electric busses would be preferred and</p>
29849	Christopher Kuhn	Don't dump silt in the creek. Build the gondola.
29850	Donald Robinson	No Gondola! I think a fee station like the on at American Fork Canyon is a better solution, in my opinion.

ID	Full Name	Comment
29851	Kinde Nebeker	<p>I am in strong opposition to a gondola in Little Cottonwood Canyon. I understand the politics of this proposal are convoluted beyond my wildest dreams. But the facts remain that a gondola does NOT solve the traffic issues, does NOT consider other users of the canyon besides Alta and Snowbird patrons, and is NOT a responsible use of public money. The gondola DOES impact the visual beauty of this canyon and DOES put big money in the pockets of developers who are eager to build up the base of the canyon.</p> <p>As a Utah taxpayer, I demand that UDOT seriously and in good faith carry out the many other traffic-reducing alternatives available and ultimately scrap this irresponsible tram scam.</p> <p>Subject: A better alternative to the Gondola</p>
30616	Brian King	<p>Óªø</p> <p>Carlos, thanks for all you have done and continue to do heading up UDOT.</p> <p>I want to run past you information that I received from a well informed and thoughtful constituent about an alternative to a gondola system up Little Cottonwood Canyon.</p> <p>In reading the attached proposal I was impressed with the efficiency of this transportation alternative to ease the crowding in Little Cottonwood Canyon. I also was struck by how environmentally friendly this alternative was compared to other proposals that have been presented. My constituent, Larry Stucki, has done a great deal of research as you can tell from the paper I have provided from him.</p> <p>We all agree that how to best handle the traffic and environmental impacts in Little Cottonwood Canyon is critically important to our economy, our environment, and our quality of life. I would appreciate UDOT giving careful consideration to the type of transportation method that has been proven and effective in Switzerland and that Larry so thoughtfully outlines in his paper.</p> <p>Please let me know if I can provide additional information about this or if you would like to communicate with Mr. Stucki about this.</p> <p>Brian S. King</p> <p>Utah House of Representatives, District 28 Leader, House Minority Caucus 875 S. Donner Way, #1504</p> <p>Salt Lake City, Utah 84108 [Redacted] (Work) [Redacted] (Cell)</p>
29852	Bill Hiekel	<p>My family lives in Sandy and we are adamantly opposed to a gondola in Little Cottonwood canyon. We are year-round users of the canyon... whether skiing in winter, snow-play for the little kids at White Pine trailhead (a slice of paradise) and summer drives to the ski areas to eat and hike. The gondola with its 200' towers along this beautiful scenic canyon represents permanent destruction to the natural beauty of Little Cottonwood, and appears to be a solution in search of a problem (for a handful of powder days that clog the canyon... by choice for those skiers/boarders). Not to mention the astronomical cost to burden current and future taxpayers. This appears to be a "free government money" endeavor that doesn't pass the "common sense" test. Hopefully there will be a reversal of this decision that would destroy Little Cottonwood and permanently take away its spectacular beauty. Thank you, Hiekel family</p>
29853	Daniel Brinkman	<p>The cost of the gondola is astronomical. Currently the mass-transit options available in the Canyon are nearly non-existent. Unlike Big Cottonwood, there is no Park-n-Ride near the mouth and buses are infrequent at best. Mass transit should be faster, easier, and cheaper than driving. Building a gondola in the canyon won't alleviate traffic as it (usually) does not solve any of those three problems.</p> <p>Currently, for example, there is no bus service for Oktoberfest. This a summer festival where alcohol plays a part and UDOT has not worked with Snowbird to encourage less driving.</p> <p>I have read the reports for the other methods that were looked at and found it disturbing that a gondola was chosen in comparison to the other options. I was surprised that an increase in quality and quantity of current services was not amongst the list of suggested implementations. I would look closer at what other mountainous countries are doing (such as Switzerland), instead of building the largest gondola in the world. It was referenced that light rail wasn't considered due to some sections requiring grades of greater than 10%. How many bridges and tunnels could be built to work around that problem for a cost of \$550,000,000? I hesitate to ask, but is that enough money to make a majority of the line underground? If the price is less than \$12,000 per foot, it is cheaper than the price tag for the gondola, with no visual impact and no loss of service due to avalanches. In addition, other alternatives, such as electric buses, trolley buses, light rail, and rack and pinion rail can utilize portions of existing roadway with minimal additional infrastructure and a much smaller environmental and visual impact.</p> <p>Once again, focus on building a facility at the bottom of the canyon and increase bus service to every 10 minutes up and down, if not more often.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29854	Brenda Kimball	<p>Is this a done deal? I cannot understand why Utah wants to spend \$550 million in taxpayer money for a project in ONE canyon that most of the locals seem NOT to want. It seems designed to benefit developers, above all.</p> <p>There are SO many things more worthwhile things that could be done with that money. Education? Healthcare? The issues with Utah Lake? End the food tax?</p> <p>And personally, I'd rather drive my own car up the canyon, for free, as I have recently, and not had problems with parking.</p>
29855	Aleen Fuelling	<p>Please leave the canyon alone. No need for a gondola or wider roads. Neither is needed. People can carpool or use the bus. The reservations for parking is working. The canyon is great the way it is. The money for these projects should not come from the tax payers. Make Snowbird and Alta pay since they are the only ones that want these changes. For once, please listen to the residents. WE DO NOT WANT EITHER CHOICE!!!!</p>
29856	Aaron White	<p>Please don't do the gondola option. I don't want my tax money funding profit for companies. Just charge a toll</p>
29857	Greg Sherry	<p>Gondola people. We don't have powder days anymore. 5 road closures in Little Cottonwood Canyon 2021-2022 ski season.</p> <p>Hi Greg,</p> <p>Thanks for reaching out. There were six road closures (five in LCC/SR-210, one in BCC/SR-190) during the winter 21-22 due to avalanche mitigation. Please let us know if you have additional questions.</p> <p>Best,</p> <p>Cottonwood Canyons Communications Coordinator @UDOTCottonwoods Twitter/Instagram cottonwoodcanyons.udot.utah.gov</p>
29858	Greg Sherry	<p>UDOT has never Implemented a 2 lane road in Little cottonwood canyon. Very simple first two hours of the morning of a canyon closure, uphill traffic only both lanes. In the afternoon if needed for two hours down hill traffic both lanes. This will obviously evacuate the canyon twice as fast and in half the time. Why has this never been done UDOT?</p>
29859	Sarah Marsden	<p>Limiting lift tickets sold at the privately owned ski resorts using public land in Little Cottonwood canyon is the best way to limit environmental and esthetic impacts. A large parking lot and gondola cars swooshing up the canyon will do nothing to improve access or experience for hikers.</p>
29860	Alex Salt	<p>I do not believe that a gondola is the right choice to solve the traffic problems of little cottonwood canyon. As someone that grew up near the canyon just a 5 minute drive away from the mouth of the canyon I hate the idea that that beautiful senary can be destroyed by a gondola. I believe that the solution can be improved by increase bus service as outside of rush hour the busses up little cottonwood canyon run every 30 minutes. I believe that if we can cut down max wait time on the schedule to 15 mins at low points and 7 to 8 min during peak times we can cut down on people driving. I have ridden the bus countless time and been packed in like sardines and I believe that more buses ran more people would be convinced to ride them. I also believe that we should toll the canyon in the winter time with a variable cost modal dependent on how many people they have in the car and charge people more for less people in a car. Lastly I believe that if we can add some avalanche sheds long the highest frequented slide paths that could cut down on the danger in the canyon. A gondola while being able to go up on bad snow days in my opinion doesn't help a lot. From what I have experienced when there is a bad snow day the resorts tend to close large amounts of terrain because of high avalanche danger. So why build something that can pass the road if the resorts will also be closed on over 50% of the slopes. Lasty if you do decide to build the gondola that I am against and many others are as well do not build it with state money just to give it to a private company. If they are going to profit off a gondola in the canyon let them build it. We do not need the state building that for them just to make money off to bring more rich people from out of state to price people out that live here. It is already happening at ski resorts and with the addition of the gondola prices of ski passes will go up as it will cost a significant amount of money just to get up and down the canyon. And lastly if it is build I do not believe that the bus service to the ski resort should stop as it is a vital source of how employs get to the resort. In other words no gondola, but if build please consider my thoughts on its build</p>
29861	Mark Hoffman	<p>If tax payers are paying for this. Tax payers should be able to ride it at no additional cost.</p>
29862	John Doe	<p>Tolling is a much better option. No one wants the gondola.</p>
29863	Sy Maestas	<p>I am opposed to the gondola project. I believe it is the wrong transit option for the Utah ski areas. I'm concerned about the financing of this project. Furthermore, if this was such an ideal transit solution for municipalities close to ski resorts, I believe it would have been implemented in other locations already. I think reinvestment in existing ski bus routes is a better option, potentially expanding seasonal service options that utilize existing infrastructure. Thank you.</p>
29864	Taylor Woodbury	<p>I am not in favor of the gondola, basically any other option would be better. Let's start with more buses or tolls on busy days/times.</p>
29865	Jacob Beeler	<p>The gondola project is a pointless endeavor fueled by corporate greed that will only make the canyon less accessible. The solution to the "transit problem" is to do nothing.</p>
29866	Eric Villadsen	<p>Please consider all the Backcountry users before deciding on this. Electric busses and additional base parking would be an excellent alternative.</p>
29867	Carmen Yennie	<p>The gondola does not address anything other than funneling people to a for profit facility. It does not help get people to trailheads, campgrounds, backcountry access, just the ski resorts. The structure will detract from the canyon. A horrible way to waste tax dollars.</p>

ID	Full Name	Comment
29868	Tanner Larsen	As a skier and a rock climber, I believe little cottonwood is one of this State's most beautiful and precious natural wonders. We could do nothing and leave the canyon the way it is, but we all know that is not realistic. I started my career working in the Ski Industry working at Alta, and I love little Cottonwood Canyon. I taught my children to ski there, but in the last couple of years, I stopped going because it started to take 30 minutes to get up the canyon and 90 minutes to get back down. I believe Gondola B, along with the toles during peak times, expanded trailhead parking, and the covering of key avalanche pathways really shows the legislature has listened. I now live in Southern Utah but I fully support this plan as I believe it will become a feat our children are proud of and that visitors will experience with aww.
29869	Joel Draxler	I would like to express my opposition to the proposed Little Cottonwood Canyon tram. I think this is the most intrusive proposal and should not be considered. It is my opinion that another plan should be implemented. The tram is extremely expensive and benefits only the winter canyon visitors, leaving an eyesore for the majority of the year. Not only am I opposed due to the esthetics but also if the Ski resorts will reap ALL of the benefits they ought to shoulder the majority of the costs. Expecting the tax payers to pay to improve their business is a poor idea. Please do not proceed with the tram. Please find another, better seasonal solution.
29870	Ryan Mccune	I know the train option is a lot more expensive, but the negative aesthetics of the gondola towers need to be considered, especially if the gondola is only going to be able to accommodate a limited number of skiers per day.
29871	Marko Jovanovic	The gondola is a terrible idea. It will ruin the canyon and cost us an insane amount of money. It just serves special interests. Nobody wants it, and I don't understand why you don't care!
29872	K Murdock	Not that you're listening, as the public was very clear previously that we do not support this, but no one wants the gondola expect the developers who stand to make money off of it and everyone knows it. This is still true no matter how many patronizing ads they pay for.
29873	Cameron Griffiths	The local residents of Utah do not want a gondola going up little cottonwood canyon!!!! NO !!!!
29874	Cameron Griffiths	No gondola!!!!
29875	Cameron Griffiths	No Gondola!!!!!!!
29876	Brandon Beattie	Do not do this!!! Here's 5 reasons. Many of us are scared of heights. Gondolas will be cold and if they fail function could kill people. A broken bus can easily swap people to a new bus. Gondolas can't. It's a single point of failure for many systems. Sudden wind issues can shut it down and strand people. Just force people to take buses, cheaper and more reliable. Also 99% of the year the gondolas will not be needed. Make the resorts fund busses. I've been skiing in this canyon for nearly 40 years and this is obviously being pushed not by people who use the canyon or care about cost, or have a fear of heights.
29877	Susan Markey	As a resident of Cottonwood Heights, a tax payer and a concerned citizen of the area, I am completely opposed to the gondola. Spending Over \$500,000,000 to build a system that benefits a relatively small segment of the population? It makes no sense. I love to ski, but I would never use this form of transportation. It's not financially sustainable for locals. As well, it seems as if this system is catering to wealthy out of towners and the two ski resorts. Alta and Snowbird with taxpayer's dollars. No to the gondola!
29878	Cameron Griffiths	The tax paying utah residents do not want a gondola !!!!! The fact it would not service any other part of the canyon other than snowbird and Alta is pathetic! What about red and white pine ? Arguably the busiest place with the most cars in the summer ! All so the resorts and developers can can make money ! I don't even ski at snowbird or Alta ! I snowboard and can't even go to Alta and you want me to pay for a gondola? No thank you !!!!! Your going to ruin the beauty of the canyon forever there is no going back . The resorts need to limit the amount of people in the ski season , period . There are too many people to facilitate all of them . However that looks , let some people ski on even days and some ski on odd days . Or how about you have to pre register your days you want to ski . Can you imagine trying to park in a parking garage with all your ski gear with a ton of other people doing the exact same thing ? That will be complete chaos ! Sounds like a nightmare to me ! Ohh ya you don't care because it's all about money ! No gondola !!!!!
29879	Erica Faircloth	I oppose the gondola. This will limit free movement up and down and access to public lands. Buses are never full. The gondola is a boondoggle reminiscent of the "great salt lake pumps" - remember those? Complete waste of taxpayer funds. NO NO NO to the gondola
29880	Euresruboimb Euresruboimb	_∞-ª-°-∞-∑-Ω-∞-è -f-æ-Ä-æ-Ω-f-∞ 450
29881	Samuel Tresco	Little cottonwood canyon is one of the most special parts of the Salt Lake valley. This canyon allows people to access untouched nature just 15 minutes away from their homes. A gondola will make this rigged natural escape feel like an amusement park. The ski resorts are far too busy as is. Powder days are borderline unskiable due to the sheer number of people. Increasing the number of guests will only exaserbath this problem. It will be much more cost-effective and low impact to first explore options like higher throughput bus service. Let us not permanently more one of the gems that makes our city so special.
29882	Rebecca Rougeau	Please don't build the gondola without exploring an expanded and improved bus system. The gondola will tarnish the beauty of the canyon, damage recreational access (rock climbing), and still does not provide a comprehensive solution.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29883	Lori Decker	We live at the mouth of the canyon and have been well acquainted with the cars that congest the road leading to the canyon after a fresh snowfall. We also observed how when Alta and Snowbird required parking reservations, the congestion improved considerably. The problem is that too many cars have one individual inside going up the canyon and the need for a reservation was impetus enough to modify that behavior. We are skiers but can't figure out why we as taxpayers we should be footing the bill for a gondola or widening the road when the solution lies with the ski resorts. All they have to do is limit the number of cars that can park in the lots. They could also offer specific parking times to regulate the flow up the canyon. We understand the resorts don't want to limit the number of paying skiers for monetary reasons, but why should taxpayers foot the huge bill for gondola when it is the ski resorts who will benefit? The skiers won't benefit with longer lift lines and crowded slopes. The time that would be saved in using a gondola would be lost in the long lift lines because of too many people on the slopes. The taxpayers lose and the skier/snowboarders lose and we are all paying to help the ski resorts. It's just plain foolish.
29884	Kimberly Deneris	The gondola spoils the natural beauty of the environment. There will be no gondola. This is not going to happen.
29885	Joshua Parker	The gondola is a MISTAKE! DO NOT do this to LCC. This may not be original but I have not heard it elsewhere as a solution: LIMIT THE NUMBER OF DAY PASSES SNOWBIRD/ALTA CAN SELL IN A DAY. This would solve the parking problem. This would solve the traffic problem. This would solve the long lift line/customer (dis)satisfaction problem. Season pass holders should not be restricted but limit the sales of day passes including IKON, etc passes. The resorts need to be held accountable for the issues that resorts cause. They cannot benefit without limit to the detriment of the environment. Deer Valley already does this to ensure customer satisfaction, so this is not unheard of. PLEASE, DO NOT BUILD THE GONDOLA, IT IS A MISTAKE!!!
29886	Adriana Chavez	The gondola should not be the option to help the canyons. Other less costly and impactful options have not even been explored such as more busses or a toll. These options should be more closely examined and tried before building a gondola that would forever impact the canyon and ecosystem. I do not want my taxes to go towards something that will only be benefiting two ski resorts
29887	Nathan Mitchell	The environmental impact seems low vs a road/wider road and idling cars, but the funds should not come from tax payers. Our family enjoys snow activities but family's that don't shouldn't have to pay. The tax money can be used in so many ways to benefit those actually in need.
29888	Hess Brian	I am opposed to the proposal to put a gondola up LCC. I think it is a expensive solution which does not meet the needs of all those who recreate in the canyon. It would also be a huge eyesore. I am a avid climber and backcountry snowboarder. The gondola would ruin the view and the construction would destroy many classic boulders. I think a solution involving road access would be better and cause less damage. Possibly implement a shuttle system like they do in Zion National Park during peak season. In my opinion a gondola would ruin LCC and not provide a equitable solution, since it would only serve two ski resorts in the canyon, ignoring all the other users of the canyon.
29889	Kim Hogan	Please do not go forward with the gondola project! The cost far outweighs the benefit it will provide to a few people that can afford the ticket to ride it. The bus option would serve more taxpayers and be able to be built on budget. Someone also ought to consider that with the weather changing, the ski season might not be worth such a huge investment.
29890	Megan Fitzklein	I do not want my tax dollars to go toward a project that only benefits those who ski and the ski resorts. Especially when there are better solutions and the gondola would block the amazing view that little cottonwood canyon provides for hikers, bikers and other people who recreate there. Please vote no on the gondola, it really is not the best solution to the traffic issue. Thank you.
29891	Scott Hatfield	Do not build. You're ruining a pristine environment. The people have spoken they do not want it. This is millionaires and politicians who only want to line their pockets with more money. It's an overstep of government intervention. You're going to ruin the beauty of the canyon. Implement a permit system, an entrance gate that only allows so many up, or if they have reservations on the slopes, hotels, etc, or if they live up there. I'd rather see an established bike path and more established walking trails to give people the chance to get up there, also better parking at trails. The amount of money that you're dropping on the taxpayer would be put to better use than to ruin a gorgeous environment. This is a Republican speaking as well. Politicians, administrators, and millionaires are overstepping their welcome and abusing their power on this issue.
29892	Brad Giebel	No Gondola. Electric bases, tolled road with daily limit of vehicles.
29893	Christopher Rockwell	No, just no. Why is the public paying for something that serves private companies? A improved bus service would actually serve the public better during both the winter and the rest of the year. Also, has anyone thought about rescue operations if something happens to the gondola and the cabs can't be moved and thus people need to be rescued from the cabs? Seems like a major problem to me.
29894	Tarrell Hughes	This benefits me as a taxpayer how? This only befits the ski resort. I do not to be squeezed out of more tax dollars for some fun whim. I'm already looking for likeminded Utah taxpayers to form class action against UDOT
29895	Stephen Grant	I do not agree with the plan of installing a Gondola. There are better solutions.
29896	Mike Baker	I have skied in LCC for 26 years. What happens when you load the canyon and a storm rolls in making the gondola useless! Everyone will be stranded!!! Tax payers should not pay for corporations to profit!!
29897	Patrick Egbert	I am in support of the Gondola, I have looked at the options and feel it is the best solution for the most people for the longest time. It allows for safe and environmentally conscious transportation and allows for more people to experience the beauty and majesty of Little Cottonwood Canyon.
29898	Theresa Heinrich	I am concerned about our tax money paying for 2 hub parking lots that will not be permanent. 110 million spent on 2 parking hubs that will only be in existence to accommodate enhanced bus service during the phased approach. I thought UDOT & GW decided together that they would increase capacity to 2500 instead of 1500 in the GW parking garage. If this isn't true & I don't understand the EIS I would like this defined. Seems like a waste

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29899	Eric Scott	<p>As someone who has been visiting and enjoying a variety of activities in Little Cottonwood Canyon for over 20 years, 100+ days per year, I just want to say that in my experienced opinion, building a Gondola is not necessary. The traffic issue exists on a handful of days each winter and can easily be solved with the following measures -</p> <ul style="list-style-type: none"> -institute mandatory parking reservations for all resorts (this has already made a huge impact and eased travel in LCC to Alta Ski Area in the 2021/22 season) -increase parking at the base of the canyons (the LCC park and ride does not even function as a bus stop currently???) -build snow sheds under major avalanche paths to increase safety -increase bus service and make it an enjoyable experience to ride the bus on snow days (shelters and warming huts at stops, increased service so people don't have to stand during the entire bus ride) <p>The Gondola would, quite frankly, be a boondoggle of epic proportions. Not only will it be a huge burden on tax payers but it is a MASSIVE CORPORATE HANDOUT, but it would essentially ruin the aesthetic of the canyon with its giant towers. These eyesores will ruin the ambiance of the canyon for hikers, climbers, bikers, etc.</p> <p>In closing, I IMPLORE UDOT TO RECONSIDER. The canyon DOES NOT NEED A GONDOLA!!! Listen to the people or put it to a vote with the taxpayers who will be left footing the bill FOR DECADES!!</p>
29900	Robert Hatch	<p>I have skied Alta for over 20 years. We carpoled the entire time and have not experienced the traffic the gondola is supposed to reduce. I am now a bit handicapped and need help to ski. The gondola will add cumbersome extra steps in my effort to ski. The gondola is discriminatory to handicapped persons and to disadvantaged youth. The cost of a ski ticket is enormous, now add the gondola ride! How much will parking and the gondola add to the price of a ski day? The gondola makes the use of the Public's Little Cottonwood Canyon more Elite-est than it already is. Is the state of Utah using the method of price exclusion to prevent minorities and other unwanted people from using LCC?</p>
29901	Klay Anderson	<p>So now we're going to get taxed on a project we don't want, tolled at the mouth of the canyon, and pay for parking at the resorts themselves. This whole murky project is so anti-consumer, it's impressive.</p>
29902	John Giles	<p>Wrong decision If this happens Alta and snowbird should pay for every penny not taxpayers UDOT [REDACTED]</p>
29903	Jean Brown	<p>Excuse me.....but I do not want to pay for Alta and Snowbird recreation fees. Get serious PLEASE. How unfortunate that me, a citizen in SLC since 1977, can see these day ski passes go over 100 a day. Give me a break. Alta and snowbird can sit in there sorry state with no snow forever. Never skiing that canyon again</p>
29904	Bert Walker	<p>Stupidest proposal I have ever heard</p>
29905	Phineas Parker	<p>I am opposed to the proposed changes taking place in Little Cottonwood Canyon. I agree that something must be done to better facilitate the overwhelming number of vehicles commuting up and down State Route 210. Both the idea of installing a gondola and expanding the road seem remarkably expensive and tremendously damaging to the environment. I do not see either of these changes having any substantial effect on limiting the number of vehicles in Little Cottonwood Canyon. May I suggest 2 ideas that I believe will alleviate much of the traffic and environmental damage inflicted upon this area of the Wasatch Front. The first idea includes limiting the number of day use passes and removing both Snowbird and Alta as potential options available through purchasing the IKON pass. The second idea would implement the use of tolling. On particularly crowded or popular days during the winter season a toll would be set in place to encourage carpooling thus limiting the number of cars in the canyon. If a vehicle has 3 or more passengers in the vehicle, the driver may proceed at no cost. Vehicles with only one or two passengers must be forced to pay a toll fee in order to access the canyon road. I believe these proposed changes will be more effective and environmentally friendly to an area we all love and admire.</p>
29906	Alan Longshore	<p>Limit personal owned vehicles and reserve the roadway for commercial UTA and rideshare vehicles transporting passengers to and from the resorts in little cottonwood canyon. Rideshare/taxi/UTA all do the same thing. We don't park in the given resorts but we do drop off patrons that do use the resorts. We should take priority when it comes to road use. Gondolas would have all personal owned vehicles parking at the bottom of the hill and free up the road for all of us that actually make a living.</p>
29907	Richard Gardner	<p>As a climber I appreciate the aesthetic beauty the canyon has to offer and the phenomenal climbings. Adding this Gondola will hinder the majesty of the canyon and ruin a lot of great climbing. Build bigger roads #nogondala</p>
29908	Suzanne Glick	<p>I do not agree with the gondola being built. I think that it will only serve a select few of the population and will be an eyesore with all the big towers going up the canyon. I think a better thing to do is something similar to Zions National Park, where you have busses going up and down. That way you can do busses year round and they can stop at different locations. You can make so that no vehicles are allowed outside of busses unless they live or work in the canyon. Perhaps a parking garage can be built at the base of the canyon.</p> <p>It does not make sense to build something that will only be used in the winter and only used to get people from the base to the top of the canyon.</p>
29909	Jerry Straley	<p>What ever is done SHOULD BE PAID FOR BY SNOWBIRD and ALTA. Our tax dollars should not pay for rich corporations to more profit.</p>
30987	Craig Wallentine	<p>Hi, my name is Craig wallentine [REDACTED]. This is not a comment on a question. I was trying to find the cost of riding the gondola, you know, it's obviously big document and I see them costs like the capital costs. I see the towing for the four drivers and all that. But what the cost for ride up and down the canyon again, my name is Craig. Just tell me where it is in the is that appreciate it Craig wallentine? [REDACTED] Thanks very much, bye-bye.</p>

ID	Full Name	Comment
30617	Craig Wallentine	<p>Hello, LLC UDOT Team,</p> <p>I have been unable to find the projected price of LCC gondola tickets in the large EIS document.</p> <p>Can you tell me how much riding the gondola will cost?</p> <p>Will it be round trip pricing?</p> <p>Will there be peak pricing?</p> <p>Will there be discount passes?</p> <p>Thank you,</p> <p>Craig Wallentine</p>
29910	Mary Nettleton	<p>Electric buses and lots of them is the answer the gondola solves nothing just creates different problems response to gondola proposal.</p>
29911	Bill Boyle	<p>I am not in favor of any of the current proposals and support leaving the canyons alone. I for one have weeded myself out of little cottonwood skiing except on weekdays where no snowfall has occurred for 24 hours.</p> <p>Here are my issues:</p> <p>Destruction of the scenic view shed-I do not want the visual impact of this project during and after.</p> <p>Possibility of years of disruption in vehicle travel.</p> <p>Other (than skiers) recreation will be disrupted and in some cases destroyed. Access to the area and its trailheads will be curtailed and there will be destruction of historical climbing/ bordering. Not to mention that the gondola does nothing to get people to trailheads and climbing areas</p> <p>Capacity of the gondola will not make significantly impact car transportation-It is simply not cost effective (at a 1000 people per hour), or in general, time effective for many skier days and or use outside the ski season. to better access this I would like to see detailed data outlined below.The gondola is only really being considered because of ski season at ski resorts.</p> <p>A thousand people an hours does not begin to cover the demand for early/peak time travel in the canyon</p> <p>Allowing people to weed themselves, out rather than the state setting boundaries, is a much better approach. Consider how much skiing ha changed in 10 years. Many people have switched to multiple area passes, and don't, I for one, go up little cottonwood on snow days; and this will probably continue to be so regardless of the existence of a gondola.</p> <p>Levying a 20-30 dollar add on to access canyon is frankly not worth it and I believe that most people will agree. Put that levy on now and that may resolve much of the traffic problem, I wont pay it. And then again consider the benefits of season passes to other resorts. I find that the ability to make a reasonable decision requires significantly more data than has been presented, and data that covers the entire year or several years of all season use.</p> <p>Some of the data I would like to see: Several years of road traffic that breaks out 1) daily skier populations at snowbird and alta, 2) daily uphill traffic, 3) relationship to weather of daily count to weather, 4) number of days canyon closed, 5) weather</p>
29912	Tom Stillinger	<p>The proposed gondola is an astoundingly bad idea. It will shovel money from taxpayers to already-rich resorts; it will damage the environment and the special natural beauty of the canyon. It would be a colossal waste of our resources, at a time when we need to focus on the real threat to our climate. Please say no to it.</p>
29913	Karen Ellis	<p>I do not support the gondola. It does not serve users who are not going to the ski resorts and does not solve the problem of traffic congestion. Please increase bus services- if buses were available in a timely manner I would take them.</p>
29914	Caleb Fry	<p>No gondola. No road expansion. Keep it how it was.</p>
29915	Helen Raty	<p>The gondola system is completely unnecessary. There is no reason to completely ruin our mountains for "convenience". Unacceptable.</p>
29916	Jana Erickson	<p>A gondola that is accessed at the mouth of Little Cottonwood Canyon will only drive more traffic, pollution, and congestion to that area. The solution to the problem is NOT to create more traffic, which then requires taxpayers to pay for wider roads and bigger parking lots. UDOT needs to focus on alternatives that don't require personal vehicles to travel to the mouth of the canyon. We need more ski buses, including electric buses, that originate from many more locations across the valley. It is unconscionable to saddle taxpayers with an incredibly expensive option that only benefits the most affluent citizens-- those who can still afford to ski--and the two ski resorts that stand to gain from the misguided gondola plan. The selection of this option as the preferred proposal smacks of influence peddling, gross negligence, and blatant disregard for the taxpayers of Utah.</p>
29917	Phillip Johnson	<p>This project is not the Best use of funds. Why should we fund to businesses namely Snowbird and alta. The average person in Salt Lake City will not be using this gondola it will only be used less than 20 days a year. Why should I pay to make these 2 resorts money.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29919	Lynn Colgren	I'm adding my recommendation to no gondola. If you make busses arrive and depart more frequently and put ski racks on the outside of the busses I would enjoy the ride much more. People can't hold on to all their gear and kids on the bus. Especially if there is standing room only. The gondola is a bad idea. If you charge people to drive, they will pay anyway. How will people get out to hike?
29920	Garrett Myers	<p>Hello, I am an avid user of LCC. I love to hike, run, ski, climb, and camp in the canyon. Because I use the canyon for skiing as well as other activities, I feel that I have a valuable opinion on the gondola.</p> <p>The negative impacts of the gondola significantly outweigh the reduction in traffic, accidents, and avalanche-caused delays. For all of us that use the canyon for non-skiing activities, the unobstructed view is one of the biggest draws to the beautiful LCC. Even more importantly, the gondola will heavily impact bouldering on the canyon floor. Some boulders will almost certainly be removed due to their placement. Others will just be covered by construction and have their natural feeling removed.</p> <p>The parking situation is not going to be sufficiently resolved by the gondola. Whatever new parking will be implemented at the base of the canyon is going to fill up very quickly as it will serve both Snowbird and Alta.. getting to the resort is going to start taking around an hour or longer from the base of the canyon - not much improvement to current delays. There will be huge lines to get onto the gondola at both sides.</p> <p>Cost is also a significant factor. As someone who will be using this gondola, it is wrong for me to ask my non-skiing peers to pay for this gondola with their taxes. While the tourism is good, this gondola only serves a small population and is too expensive for its limited purpose.</p> <p>I hope you will reconsider this option and reconsider the extended bus service. Thank you.</p>
29921	Beth Blattenberger	Improved bus service and parking are all that is needed for both winter and summer. No need to widen the road if frequent busses are available serving all Canyon destinations.
29922	Er Far	Please don't ruin our beautiful mountains. They are already crowded and if people want to enjoy them they can drive through. There are also ski lifts people can go up. Gondola are unnecessary and will take away the majestic views that we have now. The construction for it will also be a nightmare. Don't ruin our mountains!!!!
29923	Clement Gelas	<p>Additional questions from my previous comment</p> <p>1) what's that the options behind controlling canyons access. To me it's critical I'm order to reduce the traffic and make sure most everyone that ski uses the gondola</p> <p>2) why not looking at both BCC and LCC as the same issue and propose solution to BCC too ?</p>
29924	David Arbon	It is irresponsible to utilize tax dollars on a billion dollar gondola project prior to considering other alternatives such as mandatory carpooling, mandatory bussing, or simply increased tolling at a per-vehicle basis. The utilization of this many tax dollars should benefit the majority of the residents that have funded them, not just the one percent of the wealthy, who will receive the convenience benefit. I find no value based proposition in a gondola for the public when the only people profiting from this will be the ski resorts and developers.
29925	James Broderick	My concern is the funding source. The businesses that are benefiting should be paying a substantial amount for this project. It is unfair for public funds to be used so a private business can profit. What I see is a need to get more people to the ski areas, so the ski areas can profit.
29926	Steven Jones	<p>Say YES to the Gondola.</p> <p>https://gardner.utah.edu/wp-content/uploads/TravTourReport-Sep2020.pdf</p> <p>From the above URL:</p> <p>In 2019, Utah tourism saw \$10 billion in visitor spending according to the Utah Office of Tourism - and \$1.34 billion in tourism tax revenue.</p> <p>Skiing/Boarding is the largest portion, close to 50%.</p> <p>Utah's travel and tourism industry accounted for an estimated 141,500 total jobs in 2019, a 4.0% year-over-year increase. Approximately 1 in 11 Utah jobs is supported by visitor spending, either directly or indirectly.</p> <p>Also, ...</p> <p>The gondola establishes a second transportation source in the canyon. The road, mostly a one-lane road, will no longer be a single point of failure.</p> <p>The gondola is estimated to cost \$592 million and the bus system \$510 million.</p> <p>This is subjective; however for many, the gondola is more esthetic than road expansion and increased bus traffic. The views from the gondola will be stunning.</p> <p>The gondola will likely prove to be safer and better for the environment.</p> <p>Gondolas have been tried and are proving to be successful in places like Telluride, CO ... https://www.telluride.com/activity/gondola/</p> <p>Growth is inevitable. It's time to put that last settler's syndrome in check and plan ahead.</p>
29927	Alexa Quinn	In favor of option B. NO GONDOLA

ID	Full Name	Comment
29928	Richard Schutt	<p>Simply put, the EIS put forth by UDOT is not only not for the benefit of the public,, it is actually just the opposite. In reality it is designed to benefit a very tiny portion of the population, while with every new addition ie: the change and increase in access to the parking facility, worsens the overall situation. Added to this is the fact that the overall plan, while not only does it not improve things, it actually makes that which it will affect environmentally worse. All that at the expense of the public for the financial benefit of just a very few. This can't be UDOT acting in the benefit of those it serves.</p> <p>Sincerely, Richard Schutt</p>
29929	Neal Hopkins	<p>This is not the solution SLC needs. It is too expensive, disrupts the beauty, and citizens don't want this. This proposal supports developers, not the people.</p> <p>A more affordable and less impactful solution is more frequent buses and a parking lot at the mouth/base area of the canyon.</p>
29930	Jana Mcgettigan	<p>NO! NO! NO! NO! NO! NO!</p>
29931	Pierce Boggan	<p>While I appreciate the hard work that went into crafting this proposal, I strongly oppose this project. First, it destroys the natural beauty of the canyon. Despite being right next to a major metropolitan area, LCC feels and looks wild. A gondola ruins that. Second, if the real aim is to solve the transportation issue, this is not the solution. The throughput of the system is not high enough to significantly alter the traffic situation in LCC. Additionally, most of the load will be coming early in the morning and around closing in the afternoon, so there won't be a steady stream of riders. Thus, from a traffic perspective, it doesn't really solve the problem. Finally, why does this problem need solving at all? Yes, it's not fun to sit in traffic, but the good thing about LCC is it doesn't get torn up from human use because there is a natural limit to how many people can transport up the canyon and park. A gondola ruins that. This is not a good use of our tax dollars, and only stands to benefit two major private resorts. Keep LCC wild.</p>
29932	Clair Price	<p>I am convinced this is not only the best alternative but is the right one. My wife an I enjoy trips up the canyon. We don't ski but we enjoy it, beauty. With growth in the states population and the importance of tourism to the State, I think every one should be able to enjoy this amazing State treasure and not just a few. The Gondola improves the safety of those traveling in the canyon, supports every ones desire for Green Energy, improves access to the canyon and is the most cost effective to build and operate for years to come.</p>
29933	Aleksander Holleran	<p>I think the gondola is a pretty bad idea, given the cost and other options. Zion has many more visitors and they managed to fix congestion with busses. Busses are flexible, can be scaled up or down. This is an important feature because there's only congestion on a few days a year. Surge pricing + functional busses (every 5 mins) with early and late service, could easily work. Imagine driving past a buss station and paying 50\$ to drive up the canyon. I'd be so silly.</p> <p>Any way, thanks for reading my comment. Please don't build a gondola while there is such a good alternative.</p>
29934	Cliff Reader	<p>First, I'm stunned to learn after this whole, lengthy process, that there is not a funding plan in place and no schedule. To me, as a lifelong engineer, this is an unbelievable, unacceptable failure of project management.</p> <p>Second, the plan you announce now is tantamount to accepting the not-preferred alternative for bus service. This will lead to hiring staff to run the bus service, who will be covered by union contracts. That means A. They will be contracted for employment for all shifts in a day, all days in a week, and all weeks/months in a year - regardless of whether or not it's ski season and regardless of whether anyone is actually riding the buses; B. You will not be able to dispense with these staff if the gondola actually gets built; C. when funding does become available for the preferred alternative with the gondola, there will be an argument to keep the buses, keep the staff, and just fully implement the enhanced bus alternative.</p> <p>Third. I strongly suggest setting forth a phased implementation of the preferred alternative now. The funding should be broken down into components that facilitate funding according to logical/practical sources of the funding. A. All road improvements should be funded by the state and federal financial infrastructure already in place. Notably, the recent, COVID-related federal government funding should be solicited. Consideration should be given to include the new base parking facilities as a component of this funding, although it could be considered a separate component B., funded by the actual users of the canyon. C. The gondola itself should be funded by the actual users, meaning the funds should come from lift tickets, restaurants, lodging (of every type), etc. This funding might be made available quickly through use of bonds to be repaid from use-related taxes, enabling the gondola to be built in the shortest timeframe. The schedule for the gondola - like the funding for the gondola - should be decoupled from all the other infrastructure. It is the critical component and must take priority and be installed and operational without delay. D. I note the substantial new gondola linking Alpine Meadows and the former Squaw Valley ski areas cost \$65M. While the Cottonwood Canyon gondola is significantly longer, with higher-capacity cars, the cost you project for this seems unreasonably high. I suggest you solicit bids - worldwide - for construction of the gondola component itself, including proposals by the bidders that they facilitate the funding together with you. They have the greatest incentive to do so!</p> <p>In summary, I see the current project plan as an omnibus that comprises disparate components in an unmanageable jumbo package. Please break it down, and focus on getting the gondola itself operational in the shortest time at the lowest cost.</p> <p>Sincerely, Cliff Reader, Ph.D. (Age 73)</p>
29935	Chris Nielsen	<p>What a joke... This is the biggest waste of taxpayer \$\$\$ to help the ski resorts! It will not solve the traffic issues the cars still have to get to this [redacted] and it will ruin the canyon. I knew from day one you were going to push this [redacted] thing thru regardless of the publis opinion and it was proven by all your ads about ONLY the gondola.... You should not have the right to do something the public is totally against. The ski resorts hshould be paying for this if you do go thru with it. What a [redacted] joke.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29936	Beth Martial	As the Utah Department of Transportation announced their preferred option to build a gondola up/down Little Cottonwood Canyon, I feel compelled to share my lack of support for this initiative. As a taxpayer, I feel disappointed that massive funds are being considered to alleviate a transportation concern that is unique, yet limited, to a small constituent in our communities that wish to access two private resorts. I am hopeful that my comment will assist in the redirection of this conversation. I believe that these funds can be used in a more appropriate way that would serve the greater good of the communities throughout the state at large - rather than a few on the Wasatch Front (infrastructure, potholes, etc).
29937	Mathew Francis	You people are crazy if you think this is a lower overall cost - you take that capital and invest instead of blowing it on a circus ride and the numbers will never catch up, LCA or otherwise, esp since you are upgrading the bus system already. Just do that and leave well enough alone with demand pricing to lower the vehicle count. Also devaluing the visual aesthetic of the canyon shows a blindness to the reason people go to LCC. This isn't the Alps, it's a narrow fragile canyon with a single visualscape you will ruin with a gondola. And why don't you disclose the votes for and against. Our community hates this gondola idea. C'mon UDOT listen to the people and common sense. You are acting like UTA.
29938	Kim Royer	NOOOO!!! I'm against this plan.
29939	Teplapidlogadobia Teplapidlogadobia	
29940	Kathy Parker	You have completely ignored the voice of the people in Utah. We do NOT want our beautiful canyons ruined by a gondola that will only service a small portion of the people in our state. We do NOT want to pay for this with our tax dollars! Why are you not listening to the people who live in this area who do NOT want the gondola in their neighborhood! The men who purchased the ground for the station are trying to manipulate this to pad their own bank accounts. Don't destroy our gorgeous canyon. You will be ruining something that can never be put back to its original Beauty. Please listen to the people of UTAH!
29941	Riley Crezee	Listen, I'm down for a gondola actually. I think it's a unique idea and will be more reliable in the winter than an enhanced bus service or bus lane, where inevitably commuters will enter the lane and clog the commute anyways. The one thing is, the gondola needs to be OUTSTANDINGLY gorgeous, in order to contribute positively to the canyon rather than negatively.
29942	Noa Bender	Please do not choose to ruin the canyon by building the gondola. It does not help at all with parking outside of the ski resorts and will destroy the beauty of the canyon and the climbing as well. I am very much opposed to this solution!
29943	John Jd King	NO NO DON'T DO THIS - this will ruin everything it will be a BIG MESS
29944	Mark Foote	I am hugely opposed to the gondola in Little Canyon. I think there are much better options that are much less expensive. I am a skier who loves the canyon but there is not any more room for people at the resorts. Also, there are only about 10 days a year when it is really crowded in the canyon. I think there are other options such as improving best service, improving parking services, and charging for parking. Thank you
29945	Eric Salmi	Gondola is not needed. Too many people are in that canyon and needs to be regulated to how many people should be in the canyon.
29946	Rich Douglas	Do not go with the Gondola. I ride the bus to Snowbird. They are clean and timely. Add more busses as demand dictates. You can also limit traffic to cars with 3 or 4 persons. No need to widen road.
29947	Dan Homer	No gondola. Gondola only benefits private interest on taxpayer dollars. Lack of transparency puts UDOT in question. Fix the bus system... dedicated canyon routes up and down. Transfer at hub for other destinations. Gondola will destroy several climbing/boulder areas for the benefit of seasonal private interest. Pathetic that we've come to this point... so many things wrong with the is proposed solution- influx of private interest money influencing a state municipality. I recreate weekly in the Wasatch and I'm in favor of tolls. The motorcycle revenue alone would pay for the additional bus routes. Try one way traffic during peak hours... I don't care if it impacts private home owners- you bought and built in a poorly accessible area - which taxpayers already support via plow service and road maintenance. No gondola...
29948	Brennan Frost	To put it simply, Utahns do not want a gondola. As it stands, the proposed plan is not inclusive of those who wish to recreate in little cottonwood canyon outside of the ski resorts. Utahns want electric busses, expanded bus service, tolling, and car pool incentives.
29950	Michael West	The funds spent on a gondola to provide recreational access to the canyon is an opportunity cost to other projects that can be done. Consider a shuttle system like Zions National Park has, use the existing roadway, and limit private vehicles in the canyon (perhaps additional parking may be needed at the mouth of the canyon to make it work). I would much prefer these funds go to providing equitable transportation investments in our cities such as increased public transit service and creating a robust safe and convenient active transportation network.
29949	Thomas Jameson	Y'all are literally dumb don't do this it will not end well.
29951	Kai Morris	I do not want the gondola built. Please support public transit infrastructure which will allow much more people to be transported, much cheaper. The corruption in the gondola plan is very apparent and makes me disappointed in the state legislature.
29952	Ian Dzilenski	Please don't build the gondola. I don't think its fair to use tax payer money to subsidize two private businesses. And at the expense of our beautiful canyon. Please don't.
29953	Andrew Stewart	LCC canyon only needs a better transportation option because of overcrowding. Instead of rewarding a private company with millions of dollars to further over crowd our canyons, the root of the overcrowding should be addressed. This is very obviously the inclusion of alta and snowbird on the Ikon pass. If both these resorts were off the mega pass we would have no issue. These resorts should not be rewarded for greedily ruining the canyon.
29954	Maggie Adams	NO GONDOLA. No one wants it and it will just make traffic worse:). Also the problem isn't that we can't get enough people up to the resorts, there are too many people getting there anyways!! There are better solutions that are more cost effective!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29955	Jake Edwards	The gondola will not be used for 75% of the year, nor will it effectively control powder day traffic. As long as its still an option to drive your own vehicle people will, no matter the price. build the parking lots at the base and triple the buses, then require buses only on peak days.
29956	Patrick Miller	Given the air quality, risk of avalanche and traffic risk in the little cottonwood; I think the chairs would help significantly in all health and safety measures. The best second measure is making it two lanes up and down which would look less pleasant.
29957	Thomas Jameson	This is a threat but low key not maybe...
29958	Thomas Jameson	Your daughters a [redacted] ima sub her [redacted]
29959	Thomas Jameson	Da gondola finna be uglier than your mom
29960	Thomas Jameson	If the gondola was a transformer it would be a deceptacon
29961	Thomas Jameson	Ima hotbox that gondola if you make it. [redacted] you
29962	Thomas Jameson	The skinwalker finna eat your children
29963	Joe Mamma	What are you compensating for? A gondola will not fix your erectile disfunction
29964	Mommy Milker	Pls don't do it I'll [redacted] your [redacted]
29965	Covey Morris	Thank you for prioritizing the smart option. Forget the NIMBYs, prioritize safety and environmental impact. Your good work is greatly appreciated.
29966	Michelle Clark	The EIS has clearly shown that the gondola will not reduce auto travel, just INCREASE THE NUMBER OF PATRONS SHUTTLED DIRECTLY TO RESORTS. I have lived here my whole life; I currently live at the base of the canyon. Buses are the answer and our community has repeatedly shouted this as evidenced by popular opinion. Please don't let the potential profits of the rich/former legislators ruin what we love. Put buses in which have stops along the whole canyon; don't force us (I am a single mom) to pay for gondolas which only benefit the already wealthy resorts as well as destroy the areas we enjoy. You can be sure I won't bother taking my kiddos to Tanner flats anymore if there's a gondola going over it. Please choose the right-- choose buses!
29967	Finn Navidomskis	The watershed of Little Cottonwood canyon is vital for the local ecosystem and for the community downstream. There has always been an effort to protect and conserve this watershed including the banning of dogs and pets from the canyons. Salt Lake County published that the watershed cannot survive the construction of this gondola. Yet plans for this massive construction project move forward anyway. We've spent years protecting this vulnerable watershed, why throw it all away now? The construction of the gondola will cause irreparable damage to the ecosystem and everything that depends on it. Don't destroy it. Don't build the gondola.
29968	R Yeoman	No gondola. We do not need more people in the canyon nor do taxpayer dollars need to spent to benefit only snowbird and Alta. No gondola.
29969	Heather Dance	<p>I have lived east of wasatch Blvd for the 3 years we have lived in Cottonwood Heights. I have 3 young children with friends who live west of Wasatch. I am concerned about having my kids ride their bikes or walk to their friends homes because of the speed of traffic on Wasatch. This has gotten worse over the years we've lived here. Coming down Kings Hill Dr is a blind corner with traffic going 50+mph. Golden Hills intersection was poorly designed with a 50+ MPH lane (coming out of Little Cottonwood) ending right where Golden Hills enters Wasatch. The high T intersection with a light, is NOT conducive to foot traffic crossing. There are two traffic lights (3500 E, Bangel) crossing Wasatch that are NOT safe for crossing with 50 MPH traffic running lights and right turns being made into a fast highway. I do not feel safe having my kids travel a distance they should be able to. Would you feel sae sending your kids to cross these roads on their own? South of 9400 S, traffic is 35/40 miles per hour and cars largely follow those speeds. Please considering listen to the COttonwood heights city officials who are pushing to save wasatch and keep it a city/community friendly road. Ski traffic is in the winter, we live here year round! the roads that could change for winter traffic effect our whole way of life year round. What would you want if you lived here?</p> <p>There is a very large neighborhood east of Wasatch that will be detached from Cottonwood Heights if the road becomes widened and speeds stay 50+. Change the speeds to 35mph. 50+ is much too fast for community.</p> <p>I compare Wasatch to Bangerter Highway. Bangerter used to be a commuter road with lower speeds and traffic lights, but now it is literally a freeway. Cottonwood Heights is a community that doesn't need to be broken up by large, high speed roads. I hope UDOT officials can do their best to be an example for the cities around the valley. Thinking about those who live in the areas where roads and transportation is changing. We can have roads conducive to bikes and pedestrians while still allowing cars to pass through.</p> <p>Having a giant parking lot at the base of Little Cottonwood is again not a community feel. There are better places to put the parking lot (ie gravel pits north of big cottonwood). I don't want the gondola going up at all, but if the comments of the people don't change UDOTS mind, the parking lot should NOT go up in neighborhoods already established. The gravel pit should be the location.</p> <p>The gondola changes the canyon forever. FOREVER. we will never get back what mother nature has given us once the structures are built. When global warming continues to effect our snow fall and precipitation each year, where will the gondola lead? This, in my mind, might be when the gondola is finally funded and completed. We will not have snow in these mountains forever the way the world is going.</p> <p>I agree with all the comments as to why the gondola should not go up. The peoples voice has spoken with the 10's of</p>
29970	Crystal Jagels	I oppose this option to ease congestion in LCC. There are so many other options. It's a real shame that the people in charge are so willing to destroy the beauty of LCC for a buck and at the tax payers expense. Shouldn't we be spending that money to fight the homeless situation in the valley, not shuttle more rich people to enjoy their leisure sport?
29971	Rhett Baldwin	Nah man, no gondola, that would ruin the canyon.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
29972	Finn Navidomskis	The gondola is not an effective public access solution firstly because it does not provide equal access to people in different social and economic standings. Riding the gondola requires transportation to the loading area. Most people will use their car to do so, but this isn't an option for everyone. For example a recent study shows Utah Latinos have about half the access to a personal automobile. How will these people to get to the gondola then? The bus? It wouldn't make sense for them to ride the bus to the canyon, just to get off the bus and pay to ride a gondola. They should just continue up the canyon on the bus. The gondola is therefore not an public transportation solution since many people will still be relying on the bus system.
29973	Finn Navidomskis	<p>The gondola is not a valid solution to the traffic problem because it does not give access to the parts of the canyon most people go to, and it still requires transportation to the bottom of the canyon.</p> <p>77% of canyon users do not go to the resorts at the top. Instead, the majority of people are accessing the many hiking trailheads, bike trails climbing areas, and river recreation areas. The gondola does not provide access to any of these areas, and is therefore not a transportation solution to the majority of canyon users.</p> <p>Another reason the gondola does not solve the traffic problem is that it still requires everyone to drive to the bottom of the canyon. The EIS says that there won't be a reduction to cars driving to Snowbird and Alta. The same number of people will drive, but some additional people will take the gondola. Anyone who access the cottonwoods during a high traffic time knows the problem starts way before the canyon. Wasatch Boulevard is often backed up all the way to I-215. This would still be the case with the gondola solution. The problem will even be exacerbated by the additional people who are driving to LCC just to take the gondola. The gondola will do nothing to solve the traffic problem in the Cottonwoods.</p>
29974	Finn Navidomskis	According to the Deseret News and Hinckley Institute of Politics, 80% of Utahns oppose the gondola construction in Little Cottonwood Canyon. Moreover, the local community of Cottonwood heights is outspoken in its rejection of the gondola. Yet, with such an overwhelming majority opposed to the gondola, the plans are still going forward. Why is this the case? Why is UDOT ignoring the opinion of its constituents? Especially the opinions of its most impacted community? I believe this is evidence of a deeper problem with our system. The needs and desires of the local population, the people directly funding and directly impacted by the decisions, are being overruled by private interest and lobby groups. This shouldn't be the case. This may sound crazy, but public transportation built by public funding should take into account the needs and desires of the public.
29975	John Haglund	I am against the gondola. It amounts to corporate welfare on behalf of the two resorts and the real estate developers who bought the land where the proposed base station would be. It is only needed a handful of days per year, and last winter's paid parking system resolved much of the problem for infinitely less cost. Other options are available- the gondola does not need to be rammed down our throats.
29976	Nils Adey	No gondola please, way way too expensive that benefits just 2 ski resorts. Reserved parking spots is a far far less costly idea. I would also suggest a 3rd lane on the road up with reversible direction traffic like they have on 5400 south.
29977	Justin Grieco	<p>Have you guys considered that LCC is no longer the traffic problem in winter that it was at the beginning of the EIS?</p> <p>The resorts implementing paid parking reservation systems essentially solved the problem. Now, BCC is a bigger problem.</p> <p>Tolls and reservations are clearly the answer, and are not a permanent and destructive and UNWANTED construction project.</p>
29978	Chris Miller	The proposed solution is not inline with what the public opinion has stated, the cost is way to high, and a of Gondola will ruin the canyon.
29979	Hayley Juhl	<p>Born and raised in the Wasatch front the, the decision for the gondola is rather devastating. This decision has largely disregarded the needs of the community for corporate profit. While yes, it will be an eye sore it is also a terrible mismanagement of tax payers dollars. As one of the largest gondola structures in history, this project is (with examples of gondolas past) going to cost significantly more than the projected \$5 million. Not to mention the environmental impact. Forget the damage that the structure will cause to our canyons. But the trails that will be destroyed due to heavy machinery, and additional pollutants entering our streams. An incredibly large, expensive, and ugly bandage when next to other solutions have been attempted yet.</p> <p>I also fear, that by the completion of this gondola, the ski industry will no longer be a viable industry for Utah's tourism industry. We have just experienced yet another hottest year on record. And we are approaching another day at the very end of September that will almost reach 90 degrees. This is following a rather grim snow year within the timeframe of the leased ski season. With all of this in mind it is truly hard to believe that this is the best option.</p> <p>Finally, as I sit here and think of all the reasons this is not the right fit for LCC and the community surrounding it. I can think of so many ways in our communities that this funding could not only improve our cities, but change lives!</p> <p>With inflation as high as it is, housing through the roof and food prices increasing daily, providing easy, safe and accessible public transportation is a large need throughout salt lake county and surrounding cities. I understand grant money, and other donations in the back pockets of decision makers might make things a bit complicated. However, choosing corporate greed over OUR communities, OUR environment and OUR future, UDOT included would be a devastating decision! Maybe we could a take a page out of Yvon Chouinards book and make some uncomfortable sacrifices for the good of out community, our canyons, our state and our futures!</p>
29980	Anonymous Citizen	I have concerns that you have employed a 6 figure IT supervisor that is wasting the taxpayer provided salary. I'd guess there are many more like this person on your payroll and recouping their inefficient wasted taxpayer money would pay for the gondola. Please share this comment!
29981	Colby St. Clair	Why would T you listen to the 80% of Utah residents that OPPOSE the LCC gondola?! Please do NOT ruin the beauty of LCC with a gondola that will only benefit 2 ski resorts. This is not the best way to spend \$500+ million! Please don't destroy the natural beauty of LCC!!!
29982	Shasta Mitchell	A gondola is not the answer! More people use the canyon that people who are going to resorts! Preserve the beauty of the canyon. NO GONDOLA
29983	Christopher Bush	The people have spoken. We do not want the gondola.

ID	Full Name	Comment
29984	Rich Chaffee	<p>I will first state that I am not in favor of the gondola for little cottonwood canyon. I have been a skier and snowboarder for many years and still do both at 68 . I was a ski and snowboard instructor at Brighton for 9 years and a ski instructor at Deer Valley for 9 years. I do not feel that it will benefit Utah residents as much the many visitors we get every year. I was a ski and snowboard instructor at Brighton for 9 years and a ski instructor at Deer Valley for 9 years.</p> <p>I have a vision of creating a ski village in the valley as a transportation hub for both canyons. My first choice would be the land where the current prison is. My vision of a ski village at this location would be one where there would be parking , bus transportation, hotels restaurants etc.. In the future I would love to also see an indoor year round ski facility. This would provide a consistent source of income for the State as well. the ultimate goal is to reduce the traffic in the canyons. I am an arborist so I know what a great resource the canyons are to all. This village would also be in a great location in close proximity to both Utah County and Salt Lake county. Thanksgiving Point would be a great option for entertainment for visitors and their families just a couple minutes away.</p> <p>I know from all of the times I have stood out in the cold waiting for the bus that this is probably one of the deterrents to people using that mode of transportation. Another deterrent is trying to find parking to get to the bus. There are many times [Weekends and holidays] where parking is just not available after 9:00 am. At this ski village there would be a transportation hub where people would have other things to do while waiting especially on a day where there is a canyon closure. A covered bus stop would provide a comfortable place to wait. There would also be ample parking as well.</p> <p>As far as the option to increase bus service and widen the canyon road I am In favor of that more than the gondola. Knowing both canyons well [I am including big cottonwood as well because the gondola does nothing for that canyon and there is als o excessive traffic problems there as well.] I see that there are spots in both canyons where it would be difficult and expensive to create a bus lane. My solution would be to create a bus lane where possible and install a traffic light where it would merge to a single lane. The bus operator or UDOT could remotely control the light to stop vehicles and allow to bus to continue. I am sure after being in a vehicle a few times on a powder day and seeing a bus full of people pass by for first tracks those individuals might opt for the bus rather than driving their own vehicle.</p> <p>I think we can all agree that something has to be done. The problem is not going away.</p> <p>Having a ski village away from the canyons would benefit both visitors and residents as well as protect our watersheds from further damage. On a canyon closure day it would keep many people at the village rather than waiting an hour or more in traffic on wasatch boulevard.</p> <p>Thank you, Rich Chaffee</p>
29985	Barbara Braeden	<p>I am AGAINST the gondola option. A train & tunnel system connecting Big & Little Cottonwood Canyons is a sustainable long-term answer to the congestion problems in the canyons.</p>
29986	Mark Gessel	<p>It is not that hard to solve the traffic problem in LCC. Remember that the red snake days only occur when there is fresh powder to ski on. Those days should be bus and carpool (4 or more persons per vehicle) only. Wow! Other things such as charging big bucks for parking, providing free lockers at the resorts for all bus riders, free bus rides, avalanche sheds can help also at a fraction of the cost of a gondola or widening the road. Would a gondola ever be built if the resorts had to pay for most of it? Or if only local money (such as Salt Lake County) had to fund the entire cost. Think of what good 600 million could do to alleviate REAL problems like poverty, food insecurity, lack of good jobs because of lack of affordable training/education, etc, etc.</p>
29987	Lawrence Howard	<p>Don't build this</p>
29988	Mark Linford	<p>I really think Wasatch should include a PROTECTED bike and walking lane. You can turn that road into something so much more! I love the gondola. Please connect to Trax.</p>
29989	Drew Phillips	<p>I support the gondola project to reduce traffic and emissions in Little Cottonwood Canyon</p>
29990	Ricky Szukala	<p>No gondola! Decision makers will go down in history for ruining the wasatch front! What do you get for building the gondola? Favors, money, or giant conflict of interest.</p>
29991	Rod Butler	<p>This sham smells of back room payoffs from Snowbird and Alta. The gondola is widely unpopular from those of use that live near the canyons and from those in SoUtah that will be paying taxes for ages for this poor solution. People that refuse to ride busses will refuse to ride a crowded gondola.</p>
29992	Tim Roberts	<p>Imagine Zion Canyon with a gondola running up the middle of it. The view from Angel's Landing would be ruined and the place would never be the same. Zion Canyon is a lot like Little Cottonwood. A beautiful environment with millions of visitors every year. Busses work great in Zion and could work great in Little Cottonwood. I don't even think you need to actually widen the road. I think traffic needs to be limited and everyone should have to take a quick and efficient bus service. The avalanche enclosures could help the road stay open in hazardous times.</p>
29993	Jean Brown	<p>Well, this gondola idea is just NUTS! Really, 'us' taxpayers are going to fund this for 2 stinking ski resorts? And RUIN a beautiful gem of a canyon? Oh COME ON! Initiate a reservation system for both ski areas, limit the number of cars up the canyon, add more electric busses, have 'out of state' skiers/visitors pay an additional luxury tax (since this option will only benefit the rich folks that have the money to spend). Unfortunately, this will be one of the reasons for leaving SL valley: too many people, no snow and out of state money taking over our beautiful Utah.</p>
29994	Gary Varley	<p>The gondola makes way more sense. Those that oppose it just don't want people to Park in there area. They would all approve a parking garage if it was in Magna.</p>
29995	Williejuan Johnson	<p>Gifting this kind of money for the benefit of two ski resorts is an abuse of the taxpayers.</p>
29996	Jessica Callister	<p>If the resorts (Snowbird & Alta) pay for it themselves I'd be cool with the Gondola. Utah tax payers should not have to pay for that. Our money is better spent elsewhere throughout the state. Starting with re-opening homeless shelters.</p>
29997	Matt Liapis	<p>5 lane alternative on Wasatch please for year-round traffic improvement. Don't remove road parking at resorts until gondola is complete. Snow sheds are a must. Gondola needs to run year-round on weekends or have bus service until gondola is complete. Single occupant vehicles restricted or tolled on peak or powder days will be welcome.</p>
29998	Tori Chrupalo	<p>Please do not put a gondola up little cottonwood canyon. Do not rush this decision, if you don't like the options right now, give it more time, think through the ramifications. It is better to take time to decide than to rush to an irreversible damaging option.</p>
29999	Elizabeth Goott	<p>No No No gondola</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30000	Joe Jackson	I think the environmental impact of the gondola will outweigh the current situation. There is already a road, no need for a road and a gondola.
30001	Marissa Moran	A gondola in little cottonwood canyon is not the right choice for our state and our community. As someone who accessed the canyon year round, how will this gondola solve parking issues at different trailheads in not only winter but also summer? The parking issue and traffic is no longer only a winter issue. We must come up with a solution that addresses the year round traffic issue and at all popular spots. Not only that, but this gondola is definitely not for the people of Utah for it will only increase traffic to the canyon and at the resorts. Please don't destroy our canyon.
30002	Larry Hedrick	Finding ways to put more people up the canyon does not solve a problem it escalates it.
30003	Jennifer Jackson	Don't do this! This is a massive waste of taxpayer money. The ski resorts need to pay for this if it is going to happen. The State of Utah should not pay to make other people rich. This is a waste. A serious investment into busing would be a much better use of money and much more equitable to all.
30004	Linnea Charnholm	A gondola will forever change the landscape of Little Cottonwood. Forever is a long time. Can't UDOT explore other non-invasive options first before venturing into this poorly planned eyesore?
30005	Edward Chillington	That is the most ridiculous proposal you could have come up with. Where will people park to access the gondolas? The view along the entire length of the canyon will be ruined. Try limiting traffic instead, and implement some shuttle buses like Zion NP.
30006	Mary Fry	Definitely against the gondola! Why don't you limit the number of vehicles traveling up the canyon. Little Cottonwood Canyon is perfect now. Don't ruin this gem of a canyon!
30007	James Jackson	I am deeply concerned by what appears to be a conflict of interest between the developer and lawmakers in this decision. I do not appreciate half a billion dollars of taxpayer money being used to enrich lawmakers and ski resort owners.
30211	Galen Schuck	Please do not even consider the gondola proposal. What a fiasco. Someone is going to make tens of millions building this but at what cost to the beauty of our canyons. The needs of the many outweigh the needs of the few. We want year round solutions at a much more reasonable cost. Electric busses would be a great solution. They are superior to diesel because of kinetic regenerative charging of the batteries on the way down the canyon reducing brake wear, noise and of course no pollution. Thank you Galen Schuck Sandy, Utah
30008	Annelise Allen	Hello, What benefit does the gondola have above increased bus/public transport for the efficiency and sustainability of Little Cottonwood Canyon? I can imagine a gondola is slower, holds fewer people, may draw more people into the canyon (even from long distances), and cost more. For these reasons it is hard for me to see it solving any transport issues and actually creating more transport and sustainability issues. Please let me know how this is created to work for us and for LCC. I use the canyons regularly and carpool with the park and rides and haven't had issues so far. I am extremely skeptical of the gondola. I want to see people able to use LCC in a sustainable way and am hoping we can have a good outcome here. Please consider the majority of public opinion on this.
30009	Jeremy Dimond	Absolutely NO Gondola! This idea is complete nonsense. I suspect political corruption.
30010	Mark Allen	I am opposed to the addition of a gondola to Little Cottonwood Canyon. It will irreparably mar the scenery of the canyon. It also lacks the scalability required of a structure that will be on the landscape in perpetuity. Please reconsider the current in plan and consider solutions that will provide access to the resorts and the pristine wilderness for generations to come.
30011	Amy Dall	I unequivocally disagree with a gondola. A gondola only serves and benefits the wealthy. Taxpayers foot the bill? Not good, UDOT.
30012	Brady Adams	I support the gondola.
30013	Lucy Peifer	My name is Lucy Peifer and I am seventeen years old. I have lived in Utah my entire life and have been going up Little Cottonwood canyon for as long as I can remember. I know that canyon like the back of my hand. That canyon means so much to me. So much. The LAST THING I want is a freakin gondola running through it. 22 towers that are 200 feet tall each, taking away so much of the natural beauty. Canyon drives will not be the same. I am so beyond angry and I am only seventeen years old. The people that are deciding for me are way older than me and frankly I don't think they truly understand the raw beauty in that canyon and what this gondola will do. No one will remember that canyon for a gondola. They will remember the raw beautiful mountains and snow and wildlife they see. I hate this. I don't want this. My FRIENDS don't want this. My sixteen and seventeen year old friends don't want to see this. This is my future in this world and I do not want to see this in the one place I go to to get away from the ALREADY growing and infrastructure filled valley. I can't even go up my favorite canyon anymore without the fear of it turning into a money making development. It is outrageous. Think about your mother. Your mother earth. Do better officials, do better.
30014	Lisa Colley	Hello, My name is Lisa Colley. I am 18 years old and I want to say that I hate the gondola. I climb in the canyon all the time, I have friends that climb there. All our awesome climbing lines will be affected. Even more disturbing is the ugly sight this will have when you are driving up the canyon. A place that is so close to me in my heart, this canyon, is being lost before my eyes to money craving individuals who want this for their own benefit. What is even more alarming is the time they have been considering this without even mentioning it to the public. Truly a backroom deal. I love that canyon. So many people love that canyon. And anyone that has touched grass and appreciated it's nature knows the cost the gondola will have. In the world we live in today, there is so little nature left that is untouched. Truly depressing to know that a beautiful place I know is falling victim to the brutality of mankind. I'm not even being overdramatic, this is the result of humans. Our world is dying because of US. THINK ABOUT THAT. THINK.

Comments on Little Cottonwood Canyon Final EIS

30015	Lily Mackenzie	I'm Lily and I am 17 years old. I am a sole believer in the power of nature and the effect it has on people. It takes a person who has been in nature for a long time to hear her cries for a better world. I have heard cries in that canyon from THAT CANYON. I can feel the hazy toll of the idea of the gondola and the effect it will have on her beauty. What happened to wild utah? what the hell happened! We have white old men deciding before me what they want to do with MY FUTURE. I DONT WANT TO SEE THIS. THERE ARE SO MANY THINGS WE CAN DO INSTEAD.
30016	Annette Earp	Thank—i for your personal marvelous posting! I quite enjoy—ud reading it, you're a great author. I 'uillpl remember too bookmark your blog and will eventually come back down the road. I want to encourage that you continue your -Åreat work, hafe a nice afternoon!
30017	Claire Schraidt	This is such a gross misuse of public funds and an tragedy for the canyon. The gondola, which only serves a select few, further perpetuates the notion the the outdoors are recreational hubs for the wealthy and the wealthy alone. This does nothing to aid access for hikers, climbers, or backcountry skiers. If UDOT goes through with the construction of the Gondola, it will be one of the great missteps of our time and we will be forced to live with it for decades to come. Shame on all of you that it's gotten this far.
30018	Kitty Ford	No Gondola. Waste of tax payer dollars. Will destroy the environment in the canyon. Only benefits Snowbird and Alta
30019	Taylor Lay	I cannot understand how you guys want to ruin YET ANOTHER beautiful thing on earth. There isn't even that much traffic only a couple times a year? Also... I don't know a single person who wants the gondola... So I just don't get it.
30020	Laura Dupuy	NO to the gondola project. Absolutely not! This project benefits Snowbird and Alta at the expense of the community and the environment of one of our most important natural resources - Little Cottonwood Canyon. The resorts are full enough. The bad snow days and resulting traffic happen 5-10 days a year - certainly not enough to make this necessary. This project reminds me of the Great Salt Lake pumping project - a major infrastructure project that has never been used. People won't pay to ride the gondola for the scenery. Our taxes can be spent better to: fix roads, pay teachers a reasonable salary, work to reduce emissions, water conservation measures, etc. No, No, No to this project that favors a special interest group.
30021	Illa Matthewss	DONT DO IT YOU'RE ACTUALLY RUINING UTAH
30999	Craig Wallentine	Hello I am trying to find out how much the proposed gondola rides to Alta/Snowbird will cost - base price - peak pricing - passes? - discounts/prepays for groups like employees - proposed hours of operation winter -proposed hours of operation summer - will UDOT collect the gondola fees as with the tolling? Thank you Craig Wallentine
30022	Joseph Howell	I'm concerned that a gondola is not the right choice here. It serves only the ski resorts and the research I've seen shows it does not reduce traffic in the canyon at all, it only allows more people to access the resorts and resorts only. What about summer hikers? Backcountry skiers? If this is only to serve the resorts, why not make them pay for it? Please pursue other options like mandatory carpooling, more busses, etc.
30023	Roger Hamilton	I am opposed to the construction of a gondola. The taxpayers money is not well spent on this and turns LLC into a Disneyland-like tourist attraction that serves the financial interests of special-interest groups who do not represent the general public. No to the Gondola!
30212	Ian Ehrlich	The only good thing about this is there's no funding for this nightmare. Why does UDOT continue with this completely disingenuous campaign? 90% of people who live in the Wasatch don't want this gondola. It doesn't solve the problems it purports to solve and it's a nightmare for the environment. But of course UDOT doesn't give a flying about what the people actually want. This is all performative nonsense.
30024	Charlie Dehner	No gondola, public is pretty unanimous in opposition.
30027	Austin Goebel	Please build the gondola, traffic is horrible.
30026	Rob Squire	This is only a solution for the land investors and ski resorts it doesn't help the issues you are trying to solve. More snowplows is the answer.
30025	Jeremy Huckins	This is a terrible decision. The greed of slc will ruin it
30028	Kristen Iversen	The gondola is a terrible idea. It doesn't meet the needs of many canyon users, just skiers who have the money to pay for the ride, and of course the ski resorts. It doesn't serve other stops in the canyon. And it costs way too much. Build snow sheds when needed, increase bus service, charge a toll for canyon visitors. Please don't build a gondola!
30029	Michelle Todd	I am very disappointed the proposed Gondola in any form has been approved. The destruction of the canyon with steel towers is a tragic misuse of caring for what is so unique and beautiful to the Wasatch front. To destroy the beauty only for the transport to the resorts and meet developers needs is shameful. There should be a limitation to users, which of course does not meet the greed of the resorts. There should also be only buses during the peak season. The cost spent for a minority is not reasonable.
30030	Kelsey Martinez	NO GONDOLA. This is an extreme misuse of taxpayer dollars. 550 million to benefit the wealthy who are privileged enough to afford to go skiing. By the time the gondola is completed, it probably won't even snow in the canyons anymore thanks to Utah's refusal to conserve water and limit farming in the desert. The Great Salt Lake which feeds a lot of the snow fall in the canyons won't exist in 10 years. How about 550 million to fund homelessness services in Utah? Improve crumbling infrastructure in other places in the state that services more people? Build public transit in cities that ACTUALLY WORKS? There are literally a million better uses for 550 million.
30032	Joe Day	Who is paying for this. Shouldn't Snowbird and Alta pay for it because they are the ones that will continue to profit ? Will there be stops for non resort traffic ? Can I take my mountain bike on the gondola.
30031	Matthew Colemere	I believe that the Enhanced Bus Service Alternative is the way to go for Little Cottonwood Canyon. It's a more scalable solution and doesn't destroy the beauty of this canyon. I believe the people in Utah want the solution with the least impact, which means I believe the gondola is a big mistake.

ID	Full Name	Comment
30033	Greg Davis	<p>Dear UDOT:</p> <p>First if all does it really matter what the locals or the people that use the Canyon regularly or the homeowners at the mouth of Lcc have to say because a majority of the people do not want your gondola and yet here we are moving forward with the ridiculous gondola.</p> <p>how can u all b serious about destroying the canyon for 2 ski resorts that that stand to profit substantially at the cost going of everyone else.</p> <p>not only is the gondola not going to help it will actually things worse In my opinion. the Gondola will lead to even more people attempting to drive to the mouth of pristine Lcc where there will now be a parking lot for up to 2500 cars, a base station and 200ft plus size towers strewn along the entire canyon. (No Thanks) For what, 15 really bad traffic days u r willing to spend in excess of \$500 million.</p> <p>The vehicles that are attempting to get to the gondola parking lot which will b located near the mouth of the canyon will still be stuck in the same traffic as everyone else(Backed up to ft union on some occasions and even to 6200 s hwy exit) on days canyon is closed for avi control and crazy pow days. The GONDOLA will also not run while they are performing avalanche control. (2 hours and up) so now even more people will be waiting in there running cars with heat on till canyons open and the gondola to start running. A majority of locals do not want it nor do the communities near the mouth of Lcc.</p> <p>This gondola is nothing but a Sheep in Wolves Clothing for snowbird who dreams of the day they can advertise longest gondola in the world. snowbird doesn't care about the traffic otherwise they would limit the amount of people they allow on the mountain. do any of u actually recreate in these canyons. have u ever been to snowbird on a packed powder holiday.</p>
30035	David Henriksen	<p>I think the phased approach with busses make sense. I think we will find that folks just don't want to take public transportation. We need to take the gondola off the table. It will just make for really long lines at the resorts and ruin the great experience we have here in Utah.</p>
30034	Everett Knauss	<p>The gondola is a very expensive option that only services two private businesses in the canyon solving a problem for them that only happens certain days in the winter. Taxpayers should not have to fund this. Ridiculous wasteful spending now and forever going forward. No to gondola!</p>
30036	Michael Yingling	<p>Please consider either (1) a tunnel, or (2) simply shuttling down the canyon to ALL traffic (except home-owners and employees) and doubling SKI BUSES ONLY on days with massive snow.</p>
30215	Doug Kahler	<p>Lol!!! I'm guessing over 90% of the replies I read on Facebook are against gondolas. It's beyond a stupid option even more baffling how idiot (that was the correction for UDOT, but I thought appropriate. And let me tell, putting in gondolas will be such a HUGE deterrent to tourism. Who the hell is gonna want to come here & have to ride a gondola to the resort?????? STUPID!!!</p>
30037	Steven Kartchner	<p>This is a poor use of public funds for the large amount that will be expended. I oppose tax funds used for this purpose as they could go to better uses that would benefit a larger percentage of the population.</p>
30040	Molly Malone	<p>The proposed plan with the Gondola is the least popular, most harmful and most expensive option for LCC. This decision feels rushed and for something as big and expensive as a gondola going up and down the canyon, careful consideration and time need to be taken. There are less drastic and reverser able decisions like increased bussing or tolling as better options. If an Gondola goes up it is up forever, no matter how much or little it will get used (the decrepit gondola down in Moab comes to mind).</p> <p>This proposal ignores local public and political opinion and only listens to the folks who would benefit monetarily from the gondola. This would be funded with tax payer money and therefore it should be in the best interest of the people paying for it. NOT a crowd funded subsidy for the private ski resorts.</p> <p>Personally, I do not ski at Snowbird or Alta, I do not have a pass to either resort. But I spend many days in the summer and winter up LCC climbing, running, and backcountry skiing. The Gondola is the worst option for me and people like me. The solution for LCC should not just benefit those who can afford to frequent the resorts, but anyone who wants a mountain experience.</p> <p>I hope you are listening to the people and not just the money.</p> <p>Cheers.</p>
30039	Kathy Mcfarland	<p>I have not seen any information about the impact of a gondola on the traffic problems along Wasatch Boulevard, 9400 South, and Fort Union Boulevard. I feel that a gondola will not improve this problem in any way. Those wishing to access the gondola parking lot will still back up traffic on these feeder roads, so everyone who lives near or uses these arteries will be negatively impacted. And, if a gondola is needed, why don't the ski resorts pay for it? It boggles my mind that this should be a taxpayer concern. I am definitely against a gondola as a solution.</p>

Comments on Little Cottonwood Canyon Final EIS

30038	Tom Koester	The only interests that stand to win from the gondola are the owner of snowbird and the owner of the land where the parking lot will go from parking fees, gondola fees and increased resort traffic. Alta and Snowbird will still see large volumes of traffic driving up to the resort and they will have more skiers and snowboarders on the slopes, degrading the experience. The gondola will likely sit dormant for at least a few months during the spring, summer and fall, proving to be an eye sore. The gondola at Snowbird already gets put on hold frequently for wind, weather and mechanical issues, as will a gondola spanning the whole canyon.
30042	Robert Mccowan	I am glad about the decision for the Gondola. It would be prudent to limit (ski hill owners) number of skiers per day also lodging with reservation system so as not to create disappointment at the resort, by blindsiding patrons after they pay for the ride.
30041	Jeff Brown	I am absolutely opposed to using tax money to build the Gondola or any other road enhancements that benefit the ski resorts up the canyon. Traffic is a problem in the winter, but only because too many people are driving too many cars to ski/snowboard. A \$500M tax payer funded pet project that benefits 2 business is stupid. If the resorts want to ensure their guests are having a great experience to/from the resorts then they should pay for it. If a Gondola is the best solution, so be it. UDOT should be consulted and part of the solution, but this project should not be part of any annual budget consuming tax dollars.
30043	Andrew Koziatek	Hello, I would like to propose that the gondola does not go up. I am born and raised here in Salt Lake City and I've skied my entire life. part of skiing is getting through the traffic, I believe this gondola will destroy climbing spots that I go to frequently all year round. This gondola proposal appeals to more tourist and will appeal to all ikon users more than it does the locals. This is extremely unfair and will destroy the beauty of little Cottonwood Canyon. I work at (Alta) in the winters and it would absolutely hate my life if I had to ride the gondola to work. There's something special about waking up super early in the morning with your friends hanging out in the same car and waiting for the ski resorts to open on a busy powder day. if you don't know how to get a good snow on a powder day you shouldn't be able to get it at all. This gondola proposes all traffic from the bottom of the canyon to get to the resort which will overpack the resorts. The resorts don't have a daily ticket limit but trust me that will be the next step if the \$500 million project is an act
30044	Timothy Hood	Putting a toll road in Little Cottonwood Canyon is a bad plan. It places a toll burden on every traveler, every day, including travelers who could not take advantage of the gondola even if they wanted to. The gondola is for skiers. It will drop skiers off at ski resorts but not be able to be used by anyone not making a ski resort their destination in the canyon. The cost of the toll infrastructure and manpower to operate, support and maintain it is an unnecessary waste when a simpler solution is available: add a tax/fee to the cost of a ski lift ticket, season pass, etc. I am a skier and I support a tax or fee rather than over-paying for unnecessary infrastructure and operations that will only add to congestion and traffic at the base of the canyon.
30047	Fred Ash	I like what I have read above about the plans. My only concern at this point is who pays the bill. As the main beneficiaries of the whole process are the two privately owned ski resorts, their employees and visitors, those two ski resorts should be covering a big portion of the construction and maintenance costs.
30046	Ray Niederhauser	This is corporate welfare plain and simple. A taxpayer handout to narrow interested parties. It really aids only the ski resort owners. If Snowbird wants a gondola let them pay for it.
30045	Mike Williamson	I fully support the gondola idea and feel it is easily the best solution for the canyon and makes the most sense economically.
30051	Brittani Bench	Please lower the speed limit on Wasatch Boulevard from Fort Union Boulevard south to the High T intersection (where Wasatch turns into Little Cottonwood Canyon Road). For those of us who live in the neighborhoods along Wasatch, safety is top of mind. As it is now, the 50 MPH speed limit is just too fast. People consider it a highway and disregard the safety of the bikers and pedestrians who also have access to the roadway. This has led to many accidents that could have been avoided but for the high speed of vehicles involved. Lowering the speed limit to 35 MPH would signal to motorists that it is a residential roadway and will be much safer for those of us entering and exiting from the residential access points along Wasatch. Please restore the safety of our community by lowering the speed limit to 35 MPH.
30050	Joann Ralphs	I fully support the gondola b decision. I would happily use the gondola to access the ski resorts in the winter and would likely ski there more often as I am currently afraid of road conditions in the canyon and the danger of avalanche and rock slides
30049	Jared Poulson	Let's join the world's elite Alpine engineering countries who have struck a balance between beautifully enjoying nature and minimizing impact. A Little Cottonwood Gondola would not only solve serious traffic issues, but would become as iconic to the Salt Lake Valley as the LDS Temple. SLC would be a leading example in this country, allowing the world to enjoy the beauty of our natural world without having to leave needing the canyon full of cars, parking eyesores, emissions, noise, etc. I remember when many didn't want the 2002 Olympics to come to SLC for fear it would ruin our town or saddle us with debt. Some are resistant to progress, but I don't ever hear anyone complaining now that we did the wrong thing with the Olympics and we are trying again. I view the Gondola as a similar event, real progress that will be done in the proper way for maximum enjoyment, minimum impact. Thank you!
30048	Doug North	I disagree with the Gondola proposal. Expensive/view altering solution for about 3 months per year!
30053	Nicole Brannen	As a 37 year resident of Sandy/Draper, I fully support the gondola and believe this to be the best option we have to reduce canyon traffic and improve air quality. The only other alternative would be to limit daily canyon travel, which would be too restrictive and reduce resident and tourist satisfaction.
30052	Dennis Pruzan	A publicly funded project to benefit private companies is not the answer to our problems! This increases access to ski resorts with bloated access prices that are inaccessible to most people in the valley! This does not increase access to White Pine and all the other public access trailheads for people that cant afford to ski at resorts!! Please show that options that don't cost half a billion dollars don't work before spending such tax-payer funds! Charge people to park at the private resorts and use that money to run an affordable and frequent bus up canyon. We are trying to solve a problem that is because people have been unwilling to try something new. Force the change in more creative ways!

ID	Full Name	Comment
30056	Namita Chittoria	Gandola - reduce pollution. Will there be seats in Gandola? It would be hard to stand during the whole ride up.
30055	Tim Zito	Gandola B is the best choice among those given.
30054	Fred Deblase	Please build the gondola! It's the best solution.
30058	Richard Schlesinger	pure garbage. Who is to gain other than the contractors, the ski area owners and some very corrupt politicians. Virtually no one else wants this for 20 crowded roads each year
30057	Richard Schlesinger	pure garbage. Who is to gain other than the contractors, the ski area owners and some very corrupt politicians. Virtually no one else wants this for 20 crowded roads each year
30059	Joseph Tamasonis	No gondola. Just put in a toll booth for cars and make the bus free. Would reduce traffic drastically and might earn a profit.
30060	Mark Hastings	I support gondola. Road often obstructed for hours or days due to avalanche.
30062	Lucy Christensen	The gondola appears to be the best alternative to the traffic, congestion and pollution in the canyon. I would ride it even though I don't ski. It appears to be the least destructive option.
30061	William Robinson	I do not support the gondola given cost and visual impact. - I support enhanced bus service - I support tolling
30064	Marsha Olsen	I have lived in Salt Lake City all of my life, as have all of my children and grandchildren. We have all skied all of our lives. Quit catering to the outside money skiers!!! We can improve taking the bus to ski resorts by limiting cars going up the canyons - pretty simple, right!!!!
30063	Peter Vordenberg	No Gondola. This is the most expensive, least sensible when it comes to moving people to many locations within the canyon. It serves the ski areas at the expense of the rest of the population, and has the greatest impact on the canyon itself. It does enrich a few (already wealthy) people which is the only reason we're still talking about it, because of the pressure they're able to put on the conversation. A better alternative is simply more, smaller busses, and at peak times closing the road to all but busses which can make stops at various places along the road, and those who live or work in the canyon. Very cheap and very effective. Sorry though, the rich won't get richer. And the poor (general population of the valley) will not be subsidizing the ski areas and the rich guys who want the gondola.
30065	Emina Alibegovic	I stand unequivocally in opposition to the gondola solution. The enhanced bus service is a superior solution with the smallest impact on the environment and is also the cheapest. Gondola serves one purpose and one only: to get the skiers to the resorts which make a pretty penny on public lands and now we are also supposed to subsidize their business agenda? There are many other uses of the canyon that will be continue to impact the traffic problems in the canyon because their needs would not be served by the gondola. To summarize: NO to gondola.
30066	Loretta Markham	The alternative of a phased enhanced bus to a rapid, high capacity bus service with automation was not and needs to be evaluated. The bus alternative does not adequately assume enhanced bus with improvements of tolling, etc (common to all alternatives) with a transition to automated and 'linked' buses for higher capacity and more frequent stops. Flexibility in adaption with each alternative was not and should be explored. Climate change and implications that will modify recreational use outside of these two privately owned ski resorts was not adequately evaluated and used for screening in a meaningful way for comparison and selection of the recommended alternative. Bottom line-NEPA allows for disclosure. This was done. And the result - as seen in the selection of a gondola option demonstrates the utter lack of respect to public comment, the land and longevity of our resources in the presence of climate change. Evaluation is needed in this NEPA document: for the public investment that is being made- each alternative (including and especially the preferred) should be evaluated based on the monetary return to the private companies that will directly benefit from this public investment. Pricing and access of the gondola was not fully evaluated for its impact on EJ communities. The gondola provides limited access to parts of the canyon- only accessible with required fees. The access by the gondola will only serve those that can afford to access snowbird and alta and not provide equal access to the canyon as a whole.
30067	Vinc Simon	This only benefits ski resorts Those who benefit should pay. This would also negatively affect the environment. Also, it does not provide service to other dispersed canyon rsers.
30068	Jeff Stephenson	Thanks for running the process. I support the gondola option, with tolling for cars that drive up the canyon.
30069	Ron Sawdey	I have two comments regarding the proposed, preferred alternative for Little Cottonwood Canyon. First, none of the discussion to date has been around what might be the maximum number of people allowed in the Canyon at any one time? In other words, what number can be in the canyon and not seriously impact the quality of the user experience and the watershed? The assumption appears to be to get as many people up the canyon as quickly as possible, regardless of the impacts. This is ignoring how environmentally sensitive these watershed lands are. Second, the Gondola proposal is primarily benefitting two large corporations, Alta and Snowbird. How much money have these two corporations pledged towards the construction of the Gondola? Using over \$500M in taxpayer money to create a transportation corridor that benefits these two entities smacks of blatant corporate welfare. I do not want my taxes spent for their benefit.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30070	Karin Liimatta	<p>I'm not happy with the proposed gondola idea. The community consensus was definitely not in favor of that idea yet it passed with the support of big money and influential people.</p> <p>Please consider keeping bikers safe by implementing separate lanes for vehicular travel and pedal pushers. The thoroughfare of Wasatch is a biking connection route between communities and safety should be paramount in the decision. A shared bus and bike line makes little sense if you are a biker and understand the risk. If you are not a biker, it's easy to plan for a less expensive expansion. Also, consider speed limits that reflect the road between neighborhoods and keep it to 35 to save lives.</p> <p>As I write these comments I can't help but wonder if they are considered or if plans have already been made and the open comment period is just a mandatory part of the process to make locals and individuals feel "heard".</p> <p>Here's an opportunity to make good on listening to the voices of the constituents living in the area. Thank you for choosing safety and community over speed and greed.</p>
30071	Veronica Fickel	<p>I believe that a gondola would negatively impact the canyon, as it would allow more visitors to travel up the canyon between the road and the gondola, creating a worse environmental impact to the canyon. I also believe that a bus system implementation or shuttle system would be less detrimental to the visual beauty of the canyon as well. Please say no to the gondola!!!</p>
30072	Robert Allen	<p>No Gondola Breeze by gate for certified 4WD with traction tires. Pay gate and inspection for all other traffic. Parking Reservations at both Alta and Snowbird. Make Car Pooling Count. UTA Busses.</p>
30073	Sam Nielson	<p>I am 100% for the gondola. It will clear up the roads for people who want to use the roads lower diem the canyon and provide an amazing experience</p>
30074	Kent Rogers	<p>PLEASE build the tram. I don't believe that any other alternative provides a long-term solution. Only the tram will help when the road is the worst, during heavy snowfall or an avalanche. As for the aesthetics of the canyon, the tram would be minimal and certainly MUCH less of a distraction than the road is or telephone / electrical poles already are.</p>
30075	Glenn Johnson	<p>I live in east Sandy, within a few miles of the mouth of Little Cottonwood Canyon. I am a runner, and run down the canyon often. I was doing a canyon run in late July and reached the area of White Pine trail head. Both sides of Hwy 210 were packed with parked cars, stretching as far as I could see in both directions away from a parking lot already filled to capacity. This was more than a mile and a half from the nearest proposed Gondola Station (Snowbird).</p> <p>This image perfectly captures the absurdity of arguments in favor of the Gondola option. It will not "increase the quality of life for residents and canyon users by reducing traffic congestion as private vehicles shift to transit" unless of course you limit that discussion to downhill skiers buying \$100+ lift tickets and/or politically well-connected Sandy residents that also happen to be real estate investors. This reeks of cronyism and corruption. Please reconsider this absurd decision.</p>
30077	Cynthia Wright	<p>I'm strongly opposed to building a gondola in Little Cottonwood Canyon:</p> <ol style="list-style-type: none"> 1. This gondola would serve a small sliver of our community-residents who can afford to ski and tourists-- during the winter months, and be underused the rest of the year. This is our tax money going to benefit only a few during a limited time period. 2. The real entities benefitting from this huge expenditure of tax money are Snowbird and Alta ski resorts, and the land developers. 3. The gondola is not a flexible, scalable solution to solving the traffic problem in the canyon. It only will serve Snowbird and Alta, and none of the trailheads or campgrounds in between. 4. The numerous structures required throughout the canyon to establish this monstrosity would violate the scenery of the canyon and disrupt natural habitats. Everyone who lives anywhere around where the entry point would be is opposed to the gondola. 5. The gondola does not seem convenient. People will have to drive to it or ride a bus to get there, transfer all their gear, and then (it's my understanding) that if they want to go to Alta, transfer it all again to a different gondola car. It will take much longer. It's an ordeal; people would rather just drive their own cars up the mountain. 6. Other more conservative means of controlling traffic should be tried before building something this drastic, such as a toll to enter the canyon, staggered parking reservation fees (similar to what Alta has already initiated), and dedicating skier-friendly buses which would allow more flexibility in adjusting to schedules and needs.
30076	Parley Baldwin	<p>No to the Gondola, please.</p>

ID	Full Name	Comment
30078	Patrick Rich	<p>So tolling pays for tolling and punishes people financially for wanting to use the canyon. This is a terrible disincentive. How about toll single occupancy vehicles instead? If the toll is just to pay for tolling and there will be single occupancy restriction enforcement tools already in place, simply use those tools to toll single-use vehicles. If the resorts are going to financially punish single-use vehicles AND UDOT will punish single-use vehicles it will become financially onerous for residents to use the canyons. This system creates an economic imbalance of access while double charging residents whose taxes support the infrastructure already.</p> <p>It's been said already but this entire project revolves around supporting two private businesses (and to a much smaller extent a small population of the town that supports those businesses). I'm struggling to understand why I should pay to support a road with taxes, then pay to use those roads through tolls, then pay to park at those businesses, and then pay for the use of the businesses. If the businesses want to support the level of traffic that is causing the problem...why aren't the businesses financially responsible? Why is the financial burden on ALL users and doubly so on residents?</p> <p>At the VERY least there needs to be a reduced residency toll to account for maintenance already paid and avoid double taxation that unfairly punishes locals that already have to deal with canyon-related issues.</p> <p>I've also yet to see any supporting evidence that tolling will actually have the desired effect. While there is some study regarding tolling generally it doesn't take into account the type of user and the destination - I.e. will people paying \$150 to park and ski be disincentivized to pay an additional \$20-30 dollars or will they just pay it as the ever-increasing cost of skiing?</p> <ol style="list-style-type: none"> 1. Tolls support tolling or other non-canyon-related projects and do nothing to improve the canyon. 2. There hasn't been a compelling argument made that tolling will have the desired effect of reducing traffic.
30079	Katherine Kern	<p>I live at the base of Little Cottonwood Canyon. The gondola will not only have an effect on the habitat at the base of the canyon, destroy significant natural sites, and cause serious risks to the watershed; but for locals, the habitat simply is too important to touch. It's so evident that the people who live in Utah don't want the gondola. 97 percent of the comments on the Instagram post announcing UDOT okay-ing the gondola were against it. There are organizations actively working to not let this happen. I don't live in Utah anymore, but I shed a tear when I heard about the gondola because I am so terrified about what effect it will have on my home. My parents got married at La Caille, the rock garden climbing is famous, and its where people live. Its very evident that this is economically driven. With threats to Utah's habitat currently (with the Great Salt Lake), why do more to destroy it? For once, let's listen to the locals, the environmental scientists, and the habitat itself.</p>
30081	Rachel Tibolla	<p>I feel like this has already been decided and the "public comment" period is disingenuous. Am I wrong?</p>
30080	Rick Newton	<p>I believe that the gondola solution is an appropriate and prudent choice given the options.</p>
30082	Diane Whittaker	<p>This is the most expensive option that caters to an elite special interest group. It will take too long to reach the resorts and doesn't serve the many canyon users that do not go to the resorts. Natural gas busses that run frequently are a much less expensive and versatile option. I have been skiing this canyon since 1965 and will never use the gondola. I was shocked at UDOT's decision. Who is paying who off here?</p>
30083	Jim Hunsaker	<p>Looking at the options, I've not seen any information on how much it would cost to ride this Gondola. How much would a ride cost? I live close to LCC. I'm in favor of a toll system and widening the road where needed. The ski resorts have caused this problem with change in ownership of Snowbird and the IKON pass and passes like it. It brings people into LCC that normally would not come to LCC to recreate. I would support IKON pass users to pay a fee for coming to ski that goes directly to a fund for highway improvements. If Snowbird and Alta can charge for Parking at their resorts, then it is reasonable to charge the IKON pass users a special fee. Deer Valley charges an additional fee for IKON pass users. This problem is one that the resorts made by attracting a clientele that pays very little for the services they use. I am not in favor of the Gondola, there are better alternatives.</p>
30216	Phil Casper	<p>What percent of the respondents were in favor of Alternative B (Gondola)?</p>
30217	Laura Gumula	<p>Gondola</p>
30084	Cyrus Johnston	<p>Choosing the gondola as the preferred alternative to improve transportation is hilariously corrupt and backwards. The gondola will be a heinous eyesore on the sweeping valleys of LCC, and will greatly diminish the natural beauty of the area. It only benefits a select group of users, only for a specific period of time. Climbers, hikers, and all recreational users will not use the gondola at all, and will instead have to deal with the mechanical sounds of the gondola moving, as well as the previously mentioned visual impact. I grew up climbing in LCC and have loved climbing many roadside boulders that will be subsequently destroyed by the construction of the gondola. We climbers have been recreating in the canyons for well over 50 years now, and it is infuriating that this place we call our home crag will be greatly diminished to benefit groups of tourists and skiers. The gondola will cost millions of dollars, mostly for the purpose of Snowbird and Alta's owners making millions more dollars. This gondola is not for the SLC community, it is serving tourists at the expense of the locals. Instead, why don't we increase bus service?? The UDOT bus system is great for traveling up and down the canyon, and all that we would need is more parking space and more buses. This could be implemented within a few years at most, and would cost a fraction of the gondola. Please, show support for the local community and those users who do not wish to ski/snowboard. DO NOT BUILD THE GONDOLA</p>

30085	Douglas Brockmeyer	Gondola alternative B was a bad choice for multiple reasons, the primary of which is its inability to accommodate increased year-round demand for all LCC visitation destinations. The ski resorts win again, just like the heli-ski operations won in the 80's and 90's. The only long-term solution for LCC is to create a fair and equitable reservation system for visitation, along with increased user fees. We need to start treating LCC like a precious recourse, not a "destination" to be exploited.
30087	Frederick Sunderman	I support the determination that a Gondola system is the best solution for alleviating traffic congestion in Little Cottonwood Canyon.
30086	Mike Shannon	Hello UDOT, I'll just get straight to the point. The idea of stringing a gondola all the way up Little Cottonwood Canyon and forever blighting the landscape with this monstrous eyesore is one of the most ridiculous ideas that I've ever seen in my 51 years on this earth and my 30 years in the Wasatch. It is truly an absurd and asinine idea of epic proportions for many, many reasons. Chiefly among them is the further Disney-fication of the Wasatch Mountains with this massive abomination strung all the way up an otherwise mostly natural looking canyon. And then there's the at least 600 million dollar price tag. Ridiculous. And for what? A handful of days each winter when conditions make for a difficult traffic day in the canyon? It's a taxpayer-funded gift for the ski areas. That's all it is. And as for it being some kind of tourist attraction, that's not your job. You are not Disney, you are UDOT. Please listen to the taxpayers instead of Snowbird and Alta and abandon this laughable nightmare idea. Thank you. -Mike
30088	Bob Greeneisen	I think the Gondola is a wrong way to go with this problem! Great permanent environmental impact for something that is an issue less than 30 days a year. Please pursue other mass transit solutions.
30089	Mary Harriet Shuler	This alternative only helps the resorts. Period. Therefore, the resorts should pay for it. Were there to be stops at other places, then you could argue for funding. Neither the general public nor the state should be expected to fund something that will only benefit two for profit ski resorts.
30218	Nesha Niezrecki	Please look at other alternatives instead of a gondola money grab. What about a train? Or just charging cars to enter the cantina during certain days? Thank you, Nesha
30090	Jeff Myers	I favor the No-action alternative. All other alternatives have negative wildlife habit impacts. The gondola is definitely a bad idea....could cost up to a half-billion dollars in taxpayer money, just to deliver customers to a for profit corporation called Snowbird.
30091	John B Henriksen	I understand the top issues for the canyon are safety, mobility and reliability. I think the number one and two issues of the canyon should be preserving the natural beauty of the canyon and controlling the use of the canyon in order to preserve that beauty. I think a gondola is a terrible idea. It will destroy the beauty of the canyon. It will create a terrible eyesore. It will also put more people up the canyon at Alta and Snowbird, when the resorts and the canyon usage outside of the resorts is already past its maximum. The resorts can only put so many people on the hill before it is too crowded to ski and enjoy. If safety is an issue, then we really don't want to have people up the canyon before the roads are safe, because the mountains are not safe either. People will ski anyway if they are up at the resorts. Sure, Alta and Snowbird will lockdown the report, but more and more people ski back country and we will lose more lives to avalanches than ever with a gondola. It is no more reliable than cars and busses. People don't like to ride busses, so they take their cars. We can solve much of the over crowding by making cars pay to enter the canyon like Millcreek canyon. Then do like Solitude and reduce the fee for cars that have more than one passenger. Use the money to improve the roads and in a few places widen the roads. I don't think we need bigger roads. We have ample roads. We just don't have enough canyon for everyone who wants to use them. That is a population problem, not a transportation problem. People also drive cars because they want to be mobile and park in all different areas in the canyon and hike in different areas and ski backcountry in different areas. They still will. Keeping the canyons closed during avalanche times is still going to happen. There will still be long lines, even if there is a gondola. The only roads that need to be wider are those at the mouth of the canyon where people are waiting for the canyons to open. I have been there many times. First ones in line get the powder. If you are late, you don't get it. We are all ok with that. No Gondola Please!!!
30094	Mark Higginbottom	Hi , i live in the [redacted] area close to little cottonwood, I ski on average 100 days a year at Alta and Snowbird and 100% support the gondola and hope the concept is expanded across the Wasatch front, linking all our great area's. World class infrastructure for world class skiing.
30093	Dale Bondaruk	No Gondola
30092	Jason Mcphie	NO GONDOLA. That idea is not a good use of our tax dollars. This parking issue is the responsibility of the resorts. Use tolling, busses in the busy season and parking strategies like windows of time for arrivals. The beautiful canyon should not be changed for Mickey Mouse ride and tourist attraction. We can do better things as a state with a billion dollars. (We all know it will not come in at budget of \$600M). Is a Little Canyon so treat like one.
30095	Hansen Qian	I greatly support the preferred Gondola option, as it alleviates traffic in the valley with minimal environmental footprint while presenting an option that visitors will actually use. Please don't listen to the other NIMBY commenters who don't want to see any change--promoting growth is good if Utah's ski and outdoors industry is to remain world class.
30096	Christina Yong	Please adopt Gondola B. The low impact to watershed and wildlife alone justify it, but with the lowest 30-year overall cost, there is no excuse not to choose it except for short-sightedness.

30097	Mike Sohm	<p>The so-called "preferred alternative" is quite obviously not the preferred alternative from the public's point of view. The preferred alternative would be an expanded and enhanced bussing system on the current roadway along with parking limits and vehicle access limits at the resorts. The resorts are the only entities benefiting from the proposal of any of these options. A gondola is simply a shiny object and a way to siphon public money to enrich private businesses. This no - preferred alternative will not alleviate the roadway traffic, instead it will cause access issues for non resort users of the canyon, and will only benefit those who are wealthy enough to afford an extra \$40 fee to go use ski resorts that are already operating at maximum capacity during peak times. An installation of a gondola in little cottonwood canyon is not a preferred alternative and will only further the human impact on our beautiful canyon.</p> <p>UDOT needs to search for alternatives that serve the public while minimizing environmental impact. The proposed gondola fails both of those goals. The public will be heard whether it is through this administrative comment process, or through our local and state government representatives. UDOT is making a big mistake by trying to push this project down all of our throats against our wills. We will be heard.</p>
30098	Anthony Dixon	NO to gondola!! No taxpayers money to benefit for-profit ski companies. NO to gondola
30099	Jb Henriksen	<p>I submitted a comment already pointing out all of the reasons I think the Gondola is a terrible idea. One thing I wanted to mention is a possible better use of the funds. The use of the canyons is not a safety, mobility and reliability issue, it is more of an over use issue. The canyons are just too busy and too crowded. A gondola will not solve that problem. It will simply put more people on the mountain sooner, especially during avalanche times. That is a HUGE safety problem. More people will hike in the back country, even if the resorts are closed. More people will die. Keep the canyons closed until they are safe. Use Gondola money to build a new resort in the Oquirrh mountains. It is the only way to get some relief for the cottonwood canyons. Build another resort on Mount Nebo. Just give people more options of places to go in the mountains. NO Gondola</p>
30100	Chuck Elander	<p>Hello. I believe that putting up a gondola up Little Cottonwood Canyon would be a huge expensive mistake. The vast majority of people that can afford to ski, do not use public transportation, nor will they. They will try it once and move on to a ski destination that they can drive to and park at.If you build it it will be a novelty. Much like the Mall of America In Minnesota, people will go there once or twice untill the novelty wears off, and then dont return , especially if your local. If your looking for less people wanting to ski Alta or Snowbird, in the long run you will accomplish that by having a gondola. You also should expect costs by the end to more than double whats projected currently. Minnesota is going through this now. The "Met Council" has forced a train system in Minnesota on our metro area and came up at least half a billion dollars short in constuction and have no further funding. I have yet to find anyone in support of a train or said they would actually use it, but yet they force this on hard working tax payers. Do not take these comments as negative just because they don't support the gondola agenda.</p>
30101	Nicholas Schumacher	<p>Spending this much and running this gondola for about 30 days per year (weekends are probably the only time people have issues going up and down the canyon) is absurd. As a Utah tax payer, I pray this isn't what will be expected of us.</p>
30102	James Jolly	<p>The Gondola only benefits two extremely rich companies, if it has to be built let them pay for it not the taxpayers of UT (citizens). It also destroys the canyon and 100% should not be built! I know the only people who want to build the Gondola are the executives of Snowbird and Alta that benefit from it. The people of Utah are 100% against it. Let's put the money that would be spent on this and try to get us some water so we actually have a future. DO NOT BUILD the Gondola!</p>
30103	Kuni Schmertzler	I strongly support the gondola proposal. It seems to be the most effective and environmentally sound option.
30104	Merilynn Kessi	<p>I agree with a phased approach starting with enhanced bus service that will include stops at major trail heads, but I am totally opposed to the gondola. I cannot agree with spending over \$550 million of taxpayer money to subsidize 2 for profit ski resorts. I am not a skier, but I use the canyon on a regular basis for hiking and snowshoeing. In addition, the gondola infrastructure would permanently change and negatively impact the visual beauty of the canyon. I agree with the construction of snow sheds, as they can drastically reduce the impact of avalanches on the highway. Please consider the needs of all canyon users, not just skiers, and give the bus service a chance to solve the problems with the least amount of money and impact on the canyon.</p>
30105	Hunter Page	<p>I am in support of the Gondola project. It is the best alternative to improving traffic and reducing the effects on the environment. It is also the best option over another bus lane as it doesn't improve traffic in the long term. Also tourists would rather take a gondola over the busses as well. However, tolling I think is a terrible option as it will guarantee traffic jams on any weekends or snow days. Thank you for continuing to listen to the community with everyone's strong opinions on the matter.</p>

30106	Mike Goodfellow	<p>1) We're going to 'hope' that people take mass transit (buses/carpool) to the base of Little Cottonwood Canyon? The massive lines of vehicles outside the canyon are a major part of this problem. No one is being incentivized or mandated to use those forms of travel so the 2-lane Wasatch Blvd will continue to be a horrendous nightmare of cars trying to get to the proposed parking structure at the base of Little Cottonwood Canyon... just to then transfer to a gondola.</p> <p>As a lifelong Alta Skier, this plan doesn't speak to me one bit; in fact, it sounds ridiculous like nobody who would be asked to use the system was consulted in the least. I would never use this form of transportation unless it was the only option!</p> <p>2) I also have a unique perspective as one of only a handful of people who work daily in the lower portion of the canyon. I am impacted on a daily basis by the skier traffic and I've seen this traffic grow exponentially over my 29 years in this role. I've been literally able to watch from above as UDOT and UPD try to manage the hoards of determined skiers who simply want to find the easiest way to the powder. Having both of these perspectives, I can tell you that without any motivating factor toward use, all this gondola will do is become a massive waste of tax-payer dollars because no one will use it. A few, yes... as a one-time fun event, but it will add costs, delay time getting to the slopes, and be a massive headache for families transferring from bus-to-bus-to-gondola. I would never use it to go ski alone or with my family! Never, unless mandated 'by policy' for skiers (those it's being built exclusively for) to use. It must be either mandated for skiers or incentivized by the closure of parking options completely, or via a hefty parking fee. If the ski resorts want to force taxpayers to pay for a direct path to the resorts, then the skiers should be forced to use it, otherwise it becomes a massive waste to taxpayers who didn't deserve to be burdened with the astronomical cost in the first place.</p> <p>3) The only benefit derived from this project is to get more people into the canyon, more people to two private businesses. Those people ought to be paying a large percentage of the cost of this transportation service through increased ski pass fees. I'm a skier; I would pay \$10 more to ski at Snowbird/Alta if my only option was to take the bus system to the gondola. But, I would never take either the bus system or the gondola unless coerced/mandated to do so. Never.</p>
30107	Thomas Carter	<p>The Gondola solution isn't a solution. It is a vast giveaway that serves on the two ski areas--who stand to profit mightily at the taxpayers expense. The Gondola will not address multiple use -- hikers, flower gazers, bikers, back country skiers, climbers -- and basically will function effectively (for the ski resorts) only during the winter. UDOT needs to work on a transportation plan that first looks at overall canyon capacity and then addresses the needs of the whole population, not just ski resort skiers. Given Snowbird's recent acquisition of the land for the base structure, it all seems like more grift and graft. This is the most beautiful glacial canyon in the state, and will be forever changed by tram towers and cables and colored cars. Please, NO GONDOLA.</p>
30108	Maddie Quilter	<p>I am 100% against the gondola. It will create a trafficked mess in the people of Sandy's backyard. The parking lot on wasatch Blvd will create a horrible mess for anyone who lives in the area, including myself. Expand what's already working. Don't ruin the beauty of our canyon by adding an expensive gondola. Private companies are trying to make a buck instead of protecting community members and our canyons.</p>
30110	Ash Gambhir	<p>The Little Cottonwood Canyon does not need a gondola. It needs mandatory shuttle (bus) transportation like the one in Zion National Park during peak months of ski-related travel (December - March). We need to preserve LLC for others who do not go to the resort and instead climb, backcountry ski, hike, trail run, or boulder in the canyon. It is a habitat for many animals and a source of water for us. You should be ashamed that you are trying to give away our hard-earned tax dollars to build a catastrophe Gondola on public land to Snowbird and Alta so they can make the big bucks.</p>
30109	Ash Gambhir	<p>The Little Cottonwood Canyon does not need a gondola. It needs mandatory shuttle (bus) transportation like the one in Zion National Park during peak months of ski-related travel (December - March). 30219	Rhea Lisonbee	<p>Well here we go again! The rich and powerful will run with Jack booted glee over the desires and needs of the Utah taxpayers!</p> <p>I can think of so many like the Inland Port, Syncrete fiasco on I 15, State Prison relocation, The Salt Lake Pumps and so on! This will be just another grifter boondoggle and won't be the last along with water pipelines etc.! What an awful shame for our gorgeous canyons. Don't be surprised if you get some major nasty pushback from some extremely angry people.</p> <p>When will we learn? Probably never!</p>

30221	Jeff Whiteley	<p>to whom it may concern</p> <p>My name is Jeff Whiteley. I have lived at the [REDACTED] since 1999.</p> <p>Editorials in the SLC Tribune appeared a few months ago about the pros and cons of the two surviving proposals for Little Cottonwood Canyon. 1) the bus and wider road approach, and 2) the gondola approach.</p> <p>Robert Gehrke of the Tribune summarized my thoughts well. Neither proposal is good for the canyon or for those who live near the canyon, for the fundamental reason, that traffic in Little Cottonwood Canyon can be better managed by more intelligent parking and customer management systems that Alta and Snowbird could be implementing to control the numbers of skiers cars on the road, in their parking lots, and the number of people on their slopes.</p> <p>The widening road / bus proposal and the Gondola proposal both bring environmental / aesthetic degradation to the canyon.</p> <p>In my view, the Ski resorts are at the heart of the problem and they should be asked to solve the problem. Not the tax payer. And there is a lot that they can do. And I think they are starting to implement some plans.</p> <p>And of course, Utah is already paying a heavy price for unlimited growth, in terms of traffic on roads, increasing demands for diminishing water supplies, and increased traffic on hiking trails. In other words, the quality of life in Utah is eroding before our eyes. Tall gondola towers in the canyon add to this erosion. Widening roads and big parking lots add to this erosion.</p> <p>So by asking the ski resorts to deal with this issue, several problems are addressed.</p> <p>1) put the financial burden where it belongs. On the shoulders of those who will benefit. The ski resorts.</p> <p>2) It is OK to draw the line at a sustainable number of cars and skiers at the resorts. With organization this can be managed in an orderly manner and the canyon will suffer less degradation. Whether it is ever expanding freeways or expanded roadways up the canyon, or water supplies, or a drying up Great Salt Lake, one day county and city leaders will have to face the fact: unbridled growth in Utah cannot be sustained indefinitely. Certainly not in an era of climate change.</p> <p>My recommendation is to re-open the discussion to more than the two proposals involved. The editorials on this subject in</p>
30111	Joseph Watkins	The gondola is a terrible idea!! Don't deface the entire canyon like that!
30112	Jon Erickson	I am in full support of the Gondola solution. It will have the least amount of impact to the canyon while allowing the easiest and most efficient way to access the canyon going forward.
30114	William Brass	I support alternative B.
30113	Steve Prior	I oppose gondola. Inefficient and taxpayers that don't ski pay. Not good. I do support smart lanes and tolls. 2 lanes up in the morning and 2 lanes down in the afternoon. It already has a fair amount of 3 lanes. Thank you for your time and consideration. Steve prior
30115	Alex Burciaga	I do not support the current proposal for Little Cottonwood Canyon. I support the efforts of the Salt Lake Climbers Alliance. The current gondola plan will cause irreversible damage to world class climbing, especially the beloved bouldering. No damage to these resources can be tolerated.
30116	Judith Warner	The proposed changes added to the gondola sound great, Minus the actual gondola. The gondola would benefit so few, for an increasingly short season, it simply cannot be justified.
30117	Beth Armstrong	I am fully in favor of this important project!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30118	Richard Villata	<p>Opposition to the gondola is well grounded - pun intended. As a civil/environmental engineer and aerospace medicine physician, I do not think that a gondola is a good solution due to the high visibility and operational problems during inclement weather. European tunnels and lane expansion using covered roads would be an advantage. The cost may be higher, but the benefit lies in having access even during periods of high avalanche activity.</p> <p>The road is covered by the roof of structure, which has vegetation on portions of the top. This method also permits the road to be built into the side of slope, which would minimize the potential for road closures in areas such as Tanners Flat and Superior. This winter the road was closed for an extended period during an unusually heavy snowfall. Accordingly, a gondola would not have permitted the necessary access for logistic support services such as provisions and emergency services.</p> <p>I worked with a nurse at LDS Hospital who was killed in a helicopter crash in Little Cottonwood Canyon over 20 years ago. This occurred at night while they were attempting to medevac a patient during a storm. They should not have been flying and 4 people died, including the patient. Sadly, his wife made it down the canyon by car only to discover that her spouse had died in the air. A common adage in aviation is, "It's better to be on the ground wishing you were in the air than in the air wishing you were on the ground." High winds could potentially close the gondola, and avalanche danger could block the road during such periods. However, a thoughtfully designed road would still provide access and is a better option.</p> <p>UDOT needs to take a cue from road construction in the Alps. They are esthetically designed and provide minimal impact on the scenery and environment. The Swiss are masters in bridge and tunnel design. They chose methods that work no matter what weather conditions exist. While there are many gondolas in Europe for accessing ski terrain, they do not use them in situations as has been proposed here. There is a reason that the Swiss, French, and Italians use tunnels and covered roadways so extensively. An additional design consideration is that work could commence immediately, in stages, with the areas that are most prone to slides. UDOT has not had the most inspired ideas, and this is evident in some of their freeway designs in SLC. As a result, the time has come to provide some alternative plans that truly consider all of the issues.</p> <p>Add my voice to your opposition to this poorly thought-out plan.</p>
30119	Preston Due	<p>I believe that the decision to build the gondola is incredibly irresponsible use of tax payer money for the benefit of private resorts. The gondola is just a tourist attraction. We need to exhaust less impactful and cheaper options before destroying such a beautiful canyon. There are only a handful of days in the year that little cottonwood has excessive traffic.</p>
30120	Daniel Knox	<p>I am still totally unsure why udot feels that this is a public problem. This is a problem of people being able to use the alta and snowbird businesses. There is no need for a gondola. Those two businesses have already taken steps to remedy the traffic. They're implementations of parking restrictions have markedly improved conditions. There is no need to spend hundreds of millions of dollars of public funds. If there is a feeling that something must be done then make a large parking lot and run more buses. The businesses up the canyon are already at capacity, there is no benefit to increasing uphill capacity of traffic if the businesses can't handle that. By further pushing more people up the canyon with a gondola or buses, it will make those businesses exceed their operating capacities. If the department of transportation wants to do something to help alleviate traffic, they could open up restaurants to stagger people leaving in the afternoon from these two private businesses. This will not solve anything. I am strongly against any public dollars being used for a gondola.</p>
30988	Gabriel Knox	<p>Hi, my name is Gabriel Knox. I live in Salt Lake City Utah. My name is gay. My email is is Gabe. I'm calling to say that I strongly oppose the gondola or you. Implementing any financial situation to try and improve Little Cottonwood Canyon. This is a private party matter. There is no need for the government involved in helping to increase business for these two private businesses Alta and Snowbird those two businesses have already taken steps to improve the traffic situation. There is no name. If you. Feels that they have to do something then increasing busing and implementing tools for single drivers would be the solution. I would be in favor of God.</p>
30121	Marilyn Taylor	<p>I am highly opposed to the gondola plan...it will only benefit snowbird and Alta..and of course they are not paying for it..do ashuttle system like Zion, or a reservation system...a shuttle would also be of benefit for cross country skiers and snowshoers...they could get off down the canyon from the resorts so they could also use the canyon....plus who wants to pay \$150 to stand in a lift line all day..I am local and ski at Alta...would love a shuttle and or reservation system</p>
30122	Mark Skidmore	<p>Put the Gondola system at the very bottom of the canyon (below S. R. 210) where it can't be seen for most of trip up the canyon. Yes, construction would be challenging (and more costly) but it would be hidden from view for most of the way up the canyon which is worth more than the cost of the system.</p>
30123	Nick Gochnour	<p>After reviewing the documents, I feel strongly that a gondola does little to actually alleviate the problems of traffic in the canyons. I am advocating for improved bus access year round, with stops at various trailheads. A dedicated bus lane would be ideal but just improved bus access would do much for my desire to not drive.</p>
30124	Brent Hadley	<p>No gondola/Tram.</p>
30125	James Kenney	<p>I spend four months each winter in Utah specifically to ski and primarily do it in Little Cottonwood Canyon. I am in favor of the gondola. I believe it will make access to the world famous resorts of Alta and Snowbird safer and more reliable. These two resorts are the cornerstones of Utah's reputation for the greatest snow on Earth and their success is critical to the entire ski-tourist industry in Utah.</p>

ID	Full Name	Comment
30126	Spencer Dirats	<p>Good afternoon,</p> <p>I would like to begin by being up front and admitting that, having just read "Chapter 32: Response to Comments" of the LCC EIS, I have nothing to add that wasn't already shared by apparently thousands of other commenters. The case against the gondola has been made 14,000 times over.</p> <p>All that I can add is, first, gratitude that you are evaluating the situation in LCC (and taking the community's perspectives into account) and second, yet another voice of opposition against the gondola.</p> <p>I don't envy the scope of the task you have at hand, but I do hope that you take our community's clear decision into strong consideration. I understand that community preference isn't exactly a primary influencing factor (I know that this isn't a democratic process), but as a public institution, I should hope that it still matters to you.</p> <p>Sincerely, Spencer</p>
30128	Louie Squire	<p>Udon asking for comments is a joke. This was a done deal between Udot and land developers. Udot did such a poor job on the wasatch blvd connect and that took awhile.</p>
30127	Travis Van Den Broeke	<p>The gondola proposal really only benefits the resorts at great costs and little benefits for everyone else. Most people don't want this. Find a better alternative using public transit lane, or a train, or some better system. This only helps lcc also. What about the problems with traffic in big cottonwood canyon? Better public transit and covered slide paths with a train in the future is the best alternative.</p>
30129	Anita Drew	<p>Forget the gondola, and let the ski resorts pay for that. Spend the money on healthy and convenient transport and parking for the skiers and the whole Salt Lake area. Parking lots and healthy buses up are doable right now.</p>
30131	Heather Waldron	<p>Hi, I am resident, and home owner in Sandy UT. I am for the gondola as the traffic and subsequent pollution is an issue that will only get worse. I would request a lot more educational outreach for the resident's of the valley as this moves forward- there is a ton of missinformation out there. I would also ask, that the resort pay something for this system- not all, but a contribution- as they do stand to benefit. If the resorts were not in this canyon, we wouldn't need a gondola.</p>
30130	Charlie Bradley	<p>No gondola!!! Add a non-carpool tax or increase bus services or do nothing! Better than an ecological disaster</p>
30132	Eric Rich	<p>I don't know a single person who wants the gondola. I would like to see transparency for how much support each option has.</p> <p>The Gondola best serves capitalism, not the canyon. The gondola will degrade the wilderness experience for me and everyone I know agrees. This is an atrocious scab on the landscape that is totally unnecessary. You are only helping big business continue to grow. This is not solving anything in an ethical way.</p> <p>Please, consider the many people who oppose the gondola. Please increase bus service on the roads that already exist and then see when kind of transportation is needed after we have improved what we can with the infrastructure that already exists.</p>
30134	Kevin Haupt	<p>The construction of a gondola would permanently alter the historic and iconic look and feel of LCC. This is unacceptable while other alternatives are on the table. Enhanced bussing, tolls, and carpooling resources and incentives would all serve as remedies that do not require altering the character or beauty of the canyon.</p>
30133	Vilma Helmer	<p>I am still for Gondola: no pollution generated, less diseases for our mormon kids & seniors in future, no gas traffic, its for all average income, middle income, high income, it will attract tourism just like Swiss alps winter & non winter seasons, generate funds for Sandy, Alta. Most of all it will preserve nature.</p>
30135	Kenzie Peterson	<p>Please do not go forward with the gondola. There are so many more affordable alternatives that would not obstruct natural views. I would prefer increased busing during winter months and charging fees for those who choose to drive personal cars. Natural land does not exist for the profit of large corporations.</p>
30136	Steven Summers	<p>The gondola is THE absolute worst way to move people in LCC. You can double the cost for sure.</p>
30137	Ben Jessee	<p>Bus routes would better serve transport in Little Cottonwood Canyon than any gondola, which gondola would disturb the beauty of the canyon and the environment.</p>
30138	David Silvia	<p>The construction of this gondola does not pose significant benefit to the people of Salt Lake City. The construction would benefit tourism and out of state travel, and consume hundreds of millions of tax payer dollars. \$45million dollars were allocated towards saving the most important natural resource we have to our continued prosperity. Without this lake, there will be no ski industry in Utah, and the gondola will be vastly under utilized. Save the Great Salt Lake, allocate our tax dollars to the present needs of the people of Utah. Please.</p>

ID	Full Name	Comment
30139	David Scheer	<p>UDOT's criteria emphasize that the preferred alternative must benefit ALL USERS of the canyon. The gondola only benefits patrons of Alta and Snowbird and, not incidentally, the owners of these resorts who would be receiving, in effect, an enormous public subsidy.</p> <p>The gondola towers would deface the natural beauty of the canyon, diminishing the experience of all visitors, including those who derive no benefit from the gondola.</p> <p>Traffic delays and crowds foreseeable at the gondola base will cause many prospective users to drive instead.</p> <p>Better and much cheaper alternatives would be to implement either alternate day access depending on a vehicle's license plate number, or mandatory carpooling enabled by an app (similar to Uber's) to match drivers and riders to meet at a designated place near the bottom of the canyon.</p> <p>It's understandable, although not in the public's interest, that the ski resorts would object to such arrangements for fear they would reduce the number of skier-days. However, they, and all of us, must realize that the only way to save LLC is to limit the number of people who use it.</p> <p>Finally, it is short-sighted to spend half a billion public dollars on an industry whose economic importance will decline as our snowpack thins. By the time the gondola is finished, it is entirely possible that Utah will no longer be the ski destination that it has been in past decades. Of course, the ski resorts refuse to consider this future. Whatever solution is adopted, it should minimally impact the experience of the canyon in case this future becomes reality. If the gondola is built, we will have permanently defaced the canyon and spent a huge sum of money for no purpose.</p>
30140	Zeb Engberg	<p>I am opposed to the gondola proposal. It devastates finite natural wonders to create profit for two ski resorts. In the immediate, it will restrict LCC access for common user groups. In the long-term, it will destroy an already splintered ecosystem. Please apply some forethought in this, and consider other objectives besides churning profit.</p>
30141	Wynnette Erickson	<p>Where can I read the commentt from other people on the website that we sent in our own comments as I would like to read what other people are saying. I already wrote my comments, but everyone I have talked to does not want the gondola. I would like to read the comments sent in to your website to see how everyone is truly feeling about this horribe decision to ruin our beautiful canyon with the Disney like gondola. Please know that I am serious about reading he cpents as I feel the public has a right to view the opinions.</p> <p>Wynnette Erickson</p>
30992	Lynette Erickson	<p>Hey, I live in Cottonwood Heights, and I have course have written a couple of letters regarding the terrible idea of putting a gondola up little off and everyone I know does not want it. So I'm curious as to where I can read what other people have been writing on the internet to you. I don't want to like read page. I'm sure a lot of people have sent them in, but I'm curious to see actual tons of letters that are actually for this Gondola. So I'm trying I've written no one's responded. I'd like to know where I can see these letters that are actually sent to you guys about, you know, the proposals. Could you please call me? [redacted] I just need validation to know that this is in fact what the people want job. It was being put to a vote, but I somehow don't believe that most people want this and I find it hard to believe because everyone I know that's an outdoor person and I, you know, a lot of people and I live in Cottonwood Heights. We do not want this Abomination going up our Canyon. So please call me. Let me know where I can get my hands on reading these actual letters home supporting or disappointing this horrible decision. Thank you. My name is Lynette Erickson.</p>
30142	Jonathan Lim	<p>Proceeding with the Gondola would be a classic example of where our society is heading: a corrupt political system that exists to benefit the wealthy few and that goes against the WILL OF THE PEOPLE. Wealthy corporations and land owners stand to benefit from the Gondola. It is the more expensive and more disruptive solution. What happens during the summer? You will have a giant gondola system just sitting there as an eye sore. A bus system is cheaper and is dynamic. In the summer the buses can flex to serve transit elsewhere in the Salt Lake Area. It's clear that our democracy is in decline. Building the Gondola in the face of such clear majority opposition will be yet another blow to our democracy. Sad.</p>
30143	Michael Bell	<p>I live on [redacted] where the gondola would literally be overlooking our house. This is too important of an issue to not be on the ballot. Too much money and dedicated special interest involved and UDOT is actively participating. Phased approach first to truly see if it works, not just a timeblock to seek funding. LCC is too important to let a slow overpriced transit option ruin it forever. Please stop it at all cost.</p>
30144	James Rybicki	<p>I am vehemently opposed to destroying our beautiful Cottonwood Canyon with the building of a gondola . Adding Electric busses make much more sense and will not detract from the wildness of the canyon as it is supposed to be. I'm afraid that Snowbird and Alta have had way too much influence in this decision so that they can profit from all of the tourists that will be dropped off at their resorts. It really [redacted] that the typical Utahn that loves to rock climb hike and just go up the canyon will be subjected to the unsightly towers and Disneyland type of obstructions.</p> <p>I really feel that this big of a decision should be voted on by the taxpayers. Why can't it be voted on?</p> <p>I am literally disgusted with the whole idea of ruining the beauty of my favorite canyon and I was here before Snowbird!!!!</p>

30145	Matthew Clawson	<p>As a resident of Sandy I'm truly disappointed that UDOT has decided to recommend building a gondola in my community's back yard. This gondola not only destroys the natural beauty of the area, but represents a massive financial commitment that will benefit only a small percentage of Utahns. For myself and many other Utahns a >\$2000 season pass and \$150-250 daypass is an untenable expense, why is the state bankrolling 2 resorts who are making more money than ever?</p> <p>Additionally, the gondal will be a target for ecoterrorist groups. If this sounds improbable, I encourage you to examine a single gondola in Squamish, British Columbia, for which the cable has been cut several times.</p> <p>I am very disappointed by the decision from UDOT, not only as it defies logic, but it also defies the wants, needs, and best interests of the citizens of Utah. It is as if UDOT has selective hearing and can only hear the input of companies lining their pockets and is dead to the countless citizen's who have spoken out against this proposal.</p>
30146	David Shaw	<p>Spending tax payer money on the gondola and not on something like saving the Great Salt Lake is irresponsible and stupid. No one will visit to ski Alta/Snowbird and use said gondola if they are worried about toxic dust that will be everywhere if the lake continues to dry up. If the lake dries up then even less snow will fall in the mountains. The gondola might only help with traffic a few days a year but if there isn't snow or it is unsafe to visit Salt Lake City because of toxic dust, then who cares.</p>
30147	Steve Williams	<p>1) \$500 million is a lot of money to spend on wealthy skiers and two resorts. It is not cheap to ski. I feel that the \$500 million should be spent improving and attracting the highest quality of first responders, teachers and other public servants. Improving those lives improves all Utah residents. 2) I also think that Snowbird and Alta should pay for the majority of the cost. Give them the right of ways, and other approvals, but let them build it, maintain it, and charge whatever the market will bear. They both had their most profitable year ever last year. 3) To reduce congestion, have all parking be reserved, use a toll system. By increasing the cost and the hassle factor, you will eliminate congestion. 4) The proposed Gondola will not decrease the congestion on Wasatch Blvd, or 94th south. You will still have 5,000 cars trying to get the 2500 parking spaces. And those cars will start lining up a 4 AM on powder days.</p> <p>5) I also think to reduce congestion on Wasatch Blvd, Highland Drive needs to be extended south at least to Hidden Valley Country Club. Then non skier traffic will have another option to move north and south. That construction project should be a higher priority than improvements to Wasatch Blvd. 6) This Gondola plan does nothing to reduce congestion in Big Cottonwood Canyon. Why the focus on Little Cottonwood? This plan may just cause more folks to head up Big Cottonwood instead. 7) I also do think that when we have major storms, wind, snow, and lightning the proposed gondola will be shut down. Already when there are high winds, lighting etc., both chair lifts and the Snowbird gondola shut down. All it will take is one car with 35 people in it to have accident and every personal injury attorney will make a ton of money, and the gondola will be forced to close when there is "bad" weather. Then what happens to people trapped on the mountain? When people drive themselves, they take the risk of driving in bad weather. Most auto accidents do not end up with major court settlements. Why shift the risk of transportation in bad weather from the private sector to the public sector? Thank you, Steve</p>
30148	Isabella Mackintosh	<p>YOU ARE KILLING OUR PLANET AND ITS NATURAL HABITATS!!!! LEAVE OUR CANYONS BE!!!!</p>
30149	Kent Mattingley	<p>Either of the Gondola proposals are no brainers. The other proposals would be much more destructive of the environment that the gondola option, and will be able to move much more people with much less impact. I vote for the Gondola B proposal.</p>
30150	Catherine Kornyei	<p>As a 79 year old skier in UT and many countries I see absolutely NO reason to build a gondola in Little Cottonwood canyon. I also object to my tax dollars being spent on something that seems to benefit only the ski areas. When we ski as a family, I assure you taking the gondola would be excessively time and energy consuming. I am VERY opposed to this project.</p>
30151	Michelle Lebaron	<p>Hello,</p> <p>As most of your 14,000 comments reflect, I also do not support any type of gondola option.</p> <p>However, I do support the additional busses (electric has proved a viable option), gov lane and toll.</p> <p>This option reflects minimal destruction to the canyon corridor, encourages riding mass transit due to additional park & ride areas, less pollution with the electric busses and allows for stopping at popular hiking/climbing areas for local residents, not just resort patrons.</p> <p>Our tax monies pay for this so locals should also receive a locals discount in the tow or parking fees so we are not paying more than resort patrons for these services.</p>
30152	Frances Smith-schroer	<p>UDOT- This is a terrible idea and does nothing to solve the problem for 1/2 billion dollars of taxpayer funds. The win-win in this should be that 1.) Local season pass holders can access the road anytime because they take all the risk prior to a season startup. 2.) Alta and Snowbird should only sell passes that equal full parking lot capacity and no more- limit the crowd - cut the the greed Snowbird! 3.) Charge \$35+ per Icon pass parking space at either resort. One thing we noticed when the Icon passes started selling is that the parking lot was much fuller much earlier- Take that off the table by charging a lot- or making them take the bus. Alta already cut their access- so should Snowbird.</p> <p>A Toll on the road is a double tax on locals , we already pay tax on the roads- The parking structure is an abomination in the La Caille area and will cause huge lines waiting to park hence clogging up the area as it already is on powder days- granted- this is 20 days a year- no rationalization for 550 million dollars. The gondola is a canyon wrecker that can never be turned back. You say you want to save the Canyon- do it! Stop this project.</p>
30153	Arthur Leigh	<p>It's a wonderful thing! Much needed and will be spectacular</p>

30155	Emerson Zamora	<p>The gondola option is a bad idea. It does not have the capacity to scale-up "throughput" like a bus system would. In other words, based on my cursory understanding of the gondola system, it would not be possible to add more gondolas during the busiest times... the throughput has a maximum volume, which cannot be increased. However, a bus system can increase trip volumes simply by adding more buses. If a dedicated bus lane was added, the maximum trip volume would be much more than that of the gondola. It could "ramp up" during peak hours, to match the demand, and much better serve and meet the needs of users. Furthermore, adding another lane to the highway would not be as impactful to the natural environment as a new gondola system would be. The road has already impacted the area, and adding another lane would not make the highway significantly different than it is now. However, the gondola would greatly impact the viewsheds in the canyon and the towers and cables are very unattractive. Additionally, even though the footprint of the gondola towers are relatively small, each tower location would need temporary construction access roads built to them, and this would cause a significant impact to the natural environment in the canyon, and would take many decades to recover. But, I imagine that some sort of access road would be required for each tower location. So, the figures that gondola supporters state about the number of acres being impacted (bus vs. gondola) are very misleading, and I would say inaccurate. And the public should know about this element of the gondola system. The gondola system would have much larger impacts (both temporary and permanent), than gondola supporters would have everyone believe. I have many other thoughts, but these are the main ones. Thank you for considering my opinions.</p>
30154	Andy Mckerrow	<p>The gondola is state money being used for a tiny minority of state residents for a fraction of the year. Improving the highway provides a year-round benefit to all residents. The gondola is the wrong decision and I will never use it. I stand with the majority of Utah in opposing this elitist and discriminatory waste of state funds.</p>
30156	Jessica Yingling	<p>A key component of UDOT's purpose is to serve all users of SR 210. A gondola does not serve all users as it focuses on the resorts. It does not serve climbers, bikers, hikers, backcountry skiers, etc), heading to different destinations, etc.</p> <p>The primary motivations for visiting the Central Wasatch are to "Observe scenic beauty", "Enjoy the sights and smells of nature", experience peace and tranquility", and "improving physical health" as the most important factors for recreating. Building gondola towers is at cross purpose for most of the users primary purpose of recreating in the canyons.</p> <p>We do not support the gondola and would instead prefer to see improved bus service and parking, including a parking hub and transportation center at the gravel pit.</p>
30157	Brooke Derr	<p>I object to the toll booth starting further up Big Cottonwood Canyon and think it should start just before the S turn. BCC has more summer than winter traffic and rodeside parking at the S turn is a huge problem. I am the lower cnayon represetnataive for the BCCA.</p>
30158	Sean Mullany	<p>As a resident of SLC and long time worker at Snowbird, I do not want to see a gondola in the canyons it is a selfish irresponsible fix to a larger problem. It is self serving for Snowbird and Alta. We needed a solution for both big and little cottonwood in the form of a rail loop (if a major infrastructure program is to be presented). Or we need to actually incentivize bussing into our box canyon. This solution of a gondola only creates more havoc at the mouth of the canyon, moves the parking problem to someone else's backyard, and doesn't address the traffic approaching the canyons (which as a worker is the real problem on heavy traffic days). Call the gondola what it is and charge the users (Snowbird and Alta) accordingly: it is a tourist attraction. Not a solution for locals commuting to work or coming up to ski for a couple hours. The gondola is not the right solution. Don't miss the point just to line your pockets!</p>
30159	Sarah Blenkhorn	<p>What is the point of comments if they are not being read or considered? Over half of the citizens of Salt Lake do not want the gondola. Climbers, hikers, and bikers who travel to this canyon for their world-class routes and trails will not come here. People will move away. This is not the best option, just a greedy one.</p>

30160	Victoria Gorman	<p>I completely disagree with and DO NOT support the Gondola construction. No matter when it would be phased in, it does little to solve the traffic problem. It's a gimmicky "solution" supported by business and resort owners, not the surrounding community residents.</p> <p>Additionally, I would like to offer another option that could alleviate traffic conditions in LCC on powder days, especially.</p> <p>Use stoplights to control to canyon traffic that allow uphill traffic only for 30 mins (for example) and then downhill traffic for the next 30 mins. Alert travelers via UDOT and provide a schedule of travel times up and down hill.</p> <p>This solution is similar to highways and bridges that provide additional lanes during high volume commuting times.</p> <p>This is a simple, cheap alternative that could greatly decrease congestion and frustration and could be implemented along with other options like carpool incentives, increased bus routes and bus stop parking, tolling for NON-RESIDENTS and parking reservations at the resorts.</p> <p>Please listen to the residents and not the greedy resort and business owners.</p> <p>There are simple solutions that are inexpensive and effective and don't require tens of thousands of taxpayer dollars to solve a problem that a small percentage of residents experience.</p>
30162	James Brown	<p>Once again I am writing to say how silly this gondola idea is. Costing me as a tax payer way to much and only benefitting 2 ski resorts who pay nothing. RIDICULOUS! There are many more important things to spend my money on. I have skied at Alta for decades and people need to wait or pick another day. Limit the number of cars, problem solved. Please don't make me write yet again another letter to you folks.</p> <p>Jim</p>
30161	Megan Frazier	<p>I oppose the gondola project as a solution to increased traffic in Little Cottonwood Canyon. This will be a huge cost to local Utahns via taxes without benefiting the average Utahn. This project caters only to visitors and tourists who will not be paying for it in taxes. Frequent local users of the canyon will not be able to regularly afford the high price of a ride and will be limited to stops that only service the ski resorts. Local Utahns like me take affordable public transit during peak ski days when going to the resorts, and other times drive to stop at various other trailheads along the canyon road for backcountry skiing or hiking during winter months. Why make the locals pay for something that doesn't serve our needs? It will also be a devastating eyesore to our beautiful canyon.</p>
30163	Kevin Schaefer	<p>At this point it is utterly clear that the comments, voice, and opinion of the public does not matter. The choice for a gondola has already been might despite majority of the public being against it. "Face" must be shown, thank you for acting and pretending like our voice is heard, and like our voice matters. But it doesn't. If it did, moves forward for the gondola wouldn't be happening. Better solutions would actually be entertained. Better ideas and solutions such as avalanche tunnels over common slide paths. But hey, does it really matter. We live in a capitalist nation, and don't get me wrong- I think capitalism is great, but when greed becomes the driving force for change over what the people want, then there is a problem. So I say, sincerely, [redacted] you, [redacted] you kindly, please listen, and don't put in a gondola. And to speak freely, you [redacted] [redacted] [redacted] pieces of [redacted] go take a long walk off a short pier and get out of government. Eat a bag of [redacted]</p> <p>A local, who won't be listened to over the sound of corporate money and greed.</p> <p>Thanks.</p>
30164	James Slade	<p>I am a novice climber in the salt lake area. I recently began climbing and would hate to see access to any of the canyons boulders or walls restricted. I love skiing, and that part of me loves the idea of better transport to the resorts, but I don't think my interest as a skier should be be considered greater than the impact of the gondola on the other types of recreation in the canyon.</p>
30165	Eddie Morillas	<p>I support the canyon tolling and increased bus service ideas that will be implemented as part of the phased approach. Why don't we give those options 3-5 years to become mature services and see if the gondola is even necessary? I still strongly opposed the gondola due the the cost of construction, the destruction of historic rock climbing areas, lack of service to backcountry trailheads, visual impact, and cost to riders.</p>
30166	Meredith Bunsawat	<p>The gondola seems like a dramatic, landscape alternating step to take before even trying to enhance the usability of the current infrastructure. A toll system for cars entering the canyon would encourage car pooling and the use of public transportation. The building of bigger parking lots/parking garages at the base of the canyons would also encourage public transportation as there is often not enough room in those lots to park. Increased number of buses to get people up and down comfortably without packing 50+ people into on bus.</p> <p>For these reasons I'm against the gondola and for tolling of canyon roads, increased parking at the base of the canyons, and more buses.</p>

30167	Danielle Young	America is unusual in the fact that we preserve our sacred forrests and don't have a coffee shop on every mountain top like European countries. I want to keep that to the Euros and keep our forests wild. If the proposed gondola goes up in LCC, I think more harm would be done then good. We would see more lifts cross over the cottonwoods and it would not help with decreasing the traffic like it proposes because we are on the edge of a city. We have millions of people coming in to visit. If we truly wanted to decrease traffic and solve parking problems, we could get rid of Ikon passes in the cottonwood resorts. But that would mean that big business would not win. I know that is not an option. I believe that we could toll the bottom of the canyon, sure, and have season passes for the cottonwoods. However, this gondola would mean parking structures would spike at the bottom of the canyon and that neighborhood would be destroyed. I love Salt Lake and don't want to see this new addition added.
30168	Elizabeth Brown	I am opposed to spending this huge amount of money on a project that may not even be needed...at least for a ski resort. With the later winter seasons and earlier springs that we have been having, is it really worth spending that much money on a project that is mainly to help a dwindling ski season, which is now basicall 3 months (Jan, Feb & Mar) of the year. This is what concerns me. This gondola will not help the summer traffic for hikers going anywhere except to Snowbird or maybe Alta (if there is a shuttle). This project is cool, and has the 'wow' factor, but Utah doesn't have the snow it once had and the snow it does have is not the same. This is an extraordinary amount of money on a project that may, when completed, not have a reason to transport people to the resorts in the winter. Please, rethink this spend of the people's money. Thank you.
30169	Robert Parker	<p>Please consider whether there is truly a problem to be solved. I live in SLC and have a pass to ski every year at both Alta and Snowbird. While I generally avoid Saturdays and holidays, there are no other days of the year that I experience traffic in any meaningful way. The time to get up or down canyon varies within a 5-15 minute span. The scale of proposed solution, whether the gondola or road widening, is way more than the actual problem. Sure, there is heavy traffic on a genuine powder day. If you really want the powder, deal with it. Or, have a toll kick in on heavy traffic days (for the rich or people willing to carpool) and triple the number of buses (for the less well off). It is nonsense to build something (the gondola) so devastating to the scenery of the canyon for a problem so easily handled with tolls/added buses. And, as a climber, hiker, and biker that uses the canyons year-round, the gondola offers me nothing but negatives for those activities. This is catering to a tiny segment of Utah that can afford to ski, skis at Alta/Snowbird, and does not care about other uses of the canyon. Also, people will still drive to Alta/Snowbird when they discover how far they need to walk to/from their car to the gondola loading at the bottom of the canyon.</p> <p>Please consider environmental impact in a broad way. Little Cottonwood is a phenomenal treasure that brings businesses here (because people want to come). Taking away its massive beauty with gondola towers is extremely short-sighted.</p>
30604	TEK ANNE KILGORE	<p>I think that the visual impact on the residents and the tourist going up LCW would be a total shame. What is projected now to be a 550 million dollar expense will surely double by the time the gondola is ready to be built.</p> <p>I think making riding the bus mandatory, adding parking structures and the timeliness of bus route would be a better way to go.</p> <p>It seems a bit suspicious to me that snowbird just happened to buy the land associated with the start of the gondola. Who's paying who in this political scheme?</p> <p>Anne Kilgore Millcreek Utah</p>
30170	Joe Benowitz	<p>By the time this is completed electric and driverless vehicles would dramatically change the potential outcomes of this investment. Furthermore, there are significant economic problems that could be solved through a better plan including the potential to link Park City and SLC so service workers could commute and a faster connection between all SLC and PC resorts would improve tourism dramatically.</p> <p>Reconsider a tunnel solution that can tap into the future of self driving electric vehicles.</p>
30171	Kyle Daluga	Try to see if there is a faster gondola or a way to speed it up! Make sure the gondola can withstand wind and avalanche not to close for weather and wide the wasatch bypass and entry to gondola from the south but make the gondola work well and I support it
30172	Matthew Monosson	I as a taxpayer do not want to pay 660 million dollars for a gondola when there are far better alternatives that money can go to. That money would be much better suited to helping solve the great salt lake issue so we can continue to have lake effect storms and not just become a desert with a gondola. Please please please do not go forward with this gondola it will destroy little cottonwood canyon forever for a short lasting gain
30173	Chris Cox	Say no to tolls! You take tax money from us by force then we have to pay a toll for the privilege to drive on the road we were taxed to build! Not to mention the delay the toll booths create and the extra cost building toll infrastructure and enforcing the tolls!
30174	Phuong Le	Please don't build the gondola as it will damage the canyon wall. Instead please work on building improving transportation on Little Cottonwood Canyon.
30175	Joseph Hastings	I do not support the gondola option. It is far too expensive and destructive. I support expanded bus service and possibly tolling and/or paid parking.
30176	Alan Dent	Please do not enact tolling on SR 210! Skiing is already too expensive as it is. I already have to pay \$25 for a reservation to park at Alta Friday thru Sunday, please don't make me pay to drive up the road too! My car is always full with my family (4 to 5 skiers) so we are doing our part to carpool, but riding a bus or a gondola with a bunch of equipment for small/young skiers is not a practical option for me. We bring our lunches and use our car as a dining room. We can't afford to pay for food on the mountain and need to bring our lunches with us. Please don't make skiing a more expensive proposition than it already is. The cost and hassle is ruining the experience, and having to ride a bus or a gondola will add greatly to the hassle for my family. Thank you.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30177	David Fuhrman	I'm against building a gondola in LCC. LCC is a natural U shaped glaciated canyon. To ruin this natural view and beauty of the canyon for the incremental improvement to traffic flow on peak skiers days is a waste of taxpayer money and ruins the beauty of the canyon. We should continue with paid parking, more buses on peak days and snow sheds.
30178	Audrey Stegman	<p>Building a gondola in LCC is an overall bad idea. Yes, it's will help skiers and snowboarders get to ski resorts but the canyon is so much more than the privately owned ski resorts. There is snow shoeing, snowmobiling, backcountry skiing, and so many more summer activities like hiking, mountain biking and climbing. The gondola does not serve the canyon in its entirety and will cause great detriments to the natural environment of the canyon. There are many outdoor recreation spots that will be affected by the instillation of the gondola. There are better options that spending \$550 million of tax payers money and will allow for that money to go to people in need. These options include creating a better city bus service going to the resorts with incentive programs, encouraging skiers to carpool to resorts, and having resorts create more parking at the base of the ski mountains, and many other options given by experts in this field. Thank you for you time to whomever reads this, I hoe you are able to make our voices heard.</p> <p>Best, Audrey Stegman</p>
30179	Saxton Mcknight	<p>I think that this plan would make the little Cottonwood Canyon suffered tremendous loss. The little Cottonwood Canyon is no Aspen and it will never be. The government is so worried about how much money they're making and not about what it's doing to nature and to the locals. I have always been so in love with going up into the mountains and being able to look out and see no man-made structures. This ugly concrete man made structure will be obstructing my view. Why would you want to do this because of " traffic". The climbing community that surrounds the little Cottonwood Canyon is small, but mighty the amount of people that enjoy this the way it is in the way that it's supposed to be. The world is so worried about how much money they're going to make. They're not looking at how much fossil fuels that this project will use an amount of carbon that will be in our atmosphere. also destroying more and more wildlife and natural habitat that this place and habits. Will you people ever learn.</p> <p>This isn't going to help this is just gonna hurt so [redacted] the [redacted] sky bridge or whatever the [redacted] it's called.</p>
30180	Mindy Hall	Please, please don't destroy the canyon with a gondola.
30181	Ryan King	UDOT!! I was so thrilled when I heard that the gondola option was picked. I'm a lifelong skier of Little Cottonwood canyon and I really think this will make a difference. And a difference for the better. A gondola will help get people up the canyon safely in more types of weather conditions than cars. It's also all electric which will help our air quality. I'm really happy this option was chosen, and excited to ride the gondola in the years to come!
30182	Herb Whiteley	I like both proposals of expanded bus service and gondola. I like taking the bus. I ski 4-5 weeks at Alta split between January and March. I would take the bus more often if there were facilities for short term rental of lockers to store equipment and clothes particularly at Albin.
30183	John Bridges	I'm against the gondola for the solution to little cottonwood canyon traffic congestion
30184	Norm Slauenwhite	The gondola is a huge move forward in LCC! This is a much needed transportation alternative to a canyon who is now a victim of its own success. This will allow the canyon to flow better under all conditions. The current model which allows the "red snake" is eventually going to get people hurt in a avalanche. Also within that parameter the current model of buses running in the canyon after a busy day of skiing with 80-100 people on board standing and leanings the doors as the bus goes down the canyon is going to fail as well. One crash with a full bus like this is going to make every one reconsider. Make the gondola happen before one of these other options happen!
30185	Noah Bigwood	The preferred gondola option B is not an acceptable use of my tax dollars and public lands! As a concerned citizen, climber, skier and canyon user I find the impact of the preferred option to be to great, the cost too steep and the disruption to the environment, scenery and activities too great. Please reconsider in favor of a lower impact and less costly alternative. The gondola will not benefit all canyon users equally and is primarily a benefit to the "for profit" private ski areas while causing loss of access and loss of aesthetics to all other canyon stakeholders.
30186	Tim Seeley	I don't think the gondola is economical nor eye appealing. It only benefits the ski industry. No on the gondola, we don't want to be like Europe.
30187	Ezra Nuttall	Please dont build a gondola. It would ruin the natural beauty of the canyon. It is not necessary for a few days in the winter. Please consider adding busses only and not adding lanes to the road
30188	Mark Russell	I am a resort and Backcountry skier in the winters and hiker and mountain biker in the summers. I am concerned that the gondola option would not be useful to Backcountry skiers and would only alleviate some traffic to resorts. In an ideal world I would like to see a train that has stops at trailheads and resorts that would be useful year-round and to all user groups, then the road could closed except for employee traffic for resorts. For example you can look at Perisher Australia and the success of their ski train. A gondola would be a very costly project to only address part of the user base of the canyon, therefore only solving part of the problem.

Comments on Little Cottonwood Canyon Final EIS

30189	Kerry Doane	<p>Thank you, Josh and UDOT for the thorough analysis and communication that has been done for this EIS. It is clear that there is not enough funding for the proposed action: Gondola B Alternative. However, it is my understanding that there is also no funding for the phased implementation of increased bus service. I would like to go on record with a comment that I do not support using funds that UTA currently uses for valley bus service to be diverted to canyon service. With the reduced scope of the tolling, including hours of day and length of the canyons, that funding source is not likely to be enough to fund the increased bus service, especially for both LCC and BCC. I appreciate the State's increase in interest and financial support of transit solutions, however, the TTIF fund is not designed to be used for operations cost. A separate, dedicated, ongoing and reliable funding source must be implemented in order to successfully phase the solutions you propose.</p> <p>Thank you, Kerry Doane</p>
30190	Hayden Beck	<p>The proposal put forth by UDOT is just plain bad for Utah. We would all really like to see our State agencies shift their focus from trying to attract money, tourism, and industry from other parts of the country and focus on improving life for the average Utahn. Building a multi-billion dollar gondola that will run during limited times of the year does nothing for Utah skiers. It only provides a novelty experience that tourists will be attracted to. To whomever is actually reading this comment, thank you. I doubt that you have much say over the actual final decision, but I know that there is someone who has to read these and categorize them.</p>
30191	Robert Kirschner	<p>Seems to me like the gondola is the best solution for many reasons.</p>
30192	Ezra Nuttall	<p>This is a terrible idea. There is no reason to destroy the view with a gondola. Just limit the number of cars and add more buses on the existing road.</p>
30193	Ezra Nuttall	<p>This is a terrible idea. There is no reason to destroy the view with a gondola. Just limit the number of cars and add more buses on the existing road.</p>
30194	Bill Jergins	<p>Both my wife and I agree the only viable choice, that will work now and forward for the future , will be to build a gondola up the canyon to both ski resorts. If it isn't approved now, I'm confident it will be the only solution within 5 years.</p>
30195	Kathryn Wright	<p>I am opposed to a gondola in Little Cottonwood Canyon which will be costly and benefit two ski areas which are already too crowded.</p>
30196	Benjamin Anklan	<p>I support the gondola alternative B as a solution for Little Cottonwood canyon.</p>
30198	Sylvia Mcmillan	<p>It is projects like this that will be the death knell of Utah as a beautiful state to visit let alone live in. Greater access to our parks, canyons, deserts only diminishes them over time. Limit the access fairly. Save our Great Lake, our mountains and our land. You're letting the locusts eat/destroy everything of beauty right before our eyes for a few dollars and cheap publicity.</p>
30197	Dave Gibson	<p>I DO NOT want a gondola built up LCC. Traffic can be absolutely horrible at times, but that's what happens when you broadcast the Olympics to the world and keep spending millions a year on "COME SKI UTAH" marketing campaigns. The gondola isn't needed and is just a marketing ploy to advertise a new tourist attraction that will ruin the canyon for life. We can get my just fine with what we currently have and keep the canyon as-is. Thank you for your time and please make the right decision and scrap this idea.</p>
30199	Ethan North	<p>This is the best proposed plan. Please make it happen</p>
30200	Kevin Gross	<p>Dear UDOT,</p> <p>The proposed gondola threatens to destroy important habitat and prevent recreation in Little Cottonwood Canyon.</p> <p>Almost everyone below the age of 40 I know in Salt Lake has a passion for rock climbing, particularly in LCC. According to the SLCA, 98% of surveyed climbers say that climbing access is important in their decision to live in Utah. If climbing access were restricted due to construction in LCC, I would move out of state along with many of my friends.</p> <p>There are alternatives to the proposed plan that may come closer to achieving the project goals, such as expanding the shuttle bus fleet, further subsidizing bus travel, and disincentivizing private auto travel.</p> <p>Please consider all canyon users in your decision, including bicyclists, hikers, runners, mountaineers, backcountry skiers, nordic skiers, ice climbers, rock climbers, boulderers, and everyone else who wants to enjoy the canyon's clean air, natural beauty, and wildlife habitat but doesn't have an Alta/Snowbird ski pass.</p> <p>Thank you for the work that you do to keep our amazing canyons open to visitors!</p> <p>Kevin Salt Lake citizen</p>

ID	Full Name	Comment
30201	Sean Debruine	I am strongly in favor of the preferred gondola alternative. For the "price" of short term construction and a slight visual intrusion it has the huge benefit of reducing vehicle traffic and the attendant noise and pollution. It's high time we stop letting cars define our world.
30202	Jamie Bennett	Please do not ruin our beautiful mountains by putting a gandola in. It is not a good use of money or how we should be regulating traffic. There are better solutions. Please listen to the citizens! We DO NOT want a gandola!
30203	Molly Wheeler	If this project is going to go through and be this heavily subsidized by taxpayer dollars, it needs to be a FREE PUBLIC service, not turned over to a company to then profit. Right now, this is a handout to property owners, the operator, and the ski resorts.
30204	Noah Steele	The towers are going to have a huge negative impact on the viewshed. On the news and most websites, all of the renderings show gondola's and cables floating off into the canyon without any towers, this is false and misleading. Each tower will have an access road, which will require bridges, culverts and lots of cuts and fill. Also, there are only two stops. This is not fair to spend so much money to only serve the ski resorts. What about the hikers, climbers, fishermen, and mountain bikers? I would support tolling and especially higher tolls for single occupancy vehicles (like \$50 bucks high), higher frequency and reduced cost bus service during peak times, a large park and ride carpool parking lot at the base, and I would love a 10' wide asphalt multi use trail bottom to top that didn't necessarily follow the road grade. In the winter, if you were to park in the park and ride and ride the bus up to the ski resort, you could just ski all the way back down to the parking lot at the end of the day.
30605	Kenny S	Please NO- such a massive blunder if approved and built.
30205	Jenny Gritton	As a former employee of CDOT, your Rocky Mountain neighbor, I don't understand how Gondola B was chosen as your preferred alternative. Seems heavily influenced by the ski resorts to me. Please recognize that the canyon has many uses, and don't let capitalism win you over. People rely on transit, and like it or not some people rely on cars (I have been involved in I-70 congestion projects, I understand the pain). You're better than this UDOT!
30206	Candice Bithell	I stand with most residents of Sandy AGAINST the building of an expensive and unnecessary gondola. This proposal only benefits the ski resorts of Alta and Snowbird. I am an avid user of this canyon during all seasons as a hiker, biker, snowshoer, and climber. I am up and down this canyon, which is about 4 miles from my home, throughout the year and have NEVER experienced a problem throughout the 28 years that I have lived here. Some congestion when the snow falls heavy and the canyon is closed? Maybe once or twice a year. MAYBE. This proposal is ridiculous and I, and my family of 5, are all against it. Please please don't do this to our beloved canyon or our wallets! I was shocked to learn that the gondola wouldn't even run in bad weather and that it will cost a fortune to park and then to ride! Please please start with more affordable solutions like tolling and busses and NO GONDOLA. The impact is HUGE and NEGATIVE.
30207	Bruce Innes	Really! \$500 million. You know it will double that before it's complete. Gondolas and towers will desecrate the canyon views. They ugly and have a huge maintenance costs! Better put toilets in them because they will break down. Bus lane will cheaper and faster in the long run.
30208	Ross Chambless	<p>I see several problems with the current proposed gondola project:</p> <ol style="list-style-type: none"> 1) Deciding to approve a proposed gondola while also approving a toll system and expanded bus services is premature because we will not yet know how effective the toll and bus system could be at mitigating canyon congestion. I suspect the expanded bus and toll system will have a significant impact if done well. 2) The toll and expanded bus system will cost MUCH LESS and have MUCH LESS impact on the canyon than the gondola. 3) The gondola will serve only the interests at the top of the canyon, ie the two ski resorts, but it will not address the year-round demand for other accessing trails and other popular spots throughout the canyon which are better served through expanded bussing. 4) Building a park-n-ride center will inevitably need to be placed somewhere regardless of whether the gondola or the expanded bus system is implemented. But putting the park-n-ride location at the base of the canyon could create much more congestion in those surrounding communities. Has UDOT considered building the park-n-ride further west or north so as to not create undue pressure on the base of the canyons? <p>Overall, I do not support the proposed gondola for the reasons listed above. Thank you for considering my comments.</p>
30209	Eli Primmer	I strongly oppose building a gondola in Little Cottonwood Canyon. I do not want my tax dollars used to directly benefit Alta, Snowbird, and the people that can afford to ski there (which is not middle class Utah families).
30214	Ruth Trimble	Creating this gondola to cater almost exclusively for the convenience of upper middle class individuals who can already afford expensive winter sports hobbies and benefit private companies financially (snowbird and alta) is an egregious use of taxpayer money that will harm the environment and damage free/low-cost recreational outdoor activities (hiking). It is ridiculous for the taxpayer to fund this initiative.

30213	Todd Fleming	<p>First of all, thank you for putting so much effort into improving the traffic conditions and air quality improvements to LCC.</p> <p>While I think the LCC solutions are ok solutions, I feel like there is a major issue that isn't being discussed by either of the options, and that is Big Cottonwood Canyon. These options are not addressing the same issue that BCC and LCC have, traffic backed up for hours and hours and weekends or powder days.</p> <p>The more I travel to other ski areas and national parks or heavily used wilderness areas, the one thing most have in common is their decreased usage of personal vehicles and an improved and enhanced public transit option. Rather than widening the road or building a gondola, these other areas only allow buses or shuttles to transport to the resort. Zion NP is a great example of closing the canyon during peak season and only running shuttles to visit the scenic canyon. Aspen, Jackson Hole, Steamboat, Winterpark etc do the same, increasing buses and public transit to provide reliable transportation to the resorts.</p> <p>This option will address both canyons and remove the individual vehicles and parking issues heading up the mountain. If you want to go skiing, jump on the increased and expanded bus service, people will love it, Aspen has fully embraced their transit systems and it works beautifully. This will require the large parking area and expanded buses but will not require widening of the road or building a gondola and decrease the exhaust that individual cars produce. But it will get people up the mountain quicker, faster, more effectively by removing all cars except for residents or workings that require being able to drive.</p> <p>Thanks for all your work and I hope there is consideration for an expanded bus service for a more achievable alternative.</p> <p>Todd</p>
30220	Nathan Hickerson	<p>I could not be more against the proposed alternative to canyon access. This is a huge waste of money that could be used to improve our community elsewhere. There is no research anywhere that concludes that the gondola will reduce traffic to the resorts. In fact, the research suggests that this will only increase the number of people who visit the resorts in the winter. It does not solve any of the public's problems. The only thing that makes sense is significantly limiting the number of personal vehicles that can drive up the canyon in the winter. Busing and tolls do much more to reduce emissions and traffic than this plan ever could.</p> <p>Do not go forward with the gondola plan.</p>
30222	Kevin Schaefer	<p>So after taking a half billion dollars of tax payers money to build a gondola to support private business we have to pay to park and pay to use the gondola that we already paid for?</p>
30224	Ash Gambhir	<p>The Little Cottonwood Canyon does not need a gondola. It needs mandatory shuttle (bus) transportation like the one in Zion National Park during peak months of ski-related travel (December - March). We need to preserve LLC for others who do not go to the resort and instead climb, backcountry ski, hike, trail run, or boulder in the canyon. It is a habitat for many animals and a source of water for us. You should be ashamed that you are trying to give away our hard-earned tax dollars to build a catastrophe Gondola on public land to Snowbird and Alta so they can make the big bucks.</p>
30223	Ash Gambhir	<p>I DO NOT WANT Gondola. I say NO to the Gondola. This solution is being recommended by UDOT Cottonwood Canyons Transportation & Utah Department of Transportation despite studies showing that a long-term road improvement/bus system would accomplish the same thing. This would require structures up the canyon which will devastate the canyon completely. This would only benefit two ski resorts Alta Ski Area and Snowbird to the detriment of climbers, backcountry skiers, hikers, trail runners, and taxpayers.</p>
30225	Ash Gambhir	<p>No no no to gondola!!!! Preserve our canyon</p>

30226	Emmett Ross	<p>Do not build the gondola without several years of trialing very good bus access and tolling to get up and down the canyon.</p> <p>Seems like it would be so much simpler to run a toll on the road to discourage driving and offer buses. Then all you need is several bus terminals outside of the canyon, spread across the valley. Toll every car that drives up to Bird/Alta in peak times (or deny car access outright in peak times (except for employees or people staying at the mountains)), and run buses continuously from the base of canyon parking lot. Jackson Hole basically does this and it keeps traffic down.</p> <p>it's clear that this is a big ol' bonus to Alta and Snowbird's pockets while killing the skier experience.</p> <p>The biggest issue with both BCC and LCC traffic is the lack of parking at the canyon base. On a busy day, all of the park and ride lots are filled far, far before lots at the resorts are full. Many people I know would love to take the bus, but cannot because they can't find parking close to the bus stops. The fact that building parking structures on top of all the park and ride lots hasn't really been discussed is ludicrous to me. The gondola doesn't solve the issue with parking down canyon, and to say that busses aren't feasible without developing the infrastructure to reliably allow people to leave their cars down canyon is completely disingenuous to me.</p> <p>This is going to be an epic [REDACTED] of traffic and parking dystopia at the base of the gondola.</p>
30227	Danielle Benson	<p>Do not build the gondola without several years of trialing very good bus access and tolling to get up and down the canyon.</p> <p>It would be simple to run a toll on the road to discourage driving and offer buses. Then all you need is several bus terminals outside of the canyon, spread across the valley. This is going to be an epic [REDACTED] of traffic and parking dystopia at the base of the gondola.</p>
30229	Jan Ellen Burton	<p>I am in favor of a phased plan for Cottonwood Canyon. It would be informative to see how increasing bus service and charging a fee to vehicles would impact the traffic problem. The plan for a gondola need not be implemented at this time. It would not help people who just want to see the canyon--or hike in the summer. It will change the ambience of the canyon experience, and only be an improvement for the ski resorts. At this time, with dwindling snow, it makes little sense to construct a gondola without implementing other measures first.</p> <p>Thank you.</p>
30228	Sabina Williams	<p>I am very disappointed that you care more about putting money into vip's hands than the voice of the public or the good of the land. Disappointed but not suprised.</p>
30231	Madison Chesley	<p>PLEASE, NO GONDOLA!!! There are other solutions and this is NOT where I want state resources to be placed.</p>

ID	Full Name	Comment
30230	Carla Tuke	<p>As lifetime resident of East Millcreek and the surrounding areas, I am writing to oppose the proposed gondola in Little Cottonwood Canyon. This is not a where our tax dollars should be used, to benefit private businesses, with no benefit to the majority of the citizens. Alta and Snowbird are the main beneficiaries of this massive project, and they should be the ones paying for it. In an already inaccessible industry to most of the people who live here, who can no longer afford to ski, how can you call this a public transportation issue anyway, the gondola will only serve a very small portion of the population. Not to mention that this is our watershed and we shouldn't be encouraging any more traffic in any way shape or form in these fragile ecosystems.</p> <p>A capacity/visitor management study to better understand how many visitors LCC can support should be conducted before any decisions on the best solutions can be implemented.</p> <p>I think we need to preserve what infrastructure is already there and learn to live within those parameters. Instead of this constant need to expand and increase regardless of the ultimate costs.</p> <p>Sincerely,</p> <p>Carla Tuke</p>
30232	Michellemichelle Traniello	No gondola!!!
30233	Benjamin Nye	The proposed plan is not only an insult to all who love and use the canyon, but it is also an insult to taxpayers around the state. We are to believe that this project will actually finish at only 500 million? When was the last major public infrastructure project that did not go at least 2x over budget?
30234	Eric Smith	<p>Do not build the gondola without several years of trialing very good bus access and tolling to get up and down the canyon. In my opinion, the gondola would destroy the LCC experience as we know it and only benefits the high income people that will be able to afford a gondola ticket. I will never be that person and hate the idea that you're just selling off access to utahs best skiing to the highest bidder. This is not a solution for the people. This is a solution for big business. And arguably big business is the reason we have the ski access problems we are looking to fix.</p> <p>It would be so much simpler to run a toll on the road to discourage driving and offer buses. Then all your need is several bus terminals outside of the canyon, spread across the valley. Toll every car that drives up to Bird/Alta in peak times (or deny car access outright in peak times (except for employees or people staying at the mountains)), and run buses continuously from the base of canyon parking lot. Jackson Hole basically does this and it keeps traffic down.</p> <p>it's clear that this is a big ol' bonus to Alta and Snowbird's pockets while killing the skier experience.</p> <p>To say that busses aren't feasible without developing the infrastructure to reliably allow people to leave their cars down canyon is completely disingenuous to me. This is going to be an epic [redacted] of traffic and parking dystopia at the base of the gondola.</p>
30235	Tristan Bonds	Do not build the Gondala. For the next few years, you should instead run a trial of a toll road, combined with increased parking lot space (which you would already need to do for the Gondola) and significantly increased buses which would go a long way in decreasing traffic burden and increasing speed in and out of the canyon. Start there and see how it goes. This should be tried first because it is magnitudes cheaper than a multi billion dollar gondala and leverages the infrastructure you already have (free buses) while also not causing any additional damage to the ecosystems and beauty of the canyon. Free buses would also incentive less people to take the toll road and lead to far fewer private citizen cars on the road which means less pollution to the canyon as well.
30236	Wayne Fletcher	I am in favor of the gondola. I think it would cut down on pollution and would be a great way for everyone to see the canyon, not just skiers.
30237	Paige Dabell	<p>Do not build the gondola without several years of trialing very good bus access and tolling to get up and down the canyon.</p> <p>It would be so much simpler to run a toll on the road to discourage driving and offer buses. Then all your need is several bus terminals outside of the canyon, spread across the valley. Toll every car that drives up to Bird/Alta in peak times (or deny car access outright in peak times (except for employees or people staying at the mountains)), and run buses continuously from the base of canyon parking lot. Jackson Hole basically does this and it keeps traffic down.</p> <p>it's clear that this is a big ol' bonus to Alta and Snowbird's pockets while killing the skier experience.</p> <p>To say that busses aren't feasible without developing the infrastructure to reliably allow people to leave their cars down canyon is completely disingenuous to me. The gondola is one reason I will be moving out of Utah in the next couple of years if it is proceeding forward. The gondola will destroy the canyon and is not a feasible path forward. It is obvious that this is not for the people of Utah, but just for company profitability. Please test other methods first. 80% of Utahns to not want the gondola.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30606	Martin Kern	Hi dot I like the phasing in proposal. As a resident of Granite , I am curious about the expected role individual taxpayers may have to contribute. I understand the ski resorts will not help with the cost yet they will benefit most from a profit viewpoint. Will u answer what is expected of the taxpayer ? I would hope the tolls and gondola fees along w state and federal funding will be sufficient . The developers I am sure will also be profiting from this. The is a project that individual taxpayers should not be expected to shoulder Thank you for expected response. Martin Kern.
30238	Brock Holt	I backcountry ski up in the canyon. I like to ski early. I would like to have access to different trailheads, not just 2. I would like to be able to drive before the traffic comes, park, ski and drive down the canyon. My dawn patrol skiing does not really affect the traffic or parking issues in the canyon. Please don't wreck this for me.
30240	Brock Holt	I think that EIS should do much more to support carpooling until the gondola is up and running. I think that fees should be assessed at the mouth of the canyon charging the actual users. If you have 5 people in your car, you pay \$0. If you have 4, you pay \$10, if you have 3 people, you pay \$20, if you have 2 people, you pay \$30 and if you are alone you pay \$40. This alone would probably solve both the parking and the traffic problems in the canyon. Right now, the ski resorts are incentivized to remove carpool parking spaces in exchange for expensive reserved spaces that run \$400+ and allow a single driver to park and drive- exacerbating the traffic and parking problem while lining the ski resorts pockets.
30239	Kristopher Hawkins	Please listen to the people. We have made it clear that this not the solution we want.
30241	Margaret Mullen	As a Sandy resident off Wasatch Blvd, I do not support the gondola. It is an extreme engineering feat, never been done before (larger than the gondola at Zermat) and also only supports one season of outdoor recreation in little cottonwood canyon. There's currently no source of funding for this project and I absolutely would not support taxpayers funding this project. Please enforce paid per person car entries at the base of little, increased bus service, and other alternatives.
30242	Karla C	#
30243	Alexander Hopp	The gondola is a horrible idea. Literally nobody wants it.
30244	Courtney Nelson	No and never a gondola. As a Salt Lake native, I have grown up skiing, hiking and having the mountains close for both recreation and as a mental health outlet. Now as a mom of two boys, I am continuing to share this love of the outdoors by exploring our mountains, but also honoring and respecting them. We make sure to leave them better than we found them, to preserve them for others to enjoy, and protect them. Part of the majesty that they hold lies in viewing them as you enter and exit the canyon. As you reach the summit or ridges of them. Placing a gondola obscures that majesty. It would distract and disrespect the landscape that took 1000s of years in the making. The gondola wouldn't save time, it would both destroy the canyon, corrupt the watershed with promoting more foot traffic. Having a bigger parking lot would only create more problems for surrounding neighborhoods, the small roads leading to the lots, and crowd hiking and skiing. Please, I beg you, plead with you, DONT resort to the gondola. Don't sell out the mountains that provide so much for us, esp as locals. Our job is to protect. Not destroy. I vote and support both tolls and a reservation system. People will pay and because they pay, they have already invested in preserving and protecting. Maybe those funds could be divided to offer support the landscape. Please give the mountains the respect they deserve. To save them for the future generations to enjoy.
30245	Roger Tobar	The Gondola Alternative is a horrible idea. In no way does it "Maintain existing visual experience" as 20 story towers will desecrate the beauty of LCC. This plan will do nothing to mitigate the horrible backlog of traffic on the three roads leading to the canyon mouth which is the heart of the issue for residents who live along the corridors as well as the winter sports enthusiasts. What is not being recognized is the concept of improved traffic flow. The merging of two lanes to one is never a good scenario whether on the freeway or at the mouth of LCC - sometimes called "The Zipper" - where the traffic slows to a crawl. It seems so obvious this untenable situation will persist until two dedicated uphill lanes are established to allow for free-flowing movement of vehicles. 80% of the canyon is wide enough to expand to a third lane and 20% would require state-of-the-art engineering, but the road is already there so why not simply improve it to become a world-class artery rather than an outdated two-lane road that has not kept up with the demands placed upon it. Access to all points in the canyon would be maintained to serve the diversity of users whether they be hikers or skiers and be a benefit throughout the year and not just for the handful of days that the gondola would mitigate.
30246	Tom Bushell	I recommend any alternative to a gondola. The public knows the cost will be at least double your estimate. This is nothing but a subsidy for the ski resorts. Surely, there are more deserving transportation projects. Why not institute a reserve parking system for those big powder days? Skiers could reserve the night before. If there isn't enough parking the resorts should build parking structures to support their business. This whole project smells of special interests and deserves a very close look
30247	Ryan Hamic	I just wanted to express my support for the gondola as part of a comprehensive solution for the LCC traffic and environmental situation. I believe much of the opposition is regressive in nature and does not address the reality of the situation, which will continue to worsen if nothing is done.

ID	Full Name	Comment
30248	Anna Marie Neider	<p>Problems with your plan...</p> <ol style="list-style-type: none"> 1- IT WILL IRREVERSIBLY DAMAGE THE BEAUTY OF LITTLE COTTONWOOD CANYON 2- The towers are HUGE and VERY UGLY. They will be a PERMANENT SCAR on our beautiful canyon. 3- It costs a fortune 4- You dont know how you will pay for it 5- You are ready to go forward even tho you dont have the money 6- Very few will benefit from the gondola. Why dont they pay for it? 7- Your issue with the traffic is grossly exaggerated. I live here. I can see the traffic. The only bad times are afew weekend powder days... 8- You haven't even tried far less damaging and/or far less costly options. 9-What about incentives to carpool? 10- Incentives to receive prime parking for full cars? 11- Incentives to avoid peak hours? 12- More reliable buses 13- Gigantic ugly parking garages... Permanent Eye sores 14- Traffic to get to parking and lines to board the Gondola 15- Why do you think Utahns will want to ride public transportation? I dont think they will. Why give up control, and change one headache for another far more expensive and more inconvenient headache. <p>ALL SO A VERY FEW WILL BENEFIT AT THE COST OF THE MAJORITY</p>
30249	Lauren Cook	<p>I do not agree with the building of a gondola. My annoyingly, it's only purpose is to serve privately owned resorts, yet the funds are public. The local public is being forced to pay for an issue created by corporate greed. The resorts should be pressured into securing safe travel through reservation systems, reducing passes sold per day, and better controlling their numbers vs ruining the entire canyon for everyone else. This plan does not help or resolve any issues the public faces for climbing, hiking, or backcountry skiing. Increase the parking at the mouth of the canyon with a multi level deck and improve the bus system. The gondola takes an absurd amount of travel time and does not prove to be a quality guest experience for those who will choose to still visit the resorts. They'll continue to drive and forgo the timely nightmare that is the gondola. It is not an experience worth traveling for and will ruin the canyon while being under used. Please, increase bus capabilities and experience and consider the snow shed option for the avalanche prone areas. Think of everyone and all adventure with this plan. Not just the lobbying resorts that it benefits most. Listen to the people of Salt Lake. We want our access to hiking and climbing. We want all of our seasons of fun. Not an eye sore that won't solve a problem.</p>
30250	Nicole Baum	<p>I don't want a gondola that will only cater to the resorts and create a huge impact on the people who live in the area.</p>
30608	Sandy Killion	<p>I don't understand how you can come to the conclusion that building the gondola is the best alternative. Best for who? Who or what Politian will profit from building this? I have not met a single person who thinks the gondola is a good idea. Yes, I have seen the paid actors on the commercials telling us what a good deal this will be.</p> <p>What about all the people year-around who want to go to the many places for hiking, climbing, skiing, and biking that are between the bottom and the top of the mountain? What you are proposing does not make logical sense. The sad thing is that the tragic jams occur only 2, maybe 3 months out of the year, and you want to make this big change that will be a scar to the land and an eyesore year around and cost the taxpayers too much money.</p> <p>Unfortunately, the outcomes of these types of projects, (ie building a Walmart in the old gravel pit in Sandy) happen, no matter what the majority of the population wants.</p> <p>I vote NO to the building of the gondola.</p> <p>Thankyou for your time.</p> <p>Sandy Killion</p>
30251	Earlene Swasey	<p>I do not want to pay for this which I will never use. It seems to me only the rich can use this. Why not let the ski resorts pay for it or put a toll on the road so those who use it pay for it. This is not for the good of ALL people in Utah, only a select few, but all of us pay for it.</p>
30252	Royal Swasey	<p>I oppose any tax dollars to fund the gondola in Little Cottonwood canyon. The cars on the gondola would stop any time one of the cars loaded or unloaded people from that car. This would lengthen the time to travel through the canyon. People would likely not be willing to spend that extra time in a gondola car.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30253	Linda Stephens	This is an example of money buying the response you want. CW management, political friends, and a safety net of people with money-will buy support as needed. Taxpayers should not be paying for a gondola when the support for a gondola is clearly, not coming from them.
30254	David Spencer	<p>I am pleased with the process and the decision to go with the gondola alternative. I am not as pleased with the phased implementation, as I feel that the sooner we begin the better for the environment. I do understand that total upfront funding will be a problem.</p> <p>Minimal environmental impacts, retaining climbing routes, improved transportation during avalanche cycles and reducing vehicle traffic in LCC are all points in favor of the gondola in my opinion. The visual impacts and the perception of public funding of a solution that only benefits the ski areas are negatives.</p> <p>Visual impacts can be minimized with muted cabin colors. In any case, the towers and cabins will have less of an impact on the canyon scenery than a wider road with additional traffic.</p> <p>A lift ticket tax of one or two dollars per day ticket sold, along with a corresponding increase in season pass prices, could help with the perception that this is a solution for the benefit of the ski areas.</p> <p>I would like to see the gondola run year round, with a short maintenance period in early November early June.</p> <p>Thank you for selecting the best long term solution, despite the unfriendly political climate surrounding this choice. This tells me that the process works.</p>
30255	Steve Jorgensen	The visual impact of a gondola is not acceptable so close to a wilderness area. The spending of public funds for a gondola that only runs in the winter season to benefit private businesses is not acceptable. Having spent more than 4 decades building, operating, and maintaining aerial tramway I know that the risk of failure of the gondola and associated evacuations especially in or near avalanche paths would extremely difficult and time consuming. With a high degree of expertise I would likely not use it as the risks are to high. This route only addresses the symptom, not the cause of the problem. I was part of the mountain accord process, and participated a little with the cwc, it has always been swayed towards the resorts and the needs of salt lake city watershed. I say no to the gondola alternative.
30256	Lacy Sigman	As a frequenter of SLC and of Snowbird, I know that most locals love the public access that the buses provide. The gondola doesn't sound like it'll offer easier public access nor quicker routes up to the mountain. Open up the mountains to all, not just the rich!
30257	Kurt Thornton	I believe the clear winner is a multi prong approach like the gondola, plan B. Nostalgic as I am about the canyon, and that goes for all of our canyons, the throngs of people have to be dealt with and regulated. A gondola ride up that canyon would be spectacular for tourists as well as skiers. Limiting the traffic up there by car by using a toll system would still suit the hikers and the climbers. Electric buses would be fantastic. I would even support the idea of a trail system from bottom to top that could be used for bikers, hikers and skiers along the creek. Getting people to think about how they use our canyons and knowing that they have to pay something for that use, be it limited use to keep it pristine, and I think that ship has long sailed with the two resorts built at the top, or regulated use to mitigate the damage and increase the awareness.
30258	Brian Smith	<p>I am a multi-year season pass holders at Alta-Snowbird and am strongly opposed to the gondola. This is a huge outlay of money for a questionable benefit in the distant future and could be fixed with better bus transit plus tolling.</p> <p>While next steps are being determined, UTA should immediately increase bus service to the canyons. Frequency is way too little. Buses are frequently uncomfortably full or unable to be boarded. This is a huge deterrent to riding the bus. We need to ensure there is always capacity. Buses also need to run throughout the entire season. They start too late and end too early to provide season-long transit to workers and customers.</p> <p>Secondly, whether gondola or buses, there is huge need for additional park and ride lots below the canyons. There should be an immediate effort to secure additional lots near the entrance so users can grab buses to the gondola and/or actual resort. Parking is insufficient so people just drive up.</p> <p>Third, the canyons need to be tolled immediately. At least during winter weekends.</p> <p>Tolls paired with buses would largely eliminate the traffic problem. This could be implemented by next season to provide substantial relief in the interim since the gondola will take many, many years to arrive (if ever). The status quo is unsustainable. We need immediate action. Buses are cost effective and could be revenue neutral with tolling.</p> <p>Please do something more quickly than this gondola plan.</p>
30259	Gandhi Zapata	Not in favor of the gondola, we don't need more people going up to the already overcrowded resorts, get rid of ikon pass or limit tickets sales per day, they're already so crowded and it's not safe for skiers/snowboarders (at snowbird) put tax money in more shuttles and parking hubs at different locations, as well as giving attention to the same problem on BCC traffic, have more UDOT workers checking at mouth of the canyon for inexperienced drivers driving on rental cars with bald tires and putting everyone at risk. The gondola would ruin the canyons static's and have an irreversible environmental impact. Locals don't want it! This is not Europe! Our canyon is too small for such a massive project only benefiting the resort. Tax papers don't want it, it's also not going to help other canyon users: backcountry users, climbers, hikers, bikers, etc... The people have spoken NO to the GONDOLA!

ID	Full Name	Comment
30609	Craig Adam	<p>As this is the final EIS Comment period I am not fully aware if these comments are acceptable for this purpose, but I chose to add them as they are important to me, my family and neighbors.</p> <p>As stated in the UDOT presentation Little Cottonwood Canyon is subjected to an average of 56 hours a year of closures. Depending upon the extent of the avalanche this could account for anywhere from a few hours to days for an individual avalanche occurrence. For this small number of closures and the inconvenience it causes, I cannot accept the tax burden placed on the residents of Utah for this project in good conscience. My final thought would be to either enforce carpooling or make bus transportation more convenient. Skiing is already getting the label of a "White Privilege" sport, excluding many minorities and low income persons due in part to the high cost involved and this project will only add to this label as the cost for a day's skiing may now soar to over \$200/day/person. Has anyone considered that according to some ski resort experts, skiing is on the decline? And then Utah is seeing a decline in the number of snow days due in part to climate change. Will we even need these improvements in 10-years? There's also the thought of what do all these improvements buy residents on good travel days or during post winter driving conditions?</p> <p>The inconvenience for families and older citizens hauling their gear and belongings (skies, poles, boots, extra clothes, lunches, etc) to the hill via multiple vehicle transfers is a task I would not even want to imagine and I consider myself a healthy 65+ years old. I can only imagine if I was someone handicapped or dragging 4 kids along.</p> <p>I am in favor of adding a road toll in the form of HOV tolling in order to promote carpooling, allowing 2 or more riders reduced or free mountain access. Additionally you speak of phased implementation, so consider building the parking structure for the base station first and using it as a park-and-ride bus terminal. This will provide UDOT time to evaluate if the gondolas is even needed while providing an alternative to self-driving the hill. Tolls from single ridership could be used to offset bus fares for those who chose to ride as another enticement. Speaking of tolls, what method will be used to assure that single drivers are being tolled, as currently I see many drivers of the HOV riding singularly in the HOV lane and the yellow toll light flashing.</p> <p>As for the environment I can only laugh when UDOT claims that water quality will not be affected. Currently there is an exclusion of dogs in the canyon in order to maintain water quality but has there ever been a citation or fine issued to someone bringing a dog on the trails or to the resorts? Doubt it. So how serious is the water quality going to be taken during the construction phase? Here in Weber Co I have reported many times that construction projects have violated SWPP protocols and nothing happens. I have even reviewed County site inspection reports where the County inspector basically "pencil whips" their inspection form and when a physical inspection of the project is performed using the same criteria results are radically different.</p>
30260	Jesse Margolies	<p>The gondola is not a good option for Little Cottonwood Canyon. This gondola will not solve the problem of crowded canyon roads. It will only further crowd the already crowded mountains. We need a solution that takes cars off the road and the gondola does not do that. Furthermore, the gondola only makes it more difficult to access the mountains. If I have to drive to the parking lot, then wait for a bus to get me from the parking lot to the gondola, then wait in line for the gondola to take me to the resorts, and then get a shuttle from the gondola to the lifts, I will spend more time commuting than I will skiing. And the gondola will only run for half of the year and not make any stops at popular trail heads. Seems to me like the gondola is a good option for the ski resorts to make money, not for the people who are paying for it! The gondola is not the answer!</p>
30261	Wiley Speckmann	<p>I do not think this is the best alternative to improve travel up little cottonwood canyon. I think the money that would be going into this project should be spent towards helping the Great Salt Lake so it doesn't dry up. This just seems like a much larger problem than helping people travel up the canyon faster to go skiing. The alternative would also only be effective during ski season and only stops at ski resorts while the Great Salt Lake drying up effects the air quality which effects everyone that lives here. This alternative is not the right solution for transportation in Little Cottonwood Canyon.</p>
30262	Krissie Didier	<p>No gondola ? let people use busses- leave the mountain alone Ave save nature. You're dumb gondola will ruin the beautiful scenery and natural wonders for stupid ski/snowboarding traffic. Let them eat snow!</p>

ID	Full Name	Comment
30263	Harveylot Harveylot	<p>Unknown font</p>
30264	Sid Johnson	<p>This is a horrible idea. Paid by taxes and fees yet the cash goes to the resorts. Doesn't solve the problem. I'd rather bike the canyon. I'd rather pay an Environmental tax at the mouth of the canyon if I'm gonna drive. The last thing we need is to funnel more cash to corporations. The gondola is irresponsible.</p>
30265	Lawrence Midura	<p>If the Gondola alternative worked successfully for Banff Sunshine in Canada; no reason the Gondola cannot work successfully in Little Cottonwood Canyon as a similar scenario!</p>
30266	Neil Varner	<p>This is a huge waste of money. Use the busses!</p>
30267	Lauren Strohacker	<p>The gondola seems to be the option that most benefits the ski resorts but doesn't benefit use of the whole canyon. Not in favor.</p>
30610	Craig Wallentine	<p>TO THE UDOT LCC TEAM,</p> <p>I support most of the first phase of the LCC project as proposed with a few constructive suggestions to make the first phase so cost effective that a second phase will not be needed.</p> <p>1. IMPLEMENT ELECTRONIC TOLLING FOR LCC AND BCC IMMEDIATELY: Multiple traffic studies have been done showing that there will be a significant decrease in upper LCC and BCC traffic with a modern tolling system implemented. This will generate user-based funding to reduce Utah taxpayer costs for the first phase while eliminating much of the claimed "mobility crisis". The real "mobility crisis" occurs every day in the fast growing regions of the Wasatch Front with its many traffic and safety issues. Please implement the Canyon tolls immediately and collect hard data on the claimed "mobility crisis" before developing any future phases.</p> <p>2. IMPLEMENT PROVEN, COMMON SENSE TRANSPORTATION PROJECTS THAT BENEFIT COTTONWOOD HEIGHTS AND ALL LCC CANYON USERS FIRST: It is interesting to note that the highest return investments in the proposed LCC plan are inversely proportional to their costs. After the implementation of the long delayed upper LCC and BCC tolling, improved trailheads will benefit many users in all seasons not just a handful on a few days a year. The same applies to the improved sound walls which will benefit many at a low cost. The second tier of investments - the well-placed, low maintenance snow sheds and the improved traffic flow on Wasatch Boulevard are not inexpensive but they will make travel easier for many Utahns both on the approach to the Canyon where many voters live and also in the Canyon itself.</p> <p>3. ADDRESS THE ROOT CAUSE ISSUE BEFORE PROCEEDING WITH ANY OTHER WORK The UDOT document does not address the root cause issue for the "mobility crisis" - the failure of the ski resorts to charge a market price for their offering. Beyond the logical transportation projects listed above which are either self-funding or for the benefit of all, no further Utah taxpayer money should be spent on LCC projects until the two ski resorts implement their own logical and profitable operational improvements as outlined below:</p> <p>(a) Designate any "mobility crisis" day as a "full fee" day for all discounted ski passes - this will reduce traffic volume and increase resort profitability. The incremental cost of a full day fare would be collected automatically from the discount pass holder while not prohibiting them from using their pass.</p>

Comments on Little Cottonwood Canyon Final EIS

30268	Jonathan Anderson	<p>I am against the gondola idea.</p> <p>I do not utilize the resorts, and so by being forced into a gondola I would loose my ability to take transit to trail heads.</p> <p>A massive increase in busses, and a toll / limit of vehicles up the canyon would be a much more efficient way of ensuring every can get access to all aspects of the canyon, instead of spending a massive pool of money on a system the is of only benefit for the resorts.</p> <p>No Gondola. Yes buses. Yes single occupant vehicle limits. Yes single occupant vehicle toll. Yes expanded parking at mouth of canyon.</p>
30269	Patrick Eisenhauer	<p>I have reviewed the Final EIS. I am a resident of Cottonwood Heights very near Wasatch Blvd. I concur with Cottonwood Heights City Preferred Alternatives, https://www.cottonwoodheights.utah.gov/home/showpublisheddocument/6479/637963436171200000. I oppose the Gondola B construction. It is fiscally irresponsible to spend \$550M for the gondola which provides marginal improvements in transportation to the ski resorts. It is poor business to support a declining industry. Refer to NOAA Climate.org, https://www.climate.gov/news-features/climate-and/climate-skiing, "...the fraction of precipitation that used to be totally snow is changing to rain." NOAA data indicate that the CONUS snow-to-rain ratio of precipitation has moved mostly toward rainfall and away from snowfall." Further, "...The upper elevations of the Uinta Mountains may have snow, but the Wasatch Range will be snow free."</p>
30270	Ken Gardner	<p>Well Not sure where to start -- This is the worst idea anyone in Utah has ever had re canyon usage. \$550 million and still charge people to ride the gondola really - I have not seen or heard any comments about closing LCC or BCC to auto use if this is completed -- Why not there would be no need for cars/ trucks/ deliver trucks of any kind - Let alone private property owners using the canyons - Just because they own land they also should be made to use ride the gondola-- (at ? I have read \$30.00) NO MORE PLOWING SNOW !There is a very simple fix no one has addressed that I know of 1. more parking (put in parking terraces - but that will draw more to the canyons) Or 2. there are only so many spots to park cars -count them at the bottom of each LCC and BCC build a large Round About - and then with modern day computers each time a car passes in the canyon there is 1 less spot to park everyone is counted - when the count reaches a set number a sign is turned on no more parking canyon is close until cars leave the canyon a set number to be established - control exactly how many cars / trucks / deliver trucks/ buses will and can be in the canyons at any given time. I do no favor a limit but what choice is there. As to parking for trail heads this could also be taken into account. As the gondola is proposed it is just a tourist attraction and another Olympic prop for the next bid. Stop this before it is too late - You are going to kill skiing and enjoying our canyons for ever. kg</p>
30271	Zoe A Robbins	<p>I am a resident of the community at the mouth of little cottonwood canyon so feel I am somewhat of an authority on the traffic and impact of the ski resorts canyons on a community. I am AGAINST the gondola for many of the same reasons others are but I also specifically feel this plan will negatively impact the exit and entrance into my east bench neighborhood. I foresee not only traffic up the canyon but now traffic to La Caille making getting out of my neighborhood to go to work in Sandy a nightmare. A traffic light at either of the entrances to the Kings Hill neighborhood would be a difficult if not impossible prospect. Asking me to pay thousands of dollars personally to worsen traffic in my community is not something I or my neighbors will sign up for. Furthermore, the handful of days that the gondola MAY improve upon are just that- a handful. It's not worth it. It's especially not worth it when we have in no way explored what we could do with a robust (throw 10 million at it) bussing system. This plan you have is so flawed and reactive and frankly transparent- it's no secret who is influencing this plan. I seriously hope you reconsider. If this goes badly it will be a very bad look for UDOT</p>
30272	Debie Reid	<p>If a gondola is placed in Little Cottonwood Canyon I think it would be appropriate that all proceeds collected from riders be used to reimburse the state for tax payer funds used to build it. Most Utah citizens will not be using the gondola and resent paying for something that is designed to benefit wealthy ski resorts and those who patronize them. Most Utah citizens who use the canyons are hikers, families picnicking, and other recreational activities such as biking. We don't want to pay for something we would not need or use.</p>
30273	Tom Green	<p>PLEASE NO GONDOLA WE DON'T NEED NOR WANT IT!! THE PUBLIC SHOULD NOT SUBSIDIZE 2 PRIVATE COMPANIES !! NO NO NO!!!</p>
30274	Sally Edwards	<p>I support tolling.</p>
30275	Trevor Lang	<p>I am sorry, but this is a terrible idea and not one cent of tax payer funds should go to benefit only Alta, Snowbird, and developers (as always). Any any all tax funds should go to preserving the GREAT SALT LAKE because without it, we won't have any traffic worries up LCC without snow and in a toxic valley. If the resorts and developers want this, great, tell them to pay for it themselves.</p>
30276	Olivia Tipton	<p>I strongly oppose the use of a gondola in Little Cottonwood Canyon as a method of transportation. It will serve as a major disruption to landforms, wildlife, and recreation opportunities, not to mention the major disruption to the beauty of the canyon. An incentive to carpool, use public transit OR simply limiting winter traffic up the canyon is the most environmentally friendly solution here. We CANNOT sacrifice natural resources and precious habitats to continue feeding the ruthless machine of the snow sports industry, which already leaves a massive carbon footprint of its own.</p>
30277	Thomas Troy	<p>We shouldn't permanently change the landscape of the canyon and hurt all the bikers, climbers, fisherman, backpackers, drivers, hikers, and picnickers that use LCC daily year-round just so rich people don't have to wait in bad traffic a few weekends every year. Implement a road fee and increase bus options for the few weekends that traffic is bad. Don't destroy the legacy and history of the canyon.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30278	Thomas Troy	Maybe we should focus on first investing in infrastructure that reduces water usage and promoting water conservation behaviors in order to save the Salt Lake so that we can even have the option to ski in the future, instead of promoting tourism and increasing our water usage. Without the lake, we have no lake effect, and no snow. If you have a forest fire, you don't invite more people to come throw trash and enjoy the heat of the fire... you put the fire out first.
30279	Holly Strebe	As a resident of a Utah , I have seen the many natural amenities that are available to us. I strongly disagree with the proposed plan for the gondola in Little Cottonwood Canyon. By doing this, many of the natural amenities will be taken away. For the purpose of making the overly expensive sport of resort skiing more accessible. Please also consider the current change in climate. There is less snow each year. At the cost of the ecosystem and environment, this plan will not be able to recreate the natural state of Little Cottonwood Canyon.
30281	Margaret Hale	Do not build the gondola without several years of trialing very good bus access and tolling to get up and down the canyon. It would be so much simpler to run a toll on the road to discourage driving and offer buses. Then all you need is several bus terminals outside of the canyon, spread across the valley. Toll every car that drives up to Bird/Alta in peak times (or deny car access outright in peak times (except for employees or people staying at the mountains)), and run buses continuously from the base of canyon parking lot. Jackson Hole basically does this and it keeps traffic down. it's clear that this is a big ol' bonus to Alta and Snowbird's pockets while killing the skier experience. To say that busses aren't feasible without developing the infrastructure to reliably allow people to leave their cars down canyon is completely disingenuous to me. This is going to be an epic [REDACTED] of traffic and parking dystopia at the base of the gondola.
30282	Derrick Richard	Hello, I am a relatively new resident of Utah and SLC. Moved here in 2020. Went snowboarding for the first time in 2021 and I see why people fall in love with the powder we get here in the Wasatch front. To be clear, I am not opposed to the idea of a gondola in LCC. I think it is a decently cost effective solution to the growing traffic and road maintenance issues. However, I am extremely opposed to it being a 100% taxpayer funded venture. People from across the globe travel to SLC to ski here and spend plenty of money in doing so. This gondola project is directly and almost exclusively to the benefit of the ski resorts up in the canyon. Therefore, they should be funding most, if not all of the project. This is not comparable to a public works project like TRAX where the majority of those that benefit from it are residents of the valley. Wintersports are a very expensive hobby enjoyed predominately by the wealthy, many of whom aren't even residents of the state. If they want better and faster access to the slopes, then make the resorts pay for it, not the people of Utah.
30283	Brandon Nilsson	This will disrupt the trails we run, the boulders and walls we climb for years- maybe permanently. Buses are a cheaper better solution any way you look at it.
30284	Elisabeth Lentz	I highly suggest a bus service every 10 minutes, like in a loop. Moving from gasoline powered buses to electric. Add sufficient parking so it is user friendly. Maybe a couple of satellite bus stations. Only residents and emergency vehicles are allowed. That would impact the environment the least. If Zermatt can exist as a carefree town why would it not be possible here in the LCC. Very important they buses run continuously and extended hours in the morning and evenings. The building of the Gondola infrastructure seems very invasive and it might be another bottleneck just lower down. If only buses use mainly the road there's no widening necessary. Very little exceptions for driving.
30285	Eric Balken	The gondola is not the answer. This EIS showed that it won't improve the traffic problem. It will simply divert public funds to cram more people in LCC and generate revenue for Alta and Snowbird. The only logical solution is a broader public transit approach that makes busses more feasible in the canyon and from around the city, as well as incentives like rolling [tolling] to encourage car pooling.
30286	Harry Wirtz	I do not agree with the recommendation for a gondola system. Limit daily auto traffic. Increase the bus system. Promote the use of buses.
30287	Sadye Bayly	You actually make it seem really easy with your presentation but I find this matter to be actually one thing that I feel I would by no means understand. It seems too complicated and extremely broad for me. I'm taking a look ahead on your next submit, I will try to get the dangle of it!
30288	Can Vo	https://www.cnn.com/video/2022/06/16/shrinking-great-salt-lake-could-make-salt-lake-city-unlivable.html Why are you wasting money when there is no water and the city is in peril?
30289	Natalie Winward	NO GONDOLA!!!! The gondola would RUIN the beautiful, prestigious nature views and be a detriment to our precious ecosystems. TAX PAYERS WANT EXPANDED PUBLIC TRANSIT (BUSES) INTO THE CANYON. The gondola would forever stand as an unremovable icon of putting PROFIT over PLANET. NO GONDOLA!!!
30290	Hugh Paik	The gondola is a bad idea.

ID	Full Name	Comment
30291	Andrew Peterson	As a resident of Cottonwood Heights, I am in favor of the Gondola. I will be also impacted by the widening of Wasatch Boulevard; however, I realize this need to be done. The Gondola is the "greenest" option available. If a carbon study was performed on the emission created by the asphalt required to expand and maintain S.R. 210 and increased bus service. The clear winner would be the Gondola. The argument will be made that the buses are green because they will be electric; however, these buses don't have a proven track record in the cold. I will be a regular rider of the Gondola (summer and winter); however, I have not and will not ride the bus for a number of reasons. I have been trapped at the resorts when avalanches have occurred. Not fun to say the least! It seems like the Gondola is an easy choice when it comes to safe and evacuating people when there is an avalanche. The snowsheds are a good idea but what happens if the avalanche occurs in a random area without a snowshed? Is UDOT really going to risk opening the road even if the avalanche hits the Snowshed area? The phasing out of the Howitzers is going to make it ensure another avalanche may not occur. The Gondola is a safer alternative. I think the Gondola will gain nationwide attention which will be good for the Utah economy. Lastly, I understand the opposing side's agreement. They want to keep the backcountry to themselves and are afraid the Gondola will open it up to more people. I would love that as well. However, everyone has a right to the mountain. Also, as the population of Utah, even the Us, increases more people will want to access the outdoors. They have the right to do so.
30292	Chris Cartwright	I am opposed to the gondola and do not believe the estimates on cost and environmental damage have been assessed thoroughly enough.
30293	Douglas Call	This is a very expensive boon dongle that will only serve a select few and in the end will not serve the select few adequately and the anointed few will be asking for another tax funded boon dongle.
30294	Chris Warner	I think it's going to be ugly and it's a horrible idea.
30295	Erica Myers	Hi! This is fiscally irresponsible. Cutting bus schedules because you cannot pay drivers but committing to a 55B gondola could not make less sense. Bus routes provide low income households and individuals flexibility and freedom to move around the valley. Taking away a sustainable and low cost method of transportation in favor of a flashy gondola that will destroy natural forests is neither financially nor ecologically sustainable. Bus runs are crucial for both local and overflow traffic for heavy mobility days during the winter.
30296	Mark Ciullo	I have not been personally for or against the gondola... however, I do get the sense that the public doesn't generally support it, but big business does. I also have problems with paying for the gondola with state or local funds, ESPECIALLY since it seems the public doesn't want it. I feel gov't has no right to spend tax dollars against the will of the people. I would like this gondola to NOT go through until some new financing and options can be put in front of the public for a vote. Listen to the people - let this be voted on.
30297	Rachel Grote	The plan to build a gondola in BCC is a huge mistake that will destroy our canyon and benefit a rich corporation over the residents of this city. It serves only the ski resorts and not the myriad of people who still want to access and use the canyon year round. The majority of the public does not want this gondola. Why is UDOT planning to move forward with this? And suspending some of the ski bus transport this winter? Is it to make traffic in the canyon worse this ski season and make this seem more like a legitimate option? This plan is insane. It will be a blight on our beautiful environment here and will have detrimental impacts for decades to come.
30298	Elizabeth Smith	I am against the gondola. This money can be used to save GSL
30299	Whitney Mccarthy	Please do not move forward with the gondola. Carpooling, bussing, and a parking fee at ski areas is the better option. We don't need to move more people up the canyons. In fact, there is a carrying capacity of the land and we should respect that and limit the amount of cars and people in the canyons rather than trying to get more people to the already crowded resorts. At some point the resorts will need to figure out a way to stay profitable without making a mess of the canyons, ruining the backcountry, and polluting our airs. PLEASE, increase bus service up the canyon and work to build park and ride lots. A gondola does not benefit the citizens of Utah. It benefits a select group of wealthy people who can afford to go to the ski areas.
30300	Jill Leo	Absolutely nobody wants the gondola. Nobody. Please do take into account everyone who lives here instead of pandering to private interest groups. Keep the gondola OUT.
30302	Diego Ter√n	Let's extend buses for public access instead of gondolas for tourists.
30301	John Becking	Only running during the winter, not busy at the bird if it doesn't snow. Only serves Alta or Snowbird, should be privately funded by the ski resorts not the tax payers

30303	Carolyn Keigley	<p>we need to learn from history. If you look at the history of transportation in the beginning of our country's history in changing the landscape with the building of canals. They were expensive and divisive and most importantly their service did not last long. Railroads quickly replaced them. The idea of spending millions of dollars for the sole benefit of the ski industry, two privately owned resorts which the majority of the state tax payers will not use, and to change the viewsheds and the topography of a beautiful canyon forever, I ask this question, "Just how long will Gondolas solve the problem of overcapacity of visitors in the canyon? Just as the canals , gondolas are expensive, divisive and most importantly their service will not solve the problem of too many visitors in the canyons. I will make a bet that the tax payers will still be paying for the Gondolas when we will finally realize that we still have a problem of too many visitors in a small canyon.</p> <p>I cannot understand why we can't do the simple and in expensive step as the National Parks and other areas in the Forest Service Campgrounds across the nation have taken which is - When the parking lots are full, the park, or road is simply closed to cars. After that point all entering must come in on buses.</p> <p>We do have the Zion model as an example. But of course politics are not going to allow this since the \$ rules or in this case the resorts, land developers have an inside favor with those in office making these decisions.</p> <p>As for tolling, I totally support this but in both canyons, (LCC & BCC) and both at the same time. However there are major differences in these two canyons. Big Cottonwood canyon has problems not only in the winter but also in the summer and the peak of fall colors. Big Cottonwood Canyon needs a toll at the mouth of the canyon all year around on the busy weekends, holidays, and storm days. Please lawmakers, come up into BCC in the summer on the weekends and also on the Weeknights from 5-9 and witness how this canyon is being used. It is a race track for motorcycles and small race cars and car clubs driving over 100MPH. Lawmakers have a responsibility to making Highway 190 a safe road. Making BCC a toll road from the mouth of the canyon to Guardsman Pass would solve this problem and guess what, it would not cost a dime. The tolls collected would pay for the system and even provide enough bathrooms, toilet paper and the cleaning of the toilets. Four years ago Yellowstone National Park spent \$28K on hand sanitizers per summer and 2,710 rolls of toilet paper PER DAY! LCC and BCC combined have more annual visitors than Yellowstone National Park and I can tell you we don't have the same number of bathrooms nor the amount of toilet paper that Yellowstone provides to their visitors. So much for protecting the Wasatch watershed! Both LCC and BCC have been declared by the state as one of the states gems and yet the state has seriously neglected these two canyons that serve as many visitors as the state's National parks.</p> <p>Lastly - Parking on the roads during the winter and near the resorts is very dangerous! I live here in BCC and near the highway and I can tell you that there are many busy days when there has been near accidents with those that park on the road with their car doors opened and partially blocking the oncoming traffic while they are getting their ski gear on in the</p>
30304	Kenzie Smith	<p>A gondola would outrageously impact the integrity and beauty of our canyon in Utah, not to mention disrupt the natural flying creatures of the valley. The creation of more sound, light, and air pollution would also be increased. The gondola is not the way to go.</p>
30305	Alexis Perno	<p>The people of Salt Lake say NO to a gondola!</p>
30306	Alicia Horn	<p>I am a skier who doesn't have a car and so I am reliant on the ski bus system. In my opinion increased busing and consistency with the route schedule is the best solution for this problem in the canyons. Creating an expensive, environmentally destructive gondola will not solve the problems and will destroy the natural beauty of our canyons. I think that more people would ride the bus if it was more consistent and predictable. The recent cuts to the Route 953 line do not reflect the promise that was made to "increase bus options" while the gondola is being built. You already have a system of public transport set up, you just need to make it more efficient. Building an expensive gondola isn't going to solve the issues of the here and now.</p>
30307	Britney Ward	<p>With a document this big, an audio version to listen to while I'm driving would be awesome!</p>
30308	Andy Jones	<p>Had to come back and leave another comment after seeing UDOT is REDUCING bus service?! What in the actual hell? Why are you continuing to make the canyons worse? Hoping to change people's minds about the gondola? All UDOT is doing is showing how blatantly corrupt and in the pockets of the developers and resorts they are. MORE BUSES NO GONDOLA.</p>
30309	Heather Dorrell	<p>The gondola project is boondoggle! It will benefit very few , and only financially but spoil the quality and beauty for everyone else. Say no to the blatant folly</p>
30310	Tara McArthur	<p>I strongly oppose the construction of a gondola. This will negatively impact our canyon and misuse tax payers money. If we want to positively impact the environment we should invest in Green buses which will go throughout the entire country.</p>
30311	Graham Laver	<p>No plan to limit cars in the canyon. Does not address needs of backcountry users. Significant cost and environmental impact. Solution: increase bus service, introduce express lines.</p>
30312	JJ Chardavoyne	<p>I do not think that the gondola will solve the traffic issue or increase access to the canyon for marginalized communities. As a common visitor to the canyon it is clear that the destruction and visual/ environmental impacts of the gondola will likely be consequential for everyone who enjoys the canyon in ways other than resort skiing. I am a new resident to SLC and I am disappointed that tax dollars will be recklessly spent to improve a few folks experience while diminishing other's. Solutions such as tolls where the canyon meets the ski resort lots I think is a much better solution as well as increased bussing.</p>
30313	Travis Slade	<p>The impact the gondola will have is irreversible. It's going to destroy so much wildlife. Please reconsider!</p>
30314	Nancy Feagin	<p>I am opposed to the gondola. I would like more buses and road widening.</p>

ID	Full Name	Comment
30315	Will Royer	<p>I am deeply disappointed by UDOT's decision to implement the Gondola B plan in Little Cottonwood Canyon. The Canyon provides a multitude of benefits that would be significantly impacted by this transportation solution. View sheds will be heavily impacted by this project, ruining a key component of the canyons which enhances the greatest outdoor location near a major city in the country.</p> <p>This project is also prohibitively expensive while only providing benefits to a subset of the overall traffic in the canyon - skiers and ski resorts. All of our (Utahns) tax-dollars pay for this, yet it primarily benefits tourists, corporations, and land owners. Additionally this is not a solution that benefits canyon users for more than 6 months of the year. This seems to be a drastic misuse of public resources that only benefits small amounts of the overall population.</p> <p>A gondola would only see significant use for less than 6 months of the year. For the rest of the year it would sit idly as a monument to wastefulness. This Canyon is used for so many things other than skiing. Little Cottonwood is a historically relevant climbing location providing classic views and a multitude of accessible, excellent, and unique recreation opportunities. Ruining this legacy will impact generations to come, depriving them of views and experiences that thousands of people cherish every year.</p> <p>The canyon is less than three miles wide at it's widest point. Such a small, contained area has a carrying capacity for visitation. Use should be limited, and access should not be increased so as to protect values, and physical properties that matter to many people such as the watershed, wildlife habitat and recreation access.</p> <p>I would urge UDOT to reconsider their decision as they attempt to find funding for this monstrosity.</p>
30316	Rick Walton	<p>The real cost will be \$1 BILLION or more. Why should ANY Utah taxpayer cover the cost for a couple ski resorts and a greedy real estate investor? It's ugly, it's a waste, it's wrong and you know it. NO!!!</p>
30317	Hannah Stewart	<p>Let's face the facts, choosing the gondola as the best option would be highly hypocritical, you said it yourself... "Ultimately, the partners seek to deliver transportation options that meet the needs of the community while preserving the value of the Wasatch Mountains". Meeting transportation needs of the public means, offering options that are accessible to everyone. That means considering options that are available for mental and physical handicap, finically restricted, and people of all ethnic backgrounds. The gondola does not consider those options. When you talk about preserving the environment of the wasatch, the gondola certainly does not meet that goal either. Currently, dogs are not allowed in LCC, this is to protect the fragile watershed, however that gondola would destroy that watershed, putting tons of toxic construction material into the watershed. Now tell me how that is preserving the environment? Not to mention the destruction of iconic climbing boulders, natural habitats for wildlife, and the view of metal poles rather than trees. Also the cost to tax payers is just laughable. If you truly wanted to give the public transportation options then offer more bus times, build a bus only lane, let's talk about electric busses. Let's create a carpool program. Enforce time slots or number of cars up the canyon during peak ski season. If you really wanted to preserve the beauty of the wasatch you wouldn't destroy a watershed, famous climbing crags, and the home of our wildlife. If you are here to serve a Utah, then serve a community who chose to live here because of the wasatch range. Don't serve tourist agendas or big men that will profit from the gondola. Don't be blinded by a bias, look at the facts and your own stated goals.</p>
38581	Martin McGregor	<p>Mailed comment</p>
30318	Jennifer Foote	<p>I am against the Little Cottonwood Canyon gondola project for a number of reasons. First, tax payer's dollars should not be used to fund this outrageous project that only benefits privately owned companies. Second the impact on the environment and water shed would be disastrous. There are much less expensive, much less disruptive ways to manage the crowd up the canyon.</p>
30319	Heather Awsumb	<p>I am firmly opposed to the gondola option proposed for Little Cottonwood Canyon (LCC), I like 80% of Utahns according to a recent poll. As proposed, the gondola cannot address the traffic issues of LCC - the state[d] purpose of the project. Cars will continue to be the preferred option for most visitors to LCC because 1) there will be no incentive for people to change their behavior and start using the gondola because it will add time and expense to their commute and 2) there will be no trailhead or backcountry access on the gondola so most visitors to LCC will need to continue to drive to access those areas. Without a plan to limit cars in LCC (which there realistically can't be, because of point #2 above), the gondola will benefit only the ski resorts by funneling users to their areas, but will not address the proposed objective of the project to reduce traffic in the canyon.</p> <p>Parking reservations at the ski resorts has already proven to be an effective solution at mitigating traffic. There are many other common-sense options that have not been considered such as parking hubs in the valley, electric busing with regular routes, carpooling and tolling. Please do not place a \$500 million price tag on Utah tax payers that will only enrich the ski resorts and not address the objectives of the project.</p>
30320	Preston Larson	<p>I heartily disagree with this decision. Intermediate options need to be explored exhausted without costing taxpayers so much. Look into rolling [tolling], carpool programs, increasing bus service etc. heck Double track front runner with that \$550 million before benefitting two ski resorts with such a massive undertaking. Our canyons need to be protected, not developed unnecessarily. UDOT needs to get in touch with that people in Utah value</p>
30321	Christian Purdy	<p>The gondola plan does not serve the needs of Utahns. Rather, it serves the needs of the ski resorts and tourists. Why not come up with a solution that benefits the local population as well as the resorts?</p>
30322	Noah Pollard	<p>The gondola is not a solution, it's just a redirection of the problem. A solution would be a reliable bus system with multiple stations north and south of LCC. A solution would be to toll during certain times of the day throughout the ski season. Please don't ruin this beautiful, historic natural recreational area with a gondola. The negative impact it would have on the climbing alone is immeasurable. Let's solve the problem, not make more.</p>

30323	Casey Delano	UDOT should consider organizing access like Zion Park on peak traffic days only. It seems irresponsible to radically alter the mountain face and ask the valley to pay for it for an issue that is seen on maybe 30 days out of 365 of the year.
30324	Sam Maritz	As a climber and resort skier, I can't tell you how much I disapprove of the gondola. The impact it will have on the climbing, scenery and the environment is unnecessary at this time. Why do we not try other options like enhancing the bus service and building better bus parking infrastructure before we mar the canyon irreversibly? As an avid Snowbird skier I would love to be able to take the bus to the resort, but the lack of parking at park and rides makes it difficult to do so. We will need that parking for the Gondola as well, right? Why not build the parking infrastructure, increase bussing, and then if that doesn't work in the future consider building a Gondola. I don't want my tax payer money to prop up million dollar companies and I would hope that our government feels the same.
30325	Douglas Belsheim	<p>My family and I moved here from California, in large part, to get away from these massive government spending boondoggles.</p> <p>The gondola would be:</p> <ul style="list-style-type: none"> - Unsightly to Utah's natural beauty - Waste of tax payer's money. Why do we have to foot the bill for what the ski resorts and La Calle are obviously pushing for? - Very unpopular. I have not had one conversation with someone who likes the gondola idea who lives in our neighborhood at the base of Wasatch and Little Cottonwood. <p>Please start with tolling/buses to see how that works before making a choice to spend what will most likely cost the taxpayers in excess of a billion dollars, devalue our homes, mar the landscape, and only help to proliferate big business, big government and big wastes of tax payer dollars.</p>
30326	Marvin Contreras	Spending taxpayer dollars on a gondola that will only serve ski resorts is a gross misuse of funds that could go toward more efficient public transportation. By investing in public transportation, we can better serve communities of color that do not have access to a car, and therefore do not have access to the outdoors. You can fund public transportation for years with the money it will take to build the gondola. Choosing to serve ski resorts instead of the non-car owning public is a wrong choice, and an ultimate betrayal of your constituents. Invest in public transport, not gondolas.
30327	Savannah McCauley	As someone who lives at the mouth of these canyons and has a job at a fellow ski resort, I would really love to see an increase in public transit around these areas where congestion is high. PLEASE! I used to live in NY public transit and bus systems work!!!! They're awesome and this community would gladly use it if the buses are given the ample resources needed to run consistently. As a resident here I will gladly use these systems instead of a gondola which does not serve the needs of anyone else besides skiers. As a skier myself I really find this solution of a gondola narrow-minded and very biased. All of us who live in this neighborhood and recreate here are multiskilled individuals enjoying these canyons for hiking, backcountry touring, climbing, etc. Public transit will help us reach all of those things, not just skiing.
30328	Meggi Pack	No gondola! We need sensible, cost effective solutions like peak tolling, enhanced buses, better parking, online parking reservation tools, preferred parking for carpooling, etc. We do not need or want a gondola! If you must move forward with the gondola, it should be paid for by the resorts and NOT the taxpayers. Thank you for your time.
30329	Grant Sperry	<p>traditional appeal to many of us has been it's quaintness, a small mountain town a short drive from Salt Lake City. Snowbird has always tried to be more Euro, including a month's long Octoberfest that closes at sunset. But let's face it, Snowbird is small potatoes too.</p> <p>Who are we trying to fool here? Buyers of Epic discount ski passes maybe? Utah taxpayers definitely. Who's trying to pull the wool over our eyes? A handful of wealthy people who want to cash in, it would seem.</p> <p>Let's get real. The canyon is already crammed full on many Winter weekends and it's not just the road and the parking lots. Those occasional epic powder days? If you're lucky enough to get up the canyon to a parking spot and onto the slopes you're greeted with long lift lines and rapidly disappearing powder. High speed quads so efficiently disgorge skiers at the top that most powder, even in the trees, is skied out before lunch unless it's still snowing heavily.</p> <p>UDOT isn't tasked with assessing ski lift lines and the overall human impact on the canyon but we should be. It's our mountains and our precious water. But perhaps I'm a simpleton and we can shove countless more bodies up there? Maybe we just need the hubris and yankee innovation to double or triple current visitors? Maybe we need to treat people even more like sardines in tins? Imagine people crammed into the gondola. People could sit on laps on the lifts to double up! How about lunch times in the resort cafeterias? Already packed but we can't let that stop us. Get rid of the tables and make everyone stand like a rush hour subway. We can do this!</p>

ID	Full Name	Comment
30330	Grant Sperry	<p>All of the attention seems to be going to traffic on Little Cottonwood Canyon's road, as if Snowbird and Alta are virtually limitless in size, as if LCC is our own Chamonix. But see, it's not. Alta covers a mere 2600 acres with 7 chairlifts. Snowbird is about the same at 2500 acres, with 10 chairlifts and a tram. Both have a top elevation of about 11,000'. Chamonix valley, on the other hand is more than ten times larger, covering over 60,000 acres with 69 ski lifts across 8 resorts all under the shadow of Mont Blanc at 15,780'.</p> <p>Kinda puts things into perspective. Our resorts are quaint in comparison, the Solvang version of Winter recreation. If you're not familiar with Solvang, CA, it's a fake Swiss town for tourists where everything looks like Alta's aging Peruvian lodge. Alta's traditional appeal to many of us has been it's quaintness, a small mountain town a short drive from Salt Lake City. Snowbird has always tried to be more Euro, including a month's long Oktoberfest on weekends that closes before sunset. Let's face it, Snowbird is small potatoes too.</p> <p>Who are we trying to fool here? Buyers of Epic discount ski passes maybe? Utah taxpayers definitely. Who's trying to pull the wool over our eyes? A handful of wealthy people who want to cash in, it would seem.</p> <p>Let's get real. The canyon is already crammed full on many Winter weekends and it's not just the road and the parking lots. Those occasional epic powder days? If you're lucky enough to get up the canyon to a parking spot and onto the slopes you're greeted with long lift lines and rapidly skied-out powder. High speed quads so efficiently disgorge skiers at the top that most powder, even in the trees, is gone before lunch unless it's still snowing heavily.</p> <p>UDOT isn't tasked with assessing ski lift lines and the overall human impact on the canyon but we should be. It's our mountains and our precious water. But perhaps I'm a simpleton and we can shove countless more bodies up there? Maybe we just need the hubris and yankee innovation to double or triple current visitors? Maybe we need to treat people even more like sardines in tins? Imagine crowds crammed into the gondola. People could sit on laps on the lifts to double up! How about lunch times in the resort cafeterias? Already packed but we can't let that stop us. Get rid of the tables and make everyone stand like a rush hour subway. We can do this!</p>
30331	Josh Palmer	<p>Please consider all other options and listen to public opinion before the gondola. The gondola is not what the public wants. There are plenty of other more scalable solutions that should be tried first. The gondola is not scalable and only caters to two ski resorts. BUSES ONLY IN THE CANYON!!</p>
30332	Kyle Greenberg	<p>What roles did Wayne Niederhauser and Chris McCandless play in selecting the base area for the gondola? Was there any inside knowledge with government officials that has allowed these two individuals to monetarily benefit from the gondola base selection?</p> <p>It seems that Senate Bill 277, Highway General Obligation Bonds Authorization has been interpreted by the UDOT to subsidize just a handful of private businesses in Little Cottonwood Canyon and two previous government employees.</p> <p>How do the two preferred alternatives also provide and yield easier access to public lands along the S.R. 210 corridor and not just access to private businesses? How can the Gondola Alternative be interpreted any other way than just providing access to Snowbird, Alta, and a few other private businesses located within walking distances from the Snowbird and Alta stations? The enhanced bus service alternatives also makes no mention of adding stops and access to trailheads along S.R. 210. What is the purpose of Senate Bill 277; to deny and limit access to public lands and only service private businesses? If the sole purpose of this project is to supplement the profits of Snowbird and Alta; how long would it take for the tax revenues of these select businesses be to recuperate the year-of-expenditure costs of \$724,662,280 for the gondola alternative or \$782,446,651 for the Enhanced Bus Service in Peak,Â&Period Shoulder Lane? What is the incentive for a tax paying citizen to condone a project like this, when it appears the the preferred solutions limit access to public lands along S.R. 210 while subsidizing a few local businesses with no estimated rate of return on spent tax payer dollars, from these businesses?</p>
30333	Andrew Harmon	<p>We strongly oppose the self-serving LCC gondola proposal. Not only will the gondola serve as a tremendous eyesore, it will also cost local tax payers who don't even use the canyon. Snowbird and Alta are selling out to the gondola company and it's disgusting. We are opposed!!</p>
30334	Casey Zukosky	<p>Please don't do it!?</p>
30335	Vanessa Delmerico	<p>With environmental disaster looming from the great salt lake drying up, the money proposed for this project could benefit many more people if allotted in other ways. The gondola will not fix a problem without causing more issues for the people who live here.</p>
30336	Alisha Egger	<p>I've just moved from Texas. Climbing is the sole reason I moved here. I have countless other friends that have also moved from across the country to be close to Little Cottonwood Canyon and have the chance to climb the classic boulders that this plan will destroy. The gondola will only drive people away from the Salt Lake area. Going through with this plan will only let people, specifically climbers, know that decades of history and thousands of people's opinions don't matter. There are better alternatives. NO GONDOLA.</p>
30337	Kipp Clark	<p>Please make the gondola option a reality. environmentally, and economically the best choice. Years ago, the public voted down putting in light rail. UTA did anyway. Turns out that was one of the smartest things that they've ever done. Same thing here, in order to preserve access to the mountains for our increasing population, we need to have People movers to get folks up there without polluting and creating parking lot nightmares. Please, please put in the gondola.</p>
30338	Michael Chapman	<p>This is an absolute waste of public funds. Tax payers do not want to pay for a gondola to benefit the RICH skiers that want an easier way to get to Snowbird and Alta. It's insane that this was even considered. It will just junk up our beautiful canyon and only provide benefit for a few days out of the entire year, and that's IF the snow is even good!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30339	Benjamin Pucel	I do not want the gondola. I would support any other option. First, LCC is a beautiful/unique canyon, this would take away from this for everyone who uses the canyon at all times of the year. Second, it is costly option that only helps those who go to the resorts. Also, I have personally not had that bad of experiences in LCC with traffic relative to other ski area commutes (it is much worse in BCC). Lastly, This 'solution' only helps two resorts get more people to them. What is this really about? Snowbird wanting to expand but wanting to make sure they can generate more revenue first? Getting Olympics up there? This is so bad for locals and will do permanent damage to a place we love. Please don't do this.
30340	Steve Maisch	If you're able to run the Enhanced Bus Service alternative with no roadway widening temporarily then why not make the bus option (with no roadway widening) a permanent solution? (i.e. no gondola) No road widening and using electric buses, funded federally with grants (Salt Lake City currently has 5 such buses), would dramatically reduce the cost to well below that of the gondola and would, depending on where the source of electricity comes from for the bus charging, would be a lower environmental impact than the gondola.
30341	Ashley Chapman	I am against the gondola completely. It is a complete waste of public funds for something that would potentially benefit a very small portion of our population and also a rich/privileged portion of our population to simply make their time recreating better (completely non-essential). Not to mention this is only potentially benefits a FEW DAYS A YEAR of congested traffic in the canyon! It would be an eyesore for the entire canyon and disruptive to the wildlife. It won't increase access nor decrease traffic! It will ruin amazing areas of the canyon that are world-renown! (Bouldering and climbing areas!). (Why is skiing given precedence over other recreational activities?!). Winter weather and winds will cause it to be shut down, defeating the whole purpose. Let Snowbird/Alta figure out how they can accommodate more customers and make more money. Fine them if they're allowing people to park on the road or give out tickets! Snowbird should not be allowed to sell more tickets for the day then they have accommodating parking for! If they want to profit more, then why would public funds pay for this? If the government wants to help with the issue, then sure, increase buses or shuttles, but ultimately, Snowbird/Alta should be the ones paying for increased transportation as it directly benefits them financially. The Great Salt Lake is drying up, and the more that happens, then eventually we won't have the snow for good skiing anyways. Invest that money into solving our dried up Lake issues as that is something that affects everyone and is vital to all inhabitants. (Cuz without the lake, skiing isn't even an option!).
30342	Amy Ward	Not reasonable or a good use our tax payer hard earned money to install massive concrete structures into our one-of-a-kind mountains. Please please please stop vandalizing our earth. Plus, you're just installing more surface area to graffiti, tress-pass, designate as illicit activity meet-up spots, homeless bunkers, etc. Have you considered the generational effect of the gondola? My children's children's children will have to deal with these long term effects even more than us. Please don't do this :(we beg of you.
30343	Therese Wild	The gondola is an unnecessarily expensive and destructive proposal to solve the traffic issue in the canyon. Other less destructive and more equitable options should be considered and implemented for the good of the environment and all recreators in the canyon. The gondola only helps billionaire in the ski industry not the people.
30344	Therry Mayes	I am opposed to the LCC Gondola project. This is a project that will forever alter the pristine nature of LCC. In addition, it benefits a small minority of recreations, who will potentially not even use it due to the cost. In addition, private investors and property owners who are "well connected" politically are a minute group who stand to benefit very handsomely financially. This option is not needed/wanted by the majority. Consider toll roads and extended business options. UDOT should listen/answer to the citizens, Not THE WEALTHY FEW WITH THE LEGISLATURE IN THEIR POCKETS...and you know exactly who they are.
30960	Martin McGregor	Mailed comment
30345	Steven Gomez	The Gondola option is absolutely the wrong choice. To expensive vs existing/new cleaner versions of buses. Especially for a problem that only exists several weeks out of the year. UDOT choosing the final option? Pull your headout of the wash my back, I'll wash yours political corruption sand and do what the public wants.
30346	Jenny Brown	Please do not destroy the climbing in Little Cottonwood Canyon!
30348	Johnathan Keefer	NO GONDOLA!
30347	Connor Shanklin	We need to advocate for the entire process of improvement without jumping directly into the gondola! An expanded bus system could be the answer but we will never know until we try!
30349	Emir Alikadic	As a climber and backcountry skier who lives by the canyons, I stand firmly with Wasatch Backcountry Alliance and other conservation minded organizations and in FIRM OPPOSITION TO CONSTRUCTION OF GONDOLA IN LITTLE COTTONWOOD CANYON!
30350	Bryan Betchell	Do not build the gondola! Where is half a million dollars going to come from if the UTA can't pay enough to retain drivers! This is ludicrous and irrational. Preserve the beauty of the canyon for future generations. There are more user groups for the canyon than just skiers!!!
30351	Caroline Amis	I have lived here for 38 years and I believe very strongly that we need an enhanced bus system. That is the cheapest, fastest implemented, and most flexible option. I am 100% against a gondola in any form. It's totally impractical, inefficient use of money, will spoil the view, and the footprint it will have in our canyon is unacceptable. Caroline A Millcreek, Utah

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30353	Hamilton Brooks Hall	I ski and climb, and I know the transportation issue is only getting worse. I voted for the gondola, but I only believe it should be done if we can guarantee no harm to climbing areas and minimize environmental harm. I'd rather pay more and wait longer to see that time and money is spent on being careful
30354	Elviera Gold	UDOT - as a Salt Lake local and regular user of Little Cottonwood Canyon, I'd like to challenge you to consider other, less costly alternatives than the Gondola. It's crucial we think about the demographic that will be using the gondola vs the demographic that will continue to drive up the canyon. The NPS has enforced a timed entry system that has proven to be really effective in limiting traffic without compromising environmental impact or raising the socioeconomic barrier to the outdoors. Let's think about a timed entry, bus- heavy system. We need a bus terminal at the base of the canyon where people can hang out inside, get a coffee. X number of timed entry tickets are available per day, and if you didn't get one, you ride the frequent and spacious busses. As with any change, folks would have an adjustment period - this doesn't mean it's not a good chance. Let's save money and keep Little Cottonwood natural! Please reach out with any questions!
30355	Gerald Smith	Has there been any study as to how many skiers will take the gondola instead of driving? It's a slower option, costs more, is inconvenient, and people will have to wait to board. It seems like it will take very little cars off the road. And cost a more money than estimated because all government projects do. Let's continue to steal from the poor so the rich can prosper. Typical politicians.
30356	Molly Parker	Hello! I know you are being inundated with comments likely from all sides, but please please listen to the Salt Lake Climbers Alliance and to Wasatch Backcountry Association. These are SLC locals begging you to please save our outdoor space. Not every person in the community skis and the gondola should not only serve those who do. Not everyone can afford a gondola pass/ticket. People shouldn't be punished for that. Please think of the alternatives, more busses and or tolling. The busses are great and would be a million times better with more of them or a dedicated bus lane. You know the gondola will be stopped in high winds and or severe avalanche probability. Also the gondola doesn't help out at all with the congestion being faced in The Valley. Wasatch boulevard is a nightmare. Incentivize affordable, frequent, public transit. Also, PLEASE, do not destroy the bouldering in LCC. I hope that we are not the last generation to enjoy these world class boulders we have in LCC. it would be an absolute tragedy to see these boulders destroyed for a gondola that will only serve those wealthy enough to access. Please consider the common local slc folks wanting to stop half way up the canyon in all seasons. Not everyone is trying to go to Alta or snowbird. There are trailheads throughout the canyon that need access. Please no gondola.
30357	Jonathan Coppi	More than \$500 million dollars of taxpayer money to build a massive eyesore in one of the most beautiful canyons in all of Utah to benefit 2 private corporations for a very short period of the year is an incredibly short-sighted and irresponsible 'solution'. As a frequent user of the incredible landscape both during the Summer and Winter months, I STRONGLY disagree with the gondola proposal. Please reconsider an expanded bus service and any other options that utilize the already built infrastructure.
30358	Mike Ewanowski	Please don't build the gondola! It will permanently deface this beautiful place. Alternatives exist, and I would urge you to consider widening the road, improving year round bus service, and implementing tolls for peak days.
30359	Maryann Vu	A gondola will significantly impact the access to rock Climbers. Usually construction of large projects end up March larger than initially expected. Respect the land without massive gondola structures. Implement more electric bases instead.
30360	Seth Kussow	I fully support the enhanced bus service alternative with the added tolls and carpooling emphasis. This will promote use of much more consistent public transport for those not wanting to pay a toll. This seems like a logical first step to combating the traffic and environmental problems seen during peak ski season. I have issue with the gondola B alternative being moved forward without even seeing the enhanced bus service in action. It is entirely feasible that the bus service will alleviate the current problems while also maintain the majestic view of the canyons, property value of the homes in the mouth of the canyon, preserving the world class climbing locations visual appeal, and overall preventing the disruption of natural environment. If the enhanced bus service did not address the problems, moving forward with the gondola plan would only assist travel time for a select few days out of the year. Traffic on a typical weekend during ski season is rarely bad enough to warrant such an expensive and environmentally destructive response.
30361	John Bercaw	I am against the gondola installation proposal and am appalled that UT taxpayers are being asked to pay for what can only be described as corporate welfare. If Snowbird and Alta want a gondola let them pay for it.
30362	Christina Wong	I agree with the current phased plan of carpooling and increased bussing on existing roads with adding a lane if necessary. Please do not install the gondola.
30363	Dawn Black	I do not want to see our wildlife and natural surroundings disturbed because of the gondola. I vote against the gondola.
30364	stewart middlemiss	It despairs me that UDOT has chosen the one of the most destructive options (The Gondola). It will only benefit a few canyon users (skiers and resort owners), but it is to be paid for by the taxpayer. If the resorts want a Gondola, they should pay for it themselves. What could easily and quickly be implemented (at low cost) is some form of toll/ congestion pricing. This would not require any significant construction, nor would it affect other canyon users or the environment. It should be tested for a year or two before rushing headlong into a project that will irreversibly change the canyon forever.
30365	John Climaco	I have been recreating in mountain environments around the world for the past 45 years. I have seen solutions to mountain travel and transport in regions where these issues have been contemplated and solved for over a century, including several countries in the Alps, Norway, New Zealand and South America and the Himalayas. To my knowledge no public or private actor has ever concluded, as Utah has, that a massive multi-mile, multi-tower, multi-car gondola is the right way to go. From this I conclude that either the LCC situation is so unique that nothing like it has ever been faced before anywhere else in the mountain world, or that this is the wrong solution. Given the breath of situations faced by transportation agencies and private actors in the mountain regions for the last century, I think it's the latter, not the former. This gondola is going to be a technical mess, will destroy the beautiful aesthetics of the canyon and most of all simply will not serve anyone except the owners of the two resorts. It will be a colossal waste of money and resources and will create more problems than it could ever solve. Even if more costly, at least a railway or snow sheds, both PROVEN solutions, will be just that: a solution. The gondola is ultimately nothing more than an eyesore and a boondoggle for the resorts, at the expense of the citizens of and visitors to this amazing place. Thank you.

30366	amanda hankison	1. We need to save the Great Salt Lake or there will be NO tourism in the Wasatch. Spend the hundreds of millions of dollars on the lake. 2. Pay bus drivers a real wage with incentives to get a CDL and actually increase bus service!
30367	Laura Howat	I lived and worked in Little Cottonwood when I moved to Utah in 1978, first at Goldminer's Daughter and then at the Rustler Lodge. I no longer downhill ski. I'm a huge fan of the fantastic canyon so close to my Sugar House home. Already, I don't like how much of the emphasis of the Canyon is on the ski areas. This seems like a misguided focus on this beautiful recreation area that also provides drinking water to SLC. I agree with George Pyle in the September 29, 2022 Salt Lake Tribune, if UTDOT is going to continue to cater to the ski areas (rich resorts that cater to rich skiers) then they should pay for the gondola, not the working general public. I would rather see canyon restrictions to winter traffic. The Ikon pass has been so detrimental to our winters. Thank you.
30368	Angela Mason	Encouraging carpooling and implementing an electric bussing system is more cost effective and creates less impact to the natural beauty of the canyon. A gondola is only able to serve wealthy tourists going up to ski a few days out of the year at the expense of SLC locals and the accessibility of the canyon itself.
30369	Victor-Philibert Coulon	I found the gondola's project to be not an equitable solution and do not wish my tax payer money to go toward this project. Please consider a transit bus system that would work for everyone, would cost much less, and not destruct our beautiful canyon.
30370	Celia Jones	I'm really excited about this gondola even as a climber and outdoor enthusiast! I'm excited that it will protect the wildlife from traffic, plant-stomping roadside parking, and car fumes. It's great to get a touch of European charm to our ski resorts with the gondola. I wish it connected to Park City!
30371	Christopher Osborne	I am in favor of less environmentally destructive infrastructure plans to alleviate the traffic stress on the cottonwood canyons. We do not need to build an eyesore, environmentally damaging, gondola or whatever. Make it bus only. Don't fold to the rich and powerful out of town era at the expense of nature and the local community. This is a sham and widely unsupported by the community. Please protect our natural beauty.
30373	David Shuler	I don't know the answer to the problem, but it might start with a culture change. We need to think more about what is best for everyone and not just ourselves individually. Some people need to accept that they need to ride the bus more, accept that a gondola might not be such a bad thing, car pool more, and other alternatives. Unfortunately I am among those that need to accept we over me. This is an us problem not an I problem. Last thing. I don't think a gondola is the answer. I am in favor of busses.
30372	Jeremy Bullough	Please do not build the gondola!!
30374	Logan Fryer	I think that a gondola is an over reaction to traffic that can be easily fixed by better bus/shuttle. The only thing that it benefits is the ski resort and only that. If we are trying to fix the amount of traffic on the road it's shouldn't only benefit the resort, a gondola wouldn't be able to drop people off at various spots in LCC allowing everyone to enjoy, it would only allow the ski resort goers to benefit. I say no to massive environmental impacts that only benefit a small niche of people. Think skater and better people.
30376	Benjamin Jensen	How is this even possible!!?!?! The gondola will do nothing for summer traffic. There are thousands and thousands of people that are against it but no one is listening. UDOT has somehow been influenced by the ski resorts to make this their number one plan?? Then have the tax payers of Utah foot the bill? It's absurd. You will Also be ruining LCC trails and climbing. There are other ways that a ski resort requested gondola funded by UTAH. PLEASE STOP THE GONDOLA!!! Paid parking already mitigated a ton of traffic and I'm sure since that was only last year that hasn't been taken into account. Also this year you just happen to cut ski buses. Whose pocket are you guys in. It's ridiculous. Use all the money you're going to waste on a pointless gondola to pay actual UTAHANS a wage to drive a bus. UDOT should be ashamed they have been influenced by the ski resorts to waste natural land, and tax resources for the ski resorts gondola.
30375	Dawson Christiansen	What a shame. Ruining world class climbing and views for profit.
30377	Tiffany Hawthorne	Don't destroy our canyons for an expensive form of transportation most people can't afford to ride anyways. Keep our mountains beautiful!!!
30379	Kuan Luo	I am against the gondola, and prefer to have better public transportation options that are proven in Zion, etc to solve the problem.
30378	Justin Dunne	No Gondola, please. This canyon is one of the most beautiful in our country. Keep it that way. Pursue other options, please.
30380	Tennille Severson	Not only is this an irresponsible use of tax payer dollars to build and only benefit a very specific demographic... But the fact that it will cost another additionally \$7 million a year is ludicrous [ludicrous]. \$550 million could go into a better bussing situation that won't affect the snow shed, the views of the mountains, the seclusion of the hiking and camping and completely destroying another demographic's usage of the mountain. It would completely impact the usage and enjoyment of the Wasatch. No one person's enjoyment or usage of recreation in the canyon should trump everyone else's. Get real with this insanely wasteful and irresponsible use of money and power.
30381	Kevin Reedy	I'm strongly against the proposal of a gondola. To have large sums of taxpayer money go to build and maintain an expensive, intrusive and permanent transportation system simply as a way to bring more ski customers to two businesses, Alta and Snowbird, does not serve in the best interest of the community .
30382	Tom Oaks	This gondola proposal would primarily benefit two private businesses: Snowbird and Alta. We, the public, should not be spending our tax dollars to benefit private business.
30383	Clint Underwood	Should have chosen a train. Trains used to run up L Cottonwood Canyon. Time to bite the bullet and realize the most efficient and economical way to move masses of people
30384	Nancy Geisler	No gondola cottonwoods

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30385	Hailee Christensen	I have grown up at the base of the canyon and have lived here all my life. A gondola is not a good idea for a myriad of reasons: I have worked in education in the state and have noticed how much lack of financial support there is in that regard. I feel money for a gondola, which is not essential, could be used towards education. It will also hinder the environment of the canyon, including wildlife and those who retreat to the canyon for recreational activities. As for issues of congestion, it is only significant congestion a few days a year. Alta has implemented paid parking for weekends and holidays and from my experience as a seasoned skier there last year, the paid parking worked just great. Also, after talking with many of my neighbors, they are opposed to the gondola. Hope you will consider the peoples' voices and use the money in a more efficient way.
30386	Joshua Beckner	I do not support the gondola. I feel it will have a negative impact to the environment, make LCC less accessible to certain users and is not a cost effective option. Thank you. Josh BEckner
30387	frank barrett	Fix the bus system and fix traffic instead of wasting money and destroying nature
30388	Patrick Calder	I am extremely disappointed in the EIS decision. There are plenty of alternatives that will not cost the taxpayers so much more money and still does not serve people such as myself who use the canyon at other locations than snowbird or Alta.
30389	John McNulty	I believe the gondola is a gross overreaction to a problem that only occurs less than 10% of the year. Please preserve the beauty of Little Cottonwood Canyon for all current and future generations by reconsidering and examining other solutions such as tolls, increased buses, and incentives to promote bus use. Thank you for your consideration.
30391	Lindsey Harline	My vote in this initiative is to preserve the cottonwoods. I support better bus systems and tolling, rather than the unsustainable, destructive alternative of a gondola.
30390	James Clark	We have to do something. The gondola, with a life expectancy of 30 years or so is the best option I have seen. I drive, I use the ski bus, maybe all of the above, but the gondola certainly has a place here.
30392	Alia Crook	No Gondola!! We do not support the destruction and/or removal of irreplaceable and historic world-class climbing and views.
30393	Samuel McCree	I think Improved bus service would be a better and more equitable solution.
30394	James Peterson	You guys ██████ You're ██████ the taxpayers as well as all non-resort users. Meanwhile you're clearly serving special interests - private resorts, McCandles, etc.
30395	Britt Call	Will ruin world class bouldering. Why trade one sport for another?
30396	Lindsey Martin	The gondola is destroying many iconic world class climbing in LCC. As a salt lake local I have spend countless summers climbing in little cottonwood with the climbing community. It should be left for future generations to enjoy. Why destroy one sport for another? I strongly discourage the gondola moving forward.
30397	Madison Anderson	The gondola will destroy world class climbing areas.
30398	Kimberly Menssen	The gondola will not meet the needs of the community and will forever scar our beautiful canyon. As a Cottonwood Heights resident, avid hiker and trail runner, skier, and rock climber, I urge you to consider an option that would help the community year-round and would have a smaller environmental impact. The gondola is an expensive and ineffective idea and not a solution our community wants. Please listen to the local citizens!
30399	Craig Locante	Please do not build the gondola up LCC. It is financially irresponsible and will negatively impact one of SLC's most beautiful natural resources.
30400	Ryan Gilmore	I moved to Utah 3 years ago and it's changed even since then pretty significantly. But adding a gondola to the canyon will destroy its beauty. Yes, you'd be able to see the canyon from new angles but it would destroy the base of the canyon. The infrastructure needed to build the gondola would ruin many climbing areas that are famous. Crowding the canyons will not fix the issue. It needs to be addressed that, as a whole in the community, we need to respect the canyons and their beauty by taking public form of transportation. Restricting people to carpooling and public transportation during busy times will help alleviate the congestion.
30401	Allison Coffelt	I am strongly opposed to the gondola in any form--including a phased introduction. We need to allocate resources to increase the frequency of buses up and down the canyon road and further disincentivize car use--in particular, single-person car use. This disincentive could come in the form of fees for vehicles (similar to Mill Creek Canyon), with higher fees for single-occupant vehicles. We must exhaust every other possible solution before we even return to the gondola idea.
30402	Hannah Dhonau	We (the majority of people in and around salt lake) are against the gondola, but you already know that. We see the greed of this generation and of allies made in boardrooms being held more important than the good of the earth or the community. Like it's always been done. Profits over people. Profits certainly over the earth. To say that a newly constructed, permanent, structure, serving only a few, is the solution? We see right through that. We know that people take the bus when it's available. We know that parking for the bus is the bigger issue-that more would bus if the park n ride lots not full by 8am. There is your solution. There is the thing that the people desire.
30403	Greg Radin	I am opposed to the plan to build the gondola in LCC. It will cause irreparable harm to the natural character of the canyon. It will not solve traffic problems in the canyon. Please explore less destructive options.
30404	Matt Hickman	I've yet to meet a single person that thinks a gondola is a better choice. Create toll stations, get more buses, but don't make a gondola. It's not going to fix the traffic problem but it will ruin many of the sites and trails up that beautiful canyon. It's also a world class climbing canyon and the city will lose revenue in the long run with the popularity of climbing increasing. Please, no gondola. Anything but.

ID	Full Name	Comment
30612	Margaret Bourke	<p>Dear Secretary Braceras,</p> <p>Thank you for your service to Utahns and visitors alike with your strong environmental positions regarding clean air, clean water and a health environment and ecosystem.</p> <p>Attached is a letter I sent to US Secretary of Transportation Pete Buttigieg. I am also sending it to you as well as others leading Utah into the future in the hope that that future will be a healthy on for my children, grandchildren, great-grandchildren, as well as the flora and fauna that we all cherish and enjoy seeing in so much of Utah's natural landscape.</p> <p>I urge you to change the format of the phasing process such that if the tolling and busing options mentioned provide adequately for transportation needs, that the place will stop there, and not proceed with seeking funding for a gondola.</p> <p>September 19, 2022</p> <p>Secretary Pete Buttigieg US Department of Transportation; [REDACTED] 1200 New Jersey Ave, SE Washington, DC 20590</p> <p>RE: Reject funding Gondola B in Little Cottonwood Canyon</p> <p>Dear Mr. Secretary,</p> <p>Thank you for your service to America, and the people of both urban and rural communities, cities as well as towns. I write to fervently request you and your agenda reject any applications for funding the Utah Department of Transportation's (UDOT) Little Cottonwood Canyon Gondola B, preferred alternative.</p> <p>As you know, much of Utah is federal lands, whether national park, forest, wilderness area, preserve, or land under the jurisdiction of the Bureau of Land Management. I live in Alta, the headwaters of the Little Cottonwood Canyon Creek, the top of the box canyon, a canyon named for that creek. While not South Bend, nor West Lafayette, where I was raised, it has a character, which is due to its continued natural beauty, a feeling of calm, peace and tranquillity where solitude is still possible.</p>
30405	David Brugger	We fully support the gondola solution.
30406	Nicholas Harris	Please don't do this. It is not the solution, just a way for a few to profit. It is dumbfounding to me that this proposal has made it this far. Let's improve the existing infrastructure and implement forced carpooling rules. If you build it they will come, that's literally how public transportation works. The canyon is beautiful and meant to be enjoyed by all, let's keep that a reality and not let the few profit off of the state and the environment
30407	Jason Malczyk	The gondola will just add another attraction to the Canyon. This will bring more people to the canyon. I am in favor of better bus systems and no gondola.
30408	Matthew Martin	I will start this out by saying that I am very disappointed that this committee thinks that a gondola is the right decision. A gondola up LCC canyon is the absolute worst option that there is. Yeah it may be the cool and shiny option but it just doesn't service the canyon well enough to benefit the entire community. First off, spending tax payers money on a gondola that only gets you from the canyon to the ski resorts in LCC is unethical. If those ski resorts want a gondola it should not be coming from taxes. LCC has so much more to offer than two ski resorts. The recreation opportunities are nearly endless in LCC by putting in a gondola, trailheads and climbing areas will be ruined forever. Gondolas also don't have a high enough capacity and run often enough to get people up the canyon in an efficient manner. Think about all the people that go into LCC for things other than skiing. The gondola will not reduce traffic for that at all. Please listen to the people and don't allow this committee to be blinded by corporate greed. ABSOLUTELY NO GONDOLA!
30409	Erin Packham	I am AGAINST the gondola solution and the special interests that seem to ignore both practicality and public preferences related to BCC congestion issues. Why isn't funding going toward improved bussing and/or toll booth? Both better than a gondola which won't have any snow activities to serve if we let the lake die. Maybe dump special interest money into saving the lake instead of destroying our canyon with a gondola which will not solve any problems.
30410	Randall MacDonald	I agree with the Proposed Phased Implementation of Gondola Alternative B.
30411	Carrie Cooper	No Gondola! Irreparable change to our canyon. Does not serve other user groups!! What would buses to trail heads and climbing areas look like? The gondola is a huge mistake.
30412	Carey Brown	We demand increased bus service in the Cottonwoods during all seasons, especially the winter months. We demand the public's interest is considered and embedded in this project equal to corporations. We demand all outdoor activities are considered in this project. We demand you meet with the public and stop hiding behind online forms.
30413	Colin Heath	This whole process of discussion and collecting public comments is sad from the lack of transparency with the gondola. The most asinine thing I've learned is the gondola is not going to run in the summer. Not everyone skis. You're removing a couple climbing problems forever in exchange for a seasonal mode of transportation, when the less obstructive option is running more buses.
30414	Sara Kenney	I do not support a Gondola in Little Cottonwood Canyon! They would have a negative environmental impact and not provide enough transportation for the number of people that need to get up the canyon. I believe providing electric buses running every ten minutes and tolls for cars would be the answer. You don't need to increase its bus services up the canyons! All the gas traffic up and down the canyons is not doing anyone a favor and it's going to diminish the quality of the air and the environment in the canyons. We need to ban vehicles in our canyons and insist people use the public shuttle service.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30415	Mike Behrend	The gondola should absolutely not be built. This would be very detrimental to this area's natural resources, putting the profits of few over the benefit of the whole public. Public lands should not be viewed as a tool for a small number of people to profit from, degrading the land in the process. The long term longevity of this project's benefits to the whole public are questionable at best.
30417	Lo Jones	Hello! I would like to formally submit my comment in opposition of the gondola for LCC. I believe that the construction and the implementation of the gondola will have negative effects on the canyon and the Salt Lake Community. Many people recreate in LCC from skiing to rock/ice climbing, hiking and trail running. The gondola will compromise many of the recreational activities that we enjoy in the canyon. I support other means of transportation up the canyon - increased bus service, carpooling etc. Please preserve LCC by NOT building a gondola. Thank you!
30416	Shannon McCallum	I am still against the gondola after the new and updated draft EIS. The gondola still only transports 35 people at a time, (which is ridiculously small when you consider how many people travel in the canyon in the winter) and it still only makes stops at Snowbird and Alta and it still is a huge visual eyesore that only serves a small portion of people. I still have not seen any assessment of how many days the gondola will be shut down due to heavy snow and avalanche control. They also seem to be making calculations of bus emissions on traditional fuel buses, instead of considering electric buses with far less emissions.
30418	Abbey Ostrander	We don't need a gondola we need tax payers money go to in creased bus services. More buses, more stops, more frequent routes. NO GONDOLA please! We need to preserve little cotton wood canyon not destroy it to line the pocketbooks of 2 resorts. Not everyone skis and this isn't a logical, affordable, or reasonable solution. Toll the canyon, increase buses and make incentives for car pooling.
30419	Ella Snow	Please don't make us pay for this massive, unwanted project. I've talked to a lot of people about it and not a single one wants the gondola or thinks it's a good idea. Please just improve the bus routes instead. We already have a good bus system, just focus on that.
30420	Grant Burton	Please find a capacity to the canyon and explore tolling options that keep Little Cottonwood beautiful. Instead of developing a gondola, develop practical parking options that make public transit more efficient and environmentally friendly.
30422	Chance Whitaker	We have heard for years to preserve our nature. The proposed Gondola would do many things to disrupt nature in LCC. 1. The physical appearance will be awful. We love our canyons because we can get away from the man made things. 2. The land required will disrupt the wildlife that live in the area. 3. Taxpayer dollars can be used more effectively elsewhere. There is a infrastructure that already exists and we are proposing to build new infrastructure to accomplish the same thing. Bussing is a viable solution and we can encourage that by tolling the road or limiting vehicle entry daily. As an avid outdoorsman I am highly opposed to the building of a gondola. I think it is a money making opportunity for a few of the wealthiest people and will leave a worse off situation for nature, wildlife, and the people who use the canyon as a play ground to explore the beauty within. Thank you.
30421	Kenneth Reich	The point of the canyons is not to pack them with people. There is a limited amount of space and packing every trail and every ski run with a person is not the goal. Utah has much more to offer than one canyon and two resorts. There are mountains nearly everywhere and all within a short drive. Spending hundreds of millions of dollars on a gondola is not money well spent. The traffic congestion can be simply alleviated with buses, limiting the number of cars in the canyon, and implementing a toll road. This option is much more cost-effective, environmentally friendly, and solves all of the issues.
30423	Molly Wireman	No gondola! Use tax dollars for a more sustainable and less destructive transportation option that DOES NOT help increase tourism for private resorts.
30424	Skyler Cozzens	The gondola will ruin parts of the canyon enjoyed by other recreation users (climbers, hikers, mountain bikers, etc). The viewshed would be corrupted by the site of it. The traffic won't be reduced as much as needed. The EIP says so itself. Bus availability should be increased and stops added to popular trailheads. There are other solutions that would BEST serve the PUBLIC (the public that owns the land). I am saying NO to the gondola.
30425	Tomasz Misiewicz	Many do not approve of this. This will disturb and in lots of cases ruin the classic existing bouldering and other climbing areas, will disturb wild life and increase pollution ,waste and traffic in areas of wilderness. This is also a non benefit to local people financially as they are being stuck with the bill while billion dollar businesses that own the ski resorts dont pay but are looking to gain profit. This needs to be put to vote , a popular vote by the people of this state! It should not be decided by some committee or a " panel" .
30426	Natalie Sheffield	With the selection of the gondola as the preferred alternative, and the recent announcement of the bus reduction, I am concerned on a number of fronts: Increased bus service was suggested as part of the phased implementation. I take the bus regularly. Why are bus routes into the canyon reducing service if this is a key part of the plan? How could funding be allocated to better bus services, especially with the staggering cost of building a gondola? If UDOT can allocate 600 million to a gondola, why can't they increase pay for bus drivers and the canyons bus service in general? Legislative funding to save the Great Salt Lake is currently at 45 million dollars. The declining GSL poses a much greater threat to our well being than an inability to access ski resorts in the winter. I'm wondering what kind of analysis has been done on the cost/benefit of reduced traffic in the winter, especially in light of the other issues facing Salt Lake City with the decline of the Great Salt Lake. Does the solution take into account the projected snow totals into the future based on climate modeling? I am concerned that even with increased access to the canyons, demand will decrease as we see less snow in a warmer future.
30427	Patrick Journey	No Gondola in our canyon! Put in more buses or create a toll for single occupancy vehicles instead.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30428	Emily Draper	<p>The gondola does not serve the purpose intended. The goals for little cottonwood are to reduce traffic in the canyon. The gondola will not change traffic, as it is still expensive for the consumer. To fundamentally change the way Utahns recreate, (and that is the problem, locals using the road not tourists) we need to have better options to use public transit to recreate in the way we want.</p> <p>The current plan to reduce bus service is absolutely asinine and goes against what UDOT says they are trying to do- reduce traffic in the canyons. If our budget allows for the construction of a gondola, it surely can allow to attract bus drivers with higher wages and greater benefits.</p> <p>Reducing buses in the canyons also goes against the "phased approach" to the gondola. We need good data to see if increased bussing will help traffic congestion. We absolutely need to institute a toll to use the road that incentivizes non-single rider cars. Think- 20 dollars single rider, 15 for doubles, 10 for 3 people and 5 bucks for 4 people. The so called "mobility hubs" definitely need to be built- my number one reason for not using the bus is no parking spaces. This should be project number 1.</p> <p>UDOT, do what is right for our environment and for our consumers, not for the large companies that stand to profit from the gondola.</p> <p>NO GONDOLA.</p>
30429	Noah Newkirk	<p>I am appalled that such a destructive and expensive gondola has been decided the "preferred alternative" for reducing traffic and pollution in LCC. And all to convenience a small minority at the expense of everyone else by using taxpayer dollars and imposing tolls for driving.</p>
30430	Bailey Miller	<p>I am a homeowner and resident in Salt Lake City, and wholeheartedly oppose the construction of a gondola in Little Cottonwood Canyon. This project appears to be nothing but a taxpayer-subsidized handout to the already incredibly wealthy ski resorts. It does nothing to help access to other parts of the canyon, used by many for hiking, climbing, biking, fishing, and all other types of recreation. It will permanently damage access to and actual climbing areas. It will permanently impact the views and scenery of the valley. Do NOT let this gondola be an eye sore and burden in the canyon forever.</p>
30431	Ericson Just	<p>Please don't do this.</p>
30432	Daniel Jones	<p>The Gondola B selection for solving the Little Cottonwood congestion is misguided, especially with the newly announced reductions in public transit service to the canyon. The gondola will disrupt the natural beauty of the canyon, access to trails, and climbing. The potential traffic benefits are insufficient compared to increased bus options. Further, the gondola will have no impact on traffic related to non-resort visitations (e.g., back country skiers, hiking, photography, etc.). Finally, the large costs associated with the gondola will likely hit taxpayers in the state, but are only to benefit resort owners and a small percentage of the population utilizing the resorts. Conversely, increased bus service has an increased likelihood of impacting a broader proportion of the population, supports new jobs, and (with added stops within the canyon) can reduce overall traffic volume in the canyon. Please reconsider the Gondola B selection before the canyon is forever altered!</p>
30433	sarah trela-hoskins	<p>I would prefer a system to improve bus systems. Maybe drop off to more locations in the canyon for backcountry tours, hiking, snowshoeing, etc. The bus system could be redesigned to be greener, pay better wages for drivers, and improve the speed of transporting individuals through a bus lane up the canyon. the bus lane would be uphill bus lane in the morning hours and a downhill bus lane in the evening hours. You could develop a parking garage at the parking lot 3870 S. wasatch boulevard. This would save you millions of dollars and improve customer satisfaction. Thanks for considering our requests.</p>
30435	Ellie Smith	<p>I strongly oppose putting a gondola in LLC - it will take away from the natural beauty that the canyon brings forever. People travel to this area for mountains and beauty which this is taking away and can easily be avoided with other plans that are much less impactful and more cost effective.</p> <p>Please do not forever change the canyon in this way, it would be horrendous</p>
30434	Michele Steen	<p>Please do not put a gondola in Little Cottonwood Canyon. It will destroy the view, impact wildlife, & create more congestion due to the tourist attraction it will create. Please use the money slated for this project to improve the bussing in the canyon (look to the National Park Service for electric vehicles & efficient service models). The general consensus is that UTAHNS DO NOT WANT A GONDOLA!</p>
30436	Sofia Valero	<p>I love the LLC and have been hiking, skiing, and climbing there my whole life. Please stop this Gondola. We need to preserve the canyons beauty and keep access open to all. This Gondola is a colossal waste of money that will destroy so many unique climbing boulders. Instead increase the public transport opportunities, so that everyone can enjoy this beloved canyon.</p>
30438	Sawyer marks	<p>You are cutting options for public transportation and ruining this area. Do you think the wildlife would appreciate a gandola through your their home?</p>
30437	Cara Peper	<p>I add my voice to the many others STRONGLY opposing the gondola being built in LCC. My two children and I frequent this canyon often, marveling at the views and soaking up time in nature. Please reconsider the impact this gondola would have on thousands of families like mine. Please increase the availability of buses instead of the gondola.</p> <p>Thank you for taking the time to read this.</p>
30439	Christen Thompson	<p>Utah's citizens would be better served by tunnels similar to what the Boring Company is building in Las Vegas. No gondola, let's preserve the canyon and it's scenery and put the people movers underground.</p>
30441	Christopher Morgan	<p>The gondola is not the best solution and if it gets put in then tax payer money should not be used! Try and do better</p>
30440	Shane Hall	<p>A gondola in LCC would' be one of the greatest mistakes that this state could ever do to our canyons. This only serves the ski resorts and damages recreation for thousands of others throughout the canyon. Don't make a mistake thing large without listening to the people, most of who oppose it.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30442	Sadie Sarcona	I demand increased bus service, and am furious to hear bus services have been decreased. There is \$600 million on the table, and I demand to see the cost breakdown structure for the bus service as well as the reason for bus reduction. I am vehemently opposed to the gondola, as it is a poor and maximally invasive decision.
30443	Jans Wager	<p>George Pyle of the Salt Lake Tribune correctly argues that if the resorts (Snowbird and Alta) want a gondola, they, not we taxpayers, should pay for it.</p> <p>He concludes his essay by alluding to the mammoth in the room of Utah's environmental future, climate change.</p> <p>We know our environment is warming. The beautiful and crucial Great Salt Lake is drying up due to population pressures and climate change. This portends a major environmental disaster that directly impacts all of us in terms of air quality and lifestyle sustainability. It includes a negative impact on the quantity and quality of the 'greatest snow on earth.' Those of us who live, work and play here in Utah are obligated first and foremost to ensure our environmental future.</p> <p>As a taxpayer, backcountry skier, mountain enthusiast, and local water user, I am willing to devote tax dollars to be sure that the Great Salt Lake does not become the Salton Sea of Utah. I want my granddaughter and her daughter to live and ski here in Utah.</p> <p>I do not want to see my tax dollars go to supporting Alta and Snowbird, unless it's through my purchase of a lift ticket, parking reservation, or pass to visit Albion Basin. The gondola does not facilitate access for users other than Snowbird and Alta skiers.</p> <p>Alternatives to the gondola abound. They are more cost-effective, have less environmental impact and serve all users. Save Our Canyons details many alternatives, including resort parking fees, requiring more riders/car including a occupancy-dependent toll system, a flexible year round bus system aided by canyon centers, and others. We should institute these methods instead of building a gondola.</p> <p>Most importantly, for all our futures, we must work to save the Great Salt Lake.</p>
30444	Debra Chen	There are many ways to improve transit without destroying the beautiful nature that is in LCC - please consider access alternatives to the gondola!
30445	Hugo Foucher	<p>You didn't listen to the first comment so why would this be different... BUT, I guess we have to do it again!!</p> <p>If we can find 500 mil for a silly gondola that only benefits private entities, maybe find money to pay bus drivers so we can actually use the busses. No one wants the gondola, except the people who won't pay a dime for it and collect more money as their business alone benefits from taxpayer money that could be use to instead maybe benefit said taxpayers BY ENHANCING THE [REDACTED] BUS SYSTEM.</p>
30446	desiree jenkinson	The gondola serves only the business needs of the canyon at the taxpayers expense, which is unacceptable. It would still create traffic and parking bottlenecks while ignoring the needs of people visiting the canyon outside of the resort. Please make your first step to increase bus services and charge a toll similar to Millcreek.
30447	Eric Harrison	The gondola is a ski centric "solution". Every other use of the canyon will be irreparable disruptive solution. This is an ecologically irresponsible way to pad the pockets of a few businesses
30448	Catherine Homann	We implore you to stop the gondola project. There are so many other alternatives that do not result in the destruction of natural resources. obstruction of natural views, and influx of tourists which will stress the environment. We do not wish to see Little Cottonwood Canyon turn into another "Aspen" or "Park City". Please, do the right thing and do not let the Alterra Mountain Company sway your decision. We love our community and would like ALL of us to enjoy the beauty of Little Cottonwood Canyon, which is more than just ski/boardng. Thank you.
30449	Briton Black	Please do not build a gondola and instead pursue other transportation methods to deal with canyon congestion. I have grown up at the base of the canyon and love the view, and accessibility to some of the world's most premiere climbing locations, and resorts. I do believe that other transportation methods such as a bus lane, a toll booth, parking fees, etc. would more efficiently/effectively resolve the issues that we are seeing in the canyon today.
30450	James McCloskey	With so many pressing issues in Utah vying for public funds I cannot support any canyon traffic relief project which suck up so many tax dollars to benefit a private resort with such little benefit to wider Utah. As a local resident I cannot imagine paying \$20-30 just to get up the canyon. So the alternative seems geared toward wealthier tourists not locals or low-income communities who could be excluded. The magnitude of cost to traffic relief for just 9 or 10 days of canyon congestion at peak days of the year seems like a massive waste considering this is just one canyon. Where is a comprehensive plan for all canyons and for a larger connected public transportation initiative? As a Utah tax-payer I fear any development which could potentially impact our dearest water shed. Resources are finite and I support methods to reduce traffic such as a stricter single car occupancy minimums and incentives to canyon access on non peak days. A wider Wasatch Boulevard with more traffic and higher speed limits means more pollution and noise and less neighborhood safety, this is not an improvement to my neighborhood safety or air quality, and I oppose it.
30451	Madison Austin	The gondola permanently destroys the natural beauty of the canyon. The gondola proposal does not reflect the whole population of canyon visitors - not everyone skis! I support less environmentally destructive and more accessible improvements, such as better funding for and an improved UTA bus system with drivers paid a livable wage; tolling to encourage carpooling on high traffic days i.e pow days; and expanded bus lanes/bus only lanes to encourage public transportation use

30452	Alex Beckley	The gondola isn't a real economic solution to the problem of traffic jams on sr210. A couple of reasons I see is that people are still going to have to drive their cars to the bottom of the canyon and park their cars. Currently, there is also no land or parking there. This will just back traffic up outside of the canyon and that doesn't help the problem. Also, both 210 and 190 have traffic issues, why spend 500 million to potentially fix one of the canyons? Increased bus service is what I think should happen. UTA suspending half of the bus routes is the exact opposite thing that needs to happen. Take the money proposed to the gondola to pay drivers more, create an incentive to attract drivers. This would also stimulate the economy more than outsourcing construction to some out-of-state companies to build a gondola. The drivers would be spending the money they have in the valley, creating more economic growth.
30453	Leah Taylor	NO gondola! Use other, non-destructive options like car pooling and buses.
30454	Camber Firth	The gondola is a terrible "solution" to this issue. I am strongly against this.
30455	Cody Porter	<p>The gondola should not be our first response to the traffic problem in LLC.</p> <p>Less invasive options should be explored and their impact studied before allowing for such an invasive solution. People come from all over the world to visit this canyon because of it's beauty. I feel a structure like this would be a turn off for our essential ski tourism industry.</p> <p>This solution also doesnt come close to fixing the traffic issue especially in the case if a "pow day".</p> <p>This solution also forgets to take into account the multiple other user types that are not skiers. This changes the whole canyon. We cannot let this happen.</p>
30456	Stephanie Ruesch	<p>Hello! I am a Cottonwood Heights resident, a rock climber, a Porcupine employee. I have left 4 comments throughout the process. The people have spoken and we are STILL seeing UDOT cater to please any support of the gondola by cutting funding to bus systems. Shame.</p> <p>Use the millions of tax payer dollars proposed for the gondola and instead use it for the bus system. Increase wages, electric buses, increase buses for a reliable schedule. Create jobs for people instead of installing a theme park ride for Snowbird and Alta. Skiing is a luxury that few can enjoy, and the resorts in Little Cottonwood are overreaching their control of the mountain. I am a rock climber and realize the privilege I have to be able to drive to my favorite climbing zones there. If it were tolled and/or bus only up the canyon, I would happily indulge, if it meant to keep the gondola OUT. The gondola only benefits a few, while the people who don't want it are given the bill to pay for it. UDOT is catering to the businesses of Snowbird and Alta, leaving current traffic unaddressed, bus system funding cut, and more unnecessary traffic to ogle at the new theme ride. Something needs to be done to prevent this. I urge consideration for common sense alternatives with genuine concern for traffic and the people who live here.</p>
30457	Dani Poth	<p>This gondala has been trying to happen for decades. Using the inevitable, and now, very undeniable population growth of the valley as "cause" to fund a completely detrimental project like this is thinly veiled and appallingly condescending, even for the private developers, interest groups, resorts, and the lobbyists of this unique state.</p> <p>You can't seriously defund the public transportation industry and state you have enough to fund this gondala as the "only reasonable option", expecting us to sit by as we watch you destroy the very wilderness and tourism honey pot you claim to want to "protect".</p> <p>You will NOT build this gondola. We do not want it. We will fight until you come up with sustainable options that both help our infrastructure and lessen the impact on the flora and fauna and the citizens of the county and the state.</p> <p>no to the Gondala. Stop selling off chunks of our land to your get rich quick schemes.</p>
30458	Katie Chen	<p>My partner and I traveled to Snowbird in January 2022 and we were amazed by Utah's topography and natural views. We decided to move to Utah in May to be closer to all the outdoor activities we enjoy doing. We do not want to see a gondola go up. Since moving to Utah, we've seen endless construction going on. There are other ways to economically develop this state, but we are constantly seeing local areas destroyed by greed- build massive homes, destroy the natural landscape and build apartment buildings right off the highway. There truly seems to be a lack of planning by developers, just an urgency to get as many homes up.</p> <p>We are against the gondola. Not only will it add noise pollution, the project will destroy an area that people go to retreat. There is too much going on and people find peace in nature. Do not take that away.</p>
30460	Alison Dennis	I travel to Utah specifically to climb in areas including Little Cottonwood Canyon. A gondola would destroy the world class climbing in this area which would decrease the incentive to come to Salt Lake City. There are other options to reduce traffic congestion that would be far less impactful to the environment. I believe the least environmentally impactful options should be tried first.
30459	Kevin Keller	<p>I am in opposition to building a gondola or train in LCC.</p> <p>I am in support of tolling the canyon, especially for single drivers or rental cars.</p>
30461	Kara Freedman	I am opposed to the building of a gondola in little cottonwood canyon. This is a major infrastructure project that won't benefit most Utahns and definitely won't alleviate traffic in the canyon since a huge portion of drivers are going to destinations other than the two services ski resorts. Alternatives like increasing bus service or making carpooling easy would be a much better year-round solution to the narrow canyon roads.

Comments on Little Cottonwood Canyon Final EIS

30462	Stacey Dorais	<p>Here are all the reasons my spouse and I do not support a gondola:</p> <ul style="list-style-type: none"> - fundamentally changes the natural beauty of LCC, drastically decreasing its universal appeal - interferes, and potentially ruins, established rock climbing areas, and hiking trails, which reduces the diversity of public use options for the entirety of LCC - the gondola speaks of "solving a traffic problem" but this traffic problem is only truly a problem 20-30 days/year during severe winter storms - the burden of paying for the gondola falls on taxpayers but only benefits the ski resorts and resort patrons while negatively affecting ALL taxpayers - despite the numbers touted by the EIS statement for transportation alternatives being more expensive than the gondola, this is difficult to accept as true, particularly since no transportation alternatives have been actively implemented and explored - rumor has it that use of the gondola will not be free to ride, nor will it be operating year round. This is absolutely preposterous and another reason why the gondola would be a complete waste, as supported by all the reasons noted above.
30463	Emmie Owen	This will ruin our beautiful canyon! Please consider other resources before going through with this.
30464	Emmaline Russell	I demand improved busing!!! I will not be skiing in the cottonwoods and I will encourage my ski friends to also not buy passes this year until a non destructive transportation option is approved. I STRONGLY DISAPPROVE of the gondola and I will not allow my taxes to fund a project that will destroy where I like to climb, ruin my view while hiking, increase profit for ski resorts who over use water and rape the land. Listen to the people!!!
30466	Scott Sterling	I prefer the busses over the gondola. The number of busses servicing the canyon can easily be adjusted up or down depending on demand any day through out the year. What about safety for passengers in case of brake down or high winds and blizzard condition, heard nothing about that. Thank you.
30465	Joe Getty	The gondola is not the appropriate option. There are already methods in place that need to be expanded on to allow for better flow of traffic and access to BOTH canyons (not just one canyon). Increase bus availability, parking options etc to allow for an intact canyon.
30467	Sara Batt	No gondola! Extra busses up and down the canyon, parking garage at the base, or specific bus stops with parking near shopping centers below the canyon. Cut off non-canyon residents from accessing the canyon, and require bus transportation.
30468	Grace French	Please no gondola, increased busses is what will be beneficial for the land, economy, residents and tourists.
30469	Zhiheng Liu	No gondola please! The view of LCC is priceless. Don't destroy it. Using tax money to benefit a few private ski resorts, is unacceptable.
30613	Nancy Geisler	No gondola cottonwoods
30470	Alexander Hopp	If we build this gondola, our city is forever going to be scarred by the corruption it took to build it. This is a horrible idea. I plead you listen to the voice of the people.
30471	Samuel Carter	UDOT, How can we invest in short-term increases in bus infrastructure (as outlined in the final EIS) if bus routes for UTA are being cut and becoming less frequent? The "phasing" into the gondola can surely not be possible without ensuring that bus routes are funded and supported.
30472	Richard Green	Horrible shady decision making udot. This choice only servers a single user group in that canyon effectively disenfranchising everyone else. Half a billion dollars to subsidize the ski resort industry in the face of a changing climate and dying lake meaning shorter ski seasons? Now you're reducing bus service? Really gives one pause to consider what's actually going on here. \$\$\$\$\$\$. A real transportation solution would benefit climbers, backcountry skiers, hikers, birdwatchers, everyone. It would serve all of the canyon, not just resort skiers! Who can afford that anymore anyways!!!! Expanded bus service in the canyon. No more private vehicles except for employees and residents.
30473	Cathy Bobbe	Please re-evaluate any decision to build a gondola to transport seasonal skiers up Little Cottonwood Canyon. It is such an extravagant, unrealistic solution to a complex problem. How much time will a skier need to get up the canyon? Drive to the lot, park car, take shuttle to the terminus of the gondola, board gondola (waiting for a turn with others to get on), travel up the canyon to the resort, ski for the day & then repeat to get back - at the same time all the other skiers want to get home too. How practical is this? How much will it cost, on top of lift tickets, for each skier? What has happened to supporting our local kids & skiers? Who can afford this in time & money? (not the tax payers...) We can't destroy our canyon for the benefit of out-of-state Epic & Ikon pass skiers. Visually it would be a travesty. A carnival ride in our natural beauty that will break down & eventually need to be torn down. What about our watershed? Can you guarantee no destruction to this limited resource, especially in a drought? For what? Who benefits? Who pays? Why destroy? What happens when our snow disappears because of climate change? Please re-think this terrible idea! It only benefits a few - if anybody. Sincerely, Cathy Bobbe
30474	Richard Green	How do I know if my comments were received or looked at? To reiterate, no gondola. Expand bus service. No more private vehicles except employees and residents.
30475	Epstein Marni	Please, please, please do not build this gondola. Please try more logical and lower impact alternatives first, like charging for parking and expanding bus service. This gondola will be incredibly and irrevocably harmful and only serves a small user group on a very select number of days.
30476	Andrew Grimes	What kind of state would we live in if we spent \$550 Million + \$4 million of taxpayers money on problems that affect only a small, already-privileged portion of the population for very few days each ski season? The impact is huge and for what result, saving someone a couple hours on some snowy weekends?

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30477	Pierce Whalen	The Gondola is not putting the needs of the community first. It benefits a few already wealthy individuals and doesn't improve the canyon experience for the average user. Going forward with this project is greedy and immoral. In response to the UTA Ski busses being cut, if UTA had say \$600M to \$1B (the cost of a gondola), what could it do for bus service regionally and in the canyon and for bus driver pay? Probably enough to make sure that they run at usable intervals, and even make a dedicated bus lane for parts of the canyon. Choose your constituents over profits, it's your job.
30479	Nicole Balbuena	No gondola!!! It is going to ruin the integrity of our canyons. It is so inaccessible to the public and yet who is paying for it? We need more public transit through the mountains. We do not need a gondola being created to service only a few people. Please care more about the conservation of the wasatch rather than about the rich
30478	Garrett Morris	Please don't build a gondola.
30480	MichelleMichelle Traniello	Reinstate bus service!!
30481	Courtney Pace	I oppose the gondola in little cottonwood canyon. I think that increasing resources for UTA buses is more important and can work. The canyons are a finite resource and packed already. We cannot shuttle thousands more people on the gondola. Where will they all go? I also support a fee based methodology as well. Tax payer money is going to directly benefit the ski resorts. That's not right! If we do the gondola then the resorts need to directly subsidize the cost. Listen to the people. Have a vote. The majority are against the gondola!!!
30482	dylan bueche	NOT EVERYONE SKIS! Little cottonwood canyon is used for so many recreational uses that this project will not serve! explore options that serve everyone, not just private resorts and those with the funds to use them!!
30483	Preston McIllece	The proposal of a gondola is yet another sad example of corporate greed being put ahead of appreciation of nature. I am VEHEMENTLY against the construction of this gondola. For a FRACTION of the money, we could drastically improve our public transportation system here locally including up the canyon which would both help ease the traffic burden and would preserve the incredible nature in the canyons that is loved by hikers, climbers, and wildlife alike.
30484	Phillip Massey	I strongly disagree with the Gondola as a preferred alternative. The EIS short sighted, giving no consideration to impact over time (ie. when the gondola is inevitably abandoned), and it also give no weight to the variety of people served (ie. people not going to one of the resorts.). Again, I strongly disagree with this assessment, and would request either a reconsideration of enhanced bussing or no action.
30485	christopher steen	I appreciate the amount of work that has gone into trying to find a solution. I can not support the gondola idea. Our state has many more pressing UDOT related needs that far outweigh financially supporting two large corporations and their bottom line via this project. The continued lobbying by the groups who stand to benefit is of a major concern to me. This project will forever ruin the beautiful canyon that is loved by our residents and visitors from around the world. Look at the permanent landscape transformation at the mayflower site. I urge you to not bend to the desires of Alta and Snowbird. We will never be able to cram the growing population into that canyon no matter what the solution. Stop trying to do so. Maybe we all need to be less selfish, myself included and realize there will be days where we can ski because too many people beat us to it. Perhaps invest in some additional real time warnings about traffic or parking availability. I have turned around many times but only when I was in the traffic and realized it was not going anywhere. I would have turned around earlier if better up to date data was available. More buses. I would rather see a fleet of busses that would have minimal impact than a gondola that ruins it forever.
30486	emily ford	I am opposed to the gondola because it's too invasive and too expensive. Expanded electric bus service coupled with tolling and other traffic mitigation strategies must be tried in earnest, that include dispersed recreation transit needs before permanent landscape changes are made.
30487	Mike Ulrich	I am all for the Gondola Project. I am a rock climber & I still think that the gondola is a great idea & is a benefit to the canyon. Hope it can go up quickly.
30488	Pamela Smith	This is going to destroy the views and wilderness it's being placed into. It doesn't serve anyone besides the pockets of a councilman.
30489	Jared Maxwell	The proposed gondola is NOT the answer. It is a money grabbing scheme by ski resorts to funnel more tourists and rich people up to already over crowded resorts. 99% of the year the canyon is completely empty and you can drive up the entire canyon unimpeded. The gondola would sit dormant for most of the year. Being a testament to how greedy and delusional the ski resort owners are. Not to mention all of the things that are more deserving of 550M dollars of taxpayer money.
30491	Finn Navidomskis	Udot recently announced the cutting of some bus routes and reduction in frequency on other routes that skiers use to access Little Cottonwood Canyon. It seems a bit fishy that this decision was made as Udot is recommending people use public transportation to the resorts and during the comment period of a highly controversial gondola. The official reason these services were reduced is due to a lack of drivers. However I am sure that Udot could hire more than enough drivers to service the canyon all winter for much less than 700 million dollars. If we are okay will such a huge price tag for the gondola, why can't we increase the wage of drivers enough to hire and keep new drivers? There is a cheaper and better solution than the gondola: a revamped and properly funded bus system.
30490	lindsey frein	Please do not build this gondola! There are many other, better alternative plans of action! Plans that will not irreversibly damage the natural environment. This would permanently damage and or end rock climbing in this area! Climbing is a valuable recreational activity just as all outdoor pursuits are, please do not make the decision for the people what activities to prioritize. If you care about the canyon and about outdoor recreation please refrain from building this gondola. Thank you so much for your time and consideration!
30492	Jennifer Kleinman	Please do not put a gondola system in the canyon. I want to protect the natural environment and this this will permanently damage the ecosystem and not resolve the issues. I feel strongly that the ski resorts should fund the solution that is selected as they will be the beneficiaries.
30493	Nikos Demetropoulos	we tryna climb stop [REDACTED] ruining mother nature
30494	Arek Hanna	Please don't
30495	Oscar Sandoval	This proposal, if approved, would be a slap in the face to the communities of the salt lake valley. It has been and remains a wildly unpopular proposal and seeks to remedy a seasonal traffic problem through permanent year round destruction of our communities public lands.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30496	Rhianna Campbell	Do not add a gondola. This is a ridiculous measure for only a few days a year that would destroy beautiful scenery and iconic climbs. Expand bus use, add park and ride lots, encourage carpooling, add taxes for resorts. But don't destroy what's there so one industry can profit more on high traffic days. No gondola!
30497	Dick Richard	I live in little cotton wood. Please don't waste resources building the gondola. It'll make the place I call home worse.
30498	David Vonnahme	Don't do it.
30499	Chase Hathaway	As a nuclear engineer and property owner in salt lake county, I solidly support the gondola as the most efficient and overall best method of moving persons up the canyon from an environmental and longevity standpoint. HOWEVER, as an avid climber, I IMPLORÉ UDOT to add into their final design additional services and access points to allow those recreating in the canyon in areas other than Alta/snowbird public means to access said areas. From a LAND OWNER and tax payer perspective, I am boggled as to how this project was put forth for the maximum gain of Alta and snowbird resorts without their financial participation whatsoever. I would expect and demand that Alta/Snowbird foot a decent percentage of the bill... 20-25% at least. Thanks
30500	Christopher Reifsnyder	The gondola is an expensive and ugly "solution" to the transportation issues in LCC. The bus has always been a better option but now that you're eliminating the 953 bus route and cutting service in half on the 994 we have no option but to drive up the canyon. Please reconsider because the majority of people do not want the gondola! And tourists will never use it!
30501	Armin Schwarz	I'm all for Gondola Alternative B. I live south of 9800 S and use Wasatch Blvd to get to work. Several days last winter I was not able to cross the mouth of LCC or BCC because cars were blocking intersections when the canyons were closed for avalanche control. I had to turn around and go as far as 110th South to go north on 1300 East. I'm also a skier and a gondola will be welcome to eliminate traffic backups for miles with idling cars that pollute the air for hours while waiting for the canyons to open. Go for it!
30503	Mark Christensen	Please, please, please listen to the people who live here and recreate most in LCC. No gondola. It will destroy the natural beauty of the canyon and is clearly being built to help get masses of people up to resorts that are already over crowded and is just putting money into the pockets of the resorts. Let's utilize less drastic measures to mitigate canyon crowding!
30502	Jack Purdue	I work in the infrastructure industry as a civil engineer and this plan is horrible. Please don't ruin this beautiful place
30504	Kellie Roy	I do not believe that a gondola in LCC is the best transportation solution. There is no reason to invest over half a billion dollars when more environmentally friendly options could be adopted. I am beyond disappointed in UDOT's decision to decrease the frequency of buses to Alta/Snowbird. It is very clear that this project will benefit the pocket books of a few and not the common public.
30505	Nathan Eggleston	The proposed gondola is NOT the right decision. It will destroy recreational resources (world renown bouldering and rock climbing). The gondola also does not serve backcountry ski users or hikers in the lower canyon. The gondola will cost excessive amounts of money to tax payers to serve two private resort companies. The gondola will also create environmental impacts that will forever scar the canyon. I support increased bus service and parking infrastructure, winter tolls, or bus only hours during peak use. There are much simpler, less destructive options which we should impose before destroying our canyon with excessive infrastructure. No Gondola!
30615	Ben Smith	Hello, I am interested in the goings on with this project and will be reading a copy of the eis as soon as I get the packet from a library. Please let me know who I can discuss this with. Thanks Ben
30506	Dani Poth	Increased bus stop frequency, increased bus stops, and higher wages for transit employees would yield far greater efficiency all while lessening the impact our use of the canyon would have on the environment and natural wilderness. You absolutely should not build this gondola! Parking structures or shuttle services from existing parking structures to the mouth of the canyon or already established bus stops would be the best option to protect our wildlife, ourselves, and the mountains. Buses could be utilized all year long not just during peak ski season. Tax paying citizens refuse to pay for a project that only serves private interest groups, developers, and resorts. Our valley is already littered with pollutants from road, residential, and commercial construction, please do not make our air quality worse! Say NO to the gondola. We do not want this!
30508	Alexa O'Gorman	I am AGAINST the gondola. Why waste \$600 million dollars on a "solution to the traffic" that wouldn't even be around for years to come. Use that money to invest in electric bus and public transportation. Put in more parking at the base so people can carpool. NO GONDOLA!!!!
30507	Larry Hansen	Now ski bus service is being reduced? This whole process is absolutely ridiculous!!!
30509	Peyton Hinn	Please DO NOT PUT A GONDOLA HERE!! please try to save a little adventure for people! More importantly save the environment!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30510	Aaron Miller	I am angered about the decision to build a Gondola in Little Cottonwood Canyon. I moved here recently for an engineering job and Little Cottonwood Canyon was one of the major reasons that brought me to the state. I am an avid climber and skier, and I understand the problems posed by the access to Little Cottonwood by the ski season, but I do not think that adding a gondola through the canyon is the correct solution. Having climbed there a few times, adding a gondola will significantly degrade the natural aesthetic of the canyon and destroy so many historic boulder and traditional climbing areas that so many love and have been responsible for fostering so many friendships. We can handle many more years of traffic during the ski season to determine a more environmentally conservative solution that meets the fiscal needs of the state while preserving the environmental needs of the canyon and requests of locals who call this canyon home. This is a special place for many people, including myself, who recreate there year-round to experience personal discovery but also meet new people and develop climbing proficiency and experience a wild and special place in Utah. The addition of a gondola, in my opinion, will not just fail in solving traffic issues, but will also significantly decrease the allure to the canyon that many locals and travelers know and love, a natural aesthetic that brings thousands to the state per year. I am all for a solution to the traffic issues, but this is not the right one, it will destroy a place that I have come to know and love, and that is an unacceptable use of taxpayer dollars to me. Please do not build this gondola in the interest of the local Salt Lake and Greater Utah area to preserve a special place for the community and to maintain an iconic canyon of the west that so many call home.
30511	Alexandra Vander Ark	Please, we beg you to reconsider this massive mistake of a gondola destroying Little Cottonwood Canyon. To destroy something so beautiful and majestic is purely horrific and it's almost hard to believe anyone would want to do something like this. LCC is a place of adventure, enjoyment of nature, rock climbing, and so many other activities. The sacred nature of these activities will, without a doubt, be destroyed by the building of a gondola. The lake is shrinking, the earth is warming, in 20 years there may not be snow and skiing in this part of the states. So why through away and destroy such a majestic canyon for something that may not exist later on. I, along with thousands of other people, would rather wait 2 hours to get to ski areas than see our precious LCC defamed by a human creation like a gondola.
30512	Samantha Marks	For the first phase of increased buses, can there be a few more bus stops in the canyon for people who are not going to the ski resorts? Such as the option to get off at White Pine or Spruces
30513	Mary Keegan	It is not possible to maintain the visual appeal of Little Cottonwood Canyon with these major, permanent constructions. It is not possible to keep recreation areas intact when the heart of that recreation is the wild, and this measure attempts to domesticate the wild. While all users of the canyon (including its flora and fauna, which will not be unharmed by this project) may have been initially considered in this measure, consideration means little when the well-being of the users is ultimately cast aside. This is a shame and an embarrassment and must not move forward.
30514	Brian McFadden	Additional encroachment on natural spaces for the sake of further enriching a handful of business owners is NOT acceptable. This is abhorrent and will lead to further destruction of very sacred places. There are other options for public transportation that are much less impactful and work just as well, if not better. DO NOT ALLOW THIS TO BE APPROVED.
30515	Van halen Rockhill	STOP CUTTING PUBLIC TRANSPORT!!!!
30516	Veda Armytage	
30517	Kari Reimann	Please do not proceed with building a gondola in LCC, it will not alleviate traffic and is fiscally and environmentally irresponsible.
30518	kate edgerton	Please do not build this rail. The proposed plan adversely affect the recreational use of little cottonwood canyon for rock climbing. This area has a rich history and beloved use in this community. We are the local public, the supposed "benefactors" and reason for this building project, and we do not want it. Please don't build.
30519	Josh Caldwell	I am opposed to the Gondola in LCC. I don't think it's a wise use of tax dollars and not a solution to the real problem. For the number of days that are actually a problem with transit, it doesn't justify the cost. An improved bus transportation system makes much more sense. Plus days that are bad an stormy or high winds, wouldn't the gondola be closed? It damages the wonderful bouldering and climbing areas and doesn't even stop at places other than the ski resorts. Interesting to see that the bus system has received less funding this winter season. The timing seems fishy and biased.
30520	Rian Wells	Please do not build the gondola. It's just not worth it. Anyone can see. Please make more sustainable and equitable transit like more bus routes. The canyon is so important to so many of us. This is a nightmare. Please hear our voices. Actually hear them.
30521	Chelsea Damon	I am a resident of [REDACTED] UT and am concerned about the proposed gondola. Why is it not possible to institute a shuttle system like the one successfully implemented at Zion NPS? Why does the gondola only go to the resorts? How does that help to reduce transport needs for those not skiing? I live in the Canyon Cove neighborhood that is just minutes from a skit shuttle lot. Every day in the winter I witness the number of cars being kept away from the mouth of the canyon through this service. Please note that I (and a large number of Utahns) vehemently oppose the gondola. At the very least, attempt the shuttle system before taking permanent steps.
30522	Jasmyn Reese	I am very strongly against this plan. As a non skiing member of the community who greatly enjoys LCC I see no benefit to myself or the many others like me. It does not benefit anyone but the resorts at great costs to us. This precious and unique canyon view should be preserved. We should have more busses that will cater to all types of recreation including hiking, biking, snowshoeing AND skiing. Close the canyon road during winters and use busses as sole travel in order to minimize traffic.
30523	Heather Johnson	I'm very concerned about the congestion near my home , in cottonwood height, will not improve but possibly make it worse .

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30524	Maddy Grupper	Please do not ruin the access to climbing and wilderness feel of cottonwood canyon by building a gondala right through it.
30525	Alyssa Jenson	The gondola will destroy parts of the canyon that will never be restored. You can't keep doing this to our mountains.
30526	Melanie Marier	I understand that UDOT had a clear mandate and stayed focus on the task at hand. But how is that good governance and the proper use of expert knowledge? I am relieved that all the other reasonable options would be implemented before funding would be secured for the gondola and I am hoping for a change in user behavior and state leadership in the meantime, so this project gets tabled. How long before our winters get shortened and the gondola usage revenue shrinks? How long before the resorts see their water rights drastically reduced, which would then really jeopardize most of the season? We keep hearing about the Europeans and their gondolas. We are comparing with people who have no car, or 1 per household, who use public transportation every day. I couldn't even teach my kids how to be autonomous on public transportation in Salt Lake County because it is so inadequate. We think the gondola will change the car culture? It's sexy, but not nearly enough. Finally, who ever said that we needed more people in this canyon? Don't the resorts understand that the road is the best selling point for their ultra expensive ski-in-ski-out lodging? I am really worried about the long term vision and the lack of touch with reality of people promoting this solution.
30527	Alexis Bucknam	I do not support the gondola. It fails to provide transit to any locations in the canyon other than the mountain resorts which does not mitigate the environmental impact of cars from visitors going to other destinations. Furthermore, the number of towers that it will require will have a significant impact on the natural beauty of the canyon. If tax dollars are going to be spent let's make an significant investment in UTA not only to increase bud service in the canyon, instead of the decrease that was recently announced, and public transit overall.
30528	Carolee Yates	Please no gondola!!! Tax payers are too exhausted. There are better solutions than more big business! Thank you!
30529	Joe Hillock	<p>The gondola is not the solution. It will not solve traffic issues for locals and will only be used by tourists and those that can afford to stay at the resorts and hotels that will be developed at the base station. Public money should not fund private development.</p> <p>Traffic to and from the gondola base station will still be a problem. Parking will also be a problem at the base station.</p> <p>Enhanced bus service is the preferred and logical solution. It would allow more canyon users to get on buses closer to their homes and hotels. It can be scaled as needed. Let's try busses first before putting in this gondola.</p> <p>The announcement that ski bus service is being reduced this year is a total joke and a clear sign that the general publics opinion is not being considered.</p> <p>NO GONDOLA! More frequent and Enhanced bus service picking up canyon users closer to their trip starting points is the real solution. That combined with tolling, car pool requirements, and/or private vehicle restrictions in LCC on heavy use days.</p>
30530	Ann-Lewis Shields	If this gondola goes through it is one more example of how money, power, and greed win. No one wants this gondola except the people that will get paid. It destroys the natural habitat. It only serves the ski resorts. And no one will take the gondola if they will still have the option the drive. Not to mention that wind is a huge factor in LCC and wind holds WILL happen and as soon as they do, people will just drive. The right way to decrease traffic in LCC is much cheaper and doesn't involve destroying LCC with gondola towers and access roads. It involves a toll entrance. There should be three booths at the base. One for buses who have free access and are in a "bus only" lane leading up to the toll, one for cars who have a resident annual pass (available only to residents who show proof of living the in SLC area and the fee should be upwards of 200/year), and one that has a pay per day toll that should be at least 20 dollars during the winter season. Bus access needs to include more stops across the SLC area and needs to come every 15minutes. Take a look at the Summit stage in Colorado - the best free bus system in the west. The solution is much more simpler and environmentally friendly than a gondola. The money, the infrastructure, and the environmental impact are NOT worth it and everyone knows it. For once, please choose to care more about the the natural habitat surrounding the SLC area than money. The gondola should not be the solution. There are better ways and other steps to take.
30531	Riley Hawkins	<p>To whom it may concern,</p> <p>I am writing to voice my opposition to the proposed little cottonwood gondola. The increased skier traffic is a problem. The proposed solution will likely decrease the number of skiers driving on weekends. However, the gondola (if paid for by the salt lake public via taxes or by diversion of city/state funds from other potential projects) strikes me as a shining example of tax on the many to benefit the few. Skiing is not an activity that is affordable to the general public (see cost of lift tickets, equipment, etc.) and while the increased traffic must be an inconvenience, it is not an inconvenience to the general public who would be stuck with the bill.</p> <p>In summary, I do not believe that pursuing the gondola is a wise, civic-minded decisions and that the money could be better spent in other realms, for example, on water preservation. If we do not do something to slow the drying of the Salt Lake, the increased traffic may become less of an issue as the valley becomes uninhabitable.</p> <p>Thank you for your time and the work that you do.</p> <p>Riley Hawkins</p>
30532	Stacey Allum	I believe that we should increase bus services in the canyon. The gondola is a terrible solution. We must protect our canyon, and installing a gondola will have a huge environmental impact. I believe that increasing bus services, and building another couple bus lots would be the better option. This alternative can start immediately, and we will be able to gauge the effects right away. We should not be putting tax payer dollars into a gondola that will only benefit the few. Additionally, the boulders in little cottonwood canyon must be protected. There are many reasons increasing bus services is the better alternative.

30533	Vanessa McPhie	No gondola. I live very near Little Cottonwood Canyon and there is NOT a traffic problem in the canyon that warrants \$600,000 million dollars of tax payers money. The resort should fix their parking lots to handle the amount of skiers that want to entertain along with bus use. The optics are clear and they scream that is is a relationship to pad pockets of a few... our canyon and the people that love the natural beauty deserve better. There are 10 - 25 days that there traffic and we all know when they are. We all plan accordingly. This project looks like corruption. Follow the money..
30534	Rick Fournier	I am adamantly opposed to the Gondola Alternative B proposal. This transportation "alternative" is designed to exclusively serve those who have the means to access the ski resorts. The scenic, natural beauty of Little Cottonwood Canyon is one worth protecting and one that I've admired for over 30 years. Desecrating the viewshed and impacting the natural environment with massive, 100-foot-tall, gondola towers, haul-rope and cabins will forever destroy the very thing thing that makes it unique. Those of us who regularly recreate in the canyon, be it rock climbing, backcountry skiing or hiking, truly appreciate the unimpeded views of canyons, creeks, waterfalls, and massive granite faces that all contribute to LCC being one of the most magnificent canyons in the Rocky Mountain West. I worked on ski lifts for nearly a decade and I am fully aware of the issues that will inevitably plague a gondola climbing nearly 4,000 feet in elevation, where weather can go from rain to freezing rain, to snow over the course of it's climb. Wind-related holds will also be a major issue. This is just not a practical, consistantly functional, means of transportation. For all of these reasons, Gondola Alternative B should not even be a consideration as a transportation alternative in Little Cottonwood Canyon. Thank you for taking public input.
30535	Noah Lucas	The gondola would █ up the climbs and the trails and the nature in general. Also way to expensive and no one wants it anyways.
30536	cassidy garrett	Maintain existing visual experience, I do not support the gondola
30537	sandy straley	I oppose the gondola since you still need \$55 million to complete the project and I do not want my tax dollars used to support this project. You need to offer better bus service but since you are short of bus drivers apparently this is not an option. . . . what happens when you are short of gondola drivers???? This to me is an accident waiting to happen. The canyons are over crowded as it is and I feel Snowbird and Alta should cut off passes after so many skiers each day. . . save our canyons. The only ones benefiting from this will be the ski resorts and county officials. . . by the way who in UDOT is spearheading the restaurants at the bottom of the canyon who will be benefiting financially from this project. . . I am opposed and I do not want my tax money going to this project -- I am an avid skier and I feel the resorts are over crowded and you are no long catering to local residents who will be fi=llipping the bill. . . top this
30538	Sean McKenna	The gondola is the dumbest plan I've ever heard of. If there's going to be a gondola built, then Snowbird and Alta must pay for the entire cost! Traffic is not a daily problem in the Canyon and the proposal even includes a massive toll on the canyon road, which is obviously the only way anyone would ride the stupid gondola on the 95% of days that there is no traffic on the road to worry about. If UDOT is going to fund a project then it should be a train that is tied into the trax system. Or electric busses and avalanche sheds. Avalanche sheds are a needed feature on the road for safety purposes, regardless of any alternative transportation method. And busses are MUCH cheaper and can be run to match demand. \$500 million paid by tax payers for a gondola for the benefit of 2 ski resorts is insane.
30539	roland gilmore	as a rock climber, back country skier and hiker i don't not support the gondola. it's adverse effects far out weigh any benefit
30540	Teresa Hunt	How dare you even consider spending this much money to benefit such a small part of the population- including the ski area operators??? SHAME ON YOU!!!!!! Spend money on education, food, and housing.
30541	Carol Hansen	I VERY STRONGLY oppose the gondola, as do all my friends an family. I have been a skier and hiker in Utah for 45 years. This is just a giveaway to the resorts who want something new and flashy. It will ONLY benefit visitors with three plus days of reservations at the resorts, not the local skier or the local employee, or someone staying in an Airbnb in the city. It will damage the environment and be a detriment to ALL the other activities (hiking, birding, cross country skiing, climbing, sky watching, etc.) the canyon is used for. The canyons are for ALL the people, not just those who can afford to stay in the lodges and pay for VERY expensive ski passes. I know the developers hope to make a killing near La Caille. Lets NOT let them win again as they usually do in Utah. Preserve this pecious land. NO NO NO on the GONDO!!!!
30542	Neena Plant-Henninger	Gondolas are not good for anyone but the ski resort operators. THis is a poor use of taxpayer dollars. Instead, use the same money to increase bus service through the entire canyon system on the Wasatch front, as well as through the valleys.
30543	Douglas Tollstrup	I am totally against the gondola in Little Cottonwood Canyon. First, where are all the people going to park to ride it? The busy times up the canyons in the winter are limited to 'powder' days mostly. This is something the resorts can handle with parking lots and charging for parking. Buses and making people carpool are much better than ruining the ecosystem up that beautiful canyon.
30544	Allyson Rhees	Please DO NOT build the gondola, and instead look into a bus system for LCC!! The gondola will only benefit the ski resorts, not the actual residents of Utah!
30546	Ethan G	This proposal will take away from what this canyon has to offer. The views and feeling of truly being in the mountains will be gone with a massive gondola going straight through the middle of the canyon. Not only that, but amount of land/nature that will be destroyed due to construction and movement of materials in and out will take generations to recover and never be the same. There has to be other solutions to controlling traffic; increased buses, carpooling, making a canyon pass like Millcreek canyon. The environmental impact this project will have will be an outrages. Please reconsider, find different options, and do not ruin the beauty of this canyon.
30545	Paul Weiss	My main concern is that the gondola will serve only the ski resorts. The ski industry future is bleak at this point and this seems like too much money to spend just to benefit the ski resorts. Expanded bus service would be more flexible and would better accommodate back country skiers in the winter and hikers and bikers in the summer. Either option will require expanded parking at the mouth of the canyon. Also, it does not appear that any other options than these 2 solutions were really considered and evaluated.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30547	JoLynn Miller	I have concerns about the Gondola project. I love our beautiful canyons and believe they should be protected. However, I know the way things seem to work in our state, the ski industry will win and push forward the Gondola. Therefore, I believe it should be funded by the ski resorts it will benefit and users of the canyon, not through tax dollars. The airport was able to build the new airport without tax dollars, the ski industry should be able to do it as well.
30548	Don Condie	I believe that we are making political choices or being moved by poor information. This Gondola option is a very bad idea. It will be a limitation to individuals that can use our canyons. It also places a issue in emergency evacuations. If we are truly looking to not limit who can go up to the canyon, we should look at busing. The cost is far less, and can be effectively and efficiently used. Gondola's would make it far more expensive for families to enjoy the beauty of our canyons. Plus the costs are ridiculous when compared to other options. I am looking to protect our canyons, but I am not looking to limit who can access them.
30549	Gwyn Pleatman	I am a part of the climbing community in Little Cottonwood Canyon and I strongly disapprove of the gondola because of the destruction and construction of the gondola will cause many iconic boulders all along little cottonwood canyon to get destroyed.
30550	Trevor Banks	The gondola will be destructive to many of the climbing areas that inhabit the area, which is definitely a negative. This is accompanied with the fact that the bus parking lots will need to be expanded anyway during construction which makes it an unwise decision. I think actually incentivizing the use of the busses is a better option.
30551	Robert Lentz	<p>I do not believe that the gondola proposal is a workable solution. (Not enough capacity, not enough stops, not enough incentive for its use.) I believe that the best solution for the future is to limit vehicular traffic in the LLC roadway to (frequent) bus service, commercial service vehicles and residents. This would allow users to have a steady stream of buses to get in and out of the canyon without expanding the roadway and negatively impact the environment. A large parking lot at the mouth of the canyon would be needed. Do not allow day users of the canyon to drive in at all. This will keep the road clear for a squadron of suitably equipped buses to traverse the canyon.</p> <p>Thanks for considering my viewpoint.</p>
30552	Kaerli Christensen	I am very displeased with the gondola plan in Little Cottonwood Canyon, primarily because of the irreversible visual and environmental impacts on the canyon and watershed waterflow. I believe an upgraded bus system, particularly one that involves electric buses would be a fantastic way to preserve our beautiful canyon for generations to come.
30553	Natalie Martins	This Gondola ideal is absurd. The price tag is way too high, and the ROI for the average Utah taxpayer is zero. A billion dollars spent to solve a problem that only exists for approximately 11 days a year? Meanwhile, there is no true east/west corridor in SL valley which is a problem everyday! I understand that tourist come in and bring money to the state by using LCC, but they still come now knowing traffic will be an issue. What's to say that more will come to help compensate for the money towards the gondola?
30554	Mike Powell	I object to the construction of the gondolas in Little Cottonwood Canyon. To pollute the mountains sides, both on ground and sky view is a disgrace to the natural beauty. In addition, the enormous bill from this project is not appropriate and these funds would be more positively impactful to be appropriated to another solution or even other more worthwhile causes. This is why I object to this project.
30555	Sarah Alicandro	No Gondola! So many people use the canyons besides just resort skiers! Public transit can work if it's prioritized and adequately funded!
30556	Carmen Lecluyse	Little Cottonwood canyon should not have a gondola. It will only carry 20 percent of the traffic into the canyon and it will alter the view of the canyon and destroy many rock climbing spots and other natural areas. A better solution is to make it a toll road and increase bus flow.
30557	Ima Hendricks	I truly believe this is the only option as we used to have our home in Butlerville.
30558	Magali Lequent	<p>To whom it may concern, the proposed gondola would have tremendous negative impact on the environment of little cottonwood canyon, its wildlife and most of its users. It is an extremely expensive solution that would only benefit a few wealthy individuals and 2 ski resorts, it is absurd that one top of the deterioration of this beautiful canyon, it is tax payers who would have to pay for this. An improved transit system is a far superior solution, costing less, more flexible to accommodate many different users and would have the advantage to possibly alleviate traffic not only on LCC road but much farther back, on Wasatch Blvd and 215, unlike the gondola who would still require thousands of users to get to the gondola base. Or get an bus in addition, has that requirement been accounted for in the 500 millions price tag?</p> <p>Please revisit this decision and select a better solution that benefits more people and costs less.</p>
30559	Aes Violet	The Gondola options presented would be detrimental and not cost effective to the desired goal. A better alternative would be improving bus systems across the valley and state, and use those improved busses to ferry people up and down the canyon to ski resorts when necessary. Adding a bus lane, or making the canyon road bus only, could vastly increase the rate at which busses could get there and back without drastically changing the surrounding areas for gondola lines and massive, unnecessary parking lots if the valley has good enough transportation to not need to park there in the first place. The widening of Wasatch Boulevard also does not need to happen if there is improved public transportation within the valley, not to mention the myriad of benefits that come with improved public transportation services.

Comments on Little Cottonwood Canyon Final EIS

30560	Barbara Straley	<p>TOURISM & SKIING are big to UTAH'S economy -</p> <p>The Gondola could kill tourism for the Little Cottonwood resorts!!!! What tourist is going to plan a ski vacation to Utah where you, have to carry your Skis boots & poles, & suitcases all over the place? With this Gondola plan they will have to; Rent a car to park at the gondola so you don't have to pay the toll,</p> <p>OR</p> <p>Take Trax to a Bus, Bus to the Gondola base. Then You continue shleping your ski equipment, suitcases, From your bus or your car to the gondola base. Once at Snowbird if you are staying a Iron Blossm (the first condos in Snowbird resort)</p> <p>You have to take your skis, boots, poles, suitcase, through the lobby, down a level to walk across chick-a-dee slope, though the tram building down a floor, Through 2 parking lots and a along a short road, past the tennis courts, than finally into Iron Blossom lobby, up the elevator to your room.</p> <p>Now pictures doing that either arriving at the airport at 7:30 a.m. in the morning or at 10:30 p.m. at night, and having to do that in the dark of night or while cars and skiers are arriving to ski for the day.</p> <p>Wouldn't you rather GO to - Vail or even Vermont?</p> <p>Not to mention the beauty of our one of a kind canyons. being ruined and unsightly.</p> <p>Taxpayers have to pay for the gondola, then have to pay to use it???</p> <p>Question about cost of operation. Is this another "Great Salt Lake Pump" in the making (only part time use). WHY would we spend \$550 million dollars on a project that is only used 6 months a year? AND Where are they going to store the gondola cars when it's not in use??? 16 miles(8 miles each way) of gondola cars would need to be removed and STORED if not being used in the summer.</p>
30561	Kaitlyn Platt	<p>The gondola is being advertised as a "traffic solution." However the EIS says that the gondola will not decrease traffic in the canyon. The effect of the gondola is only to increase the number of people who reach the resorts. It is therefore not a solution to the problem, and should not be advertised as such. This increase in people at the resorts only benefits the resort companies. Why would the people of Utah pay for the most expensive gondola in the world when it won't reduce traffic and will only increase profits to two private companies. Since the these companies are the only ones who benefit, they should be the ones to pay. Us Utahns have other uses for our tax dollars. Other roads to fix, schools to fund, and a real homelessness problem that needs more public funding. It would be irresponsible and unethical to spend so many tax dollars to make a couple private companies richer.</p>
30562	Elizabeth Anderson	<p>To whom it may concern,</p> <p>I am a salt lake county resident. I am an avid rock climber and skier and spend considerable time in Little Cottonwood Canyon. I am concerned about the environmental impact as well as the impact on rock climbing that the proposed gondola would create. I think there are also other/better options that will have less effect on tax payers. I truly believe that residents of the salt lake valley will not use the gondola and that the gondola will be for tourists almost exclusively. Please consider other options. The gondola is a bad idea.</p> <p>Thanks,</p> <p>Elizabeth Anderson</p>
30563	Peter Westman	<p>If Snowbird wants a new lift they should purchase land and pay for it. This is not a transportation solution. It's corporate welfare. Expanding the road and bus service to meet demand is a proven solution and the only sensible way forward.</p>
30564	Peter Westman	<p>If Snowbird wants a new lift they should buy land and pay for it. This is corporate welfare. Not a transportation solution. Improved road and bus service is the only sensible option.</p>

ID	Full Name	Comment
30565	Matthew parsons	<p>My family of 4 moved to Cottonwood Heights 18 years ago to enjoy the Wasatch. We have had a snowbird season pass every year and use the other dispersed trailheads weekly to hike and backcountry ski.</p> <p>We oppose the gondola as a transportation solution in favor of snowbird/Alta parking systems, tolling and increased bussing.</p> <p>The Gondola is a tax payer funded gift for 2 resorts to hyper-pack their resort when their parking lot is full.</p> <p>But the reality is that with Snowbird and Alta Parking reservations the traffic "problem" has largely gone away the past 2 years. We do not need a Gondola to over-fill the resorts beyond what the parking lots have held for years. It is already over-crowded and unpleasant enough to ski at snowbird when the resort is full. Tax payers don't need to pay \$550 million and \$4 million a year to pack 2 private resorts with extra people.</p> <p>90% of the ski days don't need another transportation "solution", and gondola fixes nothing in spring, summer and fall when the canyon is actually busier.</p> <p>Snowbird and Alta just need to accept that a few days a year there will be a storm and a road closure and people can't make it up to the resort that day. Nobody is going to the backcountry trailheads on these days either. Tax payers financing a gondola to 2 resorts that is only needed on a relatively rare storm day is not the solution we need.</p> <p>It does not address the other trailheads and parking for backcountry skiers/hikers/climbers.</p> <p>It will bring the resort crowd, traffic and congestion into our neighborhoods. No wonder the town of Alta, Sandy, Cottonwood Heights and Salt Lake are against it.</p> <p>Why are we using \$550 million tax-payer dollars and \$4 million/yr for a tiny subset if Utah's population when this money could fund something that benefits more people in need with more dire problems than not getting to go to Snowbird/Alta when the canyon closed due to an avalanche?</p> <p>Please consider the unmeasurable downside: a huge Gondola will be a total eyesore for one of the most beautiful canyons most people have ever seen. This is why we live here .</p>
30566	Anna Skinner	<p>Please consider other alternatives to the gondola. Parking large amounts of vehicles at the bottom of the canyon is going to congest our local streets and neighborhoods in Sandy.</p>
30567	Jessica Donigan	<p>Building a gondola as outlined in the proposal makes absolutely no sense. This gondola only serves to be a financial benefit to Alta, Snowbird, and contractors. Little Cottonwood Canyon (LCC) is enjoyed by many during the entire year, not just the winter months. A gondola that only operates in the winter months would be a complete waste and act merely as an eye sore for the majority of the year. The proposed areas for the towers are home to classic boulder problems (rock climbs) that are world renowned. Again, skiing is not the only thing people enjoy doing in LCC. The benefit the gondola would have on the environment is nominal. Why would anyone pay more money to ride the gondola when they would still have the option of driving up? The car traffic would likely be decreased insignificantly. The environment would be better impacted by making carpooling or busing mandatory. Increasing bus access would be a much cheaper option and the road would not need to be widened if on busy days you were either required to have >=2 passengers in the car or ride the bus. Let's find an option that benefits the residents of Utah, not corporations.</p>
30568	Madison Hickey	<p>Born and raised in Cottonwood Heights, UT., I feel immense gratitude to have been able to frequent Little Cottonwood Canyon in each phase of my life. From learning to Ski with parents and grandparents, to forming an almost addictive love for hiking in my teen years, to now raising my own daughter to love LCC as much as I do.</p> <p>The images of gondola towers in LCC bring me great sadness. I see so much of LCC's wonder and solitude being lost to this permanent and invasive "solution". I feel it would be an unforgiveable mistake to resort to such extreme measures without first sincerely attempting to resolve the transportation issues in LCC with less extreme solutions. It is imperative that alternate transportation options such as busses running on a timely schedule and with ample routes be available. It is also imperative that a solution meet the needs of more than just the individuals visiting resorts.</p> <p>As an individual who utilizes LCC for far more than the resorts, I do not feel that a gondola would be a solution for myself or my community at all.</p> <p>I urge you to consider the voices of our community who oppose the gondola as the use of our tax dollars and the future of Little Cottonwood Canyon.</p> <p>- Madison Hickey</p>

30569	Scot Morgan	<p>I have never seen such a biased and snobby report. If this was a business proposal it would get you fired. The lack of supporting documentation for UDOT's decision is beyond comprehension. The facts and timelines point to collusion between UDOT and Snowbird. It does not address the needs of parking needed for recreation at the multiple access points throughout the canyon.</p> <ul style="list-style-type: none"> - There is no computer traffic simulation of the traffic flow impact of the Gondola base camp to canyon residents. - Where is the public opinion comment response summary showing the number of comments for and against a Gondola? - Where is a public opinion survey? Which would show the lack of public support for this boondoggle. - Josh Van Jura and UDOT and Snowbird will be sued. - No real alternative solutions proposed. <ul style="list-style-type: none"> o Is a 20-minute drive up the canyon on warmed conductive concrete roads that don't allow snow accumulation and snowsheds in avalanche areas with no need for snowplows salting the roads a better idea? o No salt better for the environment <ul style="list-style-type: none"> - Study missing computer simulations of Snowshed additions. - Study missing computer simulations of fixing the three traffic light choke points into Little Cottonwood o New tunnels/bridges accommodate left turn traffic-flow without stopping traffic. (particularly important for outflow traffic at Wasatch Boulevard onto 210 and down canyon traffic onto 209) - The insanity of lugging skis, boots, poles, backpacks filled with helmets, gloves, goggles, neck warmers and a cooler with lunch and snacks in your arms, standing in line for 30 minutes for the hour Gondola ride up the canyon and then the 10-minute hike to a lodge or lift. What if you just flew in with a ton of luggage? o That means Gondola riders will take more than 3 hours up/down the canyon to ski plus the drive home time. This is not a viable solution.
30570	Alexandra Glass	<p>This gondola is not the solution we want or need. As a life long resident of Utah and skier I understand that we need better transportation solutions to get up to our amazing resorts. I think using a fleet of buses that leave maybe every 15 minutes would be a much better solution. A gondola is intrusive and ugly and will ruin the pristine nature of big and little cottonwood canyon. This idea was clearly born of capitalistic and business oriented ideals which do not represent the majority of the people who utilize these canyons both in the summer and winter. It would truly be a stain on our gorgeous nature and canyon skylines. There are better solutions for the canyons traffic that do not compromise the beauty of our natural places. Please don't ruin our canyons. Thank you.</p>
30571	Jennifer Sonntag	<p>The Gondola does not serve the residents of Utah but Utah residents will be the ones who end up shouldering the financial burden if it is built. The HUGE impact to the pristine canyon visually and environmentally is an irreversible price to pay for the singular and short sighted goal of getting skiers to the resorts faster on the increasingly fewer snow days. I strongly oppose the building of a gondola that serves so few with great costs for many. The gondola doesn't serve the dispersed user that wants to access the trailheads. The gondola only serves the two resorts and will ruin the beautiful vistas of the gorgeous little cottonwood canyon. There are other solutions that can be implemented more quickly - that also have minimal impact on the land and the skyline and the taxpayers pocketbooks.</p>
30572	Stewart Vassau	<p>I oppose the Gondola. It is equivalent of paying tons of money to having a Massive UDOT Snowplow parked in front of your house everyday for the rest of your life for the (maybe) 10 days a year that you might need it. Sounds ridiculous? Yep the Gondola is a very very bad solution to a 10 day a year issue. I support the use of bussing, tolls and snow sheds.</p>
30573	James Macfarlane	<p>NO GONDOLA! Yes to busses, or tolling. Don't ruin the pristine LCC!</p>
30574	Juanita Sonntag	<p>I am 91 yrs old and love LCC - please do not ruin the canyon but building a gondola - it will be an eyesore all year long. I don't think the canyon should be damaged just because skiers want to get to the resorts faster. Thats just impatience. People need to learn patience. And a taxpayer I don't want my taxes spent on something that only serves a few amount of people. Short sighted. Do not build the Gondola</p>
30575	Kathy Olsen	<p>I continue to oppose the gondola option, since it is my dollars that will be paying for it and I will never be using it since I don't ski any more and rarely ever travel up the canyon. The ski resorts in the canyon should simply put a cap on how many skiers come up the canyon through a reservation system, and require parking reservations or bus transport for all skiers. The canyon will not be more beautiful when the gondola is built, and that makes me sad.</p>
30576	Cindy Poole	<p>As an active hiker in this canyon a gondola does not make any sense for the few days the traffic is heavy during the winter season.</p>
30577	Mark Lehmkuhle	<p>I support extended bus service. The gondola is a waste of tax prayers money and does not consider winter travel outside of the ski resorts nor does it consider the impact on the beauty of the canyon.</p>
30578	Devan Sachs	<p>Pay the bus drivers more so there are enough buses and build a bigger parking lot at the base if needed. Seems like a much cheaper solution and better use of tax dollars. Corruption and money to the already wealthy is clearly behind this...do the environment and Utahns an obvious respect and not build this eyesore :(</p>

30579	Matt Corso	<p>This is the most absurd solution. Salt Lake has done a fantastic job of ruining it's landscapes by shaving off pieces of mountain for profit (mining, etc.). Please don't do the same so that people can go skiing more easily.</p> <p>If Alta and Snowbird want a solution that makes them more money, they can invest in a parking lot solution at the base of the canyon and have shuttles that operate solely on those canyon roads. Shuttles that take 10-25 people per trip, shuttles that run non-stop throughout the season.</p> <p>If there is an avalanche that prevents access to the road.....then so be it! That is what happens on canyon roads! When the snow is cleared, the shuttles start moving again.</p> <p>Spending \$600m on an 8-mile gandola is crazy and the people that LIVE in Salt Lake DO NOT want it. This only benefits tourists on a weekend or weeklong getaway. Get this ish outta here.</p>
30580	jan crable	<p>The approval of the gondola project makes me both sad and angry. Why would the citizens of Utah pay for the convenience of a handful of skiers on a handful of weekends? Why destroy the natural beauty of the canyons when other options have not even been considered? Please please take the millions of dollars and instead of using them to help a few use them to help the many. Use that money to fix the Great Salt Lake problem which will inevitably kill us all as well as billions of birds throughout North America. Why is Utah the most frustrating place on earth?</p>
30581	Aley Lambert	<p>My name is Aley Lambert and I've lived in Sandy for three years. It didn't take long for my husband and I to quickly fall in love with Little Cottonwood Canyon given its beauty and all it offers recreationally. We've shared many, many special moments together in that canyon. My love for LCC has only grown with the addition of our one-year-old daughter, who I take hiking with me often. It's been a place of great healing and a source of joy for me as a new mom. Given my own adoration for LCC, I'm not naive to the fact that many others share my love for spending time in that sacred place. I understand UDOT needs to implement a better traffic and safety solution in this canyon. However, I was upset, and even more so deeply saddened, when I heard UDOT's decision to move forward with the gondola "solution." First and foremost, it seems like an irresponsible use of taxpayer dollars (that's a lot of money!!), especially considering it largely benefits just a couple of for-profit businesses. From my understanding, UDOT would charge families to use the gondola. If that's the case, I quite frankly don't think we will be using the gondola since budget is top of mind for our young family. More than anything I'm disappointed this expensive gondola including the steel skyscraper towers will ruin the breathtaking views of our LCC. God's magnificent creations like our favored canyon cannot be rebuilt or fixed in years to come. It is our responsibility to take care of our beautiful earth, especially in our own backyard. Our canyons are world renowned for a reason. Let's keep it that way.</p>
30582	Stephanie Griffin	<p>As a resident I am not in support of the gondola plan and how it will impact the canyons we like to hike, and climb in. DO not support or move forward</p>
30583	Cody Lutz	<p>My main concern about the gondola is the absence of other stops. It seems to me that enhanced bus or cog rail that follows the historical alignment along the creek and integrates into the existing transit system would better serve the needs of all users and destinations year round, not just resort visitors.</p>
30584	Laurie Bryant	<p>I see no reason why the public should finance a very expensive transportation system that apparently will benefit only skiers and owners/operators of ski areas. This is a an idea that should not be made into reality. There certainly are other options to reduce traffic in the canyon.</p>
30585	Taylor kasteler	<p>would much rather have an alternative than the gondola. It's going to ruin our outdoors</p>
30586	Jessica Scheetz	<p>This sounds exactly like pure greed. Greed from UDOT and greed from ski resorts. There are many cost efficient ways to better the canyons, the gondola being the most flashy. Utah has consistently been one of the worst ranked education states in the nation (bottom 20%, paying teacher horribly and including health care as a part of "salaries". Perhaps spending \$600 million on a gondola that we already know is only to benefit private companies and not the local community.</p>
30587	James Murphy	<p>I am not in support of the Gondola.</p> <p>Given the amount of opposition, it's hard to understand how this is the preferred solution unel am oppose the Gondola.</p> <p>Given the amount of opposition, it's hard to understand how this is the preferred solution unless there is some illegal or immoral back door dealing. With no mandate to use the gondola, people will continue to drive up the canyons, changing nothing and costing millions of tax payer dollars. There are plenty of alternative solutions with much lower impact. Why not increase bus service and require everyone rides the buss from 8 to 11 am with car traffic allowed after. Traffic is only ever congested for a short time at the beginning and end of the day, mainly on power days. Why not mandate carpooling, or impose a pass system like national parks. The towers will also leave a hideous mark on the otherwise beautiful LCC and destroy climbing destinations. This is a terrible solution that will only benefit two for-profit organizations.</p>
30588	Whitney Durham	<p>This is complete [redacted] especially with what has happened with UTA reducing bus access. It is really criminal. The people promoting this should be prosicuted.</p>
30589	Steven Jackson	<p>I prefer the gondola because I rode a similar gondola at Tahoe and felt that it moved people efficiently, quickly, and was environmentally sound.</p>
30590	Monica Allen	<p>I have been following this story as well as I can, and all of the comments I've seen have overwhelmingly been in favor of expanded bussing over the gondola. I don't understand how the decision could have gone the other way unless no weight was given to the public who actually use the canyon. The cost is ridiculous for something that doesn't even solve the problem. Why only have a system that takes people all the way to the top of the canyon when many people only want to go part of the way? The buses aren't just the cheapest option, they are the most flexible and easiest. It can't be justified from a cost, ease of use, nor public support perspective. Can't we save some money for many of the other issues facing residents, since we are the ones paying for it?</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30591	Zayd Ma	The gondola is not the right choice for the vast majority of utahans and tourists. The gondola is nothing more than a \$500M taxpayer gift to only two ski resorts. An enhanced busing system with avalanche cover and no road widening is the right choice. Busses give flexibility to provide service to other canyons and attractions (e.g. Olympics), they provide access to intermediate stops, and are quicker to implement in a phased fiscally responsible way. If forcing ridership is a concern, UDOT can charge \$100 a car or something exorbitant just to enter the canyon. Lastly, willfully ignoring the clear public stance in favor of busing reeks of political corruption.
30592	Holtan Siegal	No to LCC destruction!
30593	Linley Baker	I do not want a gondola at Little Cottonwood Canyon. I do not want an extra lane on the road either. I think that parking space reservations and lodging reservations take care of the problem, without damaging the natural beauty and without spending millions of dollars.
30594	Jeff Haymond	What happened to the increased bus service option? UTA just announced bus service reduction. This is an unacceptable choice. It will increase canyon traffic and decreased parking. I am an employee who rides the bus and now I will not be able to rely on the bus and will have to drive and park. Add more busses especially on weekends and holidays. Busses should be the priority now!
30595	Carolyn Freeman	It will destroy the beauty of the canyon. It only serves the few months of the ski season. Why should we pay so much to benefit only the skiers. All the towers will damage the eco system.
30596	Abbie Packard	The gondola option will not be good for our canyons. This man made attraction will decrease biodiversity and ruin the natural beauty of the canyon. We should instead opt for a fee system to encourage carpools.
30597	Kirk Nichols	<p>U-DOE LCC EIS comment - KIRK NICHOLS</p> <p>Thank you for the opportunity to comment and for all the diligent work in creating an engineering study of the Little Cottonwood Road. I look forward to your Supplemental EIS with a reasonable alternative.</p> <p>Starting with the Purpose and Need statement, the actual purpose and need was to study the environmental effects of putting more people on the public lands throughout Little Cottonwood Canyon. It is irrational to think that putting more people more efficiently onto the public land would have no significant affect outside the highway right-of-way. Almost no one will stay only on the highway right-of-way. This study failed to study the very effects on the human environment that NEPA requires to be studied. To limit the area of study to only the roadway is irrational and does not meet the connected, direct, and indirect impact studies required by NEPA for this proposed action. In the court case of Thomas v Peterson, the finding was that the Forest Service could not limit their EIS to the road only, but must also study the effects on the environment throughout the area that would change due to the creation of the road. This U-DOT LCC EIS is inadequate to meet the requirements of NEPA.</p> <p>This EIS studied only the engineering in the roadway and not the purpose of the engineering, which is to put more people, outside the roadway, onto our public lands. No adequate visitor effects or visitor management study was included in this EIS as required by NEPA.</p> <p>If the engineering of the roadway increases the efficiency of traffic and reduces congestion, then more people will come to the canyon. This means more people will go hiking, picnicking, camping, mountain biking etc. throughout the canyon, not just more skiers at the ski resorts. The entire canyon from rim to rim will become more crowded and more impacted -- out on the trails and at the recreation destination sites. The effects of this increase in visitor use outside the roadway were never studied, even though NEPA requires that this increase, caused by the proposed roadway alterations, be studied as connected to the road alterations. Significant impacts on the environment will occur throughout the canyon; both direct and indirect impacts will be the result of roadway and transit (gondola) alterations.</p> <p>This EIS looked only at estimated population growth as the source of the expected increase in the volume of visitors to the canyon. This EIS never took a hard look, as required by NEPA, at the latent demand for the canyon recreation in the population already living nearby. Never studied was whether the people already crowding the canyon would come more frequently if they perceived that there would be no waiting on the roadway before getting to their destination. A small straw poll found most canyon users would come almost twice as often if they thought there would be a low risk of congestion in the canyon.</p>
30598	John Mendenhall	NO to the Gondola!!!
30599	Anne Mallon	We do not need to spend the money on a gondola. I believe we should have reservations for parking, charge for parking and more bus options. I ski Brighton, Solitude and Alta and I believe discounting for carpooling is a good option. I don't believe non skiers need to pay for a gondola and I believe it will destroy the environment and be unsightly.
30600	Giselle Slotboom	Dirty trick, promising this faded plan with enhanced bus system and then slashing the UDOT skibus. Just pay the skibus drivers good money from this project to have the bus run more then the 15min interval. Cutting the bus system is outrageous, dirty and definitely not what the public wants!!!! People rely on these busses to ski skiing, people have already bought ski passes and won't be able to get up there.
30601	Samantha Gold	Please do NOT build a gondola. It doesn't solve anything. Toll the road, increase electric bus frequency, raise bus driver pay, build some sheds over the roadway in areas at risk for snow slides. A gondola has too great of an impact on the canyon for too little of an impact on transit and I'm shocked we even have to debate this. No gondola.
30603	Alyssa Richards	The Gondola is a short-sited, taxpayer heavy, outrageously expensive solution to the large amounts of traffic up Little Cottonwood Canyon. More emphasis needs to be put on increasing bussing in and around the high traffic areas in the canyons. Just like the gondola, the buses will not be able to run during high avalanche danger conditions. Unlike the gondola, the buses will not be an assault on the incredible views in Little Cottonwood. Focusing on bus infrastructure in the canyon will cost significantly less to taxpayers, be a more environmentally sustainable solution, and can be accomplished in 2 or more years. The gondola solution to Little Cottonwood Canyon will not be completed in a timely manner to solve this problem now, but increasing busing to the canyons will be a very good start.
30607	kyle williams	No gondola! Emphasize buses. Charge large parking fees at the resorts, with all funds going to support the busses. Valley parking can be contracted with office parks and schools that are empty on weekends.

ID	Full Name	Comment
30614	Gene Miner	I don't believe state tax monies should be used to subsidize the ski industry. The gondola will mar the beauty of the canyon and is subject to avalanche damage as was the case in the destruction of Bridal Veil Falls.
30618	Clark Baron	I support the decision to move forward with the gondola and to use the bus system during funding and construction. Good alternative!
30619	Keane Horner	I previously supported, but now oppose the gondola because it does not seem to be a fully vetted option. Namely, the infrastructure around the base station seems to be inadequate and will result in the traffic jam being shifted from the canyon to the area around the gondola station. While this is a moderate improvement, sitting in traffic is still sitting in traffic. If I lived anywhere near that station and it goes up as it's currently proposed I would be irate. Additionally, it also seems as if the gondola has been the "anointed choice" from the start and other options have not been given the same consideration. Specifically, I feel as if tolling the canyon was not ever considered a viable alternative, which is disappointing as it has been successfully implemented in Jackson, WY for years now. I'll acknowledge that Jackson's situation and geography are not the same as Little Cottonwood, but I feel like there are some very real takeaways that can be applied. I also worry that by rubber-stamping the gondola the ski industry as a whole will lose public support in Utah. This is reminiscent of a bad "public funds for stadiums" deal. Want an example? Read about the Miami Marlins fleecing Miami-Dade county for what will eventually amount to \$2.4 billion dollars back in 2012. That bad deal soured public officials nationwide from supporting any kind of public funds for stadiums (even when it was a good deal) for years after, and I worry the same thing will happen between the ski industry in Utah and the general public, especially those that do not ski. The ski industry may "win" this one issue at the cost of general public support for years to come.
30620	Patricia Lake	I sincerely hope you will give up your idea of a gondola in Little Cottonwood Canyon. I have lived in the area not far from the canyon for my entire life and I think the gondola will ruin the scenic beauty of the canyon. Skiers should not be the only consideration in this matter. There are those of us who do not ski but who just like to enjoy the beauty of the canyon especially in the summer and fall and our desires deserve to be considered, too. Skiing isn't all there is to life!
30621	Jeff Winegar	Not sure if my last comment went through but this is a humongous unethical mistake. Half \$1 billion-\$1 billion to profit two companies. We have school districts wanting to raise taxes. Teachers that are underpaid. And you want to drop that much money on a project that people will not ride. The ride it once for fun and then never ride it again. I would never take a half hour gondola ride when I can drive my car up with all my kids with all the food and warm supplies. Why would I paid a ride that when I can Simply drive my car up. Locals can't afford to ski at Alton Snowbird anyways their prices are so expensive. They're profitable enough to put in parking lots and parking structures. Why did the taxpayers have to put in a half a billion2, billion \$ infrastructure for profitable companies. Completely an ethical. They have a road it works and allows them to be incredibly incredibly profitable. Do not spend my tax dollars on the field project like this
30623	Dan Ernst	<p>reading and listening to the available information and understanding there is a lot of emotion that has been conveyed, I want to give my perspective.</p> <p>I see the gondola as the preferred alternative for a variety of reasons.</p> <ol style="list-style-type: none"> 1. Reliability - whether for weather, road conditions, accidents or sure number of guest wanting to ascend the canyon, there is a higher probability of reliability. 2. Environmental - having the alternative - will provide a means to take cars off the road - less hydrocarbons. Also note each time there is an accident involving cars in the canyon, likely resulting in the release of contaminants; coolant, battery acids and lubricants that can flow into SL County water system. 3. Financial - The bill is steep, but what is the cost to the public. The ski industry and the tourism that has occurred as a result of the canyon has been a positive impact upon state, county and the communities serving this canyon over the years. Adding the gondola, would it preserve and expand the opportunity to grow the revenue \$'s in light of limited parking already in effect within the canyon. Another way to promote the state and community. Will the cost of investment be offset by expanded tourism growth with an updated and progressive view on how to better service the canyon and community via a gondola. 4. Historical - My first visit to Little Cottonwood Canyon was 1960. From my recollection, Alta was a small and quaint community served by a small and limited road. There were a limited number of homes and there was no Snowbird. Advance 60+ years and, well, we know what is up the canyon. The impact has been significant and in my mind is a reminder of the impact of growth and the pressures that comes with these additions. As is evident, there is only one way up and down the canyon and that requires a vehicle and there are limits on the number that can travel at any one time. And when there is event that makes the road impassable, well everything comes to a halt. I'm not a fan of expanding roads, adding additional hydrocarbon driven buses. Weather patterns are changing and in my mind, doing nothing or adding lanes for buses will only contribute and accelerate weather change. <p>Change is difficult and even more so when emotion is added. I look at the addition of the gondola and that of being a pioneer leader (see what we did and are doing) that serves the community. If I recall, there were a lot of vocal naysayers concerning TRAX. I disagree it is only serving two entities. I see it as servicing the entire canyon (all businesses up the canyon), the entire skiing community (businesses and local community) as well as the service community (hotels, restaurants and entertainment).</p>

ID	Full Name	Comment
30622	Erme Catino	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean" the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium" parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users. 3. Tolling is supposed to be part of the EIS but there has been little to no discussion about it.
30624	J Whittaker	<p>This proposal is so unfair to a large majority of Utahans and Salt Lake County residents.</p> <ol style="list-style-type: none"> 1. Snowbird, Alta and tourists should pay for this not the taxpayers. 2. Some Engineers agree that this project with it's tall towers and long spans will cost far more and may not be able to withstand earthquakes and never has been attempted before. 3. The mayor of Alta is against it because they will need to build their terminus 4. The legislators are again associated with developers who want to develop large unnecessary projects such as the inland port, all at the taxpayers expense, many of who don't live in the valley. 5. The other alternatives make much more sense and will be accessible to all those who wan to use the canyon not just the tourist and the rich.
30625	Alex Perez	<p>Please do not destroy the incredible boulders and walls. This generation and next generation of climbers will thank you</p>
30626	Robyn Larsen	<p>I'm against this. I feel limiting vehicles like they do on lakes woud be much better. Even though less cars you will still have too many people up the canyon.</p>
30627	Andrew Trevenen	<p>Just don't ruin the climbing that is in little cottonwood. There is always many solutions to problems.</p>
30628	Theresa Heinrich	<p>In the past few days we have heard that UTA cannot find enough bus driver employees to man the ski busses this winter. How will UDOT be able to get enough employees to work on the gondola, parking garage & everything that entails a gondola?</p>
30629	Abigail kenison	<p>PLEASE LISTEN TO THE PEOPLE! We don't NEED a gondola. It's not actually going to help with transportation that much. SAVE OUR WORLD CLASS BOULDERS!!! Other generations will never know how incredible these boulders are. It may not seem important to those who want the gondola but that's because they have not experienced the amazing boulders for themselves.</p>
30631	Daniel Cole	<p>Most people are NOT going to take the gondola unless the cost is wrapped into their ski pass. The apparent cost of driving is cheaper, so most people will continue drive. Last season people continued to drive up the mountain, even when told all parking lots were full. We need bus lanes or at least force traffic to yield to busses. Busses should never get stuck in traffic! No one is going to take the bus if it is already packed or they have to wait more than 15 minutes. There needs to be more parking at the base of the mountain. I do not support a toll; the alternatives should be made better. If taking the bus was the best option, more people would.</p>
30630	Cole Arnold	<p>I don't want the gondola it is a very stupid idea</p>
30632	Adam Lane	<p>Please we do not need a gondola. These canyons are used by a lot more people than just skiiers and snowboarders. A giant gondola obstructing views that have been appreciated for ever would be so sad. I love snowboarding but this is not the answer</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30633	Lisa pflugh	<p>I very much oppose the gondola for many reasons. It will ruin a big section of the canyon. Who wants to look at 100 ft towers when you're climbing, hiking or biking? This gondola is far different than somewhere like telluride, where the gondola moves down an open hillside.</p> <p>Even as a skier, i believe that the taxpayer funding of something that is really designed only to help specific businesses is wrong. It will also cost/impact people who want to go up the canyon to recreate without being assessed a big fee. Frankly, I'm also very suspicious of the land being already purchased by snowbird & others. Sounds very shady which isn't unusual for Utah.</p> <p>A good bus solution hasn't ever been really attempted. There needs to be reasonable parking for bus users and we've been asking for direct to alta buses for years. Make the buses quick & easy and more people will ride them. And now, the frequency of busses is being minimized, which seems ridiculous. Paying a good wage to the drivers is certainly cheaper than a gondola.</p> <p>If people are forced to take a gondola, where will they put their gear? Alta in particular has very few spots to store gear! Without a car, you'll have to rent a locker, which is yet another expense. If you don't rent a locker, you have to buy lunch & where will you store extra clothes & gear? Skiing is already a very expensive sport & this will make it more so. Homeowners in the canyon neighborhoods are opposed. Who is for this?</p>
30634	Anna Barker	<p>The gondola will destroy invaluable aspects of the canyon. I support more buses with more bus stops. As well as, increased private vehicle regulations. I think a system similar to Zion NP's busing system would be more cost effective and the simplest solution.</p>
30635	David Haeffner	<p>I am AGAINST building a gondola to benefit 2 private businesses and no one else. The only way the public will stomach spending 1 billion dollars on a gondola is if the gondola offers access to EVERY trailhead in the canyon. This would give great benefits to all users not just winter resort skiers/snowboarders. By giving access to all trailheads it allows people greater access to their public lands, making hikes and bike rides easier to coordinate. You could start at one trailhead and end at another then just take the gondola back to the base and your automobile or bus station.</p> <p>Snowbird buying the base area already probably makes the while transaction illegal now anyways, as they will gain extra advantages because of landownership.</p> <p>Please do the right thing and abandon the gondola proposition. If private companies want to build easier access to their land, then they should submit their own appraisal for NEPA review.</p>
30636	Cooper Stewart	<p>It is beyond absurd that UDOT would REDUCE the bus services that service the canyons, as they have just declared they shall do, while at the same time they call for the gondola to "reduce traffic." If UDOT wants to REDUCE traffic why the HELL are they CUTTING busses??? If UDOT can't find enough bus drivers then perhaps UDOT should raise the salary for bus drivers in order to attract more workers. I refuse to believe that having to increase the budget to pay bus drivers a better wage would be less attractive to the public than a \$600 million taxpayer funded project for Alta and Snowbird ski areas. We want MORE busses and MORE bus routes.</p>
30637	Young Ellen	<p>The research shows that this will not be the solution to LCC traffic issues. It will instead ruin world class climbing boulders and only make the issue worse. This is a tragedy and an obvious play for money when their are obvious better alternatives like increasing public transport that aren't being considered.</p>
30638	Jill Bennion	<p>Why not increase the amount of buses. Have buses that go directly to each of the resorts. Instead of having a bus go to snowbird and Alta.</p> <p>That is the big reason why I don't take the bus. Do not want to waste time waiting for room on a bus. Then having to go through all the stops at snowbird.</p> <p>Parking lot for gondola will be even worse. There is not enough room at the mouth of the canyon to accommodate all the cars. Plus, the roads in that area are all small two lane roads.</p> <p>Gondola and parking garage are a little too late.</p> <p>Should have planned this when the big nursery in that area closed down. Could have used that property for a parking garage.</p> <p>Resorts should also have been more proactive in planning for parking they should be the ones to cover the cost. To have tax payers foot the bill for a few months of use is ridiculous.</p> <p>What is the plan for when an avalanche hits the area? Loss of power and damage to the gondola???</p>
30639	Rashauna Larson	<p>I am a hiker, skier, climber, and lover of the outdoors. I strongly encourage the expanded bus services for cottonwood canyon in place of a gondola system. I'm very concerned about preserving climbing areas that would be destroyed or compromised with the construction of a gondola. I believe the expanded bus system is the solution that will help the majority of people living in the salt lake valley and those visiting. Please continue supporting the expanded bus services without constructing a gondola. Thank you!</p>
30640	Tashi Liebergesell	<p>I don't support this project. I believe that having another gondola would detract from the beauty of the landscape.</p>
30641	Alex Burlison	<p>Please do not move forward with the gondola. LISTEN TO THE COMMUNITY. No one wants this. This is fiscally and environmentally irresponsible.</p>
30642	Esha Mohan	<p>I disagree with the use of a gondola in little cottonwood canyon. It'll ruin the environment!</p>
30644	Ricks Carrie	<p>I do not want a gaundla. Charge for canyon use and charge for parking. Do not build a gaundla.</p>
30643	C A Terry Huff	<p>Please NO gondola. Expand bus service</p>
30645	abraham kim	<p>The gondola is purely a appeasement tool for the wealthy and does not actually do anything to help the traffic. It only services those who go the the resorts and leave out everyone else who uses the canyon for other recreational activities. I believe the best option would be to drastically expand parking at the base of the canyon and run a shuttle bus service similar to how zion national park does.</p>
30646	Malorie Irvin	<p>This gondola will not only destroy wild life habitats but the beautiful areas we have grown to love through climbing and exploration. Money cannot buy happiness.</p>
30647	Robert Anderson	<p>No gondola! Add a parking lot, a toll boot and increase bus frequency instead!</p>

30648	Elisa Wright	It is clear that Alta and the ski resorts matter more then the opinion of the people. So to accommodate the few that don't live here you want to ruin what the citizens want and risk doing damage to the canyon. I really think a bus would be a better option for the few hat come in the winter only to ski.
30649	Lawton Russell	I strongly oppose implementation of a gondola.
30650	Kimbra Cooke	<p>After looking at the proposal to place a gondola up Little Cottonwood Canyon, I'd like to voice my concerns about moving forward with the gondola. I don't believe that using close to 1 billion dollars in tax money to put a gondola up that canyon is a wise use of money. I'm not sure I don't see why other types of solutions cannot be used.</p> <p>Why aren't there more shuttles or buses used? Similar to the shuttles that are used at Zion's National Park.</p> <p>If there are bad winter days, don't allow vehicles that aren't prepared for that types of weather up the canyon-you could have a person in a little booth at the bottom of the canyon that is trained to know whether or not the vehicle can go up the canyon that day. I don't think that Utah has that many horrible snow days that would make it difficult to staff the booth on the handful of days that it would need someone there.</p> <p>Also what about people wanting to use the canyon for other things besides skiing/snowboarding at the resorts. What about those that want to camp, hike, snowshoe? How will they be able to utilize the canyon?</p> <p>It feels as though a hidden select few is going to be making money on the able to install and utilize this gondola, which isn't an appropriate use of public lands and doesn't seem like it lines up with tax payers views. This should be something that tax payers vote on.</p> <p>Putting a gondola up this canyon will also change the beauty of this canyon forever.</p>
30651	Ann Eatchel	<p>I do not agree with tax dollars to pay for a lift to take people to a private resort/buisness. The canyons are only impacted (backed-up) approximately 12 times a year, when it's a big snow storm.</p> <p>Improve the road in the canyon, widen it for a bus lane and make it a toll road.</p> <p>The idea you need this is ran by the private business the resorts!</p>
30652	Hugh Ferguson	<p>It is hard to figure out why a gondola is still being considered and from what I can tell the preferred alternative of UDOT. The only parties that will benefit from the Gondola are Alta and Snowbird Resort. And that will be a financial benefit to the resorts not a benefit to the guest who recreate at the resorts. The quality of skiing will go down with the higher volume of skiers</p> <p>Gondola will increase traffic in the canyon. Because, The traffic created at the parking for the gondola would be much more than the traffic created at the mouth of the canyon where the road splits at the existing parking. Most will still drive up the canyon because of the time and inconvenience of the gondola.</p> <ul style="list-style-type: none"> -No stops at other areas of canyon for hiking and climbing -550 million of tax payers money only benefitting a few, and mainly the two ski areas. -What happens during lightning? - what happens on high wind days and the gondola has to stop or not run.(ie storm days when most of the traffic problems occur.) -next pandemic? no being in an enclosed car together, I guess the same as a bus... - Once done, you can't undo the Gondola. Lots of variables will arise that we have not even thought about. -550 million you know will turn into a billion by the time the project is over. -Spending far less \$ on busses and some road improvements and maybe a designated bus lane between Alta and White pine to incentify busses. - Please take the Gondola option off the table. <p>Thank you, Hugh Ferguson</p>
30995	Bob Jacobs	<p>Yes, I was trying to find out if there was a digital version of chapter 32 available. It's kind of hard to come down to the central office to look at the comments. If there were there was a digital file that we could look at. It would certainly help a lot. My name is Bob Jacobs. My number is [REDACTED] And again, I'm just trying to find out if there's a digital version of the comments that is available for people to look at Bob Jacobs [REDACTED] Thank you.</p>
30653	Denice Hyer	<p>I am happy you are using a phased approach to this process. I am unhappy that a taxpayer funded gondola is part of this approach. The gondola goes to the ski resorts. The ski resorts should be paying for it. There has been no mention of who will be paying to actually ride on the gondola. I'm guessing it will be paid by each individual who uses it. So not only will taxpayers pay for a gondola used benefitting Alta and Snowbird, they will also be paying to ride said gondola. I am opposed to the 2500 space parking garage at the mouth of little cottonwood canyon also. It just moves the congestion further into the city.</p>
30654	chad eggertsen	<p>The gondola doesn't move enough people. The proposed plan only will move a small amount of people up the canyon per hour in comparison to the number of people that go up that canyon. A dedicated bus lane, and more frequent service will solve the problem. Buses are very efficient at moving lots of people. People dont use the current bus because its lack of frequency.</p> <p>On top of that the dedicated bus lane could be used for cyclist. LCC is really dangerous for bikers and it could be made much safer if expanded and would be so much better.</p> <p>As a city planner, I think the gondola is a bad solution and the dedicated bus lane and more frequent service is the solution.</p> <p>YOU AREN'T EVEN GOING TO PROVIDE ENOUGH PARKING TO MAKE THE GONDOLA A FAVORABLE CHOICE</p>

30655	Ilona Roach	I think the cog rail system would be best for long term (100+ years) population growth.
30656	Andy Wirkus	I am vehemently opposed to the gondola proposal. The "Environmental Impact Statement" does nothing to consider the largest resource our canyons have to offer... Pure unadulterated nature. By constructing this gondola you will permanently destroy ecosystems that are necessary to the health of the canyon. Additionally, this proposal is the one most likely to make the canyon less accessible to all but the wealthy elite. As someone who grew up at the mouth of these canyons I can't fathom restricting access to their splendor based on income. There are so many other options that allow continued access while improving the sustainability of recreation in the canyons. I recognize that this is a tough issue and that there most likely isn't a perfect solution, but I also know that the gondola is NOT the solution. From one native Utahn to this organization, PLEASE listen to us and DON'T build this gondola.
30657	chad eggertsen	<p>I am writing to you to let you know that the Gondola is the wrong choice to fix the traffic issues in LCC. I'm sure you receive plenty of money from those two ski resorts but they will not solve the problem. Dedicated bus lanes and increases bus service will fix the issue.</p> <p>The gondolas won't move enough people up the canyon fast enough and will have a drastic impact on the environment. Also the gondola DOESN'T PROVIDE ENOUGH PARKING TO MAKE A DIFFERENCE. NOBODY WILL USE IT IF PARKING IS A NIGHTMARE.</p> <p>The lack of bus frequency is the problem nobody uses it now so if you increase the frequency and the speed at which the bus can move then people will use it.</p> <p>Also the LCC is freaking dangerous for cyclists and this would be great solution for that as well.</p> <p>I'm writing this to you so that you can impact the decision while there is time for you to change it. Listen to your constituents and dont let the gondola go through.</p> <p>Chad On top of that the dedicated bus lane could be used for cyclist. LCC is really dangerous for bikers and it could be made much safer if expanded and would be so much better.</p> <p>As a city planner, I think the gondola is a bad solution and the dedicated bus lane and more frequent service is the solution.</p> <p>YOU AREN'T EVEN GOING TO PROVIDE ENOUGH PARKING TO MAKE THE GONDOLA A FAVORABLE CHOICE</p>
30658	Philip Bartz	<p>\$550,000,000 is a lot of money! Okay, now that I have your attention: Please don't build the gondola. It is destructive and expensive, and it is especially unnecessary in light of the staggering cost of the operation.</p> <p>In the unlikely event of this comment reaching anyone's eyes (besides, of course, the poor sap UDOT tasks with reading through all these complaints, if indeed they care enough to do that much), I invite you, dear reader, to ponder: how exactly do you think UDOT plans to secure \$550,000,000 (wow, look at all those 0's...) in funding for the initial construction, in addition to the \$7,000,000 PER YEAR required for the gondola's operation? Those aren't abstract numbers, funds that UDOT can simply pluck out of thin air. No, this is REAL MONEY we're talking about, \$550,000,000+ of it, earned by and taken from YOU AND ME, hard-working taxpayers from around the state, the vast majority of whom will (a) never know how the ever-increasing taxes deducted from their paychecks are being used, and (b) never in any way benefit from this colossal waste of their money.</p> <p>But you know who does stand to benefit from this? The multimillionaires in charge of the corporations running the ski resorts up canyon, who are throwing all their substantial weight into backing this project, heedless of its monetary consequences for everyday taxpayers like you and me. If they want a gondola to the bottom of their resorts, let them pay for it! It is not the government's purpose to toil away at their construction projects for them; it is not the taxpayer's responsibility to fund it; and frankly we can all see that UDOT's got enough on their plate as it is, muddling their way through the multi-year construction projects on 215 and I-80, in addition to countless other equally dismal and inefficient traffic projects around the state.</p> <p>For heavens' sakes, UDOT can hardly be trusted with our money to fix a pothole. But now it's proposed that they take over half a billion bucks from us to build a big ole ski lift up the middle of Little Cottonwood Canyon to ferry tourists to winter resorts, and no less, resorts you're telling me will be devoid of snow in a few short years? Do I need to elaborate further? If all goes as predicted by the infallible "experts" (who am I to contradict them, anyway?) and the ski resorts are shortly crippled by climate change, then what exactly is the point of throwing \$550,000,000 of our money into an alternate method of transporting people to them?</p>
30659	Stratton Haslam	The gondola is a wildly myopic solution to the problem of traffic in the canyon. Snow sports are not the only world-class recreation offered in Little Cottonwood Canyon and tailoring a solution just to that industry limits the revenue diversification of the state from recreation by residents and tourists for an income source (snow sports) that frankly is already experiencing challenges from Utah's warming climate that will only get worse over time. There are other viable transit solutions being proposed and building the gondola isn't time-bound. Try tolling, mandatory carpooling, expanding mass transit offerings before you cross the Rubicon of the gondola, and you have zero recourse once the damage of building it is done.
30660	Kara DeLuca	This is absurd and not a solution , do not put a gondola in little cottonwood

ID	Full Name	Comment
30661	Braxton Denos	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean" the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium" parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users. 3. Tolling is supposed to be part of the EIS but there has been little to no discussion about it.
30662	Brooke Wheeler	<p>There are many canyons and national parks that deal with overcrowding. Zion implemented a shuttle system that is working well to help protect the canyon, make it more accessible, and keep the natural beauty of it. I am in favor of trying a bus or shuttle system to accommodate the crowds. It would also be helpful to have a timed entry, similar to Arches or Rocky Mountain National Park.</p> <p>The gondola only benefits one group of people and only on a select few days of the year (snow days). The gondola is obtrusive and impacts the canyon for other uses-hiking, rock climbing, biking, and others.</p> <p>Other solutions need to be tested before committing to building a gondola.</p>
30663	Mark McNamara	<p>I support the Gondola proposal as set forth by UDOT. I believe this proposal will have the least environmental impact and will likely be used by the public. Bus options are not desirable.</p>
30664	Alex Temus	<p>Will this impact the climbing areas up the Canyon? I'm not concerned about losing access during construction, but breaking apart the walls with some of the best climbing routes in the state would be detrimental and irreparable.</p>
30665	Nicole Passeri	<p>This gondola is a terrible idea. Not only does it destroy climbing and hiking areas, but it is only a solution for ONE canyon and not even the one with the worst traffic issues! We need increased and accessible bus service and more parking with better security measures for cars (ie security to prevent more catalytic converter theft). This is a cheaper and more environmentally friendly option. ENOUGH with snowbird bullying Utah to have their cake and eat it too.</p>
30666	Howard Fishman	<p>My only issue is tolling. If you are going to implement tolling when the gondola is installed that is ok. But if you are going to implement a toll before hand that is not acceptable. I live in the Wasatch Back. Only ski weekdays when we have dry roads. I am retired over 65 and cannot find others to ride with or ride with me. Alta charges for parking and reservations are required. When I have tried to be a good citizen and use the ski bus the lots are full with folks parked in no parking zones. UDOT has announced reduced buses this winter due to staffing. Many of the people objecting to the Gondola live along Wasatch Blvd and they do not want it to change.</p>
30667	Kellie Monk	<p>The inequity that this project would persist should be enough to push pause on this and try to fully understand the impacts and try finding a solution that will promote transportation equity for all.</p>
30668	Marcus Martin	<p>I support the Gondola B plan. I think it is the best long-term solution for Little Cottonwood Canyon.</p>
30669	Susannah Anders	<p>No to the gondola! The gondola is not the best overall solution for our community! It's prioritizes corporations over the people who actively recreate in the canyon! It will impact climbing and our access, as well as destroy iconic Boulder problems.</p>

ID	Full Name	Comment
30670	Jeff Parker	<p>I wanted to take a quick moment to weigh in on the proposed gondola for LCC.</p> <p>I am an avid skier that skis roughly 75 days at Alta and/or Snowbird and another 20-30 days of backcountry skiing up Little Cottonwood Canyon. By no means would I say I have all the answers to the problem but based on how much time I spend in the canyon I feel that I have seen these problems first hand. And I will tell you that even on great snow years there are only a handful of days that the traffic is a serious problem. So the idea of spending nearly \$600 million of tax payer dollars to fix a problem that might only be a problem 10-15 times a year seems absurd to me. Especially when this problem can be fixed with increased bus service, snow sheds and tolls &/or paid parking. None of which would damage the beauty of the canyon.</p> <p>This hardly seems like a solution for the local skier. This seems like more of a ploy for a select few to make a ton of money at the tax payers expense. I also think that it is being overlooked that 80 percent of Utahns are against a gondola in LCC. Not just skiers that use the canyon, but 80% of tax paying Utah citizens. https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>If the resorts really want to benefit from something like this I feel that they need to move to a full paid parking option. They could even sell season parking passes to their pass holders which would allow them access up the canyon during the winter months. Everyone else would be charged on a day use basis. If you made that amount be something like \$35-\$50/day (if not more) that would significantly cut down on traffic and push people to use the busses. And if there was still a problem, you create a dedicated third lane for bus use only.</p> <p>Keep in mind that this is coming from someone that frequents the canyon more than the average person. So I do understand that it would cost me more to use the canyon but it would be worth it.</p> <p>So please take a minute to think about it, why ruin our precious canyon with these huge 200 foot towers that will only really serve a purpose a few days a year.</p> <p>Thank you!</p>
30671	Maya Parsons	<p>Hello, My name is Maya and I have grown up at the base of the Little Cottonwood Canyon my whole life. I am now 18 and know the impacts of the gondola and how negative they would be to our beautiful environment. The gondola would be a humongous eye sore in the beautiful canyon, as well as make climbing/bouldering areas unusable. You must consider that 80% of Utahns DO NOT want the gondola!!!! When making decisions like this which cost millions of dollars of our taxes, you need to take into account the citizens of Utah that have repeated over and over again that we do not want the gondola. Instead, we want bigger budgets to buses, more bus routes, and make carpooling and ride share made more suggested. Thank you</p>
30672	James Astin	<p>Why is a gondola considered a priority. Little Cottonwood Canyon is only crowded on powder days of which we have fewer each year. Taxpayers shouldn't fund this terrible idea.</p>
30673	McKenna Heck	<p>As someone who enjoys the outdoors and skiing very much, I urge UDOT to reconsider the gondola as their leading solution. Putting gondola parking at LaCaille does not solve Little Cottonwood's congestion. It just moves it downhill. Gondola supporters expect taxpayers to spend nearly \$600 million for a system that directly profits two private companies, benefits less than 7% of Utahns, to solve a problem that happens only a handful of days each year. The gondola is the wrong choice for Little Cottonwood Canyon and an unfair deal for Utah taxpayers. Improved bussing can be explored, and scaled up or down as needed. This will also benefit those interested in going up LCC for a variety of activities/attractions, not just those interested in the ski resorts. Bussing as a solution is scalable, and does not require multiple 100+ feet tall towers scarring the canyon and forever impacting the pristine views. I urge UDOT to reconsider the lasting and irreversible damage that a gondola will have on our beautiful Little Cottonwood Canyon. Thank you</p>

30674	todd s	<p>No to the gondola. Yes to enforcing traction laws all winter.</p> <p>You are talking about spending a lot of money and building ugly towers in a beautiful canyon to solve a problem that only happens a few days a year. I know about the 2050 predictions, but the gondola only has a 30 year lifespan.</p> <p>All of these discussions assume Alta and Snowbird can support a huge increase in skiers on those busy days. They have already hit max skiers on those days. Unless you add acres and runs to the size of the resorts there is no point in increasing the number of people that can get up the canyon. You are just moving the choke point.</p> <p>A major cause of traffic on powder days is cars with the wrong tires. Once you get past the stuck cars the driving gets easy. Eliminating the poorly equipped cars will significantly improve traffic. We need to enforce traction laws every day during ski season. The window sticker program makes it easy.</p> <p>We should get a big sign at the bottom warning drivers when the parking lots are full.</p> <p>The gondola is too slow. The gondola goes 19mph and the road goes 40mph. On most days driving will take half the time of the gondola. A 1 hour gondola ride plus a bus from the park and ride means 90-120 minute trip and standing in multiple lines. I'm not interested in 4 hours of transit time. I'll ski somewhere else.</p> <p>I was told that there are currently 6000 parking spaces in LCC. That works out to about 12,000 people. At 1000pph the gondola will take the gondola 12 hours. FAIL. At 4000pph it will take 3 hours to get the people to the top. FAIL. The red snake is rarely that bad.</p> <p>The gondola doesn't have the speed or capacity to solve the current load. It certainly won't solve the 2050 demand.</p> <p>A road toll won't get the tourists to take the bus. They will pay it and not blink an eye. It will hurt locals. LCC is a Utah resource and we should be supporting Utah residents.</p>
31010	JJ Freedlund	<p>the gondola. You already know that but you'll build it anyway.</p>
30675	Matt Belman	<p>No to gondola Yes to more parking, tolling, more busses</p>
30676	Lucas Drummond	<p>This proposed solution is simply wasting taxpayer money to appeal to the wealthy, without considering the environmental impacts or general community needs. There is clearly 0 consideration of the actual public's opinions, and I'm sure the real decision making is happening between self-serving politicians and corporations who stand to make a profit off of environmental degradation.</p>
30677	joseph canakes	<p>"the highest visual impact" does that mean nothing to y'all? for me, as a climber, skier, trail runner, scrambler etc., having a massive gondola with huge silver ships blocking my views of peaks and ridge lines, will literally ruin my experience. i cannot believe this is the solution... a \$550 million (seriously?) train of silver buckets floating through the sky that i have to see every two minutes while i climb and ski. alllll to help the rich folks make there way to ski 50 days out of the year? absolutely insane and short sighted. beyond disappointed. this project will likely cause me to move out of utah. such a travesty, and that will be looked back with disdain and shame. an absolute joke, every single person involved in this. if people want to recreate and do activities, i'd rather close the road and make people hike/bike their way up. so insane to destroy a landscape forever in order for some wealthy white people to ski in resort. absolute joke.</p>
30680	Judith Warner	<p>forget all the gondola stuff, and just do the other improvements.</p>
30679	John Maz	<p>There is no way the public should be funding any of this. The onus is entirely on snowbird and Alta, who directly profit from any and all traffic in the canyon. Simple solution. While the ski resorts are making profit hand over fist, they should be supplying the transportation. If they can't, limit them amount of dusky and season passes they can sell. Secondly. They should provide, maintain and staff 12 busses each. Each bus should leave from the top and bottom of the canyon every 10 minutes starting at the top of the hour, every hours for the entire ski day, weather permitting. A gondola is not a viable option. Do better.</p>

Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean" the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium" parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.
30683	Patrick Emery	<p>Nobody wants the gondola! We want expanded bus service. Don't destroy our beautiful canyon with a gondola that only runs in the winter. The whole deal reeks of corruption. Your going to do it anyway</p>
30682	Dan Ruch	<p>NO GONDOLA!!! Try tolling and enhanced bus service Plus make the ski resorts pay their fair share of taxes towards such improvements. A gondola is a HANDOUT to the ski resorts and we are a conservative state.</p>
30681	Rick Service	<p>Gondola</p>
30686	Bryan Griffith	<p>I am not opposed to the gondola. I am opposed to public funds for a gondola that only services two private businesses. If it serviced the trailheads and ran all year then I would be more inclined to support it.</p>
30685	Erik Misiak	<p>Having thought a great deal about the future of my life in Salt Lake City and Utah in general, I believe that pursuing the gondola would be a major factor in leaving the city/state. The gondola would show the continued disregard of the my communities best interest and would be a deterrent to living in the area.</p>
30684	Derek Trepanier	<p>I am a heavy user of little cottonwood. As an avid rock climber and backcountry skier, I am primarily accessing the non-resort activities available in the canyon.</p> <p>Building the gondola will destroy a huge portion of what I value in little cottonwood canyon, all so that for-profit companies can make more money. Climbing boulders will be destroyed.</p> <p>The more frustrating part is I dont believe the gondola will actually solve any problems. We need more busing, and more aggressive tactics to keep people out of their personal cars before any real gains can be made. As long as it is easier to drive your car up the canyon people will continue to do it. I dont think any level of tolling will affect this (people are already paying \$160 for single day ski passes).</p> <p>The busing infrastructure at the base of the canyon needs to be improved. The buses themselves need to run more often and more consistently. Additionally the road needs to be closed to traffic, or the parking at the resorts need to be closed. These measures are easier cheaper and faster to implement than a massive infrastructure project.</p> <p>The gondola will be a huge waste of taxpayer money.</p>
31012	Ian Ehrlich	<p>Are you actually going to take the public comments into account? My guess is this is all theater. 90% of the public comments are against the Gondola. The people of Utah do not want it. It doesn't solve the problem of canyon traffic and it only makes things worse.</p>
30689	Jeff Wyner	<p>Since the cost of the gondola alternative is the lowest over 30 years, but the upfront cost (and maintenance?) is the highest, a discounted cash flow analysis over the 30 yr period for each of the alternatives should be completed if it hasn't already. Also, the gondola alternative would likely increase user traffic. To maintain the skier/ rider snow experience, the number of daily tickets sold at Snowbird and Alta should be limited.</p>
30688	Kristopher Gotleb	<p>The gondola is a terrible idea. It's going to destroy the canyon.</p>
30687	Greg Kelly	<p>Extend the Gondola to the Draper light rail station. Create the station so that if you're exiting light rail you go into an express line for the gondola, bypassing people who have parked at the base of the gondola. In this way you have created an incentive for people to take light rail from anywhere in the county instead of driving. It will massively alleviate concerns of parking / traffic from the residents of Draper and Sandy. I live in downtown SLC, and if this was implemented, would be willing to Uber to light rail and use it so I could skip the gondola line. Finally the light rail would get serious use, less traffic in Draper and the canyon. Win win win.</p>

30691	Summer Montgomery	Option A & B are terrible ideas that only serve corporate greed in the ski industry. As somebody that climbs in Little Cottonwood it would be devastating to destroy so much wilderness to cater to one industry. More options should be provided beside widening the road and a gondola.
30690	Sheila Benson	I am against the gondola to benefit 2 businesses for a few busy ski months out of the year. It will not benefit locals , as it is expensive to ride on a regular bases.
30693	Craig Snow	No way should we build a gondola with tax money that only benefits ski resorts!!
30692	Elias Wilson	I completely disagree with this decision and the public knows that this project is being manipulated. LCC is a treasured outdoor space that deserves to be preserved! UDOT should work on improving existing infrastructure and not on ideas that require further encroachment on these important outdoor spaces!
30695	Cameron Cable	Don't put up a gondola it ruins the beauty of the canyon and promotes more visitation of an already overpopulated canyon. Keep everything the way it is and those that truly like the outdoors are willing to wait in traffic to get to their destination. The gondola is only beneficial for the ski resorts and nothing else. Stop helping big business. A toll on the canyon road is the only acceptable solution.
30694	Chris Mason	Why not pick some lower hanging fruit and make people car pool on the weekends, no single cars...they can take bus
30698	Jess Green	I am absolutely against your preferred alternative, which was picked in spite of the mass amounts of community input against the gondola alternative. One of my main reasons for being against this alternative is that it seems to service only the two private resorts and LaCaille. So much of the canyon traffic utilized other areas of the canyon than the private resorts. I am frustrated public funds are going toward transit to private businesses.
30697	Pete Hallenbeck	Gondola and automobile access for upcanyon residents and nightly registered guests should be only goal. Gondola Alternative B is a great starting point!
30696	Benjamin Snyder	Anything but a 550 million dollar chairlift / massive parking garage.
30699	Cindy Harris	I want it to be known that I am against the gondola project and also I am against the expansion of Wasatch Drive. As a resident of the state I do not want to pay for this gondola, also I think it's unfair if you were to build gondola that it would still be expensive to ride the gondola, and also the expansion of Wasatch Drive will be worse for the local residence than it already is. We have family members in the area and this will have an impact on them as well
30700	Richard Harris	I am against the gondola and I also am against the expansion of Wasatch Boulevard
31921	Peter Vander	I, like most people, are against an unsightly crammed and dirty gondola. You should get uta to add bus routes, not cancel them. Canceling routes in just one canyon is an obvious ploy.
30701	Corey Tenney	I agree with the Gondola. I would prefer sooner than later. However I do believe that you should release how this will be paid for down the line.... Snowbird and Alta patrons should be paying for this over the long haul.
30706	David Lindsay	Gondola B seems to be the most reasonable. Thank you for all the work you all are doing! Good luck.
30705	Robert McKinnie	There is no reason to develop resources to pack more skiers into LCC. It cannot handle the skiers already there. This is merely a boondoggle to subsidize the resorts which are over crowded to the point that they are offering premium lift tickets to cheat by avoiding the lift lines (another indication that further growth is unsustainable.) I stopped skiing there years ago when it was still fun. Ski areas should increase capacity before trying to increase volume. This includes lifts and skiable terrain as well as access to the areas.
30704	EP Kosmicki	I'm against the use of public monies to fund the private ski area interests at the expense of the environment and other uses in the canyon.
30703	Mona Marler	The Gondola is absurd. Why not have more park and rides and free busses
30702	Jessica Wishnie	No gondola. Period. Extend UTA services instead. I know powerful folks have purchased gondola-adjacent property and will personally benefit from the gondola. Funny how defrauding the public doesn't upset God, but a cup of coffee does. Hypocrites.
30707	Chelsey Kenney	The Gondola has my full support. Additional buses, expanding the road, and charging tolls or fees only work to help the wealthy and elite in this area. The gondola would benefit everyone in the community and save the environment. We support the Gondola!!
30708	Kendall Goodman	No one who frequents little cottonwood wants this option. It will only increase the crowding issues we already see. Literally doing nothing would be a better option. The only people who really support this are the ski areas who stand to see a massive profit from this terrible idea. Please don't go through with this.
30709	Philippe Blot	Preferred alternative does not address BCC, which is the busiest 2 lane highway in UT. Also, UT taxes should not be used to grow Alta nad Snowbird businesses over their competitors. And there may not be any snow to ski on by the time the gondola is built.
30711	Cindy Bruce	Gondola not a sound idea. An 8 mile gondola has never been built. Especially not on a fault line. Sure is convenient for UTA to cut bus service now. No Gondola
30710	Robert McKinnie	Any increase in traffic to the LLC will only increase the gridlock on the tributary streets and roads. This does not serve the local population. The UTA has failed for years to alleviate the problem. This is merely a boondoggle to subsidize the ski resorts. The government should find better uses for the public funds which could benefit the entire area population.
30712	Zachary Noyce	I am sure there are many comments complaining about the selection. And I'm not necessarily in love with the gondola. (My preferred option would have been for cog rail. Failing that, I would have liked to see one additional gondola stop before the resorts.) That said, I think the gondola is clearly superior to alternate options that called for widening the road. I like going up the canyon, though I am not a skier. And it's getting harder and harder to access the canyons all the time. Maintaining the canyons as locations that residents can actually access means building more capacity for people to get into them. I believe building a gondola up Little Cottonwood Canyon (and, in my dreams, in Big Cottonwood Canyon as well) is probably the best option to achieve that goal. It's certainly less environmentally-impactful than widening the road would be. And, personally, I would love to ride the gondola up the canyon. My family and I visit Little or Big Cottonwood Canyon just to take in the scenery roughly a half dozen times per year. I love the sights and the smells and the feel of being in the mountains. The worst part of these drives in the mountains? The driving! Let me ride on a gondola up the canyon and bring my kids with me. We'll all love it.
30713	Glynn Donahue	This is a huge taxpayer subsidized boondoggle that will negatively impact the environment- not enhance it. Please do not pass.

30715	Tim Ryan	AGAINST! This project truly only serves Snowbird and Alta at great taxpayer expenses. Also, in just a few short years, climate change will have changed the snow season and the gondola will have become a boondoggle. Better to just manage canyon traffic and parking thru reservations and busing.
30714	Garry Fratto	<p>I am a resident of east Sandy and have lived here for 50 plus years. I am also skier and avid outdoors person. I am opposed to the Gondola for the following reasons:</p> <ol style="list-style-type: none"> 1. The cost will be way over the estimate and the infrastructure at the base of the canyon will not be able to handle the increased traffic flow. 2. it only benefits Alta and Snowbird and this is a very small demographics of the canyon users. 3. The towers will ruin the natural beauty of the canyon. 4. The gondolas require lots of ongoing maintenance. 5. A good solution would be an express lane with electric buses. and widening the road a bit to allow for a lane switch 2 lane going up in the morning and 2 lanes going down in afternoon. The buses would not create pollution in the canyon. 6. The other thing that bothers me is that the deal seems fishy with the developer. I think the cost and impact are way understated. <p>Again, we are totally opposed to the gondola. Thanks, Garry Fratto</p>
30718	Thomas Kakatsakis	<p>Little Cottonwood Canyon will not have adequate snowpack for consistent resort skiing within the near future as a result of climate change. In 25 years, it will be raining at the top gondola station more days than it will be snowing. Why would you build a gondola a few decades before the snow stops? It does not make any sense. Please listen to your constituents and do not build the gondola. 500 million dollars of tax payer money for a gondola which helps the profit of private corporations, a few decades before their businesses are no longer sustainable? Does not make sense. Do not build the gondola. Please!!!!</p>
30717	Matt Ireland	<p>I am in favor of the gondola. The gondola is clearly the best solution to a complex problem. More busses, wider roads, and avalanche sheds are just as expensive, harder on the environment, and create more of the same.</p> <p>Thirty years ago, when State leaders looked at population growth trends, they understood the importance of improving transportation along the I-15 corridor. Today, we are all grateful that our leaders had the wisdom to build a multimodal transportation infrastructure that included FrontRunner and TRAX as part of the solution set. Looking back, the only thing they could have done better is to have doubled our investment in rail lines and stations.</p> <p>More busses and wider roads was not the correct solution then and it is not the correct solution now.</p> <p>Once again, we have the opportunity to plan for our future by investing in different modes of transportation. The gondola not only complements the existing transportation infrastructure, it enhances it in ways that busses cannot. The gondola greatly improves safety in the canyon; it provides access to the canyon when the roads are closed; it provides a second point of access from which to park and enter the canyon; it eliminates the need for additional parking in the canyon; it reduces pollution; it provides a far superior experience...a smooth and beautiful ride as opposed being jostled around on a bus while holding your child with one hand and your ski gear with the other; it allows people greater certainty in planning their arrival and departure from the canyon.</p> <p>The gondola is the right option for the canyon.</p>
30716	Kyle Uhlig	<p>Don't build a gondola! Just use a toll to minimize traffic, only allow vehicles up the canyon with Snow tires and 4wd. Every driver must get their tires checked and approved by the 3rd party shop and only those vehicles should be allowed up the canyon. Rental cars that don't meet these requirements and out of town folks must take the bus since their cars wouldn't meet these requirements. A gondola isn't the answer, minimizing traffic up the canyon is.</p>
30719	Winger Brenda	<p>I am not in favor of a gondola. The use of paid reservation systems by the ski resorts, have significantly reduced the traffic. There are other less invasive options than a gondola. The gondola only focuses on ski traffic, the increase in traffic is year round. Other options, buses or tolls could help improve year round traffic issues. Sadly, cost will reduce access to our beautiful mountains, there should be some help for those that can't afford our great outdoors. Please consider some "free" or "low" cost options for all to enjoy the GREAT outdoors.</p>
30720	Mark Snyderman	<p>I think the gondola is an environmental mistake. It will have a huge visual and implementation impact. I also believe it will not solve the 210 road problem. Instead, let's add more buses, preferably battery powered. Also, adding a toll to use the road and checking for snow tires would help enormously.</p>
30721	Justin Sikonia	<p>Disappointed in the gondola choice. Taxpayer money to support connecting a handful of private enterprises. How does this benefit hikers, people who picnic, fall color seekers; is everyone supposed to perform these activities at the resorts? Why does UDOT feel competent in recommending a gondola; how many have they implemented before? How is this project scalable for the next 100 years and how does it support inter canyon connectivity? What is the impact to Life Flight helicopter traffic when operating in low cloud cover and now a gondola tower is 200 feet in the air?</p>
30722	Michael Campian	<p>I feel UDOTs choice of a gondola is completely inappropriate and single sided. It only favors the resorts. I'm not sure it will do a thing to improve the traffic situation in the canyon. It will definitely cause an environmental impact on resources utilized by other canyon recreators (climbers and backcountry skiers). Plus it has zero utilization for non winter months. I know I as a Sandy local, climber, backcountry skier and yes skier at Snowbird would never use this. I certainly have used the bus system and if that were too improve would probably use it more frequently. Also as a tax payer, I absolutely do not want my tax payer money to go to an extremely expensive project with low community value. Our money could go to a much more useful project like getting the water levels up the great salt lake for just one instance. I am asking that you completely reconsider this horrible idea for the better of our community and environment.</p>
30724	Kendall Robins	<p>I think this big project should be put on hold. Try smaller, effective things before spending hundreds of millions. See how our crowds react to diminishing snowpack. Then, only if still necessary in a few years, of the two final options, I prefer the gondola.</p>

ID	Full Name	Comment
30723	Dominic Mallamo	<p>I don't think we need to waste taxpayers \$\$ on a gondola that only provides service to people who can afford to ski. Why not use this \$\$ to build housing for the homeless, provide services for the poor, improve education, provide medical services for the poor, help the elderly, you want to tax all the people for a gondola that would not do ANYTHING for the working class family that is never going to use this gondola.</p> <p>Plus, your estimate for the cost is going to be much higher down the road. How is this going to alleviate traffic? People are still going to drive up LCC and ski. Why not mandate a carpool of at least 3 people per vehicle to enter the canyon on busy days? More bus scheduling?</p> <p>The ski resorts should be footing this bill, they are the ones who might benefit? And you're not going to run in the summer? Why??</p> <p>This is a horrible decision by UDOT. You should re think this is bury it forever!!</p> <p>And who wants to look at a gondola and towers going up the canyon? In Europe, yes. There gondolas actually take you up to the top of a mountain to ski. Here, this gondola doesn't access any ski access, it only drops people off at a resort and that's it.</p> <p>Really a poor decision from our lawmakers, UDOT, Forest service, and anyone who would support such a service that only caters to a fraction of taxpayer dollars that would use this.</p> <p>Please don't ruin LCC. This is a HUGE waste!!</p>
30725	Tessa Harris	<p>I am strongly against the building of the gondola and expansion of Wasatch Blvd and all it entails! It will cost a lot of tax dollars, not to mention be pricey to ride, and disrupt the natural beauty and ecosystem of the canyon. There are alternative solutions to the crowdedness of the canyon like more bus and shuttle transportation, paid parking at ski resorts, etc. A gondola would have huge negative impacts in the long run and not prove as effective as hoped. Please leave our canyons as they are and make efforts to preserve them. This is not the answer. Thank you for hearing the voice of the people directly impacted.</p> <p>Sincerely, Tessa Harris Holladay resident</p>
30728	Kaitlyn Fletcher	<p>Leave the natural and historical land alone!! The natural beauty is appreciated and explored by many residents and other families from around the country and world.</p>
30727	Gary Larsen	<p>I am against the "Gondola Solution" for transportation up Little Cottonwood Canyon for the following reasons:</p> <ol style="list-style-type: none"> 1. Way to expensive and mainly benefits the two private ski resorts. 2. Added environmental damage. We already have a road. With the Gondola - we will then have both a gondola and a road. 3. Cheaper choices with the road and increase use of buses. 4. Current road already has three lanes in 20% of the road. it also has a very wide shoulder in a good portion of the remaining road. If each year you added one mile of additional three lanes, in 6 - 7 years you would easily have a three lane road all the way to the resort. 5. Best of luck making he correct decision. <p>thanks GFL</p>
30726	Vilma Helmer	<p>Gondola cause no pollution in air, no noise, no traffic congestion, no snow to shovel on the road, no road maintenance, no ugly traffic bus to see, cheaper in the future to come, can operate summer for tourism, will generate more money. The funding is being provided by combination of private & public funding. Thank u.</p>
30729	Shawn Marquardt	<p>I am in favor of UDOT's preferred alternative. An aerial transport system in LCC is energy efficient, quiet, flexible, cost effective, and reliable in all weather circumstances. It will reduce the amount of automobile traffic in the canyon which will help to preserve the natural beauty for future generations.</p>
30730	James Ack	<p>I am vehemently opposed to the gondola alternative owing to its impacts in the canyon and it's obscene price tag. The prudent and obvious answer to the Little Cottonwood Canyon transportation problem is electric buses. If Alta and the owners of La Caille so desperately want the gondola and the adverse impacts that go with it, and UDOT thinks it is a rational solution, then Alta and the La Caille owners should pay for it. The public should absolutely not be burdened with such a boondoggle.</p>
30731	Steven Arhart	<p>At first I was skeptical of all the options. Now, I am totally in favor of the gondola. I believe there is a lot of misinformation that is leading people one way or another.</p> <ol style="list-style-type: none"> 1. According to the Gondola Alt. B fact sheet, \$335 of the \$550 million is the gondola. The other costs are required base costs with nearly all alternatives. Even the base station parking worth \$56 million is a base cost whether a user will park and enter a bus or gondola. 2. Additional buses on a congested or potentially closed LCC road do not help solve the problem. More buses may not even be possible considering UTA has a driver shortage and may have to cut winter time routes 2022/23. The gondola can be operated in more conditions, with more reliability, and fewer staff. 3. LCC has previously had a train in the canyon and most people probably do not know that or have ever witnessed any "environmental damage" from it. When a project is done right, it can become utilized for its purpose and in the future be decommissioned without becoming an environmental concern. 4. Gondolas are a critical piece to European mountains and movement of people. Why can't we follow their model?
30733	Thomas Shepard	<p>These proposed plans are both an atrocity to the wilderness and public lands. We need to reevaluate before spending a huge sum of taxpayer dollars on a project that services a few. The solution should be more public transportation and a limit on private transportation during peak traffic days. The proposed gondola transportation statistics are not feasible. If 2000 cars show up around the same time carrying 3 people that is 6000 people. At 35 people every 2 minutes that is over 5 hours to transport all those people. By the time the last car of people make it to the ski resorts it will be closed and they will have to wait 5 hours to get back down. The logistics do not make sense. Please do not approve either of these UDOT plans they are terrible.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30732	Kristen Parrish	I do not approve of the current gondola plan that UDOT is proposing. Building a gondola would only serve the private ski resorts and wouldn't serve the thousands of people who use the canyon for other recreation. We go to the canyons to get outside away from the city and having a visual and auditory impact still negatively effects this. Instead, carpool lots and buses should be used to help reduce traffic on these roads. Gondolas will have years of construction that will also greatly impact people's enjoyment of the outdoors.
30734	Cary Dunn	BAD OPTION - The Gondola alternative will destroy the alpine aesthetic of Little Cottonwood Canyon
30735	Sarah McCloskey	I am adamantly opposed to the Gondola B option that UDOT identified as the preferred alternative for the LCC EIS. The exorbitant cost to Utah taxpayers is absurd considering it will only benefit 2 entities, ruin the natural beauty of the canyon, and not solve the traffic problem. I feel strongly that tolling, reservations, and snowsheds should be implemented before an irreversible and likely more expensive than advertised gondola is built! There are so many unanswered questions including cost, hours, and months it will run. It won't solve the traffic problem; it will merely push it down the canyon to neighboring communities. It only benefits resort skiers and there are too many transfers if the parking at the la caille mobility hub is full. Little Cottonwood Canyon is special and should not be altered for the high price tag and a couple dozen days per year that make winter travel difficult. Thanks in advance for reading!
30736	Kekoa Naluai	save our climbing crag ?? it doesn't even help anything
30737	Tyler Fagergren	This is wonderful, the gondola provides an alternative method of accessing the canyons. Even during snowstorms or road closures. This is an option I can use with my family that avoids some of the issues even the current bus system has.
30738	Jeff Mansell	Wasatch Blvd. Expansion; UDOT owns the ROW, (30% guess) of the Blvd. is already expanded via previous development. UDOT has had the plans for years now. Opinion, build the road as planned. Gondola; Build the gondola.
30739	Patrick Sullivan	Hello UDOT rep, Thank you for providing information on the proposed projects for SR210. I have a few comments. 1) I really like the large toll (\$20-\$30+) for travelers going above entry 1 in LLC. However, I would like to see the toll fare decrease based on number of occupants in the vehicle. 2) The gondola primarily serves those utilizing the ski resorts. I understand that the traffic is largely due to resort users, but at the end of the day, the private resorts are the primary benefactors of this project. I think they should be on the hook for some of the cost of the gondola seeing as they get the only two stops. 3) Backcountry skiers will need to walk to and from the Alta gondola stop to where they plan on skiing. It would be nice to have some sort of pedestrian friendly buffer for the section of SR210 around the backcountry ski entries such as the Flagstaff/Superior approach and Grizzly Gulch. These are especially important as winter roadside parking will be eliminated up there. Thank you for your time, Patrick Sullivan
30740	Anne Evans	Can't believe that this amount of money is going to be spent on this without trying other sustainable options. It will ruin the aesthetics of the canyon which is why people come to visit. Locals will not be paying the premiums to ride this.
30741	Daniel Cowan	A year round toll for a few dollars plus a requirement for proper traction and minimum 3 occupants would not cost half a billion dollars and destroy climbing access. I recommend trying other things first. Even if the local community has dragged their feet that doesn't mean we should jump to a half a billion that won't pay it self back ever.
30742	Mia Barth	I do not support the gondola being built. We should focus on alternatives that will not be destructive to the canyon, serves more people than just the resorts, and cost less.
30743	Brian Lohman	I write to condemn the proposed gondola as the alternative means of transportation for SR 210. The gondola option as outlined will serve no other purpose than to move customers to two private business. This public subsidy has no place in the tax payers budget. There is absolutely no reason whatsoever that residents should support the irreversible damage to the watershed, the landscape, and the other recreation opportunities in Little Cottonwood Canyon. The loss of these resources will be suffered by the public while the gain will be privatized and held exclusively by Alta and Snowbird. This is totally unacceptable. The correct alternative is to follow the model of our national parks and ban ALL private vehicles and allow ONLY busses that will take visitors to any location they desire. This is the only equitable solution as it treats both wealthy and disadvantaged canyon users the same. As with the gondola, allowing rich people to buy their way out of the congestion (you know they won't be on the gondola) is unacceptable. Finally, spending a massive amount of money to funnel dollars into two private businesses makes even less sense in the face of climate change. The proposed gondola would be a haunting reminder of this folly when there is no more snow to be skied and it is left standing.
30744	Connie Misket	I'm against the gondola plan due to costs and environmental impact. We need a reservation system to drive up the canyon to limit traffic. Plus an improved bus system and 4WD/chain checks in inclement weather.
30746	Ross Coyle	Propose gondola system will have a measurably negative impact on the ecology, geography and topography of little carnival canyon with little to no actual value. It better solution to the issues of access to ski season would be to expand bus capacity and limit passenger vehicle traffic in the canyon during peak hours.
30745	Philip Co	As a taxpayer, I'm outraged by this proposal to gift well over half a billion dollars to two private businesses. In addition, the proposal to build gondolas would permanently scar the visual appeal of the canyon. The financial and visual costs are much too high.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30748	Alexander Mankouski	Plz don't make the gondola it will ruin little cottonwood canyon
30747	Nick Joy	I implore you to consider alternate options open year-round for all activities. No one wants to wait in traffic, wait for limited parking, and then wait another hour ride up the canyon. This is a waste of taxpayer money, and I will vote against that, as well as any individual in my district that votes for it.
31922	Liam Snihurowych	THAT.....SAY NO TO THE GONDOLA!!!!!!
30749	Samuel Bloom	Please do not build a gondola in LCC. It will not serve any other canyon users other than those who patronize the ski resorts, it is a short sighted plan, and it will permanently mar the beautiful canyon. It is imperative that resources be allocated to relieve the traffic issue prior to any construction in the canyon. Please do not build a gondola.
30750	Kelton Jones	Cap the number of people going up the canyon in vehicles early in the day, and force the rest to go up in busses. GONDOLA IS NOT NEEDED, THE CANYON IS FINE 5 out of 7 DAYS A WEEK, AND WEEKENDS CAN BE HANDLED WITH BUSSES
30751	Amanda Gladback	The gondola is not a sustainable option. Getting less and snow every year, and its not predicted to change. Instead, both ski resorts should implement parking reservations. There is limited amount of parking, there is limited number of that cars that can fit in the canyon. Limiting traffic by reservations and by increasing bus services. Unlike the gondola bus services are not permanent. A gondola is not as cheap for most people. Driving, or a bus ride is a much more affordable option. A gondola option would not be affordable. Skiing is already so expensive. Who would ride the gondola when it's cheaper to drive?
30752	Kelton Jones	To build on previous comment, the gondola will permanently scar the scenic nature of the canyon. It damages our scenic natural resources so that the ski resorts can make more money by getting more people into their resorts, at the cost of the tax payer.
30753	Ryan Bucknum	I like the gondola idea, Les do it
30754	Geneva Stair	As a Utah/SLC resident for over 20 years, I am strongly opposed to the proposed gondola in Little Cottonwood Canyon. A solution must be found that will not cause such monumental, irreversible destruction to an area that is enjoyed, appreciated, and loved by so many locals and tourists alike. For many visitors, the first natural Utah scenery they experience when they visit will become a scene of utter devastation. This is not the way to represent our state, city, or society. As a climber, skier, and former Snowbird employee, the thought of that beautiful canyon being torn to shreds in order to offer profit and convenience for some, quite frankly, makes me disgusted with our handling of this natural resource. A better solution must be found!
30755	David Renzetti	How about just using more busses. Sounds like the parking cost will motivate some people to use the busses. The gondola will ruin the scenic beauty of hiking and biking up the canyon in the summer and warmer months..
30757	Mason Murphy	The Gondola B alternative is an overpriced and over the top option for alleviating canyon congestion. Using the money that would go towards the gondola to implement better bus systems, better tolling, and more controlled entrance into the canyon (stop letting non-4x4 vehicles up during the season). The fact that the bus system has already crashed before this season has started is proof that UTA and Udot need to be focusing on streamlining and building the buses for more canyon users over throwing money away on a gondola no one actually wants.
30756	David Renzetti	How about just using more busses. Sounds like the parking cost will motivate some people to use the busses. The gondola will ruin the scenic beauty of hiking and biking up the canyon in the summer and warmer months..
30758	Robert Clark	I own a home in Cottonwood Heights. I am a lifetime skier in Little Cottonwood Canyon. The gondola is the best solution to the problem. It will be better for everything in the canyon. Any other alternative would do irreparable damage. The gondola will be clean, quiet, and bring that ski resort area to world class status. The next thing you should do is dramatically reduce the amount of cars that are allowed in the canyon. Simply don't allow people with less than three or more of the car for me than going up there and charge for every car.
30759	Richard Schlesinger	Absurd. The final cost will definitely approach \$1 billion. There is no reason to spend this amount of money, there is absolutely no need for this monstrosity and will do nothing positive except line the pocket of a handful of corrupt elected officials, potential parking lot owners, other land owners and entities which will be involved. Unbelievably dumb idea
30760	Pamela Hinrichs	Of course, keep the wild wild, protect our wildlife, use our land and energy sources wisely. It is critical in an overpopulation (people) world. Thank you.
30762	Richard Schlesinger	This entire project reeks of corruption for people whose sole purpose is to line their pockets. Shame on all of you
30761	Pamela Hinrichs	Please do all you can to preserve our lands, our wildlife, our open space. Use our energy wisely. THANK YOU.
30763	Zachary Baughman	I am against the gondola because it would destroy the natural beauty of LCC and it would crowd the resorts even more than it already is. I support the improved public transportation alterenative

ID	Full Name	Comment
30765	Henry Gifford	<p>I'm very disappointed in UDOT's decision to move forward with the Gondola. Based on the polls and media reporting, local residents and mayors are overwhelmingly against it.</p> <p>Why are tax payers being asked to solve a problem Alta and Snowbird are responsible for? As a longtime user of Little Cottonwood Canyon, I know the skier traffic issues are only during 10 to 20 peak ski days. It's fiscally irresponsible to spend close to a billion dollars to address a traffic problem that only exists a small fraction of a year.? If the location of their businesses is inconvenient to their customers the ski resorts should bear the responsibility and cost to solve their problem. Skier days have already increased over the last several years. This growth crowds the resorts and threatens the environment to the point where it will soon be unattractive for Utahns to use them.</p> <p>Why is the traction law not enforced on snow days? Too often the congestion and backups are due to a vehicle that shouldn't be in the canyon in the first place.</p> <p>Where is the evidence that the Gondola will resolve traffic congestion? The parking lots will still be full on powder days and holidays. No one I have spoken with would choose to pay to ride a gondola, with all their gear, if driving their car was an option. The gondola will not reduce the number of vehicles in the canyon. It just puts more people in the canyon and jeopardizes a critical watershed and permanently scars the canyon.</p> <p>Why has UDOT not worked with UTA to improve bus service to make it more skier friendly? The impact of a few incremental changes have already shown a marked improvement to the congestion on busy days. Traffic has already been reduced simply by implementing parking reservations. At a Students for the Wasatch Event on 9/21/22, Alta Ski Lifts General Manager Mike Maughan said about parking reservations: "It was a positive thing. We saw the reduction or change in the flow of traffic in the canyon." I know many locals who would prefer to take a bus if they were more frequent and convenient. Riding the bus means their cars would not be subject to the wear and tear from driving the canyon. Little Cottonwood Canyon is an important watershed and environmental treasure that must be protected, not exploited for the financial benefit of Alta and Snowbird.</p> <p>What is your contingency plan for when the gondola does not fulfill its stated purpose? What if no one rides it? The inflexibility of a gondola solution is a major problem. Once it is built, the impacts are permanent. Other solutions provide more flexibility and less risk. You're harming the very thing we should be working hard to protect and preserve.</p> <p>According the Utah Senate Bill 0277, which kicked off this project, it "must have significant economic development impact associated with recreation and tourism within the state." What qualifies UDOT to decide how to best benefit tourism? You</p>
30764	Marie Barnhurst	<p>I really don't know why I'm bothering to comment, as it is very clear that the opinions and wants of taxpayers are not of any import to you. However, be advised that we do vote, and will vote out any who are in favor or pushing for this gondola project. The taxpayers should not be saddled with the bill for this travesty. It benefits 2 ski resorts and that's all! Let them figure out for themselves how to handle the customers they want and leave our tax money for more important needs. Please.</p>
30766	Marie Barnhurst	<p>See? It doesn't matter what the public wants, does it? PLEASE do not support this gondola. AS a resident who lives at the base of Little Cottonwood Canyon and has been snowboarding at Snowbird for 25 of my 44 years-I can assure you this is not the solution our community needs or wants. I don't want to live in nightmarish constructions for years while this project takes place. Our canyon crowding is AWFUL and have made it almost impossible for us to take weekday laps like I've done every winter since I was 16.</p>
30767	Anjee Barber	<p>But the solution is not this horrendous gondola. Please consider variable tolling and tire traction requirements to be enforced by UPD first. Every year we have had enforced tire traction laws except for the last two and you can see the direct consequences it has had. Irresponsible, often out of town, drivers sliding off canyon road and causing massive delays, pile ups and dangerous conditions for other drivers. It also adds to the congestion in the canyon. Whatever happened to enforcing traction laws? Now we just let anyone up with any tires and without four wheel or all wheel drive. This is a massive issue.</p> <p>Also consider variable tolling. It would be less invasive and less costly than the gondola. It could restrict traffic by deterring those not willing to pay the toll but they could still access the canyon by using the busing system.</p> <p>Additionally why not use some of this funding and contribute to the UTA bus system? They recently announced they will be cutting and eliminating ski bus routes which is exactly what we don't need right now. They claim driver shortages so why not give them a healthy chunk of this funding to help attract more drivers? I take the bus as often as I can but won't be able to with it now running at 30 minute increments.</p> <p>It's incredibly disappointing the private businesses such as Alta and Snowbird are putting the burden of canyon traffic on the citizens of our communities. They refuse to cap pass sales. In addition to this creating massive traffic issues it also creates a less than desirable experience at the resort. For the last two years both Snowbird and Alta have sold parking passes and Snowbird has also used a parking reservation system. This has drastically helped canyon traffic, is free and also incredibly efficient. The parking reservation system is also much more affordable. I am guessing the reason Snowbird and Alta don't want to rely on the systems is because it might impact their ability to over sell passes. Please help me understand how a canyon traffic issue created by these two resorts is suddenly now everyone else's problem? Why aren't we looking to these resorts to help restrict the flow of traffic up the canyon in the first place?</p> <p>Additionally, we need to be mindful of the fact that little Cottonwood Canyon is a watershed. We must protect our limited water supply which is becoming more and more scarce with climate change as the years go by. Inserting a gondola into this fragile environment will put her most precious resource at risk and that's a risk we can't afford to take.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30768	Angela Deneris	I have skied Alta for years and I am adamantly opposed to the gondola plan B proposal!!! It would ruin our gem of a mountain forever! Build a parking lot at for both Little and Big Cottonwood Canyons and require everyone to take the bus. Have buses arrive every 15 minutes. I'm angry about the money that will be spent and the physical beauty lost as a result of this stupid proposal.
30769	Jess Powell	I appreciate all the work UDOT has done with the EIS reports. I do, however, think that UDOT should commit to reevaluating the effectiveness of enhanced bussing (without road widening) that will be rolled out in the early phases of the gondola. If the enhanced bussing helps to relieve traffic in LCC, I would hope that UDOT would forgo the building of an extremely expensive and destructive gondola in favor of a much less destructive enhanced bussing system. This is the best solution for ALL canyon users ALL year round - not just the ski tourists visiting Snowbird and Alta.
30770	Mel Fullmer	I was hiking on the trail to Solitude Lake in Big Cottonwood Canyon. The trail is high above the canyon highway. And what did I hear on the canyon road? A couple of noisy Harley Davidson motorcycles. It reminded me how the noisy UTA diesel buses always seem to interrupt our quiet hikes at Snowbird ski resort. When the trail reached the Solitude ski resort, I walked under the moving summer chairlift at Solitude, quietly going about its business of carrying hikers and bikers to the top. This is how the Little Cottonwood Canyon gondola can silently replace noisy UTA buses on the canyon highway. And as electric cars replace internal combustion engines in the coming decades, Little Cottonwood Canyon can become a quieter place to recreate. I first saw this type of transportation in action in the Lauterbrunnen valley of Switzerland, where a system of nearly silent trams carry tourists and residents to villages halfway up the mountain and to the ski resorts further up. No noisy diesel buses in the Lauterbrunnen valley. A silent tram to the top of Little Cottonwood Canyon. Yes please.
30771	Dan Mccann	No gonda. Other options are more practical. No gondola.
30772	Elizabeth King	We Don't want the gondola and we don't like that the wasatch has become a freeway
30774	Robert Reynolds	I don't want a gondola or a 2500 parking spot. It's going to take away so much beauty that the mountains and canyon provide. Please just widen the road or build a hyper loop to the top. Call Elon and the boring company. Way less visually destructive
30773	Jonathan Boltax	I am against paying for a gondola and do not want to see one in little cottonwood canyon. I prefer buses and high tolls as an option
30776	Mark Gassinger	We are on our way to ruining one of the most beautiful canyons in the country, all for more profit when it's full close the gates
30775	Camille Tranter	No Gondola!
30777	Myles McPherson	It's a terrible idea. Get better busses.
30779	Tara Saucedo	I do not support the gondola aspect of this option. The enhanced bus service provides a reasonable alternative. The gondola would provide limited capacity at a high cost.
30778	Sara Way	You have an entire sport you are ignoring. So many people come to climb in the little cottonwood and appreciate how beautiful it is. You are destroying something to beautiful to loose.
30781	John Stinson	build the Gondola!!!
30780	Marianna Frame	While I understand the appeal Of this measure, it is a permanent change to the canyon. What is most challenging for me to wrap my head around is the economics of this project. Alta and snowbird can only sustain a limited number of riders/skiers on any given day. The road is a natural barrier to overcrowding the resorts (with exception to days when the road is forced to be closed to traffic for weather). There is a cap on the revenue of the resorts based on how many skiers and riders can enjoy them, yet this project cost is multiples of any given revenue of the two mountains annually. It will take decades for this improvement to "break even" in terms of increased revenues of the resorts. Because there is a cap. It's a gross misuse of public funds as far as I see it and those funds should be allocated elsewhere.
30782	Lee Walker	I want to see the canyon accessible and wild and free for humans and wildlife and with clean air, water, and soil--and easy on taxpayers. This whole project is an abomination.
30784	Sharyl Smith	I am 100% AGAINST the gondola. It would not serve anyone who is not going to the two resorts, cutting out hikers, backcountry skiers, and others. Besides, there is no guarantee that there will be sufficient snow to draw skiers and people do not travel distances to ski on artificial snow. Why increase the number of skiers at these two resorts, decreasing the pleasure through longer lifelines and crowded ski hills. No to the gondola!
30783	Eric Bunce	Building a mode of transportation that only benefits 2 parties for a small percentage of the year is ridiculous. Try going to snowbird this coming weekend during octoberfest and tell me that a gondola for winter only will solve the problem. The solution NEEDS to be a year round solution. Snowsheds, buses, carpooling, tolling are year round solutions. If the ski resorts are paying for half of the proposed gondola then it can be included into what UDOT should be doing for year round solutions. The gondola is not a solution. It needs be cheap and easy otherwise no one will use it. The gondola is not that, if your charging for parking and then charging for the gondola too.

30786	Allan Schein	<p>The following letter was submitted to Gov. Cox a few days ago. I believe it appropriate to share it with UDOT.</p> <p>Thank you. Allan Schein</p> <p>.....</p> <p>Dear Governor Cox, September 29, 2022</p> <p>I am writing regarding the Gondola and Wasatch Blvd widening proposed for Cottonwood Heights, Sandy and LCC. I have read in the news that you support the Gondola as it is a potential economic benefit to the state. However sir, traffic mitigation up canyon is the publicly stated reason for the proposed development, yet the studies show that won't change much with a tram going up canyon. What will change is having a 5-lane state road going through the heart of Cottonwood Heights to a base station industrial complex and 2,500 car parking garage. Yes, it will be great benefit to the ski areas and LaCaille, and an opportunity for Snowbird and Alta to stretch a tentacle down into the valley. It will even expand their tourist base as this will be presented like a theme park activity, both on and off season. More people will take trips just to say they rode the Gondola. But it won't be of benefit to Cottonwood Heights or Sandy. Unfortunately, it will be a strong negative and alter lives more than anyone has expressed. It will be the commencement of a Park City-esque commercial development benefiting 2 ski areas that have outgrown their boundaries. This is a huge mistake and frankly an opportunistic endeavor from a small group of creative business people selling a so-called solution to an otherwise fixable traffic issue.</p> <p>The EIS mentions nothing about the impact to residents by this enormous complex in a quiet neck of the valley. Contemplating water impacts, safety, visual and related considerations in the canyon is an imperative. But the omission of what this will do to the neighborhoods and individuals living immediately beside and adjacent to the proposed infrastructures cannot be ignored or set to side. If our residents wanted to live in Park City, they would have moved there. The impact to citizens will be tangible, yet it is being ignored in favor of economics and heavily influenced by the politics of business.</p> <p>It is reported that 14,000 letters were received by UDOT with 80% against the Gondola. Residents were told the parking garage would be for 1,500 cars. That there would be a parking hub to shuttle skiers to the base station from the Wasatch Gravel Pit by Big Cottonwood, and a hub at Highland and 9400 South in Sandy. Now these have been eliminated and the garage expanded for 2,500 cars. This was a sneaky surprise and although it may seem that as citizens we have a voice, it's quite obvious we have no say. That's a betrayal to every home owner that moved to or built their homes near the mouth of Little Cottonwood Canyon (LCC). Their decision to reside in the LCC vicinity was for its beauty, peaceful environment, access to the canyon and outdoors, and still being close to shopping and schools. It's not right to plant 240' tall towers in their front yards. It's ludicrous to build an industrial complex beside homes in a zoned residential only community. By ignoring the will of the residents and simply deciding against them without giving us a say is rather nefarious and very wrong. This should be voted upon, and not dropped in citizens laps to both accept and pay for when so unwelcome. It's not</p>
30785	Bernard Stoppi	A gondola will not solve the problem!
30787	Joe Zimmerman	It really amazes me that this was the option chosen. Making taxpayers pay for a massive project that only services the 2 ski resorts, runs only in the winter and has no parking around the base to remotely handle the volume is crazy. The gondola will ne an eye sore in the canyon as it runs in the winter and it will look even worse as it sits stationary for the majority of the summer. A solution that would benefit more users for the entire year is what should be chosen. After it came put that Snowbird owns much of the land the gondola will sit on, they should be paying for this project. Same for Alta. If my tax money is going to pay for something that will funnel people directly to these two resorts then every taxpayers resident should get free life time passes. I 100% oppose the gondola and belefe it will be nothing but problems for our canyon.
30788	Cody Hite	Don't build the little cottonwood gondola!
30790	Robyn Simonsen	Please do not ruin Little Cottonwood canyon with a gondola system. 2500 additional parking places at the bottom of the canyon with irreversibly destroy this area. Not everyone using the canyon is a skier. There are huge hiking communities and biking communities. Why do they never get a voice. You've got plenty of parking and people can learn how to ride a bus. Ridiculous to spend this money and horrible to destroy more beautiful land with a parking lot.
30789	Polly Parkinson	I previously thought the only two options were to widen the road or build the gondola. Both options will be harmful to the canyon, and neither is necessary. I no longer support the gondola because shuttles and limits on cars allowed are better options. We do not need invasive construction when inexpensive and noninvasive options are readily available. Let's just limit the cars and require shuttles. We don't need to cater to the ski resorts.
30791	Victor Lora	I support the gondola, it is more pleasing and enviromentally better.
31927	Kyle Wright	<p>Why is UDOT not being transparent about the overwhelming opinion of local people? They say in the "Public Comment Themes" that there is support for the gondola, with no mention of people who disagree. I know for a fact that there is also a large group of people who live on the Wasatch Front who do not support the gondola. Where is this in the "Public Comment Themes?"</p> <p>I would like to see data; I would like to see the actual number of comments expressing support for the gondola vs. the number of comments not supporting the gondola. Please make this information available to the public. This apparent lack of transparency is concerning to me.</p> <p>-Kyle Wright</p>
30792	Nancy Rushforth	I strongly oppose the creation of a gondola designed gamed to transport hundreds of people per hour up Little cottonwood canyon. This is a multi million dollar gift to canyon ski resorts. Crowding, expense and destruction of the canyon would result. I much prefer a phased improvement plan using additional busses with no added lanes in the the canyon.
30793	Duane Rees	We don't need a gondola that is paid for by the tax payer to support the wealthy and there is only so much room at the resorts. How and why do we need to try and fit more people into that amount of room?
30794	Lee Burnham	Just because the Governor wants it is not a good enough reason. What about all the other ski resorts and all the other canyons, We need something that would link them all and make highway use to get to any resort unnecessary. Such a solution would make a fortune off traffic to the resorts as well as people making the trip just for the pure joy of it.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30795	Ray Wagner	I believe that increasing the number of buses and widening the road is the best solution. I also wish that Alta and Snowbird were contributing more to the gondola.
30796	Doug Jensen	You make it sound like the gondola is a done deal. It shouldn't be. The phased in approach is a good start. How much consideration was given to a no gondola option? Using a toll penalty for ALL cars regardless of occupancy. If you want to drive your own vehicle you pay. Period. I hate to think the gondola is the only option and wish you would consider phasing in busses only in the canyon option. No to the gondola! Yes to phased in approach without ending up with the gondola. Is the estimated \$7million in operation cost take into consideration the what expected costs are in the year it will be implemented? And what's the annual budget every year from the year it's implemented through its life expectancy? I don't trust your calculations because you are only using the smallest amount to make the gondola look like the best option because that's the option you want to use.
31928	Robert Beckett	I'm concerned that this transportation benefit would serve two private resorts at the expense of public funds.
30797	Karen Elliott	electric buses and toll for folks that choose to not ride the electric bus. as a taxpayer, I cannot afford to ski. why should I pay for a gondola?
30799	Karen Elliott	can't afford to ski...so why should I pay for a gondola? electric buses would be less intrusive in the canyon.
30798	Robert Houk	I'm strongly against the gondola proposal. It benefits the developer but not the Skiers. The alternative that makes sense was never considered.
30800	Ryan Kelly	It seems highly unlikely that the cost figures for the gondola are going to be remotely close to accurate, especially with a phased approach, meaning the project would not even get started at any time in the near future. The maintenance costs are likely understated as well. How this could be chosen as the preferred alternative it absolutely beyond me. This would be a tremendous waste of taxpayer funds, simply wouldn't achieve the intended goals, and would be a blight on canyon forever.
30801	Amanda Wardow	I think the gondola is a horrible idea. We need to promote the use of free buses and better public transportation without disturbing the environment like the gondola would. Incentivize using public transportation for example getting \$10-15 off your pass.
30802	Steven Jorgensen	I would like to see UDOT start just the gondola only. No other projects. Get that done first. Then work in the other improvements.
30803	Matthew Clawson	The fact that the Utah DOT has continuously ignored the wants and needs of the salt lake and Utah county community in favor of pandering to the wealthy resorts of little cottonwood has left me utterly shocked and disappointed. This gondola will not only be a stain on our beautiful canyons, it will also represent a large target for ecoterrorist groups. Similar to what was seen in British Columbia
30804	Bryce Munson	Why does everyone have to ruin everything, leave the area alone UDOT's decision that determines Gondola Alternative B as the preferred alternative is flawed.
30807	May Lee	UDOT's Final EIS overview states that "safety, mobility and reliability" are the issues facing SR210 today. In terms of mobility, recent research from University of California at Davis clearly demonstrates that "traffic congestion has traditionally been addressed by adding additional roadway capacity via constructing entirely new roadways, adding additional lanes to existing roadways, or upgrading existing highways to controlled-access freeways. Numerous studies have examined the effectiveness of this approach and consistently show that adding capacity to roadways fails to alleviate congestion for long because it actually increases vehicle miles traveled." (Source: https://ncst.ucdavis.edu/research-product/increasing-highway-capacity-unlikely-relieve-traffic-congestion) Simply stated, expanding the road leads to increases in traffic. My question is: how exactly does UDOT's proposal to expand SR210 improve safety and mobility on SR 210? As a resident of Cottonwood Heights, I am especially alarmed by the expansion of Wasatch Boulevard. UDOT's proposal, set in the middle of a residential area, merely invites increased driving speeds and and I would expect an increase in accidents and fatalities. What would be better would be a road design that promotes slower speed limits; a less car-centric design limited to 3 lanes; protected bike lanes for cyclists, not to be shared with other road users (Please explain why any bicyclist would want to ride on a 5 lane pseudo-highway, especially a heavily travelled one?); pedestrian paths on both sides (east and west) of Wasatch; and no pedestrian bridges. Ground level crosswalks would work better to slow down traffic and minimize traffic hazards. The assumptions made by UDOT in analyzing an integrated transportation system are puzzling. Regarding a theorized increased traffic in Little Cottonwood Canyon: since SR 210 is not a through-road and dead ends at Alta, how is it that an increase in population would automatically lead to increased traffic? If the current road and parking available at the ski resorts throttles traffic flow, as it does currently, how does the number of cars increase? You may have extrapolated on past usage figures, but wouldn't SR210 reach a point of diminishing returns, and that rate of growth would slow down? Also, the Little Cottonwood EIS specifically states that UDOT does NOT anticipate that traffic volumes will decrease with their proposed gondola alternative, so what is the point of spending millions on this? Same traffic plus gondola just means more crowds at the resorts. They are plenty crowded now. In your project overview and final EIS summary, it's written: "Ultimately, the partners seek to deliver transportation options that meet the needs of the community while preserving the values of the Wasatch Mountains." This entire EIS exercise merely benefits a handful of individuals and privately owned businesses. It is a waste of taxpayer funds and fiscally irresponsible. Which local community is benefiting and being served from this project? I know that Salt Lake County, Town of Alta, Cottonwood Heights, and Sandy are dead set against Gondola Alternative B. It risks destroying these robust
30806	Richard Jaffe	The plan for a gondola is badly misplaced. It serves only the resorts of Alta and Snowbird, and not any intermediate stops for hikers, climbers, etc. Asking the taxpayers to pay for a gondola used by a tiny percent of Salt Lake County residents is most unfair. Bus lanes are more appropriate, somewhat cheaper, and will serve intermediate stops. No on the gondola!

ID	Full Name	Comment
30805	Lilah Rosenfield	<p>The gondola alternative proposed is the right idea whose time has come. While I was and continue to be of the opinion that the scope of this EIS was far, far too limited (the goal should have been and continues to be to remove *all* personal vehicles from LCC), the gondola would be a permanent infrastructure improvement which would give the operators an opportunity to "flex up" to fully meet demand for all resort patrons, while offloading lower-canyon patrons onto a dedicated shuttle service.</p> <p>I appreciate the modifications that have been made to the FEIS, specifically in terms of the shifting of parking away from the gravel pit and exclusively into the La Caille base area. I also like the idea of allowing a phased solution which would provide the option to accumulate funds for the gondola while addressing the most pressing issues in the canyon.</p> <p>I want to thank UDOT for considering a solution that isn't "just one more lane," and for all the effort they've put into this EIS, despite opposition.</p> <p>Only one final though (other than the "let's build this thing"): I truly hope that the gondola, when completed, is operated by a public transit agency like the UTA, rather than a public-private partnership. This is a central means by which to access our public lands. It should be operated for the public benefit.</p>
30809	Gregory Smith	<p>We need UDOT to be open minded on this and not fund either the Gondola or expand 209. Car Pool, expanded bus service can solve this minimal problem. Force skiers to utilize bus service to be first ones on the mountain. Later in day don't allow single or two passenger cars up the canyon. Listen to the local community.</p>
30808	Morgan Hardy	<p>The gondola is a terrible waste of money and will permanently alter the landscape for only a few crowded ski days a year. Climbing will be ruined and the walls of the canyon will be visibly obstructed. Wildlife and native plantlife will be forever harmed. Please try other alternatives, that are simpler and cheaper. Such as increased bus service, tolls, a better parking system, etc., before we even need a gondola. The cost of the gondola will go up, meaning more money paid by taxpayers. The gondola only benefits the ski resorts and a majority of people who use the canyon outside of skiing will have zero use for this option. This is a horrible option that needs a better solution.</p>
30810	Ryan Smith	<p>Why fund a gondola for Alta and Snowbird and let wealthy investors reap the profits of early property investment? This smells like an inside scam and should never be in this position. Listen to the public and local politicians. Do the right thing and nix the Gondola.</p>
30811	Michelle Harker	<p>Putting a gondola up the canyon is a terrible idea! The whole point of going up in the mountains to be in nature and not have human tech all around. We need to protect and take care of the environment not tare it down to make our lives more convenient. Don't build it!</p>
31930	Gregory G Bird	<p>I wanted the Gondola ? from all the options. Thanks for making the smart decision I know it wasn't the easy decision.</p> <p>My friends all toured Switzerland this last month. All of them came back saying how convenient it was to access many of the mountain communities via gondola.</p> <p>This is the most safe and keeps people in the mountains even when the snow is coming down hard.</p> <p>Thanks for keeping this decision about the ease and long term outlook.</p> <p>100% support this greg bird</p> <p>Greg Bird Owner Realtor [REDACTED] [REDACTED] [REDACTED] [REDACTED] [REDACTED] [REDACTED]</p> <p>facebook twitter linkedin instagram Search Homes</p>
30812	John Patterson	<p>Thank you for the courage to make what I agree is the correct decision. I hope it will receive final approval up the line. This will do so much for safety in the canyon; and it will have that je ne sais quoi [I do not know what].</p>

30813	Jon-David Jorgensen	<p>I appreciate that a lot of work has been put into coming up with a solution to the current problems. From my viewpoint the whole project is going to be very expensive (probably will double from estimated cost or more), make the experience of travelling up the canyon take longer overall, and result in a large state subsidy for skiers. It's also widely discussed how this would be a huge benefit to certain decision-makers in the state that stand to have a personal financial interest in the outcome.</p> <p>I have read through the materials related to the tolling proposal. I think tolling should be implemented along the lines propose on its own before committing to other expensive projects like the gondola. First, this would allow us to see how much the tolling alleviates the concerns, second, it could be adjusted, as needed, to strike the right balance, and third, it would generate revenue instead of spending money. It would allow those who utilize the space to pay for it, instead of those of us who don't live in or ski in SLC to avoid paying for the recreation of others. It's very likely that as pricing goes up, travelers would find alternatives by either more carpooling or busing.</p> <p>What's even better, is that as the price goes up we'll see enterprising individuals and companies looking to find solutions that haven't been thought of. Perhaps the resorts would provide buses. Others may come up with the capital to build their own gondola. If a gondola is to be built, it should be paid for with private dollars based on the value of the investment. The state should be a partner in making sure it's done safely and is done to minimize environmental harm, but not be the financier or owner/operator of the project.</p> <p>As discussed above, I don't like the idea of the state paying for a gondola. However, if the state slows down and relies on the tolling for now, the state could use the extra funds from the tolling to save towards building a Gondola or it could be used for other purposes that benefit the taxpayers.</p> <p>I also think that avoiding the appearance of corruption is an important reason to avoid pouring funds into this project. Many people I've spoken to are convinced that this is just a way for former legislators and higher-ups at UDOT to profit from their real estate investments. Whether it's true or not, when there are better options and it's public funds being spent, avoiding the appearance of corruption should be avoided if at all possible.</p>
30814	Leslie Riddle	<p>Expanded bus service is what we deserve and pay for! It's simply poor management to blame staff shortages are the cause of cut backs in service/frequency! Cut the top salaries by 30% -50% and pay driver's more (recruitment incentives, etc.).</p> <p>NO to the gondola now and always. As long as it is stopping only at the to ski resorts it should be fully funded by the to ski resorts ONLY!</p> <p>Enhanced busing can work -- although I doubt that UDOT can manage anything other than salaries for management that far outweigh the value management provides--especially compared to other areas our size.</p> <p>Enhanced bussing with electric buses that run on 10 - 15 minute increments and stop at trailheads not just resorts!!</p>
30815	Matt Copenhaver	<p>Does the ski resort pay for any of the cost or upkeep? Seems like a lot of money for a very small group of people. What do the rest of us get. Plus it is really for 4 months</p>
30816	Cathy Spuck	<p>I am very disappointed that the gondola option was chosen. I also do not approve of the road widening for buses option. Either one is environmentally disruptive and expensive and will not reduce the cars in the lower part of the canyon or the Albion Basin. Climate change and drought will make the canyon less desirable, especially for skiing. Less business means less traffic. The items in the phased implementation make the most sense. Parking reservations, tolls, and carpooling will help. On holidays and weekends there could be enhanced express bus service from parking lots not used on those days like high schools or the Sandy Amphitheater. People could make a reservation for the bus, park at the designated lot, and ride the bus up at the designated time for all day or half day. The buses load and leave a half hour or 45 minutes after half day or all day ends and return the people to the lot. You could even stop car traffic for a few minutes and the buses could descend all at once. UTA used to do this for BYU games from SL Valley and it worked beautifully. With more people working from home and more flexible work schedules, locals could be encouraged to use the canyons on less popular days/times. On-demand pricing could be used to slightly reduce the price or waive the toll on days that are typically slower. I'm concerned that the gondola will be an expensive "white elephant" like the pumps out at the Great Salt Lake.</p>
30817	Jess Shade	<p>I am an avid skier and opposed to the gondola. Please do not build it. Let's start with snow sheds and a better bus system. The current options do not serve our community adequately.</p>
30818	Terrasa Bennett	<p>to solve traffic issues in the cottonwood canyons UDOT and UTA need to work together to optimize busing up and down the canyon- year round! Alta and Snowbird each need a buses going to the separate resorts. IT would also be beneficial to have more stops up and down the canyon- i.e. LDS vaults, Lisa Falls, Tanner Flat, White Pine trail area. The gondola will NOT solve these issues. It feels like UDOT and UTA are working against each other rather that working together to solve traffic issues.</p>
30819	Galen Downing	<p>I'm not sure why it would be fair to destroy the possibility for current and future generations to enjoy the climbing available in the canyon for a plan that will only benefit ski resorts. If the ski resorts customers have to wait in line a few months out of the year to get there, then that is the resorts problem. There is no reason to use tax payer money to help resort customers get there especially when it so devastatingly effects the other uses of the canyon.</p>
30820	Kristi Frankenberger	<p>Please do not build a gondola in ANY of the canyons in Utah. I would rather see Little Cottonwood Canyon closed forever than a Gondola be built. I would never go in Little Cottonwood again if it would stop a gondola from being built. I trust you will listen to the voices of this community and respect their desires. This land was taken from indigenous peoples. The LEAST we can do is not destroy it any further than we already have. Please, I beg of you.</p>
30821	Sue Ann Jones	<p>I do not support the gondola. I feel it is a resort problem. The people should not pay to support private business. Let's do something with the money to help more people.</p>
30822	Julie Dansie	<p>As an employee of snowbird, I drive 5 days a week up the canyon. In the 15 years I've worked there, I've seen everything from animals in the road, mudslides, avalanche delays, etc, I think the gondola is the best alternative, I've been to Europe and seen how they work it's better for the environment and the future of the canyon. With all the tech companies moving here, the congestion is just going to get worse.</p>

30823	Dean Petersen	The preferred options are an excessive use of taxpayer money to benefit 2 businesses for 3 months out of the year. People will always opt for the easiest fastest way up, which is never going to be a gondola or a bus. Toll the road if you need to and make the public transit people preferred option. With climate changing we may not even have good enough snow in 30+ yrs.
30824	James Gross	Is it correct that the land for the base of the proposed Gondola is ultimately owned by Snowbird? When did they purchase this land? It seems the Gondola has been either a foregone conclusion, with these exercises of thought and public comment being "theatre" or prophetic to put it mildly. Do you realize that a very large portion of the "community" concerned about the LLC and the best way to solve congestion is not at all with you on this? Jim
30825	Emilee jensen	please don't pollute this beautiful canyon with machinery, there's only so much natural beauty left in this world can we please just preserve it.
30826	Mallory Howard	<p>As an avid hiker and climber, the proposed gondola will significantly and negatively impact my experience of Little Cottonwood Canyon. It has unacceptable impacts on LCC's iconic natural character and aesthetic. The current views of pristine granite and pines will be interrupted by towers and cables; the rush of the river replaced with the consistent hum of machinery and construction.</p> <p>Access to climbing areas will be compromised during years of construction and the gondola equals the destruction and/or removal of irreplaceable and historic world-class climbing resources and views.</p> <p>Transportation infrastructure that physically and permanently alters the canyon should only be considered after less impactful options have been implemented and shown not to be effective. Expanded electric bus service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before permanent landscape changes are made.</p>
30827	Shawna Blackhurst	<p>Please consider the terrible environmental impact a gondola, a 2500 space parking garage and widening the road in the small, tight, little area surrounding the entrance to Little Cottonwood Canyon.</p> <p>All neighborhoods in the Cottonwood Heights and Sandy areas would be impacted for years by construction, blasting, pollution, and delays, to MAYBE accommodate two weeks worth of powder days for powder skiers and snowboarders. The cart is being put before the horse!! We have been in a terrible drought for years!! If something isn't done about the condition of The Great Salt Lake we will stop having great powder days.</p> <p>Also, why is blasting and all of this invasive construction being considered so near the Wasatch fault line and major water supply area for the growing Salt Lake area and surrounding areas. There are very many more less costly, environmentally friendly, much safer solutions for everyone.</p> <p>This looks like big promoters needing to fill their pockets with no consideration for our community and the environmental impact on our states beautiful Little Cottonwood Canyon.</p> <p>Please stop this devastating choice to build this gondola and parking monstrosity. Please stop the widening of Wasatch Blvd, and please lower the speed limit to make our neighborhoods safer and more healthy for all.</p> <p>Sincerely, Shawna Blackhurst</p>
30829	Stacy Bare	I am not sure, how with a straight face, and in light of overwhelming community support for the option that is NOT the gondola, UDOT picked the Gondola. There is no funding for the project. Snow totals are on the decline. Extended bus service is needed right now AND the gondola does not allow for non-resort users in the winter to access trail heads. The gondola just moves the traffic problem down the canyon and will create traffic delays getting into and out of the 2,500 parking spots for the gondola station. UDOT also should not have cancelled / lowered bus service during the comment period. This project looks like a tax payer funded land grab by private resorts to support private resorts that shifts the traffic problem down valley. The gondolas will impact the view shed and water resources in the Canyon. It also does not impact traffic problems in Big Cottonwood Canyon. Expanded bus service throughout the Salt Lake Valley that allows for skiers, riders, and other public land users to access bus transit well before they get to the canyon is what is needed-electrify the buses and support all canyon users in both canyons-not just the corporate owners of Alta and Snowbird.
30828	Ken Yonemura	I fully support the plans to implement a gondola for transportation in LCC.
30830	purnima gandhi	I support "Proposed phased Implementation of Gondola alternative B". It is more of permanent solution for everyone concern. It will also provide continuous support to residents and business along the route. It will over all improve congestion. It is more reliable and provides permanent solution. The area is in need of better maintained roads and reducing traffic. It will have minimum impact on environment.
30831	Colin Clark	I fully support the now selected preferred alternative of a tram. It will be a great addition to the tourist scene in Utah. It will pull up tourists into the canyon during the summer as well as the winter. Many people will visit just to ride the tram and see the canyon, even if they do not ski. Furthermore, as a skier, it is always a hassle trying to figure out how to get up the canyon, meet bus schedules, figure out parking, get up the canyon when it snows, etc. Having a fully reliable form of transportation that does not add road traffic, is quiet, and is reliable will be a great and ongoing addition to Utah's ski scene.
30832	Andrew Stawski	Tolls will only make lines longer getting into Canyons. Will Toll booth attendants also check for snow tires or chains? Will there be a turn around for vehicles not paying toll? Will it also keep folks from driving on bald all-season tires? Ski resorts are already keeping patrons from going up Canyons by charging for or reserving parking, maybe if parking along roads was pared down? Or enforce a "No Parking" area along road and ticket and tow vehicles. A friend of mine, plows the Canyons, and vehicles parked along side of road keep him from keeping the roads clear of snow. No To Tolls!!!!
30834	Alan jarrett	Enhanced bus service is the right choice for LCC. How many skiers can the two resorts handle? Overcrowding is going to ruin skiing the experience for everyone. So in response the ski resorts will expand adding to the impact to the canyon and our natural resources. Build it and they will come when is it ever going to stop? Thank You for your time
30833	Shane Doyle	I am 100% against ANY expansion getting more people up that canyon unless the resorts up there expand their operations to compensate. Those resorts are overcrowded now. Alta crams so many people on the hill it isn't safe to ski and Snowbird is very close to that. NO on all expansion of the road or gondola.

30847	Bryan Murdock	<p>Honest questions that I have about this project and the chosen gondola solution.</p> <p>If we are concerned about environmental impact, why are we doing anything at all? Encouraging and enabling more people to go up the canyon will just do more harm to the environment.</p> <p>If we are concerned with bad traffic, accidents, and we desire more people to have access to the wilderness, why are we going to spend half a billion dollars on Little Cottonwood Canyon and nothing on Big Cottonwood Canyon that is just a couple miles away and has nearly identical traffic and safety problems as Little Cottonwood Canyon?</p> <p>If accessibility for all canyon users is a primary concern, why have we chosen the solution that primarily services the two ski resorts and not the hiking trails, climbing routes, bike trails, etc.? Why have we decided to charge use fees for the roads and the gondola? These things do not improve access for all, they only improve access for those that can pay extra, and for those that are coming to ski.</p> <p>Related to the above, is access for all really even a problem? The canyon only has bad traffic on weekend powder days in winter. Out of the 365 days a year that is maybe 10 days. We are really going to spend half a billion dollars and make major environmental changes to fix 10 days a year of bad traffic, in only one canyon of the two that have this problem?</p> <p>I'm sorry to say it, but with these considerations, plus knowing some of the details of who stands to benefit from the development of this chosen solution (ski resorts, land owners at the base station), this whole project appears to be plain old local government corruption. It is appalling.</p>
30846	Vanessa Bartley	<p>Hello. I am pleading for improved bus service in our canyons to resorts and our many wonderful backcountry trailheads and front country recreation amenities. It's time we invest in real ideas that actually solve the problem, like electric buses and regional transit hubs throughout the valley.</p>
30848	Shannon Barrett	<p>I am writing in opposition to the gondola in Little Cottonwood Canyon. This option is devastating to anyone invested in the well-being of the canyons. From an environmental standpoint it will destroy important water shed areas and directly impact the surrounding areas. The parking lot alone will have a huge environmental impact. The discontinuing of bus lines is negligent at this point. It is our obligation to try options with less impact to the canyon. The gondola also stands to remove countless world class boulders that bring climbers in from around the world. These are irreplaceable and need to be preserved for future generations.</p>
30849	Catherine Widner	<p>NO GONDOLA. What about more buses, tolling for cars with a fast pass option so we have more money to pay for plowing. Please stop putting the 1% over everyone else that lives in SLC. Local over vacationers, please.</p>
31932	Bryan Murdock	<p>Honest questions that I have about this project and the chosen gondola solution.</p> <p>If we are concerned about environmental impact, why are we doing anything at all? Encouraging and enabling more people to go up the canyon will just do more harm to the environment.</p> <p>If we are concerned with bad traffic, accidents, and we desire more people to have access to the wilderness, why are we going to spend half a billion dollars on Little Cottonwood Canyon and nothing on Big Cottonwood Canyon that is just a couple miles away and has nearly identical traffic and safety problems as Little Cottonwood Canyon?</p> <p>If accessibility for all canyon users is a primary concern, why have we chosen the solution that primarily services the two ski resorts and not the hiking trails, climbing routes, bike trails, etc.? Why have we decided to charge use fees for the roads and the gondola? These things do not improve access for all, they only improve access for those that can pay extra, and for those that are coming to ski.</p> <p>Related to the above, is access for all really even a problem? The canyon only has bad traffic on weekend powder days in winter. Out of the 365 days a year that is maybe 10 days. We are really going to spend half a billion dollars and make major environmental changes to fix 10 days a year of bad traffic, in only one canyon of the two that have this problem?</p> <p>Thank you, Bryan</p>
30850	Jeff Baird	<p>I do not want a gondola. CNG powered busses and shuttles are a much better alternative.</p>
30851	Caitlin Newland	<p>Please don't destroy the beauty and wildness of our mountains by putting in a gondola. Let's reassess and get a shuttle system and carpooling.</p>
30852	William Troy	<p>Strongly against the gondola alternative, it will cost the tax payers millions of dollars and it will NOT solve the problem. Furthermore, how does cutting the bus line schedule make any sense in working towards a solution for this winter. You need to have stricter enforcement on traction control laws to reduce the number of slide offs, accidents, and slow moving traffic. I would happily pay for a seasonal sticker that required an inspection as we do every year for our vehicles emissions, that would show our vehicle fit for canyon travel. Currently the enforcement on traction control is a joke, and you can see evidence of it everyday in the winter with people spinning tires trying to drive in LCC/BCC. There are many alternatives that you can implement here instead of choosing a massively expensive, semi-permanent, and ineffective gondola that will have numerous unforeseen impacts. One the comes to mind would be the mill creek concrete accident that happened last summer, what if that same thing happened during the construction in LCC? Worried about the water shed? Doesn't seem like it.</p>

30853	David Grainger	The gondola proposal is not a solution to the problem and fails to accommodate canyon users who have alternative canyon destination plans other than the two major ski resorts. Before jumping to a solution that fails to address 1) the problem, and 2) the users' needs, I advocate for an immediate enforced canyon access approach now deploying 1) actual strict entry enforcement of carpooling, 2) steep \$ fee-for-access, and 3) real "front of the line" driving privileges for all UTA bus use in the canyon. With only 4-person and greater carpools, and UTA buses, and authorized shared-ride vans in the canyon, this would reduce auto use substantially RIGHT NOW. Fee generation would pay for the required enforcement staffing at the canyon entrance. Electronic gating/monitoring as used on many airport accesses and toll roads could eventually replace staffed entry coverage 24/7. We need transitional solutions NOW while we debate more costly permanent solutions for years downline.
30854	Lou Patterson	Little Cottonwood has issues, but a gondola isn't going to solve any of them. It's a short term fix that isn't a fix at all, and the canyon will suffer for it. Do better.
30855	AC Rice	The best source for making the Canyon safer and better is going to be the gondola. I have been riding Snowbird since the late 80s and I remember when we didn't even have a place to park. We had to park on the side of the road on Wasatch and hope the busses didn't splash us or run over us. That was very dangerous. I also have seen too many casualties through the years in that Canyon. It would be nice to be able to come up and down the canyon at a consistent time instead of waiting for traffic to move along. This will also save the wild life from being ran over let alone the pollution will not bother them any more.
30856	Danielle Alling	I vehemently oppose building a gondola in the Wasatch! It seems like very little effort has actually been done to seriously consider anything other than the gondola. I urge UDOT to be serious about the alternatives -- why not start with improved bus service? Hearing the recent news that the bus service has now been slashed for the upcoming ski season is extremely counterproductive. UDOT needs to create programs to INCREASE bus use. If UTA cannot afford competitive pay and working conditions for its bus drivers, then UDOT should step in to make that happen. It could be part of a feasibility study: make the bus system as appealing as possible, and see how it changes ridership and helps with canyon congestion. Please, please, consider improving bus service up the canyon. Let's focus on the most low-hanging fruit and the most affordable solutions before building a behemoth gondola that would damage our canyon forever.
30857	Sara Hake	I emphatically oppose the construction of a gondola in Little Cottonwood Canyon. The cost is completely unreasonable for the few people it will service, and its environmental impact is too large. Please reconsider this choice.
30858	Parker Ence	As a resident of Cottonwood Heights and frequent user of Little Cottonwood Canyon, I oppose the gondola as a solution to relieving traffic in the canyon. Please pursue other approaches. Thank you Parker
30859	Doug Krause	I am apposed to the gondola proposal
30860	Frank Bouchard	I used to proudly wear my UDOT hat while out hiking on the trails. Everybody loves UDOT. Not anymore. I've gotten so many negative comments that I'm ashamed to admit I work here and I just leave the hat at home. Have you considered what the effect of the overwhelming public opinion is going to be? I've heard people use the phrase defund UDOT. That sentiment is going to stop talented people from wanting to work here. I think UDOT's going to get crushed with lawsuits from environmental groups. And I think this project is just going to stagnate for the next hundred years, costing us enormous amounts of money. Forget about the absurd gondola. There are so many more useful things to spend money on.
30861	Samantha Kern	Please do not build a gondola!!!!
30862	Scott Roberts	I fully support the proposed gondola system. The canyon traffic problem has become unbearable and a clean, pollution-free, vehicle-free way of getting people up and down the canyon is exactly what's needed. It will also be a great draw in the summer months as well and will further enhance Utah's image as a world-class destination.
30863	Lacey Dudgeon	I am very against the gondola proposal for solving traffic issues up little cottonwood. This is a proposition that only helps the ski resorts, and not the rest of the canyon users. I am up in little cottonwood canyon weekly, year round, and don't want to see it turned into something more mechanical, that likely will attract tourists with one of the longest gondolas around. I understand that the traffic is not ideal, but I also know that it's not as bad as other places. That's just part of the sport. I went skiing in Washington last year, and to get up to Steven's Ski Resort, the traffic was far worse. We waited 3 hours in traffic to get up there. Little cottonwood's traffic is not as severe, and doesn't need to take such drastic measures. People can carpool, take buses, and frankly just wait a little bit to get up and ski, as it's only a fraction of the year. For spring, summer and, fall the traffic is a non issue. Please do not disrupt some iconic climbing areas with man made materials that just aren't necessary. The cost alone for this proposal is astounding and this money could be better used to actually help people, not just a winter hobby that also largely will help the ski resorts themselves pocket even more money. I say this as an avid skier. Ski traffic is just a part of the sport. You plan your day around waking up early as you know you'll be waiting to get up to the slopes. The surrounding neighborhood areas should know that's the cost for living at the base of such a beautiful and widely used canyon.
30864	Dana Levy	I strongly oppose the construction of a gondola in Little Cottonwood Canyon.
30866	Wendy Summers	Clearly a gondola that serves only alta and snowbird at the expense of the tax payers is ridiculous, as well as obviously unsightly. A method involving buses and road expansion that will allow all canyon users equal access is a far more well thought out plan
30865	Todd Hawkins	HORRIBLE Solution. Doing exactly what the public doesn't want. This wreaks of kick backs and back rooms deals. This is dirty. UTA is dirty. It is very clear the citizens do NOT want this solution. Don't vote for anyone who has supported the Gondola.
30868	Randall Baum	Please, please, please do not put in a gondola in LCC. Other means from alleviating traffic exist. Many user groups frequent the canyon. Please do not destroy a resource so many love and cherish.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30867	Andrew Harris	I agree with all of the comments I have seen in opposition to the gondola. One thing I have not seen being discussed is the bottleneck for traffic and parking that will be created at the base of the proposed gondola. The gondola will only leave from one location so how does the traffic issue get resolved? I foresee a traffic nightmare with all streets leading to the gondola parking lot being absolutely packed and having the same issue as getting up the canyon just moved west. How will you build parking for thousands of vehicles and make them able to park quickly and efficiently so that they don't cause the same issues as inside the canyon??? The gondola does not solve any issues it just moves them around.
30869	Vicki Wheeler	I plead with you to listen to the people. Do not destroy the beauty of our little cottonwood canyons. A gondola is not needed. Traffic is only affected a few days in the winter. This is all about making the rich richer. I do not want one penny of my tax dollars to go toward this project. Protect our canyons. There are other options available to get skiers up the mountain. I'm sure you have heard the many alternative suggestions. Stop patronizing all of us in Utah to pad the pockets of the few. Skiing has become a sport of the very wealthy. Building a gondola is contributing to this.
30870	Britt Hultgren	Hello, I am OPPOSED to the Gondola. I am a hiker, skier, climber, and resident of Salt Lake City. I think there are easier, better, and far more sensible options to pursue before implementing a \$500, irreversible construction. This problem hasn't happened overnight, so we can aggressively and sensibly and ITERATIVELY approach it. I am FOR: Tolls for everyone except residents and low-income/resource insecure people to use BCC and LCC (like millcreek); I support bus alternatives (increasing bus fleet by using toll money, can build the huge parking lot proposed for the gondola, but run busses every 3 minutes instead--people will use the [redacted] busses then!). See what happens. It may work well, and then we don't need to pour so much money into what might be a bad idea in the end. Thank you for considering my comment. Britt Hultgren
30871	Xander Lyman	The Gondola will jeopardize the scenery in the canyon while still not solving the problem of how crowded it is. It still takes over thirty minutes to get up the canyon on the gondola which is no faster than taking a car on most days. Overall I think there should be other options considering the negative impacts the gondola will have
30872	Lynn Colgren	The announcement that ski bus schedules are being reduced and eliminated seems like a sinister ploy to defeat the many who love riding the bus as a way to show that we care about reducing traffic in LCC. Riding the bus is never convenient for many reasons but, we will do it. The alternative is that grotesque gondola, a bigger more damaging eyesore.
31933	Allyn Hart	No, No, No. This unsightly, noisy choice which runs over many homes and rentals misses the whole idea of "improvement". The whole essence of Alta is natural beauty, simplicity, "No Change". I've written before outlining all the reasons this is a misguided choice. Why should Utah tax payers pay for something that will benefit 2 private businesses. I've lived in Alta for over 40 years. I've ridden chairs with visitors from all over the world who consider Alta to be the number one ski area. They ALL say, don't let them change it. It is so unique, beautiful, quiet, natural, unlike almost any other ski resort. This is another situation where outsiders believe that nothing will be lost if we build a canyon-length transportation system which will allow and encourage more and more skiers. We don't need bigger crowds, nor gigantic canyon-length visual changes. We do lose something. That something is so precious, so endangered that everyone should think long and hard about what is lost when we consider develop to be the answer to every problem. Sincerely, Allyn Hart
30873	Will Jamison	Do you really think making Utahns spend 1/2 billion (not including cost overruns) on a Gondola is a good idea? Last year I started using bus service and found it convenient and cost saving. Better bus service wouldn't cost much more. Getting to the Gondola parking during a storm could be as bad as getting up the canyon. Quality skiing is a limited resource. Packing more people in the ski areas ruins the experience.
30874	Gabrielle Roh	Utah has systemic land use corruption that is built on greed and nepotism - for example, a former Utah senate president, Wayne Niederhauser, and a Sandy City Council member, Chris McCandless, surprise, surprise, own much of the land to be used for the Gondola. Here is my opinion in a nutshell: Please Please Please OPPOSE the Gondola. Don't give in to these CORRUPT people who own the land designated for the gondola and who have been manipulating our government for years so they will benefit financially from this. We drive all over the valley every day. Do you know what we see EVERYWHERE??? Signs that OPPOSE the Gondola. There are ZERO signs asking for it to be built. NO ONE WANTS IT EXCEPT THE PEOPLE THAT WILL BENEFIT FROM IT BEING BUILT ON THEIR LAND!!! All summer long I am up in those mountains. I see moose, deer, birds, wildlife. They need protection! Our beautiful QUIET canyon is in and of itself breathtaking and inspiring. The decision-makers refuse to look at alternatives even when public opinion is completely against this project. Buy smaller electric or natural gas-powered buses that travel more frequently. PLEASE DO NOT BUILD THE GONDOLA!
30876	Ann Waters	The gondola, while good in theory, will not be practical. Getting riders to dozens of trailheads and other locations will require a complex shuttle system so why not just have shuttles for both canyons as long as it is place. It goes without saying that they should be low or no emissions. I also think it will be difficult to keep people out of their cars. Most Utahns aren't motivated to lower their carbon footprints. Just walk anywhere in the valley and notice drivers who are idling their gas guzzlers for extended periods of time. They won't take an inconvenient gondola if given a choice.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30875	Jeff Bossard	The gondola is not the solution. It only helps the ski areas. \$500 million for a solution that could be solved using technology (ride share apps) tolling, paid parking and more busses.
30877	Kenneth Bond	The more I look at it the more I feel that a toll access and more buses delivering skiers would be a better option than the gondola.
30878	Matthew Galvin	I am opposed to a gondola and little Cottonwood Canyon. This proposed solution is not really a solution that will keep the majority of cars off the road and parking areas at the resort. Please come up with a solution like a train or monorail that would make a larger dent in the traffic problems in Little Cottonwood Canyon. Please rework plan to truly address the core problem.
30879	Mary Blum	Despite the public opposition to the Gondola, UDOT made a done deal with the developers. Who on UDOT got paid off to do this?
30881	Matt Gumbleton	<p>It is unclear to me why a gondola is considered the "preferred alternative". A gondola is extremely expensive to create, and not able to be redeployed if traffic patterns change in the future. There are plenty of unused seats in vehicles. Encouraging carpooling by charging a per vehicle toll to enter the canyon (as is done in Mill Creek) will easily help fill these empty seats by encouraging carpooling and will reduce vehicle congestion.</p> <p>Decreasing vehicle congestion through any method will result in increased congestion on the mountain. The resorts have already responded to the increased number of skiers by rapidly increasing prices for all tickets, and now introducing fees for "Fast Pass".</p> <p>Tolling is easy to implement, will solve the problem of vehicle congestion, and the revenue can be used to help Salt Lake City. A gondola is expensive, inflexible, may reduce vehicle congestion, but any benefit of reduced congestion will simply be rapidly captured by owners of Alta and Snowbird through higher ticket prices and ancillary charges such as Fast Pass.</p>
30880	Alan Fogel	No to the gondola. It would benefit only the ski resorts and only those who can afford to pay for riding it. More buses and a bus lane are better options that reach more places in the canyon and serve more people and destinations.
30882	Katie Guido	The gondola is too expensive, it makes more sense to commit to more buses instead.
30883	Gabe Gilbert	Currently implemented free fare days prove that citizens will take advantage of subsidized public transportation! Revamping the canyon bus system is the answer, not destroying the environment and access to many parts of the canyon!
30884	Garland Davis	I may have a previous comment. I'm a sandy Ut resident and oppose gondola systems as proposed. This places a huge burden on tax payers and may also not provide equal access to all. Try a phased plan first to reduce impact to the environment and the local communities. Consider a toll, similar to Mill creek, American Fork or Mederia Canyon in Az. Annual permits or day use fees. Limit days, limit vehicle and head counts. Prioritize for residents, employees, in state residents, lodge guests. Population growth is putting a strain on recreation resources. Expand fleet of mass transit busses. I'd pay nominal fee for non ski access.
30885	Suzanne Bounous	Oct. 1 & 2, 2022 I was up at Snowbird, passing White Pine trailhead both days. The increased usage of LCC is profound. Any improvements to roads and busses is only a bandaid. The trams & gondolas in Europe have solved these problems years back, take a page from their book. Yes, we will suffer now from the construction of infrastructure - - but 50 years from now I believe the generations to come will thank us for actually fixing the problem and not kicking the can down the road to them. Gondola has to have more stops than just Snowbird and Alta and be better geared towards locals & local use - - otherwise it's not addressing the whole problem. There needs to be another station for White & Red Pine Canyons otherwise it's not a solution. Locals use needs to be scrutinized better and addressed (not just resorts & guests of resorts.) Suzanne
30886	Rebecca Pace	QUIT spending money you don't have., WE DONT WANT A GONODOLA. If mass transit is so good let the people take buses up don't ruin the canyon!!
30887	Jen Rogers	I am an avid skier and climber in little cottonwood. I used to live up in Alta, and I still consider it a pseudo-home. I am very concerned that my taxes are going to a solution that is only servicing the ski resorts, disregarding the entire recreation area that is the rest of little cottonwood. Looking at the numbers, having a 30% reduction of traffic for the gondola does not offset the intrusiveness the gondola brings to the canyon as well as the potential destruction of some of the classic boulders that little cottonwood is iconic for. I ask that UDOT reconsider. Thank you.
30888	Eric Zschiesche	<p>Good day,</p> <p>This proposed plan for addressing the travel access to two ski resorts at the top of Little Cottonwood Canyon is sadly misguided. It reflects a short term solution that caters to a select group of recreational users, on a limited number of recreational use days for a calendar year.</p> <p>Little Cottonwood Canyon is used by many different outdoor recreational groups, to build transportation structures that focus on a subset of this group is just wrong.</p> <p>Do not build this Gondola, it is a horribly shortsighted idea.</p> <p>Eric Zschiesche Ogden, UT</p>
30889	Teresa Graham-Muffler	Opposed to the gondola. It will be very expensive to ride, so many residents won't be able to afford it. It intrudes on residents whose homes are right there. The buses do work, until you start reducing the service - very poor decision. It will pollute the beautiful views all residents can enjoy hiking, rock climbing or even going for a drive up the canyon. What special interests are pushing for this? Seems like if we follow the money, we'll find corruption. Residents don't want this
30890	Anton Huber	I believe the Gondola is a great idea. I would love to see it run in the summer as well. This would be an awesome way to centralize people and show them the canyon without driving. Toni
30891	Andrea Chisari	NO Gondola!!

ID	Full Name	Comment
30892	kurt gee	100% opposed to the spoiling of our canyons with a massive mistake in the form of a gondola!
30893	George Stevens	<p>I am writing to oppose the gondola option. It is not right for the state to ask taxpayers to fund a multi billion dollar project that will only benefit two private companies.</p> <p>The environmental aspects will also be very destructive and will ruin any sense of peace and calm left in some corners of the canyon.</p> <p>I am against any alternative other than enhanced bus service. The problem of traffic on ~20 pow days per year does not justify the expensive and permanent changes currently suggested by the gondola and road widening options. Let people sit in traffic on powder days. There's not enough space at the tops of the canyons anyway, putting people on a gondola won't change that.</p>
30894	Merrill Ford	<p>This is a terrible idea, with drivers waiting in traffic long lines to get to work , the skies are going for fun . Any money should be paid by the ski resorts , no pub[li]c money . For the non-skiers using pub[li]c money is a terrible thing. The ski resorts are making the money, those ski resorts are on pub[li]c land so no,no to the Gondola. The bus idea is better. Thanks</p>
30895	Dennis Ransom	<p>It is truly a mess when the public cannot have this on the November ballot. Since it is tax payers money and the environment at stake. The powers that be do not represent the public body that sees this as it is. A steal for the snow making resorts at the end of the terminal.</p>
30896	Michelle Martineau	<p>I am writing today to urge you to eliminate the Gondola B plan in favor of a more common sense approach to solving the traffic issues along Wasatch Blvd and in Little Cottonwood Canyon. The reasons for doing this are countless. I have a particularly vested interest in this outcome, you see, because I am directly impacted by this year-round, as my house is along Wasatch Blvd. I see the traffic go by my house, and while I understand that something needs to be done, the Gondola is most certainly not the answer. When you are trying to solve a problem, the most obvious thing to do would be to start with the obvious, most simple solutions first. You don't immediately turn to the biggest, worst-case scenario solution. Especially when that solution only benefits two ski resorts, during the winter, and is paid for by every taxpayer in the state of Utah. It does not address traffic concerns at popular trailheads (which are packed with cars year-round), nor does it offer a year-round solution to a year-round problem. It very clearly makes more sense to increase (not decrease - thanks UTA) bus service not only to ski resorts in Big and Little Cottonwood Canyons, but to the trailheads that recreationalists want to visit as well. Gondola Works and UDOT would have you believe that people don't want to take the bus (and if that were true, then why on Earth would they want to take a Gondola?!), but that's simply not accurate. Living along Wasatch, I have a bus stop right next to my house. My son worked at Snowbird last winter and would often try to take the bus up on Saturdays to work. The problem was that he would stand out at the stop for more than an hour, as full bus after bus passed him, unable to stop because there was no room on it. Clearly people are utilizing the service. The demand is there and we need to see that and embrace it - encourage it further.</p> <p>There's also the call for widening Wasatch Blvd. Not only is that not the right move, but we should be focusing on ways to make Cottonwood Heights and Wasatch Blvd safer for the residents and visitors to use it. Currently, the speed limit is 50 mph. I have had two vehicles crash into my yard in the past 5 years, one of which landed in my backyard - right where my trampoline currently sits - where my kids play with the neighbor children. The other landed in my front yard, where the bus stops twice a day for school children. If the accident had happened 30 minutes earlier, there likely would have been parents and children waiting for their kids to arrive home from school. We need to be redesigning Wasatch Blvd with traffic calming measures including reduced speed limit, better pedestrian and bicycle crossings. Currently, there is no safe way for my family to walk to the local park. Hell, even my son has to cross 50 mph Wasatch (with no cross-walk or lights, mind you) when he is walking to/from the bus every day to get to school. Every parent who sends their kids off to school every day worries about something happening to their child while walking to school. Not every parent also has to worry about their child being run down by speeding cars because there's no safe way for them to get to the bus.</p> <p>The solution is so obviously staring us in the face, but Gondola Works and the lobbyists who are pushing the state and UDOT are waving their dollar bills trying to distract you from that obvious solution. And if all of this isn't enough to call attention to the obvious, here are a few more reasons why we shouldn't even be considering this ludicrous idea.</p>
30897	Leigh Harris	<p>Hello, my name is Leigh. I am a concerned citizen who wishes to have my questions answered regarding the potential creation of a gondola in LCC. I grew up in Sandy, Utah and have seen the uptick in visitors in these canyons. While I agree there needs to be solutions, the gondola cannot be the logical way to go about this. The gondola is fixing an issue that is only prevalent in the winter, and only for about ten days out of the actual season. What is the logic behind creating such harmful eyesore for an issue that is only prevalent during the winter months? The red snake is dreadful, but we already have the resources available to us to address it. Has the board considered revamping the bus system? Our UTA buses are not actually 'ski' buses. If we made it so that our buses could comfortably sit individuals and have a rack for skis, it would undoubtedly attract more patrons. Additionally, expanding the bus routes year round will get more individuals up into the mountains without their private vehicles. Will there be any other operations during other seasons? How much will it cost for individuals to get on this potential gondola? Where will that money go? Furthermore, how do you plan to protect the flora and fauna that will be harmed during this process due to noise, construction, and the overall uprooting of their habitats? Thank you.</p>
30899	Savannah McCauley	<p>As a filmmaker and espeically as an enviornmental documentary filmmaker, this area of the Wasatch is one of if not the ONLY reason I moved to Salt Lake City. Living at the base of Big Cottonwood Canyon and spending more than half of my year in and around Little Cottonwood Canyon this place is not only my home it is also my place of work. By putting in the gondola not only is UDOT violating the sanctity of that for the profit of the Snowbird and private businesses in the ski industry, but they would also be causing MAJOR traffic issues along the front foothills. As this is where I live I take up HUGE issue with this. Please up the bus systems and drivers first before ever considering this. I would gladly take a bus up to the ski area, backcountry spots, or trailheads IF IT WAS AVAILABLE TO ME</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30898	David Nord	I firmly believe that the gondola project will be doing more harm than good to the little cottonwood canyon area. People using the canyon during regular hours might use the gondola, but people coming up early and leaving late will be left out of options, especially if parking is not allowed before certain hours of the day. Back country users would benefit more from an increased bus service that runs earlier and later and more often. Bus stops could be improved, making ridership more attractive to the general user base. The gondola is a waste of money and largely a performative gesture, not an actual solution.
30900	Katie Simpson	I am in favor Gondola. I think this is the best for the canyon and will support the growing city in their recreation.
30902	Richard Davies	How inclusive is the range of comments? It seems likely to me that you have received comments from those interested in travel to the ski resorts who are very likely to want a gondola. The easiest way to limit use of the canyon is by fee with exceptions for those who work, live up the canyon and deliver to the resorts. This matter should be put to the people in a referendum.
30901	David Burford	NO GONDOLA
30903	Kevin Moffatt	<p>After reviewing the revised EIS I am still strongly against the Gondola alternative. I believe the enhanced bus service can accomplish the same goals as the Gondola with less cost and less impact.</p> <p>I think phasing in an enhanced bus service is a good approach, but it seems to me that the same capacity can be reached by the bus service as the Gondola (~1,000 people/peak hour), so why phase out the bus service to pay for an expensive and ugly gondola? Electric buses would not increase pollution (EIS assumes diesel buses and states pollution concerns as one reason for phase out), and should be able to handle the 3 trips required up the canyon during peak hours before needing a charge. Electric buses may increase initial cost, but will decrease cost of ownership (another reason stated to transition way from buses). Additionally, even with the current estimate of \$350 million + \$14 mil/year for the enhanced bus service, it would take almost 30 years for the Gondola to pay out at \$550 mil + \$7 mil/year. At that point the Gondola option would likely need a significant update, which would add enough to extend the return on investment many additional years. In section 2.6.2.1, it is estimated ~65 buses would be needed to reach the peak rate by 2050. I would like an explanation on how this 65 buses results in a \$96 million capital investment in buses listed on the fact sheet, especially when the fact sheet estimates for diesel buses, which tend to be in the \$500k-\$750k range.</p> <p>I appreciate that UDOT recognizes the Gondola provides a high visual impact to the canyon, but I do not think UDOT weighs this heavily enough in their final choice. The simulated images in 32E are good, but do not represent all of the scenic points of LCC (i.e. looking down the canyon from the Red Pine area), and also seem to be simulated to reduce the impact of the Gondola (cropped out in 32E.3-2 or out of focus in 32E.3-1). Using just the enhanced bus service would eliminate this visual impact, and would also get rid of any further impact to existing climbing (especially bouldering), hiking/biking, or other environmental factors.</p> <p>One advantage proposed for the Gondola is that it could operate while SR 210 is closed due to avalanche mitigation. I do not think this is entirely valid. For earlier alternatives such as only allowing one way travel, emergency access was correctly identified as a major risk. This risk still exists if the road is closed and 1,000 people are allowed up on the Gondola, as an ambulance would not be able to access those people. As a prospective user, I am not sure I would want to get on a Gondola in potentially active avalanche terrain.</p> <p>Overall, I believe that the analysis done by UDOT shows that the enhanced bus service is the best option and should be used as the primary alternative. If this option is fully attempted and invested in and still does not work out, then further action may be needed, but for the time being moving straight to a Gondola as a preferred alternative does not make sense.</p>
30904	Brandon Jensen	Dont do it
30906	Andre Hamm	The gondola alternative does not adequately address traffic issues in LCC. Increased Bus use and wider roads are a better solutions for the people and the environment.
30905	Cheryl Walczak	These "sub-alternatives" should be built in such a way that they would be SUPPORT FOR and the PRE-CURSOR TO A PERMANENT GONDOLA.
30907	Heidi Timpson	<p>Please consider other options aside from constructing a gondola. Not only will this destroy one of the greatest views in the Salt Lake Valley, I just don't see it getting used to the capacity it is intended. Nobody is going to take a gondola ride they have to pay for when it takes much longer than driving a car. It is also frustrating that almost 6[00] million dollars will be spent for something only used (or not used) during the winter months.</p> <p>Please consider alternative less invasive options such as tolling the canyon, increased bus usage. Perhaps incentives for carpooling or taking the bus.</p> <p>This canyon is so dear to my heart. Being an avid skier, I just don't see the use in such a massive project that will destroy the canyon.</p>
30908	Jennifer Hunter	I am against building ANY Gondalas. A Or B. Too much money and it wouldn't even be cost effective for the rider. Plus I'm against those people that bought up the land. I thought those meetings were closed for a purpose not just so they could make money. Fraudulent.
31934	Amanda Martin	I live in [REDACTED]. I am in support of the gondola and hope there will be more gondolas to come. How can I help support having gondolas for our city and canyons
30909	Lynn Dixon	NO on gondola. It is a irresponsible use of taxpayers money. Local people will be paying for something that will mostly benefit out of town tourists and the ski resort. The traffic is only bad a few weeks out of the year. It makes no sense to implement such an expensive solution when the problem only exists a few weeks. As a taxpayer, I refuse to pay for this gondola. NO on gondola!!!
30910	Trevor Olch	I love the gondola selection! I am looking forward to seeing it finalized and installed. I have ridden them all over the world and it is a great choice.
30911	Marc Coppi	I do not support Gondola Alternative B. I appreciate other ideas UDOT is looking into such as a toll restrictions and increased Bus Service.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30912	Andy Weuling	<p>Hello again, I am questioning the construction estimate of \$550 Million. If this number was based on 2019-2020 numbers then that estimate is far under what it would cost even 3 years later. Construction costs rose 17.5% from 2020-2021 and are projected to increase 14.1% year over year. The current argument of the bus costing more than the gondola over the next 30 years needs to be revisited since the construction cost of the gondola will be significantly more when it's theoretical construction occurs. Utah residents are already sticker shocked at the first estimate and by not calculating and disclosing the more likely higher cost they are not being fully informed. It starts to reason bus costs are not going to go up at the same rate. Off the bat electrification is on the horizon thus cutting gas costs. Please consider revisiting these calculations and informing the public openly and transparently about the results.</p>
30913	Marc Davis	<p>The parking reservation system is working. People no longer have to drive up at 5 am and wait or get turned away, needlessly wasting time and fuel and polluting the air. Why not start enhanced bus service now? I had heard of 4 hour bus rides on snow days last year and understand UDOT plans to cut back on bus service this year. This would be the least expensive way to fix the problem now while the proposal is being evaluated thoroughly.</p>
30914	Reginal Thompson	<p>I am opposed to the gondola option as it is a huge investment for a small number of days when the canyon is congested and even smaller number of beneficiaries. Our preferred alternative is expanding LCC road to 3 lanes; 2 for morning/afternoon uphill/downhill traffic during ski season and on busy summer weekends. Construct protective sheds to cover the road in the avalanche prone areas and keep closures down. Serve the public, not the profiteers. NO TO THE GONDOLA!!!</p>
30915	Jeff VandenBerge	<p>Given the choices presented I believe the Gondola B is the best choice. Especially given the phased implementation. Before the gondola becomes a reality I think there should be more efforts to improve bus access and consider not allowing any private traffic in LLC other than residents and emergency vehicles on certain days or time periods.</p>
30916	Barbara Riser	<p>Improve roads and include a bus lane for solar & electric buses. Not against a gondola but wind, storms will affect its operation. And it will be expensive.</p>
30917	Sarah Lefave	<p>The gondola is NOT a preferred option for the thousands of people who climb along the Wasatch Front ALL YEAR ROUND. Additionally, the gondola ONLY serves those who want to travel to the ski resorts in the winter and completely ignores other canyon users and other seasons. It is a massive financial burden on the tax payers and will permanently and irreparably harm the landscape and access to canyon for climbers, hikers, and backcountry skiers. Climbing has been a part of LCC for almost a century, climbers have appreciated the landscape and nature long before ski resorts opened in the canyon. This is a money, time, and resource sink that will only benefit the already wealthy ski resorts. As a young adult who finally bought their first house, it is painful to realize the publics voices and opinions here hold almost no value. We do NOT support the the gondola.</p>
30918	Joseph Blake Quintonn	<p>The proposal for a publicly paid for gondola to solve the problems of two over solicited businesses at the top of Little Cottonwood Canyon is preposterous. A \$1 billion dollar project to run people with the top 1% of incomes up to two PRIVATE ski resorts, not with my tax money.</p> <p>The answer is simple. 1. Force the ski resorts to offset their starting hours. (Just like in Big Cottonwood). Based on my observations in BCC this will solve 75% of the problem. 2. Charge a per trip toll for all cars with less than 4 people. If there are still too many private cars then only allow buses from 7:30-10:00. 3. Buses (UTA's cynical ploy to cut busing to the ski resorts this season, are you kidding). Increase bus frequency. Make individual runs to all 4 ski resorts. 4. Use the toll to fund three lane wide avalanche sheds. 5. Expand the road to three lanes with one lane alternating, if necessary (it won't ever be necessary, the ski resorts and back country are already beyond full).</p> <p>The gondola will take too long to ride. Will take too long to get to (one pick up point, rather than disbursed pick up points). Will destroy too much of our water shed. Won't operate in heavy weather. The gondola stinks of corruption and will be a publicly paid for boondoggle of international fame.</p>
30919	Scott Claffey	<p>Stop the LCC Gondola! When you love something to death, it's sadder than you can imagine. I refuse to pay for this. Snowbird and Alta can pay for this and I'd still be against it. Less is more in this case.</p>
30920	Marjorie McCloy	<p>I am strongly opposed to the gondola alternative for LCC. The gondola benefits just a tiny percentage of the population: skiers at Alta and Snowbird, many of whom are not Utah residents (and Realtors, politicians, and contractors who will benefit financially). Left out are backcountry skiers and snowshoers; summer hikers, rock climbers, picnickers, etc. The gondola (and its giant parking lot) disturbs the pristine look of the canyon forever, and may be completed just as winter sports are declining due to our changing climate. I am encouraged that "interim" methods include discouraging single car trips through tolls and parking fees. I feel that the money allocated to the gondola would be better spent on a fleet of electric buses combined with strong measures to encourage bus use. No extra lane is required; the skiers I speak with are used to some traffic and some road closures and are willing to put up with that in exchange for increased bus service and cleaner air. Please consider increasing canyon ski bus service, adding a few electric buses per year to the fleet, and implementing single-user tolls year round (could fund a bus or two)</p>
30921	Mark Barone	<p>No Gondola..... Keep the road the same, use More Busses!</p>
30922	Jane Bowman	<p>STRONGLY oppose gondola</p>

ID	Full Name	Comment
30923	Alex Owens-Baird	<p>Please please please do not build the gondola. It will be devastating to the natural landscape of little cottonwood canyon. We do not need to spend \$1B on a privately owned & operated project that Utah politicians are clearly going to benefit from. PUT IN A TOLL where 3 people in a car go up free, 2 people = \$10, 1 person = 20 bucks. Use the money to build more carpooling parking lots and run extra buses.</p> <p>Deincentivize people from driving alone to reduce congestion & issues.</p> <p>DO NOT BUILD THIS GONDOLA!!! You likely won't even need to expand the roads with a winter toll & get people to stop driving up alone.</p>
30924	Neve Rauscher	<p>As a Cottonwood Heights resident, I strongly am against the gondola. Salt Lake needs to be focused on initiatives that protect our wilderness, not destroy it. The gondola would destroy granite and pines that have been around for centuries-affectively destroying the integrity of the natural world and ecosystems, not to mention views in the canyon. Additionally, the gondola is fiscally irresponsible, with around half a billion in costs, that could be used for other alternatives for improving our community and transit organization. I really think other options would be less intrusive and require less natural resources, and destroy less of the integrity of the LCC area!</p> <p>Thank you so much!</p> <p>Best, Neve</p>
30925	Sam Ogles	<p>This Gondola closes the door for people who have been enjoying and caring for the canyon for decades and open the door for 1000s of people who have alternatives to go to. There's not a legitimate need for this to happen. It's being marketed as a solution and if it goes through it's a pretty sad reminder that whoever has more money to market their narrative will win regardless of the impacts on the environment and people involved. I'm not a genius, I'm not an avid outdoor climber and the outcome this likely won't impact me at all, but even I can see the that this is obviously not a solution.</p>
30926	Susan Hildebrand	<p>While UDOT proposes the gondola as the best solution, please look closely at the many critiques of this decision. Bottom line, who does this gondola project benefit? Not the many users that enjoy the canyon year round. Your own criteria is NOT met when you say this preferred alternative benefits all users. IT DOES NOT BENEFIT ALL USERS. It is mainly to funnel people to Snowbird and Alta during ski season. What about all the users in between? The hikers, backcountry skiers, sightseers? And at whose expense? Public money? Probably the majority from whom would never use it? You still will have traffic congestion and delays, crowds backed up trying to jockey for parking, then for shuttles, more lines to wait in to get onto the gondola. You can bet many will choose to bypass this and still drive up the canyon to avoid that headache. And is it worth permanently disfiguring the absolute beauty of LCC and what Utah promotes itself to its own natural treasure? This is acceptable? This is not Life Elevated. Even as a volunteer employee of Snowbird, I do not support the company behind this and I know they are lobbying hard. PLEASE go slowly and reevaluate each step of your phased process, to continually critique your own decision making for the general good and best interests to ALL. The eyesore is permanent and obtrusive. What should be supported by UDOT, the state and the ski resorts is more bus service and prioritizing funds for salaries to attract more bus drivers, more buses and frequency. And seriously making bus-only designated lanes to expedite and reward users. Case in point: the recently reported closing down the 953 bus route from Midvale, 6200 Park and Ride, to Snowbird/Alta this winter. Where are the priorities to try to make this work? That's one of the busiest routes out there. As a Snowbird employee, you were unable to board the bus at 0700 or 0730 to get to work on time as it was already full. That translates to that many more cars on the road. There IS a demand. That is what should be supported in short and long term. And it will maintain the attractions and beauty of our canyon and state. Please don't listen to the select few, the companies that will most benefit at tax payers dollars, ie the ski resorts. This gondola does not give access to the canyon for other users. Respectfully submitted, Susan Hildebrand</p>
30927	Patrick Kilbourn	<p>Hello. Concerned tax payer here. Let's not spend 1/2 billion tax payer dollars to line Snowbird and Alta's pockets. How about we let Snowbird and Alta pay for it if they want it? Sheesh. Do you want locals to actually ski and enjoy the mountains or is this just catered to the 1-10%'ers?!?! Let's instead get more bus routes that serve and connect to people in the valley. More busses, more routes, and shuttles for people who utilize the backcountry trailheads.</p>
30928	Mo Sykes	<ol style="list-style-type: none"> 1. UDOT's own criteria emphasize that the preferred alternative must benefit all users of the canyon. The gondola only benefits patrons of Alta and Snowbird and, not incidentally, the owners of these resorts who would be, in effect, receiving an enormous public subsidy. 2. The gondola towers would permanently deface the natural beauty of the canyon, diminishing the experience of all future visitors, including those who derive no benefit from the gondola. 3. The traffic delays and crowds foreseeable at the gondola base will cause many prospective users to drive instead. 4. Better and much cheaper alternatives exist that UDOT has not considered. One would be to implement alternate day access depending on whether a vehicle's license plate number is even or odd. Another would be mandatory carpooling enabled by an app (similar to Uber's) to match drivers and riders who would meet at a designated place near the bottom of the canyon. It's understandable, although not in the public's interest, that the ski resorts would object to such arrangements for fear they would reduce the number of skier days. 5. However, the resorts, and all of us, must realize that the only way to save Little Cottonwood Canyon is to limit the number of people who use it. This should be done in an equitable way (i.e. not a toll). 6. Finally, it is short-sighted to spend half a billion public dollars on an industry whose economic importance will decline as our snowpack thins. By the time the gondola is finished, it is entirely possible that Utah will no longer be the ski destination that it has been in the past. Of course, the ski resorts refuse to consider this future. Whatever solution is adopted, it should minimally impact the experience of the canyon in case this future becomes reality. If the gondola is built, we will have permanently defaced the canyon and spent a huge sum of money for no purpose."

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30929	Robert Woodruff	The gondola is the Taj Majal. Widen the road to make it work for more people with less cost per person while making it work for all. The environment will survive, in spite of what is being said to make all think it would not survive. Common sense can prevail, if we let it. Thanks. rob woodruff.
30930	Julia Clowardd	The gondola is a really terrible option for the canyon. It will not help alleviate traffic, it is not good for our watershed and environment that we cherish and recreate in. Better options include: tolling, parking reservations, no two wheel drive vehicles AT ALL in the winter, electric buses, increased bussing, NOT DECREASED BUSSING! Please don't destroy our canyon
30933	Michael Kealy	Terrible squandering of taxpayer resources. I'm opposed to the MAX
30932	Diane Shelley	<p>No gondola needed!</p> <p>1 Neighborhood Preservation (many)</p> <p>Better projects available to serve more taxpayers.</p> <p>Better projects with a greater return of investment.</p> <p>Better projects to help the tourism sector</p> <p>Better projects available with use for future large investment.</p> <p>Better projects to expand growth outside of SL while serving the tourism and Ski Industry.</p> <p>Why invest in a canyon road when we serve only a handful of businesses. These businesses have knowingly built their businesses and have been profitable for many years. If these few businesses need a Gondola or road improvement to increase their profits then we might be more open to a plan.</p> <p>It takes 30 min. from SL Airport to Kimball Junction. It takes 40 min. from SL Airport to Snowbird.</p> <p>Park City and surrounding are has so much more to offer tourism and the Ski Industry. There is a greater area for growth as well as tax base for the state.</p> <p>Let's look at greater Bus service to PC.</p> <p>Let's entertain ONE WASATCH to a greater option of linking All Ski areas by trails etc. This is less impact to existing neighborhoods and strive to preserve these neighborhoods.</p> <p>One Wastatch will enhance the Canyons while serving tourism and ski industryie.</p> <p>This project as it stands has many foundation problems. Conflict of interest between individual at UDOT and the Businesses in the Canyon. Individual who own or purchased surrounding properties. Legislature leaders not following what the residents and taxpayer Wants and have been Demanding.</p> <p>This project is not needed. We have spent way to much of taxpayer funds when it was flawed from the beginning.</p> <p>Laughing at now tolling is being talked about. Tolling has cost the State and continues to cost the state by negative return and contracts with outside contract.</p> <p>Please adhere at least for Neighbor Preservation.</p> <p>Listen to the taxpayer.</p>
30931	Robert Blanco	I support the gondola alternative
30935	Pamela Silberman	I'm disappointed that the gondola option was chosen before exploring alternatives, like tolls, mandatory carpooling and increased bus service. Because the gondola will only service Alta and Snowbird, it will not reduce traffic for people going to other destinations in the canyon. We only have to look at Zion national park to understand how successfully mandating shuttle/bus use can be. If there is adequate parking at the base, you can require that anyone who is not employed, a hotel guest or resident in the canyon must park and take the bus. Let's try that before we opt for the most expensive, destructive solution.
30934	Savannah Simmons-Grover	As a resident of SLC, I strongly disapprove of the construction of the gondola in LCC.
30937	Samuel strickland	The gondola is not the way. Changing the canyon forever with a structure that costs hundreds of millions of dollars is not the move. The local residents have made it more than clear that we do not want the gondola. It will ruin the opportunity for pleasant recreation for the other 8 months of the year. Why destroy a beautiful canyon with the gondola? Please consider other options. It is not worth it.
30936	Mark Laniewski	I believe the gondola will not solve the issues with traffic or congestion in and around Little Cottonwood canyon. I live in Granite Utah and also Ski, hike, and climb in this canyon. I have first hand seen how awful the traffic can be but have also seen how the ski resorts Alta and snowbird have worked to help solve the problem. Alta for instance has started a parking reservation program that requires a parking reservation. Snowbird partially started a program but still allows some non reservation parking giving hope to many people who did not get a parking reservation. I have even seen people park at Snowbird then hike or hitchhike to Alta to ski. How about we make all ski resort parking by reservation only. Make a booth at the base of the canyon. Without a work, resident, or parking reservation then no entrance to the canyon. Also add a summer pay station. Charge a fee. This works in other canyons why not do it here too? Making a central parking and gondola will not end the ski traffic congestion it will likely make it worse. Cars still need to get to the parking lot. How will the parking lot handle that much traffic at once and how long will lines be to get on the gondola I. Either direction ? What about getting down at the end of the day? Now a almost 40 min ride on a gondola with how long of a line to get on the gondola? This is all a ski resort issue. No taxpayer money should be going to fund a gondola for privately owned ski resorts. This is complete was of money. Please try less intrusive methods of traffic management. A gondola will destroy this beautiful canyon and the area, for both people who live here and want to do recreation in this canyon.
30938	Joseph John	I've watched the videos and I've read through the commentaries, and I don't see any information regarding the cost of parking or the cost of riding the gondola, but I have to believe the public will be paying something to use these services. Please share what you expect the costs to be for both parking and the use of the gondola
30939	Ann Petroni McMullen	I think that the gondola is a very bad idea and that other options should be implemented and tried first
30940	Stephen Grant	I do NOT agree with the proposal of building a gondola for LCC. Another solution, such as busing is superior.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30941	Stefanie Musy-Verdel	Please secure funding for enhanced Bus Service with priority on Mobility Hubs. Especially those in SLC. For example direct access to the canyons from a Foothill location. Creation of a new hub at the mouth of Parleys. Along with direct canyon access from the the existing mobility hub on Wasatch and 39th. Frequent Bus schedules are important. If People can actually access the canyons from close to their house as opposed to currently driving to canyon access mobility hubs the chance of increased bus ridership would increase. Immediate free bus access to canyons with immediate canyon use automobile fees would adjust peoples decision.
30942	David Carruth	<p>Congratulations to the powers at UDOT for recognizing that we cannot continue to have road traffic going up and down Little Cottonwood.</p> <p>The gondola option although not perfect will be quieter, less pollution and can operate when the road is closed to avalanche danger.</p> <p>More buses are not the answer as it is becoming more and more difficult to find drivers, mechanics and the like.</p> <p>More road is definitely not the answer because of the damage caused to the most beautiful canyon in the Intermountain west.</p>
30943	Marjorie Connolly	<p>Dear Reviewer,</p> <p>I am opposed to alternate B. I do not want a gondola and the subsequent visual impacts in the canyon. I support an efficient bus system with ski lockers at the the resorts.</p> <p>Sincerely, Marjorie Connolly</p>
30944	Yvette Melby	<p>I support the construction of this gondola, as long as it also allows for climbers/hikers to still access the canyon in individual vehicles. The boulders in Little Cottonwood are iconic and access to them needs to remain open.</p> <p>Please also consider bike lanes.</p> <p>Thank you.</p>
30945	Kevin Murphy	100% supportive of the UDOT recommendation of proposal B
30946	Stanley Postma	<p>I support the gondola alternative because of the following benefits:</p> <ol style="list-style-type: none"> 1. Reduces the number of vehicles using the canyon to access Alta and Snowbird, which are proposed stops. 2. It reduces the overall number of users in the canyon to a more manageable level. Expanding the roadway will only encourage over-crowding of the canyon. 3. The footprint is much smaller, reducing the impact to the canyon. 4. This encourages a private public partnership between UDOT and the ski resorts to complete it to meet resort needs. UDOT should not need to pay for all of the improvements or operation costs, since the resorts will receive the benefit. By choosing this option, and not having an immediate funding source, will encourage the resorts to provide some funding to meet their needs.
30947	Maureen Ball	<p>I wish we lived in a world where we would respect our canyons being a beautiful, diverse ecological area for their own sake. As it stands, it is incredible that this kind of development is even being considered in our watershed, considering the drought and water issues SLC and UT on the whole are facing. There is truly no sound reasoning behind the proposed gondola - there are countless lower-impact alternatives to increased canyon traffic, with substantially cheaper costs to taxpayers and the environment. We can easily adjust bus routes/carpooling/tolling/etc depending on their success. Ripping up the canyon for a gondola cannot be undone - not within several lifetimes. You can't drink money - and you won't have money if we continue to damage our natural resources, have less snowfall, and say bye bye to all of our winter tourists. LCC does not need a gimmick to attract people to it - it needs sustained, principled conservation so that it remains as beautiful and rich as it was when people first began flocking to it.</p>
30948	Conor Lyne	<p>The Gondola proposal not only goes against the majority of public opinion but is a blatant violation of common sense, private vs. public interests, and our great Utah lands.</p> <p>You do not have to look far to see examples of how public transportation can improve the traffic and ecological situations of ski areas around the world. Europe is a prime example of this, where the use of busses takes precedence over cars, or large tolling measures are put in place to encourage carpooling or the use of public transport.</p> <p>UDOT should focus on:</p> <ol style="list-style-type: none"> a) limiting private access to the canyon to individuals that are 1) living in LCC, 2) staying in approved accomodation in LCC, and 3) employees working in LCC. B) All other recreational visitors should be forced, yes, forced, to utilize the UTA bus system to travel up and down the canyon. <p>To provide for B), additional parking stories can be built on the existing commuter lot near the I-215/6000S interchange, and an increase in bus operations to and from the LCC.</p> <p>Any option involving the gondola is using taxpayer dollars to provide additional revenue for Alta and Snowbird resorts, while doing nothing to eliminate traffic issues.</p> <p>Will the public good of Utah win out, or will you let private developers, solely interested in profits, negatively impact our beautiful canyon?</p>
30949	Albebson Lim	The gondola plan will not help at all transportation wise. This will just destroy the mountain sides and cause more traffic at the canyon
30950	Serena Lambiase	Please do ruin our beautiful canyon, the ecosystem, and wildlife with the gondola.
30951	Scott Jefferson	Expand the road and buy buses. Do not spend state money on the gondola. Allow Snowbird and Alta to fully pay maintain and operate the gondola if they want. Have Snowbird and Alta also pay for the Environmental impact study.

ID	Full Name	Comment
30952	Mike Plaehn	Stop pushing for an infinite growth of LCC when it already has capacity and traffic issues. Having resorts limit ticket sales or removing lkon would have a much greater impact. Adding a gondola that shuttles more people in would likely exacerbate the problem the canyon has and also destroying nature. Please no gondola, make the resorts accountable for the traffic problems they create.
30953	Brenda Ruthizer	<p>It's as clear as the noses on our faces- The only ones to benefit from the LCC gondola are Snowbird (esp since they are giving free ridership to their season pass holders), Alta, UDOT and many politicians. And it comes at a very hefty price, which residents have to pay for. There are so many other choices, that would benefit everyone who visits LCC, that should be examined and utilized before we start scarring the Canyon with a Gondola, which no one will use except for ski season.</p> <p>Think of all the hikers, rock climbers, back-country skiers who also use the canyon, and who the Gondola will NOT serve.</p> <p>And with the recent news that UTA will reduce bus service in LCC and BCC starting early Dec, due to not having staffing, it's ludicrous that UTA is not working FOR the people who enjoy visiting LCC. Bus service should be INCREASING during the ski season, promoting it's ridership and making it more attractive for people to use it.</p> <p>One of the complaints I have, which is also shared by so many others is the fact that the busses only service the ski resorts every 30 minutes or more during the winter. If there were more busses, I would ride it more, not having to wait so long for a bus.</p> <p>I do think there needs to be a major transportation hub with adequate (and free or reasonable) parking at the bottom of BCC or LCC, so that Bus ridership is more attractive and easier. But invest in electric busses for the transportation mode. That way, if ridership increases or decreases over the years (who knows if climate change will make the canyon ski resorts unusable in the next decade), it's easily modified and schedules can be changed based on the ridership needs.</p> <p>And it's not been made clear to this skier/hiker how much each gondola ride will cost me or the cost of parking at the base of the gondola. These are things that might dictate where I ski.</p> <p>So, I implore those who make the decision: Work WITH our beautiful landscape, work FOR all those who use the canyon, and work TOWARDS solving the transportation for the future, and do NOT vote for the Gondola.</p> <p>Thank you, Brenda Ruthizer</p>
30955	Colin Maehler	Please do not expand the road or develop a gondola. Traffic is not bad and I have no problem using the road. Do not destroy our beautiful earth. We are privileged to live in such a beautiful place.
30954	Jody Vorwald	Do not use tax dollars to pay for gondola. Let the ski resorts pay for it. Do not widen wasatch boulevard.
30956	Virginia Curtis Lee, Esq.	<p>I am writing as a biologist (1977 BS Biology, magna cum laude, Phi Beta Kappa), lawyer (1979 JD), a Utah Republican precinct chair, and a member of the Union of Concerned Scientists.</p> <p>As a former member of the Salt Lake City Public Utilities Advisory Committee, I urge UDOT to prioritize Little Cottonwood Canyon water quality and quantity.</p> <p>Water is life.</p> <p>Earth is already in the midst of its sixth mass extinction episode owing to the driving forces of 1) over-population and continued population growth, and 2) over-consumption by the rich. https://pnas.org/cgi/doi/10.1073/pnas.1704949114. Proximate causes include climate disruption, habitat conversion, over-exploitation, toxification, species invasions, disease, and (potentially) large-scale nuclear war.</p> <p>Now is not the time for UDOT to prioritize skiing over survival of Salt Lake City's rapidly expanding population has exceeds the carrying capacity of the quantity of water available to sustain life.</p>
30957	Max Tarver	LCC is a national treasure. It's unacceptable to destroy it for the sake of skiers who are disproportionately from the upper class. Unbelievable.
30958	Josh Bonkowsky	<p>Dear colleagues;</p> <p>I am concerned that the gondola plan (B) is not an appropriate for access to Little Cottonwood Canyon, and that continued research into options is needed. Clearly, a solution is needed, but this is not the solution!</p> <p>The reasons I believe the gondola option is not appropriate are:</p> <ol style="list-style-type: none"> 1. the gondola only serves the ski resorts, and does not service other summer and winter destinations in the canyon, which are also a source of traffic. 2. Because of the fees of traveling on the gondola, it will limit use by young adults and teenagers, and from those of less advantaged means (less well-to-do- families, people from minority groups, etc.). 3. The gondola will have a major impact on the access and intactness, and use of the wilderness areas, particularly climbing areas and hiking and running trailheads. <p>Thank you for consideration of my comments- I am happy to discuss more as well.</p> <p>Sincerely, Josh Bonkowsky</p>
30959	Tydon Kommel	I would like to express my opposition to the gondola project suggested for Little Cottonwood Canyon. The canyon is already extremely crowded and increasing traffic will only harm the wildlife and surrounding wilderness and lower the quality of experience for all visitors.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30963	Kate Flynn	No gondola. I am a mom of a 3-year-old daughter, a previous registered nurse at primary children's hospital, and current nursing PhD student at the University of Utah. I live in Millcreek and my family uses the canyons for recreation daily. Please do NOT build a gondola in Little Cottonwood Canyon (LCC). Please support the use of smaller vans and electric buses, parking reservations, and tolls. Please support a capacity/visitor management study to better understand how many visitors LCC can support. Please do not build a gondola.
30962	Steven Bott	Please no gondola!!! It fails to serve the other canyon users, is too expensive, is too slow, and is an eyesore in our beautiful canyon. A phased approach to increased bus service, and roadway improvements including avalanche tunnels makes more sense. A gondola is what the ski areas and developers want, but not the local population.
30964	James Carlisle	<p>UDOT,</p> <p>I would like to register my strong objection to the gondola proposal to address traffic concerns in LCC.</p> <p>I see this proposal as being a benefit to only the private ski resorts. It is a huge financial commitment that I believe is irresponsible and will prove to be a big mistake and not even solve the real issues. This is classic private wealthy business making a huge grab of public resources and dollars. One you embark on the path to build the gondola system you are committing to its completion. The ugliness of huge towers visible from the peaks cannot be overstated</p> <p>A far better better solution is expanding bus service. It can be done incrementally without the huge outlay of cash and the obligation to finish it once you begin. It can be done by building out parking at the canyon base, expanding lockroom spaces at the resorts, adding bus lanes where needed, charging tolls for cars to discourage their use, transitioning diesel or NG buses to electric buses as they become available. Buses can stop at far more locations up and down the canyons benefitting far more users than just those going to the resorts. If after living with it for a while if the decision is made that snow sheds are needed then they can be added. Expanding the road will be far less noticeable to hikers and skiers up on the mountains that sky high towers.</p> <p>Please represent the large majority of your constituents. Be financially smart and just think logically about how normal people go about solving problems in their daily lives. The gondola is not logical. It is the worst example of how big money and greed of a few can degrade the public's interests.</p> <p>thank you.</p> <p>James G Carlisle, MD</p>
30965	Richard Tanner	<p>As a citizen living in my owned residence not far from the mouth of the canyon, and an enthusiastic skier and camper, I wish to register an emphatic NO to the gondola proposal. In summary my view is based on (1) Corporate Welfare. This is far to great an expenditure burden on the backs of Utah taxpayers to principally benefit two corporate interests. (2) Impact on the Canyon and nearby residents. Those implications are well known. (3) The serious potential of declining ski product and skier days due to climate change.</p> <p>The alternatives have been discussed and I will not belabor them.</p> <p>I have not seen any analysis of weather-related disruption of the proposed gondola operation. Why has that not been made public?</p> <p>Having commuted to downtown via Wasatch Blvd for the majority of the past 22 years; I can tell you that the need for widening is grossly exaggerated.</p> <p>Do not allow the real estate interests and powerful ski companies to destroy the quality of life, and recreation at enormous cost for their sole benefit.</p>
30968	Robert Beesley	The proposal for gondola which will only service Alta & Snowbird less than 15-20% of the year. Why should the the public be tasked and burdened with paying for this rather than the beneficiaries, Alta & Snowbird? Also a further stipulation should mandate that if the state pays for this project Alta should no longer be limited to a skier only resort but a ski/snowboard resort similar to Snowbird.
30969	Wes Alder	A light rail train line from the u of u to lcc along foothill and wasatch Blvd would be more beneficial on a daily basis than a gondola.
30971	Katie Riley	I would like to see an electric bus system implemented rather than the gondola. A gondola will have a fixed capacity, which would perpetuate the issue of overcrowding if the demand continues to rise. A bus system, however, is expandable. More buses can be added but more gondola cars cannot. Furthermore, the construction of the gondola towers throughout little cottonwood canyon presents a concerning danger to the life supported by the area, including ourselves. How would our watershed be affected by the machinery and materials required for construction? I propose instead to improve the parking at the mouth of the canyon and below, and implement a network of electric buses that stop every 15-20 minutes during peak use hours. Thanks for the chance to comment.
30970	Josh Ampil	This gondola is clearly beneficial to select persons and organizations at the cost of the taxpayers throughout the state. I fully reject any proposal of its construction.
30972	Devin Vernick	Building the proposed gondola is a reckless use of a tax-payer's economic resources, and reckless endangerment of Utah's natural resources. This project is a likely travesty on multiple levels both morally... economically... and environmentally. Please continue to reconsider, for the sake of the canyons.
30974	Meredith Vernick	Building the proposed gondola is a reckless use of a tax-payer's economic resources, and reckless endangerment of Utah's natural resources. This project is a likely travesty on multiple levels both morally... economically... and environmentally. Please continue to reconsider, for the sake of the canyons.

ID	Full Name	Comment
30973	Jeff Mikell	<p>To say I'm shocked and saddened by UDOT's decision for Gondola Alternative B as the preferred alternative to improve transportation in LCC is an understatement! I'm bewildered, frustrated, and outraged by this decision. As a resident of Cottonwood Heights, a homeowner of property immediately adjacent to Wasatch BLVD, a Construction Project Manager extremely experienced with UDOT and transportation issues, and an avid outdoorsman who very frequently commutes this corridor/LCC - I believe I'm well qualified to speak on these issues and will fight the Gondola Alt B and the expansion of Wasatch BLVD (as currently proposed) with all my energy and efforts.</p> <p>I agree, commend, and will fully support UDOT for the "phased approach" which will include increased and improved bus service as described in the Enhanced Bus Service Alternative, tolling and restrictions on single occupancy vehicles, the construction of mobility hubs, and other misc. improvements to Wasatch Boulevard, constructing snow sheds, and implementing trailhead and roadside parking improvements. However - The carte-blanch "widening" of Wasatch Blvd and construction of a Gondola are not acceptable options or solutions for the issues currently understood and at hand. Apart from "all" specific comments I have:</p> <p>1)Wasatch Blvd - Somehow this "work" got roped into the "issue" up LCC. While perhaps they are ultimately "linked", right now the only "work" that needs to be addressed is some physical work up LCC and social re-programing on how commuters get up the Canyon. Turning Wasatch BLVD into 3-5 lanes with reduced speed limits, drainage, walls, signals highway lights are a wholesale and unnecessary change to the road, its purpose and character for which it has existed for the last 50 years. Right now we are not at liberty or need to make those changes until the phased approach up LCC is implemented and those phased outcomes measured and understood.</p> <p>2)Gondola - Frankly it's an absurd idea, hatched from deep pocket influencers poised to benefit from an "amusement park" ride up LCC to their cash registers at the lift ticket and food lines. Realistically it does very little (if arguably nothing) to solve the problem at hand. The problem at hand is that for 25-50 days of the year commuting LCC isn't safe or reliable. Frankly on the worst days (20-each?) the proposed Gondola shouldn't and couldn't run anyway - due to safety. There are so many un-answered questions and limited effectiveness of the Gondola to address the issues at hand - that UDOT is now looking fully foolish and politically motivated to bring this concept to the finish line. UDOT needs to quickly cut and run from this concept.... put it on the top self/back burner and let it die....</p> <p>So I ask - seriously? Is UDOT going to divide us and make us all fight, aggressively and divisively, for a ridiculous Gondola (that forever alters and ruins the character and LCC vista, costs \$550M, doesn't solve or address the problems)? I understand "everything" might not unfold per "everyone's" desires/wishes and I will accept that. Dump this crazy Gondola idea so I can then get on-board and support Josh and UDOT's agenda!</p>
31935	Giles Florence	<p>NO Gondola</p> <p>"Preferred Alternative B with proposed phasing" is a sham. Evidence doesn't support UDOT's half-billion-dollar gondola as either the preferred or feasible solution to the vital transportation needs on SR 210. I am baffled to think that the conclusion drawn from all the years of input from stakeholders (residents as well as resort owners) and analysis by experts could lead UDOT's decision-makers to such a ludicrous, self-serving, financially prodigal, ecologically inept, and utterly elitist recommendation.</p> <p>The price tag alone demands answers to basic questions that have been asked all along by responsible people even before Mountain Accord or CWC began their costly and excessive analysis seeking the best means of transporting people and goods up and down Little Cottonwood Canyon.</p> <p>What else could be done with that much money to solve the problem?</p> <p>Who benefits most from such an extravagant investment, citizens or the resorts?</p> <p>Why shouldn't the resorts fund it, since they are the exclusive destinations?</p> <p>Why not require resort employees to carpool or bus to work?</p> <p>Why not have Snowbird follow Alta's example and instigate paid parking?</p> <p>If "phasing" is a genuine proposal, why not begin with more bus service? (Not LESS)</p> <p>The proposed alternative lacks a valid cost-benefit analysis as well as any genuine consideration of the gondola's impact on wildlife or aesthetics. Towers would go right above my house and destroy our views, as well as views of bikers, hikers, and sightseers.</p>
30975	Vickie Brunstetter	<p>The gondola is not a reasonable solution to the canyon traffic problem. We need to encourage public, clean energy solutions. There is no guarantee that we will have winter snow in the years to come. It is not how I as a tax payer want to spend our money.</p>
30976	Yvette Romero	<p>I'm opposed to the construction of the gondola. Thank you for your time.</p>
30977	Dan Thompson	<p>The proposed gondola does not do enough to alleviate the traffic problems in the canyon, and the harm to other canyon activities and resources makes this plan intolerable.</p>
30978	Adam Thompson	<p>Please do not build a gondola.</p>
30979	Eileen White	<p>I've been surveying my family and friends, and they agree that the gondola would be a regrettable move that would not be reversable. Keep the wildness, don't even think of degrading it. Thank you!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
30980	Amy Kopischke	Please look into ways to improve traffic flow in LCC that does not include huge, visible changes in infrastructure, such as the Gondola option B. Instead, let's look at what we can do with existing infrastructure by increasing bussing and charging passenger vehicles.
30981	Sabina Williams	PLEASE DON'T BUILD THE GONDOLA
30982	Joyce Jefferson	I am concerned about the estimated cost of this project. Is it of the best interest to use half a billion state or federal dollars for such a project when the money could be better spent for public education and/or other essential services in our state? It seems to me that the two privately owned ski resorts in Little Cottonwood Canyon should be covering most of the cost.
30983	Eric Hall	A gondola up either of the Cottonwoods would be a terrible mistake. If traffic is a real concern then better bus schedules, road maintenance, and possibly widening the road will be a much better option. The gondola is a point to point resolution and will serve an extremely small fraction of the population that uses the canyons. A gondola will only be an eye sore that will never receive the maintenance it would need. It will destroy the beauty of the canyons, and like I said, it will only serve a very small fraction of people.
30986	John Ziegler	I am 100% against the building of a gondola in Little Cottonwood Canyon. I believe that the negative environmental impact and high cost of the project far outweigh any potential benefit. Please do not proceed with this project. Thank you...
30984	Natalie Fillerup	Hello, As a resident of Salt Lake City, I urge UDOT to take the phased approach for enhancing transportation in LCC. Please look towards more sustainable decisions for transportation like carpooling and busing. Thank you,
30989	Jay Lyons	As a long time skier at Alta, I am against the gondola option for Little Cottonwood Canyon. I believe it will ruin the views in the canyon and should not be paid for with taxpayer money. A better alternative is expanded bus service and wider roadways w/ snow sheds in key avalanche areas. Thank you.
30990	Richard Badenhausen	I write in strong opposition to the wasteful gondola plan, which seemingly will wreck the pristine canyon and spend \$500M simply to alleviate traffic congestion during two dozen powder days - what about the other 340 days of the year? Why would we invest in such a technology when there are many other less costly mitigation plans that haven't been tried yet? And when climate change is shortening the length of the ski season and amount of snow that falls in the canyon. This is the definition of short-sighted overreach. Please do not go down this path,
30991	Troy Holcombe	Enhanced bussing, with or without expanding the roadway is my preferred option. Gondolas may sound cool but I'm weary of these massive towers running up the canyon that impact everyone's view of the beauty while only enhancing the experiences of a few. Bussing allows ultimate flexibility. You can add stops, remove stops, increase busses, decrease busses, etc with only minimal disruptions. A gondola is a fixed project, much like a dam. It will only hold so much water and it will only hold it where it's built. There is higher demand during the morning and evening hours when higher frequency busses can help and then be turned down until the demand is again high in the evening. If a gondola is built for peak demand, it's too big. If a gondola is built for average demand it will not solve the problem on high demand days. Staffing may also become an issue for a gondola. If a certain percentage of employees are sick or can't be hired, or can't get into work, an entire gondola is shut down. If half the buss drivers can't get into work, only half of the capacity is lost. Thank you for listening.
30993	Michael Budge	I am writing my comment in support Gondola B, with the proposed phasing. As a lifelong skier and licensed civil engineer in Utah, this option makes the most sense to me. I have studied a good deal of the EIS and understand the issues better than most of the general public. I fully support a solution that removes vehicles from the canyon, and is not tied to the roadway during heavy snowfall. I also support this alternative because it has the least environmental impact. The phased implementation has been a good addition to the preferred alternative and makes sense as funding is secured.
30994	Margo Markowski	A Gondola is only for skiers and only benefits skiers and ski resorts. Buses can stop along the way for cross country and snowshoers in the winter and hikers and climbers in the summer. Therefore buses will serve a wider part of the population including people who can't afford to ski. The gondola will be a permanent eyesore, ruining the beauty of the canyon with its towers and the time it would take to build will also clog and/or limit access to the canyon. I strongly oppose a gondola. I prefer my tax dollars benefit more people. Depending on even or odd numbered license plates, access to ski resorts could be on an every day other basis for car access.
30997	jim lloyd	My preferred choice is B 'The Gondola' this is the only current choice that will be used by the public and will remove cars from the roadway.
30996	Eli Primmer	I oppose the Gondola and any iteration of the gondola. The gondola is not a common sense solution and is a total misuse of tax payer dollars.
30998	John Dunlea	My wife and I live full time up at Alta. Little Cottonwood Canyon is a jewel that should not be cleaved by a gondola. A gondola would only benefit the ski areas. No to the gondola!
31000	Carol-Anne Wright	Please do not opt for the gondola. This will disrupt the environment and the ecosystems living in that canyon. It puts our watershed, our very drinking water, at risk and is asking too much of taxpayers that A. simply will not use it and B. VEHEMENTLY oppose it. I'm a Utah native who grew up at the base of this canyon marveling at its beauty, I'd like my eventual children to have the same experience. The phased approach is the way to move forward, there are solutions along the way. Thank you for your consideration.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31936	Doyle Dow	<p>The proposed gondola project should be suspended as far into the future as possible so that the folly of this expensive and needless project will be realized by the people making this ridiculous decision.</p> <p>The only rational way to solve the transportation issue in the canyon and along Wasatch Boulevard is enhanced bus service which can be obtained at a fraction of the cost of the gondola. The cost of a summer tram ride at Snowbird is about \$35.00. The cost of a ride on the proposed gondola would have to cost a lot more than this unless there was a massive taxpayer subsidy and would be prohibitive for the average person. People wanting to ride the bus could board a bus at multiple points in the valley and would not cause the massive traffic jam that the proposed 2500 space parking lot would cause. Not many people would want to wait to board a bus to the tram station and then wait and pay again for the tram when they could take a bus directly to the resort. I am generally supportive of the proposals outlined in the EIS except for the gondola which should not even be considered. If the resorts want a gondola they should be willing to pay for it and not burden the taxpayers with the cost.</p> <p>Thank you for the opportunity to comment, Doyle Dow,</p>
31001	David Johnson	<p>The gondola is the wrong solution to this issue. I live a [REDACTED], and have used our canyons every year since I moved to Utah in 2004, for road cycling and hiking in the summer months, and snowshoeing in the winter. I do not ski.</p> <p>The gondola solution is completely inequitable to local users, and given the paucity of local public transit use, is of dubious value as a solution. Just consider the under-utilization of UTA bus routes in our suburbs. It only serves resort users (mainly skiers in winter), and does nothing for those of us who use the canyon for non-resort activities--it provides no transit to trailheads or other intermediate stops. It is a massive blight on a beautiful view up and down canyon... the visuals are horrifying.</p> <p>I am appalled that UDOT is effectively ignoring majority local opinion, which is that the gondola is the wrong solution. Please listen to the people that live here. Perhaps we need a petition to redistribute gondola funds so that UTA can hire more bus drivers to do something to solve this problem. Ski busses are actually used! Let's use them more and increase penalties on canyon car trips.</p>
31002	Graham Noteboom	<p>I am disappointed. How does this project help with access to public lands? There are so many wonderful trails and backcountry areas that are completely missed by this limited service option.</p>
31004	Hailey Meyer	<p>The gondola is not a sufficient solution for the canyon for the majority of users! We don't all ski, why is the solution targeting a very small demographic? Please select an alternative that better serves more users of the canyon.</p>
31005	Sherry Kramer	<p>Please listen to the majority and don't approve the gondola for little cottonwood canyon. The price is too high and the support too little. Lets look at the other options so we can preserve the views and the integrity of this beautiful canyon for generations to come.</p>
31006	Joe Lombardo	<p>I, and many, many other people, believe that drastically increasing buses to the ski resorts is the best solution. In combination with pay/reservation parking at the resorts, or closing resort parking entirely (at least on the weekends) - similar to the way Zion National Park is managed - would drastically reduce canyon traffic without interrupting the ecosystem/climbing/beauty of the canyon. The current problem with the ski buses (as I see it) is that there are not enough buses (they get extremely crowded), so the wait for the bus is often long and the crowd is unpleasant, which deters some people from riding. Increasing the number of buses and forcing use of the buses (as at Zion), would solve the traffic issue as well as the issue of resistance to riding the bus. Adding better ski/board storage wouldn't hurt. It would also be nice to have more diverse routes/pick-up locations for the ski buses in the valley before heading up the canyon.</p> <p>Please don't build a gondola.</p>
31007	KEITH ROBERTS	<p>The gondola is a ridiculous idea which only addresses resort-based winter use. The use of tax funds to enrich established commercial enterprises is disgusting. Snow sheds / prioritizing busses / electrification of fleet has worked around the world as a flexible and scalable means to address mountain access.</p>
31008	Paul Steinman	<p>Strongly AGAINST the gondola. You state the input from the draft EIS requested:</p> <ul style="list-style-type: none"> - Consideration for all canyon users. The gondola fails, and only services the resorts at the expense of the tax payer and environment. - Keep existing recreation intact: The gondola fails to do so. Support structures slated to destroy valuable climbing areas. - Maintain existing visual experience: The gondola fails. The gondola is the option with the largest negative impact on our beautiful canyon! <p>It could not be more obvious that the gondola is meant to serve only special interest groups (e.g. resorts and land owners positioned to benefit strongly from this development). You are permanently destroying public land for the benefit of the few! This is an expensive boondoggle that does very little to solve the canyon transportation problem. What does it do for people using areas other than Alta or Snowbird? How does it help alleviate congestion issues at the trailheads? How does it help summer use at areas other than the resorts?</p> <p>I will repeat my suggestion that we try expanded bus service and/or bus transportation requirements rather than throw a huge amount of our tax money to build something huge, destructive, and shiny with little other purpose than to attract more visitors to Alta and Snowbird ski resorts.</p>
31009	Charlie Freedman	<p>please no, no, no. toll those not carpooling, generate money, and reduce traffic.</p>
31011	LEONARD SEIFERS	<p>The gondola would definitely reduce impact on the canyon from buses and car traffic</p>

ID	Full Name	Comment
31013	Dylan Cincotta	<p>Opposition against the gondola!!!</p> <p>There are numerous reasons why myself and the vast majority of locals are strongly opposed to the gondola.</p> <ol style="list-style-type: none"> 1. Destruction of the natural beauty of Little Cottonwood. 2. Does not provide access to trailheads for backcountry skiing. 3. Local taxpayers are paying for a transport system that directly benefits two privately owned ski resorts - they should pay for it exclusively since those are the only destinations. 4. Gondola only will run in winter. This is an extremely expensive solution to a problem that only occurs several weekends of the year. It does nothing to help summer time transportation. 5. Risk of the destruction of famous bouldering and climbing locations. 6. Inefficient transportation - gondola can only carry ~ 1000 people per hour. This option still requires patrons to drive to bus station, then take a bus, then take a gondola. All these transitions followed by a slow moving gondola (resorts have 10K patrons daily) makes no sense for this level of expense. Myself and many locals will not utilize this option. 7. This gondola will be used as propoganda "come ride the longest gondola in the world!" which will only result in further crowding of our canyons.
31014	La Vone Liddle	<p>If the ski resorts want the gondola option, they should pay for all of the costs. Public money should not subsidize that cost. The road to the resorts has more than enough traffic for local residents.</p>
31015	Janet Swihart	<p>No.</p>
31017	Emily Schmutz	<p>Focus on the real problem of our drying Great Salt Lake! Gondola is only going to get more people up the canyon. It does not favor locals, it favors making the ski resorts money. Look out for your locals first!</p>
31016	Carolyn Keigley	<p>There has to be a way that residents don't have to pay a tow [toll]. Reimbursement through some digital means, etc. Otherwise we few residents will be the only Utah residents who have to pay \$25. to \$35 dollars each time we have to go to seek medical care or buy groceries or pick up our children from school! For almost all of our Big Cottonwood Canyon residents we live miles from the few bus stops so to walk to a bus stop from our homes is not an option nor is parking near a bus stop an option since the whole idea of a tow [toll] road is to address the limited parking.</p>
31019	Rebecca Burrage	<p>I strongly oppose the gondola.</p>
31018	Diann Weixler	<p>The Gondola is not the answer. Keep looking</p>
31020	Bill Arthur	<p>It is astounding that UDOT could take do long to come up with such a stupid solution. This is a transparent move to cater to the ski areas. It is a "solution" that benefits nobody else.</p>
31021	Laney Long	<p>I say No to the gondola! Cost too much, damages environments, only serves the ski resorts. Please DON'T DO IT!!</p>
31022	Brenda Voisard	<p>Do not build a gondola up Cottonwood Canyon. This is a travesty of our natural beauty and of our public funds. Do not do it. There are many other options. I write to you as a resident of the Millcreek area. Thank you.</p>
31024	Peter Novak	<p>The Little Cottonwood Canyon gondola is an idea whose time has not come. I find it unconscionable to consider spending \$550 million to build a gondola that will only be used a few days a year. America is built on cars, and people will continue to drive to the ski resorts, unless they're forced to do otherwise. The only time a gondola would be used is if the road is closed due to avalanche. Otherwise, people will stick to the reliability and comfort of their cars. Why create a massively expensive eyesore they will only be used occasionally?</p> <p>Has anyone considered that transporting skiers to Snowbird and Alta is a luxury that few people support? Not being able to get to a ski resort is not a human need. If the road is closed due to avalanche, and you can't make it up the canyon, so what? No lives are lost, people are only slightly inconvenienced. There are no hospitals at the top of the canyon, no schools, no universities that absolutely have to be attended. It's just recreation. I have had a seasons pass at Snowbird for two decades, but if I can't make it up the canyon on a particular day, it's not the end of the world. At a certain point, the canyons reach maximum capacity. At that point, the canyon should be closed. The only people who are interested in packing infinite numbers of people into the resorts are the resort owners themselves. There are many incremental ideas that should be explored first, before spending huge amounts of money for a gondola. How about a toll on the road? How about mandatory parking reservations? How about mandatory carpooling? How about more buses? All of these ideas would be low-cost, and should be attempted before the horrible idea of a gondola.</p>
31023	Julie Koplin	<p>Outrageous expense for tax payers! Don't ruin our Canyons. This is stupidity to even consider. Fund the payoff of my mortgage and others that need funding, NOT ripping thorough the Canyon for something like this. If the riders had to buy a ticket at \$50-100\$ a pop. Who would use this crazy mode of transportation. Annoying to think anyone would consider such destruction.</p>
31025	Eric St.Clair	<p>I do not support the Gondola project.</p>
31025	Eric St.Clair	<p>common-sense solutions, including parking management technologies and policies, multi-passenger vehicle incentives, traction device requirements and regionally placed mobility hubs should be fully explored before installing a large expensive project that will only truly help service skiers for 20 days out of the year. While it will impact all users of the canyon year round</p>
31028	Stephanie Darke	<p>Hoping that the news I just heard is true-that SLC has condemned the gondola!! The gondola is a horrible idea; it will undoubtedly be a huge eyesore, destroying the natural beauty of the canyon. I can imagine the parking lots/structures at the bottom of the canyon will be eyesores too. It is not fair for the ski resorts to profit while the taxpayers foot the bill. I also don't understand how this will help the traffic issue-instead of cars crowding the canyon road, they will crowd the neighborhood roads and the mouth of the canyon instead. How is that helpful?? Shame on whoever came up with this idea.</p>
31027	Elaine Slechta	<p>I want to voice my opposition to any plan to build a gondola in little cottonwood canyon. Even the thought of using taxpayer money to fund a project that will only benefit 2 privately owned ski resorts is extremely offensive. Other options to make the canyon more accessible for ALL users, not just skiers, need to be reconsidered. If the ski resorts are not willing/able to provide parking/access for the number of customers they think they need to have each day, they need to help provide other solutions instead of this limited option. People want to enjoy the canyon in other ways besides skiing and this "solution" doesn't help anyone but the resorts.</p>

ID	Full Name	Comment
31026	Heidi Prokop	<p>As a resident who enjoys Little Cottonwood Canyon year-round, but mostly during the ski season as an Alta passholder, I plead with UDOT to reject the gondola option as their preferred alternative solution to traffic issues. I agree with the SL Co. Council resolution that lower-cost, common-sense solutions need to be implemented, including parking management technologies and policies, multi-passenger vehicle incentives, traction device requirements and regionally placed mobility hubs.</p> <p>The traction requirements are a joke. A blinking sign requesting snow tires or chains does not prevent 2WD cars without snow tires going up the canyon that cause major problems. Traction must be monitored.</p> <p>The gondola creates a permanent eyesore in a beautiful, natural setting.</p> <p>Alta's effective parking reservation system demonstrates that there are creative, low-cost ways to alleviate canyon congestion.</p> <p>Please, UDOT, revise your suggested solution and eliminate the costly gondola -- benefitting wealthy developers -- from consideration.</p>
31029	Mary Yedlin	<p>I oppose the proposed Gondola Alternative B being recommended by UDOT for the following reasons:</p> <ol style="list-style-type: none"> The LCC EIS does not adequately consider all possible solutions to a complex transportation issue. <ul style="list-style-type: none"> -Its narrow scope appears to be designed to support increased tourism that benefits an elite group at the expense of local community. The gondola's cost of \$550 million will inevitably increase, some are projecting to as much as \$1 billion. <ul style="list-style-type: none"> -While the proposed plan would be funded by the taxpayers, it will primarily benefit private businesses including the developers and two private ski resorts, Alta and Snowbird. -There are many more crucial needs throughout Salt Lake to be addressed by an expenditure of this magnitude. The gondola is not the best approach when considering how people enjoy the Wasatch Front. <ul style="list-style-type: none"> -It only addresses Little Cottonwood Canyon. Big Cottonwood Canyon has similar issues. -It is not flexible, requiring massive infrastructure that changes the character of the canyon and cannot adapt easily to accommodate different activities, locations, drop off points and changing future demand. -The gondola is currently planned to operate only during the winter, and information about the cost of a ride is unclear. -Data shows that only 30% of Little Cottonwood Canyon traffic goes to the resorts. The addition of tolling reportedly at \$30-\$50 per day per car will make travelling up the canyon to other than the resorts prohibitive for many. -The gondola is much more likely to appeal to tourists than to the local residents who are footing the cost. According to reports, Alta and Snowbird are already at capacity. <ul style="list-style-type: none"> -Driving 2500 more people up the canyon every day will overstress the infrastructure and resources, damaging the experience that everyone has come to expect. -On the flip side, there have been no public assessments of the downside if the gondola doesn't attract these numbers. In conclusion, it is prudent to fully evaluate more common-sense alternatives that can be designed to flex with anticipated need, that are not so exorbitantly costly or invasive and that are inclusive of all the complex uses of the canyons. These include but are not limited to: <ul style="list-style-type: none"> -Continuing with parking reservations at the resorts, which Alta did so effectively last year. -Implementing plans to encourage carpooling. -Creating a ridesharing app. -Enhancing bus service to drive use. -Facilitating legal hitchhiking. <p>Thank you for considering my comments.</p>
31030	Dorothy Strehl	<p>40 minutes. It takes 40 minutes to drive from Salt Lake to the top of Little Cottonwood Canyon (and Big Cottonwood). In my almost 60 years of life, that time hasn't changed.</p> <p>Will I forgo the faster alternative of driving with the higher price of toll and parking lot fees to wait in line to board a gondola with 34 people I don't know and don't want to be in the same cabin with? No.</p> <p>I took the bus when I lived in Salt Lake. Drove my car to the base of the Canyons, parked, and then rode the bus to the top. Didn't take much longer than driving myself.</p> <p>But a gondola? Nope.</p> <p>Since the majority of us won't willingly ride on the gondola, how will you force us? Will there be greater incentives if I forgo the 40 minutes it would take to drive myself?</p> <p>Toll fee for the Canyon? Yes. Parking fee? Yes.</p>
31031	Patricia Thaxton	<p>I support the gondola. Buses and carpooling incentives have failed. A wider road would degrade canyon views just as much, or more, than a gondola. More traffic on the road, even if it's clean energy powered will impact water quality due to the substances spread on the road to improve traction and control ice.</p>
31032	Angela Wambach	<p>The gondola is not a good idea for canyon access. It will increase construction and pollution, be very expensive, and only possibly help traffic in one single canyon. Reducing the buses for this season is ridiculous - paying a few drivers a better salary would be a tiny fraction of the cost of the Gondola. Invest in renewable energy for transportation without destroying the mountains so we can all actually live and breathe here in 20 years.</p>
31034	Dale Dahl	<p>Gondola tells the world Utah values our canyon as a world class vacation destination. Is Utah worth it?</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31033	Beth Stutsman	I think we should try an expanded bus system before building a very expensive gondola. We're talking about a traffic problem that is very specific to winter weekends and maybe powder days, which are just a handful of days in the year. Let's try some less expensive strategies first.
31035	Grant Larimer	I vehemently disagree with the exorbitant use of public funds to finance a transportation solution that appears to only benefit a handful of resorts. If these resorts need to streamline accessibility for their customers, they should build the gondola.
31036	Corey Wilkey	Do. Not. Build. A. Gondola. Stop giving tax dollars to special interest groups and multi million dollar corporations and build ACTUAL public facilities that will ACTUALLY fix the problems. Trains. Toll roads. Bus lanes. All of these make far more sense and are scalable as future needs and demand grows. the gondola
31038	Alexander Sachs	550 million is an excessive cash grab of public funds that only serves to enrich private ski resorts who already lease public lands for very cheap. There are only 15-25 bad traffic days a year in the canyon. The bus system should be enhanced to alleviate traffic instead. This likely won't make a dent in traffic, it will only add capacity and profit to the resorts. There is also the issue of tax money for a gondola that operates only in the winter, and only to the private resorts, not suitable for public money. Lastly there is a big conflict of interest as it will be built on Wayne Neiderhouser's land. Wayne was the republican head of the senate. He no doubt still has friends and influence in politics and this is a massive waste at best, and corruption at worst. Expand the bus system, it's parking, add a toll on powder days and go from there.
31037	Jack Jensen	I implore that the gondola plan is not carried out. This plan is a gross example of robbing from the many for the benefit of the few, in this case robbing the natural splendor of the canyon from generations to come. Aside from exorbitant cost, the greatest debt would simply be the loss of the natural beauty, unaltered by mankind, of this canyon. I do not support this plan, nor any officials or leaders, elected or otherwise appointed who condone this plan moving forward.
31040	David Jones	I am strongly opposed to any form or option of a gondola going up a Little Cottonwood Canyon it would destroy the beauty of the canyon and serve limited commercial purposes only it will not serve the interest of the public at large or most users of the canyon ce
31039	Eugene Jones	I am very much opposed to Gondola Alternative B. We taxpayers are subsidizing an industry that will have to curtail operations in the not too distant future, while causing irreparable harm to the natural peace and beauty of the canyon for other users (the public).
31041	Nancy Baker	I absolutely oppose the gondola option for LCC for the many environmental impact reasons but also for 1) it is not the taxpayers responsibility to pay for access to two private businesses when the entire canyon is used year round for many other reasons that will not be served by a gondola; 2) Many other traffic mitigation options (timed staggered entry, use reservations, enhanced bus system) must be implemented before considering the addition of any infrastructure to the canyon; 3)climates studies and data tracking must be completed to ensure that the two ski resorts will actually be in operation within the next 25 years.
31042	Robyn Amaral	I Do NOT want my tax dollars to pay for a gondola to service rich out of state skiers visiting the elite ski resorts. A gondola is too costly and wouldn't serve local visitors that want to hike along trails midway up the canyon. Less expensive solutions to traffic congestion such as enhanced bus service and toll booth metering should be employed.
31043	Laurie Thomas	Do the gondola.
31044	Paul Garner	I don't feel the gondola solution is a good solution. Tax payers should not be the ones paying for this, let the. Ski resorts who benefit from it pay for it. It will ruin our beautiful canyon. The best solution is to limit people and vehicles on crowded days. Plus you people and resorts trying to profit from this solution by buying land that will be needed for the gondola.
31046	Anna Marie Neider	The huge towers at the mouth of the canyon will be HIDEOUS. SICKENING! They are GIGANTIC Not to mention the parking facility AND TRAFFIC TO PARK. This will RUIN such a beloved and treasured natural space... BELOVED by ALL of Utah. You will never be forgiven... it can never be made right... it is a COLOSSAL MISTAKE!! All because a couple of business owners want to make a buck. It's SICKENING to even think about. The mouth of the canyon will be RUINED by multiple GIGANTIC HIDEOUS TOWERS, and HUGE parking facilities... All seen by everyone in the valley. PLEASE RECONSIDER
31045	Leeya Christensen	I am not for GONDOLA B, I want an improved bus system that benefits all users of the the canyon and not just the ski resort cooperations during a few months of the year. I refuse to pay 600M in taxes for a project that wont be done until 2030. The visual impact of this will be undoable and ruin the LCC for future generations. Please listen to our desires and give what we have been asking for.
31047	Chris Christensen	I am not for GONDOLA B, I want an improved bus system that benefits all users of the the canyon and not just the ski resort cooperations during a few months of the year. I refuse to pay 600M in taxes for a project that wont be done until 2030. I do not want the unsightly views and the visual impact it will have. Please listen to our desires and give what we have been asking for. I do not think this is worth the money just to alleviate traffic for only 50 days a year. Is a gondola not just a sky bus? Why hate the bus so much?
31048	Beverley Cooper	I am opposed to the gondola project in Little Cottonwood Canyon.

ID	Full Name	Comment
31049	Teresa Crockett	<p>Little Cottonwood Canyon (LCC) Environmental Impact Statement (EIS) Comments Submitted by Teresa Crockett 10/4/22</p> <p>The Little Cottonwood Canyon (LCC) EIS is lacking in many areas beginning with inadequate scoping. I appreciate that a phased approach is included in the preferred alternative; however, the selection of Gondola B option is still objectionable and the enhanced bus system falls short. An Enhanced Bus approach that utilizes a more connected bus system that penetrates further into the Salt Lake valley and utilizes the latest technology buses offers many benefits to the broader community including reduced impact on climate change and air quality as well as improving accessibility to minority and low-income populations. An enhanced bus system, unlike the gondola, is adaptable and scalable and does not require massive, permanent infrastructure that will forever mar the beauty of LCC. Furthermore, without a carrying capacity study for LCC, the cumulative and full impacts to the true affected environment, especially water quality, cannot be analyzed as required by the National Environmental Policy Act (NEPA) process.</p> <p>A phased, integrated bus approach provides many advantages not fully considered for this project. The enhanced bus alternative fails to include regional parking hubs in the valley that would further reduce traffic in the heavily congested areas within the study with a side benefit of driving additional customers to local services (restaurants, ski shops, daycare centers, etc.) near such parking. Regional parking hubs would get users out of their cars closer to home without having to make several transfers and without concentrating traffic near and on Wasatch Blvd and LCC and while reducing air emissions throughout the Salt Lake valley. The enhanced bus approach will allow for adjustments as riders become accustomed to using the buses for LCC access, as ridership increases, as user destinations and travel patterns become better understood, and as the effects of additional measures alter usage.</p> <p>The Gondola marketing campaign acknowledges that "buses only work if people want to ride them." A bus system that people want to use is possible but not focused on in the EIS. The buses can and should be clean, quiet, comfortable and wi-fi enabled. Furthermore, e-bus technology has progressed since this study was started and is now a viable option for LCC though not included. Future technology advances can be incorporated as they become available and must be made a priority to ensure program success.</p> <p>Additional measures should include tolling (perhaps occupancy based), enforcement of proper winter traction and, prohibition during peak hours of private vehicles with fewer than 2-4 occupants, along with parking reservation systems.</p>
31050	Katy Andrews	<p>The Gondola B approach to Little Cottonwood Canyon (LCC) is not the solution or protection of the canyon as LCCes will have forever traffic congestion. If the focus was on preservation of LCC rather than reducing traffic, then traffic reduction would happen naturally. This canyon is small and fragile and is already negatively impacted by the number of visitors it sees every day in the winter. Installation of a gondola would not change the number of cars visiting the resorts, but would increase skier visits by 20%, per UDOT's EIS, thus causing further harm to the canyon. The first thing that should be done before any changes are considered is to support a capacity/visitor management study to better understand how many visitors LCC can support. Once this is determined, then the solution should be focused on limiting the visitors, which will reduce traffic.</p> <p>This is just one of several unanswered questions and there is no reason to invest what is likely to be much more than \$550 million in a permanent project that may not be the best solution once all questions are answered. It is much less expensive and much more environmentally friendly to implement enhanced bus service, tolling, parking reservations, and enforcement of traction laws.</p> <p>It seems that building a gondola in LCC is only to serve the businesses of Snowbird and Alta, yet is funded by tax-payers. The majority of tax-payers oppose installing a gondola up LCC (80% of Utahns, according to a Deseret News/Hinckley Institute of Politics poll) and the resort executives are the main people supporting this terrible idea. UDOT's EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6] Installation of a gondola completely ignores public and political opinion (the tax payers!). It also completely ignores other tax-payer uses such as trailhead use.</p> <p>Building a gondola is also not a convenient or necessary solution and adds significant travel time to and from Snowbird and Alta. How are people incentivized to not just drive up the canyon and park, which is much faster and convenient? For the gondola strategy to be effective, there will need to be a major change in public habits. UDOT has no plans to limit cars up the canyon or even analyze demand, so it seems that the original traffic issue is not being solved with a gondola. The gondola will not solve traffic issues. It will simply push traffic out of LCC onto Wasatch Blvd, I-215, and surrounding neighborhoods in the Cottonwood Heights community.</p> <p>Instead, UDOT should implement solutions that they already know reduce the traffic problem like tolling (see Millcreek Canyon) and parking reservations (see Solitude, Snowbird, and Alta). These are things that can be planned and executed for this coming ski season and if done well, data can be collected on the effectiveness of these various solutions. The expense and environmental damage caused by installation of a gondola is not commensurate with the traffic problem at hand and seems like a very unnecessary solution. This gondola would not even run during avalanche mitigation or the eight months of the year that are not winter.</p>
31051	Jackie McDowell	<p>I have worked in the canyon for 35 yes and used to ride Uta until they stopped running a bus directly to Alta. I also am concerned about tax payer dollars being spent on something that serves a handful of businesses. Also I live near the mouth of little cottonwood and the traffic uptick to this 2500 parking structure will deeply impact me and my whole neighborhood.</p>
31052	Janet Tate	<p>I like the gondola idea.</p>
31053	Tory Sharp	<p>Stop the gondola. Crooked politicians will profit from the project. But most importantly, it would have a horrible environmental impact.</p>
31054	Martha Arndt	<p>Gondolas only serve ski resorts. They should not use taxpayers money or other subsidies for private benefit. Buses serve the whole canyon and all the users. Please abandon the gondola and pursue buses to ease congestion.</p>

31055	Erica Tingey	<p>I am writing as a biologist (1977 BS Biology, magna cum laude, Phi Beta Kappa), lawyer (1979 JD), a Utah Republican precinct chair, and a member of the Union of Concerned Scientists.</p> <p>As a former member of the Salt Lake City Public Utilities Advisory Committee, I urge UDOT to prioritize Little Cottonwood Canyon water quality and quantity.</p> <p>Water is life.</p> <p>Earth is already in the midst of its sixth mass extinction episode owing to the driving forces of 1) over-population and continued population growth, and 2) over-consumption by the rich. https://pnas.org/cgi/doi/10.1073/pnas.1704949114. Proximate causes include climate disruption, habitat conversion, over-exploitation, toxification, species invasions, disease, and (potentially) large-scale nuclear war.</p> <p>Now is not the time for UDOT to prioritize skiing over survival of Salt Lake City's rapidly expanding population has exceeds the carrying capacity of the quantity of water available to sustain life.</p>
31056	Maggie Farrand	No gondola!!!!
31057	Austin Gainor	I believe that the gondola proposal is very much against the best interest of Utahns. First, i believe that there a other infrastructure issues, such as reflective road markings in adverse weather conditions, that should be up higher on our list of priorities to tax Utahns over. This proposal does not cater to every Utahns as it would not serve every Utahn. It would cater to a portion of Utah residents and non resident Tourists. On of that, it would be an atrocity from a conservation stand point.
31058	Teresa Crockett	A nearly exclusive bus/shuttle-only approach has been implemented in our national parks, specifically Yosemite and Zion, and it has not dissuaded the throngs of people frequenting them. This is without road widening or any massive infrastructure. Surely we can serve a variety of users in LCC through some combination of frequent buses, carpooling requirements, parking reservations, etc, particularly during peak traffic times. This puts the controls in place when and where needed most without having an unsightly gondola the length of the canyon 24 hours a day, 365 days a year.
31059	Kirk Hilton	No. Just no. This does not resolve the traffic problem, but does create an environmental and ecological disaster. You can't "undo" this gondola and the traffic will persist regardless. No!
31060	Jon Dalton	A gondola is a horrendous option to jump to without testing other less intrusive, permanent, and obstructive means. A gondola is such a sham of an idea.
31063	Phyllis Mayhew	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean" the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium" parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. 4. If the gondola only runs during the winter, how does that help with traffic in the canyon during the summer? The gondola would sit stagnant during the summer taking away from the natural beauty of the canyon. Traffic options need to be addressed for all seasons, not just winter. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <p>1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year.</p>
31062	Danielle Jones	<p>I believe a gondola to be an extreme measure in changing the canyon for winter sports, which many people in the area do not participate in. I appreciate the plans for tolling, carpooling, and increased bus access for the canyon. I would like to see those thoughtfully carried out and evaluated in all measurable ways before stepping ahead to a huge committment like a gondola which would be permanently changing the landscape and aesthetic of the canyon. That is how people love it, exactly how it is. Many do not want to see the canyon altered by a man made structure above the trees for eternity. The seasons cause so much flux in visitors of the canyon, which allow changes and flexibility in bus regulation and tolls throughout the year which would provide less canyon impact than the gondola. I am a camper, hiker, and climber, and I do not like to see the land altered in ways that take away from affordable wholesome recreational activites for all to enjoy nature as it is.</p>

31064	Greg Erikson	<p>Well I don't live in Utah anymore, I spent much of my adolescence in the Cottonwood Canyons snowboarding and enjoying outdoor recreation. Adding a gondola will forever change the character of the canyon. There are other alternative ways to allow people access at peak times that do not require forever changing the visual landscape. Please consider alternatives.</p>
31065	Erin Pyne	<p>No gondola!</p>
31066	Brittany Bickley	<p>The local community does not want a gondola and the impacts it would have on this beautiful canyon are devastating. Little cottonwood is one of my favorite places and the most beautiful canyon for climbing near lcc. The gondola would cut right through those areas and ruin the beautiful view. I also worry about impacts from construction and maintenance. The community wants increased bus services. A gondola feels short sighted and selfish.</p>
31067	Candice Rainey	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. 31068	Melissa Larsen	Having spent one hour in traffic to get to a trailhead this past weekend, please explain to me how the gondola will help the traffic in reaching trailheads for people who prefer their cars.
31069	Joshua Woodland	<p>I am opposed to the proposed gondola construction.</p> <p>Bus service can be adapted over time without additional, major infrastructure projects and funding requests.</p> <p>The gondola will take away from the natural beauty of the canyon and reduce the privacy of all residents in the canyon.</p>
31070	Ben Kegan	I am opposed to the propose plan for a gondola. It will mar a already beautiful canyon and this gondola is a poor use of tax payer dollars.
31937	Hadley Hatch	Please don't build the gondal, our mountains are so beautiful it helps make Utah Utah! There are also so many other things we can do to improve this problem about cars going up the mountain. Please consider this. Thank you, Hadley Hatch (11 years old)
31071	Karen rymer	The environmental impact of the gondola project is too great to justify the building of these huge structures impacting the habitat of the animal plant flora and trees. The project is cost prohibitive placed on tax payers over time. And the profiteers are the business people investing the peoples money for selfish profit. The cost in money and natural resources does not justify any end result. As a long term resident of Utah I have seen all the projects that have no concern on the environment-watershed and use of limited water;air pollution and further encroachment into our animal habitat- what the heck are we thinking- that's the problem is that there is short sighted thinking and no concerns for future generations and environment destruction. Please do not go ahead with this huge project that benefits a few.
31072	Marshal Olson	As a local resident of the granite area of Sandy, I wished to voice my extreme displeasure around the gondola. Due to the proposed capacity and ride time for the gondola, We simply fail to see how this extremely expensive and massive eye sore addresses any of the challenges posed to users of little cottonwood canyon. Simply drive up the canyon and see the amount of traffic at Lisa falls or tanners. Consider the amount of skiers on any given weekend. The gondola just does not put a dent in these issues. Given how negatively the gondola is viewed locally, the fact that this matter continues to progress in review, my only conclusion is that the business internets are swaying the vote of elected officials, rather than the will of the voting public. As such, I personally cannot and will not ever vote for anyone who pushes forward this measure, and will actively support any competition they may have to their seats in the future.
31073	Laurie Norman	<p>I have worked in Little Cottonwood Canyon for over 32 years and I believe there are so many options other than a gondola that should be considered.</p> <p>The gondola plan does not implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations, and enforcement of traction laws. These measures have been very successful in Millcreek Canyon, which serves roughly the same population as Little Cottonwood Canyon.</p> <p>The proposed gondola comes at a huge cost (at least \$550,000), but will not decrease the detrimental environmental impacts of high traffic since, in fact, it will likely result in increased numbers of visitors at a higher cost to the environment. According to UDOT's Environmental Impact Statement, if the gondola is implemented, the number of vehicles visiting resorts will remain the same while skier visits will increase by 20%. The EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts."</p> <p>The gondola will not provide access to trailheads, and will not be of added benefit to backcountry users such as mountain bikers, hikers, and backcountry skiers.</p> <p>Little Cottonwood Canyon is a true treasure of our local environment that attracts outdoor enthusiasts from around the world to enjoy its beauty. Constructing more than 20 towers reaching 200 feet tall and stretching eight miles through the heart of LCC would destroy the canyon's natural beauty.</p> <p>I am STRONGLY against the gondola even though I work for Alta Ski Area, one the businesses that might actually benefit. I believe there are many other options that should be considered before building the gondola and I urge UDOT to consider these first. I do feel that the large majority of the public, skiers and others, is against the gondola and that if you tally your responses, you will find that to be true. Please go with the majority rather than the vocal minority who stand to profit from this.</p>
31074	Sam Sorensen	I'm a high school student who regularly runs up little cottonwood canyon in the summers. I am a against the gondola proposal because I believe it will be far to expensive (well over budget), not eliminate traffic issues, and damage the canyon I regularly enjoy year round. Please consider other alternatives before turning to the gondola, this is my taxes that will be paying for a mess.
31075	Nick Short	I fail to see how this is a good use of taxpayer dollars. This gondola will not provide access to areas outside the ski resort areas. Given that, let the ski resorts pay for it. It isn't the general public's obligation to pay for something that they won't use just so a select set of society can have unfettered access to the top of the mountain in the winter. My suggestion is that these people take accountability for themselves in traveling into the mountains in the winter. They should be prepared to get stuck. Their actions and desire for easy access to a mountain environment in the winter aren't my problem.

31077	Whitney Sansom	<p>I am opposed to the proposed gondola in Little Cottonwood Canyon. I grew up in Cottonwood Heights and have regularly frequented LCC my whole life. My reasons for opposing the gondola are as follows.</p> <ul style="list-style-type: none"> -The gondola services the resorts, but does not provide access to all recreational activities within the canyon -In the winter the traffic on Wasatch Blvd is often the worst part and a parking lot at the mouth of LCC will not alleviate this congestion -A one-of-a-kind gondola from a busy city to a beautiful mountain range rings more of an expensive and intrusive tourist attraction than an air quality and congestion solution. <p>I am 100% for improved bus service to the Cottonwood Canyons from throughout the SLC valley! When I lived closer to a ski bus route I always took the bus up the canyon to ski and would love to be able to do that more easily not only for skiing, but for hiking, climbing and biking as well. I now always carpool when I ski in LCC. Parking reservations seemed scary at first but they SERIOUSLY helped with the congestion. Reservations don't help when there are avalanche closures, but to me, that is not a frequent enough event to justify destroying the beauty of this unique and beautiful canyon for the rest of time.</p> <p>Please do not ruin this gem of a place within the Wasatch Front with a minimally helpful and maximally intrusive eyesore. PLEASE!!!</p>
31076	Marcia Wheeler	<p>As I see it this project only benefits the ski resorts. The ski resorts are the ones to pay for it. Why can't they just use the bus system and maybe create more parking spaces for the cars to be left at bottom of canyon. All the taxpayers should not have to flip the fill [foot the bill] on this since only a few will benefit.</p>
31078	P Johnson	<p>I am OPPOSED to building the gondola! It's toooo expensive and only benefits the ski resorts at taxpayer expense. The ski resorts are already too expensive for locals and now you want the taxpayers to foot the bill on this ?? NO thank you.</p>
31079	Steiner Beppu	<p>I support the Gondola</p>
31080	Victor Miele	<p>A gondola should not be built in Little Cottonwood Canyon. Building a gondola would ruin the natural setting.</p>
31081	Ryan Kelly	<p>Stop the gondola</p>
31082	Kathy Blake	<p>Spending over \$500 million on a gondola to service a single canyon is a bad idea. Building the gondola is a bad idea. This decision smacks of special interests and ignoring public opinion. It's a terrible idea. I am against it. Please don't build the gondola and come up with another alternative.</p>
31083	RON HARDY	<p>in light of the uta decision to cut ski bus service i fully support the udot decision to build the gondola in lcc. i always but a season pass to snowbird and only use the ski bus to get to snowbird. uta cannot be relied upon to provide transportation to the ski areas.</p>
31085	Luis Valdez	<p>Hello there,</p> <p>My name is Luis Valdez. I am currently studying biology and my life has generally been centered in some way or another, whether intentional or not, around the Wasatch Range. Little Cottonwood Canyon in particular has a special place in my heart. It's where I've learned to make observations as a scientist and ask important questions about the natural world but it's also a place where I've forged important friendships and relationships. I acknowledge that LCC has issues with traffic at the moment and I fervently believe that a gondola would not be the answer. The proposed gondola would exclude different users, including hikers, rock climbers, runners, and bikers. It would destroy precious woodland, and degrade water quality, in a system that is only beginning to recover from the abuse of mining. It would fail to address the problem it claims to solve. For one, traffic is a year-round problem and is founded by more than just skiers. The gondola would compound traffic problems in fact and seems to only cater to wealthy skiers and users. A cheaper, more pragmatic solution would be to enhance bus routes, introduce toll booths, and do what Zions did and do bus-only routes in the winter. No one. Not one ordinary Utahn is in favor of the gondola. Only a handful of wealthy resort owners are. Approval of the gondola would be a slap to the face of Utahns and would degrade the already diminishing trust the public has in UDOT to carry out their duties. Thanks.</p>

An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include
31086	Lindsay Zeigler	<p>I firmly believe there should be other options attempted before paying to build a huge project that benefits only the ski resorts. A shuttle year round that services the trail heads and the resorts year round would make much more sense than turning land at the mouth of the canyon into parking.</p>
31087	Ridley Heyrend	<p>I'd like to count among the many making public comment on the eventual commuter change to little cottonwood canyon. As someone who visits LCC a few dozen times per year for hiking, skiing, or to see the resorts I am fully comfortable utilizing ground transit by means of bus and bus routes. I like there would be more jobs for drivers, there's less visual obstruction, and is more adaptable over time. As for air quality, Is there a means by which we could use electric powered vehicles to shuttle individuals up and down the canyon? In regard to the gondola, when it needs maintenance, what then? Could it compensate as flexible to another pandemic as ground transportation likely could? I think the gondola is an exciting idea and may be fun to actually ride but I'm concerned about the long term adaptability and flexibility of it as compared to improved ground transportation. Thank you!</p>
31088	richard larsen	<p>No Gondola!!! Minimize the disruption of such a beautiful canyon. No one will ride the gondola after the initial ride. It will ruin the pristine beauty of the canyon. Widen the road, or limit the cars going up the canyon. Have the ski resorts fund whatever you do. They are making \$\$\$\$ off of this.</p>
31089	Peter Whelan	<p>While I support increased bus service and a base station parking lot, I am fundamentally opposed to the installation of gondolas. This will severely impact the ability of climbers to climb in the canyon, as well as destroy the visual beauty of the canyon. An environmental travesty for the sole benefit of wealthy skiers and ski resorts is unnecessary and unacceptable. Good luck, (redacted):)</p>
31090	Christopher Jones	<p>As a concerned citizen of Salt Lake County, and as a regular visitor of LCC, I strongly oppose the gondola. As an impact on ecosystems and on recreation for those interested in climbing and other non-winter related activities this gondola is a private venture of catastrophic greed. Please make a soft solution approach by adopting successful systems such as a shuttle/bussing system. Zion National Park has made success through this method closing off the busy parts of the canyon to cars and we've seen an improvement over the years in pollution, congestion, and patron flow during peak season. Let's avoid the extreme solutions which satisfy only seasonal corporations. Thank you for considering my comment. Let's keep LCC beautiful, pristine and accessible to all of varying recreational preferences. Thank you.</p>
31091	Anna Rae Garrett	<p>i am totally against the gondola proposal. I have lived is Sandy since 1979 and we don't need it. It will ruin the open space we now have have. It will also create a cost that will be passed on to the next generation. My grand kids will never know the Sandy that their parents had the opportunity to grow up in.</p>
31093	Ty Nilsson	<p>I'm a resident of cottonwood heights and DO NOT support the gondola option for little cottonwood canyon winter congestion. The option may only serve a purpose during the core ski season which is roughly December thru March-that's only roughly 25% of the year. Spending \$550+ million dollars for such a short timeframe doesn't make sense. Also, what hasn't been discussed at depth is the cost to ride the gondola. There must be a cost to riders and will the cost be prohibitive to encourage gondola riders?</p>
31092	Edward Hasslock	<p>I say no to the gondola in Little Cottonwood Canyon</p>
31094	Rebecca Rambo	<p>do not put a gondola in the canyon</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31096	Sheldon Teerlink	When I first heard about the Gondola Works project I was originally in favor of constructing a gondola in Little Cottonwood Canyon. However, after hearing all the reasons for not doing it I think building a gondola is a poor decision. First of all, it is inflexible and not reversible if canyon demand changes. Building two huge towers in the canyon really kills the view. Snowbird is lobbying hard for it because they are capitalists and stand to benefit the most. Please don't build the gondolas just for the skiers. It's also wrong for Snowbird and Alta to profit the most from a gondola paid for almost entirely by public moneys.
31095	Penny Davies	This seems to make more problems than less. What if the Covid reoccurrence restricts the gondola to a few a riders rather than full. Traffic will still be at the canyon mouth plus roads will need to be redone. Early powder traffic will still be there with cars idling. The gondola disrupts the beauty of the ski area and also to those that live there. This gondola seems to be making more expensive problems with barely any answers to help alleviate this on going problem. Suggestion: keep thinking and discussing it until a better way is possible. Thanks
31097	Penny Davies	Too much money on something that doesn't seem to alleviate the actual problems. If Covid restrictions limit a few in the gondola that certainly makes the wait to transport these crowds to a very long wait. Widening the road would cause home owners inconvenience and loose their privacy. Powder days would still have idling cars waiting for their position for transportation. The ski areas would loose their beauty by the transportation being visual and passing by the buildings where skiers live and stay. No privacy is an issue. If anyone here is sensible they would research more and look for a better. answer. Thanks
31098	Abigail Collingwood	Building the gondola is an irreparable mistake that would forever alter the beauty of our canyon. Increasing the bus service would be the better approach as it preserves the beauty of the canyon and reduces traffic to the canyon base.
31099	Jake Ward	<p>Good evening,</p> <p>I read that UDOT is for proposing a toll. This is nonsensical. Tolls are simply a TAX, and TOLLS DO NOT reduce traffic. That has been proven in ALL of the east-coast United States. Utah is NOT New Jersey, and I we want to keep it that way.</p> <p>If you want to reduce the slow traffic/congestion, a gondola AND/OR widening the road AND/OR more ski-resort buses is the LOGICAL solution. I'M NOT saying I'm for any of the above ideas in this paragraph, but that would be COMMON SENSE. Also, remember that they are having trouble staffing bus drivers at this time too.</p> <p>Enhanced smart phoned technology and reservations is NOT a solution. That's a simple-minded person's dribble in some California board meeting. No-go. Think again.</p> <p>The gents are already paying \$2,000 for a Alta-Bird ski pass each year. We DO NOT want a toll (AKA Tax Penalty) simply for being born a skier and driving an automobile.</p> <p>This traffic issue is comparable to the dying Great Salt Lake issue. IT NEEDS more water. It's not rocket science. Conserving the lawn water is not going to get the job done. That's passive, faux-leadership and reluctance to solve a problem that should have been resolved decades ago.</p> <p>Also, PLEASE, no fake, false-flag tragedies/FEMA Capstones in order to receive federal funding to build new schools and/or other infrastructure(s). That is not justified/appropriate behavior by government/policy makers (we are NOT Connecticut). Tolls are for the self-fart-sniffing, Lucifer loving lib-tards that think they can solve a self perceived problems by ruining life for everyone else involved with taxes and other cucked-out ideas. Why don't we just paint more faces of our favorite mongrel felons on buildings in Salt Lake City? That might solve the LCC traffic problem, right? The U.S loves to worship their felons and worship big government.</p> <p>For us normal folks that LOVE to ski, well, that's going to make traffic. Who would've thought?</p> <p>WoooOOO!</p>
31100	Kelli Buttars	<p>As a resident living at the base of Little Cottonwood Canyon with my family for the last 35 years, I support preserving the canyon and the quality of life for residents invested in the area. I do not see the widening of the road, or the gondola as solutions to the congestion and problems that occur only a few days during the year. I believe more thought should be given to better, less expensive and less invasive solutions. But in the interim, more attention should be given to promoting bus use, Increasing bus availability and convenience, and marketing bus use. I say NO to a gondola that just changes the location of the parking problems and drastically changes the look of our canyon. I say NO to widening the road and suffering through years of construction that supports more cars going up the canyon with nowhere for them to park...and potentially increasing need for unsightly parking structures at the base of the canyon. Problems exist with all the proposals. Instead of creating new problems, let's focus on mitigating the problems we already have with better management, smarter and less expensive solutions and more listening to the ideas of the citizens. There is already infrastructure in place below the canyon that could serve as a "park and wait" facility for those wanting to access the canyon after being temporarily closed due to avalanches. There are several empty parking lots and buildings in the Canyon Center shopping mall. This giant parking lot and indoor facility could be purchased as used in this manner. It could work very similar to the ideas presented for the gondola station (indoor food facilities, waiting areas, etc. but without the Gondola!)</p> <p>The Gondola is not the right answer for a small problem of canyon congestion. It seems to really only benefit a small interest group...not the majority. If one option must be selected...advantage goes to Enhanced busing, but even then, time should be taken to allow for other ideas to be developed.</p> <p>Please don't make a \$600 million dollar mistake at the expense of tax payers and the beauty of our canyon.</p>

31101	Cody Mcelmurry	It is a disgrace to me that this gondola has come this far. LCC has always been a place for me to enjoy the privacy of nature. I would no longer go to my childhood canyon if I had to watch 30 people looking down on me from any point in the canyon while I try to enjoy whatever activity im up to. Not to mention the habitat that's going to be displaced and disrupted from this project. For two ski companies UDOT wants to turn my beloved canyon into MORE of a tourist attraction than it already is. We can all agree that the last few years the canyon has been ruined with people. This won't fix the traffic, this will only drive in thousands of more people daily to our already overcrowded slopes. It's a shame to me that UDOT has ignored the locals opinion on this, it's clear to me that everyone is opposed to this. But still they want us to fund this project with our own tax dollars. What a disgrace. Go ahead and pretend like you're having this comment period to actually listen to our opinions on this matter, but I know the people at the top don't care. It's about their pocket books at the end of the day. The traffic isn't even bad 95% of the year. So many better options to solve the traffic issue on busy days. Require people to ride busses to ski resorts? Bus lane? Train under the road? It's all possible. Just find a way to keep my canyon local and not a tourist trap. If you read this far, thank you.
31104	Joel Cooper	NO GONDOLA
31103	Jaime Pedersen	This gondola makes NO sense. It would destroy the serenity of a beautiful canyon just to put cash in the pockets of 2 ski resorts and bring more rich tourists when we already have plenty of them. We should spend money on things that salt lake needs instead. And save the beauty and ecosystem of our canyon.
31102	Kelli Cooper	NO GONDOLA!!
31106	Owen Cooper	No gondola
31105	Reed Cooper	No gondola!
31108	Tim hyatt	No gondola
31107	Ron Hyatt	NO gondola!
31110	Riley Hyatt	No gondola
31109	Wendy Hyatt	No gondola
31112	Sydney Hyatt	No gondola
31111	Alex Hyatt	No gondola
31113	Mary Bridwell zarit	I live in [redacted]. We do not need more tourists on this side of the mountain. Locals are being edged out and can barely afford to ski. Limit tickets, build a bus hub close to state street and bus people up. Create a toll for out of town people to get up the canyon. Stop compromising our canyons for greed. Also, it's undeniable...our climate is changing. Less snow means less skiers. Fix our lake issues first.
31114	Clive Watson	I am delighted that the council opposes the gondola. To distract from the scenic splendor would be would be a scar that would never go away.
31115	Ben Beasley	I love Little Cottonwood Canyon and have been a consistent visitor in all four seasons for nearly 25 years. Please do not destroy what makes this canyon so amazing by putting in this insane gondola. I love to ski, I've been a season passholder in LCC for many years, and I am 100% opposed to this gondola. Please - try some of these commonsense, simpler solutions first! Listen to the people that as a government agency you are supposed to care about, rather than well-connected developers simply looking to sell off our mountain beauty to make a buck.
31116	Arianna Lokeni	I do not support the gondola b option proposed. This is only benefiting the already overly crowded ski resorts and not the people who actually live in utah. I do not want my taxes used to further destroy the wastach. Our beautiful terrain needs to be preserved. I am in favor of electric busses and parking structures at the base or neighboring cities. This would supply more jobs and reduce traffic through the canyon.
31117	Jeff Davies	I am against spending taxpayers money for a gondola that will be too cumbersome for most skiers to use. Paid parking and improved bus service my chouce
31118	Matthew Osmond	The gondola is the only real solution that works. However, the ski resorts should be footing a large portion of the cost. Widening the roads will do more damage to the canyon than a gondola would. It is also more environmentally friendly. Stay the course.
31119	Suzannah Beasley	The gondola option is the last option that should be looked at. Twenty-two lift towers in the canyon will destroy the backcountry feeling of the canyon. It doesn't help people access the canyon anywhere other than at Alta and Snowbird. Widen the road. Require payment to enter the canyon. Provide more bus services. Don't waste money lining the pockets of a few people.
31120	Matt Sadauckas	The gondola is a dumb idea and a giveaway of tax payer funds to the (privately owned) ski resorts. For the money that is proposed for this project, we could greatly expand (and possibly electrify) bus transport and convert to bus priority lanes. A toll road with the toll indexed by vehicle occupancy is another idea that would be far cheaper to implement than the gondola. Not to mention, but the ski resorts probably won't be in business in 20 years (if not sooner) so why are we spending so much money on them?
31122	Kathleen Milburn	I have lived and skied in Utah for 50 years. I have seen the traffic increasing each year. My family always drove up. For the last five or six years I have been using the ski buses to get up Big and Little Cottonwood Canyon. I was surprised a few years ago to find a canceled route from 9400 and Highland Dr. (Park and ride) over to Big Cottonwood Canyon. During weekdays the buses are not very full. More buses, and designated area buses...ie. direct to Alta, or Snowbird would really help with the holiday/ weekend crowds. I would not drive to a huge parking lot and ride/pay for a gondola up to the ski area. I do not wish to pay millions to mess up the canyon with large developments.
31121	Janet Halverson	I am adamantly against a gondola as a form of transportation in Little Cottonwood Canyon. This is expensive and will irrevocably change our beautiful canyon. The average person in Utah will not likely spend the money to use the gondola and a reformatted bus system can accommodate travel. This should be up for public vote, not a decision by UDOT.
31123	Beth Allen	I have submitted comments on several occasions in the past. Today, I just want to commend the Salt Lake County council for making a strong statement against approving the gondola plan for LCC. I have been opposed to this project since the outset and there has been no information provided that has changed my opinion. I am a pass holder at Alta and guess what, it is not all about the ski resorts! We need a plan that protects and preserves this precious canyon as well as Big Cottonwood Canyon from further development and degradation. The gondola project benefits an elite few real estate owners to the detriment of the public who love the Wasatch. It's a very bad idea.

31124	Aaron Benson	The gondola is a poor option for Utah. As a local who doesn't ski at Alta or Snowbird, I will never use the gondola, but I would benefit from a designated bike lane on the LCC road in the summer. So I have motivated reasoning for preferring the current alternative. However, the price tag for either option is so high. Did UDOT consider expanding bus service while severely restricting private car access to the road? It seems that an increase in busses with a stiff disincentive to drive (along with the avalanche sheds) would cost a lot less but would achieve UDOT's objective of reducing traffic on those two dozen or so days a year when traffic is a serious concern. The gondola option is overkill to achieve that goal. Please don't ruin LCC with the world's longest but least used gondola.
31125	Scott Hampshire	Not only is the proposed gondola a reckless use of public funds, it has the potential to permanently damage the natural beauty of Little Cottonwood. Spending \$550M for only a 30%(!!) reduction in road traffic is frankly unacceptable and laughable that this project has come this far under consideration. We have many more options that are less costly, more flexible, and less disruptive to the natural beauty of the canyon to consider instead of a gondola for gondola's sake. The canyon exists for more than just ski traffic to Alta and Snowbird, do not ruin one of our most precious outdoor venues with a shortsighted, greedy, and reckless construction project that will irreparably damage the canyon.
31126	Caroline Eichelberger	While I like some aspects of a gondola, in the end, I don't support the one proposed: It only services ski areas in the ski season (and therefore should not be a publicly funded project), and it has a ridiculously long and cumbersome process including busses from parking.
31127	Jarrod Lummis	What effect will this construction have on our watershed?
31128	Nan Rees	I think it would be wrong to spend the proposed millions of dollars on an aerial tram in Little Cottonwood Canyon. Seems to me that those dollars could be better spent increasing security for our schools or coming up with real solutions for the homeless population rather than increase profits for 2 privately owned ski resorts. Besides, It would be a shame to ruin one of the most beautiful canyons and a protected watershed with 22 or so lift towers. Improve the bus system, car pool, etc. When the resorts are full they are full. The more people the resorts try to pack in the less enjoyment for their loyal customers and perhaps the more likely they may be to go elsewhere.
31129	Ryan Solstad	We all want a solution. This isn't it. Charge a fee for non-employees and canyon residents, give a discount for carpooling. Expand busing. This will solve 90% of the problem with little capital investment. A tunnel would be better, it has been done steeper and further.
31130	David Jenkins	I have been following this issue closely from the beginning and attended the public hearings. It did not make sense to me to widen Little Cottonwood Road with two additional lanes and adding more busses. this would certainly destroy the canyon. i was able to travel to Europe this summer and while in Switzerland i rode the new gondola in Grendawald. It was amazing! The gondola is the right choice for solving the transportation issues for Little Cottonwood Canyon and i was so excited when it became the preferred option. i do not understand why there is another comment period after all the previous open houses and comment period that was done to get to this point. Now all of those against the Gondola have come out in force and i am sure that you are getting a lot of comments against the Gondola. But in my opinion, it is the best option. i am excited for it be constructed and can't wait to be able to ride it. it would be a game changer and overall, the best option. Please stay with the preferred alternative, the gondola with alternate B and do not let the additional negative public comments that you are receiving, or the politicians have any impact on continuing to make the right decision.
31131	Marie Perry	The gondola is a terrible idea and does not solve the problem. Why are so many tax payers' dollars going to benefit 2 ski resorts? I don't ski so this thing will do nothing for me. The cost per ride will be too high for most people and the research shows that it will not decrease the # of cars. Bottom line - way too expensive, too environmentally damaging and not enough benefit to the people paying for it. If this happens, I will definitely move out of Utah. if the # of cars are such a problem, then restrict the # of cars on the days that are the issue. Force restrictions on the number of people to the ski resorts instead of forcing tax payers to make these TWO resorts more profitable.
31132	David Jenkins	I forgot to mention that the EIS that UDOT has done was very thorough and well done. I did read through most of it and can see why the Gondola with alternate B came out as the best recommendation. thanks to all involved for your diligent and hard work.
31133	Emmeline Wang	Do not build the gondola. The people of the Wasatch Front DO NOT WANT THE GONDOLA!!!
31134	Adam Grimshaw	Here's an idea: Get rid of the parking lots at Alta and Snowbird. Have them put their parking lots near the mouth of the canyon, and then THEY provide shuttles for THEIR customers to bring them to the resorts. Problem solved. This might sound like a joke, but if we're actually considering spending a HALF BILLION dollars on a gondola, why not consider this idea? It drastically reduces traffic, and would not put the cost burden on the tax payer. Why should we be spending our money so that ski resorts can reap profits?
31135	Betty Winholtz	My family is from this area. I advocate for the protection of the Wasatch Mountains. It's time to invest in real ideas that actually solve the problem, like electric buses and regional transit hubs throughout the valley. I demand improved bus service in the canyons to resorts and the many wonderful back country trailheads and front country recreation amenities.
31136	Jessica Nichols	With the incredible reaction you have continually received from the public, it should be so clear that a gondola is not wanted up LCC. There are much better methods of helping the canyon - more buses, more times of the buses, incentives to take the buses, etc. Evidence shows that a gondola will not solve the problem. I am thoroughly opposed to the gondola up LCC. It is a horrific plan that would hurt the canyon, destroy a wild place, hurt the many, and only benefit the very very few. NO TO THE GONDOLA, plain and simple. Thank you.

31137	Menno Sennesael	<p>UDOT,</p> <p>As a full time ski area employee I am well aware of the problems we are facing with SR 210. However, I am in strong disagreement with your choice of Gondola B for the preferred alternative.</p> <p>My reasons for disagreement are as follows:</p> <ul style="list-style-type: none"> -I don't believe in a massive, landscape altering infrastructure project that will only be utilized for an efficient purpose a few weekends per year. -I don't think we should have a wildly expensive taxpayer funded project that will benefit private business without them contributing significantly to a solution for our transportation issues. -I don't think that we have thoroughly attempted properly funded expanded bussing. If that doesn't work then tolling should be implemented on top of expanded bussing. -The state is losing public trust by not funding transportation solutions that address transportation issues in a timely manner. <p>Please reconsider your chosen alternative and in the mean time shift all available money to expanding peak day bussing.</p>
31138	Jackson Caldwell	<p>The gondola is beyond stupid. Waste of money. Try again</p>
31139	Andrew Stone	<p>The Gondola is a terrible idea. Your Drafts seriously under estimate the visual and environmental impact of the towers and loading/offloading structures, all to benefit to private companies. A transportation plan needs to serve all canyon users all seasons. Buses and restricting private vehicles would be far less damaging and flexible.</p>
31140	Andrea Bohmholdt	<p>The gondola is a benefit to the resorts so why aren't the resorts paying for it? Some resorts have been charging for parking as a windfall profit instead of contributing funds to more buses. We should add buses, increase frequency and connectivity to routes and limit automobiles in the canyon by creating tolling and carpooling requirements before considering a gondola.</p>
31141	Haley McClellan	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean" the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium" parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.
31142	Jerry Rasmussen	<p>If Alta & Snowbird want a gondola let them pay for it.</p> <p>It should not be the burden of every state tax payer, most of whom do not ski, to support two private businesses.</p> <p>Given climate change, in 30 years there won't be any snow in Little Cottonwood.</p> <p>Skiing is a sport of the affluent. They are going to continue driving their Suburbans up to the canyon & will never ride a gondola.</p>

An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.
31144	Jan Kennington	<p>NO GONDOLA!!!! This is taxpayer money. It should be spent on the residents needs such as affordable housing, food and health care services for those without in our community. Not to two private companies to subsize their for profit buisness. If they want a gondola they should pay for it with THEIR money</p>
31146	Bob Hayden	<p>I am opposed to a gondola solution in little cottonwood canyon in its present form. It is a classic privatize the profits and publicize the costs project. Having stops at only Snowbird and Alta would exclude most backcountry users summer and winter yet they would be paying for it anyway.</p>
31145	Sharon Draper	<p>I strongly oppose the construction of a gondola in Little Cottonwood Canyon. The cost to taxpayers mainly benefits the ski resorts. The very high cost of this project to taxpayers does not take into account other areas in the state that badly need the funding, such as education. We are in a severe teacher shortage with students in classrooms without air-conditioning on multiple 100-∞ days. It is appalling to think these taxpayer dollars would be spent on a tourist attraction that benefits two wealthy ski resorts, rather than on Utah children. Utah legislators need to get their priorities in order. Enhanced electric bus service from points in the valley is a much better answer. Ski buses are already packed full of people and are not operating as efficiently as they could. Please take more time to study ways to fix the current problem, rather than create a new one. Thank you</p>
31147	Laura Livnat	<p>No Gondola, full stop. This is another taxpayer boondoggle and giveaway to Snowbird, Alta and La Caille. If resorts want this, they should pay for it. Locals paying for transportation primarily used by out of towners is a hard no. The resorts have priced the average local right out of skiing. In 10 years, the amount of snow in Utah will make this a dead line. It will take more than 50 years to pay for it, so why are we even considering this farce? The infrastructure will also be very damaging to the canyon. UDOT is not listening to the public, perhaps it's time for a board that serves the public.</p>
31148	Nathan Orgain	<p>The gondola is the most expensive, least flexible, and least equitable transportation option. Common sense approaches such as reserved, paid parking at the ski areas, and or user fees in the canyon backcountry access areas would not involve such a massive price tag, either financially or environmentally.</p>
31149	doug thompson	<p>smelly buses no, scenic gondola yes !</p>
31150	John Kennington	<p>I oppose the Gondola B alternative to control traffic in Little Cottonwood Canyon. for the fol.owing reasons:</p> <ul style="list-style-type: none"> -Taxpayers should not be asked to spend \$1/2bn+ just to benefit mainly two businesses and not service any other canyon users. -UDOT should try a suite of less invasive measures, like tolling, slug lanes, and passenger restrictions during busy periods only for such mitigation. -There are more important things to spend the money on, like saving the GSL fixing Utah Lake, affordable housing, clipmate change.a d air quality. -I don't know anyone who is in favor of this except for a small minority who will benefit from it. -It will ruin the viewscape in LCC, and the area in Cottonwood Hts where the bottom terminal would be located. It would increase traffic on Wasatch Bl, must what we don't want. <p>A reduced scope of the Enhanced Bus Alt would be much better. Widen the road by one reversible. center .and only would work. Increase improved bussing gradually, routes could be changed to accommodate other canyon users the snow sheds will mitigate 80% of the avi problems.</p> <ul style="list-style-type: none"> -Please don't inflict this expensive draconian measure on us that will ruin CH & LCC for only 30 days per year, and will likely be not needed by the time it is built as resort skiing is already in decline due to high ticket prices and climate change. <p>Thankk you for your consideratjon.</p>

ID	Full Name	Comment
31151	Rich Varga	<p>1. The criteria for the Gondola is to benefit all users and the Gondola would only benefit Alta and Snowbird. These owners would be receiving a public subsidy and that is wrong. 2. The gondola towers would deface the natural beauty of the canyon. 3. By the time the gondola is finished Utah may not be a destination resort due to climate change. I strongly oppose the Gondola.</p>
31152	Chris McCandless	<p>UDOT EIS comment Re: Faulty date relating to SOC USU Study Dear Mr. Van Jura, The definition of dispersed Little Cottonwood Canyon (LCC) recreationists used and promoted by Save Our Canyons (SOC) and others is vague and incorrect as presented in materials by those in opposition to the UDOT EIS preferred transportation alternative being the gondola. Their attempt to provide information that states 70% of all LCC visitors are dispersed recreationists that do not use the Snowbird or Alta facilities. This comment will point out why SOC and others using this study to influence LCC visitors is misleading and has an undue influence on the gondola's acceptance and as such, the lack of support from their support groups should be discounted. In part, the first of two Utah State University studies (attached) is a five-page report called An Estimation of Visitor Use in LCC, BCC and Millcreek Canyons (the "Visitor Use Study") and uses a visitation formula with 12-month vehicle count compared to only six months of skier visits that defines the number of skiers utilized vehicles. The Visitor Use Study is skewed as it defines that all visitors in LCC who did not purchase a lift ticket are people who do not go to Alta and Snowbird. As detailed below, this prejudices the results by ignoring the non-skier visitors who use the resorts such as those attending Oktoberfest, staying at the hotel, eating dinner, hiking to Albion Basin to see the wildflowers, etc. These identified dispersed LCC visitors, as inferred by the USU study and the gondola opponents state they are not using resorts assets (including the parking) are false as there is simply not enough room along the canyon road to facilitate parking that many vehicles below Snowbird's entry one and above Alta. Because they are using the resorts parking above Entry One through to Alta, the dispersed visitors could then be served by the gondola. The second USU study (attached) is titled the Central Wasatch Visitor Use Study (CWVUS). The CWVUS results are prejudiced against the resort users further because they did not interview anyone at Snowbird (see page 3 in the CWVUS)? Of the ten reported sites where they collected visitor use data in LCC, only one location at Alta was used and that location accounted for only .8% of the studies respondents. It appears the reports desired outcomes were pre-determined and as such the report is then fatally flawed. This is in part due to only five of the 200 USU coordinated interviews being conducted within the ski areas! By stark contrast to the two USU study's conclusions, Alta Ski Area had Streetlight Data (see Note One) conduct a three-year analysis (attached) of the LCC canyon visitors' destination. From 2018-2020, the total average year-round daily vehicle count arriving from the mouth of LCC and then arriving at either Snowbird or Alta was 87%! UDOT had similar findings in their draft EIS which is why you recommend that the final two preferred transportation options only stop at Alta and Snowbird. It's not because UDOT wants to subsidize the commercial venues, it's because it's the destination for the vast majority of LCC visitors! Further, on a single day (2/12/2022) we counted 124 vehicles parked below Snowbird Entry One. Everything above that</p>
31155	Christine Riter	<p>No on the gondola. Seems a short-sighted, money-wasting endeavor. Climate change is reducing our snowpack. This contraption would only stop at the resorts? At the top of the mountain? I don't want my taxpayer dollars funding only those people who can afford it. Locals are getting squeezed out of their own backyard. I'd prefer to incentivize carpooling, expanded bus service, and base parking options.</p>
31154	Greg Barrus	<p>I oppose building a gondola in Little Cottonwood Canyon. Doing so will permanently and negatively alter the canyon experience. I prefer expanded bus service.</p>
31153	sarah arnold	<p>when something makes as little sense as this gondola, it's a good time to look at who stands to make a ton of money from it and how they are involved in the decision-making process. I cannot believe that there is actually a proposal to completely destroy an iconic and unique in the world landscape under the guise of "public good." Who paid you off to deliver the results of your supposed impact study? The gondola is bad for Utah and Utahns in the long term because it completely destroys the appeal of one of our natural wonders at the behest of a greedy few. Shame on you for recommending this and shame on you if you dare implement it.</p>

ID	Full Name	Comment
31156	Dennis Goreham	<p>Thank you for one more opportunity to address the transportation issues facing Little Cottonwood Canyon and the Salt Lake Valley. The Wasatch Mountain Club has been recreating in LCC for over a century and have a special interest in the canyons of the Wasatch and preserving their beauty and recreation opportunities for future generations.</p> <p>The WMC agrees with UDOT's plan for a phased approach starting with buses and some of the transportation components associated with it. This phased incremental approach makes sense in meeting the transit needs in LCC. We believe these components should be constructed in a way they become part of the long-term solution. In the FEIS, UDOT indicates that "When the gondola system becomes operational, there would no longer be a need for enhanced bus service". We absolutely disagree with this statement. The buses should continue to provide service for the ski resorts and dispersed recreation users year-round.</p> <p>Climate change will certainly affect snowpack conditions in LCC and in an appendix, UDOT offers evidence for that. UDOT indicates it does not affect their decision to build a gondola however. They were able to locate studies to back up their finding that "climate change effects should not materially affect" ski resorts and their desire to build the gondola. Studies of snowpack indicators by the EPA conclude that the snowpack has already declined by 23% on average with a loss of 18 snowpack days, with that trend continuing. Now is not the time to spend in excess of half a billion dollars to build something that will likely prove unnecessary in future decades, just to subsidize two ski resorts with dwindling snowpack and skier days.</p> <p>Gondola proponents continue to say that the gondola will be more environmentally friendly than buses. This is just wrong. The Final EIS indicates the gondola actually will pollute higher levels of greenhouse gases than buses. Local water authorities indicate construction of the gondola towers will adversely affect water quality and harm riparian areas in the canyon. Incrementally adding buses to the canyon will minimize the adverse effects of a gondola.</p> <p>The proposed gondola will have tremendous impact on climbing areas. UDOT continues to say the gondola will have minimal impact on climbing areas. They ignore the deleterious impact of gondolas to visual quality and loss of solitude to focus on the climbing experience. UDOT says none of the vertical climbing routes would be impacted. It is nonsense to believe that towers, cables and gondola cars running above or adjacent to climbs, what would have no impact?</p> <p>In the construction and phasing section, UDOT states that the gondola is not included in the WFRC Regional Transportation Plan (RTP) but it is an "alternative to a third lane in LCC". A gondola running in the winter to two destinations is certainly not remotely similar to a third lane. There are no similarities between a third lane and the gondola and it is just wrong to consider it a legitimate "alternative". Until the proposed alternative goes through the WFRC planning process, the group of businesses and individuals group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean" the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium" parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.
31157	Jodi Coleman	<p>The proposed gondola will have tremendous impact on climbing areas. UDOT continues to say the gondola will have minimal impact on climbing areas. 31161	Ginger Cannon	I completely oppose the nonsensical approach to solving transportation demand in the canyons with a gondola. There are many other solutions that are much less impactful that have not even been scaled or tried or invested in like our other public networks have been, such as freeways. This is not a freeway, it is a sensitive and irreplaceable natural area. I will oppose this with all my energy so that future generations can enjoy this area in peace with nature.
31162	Weston Cooley	How can you use public funds to service a private industry. The gondola is a gimmick. Snow sheds were recommended years ago and never implemented. Please review the common sense. Another example of poor people paying for a wealthy activity. You should be disgusted with your self
31163	Jake Dreier	smells like crony politics. NO TO THE GONDOLA!
31164	Jocelyn Young	I am totally opposed to the Gondola approach to Little Cottonwood Canyon. Other approaches have not been explored and the gondola approach is too expensive, invasive and will ruin that canyon. Water access in SLC and County is a much bigger problem and should be the focus of future meetings.
31165	Dennis Magaro	The Gondola is the worst option , available !! Too much \$\$ and the taxpayer should not have to pay for a lift that only stops at Snowbird & Alta .
31166	Patty Rice	No to the gondola. No to taxes funding it. I've lived in Utah 31 years and have been up LCC once. The ski resorts that benefit need to pay for transporting their guests.
31168	Gus Bandera	Do not destroy the beauty of the canyon!!!
31167	Grace Hanley	Voicing that I do NOT support the gondola. What a hideous fixture that would scar the pristine visage that is Little Cottonwood Canyon. This project serves to benefit the privileged and alienate those who wish to enjoy the canyon in all its expansive and nuanced glory (not just limited to the resorts). This is such conspicuous money grab-- √† la stadium constructions (force the taxpayers to fund while the owners reap the economic benefits).
31170	cody curtis	As a Utah resident and regular visitor to the cottonwood canyons, I am all too aware of traffic problems in the canyons. However, the gondola is a ridiculous boondoggle that will cost a fortune and will by no means solve the traffic problem. I am opposed the the phased implementation and the eyesore, waste of money, of a gondola all together! There are far more effective and cost effective ways to solve the traffic problems.
31169	Gus Bandera	Do not destroy the beauty of the canyon!!!
31171	david Richards	As a resident of the Town of Alta I am strongly opposed to the Gondola B plan. The plan does not eliminate a substantial enough amount of highway traffic and as a result the road will continue to be as much as a problem as it is currently. The avalanche problem therefore will not be resolved as the highway will continue to be packed with vehicles. Further, the current plan for the gondola as it enters the Town of Alta takes the alignment just South of the Blackjack and Sugarplum neighborhoods of Alta. These neighborhoods are already subject to the noise of the Snowbird Tram. The gondola in this alignment will further pollute this area with the humming noise of gondola cables. This is an unfair burden to these residents and will drive their property values down substantially. Last year Alta Ski Area instituted paid parking. This had a beneficial effect on traffic patterns in the canyon. Snowbird should be required to eliminate roadside parking and also charge for parking. With these actions traffic would likely be radically improved. This would be a good first step. In summary, this resident of Little Cottonwood Canyon is adamantly opposed to the gondola solution.
31172	Jerilyn Holt	No gondola! Please, that is the worst option. Not in the interest of all the people!!!!
31175	Stephen Gates	This project is a complete waste of money and will not solve any issues with the traffic. It is also a huge Enviromental impact to our canyon. Why is it necessary to have 20+ towers to have this ridiculous gondola installed. Have we not learned anything since the Ogden gondola got nixed.
31174	JARED OCANA	No Gondola! I repeat, NO █████ █████ GONDOLA!!!
31173	Mark Bosworth	I am against a gondola in Little Cottonwood Canyon and will work hard to make sure that anyone who supports it will not get reelected.
38540	Dennis Goreham	Mailed comment
31176	Stuart Hamilton	I am strongly opposed to the Gondola proposal for Little Cottonwood. This project is ridiculously expensive, and does not provide a good solution to the issues. It only provides service to the two ski areas (not anywhere else in the canyon), is only practical for operation in the winter. A road widening (and snow sheds) would improve YEAR ROUND access to the ENTIRE canyon, would be cheaper and is a much better solution.
31177	Janae Fairbourn	Do not build the gondola. The cost of the project is astronomical and it is irresponsible to be throwing that kind of money into a development that the people of Utah do not even want. Especially when you don't even know how the project will be funded and your easiest option is to throw it on the tax payers of Utah. We don't want the gondola and we can't afford the costs. Everything about this is shady, particularly the special interests of the group backing the project. The rich will get richer and the poor will get poorer. That's not the mention the the threat to watersheds, which are so precious in Utah, and frankly what an eyesore it would be. Please don't tear up the canyon. We won't get it back.
31178	Brad Jacobsen	I do not want this eyesore, and especially am opposed to taxpayer money being used for it. Let the resorts pay for this as they stand to profit from it.

31179	Jessica Muse	<p>The sole purpose of the over \$500+ million gondola project is to benefit the Alta and Snowbird ski areas. Certainly this large amount of money could be better used to fund multiple projects in multiple counties for the benefit of all Utahns. Private industry should bear the cost of operation and not be subsidized by our tax dollars.</p> <p>The gondola's exclusive service of ski resort customers comes at the cost of the canyon's natural environment, the climbing experience and the year-round dispersed recreation in the canyon of all types. The proposed gondola and its construction would have adverse impacts on climbing and fail to serve backcountry skiing/boarding in the canyon. UDOT's proposal to build a gondola up Little Cottonwood Canyon will forever alter the experience of climbing hundreds of iconic boulder problems in the canyon. In addition the views and natural beauty of the canyon would be forever altered. Better and less destructive solutions include smaller steps like adequate tire requirements (with enforcement), parking reservation strategies, tolling (with discounts based on vehicle occupancy), "express" buses during the ski season and year-round bus service with stops at the popular trailheads. They did not build a gondola in Zion Canyon to solve traffic and crowding, but instead implemented shuttle systems during high use to project the natural beauty of the canyon.</p>
31180	Niles Pierce	<p>Dumb idea. What is the real problem? I believe it's parking at the resorts and not congestion in the canyon. Have the resorts build parking facilities for their customers or limit their numbers. It's not the taxpayers problem.</p>
31181	Trina Sheranian	<p>I do NOT support the gondola for the following reasons: 1) It does not address the traffic problem but instead worsens it by drawing people directly into the canyon to ride it. It also takes longer to ride the gondola than to drive up the canyon which will deter most people. If traffic truly is the problem you aim to solve, expanded bus routs, resort parking reservations and tolling during peak hours to promote car pooling are obviously better solutions, which leads me to wonder if UDOT is actually trying to solve the problem or if they have some other motive to build this expensive monstrosity. 2) It only serves the ski resorts and the people wealthy enough to afford passes while it DESTROYS popular back country and bouldering spots, physically and visually. This canyon is meant to be enjoyed by everyone who seeks the calming power of nature, and this is impossible if everywhere you turn you see 200+ foot metal towers filling the canyon. They are UGLY! The lights on top of each tower will create light pollution that dim the stars radiance, upset the wildlife and disrupt the majesty of this beautiful canyon. I SUPPORT the phased implementations approach to solving the traffic. It is inexpensive and, most importantly, EFFECTIVE! I also vote that when Utah has a "traffic problem" to solve, they hire professionally trained city planners that don't financially benefit from the solution.</p>
31182	Yvonne Maros	<p>NO Gondola. The EIS needs to be re-done. Public comment wasn't really considered, you were just going through the motions and pretending to listen to comment from the people who will pay for this, the taxpayers. The gondola is the worst possible choice environmentally - construction of it will not prevent people from driving up the canyon, so it will not eliminate the problem!! The problem is too much traffic up the canyon. It only provides people with an alternate way to get up canyon, which most won't use, except for one-time novelty. You want the best option?? Let Snowbird and Alta pay for the solution, it will be the best solution because it would be the most cost-effective one. NO GONDOLA! It is simply a flashy answer that won't solve the problem.</p>
31183	Nathan Dye	<p>I am opposed to any of the build alternatives. These build alternatives are too costly to the general tax base without providing a wide enough benefit among that tax base. If tax dollars are used to fund this project then the majority of people paying for it will never even enter the canyon. The number of users of the canyon compared to the overall population of the tax base is not considerable enough to warrant spending \$500 Million dollars on this project. This should be solved by having the users pay for the costs of providing improved access to the area. The majority of the benefit is providing improved access to private businesses. The businesses and the users of these areas should be responsible for paying for these improvements. A toll for driving the canyon would potentially reduce traffic in the canyon or it would provide funds for the future to improve the traffic scenario. This should not be paid for by the general public many of whom do not ever enter the canyon.</p>
31184	Amy Moon	<p>At first I was excited about the gondola idea, but after reviewing this plan, I adamantly oppose this idea. I am a Snowbird skier and think it a terrible idea for taxpayers to pay for a gondola that will only go to snowbird and Alta, will only decrease traffic by 30% and cause damage to our beautiful mountains. I will not use the gondola as an avid skier and I hope UDOT will look for more reasonable solutions.</p>
31185	Mark Burton	<p>Build it</p>

ID	Full Name	Comment
31186	Fernando Rodriguez	<p>to whom it may concern.</p> <p>I am disheartened by UDOT's recent decision to implement a gondola in Little Cottonwood Canyon despite the overwhelming public opposition. This opposition is quite justified for the following reasons, all of which I hope are reconsidered with the eventual arrival at the conclusion that a gondola simply does not make any sense.</p> <p>There is no good reason to not attempt implementing alternative strategies for reducing traffic. These include, but are not limited to, electric bussing, tolling, parking management, carpooling programs, and requirements and enforcement of appropriate traction devices on vehicles...all of which are substantially less costly than the greater than half of a billion dollar price tag that has been proposed for the gondola (a likely gross underestimate of its true cost). The public will be forced to pay for this project from which only a small percentage will benefit. The fact that the largest beneficiaries are the private ski resorts of Snowbird and Alta is even more disconcerting. I sincerely doubt that the public shares the goal of increased ticket sales at these two resorts given the multifaceted costs that the gondola would impose.</p> <p>If one takes a closer look at what a gondola would actually provide, one would be hard pressed to see any true advantages. The actual travel time in the gondola is impressively long and that does not include the additional time spent parking at the mouth of the canyon. The traffic that the gondola purports to obviate would still exist at the northern and southern entrances to the canyon as people would still need to access the base station. The traffic that backs up onto the freeway and into local neighborhoods would almost certainly persist.</p> <p>The very real risk of too many visitors to the canyon is another consideration. I could foresee the gondola providing transportation to additional skiers instead of representing an alternative to preexistent patrons of the resorts. In other words, the number of vehicles on the road may not be substantially impacted (an unsurprising consequence of the inconvenience that the gondola imposes), yet the total number of skiers would increase. This would put an unsustainable strain on the mountains and resorts which already operate at levels that are disappointingly "beyond" capacity.</p> <p>Having lived at the mouth of Little Cottonwood Canyon for more than a decade, I understand and am frustrated by the amount of traffic that drives by at a snail's pace on the big powder days. Fortunately, I recognize that these represent a very small percentage of the overall days during the resorts' ski seasons and that it is a price that I am willing to infrequently pay so that I can live where I do. Even if the gondola were to lessen the impact in these instances, oftentimes it would also be restricted from operating due to avalanche control work that would prohibit its passage. As such, the true impact that it would have in the grand scheme of an entire season would likely be vanishingly small. Outside of the ski season, the gondola's worth would be much diminished as it only provides access to the resorts, one of which is entirely</p>
31188	Dave DiRocco	<p>The B Plan is nonsensical. The purpose of the gondola is to avoid snow sheds and buses. The Gondola should be fast tracked and nothing else should be done in the interim. Buses should not be in the Canyon period. If you want buses in the canyon then put a separate lane and snow sheds all the way up, destroy the canyon, forget the Gondola and be done with it. Such stupidity</p>
31187	Kyle Gish	<p>I am opposed to the gondola. It is an unnecessary way to spend half a billion dollars. The future of these canyons is mass transit, in the form of frequent buses serving efficient parking structures near major highway arteries. It is simple physics, and the gondola simply would not have the capacity to serve the needs of those that want to get up little cottonwood canyon.</p>
31190	Phillip Thompson	<p>What is the cost accounting for inflation?</p>
31189	Richard Shew	<p>Why are is there public paying for something that benefits two private ski resorts. A gondola doesn't provide access to other recreational sites except the top. A no d how many days of the year is the canyon really closed. You are just shifting the parking problem from one place to another.</p>
31191	Celeste Perrin	<p>As a Salt Lake County resident who frequently recreates in both little and big cottonwood canyon, I don't not believe the gondola is the method that should be used to reduce congestion. After many conversations with neighbors, none of us would feel enough incentive to stop driving our own personal vehicles up the canyon and take the gondola instead. Taking the gondola would be longer and remove the convince [convenience] of skiing in LCC. I believe either a tolling or parking limitation would create a much larger incentive for people to take buses, therefore supporting an enhanced bus system that reduces the environmental and visual impacts on the canyon. The canyons are beautiful pieces of nature and earth that should not be jeopardized by a giant gondola. I am strongly against the construction of a gondola and I urge UDOT to take in consideration the public opinion as the public is the one they are trying to create a solution for.</p>
31192	Celeste Perrin	<p>As a Salt Lake County resident who frequently recreates in both little and big cottonwood canyon, I don't not believe the gondola is the method that should be used to reduce congestion. I am strongly against the construction of a gondola and I urge UDOT to take in consideration the public opinion as the public is the one they are trying to create a solution for.</p>
31193	David Christensen	<p>I am opposed to the Little Cottonwood Canyon gondola. With inflation at nearly 10%per year and a multi-year construction time frame, it will inevitably cost much more than the \$550 million budget. I enjoy skiing at Snowbird and Alta as well as mountain biking and camping, hiking, and picnicing in the canyon. I feel that the majority of times that I go up the canyon traffic is reasonable. The worst times are usually snow days when traffic on a gondola would be nearly as bad as it is in a vehicle. We should look at multiple lower cost alternatives to the congestion and pollution problems including more park and ride lots near the mouth of the canyon, more frequent bus service including newer low emission busses, and widening the road for a dedicated bus lane, and tolls limited to heavy traffic days like winter snow days.</p>
31194	Sage knapp	<p>As a Utah citizen born and raised. I have skied my whole life and love the canyons. I feel that a gondola is not the solution. Busses and limiting ticket sales to the resorts should be sufficient. The gondola just creates a new problem. I also don't want my tax money to be spent on this.</p>

Comments on Little Cottonwood Canyon Final EIS

31195	Lynne McKenna	Given the rapid climate changes that can no longer be denied, it seems very short- sighted to spend at least \$550M to build an ugly set of towers.ruining the majesty of Little Cottonwood Canyon, when skiing will not even be available 25 years from now. This project will benefit no one but Snowbird and Alta, and will ruin the Canyon for everyone else. If the plan is only to offload at the resorts, this means all others will drive cars up the canyon anyway. The overcrowding should be reduced with clean electric buses, canyon tolls FOR NON UTAHNS flooding the Canyons, and road improvements. Buses can be used for other routes as needed. Flexibility and the ability to upgrade services in response to actual needs is key, Please eliminate the Gondola project now, in favor of solutions that benefit Everyone, not just ski areas which will not even exist in 25 years, or probably less, given the speed of climate changes we are already experiencing. Perhaps making this a ballot issue for all Utahns to decide is a better step at this time. Thank you for listening to the majority of UTAHNS who oppose this project!
31196	Kyler Hodgson	I am against the gondola. It seems like a project that will only benefit the developers. It seems developers have a strong lobbying presence in Utah politics and within UDOT. The proposed cost to ride it is prohibitive and unfair to all but the wealthy. Currently, we would all love to ride the bus but the parking lots fill up early and there are few connecting routes from around the valley. If there were direct buses from starting points all around the valley, that would enable utahns to not drive and clog up the neighborhoods around the canyon entrances and enjoy a faster, greener commute to the ski resorts. I live in sugarhouse and if I could just park at Walmart on foothill and catch a bus DIRECT with no other stops to either big or little cottonwood for a reasonable price I would do so. I would not ride a gondola and for the cost of the Gondola over a season could afford to go outside the state to ski.
31198	Nicole Ford	I am in absolute shock that you would not consider less invasive lower cost ideas before jumping to an almost billion dollar cost idea. The problem your saying exists is not all season long and to build a gondola is absurd. I've lost all faith in UDOT and their intentions for utah. I feel it is a greedy money driven decision instead of a well thought of solution that's best for the public. There are many other solutions we can put into place here, but since you don't have the publics best interests at heart you don't even consider them. I have seen so many ideas submitted to you by very educated individuals that want to help with a solution that doesn't involve sticking a billion dollar bill to the people and changing the entire face of the mountain. Think about us think about spending and being responsible with our money.
31197	Bill Ryan	The cost is outrageous and to be borne by the community and not the ski areas.
31200	Mark Rothacher	The gondola should not be built. Few people will use it and over \$500M of government money should not be wasted on it. More buses should be purchased and avalanche sheds built. The road does not need to be widened significantly. If it gets too crowded, cars should be restricted.
31199	Shannon McRae	Please listen to those of us that call this place out home. Don't destroy the wild natural beauty of this land just for convenience sake. It's a privilege to drive up the canyon to go to a ski resort. There Hass to be another way. I realize people come from all over the world to enjoy our ski resorts here in Utah but that shouldn't require us to destroy land to conveniently put a gondola up the canyon. Please consider other options like time slots and bus systems.
31202	Michael Stahler	I am not in support of he gondola. The price tag is excessive and the benefits are minimal and benefit two private companies who have created this problem themselves by embracing a high-volume business model that is not sustainable in this narrow fragile canyon. Alta is to be commended for using a parking reservation system that has done a lot to reduce the traffic. That cost the taxpayers \$0. Snowbird could easily adopt the same. If we had a Great Salt Lake that was full, no homeless people in Salt Lake City, and a properly funded education system, then this "luxury" item would be a "maybe" for me. But giving two employers (who DO NOT pay a livable wage and one that is notorious for making bad business decisions) a \$550 million gift is not the definition of fiscal responsibility especially considering that cheaper and less environmentally damaging. Reconsider this boondoggle.
31201	Claire Philippides	This gondola idea is insane. This is yet another example of a governing body working for capitalism, not the citizens they are out in place to serve. Before making an extreme decision like a gondola, consider expanding traditional public transportation (buses etc). It is appalling to me that you would ignore the opinions of citizens so blatantly to put something into place that is extreme (in its appearance and cost) before trying more reasonable alternatives first. People come to Utah in large part for the beauty of our canyons and not only is the gondola expensive, it ruins the natural appeal of the area. This is a terrible idea and I cannot believe that you are considering going ahead with it and ignoring the opinions of the citizens in favor for that of a few resorts.
31203	Doug Carlson	I am in full support of the Gondola option to improve the access and safety to the Little Cottonwood Canyon. This is not only the most environmentally friendly option it also provides a state of the art way to access the wonderful outdoor experiences that the Canyon offers. I also think this creative option will become an attraction to help support tourism in the area. To conclude this is by far the best option for safety, reliability, environmentally and sustainability!! I urge you to please approve and move forward with the Gondola option for access to Cottonwood Canyon!! Sincerely, Doug Carlson
31204	Troy Lincoln	Please reconsider the gondola. It is not a plan that serves the canyon environment and likely only helps a very specific subset of canyon users. Sure it is a hard problem to solve and thus it requires more understanding and consideration.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31205	Lorna Vogt	I do not support the recommendation of the gondola. It's anticipated capacity does not account for the number of people wishing to access the canyon nor the parking that is needed to effectively transport those people if they do choose the gondola. There is not enough accessible public transportation to ferry people from distant parking to the base. The gondola only works within an integrated system that is far too complex and large to fit in the already almost fully built out area surrounding and leading to the canyon. The gondola will mar the landscape and forever change the nature of the canyon without mitigating the effects of the road and traffic. expanded bus and public transportation options not only help meet the need, they encourage greater use of public transportation in general which benefits local and regional economic success, air quality, and mobility while also reducing demand for more road building that is simply unsustainable.
31206	Matthew Young	Listen to the people. We don't want a gondola. The price is exorbitant, it's an eyesore, it's simply not the best option we have to improve transportation in the canyon.
31207	Barbara Thornton	Please, please reconsider constructing the gondola through the canyon. I believe it is going to damage the natural beauty of our mountains, which we can never, ever undo. I also worry for the watershed that so many of our population rely on! With Utah being the second driest state in the nation, and our population continuing to grow, we need to have radical solutions to water protection and conservation. It is too fragile of a resource to risk threatening at all. Our family has a long history of recreating in Big Cottonwood Canyon and being careful stewards of a multi-generational cabin and land. We have seen a lot of history in the canyon and want to protect it for all who use it- rock climbers, skiers, hikers, campers, tourists, as well as preserving this fragile ecosystem for animals and plants, as well. Please think in the long term! Ski resorts and tourism are not the only points to consider!!
31208	David Mantenuto	The construction of a gondola in LCC would be detrimental to both the public and the environment. Living in a state that has been in a 20+ year drought one would think the importance of our watershed is understood. Constructing a gondola with zero attempt to mitigate traffic in the canyon another way is clearly in the best interest of Alta and Snowbird. The gondola provides no real resolution to the traffic issue in the canyon-as the same number of people will be driving their cars to access the gondola. There are so many other (less detrimental) options to be considered. I'm not sure why the least effective but most expensive option is our first step to alleviate the traffic issue (other than corruption). The gondola is not something the community wants, nor is it a reasonable solution to the traffic issue. The gondola will not only create in issue in LCC but also have a trickle down effect on BCC. As traffic continues to be an issue in the canyon, and people are encouraged to pay for their gondola ride more people will move away from LCC to BCC. Then we will be faced with the same exact problem we are experiencing in LCC now. Is the solution going to be build a multi billion dollar gondola in BCC as well? If constructed the gondola will not only leave the traffic problems unsolved, it will have a MASSIVE negative impact on the community, the environment, and the surrounding canyons. Lets keep Utah wild and fight against the corrupt individuals who claim this gondola does anything other than make the rich even richer.
31209	Margie Erickson	I am firmly opposed to the gondola plans for LCC. I have lived in Sandy all of my 81 years (minus college years) and the canyon feels like my own backyard. Please do not scar it with such an atrocity. It is foolish to spend taxpayers \$ on a project benefiting two resorts and in particular since with the GSL drying up our snow season will change drastically and skiing will no longer be drawing tourists whose \$ benefits surrounding communities. Back to the early planning, please, let's do something more common sense that does not scar the natural beauty of this iconic canyon.
31210	Rosane Coleman	Rather than putting in the gondola or widening the road, encourage more frequent use of electric buses and toll roads. Widening the road or Gondola creates a loss of iconic boulder problems that are renowned worldwide, as well as hiking trail heads that will either be lost or moved. We need to preserve our canyons, please do not destroy the beauty of Little Cottonwood Canyon by erecting an unsightly gondola. Or destroying iconic rock formations that are part of climbing's history by widening the road.
31211	Kellen Davis	I am firmly against the Gondola, the PPSL, or any other solution which threatens to permanently alter the recreational resources and natural beauty of LCC. I am in favor of pursuing significantly less impactful solutions to address the transportation problem. Specifically, an enhanced bus without roadway widening combined with tolling and other traffic mitigation strategies. It is devastating to think that we are at the cusp of irreversibly scarring one of the most beautiful natural wonders that our state has to offer. I understand the economic considerations and the uniquely difficult logistical problems that LCC creates, but it is simply unacceptable to go ahead with the gondola or the road expansion. Our priority must be to preserve the natural beauty that makes the canyon the attraction that it is, not permanently taint it in order to exponentiate the number of people who can access it on such a small and specific number of days each year. I am a season pass holder at both Alta and Snowbird. I am also a rock climber. There are a myriad of reasons that people choose to recreate in LCC each and every one of the 365 days of the year. Any "solution" permanently marring the canyon is not a solution at all.
31212	Jean Rengstorf	No to gondola. Poor use of public funds, benefitting a small portion of UT population.
31214	Dona Staples	Based on factual information, I believe that the Gondola in LCC is the best option. It is safer, in the long run more cost effective, will allow more people to use the canyon with less emissions and relieve the congestion. Widening the LCC roadway to four lanes, to accommodate more cars, would cause so much destruction in the canyon and destroy some of the current views. The Gondola impact on the views would be minimal compared to widening the road. I believe that people would be much more willing to ride the Gondola than a bus up the canyon. Whistler/Blackcomb ski resort is a great example of how a Gondola can impact a community. The Gondola will be a better use of tax payer money as it can be a solution to the problem for the long term and not a short term fix that we will need to pay for and address again in the future.
31213	Mary Whittington	No gondola. Too much money. Unrealistic and unfair for Utahans to pay for access to two ski resorts.
31215	Stefani Day	I am strongly against the gondola proposal. Yes, there are traffic issues and environmental issues that need to be addressed but the gondola will be an eyesore and is basically a give-away of taxpayer money to private ski areas and Gondola Works. Many other users of the canyon will be adversely affected without any benefit. PLEASE try implementing less harmful and destructive measures before permanently scarring this beautiful canyon!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31216	D K	Going forward, please include, prominently, what is going to be the price to ride the Gondola, or at least a projected range of likely prices being considered. Thank you.
31217	Gertrud Carpenter	Having a gondola going up Little Cottonwood is insane. It benefits only the for profit ski resorts and is paid for by tax payer money by people who never would have the means to go up there and ski. How about all of us who only want to go snow shoeing in the lower areas. This gondola is never needed in summer. Please stop this insanity!
31218	Larry Lynner	Do NOT continue down this path to destroy the beauty of this canyon!!!!!! Ridiculous! No Gondola !!!
31219	Joshua Hunter	The Gandola is the only option that would reasonable make any sense. Widening the road, if possible, could help for a season. As populations grow I imagine we would be right back here. More frequent buses seems to be a Non solution. More buses adds to the overall traffic going up the canyon. I don't like it either, but it seems the Gandola is the only option that is an actual solution.
31220	Yiqin Ma	I absolutely oppose the plan of building a gondola in the Little Cottonwood Canyon, which is a total waste of money and only favors the ski resorts, not the vast majority of valley residents.
31222	Craig E Weir	The Salt Lake City council recently voted to stop the gondola. Is that not clear enough for UDOT to understand? We "The People" DO NOT want it! At a minimum before ignoring the people's voices there should be a study completed of an alternative route for the Gondola from the Wasatch/Summit County side of the mountain. UDOT is in the process of constructing a UTA express bus terminal in Summit County that could be coordinated with a gondola located in Wasatch County using Wasatch State Park lands for the best overall result. It would be preserving Little Cottonwood Canyon and providing an alternate transportation option for people to access the resorts. Best regards, Craig Weir Millcreek, UT
31221	Yiqin Ma	I absolutely oppose the plan of building a Gondola!
31223	James Dillon	I feel like I am in the majority when I express my dissatisfaction with the latest decision to move forward with the Gondola alternative. I live and work in Little Cottonwood Canyon and have yet to meet a single individual who is in favor of building a gondola up LCC. Why haven't the options of the train and/or snowsheds been higher priority? They are safe and surely more cost effective than a half billion dollar piece of machinery. There is so much more that we could do with the excess money for our state than creating an unsightly, and frankly, inefficient piece of (seasonal) infrastructure. Either the train or the snowsheds would create a plethora of jobs for Utahns and help develop a certain culture and atmosphere around the canyon and the ski areas. An atmosphere quite different and more welcomed by the ski community than the 'latest, greatest and biggest'. That attitude may have a place elsewhere but the users of Little Cottonwood Canyon are not ones to embrace such gawdy and unsightly things. We love these canyons and this amazing area. Please don't ruin it for the sake of 'progress'.
31224	Leslie Andersen	Can we just stop all the romance of having a gondola? A gondola will help me not at all. Can it stop at trailheads? No? So who does it benefit other than the fat cat resorts? Give me an energy efficient shuttle that can make stops and I'll gladly use it. Add a third variable lane.
31225	Nadine Stupelli	I am adamantly opposed to building this gondola. We hear frequently that the canyons are being "loved to death". The gondola seems to me to be another way to help a few privately owned businesses add to this problem at no expense to them. I am opposed to my tax money being spent to enrich their bank accounts. A majority of the people of the state and local counties will never use it. If the problem is getting folks to the resorts there are other options. Limit the cars at any one time by some type of reservation system as was used in our national parks. Encourage the use of buses. The argument that people don't want to use the buses is a poor excuse for spending that much money to support a few businesses. If the bus becomes the best option, folks will use it. The timing of the announcement that there will be fewer ski buses this is year is very suspect. I don't believe it's a coincidence. I'm not sure the gondola is good for the environment and the animals in the canyon. If you're planning to do this in "stages", maybe try the first stage before going ahead with building the gondola. It seems to me that this decision was made years ago (I remember some highly publicized "fact finding" trips to visit European ski resorts) Now UDOT and the other powers that be are on a major campaign to convince the public that we want it. I don't. The local communities that will be heavily impacted don't. Who does? The ski resorts and some of their (probably wealthy) patrons. There has to be a better solution. I'm retired and live on a fixed income. I don't believe I should be forced to pay for this. I'm also not convinced that it is the best choice. I'm fairly confident that those of us who oppose this actually have no voice in the final decision. But, thanks for letting us believe we might.
31226	Tim Skuster	The gondola will benefit Alta and Snowbird resorts only, almost an extension of their lift systems. All funded by taxpayers. Enhanced bus service with snow sheds in the worst slide paths will be more effective and cheaper. Also, there should be Alta only and Snowbird only busses. Currently every route goes through Snowbird on the way up and down. Alta busses should use highway 210 and not the bypass road when possible with an additional stop at the Hellgate road turnoff.
31227	Barbara Hansell	Hello, I am a lifelong Holladay resident and I am against the gondola proposal in Big and Little Cottonwood Canyons. Increased bus routes and getting people out of their cars is the best solution. Thank you for your time, Barbara
31228	Jackson Miner	We do not want this Gondola! Our community has made it very clear, please DO NOT move forward with the gondola
31230	Jesse Gambrell	Please find an alternative to the gondola. It is not a sustainable way to solve the problems in the cottonwoods and only services the two resorts in little.
31229	Jacob Cerezo Revuelta	Audentes fortuna iuvat [Fortune favors the bold]

31231	Karthik Sonty	<p>UDOT should [not] support the Gondola's construction. This project will have an indelible impact on the natural landscape that draws so many to Utah. This project will have a substantial impact on a watershed that nourishes so many in Utah. This project WILL NOT have a significant impact on transit in Utah. The gondola is not a necessary means of transit. As such, most will continue to enjoy comfort and autonomy by relying on their personal vehicles. Further, the gondola WILL NOT be a continuous means of transit in Utah, meaning that in summer personal vehicle use will resume--if it is diminished by any amount.</p> <p>Ultimately, the gondola plan is a mechanism whereby affluent ski resorts can ensure the affluent ski community can enjoy a resource that is designated as multi-use. This is not the object of our national forest system.</p>
31232	Karthik Sonty	<p>The Gondola Project is in plain conflict with environmental law. Accordingly, it is incorrect.</p> <p>Under the Multiple Use and Sustainable Yield Act (MUSY), National Forest land is designated for multiple use and sustained yield giving due consideration to the interests at stake. Multiple use requires the appreciation of myriad of recreational uses--including those that do not redound to the advantage of private ski resort operators--as well as range, watershed, and wildlife. The management of our natural resources must be conducted in a harmonious and coordinated manner. Sustainable yield requires maintenance without permanent impairment of the benefits provided by the land.</p> <p>The Final EIS fails to adhere to these standards. The decision demonstrates a substantial preference for immediate private commercial interests at the expense of all others--ecological, public recreational, etc. It is predicated on subsidized economic boons to the very few, while diminishing the benefits enjoyed by so many others. Moreover, the articulated environmental benefits appear dubious. Absent any enforcement mechanism requiring use of the gondola, why might the status quo change? During the majority of months when the gondola is inoperative, how is it a benefit? The Final EIS provides no answers and it strains credulity to conjure them on its behalf. The truth is that, at best, this may provide an *additional* transit mechanism--one that is highly disruptive and destructive--rather than a *substitute*. Moreover, the decision prioritizes short term benefit to a select user group which comes at a permanent cost to the natural environment and a broader user group. This is antithetical to the MUSY.</p> <p>Under MUSY, the government must give due considerations to the relative value of the various resources. MUSY does not define value in purely economic terms. Instead, it is a capacious term and a nuanced analysis which involves balancing the myriad interests at stake.</p> <p>The Final EIS fails to weigh these interests appropriately. Instead, it recognizes value only in dollars--specifically, those that may be earned by both private entities and the government. Entirely absent is analysis of the countervailing interest to other user groups--specifically, those that will not contribute to the above coffers. This reading is improper, but perhaps unsurprising.</p> <p>Utah has marketed itself to residents and visitors as an outdoor paradise. And yet, upon finally receiving the extrinsic recognition it has so long sought, it foolishly sprints towards the destruction of this resource.</p>
31233	Emily Powers	<p>The environmental impact of the gondola is too great. It is creating too much of a carbon footprint and infringing on the canyon that we work so hard to protect. I also do not believe this will provide a solution to the problem and will only be utilized for a few months of the year.</p>
31234	Kristen Elder	<p>Please-no gondola!! The reason people enjoy Little Cottonwood Canyon is the natural scenery. It's bad enough Snowbird built on top of Hidden Peak. A gondola would ruin it entirely. I am a resident of Salt lake County and oppose my tax dollars going toward this project. This benefits no one but wealthy ski resort owners.</p>
31235	Sky Ransohoff	<p>I am VERY pro gondola. no other decision makes sense. there is no other plan other than to keep having 4 hour lines to get up the canyon in the morning</p>
31236	Margaret Edmunds	<p>I am opposed to the gondola, which will change the beauty and character of LCC. It is outrageous to even consider such an expensive boondoggle when resorts in both canyons still offer free parking to some or all visitors. Fund more buses and drivers (maybe they need to be paid more to do the work?) and try that first before spending half a BILLION DOLLARS on an ugly gondola. Thank you!</p>
31237	Isabelle Albi	<p>I love the gondola. its a great idea. I have been on these before in other countries and they are amazing. the views are spectacular and will be a great addition to the canyon. I know people think it will be an eye sore but that is a small minority of people that use the canyon. we can't all skin the backcountry all the time, but we should be able to enjoy the views too!</p>
31238	Henry Hemingway	<p>To Whom it may concern:</p> <p>I am totally opposed to the building of a gondola up LCC for these reasons:</p> <ol style="list-style-type: none"> 1. The construction and the presence of the towers will permanently damage the beauty, viewscape and ambiance of the canyon. 2. To subsidize Snowbird and Alta in the amount of \$600,000,000+ is a total rip-off of the State of Utah taxpayers. If it's such a great deal, make them pay for it. 3. The construction of the gondola could be obsolete within years with global warming. Like the pumps in the west desert, who know what our climate will be in the next few years. <p>Call me if you have any question.</p> <p>Henry Hemingway</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31239	Wes Fleuchaus	I am in favor of the gondola. Advocates against the gondola are all committing fraud by submitting hundreds of comments per person against the gondola. its only a few people that are actually against this Idea.
31241	Wayne Day	The gondola is the ONLY solution to sllow more access without more traffic and more pollution. Expanded roads or more parking will only lead to more damage to the environment. The cost is high, but I have yet to see another solution that is better.
31240	Schuyler Ransohoff	Please build the gondola! we need this
31242	Wesley Fleuchaus	Please save our canyons and BUILD THIS GONDOLA. YES TO GONDOLA
31243	Scott Chandler	I support the Gondola. The Wasatch Mountain range is a Utah tourist attraction whether we want it to be or not. And as a tourist attraction the Wasatch Mountain range is important to Utah and it's businesses both in the Wasatch Mountains and outside of them. Currently the roads into Mountains are often clogged and can be more dangerous because of this. This detracts from the Mountains as a tourist attraction. Widening the roads and/or adding more busses to these roads is not a good solution as it has more environmental impact than the Gondola solution does and does little to decrees the dangers. The Gondola solution will be more pleasing aesthetically (a bit of a European flare) and provide a lower environmental impact. Being separated from the road system the Gondola will inherently be safer. The cost is high. But since businesses in the mountain and, often forgot, outside the mountains benefit this cost will be offset rapidly. Hopefully in time linking Salt Lake City with Park City will also be considered. Maybe not with a Gondola. Maybe with underground trains as that technology expands as we see it in Las Vegas.
31244	Douglas Cannon	Gondola looks like a good solution to me.
31245	Cailee Markosian	Remove gondola as an option. We need to protect Utah's watershed, especially as the GSL is drying up. We cannot sacrifice precious resources and damage or canyons natural landscape for the sake of driving more folks to two ski resorts.
31246	Marilyn Copeland	Please don't build the gondola. It is a short-sighted "solution" that causes more trouble than it fixes. It would only benefit the ski resorts, not the vast number of people who access Little Cottonwood Canyon for other forms of recreation. Taxpayers should not foot the bill. It will be a permanent blight on the landscape. In 50 years, climate change may so affect the weather that skiing the Wasatch may be a thing of the past. Don't widen the road, either. Use electric buses, on a more efficient schedule, tailored to the needs of people who will use them.
31248	Joan Hadley	I am against a gondola. It is too expensive. Need to limit vehicles coming up canyon by more efficient busing, 3 lanes open so busses and EM vehicles have 1st access. Parking reservations and limits to cars coming up canyon. Charging a fee for cars to come up canyons, this would help off set costs.
31247	Bryan Millerberg	I believe that the current costs for the proposed gondola are not even close to what the actual completed costs will be. How about the numbers estimate for 10 years from now? Since by your own admission you are saying that starting the project is years away. I believe that even today's estimates, if it was started today, would be way to low based on current construction trends.
31250	Gary McLaren	To Whom It May Concern: I was happy to see the vote against the gondola in Little Cottonwood canyon. Just a friendly reminder why a gondola is a bad idea. It doesn't actually solve congestion it just moves it to a different spot. It becomes and eye soar in one of our most picturesque canyons. And the the gondola would be paid by tax payers to allow two private corporations to profit from its use. The above our why it needs to never be considered an option again. Thank you, Gary
31249	Erin Armstrong	I oppose this project! Do not build this project. We should be preserving our green and open spaces not ruining the land for the few interested parties who will profit from this build. Winter/ski season is not that long in Utah. Not everyone skis. Create a toll for parking for those who want to ski in these 2 resorts, force carpooling, increase buses during ski season when parking lots are full. There are better options then this massive financial project. Utah taxpayers do not need to be using our tax dollars for this pie in the sky project when teachers and schools and medical professionals and arts organizations and homelessness needs are far more important for us to focus on. Again, I vote no!
31251	Ben Anderson	I would like to say that putting a gondola in the canyon will harm its aesthetics in such a way that it will never be the same. A road is understandable and necessary to access the area. An increase in car pool lots, hitch hiker pick up zones, better bus service, and an increased of responsibility from the ski resorts would go a long way to mitigating the problems people are currently experiencing in the canyon. Although there are no metrics yet to measure the effect 22 steel and concrete towers will have in the canyon, I can't help but feel that in an effort to save people, we are harming a canyon. I will take the hard road every time if it means we can save our natural spaces. Ironically, in trying to meet the requests of progress, we are ruining the very thing we are trying to save.
31252	Kirsten Dockstader	I'm opposed to the gondola. Lower cost, lower impact solutions like increased and improved bus services have not yet been attempted. Please try that first.
31253	Sarah Szymczyk	I am so thankful the council voted against the gondola. It is such a horrible idea that will drastically negatively impact our environment. And there is no good reason to ruin what the most beautiful part of our canyon is.

ID	Full Name	Comment
31254	Noah Syroid	<p>I'm against the gondola solution for all of the reasons that have been mentioned numerous times by others (e.g., Salt Lake County, Salt Lake City, and the public).</p> <p>Please consider this suggested alternative:</p> <ol style="list-style-type: none"> 1. Significantly increase bus service (electric/low emission) from multiple departure areas in Salt Lake Valley for both Little and Big Cottonwood Canyons. Use existing technology to allow users to monitor via mobile app in real-time to see what buses are full/available, wait times, locations, etc. Cost should be free to nominal. 2. In addition to 1. above, provide premium reservable bus service at an extra cost (employ electric/low emission luxury tour buses with guaranteed seat, skis/snowboard storage beneath bus) that depart from a variety of places throughout the valley. 3. Limit # of vehicles in both Little and Big Cottonwood canyons, ensuring that buses will not ever get stuck in traffic. Limit cars to parking lots, and there should be NO parking on the roads whatsoever. <p>Use existing technology that may be deployed on mobile apps and allow advanced scheduling of up and down time (20 min windows) for vehicles that prefer to drive up and down the canyons. Single occupancy vehicles should pay a premium based upon "load" (e.g., a busy powder day, it could be \$125 where a spring weekday it could be \$30). The same could be true for double occupancy, but at reduce fees. Free for 3 or more in a vehicle. Ensure good "mobile data" accessibility in the canyons, particularly at the base.</p> <p>Install automatic (no human presence required) monitoring at the base of the canyons to monitor license plates (or use toll technology). Non-compliant drivers would be reported and subject to a hefty fine/impound. Incorporate the inspection/approval for vehicles to have all-wheel-drive or approved snow tires.</p>
31255	Dale Covington	The gondola serves a limited demographic, not all users of LCC. I think there are better, more inclusive solutions.
31256	Caleb Bosworth	With less and less snow per year, paying \$600m for a gondola doesn't seem like a smart use of money. Especially when risk regarding the watershed and local ecology come into question; not to mention the gondola's questionable efficacy in the first place.
31257	Christa Zaro	I moved here in 1993 and have watched the growth of the Wasatch explode. I've always skied Alta/Bird and Solitude. Now, I am passing the torch to my kids (ages 13 and 15) who are on the Alta All Mountain Team. I would like to express that we (my family and I) are opposed to the gondola with the strong belief that it will ruin the natural beauty. I have been a steward to the environment and have taught my children to protect the earth and its limited resources. Now, why would I feel any different just so we can add more people to get up a road? My kids study the great salt lake disappearing, our water shortage, and pollution just to name a few. It is completely contrary to everything we believe in to strip away the natural resources just so that we can get more skiers up a mountain to the front doors of Alta and Snowbird. I propose mandatory car pools, lottery system, and extended bus services. Hell, with the public tax \$ we would save on the gondola we could use it for FREE busses up both canyons.
31258	Jessica Chappell	As a resident of Cottonwood Heights impacted by ski day traffic a few times a year, the gondola does not actually help solve the issues we have on Wasatch boulevard. This becomes a tax payer give away for the developer. It does not serve our community equally. It does not help for climbers, bikers and hikers which impact the canyon year round.
31259	Alexis Ashe	I personally have grown up in that canyon , I don't want to see it over ran and destroyed by a tourist attraction, leave the canyon the way it is. I am NOT supporting this , it just kills me knowing some people want to destroy Utah's natural beauty for their own entertainment.
31260	Olive Grutter	Please look towards other options to help negate traffic besides a gondola. more frequent busses from the base of the canyon would be great, or even more busses from around the valley would help a lot.
31261	Allison Elmer	Please don't put a gondola in little cottonwood canyon. Improve access with UTA instead!
31262	Sari Rauscher	<p>I am a weekend skier and season passholder of Alta and Snowbird, and I am opposed to the Gondola. I am also an avid user of Lower and Mid- Little Cottonwood Canyon Trails, and I go there--15 minutes from home and work--to be in nature and to escape manmade noise and structures. This proximity to relative wilderness is what makes where we live amazing. Please don't ruin this natural resource that keeps us all sane by building gondola towers in the middle of it and introducing a constant low humming noise of operation of a gondola.</p> <p>A gondola won't help traffic on Wasatch Blvd. or 9400 South, because cars will still have to travel there to park at the bottom gondola station.</p> <p>Better solutions to Gondola:</p> <ol style="list-style-type: none"> 1. I thought the 2021 Snowbird reservation system and the 2021-22 Alta Parking reservation system made a huge and effective difference in traffic congestion, and is the solution we need. 2. A direct bus to Alta a couple of times a day. I would ride the bus every day <p>As it is, I travel on weekends to LCC ski areas, and I'm willing to wait in traffic more before having a gondola!</p> <ol style="list-style-type: none"> 3. We should spend some, but less, money on checking for 210-appropriate winter tires, reservation systems, and electric buses, with additional service direct to Alta. <p>Thank you, Sari Rauscher School Counselor Resident, Cottonwood Heights, UT</p>

31263	Michael Dawes	<p>I am an avid skier/climber/mountaineer that accesses LCC frequently. I have four main reasons the gondola is a TERRIBLE idea and not worth \$550M:</p> <ol style="list-style-type: none"> 1- At best, it might save some time accessing the upper canyon maybe 15 days out of any given year. 2- It limits the backcountry access. Backcountry skiers would never use the gondola because they need mid-mountain access at various spots. 3- Families would never use the tram because they need their vehicle at the resort parking lot for storage. Where else are we going to store our families' extra layers, goggles, gloves, food, water, sunscreen, snacks, diapers, dry socks, first aid kit, helmets, picnic supplies, rain gear, cameras, lawn chairs, blankets, stoves, firewood, climbing gear, snowshoes. 4. There will be extreme and irreversible damage done to our beautiful canyon. <p>I am so sad that greed has overtaken logic on approving the gondola. The reality is that very few people will use it, traffic might be better for a handful of days, our canyon's beauty is destroyed, and those that approved the project have pockets lined with cash.</p>
31265	STANFORD PITCHER	<p>Not sure what to say other than I am appalled by your decision! Not in my worst nightmare could I see this coming, its the same feeling I had when Trump became president! Its just an unbelievably bad idea that benefits the ski area and ruins the canyon that I've loved for over 35 years for everyone else. The solution is simple mass transit using the existing road from hubs scattered around the area. Please don't ruin the crown jewel of the Wasatch for the benefit of rich ski-areas and the developers that are going to profit. Its obvious, your decision is not based on sane logic but that your beholden to this idiotic plan for some reason.</p>
31264	Trudy Bach Whitehead	<p>Protect our beautiful Wasatch Mountains. Change behavior first. Take We need electric busses, regional transit throughout. The valley, have people take the bus and or carpool. Please stave off the gondola! We can't make more land.</p>
31266	Quinn Dietlein	<p>I am hopeful for the Gondola. It is exciting to dream about my family and I easily accessing the canyon in this manner. Thank you.</p>
31267	Alex Aberman	<p>Very much opposed to the gondola. As someone who works in and plays in LCC, my opinion is strong. Why would our first solution be billions of dollars spent on a gondola, knowing that it will not affect the traffic problems. It is only going to disrupt the canyon more, not protect the green space we're fortunate to have. There are solutions through busses, and restricting who is let in the canyon. If busses ran more consistently then the public (including me) would ride them. Why would we ask Alta and Snowbird to help fun a special fleet of ski busses that just continuously loop from park and rides up the canyon?</p>
31914	Micah Lawrence	<p>To whom it may concern,</p> <p>We are lifelong residents of Salt Lake County, frequent skiers in both big and Little Cottonwood canyons and frequent hikers in the summer. We strongly oppose the installation of a gondola system. The system will be costly upfront for taxpayers to install, cost money on the backend to use, require additional traffic management for parking at the base, and allow special interest groups to mitigate our access to our natural land.</p> <p>Research shows that access to natural spaces reduces depression and anxiety throughout the lifespan, we are currently having a public crisis due to lack of access to natural spaces. If the gondola is installed it will further reduce access for underserved populations that needed the most. We talk about getting children out into the wild and that is a priority in our state but if the condo is installed it will be Cost prohibitive for families. Sure it might be a great tourist attraction but it doesn't work for Utahns. These are our taxes, we don't want them to work for companies or tourists. We need them to work for our families, the people paying these taxes. I was one of the few states that has a robust birth rate we need to think about the children. The outdoors are what set utah apart we can't give those rights to corporations so willingly. It would be a different sort if they wanted to foot the bill and reap rewards on the back end, but they can't have us pay for it and also reap the rewards later. We need common sense solutions like more buses, carpooling incentives, and maybe a modest fee station.</p> <p>We can and should go along with better ideas that keep wild utah accessible to Utahns not rich visiting people.</p> <p>Thank you, Micah Lawrence</p>
31268	Felix Rauscher	<p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users. 3. Tolling is supposed to be part of the EIS but there has been little to no discussion about it. <p>I urge you to take action and use your voice to speak out against this development. Thank you!</p> <p>The problem only exists on a few select days of the year. It is just fine for most of the rest of the year. It seems way excessive to build a gondola or a third lane. And when it does happen it is no worse than I-15 during rush hour.</p>
31269	Lisa Nord	<p>The taxpayers should not pay a half billion dollars to finance a gondola system that will ruin the pristine beauty of the canyons. Then when you consider that the ugly, ridiculously expensive gondola system will then charge exorbitant fees to use it, and it all benefits two privately owned ski resorts that the average local Utahn can't afford to use, it's offensive and out of line to even consider this gondola. The majority of people do NOT WANT this gondola! Take the half BILLION dollars and put it to better use for ALL citizens of Utah, not the elitist ski resorts and tourism industry. The canyons are for everyday Utahns, and we shouldn't have our tax dollars used for frivolous, elitist, private enterprise, and in so doing ruin the beautiful canyon with the ultimate eyesore.</p>

31270	Erin Carroll	Please do not build the gondola. It will ruin special areas of LCC and the communities who use these areas will be massively negatively affected. Please do not build it and do not be swayed by the big ski companies and businesses wanting it built.
31271	Chad Shepherd	The Gondola is a great idea. We need something that functions, is fun and will probably be an attraction. If the gondola was built in another state, these naysayers would be the first to ask why Utah doesn't build something like this. We've got enough roads and busses and never working carpool ideas. What a great idea & solution to traffic problems... we need to get it done!
31272	Andreas Schmidt	I'm dismayed that UDOT has chosen the Gondola as the preferred option despite public outcry against it. I understand UDOT's objective is to alleviate congestion without much regard to other considerations, but the Gondola is not the way to solve this issue. The traffic mess would still occur and be concentrated in the neighborhoods surrounding LCC. The Gondola would degrade the environment and viewshed of the canyon. It would only serve one population (resort skiers) and basically be a huge appropriation of public money to benefit the two ski areas. Surely there are better ways to spend \$550M to address issues of transportation, climate crisis and equity in our state. With the climate warming, making such a massive investment in the uncertain future of winter recreation seems like a foolish gamble.
31273	Avery Parry	Why can't the funds allotted for the gondola be put towards improving the bus service? Why cut the bus service as this particular time?
31274	Jared Holindrake	<p>I find the proposed plan not only shady, and against the state tax payers, but of poor judgment to richen the pockets of few.</p> <p>The Gondola does not trasfer enough people given the cost Private companies/persons benefit financially and this is paid by tax payers Busses and shuttles can be provided by both resorts at a fraction of the cost. This is not well geared towards families who have lots of gear to mind Snowbird especially is pulling some back door deals though their shell companies e.g. purchasing the parking lot land. We need to fist toll the road for access and limitation of people The gondola also limits other, non resort recreation which is substantial.</p>
31275	John Holland	<p>As a former Alta resident and Snowbird Ski Patrolman, and a continuing customer at Alta and Snowbird I offer my perspective. I'm opposing the development of a gondola in LCC because of the anticipated environmental impacts, impacts to wildlife, impacts to visual resources, the project costs to Utah residents, and the fact that the carrying capacity of the recreational resources in LCC is already maxed out. In addition to the issues stated here it is clear that skiers and Uthans in general have not adopted public transportation as a practical transportation resource and the investment in public funding is unreasonable.</p> <p>Thank you for the opportunity to comment.</p>
31276	emily desmeules	No to the gondola! How will it fix the issues if it won't be finished for years? What happens in the meantime, and then if the meantime plan is adequate why don't we just continue with that? The gondola will only benefit rich tourists at the detriment of working class locals who are the backbone of the community. Not to mention destroying the natural beauty of the canyon.
31277	Kathy and Miller	The gondola is not an appropriate use of tax dollars. Please use other solutions.
31278	Denise Peterson	There are many reasons why I am opposed to the construction of the gondola. Not only will it be an eyesore with a significant amount of negative impact on the environment, it will destroy critical habitat that wildlife rely on for survival. I cannot in good conscience support this gondola now or in the future.
31279	Helen Dohman	<p>It is unfair to think that all taxpayers should pay for this when only 2 ski areas and skiers and boarders will benefit. Close the ski areas when they've reached capacity. Or, close the road to vehicles that do not have a pass.</p> <p>Increase electric bus service. No to the gondola.</p>
31280	Brandt Saxey	Please continue to support the gondola option that was chosen through the review process and do not let extremists change the outcome of that process.
31281	Jack Stauss	<p>Well I did this really eloquently last time but I don't think y'all deserve that again. This EIS was flawed from the start - you didn't ask the right questions and because of that you came up with a bad solution. It's clear that the whole process was a long strategy to work with the ski areas to build revenue and market the resource.</p> <p>Here are some questions, followed by some solutions:</p> <p>Why was the reality of the climate crisis not front and center in this decision?</p> <p>why wasn't there a canyon capacity study done?</p> <p>How much time and resources are you going to allocate to a phased approach, and how does that even work while UTA is taking busses off the road?</p> <p>Why weren't the USFS, UTA, and SLC/SLCo more actively engaged in the eis and subsequent plans?</p> <p>What has the budget for the gondola expanded to in recent years? Cuz it sure as [redacted] ain't \$600m anymore.</p> <p>I would implore you to reconsider this decision. Try the phased approach, take the gondola off the table. Apply 1/4 of the resources to new and better busses. Pay the bus drivers more. Expand access to service across the valley with direct, four season lines to all of the canyons in the central range. Make them free, comfortable, and easy. Incentivize people to take them. Create an aggressive fee structure for personal vehicles.</p> <p>ldk. you guys are basically just pawns at the whims of the developers, grifters, and some of the worst politicians in our nation so this seems futile. But you know what: nature bats last, and when that gondola is dropping people 1000 feet below the snow line in 2050, she will have had the last word.</p>

31282	Chad Eggertsen	I apprise the gondola. The bus is much better
31284	Julia Sherwood	Putting a gondola in LCC is going to ruin the beauty of Utah. Utah is so special because of the beauty. People fly from all over the world to enjoy our nature and with a huge gondola in the view will just ruin it. I understand that we need to change something but the gondola is not the answer. It'll be extremely rough on our mountains. I want my kids to enjoy the mountains and Utah the way I remember and have fallen in love with it. Please don't put in a gondola. Listen to the people!
31283	Scott Donaldson	I do not support any public funds building any type of structure for the benefit of private business. I do not support the gondola project and do not want any of our tax dollars going towards building it. We must find better solutions like improved busing options of more busses, higher parking rates at the resorts, and cheaper cost for the rider on the bus. These are the solutions we need not building a gondola.
31285	Suzanne Cooper	I am against spending this money to benefit only ski resorts and address a small number of days per year when traffic is congested. Why not find less expensive solutions that benefit all county residents year round?
31286	Annette Moulder	I glad the gondola idea is being blocked. It solves nothing. I do like the idea of more busses and terminals for busses in the canyons.
31287	Zachary Smallwood	I support the gondola. It seems like the most appropriate solution. It also provides a uniqueness to help those resorts stand out.
31288	Trent Clifford	I advocate to protect our canyons by not putting in a gondola and pushing to find a better and more sustainable solution to this problem
31289	Rudy Rutemiller	I live in Cottonwood Heights and frequent LCC, mainly for trail running and hiking. While this version of the EIS retorts the frequent comments from actual locals who are opposed to the gondola, my comment remains the same: The goal of the EIS is inherently flawed. The goal should not be to increase more visitors into LCC, and should not be to serve only the ski resorts. I implore you to listen to the people who live near LCC. Perform minimal measures to increase safety in LCC instead of jumping to a permanent solution that only addresses an issue of 15 days a year. Snow is decreasing in Utah. Our Great Salt Lake is shrinking. Air quality is disastrous. No secrets there. Why are you proposing to spend money on a frivolous activity (skiing) that only the wealthy have the resources to utilize? Why don't you NOT spend the money and address actual issues that effect all of the Salt Lake Valley? I am appalled that the gondola is actually being proposed and disagree with your recommendation. What a sham.
31290	Hannah Sutherland	No gondola!! Prioritize people, flora and fauna over profits. Gondola is a nonsense plan. The people have spoken, listen.
31291	Dale Janney	My thought on the subject is that the tram is going to be at least an eyesore and a money money pit that won't stop taking. Electric or natural gas buses will do the same thing without destroying the canyon and the water shed.
31292	David Frey	I strongly oppose this gondola project! It serves a small portion of the county/state and is contrary to common sense to require the entire county/state to pay for it. I would not use the gondola as I enjoy the canyon in other ways which would never include a gondola ride. The unimaginable cost of over 550 million dollars could be far better spent by reducing taxes, on food or gasoline which would benefit every single resident of the county/state. Or NOT spend \$550 MM at all as suggested by Councilman Richard Snelgrove. What a brilliant thought! Just because something CAN be done later to be claimed as the "largest in the world", doesn't mean it SHOULD be done. The traffic congestion photo on the landing page of the developer's website depicts a scenario that only occurs a few days out of the entire year. Other photos, including those on the UDOT website supporting the gondola depict 2-5 cars in the entire frame. UDOT is wrong to push such a project that benefits so few yet impacts so many. Little Cottonwood Canyon is just as beautiful today as it was 60 years ago when I would ski at Alta. The people don't want it. Neither do I. If it such a project is ultimately rammed down our throats, including short-sighted projections, overages, tolls, restrictions, etc., the Little Cottonwood Canyon resorts and associations, also pushing an "outside the bounds of common sense" development, are also short-sighted in their ambitions as I will always maintain the ability to choose another resort in a different canyon or in a different state... as I currently do.
31938	David Frey	I strongly oppose this gondola project! It serves a small portion of the county/state and is contrary to common sense to require the entire county/state to pay for it. I would not use the gondola as I enjoy the canyon in other ways which would never include a gondola ride. The unimaginable cost of over 550 million dollars could be far better spent by reducing taxes, on food or gasoline which would benefit every single resident of the county/state. Or NOT spend \$550 MM at all as suggested by Councilman Richard Snelgrove. What a brilliant thought! DF
31293	Joshua Morris	I am curious as to what the other options are? I do have some concern for earthquake resistance due to building right on the wasatch fault
31294	James Burton	I oppose the Gondola. There are other common sense solutions that don't strictly benefit a few at the expense of everyone in SLCo. The gondola benefits the ski resorts exponentially compared to the constituents of Salt Lake County. I want to see a more equitable solution that doesn't require so much infrastructure and impact on the entire canyon. We should be increasing bus services instead of reducing them.

31295	Mary Ann Van Alstyne	The gondola proposal is an expensive project that cannot possibly reduce the number of cars going up the canyon. The decision that impacts the beauty of the canyon will be irreversible. Once the gondolas are in place no amount of effort can eliminate them. It appears to me that the gondola is designed to benefit the developer not the preservation of the canyon. Are we really thinking about the future of the canyons for coming generations or are we just focusing on how much the developers will benefit? The reality is that the ski resorts can only handle so many skiers anyway. Why is UDOT coming up with plans to increase the number of people up the canyons? There are other ways to mitigate against avalanches, parking restraints, and crowd control. Do not let the hyperbole and pressure of developers get in the way of clear thinking.
31296	Colin Reeder	A transportation option should be provided that benefits ALL recreation up the canyon. That would be more buses. A gondola will certainly reduce traffic from skiers/snowboarders, but more busses will reduce traffic for all recreation. Better for the environments Better for the budget. Better for all parties. We love our canyon how it is. Please no gondola.
31297	Jessica Scheetz	What has been asked of the privately run ski resorts to solve this problem without disrupting the canyons?
31298	stan smith	Love the gondola idea
31299	Chad Horne	So if you are going this direction, which is counter to so many of the local resident comments we have all seen and read, some important elements that I do not recall seeing in Gondola Alternative B: 1. Infrastructure and building plans for the Alta and Snowbird tram stations and specifically in Alta, where will the land come from? 2. Provisions for mobility from those stations to other parts of LCC and for the use of those stations as multi-use facilities for both ski and non-ski uses? Public or private funding for those? and 3. What is the viability of operating during the Summer?
31300	Joe Evans	We need a solution that both decreases the automobile traffic in the canyon as well as increases access to the whole canyon year round. Increased electric busses, more parking, and a canyon toll or reservation would be very effective and could also be extended to Big Cottonwood too. The gondola is a terrible idea that only benefits the resorts and doesn't actually solve the problem. The experts and public agree that the gondola is a bad idea.
31301	Michelle Hernandez	I am new to climbing, and have loved getting outdoors more and exploring the beautiful cottonwoods. No to the gondola!!!
31302	Elizabeth Ence	NO!!!! GONDOLA!! May I add my voice again to the growing number of residents of Utah who vehemently oppose the proposed Gondola. I am sure you have heard these arguments before, but may I reiterate how it affects us in Cottonwood Heights. -This is on our doorstep in Cottonwood Heights. We deal with the traffic, we should have a say. How will this divert traffic from our area by creating a stop at the base of the canyon? It won't. I walk to the top of my street and ride the bus to Snowbird. It is quick and pleasant. I will lose that option. -How is it fair to have citizens of this state, urban and rural to foot the bill for the elite riding this monstrosity to two stops in our pristine canyon? Why aren't the resorts paying for this option to bring people to their resorts? The \$500 million is not a realistic estimate. Make those who will benefit by it pay. See how far that goes. -We are being held hostage by those in power who invested secretly in the land in and around the base of the proposed gondola. Do you think we didn't notice? -Little Cottonwood Canyon a fragile ecosystem that would be greatly disturbed by building towers all the way up the canyon, accessed by a service road to each. -Those who use the canyon for recreation other than alpine skiing at a resort are being overlooked and ignored. This is our playground too. -The mayors of Salt Lake county, Sandy and Alta all oppose this. That says something.
31303	Karen Bryan	Don't do it!! If there are only two resorts who will benefit, let them pay for gondolas. Too many negatives for the cost vs advantage.
31304	Linda Kofford	Public opinion is overwhelming against the gondola project. The video by the project manager states that by 2050 there will be 50 snow days that would effect traffic on Wasatch and the Little Cottonwood Canyon. However if you review climate data predictions about warming, it is expected that snowfall will be 25% less than current. In 30 years it is possible there will be rain but no snow in the Wasatch mountains. Why spent a billion dollars of taxpayers money on the dying ski industry.
31305	Robert Rousselle	I'm in support of the preferred alternative "the gondola with Alternative B".
31306	Peri Cook	Email [REDACTED] I am writing to you to let you know that the Gondola is the wrong choice to fix the traffic issues in LCC. I'm sure you receive plenty of money from those two ski resorts but they will not solve the problem. Dedicated bus lanes and increases bus service will fix the issue. The gondolas won't move enough people up the canyon fast enough and will have a drastic impact on the environment. Also the gondola DOESN'T PROVIDE ENOUGH PARKING TO MAKE A DIFFERENCE. NOBODY WILL USE IT IF PARKING IS A NIGHTMARE. The lack of bus frequency is the problem nobody uses it now so if you increase the frequency and the speed at which the bus can move then people will use it. Also the LCC is freaking dangerous for cyclists and this would be great solution for that as well. I'm writing this to you so that you can impact the decision while there is time for you to change it. Listen to your constituents and dont let the gondola go through. Peri
31307	Brett Dudash	Please do not build the Gondola! We are already facing unprecedented water issues in SLC. Fund the ski bus instead!!

ID	Full Name	Comment
31308	Felix Leung	<p>Although I've submitted comments about this before and am doing so again, I am pessimistic that these are making any difference. But once again, I feel that the gondola is the worst option for LCC. They primarily serve the resorts--and mostly Snowbird at that, since Alta requires loading on a second gondola. They do not help the myriad of other stakeholders--backcountry skiers, climbers, hikers, bikers--access the Canyon. In addition, during inclement weather, which is when the gondola will be most important, I think the gondola will have less uptime than anticipated, given how windy the canyon can be. (The Snowbird Tram and multiple lifts at Snowbird and Alta are frequently placed on wind-holds during the season.) I feel that the best option for LCC is to place a dedicated bus lane (which could be used for foot/bike traffic in the summer), placing avalanche shelters over the road, and placing a sliding-scale road toll for cars during the ski season. I feel that this would be much more practical, versatile, useful than a billion-dollar gondola boondoggle would be.</p>
31309	James Winokur	<p>The businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use, and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean" the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal unless you are elite enough to have one of the 2,500 "premium" parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, and impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.
31310	TJ Davis	<p>I have yet to see a compelling reason to not just go with a plan that builds parking, adds free busses, and tolls cars to pay for it. We can manage demand without destroying the skyline or expanding the roads. I am really disappointed that we are going with the gondola instead of more practical and less disruptive solutions.</p>
31311	Curt Roskelley	<p>this is an insider deal going down. the two players that are benefiting are the ski resorts. if they want revenue then they should bare the total cost. the taxpayers should not be subsidizing their profits by installing the gondola. the true total cost will be double the amount that they are saying. even the people of Park City put their foot down with Vail. the best solution is to do neither of the two options. put a toll gate down and if you want up the canyon you can pay for the access. this way they can put a stop to the overflow parking at the same time. when they have sold the maximum amount of parking stalls the canyon is closed. they can ride the bus after that. KISS it ie keep it simple ****</p>
31312	Brian Martain	<p>Road traffic has exceeded the capacity of the canyon. I'm excited about the new modern gondola proposal. It can't address every issue, but it is a welcomed smart beginning.</p>
31313	Margot Churchill	<p>No gondola - not ever!! LCC is a precious area that needs to stay preserved for future generations.</p>
31314	Mary Negus	<p>This is truly the worst idea that I have ever heard. Little cottonwood canyon is the best ski area in the United States, and the gondola will permanently ruin its aesthetic charm. Even when better technologies are available it will be cost prohibitive to ever remove, resulting in permanent scars to the environment. I can only imagine the short sighted developers and gullible or paid off political class who will make a fortune off this boondoggle. Meanwhile, smart people will leave Utah for more pristine areas. Ugly, costly, stupid, unnecessary, soon to be obsolete. It will be an absolute disaster for Utah and a National shame. Our children will wonder what were they thinking. The answer is they weren't.</p>
31315	Amir Noshiravan	<p>It's so unfair to charge residents to pay \$30 everyday to just get home from work. This is unheard of in any living community. Why can't DOT give residents sticker or some kind of solution to remedy this problem. Maybe they can reimburse the residents. It's unrealistic to charge anybody \$30 to get home from their work everyday.</p>
31316	Alex Tokita	<p>Please consider low-cost options first. A billion-dollar project with so many variables for unknowns, BEFORE trying other options, is reckless. You're ending this issue way too quickly before the full impact of a gondola system can be evaluated. As an avid hiker of the canyons, I believe you are ruining our Utah Landscape by pursuing a gondola.</p>
31317	Alyssa Oglesbee	<p>No gondola! I'm a climber and I spend a lot of time in LCC year round. Destroying LCC is of no benefit to the citizens of Utah. Not only would it put our watershed in jeopardy, but it would kill recreation in the canyon. Due to climate change, Utah is getting less and less snow each year. There won't be a ski season to back up traffic in the future with the way things are going. Please do not ruin a canyon for a few days a year. It is short sighted and not in our state's best interest!</p>

ID	Full Name	Comment
31318	Debbie Zeeman	I DEFINITELY DO NOT SUPPORT THE GONDOLA. IDIOTIC IDEA.
31319	Christian Godbout	<p>Hi,</p> <p>I really thing that UDOT needs to re evaluate the Gondola option.</p> <p>It is clearly not a sustainable choice. It only reduces volumes by 30%. A real solution resides in courageous decisions such as closing the canyon to all traffic except residents of the canyon. All other users would be using electric or hydrogen buses that are at adequate frequency. Multiple stops on some of the buses would allow users that are not going to the 2 resorts to gain access to their chosen area of recreation.</p> <p>There are plenty of solutions that don't require the widening of the road and that are common sense but that requires courageous decisions.</p> <p>Stop listening to the private lobbies. The private interest only seek short term gains and do not care about the community and the common good.</p> <p>Could we for once break the mold that everything has to be done with big construction projects. Here, it is clearly the case.</p> <p>Going ahead with a gondola is moving backwards on sustainable development.</p>
31320	Elijah Gregory	Say no to the gondola!! Just go up to any of the ski resorts in the summer time to get a good look at the effect installing that kind of infrastructure has on the immediate environment. Look at Millcreek, for example, on the west side of the ridge compared to the east side where Canyons Resort is. Where they built resort infrastructure the entire area has died off, leaving nothing but dirt. I guess having loads of heavy machinery milling around the area during construction is pretty impactful.
31321	Nash Bogart	The gondola is not the solution to canyon congestion and caters far more to the resorts than the skiers living in the valley.
31322	N Edward	I wonder if those who oppose the gondola actually ski Alta/snowbird or even ski at all? The gondola makes the most sense and on snowy days makes the roads safer with less traffic and no tie ups. We have to be forward thinking. If we go with busses and wider lanes, in 10 years, we will have to examine a gondola again. Busses are relics. Why don't people see that?
31323	Michael Jones	No on the gondola! For starters this issue should be treated as a public bond which should be voted on by Salt Lake County residents.
31324	Wendy Carrigan	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.
31325	Kasimir Gabert	I love Little Cottonwood, having practically grown up in it and now enjoying spending time there with my child. Please keep it natural and use buses instead. I strongly oppose destroying the canyon with a gondola that makes a few much wealthier on the tax payers dollar. Instead, setup a toll (free for disabled plates) and promote free buses. The toll can placate those who don't want their in-laws to go on a bus in ski season. Don't ruin the canyon permanently for everyone.

ID	Full Name	Comment
31326	Ryan Fanning	<p>Hi,</p> <p>I am a frequent LCC user (100+ days a year) and would like to voice my strong, unwaivering opposition to the gondola solution proposed by UODT. In my personal opinion as a 60+ day per year LCC skier, the canyon is not in dire need of a new traffic solution given that bad traffic affects a very small amount of days a year (the number of days per year that it takes me more than 1 hour to get through the canyon is negligible). In addition, the visual and environmental impacts of the proposed gondola are entirely unacceptable - even if the canyon were in fact in dire need of a traffic solution. I propose that UDOT eliminates the gondola from consideration entirely and works to improve traffic flow through more practical means that do not destroy the beautiful essence of Little Cottonwood Canyon, such as increased enforcement of tire / 4x4 laws which prevent the avoidable traffic accidents that frequently contribute to poor traffic conditions in LCC. It is unacceptable to me that UDOT is considering options such as the gondola that would permanently degrade the fundamental beauty of the LCC experience before attempting some of the more obvious solutions such as enforcement of traffic laws, tolling, etc. In addition, the gondola would add zero value for over half of the calendar year while simultaneously destroying the beauty of LCC for all summer users. Overall, this is one of the worst ideas that anyone has ever come up with and all who support the gondola should feel utterly ashamed and embarrassed.</p> <p>Best regards, Ryan</p>
31327	Kit Kobe	<p>Please abandon the horrible gondola idea.</p>
31328	Connor Nash	<p>Building a gondola in Little Cottonwood Canyon is a shortsighted, irresponsible, and unwelcome solution to the traffic problem on SR 210. Negative impacts to viewshed, watershed, wildlife, overall canyon experience, etc. far outweigh any potential benefits promised by the gondola proposal.</p> <p>To start, the gondola stands to solely benefit Alta and Snowbird, two successful private entities that should not be receiving, and do not need, any public subsidies or handouts. 500 million dollars could be much more effectively spent on improved bus service (which has now been cut and will be essentially useless this coming ski season) and implementing a tolling system for holidays and weekends.</p> <p>The solution is in fact, simple, and does not involve building the world's largest gondola in one of the city's most important watersheds. Predictably busy days in the canyon (and trust me, as someone who spends well over 150 days per year there, they are quite predictable) will require a hefty toll to drive up the canyon. This toll can be reduced through carpooling. The more people in the vehicle, the smaller the toll. Toll fees go toward maintaining the improved bus service and improving canyon facilities; trailheads, parking lots, public restrooms. The bus is free, for EVERYONE, and has stops for ALL canyon users. Money incentivizes human behavior, and people all of a sudden start to take the (new and improved) bus service on busy days. This is simple economics, but by the lack of logic coming out of UDOT I can tell that no one on the team has any knowledge of the subject.</p> <p>A massive gondola would indeed mitigate the need for avalanche-induced road closures and traffic jams attributable to vehicle slide-offs, but do we really need to mitigate these issues? Alta and Snowbird are situated in one of the most active avalanche areas in the country. That's part of their beauty and appeal. The snow is deep and the terrain is steep. In fact, Alta has made promotional videos about this very concept. The phenomenon of "Interlodge" is unique to LCC and is something to be accepted as a part of recreating in such an amazing place, not something to be overengineered around. Slide-offs can be reduced through meaningful enforcement of the traction law. This "law", as it is currently enforced, seems more like a suggestion than a serious and fineable offense. I have never seen a car pulled over during a snowstorm for disobeying the traction law, and I have seen many, many vehicles driving in the canyon during snowstorms that are far from compliant.</p> <p>The main issue with the gondola is that it does not even solve the problem that it claims to address, it simply moves it. The gondola would take weekend powder day traffic jams from in the canyon to the base of the canyon, affecting homeowners, commuters, BCC traffic, and beyond. The roads at the base of LCC are no better suited to handle immense volumes of vehicles than the one going up it. Not to mention the fact that after all of the construction, inconvenience, and financial</p>
31329	Scott Overman	<p>My family and extended family are big skiers. My wife and I have skied Alta & Snowbird for over 40 years. We are in favor of the Gondola to protect our canyon and provide much better service for everyone who uses it.</p>
31330	Lance Rowley	<p>The gondola is ridiculous. It's insane to me that the government would use taxpayer money to build something that benefits a private business. If the ski resorts want the gondola, they should pay for it themselves.</p>
31331	Marianne Zenger	<p>No gondola!!!</p>
31332	Ann Brady	<p>More buses, no gondola.</p>
31333	caden zufelt	<p>How can you build a gondola that will only help traffic 30%. As rational human beings this does not make any sense. I have lived here for 24 years and at first this seemed like a cool idea. After a month of looking over it and driving the canyon this IS NOT THE SOLUTION!!! The public does not want a gondola. The ski resorts are pushing for it. Please do the right thing. This will have ever lasting consequences on future generations. Please do not build this gondola. It will not help and it will eventually ruin Little Cottonwood.</p>
31334	Zach Averill	<p>I don't see anything addressing the impact a gondola would have on LCCs bouldering zones. As proposed, it appears 100s of bouldering and climbing zones would be negatively impacted. This is a large driver of tourism and local recreation in the area that is done almost the entire year. Installing a gondola that would only help shuttle people to the ski resorts seems like a miss for all the other recreational activities in the canyon. Running an enhanced bus system isn't something that has been seriously considered to this point. Due to a lack of buses running, I've tried to use this system multiple times and ended up waiting hours. As a result, I (and most people I talk with) end up driving their personal cars. IF an enhanced bus system was actually implemented for a couple years, I believe it would alleviate many of the issues we currently face. Installing a 500 million dollar, tax payer funded, that only benefits the ski resorts is a short sided solution to the issue at hand. We haven't yet fully explored other more comprehensive, cheaper options yet.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31335	Amanda Quinn	INSTEAD of the gondola, which doesn't solve the problem - the problem being "there are not enough parking spots at the park and ride in order to take the bus" - build more parking areas so people actually take the bus. Second idea - ban all non canyon resident traffic for staggered chunks of time.
31336	Kevin Megown	I don't want a gondola To expensive to tax payers out of pocket expense -to impactful on the environment and visual views of the canyon -not going to work for sending skiers up fast enough for skiing -I won't go skiing at Alta nor snowbird any more. Have skied both for more than 20 years and will not go up that canyon again. That said I don't think the people who want the gondola care what the people in the valley want. - I have lived in the valley for more than 20 years and can't imagine seeing a cable run up the little cottonwood canyon with massive stands to stain the ecology and view shed views.
31338	Melanie Wright	I oppose the gondola because it would be a visual I saw to Little Cottonwood Canyon
31337	Melanie Wright	I oppose the gondola because it does not address canyon access to trail heads it would only be going to Snowbird and Alta
31339	Melanie Wright	I oppose the gondola because it only benefits the resort but the tax burden on the rest of the valley is ridiculous
31341	Missy Griffiths	Please do not vote for a gondola it would not only be an eye sore to our community but it's would destroy our canyon! Protect our trees and wild life! Utah has see so much change but our mountains keep us grounded! Please say no to the gondola!!!
31340	Melanie Wright	I oppose the gondola because it wouldn't be open during the summer
31342	Amanda Hayes	Please do not go through with the gondola B plan. This will not solve the issue of increased use and access needs and will degrade a resource very important to the valley. Instead please consider a bus shuttle system that would decrease traffic up canyon, have a larger transportation capacity, and the ability to modify stop locations/frequencies depending on need.
31343	Paul Nelson	pLeAsE dOnT bUIld tHe gOnDoLa1 PLEASE DONT DO IT!!!
31344	Jason Brand	Disappointed to hear that the option being selected will not address the issue of traffic in the canyon. Once the novelty wears off people will choose to drive if given the option. Please consider more serious investment in ramping bussing on existing road and limiting traffic similar to Zion canyon. It would be the most effective solution and come at a lower cost and environmental impact. Better than tolling would be a reservation/lottery system for the available daily slots.
31345	Skyler Frickelton	No Gondola. This is not our best option. Please consider other less impactful solutions. Changing the landscape of LCC forever is not the right answer. LCC is too special to have an "eyesore" of a gondola and not to mention one that will cost the taxpayers and only be fully utilized a handful of days out of the year. I would rather sit in traffic than change LCC forever. Please no road widening either, we need to preserve the climbing boulders for future generations. Please do not alter the natural recreation landscape for other user groups like climbers. Enhanced/more frequent bussing I support. Thank you for your consideration.
31346	Schofield Kendyl	Please don't build the gondola. From a non-skier native who loves the canyon views.
31347	Laura Carter	As a Snow bird timeshare owner I disapprove of a tower being placed in a limited parking lot and blocking the view of the moutain. Additionally it will not provide the needed decrease in traffic for the. Cost
31348	Chasen Fairfield	The healthiest, most beneficial and beautiful idea for Little Cottonwood Canyon is to choose a way other than the gondola to transport skiers up the canyon.
31349	Zachary Pinnau	Please do NOT do the gondola and ruin the canyon. It doesn't have the capacity anyways to deal with the problem. There are better solutions than a gondola.
31350	Jane Tanner	I am very opposed to the gondola option. While we've been talking about this for years, the parking reservation systems in the canyons have alleviated so much of the problem. I hate the idea of spending a ton of tax-payer dollars to only help Alta and snowbird. Do we know how much they will contribute? Or how much the gondola will cost me every time I ride it with my family? Or will each ride be so expensive that no one uses it anyway and just drives and it becomes a ugly, useless, expensive eyesore? No one has been transparent about how much it will cost individuals to use it. We just know about the almost billion dollar building cost. Let's make buses affordable and frequent! And charge cars to go up the canyon.
31351	Lia Applegarth	As someone who lived in SLC for years and and Alta and lived to ski, this proposal is terrifying. The irrevocable change it will have on the canyon is huge and no where in this vast plan does this help big cottonwood. The cost and environmental impact this will have is so large. I have had friends forced to buy cars and drive in recent years due to bus limitations. The gonodola is going to change our canyon and not for the better. Listen to the people and find another way!!!!!!!

31352	Kirk Nichols	<p>U-DOT LCC FEIS Comments on Tolling - Kirk Nichols</p> <p>Tolling a road to recover additional road costs incurred by that specific user can be fair. Tolling to limit use, using wealth as the limiter, is unethical on a public road. When limits are what are intended, then set and enforce limits in a just manner. Use a reservations and metered entry to limit access with a system where each user has an equal chance at a reservation and thereby equal chance at entry.</p> <p>Charging a canyon resident a tolling fee to go home is also unethical unless it is applied to all residents across the state who go home; doing so statewide would be absurd. Charging a canyon resident a toll to go to work, to go home, to visit a neighbor is an unethical restriction on those residents. Tolling for the purpose of limiting access is unjust to start with (instead, set limits) but additionally charging residents each time they move about is reprehensible. Technology to read license plates abounds. U-DOT can solve the residents unfair tolling with license plate readers, better yet, let residents come and go as they do in any neighborhood and fairly set limits on visitors - not residents. U-DOT engineers are great at engineering, they can solve any license plate reader issues -- get rid of tolls and set reservation limits on visitors. In Alaska, you get ticketed if your license plates are dirty and unreadable. You clear your license plates every time you clear or wash your windows.</p> <p>If an annual toll, to cover road maintenance costs, were created instead of single use tolling to limit visitors, then residents should pay the one-time annual fee just as any visitor would. However, when tolls are created to limit visitors (a very poor mechanism for creating limits) residents must have a way to come and go from their home equal to all Utah residents coming and going to their homes.</p> <p>These are the comments of, Kirk Nichols</p> <p>With insights from being: President and Watermaster, Evergreen HOA, Brighton, UT Associate Professor/Lecturer, University of Utah Big Cottonwood Canyon Community Council member Central Wasatch Commission's Stakeholder Committee member Central Wasatch Commission's Environmental Dashboard member</p>
31353	Joseph Brooks	<p>Due to the limited number of days / times the road is actually backed up, it strikes me as irrational to build a massive gondola before trying adjustable to tolling or other solutions that do not have a massive price tag or environmental impact on a key watershed</p>
31354	Lynn Nichols	<p>I believe the better solution is to use buses, similar to Zion National Park. This would be less costly and be more useful to those who are not using the ski resorts. The gondola only serves the ski resorts. Please make the better choice for all users of the canyon.</p>
31355	Ryan Pilstl	<p>Please consider an alternative transportation option other than the go Gondola. This solution seems way too expensive and will harm the natural scenery in the canyon.</p>
31356	Douglass Brown	<p>As a lifelong Utahian and Salt Lake City resident, I am writing to request that you please do not move forward with the proposed gondola project. This seems like the most extreme and risky option. Please do not mar the beauty of our home and our canyon with a gondola. Please consider other common sense options, such as tolls, rail, bus, and carpool incentives.</p>
31357	Evelyn Bossart	<p>I vote NO The capitol cost of the gondola in LCC is an obscenity and political folly in an age of a diminishing winter ski industry and lack of snow fall- another Saltair being built.</p>
31358	Peter Bossart	<p>No gondola in LCC- pure folly</p>
31359	Pamela Beck	<p>My understanding is that the gondola would be a similar cost to widening the canyon road. I prefer the approach that has worked in europe for decades : gondola yes</p>

ID	Full Name	Comment
31360	Scott Mietchen	<p>I am not in favor of the gondola approach. I live near the mouth of [REDACTED]. My family and I are also regular skiers and have held passes at Alta for over two decades. My concern with the gondola approach is four fold. 1) - Traffic is only really bad a handful of days out of the year. Normally on a weekend after a snowfall when people want to ski first tracks. And yes, it is backed up on those days. But that couldn't be more than 10 or so days a year out of 365. I'm sorry that everyone can't get up the canyon at the same time, but that is simply not a reality. Traffic normally clears by around 10 a.m. on those days. 2) There are a dozen ski resorts in Utah - why is traffic not backed up in Big Cottonwood Canyon? If traffic is heavy, people can go to Solitude, Brighton, PC, DV, etc. Why are we creating this for two ski resorts? 3) - If you build a large parking garage at the mouth of the canyon - that still won't decrease traffic. Now everyone will be backed up onto the freeway - those ten days a year - to get into the parking garage. No one drives or exits quickly into a parking garage - you're just pushing the issue to another area. Look at the congestion created by one Chick-Fil-A on 2100 South and 1300 East. One fast food restaurant has created a mess of 2100 South. So now you'll have people backed up for miles on those first snow days to get into the parking garage. 4) - Why is it the public's obligation to allow anyone to go to the canyons and resorts whenever they want? Nature has a carrying capacity and with a growing population why do we think that anyone who wants can go to the canyon or resorts whenever they want. They tried this at Arches National Park and it was a mess. The Park just can't hold that many people at once - so they put in timed entry and it addressed the issue during the busiest days and the lines disappeared. I'm sorry that everyone can't get to the resorts when they want to - but there is no promise of that for anyone. Limiting parking, limiting timed access, increasing bus routes, charging for parking at the resorts will have an effect. The resorts charging parking last year has already altered how I and my family approach the issue. I don't understand why there aren't multiple bus loading stations located all over the valley - not just at the mouth of the canyon - for ski buses. One big ground parking lot - and direct bus line to the resorts. Timed entry if you want it, etc. I just don't understand why anyone feels the need for taxpayers, or anyone else, to build a gondola for two private businesses. Maybe the focus should be on limiting access, not increasing access. Use will change when options are limited. But for 10 days a year, when there really is a traffic problem, to spend this kind of money so everyone can get there faster is folly. The canyons just can't keep taking more and more people, faster and faster, just because a few people want it. The gondola is not the right answer.</p>
31361	Stan Witt	<p>I think the gondola is a great solution. It gives safe access in and out of the canyon in all kinds of weather. I was in Switzerland a few years ago where the use gondolas extensively and they are great! I don't understand why this idea is controversial. The idea that only Utah tax payers will be paying for it doesn't seem to be accurate. Utah's ski and outdoor industries bring in millions in taxes. I thing the gondola will enhance Utah's image even further and could help bring in additional out of state revenue from tourists.</p>
31362	M Redd Bradshaw	<p>No no no no no on the gondola! Your just going to keep asking and then do what pads the pockets of a few lawmakers anyways. You guys [REDACTED] We want a bus lane and parking, and that bus lane can double as a bike lane in the summer. I don't know why I write this though because I am confident you send all these right into the trash. Ugh I am so mad at you pieces of trash.</p>
31364	Beth Chardack	<p>I am opposed to the construction of the gondola. This is a project that benefits few during a small window of time, and with global warming and shortening of the ski season, who knows if this will even be needed by the time it is built. There are better, more cost effective, non-permanent ways to address the congestion problem for skiers. This money could be used for greater needs in our state. I am strongly opposed to this project.</p>
31363	John Anderson	<p>The people of Salt Lake County will be the big losers if udot proceeds with this foolish idea. Use some common sense and look for other ways to solve this traffic problem.</p>
31365	Jennifer Santoro	<p>I live between the two canyons and have a Snowbird pass. I have been using the bus for over 10 years, and in the last few with my kids. The bus is a great solution when we can find parking. The bus also goes to other trailheads, which many of us use all year for backcountry skiing and climbing. More parking and a circulating bus that runs from a hub to the canyon would be a great way to get people up. Additionally, having a "bus only" period in the morning (ex: 8:30-10) and afternoon (3:00 - 4:30) would make it much faster.</p> <p>Now that the 953 has been pulled, the bus system is not accessible to my family anymore without a drive in the opposite direction. I highly doubt finding a way to resume and improve the bus WITH existing infrastructure would cost as much as a gondola. And we, the people who live here, have already spoken against the gondola. It's a very expensive and destructive solution that has a much easier alternative. Please do not ruin our watershed and sully the view with a bunch of towers, access roads, and a very expensive toy that is even just a tourist attraction and not a responsible solution to this issue.</p>
31366	Tracy Walton	<p>I strongly oppose the proposed gondola. The use of taxpayer dollars for the benefit of so few is egregious. As a local skier, I can definitively state that I will never again ski in LCC if there is a gondola.</p>
31367	Karson Pope	<p>I am very much opposed to the LCC Gondola. This "solution" does not fix the problem and only creates more. It does not serve locals, seemingly no local wants this eye sore. This "solution" only serves the ski resorts and poorly at that, if anyone wants to recreate in the canyon elsewhere they cannot use the Gondola. If you are short on time, you cannot use the Gondola. I understand that to solve this issue infrastructure needs to be built. Why not start with building parking garages at the park and rides. A multi-level garage can fit more woth less of a footprint. I also believe that an expanded trax system would solve many of the issues of traveling throughout the valley. Our trax system is only focused on going north to south, but most of us live and recreate east and west of state street. Please do not build this forsaken Gondola and create more common sense and useful infrastructure for the future.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31369	Harris Sondak	As a resident, former town council member, and mayor of the Town of Alta, I write to object to the adoption of the gondola as the preferred transportation option in Little Cottonwood Canyon. I have several reasons for this view: The capacity of the gondola is insufficient to achieve a meaningful reduction in traffic in LCC. The gondola is only designed for use in winter, but given climate change, there is a good chance that the gondola will become a white elephant if skiing is not a recreation option in LCC for the long term. The gondola will diminish the quality of life for residents of Alta. The gondola will facilitate holding Olympic events in LCC, where they do not belong (I know they are not currently planned for LCC, but I believe there will be great pressure to have them there; by 2030 or 2034 there will be little or no snow at the lower elevations of Snow Basin and, besides Snow Basin, only Snowbird has the terrain for the downhill event). The people of Utah will not adequately benefit from the investment of \$600M (probably \$1B by the time it is built) and this development is a transfer of public money to private pocketbooks. Like Disney or like the SLC airport, the ski areas should have remote parking lots and they should arrange for themselves for their customers to get to their base areas (e.g. with buses they provide). I realize that this isn't in UDOT's purview, but the money will be better spent, and the ski industry as well as our community will be better supported, by using all available resources to address the problem of the pending disappearance of the Great Salt Lake.
31368	Gretchen Siegler	Please do not defile LCC with this atrocity. There are so many other alternatives that allow for all people to enjoy the canyons rather than the few who entertain the over priced sport of skiing. The ski industry needs to regulate itself and that does not include being given more access to defile our public lands. Put it on the ballot and the idea of a gondola will be substantially renounced by those who will otherwise have to pay for it.
31370	Rebecca Wiltz	I hope to golly goodness this canyon is preserved in its entirety. I love getting people in nature but not at the expense of ruining areas. It is like building a road through the middle of an existing building.
31371	Joseph McShinsky	Glad to see the gondola will be used. Awesome that Utah is moving forward with good big projects like this.
31372	Tanner Gray	The Gondola option is the WRONG decision for many reasons. First, it's a misuse of public money in a time of a local environmental crisis. Second, it is a massive physical project that has a potential to not have the intended effect on canyon efficiency which cannot be undone. Third, it's not a versatile option that cannot be used in any other way than skiing Snowbird or Alta.
31373	Teresa Stepanek	To UDOT, Please do not allow a gondola in Little Cottonwood Canyon! Who does this actually benefit, the owners of the resorts! It sure will cost tax payers a lot and few will benefit from the service. Isn't it your priority to provide services where the most can benefit? Also what an horrible permanent eye sore it will be in one of the most beautiful canyons we have in Utah! Please do Not build a gondola. Teresa Stepanek
31374	Janene Brown	Terrible idea. Taxpayers to pay for gondola that is benefits two skii resorts. The gondola and towers will have a negative visual impact on the brEauty of the canyon am strongly opposed to this proposal on many levels
31375	Alex Steckel	Arches National Park and Zion National Park implemented a quota system to address the associated impacts of visitation on the landscape and the diminished visitor experience. Both alternatives that attempt to address the skyrocketing visitation numbers in Little Cottonwood Canyon, are focusing their gaze in the wrong direction. If national park officials can recognize the irreparable damage caused by uncontrolled visitation, it puzzles me that UDOT fails to recognize the only sustainable solution for the long lasting vitality of Little Cottonwood Canyon. A policy that caps the number of people in the canyon at any given time, is the obvious solution. The water crisis that we're in, should be of paramount importance. Since LLC is part of the capital city's watershed, its integrity shouldn't be compromised. Inevitably some citizens will be upset because it infringes on their sense of entitlement, but ultimately this difficult decision is incumbent upon UDOT to make, for the protection of every citizen of the Wasatch Front, today and tomorrow.
31377	John Cooper	As a dual homeowner in salt lake county I'm opposed to the gondola as a solution to the traffic in little and big cottonwood canyons. As a tax payer, I see this solution as one that benefits the two ski resorts and a couple of business men without addressing the issue of traffic congestion. In my opinion the gondola is too expensive and the environmental impact will be astronomical. A more aggressive busing schedule using hydrogen powered busses in addition to widening the road with dedicated bus lanes would be far less intrusive both economically and environmentally.
31376	Tyndall Bounous	NO to the gongola!!! I fully SUPPORT increasing and improving public transportation! The bus lines are already SO LONG on the weekends. I would use it way more frequently if there were more buses so less wait time.
31378	Sarah MacCarthy	It seems that the negative environmental impacts outweigh the positives for this project. Please vote to halt this project from moving forward.
31379	Ryan Barber	I am 100% for the Gondola. There has been way too much traffic up the canyon to the point that I almost avoid it and cease to go up as much as I used to. The ski season is misserable because of the lack of enforcement of the 4wd requirement on behalf of UPD. This will create a much safer environment and help ease the traffic and consequently reduce emissions. 100% for it!

ID	Full Name	Comment
31380	Ingrid Akerblom	<p>I do not support the choice of the Gondola option for Little Cottonwood Canyon. I implore UDOT to use "a lower impact, adaptive approach" to transportation issues in the canyon to protect a vital watershed that supplies water to more than 450,000 county residents.</p> <p>The gondola comes with a hefty minimum price tag, serves only two private ski resorts, creates an additional transportation route, has limited flexibility as fixed infrastructure, and has not shown it can reduce the number of vehicles that travel the canyon each hour during peak times.</p> <p>Most importantly, the environmental study failed to effectively consider many of the risks to water resources that SLC raised throughout the process, including those associated with the construction and operation of the gondola, and the strain of increased visitation to the watershed.</p> <p>As a taxpayer in Utah I do not support using my tax dollars to fund the elitist Utah ski industry desire to add more profit to their bottom line. They should fund it themselves. They clearly have funds considering they slyly purchased the land for the landing tower near their resorts. In addition, climate change and reduced snowpack coming in future years will reduce the viability of this massive structure with limited use. There appears to be no plan to reduce traffic making the gondola an add that doesn't change much on the ground for those accessing resorts. Finally, it reduces the recreational attractiveness for any other lower cost uses of the canyon like snowshoeing, climbing, cross country skiing etc. through noise pollution, construction noise and blocked sight lines.</p> <p>Please reconsider and pursue a less costly and disruptive alternative.</p> <p>Thank you, Ingrid Akerblom</p>
31381	David Taggart	<p>Please do not permanently deface the natural landscape for the benefit of the few. Thank you!</p>
31382	Alisse Cassell	<p>The gondola should not be UDOT's preferred option for mitigating congestion in Little Cottonwood Canyon. First and foremost, this is not what the community or taxpayers want. Independent polls show that nearly 80% of Utahans do not want this gondola and the Salt Lake County Counsel voted 5-4 to condemn the gondola in a strongly worded resolution. Second, a gondola would not be effective in achieving the stated goals of "meet the needs of the community while preserving the value of the Wasatch Mountains." Finally, this is the most expensive option and the most permanent and ecologically damaging to this fragile area that is such a valuable asset -- without a gondola -- to the metropolitan area of Salt Lake City. Thank you.</p>
31383	Jason Erickson	<p>Dear UDOT,</p> <p>Thank you for compiling the detailed EIS report that clearly lists out the main options and an overall review of how the analysis and impact study was conducted.</p> <p>The main concern with the final EIS proposal is the very narrow focused scope of the project being the evaluation of options being considered to improving the mobility and reliability of transportation on S.R. 210 overall for winter ski traffic.</p> <p>The problem regarding mobility and reliability is now becoming a matter year-round and impacts S.R. 190. Seeking scope expansion to cover recreation users for the 2.1m users as listed in section 1.1.2.1 for S.R. 210 and the additional users for S.R. 190</p> <p>My first suggestion is to expand the Scope of purpose statement to include improving the mobility and reliability of transportation in S.R. 210 during year round peak periods.</p> <p>When considering the current scope of the Final EIS statement - My recommendation is enhanced bus service without road expansion in S.R. 210 is the best solution moving forward as it is a scalable solution that minimizes permanent environmental impact in S.R. 210. Per page 2-142 of the Final EIS the cost of phase implementation is \$110 Million with a \$7 million operating budget. This solution can be implemented with out permanently changing the landscape. This solution has a 54 minute proposed transit concept which is one minute shorter than the Gondola B alternative as recommend by UDOT. Per page 2-89 Final EIS statement</p> <p>The gondola would not operate if artillery is being used for avalanche mitigation since the artillery shells would pass over the gondola towers and cable (up to six times per year with snow sheds in place). As soon as the avalanche mitigation using artillery is completed, the gondola would begin to operate even if S.R. 210 is closed to remove snow from the avalanche mitigation. Some of the gondola towers and parts of the alignment would be within an area where there might be artillery shell fragments. The gondola cabins would not be on the cable within the fragmentation zone when artillery is being used (gondola cabins can be stored at the nearest station). After avalanche mitigation using artillery is completed, the cables would be inspected by cameras and magnetic imaging devices, and the towers would be inspected by video, to ensure that no damage has occurred. To reduce the need for avalanche mitigation using artillery, snow sheds have been included with Gondola Alternative A (see Section 2.6.4.4, Avalanche Mitigation Alternatives). (This applies for Gondola B) Snow sheds could reduce the need for avalanche mitigation using artillery by 80%</p> <p>This demonstrates that the Gondola B alternative does not solve the problem of moving people during avalanche mitigation and if the cables were determined that they needed repair this could potentially shut down the gondola for the season.</p>
31384	Brandon Atkinson	<p>I personally like the gondola option. I don't think we need to add to the roadway construction that is always happening in Utah. It will only make the issue with traffic in the canyon worse. I also feel like the gondola option provides an additional recreation or activity that is provided to the public to view the canyon with out adding to the traffic. It will also allow for safer travel when trying to access the canyon in snowy conditions.</p>
31386	Judy McCorvey	<p>Do not support gondola for canyon canyon transportation. So not support tax increase for this purchase. Do not support environmental destruction for this project.</p>
31385	Jerilyn Holt	<p>No!!! To gondola!!!!</p>
31387	Judy McCorvey	<p>Do not support gondola for canyon canyon transportation. So not support tax increase for this purchase. Do not support environmental destruction for this project.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31940	Annette McMullin	<p>"Do No Harm", the primary tenet of medicine, should be the informing slogan for UDOT. Climate change is pressing down on Utah, no water is drying the Great Salt Lake which further reduces snow pack. The mountains and trails are already overrun by the hordes of people in Utah. Stop and think of this place in twenty years. On a dusty air day, a toxic environment. Dead lawns, golf courses and city parks throughout the city. Ongoing fights over finite resources. You want to move people up the canyon to ski the powder, on the rare days there is any. Stop thinking in such a narrow perspective. Your Gondola will be an obsolete White Elephant, standing as an incredulous blunder to the stupidity of man. Please wake up and do the less harmful alternative, we are sure it's out there. Annette McMullin</p>
31388	Colleen Atkinson	<p>This seems to be a thoughtful, balanced solution. It allows Rogers's and keeps our canyons accessible and beautiful.</p>
31390	Sue Weaver	<p>I oppose the gondola project. It limits where riders will load and unload, giving unfair advantage to particular corporations in the canyons, and creates bottle neck parking situations.</p>
31389	Annette McMullin	<p>In 20 years there will be no water, no snow, no decent air in Utah. So why worry about a Gondola? Let's focus on real issues that are pressing down on the ability to live safely in Utah.</p>
31392	Esty Steffen	<p>It seems like no matter what the public says, the gondola is going to be built. For what it's worth, I am opposed to the gondola for the following reasons:</p> <ol style="list-style-type: none"> 1. With the current parking reservation system in place by Alta (and Snowbird in seasons past), the traffic has not been bad except for a few days a year. Is it really worth \$500 million to alleviate a problem that only occurs a few days a year? 2. Adding snow sheds alone will take care of the majority of the road closure issues and thus the traffic issues. 3. Taking the gondola will take much longer to get to the resorts. Driving to parking the parking lot, finding a spot, waiting to get on, etc. It's not worth my time. 4. Families with small children need their cars to keep their supplies - diapers, breast pumps, food, etc. 5. The gondola will allow for unlimited amounts of people at the resorts. They are already overcrowded on powder days. 6. It's very expensive and will be an eye sore in the canyon. 7. It seems to me the gondola is just a way for a few people to make money and is not really serving the public like it claims. It's quite disturbing that it's so blatantly obvious, yet it's getting pushed along to be built anyway. Go ahead and make your money right now and forget how this will affect generations to come.
31391	Vernon Reed	<p>I believe the gondolas would be an excellent way to alleviate traffic congestion caused by hikers, rock climbers and skiers. My only objection is that there should be a few more stops lower in the canyon rather than going only to the top of the canyon.</p>
31913	Ellie Pickett	<p>October 6, 2022</p> <p>Director Carlos Braceras:</p> <p>I am a resident of Utah county and a student at Brigham Young University. I am writing to you regarding the recent decision of building a gondola in Little Cottonwood canyon. I love to go hiking during the summer and fall months and love going skiing in winter and spring. I have experienced the extreme traffic when I am driving to ski resorts or to the trail heads in the canyon, and I have always been concerned about health problems that could arise from the excessive pollution of the cars. I am aware of the many alternate solutions proposed to this growing problem (eg. additional buses, widen roads, rideshare). Some of those alternate solutions, such as creating a bigger bus system, would have required destroying over 50 acres of lands, increased taxes for community members, and continuous emission of dangerous pollutants into the air from the high number of buses in the canyon.</p> <p>The building of the gondola will provide for a safer and more efficient way for members of the community to access the beautiful attractions of Little Cottonwood canyon. I am greatly supportive of the decision to build the gondola in Little Cottonwood canyon. The gondola will be the best option in regards to protecting the wildlife habitats and existing trails in the canyon. As well, the gondola will provide a way to have cleaner air with fewer pollutants and emissions, providing community members with a healthier area to visit and live in. The gondola will take time and money to build, but I believe it will have a very positive effect on many people, especially me and my friends/family that share the love of hiking and skiing in the canyon. I know many people who are excited for the changes and the improvement of transportation in the canyon. I am very supportive of the decision to protect the land as well as the health of the community members that live in the area.</p> <p>Thank you for taking the time to research what would be the best decision for the canyon and the health of the community members. If there is anything I can do to help show my support for the building of the gondola, please let me know. I am willing and able to do so.</p> <p>Thank you.</p> <p>Sincerely,</p> <p>Ellie Pickett</p>

31393	Steven Bartlett	<p>The Capstone Design Students at the University of Utah completed an alternative/feasibility study to explore alternatives and features that would help reduce traffic congestion in LCC during peak times while improving safety throughout the Canyon. After a review of the data, compiled from several prior studies, we noticed an average of 1.8 people in each vehicle are entering the Canyon. This alarming low occupancy rate per vehicle lead us to review an intelligent transportation system that would have the ability to: (1) incentivize visitors to increase occupancy, (2) incorporate autonomous vehicles that could communicate with signals and improve traffic flow, and (3) develop a multimodal hub in the Salt Lake Valley to allow space for Canyon visitors to meet and carpool. In this study, we also discussed the importance of reducing the number of vehicles traveling within the Canyon, while allowing an increased number of people to enjoy recreational experiences in LCC. Additionally, we discuss the need for snow sheds due to LCC's high avalanche activity. The snow sheds allow Canyon visitors to safely traverse the roadway during avalanche control while traffic continues to move, therefore reducing roadway closures. Other roadway improvements that were recommended included: (1) resort ingress/egress redesign to allow for free flow traffic, (2) minor alignment changes along the roadway to improve sight distance, merging, and passing, and (3) shoulder adjustments to improve cyclist safety.</p> <p>During our discussion with stakeholders and the public, we understood the importance of cyclist and pedestrian safety within the Canyon. After reviewing two path alignments for this user group, our team decided a path within the lower limits of LCC would benefit this recreational activity. Allowing a portion of this trail to be paved and constructed for ADA accessibility would support more user groups within the Canyon. The results of the proposed features are to: (1) increase occupancy per vehicle, (2) increase public transit utilization, and (3) increase safety throughout the Canyon. The successful implementation of these features will allow Little Cottonwood Canyon to continue to provide a natural and inviting destination for people with diverse interests and hobbies. We believe this could be accomplished by protecting the Canyon's sensitive ecosystem and by minimizing the footprint of future transportation system operations within the Canyon boundaries.</p> <p>Because of this study and its conclusions, I believe that a Gondola is not necessary for the Canyon. The existing transportation footprint should be used and enhanced.</p> <p>Regards, Steven Bartlett, Ph.D. P.E. University of Utah</p>
31394	Brock LeBaron	<p>Alt B will only successful if it can provide access stops at multiple points in the canyon where parking is in demand. As proposed, it only stops at the two ski resorts. Alt B also needs to be able to operate summer as well as winter.</p>
31395	Jerry Oyama	<p>To the Utah DOT. Please read. October 6, 2022</p> <p>While well intentioned the EIS report's conclusions are mistaken. The environmental impacts of a gondola would be far more damaging than any other alternative. The gondolaworks.com website states that the project would "save" the canyon. The opposite is true. It would certainly destroy the wild beauty of Little Cottonwood; its dramatic, sheer-walled grandeur is unmatched in Utah. The residents under the cable at the mouth, at the terminus and over Alta will be harmed; no one would choose to live under a gondola. Of course the value of their properties will plummet.</p> <p>The tram would exacerbate the overcrowding that it purports to help. Former general manager of Alta, Onno Wieringa (now a paid lobbyist for the Leitner-Poma company, a potential, perhaps pre-ordained, gondola builder), was asked 15 years ago if he felt that the ski area was overcrowded; he replied that it had been for years. As there are more skiers and boarders on the mountain the slopes have become unsafe; serious collisions have become commonplace. Adding a sizable number of additional skiers will only make the situation worse. While burdening the public treasury the project would beneŒt a few: the already overcrowded ski areas and the gondola construction company. When the present manager of Snowbird revealed the secret acquisition of the land for the proposed Sandy station he inadvertently stated that the taxpayers of the state would pay for the project. Our fiscally responsible legislature should halt this boondoggle. With crumbling infrastructure throughout the country the federal authorities surely have more pressing concerns.</p> <p>As you're aware the mayors of Alta, Sandy, Salt Lake County, Salt Lake City and Cottonwood Heights have all come out strongly against the construction of a gondola for Little Cottonwood Canyon. I understand that the overwhelming majority of survey respondents, many of them skiers, were equally negative in their opinions. Wouldn't it make sense to consider their conclusions as important and legitimate?</p> <p>Alta's new parking reservation program has had a good effect on the traffic congestion on the weekends; some skiers have speculated that in this past winter on only 7 days were there problems on highway 210. \$550 million for 7 days? As in most projects of this magnitude the cost will certainly balloon. Wouldn't it make sense to try the other minor tweaks suggested by the mayors in Salt Lake valley before embarking on such a bloated, destructive, wildly expensive project? Maybe the problem is not such a big problem.</p> <p>Thanks for your attention, Jerry Oyama, [REDACTED]</p>
31396	Mary Brown	<p>This to me is a textbook case of Utah putting growth and development before quality of life. The gondola would only run during the winter, and would only service the ski resorts. Beyond that, it would be a full-time eyesore, even if it does help with winter traffic - something that is very much in doubt. People won't park and trade the comfort and flexibility of their cars to get on a bus. Why would they park and use a gondola? PLEASE DON'T DO THIS</p>

To reduce the need for avalanche mitigation using artillery, snow sheds have been included with Gondola Alternative A (see Section 2.6.4.4, Avalanche Mitigation Alternatives). (This applies for Gondola B) Snow sheds could reduce the need for avalanche mitigation using artillery by 80%</p> <p>This demonstrates that the Gondola B alternative does not solve the problem of moving people during avalanche mitigation and if the cables were determined that they needed repair this could potentially shut down the gondola for the season</p>
31398	Walt and Kathy Soltys	<p>We are writing regarding the proposed gondola in little cottonwood canyon. As long time residents of Sandy, Ut. we have seen many changes to this area and most have been positive. This gondola is the most unnecessary change to our beautiful canyon. The cost to erect this structure is extremely high for a system that would only be used by a select group of "elites". Who is going to pay for this "eyesore" of steel towers, miles of cable and ugly metal and glass cars?? The taxpayers ?? Who will supply the power to run this "Sandy?? the citizens of all of Utah?? even though only a select few "elites" will use it. Apparently there are approximately 20-25 days in the snow year when travel up and down this canyon is a problem and yet the "power elites" want to build this monstrosity that will be seen ALL YEAR LONG, disfiguring our beautiful canyon. In our opinion this "boondoggle" is a total waste of money, totally unnecessary and will only be used by a select few. We are requesting our ELECTED OFFICIALS, the leaders of the D.O.T. and all rational individuals to stop this utter nonsense of building a gondola in Little Cottonwood canyon.</p> <p>Walt and Kathy Soltys, Sandy Utah</p>
31399	Brian Dunleavy	<p>This is a really dumb idea.</p>
31400	Theresa Heinrich	<p>Josh & Carlos, Will the gondolas have heat? Just wondering. The Snowbird tram does not have heat but it is only a 7 minute ride. Won't it be cold to ride something for 35 minutes? What about emergencies? I realize everyone has a cell phone but as a nurse I wonder if UDOT has thought of any problems that you can anticipate. I know from working at the Snowbird Clinic we often took care of patients from the tram who fainted or were having chest pain etc. Some needed oxygen. Just wondering if you have thought of any of these problems because it is such a long ride.</p> <p>Thanks</p>
31401	Richard Amaral	<p>Why is tax payer money being used for this project. Alta and Snowbird should be putting up the money for this gondola and the tax payers. The gondola will be benefiting the out of staters more than the average Utahan. This exactly what the big sporting teams do when they want a new stadium. They want the taxpayer to pay for it when they should be using their own money. I'm against the gondola and using taxpayer money to fund and build it.</p>

ID	Full Name	Comment
31402	Sam Liz Dunham	<p>THE SEASON IS NEAR AND CHANGE IS IN THE AIR! Crystal Mountain has tackled a new transportation plan with thought, strategy and consideration, rather than sticking their heads in the snowbank and pretending traffic wasn't an issue. They listened to a lot of impassioned guest feedback, carefully evaluated their options and forecasted for another big winter of visitation after seeing how the population, and community and the outdoors are all booming right now. They looked to other ski resorts that have tackled similar transportation challenges and what solutions best preserved the character of their hills.</p> <p>CRYSTAL MOUNTAINS SOLUTIONS started in 2019.</p> <p>THE BIG SHIFT</p> <p>So, for this winter, we're changing how it's all going to work in our parking lots.</p> <p>First, the big news is that we've shifted our lots to paid parking for non-passholders on Fridays, Saturdays and Sundays. Parking will be included with the purchase of a season's pass, but they will be required to register their plates before arrival so we can gauge capacity. Carpooling will be radically encouraged and free for four or more with designated spaces and priority shuttles. Paid parking revenue will directly fund free bus transportation from Enumclaw on peak weekends, as we embrace more efficient and more environmentally conscious ways of accessing our mountain.</p> <p>THE DETAILS All Passholders</p> <p>Parking is included with the purchase of a season's pass. Passholders must enter their license plate numbers online in our system prior to arrival and will be verified in our lots through the license plate recognition software. On-site parking is included with the purchase of an Ikon Pass as well as Crystal Local Pass, Hall Pass and Anytime passholders. Wild Card holders will park free on Fridays. A Lot is still reserved for A-plus parking pass holders.</p> <p>Four-Plus Carpools Parking will be free for 4+ person carpools that are verified on arrival. Aside from being part of the solution and earning good powder karma, carpools will gain access to designated spaces and priority shuttle service- both of which will save valuable time getting up on the hill. We encourage household members or vaccinated groups of four or more to carpool as much as possible this winter</p>
31403	Cortlund Ashton	I believe that UDOT got it right in recommending the gondola option - The EIS was also appropriate and on point.
31404	Bryan Mason	Please do not build the gondola up LCC. It will lead to irreversible changes to the canyon and the ecosystem. Increasing buses or even widening the road is far less destructive and more universally useful to the community. Please consider less ecologically destructive approaches to the traffic issues.
31405	Adele Breeden	<p>YES TO ELECTRIC BUSES!!! THEY COST LESS THAN THE PROPOSED GONDOLAS! THEY ARE ENVIRONMENTALLY HEALTHY!!! Little Cottonwood neighbors won't have to deal with thousands of cars parking in their backyard using ELECTRIC BUSES !!! ELECTRIC BUSES WON'T damage the land like chewing up thousands of acres for gondolas and new parking lots</p> <p>! I surely don't want to wait in line for a gondola at the end of a ski day!!!!</p> <p>ELECTRIC BUSES JUST MAKE SENSE!!!</p>
31406	Abigail Olson	Little Cottonwood Canyon is one of Utah's crucial recreation areas. While this includes skiing, it is out of touch to assume that attempting to improve skiing transportation is worth the irrevocable damage that would be done to the environment and the natural landscape of our treasured outdoors. It is disgusting and disheartening to see our local government giving into the promise of a pay-off from lobbyists and corporations at the expense of our state's most valuable resource. This decision would reserve access to ski resorts to the economic elite and puts our precious watershed at risk. Ultimately, the people of Utah don't want the gondola.

ID	Full Name	Comment
31407	Keith Barrell	<p>Taxpaying local says HARD NO TO GONDOLA!!!</p> <p>I feel that the proposal for the gondola has been rushed and not thought out. Considering it will be publicly funded, it does not serve the public/tax payer interest, but rather puts benefits of Snowbird and Alta above common sense public transit options that are better for the public.</p> <p>It is not scalable, flexible, or able to be customized. It chiefly servers private companies who are not paying for the project. Continual maintenance will be expensive and have long lasting environmental impact on our watershed.</p> <p>Answers to vital questions such as:</p> <ul style="list-style-type: none"> -Parking for the gondola and traffic issues at mouth of both canyons -price per ticket -environmental impact of construction as well as continued maintenance -Costs of continued maintenance -Rescue resources and associated costs <p>have very uncomplete and unsatisfactory answers, or not answered at all.</p> <p>This also does not address BCC traffic issues at all and is unable to incorporate into a larger transportation plan for both canyons.</p> <p>A TOLL BOOTH SUBSIDIZING A BUS SYSTEM WITH A BUS LANE up both canyons makes the most sense.</p> <ul style="list-style-type: none"> -Is customizable, scalable through various seasons, able to serve all users (not just private ski resorts). -The resources can be incorporated with and contribute to transportation in both Cottonwood canyons. -It can be updated and optimized as we learn from our mistakes. <p>Again:</p> <p>HARD NO TO GONDOLA YES TO TOLL BOOTH SUBSIDIZED BUS SYSTEM WITH LANE</p>
31911	KC Stewart	<p>Please. Please listen to the taxpayers and people who LIVE in and near LCC. There are many other viable options for reducing the effects of heavy traffic in LCC. I believe public outcry has made it clear that we are ready and willing to give other, much less expensive and proven methods (reservation, tolls, electric busses, etc) a fair try before just rushing to the "easiest" but most expensive and really, the most devastating to us to whom preserving the canyon's beauty and natural state are so very invested. There ARE other ways. At a time when the cost of everything has simply skyrocketed, and our paychecks have not increased AT ALL, how can you, in good conscience, seriously be considering a gondola and the financial burden this straps to taxpayers? Please don't burden middle class taxpayers with yet another tax burden that we don't want or approve of. I can't even afford to ski (and I love to ski) so it makes me SICK to think I'll have even less from my paycheck every month, paying for something I don't want and think is incredibly irresponsible both fiscally and socially, further increasing the likelihood I'll NEVER. EVEN. USE. IT.</p> <p>PLEASE DO THE WORK TO FIND ANOTHER WAY. PLEASE. HAVE INTEGRITY AND HEAR WHAT WE ARE SAYING!! Thanks for your time.</p>
31408	Richard King	<p>The financial impact of doing this project is insane. The resorts served by this project are already near capacity, and there isn't that much room to expand. It would just raise the cost even higher making it only available to the really wealthy.</p>
31409	Laura Landvatter	<p>I'd rather wait in a 3 hour line to get up the canyon than watch it being destroyed by a gondola. If you do this I will be there every day of the process with fellow protestors; you greedy, greedy gold digging people.</p>
31410	Robert Tiller	<p>Hello I think the gondola project is a great idea, it will bring in more tourist revenue year round. Also I am a bus operator with UTA and we simply do not have the man power to operate all the extra buses in the canyon, we can barely cover the inner city routes now as it is, so if the salt lake council wants to go with more buses they are going to need to learn to operate them or have the resorts hire their own people to operate the buses.</p>
31411	JL Angell	<ol style="list-style-type: none"> 1. UDOT should conduct a capacity/visitor management study to better understand how many visitors LCC can support before completing the EIS (i.e., inadequate information to decide anything yet). 2. The gondola won't solve Little Cottonwood Canyon's traffic problems, but we already have solutions that are proven to work, including enhanced buses, tolling, parking reservations and enforcement of traction laws. 3. Constructing more than 20 towers reaching 200 feet tall and stretching eight miles through the heart of Little Cottonwood would destroy the canyon's natural beauty. 4. Committing hundreds of millions of taxpayer dollars to the world's longest gondola without a commensurate effort to reduce auto traffic in the canyon nor addressing spring/summer/fall traffic amounts to a government-paid lift for two ski resorts (inappropriate uses of taxpayer funds). <p>Thus do not approve a dime or any action until the missing studies are complete</p>
31412	Robert Kain	<p>Please do NOT build a gondola and disrupt the beauty and accessibility of climbing and hiking in the canyon.</p>

ID	Full Name	Comment
31413	Erin Reynolds	<p>I do not agree with the Gondola option, and think it is the WRONG decision for many reasons.</p> <p>First, it's a misuse of public money in a time of environmental crisis. This money could be used to improve current public transportation across the Salt Lake valley.</p> <p>Second, it is a massive physical project that has the potential to NOT have the intended effect on canyon efficiency; it is a project that could take a negative toll on our canyon and cannot be undone.</p> <p>Third, it's not a versatile option, and cannot be used in any way other than skiing at Snowbird or Alta.</p> <p>This is a project that appears to cater to two ski resorts, and does not have any clear benefit to other recreationalists in the canyon. The public of Salt Lake wants to protect our beautiful and unique landscape, and this project would not be of benefit to that endeavor.</p> <p>We, the people, are in favor of exploring other viable options for improving traffic and parking in the canyon. The Gondola is NOT that option.</p>
31414	Symmer Andrews	<p>There are several reason why we should not build a gondola in LLC. LLC is a main source of water in Utah, the destruction of wildlife would be devastating, and the proposal will not fix traffic. There are other solutions that would use tax payer dollars in a more sufficient way. Instead of decreasing the bus schedule we should increase. Not only have more busses but more parking lots through the valley that accommodate the busses. The solution is not simple, but it doesn't not require destroying our canyons with a gondola to not have any change in traffic.</p>
31415	Austin Richards	<p>The gondola option proposed by UDOT would be a blatant misuse of state dollars in addition to being a clear money grab for ski resorts. I do NOT support it.</p>
31416	Elizabeth Neilson	<p>WE DO NOT NEED A GONDOLA. We need more public transport that is not a funnel to the ski resorts alone. We need a light, efficient footprint, not a grandiose, inefficient engineering feat serving the needs of a select few and paid for in part by the public. NO GONDOLA. Please listen to the locals.</p>
31417	Megan Sollis	<p>Please do not continue with this project! I know you are just trying to solve a problem that needs attention but there are other ways we can improve traffic control without needing to spend resources on a gondola that can potentially hurt the canyon long term. Please read the other 14,000 comments that agree!</p>
31418	Cam McVeigh	<p>I am incredibly concerned about the environmental impact of a gondola being built in LCC. How would it affect native and migratory bird populations? Would it be free or low cost to ensure all socioeconomic groups could access the Wasatch Mountains? What mitigation strategies will be used to ensure ecosystems are not disrupted? How does the gondola provide access to the Wasatch for outdoor activities besides skiing? Climbing, hiking, and back country skiing areas will be disrupted or destroyed in order for the gondola to be built. The gondola is a terrible idea, environmentally and economically.</p>
31419	Margie Jensen	<p>My name Margie R. Jensen,</p> <p>I am a native Utahn, And, I live [REDACTED]. My concerns are voiced here to UDOT.</p> <p>My daily life is affected by all these decisions of traffic around my neighborhood. I live on Top of the World Drive. And, when I am driving turning on to Wasatch Blvd. is atrocious!</p> <p>I have major concerns about ruining the beauty of the fantastic geology and ecology of Little Cottonwood Canyon. The wild riparian zone would be ruined by all the towers and maintenance equipment that would be required to maintain these towers. This is an irreversible and rushed decision without trying many less expensive options like: more staging stations for parking. An improved bus system which includes designated buses to specific locations. A toll booth at the mouth of the canyon that monitors the number of users which would enable decisions made about carrying capacity.</p> <p>Who is the getting the payoff? The eager developers for the project, Snowbird and Alta are the money makers. This plan does not address local traffic or hikers and climbers.</p> <p>The proposal ignores public comment. 80% of Utahns oppose UDOT's proposal. Developer propaganda and money spent on ads are from GONDOLA WORKS. This is outrageous and I am so dismayed at UDOT's final EIS.</p> <p>Sincerely,</p> <p>Margie R. Jensen</p>

Comments on Little Cottonwood Canyon Final EIS

31420	Tara Hetz	<p>I am a student at the University of Utah. I am an avid outdoor recreationist. I am a lover of nature. I am a conservationist. I am a woman dedicated to protecting our natural environment. I oppose the gondola being built in Little Cottonwood Canyon.</p> <p>I have several questions regarding the decision to choose a gondola as the preferred alternative to transportation.</p> <ol style="list-style-type: none"> 1. How much will a ticket cost to ride the gondola? 2. Who will collect that money? 3. Who will manage that money? 4. What will that money be used for? 5. Will the gondola only stop at Alta and Snowbird? What about all the other points along the canyon that I stop at? I will still have to drive my car up the canyon in order to access these points. 6. How will you mitigate environmental damage from the construction of the gondola? What measures will be put in place? How will you prevent spills into our waterways? 7. Where will people park to get onto the gondola? 8. Will people be able to fit all their stuff onto the gondola? 9. Is the gondola just for day trippers? What about hotel guests and lodge guests? Are you expecting them to bring all of their luggage on the gondola? 10. How long will construction take? 11. What will the towers be made of? What color will they be? How tall will they be? 12. I am really concerned about the future of the natural environment in LCC. If you are planning to destroy it by building a gondola, without considering other alternatives, you are jeopardizing this area for many generations. Why not pilot test a better bus system that runs year round? 13. What do you estimate the economic impact to be of this gondola? 14. Who will pay for the construction of the gondola? 15. Who will you hire for the construction of the gondola? 16. Who will maintain the gondola? <p>thank you and I would like answers to all of my questions.</p>
31421	Tamara Masters	<p>I am absolutely opposed to any Gondola being put in.</p>
31422	Eli Lovett	<p>I'm commenting about the tolling of Big Cottonwood. I am a full time resident of Brighton and learned that UDOT has no way to identify who is a resident so all residents and delivery companies will have to pay the tolling fee. This seems highly unusual. If it is automated we can have a pass with a scanner. If there is a person we could certainly have a pass to show that we are full time residents. I don't understand why this is so difficult. If you tell residents that have to show proof of residents in order to get a pass to get through the toll I'm sure they will comply. If not, charge them. But saying there is no way, is ridiculous, there are far more complicated tolling systems in the world, surely we can figure out how to create a pass. This is really frustrating.</p>
31423	Thomas McKenna	<p>Has UDOT Committee calculated the additional property tax to Utah taxpayers to build the proposed gondola? Do taxpayers who do not ski pay additional taxes as well?</p> <p>Additionally, what percentage of the costs to build the gondola will be paid by the resorts benefiting from the additional revenues?</p> <p>Appreciate any information you can provide. Thanks and kind regards. Tom McKenna</p> <p>--</p> <p>This e-mail was sent from a contact form on Utah Senate (senate.utah.gov)</p>

31424	Mark Moehling	<p>Hello,</p> <p>My main concern with the Little Cottonwood project is that any major construction may not be the best use of our resources. I understand that the financing and prioritization of transportation projects lies beyond the job of UDOT project planners. I also understand you have pride in your efforts to design this project and to improve LCC. However, UDOT championing this project as a slam dunk victory may take away from other, more beneficial projects. Remember UDOT should be planning for ALL of Utah, not just 50 days of recreational travel on one short road.</p> <p>Safety/emissions: Yes the gondola and bus projects will save emissions and improve safety, for a few thousand people 50 days per year. However, I imagine MUCH more benefit could be gained by investing in public transit elsewhere along the Wasatch Front, where a million people commute 365 days per year. Increasing population and poor air quality are two major issues here, and you have the opportunity to improve them.</p> <p>In addition, please consider implementing summer bus service. The throngs of summer visitors create tons of traffic, dangerous parking situations, frustrated visitors, and lots of noise and emissions. A simple bus route stopping at White Pine, Snowbird, and Alta would improve many of UDOT's stated objectives.</p> <p>Economics: Does the cost for the Gondola B option include the cost for phased implementation of the increased bus capacity, or will this require funding both the Gondola B AND the Enhanced Bus Service options? And again, I know this planning group is not in charge of financing, but please use your position of influence to encourage legislators to make transportation investments that will most effectively affect the widest range of Utahns, not just your personal project. In addition, I appreciate that the Enhanced Bus Service will be implemented first. If this method is ineffective, at least we can still go back with minimal permanent impact. On the other hand, a gondola installation or widened road cannot have its impacts retracted in the future.</p> <p>Environment: Yes there will only be "minimal" disturbance to the land development, noise, and visuals. HOWEVER every project in the history of LCC has been minimal, until they all get added up. A dirt road, a few logged trees, and next thing you know we have a highway and dams and a gondola and acres of clear-cut ski runs. If the environment is of ANY concern to you, then it must be prioritized with no negative impacts at all. Please do not whittle away our watershed, wildlife, and aesthetic resources merely for improved traffic flow. The future of Utah's quality of life depend on these.</p> <p>Thank you for the opportunity to contribute comments to this project. Mark Moehling</p>
31425	Martha Happ	<p>September 9, 2022</p> <p>Dear Sirs,</p> <p>I am writing this letter to voice my opinion about the proposed gondola plan B. In looking at all the plans and all the numbers I strongly disagree that your assessment that gondola B plan is the best plan. The gondola B plan is ill conceived, disrespectful of the people living in or near Little Cottonwood Canyon.</p> <p>It certainly is very expensive. I believe that not all the issues have been analyzed thoroughly or thoughtfully. In studying many decisions that UDOT or DNR or other organizations have made throughout the years, it seems that often common sense is thrown out the window and the biggest and most glamorous plans have been adopted with not a lot of public support and then disaster strikes. I sense that most of the public is opposed to the gondola plan B, especially those that live near the mouth of Little Cottonwood Canyon. I am speaking about the boondoggle of City Creek Canyon having a one in 100-year flood and the reaction was to build a huge water pump system for millions of dollars and it has never been used and sits and rots and is a horrendous waste of money. Or the boondoggle of introducing Glass Carp into Utah Lake because a few biologists thought that would be a good idea. Or the boondoggle of building islands in Utah Lake so developers can sell more "land" and houses and destroy an ecosystem that has already been so compromised. Finally, two more boondoggles are in the works with not very much oversight and certainly driven by money. The inland port authority is not exactly forth coming in all of their plans despite the huge negative push back against a port that will attract so many undesirable results. The common feature in all these issues is water. Water is so important and the one resource that is taken for granted. We do not have enough fresh water to support a humongous inland port and yet the selling point seems to be that it is an inland port so no water needed. Except that a huge port will demand so much more water usage that is in such short supply. One thing I think everyone takes for granted is that snow is inevitable and yet the average snowfall has decreased over the last 30 years that the mountains no longer receive the 800 or so inches they once did. The cycle continues as people do not connect the dots that the reason we do not receive as much snow is because the Great Salt Lake is the singular snow making machine for the Wasatch Mountains and in case no one has notice the Great Salt Lake is making news everywhere this summer because it is at an all-time low and we have lost so much water due to drought and other sources diverting the water from the lake. Unless UDOT does a comprehensive study of water usage, including documenting the pitiful decline of water over the last 20 years and factoring in the tremendous population growth of non-skiers and skiers alike, I think this reckless project of building gondola's is ridiculous. Furthermore, building this kind of project with public money and subsidizing 2 ski resorts and a handful of people who live in the canyon is way over the mark of prudent spending of money. Even if you get money from the Federal Government eventually, we all are paying for it. The financial plans for this project are incomplete. We should have a firm financial plan prior to beginning this project. A phased financial plan is deceiving and not a true representation of the total cost. With the phased financial structure UDOT has proposed the cost could skyrocket to 1 billion dollars. This is not prudent and certainly destroys the environment in a way. We should not build the gondola and protect the wasatch mountains</p>
31426	Tyrone Yanaga	
38559	Verena Crockett	<p>Hi, this is Verena Crockett and I live in Sandy and I would like to let you know that I feel with all the input that you are getting about putting a gondola or a bus or whichever way people want to do it go up towards Snowbird and Alta. I am definitely definitely in favor of a gondola a hundred percent. I am from Switzerland and I am I know what gondolas can do. I know how wonderful they are and we are not, we're saving the canyon that way and the beauty and it is absolutely amazing. And I feel like that's the right decision in my view, in my opinion. You can call me back and I love to talk with you. My phone number is [REDACTED] I thank you so very much, bye-bye.</p>

31427	Garrett Schwanke	A gondola doesn't serve public interest or the environment or basically anyone else. It servea a narrow economic interest at extraordinary cost to taxpayers and the environment. It will destroy the scenic nature of the canyon as is. We're tired of bailing businesses out. They exploit is as consumers and tax payers. No more. Do not proceed with this folly.
31428	Craig Gelman	The gondola is a lazy idea that aims to just be eye candy to the everyday person without habing the knowledge if the impacts it will create. We are so much smarter than this and can create such better alternatives with the ridiculous amount of money it would take to build this! Building a gondola won't stop traffic other than relocate it! We are too smart to consider this a good idea
31429	Sebastien Levin	<p>I think the move to improve access to LCC is a great idea. The concept of a gondola COULD make sense, but the version proposed does not work for the community as a whole.</p> <p>I will start with issues to address if you would like to proceed with a Gondola concept, but I also think there are other options that should be further explored.</p> <ul style="list-style-type: none"> - The proposal is very expensive and only benefits a small user group --> look to add more stops than just snowbird and alta that can be used year rounq and accomodate a larger user group (like at popular hiking, ski touring, climbing and mtb destinations) - The gondola has a low uphill capacity --> how can the gondola concept be updated to increase the number of guests moving up and down the canyon; the gondola needs to move at-least as many people as the current model (drive yourself and take buses) does, but ideally it actually creates an incentive by increasing the speed of access - The gondola construction and towers have negative impacts on the ecology of the canyon and the popular hiking/climbing spots --> do an analysis of the run-off/damage caused by the construction vs. current car use in the canyon; look to lessen the impact on popular trailheads and world class climbing destinations - access to/from the gondola --> it seems that having a parking lot that is not located right at the base of the tram is a bad idea; it creates a barrier to use --> look to adjust the design such that user can park at the gondola rather than a long walk or bus ride away <p>Other alternatives: I think that there was not enough attention put into other alternative options. This will require out of the box thinking and some combination of alternative ideas</p> <ul style="list-style-type: none"> - increased bus routes (both frequency and route options) - closing canyons to cars all together or during peak times (except home owners, employees, and hotel guests) <p>There also needs to be a greater focus on comparing options and looking at a cost/benefit analysis (both monetary, environmental, and ease of use)</p>
31430	Calvin Hoggard	I prefer Gondola B because as a Utah Taxpayer I prefer the lowest life cycle cost.
31431	Robert Bain	I disagree with the UDOT decision to have the Gondola as their preferred option. And do agree with a phased approach. LCC is a very special place and I just feel putting a gondola in that place is too intrusive of a solution for this problem. Getting more people into the canyon should not be the approach it should be to create interventions to have fewer people enter the canyon. Crowds will be an ongoing issue in LCC. But for the vast majority of the year it really is not a problem. To me this is more of a ski resort issue than a canyon problem and I do not understand why the resorts cannot just come to terms with limiting the number of tickets they sell or the parking that is available. And everyone else can take the bus. The gondola solution is too much of a visual impact on everyone not to mention the roads required to get to the towers and the maintenance. I think widening the road could be a good next step. But the gondola is not a good idea and I really question whether it will be used enough and be worth it. For me it will not. Plus why is it that the local community will be paying for it when most of the local community will never use it. That is unfair of course. I ski (BC and front), climb and hike and I do not want to have to look out at a gondola wherever I go in LCC. It is simply too much of an eyesore. Thanks you for hearing my perspective and concerns.
31432	Anna Florin	I am against spending taxpayer money on the gondola project. This project would benefit only the two ski resorts, not the taxpayer. The slopes would be too crowded for enjoyment and possibly too crowded for safety concerns. Corporate welfare projects, like this one, should not even be considered in this state, where we have so many other areas that need our tax money. Again, I am totally against this.
31433	Isaac Lindstrom	A gondola is a complete waste of money. The canyon is too valuable to destory.
31434	Chris Walker	I am a property owner in Big Cottonwood Canyon and I am vehemently opposed to tax payers funding a Gondola. Snowbird and Alta would be the direct beneficiaries, let them pay for the Gondola but only if it made ZERO impact on the water shed.
31435	Ahmed Ahmed	This gondola would be a disgrace. To spend such an obscene amount when we have much more pressing needs is a direct insult to the people who live here.
31436	Chris Barker	I am opposed to the gondola. It is too resort focused and too expensive. Use electric buses and charge drivers to pay for bus service instead.
31437	Sharylane Anderson	The Gondola would abstract the beautiful view and is not the neighborhood choice. More people in the mountains means more damage not less.
31438	Andrew de Jong	I am opposed to the gondola solution for 2 reasons. 1 The problem is a seasonal and limited issue. 2. If you think a gondola is a good mode of transportation go to DisneyWorld and see if you like using their gondolas to move about the parks. Especially at closing. It would be just like the end of the day at a ski resort. multiple hour long lines with no other solution to exit the canyon.
31439	Ludovica Farese	The creation of the gondola in little cottonwood canyon would be an abomination. It would ruin the wonderful natural habitat in the canyon and ruin our beautiful mountains. To reduce traffic in the canyon, we could instead ban all vehicles from entering the canyon (unless they have a license plate specifically for residents of those homes), and instead create a shuttle system in the canyon, much like the one in Zion's national park. That would be the best and most environmentally friendly way to reduce traffic.
31440	Mario Ruiz	What an unbelievable disaster of a plan. Run more buses and limit private cars and problem solved.

31441	Joe Canakes	<p>-The gondola would have a huge negative effect on one of Salt Lake City's biggest economic drivers: dispersed recreation (hiking, climbing, running, backcountry skiing). This is more difficult to quantify than resort skiing, but is a huge factor when people choose to visit and/or relocate to Salt Lake City and is surely the largest economic driver in our local canyons</p> <p>-Access to climbing areas will be compromised for the next decade while the area is under construction, and some may be permanently affected or lost</p> <p>-The building of the gondola will come with the destruction and/or removal of irreplaceable and historic word-class climbing and views</p> <p>-The gondola is not an equitable solution and will perpetuate environmental marginalization and injustice in the Wasatch Front</p> <p>-The building of the gondola is fiscally irresponsible, with half a billion in initial construction costs alone</p>
31442	Sidney Harris	<p>I strongly urge a reconsideration of this as the best solution. The gondola would have a huge negative effect on one of Salt Lake City's biggest economic drivers: dispersed recreation (hiking, climbing, running, backcountry skiing). This is more difficult to quantify than resort skiing, but is a huge factor when people choose to visit and/or relocate to Salt Lake City and is surely the largest economic driver in our local canyons. Access to climbing areas will be compromised for the next decade while the area is under construction, and some may be permanently affected or lost. The building of the gondola will come with the destruction and/or removal of irreplaceable and historic word-class climbing and views. The gondola is not an equitable solution and will perpetuate environmental marginalization and injustice in the Wasatch Front. Lastly, the building of the gondola is fiscally irresponsible, with half a billion in initial construction costs alone</p>
31443	Amy Hartner	<p>Hello,</p> <p>Thank you for considering the support of all canyon visitors, not just resort visitors, the impact on bouldering, and the impact on visual experience for Little Cottonwood Canyon. I would still like to advocate for neither widening the road nor implementing a gondola. Tolling, a bigger parking lot at the bottom for people carpooling, and a shuttle system like Zion National Park has would all be better alternatives to obstructing the view in such a pretty canyon.</p> <p>Thank you, Amy Hartner</p>
31444	piper lever	<p>I am writing to voice my opinion on the UDOT preferred gondola canyon transportation alternative, in response to UDOT's EIS. I am particularly concerned about the wisdom and comprehension of the chosen alternative option and welcome the opportunity to comment.</p> <p>I believe the gondola is a terrible idea for a number of reasons:</p> <p>\$592M is an enormous amount of taxpayer money that will be funneled into benefitting a relatively small number of constituents and a few large resort businesses. This type of discriminatory spending raises the issue of questionable motivations by legislators and agency leaders.</p> <p>There are no plans to serve the ever-growing population of nature-lovers and recreationalists who choose not to patronize the two private ski areas. The large amount of public land in Little Cottonwood Canyon should be equally accessible to the public, and not only special interest groups.</p> <p>The final budgetary estimates do not take into account the cost of non-ski season operations. With the large infrastructure investment, how is it possible to ignore the other months of the year? I believe it is a blatant omission to not include an operations budget for year round activity and compromises the integrity of the presented budget estimates.</p> <p>The amount of time it would take to use the gondola as a viable transportation option for a ski day is ridiculous. It's hard enough to remember all of one's ski gear, wallet, and other necessities, but now you want to add planning the logistics of parking a car, loading a shuttle bus, entering the gondola base station, paying fees, scheduling the return trip, etc.</p> <p>The obvious scenic and environmental impact of a gondola and towers on Little Cottonwood Canyon is a destructive and unconscionable suggestion.</p> <p>I favor a combination of snow sheds and enhanced bus service as a preferred alternative. I believe there will be more data to be collected and considered from this step, and will be instrumental in planning a progression of the next transportation solution.</p> <p>I believe our legislators and public agency leaders owe their constituents the duty to carefully consider all possible solutions and vote or act in a transparent and conscientious manner.</p> <p>Thank you for the opportunity to weigh in. I look forward to seeing the result of further deliberations.</p> <p>Sincerely, Piper Lever</p>
31445	Brandon Downey	<p>This is absolutely absurd, no tax dollars should go to a project that only benefits ski resorts and skiers/snowboarders. Also this project would destroy so many amazing Bouldering spots along little cottonwood, as would the expanded bus lane. DO NOT DESTROY NATURE FOR YOUR SELFISH DESIRES, just because ski resorts are profitable doesnt mean they deserve to destroy FREE public bouldering spots. And if they did they ought to be paying for it themselves.</p>

ID	Full Name	Comment
31446	Christine Nervig	As an outdoor recreationalist that participates in all types of outdoor activities in Little Cottonwood Canyon, I vehemently do not support building of the gondola in little cottonwood canyon. The gondola would have a huge negative effect on one of Salt Lake City's biggest economic drivers: dispersed recreation (hiking, climbing, running, backcountry skiing). This is more difficult to quantify than resort skiing, but is a huge factor when people choose to visit and/or relocate to Salt Lake City and is surely the largest economic driver in our local canyons. Without access to those resources, Salt Lake City economy would take a large hit and would suffer in recognition as an enticing community to mix work and recreation. Many industries, including Biotech where I work, have made moves into Salt Lake City because of access to Little Cottonwood Canyon. With the building of the gondola and the loss of those resources, it is extremely likely that those companies would no longer consider bringing jobs into the state. Further, the building of the gondola is fiscally irresponsible, with half a billion in initial construction costs alone. In addition to exorbitant fees and the guaranteed loss of recreation in the canyon, the gondola is not an equitable solution and will perpetuate environmental marginalization and injustice in the Wasatch Front.
31447	Noa Bender	We do not want the gondola. It ruins the canyon and the climbing and only serves the ski resorts. Please don't ruin this geographic beauty with our taxpayer money
31448	Kerry Lehtinen	Maintain the highway and buses at taxpayer expense. Tax the ski resorts and skiers using Little Cottonwood for the cost of a tram, especially since it will only run during the ski season. Better yet, don't build the tram.
31449	Steve Roper	Tax Payers should NOT be forced to pay for a gondola. Leave the road to Alta alone - no expansion.
31450	Chloe Simonich	It saddens me to have such wonderful climbing be destroyed. I feel the gondola will ruin the sightlines and the natural beauty of little cotton wood. There is no need for a gondola to ferry people up the mountain when there are such beautiful trails and experiences already available. Lets not industrialize what little nature we have left.
31451	Bert Corley	<p>UDOT should conduct a capacity/visitor management study to better understand how many visitors LCC can support before completing the EIS.</p> <p>The gondola won't solve Little Cottonwood Canyon's traffic problems, but we already have solutions that are proven to work, including enhanced buses, tolling, parking reservations and enforcement of traction laws.</p> <p>Constructing more than 20 towers reaching 200 feet tall and stretching eight miles through the heart of Little Cottonwood would destroy the canyon's natural beauty.</p> <p>Committing hundreds of millions of taxpayer dollars to the world's longest gondola without a commensurate effort to reduce auto traffic in the canyon nor addressing spring/summer/fall traffic amounts to a government-paid lift for two ski resorts.</p>
31452	Scott Sanders	I fully support the Gondola option. We need to reduce car
31453	Ben Spaunhorst	<p>I am writing today to express my dissatisfaction at the selection of gondola B as UDOT's preferred alternative in the final EIS.</p> <p>In the final EIS, UDOT identifies six "themes" from previous public comment periods. Half of which, seem to be blatantly ignored in the final EIS. I would like to address each.</p> <ol style="list-style-type: none"> 1. Consideration of all canyon users, not just resort visitors: The gondola only services resort visitors. It only stops at the resorts, and in the final EIS funding is only written in for winter operations. How does the Gondola take non-resort users into account? 2. Keep existing recreation opportunities intact: I find it hard to believe that a major infrastructure project (twenty towers from 130 to 150 ft high) will not impact existing recreation opportunities. Trails will be destroyed, boulders moved or removed. The gondola threatens existing recreation opportunities. 3. Maintain existing visual experience: Again, 20 towers ranging from 130 to 250 feet high..... Of all the identified alternatives in the EIS, the Gondola undoubtedly has the MOST impact on the visual experience of LCC. <p>Other points of concern:</p> <p>Do we really need to spend half a billion dollars on something that really only runs half the year, at best? What is the point of the gondola in the summer months? The final EIS doesn't include funding for summer operations, indicating it would sit idle half the year.</p> <p>What about wind? How many times a year to ski lifts and trams get shut down for wind? Won't the gondola be the same?</p> <p>Positives. I was pleased to see mention of phased implementation and increased bus service in the final EIS as well as mention of potential tolling. These are all ideas that I can get behind. My hope is that the combination of reservation systems + tolling + increased bus service that will be used during the phased implementation phase will prove successful. I would urge UDOT and local officials to take notice of that success, and re-consider the gondola in LCC.</p>
31941	Amy Carmen	<p>Could you please tell me who is on the committee or organization that makes the decision regarding the gondola? Are they elected officials? Are they appointed by the governor or UDOT? I would appreciate it if you could let me know, as well as their names and contact information. Maybe it is on a website that you could direct me to.</p> <p>Thank you - Amy Carmen</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31454	Chris Blake	I don't want the gondola at all. I'm an avid snowboarder. I've been riding and skiing in these mountains often since 1984. The most awesome thing about the Cottonwood canyons is that they haven't sold out as much as resorts in Park City, Vail, and others.
31456	Larry Jeffries	No No No. No Gondola for the Ski Resorts with tax payer funding. Way to much money involved that can be used for higher valued purposes.. Out of State skiers use the canyon for less than five months. How many snow days in that five months and how many traffic issues in those snow days. Most locals use the canyon in the summer for hiking, biking picnics, etc. The canyons are for everyone, not just the elite skiers. I use to ski but it has become a rich mans sport and I can't afford it any more. No on the Gondola.
31455	Lydia Stueber	It's extremely expensive, will cost taxpayers half a billion dollars for something the majority is protesting heavily. It will ruin the watershed and our view and is catering to a very small minority of people. Show you actually care about the people of Utah and listen to the solutions!
31457	Amanda Farnworth	No gondola. Giant waste of my tax payer dollars for something that I or my family won't be using. Even if we do use it we still have to pay to ride it. Even though my tax dollars went to build it. Also, I really don't want to hear it in the winter or see it while hiking in the summer. 2 stops for it? Really? Charge a toll for cars and maybe contract a private company for bussing up and down the canyon in conjunction with UTA. Look into who Park City contracts with to supplement their free public transit around the city.
31458	Mark Horowitz	I am not a Utah resident. But I am a frequent visitor both for skiing and exploring your national parks. I have been skiing at Alta in Little Cottonwood Canyon since the 1990s. I have written stories for national magazines about Alta. I still go every year with my family. This winter I'm planning on going twice. And I oppose the construction of the gondola in the canyon. It's just a total violation of the character of the canyon. Alta and Snowbird are big ski areas, but they are not as big as Park City or Vail or many others I've been to. Their intimacy and specialness is all tied up with the fact that they are in this small realtively untouched canyon. I'm all for upgrades for safety and conveneence, and I support a bus lane if that will make a difference. But the gondola is completely out of scale.
31459	DAVID LEWIS	I do not support the gondola solution for LCC. I frequent both BCC and LCC nearly every week of the year to hike, including snowshoeing in the winter. Seldom would a hike start at Alta or Snowbird. The gondola option does nothing for hikers, backcountry skiers, and others that need to arrive at locations other than Snowbird or Alta. The gondola option is an ALL OR NOTHING option that cannot be phased in, scaled up, or scaled down. That is a problem. There are many options with busses for scaling up, scaling down, and rightsizing. The impact on the environment can be better controlled with various bus options. We need to evaluate phased bus options and not assume that the bus option must have dedicated lanes all the way up the canyon. While I don't like either of the two proposed options, the gondola is a non-starter. The bus option can be easily modified to phase in costs and benefits of various options.
31460	Ian McClane	NO GONDOLA!! I'm from SLC and strongly oppose this.
31461	Lisa Emenev	I am an avid hiker and love to access Little Cottonwood canyon for the trails, snowshoeing and other outdoor recreation. I am opposed to the gondola because it primarily benefits the ski resorts and real estate developers, not citizens like me. I believe access fees, buses, parking reservations and other less expensive and more flexible options should be tried first.
31462	Brandon Reeve	As a resident of Sandy, and active user of LCC, I vote NO to the Gondola. Look at the ski busses. Hardly anyone uses them in lcc, but many people use them in BCC because the resorts require payment for parking. The resorts could actually make money while combating the parking situation with requiring payment. Don't make us pay to funnel tourists to the resorts. I wouldn't be making any money from the gondola, they would.
31463	Sidney Garrido	This is a microcosm of the bigger problem. It's time to prioritize the environment over profit. The more people in little cottonwood canyon bring more pollution and negative environmental impacts, including our water source that provides for 60% of the Salt Lake Valley. Please consider toll booths, more buss options, more parking for both canyons, fair living wages for bus drivers to incentivize all positions are filled. Utilize apps for the general public to rideshare. Please, please consider these options before we are unable to reverse the damage we are doing to our state, and to our humanity.
31904	Anonymous	Please put tax payer dollars to better use. Let residents vote on gondola. I am a salt lake born and raised resident against gondola
31464	Melissa Parkin	NO GONDOLA
31465	Jonathan Campbell	I have lived a majority of my life just west of Wasatch Blvd between Big and Little Cottonwood and know how bad the traffic gets. I initially was supportive of the gondola over the busses, I've seen gondola systems work very well in the Alps and in La Paz, Bolivia. However the fatal flaw in the LCC plan is the parking structure at La Caille. This will only move the traffic further down into the neighborhoods surrounding LCC and not solve the problem. So I am not supportive of a gondola as proposed. There is a better solution for the gondola that significantly reduces the costs and congestion. Rather than a parking structure at La Caille, run the gondola down 9400S to the Trax Station and Jordan Commons. This allows people to ride Trax from all over the valley to take the gondola. There is alot of parking in the area, both govt and at private businesses that only increases on the weekends - Jordan Commons, Mt. Jordan Middle School, Convention Center etc. Put gondola loading stations at the half empty stripmalls along 9400 S and use their parking which will drive people to those businesses, increase investment and traffic to those businesses and properties and generate tax revenue that will help offset the cost of the gondola. It also resolves the negative perception that the gondola is only going benefit Alta and Snowbird - make it benefit dozens of businesses and restaurants along the route without having to build a parking structure. By my count there could be parking and loading stations at Jordan Commons, 9400S & 700 E, Quarry Bend, and 9400 S & Highland Drive. It would also spread the traffic congestion out along several miles so you wouldn't have the congestion you will have with the La Caille option. So this plan reduces traffic congestion, supports dozens of local businesses, generates tax revenue for Sandy City and SL County.

31466	Anna Little	First of all, I would like to say that I appreciate the time and research that has gone into determining the best solution to this traffic problem. However, we cannot ignore how overwhelmingly this gondola is opposed. And, while it may be a solution during ski season, it will destroy the environment for other canyon users throughout the rest of the year. It will destroy the beautiful, stunning, natural wonder that takes my breath away any time I travel up or down the canyon - regardless of whether or not I am sitting in traffic. The people have spoken. The overwhelming answer to this issue is NO GONDOLA!!!!
31467	Dave Kelly	I would prefer a railroad/train service. Whatever option is selected should include stops of backcountry users in summer and winter months. The Gondola is not the right solution and feels more like a tourist attraction vs a transportation solution for local skiers. Please reconsider a solution that is viable for access to the canyon.
31468	Crystal Grimes	The idea of a gondola going up little cottonwood canyon is preposterous! What is the end goal here? To save our canyons? This won't do it. Only decreasing traffic by 30 percent, the impact on the watershed, the increase in tourism, two giant tower eye sores?! And let's not forget about the cost! There are better ways! Please don't let this happen!
31469	Joe Spataro	1) I'm a big supporter of the gondola and I think we should build it ASAP with a few conditions: The gravel pit is a much better place to corral visitors, especially on stormy days. I recommend starting the tolling at 7-11 instead of up canyon. A stiff toll at 7-11 will convince people to take transportation from the gravel pit to access the gondola, or they can drive to highland and up 9400s. Also, If bridges are used to connect east and west Cottonwood Heights, they should be beautiful, architecturally relevant bridges that enhance the community. Lastly, Wasatch should have separated bike lines and walking paths on both the east and west sides.
31942	Wendy Lowrance/Wittke	To Whom it May Concern, Please stop the Little Cottonwood Gondola project from proceeding forward. I feel the use of the tax payers dollars is not being used wisely, going towards this project, that only benefits a small percentage of the population. Sincerely, Wendy Wittke
31470	Kyle Lore	First I need to state I am absolutely against constructing a gondola. Unlike most commenters I have extensive knowledge on the construction and operation of ski lifts, gondolas, and trams. I am a chef by trade, but went to school at CMC for ski area operations and have both operated and worked on construction of lifts including cable splices with Rj Knight of Missouri. Your declarations on the gondola being impervious to adverse weather conditions and avalanche proof are a complete fallacy. Any lift operator knows that high winds can shut down a lift and the safety laws enacted following the Vail gondola accident require physical inspection of tower sheave gangs when high winds cause the movement to trip a cable sensor. Clearing ice and inspection are accomplished by climbing the tower. So.. who is going to crawl up the tower, that sits in one of the over 60 avalanche outruns in the middle of a wind loading high danger event?? If the highway is closed due to avalanche danger, the service road to the tower base is irrelevant. The gondola will be shut down. What happens to the people that went up the lift in the morning, and by afternoon the high winds prevent them from downloading?? Where is your evacuation plan?? How do plan on transporting 30 plus people safely from a remote tower pad location in the event of shutdown and evacuation. Sure they are on the ground, in the dark, across the creek, in an avalanche run, and the road is closed... great plan! In school we studied in great detail the avalanche data collected from Little Cottonwood and Big Cottonwood Canyons and the experts weighed in as early as the 1970's that the best solution is a cog rail up one canyon and down the other, with multiple stops, show sheds over the rail in outruns. It is obvious to everyone that this decision has been made for the taxpayer by somebody that has money in the development of the base station and construction. Lastly I would like to point out from the renderings and video rendition it appears to be multi track cable single haul cable design. That design will be even more prone to cable fatigue during high wind events. Forcing operation in high winds will increase the likelihood of a gondola car swinging as its clip is coming into either a support or depression sheave gang. This causes constant vibration of the lee side track cable. All of that will mean endless frequent cable maintenance. You will end up scanning every millimeter of all three cables multiple times a month. All of this adds up to potential injury and loss of life, and everytime the lift industry has ignored inherent design flaws, people die. Yan lifts are the best example. Do you really want to become famous for that?? Build a train, not a lift, it's literally the worst public works idea I've ever seen, and you are lying to the public about the potential dangers. I guarantee we will be the first in line to file the class action suit as soon as your false claims of a weatherproof transportation system come to light. As to the subject of your EIS, I do not see anywhere how you intend to mitigate the dripping lubricant from periodic cable maintenance where the gondola crosses the creek, pretty sure that stuff is toxic to protected Bonneville Cutthroat Trout and their spawning reeds in the creekbed. Certainly is in Colorado where there is a tram board to oversee lifts. Thanks, Kyle Lore
31471	Lee Walker	Some common sense measures to alleviate the traffic problems are welcome immediately. UDOT should have been plowing the residential neighborhood of city of Cottonwood Heights all these years of people being unable to go to work, school, medical apts and home again.
31472	Lee Walker	This space is too tiny to be able to write much of anything. Does it cut off every time the red asterisk appears?
31473	Todd Davis	How did this gondola become the preferred solution to the traffic issues in Little Cottonwood Canyon when 80% of Utahns oppose it and it's exorbitant cost. Not to mention it doesn't actually address or incentivize less private vehicle traffic! Because of its cost riding it will be expensive and there is no data that people will use it. There are simpler, less costly and more effective solutions to this problem.
31474	Lee Walker	Bouldering+ but any version of gondola or road widening NO.
31475	Lee Walker	The public has gotten wise to telephone answering systems make you wait forever to then have you pick the subject of your call but none of the choices fit so you pick something hoping to get an actual person. You can spend hours and tell too much personal data and hang up and try again, all for nothing. UDOT has this process down to never get real data, but a claim that the public vetted and approved their preferred choice.

31476	Laura Lunceford	<p>First we got ourselves a billion dollar boondoggle of a prison (built on clay) that was undersized before it was even finished because it went so far over budget. Then we got the infamous Inland Port which has so far cost taxpayers millions with zero to show for their hard-earned dollars. And now, we decide it's time to dole out some additional corporate welfare by spending what is laughingly estimated to be a \$500M gondola (remember, that's what the estimate for the prison started out at) that will not solve congestion in the canyons, will pave over a gigantic piece of land (purchased by a couple of prophetic legislators just prior to the gondola proposal) and will forever ruin our canyons. Future generations are bound to look at that mess and once again wonder why anyone ever thought a gondola was a great idea. Has anyone considered that within less time than it will take to pay back a billion dollars or more, there might be little reason to build this monstrosity since it's unlikely we'll have enough snow to make it necessary to get to a 'ski' resort within the next decade or less. Meanwhile, traffic on Wasatch Blvd. and all the roads in Sandy and other cities leading to the canyons will be massively worse.</p> <p>We already have an example of how congestion could be managed and it's right here in our own state. Zions (and other national parks) have implemented a reservation system for staggered entry, electric bus transport to allow more people into the canyon with less stress and pollution and a more enjoyable experience all around. Some of these same things have been suggested for the canyons, but it seems corporations talk louder than taxpayers, because even though there are better solutions, the fix is apparently in with UDOT because they think that gondola idea is fabulous.</p> <p>Please, Just stop this nonsense now. It's obvious that the vast majority of the population that live in and around the canyons are vehemently opposed to this boondoggle. In fact, it seems like the only people in favor of this ugly thing are the resorts who won't be paying for it, but will be receiving all of the benefits. If ski resorts think this is such a grand idea, perhaps they should pay for it. Finally, does it ever bother anyone in this state that every single one of these enormously expensive projects somehow benefits a very select group of (already wealthy) legislators and their corporate patrons? Just. Say. No.</p>
31477	codeiherbgrede	
31478	Lee Walker	<p>If any one has money, work on saving the Salt Lake, which is where the famous powder snow comes from. Which melts into the water source for half a million people. UDOT will cause pollution for years of one lane and idling traffic jam while they build gondola towers as big as skyscrapers. 100 mph winds, massive mudslide, and an earthquake have all manifested since the UDOT Researched the potential impacts.</p>
31479	Jeremiah Walker	<p>Super excited to see the new gondola up and running. This will be an awesome new venture for Udot and the rest of us. Can't wait to see what comes of this, thank you!</p>
31480	Melissa McCarty	<p>I am opposed to the gondola. It will only service the ski resorts and not trailheads, so it won't reduce traffic by much. It will also ruin the aesthetics of the canyon and is a very expensive solution. An expanded bus route that services trailheads and expanding the road if needed is a much better solution to the traffic problem.</p>
31483	James Turner	<p>The gondola proposal does not address transportation issues in all four seasons. As recreation and population grows along the wasatch front 4 season transportation needs to be addressed and a gondola with two stops does not provide this. Further, the gondola seems to unfairly benefit private entities that operate in the canyon. Having worked in mountain operations at park city mountain resort for over 5 years, I have keen awareness of gondola operations and the issue of wind and avalanche mitigation is not accurately represented in the EIS. There will be more impact than the public is being led to believe.</p>
31482	James Turner	<p>The gondola proposal does not address transportation issues in all four seasons. There will be more impact than the public is being led to believe.</p>
31481	Lucy Smith	<p>I'm opposed to the gondola option for a transportation solution in Little Cottonwood Canyon. I feel that the most affordable and viable solution is to increase busing and implement tolling for single rider cars.</p> <p>I'm also supportive of widening the road and putting in snow sheds. Whitening the road will serve many other constituents as well as people who want to ride bicycles in the canyon.</p> <p>Thanks</p>
31484	Ryan Pecknold	<p>The Gondola is a mistake we can't afford to make. It will permanently alter one of the most important resources SLC has - for the worse. This will also open the door for other similarly destructive projects. We need to find a better solution, the Gondola is not it. Climbing brings so much to the Utah economy, don't ruin LCC climbing for current and future generations permanently. Preserve the climbing and landscape so that we can enjoy it as it was meant to be for many generations to come. The Gondola is a fiscally irresponsible disaster we will come to regret, and something we can't reverse.</p>
31485	Nathaniel Young	<p>I strongly oppose the gondola. The gondola plan brings more people into a residential neighborhood and will do nothing to address traffic issues on Wasatch Blvd. in fact, this "solution" will make traffic even worse on Wasatch. Additionally it is not flexible. Once it is there, it can't really be moved. Buses can easily be added, removed, or redirected. They can leave from anywhere, including close to highways and current high volume areas (that aren't busy at 8am).</p>

31906	Verena Crockett	<p>Gandola in the Canyon 🇺🇸🇺🇸🇺🇸🇺🇸🇺🇸🇺🇸🇺🇸🇺🇸🇺🇸 I feel very strong about Transportation People to Snowbird and Alta is the very best way to go. I live in Sandy and I was born and raised in Switzerland CH. We have many many Gondola 🚠 and 🚠 Lift in our Mountains 🏔. It works perfect . A Bus 🚌 System would be more difficult. I also feel that only Residents and Business should have access by Car to go up and down the Canyon. into the Canyon. I feel we need to protect our beautiful Canyon the best way we all can , that way many more Generations will enjoy them the same all of us are today. Please let me know if I can help more in any way. Thank you for listening. Verena Crockett Gondola 🚠 🇺🇸🇺🇸🇺🇸</p>
31486	Troy Vellinga	<p>As a resident of Sandy and frequent user of the canyon I do not support the gondola option. This option only maximizes the benefits to the ski resorts and not other canyon users. Light rail is my preferred option.</p>
31487	Michael A Suarez	<p>I stand against the building of the gondola. There are better solutions that we can do that does not result in the permanent destruction of Little cottonwood canyon.</p>
31488	Joshua Bryant	<p>Please consider a more sensible option first. Have you considered flex lanes...uphill in the am and downhill in the pm for a small window of time? How about avalanche road covers in the avalanche paths? That way the road could stay open through avalanche control and be more safe to drive all the time. Jumping straight to the most expensive and most intrusive option our of the gate seems completely irresponsible, when you haven't tried more buses, reservation system, or any other relatively low cost alternatives.</p>
31489	Jenika Mifflin	<p>The gondola is a sad excuse for a solution to the traffic issues of Little Cottonwood Canyon. Of all the people I know in the Salt Lake Valley area, only three think it is a moderately good idea. If the planners for this project had spent any time at all in this canyon admiring the beauty of it, I don't believe they would be suggesting this at all. No one wants to climb right next to an ugly metal tower or hike to a peak just to see the whole canyon full of ugly infrastructure. No one wants to ski with all the increased tourism and crowding a gondola would bring. You have been so dismissive of the factor of natural beauty in this case, but the fact is that natural beauty is the main reason anyone uses and loves this canyon in the first place. Don't take away something everyone loves for your own agendas, that is just wrong.</p>
31491	Alison Dernbach	<p>I support the phased approach B to the full gondola implementation. Building the gondola is costly upfront and will create a construction nightmare in the canyon and at the base. Instead, I fully support enhanced bus transportation and tolls or carpool incentives in the canyon in order to reduce congestion and environmental impact. These solutions seem like the best way to move forward with keeping LCC a great place to recreate without the hassle and costs associated with building a gondola.</p>
31490	Molly Hemenway	<p>NO GONDOLA!!! This is an incredibly shortsighted proposal that will DESTROY the natural beauty of LCC. There are better solutions! Increase buses! Mandatory carpool! Ban cars! Look at Zion np as a model! NOT EVERYONE SKIS!!!</p>
31492	Skylar fenton	<p>The gondola is a waste of money and won't fix the problem! There are much better solutions like increased buses and mandatory carpooling. This proposal ignores the many people who use LCC for activities OTHER than skiing at resorts. Say NO!</p>
31493	Mikael Mrotek	<p>The gondola is an excessive waste of money that will destroy much of LCC and ruin the canyon. Alternative measures like tolling and improving the bus service would greatly help the flow of traffic while maintaining the sensitive nature of our canyons.</p>
31495	Lisa Bell	<p>The gondola proposal has unacceptable impacts on Little Cottonwood Canyon. Access to climbing, hiking, running, and biking areas will be compromised during years of construction. The gondola equals the destruction and/or removal of irreplaceable and historic world-class outdoor resources and views that are unique to SLC and drawn people from around the country and world. The gondola is designed to serve only ski resort users, ignoring dispersed use recreators and other year-round canyon users. The gondola is fiscally irresponsible, with half a billion in initial construction costs, alone. The gondola is not an equitable solution and perpetuates outdoor marginalization in SLC. There are other options such as tolling and increased busing that are backed by the majority of people and Utah residents. Listen to the people, not special interest groups out to make money with no regard for the longevity of the community.</p>
31494	Jenika Mifflin	<p>I am an advocate for common sense solutions to the traffic issue in Little Cottonwood Canyon. Such solutions include increasing bus service and replacing more busses with electric busses, as those have a decreased environmental impact and don't slow when loaded on hills. Also, bus stations should be spread out across the valley so that cars do not all have to gather at the mouth of the canyon and create more traffic. I also support stricter enforcement of the traction law and the possibility of it being enforced all winter, as a large contributor to traffic is often inadequate vehicles in bad weather.</p> <p>This winter Alta instituted a parking reservation system for weekends abs holidays and it worked wonderfully. If Snowbird was also required to take responsibility for the amount of cars they bring into the canyon, traffic would slow flow much better. This may be the most common sense solution of all, but there needs to be a plow station in Little Cottonwood Canyon. The fact that it takes 40+ minutes for plows to get to the canyon means that the roads are already covered in many cases. Having immediate access to plows means roads could be cleared more efficiently.</p> <p>These are things that can improve efficiency of canyon transportation without costing taxpayers heavily and creating a whole new avenue of tourist crowding.</p>
31496	Tess Jordan	<p>The gondola is not the solution as, the canyon is not ONLY used for resort skiing. The proposed gondola is a selfish act that benefits one user to the canyon. Hiking, biking, climbing, running and backcountry skiing (dispersed recreation) are major uses of LCC and should not be minimized by the resorts with deep pockets. I urge you to consider enhanced bussing phase (without the added lane FIRST) as, this could be the solution. In the end, if this gondola gets approved I sincerely hope that the tax payers are NOT expected to pay for this eyesore that will fill a beautiful canyon. Make the the people/companies that would benefit from the gondola being there, THE RESORTS, pay. Unfortunately, the canyons have become overrun due to resorts jumping on the IKON and EPIC pass. But that should not negatively affect locals and outdoor athletes in the community.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31497	Jeanne Hayes	Not in favor of a gondola! The cost and impact of this project seems way out of line for what can be solved by forced busing or carpool requirement.
31498	JESSICA FRENCH	I strongly oppose the gondola, and I believe it should not be considered any further as a solution to our canyon traffic problems. Traffic does not exist in a vacuum; it does not only exist during the winter months, and it is not a problem only for the operators of the ski resorts. Traffic problems need to be solved with environmental, human, and recreational impacts in mind, as well as the financial impacts. It's time to go back to the drawing board.
31499	Tawni Bugden	I am opposed to the Gondola. It is short-sighted. With climate change, the shrinking great salt lake, the likelihood of snow is decreasing and with it the need for an unsightly expensive gondola. Mandating a shuttle like zions National park seems much more advised.
31500	Mark Bell	I know this is a resource used by many (outside the ski groups). It would be good to get a solution (e.g., more buses, tolls, etc.) that help meet the needs of all involved (the short ski season) and helps preserve over 200 world class bouldering opportunities.
31501	Allan Perry	Please don't widen the canyon roads. I feel like that would ruin the character of the canyon more than any other solution. The gondola could be a fun way to experience the canyon, but if the gondola moves forward please make it a connection for more than just the ski resort. Find a way to connect the gondola to residential areas in the canyon and other popular recreation areas so it serves more users year round.
31502	Blake De Vries	<p>The proposed gondola plan is a large waste of tax dollars, cuts into the visual aesthetics of the canyon, harms natural resources, and only serves a percentage of canyon users during winter months. It seems that increased bus transit with more stops throughout the canyon (or other alternate solutions) could serve not only skiers at the two resorts, but those who visit the canyon year-round and desire to backcountry ski, snowshoe, hike, bike, climb, birdwatch, etc. The gondola only serves resort-goers and is a strenuous impact on the tax paying citizens of Utah as well as the natural environment of the canyon.</p> <p>Wouldn't it be better to increase/improve bus operations and hours of the day for a much smaller investment while reallocating much of the proposed gondola budget to improve mass transit throughout the rest of the Wasatch Front? Perhaps two rail lines for the FrontRunner? Additional rail lines? Utah's governing authorities could provide solutions that majority of Utahns (not just those who support two ski resorts) can benefit from -- especially as our population will begin to reach 4 million people by 2032. This seems like a narrow-minded proposal which aims to benefit the few and privileged who can afford to ski at these two corporations, line the pockets of legislative landowners where the parking garages will be built, impact the aesthetics and wildlife of the canyon, and not address/fix the underlying issue with overcrowded canyon use.</p> <p>I know this solution seems exciting and like a fun way to advertise tourism to our great state. However, for the reasons above, please reconsider and think long-term about the impact of your decision to support on current residents, future generations, wildlife, water resources, erosion components, and sustainable solutions.</p>
31503	Chris Kading	Please consider the irreversible effects the gondola will have on this canyon. There is no rush to destroy something that cannot be recreated. Busses, carpool, shuttle vans all increase access while limiting total number of vehicles. They can be throttled to match demand throughout the seasons and can and will all be electric before long. Not sure who is getting rich off the gondola but it seems to be a terrible solution if only servicing resorts at peak times. Please find some other project to spend billions of tax payer dollars on that doesn't ruin the remaining nature we have for future generations. Thank you
31504	Sue Garr	I have lived in Cottonwood Heights for over 35 years. In that time I have watched our roads (Wasatch, Fort Union) become increasingly busy and harder to navigate. During the ski season it is awful. I would hate to add to the traffic on those road via the gondola. Traffic is not the only concern, it will be a blight on the canyons beauty. I would think the money would be better spent helping in lower income areas. Why make the rich richer, as I see it this will only help Snowbird, Alta and UTA.
31505	Lori McDonald	As a sixty-four-year-old Utah native, I've experienced watching Salt Lake explode. Yes, the canyons, especially Little Cottonwood are very busy, yet I adamantly do not think a gondola is a solution. A gondola only accommodates the commerce of Snowbird and Alta, yet we have a beautiful canyon with many trailheads and many uses. I am a back-country skier and climber. I think incentives to carpool, improved (ideally electric) bus schedule and system, and considering a small toll like Millcreek Canyon would be more effective and less damaging solutions. We must change behaviors and not cause irreparable damage to accommodate commercial interests. Thank you for your consideration.
31506	Isabelle La Motte	<p>I am disappointed to see the route that this solution-finding process has decided to take. As a recreational user of LCC's land and a canyon employee, I can not think of a more disastrous decision for the fragile, precious landscape of Little Cottonwood Canyon.</p> <p>I am curious about where the decision came from. As far as I can tell, public opinion does not align with implementing a gondola in this space. It would be a true shame to ignore the wants of residents and users in exchange for appeasing private entities who will benefit from financial gain.</p> <p>Time and time again we have asked for an expansion of the current bus system. I truly believe that there is a solution there. Let's exhaust the options we already have before taking drastic measures with a "solution" that may not even get the job done.</p> <p>As of late the Salt Lake City council has released a public statement condemning the implementation of a gondola. Please listen to all of us and the council who is speaking on our behalf.</p>
31507	Leslie Osborne	I am in support of the gondola. It is a great way to help make little cottonwood more accessible. It will also elevate the experience of visiting the canyon. Anything to get vehicles off the road is a win.

ID	Full Name	Comment
31508	Greg Sherry	<p>Time for reality. IKON pass causes Environmental impact.Øø°</p> <p>Ikon pass has caused over crowding in Little and Big Cottonwood Canyons. Both canyons are dead-end canyons, meaning there is only one way in and one way out. This is why no Olympic events were allowed in the canyons due to evacuation issues.Øø° Ikon passes in both canyons is irresponsible overcrowding for monetary gainØø°.</p> <p>What is your response? Do you believe the Ikon pass is "responsible usage" for the Cottonwood Canyons? What are the negative results from Denying the Ikon Pass or Epic Pass in Little Cottonwood and Big Cottonwood Canyon?</p> <p>https://www.ksl.com/article/50489075/salt-lake-county-narrowly-passes-resolution-condemning-the-little-cottonwood-gondola?utm_source=facebook_share&utm_medium=facebook&utm_campaign=news&utm_content=utah&fbclid=IwAR1ti-4swr8dyzuoKoO5r-dw-4zS48hvCAnFsaRRxzg4nz-oHSWYvy4TWPM</p>
31509	Christian Wright	<p>Instead of constructing an expensive gondola that will benefit few, the bus service should be expanded at a reasonable cost, to serve many. to whom it may concern.</p>
31510	Kyle Toohey	<p>As a resident of the surrounding LCC community and someone who recreates and works frequently in the canyon, I am disappointed to hear about the choice of preferred alternative regarding the choice to install a gondola in Little Cottonwood Canyon. It seems that there are other options being overlooked in previous proposals that should be used before committing to a potential gondola build.</p> <p>The use of tolling with a tiered payment system considering yearly passes for locals and progressive fee based on car occupancy could greatly impact the amount of cars entering the canyon and actually encourage carpooling. Without some sort of incentive given to people travelling to resorts it seems hard to get people to change habits in a timely manner.</p> <p>The use of more effective and stringent vehicle restrictions with preemptive monitoring entering the canyon prior to storms that may arrive in the afternoon. It's great to have enforcement while a storm is actively going in the morning but we need people their in advance of other anticipated weather systems to prevent people accessing the canyon ahead of forecasted storms. It does no good if they drive up on a dry, snowless road to only then need to get down in an inadequately equipped vehicle after a storm has begun.</p> <p>There needs to actually be a wholehearted attempt to increase bus service and build better regional transportation hubs for accessing public transportation into the canyons. The proposed alternative and amendments already made to bus service do little to address the proximal nature of parking areas to bus lines going up canyon. Currently, the setups for transport lead to bottlenecks near the mouth of the canyons because transportation users are all still driving close to the mouth to access these options. The gondola option presents this same issue because people will still need to drive to the mouth park for this solution. It does little to take cars off the road and ultimately adds more people into LCC, which may already be at its natural daily carrying capacity for recreation. There simply may not be much more accessible space for people to recreate on the most popular days to ski and ride. There is very limited number of days per winter season when the gondola would operate without the road being open and actively being the only option to bring people up to the resorts.</p> <p>The gondola also fails to address access for potential recreationists outside the resorts and will not appropriately serve all people but favor for profit businesses being the resorts. It will be a taxpayer handout to two businesses that seem to doing just fine and posting record years in terms of visitation year in year out. They will contribute little financially to the project but benefit the most.</p> <p>Another idea to take into account is that as the climate continues to change there will potentially be fewer days where the</p>
31511	Heather Kluk	<p>The gondola solution is customized to only benefit ski areas and does not provide equal access to all the public lands in Little Cottonwood canyon in all seasons. There are many public trailheads that the gondola will not provide access to/pass over and the traffic concerns in LCC are cyclical and primarily tied to ski area operating hours and weather/avalanche conditions. UDOT has pursued finding a solution to a problem that is tied to private entities without holding them accountable, which is disappointing.</p> <p>Adding a 3rd lane to LCC is also not a preferred option due to the significant environmental impact. However, improvement in traffic and traffic safety during the winter can be achieved by installing snow sheds under critical avalanche paths, expansion of the remote avalanche control systems (and retiring overhead artillery), and changing traffic policies about parking/lining up in front of road closures. These solutions should be prioritized first, followed by improvements to summer/winter trailhead parking, tolling, and expanding bus service if possible. Private entities like ski areas should be forced to think creatively about how to provide access to their private services (private bussing, flexible ticket start times) and public money should not be used to solve their problems.</p> <p>Please, do not build a permanent gondola infrastructure that will go unused most of the year.</p>

ID	Full Name	Comment
31512	Bryan Anderson	<p>As a frequent user of this canyon, I don't think the gondola is necessary and would be an eye sore and would increase the time to get to the resorts. It would also contribute to an already overcrowded experience. The items needed are the following:</p> <ol style="list-style-type: none"> 1. Snowbird should continue to use the FREE parking reservation system they used to limit the number of skiers and cars. Alta should adopt the same system which they have never done to this extent. Combined, this will also help with the end user experience by eliminating overcrowding. We don't need to increase skiers' cost and travel times to limit the number of cars. It can be done for free!!!! No parking spot, to car! 2. Build nice looking snow sheds at only the very worst 2 or 3 avalanche paths to maintain traffic flow, safety and minimize destructive construction. 3. Increase existing bus service, but do not widen the road or add lanes in the canyon. Once up the canyon a little ways the traffic flows well even on the worst of days. 4. Add just one (1) southbound express bus lane on Wasatch Blvd from BCC to the mouth of LCC. This alone will incentivize people to use the bus because this is the area with the worst traffic problem. Please don't wreck Wasatch Blvd with more than one lane added!!! 5. Increase the busing and canyon transportation services for tourists from their hotel who don't know how to drive in the canyon. 6. NO TOLLING!!! Tolling will cause increased traffic congestion at the tolling site, which we are trying to reduce, and is totally not necessary to reduce the number of cars in the canyon as the parking reservation system will solve it. <p>As you can see, this involves not just a UDOT solution as item 2 solves much of the problem with zero costs.</p>
31513	Devon Fischer	<p>The gondola is not the correct option. It is a tourist trap when many of the ski tourists stay at the resorts. It fails to take into account backcountry skiers, snowshoers, and hikers. The cost to ride the gondola would also be prohibitive to people actually using it. Further most of the outdoors community (those that would actually use alternative transport up the canyon) do not want it.</p>
31514	Brian Stewart	<p>I am supportive of this project. It's net positive for the environment and public access.</p>
31515	Sarah McCroy	<p>I am writing to say it does not seem like a financially prudent decision for tax payers to support the gondola decision. It is only benefiting the ski resorts without actually tackling the issue at hand: increased car traffic in the canyon. Furthermore, it seems odd that UDOT is limiting bus routes during the upcoming season when it's been acknowledged that using buses is a good solution in the short term. Bus routes and pick up times should be increased to support this solution. In summary, more buses, no gondola. Thank you.</p>
31516	Russell Weeks	<p>I oppose the proposed Gondola. It's one of the great examples of legislators' self-dealing that I have seen unfortunately in the last 40 years. Just reference the Deseret News article by Kyle Dunphey published on September 7 to see how far former Senate President Niederhauser stands to profit from the project and how ill-served the people of Utah will be by a transportation device that serves only ski resorts. Finally, it's amazing to me that the ski resorts would decry UTA cutting bus service to their resorts when the owner of Alta said publicly that only 3 percent of skiers use buses. The project is arrant and corrupt and should be scrapped.</p>
31517	Gerald Matusick	<p>As a life-long skier, Sandy resident, and parent of two children, I would love quick access all season long up LCC. I've drastically reduced my skier days to minimize my footprint up the canyon, and plan accordingly when wanting to ski with my family. Sometimes it's not convenient, but I'm ok with that. I would love increased, modernized, convenient bus services, instead of a gondola. The gondola option supports the private ski industry only. Why should I have to pay for it? Please eliminate this ridiculous, single season and single industry serving option. Busses can be used all year, at multiple locations, are cheaper, less destructive, and can easily adapt to the changing seasons and future environmental affects of global temperature cycles.</p>
31518	bryan harris	<p>Seems like this money and effort should be directed to saving the Great Salt Lake water levels so that there is actually snow to ski on in the future.</p>
31519	Kayla Smith	<p>I support the gondola!</p>
31520	Kyle De Vries	<p>The proposed gondola plan is a large waste of tax dollars, cuts into the visual aesthetics of the canyon, harms natural resources, and only serves a percentage of canyon users during winter months. It seems that increased bus transit with more stops throughout the canyon (or other alternate solutions) could serve not only skiers at the two resorts, but those who visit the canyon year-round and desire to backcountry ski, snowshoe, hike, bike, climb, birdwatch, etc. The gondola only serves resort-goers and is a strenuous impact on the tax paying citizens of Utah as well as the natural environment of the canyon.</p> <p>Wouldn't it be better to increase/improve bus operations and hours of the day for a much smaller investment while reallocating much of the proposed gondola budget to improve mass transit throughout the rest of the Wasatch Front? Perhaps two rail lines for the FrontRunner? Additional rail lines? Utah's governing authorities could provide solutions that majority of Utahns (not just those who support two ski resorts) can benefit from -- especially as our population will begin to reach 4 million people by 2032. This seems like a narrow-minded proposal which aims to benefit the few and privileged who can afford to ski at these two corporations, line the pockets of legislative landowners where the parking garages will be built, impact the aesthetics and wildlife of the canyon, and not address/fix the underlying issue with overcrowded canyon use.</p> <p>I know this solution seems exciting and like a fun way to advertise tourism to our great state. However, for the reasons above, please reconsider and think long-term about the impact of your decision to support on current residents, future generations, wildlife, water resources, erosion components, and sustainable solutions."</p>

ID	Full Name	Comment
31521	Shanna Ryan	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean" the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium" parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.
31522	Janet Watson	<p>I am totally against the gondola. It will ruin the canyon forever. You should simply regulate the number of cars that can enter the canyon daily.</p>
31523	Anna Roberts	<p>I am a civil engineer living in Sandy, Utah. I work for Ensign Engineering, who will help design stations for the gondola. I recognize my bias on this issue, but I do support the gondola as a citizen of Sandy. My primary concern is the environmental impact and the economic burden of the alternatives considered. I am a rock climber and volunteer for organizations like "Keep Nature Wild". The gondola has a smaller footprint, is carbon neutral, has a lower impact on the watershed, and operates quietly which contributes less noise pollution to the ecosystem of LCC. It impacts 2 climbing sites instead of 40+ like the road expansion, and removes ski traffic from visits to hiking/climbing locations along LCC.</p> <p>Environmental issues are severely affected by economic opportunity, and the gondola is less expensive over its lifetime than the road expansion. Other alternatives do not offer long-term solutions to the traffic in the canyon, and access ought to be equitably offered to all residents. As a civil engineer who has researched this issue thoroughly, I support the gondola as the preferred alternative for LCC. I am distressed by the misinformation that has been spread about the gondola, and ask that UDOT continues to evaluate all factors objectively. Whichever alternative is the most environmentally and economically responsible should be the alternative selected.</p>
31524	Cassie Dillard	<p>I live at the base of Little Cottonwood Canyon so this issue is being discussed all around the community. In those discussions I have NOT met one person who is in support of the gondola.</p> <p>If you push forward with the gondola agenda, in opposition to local citizens support, you will certainly show your true colors and prove that you are in fact NOT in service to your community, their desires and the overall well being of environment.</p> <p>Please consider these things as you make decisions.</p>

ID	Full Name	Comment
31525	Scott Cowan	<p>I am adamantly opposed to building another boondoggle of a project that is going to harm our canyons. I have pulled Financials for both Alta and Snowbird and run a rough Cost benefit analysis to see if a financial case could be made for this based on their annual revenues and projected growth, it does not. They can't make the economics work either!</p> <p>So, in essence, we are going to spend close to 1 Billion dollars on a project that does not make environmental sense, economic sense and fails to account for better flex solutions such as adaptive bus routes, limiting access based on capacity and non-visual destruction of one of our most beautiful canyons.</p> <p>there is not one argument that can be made about putting in a Gondola that makes sense at any level and to the people most impacted by it, you are not listening to the majority of them, because you keep trying to push this through.</p> <p>Didn't we learn anything when we built giant pumps to control the flooding back in the 80's how wise was that? You can't change the environment for the sake of money or a few self-centered politicians.</p> <p>if anything, we can learn something by looking at successful for-profit companies, Disney has starting limiting capacity, increased costs, added per users fees, etc., and is generating more profits. There is a lesson to be learned here about letting economics help drive ecological decisions. Limit capacity, arrogant as it sounds, the people who can afford the ridiculous amounts of money it takes to ski are not going to balk at paying more, it may limit how many times, but they will still keep coming</p> <p>Finally, they are not putting gondolas or rails systems in our national parks to control crowds, they are using reservation systems and buses, so why in the world would we not do that it in a pristine canyon instead of destroying it by putting ugly concrete towers that ruin the natural beauty of the canyon, It Makes no sense.</p> <p>The bottom line is this, canyon capacity issues are not year-round, increase skiing costs, limit access based on capacity and use buses that can be scaled up and down based on demand, that is the prudent move and makes us wise stewards of our natural resources. Do not let greedy corporate politics or self-serving politicians destroy our canyons for their own profits. It's time to stop this ridiculous fiasco before the first pole gets planted.</p> <p>For once, please be the voice of reason and wise governance.</p>
31526	Wayne Geilman	Please don't put in a gondola using taxpayers money.
31527	Emily Boman	I do not support the gondola. We should not be using tax payer funds to serve private ski resorts. This will not serve any land/uses other than the ski resorts.
31528	Emily Boman	Hi, I do not support the gondola. Overwhelmingly, local public and political opinion is in opposition of the gondola. UTA should respect the citizens and politicians of Salt Lake County rather than just do what the ski resort wants them to do. UTA does not exist to serve wealthy ski resort CEOs, it exists to serve the public.
31529	Emily Boman	The "solution" of a gondola is irreversible and rushed. This would be an incredibly visually and environmentally impactful decision that could jeopardize this beautiful place permanently. This is not a decision that should be rushed through by eager ski resort executives.
31530	Tim Brennwald	<p>I fully support the Gondola. This will have the least impact, provide the greatest benefit for all weather year round access. Taking cars off the road is key, while still allowing people to experience the beauty of the area. LCC road access is very difficult in winter with the weather. It only takes one car or bus accident to completely block traffic in both directions, which is a huge health and safety concern. I have spend a lot of time in Europe and this mode of transportation and access is wide spread and has been beneficial for the health & safety of residents living in true mountain towns and tourism while protecting the environment and water quality. The gondola is the right choice.</p>
31531	Norm Henderson	<p>The preferred alternative is ridiculous. If UDOT desires to eliminate traffic problems in LCC, eliminate parking along the highway and require that the ski areas implement a parking reservation system. This will eliminate the severe clogging in LCC. There will be no reason for skiers to travel the canyon since they can't park. If you don't want to remove all parking along the highway, then implement a reservation system for access to the resorts. The county or the town of Alta could require land use restrictions at the resorts based on water quality concerns. The general public understands and supports reservations on public lands to preserve a quality visitor experience. Trying to reduce demand by charging for parking or tolling roads without use restrictions is never going to work since high end skiers will always pay the price on desirable days. It will become even more a rich persons activity. A parking reservation system was put into place, it would eliminate the need to add additional paved lanes to the LCC road or Wasatch Blvd. Reservation systems work as evidenced by past experience in Park City during the 2020-21 ski season.</p> <p>I don't see how UDOT will be able to secure federal funds when the preferred alternative is completely contrary to the request made by Salt Lake County through the Regional Transportaton Plan. In essence, it appears that UDOT is attempting to push through its own version of the road to nowhere.</p> <p>The WFRC is a group required by federal law to propose projects from the ground level to prevent such boondoggles. My recommendation is to formally select No Action and describe future management prescriptions to include road upgrades and a simple parking reservation system for the two LCC ski resorts.</p> <p>Finally, I still believe that UDOT should be evaluating a mountain transportation system that connects all seven Wasatch ski resorts. Access to such a system cannot be at the base of LCC or BCC. Lets talk about a gondola system to connect all seven ski resorts and not one that benefits only two resorts and two well connected politicians.</p>
31532	Marshall Baillie	<p>I will not support a publically funded alternative that only benefits two private entities. The parking situation, with the reservation system, works great. Increase parking and service nodes to have direct bus service up both canyons and enable tolling. What about BCC transportation alternative? This is a red herring for both resorts that want to have skier days that are presently half a million (at each resort in LCC) to roughly what PC may have on the same day, which is 1.2 mill. If that's the case, build a connection between all the resorts up high. I would even support tunnels as long as all environmental concerns could be mitigated. Let's work through an adaptive approach that includes all stakeholders rather than sign over millions of taxpayer funds to plans that UDOT really had little no business making.</p>

31533	Cindy Haacke	Greetings, I think a gondola sounds much more expensive and unnecessary than using something we already have mostly in place, buses. You would be saddling the tax payers with much more expense just for the few people who would use the gondola and the resorts who would benefit from this. These people who would use the gondola are mostly well off as they can afford to ski. Some come from other states and so have the disposable income most of our tax payers here in Utah do not have. The ski resorts also benefit greatly from this but do not have to pay for this. I think we should use a self funding means of transportation, ie those who use the services should pay for them. This should in no way saddle the Utah tax payers further. It should be able to pay for itself. I can see widening the road at the tax payer's expense as it is a public road. If a private company wants to build a gondola at their expense then I could support that also. I have issue with tax payers supporting a very expensive gondola project when there are so many other needs which would benefit a broader, more in need population.
31534	Gary Fields	As a 6 month out of the year longtime resident, I believe that a tolling exception needs to be made for residents/property owners. We pay substantial taxes to live here and a resident pass is only appropriate.
31535	Barton Blackburn	I fully support the Gondola.
31536	Courtney Cookson	If the gondola is going to mess with the watershed, can I start bringing my dog to LCC?
31537	Isaac Cunningham	It will be difficult to measure the impact on traffic and congestion of the Gondola with 2500 new parking spots versus just adding 2500 new parking spots. The biggest impediment to busing during ski season presently is the lack of convenient parking at the primary bus stops as well as the inadequate number of buses. Start with a large parking expansion project and then reassess whether a Gondola is still needed
31917	Taylor A Jensen	I'm curious how UDOT has anything to do with the gondola possibly going up Little Cottonwood. I'm not against it and actually for reasons I can't say I'm for it, but I find it's kind of suspicious that UTA isn't being more public about their push for the bus option it's almost like they know something that everyone else doesn't. That being said I am more interested in why UDOT is pushing for the gondola. Thank you for your time.
31538	Thomas Hartigan	So I have moved here from NY about three years. I think that the sticker program is a great way to not only check tires but to allow access under heavy traffic/powder days. We need to almost force the bus option. The only way that it will work is to catch unstickered vehicles early on the access roads and send them to a designated parking area for the "free Bus" access. Obviously, no sticker no access. Car rental companies will not be allowed to get access stickers. Only Utah residents would be allowed through the annual inspection stations. Just some ideas
31539	Thomas Byrne	I would hope that people that live in the canyon would not have to pay a toll to get to their home each time they went up and down the canyon!
31540	codeiherbgrede codeiherbgrede	iherb promo code
31541	Eric Zenger	Charging a toll to property owners to access their cabins is outrageous. We already pay significant property taxes, especially as non-primary residences who do not receive the primary residence discount. There must be a way to exempt cabin owners and there guests. We are not the ones causing parking issues in the canyons. We have our own private parking.
31542	Toby Kravet	Due to the warming climate, snow levels will be decreasing in the coming years with, perhaps, a lessening of avalanche danger but, most definitely, the closing of the ski resorts. Some experts have predicted this might happen within the next 30-60 years. With this in mind, the construction of a tram could end up being a colossal waste of taxpayer money as it would become "A Tram to Nowhere." I don't believe that back country skiers and mountain bikers and hikers during the summer months would come in sufficient numbers to justify it's operation. An easily reversible alternative such as an enhanced bus system, with adequate parking for riders, at seems more reasonable economically and practically.
31543	Samantha Goodrich	Please protect little cottonwood. A gondola would compromise so much of what makes this space beautiful!
31545	Jolene Gebelt	I think the gondola is a terrible solution. It will not give access to anything but the resorts so it won't really fix the traffic problems. It will also destroy really awesome climbs. The gondola will also be ugly.
31544	Lillian Smith	Gondola more like lameola
31546	Austin Scott	Do not proceed with the gondola project. Resources would be better suited elsewhere. Thank you.
31547	BRANDON MCCLOY	The gondola is the best option in all categories; enviromental impact, carbon emissions, safety, convenience, future growth, and economically. In my opinion it's the best option. Thanks for listening to my 2 cents.
31548	J.A. Johnson	Please, please... consider the blight this gondola system will be on our beautiful canyon! It will be a terrible sight. It's not needed! 50 days ayear is an exaggeration on over use. We live near the Canyon, some holiday weekends, yes. But we then must look at it all year around!
31549	Michelle Jardine	This is a huge taxpayer expense that benefits the ski and snowboarding population. Current reservation and charges for parking, and additional buses would serve the same purpose at less expense. I am a skier and hiker and will never ski in that canyon again if the gondola is intalled.
31550	Kathy Karren	I am definitely against the gondola in Little Cottonwood Canyon. It would only help a small group of people for a limited number of months during the year at a huge cost. I am certain there are other options that should be considered!
31551	Jeffrey Karren	I am very much opposed to the gondola idea. It makes no economic sense to me; it will mar the beauty of the canyon, it will financially benefit a very few special interests. Bad, bad idea!
31552	Larry Hunt	It is time for the Utah government to stop using tax dollars to benefit private companies and this is what is being attempted by putting a gondola in Big Cottonwood Canyon. If the ski resorts want a gondola let them foot the bill not the tax payers of Utah.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31553	Leila Bell	The gondola proposal has unacceptable impacts on Little Cottonwood Canyon. Access to climbing, hiking, running, and biking areas will be compromised during years of construction. The gondola equals the destruction and/or removal of irreplaceable and historic world-class outdoor resources and views that are unique to SLC and drawn people from around the country and world. Furthermore, the traditional owners of the lands should be consulted and all areas of cultural and gistorical significance should be identified and protected. The gondola is designed to serve only ski resort users, ignoring dispersed use recreators and other year-round canyon users. The gondola is fiscally irresponsible, with half a billion in initial construction along. There are other options such as tolling and increased busing that are backed by the majority of people and Utah residents. Listen to the people, not special interest groups out to make money with no regard for the unique and incredible areas in which we are lucky to live and explore.
31554	Sandra Biel	Vans every 10 minutes. No cars. Skiers, hikers and snowshoers can be transported. Road does not need to be improved for this. Taxpayers who do not use the resorts should not have to pay for the resorts to make money. Global warming is real. Why develop gondolas with such a limited future. Only those with money already in this will profit.
31555	Chrissy Lassen	I've been opposed to the gondola from the beginning and so has pretty much everyone. I've yet to find one person that supports it. So much money spent and land destroyed to service the ski community is excessive. Why not start with something that makes sense-incentives for ridesharing and tolls. Please find a better way and take all these against comments into consideration.
31556	Karen Tibbitts	I am a mom of 5 boys. I raised my boys hiking through the cottonwood canyons. We had very little money to do most things but I taught them to always respect nature and enjoy God's creations. They have all graduated and are law abiding citizens. They too are trying to provide for themselves and want to raise their families with nature. I strongly disagree to a cost to the canyons. Gondolas are not the answer either. We need our people to be healthy and to be able to use our mountains. We need solutions that will not cater to the rich.
31557	John Sheedt	No tolls in the cottonwood canyons
31558	Nathan Heaps	I have a condo in Big Cottonwood Canyon. Are you going to charge tolls to residents driving up to their homes? I am strongly opposed to this!!
31559	Angie Barnes	I would like to offer another option for the Canyons ski season that won't cost anyone each day- let's build a parking structure at each ski resort. 2 or 3 story to give more room for parking. Can be decided hours by resort. PARKING STRUCTURE, yes!
31561	Angie Barnes	Parking Structure for each Resort.
31560	William Judd	Sounds like UDT saw how successful solitudes parking fees were. And they want a piece of the action. I don't think they should implement tolls on the roads. During the winter months, if the ski resorts want to have parking fees, that's up to them. But the government should stay out of it.
31562	David Howell	Charging people to use the canyon? A lot of people will thank you for that: those in the Idaho Department of Commerce - Tourism Development, the Colorado Tourism Office and those in Wyoming Office of Tourism. And I'll bet the Utah Office of Tourism will also thank you! And let's not forget the Utah Olympic committee! That is as wise a decision as the one a few years ago when beer was outlawed at Oktoberfest!
31563	Kim Nortz	I'm not opposed to a toll, many canyons have them, but 20- 30 dollars is punishing people who are low income and will make it so many people won't be able to access the canyon Let the people who want to use your ugly view killing gondola pay more, not those who don't ski or can't afford it.
31564	DAVID JACK	I am not comfortable with this choice, as there are other aspects that were not considered. Plus, I do not want to see a gondola defacing the mountainside. I recommend more considerations and deliberations.
31565	Paula Kremser	I'm opposed to the gondola. I do not think taxpayer dollars should be used for this purpose.
31566	Jared Carter	I am against the proposed gondola plans as it only serves a fraction of the canyon and will do nothing to alleviate congestion during the summer nor at other trailheads. The cost is also unacceptable and the average family would not be able to afford to ride it.
31567	James White	I am in favor of the proposed gondola. The initial costs are definitely a concern but the long term benefits out weight the cost. The proposed tolling isn't a bad idea especially if applied towards the cost of the gondola however, tolls of \$20-\$30 is absolutely outrageous. It's already costly for just a single day pass at the resorts. Adding additional fees just to enter the canyon will absolutely deter me from enjoying one of the best features of living in this beautiful state.
31568	Kalehua Bellotto	Just build the gondola ? Americans are so slow. We want but we don't want. If that's the case then leave them in grid lock.
31569	Sam Beseiso	Other countries go to the future we go back, UDOT is old school they need to hire innovative people, widen the roads, put a tunnel, making it start at a private restaurant and go up to 2 private resorts..... that sounds like corruption in my opinion someone's getting paid to push this. Add bridges to make traffic flow instead look at othe countries go to Japan.
31570	Heather Knowlton	This is outraged! Not only are Utahns being priced out of buying homes and dealing with inflation with their large families now you're depriving them of one of the free activities they can actually do... going hiking and for a picnic in the Cottonwood Canyons. This is just soooo wrong.
31571	Ken Faulkner	No, No, No, Gondola

ID	Full Name	Comment
31572	Frank Johnson	<p>Why is UDOT so heavily subsidizing Snowbird with the longest gondola in the world while hiding the real cost of \$1 Billion to solve a 30 day congestion problem in the winter? Little Cottonwood Canyon is little, just 17,000 acres with very little flat land maybe 100 acres. Little Cottonwood Canyon currently lacks adequate fire flows, water flows, and sewer capacity.</p> <p>While we appreciate Snowbird persistence in getting a free billion dollar gondola, the billionaires who own snowbird can buy their own gondola.</p> <p>Big Cottonwood Canyon has a greater need for a gondola, because it is 34,000 acres with more visitors. Moab and Zions have a greater need for a gondola.</p> <p>A gondola from the SLCl to Park City resorts would be far more useful and save more lives from the dangerous Parley's Canyon during the winter months.</p> <p>As usual, the true cost of the new gondola Lagoon ride in LCC is more like \$1 billion, the operating cost has not been made public nor the cost of the tickets.</p> <p>LCC has about 6 public toilets and 1 million pounds of human poop on the canyon floor now, won't the gondola add to the problem of people pooping on the canyon floor?</p> <p>The politicians who speculated on base land for the gondola should not be part of the vetting process for UDOT. Most every town in Utah has a congestion problem today and getting worse.</p> <p>Clearly there are more deserving canyons, getter uses for \$1 Billion though \$1 Billion is the old 1/2 a billion due to inflation.</p> <p>UDOT's "decision" was political not logistical.</p>
31573	Danielle Nokes	<p>Skiing is already for the rich now. Don't make any use for the canyon only accessible for the privileged. Average people with families need to be able to enjoy it too abd would be impacted the most. The rich skiers won't be the ones impacted.</p>
31574	Danielle Bradshaw	<p>The proposed gondola plan is a large waste of tax dollars that would cut into the visual aesthetics of the canyon, and harm natural resources. Not to mention it would only serve a percentage of canyon users during winter months. Increased bus transit with multiple stops throughout the canyon (or other alternate solutions) could serve not only skiers at the two resorts, but those who visit the canyon year-round and desire to backcountry ski, snowshoe, hike, bike, climb, birdwatch, etc. The gondola only serves resort-goers and is a strenuous impact on the tax paying citizens of Utah as well as the natural environment of the canyon.</p> <p>Wouldn't it be better to increase/improve bus operations and hours of the day for a much smaller investment while reallocating much of the proposed gondola budget to improve mass transit throughout the rest of the Wasatch Front? Utah's governing authorities could provide solutions that majority of Utahns (not just those who support two ski resorts) can benefit from -- especially as our population will begin to reach 4 million people by 2032. This seems like a narrow-minded proposal which aims to benefit the few and privileged who can afford to ski at these two corporations, line the pockets of legislative landowners where the parking garages will be built, impact the aesthetics and wildlife of the canyon, and not address/fix the underlying issue with overcrowded canyon use.</p> <p>Zion national Park runs bus/shuttle systems to accommodate all who want to appreciate the beauty and recreation of the park, we could easily follow suit and preserve the canyon from unnecessary and expensive damage to the canyon that a gondola would would provide, not to mention the eye sore of a gondola.</p> <p>For the reasons above, please reconsider and think long-term about the impact of your decision to support on current residents, future generations, wildlife, water resources, erosion components, and sustainable solutions.</p> <p>Kind regards, Danielle</p>
31575	Brittany Zetterquist	<p>I'm am opposed to a toll this year. If you want to do a toll doing it next year gives those of us with season passes the choice to renew and deal with tolls. To impose a toll this close to the season when we have already invested in passes is just wrong. This economy has been hard enough (between inflation, the housing market crashing, and being so close to a recession) having a toll would make it so that we could not utilize the season passes that we have already purchased.</p>
31576	Heather Kluk	<p>This idea does not necessarily meet the needs of safety and travel time, but I'm wondering if traffic queuing areas, like are use for queuing cars to board ferries, have been considered to divert waiting traffic at the mouth of both LCC and BCC during closure and high traffic times. This would remove idling cars from the road and timed release of cars from these queuing areas would improve the flow up the canyon. Queuing areas would also allow for calculation of car volumes waiting to drive up the canyon which could be projected to the public for them to better plan their travel.</p>
31577	Brent Barber	<p>If you have to pay to park at the ski resorts now why should we have to pay a toll to use the road? You're charging people twice. And if they don't build the gondola and widen the road the problem of shutting the road down during snow days will not go away.</p>
31578	Roberta Melis	<p>Improving bus transportation (number, frequencies and use of electric bus) large parking by the entrance of the canyons, should improve the traffic in the canyons. Close number of vehicles allowed</p>
31579	Brian Zimmer	<p>Our tax dollars should not be spent on a gondola up LCC to support a private business that is for the well off. People need to understand that the that mountains are a limited resource and access should not be expected to be like a fast food drive through. Sincerely, Brian</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31580	Shane Roe	<p>Let me go on record stating first that I'm completely against the gondola idea. It will mar the canyon and be a benefit to relatively few and at immense cost.</p> <p>Tolling sounds interesting, but not at the \$20 to \$30 being suggested to limit vehicles. This cost is prohibitive to lower income folk who maybe make it up to ski once or twice a year--if at all, or who just want to go for a drive to check out the snow in our beautiful Wasatch Mountains. I do believe that tolling at a lower rate--say \$3 to \$5 per car--can be effective at raising funds for canyon improvements, such as better parking, or widening roads, and should be considered.</p> <p>As a personal note, I pick up a blind guy and take him skiing once per week. Public transportation is much harder and a private vehicle to the resorts makes life much easier for those with disabilities, and I think exceptions should be made for such conditions should the prohibitively priced tolling be enacted. Just my two cents. Thanks.</p>
31581	April Eames	<p>The community has spoken and the majority say no to these proposals. Why not electric buses? On those few great snow days those that really want to ski should be willing to take the electric buses from a bus station at you Fort Union parking proposal. Unless you are a guest at Snowbird or Alta any parking should be reserved ahead of time. So many more options than destroying the beauty of our canyons.</p>
31582	Dana Steck	<p>I truly find it hard to believe that the gondola has even been entertained as a viable solution. When I take the time to envision myself using such a transportation "solution" it all falls apart.</p> <p>Don't ruin little cottonwood canyon for 2 resorts. They aren't even footing the bill, we taxpayers would be. Why would I want to pay tax dollars to destroy cimbing areas that I like to access, and views that are part of the reason I live here.</p> <p>I am encouraged that the funds for the Gondola have not yet been secured and that in the meantime the Enhanced Bus Service Option will be implemented. This provides time for the transportation solution that I believe will be best for BOTH Little Cottonwood and Big Cottonwood Canyons to be implemented, if done right, this will be successful and eliminate the need for the Gondola Alternative.</p> <p>One of the biggest oversights of this entire EIS is that it is focussed solely on Little Cottonwood Canyon. The data shows that there are more heavy congestion days in Big Cottonwood Canyon than Little Cottonwood for the past several years, even outside of ski season. The Enhanced Bus Service should equally help the traffic congestion in both canyons if implemented effectively and will provide a year round traffic solution.</p> <p>The Enhanced Bus System will be most effective if it is made to be easier than driving your car to the resorts or any of the many trailheads between Wasatch Boulevard and the top of each of the two canyons As such, it should be free or at least subsidized enough so that taking the bus is cheaper than the gas that it would take to drive up each canyon from the each mouth in a personal vehicle (including the parking fees being implemented by the resorts in the winter). Buses should be given priority over personal vehicles to enter the canyon, this can be done by creating bus only lanes on Wasatch Boulevard to allow buses to pass traffic and make the turns into each canyon. If the buses have priority over personal vehicles for entry to the canyons, they may still be a very attractive option to users if the cost is slightly higher than driving a personal vehicle because you will get there faster. Buses should be equipped with external ski racks to avoid the hassle of bringing equipment on to the bus and holding it for the duration of the ride. Buses should also be equipped with external racks to carry bikes, crash pads for bouldering and sleds so that canyon users other than skiers may also be accommodated. The bus should be able to make stops at any requested location between Wasatch Boulevard and the top of each canyon so that all canyon users can be accommodated year round.</p>
31583	Charlene Frailey	<p>I am saying no to the gondola. This will not be a benefit for the citizens of Utah and we should not have to pay for it. This will essentially only benefit the rich elites. This seems to be only a scheme to make a handful of people a lot of money while fleecing the public.</p>
31584	Matthew Zetterquist	<p>I have already purchased passes for Brighton ski resort this year for four people that's over \$2000. I cannot afford to pay additional fees on top of what it already costs a family of four for a single day. A \$20-\$30 additional fee is outrageous. I would not have purchased passes had I known this might happen. If this passes, I'll be done using the ski resorts that my family has enjoyed for 3 generations now.</p>
31585	Paul Gascoigne	<p>I am strongly opposed to the plan to construct a gondola system in big cottonwood canyon. This is a critical view shed and beautiful natural resource that must be preserved. Tolls, better bus service and other alternatives should be incorporated into a plan to manage traffic in the canyon.</p>
31586	Denise Gascoigne	<p>I oppose the Gondola B plan. It will forever change the landscape of our beautiful Little Cottonwood Canyon, creating a horrific, irreparable blight. Moreover, it is an expensive and unreliable solution to address traffic problems up the canyon.</p> <p>I don't believe that UDOT has explored all the possible traffic solutions thoroughly. Given the expensive marketing and commercial push for Gondola B, I believe that UDOT is responding more to special interests and not to what's best for the environment and the public.</p>

31587	Ryan Scrivano	<p>While I understand the idea that a toll would reduce traffic up the canyons, it also serves as a punishment for those who are not upper class. There are many individuals like myself who are middle class and ski every weekend (60+ days a year) and that's what makes us love Utah. If someone skis 60 days a year and you average 20-30 dollars a day to go ski on top of a pass thats already over a thousand dollars, its essentially punishing those who cant afford it and are already being squeezed by high inflation. Assuming an average of 60 ski days per year at 25 dollars, thats \$1,500 in parking, \$2,800+ when you add in the price of the pass, nevermind gas. All I ask, as I am sure many people are, is to take everyone into consideration and look into alternatives first of the gondola which I support or the bus system before the toll option. Both options will reduce traffic significantly, even I would consider them instead of driving. The resorts generate a large amount of taxes on behalf of the volume of customers each year and that revenue through state income tax should be allocated to benefit the community, not taxing the citizens another toll on top of the current taxes we as citizens already pay and not having the resorts be held responsible at all. Utah will not be Utah if this happens. So many people moved here and live here to enjoy nature and this idea will ultimately favor the wealthy who can afford it and no one else. If the toll is implemented, there should be an annual toll pass for under \$100 for a Utah resident and charge out of state visitors a daily rate. Many people will likely move out of state who are here to ski if this happens, including myself. At the end of the day, its your decision, your in the role to make the best choice for the community. In my view, if a toll system is put in place, it will benefit the rich to make it more of a private resort for them and make people like myself not afford to ski anymore. Something has to be done to resolve the traffic issue, I 100% agree with that, but it shouldn't be a punishment that prevents others from affording to ski. The Utah Bus Transportation system is already cutting back staff and bus volume which would not leave efficient options to get up the canyons if you cant afford to pay the toll.</p>
31588	John Adams	<p>Does UDOT take public 'preference' into consideration in the final EIS decision, or does UDOT make the decision solely on the goals of mobility, reliability, and safety, regardless if the EIS decision goes against the wishes of the majority of the citizens?</p>
31589	Julie Daily	<p>Thank you for the opportunity to comment. We the public are the people being served by our government. I hope that comments from the public are not simply a check box but that they are impactful in this decision. The gondola plan is not cost effective for public money as the benefits serve private companies and the cost is magnitudes higher than the alternatives that have proved very successful in Millcreek (enhanced busses, tolling, reservations, enforcement of traction restrictions). Little Cottonwood Canyon is a national treasure. It is our duty to protect this treasure for the future, for the children. Analogies are often made to European ski resorts. The landmass in our canyons is magnitudes smaller than resorts like Chamonix. A solution for Chamonix is not appropriate for the Cottonwoods. Thank you.</p>
31590	John Adams	<p>Does the Gondola B plan require the widening of Wasatch Blvd? UDOT states that the purpose to widen Wasatch Blvd. is solely for potential future evening southbound commuter traffic, but the numbers in the study to support that are under review and have been found to be inaccurate. If the revised study to widen Wasatch for commuter traffic are determined to NOT support widening Wasatch, does that have any impact on the Gondola B decision?</p>
31591	Ken Kiss	<p>The Gondola option is not cost effective; it is not fiscally sound. This alone should eliminate it from consideration. The Gondola option uses tax payer money to serve private resorts. This is not how we do things in Utah. 80% of Utahans oppose the Gondola option. Government is for the people not for the elite few who will benefit. Listen to your constituents.</p>
31592	John Adams	<p>Gondola B option states that parking hubs for a UTA bus to take riders to the gondola base station were eliminated to support mobility by making it faster to get up the canyon by driving direct to the gondola base. This means people without cars are excluded from being able to ride the gondola. Does UDOT have the legal authority to build a public transit system that excludes part of the local population across the valley by only having access to the transit to personal vehicles?</p>
31593	Sandy Barson	<p>\$20-\$30 toll for big and little cottonwood is way to expensive! Hiking has improved my health. After covid I had heart flutters and breathing problems. Hiking has strengthened my heart and lungs and the flutters have improved. Nature should be free for EVERYONE to enjoy not just the rich!</p>
31594	Clint Williams	<p>My family has owned a [redacted] for 18 years. I have watched each year as the crowds have grown in the canyon and on Wasatch Blvd/Canyon Roads to an unbearable condition on some days. I have attempted to carpool and use the UTA bus whenever possible, and I've learned through personal experience and community discussions that the bus is completely unreliable and overcrowded. To date, UTA has failed to provide an adequate bus system and there is much room for improvement. The UTA bus system has simply failed the skiing/riding community. At other ski areas with much larger crowds, like Mammoth, a sufficient bus system has alleviated overcrowding and solved the problems that UDOT is attempting to solve - without a ridiculous gondola that serves only the shareholders of the resorts. I believe that ride sharing and an adequate bus system as described in the EIR is sufficient to flood the mountain with as many skiers as the mountains can handle. The controlling factor should consider lift capacities and safety of the skiers/riders on the mountain. In otehr words, there is no need to increase travel capacity if it only serves to crowd the mountain resorts with paying customers that line the pockets of the resort shareholders. Please reconsider the Gondola B option and focus on the road improvements and bussing options. Gondola B will be an eyesore and circus act that is not favored by the local community such as myself. Lets make UTA do the job properly or replace them with a localized bus service that serves the community and is scalable to accommodate skier/rider needs when accessing the canyons.</p>
31595	Laurie Noda	<p>I am opposed to the gondola for a number of reasons including the cost to build it which is too high. The projected cost of \$500 million is low, given inflation for the materials to build it and labor costs. The cost will be closer to 750 million or higher which I, as a taxpayer, am unwilling to pay for. It will also severely affect the canyon in a number of ways including the structural base supports which have to driven deep into the mountain to meet earthquake standards. It also will affect the watershed. It will also affect the routes for hikers and climbers and the the majestic views of canyon. It also will not reduce traffic in the canyon because most people will be unwilling to pay to take it and can get into the canyon faster by driving or taking the bus. Finally, the issue of funding is a serious one as the legislature and the federal government may be unwilling to fund it. I seriously question the need for it and think it should be reconsidered as the preferred alternative.</p>

31596	Andrew Wirtz	
31597	John Adams	What will the source of electricity be for the gondola? Will it be from Utah coal fire plants, or from a renewable source?
31599	John Adams	The EIS states that to get a 30% reduction in canyon traffic there would need to be a toll put into place for drivers to entice people to ditch their cars and ride the gondola. If this tolling is able to shift driving behavior as UDOT states, why wouldn't UDOT first try using tolling to increase vehicle occupancy up the canyon which now only averages about 1.8 people per vehicle? This could easily reduce cars in the canyon by 30% or more without the \$550,000,000 spend on the gondola. The average vehicle occupancy in LCC is about 1.8 riders per car. With simple tolling and single occupancy restrictions during the busy winter weekend mornings, occupancy could be sh
31598	Wyatt Christensen	Rather than make it exclusive to those who can most afford it, please consider implementing a lottery system. It's fair and equitable if non transferrable. If not used, the list opens up to the next people. Have a stand by list for \$20-30 with fees going to preserve the canyon. My 2 cents
31600	John Adams	UDOT states that a gondola would take cars off the road to reduce traffic in LCC. UDOT also states that fewer cars in the canyon could actually induce demand for driving up the canyon. To resolve this, UDOT states they will charge a toll to drivers that would be less than the cost to ride the gondola, to financially incentivize people to ride the gondola versus driving up the canyon. Does UDOT have the legal right to set and control what the future fees will be to ride the gondola; and does UDOT have the legal right to determine what the tolls would be to drive up the canyon in order to entice people to ride the gondola?
31601	John Adams	UDOT states there is a need to widen Wasatch Blvd from Bengal Blvd down to the split of LCC and southern Wasatch Blvd. because Wasatch Blvd. currently chokes down from two lanes to one lane at the lights at Bengal Blvd. Over 95% of the southbound evening commuter traffic turns right at the lights at the split, where Wasatch will remain a single-lane road. How will widening Wasatch Blvd to two lanes from Bengal to the split improve the potential future commuter traffic issue when it just moves the two-lane to one-lane choke point from the lights at Bengal down to the lights at the split?
31602	Erin Waldron	No gondola! Teach cars drivers to use public transportation (busses) by levying a heavy toll against cars. Tolls are a good idea if implemented properly. People will [redacted] but Utah is growing and the cars in the canyon are unsustainable and dangerous. Especially hanging on the mountain all day shotgunning beer and wearing yourself out from altitude and riding.
31603	Michael Rogge	I oppose the gondola project. I support bus, light rail, as well as putting a restriction on accessing LCC (paid parking). I have skied many years in LCC & I believe that the gondola does nothing to address the real issue of limited capacity in LCC. The limited capacity issue cannot be solved by gondola as it does not make the canyon larger. Solving auto-traffic issue simply kicks the can down the road to the larger PROBLEM. Moreover, the gondola project wastes the States & possibly federal money on a frivolous project that benefits a few people and a few businesses. If this project moves ahead the Ski areas should be forced to pay 100% for the project and charge people like me for skiing (ie be forced to go out of business). Resources like LCC are limited - there is nothing you can do to make a limited resource larger -- you can only limit - CONSERVE - usage of it (ie national parks -- water - etc -etc). Thanks Mike
31604	Phyllis Coley	The gondola is an expensive subsidy for the ski resorts, it will ruin the beauty of the canyon. having busses use the existing road and limiting cars would be the cheapest and most environmentally sound solution
31605	William Walsh	I am against the Gondola option. It is very costly and only benefits 2* ski resorts during the heaviest snow period to the likely detriment of many other year round uses of the canyon. Additionally as a snowboarder, this project (if it works) would only ease my access to one of the 2 resorts as I am not welcome at the other one.
31606	John Adams	I understand the gondola car will hold 35 people. What % of those 35 people will need to stand for the 37-minute ride up to Alta from the base station?
31607	John Adams	Regarding the final EIS, are all components of the 'phased implementation', including the widening of Wasatch Blvd. already approved and available to UDOT to move forward? If not, who has the power and authority to approve or reject that funding?
31609	Joel Ban	<p>The UDOT has done a good job accepting comment on this project but a terrible job using the knowledge and comments of the recreating public. UDOT has presented very little to no information as to why the alternatives offered make sense in light of the fact that so many recreate outside of the two ski resorts or why the public should pay for a gondola for the benefit of two private companies. this makes no sense and is a terrific example of how we socialize costs but privatize the benefits in so many ways. No middle ground options were provided or studied so that the canyons would undergo no physical changes and instead have more buses and tolls that would be reduced if the car were full or contained more than one person. This is the real problem on just a handful of weekend days people traverse up the canyon with just one person. These people should pay for this privilege but no alternative was studied that would address this problem even though it could be easily addressed. Instead a project that will cost more than half a billion dollars that will permanently and negatively alter the ecology of little cottonwood was chosen. Again, where's the logic and common sense of this. Going through the motions but not listening to the public is a travesty its clear that the vast majority do not want a gondola and particularly don't want to pay for one. At the very least let the 2 ski resorts pay for it.</p> <p>the analysis also offered basically no analysis as to how by the time the gondola is done it will offer a trip to ski resorts that have much less average snow pack than they do now. The salt lake is disappearing offering much less lake effect snow and the climate is warming at an exponential rate. Researchers have verified there will be much less snow and hardly enough to ski for the majority of the ski season offering maybe at best a few months of even decent snow by 2050. By 2050, around the time these proposed projects would be finished, there will be 90 fewer days below freezing each year according to the 2016 Journal of Climate Study. A 2017 study by the EPA found that by 2050 there will be a 50% shorter ski season. Scientists are already seeing that high elevation areas are warming faster than sea level. At least one hydrologist, Brian McInerney, anticipates that in the Wasatch there will be no snowfall by 2100. Again, where's the logic. Why create permanent infrastructure that will take people up to an area that provides terrible skiing opportunities. Please reject all proposed alternatives and go back to the drawing board. Its a travesty that this gondola has been considered and approved.</p>

ID	Full Name	Comment
31608	John Adams	Who owns the property where the gondola base station will be built, and does UDOT have permission to build on that property? If so, what portion of the \$550,000,000 project cost goes to the base station property owners to allow the required infrastructure to be built on their property? Or. does UDOT have to buy this land from the current property owners in order to build the base station?
31610	John Adams	The gondola B option states it eliminates mobility hubs, forcing gondola riders to drive directly to the base station. But the final EIS also states that mobility hubs will be built for the phased approach part of the project. Where will these hubs be built, and if you spend the money to build them, why can the not be used for getting people to the gondola base once that is built?
31611	John Adams	Will UDOT make available on their website (or some other platform), the third-party study that was done that contains the raw data and models used to support the need to widen Wasatch Blvd. for potential future southbound commuter traffic issues that would be resolved by widening Wasatch? The study I am referring to was done by Fehr and Peers and is titled: SR-210 EIS Traffic Study Fort Union to North Little Cottonwood Road UDOT project #S-R299(281) dated May 2019 and revised July 2019; which was prepared for HDR UT19-2093.
31612	John Adams	Many questions were asked of UDOT previously about capacity in the canyon. All the answers by UDOT simply stated that this project will not have an adverse effect on canyon capacity. What is the carrying capacity of the canyon that you are using to be able to state that this project will not surpass that capacity?
31613	Brian Bouck	Scrap the gondola and put in a light rail route, out of sight in the bottom of the canyon, where the old RR track went up to Alta.
31614	Brian Bouck	Scrap the gondola and put in a light rail route, out of sight in the bottom of the canyon, where the old RR track went up to Alta.
31615	Hadlock Colette	I believe that the gondola should be in operation year round, not just for ski season. Hiker/backpackers, picnickers, concertgoers, bicyclists would be using it all the other 3 seasons & it would alleviate crowds on the roads making the road safer for those left that didn't use the gondola. Safer for joggers, bicyclists, motorcyclists. In the event of rock & snow slide closures the gondola can alleviate backups & stranded incidents.
31616	Jeff Alton	My concern with a toll is, what about disabled veterans? I already live on VA disability and with inflation the cost of everything has increased especially gas prices. So if a toll is supposed to lessen the impact of how many people use the canyon I would assume that the rising cost of everything had already done so. Please consider giving Veterans like me a break by incorporating a Free toll pass into the Utah State Park pass which I already qualify for. The irony with being disabled I've only used that pass a handful of times and I've had it almost 6 months. Please don't make those of us who served our Country pay more when we already can't afford basic goods and services. If you don't want to make it Free than please consider subsidizing the toll based on the Disabled Veterans disability percentage similar to property taxes or DMV vehicle registration tags. Now I have provided two separate alternatives. Thanks for your consideration!
31617	Jack Greenberg	Starting with a taxpayer subsidized gondola with very expensive ride tickets is not the right next step for the canyon. Keep the canyon accessible and affordable by adding tolls and improving bus service. If that truly doesn't work, then explore the gondola, but don't spend hundreds of millions of dollars when we haven't yet tried this easier solution that will be cheaper for taxpayers, cheaper for outdoors enthusiasts, and is less environmentally damaging. You're just giving in to the corporations and not acting in the best interests of the local community.
31618	Miki Karg	The proposed gondola is NOT the solution! I have not seen any information on what the fee for a gondola ride will be, but consider the cost for a couple or a family with children - it would be much too expensive. In reality, who do you think is going to ride the gondola? The logistics of getting yourself to the gondola station after boarding a bus or loading your car with all of your gear, riding or driving to the station, dragging all of your equipment from the bus or your car to the gondola, then from the gondola to a place at the resort where you can gear up and find someplace to leave other belongings (lunch, extra clothes, etc.) is a hassle! Also, the length of time it takes to get to the resorts that are benefitting is too long. Even sending up to 2500 cars up the 2 roads will create such a traffic backlog. Please try other options of road tolling and increased bus service before you spend an exorbitant amount of money on an option that will destroy the beauty of the canyon, benefit only the ski areas, be used only part of the year, and will likely have low ridership.
31619	Glynn Donahue	No tolls on Fridays & Sundays! Those are the only days I can ski & they're cutting the frequency & number of bus runs! This & the gondola boondoggle are moves to greater mine the pockets of tourists at the expense of locals! Making my choice to ultimately leave SLC & retire in SandPoint ID or Ogden that much easier!
31620	Karen Meredith	I am not in favor of the Gondola Proposal for Little Cottonwood Canyon. It makes as much sense as the tunnel I have recently heard of. A lot of talk has been about getting more and more people up the canyon to the resorts. I feel skiing at Snowbird and Alta is very unsafe because of the number of people on the slopes now--more people will make the skiing experience even less desirable. There are several options: snow sheds, tolls to enter the canyon, more UTA Busses and possible a reverse lane for the buss and car traffic. If the gondola is the only option, then Snowbird and Alta should pay for it. Tax payer's funds should not be used to benefit the few and elite. However, I also think whatever is done to Little Cottonwood Canyon needs to be done for Big Cottonwood Canyon. Solitude and Brighton are not as big as Snowbird and Alta, but are dealing with the same problems. This is evident when Little Cottonwood Canyon is closed. Please truly consider other options. On another point, why was the ski bus service cut for both canyons this year?
31621	Michael Nordstrom	The proposed toll is like a cigarette tax. It depresses use but how will the toll money be utilized. Alta charges \$10 for entry to Albion basin. That will be a large cost to go to cecret lake. The bus is a better way. I like the gondola idea too, but that is future. There were hundreds of car on the big cottonwood canyon road today Saturday. Still no problem getting up there and parking.
31622	Debi Hunt	The majority of Salt Lake County residents do not ski. They really utilize the canyon and there fore will not benefit from the costly gondola. Why should residents pay for something that will benefit the skiers and the skiing industry? What will we benefit from this costly project?

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31623	Ashley Lodmell	It seems oddly ironic that a few weeks after the preferred alternative is announced to be a gondola, UTA cuts transit routes to ski areas for the 2022-2023 winter. How much money much money has UDOT wasted on finding a complicated solution to serve ski resorts instead of making the ski resorts do something to fix the problem? Solitude started charging for parking at a tiered level which has increased number of people in cars. Solitude also changed their hours to open at 8am last season to help space out traffic with Brighton. These are multimillion dollar resorts that should be able to figure out how to solve their own transportation issues themselves and support UTA to do what it does best. Buses and single occupancy restrictions can fix the traffic and be more equitable. Bus routes should extend throughout the Salt Lake Valley to reduce the need for big parking lots at the base of the canyon. A gondola will not solve the problem, especially if Big Cottonwood is not considered. Don't let Little cottonwood canyon look like Moab with a rusty unused gondola ruining the landscape.
31624	Michael Newman	Yeah electric buses are the way to go. Why spend so much money to accommodate traffic for a lot of high socioeconomic status people for a few days each year. Seems like there are a lot better ways to use those resources.
31625	Byron Noel	The gondola is a WASTE of taxpayer dollars. No no no gondola
31626	Chelsea Orton	This is an absolute misuse of tax payer money. The gondola will only help a select few and won't improve traffic. It will also change the canyon in negative ways.
31627	Maggie Liebergesell	So many common sense reasons NOT to put in a gondola. 1. The people of Salt Lake City and Salt Lake County can't afford more taxes with inflation the way it is. 2. This is our watershed. 3. This a very limited use for 2 ski resorts and only people who ski. 4. There are only about 20 days where traffic is a problem. Put in more buses and make people park and bus. Why did you cancel the two buses for the winter? idiotic move or just stacking the deck? Use hydrogen buses and base the fueling station on the 5 acres snowbird bought. Highways have always been cleared of snow in a timely manner. Suddenly it's a problem? NO. And who is profiting from all of this? Not the people of Utah. Completely opposed to the gondola.
31628	Lori Labrum	This is a ridiculous waste of money.
31629	Leslie Andersen	Please don't add such a large toll for access to the canyons. That will price some of us out of using the hiking trails. And if we need to use the parking at the resorts we'll be double charged. Think about how you're impacting regular people! These are public lands and should be accessible to the public. I'll gladly pay a small fee for use of a shuttle if it stops at the trailhead I want to use. But \$20 is just greedy and unfair.
31630	Larry Argyle	I paid taxes for the roads in these canyons. I shouldn't have to pay again! Only the poorer people will be prohibited from seeing the beauty of these places. What a pity this state only cares about those who can afford it!
31631	Robert Janzen	I oppose the gondola. I oppose any use of taxpayer money to fund the gondola. UDOT should pursue widening of the road up Little Cottonwood.
31632	Kirk Cannon	Great solution to the horrible smog in the valley. Love it
31633	Toni McKinnon	I am against the gondola. It is ridiculous to spend money on a gondola when there are better options. Taxpayers should not fund a gondola that only benefits 2 businesses. There are many roads in our state that need repairs and upgrading. They are more important than a gondola that has a limited benefit for select people and a monetary value for two former corrupt politicians and two ski resorts.
31634	Kody Bertoldi	Do not put a big ugly gondola in that canyon. All the land its going to ruin for each supporting tower you have to build along it's destination. It's way expensive. I don't want to be trapped in a cube box up in the sky full with of other people. There's no parking for a thing like this. Just widen the road an extra lane and do the busses
31635	James Westphal	<p>Europe has found many solutions to AVY roads. Installing a gondola that only runs to 2 areas. Excessive parking & lines for the gondola doesn't seem to be the solution. If you want to reduce traffic; create AVY safe road coverings. 100% restrict anything besides busses in the canyon except for people that live up there. Make Snowbird & Alta run busses of their own that are fully equipped to handle the conditions. This will require a large parking structure.</p> <p>Don't allow the resorts to allow parking of any type and only allow paid parking or resort guests to park up there. Make them run busses of their own. Have UTA fill in the gaps between ski season.</p> <p>This is a 15 day problem a year. The gondola is a money grab for local tax payers, these tax payers will not just be able to drive up the canyon while the "tourists" take the gondola.</p> <p>What is the benefit of this? Pay taxes for a Gondola that will take hours to get up, pay extra taxes for it, pay for parking along with the season pass... then still have the "LOCALS, EMPLOYEES, GUESTS, SEASON PASS HOLDERS" still trying to get up the canyon with the same results???</p>
31636	James Westphal	<p>Europe has found many solutions to AVY roads. Installing a gondola that only runs to 2 areas. Excessive parking & lines for the gondola doesn't seem to be the solution. If you want to reduce traffic; create AVY safe road coverings. 100% restrict anything besides busses in the canyon except for people that live up there. Make Snowbird & Alta run busses of their own that are fully equipped to handle the conditions. This will require a large parking structure.</p> <p>Don't allow the resorts to allow parking of any type and only allow paid parking or resort guests to park up there. Make them run busses of their own. Have UTA fill in the gaps between ski season.</p> <p>This is a 15 day problem a year. The gondola is a money grab for local tax payers, these tax payers will not just be able to drive up the canyon while the "tourists" take the gondola.</p> <p>What is the benefit of this? Pay taxes for a Gondola that will take hours to get up, pay extra taxes for it, pay for parking along with the season pass... then still have the "LOCALS, EMPLOYEES, GUESTS, SEASON PASS HOLDERS" still trying to get up the canyon with the same results???</p>
31637	Jeffery Scott	World class climbing areas will be ruined and in the name of more technology and growing destruction of natural areas. Once it is gone it is gone forever. Please don't do this. It isn't necessary at all. Leave it natural.
31638	Carol Bee	The proposed toll prices are exorbitant, and they will prohibit many people from accessing the canyons. Why not issue a small fee for parking at the ski resorts and establish a parking reservation system in the winter. And provide more buses, especially for Little Cottonwood Canyon. We are in a recession, so don't get so greedy.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31639	Carol Bee	I am totally opposed to a gondola system being installed in Little Cottonwood Canyon. The initial cost, yearly maintenance cost, plus the estimated price of a ride are all too much. We are in a recession, which is expected to get worse, perhaps even a depression, so now is not the right time to spend kind of money. A better use of the money might be in securing our schools.
31644	Sven Solvik	I am writing to express my strenuous objection to putting gondolas in Little Cottonwood canyon. This solution has much too great an environmental impact and benefits 2 ski area and developers rather than providing a transportation solution assisting the greatest number of people visiting the canyon. A bus alternative would assist in reducing canyon congestion year round (not just winter) as ND would result in less environmental degradation. Please do not pursue the gondola option - it is opposed by a significant majority of Utahns!
31645	Pamela Grubaugh-Littig	I do not support the Gondola alternative. Once the environment is changed by the construction of the gondola (which is a public funded project for the rich), then the natural beauty is changed forever. There are bus alternatives, even hybrid buses to handle many skiers Is the ski economy the sole interest of this area? Please do not select the gondola alternative!
31646	Ben Bayat	Before deciding on a long term project like the gondola, we should first try a few seasons with other ideas like expanded bus, toll, and other incentives to manage canyon traffic
31647	Audrey Pines	Listen to UDOT representative admit the canyon appearance will dramatically change due to Gondola.. He means it will be destroyed of natural beauty. The EIS is untrue and biased. just the fact the canyon will be forever altered of natural beauty, accessibility for wild life is a NO as far as the EIS findings. UDOT will still have to build the bus system so in the end, we will have destroyed the beautiful view for a lagoon ride. The Gondola has to stop in heavy winds and storms and for avalanche or avalanche safety Gondola is a 55 minute ride, longest in the world, will have to provide seats for all riders, exactly how many can ride at a time?? 90 % of Utahns do NOT want the Gondola but UDOT doesn't care! WHY? They are going to fund it with private funding, who is paying for the Gondola? Who is benefitting? UDOT has admitted it doesn't matter to them that Utah citizens do not want the gondola! Shame on UDOT
31648	Tyler Kroll	I respectfully oppose and disagree with UDOT's recommendation to build a gondola in Little Cottonwood Canyon. LCC is a special canyon in that it is a natural oasis that's located very close to a city. LCC offers Utahns the ability to be in suburbia one minute, then out in the beauty of the mountains fifteen minutes later. If a gondola is built, the ability to "escape" SLC and the surrounding area will be severely diminished. We'll lose the quietness and solitude currently accessible from the city. We'll lose rock climbs because of the construction. We'll lose the lovely fall photos--they'll be tarnished by the presence of the gondola. We'll lose the cleanliness of the canyon--with so many people visiting (tourists and locals alike), I've seen no elements of the plan that address keeping the canyon clean in the face of increased usage. The ski resorts are already at capacity. Traffic is bad, yes, but we don't need more people in LCC. I'm not in support of my tax dollars paying for such a project. If the ski resorts want this, they can pay for it themselves. Ultimately, it is my belief that the canyon is not a renewable resource. It is finite, and needs to be treated as such. I'm an avid outdoorsman, and would be perfectly happy if there were some days that I couldn't use the canyon. If that would help maintain it's natural beauty, it would be worth it.
31649	Nate Moon	I agree with the adding a toll for Canyon ski resort usage. I lived in Singapore for five years. It is arguably the best run country on earth. They provide frequent, reliable and affordable public transit for all citizens. They consider driving a vehicle a luxury. As such, all surface streets into the central business district are tolled. This controls traffic and reduces air pollution. LCC and BCC are a perfect scenario where this model would work for Utah. I agree with phase 1 of the current EIS proposal... provide increased bus service with the toll to the resorts. I would suggest there is always a toll, but for a lower rate on low peak days and times. On and off tolls will not likely change behaviors in the same way. I also agree with adding a toll to BCC at the same time. I am an avid skier with a season pass to Snowbird. I love and use LCC year round. I realize there is a negative externality of my use. That is why I strongly favor the toll approach. If the toll is too expensive, I have the bus option. I would suggest bus parking is free. I would also strongly suggest all the toll money goes to manage and maintain the Canyons not the ski resorts. I do not support the gondola. It feels like 1) a lot of tax money just just to benefit the ski resorts and 2) political graft for certain State legislators, and 3) a negative impact to the canyon environment. A gondola of this length has never been done. It is very risky use of taxpayer funds. Let's make the canyon affordable and accessible to all through public transportation while charging a toll for those that insist on driving their car. All toll proceeds pay for the care and maintenance of our canyons, not ski resorts. We don't need an expensive and unsightly gondola to do this.
31650	Alex Deseelhorst	I'm glad we're taking the congestion and pollution issues in our cantons seriously. This seems like a logical solution. The toll seems expensive but necessary. Can't wait to see the gondola in action
31651	Suzanne Zraggen	While the gondola looks nice, I do not think it is worth it in terms of dollars spent or the impact of the towers in the canyon. Little Cottonwood has such lovely views because it was glacier-carved, and building the gondola would ruin it.
31652	Rebecca Marshall	20-30 per car is a ridiculous toll. That is so expensive it would make the activities done up there like hiking no longer cost effective. Please don't do this!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31658	Thomas Brown	Taxpayers should not pay for the gondola that benefits only a few.
31659	Rick Austin	Our family has lived off of 9 [REDACTED] for 39 years. The beauty of the canyon is seen out my windows. To install a tram system would forever take that natural beauty away. I firmly believe that another option should be approved. Where is funding for such a project? The tram option is only being considered for a small group of skiers not the majority who do not ski. Don't put in a tram. Please
31661	Michael Edwards	Why spend billions of dollars on a gondola to make the problem worse? Put in a toll booth, make money, and SOLVE the problem.
31666	Eileen Barry	I am against having a gondola system in Little Cottonwood Canyon. Don't use taxpayers money to benefit the few. Don't let the ski resorts ruin the beauty of the canyon. Don't build a transportation system that will be too pricey for most people. There are other better options.
31671	Brennon Peterson	Dear those relevant to the subject, The fact that the gondola is still a proposal after all the public pushback is unfathomable. The people of Salt Lake City do not want this, and it is clear. The beneficiaries from the construction of a gondola are two large corporations, Snowbird and Alta. With the funding reaching nearly a billion dollars, how can one think it is worth it? Not only would it hurt the ecosystem and recreation of the canyon, but it would hurt it's intended goal: less canyon traffic. Gondola users being required to drive to the parking lot would make the traffic on surrounding roads even worse. Rather than having such a narrow minded approach to traffic, and seeking to benefit only 2 private companies, why not invest into better public transport? Not only would it take less money, but it would be a more efficient solution and make the public MUCH more satisfied. No locals, or the bulk of surrounding cities want to see the eye sore a gondola would create. The world class hiking, climbing, and mountain biking would be hindered. It's important to recognize that little cottonwood is a place for people of all interests, not just skiing a few months out of the year. Please, for the extreme majority of Utahns, reconsider the construction of a gondola. It would have an enormous negative impact.
31672	Robert Sharp	Save the taxpayers money, limit the number of people in the canyon
31674	Catherine Schroerlucke	Please build a gondola or tram.
31673	Randall Schroerlucke	Build the gondola, and do a better job of keeping the canyon open.
31675	Taylor Cone	This Tax will be levied on 100% of the people. It will only benefit skiers and those who pay more. A more economical solution would be a timed entry in addition to the buses. This is to solve a problem that affects 30% of the population on powder days on Saturday's. Please use our taxes on brighter lines on the freeways and other services which help all and not 2 private businesses, 30% of the population, and those who bought up the land for the parking lots. If it's so good for the ski resorts, have them pay for it. Please delay or reconsider the solution. It's not the right time.
31943	John Ackerman	Dear Sirs, I am a Snowbird skier that skis at least 150 days a season.I ride the bus everyday that it is in operation. On the few days that it takes an hour or more to get the two miles from my bus stop to Wasatch it's not fun. As soon as the traffic merges at the mouth of the canyon,traffic flows pretty well.That is why I don't understand why anyone would think that a parking garage and gondola at the mouth of the canyon would help.There would still be a traffic jam from the north and the south.So spending \$600 million dollars or more for a gondola that doesn't solve the traffic problem seems crazy. I feel the best way to help is to add more snow plows and charge a toll using ez passes.A toll would encourage the use of buses.There should be increased bus service in the morning and the afternoon from both the north and south.I don't feel that widening the road would even be necessary. It seems to me that there would be only a small group of people that would benefit from the gondola. That would be Snowbird,Alta,the construction company building it and of course the politicians that these companies have in their pockets. Wouldn't 600 million to one billion dollars be better spent on I 15,215,and I 80? Although there is a lot of construction on those highways,there is still a lot of traffic on them year round.When there is only 10 to 15 days a year when Little Cottonwood has a problem. Listen to a person that goes up and down the canyon everyday of the ski season. Thanks, John Ackerman
31676	James Elder	The gondola option is too limited in what it will do and not flexible going forward as a long term solution. I am not in favor of this concept.
31677	Sandra Walters	I am opposed to the "world's longest gondola" in this sensitive area. Public opinion should be given maximum priority in this decision, and for-profit uses should be at the bottom of the list.
31678	Korban Lee	Please strongly consider the Gondola as a viable transportation option for Little Cottonwood Canyon. It is time we started moving away from the automobile as the sole source of transportation and considered other transportation models as viable options. Gondolas in mountain environments make for good sustainable transportation.
31679	K O	This is the stupidest idea ever. Why lay off 50% of ski bus drivers and then build a multi million gondola when you can ban cars and just get more ski busses going up the mountains?? There's your solution for pollution, traffic, and more local jobs for bus drivers!! You wont pay ski bus drivers a livable wage but you'll build a multi million dollar gondola? Y'all are seriously so disconnected from reality and what the people in this city need. Your stupidity amazes me. Use that money to give locals a livable wage and start giving an f about the air quality here. BAN CARS UP THE CANYON. [REDACTED] THE GONDOLA. SKI BUS IS THE ANSWER.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31680	Ellen Mitchell	I truly believe that a gondola system is WRONG for this canyon. There are so many other options that would be feasible and less expensive and destructive. You all know this to be true, so why pick this one?
31681	Shane Johnson	As a native to Utah of 47 years, I am troubled by many things. This has go to be the worst idea! I lived at the base of little Cottonwood for the majority of my life and have spent many days and nights in the canyon. It is over used, over developed and doesn't need additional development. Leave the canyon alone, it is not ours to destroy. If we need to add restrictions to the canyon, I would much rather do that. I would even support a fee system like Millcreek or American Fork. Please please please don't build more with our tax dollars to encourage more use of the canyon. Let it flourish and heal. Please be good stewards of our tax dollars that you are entrusted with.
31682	Sophie Penner	You don't understand that the gondola will ruin the experience of Little Cottonwood Canyon for generations to come. Not only does it only allow access to the ski resorts, but it is bringing thousands more people to already overcrowded resorts. An improved bus system would be better because we already have a bus system in place that requires some rearranging for more busses. Tolling or not allowing single occupancy vehicles could also help improve the situation by getting more snow sport enjoyers up the canyon through carpooling. One of the beauties of Little Cottonwood Canyon is that you can drive up to Alta and Snowbird and feel far away from the rest of modern civilization, the gondola would tear apart that feeling and even more importantly destroy the beautiful view down the canyon enjoyed by every single person who has ever been up LCC. Please think about how the gondola would impact the next generation of skiers and riders because that is who will have to deal with it. This should not be about making the biggest tourist attraction possible, but preserving the snow and the beauty of the sports it promotes.
31683	Kelly Boardman	Please NO gondola. It just doesn't make sense. We need sustainable integrated transportation solutions that include BCC and Wasatch Blvd. I live on [redacted] and work in Millcreek, BCC and LCC. We need to capture ski traffic at the gravel pit and get people on buses. Having people drive to a gondola loading station on Wasatch will make the area congeosnd take away from the aesthetics of Cottonwood Heights. BCC has gotten really congested over the past few seasons and the gondola does nothing to address this while destroying the beauty of LCC. The gondola is also resort centric and should not be paid for with tax payer dollars.
31684	Parker Izatt	I am NOT in favor of the proposed plan to build a gondola. I think it will negatively impact the environment, the visual ascetics, and the climbing throughout the canyon. There must be a way to improve traffic conditions that will be more economic and cohesive with the environment that doesn't only benefit a select group of people.
31685	Jonna Young	What will it cost to ride the gondola? This might make it too costly on top of lift pass.
31686	Mati Chessin	Frankly, I think building the world's longest gondola for Little Cottonwood Canyon is a dumb idea. This winter, UTA has canceled the 953 bus route which will force more people into single-occupancy vehicles, likely make the traffic in the canyon the worst we've ever seen. If instead of putting all this time and energy (and a ridiculous amount of money) into a gondola, those resources could go to hiring more bus drivers, making a real impact immediately. By the time the gondola gets built (if it ever does), the winters might be too warm and short to even justify its existence.
31687	Rich Bergan	I support the gondola plan. It makes better sense than widening the road, tolls dozens of noisy, smelly, and crowded busses. I have visited the Alpine areas in Europe and fully enjoyed the gondola trips. Like many people I am unable to hike or purchase special gear to enjoy our beautiful canyons. Gondola is the only many people can see the beauty and enjoy winter sports without pollution and noise.
31688	Ruth Hawe	I believe that the gondola is a misguided and less satisfactory solution for transportation in Little (and Big) Cottonwood Canyons. The gondola would be a two-stop transit straight to ski resorts, not for all the other uses within the canyons. Further, this only addresses Little Cottonwood's issues, and ignores the fact that Big Cottonwood also has issues. The taxpayers would, whether through Federal grants, state tax dollars, or otherwise, be required to provide two lucrative ski resorts with a huge hand-out of corporate welfare - providing them with additional sources of revenue. Some of the other alternatives considered, including increased bus transportation and tolling, provide much more flexibility in adjusting the levels of necessary transportation, whether winter or summer ebbs and flows, increased or decreased usage, and regardless of at what point in time climate change makes skiing infeasible in Utah. As is often the case in transportation decisions, it seems this selection was made to maximize the number of people accessing resources during limited periods of time, to the exclusion of determining how to better manage and regulate the number of people who can (and who should) be availing themselves of the natural resources provided in these canyons. I STRONGLY urge the reconsideration of the gondola as the preferred alternative.
31689	Micki Harris	<p>There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws.</p> <p>We have seen parking reservations work throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon.</p> <p>As Salt Lake County Mayor Jenny Wilson said, these are "common-sense solutions that are fiscally sound."</p> <p>We should give them a real shot.</p>
31690	Chad Ambrose	I continue to be saddened by the decision made by UDOT to pursue the Gondola option. For decades, we locals have faced a handful of years when the roads are grid lock due to large storms causing challenging conditions in Little Cottonwood. This has not changed. What has changed is the volume of people wanting to access Alta and Snowbird. I believe and increase in busses, an entry gate limiting the number of vehicles up the canyon is the answer. Not simply adding to the people volume through the use of an aerial gondola. Restrict canyon access, say no to the capitalists demanding more revenue (Alta and Snowbird). A simple app could be created and regular canyon volumes monitored so people can plan trips. Busses take priority and make em electric too where possible. The Wasatch Mountains have given us valley folks life from the beginning and now with this Gondola option UDOT is telling mountains, "thanks but we want more from you." Stop the greed and start the gratitude and restrict canyon access! Please! Sincerely, Chad Ambrose

ID	Full Name	Comment
31691	Cheryl Hunter	Instead of a toll, just call it what it is. A fee for the elite and a way to keep the poor out of the canyon. Seriously how can none of you see how elitist this is?? This is disgusting. It's a popular place because it's beautiful. Placing a toll will definitely limit the drivers accessing the canyon by taking away the ability for many to access these public lands. You can put in public transportation options or whatever but those still won't be free. Nor will they be as timely and hassle free as driving yourself and they will still be limiting access of individuals of lower socioeconomic statuses. Maybe I'm crazy but I believe that environmental impact reduction shouldn't be classist. Find a better way out start calling this what it is a way for the elite to have sole access to public lands without the poor causing traffic for them.
31692	Dyan Johnson	I do not believe the gondola is the right choice for Utah. We should try cheaper alternatives before we build an expensive gondola. I wish they would try tolls, buses, etc. before going to such extreme measures. I am a life long skier, and although I don't like waiting in gridlock traffic on powder days, the gondola is not worth building.
31693	Sheri Gibb	Once again, skiing is only for the rich, and now canyon access is only for the rich as well. I appose the gondolas!
31694	Anne Holman	Putting a gondola in LCC is a joke. Please take a longer view of what's good for our community.
31695	Tim Skoglund	Could the skiing day be extended by morning and evening lighting? An extended day might spread the road usage over greater time.
31696	Natalie Hunter	Do buses and tolls instead of the gondola. The tax payers don't want it
31697	Mike Risley	The Gondola is a terrible idea. Why are we spending millions to reduce congestion to get to a recreational sport. Spend the money on people who need it, not some boondoggle for the affluent.
31698	Kevin Dolan	I and my wife strongly oppose the gondola solution choice for LCC. I am a senior citizen and longtime resident of the Sandy/Cottonwood hts. area as well as an avid hiker, skier, and biker. I want to regulate the number of visitors to LCC throughout the year, but want to explore many other options before taking the plunge for a gondola for these reasons: 1. I don't want to saddle Utah taxpayers with the huge burden of paying for the gondola. The ski resorts should be shouldering the bulk of the cost. 2. I don't want to see giant gondola towers spoiling the LCC view and environment. 3. I encourage requiring a reasonable daily fee or local resident pass to use the canyon, similar to Mill creek canyon. 4. I strongly encourage improving bus service (electric if possible) to relieve the pressure of excessive numbers of vehicles.
31699	Edie Pike	I and many of my friends are totally in favor of a gondola up to Snowbird and Alta. Although it is expensive at the begin it will save all of us in the long run. Gas and electric cars impact our environment much more than a gondola. Europe has many that go to ski areas with much success. Europe does not want many cars polluting their pristine landscapes. We could be a head of our times with clean air and keeping the pollution down. I love our canyons and hope that your committee will vote favorable for the gondola to lesson our pollution and save our canyons. Should you need additional input, please contact me and I will contact my friends..
31700	Mario Moreno	Dear UDOT, if you go ahead with the Gondola project. I believe that the funds to build it should come from those who would benefit from using it and profit from it. Those of us who will never use it should Not pay for it. Thank you.
31701	Mandi Christensen	This gondola is NOT the solution!!! I am not sure why on God's earth it's even being considered when 80% of citizens DO NOT AGREE WITH IT!!!
31944	Edie Pike	Sorry for some sentence structure and clarity issues. Begin should read beginning. Europe has many gondolas to their ski areas. a head should read ahead. thank you. I type too fast sometimes and forget the grammatical errors. Edie Pike
31704	Mandi Christensen	A Gondola is NOT THE ANSWER! It floors me and makes me wonder what is going on that it's still even being considered since 80% of the population DO NOT APPROVE OR WANT IT!!!!
31703	Mandi Christensen	A Gondola is NOT THE ANSWER! It floors me and makes me wonder what is going on that it's still even being considered since 80% of the population DO NOT APPROVE OR WANT IT!!!!
31702	Mandi Christensen	A Gondola is NOT THE ANSWER! It floors me and makes me wonder what is going on that it's still even being considered since 80% of the population DO NOT APPROVE OR WANT IT!!!!
31705	William Prince	I have a list of concerns: 1. After serious efforts to preserve Little Cottonwood during the 2002 Olympics, the Gondola project appears to ignore those efforts by placing 40 poles 15 feet in diameter and stringing large cables down the middle of the canyon. The visibility degradation alone should cause concern and a reconsideration of what Utah wants to preserve along the Wasatch front . 2. It is unclear what the price of will be to ride the gondola. It could easily be prohibitive for locals to use the service, which will upset the cost and ridership analyses for the project and render the gondola valuable only to wealthy visitors. 3. The cost of the project should not be borne solely by the public and should be shared by the two ski resorts benefiting from the project. It is unclear whether the alleged benefits to the public balance out against the overall cost to the public. Additionally, the overall cost of the project may be far in excess of the projected \$550M price tag, particularly in an era of rising inflation. 4. If approved, the project should be conditioned on Alta and Snowbird making major improvements to their parking areas, without passing the majority of their costs along to the user public. 5. The failure of the project to serve only two ski areas and to omit any service for ancillary canyon uses such as climbing and back country skiing is a major weakness. This weakness is magnified by the plan to only use a \$550M transportation system only 50 days out of the year. An accurate cost/benefit analysis would likely doom the project. 6. The proven global warming impacts upon weather patterns suggests that there is a high possibility winter sports like skiing will be heavily impacted. The beauty of the bus alternative allows for readjustments based on long term weather changes. A gondola would not provide that option.
31706	Jane Leaphart	An electric train is so much faster at moving people and environmenally friendly. NO to the gondola for environmental impacts, slow awkward travel with ski/board gear, and inefficient in moving lots of people. Expand the TRAX to accomplish this goal. Europe manages to do it by train, not gondolas! Be reasonable!
31707	Traci Salisbury	NO GONDOLA

ID	Full Name	Comment
31708	Darin Vandecar	<p>Less than 1% of SL County residents frequent LCC Resorts. Why should anyone other than the resorts cover these costs? Tax payers should not be forced to help fund the profits of these resorts. Why do we always have to bow to the wishes of developers with deep pockets even when it goes against what is best for us and the environment? Seems like Snowbird and Geneva Steel decide what's best for Sandy and Draper. So sad. Of course I know this comment will never be read by anyone in a decision making position so the whole comment process is a sham. Prove me wrong by responding!</p>
31945	Margaret Bourke	<p>October 10, 2022</p> <p>Josh Van Jura, EIS Project Manager Executive Director Carlos Braceras C/O HDR via Email: LittleCottonwoodEIS@utah.gov Utah Department of Transportation 2825 E. Cottonwood Parkway, Suite 200 Cottonwood Heights, UT 84121</p> <p>RE: Comment on Final EIS for Little Cottonwood Canyon of August 31, 2022</p> <p>Dear Messieurs Van Jura and Braceras,</p> <p>Thank you for the opportunity to comment on the Final Environmental Impact Statement (FEIS) prepared by Utah Department of Transportation (UDOT) in August 2022. Thank you for allowing the public to comment now that UDOT has reached a primary preferred alternative. I hope that following these comments, any changes to the FEIS will also be subject to public review and comment prior to a Record of Decision being made, although that step is not currently in the timeline on the UDOT website for this area.</p> <p>Information for the team to consider is included in this, my comment, before a final decision is reached. I share my thoughts on the selected preferred alternative, environmental impacts and other transportation performance considerations contained in the FEIS. My comments, like all others, will be a matter of public record, subject to public release. However, please remove my street, phone number and email addresses from the formal public release, whether on the project website, or otherwise, absent written permission from me, ahead of any such release.</p> <p>My comments relate to inconsistencies, analysis, diversity, inclusion and equity which do not appear to be adequately considered in either the Draft Environmental Impact Statement (DEIS) nor the FEIS.</p> <p>The FEIS includes several new Key Observation Points (KOP) which were not present in the DEIS. These new depictions are for residential areas at the mouth of the canyon. Apparently this recognizes residential areas deserve special attention for impacts from the proposals. Despite Alta being a town with a residential community, as well as the situs of a ski resort, UDOT still fails to provide any KOP's in Alta depicting the towers or cables over those residences, nor the change to the iconic image of the sun setting down canyon, through the corridor in which LCC traverses. The gondola towers and gondola</p>
31711	Joan Degiorgio	<p>Dear UDOT Team,</p> <p>I am writing in opposition to the preferred alternative. As a Utah native who has recreated for decades in Little Cottonwood Canyon I have seen the increase in visitation and agree with the need of addressing the ever increasing use. However, I think the preferred alternative is a VERY EXPENSIVE, LIMITED ,NON-SOLUTION to these problems. As many others at the highest levels have pointed out - this is a VERY expensive project that will benefit two private businesses and some of their guests at the expense of the irreplaceable scenic beauty of Little Cottonwood Canyon.</p> <p>A better long-term solution is demand management where the focus is on parking management, multi-passenger vehicle incentives, traction device requirements, regionally placed mobility hubs, carpooling, tolling etc.</p> <p>What is particularly disturbing with the choice of this alternative is that it would add increasingly more people before we have a capacity/visitor analysis. UDOT has no idea about biological thresholds where adding more people crosses a line that impacts water quality and watershed health. Let's wait until we have that level of information before making decisions where there is no going back. Plenty of projects to implement that will address the issue, benefit more users, over a longer time with fewer impacts.</p> <p>Thank you for the opportunity to comment.</p>
31712	Stan Christensen	<ol style="list-style-type: none"> 1. The scope of the EIS did not include the surrounding canyons or the impacts on 940S which makes no sense due to the need to plan regionally rather than canyon by canyon. 2. The cost: Cost of alternatives (in addition to road) were not considered, and the total cost for some reason has stayed static despite a huge increase in construction costs and other inflationary costs. 3. Electric buses were not considered. 4. Maintenance costs were not considered as they relate to environmental impacts. 5. Earthquake risk not addressed adequately. 6. Issues related to the superfund site glossed over. 7. The fact that future skier days are projected to go down over the next 20 years by multiple sources including US Ski Association not considered. 8. Environmental impacts of phased approach not considered and compared with gondola option. 9. Environmental impact of gondola on other recreation uses not addressed. 10. Capital and operational cost of satellite parking not addressed or considered in terms of environmental impact. 11. Watershed impacts not addressed adequately. I spoke with the Forest Service about this and they did almost no analysis.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31713	Robert Macfarlane	<p>I believe the EIS for Little Cottonwood Canyon is incomplete in ways that bias it towards the gondola alternative.</p> <p>The study fails to adjust for climate change and the reduction of snowfall in coming decades and how that will lessen avalanche risk and closures in the future. The study fails to determine a carrying capacity for LCC. LCC and BCC are far smaller than Zion NP and yet have higher visitation annually while Zion acknowledges the negative environmental impacts of the hordes of people. The increased visitation impacts the environment and that is not in the EIS.</p> <p>Further the EIS was insufficient in scope. It didn't take Big Cottonwood Canyon, impacts from 9400 South, Parleys or the Wasatch Back into account--the surrounding canyons and roads need to be looked at in their entirety. The Watershed impacts were not sufficiently studied or considered.</p> <p>Alternatives were not presented or explored sufficiently, what about increasing bus service in coming years while awaiting funding. Also electric buses will be best available tech and they were not analyzed and they will have superior emissions and lifecycle costs.</p> <p>Current traffic patterns were not systematically or rigorously analyzed.</p> <p>Cost estimates of the gondola were not rigorously analyzed and have not be adjusted upwardly for inflation nor loaded with typical contingency increases that plague all mega projects.</p>
31714	Stuart Young	<p>I oppose the gondola poroposal. Suggest going with other alternatives such as expanding the road and increased bus service.</p>
31715	Mary Lou Hamill	<p>The proposed gondola for LCC is not in best interests of the vast majority of Utahns, benefiting a few individuals. Since it will only service 2 privately owned resorts, it is beyond the pale that the citizens of Utah will have to pay for this travesty. The gondola will not solve the traffic issues but will only move the congestion to the roads accessing the gondola parking structures. My friends live adjacent to La Caille and have stated, repeatedly, that the traffic to LCC is only problematic 5-10 days per winter season. Why are we planning to spend > \$500 million dollars to address this time limited issue? The gondola will be an eyesore, harmful to birds and does not belong in a fairly undeveloped canyon. If UDOT choses to spend this money on LCC, why should UDOT not build a gondola for BCC or Park City? Is it not discriminatory that the State of Utah is spending so much of the tax payers money on 2 ski resorts when there are many others in the state who are contributing to the Utah economy? If Snowbird and Alta want a gondola to improve access to their businesses and contribute to the bottom line, why shouldn't they pay for it? This seems to be a political decision designed to benefit a few at the expense of the many.</p> <p>Stop the gondola or at the very least put the proposal to spend >\$500 million of Utah tax payers money on the ballot and let the citizens of Utah decide.</p>
31716	Brennan Wade	<p>The gondola would have a huge negative effect on one of Salt Lake City's biggest economic drivers: dispersed recreation (hiking, climbing, running, backcountry skiing). This is more difficult to quantify than resort skiing, but is a huge factor when people choose to visit and/or relocate to Salt Lake City and is surely the largest economic driver in our local canyons. Please reconsider an alternative to the gondola such as enhanced bussing. This is a treasure that should not be exploited.</p>
31717	Patrick Redington	<p>The gondola is the wrong choice, it is too expensive, only supports Alta and Snowbird, does not support other users of LCC. As described in the July 31, 2022 Salt Lake Tribune article by Peter Dahlberg a tunnel is a much better option. It is much less expensive and can support all users of the canyon. During the winter electric shuttles could be used to move skiers.</p> <p>We taxpayers should not have to pay for a gondola that only benefits two private businesses.</p>
31718	David Smith	<p>NO gondola, as a tax payer, I don't want our money going to support just two ski areas. Widen the road, snow sheds over major avalanche areas.</p>
31719	Nathan Baier	<p>The gondola is a terrible idea. These ski resorts do not care about the environment no matter how much they donate to POW. If they gave a crap, they would drop the corporate ski pass (ikon). That alone would reduce the traffic. I support adding a flex lane, this would allow better flow up and down the canyon with minimal additional impact. The gondola is a terrible idea. These ski areas are greedy. They don't care about anything but profit.</p>
31720	Bryan Luftglass	<p>Do not plan for the gondola. Maximize the benefits of buses by striping the existing road to create a bus-only lane (up mornings, down afternoons) wherever the current road is wide enough and merge the buses into traffic where it isn't. This will allow buses to leapfrog traffic. Also, increase pay and benefits for drivers, and buy more lower- and non-polluting buses. Thank you.</p>
31721	Bryan Luftglass	<p>Do not plan for the gondola. Maximize the benefits of buses by striping the existing road to create a bus-only lane (up mornings, down afternoons) wherever the current road is wide enough and merge the buses into traffic where it isn't. This will allow buses to leapfrog traffic. Also, increase pay and benefits for drivers, and buy more lower- and non-polluting buses. Thank you.</p>
31722	Jonathan Chen	<p>I am firmly against building the Gondola due to the cost vs gains of building the Gondola. I believe that it is far more cost efficient to build more buses and better parking at the base of the mountain than to build a Gondola system that would only help with traffic on weekends only.</p>
31724	Colby Menefee	<p>NO GONDOLA. All of Europe successfully relies on public transportation for a HUGE portion of their mass transit, why can't we figure this out, for a single road? Have none of you made a call to France, Germany, Japan, or literally any country with a successful transpo system? Come on guys. Do the work that we pay you to do.</p>

ID	Full Name	Comment
31723	Shane Ryan	<p>You should be ashamed of yourselves. Thousands of citizens are telling you that they do NOT want a gondola, yet you continue to move forward with this atrocious plan because the resorts are pushing for it. There are so many reasons why this is a bad plan. We do NOT need this in LCC. We need more busses and more parking. And guess what? When the parking and busses are maxed out, that means LCC is maxed out. Despite how much the resorts want to pump people up the canyon and pump their wallets, there is an obvious and undeniable capacity issue. By tolling, adding busses, adding parking, etc. we can help alleviate the problem without going completely nuclear on an absurd "solution" (the gondola). IF, and only if the gondola is ever to pass - the taxpayers should NEVER pay for it. The resorts should pay for it, as they are the only ones that benefit from it. Pretending like it's a taxpayer benefit is ludicrous.</p>
31726	Hailey Karg	<p>The is a very upsetting proposal to the MAJORITY of Utahns, as you can see from all of the comments. Here are just a few of the many reasons the gondola is a TERRIBLE idea:</p> <ol style="list-style-type: none"> 1) expensive to build: this money is coming out of taxpayers pockets. Do you know what we can do with \$550 million-\$1 billion?? Maybe use it to improve education, pay teachers, make the world a better place by educating children properly. That's just 1 idea. Not to mention, the gondola is only benefiting Alta & Snowbird.. why do you think snowbird mischievously purchased an LLC for the gondola? THEY WANT IT. 2) destruction of land to build: how much land are they destroying by building a giant gondola? Tearing down trees. Affecting bird migration. Not to mention it will be a HUGE EYE SORE. If you want to see a gondola, go to Europe! 3) threat to the watershed: through constructing/ operating the gondola, it poses a significant risk to the canyon's watershed. Protect our water sources, water is a basic human need! 4) expense to ride the gondola: it is projected to cost \$50-\$110 to take 1 ride, who can afford that? What about a family of 5? Skiing/ snowboarding is already an elitist sport, ski passes cost > \$1200, gear is expensive etc.- it will only worsen that issue. Can we make skiing more affordable for everyone instead of widening the gap? Hey, we could use some of that \$550 million to allow underprivileged kids learn to ski! ;) 5) The gondola ride time is an hour. An HOUR?? It takes 15 minutes to drive from the mouth of LCC to the resorts. What happens if someone forgets a glove? Take that ride right back down, grab that glove and head up- oh that's 3 hours of your day, you could have gotten 12 laps in already! I have more. <p>But here is a GREAT SOLUTION to the canyon traffic: Build 2 multi-level parking structures from each entrance of the canyon (because the current bus stop lots are WAY too small). Build one near the swamp lot, or the lot at the bottom of LCC, or where the proposed gondola base is to be! Build the other near 9400 S. Then have a FREQUENT BUS OPERATION FROM THE 2 LOTS. If buses run every 10-15 minutes from the lots to the resorts, people will take them. People will take the bus if it is not full when it gets to them, and if it is on time! Running frequently will assure the busses won't get full, and they will remain on time. People were previously deterred from taking buses, if they weren't timely, or out of concern they wouldn't be able to get on. Bus rides take 20 minutes instead of 55 minutes! YAY. On top of the frequent bus operation, there should also be a CANYON TOLL. Just like in other states that toll highways, Utah can charge to enter the canyon. Whatever it costs, it will be MUCH CHEAPER than buying a gondola pass. Locals should be allowed to purchase an annual pass, or highway toll device (like bridges in CA) that automatically charges you. Please please go with a more reasonable solution to canyon traffic like this! There is absolutely NO NEED FOR A GONDOLA. Thanks for reading.</p>
31725	Stephen Judd	<p>I am against ANY new infrastructure being built in the canyons, especially a giant gondola that will undoubtedly be an absolute mess parking at. We should be restricting canyon usage, not catapulting people to the top. There are TOO MANY PEOPLE USING THE CANYONS. Obviously a Gondola isn't going to fix anything, just cause more issues.</p>
31727	Casey Penn	<p>I was a proponent of the the Gondola when I first heard about that option but after seeing that the Gondola only serves Snowbird and Alta and only in the Winter time, I think that is ridiculous.</p> <p>There needs to be other stops up the canyon for access to popular trailheads and the gondola needs to run in the summer time. It is good that UDOT is thinking about running the gondola in the summer but that NEEDS to happen. Why spend all of the money on the project and not utilize the gondola year round? For the Gondola to be a good option, UDOT needs to add other stops on the Gondola Route as well as commit to summer access, even if those other stops are not added at the beginning they need to be planned from the beginning.</p> <p>If the Gondola options stays as is for Snowbird and Alta Access only and only winter access, i think this is a bad option and not the best.</p>
31728	Sarah Stevens	<p>There are other options for transportation to the ski resorts BESIDES the gondola that have a LOWER IMPACT on the canyon and still provide transportation to thousands. Just because there is a cool ski resort at the top of the canyon does not mean we should destroy the bottom of the canyon for people to get there. If you build the gondola you are destroying all of the other activities and nature just for one activity of skiing.</p>

31729	Kevin Rogers	<p>As a life long Utahn, one who is both a climber and a skier, one who has worked at Snowbird for years and dealt with the traffic in LCC, one who is a tax paying citizen with a tax paying business, I have to throw my hat into the ring with those that are adamantly opposed to the gondola. Unlike many of those both for and against, I have read and studied the available information on the table. I know how much it costs to install, operate, and maintain a gondola at a ski resort, one that is privately funded where they are careful about expenditures because they have to be. A state funded, state ran gondola will go comically overbudget. It will cost the taxpayers far more to maintain and operate, it will serve a small amount of people who ski and snowboard, most of which are not locals, but tourists. This gondola will serve private industry the same way oil roads and oil trains that claim to be "public assets" do. The truth is not hard to see and moving forward with this option, especially when so many less costly options are available, will unravel the public trust in UDOT, and in the process that came to this conclusion. This will be the tipping point for a community that has already been sold a prison relocation that was nearly double the stated 550 Million budget, the same community that is now unraveling the back channel dealings of the currently crippled Inland Port. Utah's tax payers will only tolerate so much of this before they make themselves heard. Does UDOT really want to place themselves in the center of that ring? Do they really want to be the poster child for government corruption, when the motives for this decision and the people it benefits are so readily known? I am insulted as a voter, for no other reason than collectively, your actions indicate that you do not believe that Utahns will make themselves heard, or that we have the will to root out the corruption that continues to plague our government spending. It has to stop. Please, do not move forward with the gondola option. It will not be successful, it will only serve as a monument to the erosion of public trust in our government, our "democratic" processes, and our elected officials.</p>
31730	Alysia Watanabe	<p>I am against the transportation option of the gondola because it is a very large expenditure benefitting only well off skiers. Snowbird corporation in particular benefits from this option.</p>
31732	Kyle Cline	<p>I'm not taxes to support a gondola unless snowbird/Alta agree to shoulder 1/2 of the installation and operating costs, as they will benefit most from its operation.</p>
31731	Melissa Dotherightthing	<p>The answer to so many of the new problems put on the west is simple: there are too many people. This sounds great at first to some but there's a lot of great costs associated with more people especially since most of the west isint an environment meant to host large populations of people. You'd think with the evidence of climate change people would recognize this but alas, their selfish desires will destroy the west. To save the west it needs less tourism and less [redacted] ruining it. Those [redacted] are also bad influences in the humble communities who've mostly survived this long based on hard, honest work. Techies, and these people who exploit and capatalize ruthlessly at all costs think they're making the west "better" or more "successful" are actually wolves in sheeps clothing. They will destroy it and unfortunately, they will drag others into it. Don't let the west lose it's free spirit, it's nod to honest hardworking folks (where techies come from these people are low class people who don't deserve rights because they don't have as much money as they do), the self-sufficiency it actually takes to truly survive in the west, and the list goes on about how great the west is compared to these other places where people are ruthless on how the make their money. Money is not god, do not let it ruin the west. It's already creating havoc on so many great places.</p>
31733	Andy Blair	<p>I am writing to express my disapproval of the proposed gondola up Little Cottonwood Canyon. The sole purpose of the gondola appears to be to appease the desires of the ski areas in the canyon to funnel more and more people to their businesses. The gondola does not take into account the many other users of Little Cottonwood who are not going to use the ski areas. Some examples are rock climbers, hikers, backcountry skiers, and snowshoers. The gondola is not oriented toward these user groups and will certainly have an impact on their experiences. This, coupled with the extensive environmental impact and mitigation on the canyon ecosystem combines to make this look like a complete boondoggle oriented to enrich the few at the expense of the many. The gondola appears to fly in the face of the multiple use principals of the Forest Service, which administers much of the Wasatch Mountain Range. This gondola should not be built.</p> <p>Thank you for your time.</p>
31736	Brian Higgins	<p>First of all, I think the importance of protecting our one-of-a-kind natural spaces should be put ahead of the needs of private businesses. But that aside, we should at least TRY other, easier solutions to the traffic problem before resorting to the most expensive, complicated, and environmentally impactful option immediately. Now is a turning point in Utah's history where we need to put the needs of our land and its living things and wild spaces first. Please be on the right side of that history.</p>
31735	Ryan Harmer	<p>As a skier, road cyclist, mountain biker, hiker, and rock climber, I am 100% OPPOSED to the gondola. Unbelievable to me the gondola option has even made it this far given the cost and impact to the canyon.</p>
31734	ross HILDEBRANDT	<p>The resorts should be paying for this, not the public. If it is the public, the ones that are using the resorts should be footing the bill.</p>
31737	Jakob Tew	<p>I think the part of the plan that seems reasonable is the improvement of the bus system. Why aren't we considering this as the whole system? It sounds like the bus will be faster and more efficient than the gondola. I would be stoked to utilize an improved bus system!</p>
31739	Wallace Wright	<p>I like the gondola concept and feel that it would be the least invasive method to transport people in the canyon. But I don't like the fact that it only supports the ski resorts and doesn't allow for other stops at popular trailheads. As such, I only support roadway tolls or paid parking at the resorts, increased electric bus service and perhaps some snow shed construction in avalanche areas as I've seen in Switzerland. If the resorts want a gondola, they should bond and pay for it from user fees.</p>
31738	John Martin	<p>Please look to solutions that have proven to work. Look at areas, like Zion, that get millions of visitors and see how they handle traffic. I would fully support the gondola if less expensive and destructive options were tried first and shown not to work.</p>
31740	Sam Omer	<p>I am strongly opposed to the gondola in Little Cottonwood Canyon! As a lifetime resident of Utah, and an avid user of the canyon for recreation, it is my belief that the gondola will ruin our beloved canyon. It serves no purpose other than channeling people to the ski resorts, there is no benefit for other canyon users. As a climber, I am distraught over the idea of large gondola towers destroying classic boulders and ruining the experience of climbing in the canyon. There is a better solution and it is not the gondola. Please do expanded bus services instead!</p>

31741	Lyndsey Anderson	No gondola! Using public funds to benefit two private business is incredulous.
31747	Michelle Cruz	This isn't for traffic control, it's for money & no one wants it.
31746	Adam Humpal	The traffic problem will grow worse by my house as people start to go to la caille area for gondola boarding. This just assures that the traffic probl will not get better here at [REDACTED] but become more difficult to get into my neighborhood. This whole process has been a joke. Snowbird Alta and well connected politicians have greased the wheels and bought property strategically to increase profits while at no time trying to fix the problem. This shifts where the problem will be and 1000 people an hour is likely not to be met nor would that even be enough. The gondola does not stop in between start and ski areas. Busses need to run. All year and increased bus traffic would help. Now this year busses are decreasing in all likelihood as part of the plan to show we need the gondola. Take the political and corruption out of it and I am still not a huge fan as I don't think it truly will fix anything. I am open to a gondola if it would help. I don't think it does and this decision has been tainted by mccandless and pals.
31745	Peter Georgiou	Please do not put a gondola up LCC and further expand the trace humans have left on a beautiful area
31744	Maxwell Johnson	Why wouldn't we try something else (i.e. a toll, license plate days, more buses) before we do something so irreversible, expensive, and potentially detrimental to the canyon?
31743	RICH SHERMAN	I SUPPORT the Gondola B alternative. Some of the negative comments talk about taxpayers paying for this - there is no indication that taxpayer dollars will pay for this - hopefully some Federal grants and private funding and advertising dollars. I appreciate your looking forward out to 2050 and see the traffic problems along the way - this Gondola should really help mitigate the future problems.
31742	Xander Gordon	Fully and enthusiastically support the gondola plan! Utah needs less vehicle traffic and gondola's are interesting, effective and green!
31752	Margo Becker	I strongly oppose a gondola!
31751	David LymN	I favor the gondola.
31750	Christopher Noble	I strongly oppose building a gondola in LCC. The gondola is not a solution, it is a real estate scheme hatched by Snowbird posing as a public works project.
31749	Jason Lyman	The proposed Gondola solution will absolutely DESTROY the beauty and serenity of the canyon this is allegedly for the benefit of. It is not all about just getting to the top! The Canyon is enjoyed throughout and a gigantic man made monstrosity of machinery will do nothing more than destroy the scenic beauty of the canyon! Of the proposed solutions the gondola is shortsighted and enforces the stance that only money is the influence here and there is no actual investment in preserving nature and the existing beauty of the canyon.
31748	Thorn Merrill	I don't think that the gondola is the answer. I would ruin much of the natural beauty in LCC and would destroy many of the areas people like to recreate in. I think a better solution is to increase park and ride capacity out of the canyons and increase bussing.
31755	Peter Coombs	This is a huge waste of money for a relatively small problem. The canyon gets busy for about a dozen days out of 365. On those high traffic ski days people can plan ahead, avoid the canyon, carpool, or even pay a toll, but spending half a billion dollars on a gondola that will disrupt the landscape, community, and only provide marginal traffic improvement is irresponsible. The gondola is a boon for developers, no benefit to Utahns, and disruptive to the environment.
31754	Samuel Pressprich	Build the gondola
31753	Sean Meegan	Please prohibit single occupancy vehicles from canyon from 7am to noon on every Saturday/Sunday/Holiday/Christmas to New Years and on weekdays where 6 or more inches of snow is reported on official NWS 6am report for upper canyon.
31757	Bryce Crawford	The gondola proposal does not solve the issue of traffic congestion in the canyon. Personal vehicles are chosen as the primary transportation method due to convenience and time savings. Without solving these two issues, people will continue to choose to drive up the canyon. Saving 30 minutes of time by driving, rather than parking, unloading, and taking the gondola will make driving more popular than a gondola. The proposed gondola will not be any more convenient than transporting gear in a personal vehicle either. If people still choose to utilize personal vehicles due to the convenience, little additional traffic will be mitigated by this solution. I believe the only way to optimize the canyon will be to disincentive driving. Prohibiting parking at the resorts and providing a quicker service up the canyon will do more to drive people to alternate transportation. Additional busses would be able to accommodate large volumes of skiers without increasing commuting times to the ski resorts dramatically. This would be a lower burden on the taxpayers as well as the service would only need to run during peak ski season times.
31756	Anna Durrans	Don't build a gondola!!! Nobody wants it and there are better solutions.
31761	Skyler Anderson	Concerns: How does the Gondola actually benefit people who aren't going to Snowbird or Alta? There is significant traffic that goes up the canyon during the winter for back country skiing. They will still be affected by avalanches and be dangerous on the road. And if there is a significant storm with heavy winds, will the Gondola be able to function? Also, what is the benefit of the Gondola during the summer? At least a bus system could reduce the number of buses needed to go up the canyon. It is hard to give more description about the impact when there isn't a true plan for where the Gondola will go. I don't know. Yes the actual poles for the Gondola won't have significant impact on the area, but what about the initial installation? It seems like big trucks and machinery would be needed to get poles where they belong, which would damage significant parts of the canyon environment. Overall, the Gondola seems like a bad decision that only benefits the resorts during the winter.
31760	Charles Hardy	I oppose a gondola. The operational costs are too high. The visual effect on the canyon too severe. I favor widening the road.
31759	John Olsen	The prohibitive cost and environmental damage to our canyons are enough to negate the idea of a gondola to get to the ski resorts. Building a gondola has so many risks and so many things that will go wrong which could make it be scrapped before it's ever completed. The cost of riding it will also be prohibitive for most locals. Let's be smart and not let the lobbyists for this ridiculous idea have their way. Utahns are not in favor of the gondola!!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31758	Frank Whitby	STOP the GONDOLA! The gondola plan is a waste if money and is a big money giveaway to influential developers and state business and political influencers. KEEP IT SIMPLE. The road is good enough and A-LOT cheaper. There will always be a road, NO NEED for a gondola. Vote NO on the gondola!!!
31762	William Hendrickson	I'm 100% in favor of Phased Implementation of Gondola Alternative B as it provides safe access to skiing during major snow events, as well as safe egress. A single central parking area at LaCaille is ideal for efficiency (i.e. car to gondola as opposed to car to bus to gondola). This solution also reduces emissions in the LCC. Please incorporate electric buses (only) when supplemental busing is necessary to serve LCC as part of this gondola solution. Gondola solution should reduce environmental and cost risk of widening the road that would be required for enhanced bus lane. A recent Idaho Highway 55 slope stability project along the Payette River recently tripled in cost due to differing site conditions. Let's build the LCC gondola!
31766	William Morris	It seems difficult to imagine how the gondola become the "preferred" alternative with so much public resistance. Preferred by whom exactly? It's a catastrophically expensive project and waste of taxpayer dollars to benefit a very select few Utahns with many of the supposed "benefits" being enjoyed by out of state residents. I cannot fathom why it is not possible to start with simple tolling to pay for enhanced bus service and free bus service to reduce congestion on busy days at no cost to the Utah taxpayer. Saddling all Utahns struggling with record inflation and unaffordable housing with a half billion dollar tax bill for a gondola that the overwhelming majority of Utahns will never use is not acceptable to the general public. The money is far better spent elsewhere and such a proposal in the face of such economic challenges for many Utahns is incredibly irresponsible.
31765	Steve Kartchner	I do not support spending this level of funding on a project that could be better spent that would provide benefit to a greater population. Just keep things the way they are. That is the best alternative and costs nothing.
31764	Jennifer nazzaro	<p>To whom it may concern,</p> <p>I am writing to voice my strong opposition to the gondola alternative for Little Cottonwood Canyon. As a person who lives in the [REDACTED] neighborhood, this decision will affect the daily life of my family, our neighbors, and the entire community.</p> <p>The option of a gondola, not only ignores the need for public transportation to popular hiking trailheads in the canyon during the warmer months, but will do nothing to improve traffic during ski season. Charging a high fee to ride the gondola and long wait times will not entice drivers to instead ride the gondola. Creating a parking structure near the gondola will do nothing to reduce traffic on Wasatch Blvd and 9400 South. People will still have to drive on these roads to get to the gondola parking and will continue to clog roads and contribute to poor air quality with their idling vehicles. The gondola will be an enormous eyesore and damages the natural beauty of our canyon. This pristine area should be left alone. The gondola is a huge expense that taxpayers should not have to pay for. Most people in our area do not want the gondola alternative. Please listen to our citizens, please think of the big picture and chose enhanced bus service instead. Enhanced bus service would improve public transportation for all the seasons, reduce traffic through our neighborhoods, and preserve the natural beauty of the canyon for everyone to enjoy.</p>
31763	Devany Browning	Don't install the gondola!! Not how this money should be spent.
31769	Charles Swindells	<p>Please, please, please do not turn Wasatch Blvd into a five lane super highway! You will ruin the lives of all that live along this street. I will never be able to safely leave my neighborhood. I will have to move but won't be able to sell my house as its value will have dropped to zero.</p> <p>What is needed is the opposite of this proposal. We need traffic calming solutions and a lower speed limit. At one point a traffic circle was proposed at 8350 south and Kings Hill. Please revisit this solution. It would make travel along this corridor much safer. We have already had several fatal accidents at this location and the death count will only rise with higher speed traffic zooming through this area. There are sight restrictions with the curvature of the road here that have led to me being nearly rear ended numerous times by fast moving traffic that was not in sight as I entered the road.</p> <p>There is no reason to ruin the lives of thousands just to speed the traffic to the mouth of the canyon where it will inevitably stack up and have to wait anyway. If you think your ill conceived gondola plan will prevent this you are sadly mistaken.</p>
31768	Joan Benson	I am opposed to the UDOT recommended "gondola solution" to Little Cottonwood traffic. I cannot imagine a more intrusive plan. With unacceptable impacts to the look, environment and wildlife inhabitants of the canyon. I honestly cannot help but laugh at the absurdity of the plan, though it is anything but funny.
31767	Todd Passey	I was very disturbed and upset when I heard UDOT was moving forward with the plan to put a Gondola up Little Cottonwood Canyon. The Gondola up the canyon will destroy forever much of what many of us love about the canyon. The incredible and unprecedented environmental impact to our view, wildlife and water will be permanent. The Gondola is also a handout to the ski areas. Alta and Snowbird will be the biggest beneficiaries and yet taxpayers flip the bill. The many trail heads up the canyon cannot be accessed by the Gondola. It is beyond reason why we dont at least try an enhanced bus system. Every time I ride the bus on a weekend or powder day the bus is packed, standing room only. Double or triple the busses in the mornings, charge a fee for driving up the canyon. These things are a fraction of the cost of the Gondola and will not destroy our canyon.
31770	Konner Welch	Please no gondola. Seems like a tourist sales point rather than a solution. Lets add a bus only lane and incentives public transport
31773	Mary Joyce	The gondola is the worst, most financially irresponsible idea I have ever heard! The taxpayers should have the final say on this issue! Destroying our precious canyon is not the solution to a vehicle problem.

ID	Full Name	Comment
31772	Kelsey Selin	<p>NO TO THE GONDOLA. The gondola is an idea that only benefits two ski corporations without recognizing the impact to many other outdoor communities. This will change the canyon forever and the impacts cannot be reversed once the project is underway.</p> <p>I am an avid boulderer in the climbing community who cherishes the world class bouldering that Little Cottonwood has to offer. I have a growing group of friends that meetup every week to project climbs together in LCC. The gondola tower locations themselves will remove many boulders that people enjoy and this doesn't account for the impact to the area that the construction alone would cause.</p> <p>LCC is one of the most alluring canyons in the world with its shear granite cliff sides, looking down canyon from one of the many hikes offers immense beauty. People get away to the mountains to...get away; get away from the busy SLC valley to find solitude and peace. The gondola, with its 200 foot towers and cables, will have a constant visual impact throughout the canyon.</p> <p>The primary goal of this project is to alleviate traffic concerns for 6 of the 52 weeks in a year; that's 10%... a half billion dollar project for 10% of the year to get people to two relatively small areas at the top of the canyon. What about the people in 90% of the year who don't have any traffic problems and want to enjoy the entirety of the canyon.</p> <p>Who's to say that people will even ride the gondola. The gondola is asking people to drive to an offsite parking location, get in line for a bus ride to the base of the gondola, wait in line to get on the gondola, then wait the time it takes for the actual gondola ride. Why wouldn't someone continue to drive their car up the canyon because it will take less time and effort. This doesn't sound like it will alleviate that much traffic.</p> <p>This project will be paid for by tax payer dollars to funnel more money to two ski resorts who already make millions of dollars. Of course Snowbird and Alta are willing to contribute insignificant amounts of money to help fund a project that will pay many times over in increased customers.</p> <p>UDOT please listen to everyone's comments. This is not a project that benefits everyone.</p>
31771	Lance Peterson	<p>To whom it may concern,</p> <p>What is frustrating about this process is that I feel that my comment and any others in opposition of the gonodola make zero difference in whatever solution is ultimately chosen and/or funded.</p> <p>While I and others recognize that continually increasing demand for access to our canyons will result in a solution and experience that we may not love but ultimately need to accept, everything about this feels wrong for the reasons that everyone else has stated:</p> <ul style="list-style-type: none"> - Ultimate benefactors are two private businesses at the top of the canyon, and landowners with legislative ties in the valley. - Doesn't address other seasonal (summer/fall) traffic. - Doesn't address traffic for backcountry trailheads. - Will still bottleneck traffic moving toward LCC. - Irreparable damage to viewshed. <p>...Among many others.</p> <p>As much outcry as there was to the "One Wasatch" concept, I personally feel that a revised version of the interconnect proposal may be the best solution.</p> <p>A lift/gondola between canyons that DOES NOT have terminals on ridgelines that result in resort expansion, that acts only as transportation, would serve to reduce reliance on the road and provide access to the significant number of tourists coming from Summit county. That in addition to avy sheds, reducing the time the 210 needs to close, and bus service, seems to be the best long term solution.</p> <p>Sincerely,</p> <p>Lance Peterson</p>
31775	Bongok Ha	No gondola in this beautiful canyon. Let people walk or take shuttle..
31774	Jack Vines	I am completely against the gondola. The electric bus option is better both short and long term for LCC. Please do not make this terrible mistake with tax payer money that cannot be undone!
31776	Gary Uzzell	STOP PUSHING THE GONDOLA idea. There is virtually NO support or interest in this idea by actual local neighbors and stake holders of the canyons.
31779	Gabriel Vanrenen	The gondola is way too expensive & disruptive and that money should instead go towards saving the Great Salt Lake. I believe that just adding additional busing options along with parking reservation systems at the resorts is enough to solve existing problems.

31778	Kirk Seegmiller	<p>I strongly believe that the gondola is the wrong choice for the following reasons:</p> <ol style="list-style-type: none"> 1. The gondola proposal has unacceptable impacts on Little Cottonwood Canyon's iconic natural character and aesthetic. 2. Access to climbing areas will be compromised during years of construction. 3. The gondola equals the destruction and/or removal of irreplaceable and historic world-class climbing resources and views. 4. The current views of pristine granite and pines will be interrupted by towers and cables; the rush of the river replaced with the consistent hum of machinery and construction. 5. The gondola is designed to serve only ski resort users, ignoring dispersed use recreators and other year-round canyon users. <p>Sincerely, Kirk Seegmiller</p>
31777	Sara Salmon	<p>I do not support the gondola option in Little Cotton Wood canyon. It will only support visitors to the resorts, which ignores half of the canyon traffic to other areas. By ignoring the other canyon users, this option will not meaningfully reduce traffic.</p> <p>In contrast, the additional lanes would not only ease traffic to resorts, but also to other areas of the canyon. This space would be heavily used by cyclists when buses are not present, and would improve the safety of the canyon for multiple users.</p>
31947	MICHAEL SCHMERTZLER	<p>As an Alta homeowner, I support the gondola plan and understand that it will likely require phased implementation.</p> <p>I have two concerns to raise.</p> <p>First, I am concerned this not become a nice idea that is never implemented for lack of funding. A funding plan with some committed City, State, and ideally Federal, dollars should be part of the plan. The ski areas should also make some contribution. Have a small surcharge on lift tickets or a parking fee implemented now and earmarked been considered?</p> <p>Tolls are mentioned, presumably to encourage gondola use and defer a portion of the cost. Will the toll booths be automated with something like EZ pass so they are not a bottleneck? I see no mention of how Alta residents will be treated. Some accommodation seems fair such as a pass with reduced seasonal cost.</p> <p>MS</p>
31780	Richard Steiner	<p>A recent editorial in the Salt Lake Tribune stated that Gondola tickets could run \$50. If that is indeed the case the ridership will be nil. If a ski area pass includes the gondola will the ski area actually pay the fee? If not, this is just additional subsidy for two businesses at the expense of all other users. The cost of a ticket for the gondola has not been part of the discussion, yet is an integral part of whether or not the system will work. Before a final decision is made this issue should be addressed and proposed ticket prices be made public.</p>
31783	Megan McDonald	<p>Please don't build the Gondola.</p> <ul style="list-style-type: none"> -The gondola would have a huge negative effect on one of Salt Lake City's biggest economic drivers: dispersed recreation (hiking, climbing, running, backcountry skiing). This is more difficult to quantify than resort skiing, but is a huge factor when people choose to visit and/or relocate to Salt Lake City and is surely the largest economic driver in our local canyons -Access to climbing areas will be compromised for the next decade while the area is under construction, and some may be permanently affected or lost -The building of the gondola will come with the destruction and/or removal of irreplaceable and historic word-class climbing and views -The gondola is not an equitable solution and will perpetuate environmental marginalization and injustice in the Wasatch Front -The building of the gondola is fiscally irresponsible, with half a billion in initial construction costs alone
31782	steven joyce	<p>No to the gondola! Will destroy what's left of pristine environment of the canyon, deprive those who don't go to Alta or Snowbird of access. You will use our tax dollars, and then charge us to ride in it! Charge an access fee, use busses, but let us go where we want in winter without looking at ugly gondola towers. Don't ruin Little Cottonwood Canyon beyond repair.</p>
31781	Kristopher Crockett	<p>No Gondola! Terrible idea that only serves to increase profits to the resorts. Doesn't help the public in any way.</p>
31784	logan rosson	<p>I feel as if you're going to limit the canyon with a toll road and a taxpayer paid gondola just to help with congestion up the canyon. The canyon should not just be for the service of resorts. The gondola stops clearly are for snowbird and Alta and the road is going to be tolled, so people who want to use the canyons for other uses are limited. I always get an Alta season pass and have been stuck in traffic for hours and that's a completely justified compromise for some of the best skiing on earth. I really don't want to see a bunch of rock climbing boulders being destroyed for a taxpayer behemoth, overly zealous gondola that is only going to serve the tourists and wealthy individuals who visit these places. And the worst part of it all is that the taxpayers are paying for it. As someone born in utah and grew up skiing here I will be very sad and hurt if the gondola gets put in.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31786	Peter Lenz	<p>I wish to record my opposition to the proposed tram in Little Cottonwood Canyon. This will permanently alter and damage the canyon, and serve no one but the skiers and the resorts. It is unlikely to be anything but a costly temporary solution to problem it is designed to address.</p> <p>I favor expanding current bus service, construction of snow sheds and widening the road, PLUS limiting further development of the ski areas, including lodging and restaurants.</p> <p>Rationing access to the canyons is the only answer. The resources are finite.</p>
31785	Mike Kraszewski	<p>The gondola is a terrible idea and will forever ruin one of the most beautiful places. Gondola is not the solution. We must try less destructive alternatives before resorting to a gondola. A gondola will only move the issues further out the canyon. The last thing we need is more people coming to SLC at this point.</p>
31948	Lynn Butterfield	<p>Please do not implement the option of the gondola. Using existing buses and enlarging the parking at the Canyon base are huge steps towards reducing traffic in the Canyon. These steps should be taken first before committing to any large plan. They are simple and need not have massive amounts of money to study before implementing. Once the Canyon is torn up for more infrastructure, we can never go back. START SIMPLE!!!!!!!</p> <p>Lynn Butterfield</p>
31787	Hannah OConnor	<ol style="list-style-type: none"> 1. The gondola proposal has unacceptable impacts on LCCs iconic natural character and aesthetic. 2. Access to climbing areas will be comprised during and after years of construction. 3. Construction in the canyon will add endless traffic all year. Making traffic a problem for 3 more seasons. 4. Only designed to serve ski resort users, ignoring dispersed use recreators and other year round canyon users. 5. The gondola is fiscally irresponsible, with half a billion dollars in initial construction costs alone. 6. The gondola is not an equitable solution and perpetuates environmental marginalization and injustice in the wasatch front. <p>You know the public doesn't want this. Why are we even thinking about ruining the canyon so a few companies can make more money. The environment is MORE important than capitalism.</p>
31791	Shirley Nelson	<p>I absolutely oppose the plan to put in a gondola up Little Cottonwood Canyon. How dare you monkey around with taxpayer funds for such a elitist project!!</p>
31790	William Andes	<p>I oppose the gondola. As the cities and county involved oppose the gondola due to the impact on water supply to the communities. Also, the idea to pay millions of tax payer dollars to benefit two ski resorts is irresponsible.</p>
31789	SAM CHRISTENSEN	<p>Let's start with all of the proposed items EXCEPT for the gondola. Then see where we are at.</p>
31788	James North	<p>I am opposed to gondola, add bus lane and sheds.</p>
31949	Jim Hanrahan	<p>Your analysis doesn't go deep enough into the various costs of alternations cost to the public - seems like a whitewash due to lack of complete analysis.</p>
31795	Mark Sullivan	<p>The gondola is not a solution to the problem. It only serves as a tourist attraction to benefit the ski resorts. More reliable bus service is important in encouraging people to not drive their personal vehicles. This will need to happen whether there is a gondola or not. Otherwise traffic to and from the gondola base will be a problem, as will parking. Public transit in general needs improvement. Light rail from the U to the canyons along Wasatch Boulevard should be a long term goal. If an alternate mode of transportation up the canyons is considered, I would propose a monorail. Minimal footprint. Towers can be located out of avalanche paths. Visually much less obtrusive than the Gondola. I also propose rail through a tunnel under twin lakes pass and potentially over guardsman pass. People need to get out of their cars. Preferably closer to their homes and have access to frequent and reliable bus service to, from, and up the canyon. More incentive should also be given to make leaving the car at home. This should include lockers available to locals for season long rental. Snow removal needs to be more often and reliable during storms. Disincentive for people who chose to drive in the form of higher parking pass prices. Better monitoring of 4x4 and traction device compliance. The gondola is a gimmick designed to attract more people to the resorts and benefits real estate and the resorts only. It solves none of the problems it is proposed to address.</p>
31794	Margaret Johnson	<p>I am against the construction of the proposed gondola. Spending this amount of money to get more people recreating in Little Cottonwood Canyon is hazardous to the greater environment of the Salt Lake valley. We do not need to put more pressure on the limited resources of LCC or invest in even more extractive practices than the ski industry already does. As an employee in Alta, I see that resorts are already strained trying to serve the increased visitation over recent years. Ticket sales will need to be capped soon to combat the rising number of skier collisions, long wait times for food and restroom services on the mountain. Reserved parking has already solved the traffic problem's worst days. We need to pay the bus drivers more and offer more benefits so that there won't be a "labor shortage" for the most reasonable solution- increased bus service. A much smarter use of funds would be investing in protections for the shrinking Great Salt Lake. Otherwise the ski resorts that this gondola indiscriminately serves will have no more snow in the very near future.</p>
31793	Casey Sanders	<p>I am completely opposed to the Gondola proposal for Little cottonwood canyon. Expanding bus service and limiting vehicle traffic to non-residents of the canyon are the only viable options. We need to protect the scenic beauty of the wilderness area, as well as the watershed.</p> <p>Can we also plz shut down the for profit ski resorts operating on public land.</p>
31792	ben siefert	<p>First this is a huge waist of tax dollars.</p> <p>Second. 35 people per gondola every 2 minutes is an uphill capacity of 1050 people per hour. I would assume a busy Saturday for Snowbird and Alta combined is roughly 15,000 people. This will never get that volume of people to the resort in a few hours in the morning and everyone back down at 4 pm...</p> <p>This is very expensive and will not get the job done.</p>

Comments on Little Cottonwood Canyon Final EIS

31796	Laurel Samuels	<p>How do you constitute resident support for the gondola when the majority of residents near the base of the canyon DO NOT WANT the gondola and the associated traffic and problems that will come with it? How do you justify that you are "reducing pollution and traffic" yet creating what will become a parking lot of stalled traffic in a residential zone? Most residents surrounding the canyons DO NOT WANT and DO NOT SUPPORT a gondola.</p> <p>We need common sense solutions to reduce pollution in our state. That involves getting residents to leave their cars at/ or near their homes and utilizing mass transit, which must be easy, convenient, cost effective, safe and timely. If we prioritize access for buses up the canyons (and increase availability/ timeliness of said buses across the valley), create tolls at the base of the canyons, and stop making driving more convenient, we can help the health and lives of people across the valley. The gondola will NOT achieve this. Nor do we need to spend tax payers money on frivolous projects that do nothing more than move traffic, noise and pollution from within the canyons to the neighborhoods around them.</p> <p>STOP the gondola project before it's too late and our beautiful canyon is forever ruined! And STOP widening roads and instead focus on making it easier, safer and more convenient for people to use alternative modes of transportation!</p>
31797	Terry Kirkey	I support Gondola B alternative with phased approach.
31798	Stephanie Adams	<p>If the states goals are : Consideration of all canyon users, not just resort users Maintain existing visual experience</p> <p>I am confused how the gondola accomplishes them. The gondola will go from bottom to top which does not help anyone except people going to the resorts. Also it sounds like it will not operate year round, which does not help fall or summer canyon users.</p> <p>It is important also to consider that all of the traffic backup has not been alleviated but is simply moved to a location in the valley where the gondola parking will be. This is NOT solving our problems.</p>
31799	Stuart Browne	<p>The long-term economics, reducing avalanche risk, and the convenience of a gondola makes the most sense. Buses will not get through dues avalanches and are more expensive long term. Widening the road will have a great impact on the environment, again does not resolve for avalanches.</p> <p>You complain about the traffic, we it is not going away. Build a long-term solution.</p> <p>Stuart</p>
31801	Matthew Hickenlooper	Please no gondola. It irreparably harms the nature of the canyon and directly affects my family's enjoyment of this amazing resource in our back yard.
31800	Scott Farnsworth	The public doesnt want a gondola nor to pay for it. Legislators will still end up doing whatever they want. Let's charge the ski resorts to pay for the future revenue they will get.
31950	Ben Thorn	<p>the overwhelming majority of the local residents in Sandy and the State of Utah have consistently said NO to the proposal or a gondola. Why is it so hard for UDOT, City, County and State leaders to abide by the wishers of the people?</p> <p>A gondola is not the best solution, the impact will be far greater than the results hoped for (they are hoped for, but I don't and most do not believe that a gondola will provide the desired result).</p> <p>Please just listen to the voice of the people, there are other easier and viable solutions. Why not limit the traffic count in the canyon as is done in National Parks, why not charge a toll, why not require a certification that a vehicle is road worthy and snow worthy, why not, why not???</p>
31802	Darin Poulson	The gondola idea is a blatant cash grab by legislators and politicians. This enormous project will damage the canyon, surely go over on costs, have little to no cost oversight, burden taxpayers, and ultimately make a select few people very wealthy for all of the pork stuffed into the likely no-bid contracts. It's absurd in scale, flimsy in purpose, and is a prime example of disregard for the public will by local politicians.
31804	Sarah Diener	<p>I am writing to express my opposition to the proposed Gondola alternative B. I do not think any gondola should be permitted in the canyon. A gondola would wipe out much of the climbing and bouldering that is precious to the rock climbing community as well as being expensive and unnecessary. I would support the same big parking garage at the base of the canyon to be serviced by a fleet of electric buses.</p> <p>Once again, I, a Salt Lake resident for almost 20 years, outdoor enthusiast, skier and parent strongly oppose a gondola.</p>
31803	Richard Middleton	For years my retirement "career" was as a volunteer naturalist and school field guide in the Cottonwood Canyons. I am now semi-disabled and no longer guiding, but like to visit the canyons. The proposed gondola solution appears to me to benefit only the resorts (and at the public's expense, which in itself is outrageous). I do not see anything in this proposal which would make it easy for people with limited mobility to access all the other public lands in the canyon, even though the gondola (and waiting and loading areas) will have to comply with ADA requirements.
31805	Annie Hazlehurst	Please stop destroying the mountains!! Why do you think it's a good idea to harm earth for the sake of profit?? Without a healthy mountain region we will have no water as in zero and this project is catastrophic. This is funded by corporate profit not for the sake of health and viability of the area for any living creature. It should be halted.
31806	Keith Kirkman	I think this proposal is worth going forward with. I do think more parking will eventually be needed above the proposed 2500 spaces.
31808	Lise Brunhart	<p>This gondola will not approach solving the Little Cottonwood transportation problem...we will still need increased bus service to adequately handle this issue.Both Cottonwood canyons should be treated like Zion National Park....bus shuttles only, for access..There should be a card reader for vehicle passes for canyon residents, service vehicles and commercial deliveries.</p> <p>UDOT's cutting of bus services is absolutely scandalous...No gondola,PLEASE.</p>
31807	Heidi Kasemir	Please do NOT build a gondola. Consider trying better bus infrastructure.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31809	Stephen Sorweid	Phased implementation sounds like a hard pass on any difficult decision. Don't give into the political pressure of essentially doing nothing. Either widen the road or build the gondola. Enhanced buses alone do nothing. Buses get stuck in the same traffic and the same snow conditions. Absolutely do not waste our money on ineffective electric buses. They are completely inefficient in the cold and snow and you'll end up buying more due to limited range which will cost more in capital and operating expenses.
31810	Shane Kemp	<p>I still am confused about how we can propose a solution that clearly only benefits the ski areas and not everyone else. If Alta and Snowbird want a gondola, they can pay for it, but using public tax dollars for this project is an insult to all the other people in the state that don't use the canyons or even those that do but that don't ski in Alta and Snowbird!</p> <p>If traffic in the canyons is an issue, we should see what we can do to REDUCE the number of cars and people in the canyon - not try to get MORE people up the canyon.</p> <p>This is another example of public money that will go to private profits.</p>
31811	Jen DuBois	The gondola is an abuse of taxpayer funds to benefit the private ski resorts. Why aren't Alta and Snowbird paying for it? What is the public benefit? You could toll the road, mandate buses certain times of the year, using the parking garage area and limit ticket sales, giving out of state Ikon passholder least priority. How about fixing the terrible conditions on I215 West and East FIRST? The bottom line is public funds are being used to blatantly benefit private enterprise while diminishing the quality of life and property value of a neighborhood. That is fiduciary misconduct. If you want more Democrats to be elected in Utah, carry on with this project because those on the fence are watching closely.
31812	Natalie Merz	The gondola is not the best option to improve transportation issues up our beautiful canyon. It's environmental impact will be devastating and its cost is absolutely outrageous. This project is slated to be funded by taxpayers fund and thus public comment should be what drives decision making. Residents of the greater Salt Lake area have made it clear that this is not their preference. We need to think reasonably and address this issue in the most environmentally friendly and economic fashion. Not only will the construction of this be damaging to surrounding wildlife and watershed, the ongoing operation of the gondola will continue to be harmful to bird populations indefinitely. The cost will remain high for operation will only benefit the ski resorts. Expanding bus routes and requiring everyone to participate in public transportation makes the most sense. It has Proven to work well and other high traffic recreational areas such as Zion National Park. Let our canyons be known for their beauty, not their ridiculous transportation disasters. As public servants you have an obligation to listen to community feedback and this one is loud and clear, NO TO THE GONDOLA. Let's stop prioritizing the profits as a few individuals, and rather work together on a solution that makes sense.
31813	Rachel Walch	I don't think a gondola in Little Cottonwood canyon is the right answer. I think a Park and Ride and buses is a much better idea!
31814	Jeff Rose	<p>Thank you for the opportunity to comment and for all the diligent work in creating an engineering study of the Little Cottonwood Road. I look forward to your Supplemental EIS with a reasonable alternative.</p> <p>Starting with the Purpose and Need statement, the actual purpose and need was to study the environmental effects of putting more people on the public lands throughout Little Cottonwood Canyon. It is irrational to think that putting more people more efficiently onto the public land would have no significant affect outside the highway right-of-way. Almost no one will stay only on the highway right-of-way. This study failed to study the very effects on the human environment that NEPA requires to be studied. To limit the area of study to only the roadway is irrational and does not meet the connected, direct, and indirect impact studies required by NEPA for this proposed action. In the court case of Thomas v Peterson, the finding was that the Forest Service could not limit their EIS to the road only, but must also study the effects on the environment throughout the area that would change due to the creation of the road. This U-DOT LCC EIS in inadequate to meet the requirements of NEPA.</p> <p>This EIS studied only the engineering in the roadway and not the purpose of the engineering, which is to put more people, outside the roadway, onto our public lands. No adequate visitor effects or visitor management study was included in this EIS as required by NEPA.</p> <p>If the engineering of the roadway increases the efficiency of traffic and reduces congestion, then more people will come to the canyon. This means more people will go hiking, picnicking, camping, mountain biking etc. throughout the canyon, not just more skiers at the ski resorts. The entire canyon from rim to rim will become more crowded and more impacted -- out on the trails and at the recreation destination sites. The effects of this increase in visitor use outside the roadway were never studied, even though NEPA requires that this increase, caused by the proposed roadway alterations, be studied as connected to the road alterations. Significant impacts on the environment will occur throughout the canyon; both direct and indirect impacts will be the result of roadway and transit (gondola) alterations.</p> <p>This EIS looked only at estimated population growth as the source of the expected increase in the volume of visitors to the canyon. This EIS never took a hard look, as required by NEPA, at the latent demand for the canyon recreation in the population already living nearby. Never studied was whether the people already crowding the canyon would come more frequently if they perceived that there would be no waiting on the roadway before getting to their destination. A small straw poll found most canyon users would come almost twice as often if they thought there would be a low risk of congestion in the canyon. This immediate increase of visitors to the canyon was never studied in this U-DOT LCC EIS. Any reasonable decision maker would require that this latent demand be studied</p>
31815	Ravi Altman	Please don't build a gondola. More buses and more tolls will work.

ID	Full Name	Comment
31817	Kathy Stark	<p>The arrogance of UDOT has been especially difficult to stomach with each day! The misrepresentation of an expanded bus service with the ads on tv are untruthful. The TRUTH is, this is a boondoggle that serves only two ski resorts. It will profit ONLY Alta and Snowbird. It will permanently destroy the beauty of Little Cottonwood Canyon. It's construction will adversely affect the quality of our water source and air. The noise of that construction will also cause disturbances in the natural world which will adversely affect the wildlife. And then UDOT announced limited bus service for the coming winter! Then, in their infinite wisdom, they announced their "plan" to put a \$20.00 to \$30.00 toll on both canyons! The level of incompetence in both of those ideas put forth, particularly at this time, also strikes many of us who are against the gondola as a disingenuous way to force the issue. The greatest of insults is UDOT and it's two greedy backers expect this gondola to be paid for by we the tax payers!!! The ongoing misrepresentation and faulty planning only compounds my discontent and I for one have no interest in my tax dollars going to such a bad solution. Hasn't the climate changed enough to consider there may not be much snow to ski on in the coming years?</p> <p>I remember when we had tons of snow and UDOT put low priority on the canyons-they plowed the main roads first and the canyons were last. Now they want us to pay for this ridiculous gondola! Some kind of plan for the increased traffic is a value concern, but a gondola is not the answer. Certainly not on the backs of the tax payer.</p> <p>Teddy Roosevelt said it best "Leave it as it is-you cannot improve it-the ages have been at work on it and man can only mar it"</p> <p>I fully support a bus service and it should be funded by those who will profit from the use of a bus to bring those to the resorts so they can pay \$150.00 to ski for one day. I know the climbing community will not support this gondola scheme either. Thank you for the opportunity to voice my concerns.</p>
31816	Ari Mason	<p>The public and the city have spoken multiple times. We do not want a gondola. The fact that an enhanced busway is viable and planned indicates a gondola is NOT necessary. A gondola would be hugely detrimental to the environment, cost millions in taxpayer dollars, and only benefit two out of four resorts, not to mention it will do zero for other access to the canyon, including hiking and climbing. Please listen to the public and the government and find a solution that everyone can be ok with and excited about.</p>
31818	James Welch	<p>I am very concerned that U dot has identified the preferred alternative to be the gondola system. I believe the gondola system is a big mistake and we'll negatively impact the aesthetics, environment and transportation costs for all users in the Canyon. Yes the increasing use of the canyons poses significant problems to the air quality and congestion however as a frequent user of the canyons particularly in ski seasons I have not found these to be a major detriment to my experience. Parking has been able to be managed at the resorts by paid parking and carpooling. I also take the bus frequently which works very well and is not often overcrowded. By increasing bus ridership and bus frequency much of the congestion could be eliminated. By moving to a gondola plus tolling of cars going up the Canyon the cost to have an experience up the Canyon goes up substantially. It will force many of lower income and lesser means to have to choose other alternatives. Skiing will become more of an elite experience for those who can afford it. I want to be able to take my family and grandkids skiing but the cost continues to escalate and when you throw on the additional cost and hassle of transportation through a gondola system it will make it unreasonable to be able to pursue this type of recreation for my family. I believe the best solution is to increase bus lanes and peak time bus availability. These work well and are able to accommodate the large crowds during the peak demand times. As a resident of the state I also don't feel that if the gondola moves forward it should be paid for by taxing all residents. Th is is unfair and represents a significant taxation without representation for resident who do not use the canyon. I know that all of these issues have been brought up before but feel they are significant and the gondola system is a big mistake that will negatively impact the environment and experience of the canyon. It would also be a huge misuse of the public trust to use general state taxes or a newly imposed tax to pay for and subsidize it for the benefit of a couple of major ski resort operators. Please reverse this train before it is too late and implement a more economically and rational solution.</p>
31820	John Wallin	<p>I support the gondola.</p>
31819	Stephen Lehigh	<p>A few questions for framing the design and planning challenge in LCC:</p> <p>-Why cede opportunities to productively reshape behavior? Imagine what might happen to winter air quality if we, in Utah, learned (like hundreds of millions of cosmopolitan people across the world) to ride public transit. Don't worry--people won't just quit skiing.</p> <p>-Why carry on the baneful practice of diminishing nature to protect unsustainable human habits? Where will this practice lead the tourism industry in Utah?</p> <p>-Why resolve challenges arising from competing constituencies simply by asking who, at present, brings in more money? Even an economist can see that this practice will produce losses. Such challenges needn't be zero-sum-games.</p> <p>Salt Lake faces serious challenges as it seeks to grow infrastructure without marring the beauty, amenities, and access to nature that draw people here.</p> <p>A gondola would likely become a shameful instance of what-not-to-do contemplated mournfully (if not scornfully) in discussions around the country.</p> <p>Please don't diminish the canyon with a gondola.</p>
31821	Kayce McKendrick	<p>I'm against the gondola, for the reasons that it is too expensive, it's only for the benefits of skiers, it does nothing for the access of hikes, climbs, and other recreation in the canyon, and the gondola will only subsidize the ski resorts. I would rather submit to a mandatory shuttle system with frequent bus stops and give up the ability to drive up the canyon, then destroy the canyon with a gondola that will only serve a select few.</p>

31822	Lydia Porter	The gondola should be paid for by the ski resorts that are pushing for it. Because ski resorts are benefiting the most from the gondola being built, then they need to be responsible for the cost of construction. Any resident of salt lake county should not have their taxes increase at all to pay for this endeavor. Sandy city should also not use any city funds for the gondola.
31824	Audrey Hunter	Gondola ??
31823	Brad Porter	The Gondola Alternative B is a great choice. The changes addressing more parking spaces at the base is a good move. Also addressing the lower green house impact with the Gondola options is a great service to the community.
31825	Craig Snow	Do Nothing We have less snow every year and the tie up in the canyon are less than 5 days a year. So make the users put up with it. No more of my tax money supporting special interest businesses!
31826	Brandon Lake	My fist choice would be widen the road have a train. 2nd choice a dedicated bus lane with frequent buses and incentives to make people utilize the transit option for most trips.
31827	Susan Allen	A gondola in Little Cottonwood Canyon does not solve any problems. It is too expensive (to build, maintain and to ride), too exclusive (in that it is so expensive to ride, which means there will still be lots of car traffic in the canyon, and it stops only at 2 downhill ski resorts instead of also at hiking and backcountry access trailheads, and only runs in the winter), too damaging to the environment (building and maintenance of the towers, including roads to the towers for maintenance, and the visual pollution, i.e., the view up and down the canyon will be damaged by images of the towers). A gondola is NOT the answer.
31951	Carol Hansen	NO NO NO Gondo!!!
31828	Andy Hokanson	I have live in Sandy all my life. I have skied all my life when I can afford it. My family currently has passes the bird. I am 100% against the gondola! How can you justify give all that tax payer money to two private resorts? Please choose the bus option.
31830	Daniel Kovach	I rise in opposition to the conclusions presented in the LCC Final EIS. You state that UDOT's purpose is reflected in one primary objective for S.R. 210: to substantially improve roadway safety, reliability, and mobility on S.R. 210 from Fort Union Boulevard through the town of Alta for all users on S.R. 210. (ref Chapter 1, section 1.2.1). Since UDOT obviously fails at addressing safety concerns elsewhere on Utah roads (we all know that speed kills and reduced speed limits save lives), then why should we believe you are honestly proposing a Gondola because you want to "save lives"??? Why not change the speed limit on Utah's highways to 75 mph ??? That would cost a pittance compared to a 1-Billion Dollar Gondola. Or even better, drop the speed limit on Wasatch to 40 mph, to slow down the crazies rocketing downhill from the mouth of LCC through the Ft Union intersection? They are at 40 MPH (supposedly) coming down the canyon, leave them at 40 MPH till the road flattens out (or even better, till the I-215 interchange). That would save lives and cost less than a Gondola. You say that's your mission, act that way...
31829	Tony Allred	I am a Sandy City resident near the base of LCC and frequent LCC user. The impact and cost vs. benefit seems very poorly tilted toward the benefit of Snowbird and base area developers. The gondola option provides no benefit to any canyon users other than Snowbird customers on the busiest weekend days. I would support an expansion of the LCC roadway to give buses a dedicated lane up-canyon in the morning and down-canyon in the afternoon. A driver toll at the top of the canyon combined with user-tax on the primary beneficiaries (Snowbird and Alta resorts) to subsidize the increased bus service seems very appropriate. A gondola system would possibly provide more customers to Snowbird but is not likely to noticeably reduce private vehicle traffic. My family and I strongly oppose a gondola system funded with our dollars to simply provide increased profits for Snowbird and base area developers. Options with that are less expensive, less impactful on the scenic and environmental assets in the canyon, and more likely to have real benefit exist (tolling, road improvements, 4-wheel drive enforcement) exist and should be tried first. Given what seems to be an ulterior motive to benefit certain private entities, the gondola project should not be considered as an option.
31831	Cathy Austin	NOOOOOO gondola in little cottonwood canyon please
31832	Jenny Hawke	I've been climbing in Little Cottonwood Canyon since 1995 and I DO NOT support the gondola proposal. There are many less-impactful options that need to be trialed first before such drastic, canyon-altering steps are taken as a massive gondola! Let's do better with bus options, shuttles, tolls...Why are we even contemplating such an expensive, destructive and skier-centric option before trying other things? Again, I do NOT support the gondola. I don't want the climbing areas destroyed!
31834	Harold Carr	As a lifelong Utah resident (born in Salt Lake in 1950) I am 100% AGAINST the gondola.
31833	Vitor Chies	The gondola is unwarranted and not wanted. I strongly urge UDOT to imagine what could be done with half a billion dollars if redirected towards less intrusive efforts. It is pretty disappointing to think UDOT is so ready and willing to spend that amount of public funds on a massive project, but is struggling to keep the bussing running. The comments about challenges hiring enough drivers for this winter is an simple economics problem. Increase drivers wages and you will have a much larger pool of operators to choose from. I truly believe wages of over \$30+/hr are justified for a wintertime bus operator. Expanding the fleet and paying a fair wage to our operators is the least we can do. This alone would reduce traffic issues in the canyons and at the same time take centuries to meet the same cost as building the Gondola. Please consider a more progressive approach and do not seriously consider a Gondola until all other option have been absolutely exhausted. Kindly, V
31835	James Larkin	I support the gondola option
31836	Elizabeth Goott	I am against gondola
31837	Jennifer hall	I support the gondola. I think (not believe) that the Gondola will produce less waste and be a tourist attraction. Buses and cars are messy and less reliable.
31838	Lara Brewer	I support year-round electric buses, not a gondola. I think a train is actually a better long term solution. Please add a train to the discussion and evaluate whether it might be an affordable long term, year round solution. It works in Switzerland, why not here?

ID	Full Name	Comment
31839	Paul Bradley	I fully support the gondola alternative that has been put forward. This is the best approach for long-term solution of getting skiers up and down the mountain in a timely way. Additionally, it makes the most sense from a safety perspective as well.
31840	Rhea Cone	<p>The gondola is NOT supported by the public. As a sixth generation Utahn, and user of Little Cottonwood Canyon, I am disappointed at the gondola's prioritization in Utah's LCC plan. The gondola only serves a segment of Utah's population and leaves permanent damage to the ecosystem, viewshed, and our precious water supply.</p> <p>Taxpayer funds should not be used to fund a project that only serves two private companies: Snowbird and Alta. The proposed gondola would not stop at the many trailheads or other areas that canyon users frequently recreate. The use of taxpayer money to further the revenue of the resorts is unethical.</p> <p>The environmental degradation caused by a proposed gondola is also unethical. As a habitat restoration professional, I have seen and see every day the long lasting effects of much less dramatic human caused degradation. Sensitive species like native fish and high alpine mammals reside in this island of habitat within the busy northern Wasatch.</p> <p>Busses should be expanded, and bus drivers should be fairly compensated for their work with higher wages and benefits to entice workers. Expanded parking is needed at the base of the canyon to allow the ease of use of these busses, that should run more frequently. Busses should be equipped to handle snowy roads to not put drivers, riders, or others in danger.</p> <p>Tolling should be implemented. Most importantly, vehicles need to be inspected for their capabilities in snowy roads. Oftentimes, the traction law is not in effect when users go up the canyon on weekend mornings, and then heavy snows create a dangerous ride back down the canyon with many vehicles that cannot handle the conditions and put their drivers, other canyon users, and first responders at risk. The rules need to be changed about the traction law, to be put into effect more often or in anticipation of weather. And, tires need to ACTUALLY be inspected. Not once was my UDOT LCC sticker checked or looked at after I got it on my 4WD vehicle with snow tires.</p> <p>The gondola should NOT be built. It is not supported by Utahns or canyon users. Why jump to such an expensive and permanently scarring solution when others have yet to be implemented and tested? It is reckless and irresponsible to taxpayers and future generations.</p>
31841	Doug Brown	I haven't seen any or proposals to use the existing rail bed up to Wasatch Resort and beyond up to the mines used to haul ore and timber's in the early days
31842	Thomas Green	WE (TAXPAYERS) DO NOT NEED OR WANT THE GONDOLA !!!! PLEASE NO GONE-DOLA !!!!!!!!! LET THE RESORTS PAY FOR WHAT THEY WANT !!!!!!!!!!!!!
31844	Emma Slikker	Option B is the best. These improvements will improve air quality, protect the watershed, and increase the quality of life for residents and canyon users by reducing traffic congestion as private vehicles shift to transit. This option makes the most sense and preserves our beautiful little cottonwood canyon.
31843	Chase Meredith	Build the gondola. It will be better long term. Eco friendly, no more sitting in traffic to get up the canyon. Access when the roads are closed. Great for powder days.
31846	Andrea Andersen	As I'm out working in my yard on a 78 degree October day I really question if we will have enough snow in the valley or mountains when the gondola finally gets funded and built. I'm opposed to the gondola unless it is free or nearly free, has more than stops at Snowbird and Alta and is year-round enjoyment for everyone. Snowbird and Alta can and should figure out a way to get their customers from point A to B, this is not something the tax payers should be doing. Please consider what environmental projections are 10 years from now before funding the gondola option.
31845	Will Nesse	I say NO to the gondola. The main reasons are (1) the gondola is not fast enough, or scalable to be a practical solution. After waiting in parking in lot, waiting in lines, and boarding/unboarding, I can't see how this will actually help get people up the mountain quickly or at the scale required in a quick fashion--Also, a 40 min gondola ride up canyon will surely require a bathroom facility for the captive riders or the cabins will smell of urine, adding to cost. Busses, if the roads are properly tolled, can get as many people as required up the road in half the time of the gondola without as much new physical infrastructure in a scalable fashion that can flexibly meet demand, and can serve a broader population than just resort-goers. (2) the gondola will destroy the view shed of our beautiful canyon with a huge hunk of metal that sits dormant 8 months out of the year, and would only be used at its capacity on a few weekend powder days. (3) The price tag of half a billion dollars is too expensive and irreversible for such a risky proposition. We should first try out reversible and cheaper solutions like busses. (4) climate change estimates in UDOT's own analysis predicts 4 fewer weeks of winter skiing operations in the canyon by 2050, adding to the risk.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31847	Wilma Corkery	<p>I am against the Gondola! As are 99% of residents in Cottonwood Heights! I can't believe UDOT reduced bus service!!! Bus service to the 2 skiresorts in LCC.</p> <p>Climate change, reduced lake affect, low snowpack in the next 10 years and future is real!</p> <p>Is there no common sense in the UDOT organization and management?</p> <p>Our future generation will suffer and pay the consequences for your selfish, greedy, money making decisions.</p> <p>You should be ashamed of yourself!!</p> <p>You ask for input, comments, and you don't listen!</p> <p>Shame on you!</p> <p>No Gondola!!!</p>
31952	Gary L Rosenkrantz	continue with gondola
31849	Clinton Hoffar	<p>The building of a gondola to the top of little cottonwood canyon is not a fix to a problem. It is a multimillion dollar band aid. We cannot continue to pump more and more people and things up the canyon. We need to toll the canyon and mandate eco friendly buses during peak days and holidays. If we continue to just push more and more people up the canyons there will be more and more destruction. The canyon holds a very special place to many people and continually widening the roads and taking out the natural beauty is detrimental to all who recreate in the canyon. The gondola would be unsightly and only used by two private enterprises who are not even taking the brunt of the cost. We as a people should have as much to hear about and say as too large corporations.</p>
31848	Kelly Bausum	<p>I've only just seen the Big and Little Cottonwood Canyons, and this mountain range for the first time in my life this month, and already I feel deep in my heart that these landscapes need to be protected from the industrial greed of humans. There are fewer and fewer undisturbed wilderness area in this country, and as a climber and environmentalist, it breaks my heart to see untarnished nature be made so ugly with unnecessary construction and human intrusion. And once one project like this is allowed, more will follow, and in seven generations time there will be nothing left of our sacred spaces where we feel we must go to heal from the wounding touch of society. Save Little Cottonwood from being spoiled, please.</p>
31850	Pavandeep Sethi	<p>I am strongly against the gondola proposal. Little Cottonwood Canyon serves a multitude of users with many locals, as opposed to tourists, being heavily involved in non-skiing activities such as hiking, climbing, etc...The irrevocable loss of landscape and availability of these resources will be catastrophic to the local community, and the gondola is only servicing one group (skiers). Other less invasive solutions to the Canyon congestions should be employed first and assessed before permanently scarring choices such as the installation of a long gondolare system are contemplated.</p>
31852	Andrew Watt	<p>I'm writing to express my support for phased implementation of alternatives, with support for expanded bus service and tolls. The gondola will not be an equitable solution and will only serve to help business interests, not the actual concerns or needs of the people. There are better options, and a phased implementation of solutions should help us find the best way. DO NOT BUILD THE GONDOLA!!</p>
31851	Christopher Norwood	<p>Before committing over half of a billion dollars to a gondola infrastructure plan, less expensive and less invasive measures must be implemented for a significant time period to determine their success. A trial period needs to happen to determine if traffic can be significantly reduced by charging single-occupancy vehicles a toll while also providing a significant increase in bus transit. We should only move forward with this gondola plan after these other measures are determined to not provide enough traffic reduction after being tested for a few years.</p>
31853	Nina Chapman	<p>I am against the gondola project. It did not make financial sense because it is an extreme expense for not much return. But my biggest concern is for the environment of the canyon. This would destroy the pristine nature of the canyon. Use the money for projects that benefit far more people that this project and do a lot less damage to a beautiful environment.</p>
31855	Cole Feagler	<p>The gondola is environmentally destructive & this project is an obvious scam. Implementing a progressive tolling system for private vehicles (by number of vehicle occupants) and adding additional busses & bus routes would be a much better solution.</p> <p>Taxpayers should not be required to pay nearly a half-billion dollars to subsidize corporate interests, at the detriment of all other canyon users. There WILL be ecological impacts to implement the gondola, which will disrupt climbing, hiking, camping, and all other recreational uses of the canyon YEAR-ROUND.</p> <p>Further, the thought that the gondola will have " no impact to the water quality" is laughable. This project is built on LIES and CORRUPTION!! Utahans have spoken, and we are AGAINST this gondola.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31854	May Lee	<p>I am concerned that Alternative Gondola B will not have a positive influence on building tourism for the area.</p> <p>It is difficult to understand how the assessment was done without a capacity/visitor management study to better understand how many visitors LCC can support. In reading the responses, UDOT claims this is out of their purview. Then, is UDOT the appropriate organization to be making this decision?</p> <p>As our friends at @studentsforthewasatch pointed out, if the gondola is implemented, the number of cars visiting resorts will remain the same while skier visits will increase by 20%, per UDOT's EIS.</p> <p>The EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6]</p> <p>Currently, the ski resorts in the Wasatch are renown for their convenience. The construction of the snow sheds, tolls and gondola will only add time in the short term. In the long term, there is no time nor logistics conveniences to be gained by using the gondola. It takes longer. Carrying all the equipment (skis, poles, boots) and having multiple stops on the way is not appealing in any way. Please reconsider and consider common sense solutions with parking controls and enforcing the current traction laws before funding what could be a costly mistake.</p>
31856	Brooke Muir	<p>I do not see how building a \$1billion gondola with taxpayer money will help with congestion. On the contrary, it seems like the location of the gondola base will only make things worse. Why is there not private funding for this project? If we are paying for the gondola, will the service be free to the public?...of course not. I would like to see more rational proposals before we jump in head-first on such a huge project.</p>
31953	Charlie Schaul	<p>I am very much opposed to the gondola solution. I feel that this options is strictly a tourist attraction that will do nothing but make the mountain resorts even more crowded. The resorts do not have enough room space for more people and the ski runs most definitely cannot handle anymore people. More people will ruin the experience that the resorts have had in the past.</p> <p>Gondola tours that are 280' tall is absolutely an eyesore and will ruin the solitude of hiking and biking in the canyon.</p> <p>A better solution would be to do tolls with a frequent user pass as many of us locals go to recreate for limited time each day. Once the frequent users leave it opens up more parking space.</p> <p>Greater bus frequency would help, however overcrowding of the resorts will negatively impact everyone except for the pockets of the resort owners.</p>
31954	cassady bindrup	<p>Hullo,</p> <p>Do the words "ANY massive infrastructure plan implemented to create a Gondola up little cottonwood canyon will be opposed by the climbing community," mean anything? It doesn't matter what letter preceeds the plan for construction WE DON'T WANT IT. Bus schedules can be disrupted, business can we waylaid as a sad ploy to alter public support but the fact remains that construction of a lift of any size will not only visually impact the canyon forever, it will leave scars in the earth and change the zone for worse and therefore it will be opposed on site as adamantly as it has been in the online space. Our community has spoken out against it. We know we are together on this. Any climber who has touched the drilled scars across faces and aretes understands the history of quarrying and industry already worked upon LCC and has developed a desire to preserve these blocks and pinnacles at any cost. Promises of not affecting bouldering areas have been made, but these cannot be kept if construction goes forward. Neither side is deceived on that point. The entire swath of land from col to river valley is strewn with granite which has, over generations, been intricately mapped and recreated upon. What can be built without affecting it you ask? Nothing. People have not only written and rewritten the history of the canyon, the canyon has been written into people's minds, their memories and their development. Crystals of quartz monzonite leaves impressions in more than fingertips. █ your plan, █ your plan B and every forthcoming plan which involves massive construction efforts requiring heavy machinery to demolish people's relationship with wildernesses. Thanks for listening,</p> <p>-c</p>
31857	Korielle Rhodes	<p>I think the gondola is a selfish way for ski resorts to make more money, not a way to get more people outside. I think the harm this will do to the mountain and the Utah culture is way greater than the "good" it would do. I absolutely think Utah should do the right thing and refuse to install the gondola.</p>
31858	Hediyeh Baradaran	<p>I sincerely hope we can attempt alternative methods for decreasing traffic before spending millions on a gondola. Other ideas have not been fully explored including creating a toll or fee system. Please try these more cost effective methods first before committing to an expensive and unappealing gondola option.</p>
31859	Brian Doubek	<p>I am NOT in support of a gondola in Little Cottonwood Canyon.</p> <p>A gondola is not a practical transportation solution. It is more practical to increase bus service in combination with 'reversing' lanes at peak times.</p> <p>If UDOT proceeds with forcing this option on the public, my suggestion is to also include enhanced bus service and make the bus option free to the public. Those who ride the gondola and the resorts which stand to profit from the gondola should pay for it.</p>
31862	Tracy Gorham	<p>No gondola. Dont make this massively idiot decision.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31861	Chris Hartley	Do not build anything!! At some point, we have to draw the line that we cannot accommodate all those that want to get on the mountain. Our mountains have a capacity and we do not want to disrupt our mountains to make it accessible to all. I'm born and raised in Utah. I have spent many of my days in the mountains. I'm a huge skier and would love the easy access to those resorts but I respect the mountain too much to want any more development to accommodate that desire. It is sad when I can't get there but I don't want a bigger road and I don't want a gondola. Take your money elsewhere. Build something else that will draw some attention away from our mountains. No more asphalt. No more bathrooms. No more mountain luxuries. Those that are worthy of the outdoors and will respect the outdoors will find their way to the mountains. Those that don't want the inconvenience can take their money to a theme park or something else. Please don't build anything!!
31860	Kenneth Black	It is the best thing for the canyons
31863	Jason McPhie	No gondola. Wrong use of tax dollars. 20-50 Days of traffic for \$600,000,000 dollars is not acceptable. The proposed gondola would only remove 30% of the cars. Not appropriate use of our Utah Tax dollars. Use tolls, parking reservations. Snowbird and Alta can pay for the parking and traffic issue with their own profits.
31864	Marjanna Hulet	Please take more care to preserve the incredible climbing locations in this canyon. Every effort must be made to protect climbing rather than sacrifice their activities for a gondola, of all things. Climbing areas are important and irreplaceable, but often given short shrift when other recreation opportunities come along.
31866	Greg Krumel	We should NOT build a gondola up LCC. Not only is this an egregious misuse of public funds for private industry, it will forever alter the view shed of the canyon for the worse. Resort users, backcountry skiers, climbers, and hikers are all against it. The only ones in favor are the resort executives and landowners (often there is overlap between the two) and corrupt UDOT officials all of whom stand to financially benefit from this project. Keep the canyon as it is and expand and maintain better bus service for all.
31865	Russ Sutton	The proposed line should not be built. Save the canyon please.
31867	Caitlin Curry	I am a Sandy resident and outdoor recreationist, and I adamantly oppose the gondola solution. This is a disruptive solution, not only to the canyon but to Sandy residents. This is a structure that will permanently alter the landscape to benefit a private entity and single outdoor user group, without consideration to the environmental reality that the ski industry will likely not exist in 25 years due to climate change. Furthermore, as an avid bowhunter that hunts in the Wasatch, I'm particularly irritated that my tax dollars would fund this project - one that benefits a private entity that leases Forest Service land that I own as an American and restricts hunting access on that land. I am a proponent for the enhanced bus service solution, but I would also like to see some contribution from the private entities that would benefit from this solution to fund that service rather than relying on tax dollars from Utahns who will not utilize this service because they don't ski (like myself).
31868	Ryan Shaw	We don't want a gondola. Just start tolling on busy days and run a bus every 5 minutes. Make it easier/cheaper to ride the bus than to drive. If you're going to spend money on anything, spend it on more busses and more parking somewhere outside the canyon for all the cars getting on the bus.
31869	Cameron French	A sustainable solution to the traffic problem in LCC needs to incorporate the interests of all stakeholders, not just tourists heading to the resorts. Backcountry users and other winter recreationists need to be considered by incorporating more stops on either the busses or gondola. Making busses the easiest way to go up the canyon should be the preferred option. The uniqueness of our Cottonwood Canyons is something that cannot be restored if we squander it for short term profits for a minority of the people. The bouldering opportunities that exist in LCC are world class and should not be overlooked and sacrificed.
31870	Sam Liston	I feel as though a simple one lane widening of the road, that was either used for a dedicated bus lane, or as a flex lane that had an uphill direction in the morning, and downhill direction in the evening, very much like the flex lanes on 5400S between 1900W and Bangarter Hwy. It seems the two main congestion issue are an accident or slide off that impedes traffic and the many merges that occur, in the evening, until one is past Snowbird entry one. An additional lane up in the morning and down in the evening would help immensely.

ID	Full Name	Comment
31872	Darryl Neider	<p>There is far more impact that you purport. The visual impact is environmental impact. Firstly having the towers strewn up and down the canyon, the 30-50 gondolas dangling 50 feet above all of which are 100% visible at all times anywhere you are in LCC plus a 2,500 parking facility and gondola station will destroy the beauty of LCC. Additionally, UDOT ALWAYS underestimates the adverse impact of executing their projects to include cost overruns and substantial delays (consider the west Davis corridor as a current example) and doing so again, this time in LCC, will result in unanticipated and harm to LCC and its broader environment.</p> <p>Moreover, saddling taxpayers for this unneeded project with cost estimates completely outdated with what has happened in this Country and State is an abuse. You always get into these projects and then come back for more money and more time and the taxpayer are left to clean up these messes with additional taxes (federal or state, it's all the same).</p> <p>Bottom line is this project is horrible for LCC and horrible for taxpayers who are already struggling with exploding living costs that will increase even more with continuous inflation and recession. All of this to benefit a few financially and to give UDOT another "grand and sensational" project -- if this is such a great project, why don't Alta and Snowbird pay for it? Additionally, everyone knows that the next step for Alta and Snowbird will be, "There are too many people coming to LCC, we need more land for hotels, ski runs, towers, gondolas, lodges, etc." I don't see that in the EIS.</p> <p>Also consider the ease of use for families. Now you load up the car and park, get into your equipment and set out, leaving what you do not need in the car. With the gondola, load up the car, empty the car, transfer to the gondola, exit the gondola with all of your stuff, now where do you put the stuff?? Then, if you are going to ALTA, now another transfer. Then, at the end of the day, all of this in reverse. Decidedly not user friendly.</p> <p>Please do not inflict this project on us and saddle us with its unquestionably undermined cost and environmental impact.</p>
31871	Vilma Helmer	<p>I had submitted in past my comments, the Gondola will generate money income all year round, it wil give Utah the Olympic bid which generate money & will improve the Mormon LDS image internationally, likely convert into Mormonism. The SLC people don't like it bec they don't want to spend local taxes for the gondola. Those against it are so ignorant that buses even if it's electric cause unsightly & noisy pollution from people boarding it. Buses needs maintenance of Bus & roads & traffic. U don't get those from Gondola. Even third world countries Vietnam n Thailand have Gondolas. I laughed at Utah who Wants buses. Is Utah a third world country ?? I supposed so , Utah wants to go cheap. When you spend on cheap stuff like Bus, u get cheap results. Gondolas are the answer & I am not even a skier. Gondolas cause no traffic in Alta & Sandy neighborhood. Get a toll road for the Gondola so the legislature will approve it. Utah u r in 21st century .</p>
31873	Elizabeth Enos	<p>The speed limit on Wasatch Blvd needs to be reduced to 35mph, similar to other residential areas. This road has become increasingly dangerous due to high-speed vehicles. This is a multi-use roadway and pedestrians and cyclists need The ability to safely use this road. Additionally several high-speed crashes have occurred with vehicles ending up in the yards of houses in neighborhoods along Wasatch Boulevard. The beauty of the foothills and access to the canyons needs to be preserved for everyone including all of the bicyclists and pedestrians who use that road.</p>
31874	Errolyn Hatch	<p>I commented during a previous comment period. I do not support the gondola. It will cause irreparable damage to our beautiful canyon. PLEASE SAVE THE CANYON. The solutions proposed by UDOT as the 'phased' implementation of this project such as tolling, limits on single passenger vehicles, improved busing etc. will, in my opinion, have a tremendous positive effect on traffic in the canyon. Someone even mentioned odd/even day use based on license plates. We can get creative! We may find that we don't even need a gondola if we implement these other solutions well. Why not start there?</p> <p>We ski at Alta and we felt that the parking reservation system implemented last season was a great step in the right direction. Our family would ride the ski bus more often if a direct Sandy City-> Alta bus was offered so we didn't have to stop so much. Also, if we forgot to make a reservation, we rode the bus.</p> <p>I wish I could cite the source but as I have read up on this issue, one article claimed that canyon traffic could be reduced by up to 34% by just eliminating single occupancy vehicles during peak travel times.</p> <p>One sentence from your statement above in support of the gondola says, "This [gondola] alternative has the highest visual impacts but low impacts to the watershed, wildlife movement, and climbing boulders." Implementing tolls, ride sharing and busing etc. also would have low impacts to watershed, wild life movement and climbing boulders *with the added benefit* of eliminating the HIGH visual pollution the gondola option would create.</p> <p>I haven't met a single person in real-life who supports the gondola so I question who benefits from this "Preferred Alternative"? Please table the Gondola option for now. Let's start with the other solutions and see how much we can do to improve traffic while still preserving the beautiful canyon. It is such a treasure and it would be an absolute shame to scar it with a massive gondola if there are less-invasive solutions that would provide the needed relief on the canyon road. Please make your decision for the locals, the tax payers; those of us who live and use the canyon. Please don't make a decision based only on money, resort profit (Snowbird) or tourism. PLEASE DO THE RIGHT THING AND PRESERVE OUR BEAUTIFUL CANYON. Thank you.</p>
31875	Samantha Nielson	<p>Love the gondola idea. It gets all the skiers off the road to relieve traffic for the rest of us</p>

31876	Sean Nielson	I do not support the installation of the proposed gondola as a solution to transportation problems in LCC. The gondola serves a limited area of the canyon and essentially relocates the parking lots of Snowbird and Alta. It does not mitigate the larger transportation problems and driving to/from LCC and has a limited reduction in overall emissions in the SL valley. The gondola seems to be catered to skiers/snowboards, largely focused on the wealthier socioeconomic class and does not serve the populations that need affordable transportation the most. The gondola would also diminish the visual environment in LCC. I encourage you to implement alternative(s) with less of an impact to the environment and that focuses on underserved communities.
31877	Dalton Bunker	I am in favor of the increased carpooling and bus use options. Not the gondola nor the widening of the road. This gondola would benefit the ski resorts, not the people of salt lake city nor the ecosystem of little cottonwood canyon. Thanks for allowing this comment period.
31878	Fiona Blackburn	I do not support the Gondola alternative selected by UDOT. The permanent destruction to the natural aesthetic of the canyon is unacceptable and unjustified, especially to those who recreate year round and in the lower portion of the canyon. All users experiences in the canyon will be negatively impacted to improve the experience for only select users on a few high traffic winter days. Tolling and other alternatives that specifically target the congestion concerns on busy winter days without causing irreversible harm to our treasured local canyons is the only acceptable solution.
31880	Bob Wertz	Please just add a lane to existing road. 2 up in the morning. 2 down in evening. minimal cost, minimal impact. Parking issues can be cost adjusted, ie. pay to park. Resorts can manage the parking. Or have a toll like millcreek canyon. Building a gondola is unmanageable, who's going to lift evac. when a gondola goes down. These are HIGH MAINTENANCE. You also have to build road under the Gondola for maintenance, To complicated!
31879	Miranda Menzies	With respect to the Gondola Option B, I believe it will increase the total numbers of people in the canyon while decreasing wildlife and vegetation diversity. Doing this at the expense of taxpayers, to benefit private entities, is a violation of the public trust. As a tax payer, I believe a market based solution should be followed.
31881	Colby Stetson	The proposed gondola does nothing to solve the traffic problems in EITHER cottonwood canyon and amounts to little more than corporate welfare for two multi million dollar ski corporations. Nobody who lives in Utah thinks this is a good idea. The only benefit it would provide would be to the resorts who could ferry more people to their profit centers (ON PUBLIC LAND) when their parking lots are already full (which means traffic will be as bad as ever). It will not stop at popular USFS trailheads, or be mandatory for resort skiers. It does nothing to alleviate traffic in LCC OR IN BCC. It will be unused and only serve as an advertising gimmick for Alta/Snowbird. The fact that the resorts expect Utah taxpayers to fund this disaster is utterly offensive. There are many other lower impact solutions (increased bus service, snowsheds, commuter lane) that would safely alleviate traffic problems and allow ALL users to enjoy their public lands. The gondola solution is not a solution at all. It is a government>corporate handout that will likely have a net-negative impact on the Salt lake valley and the cottonwoods in general.
31882	Christophe Diezma	to destroy a beautiful canyon for the economic gain of skiers is WRONG!!!! no gondola. make everyone bus up n down but no gondola!!!!!!!!!!!!
31883	Flynn McGuire	A gondola is not a plausible option due to the disruption to the environment, time course, and financial disruption to one of the biggest draws and economic powerhouses in Utah. Please be more creative. Best, Flynn McGuire
31884	Frank Crandall	Taxpayers should not be paying for a Gondola that delivers customers to private businesses, i.e Alta and Snowbird.
31885	Colby Stetson	Expensive and dumb. Nobody will use it. Who is expected to pay for this? Environmental and watershed degradation, no impact on traffic (seriously?), no access to USFS trailheads, corporate welfare. No benefits for anyone outside of resort shareholders. This is so offensive, I cant believe that this is even still on the table. Do better UDOT!
31886	Thomas Finley	I ski at Snowbird 60 days a year. I only find the road difficult to travel on storm days which are 10 to 25 days a year depending on the year. This means that with the gondola and enhanced bus service a very large amount of money is being spent for only a handful of days a year. I am very pleased that there is a phased approach being proposed while funding is secured which means the gondola may never be built. I do believe that the gondola is bad idea as it is a very expensive solution for a problem that exists on a handful of days a year. I also believe that just like most large projects the final cost will be double the \$550 M. When reading through pros and cons for the Gondola vs Enhanced bus service a common con for busses is that no one rides them today. A simple solution to increasing ridership is to put in place restricting the canyon to only busses on the days that the road is a mess. Again this is only a handful of days a year. You could also just restrict the canyon to busses only for the first hour or two after opening. If that were done the busses would be packed with skiers wanting to get powder. To deal with the traffic issues near the neighborhoods either make a parking lane (ie wider shoulder) or ticket people that park and wait in the lane of travel. You could require cars to wait in mobility hubs which is where the busses would load. With this approach the busses will be full. Another comment is that the ticketing of cars waiting in the lane of travel and restricting cars on the days the road is a mess is a safety issue and that should make them implementable. Also cars should be ticketed if they are in the canyon with out snow tires through out the season. There should be an inspector checking a cars tires and turning cars around particularly on storm days.

ID	Full Name	Comment
31887	Benjamin Verdejo	<p>After reading the environmental impact statement I have changed my opinion of what I think is best. It does seem that the gondola appears to be a good solution. The recent EIS announcement put out by UDOT has made my voice and opinion felt heard, and has changed my opinion of what is best.</p> <p>It appears that the gondola has less impact on water shed, wildlife, climbing and other environmental impact. I support how the gondola would help with air quality, winter inversion and lower the incentive to drive and increase emissions. Thank you for looking into this matter and researching thoroughly before acting.</p>
31889	J Wyatt	<p>A gondola serving the needs of skiers and snowboarders in Little Cottonwood Canyon will greatly improve the quality of life. Traffic up/down LCC is already a nightmare on powder days and hellacious over the weekends. Sailing over the slow-moving traffic in a gondola car will be much faster. Finding a parking spot will no longer be an issue, except for the ample parking facility at the base of the gondola. Such infrastructure will also be better for the environment as there will be fewer cars in the canyon. I look forward to the next phase of this solution and hope the rest of Utah can get on board.</p>
31888	Nicholas Backus	<p>Little Cottonwood Canyon is an exceptionally beautiful area with very high recreational value that needs intelligent planning to protect and balance its natural beauty, recreational value, and ease of access. I think the improved bussing is a good start but more should be done to evaluate its effectiveness and only move on to alternatives if it does not work for fulfilling the transportation needs. To find a solution that does not involve a gondola, and that avoids the widening of the canyon road in the future. We should be looking at models used by the national park service, as this type of transportation is something they specialize in. In minimizing impacts to high value areas while accommodating mass amounts of people. Specifically Yosemite and Zions. In peak volume you can swap to bus only for most visitors, but allowing residents handicapped vehicles to use the road. Or a system like glacier point road in Yosemite, during peak season, control the number of cars that are allowed up based off how much parking is available, thereby keeping roads clear of traffic allowing fast transit via busses. My favorite time of year in Little Cottonwood Canyon is spring through fall. Seeing a gondola put in it would make me sad. The Freeway in Provo canyon ruins it for me, I hope this canyon remains intact.</p>
31890	Anthony Bonanno	<p>Don't build anything! Close the road to POVs and offer an electric bus with a parking lot at the bottom.</p>
31892	Kyle Kemper	<p>No Gondola! Expanded year-round bus service with real incentives for those who ride and high per-vehicle fees for those ski tourists who don't. Electric buses as possible to reduce ecological impact to canyons. Let's not have the citizens of SLC subsidize a base ski lift that only serves the wealthy that utilize resorts.</p>
31891	Asha Flick	<p>Public funds should be used for the highest priority public needs, benefiting the most vulnerable in our communities. Given the current economic uncertainty and the financial hardship so many of our families are facing, a gondola is simply not a priority at this time. Let's invest in our food banks, libraries, and public services, please!</p>
31893	Jemmy Buchanan	<p>I am sure one of the Gondola solutions will be the lowest impact and while I want to preserve our canyons as much as the next person let's be realistic. Let's expand the road up the canyon and also do the Gondola. If we can do the Gondola first let's do that to alleviate traffic and deal with immediate growth and congestion and then expand the road. It is unrealistic to just not expand in one way or another in multiple ways.</p>
31895	Robyn Palmer Steele	<p>Quite frankly, I am not sure why you are soliciting comments. Your mind was made up prior to ever asking for public comments. The PEOPLE are opposed to the tram- to the cost and to what it will do to the canyon. However due to people in power who have a significant financial interest in pushing the tram through, you have chosen this option, enriching a few at the expense of the taxpayers.</p> <p>The news reported last week that you are also pushing a toll in the canyons of \$20-\$30 per car. The result will definitely be to keep traffic out, and you will make the statement that the canyons are only for the wealthy, the elite at the expense of the rest who maybe just want an inexpensive family outing, or to hike or to just enjoy the beauty that are in the mountains THAT BELONG TO ALL OF US. I cannot tell you how utterly disgusted I am with this entire process and with UDOT. Trust me, I am not the only one that feels this way, in fact the majority of Utah taxpayers are opposed to this. Since we don't have the money to influence your decisions, we will be ignored again. Shame on you.</p>
31894	Peter Veals	<p>I'm extremely disappointed that your preferred choice is a gigantic giveaway of money to two large ski resort corporations. That gondola only stops at these resorts, and not at the trailheads where we citizens can access our public lands. This massive eyesore should be paid for in full by the ski resorts. I don't want one cent of my taxpayer money going to a project that benefits them exclusively. The bus alternative will be far less of an eyesore in our beautiful canyons, and the dedicated lane will double as great recreation benefit for cyclists and runners in the warm months. Please please reconsider the dedicated bus lane option!</p>
31896	Colin Pollard	<p>I do not support the proposed gondola as a valid solution to LCC's traffic congestion for several reasons. First, as a taxpayer, it is dubious at best to publicly subsidize a transportation system that will primarily serve two for-profit companies. Secondly, as a user of the climbing locations identified in the EIS as impacted, I do not support the required impact of this solution to these recreational areas. Finally, and most importantly, I do not recognize the urgent need for improved transportation up LCC. As a long time resident of Park City, and a long time skier at PCMR, I have experienced the effects of ski resort operators increasing the population of skiers on the mountain to an unreasonable degree. The bottom line is that the modern mountain operations model, which is one of selling the maximum number of passes, and getting the maximum number of patrons onto the mountain, is a negative one, both for skiers at their resorts, and as residents impacted by the immense traffic demands to these company's properties. The bottom line is that it is not in the public's interest to support this detrimental model by alleviating a traffic problem they by and large created. By approving and helping finance this gondola, we are sending a message to these mountain operators, and mountain operators across the country, that selling more passes is always the answer to profitability, and when this strategy creates traffic problems, the state will step in and fix it for them.</p>
31897	Sheridan Davis	<p>I am strongly against the Aerial Tramway aka Gondola proposal. Number one, the Wasatch Range is young and is growing by 1"/decade--astronomically fast by geological standards. You would be building across the Wasatch Fault in a zone prone to earthquakes. This is a deadly proposition in the near and long term.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31898	Bradley Purcell	Well, I'll just say this. With clear and overwhelming opposition from the community against the Gondola, it strikes me as pointless to comment any further. UDOT clearly has decided to pursue a solution supported by the self-interests of the operators of Alta and Snowbird and all but ignored the environmental impact concerns from the broader community. I own a home at [REDACTED]. A Gondola will do little to solve congestion, will destroy the extraordinary canyon sight lines and will cost tax payers probably closer to \$800 million when all said and done. Makes no sense. I think you owe it to the public to explain how you settled on Alternative B in the face of such massive opposition.
31899	Silvana Medukic	As a resident of Sandy with views of Little Cottonwood from my window, I strongly oppose the building of a Gondola. Not only for the negative visual impacts and commercialization of a pristine and natural landscape, but because there are other environmentally friendlier alternatives that won't disrupt an entire ecosystem of flora and fauna in the canyon. I would gladly support electric buses as have been implemented in Zermatt, Switzerland. Or, additional bus service to-and-from the ski resorts to the canyon base. Little Cottonwood is such a beautiful place for all recreationalists, from climbers to hikers, snow shoers, cross country and downhill skiers. The wild and untouched alpine landscape is one of the main reasons my family has purchased a home here, and we would prefer to see it remain that way with no further visual impact.
31901	Sheridan Davis	I am strongly against the Gondola/Aerial Tramway proposition because of the negative impacts it would have to the viewshed. Like The Green Mountain Parkway proposed as a highway across the top of the Green Mountain Range in Vermont in the 1930s, this aerial tramway would change the character of beautiful Little Cottonwood Canyon forever. It is a boondoggle and an absurd, shortsighted "solution" to the traffic dilemmas we face here in LCC.
31900	Melissa Thinkaboutit	Don't build the gondola. The answer is less people visiting and you won't need the gondola. Save money and resources by stopping the promotion of the ski resorts. Money will still come to them and their business will still be fine. They are greedy if they think they need excessive tourism. Stop ruining the west. Anyone who would like to see excessive growth does not belong in the west. There are other more fitting places for you. I've seen in the structure such as gondolas and gravity coasters and all kinds of other crap people put into the mountain. Less is more
31902	Paul Litka	I am opposed to the gondola option on a number of grounds: 1) The expenditure of \$550 M or more of taxpayer money for the benefit of private businesses, tourists and only a small minority of Utah residents is inequitable. 2) The aesthetics of the parking lot and gondola towers, at least from my perspective, are terrible. (I can see the canyon from my home in South Jordan.) 3) As far as I can tell there is widespread opposition to this project from local residents and local political leadership. There are what seem to me to be valid concerns about shifting the traffic problems from the canyon to Cottonwood Heights and Sandy. I would urge you to go back to the drawing board on this idea. For immediate solutions please consider tolls, required carpooling and free bus service plus simply closing the canyon to uphill traffic once a certain threshold is reached. If further steps are needed to reach traffic reduction goals in the future please consider extending TRAX or putting in a monorail or mag-lev system. I believe there is an existing railroad bed which could be used for part of the way up the canyon.
31903	Sheridan Davis	I am strongly against the UDOT gondola as there has been no independent, scientifically based human capacity study done on the upper limitations of how many people we can continue to have in this little canyon and expect that we will not crash the fragile environment and culinary watershed of this area. If anything, we should be moving against a trend to continuously deliver more people to this fragile, beautiful canyon.
31905	Christie Saunders	I have been a regular user of Little Cottonwood Canyon for over 60 years. I no longer ski but am in the canyon often for hiking and mental health. I feel that the gondola will mainly benefit the ski resorts but is being paid for by taxes of non skiers. I would prefer working on all other suggestions for limiting cars in the canyon.
31908	Johnny Page	Yes, this is Johnny page. I'm a nurse up at the university hospital and I live right in downtown Salt Lake City and I am putting a comment about the gondola that's been proposed and I do not want my tax dollars spent on the Gondola. I am totally against the gondola off and you don't have to call me but I just want to express a no for the gondola. Thank you very much, bye-bye.
31907	Eric Croswhite	I am not in favor of the gondola due to the high forecasted expense vs the relative few who benefit. I feel strongly other approaches should be tried first which include increased busing, tolls and reservation systems.
31909	Randall Johnson	I think the Gondola is a bad idea and I am 100% against a gondola. The gondola in LCC does nothing to help traffic in BCC. Where a fleet of buses could be flexible and used where and when needed. Supporting just mainly 2 companies, ski areas with tax payer money is wrong. Why have the number of tickets sold not been capped 5 years ago... No other company can expand without having adequate parking. If season passes were banned this problem would be solved. is it fair for a daily user local or tourist to pay 140\$ when season pass holders who brag about 80 ski days each year pay 15\$ for each day... Season pass holders also come up and ski for as little as 2 hours and then go home and they do not and will not use public transportation. A big investigation of all the parties who stand to gain financially needs to be completed or the public is going to lose all hope in government and UDOT Regards Randy in Sandy

ID	Full Name	Comment
31910	Charlotte Figgins	<p>UDOT,</p> <p>After all of the concerns proposed in the Chapter 32 document, I still cannot fathom that the Gondola is somehow the BEST choice for LCC. The climate, ecological, recreational, and environmental impacts would be irreversible simply because people enjoy a ski season for 2-4 months out of the year. The canyon is used for other purposes other than skiing, in months without snow, and those types of recreational activities also bring hundreds of people to Utah to enjoy. They come for the natural landscapes, climbing, hiking, etc. and enjoy what nature has to offer to escape the sounds of machinery for a few hours, something that would be eliminated by this project, along with the climbing and hiking routes that would be bulldozed to make room for this.</p> <p>By only focusing on a ski season that potentially may be non-existent in the next 25 years due to the increasingly less snowfall we receive each year from global warming effects, we are limiting the amazing benefits all year around that the mountain range offers. Considering the trajectory of less and less snowfall each year, the 10 years it will take to build the gondola, and the potential to have permanent climate effects by 2050, realistically this gondola only has about 15 years of operation once it's completed to even enjoy any snow at all.</p> <p>All of this for \$550 million which could be spent on climate efficiencies to save The Great Salt Lake, something that is in need of support RIGHT. NOW. And something that, if not fixed, could cause Utah to become uninhabitable in general, to where a gondola wouldn't even be needed let alone funded. I'm appalled at UDOT for still considering this ridiculous project. People who take part in the ski season understand the traffic, they willingly participate in it every year as a factor in enjoying the resorts, and they know what they're getting into. If they are concerned about getting up the canyon, they can carpool, arrive earlier, take the bus, or use alternative means that aren't going to create a forever lasting effect on the natural landscape of the canyon.</p>
31912	Brady Newton	<p>UDOT's process of commenting and EIS makes it seem like UDOT will do whatever it wants regardless of public will or sentiment, but I will submit a comment again anyway. The communities have spoken: No Gondola! Sandy Mayor has represented her constituency in opposing the gondola. The Salt Lake County Council has officially passed a motion condemning the option. Our community does not want or need the gondola. Please stop pushing this option on the patrons of the canyon.</p> <p>The traffic congestion is only an issue a handful of days per year, yet a massive infrastructure development is proposed at taxpayer expense to transport people up LCC.</p> <p>The numbers don't make sense either. A 30 person gondola car departing every 2 minutes only transports a maximum of 900 people per hour. On a busy travel day, canyon rush hour is only 2-3 hours. This means that effectively the gondola will only transport a couple thousand people per busy day, in ideal conditions. Use scalable transportation solutions, not fixed, high-priced, and high impact developer friendly options!</p>
31915	Martin Neunzert	<p>I know UDOT is required to accept public comments but it's obvious it doesn't matter anymore what the public thinks.</p> <p>Martin Neunzert Ogden, Utah</p>
31916	robert weaver	<p>The preferred alternative summary is misleading in its portrayal of the facts: "Support for gondola and bus alternatives" More correctly it should show that over 80% of respondents are against the gondola in any form, with busses preferred Support for tolling - YES! low cost/high impact improvement Support for phased implementation - YES! Start with tolls and enforcing traction laws that are already in effect (almost never enforced) Consideration of all canyon users, not just resort visitors - YES! Keep existing recreation opportunities intact -YES (Gondola does nothing for summer users, trailhead access, etc. Maintain existing visual experience - Gondola ruins the canyon experience.</p> <p>Budget - Who is kidding who with this budget? like all large govt projects, it will end up costing double.... (Think Airport, Prison, Legacy...) If 1/2 or more likely a billion dollars can be found for any project, why cant a couple hundred grand be found to patrol/enforce existing traction laws?</p> <p>All the above is to say nothing of the Super Fund/EPA reclamation work that will need to be done at the proposed goldola base station site as it is an old tailings pile, the pre-2022 Winter Olympic EPA study that found LCC was too fragile to host any events, the fact that a gondola is just corporate welfare for 2 private businesses and nothing more than a tourist ride. It seems clear that any goldola option is too expensive/wastes tax dollars, does nothing to improve the canyon experience, favors 2 private entities, etc.... If it ever does go in, forced use will then come into play with the additional cost to users of \$40, plus the parking, plus the transferring from a park and ride lot to the base station, which will just cause people to continue driving up anyway...</p> <p>Put in a toll booth for single passenger vehicles, let HOV's go up free, add busses, institute an even/odd lisc. plate program if needed, fund enforcement of current traction laws. Resorts to institute more paid/reservation parking. PROBLEM SOLVED!</p>
31918	Eric Woodbury	<p>I'm in favor of the Gondola. I've lived in Salt Lake my whole life and routinely drive to Snowbird and Alta for skiing. It's a nightmare and it's dangerous. So much better to get people off the canyon road and have them ride a gondola. I'm also concerned that opponents to the Gondola I really just trying to keep skiers out of the canyon, they aren't looking for a solution that allows more people from Utah to enjoy the ski resorts. Our population is growing, we need to make it easier for people to reach the current ski resorts or we need to build more resorts. I'd prefer to improve access to the resorts we have.</p>

ID	Full Name	Comment
31919	Andrew Lines	<p>The decision by UDOT to adopt the Gondola B option is a mistake.</p> <p>Enhanced Bussing Busses are a tried and true method of transportation, and I see no reason to abandon them in favor of a system that would cost \$500 million when enhanced bussing would cost \$140 million less. UDOT should try expanding parking, expanding the bus fleet, and if needed examining the possibilities of expanding Wasatch Boulevard BEFORE attempting a large, years long project like a Gondola.</p> <p>The current plan wishes to implement an Enhanced Bussing plan alongside the Gondola, which is a terrible idea. UDOT will be too focused on the Gondola to make the Enhanced Bussing option run well, and it will inevitably turn out to be wasteful and inefficient. UDOT will then cite this inefficiency (caused by UDOT's lack of focus) as a reason for the Gondola.</p> <p>Ski Resorts I understand that tourism is a large part of Utah's economy, especially during ski season. But using public funds to build a ferry directly to corporations does not sound like a good idea. It would be like public transportation going exclusively from the bus stop to McDonalds or Taco Bell and back. Tax revenue from the Ski Resorts will help mitigate the cost in the long run, but this could take decades, not including the year on year maintenance cost of the Gondola.</p> <p>The Gondola only helps Ski Resorts, as if you are going down the Canyon for any other reason, the road will remain small and most likely congested during the winter months. The Gondola will permanently ferry tourists to and from the Ski Resorts, which sounds like something the Ski Resorts would implement, not something a State Agency would advocate and provide funding for.</p> <p>Expansion In my opinion, expansion seems like the easiest option here. Expand the roadway, expand parking, expand bussing options. If Wasatch Boulevard and North Cottonwood Road are expanded, ALL traffic moving through there, including residents, hikers, campers, and climbers would benefit, not just the Ski Resorts and Skiers.</p> <p>Expansion of parking and expansion of bussing options would also help fix congestion, as there would be less vehicles on the road in addition to a larger road. This would be much simpler than attempting to build a large Gondola System, and much of the construction could be done during the Summer, when traffic would be comparably light.</p> <p><i>Overall, the Gondola seems like a poorly designed decision chosen to benefit Ski Resorts, and a very inefficient project that</i></p>
31920	Sheridan Davis	<p>I am against the Gondola as it is an old fashioned, fixed, unvariable means to transport people that is wildly expensive, will benefit two privately held snow resorts, and is proposed to be paid for with taxpayers dollars. Boondoggle by definition. Not able to adjust to the swift changes in transportation which are on the immediate horizon.</p>
31923	Lori Peterson	<p>NO GONDOLA!!!! It is much simpler and less expensive to simply limit the number of buses /cars allowed up the canyon. The gondola appears to be the excuse to build infrastructure at the site of LaCaille and widen Wasatch Blvd. A gondola structure will also completely ruin the beautiful appearance of the canyon.</p>
31924	Michael Walterscheid	<p>I am against paying for the Gondola. My taxes are too high and I don't benefit from the canyon access for skiers.</p>
31925	Tammie Atkin	<p>No gondola</p>
31926	Andrew Meservy	<p>First off, NO GONDOLA. Dumbest idea I've heard in my life. ... My proposed solution:</p> <ol style="list-style-type: none"> 1) Require resort visitors to have a parking pass to be able to drive up the canyon. 2) Limit the amount of available parking passes to the resort. The rest of the canyon can remain free for non-resort use. <p>... This will keep the canyon nice for everyone and discourage people from rushing up the canyon all on the same day. We don't need more infrastructure up the canyon. We need less people on a few certain high-traffic days. For example, a toll booth on the high-traffic weekends that checks for parking passes. ... I live in Sandy, less than 15 minutes from LCC, and I've been going up LCC at least once a week through all seasons for the past year and a half.</p>
31929	Stephen Hales	<p>I do not support using taxpayer funds to pay for a ridiculously expensive and ugly transportation system to two privately owned ski resorts. The gondola is a terrible idea that benefits a few wealthy individuals and corporations. I only support expanded bussing and snow sheds that can keep the road open through avalanche paths.</p>
31939	Sabina Williams	<p>Please don't build the gondola</p>
31946	Milton Witt	<p>To all Utah residents, After reading and listening to explanations and many comments about the various proposals for future transportation options in Little Cottonwood Canyon, I am in favor of the Gondola option, specifically Gondola alternative B with proposed phasing. This addresses both short and long term issues. This proposal is the most cost effective in the long term.</p>
31955	Jennifer Badger	<p>Hello! I am commenting to express I am against the proposal of a gondola as the traffic solution to Little Cottonwood Canyon. This is an expensive, damaging suggestion that has no real data to solving the problem. I would like to see less invasive measures implemented first, such as a tolling system, a reservation system, or a bussing solution, before determining a gondola is the best solution. Thank you.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31956	Sharlene Wells	No to the gondola in any way! Environmentally it would be a disaster to habitats, destroy the scenic quality of the canyon, cost way too much, and be used only by a limited group of people to provide traffic congestion relief that is only necessary for relatively short periods of time in an entire year. Surely there are people who are smart enough to address limited traffic congestion without causing so many negative consequences!!!
31958	Tom Boner	For the gondola with the following caveats. Alta and Snowbird must share in cost burden and yearly maintenance of the gondola system. Senior rates and no skier riding rates need to be lowered. Summer rates should be lower than winter rates. Remediation after installation mandatory and ongoing. Any profit from ongoing gondola operation should be set up in an escrow account and allocated per a oversee committee comprised of public, private and government officials.
31957	Micki Harris	Increased visitation stress on LCC. If those invested in the gondola are so interested in preserving Little Cottonwood Canyon, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. As our friends at @studentsforthewasatch pointed out, if the gondola is implemented, the number of cars visiting resorts will remain the same while skier visits will increase by 20%, per UDOT's EIS. The EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6]
31959	Chris Riggle	I have said it before and will say it again--NO GONDOLA! We're at Snowbird for 2 days and enjoying the wonderful view which will be changed FOREVER if the gondola is chosen. Follow the money--who benefits? 2 rich ski resorts and the developers. Who loses? ALL the taxpayers.
31960	Darren Balls	The proposed gondola plan is a large waste of tax dollars, cuts into the visual aesthetics of the canyon, harms natural resources, and only serves a percentage of canyon users during winter months. It seems that increased bus transit with more stops throughout the canyon (or other alternate solutions) could serve not only skiers at the two resorts, but those who visit the canyon year-round and desire to backcountry ski, snowshoe, hike, bike, climb, birdwatch, etc. The gondola only serves resort-goers and is a strenuous impact on the tax paying citizens of Utah as well as the natural environment of the canyon. Wouldn't it be better to increase/improve bus operations and hours of the day for a much smaller investment while reallocating much of the proposed gondola budget to improve mass transit throughout the rest of the Wasatch Front? Perhaps two rail lines for the FrontRunner? Additional rail lines? Utah's governing authorities could provide solutions that majority of Utahns (not just those who support two ski resorts) can benefit from -- especially as our population will begin to reach 4 million people by 2032. This seems like a narrow-minded proposal which aims to benefit the few and privileged who can afford to ski at these two corporations, line the pockets of legislative landowners where the parking garages will be built, impact the aesthetics and wildlife of the canyon, and not address/fix the underlying issue with overcrowded canyon use. I know this solution seems exciting and like a fun way to advertise tourism to our great state. However, for the reasons above, please reconsider and think long-term about the impact of your decision to support on current residents, future generations, wildlife, water resources, erosion components, and sustainable solutions.
31961	Matheson Harris	Wasatch BLVd Redesign: Road design that promotes a slower speed limit (vegetation, medians, chicanes, etc) 2. 3 Lanes at most, less car centric. 3. Protected bike lanes for cyclists, not to be shared with bus lane. 4. Pedestrian paths on east and west side of Wasatch Blvd, not to be shared with cyclists. 5. No pedestrian bridges, implement preferred pedestrian ground level crosswalks (hawk signals) or pedestrian tunnels, 2nd preference.
35163	Ross Murray	So I live in the city of Sandy and have since 2015 and I also work at snowbird and I would like to voice my opinion that I am pro gondola I have read multiple arguments against it and I actually see no validity in any of the arguments. I was just in Uzbekistan and was skiing at a resort where they have a four Mile Long gondola and you could hardly see it in amongst the trees The traffic up Little cottonwood needs to be controlled somehow and there needs to be an alternative to driving a two wheel drive vehicle up the canyon. Including bus options and they also have the same issues
31962	Sandra Livingston	The expense of a gondola ticket, coupled with the price of a lift ticket, will prevent many local skiers from accessing their own mountains while subsidizing two resorts with public funds. The gondola is not in the best interest of most Utahns; it is a project that benefits an elite few at our expense.
31963	Josie Bohling	I do not support the Gondola. Using tax payers money to pay for the ski resorts private industry is criminal. Even if the roads are crowded the number of Utahans who actually can afford to ski dies not proportionally justify this cost. Let's use tax money to benefit all of Utah! Education, Homeless, Filling the Salt Lake, clean air infrastructure. The list of priorities are huge and funding private industry dies not make the list.
31964	Steve Nielsen	Why aren't the ski resorts paying for part of this? My concern for them would be that tolls will drive business to other ski resorts.
31965	EP Kosmicki	The resorts, who would benefit from a new gondola, should bear 100% of the costs not the public.
31966	Jessica Scheetz	With Utah being in a dangerous, life-threatening draught situation because of the lack of mitigation amongst agriculture, it's quite shocking what companies are willing to do in order to bring more people here. If the money earned were going to support the ecosystem of the state, then perhaps it could be justified. However, this project only supports private companies. Construction has amplified in this state as a whole and this project only seems an opportunity for the state and private companies to make money. Perhaps this money would be better spent on organizing a proper infrastructure that operates efficiently. The gondola only presents itself as a hedonistic financial conquer.
31967	Maryann Wright	Preferred alternative is a fee to enter the canyon at certain times of the year.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31968	Berkley Frei	The Gondola for our Canyons seems to favor a privileged demographic of Skiers/Snowboarders and fails to consider the more accessible activities of hiking, biking, photography and climbing. I personally don't want to have Gondolas marring my views and restricting my access to the top end of the canyon. We need a solution that services the entire canyon top to bottom along with ALL activities!
31969	Bianca Lyon	I am against the Gondola and would support any other alternatives that are less permanent to address traffic concerns up LCC.
31970	John Stinson	build Gondola
31972	Gail Bullock	Please no gondolas. Totally against this plan.
31971	Andy Joy Chase	<p>NO NO NO 1,000,000,000,000,000,000,000,000 times on Gondola B</p> <p>By the time you scrounge up the money from private investors, crooks, etc., there will be no snow in this valley anyway. We have major water issues and an evaporating lake that is going to damage all of our livelihoods significantly in the next few years. Let's throw some money at that instead of some disgusting gondola.</p> <p>We have world renowned climbers, as well as, strong local climbers that come to Little Cottonwood Canyon to train and get stronger. There's nowhere else in the world like little cottonwood for bouldering. The gondola will directly affect these special climbing areas. These places need to be protected. Utah is becoming more and more of a joke.</p>
31974	Shauna Sloan	The \$550 Million cost should be passed on to resort visitors - not shouldered by local taxpayers. Assuming 10,000 cars a day (I doubt it's this high), that's \$5 per car every day for 30 years. If there are 5000 cars a day, that's \$10/car. A simple cost/benefit analysis for the general public doesn't pencil. We need to stop funding wish list items that are paid for by future generations.
31973	Sheridan Davis	I am strongly against the Gondola. Before any taxpayer money is spent on increasing people in this canyon, the public needs clear and transparent data about how Snowbird and Alta calculate the human capacity numbers they aspire to have at their areas. Those numbers need to be looked at critically through the lens of environmental impacts. Non resort industry, science based human capacity experts need to study the limitations of our Little Cottonwood Canyon when looking at culinary water quality, flora and fauna impacts, and the overall health of the forest.
31975	Sheridan Davis	I am strongly against the Gondola. Indeed, we do not have an access problem in Little Cottonwood. There is not another top tier mountain range in the world that can match ease of access. We are being destroyed by the easy travel access locals and outsiders have to this canyon. We need to study options that deliver fewer people in a steadier way AFTER we have independent, scientifically based human capacity studies done on current and future impacts to this environment. When we have those numbers, we can begin to assess how we protect this precious place. Putting privately held businesses and transportation departments at the head of such discussions is an absurd, backwards way to think about how to manage this beautiful, unique, and little canyon.
31976	Ranee' Ross	I don't want to see a gondola mar the beauty of our canyon. I don't believe it will do the wildlife any good. No to the Gondola
31977	Darrel Dixon	<p>I have been skiing, Biking and hiking in the canyons ever since I came to Utah for school and then business. I taught at Snowbird for almost 30 years.</p> <p>The changes that I have seen are huge. I would love to go back but that is impossible. The best alternative is the Gondola and although I don't really like it, I think it will eventually have to happen. I skied in Europe for 3 years and there were numerous Gondolas and Funiculars that you have to take take to get to the slopes. Eventually the same here.</p>
31978	Susan Corth	I oppose the gondola solution. It only serves two ski resorts rather than other canyon users. It will mar the landscape of the canyon. This is not a solution that works for more than skiers. But we all pay the price in \$ and visuals.
31979	John Kennington	<p>No gondola please!</p> <p>- Not only the viewscape will be ruined, but all the const and service roads to build and maintain the Gondola will tear up the ecosystem on the ground.</p> <p>-The highway exists now and will always be needed to maintain the canyon. It can be gradually tweaked to adequately mitigate traffic jams in the few crowded days of the year, like tolling, resort parking, better bussing and snowshed const. If needed, only one bi-directional lane could be added to minimize ground disruption, and take care of traffic snarls (le up in the am and down in the pm).</p> <p>-The planned bottom terminal, with a 2500 car capacity, will over crowd Wasatch Bl. and over develop the area around it. Regional traffic hubs further away will work better.</p> <p>-The gondola will be too long, too expensive (likely much more than the \$550MM now forecast) just to benefit two private businesses and a few political businessmen. With increasing resort prices and decreasing ski seasons, this idea is 50 years too late. There are plenty of other higher priorities to spend \$\$ on, like saving the GSL and Utah Lake, affordable housing and saving us humans, by adressing climate change with many sustainability projects. Lets not waste our \$\$ on bygone priorities.</p> <p>Thank you for listening.</p>

31980	Nancy Tanner	<p>My comments are in opposition to a gondola in Little Cottonwood Canyon and the widening of Wasatch Blvd for a number of reasons.</p> <ol style="list-style-type: none"> 1. I'm opposed to corporate welfare. From all the materials I've read and research the gondola is being put forward to be built on tax payer funds but only helps the corporation of Snowbird and a short ski season. I am a downhill skier, snowshoer, hiker, and outdoors person. How does this gondola help me? Will there be stops along the way to drop me at trailheads. Do I get in a gondola to snowbird and then to a bus for hiking? Again, this project is being orchestrated by Republican legislators for themselves or friends to increase their wealth. 2. Reliability of a gondola. They stop regularly in winds or malfunction. Having lived in Vail, Co, gondolas are not the most reliable and theirs just take one up the the ski slope. I haven't seen any report coming out from other locations with gondolas in the USA and outside such as Switzerland. Check out accidents. 3. Wasatch Blvd. I have lived at the base of Little Cottonwood Canyon for over 20 years and drive Wasatch almost every day. I've only been in one traffic issue where I turned around and that was on 9400 south. Not once on Wasatch have I even had to stop or barely slow down. With a parking garage at the base of Little Cottonwood Canyon, all of us who live in the area will actually lose our quickest and easiest access from our homes to work, etc. 4. If the gondola is so important for the ski business, why is there no talk of also putting one Big Cottonwood Canyon to Solitude and Brighton. Do they not count in the important, wealthy corporations. 5. Beauty and pristine nature of our canyons. 6. Let's hope we continue to have enough snow to even have a ski industry in the next many years. Check out historical weather. <p>Again, I'm totally opposed to this project. It makes no logical sense other than lining Corporate and Legislative members pockets.</p>
31981	Scott Boyce	<p>I support enhanced bus strategies (including electric) and snow sheds. Busses could have integrated brushed plows (once the first edged plow runs after a gap in the bus schedule during a storm to remove heavy accumulation, the brushed plows on the front of the busses would keep the roads clear, as they'd be running every 2-5 min presumably) and could use non-soluble traction agents to protect water (no salt!) (like Oregon does). Electric busses with brushed plows would be quiet and contribute no local emissions.</p> <p>I do NOT support tall gondola towers! I get that they can run during a storm but they irreparably destroy the pristine views in the canyon, all year long. They are useless for 97% of the time they're not needed. The view is priceless!</p>
31982	Jared Williams	<p>The People in and around LCC DO NOT WANT A GONDOLA. It is a waste of money, for an elite few on a few powder days so Alta and Snowbird can make more money. Widen the road and or impliment busses that are more versatile, more flexible, serve everyone, (not just skiers on powder days) and can be easily upgraded and sold and replaced with electric busses someday. NO GONDOLA!</p> <p>A gondola in Little Cottonwood Canyon should be the last choice after less costly measures have been fully explored.</p>
31983	Peter Donner	<p>Enhanced bus service is the most obvious measure. To its credit, UDOT explains it "could start with initial smaller mobility hubs and fewer buses and build the bus service as ridership demand increases with population growth. Snow sheds would be implemented based on construction funding. Wasatch Boulevard improvements, and trailhead improvements would be implemented based on construction funding." This should be done as the start of the gondola is delayed while its funding is identified.</p> <p>The next measure should be converting SR210 to a congestion pricing toll road. When SR210 is congested tolls should be high; when it is uncongested tolls should be low, even 0. During summer week days a 0 toll seems reasonable. Receipts from tolling should be used to fund improvements to Little Cottonwood such as SR210 maintenance, trailhead parking, bus operations and maintenance etc.</p> <p>Roadside parking should be maximized to the extent compatible with public safety. Additional trailhead parking should be constructed consistent with minimizing impacts to the environment, but this should be done as roadside parking is maintained with the goal to increase available parking. As mentioned, tolling receipts should be used to fund parking improvements.</p> <p>At a peak period usage of 1000 people per hour, the gondola seems to be an excessive disturbance of the environment relative to enhanced bus and tolling.</p> <p>The fact that UDOT has selected an alternative that is being promoted by the private interests funding the Gondola Works campaign raises the suspicion of corruption. UDOT should amend the FEIS to document that Gondola Works has not corrupted the process. Specifically, all interactions (e.g., meetings, phone calls, texts, email, etc.) between any individual connected to Gondola Works and the EIS staff should be documented. When did the interaction occur, what was the purpose, what was said, what actions were taken by EIS staff pursuant to the Gondola Works interaction. Gondola Works individuals include but are not limited to individuals associated with Snowbird, Alta Ski Area, POWDR, Ski Utah, UCAIR, Utah Clean Cities, Love Communications, Exoro Group, CW Management. One obvious item is the land for the parking structure and gondola base. Who owns this land and how they stand to benefit financially should be addressed by UDOT. Any and all private beneficiaries of gondola construction should be fully documented by UDOT in the EIS.</p> <p>UDOT will find if it implements tolling and enhanced bus the additional capacity brought by the gondola may be unnecessary. Tolling and enhanced bus are "low hanging fruit" that should be fully exploited before the "high hanging fruit"</p>

ID	Full Name	Comment
31984	Margaret Boud	<p>Building a gondola at first glance seems very intriguing, but as I've learned more about it, it seems like a very expensive option that will not guarantee less traffic up the canyon. Why not start with something less extravagant like the toll booth at the bottom of the canyon. That way, those that are using the area will be paying for the use of the area. Also, it would make no sense to put the toll booths at Snowbird or at the Spruces in Big Cottonwood Canyon as I have read might be an option. That will only hurt the skiers. If the problem is traffic up the canyons, then anyone who goes up the canyon should have to pay like in Millcreek Canyon. The traffic in Big Cottonwood Canyon is a problem all the way from the bottom to the top, especially at Lake Blanch and Cardiff Fork. If you charged everyone closer to the bottom you wouldn't have to charge as much either. A toll booth is way cheaper, more practical solution and won't ruin the beauty of the canyons.</p> <p>Going through the beautiful Alps I realized that those roads and towns have stayed small for hundreds of years. Why have they not been built up and overrun like our canyons? It dawned on me, they don't accommodate the visitor. Visitors may have to put up with some inconveniences, but that is a small price to pay to keep the natural beauty. They are being good stewards of their beautiful mountains. If we expand our canyons to accommodate anyone who wants to come then we will end up destroying the very beauty that people are coming to see. The canyons are beautiful the way they are. Don't ruin them. Find less impactful solutions!!</p>
31985	Marilyn Hildebrand	<p>Please no gondola! It will ruin our beautiful canyon. We need to fully study and use other options. I'm thinking about beauty and our wonderful wildlife.</p>
31986	Kevin Tolton	<p>The gondola option to solve the horrendous and dangerous Little Cottonwood Canyon Highway 210 is the best solution by far.</p> <p>The visual impact is nothing compared to the fire hazard should a fire ever trap thousands of people who couldn't escape certain death without the gondola. Further, people trapped by avalanches could result in massive death and casualty. The UDOT experts as well as the avalanche experts all agree that it's not a matter of if but when. The current avalanche control work on HWY 210 is merely an ongoing attempt to trigger and clear smaller avalanches to try and avoid the catastrophe of massive mother of all slides.</p> <p>this gondola is a no brainer and must succeed.</p> <p>The entire road span could be done with three to four towers like they have done at Blackcomb Whistler in Canada. I hope UDOT has studied their transportation system.</p>
31987	Dave Reynolds	<p>This morning I rode my bike up Little Cottonwood Canyon as I do several mornings a week before work. There is no better way to start the day than enjoying a sunrise over the Wasatch Mountains. I am very fortunate to have this beauty and wilderness so close in proximity to Salt Lake. And the reason Utah has become so popular. Very few places in this country can you escape the busy city life within a few minutes' drive. While riding the canyon this morning I couldn't help but envision an unsightly gondola running up the south side of the canyon and the permanent footprint this gondola would leave on one of Salt Lake's greatest treasures. And for something that would only be used perhaps 6 months out of the year. It makes me sick to my stomach. But then again Utah doesn't have a good track record of being considerate to the natural beauty of this state. Money and big corporation usually prevail. In fact, I wonder if the recent closures of the UTA ski area routes are a part of the plot by big corporation? Yes, a far stretch but feasible. Aside from Snowbird (for monetary reasons), who is in favor of this potential billion-dollar boondoggle? It appears the overwhelming public is opposed. I believe all other options must be explored and tried before permanently and detrimentally altering one of Salt Lake's greatest resources. Little Cottonwood canyon and the world calls recreation it provides is the reason I moved to this beautiful state over 30 years ago. Please give this resource the respect it deserves.</p>
31988	Wally Cromar	<p>I strongly disagree with the idea of putting a gondola up little cottonwood canyon. We need to pursue all other options that don't involve development. The gondola would destroy the canyon and the cost is insane. No to that idea</p>
31989	Marc Graves	<p>The Gondola is terrible idea. It comes at a very high tax pay expense with the benefit of a few. We need to use the money to pay Canyon bus drivers a high premium, as there is reduced number of buses due to bus driver labor shortages.</p> <p>The worst traffic is one snow days, we need to figure out how to keep the road open safely during storm event. We need to build snow sheds for known avalanche paths to keep the road open and to reduce overall avalanche mitigation risks. We need more busses with dedicated bus lanes. The Gondola would only benefit tourists, the locals would not ride it.</p> <p>Furthermore, the idea of a 2500 space parking garage in what is essentially a neighborhood is an awful idea. The parking garage needs to be located closer to the interstate where the connecting and collector streets are not two lane neighborhood roads. The parking garage should be placed off of Wasatch Boulevard where the 6200 S Park N Ride is now or somewhere near the gravel pit area and not in a neighborhood.</p> <p>Why would taxpayers want to fund what doesn't make sense, the ski resorts who would mostly benefit should pay 80% more of the price tag. The burden shouldn't be on the tax payers for what would be seen mainly as tourist attraction.</p> <p>We need better enforcement of the traction rules and should have a healthy budget for law enforcement to enforce such. If you really talk to anyone, the sticker program is a joke, because mostly no one enforces it. We should have the money to see some kind of law enforcement at the mouth of each canyon on every snow day, writing expensive tickets for increased revenue to help the enforcement budget but moreover to get the word out it will not be tolerated. With the state of Utah getting rid of checking tire tread depths as part of the safety inspections, it has led to an untenable situation. Walk through a resort parking lot on a storm day and see how many magically made it up the canyon in their 4wd or AWD, but will slip off the road on the way down because the tires are bald or below an adequate tread depth. I think law enforcement should walk the parking lots and measure tread depth and write tickets, again this directly affects others through safety and traffic.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31990	Phyllis Anderson	I could not be more opposed to the Gondola! It would primarily benefit the ski areas, at taxpayer expense, and then just during ski season. If our drought continues, we cannot even be sure that our ski industry will survive in coming years. As someone who hikes and snowshoes in LCC, I need access to the trail heads, so the Gondola would be useless to me. Ski areas should implement a reservation system to insure that parking or busing is available for skiers. Reservations would also limit the number of skiers on the hill for safety. Carpooling and use of electric buses is essential. This latest ploy from UDOT about limiting the number of buses due to a driver shortage is a crock! If nothing else, the ski areas could contribute to driver salaries that were high enough to get takers. What a shameless weak argument! PLEASE don't permit anyone to build those huge towers that will forever ruin our beautiful canyon just so the powers that be can line their pockets. It always comes down to politicians and money doesn't it? For once, just do the right thing for the future and forget about that Gondola.
31991	Ann Dean Hannibal	<p>I wish to comment on UDOT's selection of Gondola Alternative B in the Final Draft, Little Cottonwood Canyon EIS. Thank you for the opportunity to do so.</p> <p>Gondola Alternative B fails to address in any meaningful measure most of the objectives outlined in the EIS, to:</p> <ul style="list-style-type: none"> Improve peak-hour per-person travel times, except for a select group of users during the winter months Reduce vehicle backups on S.R. 210 and S.R. 209 Meet a reasonable level of service on Wasatch Boulevard Improve reliability and safety in 2050 Reduce avalanche delays and hazards for most users Reduce traffic conflicts and improve roadway safety at trailheads Reduce or eliminate roadside parking <p>Regarding the environmental and regulatory impacts, the effect of Gondola Alternative B will be significantly negative with dire impacts to the natural resources in this beloved and heavily used Wasatch Canyon, and to the built environment and quality of life in the affected Salt Lake Valley communities.</p> <p>This project offers marginally improved access for one group of users only, prosperous downhill skiers wishing to access the ski resorts of Snowbird and Alta during the commercial ski season. It offers no benefit - and active harm - to the growing number of other Canyon visitors, including the very large numbers of spring, summer and autumn visitors and winter visitors planning to access the backcountry on Nordic skis or snowshoes or for a myriad of other purposes. Its damaging impact on the visual integrity and beauty of the Canyon is truly shocking. Its cost is prohibitive.</p>
31993	Patricia Rothacher	Please proceed with phasing in of the improvements listed with Gondola B alternative, but with NO GONDOLA ever constructed. The other improvements make sense in a world of climate change which will reduce the snowpack. Leave out gondola construction since some of the ski slopes will not be skiable. Limit the number of cars allowed in the canyon but make the road improvements and we will not need the unsightly gondola towers.
31992	Carolee Yates	No Gondola A, B, C, D, or E or so on. When we voiced no Gondola, we said no Gondola please!
31994	Steven G. Maxfield	<ol style="list-style-type: none"> 1. Treat the canyon like a National Park. By implementing similar requirements, where applicable. 2. Increase bus service, significantly, and install parking at the entrance. Get some government help with eco friendly bus purchases. 3. The benefit of installing a mass transportation system up the canyon favors Alta and Snowbird. They should be involved in some investment. 4. Forget the gondola.
31995	Kevin Dolan	<p>NO GONDOLA!</p> <ol style="list-style-type: none"> 1. Is a gondola even necessary? Does a gondola really reduce the number of cars up LCC? And what of back country boarders, skiers, and non winter hikers below snowbird? 2. Why are Utah taxpayers being burdened with the cost of this sham, when Alta and Snowbird will reap the benefits? Public money for private corporations. 3. Why is UDOT ignoring public opinion - majority of Utahns polled, do not want a gondola. 4. A gondola will be a forever scar on LCC, that cannot be hidden, improved, or made to blend in with the natural beauty of LCC.
31996	David Baldrige	Before moving forward w Gondola option, try a few smaller and less expensive options. Look at the bus service successes at the Maroon Bells area near Aspen Co or Zion NP. They utilize well planned and scheduled shuttle bus service that are very frequent and transport hundreds of thousands of people annually. Try an option like this for a few years. You have to build a parking facility either way.
31997	Erika Wiggins	<p>After reviewing the Gondola options, I'm not in favor of this project. It doesn't take into consideration all of the non-resort users of the canyon (climbers, back-country skiers, hikers) which amount to a significant portion of the traffic. A year-round shuttle service, such as used in many national parks, would address all of the uses, versus only the resorts.</p> <p>If an access fee is explored further, please consider that many of the canyon serves all income levels. Let's not turn it into a place only for the well-off.</p>
35169	Richard Schlesinger	<p>What is wrong with you people. There is no way this project will cost less than \$850-900 billion. This is an unnecessary fiasco for tragic snarls that occur about 18 days each winter. I question what will be the cost of parking in order to access the godola. Apparently owners of</p> <p>property who can charge vehicles allow parking, members of the government with a vested interest in this project and the owners of the two ski areas will be the ones who will benefit financially from this unnecessary fiasco.</p> <p>Wake up you obvious mercenaries. How disgusting and unnecessary.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
31998	Bree Hann	Thanks for taking public comment on this issue. As a resident of Sandy who routinely visits Little Cottonwood Canyon 3-4 times per month, I strongly oppose a gondola there. The gondola will destroy the natural vistas and beauty of the canyon for those of us who cherish its value as a hiking destination. While I understand UDOT is considering tourism as a factor, I would suggest that many tourists come to the canyon not to ski, but to hike, relax, and otherwise enjoy the gorgeous river, forest, and mountain views. We don't want those ruined by ugly cables and massive support towers throughout the canyon. Further, it appears that the gondola is not the best solution to the traffic problem. The ski traffic is an issue on high-powder days when many people want to get to the ski resorts early to enjoy that snow. Better than a gondola -- which just moves traffic up the road to the gondola station, and which isn't feasible in high wind or storms -- would be for Alta and Snowbird to simply require skiers to pre-purchase a reserved parking spot. When the spots are sold, they're done, and no one should be allowed into the canyon that day without a parking pass. This worked fine during Covid and puts the administrative burden on the ski resorts, which is fair since they are the reason for the traffic problem in the first place. This would be far less expensive than a gondola (or widening the roads), would not damage the canyon, and would be flexible enough to be put into place only when required -- unlike a huge, permanent gondola. Please, please, please do not build a gondola in LCC for the theoretical benefit of a few skiers at the expense of the rest of us and the canyon itself.
31999	Roger Kehr	Why would you kill the golden goose? In a few words...absolutely no gondola. Ever.
32001	Roger Kehr	Why would you kill the golden goose? In a few words...absolutely no gondola. Ever.
32000	Jake Christensen	I support the gondola as the best long term solution
32002	Shari Bowers	If the traffic problems during ski season are because of all the skiers then the ski resorts should pay for the problem to be fixed. The gondola has a way too hefty price tag to unload onto the tax payers. Other ideas, like 1)an electronic marquee at the mouth of the canyon saying when the parking lots are full. 2) dividing season passes into odd and even days. 3) selling morning skiing passes and afternoon skiing passes but not all day skiing passes should be tried first.
32003	Joseph McMullin	Why would we be spending massive amounts of public funds to benefit a couple out-of-state, already rich ski resorts. Very bad idea.
32004	Don Rondinelli	I am strongly opposed to this gondola boondoggle. I think it will be over budget and under used. I would much prefer expanding the bus service and use BEV buses to decrease pollution. Bus service is more flexible through out the entire year and can be scaled up or down depending on demand. The gondola is to limited in its use. Dump the gondola!
32005	James Kvasnicka	Hopefully someone there has the brains to come up with a better idea than to line the pockets of those two developers.
32006	Axel Amundsen	Imagine the new views of the canyon like never before!
32007	Hunter DeLany	The current EIS undervalues recreators that are not at the ski resorts. The gondola would reduce access for hikers, rock climbers, and backcountry skiers across the entire year.
32008	David Wilcox	More than a year ago, I wrote a comment in favor of the gondola. It just seemed so cool and modern. However, after much reflection, my opinion has changed. I don't want to alter the landscape of our beautiful Little Cottonwood Canyon more than we have too. The gondola seems large, flashy, and excessive. I now support widening the road.
32009	Mark McKell	Very few Utah citizens want a gondola in Little Cottonwood Canyon. It is too expensive and is not favorable to the public. Explore bus or other, more efficient and less costly options. The gondola is not wanted or needed. Find other options.
32010	Terri Gilfillan	I am surprised that there is any support at all for a gondola. Most every Utah resident I have ever spoken to about this is against the gondola. I cannot see this problem being solved by charging tax payers this ridiculous amount of money to take people to 2 ski resorts. This is a terrible use of tax payer money. The gondola continues to create congestion issues on Wasatch Blvd and I can tell you right now no one wants to make multiple transfers from bus to gondola to ski resort to shuttle with all of their ski gear. I honestly do not see this solving any of the issues. Enhanced bus service with multiple buses running from multiple locations in the valley and leaving every 10 to 15 minutes would solve this problem. A BIG NO to the gondola. A BIG YES to more buses running from more locations in the valley. A designated ski bus pick up and drop off at multiple locations in the valley.
32011	Ian Esplin	Thank you to UDOT and all of the planners and engineers who have been working on this. I hope toll booths, increased bussing, and resort parking fees options are exhausted before seriously considering the gondola, which I am opposed to. Thank you
32012	MississippiLead MississippiLead	here
32013	David Bain	I appose the gondola. My main concerns are: 1) environmental impact 2) cost to the taxpayer I believe that exploring more incremental approaches such as tolling/improved bus service makes a lot more sense than before diving into a project that will forever change the nature of the canyon and could cost taxpayers millions (if not billions with cost overrun) of dollars.
32014	Nathaniel Woolley	Keep the canyon as is. There's no need to build an expensive white elephant when a cheaper and more environmentally friendly option is to increase bus service to the canyon and within the canyon. The proposed infrastructure is a boondoggle built for rich tourists. The supposed benefits to the tax base will likely just recycle back into the private corporations that benefit from the volume increase in ski tourism and those that would construct and maintain this unnecessary eyesore. The proposed project is a bald example of the corruption rife within public-private 'partnership' when it comes to the commissioning of a large infrastructure projects that are designed to perpetuate profit for businesses at the expense of the average citizen and the beautiful wilderness areas which we have proudly funded to protect and preserve for the public good.
32015	Farrah Edwards	I'm in favor of Gondola B. We should look at public transit first and then if we need to, consider gondola. I personally think we should have no private vehicle access outside of residents and business up and down the canyon in the winter. The resorts need to come up with a streamlined approach to getting people on-&off transit with their gear. They also need to provide gear lockers for every season pass holder.
32016	Mark Bromley	A gondola built with public money to benefit Snowbird and Alta? This is nuts on any level.
32017	Kathy Miles	Yes, I like the idea of the Gondola an# anything else to reduce vehicles in the canyons

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32018	Ryan Argenta	Gondola B is a fiscally irresponsible use of taxpayer dollars. Especially given the taxpayers themselves have spoken loud and clear that they do not want a gondola option at all. Tolling, increased bus service (staffed by appropriately paid employees), and year round traffic management options far exceed the benefit of a gondola not to even mention the environmental impact of such development. Not in favor.
32019	Christian Madsen	We all know Udot won't listen to us and are going to put this ugly contraption into little cottonwood no matter what. But put me on record as saying NO to the stupid gondola. I don't want my tax dollars ruing my favorite canyon.
32020	Marty Jopling	<p>The Gondola proposal is a very bad idea!! It is a wasteful use of tax payers money that will only benefit a select group of people. I don't know who could (or would) afford \$30-\$100 per person to ride it. People might ride it once just for the experience but would not ride it repeatedly. It would be an eyesore for the canyon and bad for the environment. We probably won't have enough snow in 10-20 years to warrant that expense. It doesn't make any sense to try and have a lot more people going up the canyon to ski and then get up there and have to wait in long lift lines. Who wants that???</p> <p>Certainly not the skiers!!!</p> <p>There are hundreds of more useful projects statewide to spend the money on. We should try electric bus service, tolling, and limit the number of people at the resorts first.</p> <p>NO GONDOLA!!</p> <p>4</p>
32022	Rebecca Babicz	Please don't use public money to support private corporate interests. Please consider other options for traffic control besides this extreme narrow minded option.
32021	Kody Olsen	No to the gondola Utah people do not want to spend their money on this!
32023	Deborah Ehrman	I am against the proposed gondola solution for Little Cottonwood Canyon as outlined in the Final EIS. This plan inequitably serve the majority of the community who want to use the canyon for activities other than skiing at the two ski resorts in this canyon. The gondola will also impact the canyon's beauty and appeal. If there will be a large fee attached to use of the proposed gondola-that is another example of inequitably serving visitors to that beautiful canyon. No gondola-listen to the public and not the ski resorts and future developers. My son works for the US Forest Service (not in Utah) and this plan is bad public lands forest policy. policy.
32024	John Ehrman	The proposed gondola will only serve two elite ski resorts at the expense of all Utahns, it will only benefit a very small percentage of the community who can afford to ski at two very expensive resorts, pay the gondola fee, and not take into account the greater percentage of people who would like to use the canyon for non-skiing activities.Listen to the public, no gondola in Little Cottonwood Canyon. This plan is a waste of taxpayer money and only serves a few. Absolutely no to this plan. It's an example of corporate welfare. Climate change may make our ski industry unable to operate in 20 years-consider that. This is terrible public lands policy.
32026	Sandra Ball	Rather than ruin the natural beauty of the canyon and save multimillion of dollars just because the resorts are trying to make even more money, simply limit the traffic to what it was last year and provide the parking at the base. There are special interests written all over this idea and we're sick of it. Taxpayers are paying for this!
32025	Jody Gibson	No to the gondola. It will ruin the beauty of our canyon and a waste of taxpayer money.
35170	Robyn Christiansen	<p>Dear Planning Commission,</p> <p>Having worked at Alta for almost 50 years and in my continued travels up LCC to ski and hike, I would like to share some observations.</p> <p>The greatest pollution in this canyon (the source of our water) is the the motor vehicle with its noxious emissions and dripping oil etc not to mention the substances sprayed on the road to keep it passable in winter months. Therefore I do see a gondola as a viable far less polluting source of transportation in LCC.</p> <p>However the many negatives certainly need to be addressed.</p> <p>1. Access: Suitable facilities both top and bottom for equipment storage, changing areas and food and beverage options need to be in the plan, as well as traffic flow and parking considerations.</p> <p>2. Cost: Skiing is already prohibitively expensive for many people. How will that be structured? Utah resident pricing? Tourist rate?</p> <p>3. Visual Impact: This seems to be the biggest problem for the people who live within sight of a proposed line.</p> <p>4. Serving only Alta and Snowbird: This is seen as public money being used for two private enterprises.</p> <p>5. Snow: Viability of the ski areas would be the least of our worries in the eventuality that we no longer receive adequate snowfall. My opinions do not necessarily oppose a gondola, however it is not going to solve the immediate problem of car numbers in the canyon.</p> <p>1. Electric frequent buses that have better routing is a priority.</p> <p>2. Tolling that is used year round by buying either an annual or day pass. These could be set up like an EZ pass as is used already on other toll ways. The cost of such passes being spread over summer and winter users would keep the cost down. cf. Millcreek.</p> <p>You may have observed the number of cars in LCC during Oktoberfest. Bumper to bumper just like a powder day. This would be better than trying to charge hikers or skiers at the various trailheads. I certainly do not know whether any numbers have been run to this end.</p> <p>I believe reducing cars in the canyon is everyone's goal. Our individualistic society will only be weaned from their cars if a convenient alternative is available.</p> <p>Respectfully, Robyn Christiansen.</p>
32027	Adam Erickson	No gondola
32028	Ed Hickey	I support Alternative B, phased implementation.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32029	Jeff Haymond	Busses!!! Busses!!! Busses!!!
32030	Jeff Haymond	Please more busses! Try more busses. Employee busses! Busy day busses! Charge toll to drive and fund MORE BUSES!
32031	Alexis Bartholomew	No Gondola. The gondola would only service two stops up the canyons and surveys have found that would only be 30% of the canyon traffic. It sounds like money, greedy politician and businesses are trying to push this through and make the people pay for their wishlist item.
32032	Stacy Shaha	No. No. No. Please no.
32033	Aldo Fernandez	The gondola is just a money grab at taxpayer dollars. The claims that the gondola will resolve traffic issues in the area are a farse. Vehicles still have to get to the mouth of the canyon to get to the gondola, and this is where the bottle neck always has been and always will be. Don't waste resources lining pockets of developers at the expense of the public and public spaces. Canyon traffic is a problem less than two weeks a year. There are so many other low cost low impact solutions and other, more beneficial, low impact high cost solutions that will benefit the public rather than developers. Improve bus service and infrastructure from more locations throughout the valley and up into the canyon. Create and promote a ride share app. Create and enforce carpooling rules on busy days. Make a rail line along 9400 S that connects to existing TRAX and serves multiple stops in the canyon (not just resorts) via tunnel that won't be impacted by weather and won't impact the natural beauty of the canyon. There are so many great options. Even doing nothing would be better than the gondola because if you allow this wasteful monstrosity to be built, no one will ride it anyway because it will cost over \$100 per ride; just look at how much other gondolas of much shorter distance cost to ride. It's ridiculous.
32034	Eric Cambria	Build the Gondola.
32035	James Powers	Why is electric busses tested but never given a true chance as an option. The gondola is a joke that serves no one but special interest groups, two resorts, and politicians.
32037	Brandon Dubovik	The idea of a gondola payed by tax payers to service 2 ski resorts is ludicrous. This is part of a larger plan to interconnect the other resorts from big cottonwood to park city with a gondola system. This simply will not be accepted by users of these canyons and Backcountry areas. A solution presented by UTA should service ALL users including those that do not ski the resorts. A cog rail and avalanche sheds would be a far better use of finances than a gondola that can't run during avalanche mitigation, severe weather, and mechanical malfunctions. Who rescues stranded riders suspended over a canyon? This would be a logistical nightmare. Stop trying to create another tourist attraction and start solving the problem.
32036	Donna Knight	Let private money fund this if it's such a great idea, NOT public funds. The only ppl that benefit from this are the ski resorts (private money) and the skiers(private money). NOT the taxpayers in the valley, most of which do not even drive up that canyon, ever! Gondola parking at the base of the canyon will be as big of a nightmare or more, than the traffic problem they have going up the canyon. Charge the skiers driving up, and the resorts...not the taxpayers that are not benefiting in any way. Follow the money here...who benefits? Not me, and I don't want to pay for it.
32038	Lawrence Scott	I am totally in favor of the Gondola option. Other options with buses and increased lanes don't help during Winter weather. It makes so much sense to use the unique and efficient Gondola option.
32039	Melinda Frandsen	I'm opposed to the gondola. It's going to be an eyesore and it's going to be too expensive to even ride it when it's done. I don't want my tax dollars going to something that will only benefit people with deep pockets.
32040	Shannon Johnson	I am appalled that the gondola may be built when it benefits so few people who are actual residents and taxpayers. Our canyon will be ruined for the ski resorts to make money, the developers to defile the canyon communities, including Granite and Cottonwood Heights. What a deception and misuse of funds. Lobbyist and former state senate leaders become richer and we lose enjoyment of beloved canyonscapes to concrete and pavement.
32041	Adam Holt	Do not build a gondola at the expense of the taxpayer. I was previously an avid skier, and spent many years at Alta, and I love the place. Building a gondola only benefits the ski resorts and not the local community in any form. Make them pay for it if they think it is a good idea; most of the people in the area surrounding LCC will not benefit from an expensive, non-incremental solution such as a gondola. Improve the road, add bus routes, implement tolls, build avalanche sheds. Don't make non-skiers fund this project.
32042	Preston Ward	My name is Preston and a long time Sandy city resident in fact my whole life. I have used every trail in little cottonwood canyon to recreate. I am against the defacing of the canyon that the proposed gondola would provide. Sandy city residents have spoken and we don't want the Gondola however for some reason there is still a push for it to happen from private entities with large pockets who are looking to pad their pockets even more. I am proud to be a Sandy resident but disturbed at the actions Sandy is taking to even consider the gondola prior to other more environmentally friendly options have been tried and against what the people want. I urge you to reconsider the gondola for the environments sake the acres of public land that will be locked up, and the defacing of our beautiful canyon.

ID	Full Name	Comment
32043	Gregory Irwin	<p>The gondola is not a good solution for easing ski traffic in Little Cottonwood Canyon, for many reasons. I want to highlight a few:</p> <p>#1: Nothing in the public information released so far explains how much a round trip would cost. If the goal is to significantly reduce the number of LOCAL skiers and snowboarders from driving up the canyon, the fare would need to be quite low (equivalent to the current ski bus fare). If it costs more than that, locals will always choose driving over the gondola, and traffic congestion will be as bad as it is today. Given that this will be the longest gondola ride in the world, I highly doubt it will be a \$5 round trip. Snowbird's current tram rides in winter are \$30-\$42 round trip. Local skiers and snowboarders are absolutely not going to be willing to add even \$30 to every day on the slopes. The combined fares for a family with children would be outrageous. If no one rides it, the taxpayers will have funded nothing but an eyesore.</p> <p>#2: Public funds of this magnitude should not be going to assist private businesses. Other large projects of this cost in Utah (e.g., the new SLC airport) are for public use. This project is totally to assist only two of the private ski resorts.</p> <p>#3: Having 200 foot towers all along the canyon will absolutely destroy the pristine nature of LCC. The renderings in the EIS really highlight how visible they are. If Little Cottonwood Canyon were in any other state, it would likely be named a national park because of its sheer magnificence and beauty. To mar that with metal towers is incredibly selfish.</p> <p>#4: The base station at La Caille does nothing to help ease traffic congestion entering Cottonwood Heights and Sandy. This will be a choke point yet again, because you can only get to it by driving down Wasatch Boulevard (the upper or lower).</p> <p>#5: While the worst traffic days in LCC are very bad, they don't happen often enough to justify this project. Something that costs this much and alters the character of the canyon (and the area below it) this significantly for only ten or fifteen days of the year is just not worth it. Perhaps just limiting the number of vehicles that can go up would do more good.</p> <p>I have taken the ski bus (953) many times to Alta and Snowbird, and it's always been a pleasant experience, despite what pro-gondola commercials and executives are insinuating. UTA recently announced that it is SUSPENDING the 953 service line due to not finding enough qualified drivers. It's absolutely astounding to think that Utahns are being asked to come up with \$600 million for a gondola, but the state is not able to provide high enough wages to attract qualified bus drivers. If traffic congestion is SO bad that we have no other options than to build the world's longest gondola, it seems cutting ANY ski bus service at all is the worst idea out there.</p>
32044	Laura Muscalu	No to the Gondola. Let the wealthy people that want it pay for it.
32045	Evan Johnson	Please build the gondola and if needed expanded UTA bus service. I'd use the gondola year round.
32046	Kevin Handy	<p>I would presume you only get negative comments about your Plan B. It would be unfair to only list the negative without listing a better solution.</p> <p>The main problem with SR210 is the flow and who controls the flow.....UDOT. If the forecast is for heavy snow UDOT closes SR210 late that evening with anticipated opening 8AM which most of the time is close. Meanwhile private vehicles are parking in the canyon road early so they can be first up the canyon. This backs up SR210 for miles as well as 9400 South. The canyon can't open till control work has been accomplished.</p> <p>The problem is clearing the road so traffic can proceed. Could more than 2 plows be driven up early to help clear the road quicker or are those plows being used elsewhere if it really snows?</p> <p>In regard to staging the Parking Lot for Plan B above the High T intersection on a snow day very few will ever get there do to the flow beginning stopped for control work. Once the flow stops the traffic stops and backs up for miles and it is a mess.</p> <p>Since we have experienced a drought for some time and forecasted to continue we are not having winter like we used to. We used to have about 10 days a year that backed up traffic. Last year there were only two days. Yes, someone from UDOT gets happy about turning on the 4-wheel drive and chains signs at the least little bit of snow falling or on the road.</p> <p>Last year the parking situation was great due to reservations at Alta and Snowbird for it held down alot of cars from traveling up canyon. Hopefully this will be the same this year.</p> <p>It is to bad that UTA does not pay the going rate for CDL drivers and no we are losing route 953 because of driver shortage. If there was a direct bus to Alta in the morning and back in the evening more employees would ride it but Snowbird controls the ridership and won't allow it....to bad? If you have ever ridden the bus up the canyon you would know what a bummer it is to go thru Snowbird for it adds 15min to the route.</p> <p>In summary it looks like we need more buses and pay more for drivers, keep the flow moving for people will always drive regardless of the cost, help with incentives for 4 people per car and see how that works first before spending \$500 M and more for a non-white elephant. Remember the Pumps at the Great Salt Lake.</p> <p>Good Luck and as the lead PE told me he went to school to make decisions for a better world, I don't think the Gondola will work in the long run.</p>
32047	Evan Johnson	Please build the gondola. If needed expand the UTA bus service. I will use both services year round.
32048	Robert Wold	Love the idea of gondolas but it will only be successful if there is public transportation to get to the gondola.

ID	Full Name	Comment
32049	Katherine Moss	I am against the gondola. The recent canyon traffic (summer and fall) shows that people are in the canyon for more than just to get to Alta and Snowbird. The white pine trailhead parking is consistently full every morning, not just on weekends. Furthermore, As a daily skier and bus rider (I take the 994 from near alta canyon sports center at 8:25 am) I am disappointed that there isn't a push for more increased ridership and increased buses. There should be a dedicated lane to allowing buses to cut the line, but in my experience you would only need to let them cut to the electric sign/ merge. Last year I sat on a bus for almost 3 hours up the canyon and most of that wait was before the electric sign!!! Let the buses skip that, show everyone sitting in their cars they would get up faster and there is the incentive to get out of your car. Hell, at least TRY it. It's a fairly simple experiment. Showing you exhausted all options might at least take away the distaste I have in my mouth that you are a bunch of money hungry unreasonable pigs.
32050	Julie VanderToolen	No Gondola. Taxpayers should not incur the cost that ski resorts and parking area landowners will fiscally benefit from. The gondola will be an eyesore.
32051	Andrew Bench	A gondola is a horrible, terrible, no-good idea. What you really need is a 1-seat ride from the airport to the ski resorts!! Light Rail all the way!
32052	Anna Gallagher	Hello and thank you for the opportunity to comment on this proposed massive endeavor. I am opposed to such development in the Little Cottonwood Canyon. There are many more rational alternatives instead of the gondola. Yes, the canyons have seen a drastic increase in use by the population and the impact of cars is evident; however, the proposed development will not be sufficient to mitigate the problem. Based on my experience with national parks, for instance, enforcing a limited registry permit entry into the canyon for the amount of cars and busses is the best and adequate solution that has been practiced by other states and is understood. The \$550mill√≠on dollars may be not an outrageous amount for such project but is unnecessary. I am against the construction and description of natural beauty of the little Cottonwood Canyon.
32053	Teri Furlong	Please do not put a gondola in our beautiful canyon. Instead of greed always being the answer try restricting the amount of people in the canyon per day. UDOT is famous for throwing things together no matter the impact or cost. How about spend the money to get people from the east side to west side. Make it safer for the thousands of people heading to riverton, Bluffdale and Herriman everyday. Hopefully there's never a bug disaster in the valley, UDOT has made the valley a gridlock if soo.
32054	Jenna Klarberg	We don't want this. It's destructive to the wildlife and environment, expensive to build and ultimately to ride, and limited in its usefulness to the community. Listen to Utahns. It's a no.
32055	Christopher Quinlivan	I support.
32056	Caroline Jansson	<p>I am disheartened by UDOT's recent decision to implement a gondola in Little Cottonwood Canyon despite the overwhelming public opposition. This opposition is quite justified for the following reasons, all of which I hope are reconsidered with the eventual arrival at the conclusion that a gondola simply does not make any sense.</p> <p>There is no good reason to not attempt implementing alternative strategies for reducing traffic. These include, but are not limited to, electric bussing, tolling, parking management, carpooling programs, and requirements and enforcement of appropriate traction devices on vehicles...all of which are substantially less costly than the greater than half of a billion dollar price tag that has been proposed for the gondola (a likely gross underestimate of its true cost). The public will be forced to pay for this project from which only a small percentage will benefit. The fact that the largest beneficiaries are the private ski resorts of Snowbird and Alta is even more disconcerting. I sincerely doubt that the public shares the goal of increased ticket sales at these two resorts given the multifaceted costs that the gondola would impose.</p> <p>If one takes a closer look at what a gondola would actually provide, one would be hard pressed to see any true advantages. The actual travel time in the gondola is impressively long and that does not include the additional time spent parking at the mouth of the canyon. The traffic that the gondola purports to obviate would still exist at the northern and southern entrances to the canyon as people would still need to access the base station. The traffic that backs up onto the freeway and into local neighborhoods would almost certainly persist.</p> <p>The very real risk of too many visitors to the canyon is another consideration. I could foresee the gondola providing transportation to additional skiers instead of representing an alternative to preexistent patrons of the resorts. In other words, the number of vehicles on the road may not be substantially impacted (an unsurprising consequence of the inconvenience that the gondola imposes), yet the total number of skiers would increase. This would put an unsustainable strain on the mountains and resorts which already operate at levels that are disappointingly "beyond" capacity.</p> <p>Having lived at the mouth of Little Cottonwood Canyon for more than a decade, I understand and am frustrated by the amount of traffic that drives by at a snail's pace on the big powder days. Fortunately, I recognize that these represent a very small percentage of the overall days during the resorts' ski seasons and that it is a price that I am willing to infrequently pay so that I can live where I do. Even if the gondola were to lessen the impact in these instances, oftentimes if would also be restricted from operating due to avalanche control work that would prohibit its passage. As such, the true impact that it would have in the grand scheme of an entire season would likely be vanishingly small. Outside of the ski season the gondola's worth would be much diminished as it only provides access to the resorts one of which is entirely</p>
32058	Dave Hortin	Just say NO! No Gondola!,,,,,,!!!!!!
32059	Audrey Pines	<p>It's shocking to hear that UDOT doesn't care that a huge majority of citizens do NOT want the gondola down OUR canyons, they will do what they want.</p> <p>UDOT will bring in private funding from the rich people that don't care about our natural habitats and beauty but only care about the money they will make with their Lagoon ride Gondola and their ski village for the rich at LaCaille restaurant.</p> <p>Does UDOT have the right to steal our airspace and views? To line the pockets of a few?</p> <p>I never thought this behavior would go on in Utah.</p>
32060	Carol Colemere	I am totally on board with this decision.
32061	Dawn Rohde	No gondola. Do the bus system. The only reason why traffic builds up is due to avalanche closers.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32062	Joachim Meyer	<p>As a resident of the [redacted] neighborhood, I feel that the Gondola solution has forgotten about the locals being affected by the increased traffic on Wasatch Blvd. I see this solution as pushing the traffic issue "down the hill" creating further issues when trying to enter and exit the neighborhood during peak hours in the winter season. During 7 to 10 AM, it is almost impossible to leave the house due to the backed up traffic. This I see only getting worse with people trying to park and access the Gondola.</p> <p>With all the focus on Little Cottonwood Canyon, I also don't see a solution for Big. There, we have similar issues with backed up traffic in the morning. I think the solution for Little should be a test bed for Big and a Gondola seems very unlikely to work in that canyon too.</p> <p>I think incentives for people to carpool and taking public transportation earlier than getting the both 'Mouth' of the canyons needs to be part of the solution. Reducing the amount of cars will lead to less congestion and backed up traffic. Increase the safety with less cars on the road and make it possible to have 'daily' life happening for people living in the area close to the canyons.</p> <p>I think the resorts also need to stop selling the cheap season tickets with companies such as Ikon or Mountain Collective. All resorts enjoy a high attraction and I can't see that being reduced if there would be only tickets sold 'locally' to the mountain. This traffic issue increased rapidly once the resorts where part of the national chains. A return to local customer priority first would further reduce the traffic by making it a more conscious choice of where one recreates instead of 'just being cheap'.</p>
32063	Wayne Swasey	<p>I believe that those who benefit from any improvements should pay for them. Ski resorts, skiers, climbers. Taxes on fixed income residents are already a huge burden. Often the tax burden prevents us from doing the things we formerly enjoyed because we have such high taxes.</p>
32064	Mark Dignum	<p>This gondola seems like an extreme measure for a fairly limited problem. The problem exists on a small number of days a year - snow days and weekends. This proposal also seems to do nothing to actually reduce traffic - all it seems to do is provide a way to get more people up LCC. As far as safety, this proposal also does nothing to improve safety of the road. The road is in many significant avalanche paths, and avalanche sheds have proven quite effective, so I'm not sure why they're not included. They would allow the road to be open more frequently, allow it to stay drier, two things that would allow traffic to flow more smoothly on the worst days.</p> <p>Based on my experience driving up and down these canyons a simple measure would go a long, long way to alleviating traffic. Enforce the existing traffic laws. LCC and BCC are two lane roads - it takes one car on bad tires to back them up. In hundreds of winter days driving up and down I've seen them enforced once and only at the mouth - never driving down. That is pathetic. If people start getting turned around for having inadequate tires traffic will flow more smoothly and there will be less slide offs.</p> <p>In short, I'm firmly against the Gondola and I think we should try some of the low-hanging fruit solutions that are right in our face first (enforce traction laws)</p>
32065	Dan Mccann	<p>Toll for drivers using little cottonwood is a good idea. For those of us who use the road everyday a 6 month pass, or a reasonable yearly pass makes sense.</p>
32066	Margo Harpster	<p>This comment says it. This gondola is too environmentally invasive as well.. Why spend \$500 million? The Salt Lake Tribune 11 Oct 2022</p> <p>I have skied at Alta for the last 20 years, so I thoroughly understand the traffic problem in the canyon. However, I don't understand how so much taxpayer money can be spent for the benefit of the smallest number of Utah taxpayers.</p> <p>The canyon really got crowded when the Ikon pass was initiated. People using the pass are mostly from out of state. Are we spending taxpayer money to pander to out-of-state skiers? Do UDOT and the "powerful players" think we need a gondola to keep up with other ski areas in the U.S. and the world? Many taxpayers do not ski, but use the canyon to hike and bike in the three other recreation seasons. The gondola does nothing to alleviate the parking problems at the hiking trailheads.</p> <p>There have to be solutions that do not cost \$500 million of taxpayer money. People who use the canyon, I'm sure, would be willing to pay to use the canyon. I pay for hiking and skiing in Millcreek Canyon. Have seasonal paid passes for locals, and charge others a fee to drive up the canyon, especially during ski season. Have rideshare vans available at the mouth of the canyon and drive up groups of 12 skiers to a specific resort. Have buses dedicated to each ski area, leaving the parking lots more frequently. Who wants to stop three times at Snowbird to reach Alta? Reserved parking until noon seemed to work quite well last year at Alta.</p> <p>Construction of a gondola would take many years. Who knows, by the time the gondola construction has destroyed the natural beauty of the canyon and possibly compromised our water supply, climate change may have done its deed on the Utah ski industry.</p> <p>Someone is benefiting from spending \$500 million on the gondola, but it is not the Utah taxpayers. Let's spend the money where it will benefit Utahns, not the privileged few.</p> <p>Ruth Hoffmann Holladay</p>
32067	Janae Lockhart	<p>This is a poor idea. Not only is it a huge impact to the outdoor community, you still won't solve the issue. That much money for one canyon to benefit the resorts? And what is your solution to big cottonwood? That is just adds bad if not worse.</p>
32068	Debbie Lam	<p>Tollway should be implemented with additional bus transfers.</p>
32069	Anna Lindstrom	<p>Little Cottonwood Canyon doesn't need a "tourist attraction" that will cost wayyyy over the 500 million that have been stated in the EIS. don't ruin the art of LCC. no gondola. This is just fundamentally stupid to address a MAX of 15 days of weather.</p>

32070	Chester Lundy	Build the gondola system. It should have been done thirty years ago.
32071	Lindsey Fell	<p>Hello,</p> <p>I am very concerned regarding the supportive logic for UDOT's plan to move forward with this gondola.</p> <p>- Equal opportunity: How much will gondola versus bus rides cost? I am concerned a gondola service will make what is already a privileged thing (getting out into nature) a harder-to-access activity for those with a more challenging socioeconomic status.</p> <p>- Flexibility: I am primarily a backcountry user, as many people in this region are. I use various trailheads to access our public lands, for which the gondola will not be stopping at. Bus service will provide for a more flexible service, allowing people to get on and off where they choose, ultimately increasing the user amount to whom public transportation up the canyon will benefit. I have no interest in going up to Snowbird/Alta, but I do have great interest in the remaining trailheads. A gondola will not service my use preferences and thus not change my driving habits. I would love to Save our Canyons and ride the bus, if it provided access to all trails.</p> <p>- Bad weather: There is no way that a gondola will be able to run more than the buses in the more extreme conditions (i.e. wind, sleet) that the Wasatch provides. I have worked maintenance on lifts in winter environments and maintaining such a large lift in this environment, with so many people depending on its service during the most challenging of times (i.e. powder days) will be a nightmare.</p> <p>- Cost: Are we sure these cost estimates are legit? How many times do construction costs far exceed predictions? And maintenance? Liability for the structure?</p> <p>- Parking: one argument for the gondola versus bus service appears to be that people do not want parking in their neighborhood. Well, people will have to park somewhere for the gondola as well.</p> <p>- Environment: Little Cottonwood Canyon is a special place, with very unique attributes like its world-class bouldering. This gondola will disrupt and permanently destroy a good number of these resources. Please reconsider less invasive, more helpful, and more practical reasons. Please strive to maintain the trust of the tax-paying public by re-considering this project.</p> <p>Thank you for your time, Lindsey</p>
32072	Patricia Richards	I have been skiing and hiking at Alta and Snowbird for many years. I do not support the gondola alternative for several reasons. It uses taxpayer money for the exclusive benefit of private resorts and, to a large extent, out of state visitors. It would irreparably scar the scenic beauty of the canyon. It does not address summer congestion. I do not believe it would actually have sufficient ridership to justify the cost and damage done. Please reconsider.
32073	Michael Silver	I am a Millcreek Utah resident and frequent visitor (summer and winter) to Little Cottonwood Canyon. I fully support the preferred gondola alternative - for safe travel in the canyon under all weather conditions and, especially, to reduce the number of idling vehicles "parked" for miles trying to get up or down the canyon.
32075	Hayden Fleming	I have many cherished memories of bouldering in LCC. I can't imagine others being unable to have such lasting and impactful experiences due to the greed of wealthy ski resorts. This gondola is not a necessity. Please don't take something away that has been so joyful in mine and so many others lives. Not to mention LCC has the best bouldering in the wasatch, almost year round.
32074	Ron Manning	I support the Gondola project 100% It is the least cost effective solution over the long range and less impact to the overall environment and wildlife. I have been skiing and recreating in Little Cottonwood Canyon since 1987, the days off leisurely driving up the canyon and easily finding a place to park for the day are over. Long time residents of Alta can no longer have their cake and eat too, they can't oppose all solutions - the buss lanes and gondola there has to be a compromise. More and more people are skiing and recreating in the canyon summer and winter and it's just going to get worse. The Gondola phase B project is obviously the best solution for all.
32076	RUSSELL OBRIEN	<p>I am a Sandy UT resident who lives very close to Little Cottonwood Canyon and I vehemently oppose any development in Little Cottonwood Canyon, particularly the idea of a gondola!</p> <p>Not only are there additional means to control traffic that are not currently employed during ski season - varying ticket times, providing parking/access based on ticket times (methodology that our national parks successfully deployed to control traffic), and providing alternatives with incentivized carpooling and more efficient bus transportation.</p> <p>In addition we all are keenly aware of climate warming conditions and the lack of snow with reduced skiing season which has impacted our ski season here in Utah and globally. In light of this and the small population of skiers that this would serve is it financially prudent to spend \$550M? I highly doubt any project with a scope such as this would fall within budget, in particular as materials and labor costs are rising dramatically with inflation and world events.</p> <p>Kill this project and use the funds to better serve the community!</p>
32077	Jenna Malone	I am very much in favor of tolling from the mouth of both Canyons year round. Residents should have a greatly reduced pass readable by overhead sensors (this technology is being used on toll roads in California now). Free bus service, year round, should be offered and paid for by the state as state visitors and residents use the canyons year round for recreation. I agree with the use of snow sheds on State Road 210 to mitigate avalanche hazard and enhance traffic flow.
32078	Elena Pocs	I do not want the construction associated with this project compromising the climbing areas and access within the canyon. I suggest investing the money into a stronger bus system. Increasing the frequency of the busses, including more stops near the mouth of the canyon, and a larger parking lot at the mouth of the canyon. I highly disagree with the gondola proposal. There are many less invasive solutions to this issue.
32079	Steve Spencer	<p>I think a gondola is a very bad idea. The expenses could get out of control. Tax payer should not be responsible to pay for it! It would mostly service rich people that can pay hundreds of dollars to go up in the first place. Have green UTA bus service expanded.</p> <p>Thanks, Steve.</p>

ID	Full Name	Comment
32080	Ryan Larsen	Please don't ruin Little Cottonwood Canyon for the profit of corporations and politicians. It's clear through the KSL reporting that there has been a gross abuse of political power to push this project to the place we are today. This team is a marketing scam for the ski resort disguised as a positive for the environment and the people living in the Salt Lake Valley. Please don't tax me and the rest of the tax payers to subsidize corporate greed and continue to deminish the beauty of LCC.
32081	scott mershon	<p>to whom it may concern,</p> <p>As a member of the outdoor community and a taxpayer of Utah, I am extremely interested in the project regarding Little Cottonwood Canyon. The canyon is one of Utah's greatest gems and deserves protection. The canyon is not Disneyland, it is a pristine mountain environment and should remain as such. It is time we stopped modifying our environment and started to modify our behaviors.</p> <p>I appreciate the efforts taken by UDOT and other parties to solve the traffic issues that woe this canyon. Phased implementation though enhanced bus services, tolling, and restrictions to single occupancy vehicles are a great start. Significant effort should be taken to implement these ideas and others before moving onto the construction of a gondola or other costly ideas.</p> <p>The goals of this project are to improve mobility, reliability, and safety in 2050. Issues with mobility and safety are largely related to the presence of two large ski resorts at the top of the canyon. The ski resorts are the reason a large number of people flock to the canyon and people create mobility and safety issues.</p> <p>This project has many beneficiaries. It benefits resort goers, trailhead users, residents of the canyon, residents below the canyon, people driving to work, the tourism industry and associated companies, and the ski resorts themselves. While it does benefit many groups, Alta and Snowbird ski resorts are the main beneficiaries. They will likely see increased revenues and as the main beneficiaries, Alta and Snowbird should be required to pay the cost of these projects. Tourism benefits the state, but the gondola is designed with private resorts in mind. Why should taxpayers, many of whom will not step foot in Little Cottonwood Canyon, be required to fund this project. Whether the money comes from the state or federal government, the problems associated with Little Cottonwood Canyon are caused by the traffic heading to ski resorts. As such the ski resorts should be required to solve the problem they are causing.</p> <p>It is true that other canyon's, Mill Creek for example, have traffic issues; however, none compare to that of Little Cottonwood Canyon. Ski resorts are the primary reason for traffic and safety issues and should be regulated. It should be the task of the ski resorts, not anyone else. An ideal system to regulate parking is explained in the next paragraph.</p> <p>Guests at the resort wishing to drive themselves would purchase a parking pass prior to their trip along with their ski passes. Pass holders desiring to avoid this would be able to ride buses. Each parking pass would have a canyon entrance and exit time. Pass holders would only be allowed to enter the canyon at their specified time. Monitoring equipment would be placed at the canyon entrance and steep fines would be assessed to those in violation.</p> <p>This system could easily be programmed into an app on individuals cell phones. The app would allow users to make parking reservations, purchase ski passes, provide them with canyon and parking maps, entrance and exit times, and bus system information.</p> <p>Studies and traffic flow models would determine the number of vehicles that would be allowed to park at each resort. The same models would also determine the schedule of those wishing to park. Ski resorts would need to collaborate with UDOT and the Forest Service to include traffic destined for trailheads, residences, and other canyon users.</p>
32082	Gordon Mortensen	<p>Thank you for choosing the Gondola alternative. This is a great solution that will last for a very long time. Do not let this solution be pushed aside because of personal/political interests in the valley and the mountain. The Gondola solution is the best, it is bold and it will be adored in the future. I am looking forward to my first ride up this canyon when it is operational. Focus effort of funding and getting construction started.</p> <p>Thank you and Go Gondola, Gordon</p>
32083	Gwendolyn Adams	<p>Hi there,</p> <p>It has been a discouraging process trying to submit comments about this issue because as a resident who lives right off [REDACTED] it does not seem that you choose to listen to the people that live here.</p> <p>Proposing the Gondola as a solution for traffic problems in Little Cottonwood Canyon is not practical or logical. I have lived here for almost 15 years and see that the traffic is not that bad for the vast majority of the time and even when it is, I already noticed a large difference with Alta's reservation system last winter.</p> <p>It feels like you only wants to support two ski resorts, the owners/interested parties of La Caille, and gondola works. For my family of five, we would never be able to afford or logistically it wouldn't make sense to use the gondola. Why should I have to pay for something as a taxpayer for something that the majority does not want or need? I also have concerns about the aesthetics of our beautiful Little Cottonwood being ruined with such an eyesore. I feel discouraged that the environmental impacts have been downplayed. It really feels like you have no interest in supporting the people you are supposed to be serving.</p> <p>Please consider us! We live right here and will be impacted the most by this poor decision.</p>
32084	Bonnie Zinanti	<p>We see now hiring signs everywhere. People don't want to work. What makes them think they will have enough employees to operate the gondola when it is finished. The only ones that benefit from the gondola are the ski resorts.</p>
35184	Scott Mershon	<p>Good morning,</p> <p>I am sure you receive ideas from many people regarding Little Cottonwood Canyon so I hope this is not a bother. We spoke a few months ago about working for a DOT and I thought of you when UDOT published their recommendations for the canyon. Whether you are in a position of authority over this project or not, I believe you can have a larger impact on this project than I can. I hope this message finds you well and that you'll take the time to read through what I have written.</p> <p>Best,</p> <p>Scott Mershon</p>
32085	Gary Nelson	<p>I do not support the gondola option. I think enhanced bussing and limiting traffic up the canyon is a far better option to preserve the canyon and improve traffic flow.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32087	kevin dolan	I'm a CH resident, road biker, skier, and hiker. I'm very concerned about the plan for Wasatch blvd from Ft. Union to 9400 South. We need to plan for and accommodate bikers and pedestrians along both sides of Wasatch. I agree with the Savenotpave plan to provide protected bike and pedestrian paths on both sides of Wasatch. Please expand to only a turn lane and one lane on either side of the turn lane. Also add roundabout to allow entering from side streets. Again savenotpave.org has good suggestions from Micki Harris and Ellen Birrell. thank you
32086	Carolyn Theler	I do not believe this is a good idea for several different reasons. First, the cost, second it would only help for a few months of the year, third given the drought we are in there may not be much snow in the future, fourth, it would end up being a white elephant that harms the beauty of the canyon.
32089	Nancy Carlson	I am opposed to a very expensive gondola that ONLY benefits the two ski resorts, only stops at those two places, only runs in the winter and will be costly to ride. We still have to DRIVE or bus to the mouth of the canyon - so does not stop traffic or air quality issues in any major way.
32088	Edward Sorensen	Public tax money should Not be used to benefit private companies. No Gondola. Spend the money where it benefits the general public more than the ski industry.
32090	Nicholas Pederson	It is clear that the people DO NOT want a gondola. We feel gaslit. The only people who want this are Snowbird/Alta. This is NOT a solution for traffic, it is a way for the resorts to make more\$\$\$. You would have to be stupid to think that "the people" want this gondola. We wanted better busses. Fund UTA better! We wanted more busses not ... Less !!! Incentives carpooling. Do better with the busses. None of the skiers or riders want this gondola!
32091	Brooke Boone	I believe the gondola is the best option. I Would like the ski areas to help pay for most of the cost, as they will receive the most benefit. There shouldn't be an astronomical charge to ride the gondola. Maybe a season pass, too. Also, there should be considerations made for people that live in the canyon, and employees. All of the evidence has been presented in other comments and issues phases and the gondola is the best option.
32092	Donald Droubay	Gondola does not effectively address the Little Cottonwood Canyon transportation need. It would only reduce a percentage of the vehicle traffic at a non-competitive cost. Apply the Zions National Park transportation solution - mass transit only. People drive up the canyon because they have the option to do so. If seats were readily available on buses during peak periods, they would be amenable to that form of transportation. Our public norm is to wish we would spare the environment from degradation, but to not take action until we are required to do so. Recommendation: Bus transportation only in Little Cottonwood Canyon [exceptions for unusual circumstances] - provide a steady stream of buses sufficient to prevent notable waiting lines.
32093	Suzanne Thorup	Our family highly opposes the gondola proposal!!! It will decimate the beauty of our canyon and only serve 2 benefactors!!! We haven't solved the problem. Where do those who ride the Folsom's think they are going to park???? There will be even more traffic that will bottleneck at the base of our canyons creating more traffic issues!! DO NOT allow this to be a part of our community!!!
32094	Shelley Swapp	Really excited to see this as an option. Hopefully it will also be a great way to relieve traffic during the fall leaf peeping season & summer wild flower season & allow more access to people of all abilities to our beautiful canyon while decreasing pollution & negative impact.
32095	Amber McMullin	While the gondola would be cool, it really feels like a waste of taxpayer dollars. A toll in the winter months, or passes, or carpool incentives, seem like a much better approach before the hundreds of millions being spent on a gondola. The quotes were especially concerning, with the numbers being calculated prior to major inflation and rising costs over the past two years.
32096	Guinevere Cummings	Looking at all of your alternates, the cost & improvements of Enhanced Bus Service with Roadway widening seems to be almost entirely inline with the Gondola B plan. So why jump into an unknown gondola which seems to be under quoted in costs, much longer in miles compared with existing gondolas, has no current funding, won't provide safe or reliable transportation on bad weather days (please look at the downtime of the Snowbird tram & other resorts for wind, rime/ice, avalanche shooting, maintenance, etc.) and will undoubtedly be run year-round. I didn't see anything about the cost of riding the gondola up the canyon, nor where this funding is supposed to come from. I'm not interested in being taxed on the state or federal level to pay for the wealthy winter sports persons to have easy access to Snowbird & Alta. I suggest solving this problem a bit at a time, tolling cars at the canyon, improved busing (more and dedicated to each resort), snow sheds, and showing some progress, since over the last 5 years, it appears nothing has been done to rectify the on-going and growing problem.
32097	Mason Kolendrianos	I support the gondola. We do not need to carve new roads into the mountain side when we have the opportunity to create a new way for current and future generations to experience the nature and wildlife that Utah has to offer with minimal impact.
35174	Ross Murray	So I live in the city of Sandy and have since 2015 and I also work at snowbird and I would like to voice my opinion that I am pro gondola I have read multiple arguments against it and I actually see no validity in any of the arguments. I was just in Uzbekistan and was skiing at a resort where they have a four Mile Long gondola and you could hardly see it in amongst the trees The traffic up Little cottonwood needs to be controlled somehow and there needs to be an alternative to driving a two wheel drive vehicle up the canyon. Including bus options and they also have the same issues

ID	Full Name	Comment
32098	Paul McMullin	<p>I have concerns relating to the costing of the gondola project. While I see from the EIS summary sheets that have been published over the last year or two that the gondola makes a lot of sense from a road congestion and transportation time paradigm, I'm skeptical of the projected costs.</p> <p>First and foremost, why is the cost of this gondola going to fall squarely on the shoulders of taxpayers like myself, when it is going to benefit the ski resorts the most? I understand that they fall within Sandy city boundaries, but how much money (through taxes or direct contributions) are they going to put towards this project? I find this particularly irksome as skiing and snowboarding tend to be hobbies for wealthier people. I would rather have my tax dollars go towards public works that people from all economic backgrounds would benefit from.</p> <p>Secondly, I am concerned with the quoted costs for the projects. The stereotype of transportation projects costing well above projected expenses is all too prevalent. I am concerned that this project will live up to this stereotype as the quotes that I've seen through the EIS summary sheets have not changed throughout the years. Material and labor costs have gone up significantly over the last few years, and it feels ignorant and deceptive to not have a publicly available estimate of the impact on the estimated costs.</p> <p>For these two reasons, I am against the gondola project in its current form.</p>
32099	Michael Kimball	<p>I've lived near and have enjoyed the beauty of Little Cottonwood Canyon for most of my life. My wife and I were just up the canyon Saturday enjoying the fall colors. We do not feel that a gondola system would help the canyon. I do not pretend to have all the answers, but it seems like a bus system, similar to what Zion NP does during peak months would be a more reasonable solution, and less intrusive to the natural beauty and landscape of the canyon. Parking lots would need to be scattered so as not to concentrate traffic into one spot. Again, I am against a gondola system and favor more of a bus system during peak months in the canyon.</p>
32101	Sam Untersee	<p>The proposed LCC gondola is not the common sense solution we need in the canyon. Not only is it going to drastically and negatively affect nearly every bit of roadside recreation from climbing to hiking to just plain sight seeing but it does not serve to alleviate the pressing issue of traffic backups in the canyon. All this gondola serves to do is prop up the already booming ski industry of Alta and Snowbird and make some pocket change for the private landowners at the proposed base station. Little Cottonwood needs a solution more along the lines of the proposed enhanced bus service. Something that would actually solve the issues that this gondola doesn't even pretend to. As a rock climber myself I know the draw that the world class granite walls and boulders of LCC have. To go forward with this gondola not only destroys a significant amount of that it does nothing to solve the present problems. Please reconsider this before ruining the recreation and scenic vistas as the gondola promises to do.</p>
32100	Don Bell	<p>I'm against gondola construction. It's too expensive and will be destructive to the canyon. Better less expensive alternatives such as parking passes, mandatory car pooling, and others exist. The problem needs further study.</p>
32102	Jennifer Kershaw	<p>Do not approve the Gondola. It's not wanted, nor will it be used.</p> <p>It's costly, it's a eye sore, it's slow, it's inefficient, it kills birds, it ruins the landscape.</p>
32103	Eric Bowden	<p>A massive public debt that services two, profitable private ski resorts makes little sense. While I don't have a problem with the gondola itself, per se, this should be funded by the ski resorts, not the tax payers. Even then, a shuttle service similar to Zion National Park seems like a far more flexible and equitable solution that could help resorts and mitigate the lack of sufficient hiking trailhead parking in the summer.</p>
32104	Geri McMurdie	<p>I know the Gondola is unpopular, but I support it. I don't know how wider roads, more Buses and more traffic, closed roads during snow storms equals better for the Canyon. The Gondola will be a summer and winter option and will give people hesitant to drive the canyon roads a chance to experience its beauty in safety and with low impact to the environment.</p>
32105	Rachel Jepsen	<p>I feel strongly that the gondola is not the right solution for Little Cottonwood Canyon, its inhabitants, its community, or its visitors. The gondola only benefits folks visiting Alta or Snowbird, and will as a result permanently change (for the worse) the natural beauty & state of the canyon.</p> <p>The cost of the gondola alone (for which funding does not currently exist) is an egregious use of taxpayer dollars, especially when adoption seems unlikely and the consequences seem so high.</p> <p>No gondola!!</p>
32106	Chris Call	<p>The blatant opposition to the gondola is a sign of NIMBYism (Not In My BackYard) at its finest. Everyone wants to "solve" the problem until it impacts their backyard. The ultra wealthy live right at the mouth of our canyons. While they're wealthy enough that a decrease in home value wouldn't hurt them they still can't stand the idea of their net worth ever being dampened. So, they oppose a gondola. Our politicians are elected officials that have their campaigns funded by the ultra wealthy and if they don't oppose the gondola the politicians risk losing votes and funding at All the arguments that the gondola hurts the skyline views, displaces animals and plants, ruins summer recreation, and other claims are bogus because all other proposals do more damage. A widened road will remove more plants, animals, etc. More buses will cause more accidents as buses are the main reason the canyons have been closed from vehicle accidents the last several years. People won't stop driving with buses because they want the flexibility a car provides over the bus. Let's stop listening to the ultra rich and territorial people who think their wealth is more important than a real solution and those territorial people who think the canyon is theirs and only for them. Build the gondola.</p>
32107	Jonathan wrathall	<p>The proposed gondola is clearly a land grab by wealthy influential investors who stand to gain by pushing through an obviously unpopular development proposed as a solution to a non-existent problem against the will of virtually every public stakeholder involved. The fact that UDOT is still supporting this unpopular position only speaks as evidence that dark money is involved in pushing the proposed gondola away from the public interest and towards the interests of those who stand to financially gain from its development. How much more public opposition can be leveled? How much more corrupt can this process become?</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32108	Charles Freedman	1) The EIS was insufficient in scope. It didn't take Big Cottonwood Canyon, impacts from 9400 South, Parleys or the Wasatch Back into account--the surrounding canyons and roads need to be looked at in their entirety. 2) Watershed impacts were not sufficiently studied or considered 3) Alternatives were not presented or explored sufficiently. 4) Current traffic patterns were not systematically or rigorously analyzed. 5) Cost estimates of the gondola were not rigorously analyzed.
32109	Beau Parent	Let's say it take 6 minutes per person (not realistic) to evacuate a 35-person cabin... that's 3 1/2 hours per cabin; times 30 cabins, that's 105 hours, or over 4 days to evacuate the line! And that is not even accounting for travel times of evacuation crews (let alone that there will not be one evacuation crew per car), 100kph winds, white out conditions, lightning, access for emergency vehicles & shuttle buses to the lift line, noncompliant passengers, temperatures at -10C, ... By the way, double that time because you also have to evacuate to down traffic cabins. Get the picture and do the math. Gondolas are not a viable alternative.
32110	Steven Kerr	The Gandola argument continues to be one around the mitigation of safety and traffic in the canyon. Last year, the resorts up LCC implemented updated parking policies and no one has reported what effect this had on the traffic congestion problem. UDOT needs to report on non-invasive solutions that can potentially mitigate the problem at hand. I want to know what difference the parking policies made on the traffic. Then institute a bus policy and let's measure what effect that will have. If traffic congestion is truly what we are solving, then show that you are solving the traffic issue and not just set on building a gondola.
32111	Ira Goodsmith	Why are taxpayers paying to support private businesses to a tune of 500+ million \$ for a problem that happens infrequently? What is the capacity for visitors in LCC? How will the increased visitation numbers affect the experience for the public? How will the visual experience for visitors be with 250foot towers ruining the natural beauty of LCC? We need further reviews of this project to be done! Not enough thought has been done to consider other options. What about spending this money on electric busses specially designed with larger batteries that carry more charge or have solar batteries on top. How about spending this money to offer higher wages to drivers encourage more people to apply for these positions. Drivers don't receive a living wage and have trouble making ends meet! There are many alternatives that have not been considered. This gondola will create more problems then it solves. Who will actually benefit from this project, the developers or the user's? This will not solve any problems!
32112	Nick Copner	This gondola only shows the lack of concern the Utah government has for our natural resources. Ski resorts are not more important than all the other users recreating in LCC for the other 8 months of the year. You guys don't let dogs in the canyons out of concern for protecting our watersheds but you think building a gondola is totally ok? It's ridiculous, traffic is a reality and increased bussing must be tried before we make any drastic changes.
32113	Jessica Strout	The traffic in the canyon has been a problem for decades. A gondola that only serves 2 resorts for only part of the year is a very bad idea. I say no to the gondola.
32115	DEAN HAGUE SMITH	Please no Gondola! I dont want my taxpayer money used on this boondoggle that will only benefit a small number of tourists and the ski operators. Locals do not want to queue to park and queue up to get on a gondola to get up to ski. The existing parking system works - then you can add more buses with right of way if needed for the bus. Teh proposed Gondola is a waste of money and reeks of corruption as teh \$\$\$ will go to the developer at huge expense to the taxpayer (me!)
32114	Jean Brown	NO GONDOLA PERIOD! The money being 'spent' on this disaster belongs to the citizens of Utah, not to Alta, Snowbird and rich out of state people with EPIC passes. Question: who is really benefiting from this plan anyway? This is as bad as the Inland Port debacle. What happens when there isn't any snow due to climate change? Let's please get real about this, it's just a very bad idea
32116	Emily Allison	Why are taxpayers' money being used to harm one of our treasures? There more reasonable ways to keep the canyon usable and protected! Thoughts- charge a fee like Milkcreek, limit the number of cars allowed in each day- for example by license plate with every other day type access. Skiing may become a obselete past time with global warming and it seems very very narrow sited of UDOT to focus on a gondola as a solution - just not a good use of MY taxpayer money- and cutting bus service to gerrymander support is really loathesome- see it for the manipulation intended- Please, respect our nature areas that are beloved by all - and leave our canyons gondola free!
32117	Brad Buckmiller	Gondola please.
32118	Curt Crowther	I am AGAINST building a gondola in Little Cottonwood Canyon. Valley parking and busses are the answer.
35176	Colton Roberts	Thank you for all of the hard work and preparation that has gone into this project thus far. The gondola is a great solution to benefit generations to come
32119	Sinead McSweeney	I am opposed to the construction of a gondola in Little Cottonwood Canyon. A gondola would horribly scar the stunning natural beauty of Little Cottonwood Canyon, which is tremendously valuable to residents of the Salt Lake area and tourists alike. The natural beauty of the canyon is not a commodity that can be weighed up against time spent or dollars lost in traffic. I am an avid skier, hiker and resident of a neighboring area. Easier access to the resorts on powder days and less congestion in my neighborhood is not even nearly worth the permanent marring of the outstanding, invaluable beauty of Little Cottonwood Canyon.
32120	Scott Claffey	Don't you dare force me to pay taxes for this boondoggle of an idea for a gondola. Traffic up Little Cottonwood Canyon doesn't even affect us most of the year. Carpool. Charge for parking. Limit the number of skiers, etc.
32121	Curran Lemp	I learned to climb in the Sandia mountains that rise above Albuquerque, NM. The west face has what was for a long time the "world's longest aerial tram" which is a public works project from generations ago. I know what it's like to be hundreds of feet off the ground on a hard-to-access climb only to be gawked at by tourists accompanied by the constant hum of machinery in motion. The Wasatch deserves better, and the community of the Wasatch knows the value of its natural resources. Little Cottonwood Canyon is more than a couple of ski resorts or a couple of big powder days. It's a treasure and UDOT's decision exploits the canyon, to its detriment, for the benefit of a few. Expand electric bus service. Limit personal vehicle traffic. Respect the environment in which you managing transportation.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32122	nick parent	I support the gondola. Year-round direct access to the canyon accessible to cyclists, hikers and backpackers, will help clean the canyon and reduce motor vehicle road usage. Any areas affected immediately will adapt and new areas will be found to in due time. Wildlife and plants will adapt and may be less disturbed, overall the canyon will be improved with better access without personal automobiles.
32123	Peter Brown	I have had a season pass at Alta for the past 5 years and hike 20 to 30 days during the summer months in Little Cottonwood. After Alta implemented their reservation system last year (21-22) we had zero problems getting up and down the canyon and finding a place to park. Previous years were a nightmare, but their new system eliminated issues. We've never encountered any problems in the Spring, Summer or Fall. It's shocking that this ridiculously priced gondola is even being considered based on what the majority of Utahns want. It stinks of corruption and bad politics, UDOT is completely out of touch with what the public wants. If I wasn't clear, the gondola is a terrible idea that is unnecessary, I only see many more problems down the road if it's approved.
32124	Rosie Staes	<p>UDOT - Thank you for taking the time to read this comment. I have been a life long resident of Salt Lake and grew up and still use the Cottonwood Canyons year round for skiing, hiking, biking and simple getaways out of the city. The problems with congestion in the canyons is no longer limited to just an occasional powder panic Saturday. In fact, just this past weekend, UDOT put out an advisory on Instagram advising people heading up the canyon to consider going on the weekdays instead as they were seeing traffic of over 2hrs at some points due to the increased number of visitors going to enjoy the fall foliage. The gondola is NOT the solution. We need true infrastructure providing year-round bus transportation and better mobility hubs throughout the valley so that people don't have to drive 80% of the way to the canyon and then take a bus or gondola the last 8 miles. We also need to acknowledge capacity constraints in the canyons and implement better tolling and limiting ski passes sold to manage capacity. I know we all want a better experience than multi-hour waits in the canyon and the gondola does not solve that. Let's implement common sense mitigations, tolling, more frequent busses, and limits on ski passes, before jumping the gun on expensive and ineffective gondolas.</p> <p>Thank you - Rosie</p>
32126	Doug Goodall	<p>Please include my comment in the decisionmaking process.</p> <p>I appreciate the interest in reducing traffic in Little Cottonwood Canyon. One of the best ways to reduce this traffic is to ensure that people have another way to get to the canyon without driving. Little Cottonwood Canyon is a spectacular place and it would be a shame to have such an eyesore there that would be created by the gondola. The gondola would only benefit the ski resorts and maybe some of the skiers at the expense of the taxpayers. Once the gondola is built, it's permanent. The damage to the canyon will also be permanent. There's also no way for the gondola to stop for places between the mouth of the canyon and the ski resorts. A better way to reduce traffic would be to run more buses up and down Little Cottonwood Canyon throughout the day year-round. This could be started very quickly and will do no damage to the canyon. There could be buses that would stop at various places such as trailheads and there Express buses that don't stop anywhere between the mouth of the canyon and the ski resorts. Maybe at some point in the future a bus lane could be added to the road but that would still take a lot of time to build and there may not be any need to do that right away. Also maybe at some point in the future we will have technology available to build bus lanes up the canyon without damaging the canyon.</p> <p>When I used to live in Sandy, I took lots of trips up the canyon but frequently I didn't go all the way to the resorts. There's plenty to do in the canyon besides ski. I would not have minded taking the bus up the canyon as opposed to driving it. It's a spectacular drive but would be an even more spectacular bus ride.</p>
32125	Ali Wolpern	Please consider the environmental and recreational impact that the gondola would have on the canyon with the drastic increases in people recreating within the canyon. I suggest to try improvements to parking lots and bus service prior to building new expensive gondolas.
32127	nick parent	I do still support the gondola, however after reading more my first choice would be the cog railway. The cog railway has much easier potential to expand stops and link in to existing trax lines. While the cog railway may cost more initially and be limited by avalanches, it will cost less to operate and is more adaptable in the future years for expansion.

32128	clayton parker	<p>I oppose the gondola in Little Cottonwood Canyon. I suggest trying some cheaper and less invasive alternatives before committing to a gondola or 4 lane road up the canyon. My suggestions would work for Big and Little Cottonwood canyons</p> <p>On busy days ONLY, charge a hefty fee for driving up the canyon, UNLESS a vehicle has three (or perhaps 4) or more occupants. The goal here is not to make money, but to reduce the number of cars in the canyon.</p> <p>Install an automated toll station at the bottom of the canyons.</p> <p>Promote ride sharing. Provide websites where folks can hook up.</p> <p>Promote hitch hiking with designated pick-up sites at the base and at the resorts (we ride up the lifts with single individuals, why not ride up the canyon). Win win - Drivers would want to fill their vehicle to avoid the fee.</p> <p>Increase ride share parking at the base of the canyons (the gravel pit near BCC would be a great location).</p> <p>Eliminate paid parking at resorts, instead create more carpooling lots.</p> <p>Increase bus service on busy days.</p> <p>Increase snow plows dedicated to the canyon on snowy days.</p> <p>Provide avalanche tunnels</p> <p>Next step up:</p> <p>3 lane directional road - 2 lanes up in AM, 2 down in PM.</p>
32129	Kris Cornell	The Gondola doesn't work. It's not a solution! Expand the bus schedule! UTA shouldn't be cutting their bus offerings.
32130	Ary Faraji	I fully SUPPORT the gondola proposal.
32131	Jessica Stevens	<p>I am a Sandy resident who pays taxes and skis LCC and I do NOT support the gondola. We do not need to spend so much money on a gondola. It is unnecessary and just plain wrong. It will not solve any of the problems, but will cost a ton of money just to create new problems. No one will want to pay to ride the gondola- it will be very expensive for families. The crowds and traffic will move to the bottom of the canyon. Just restrict the number of cars allowed in the canyon. Alta's paid parking system last year nearly solved the whole problem on its own! Don't do major surgery when just a bandaid is required. Please try some inexpensive and noninvasive measures first, like tolling and/or parking reservations. Save our canyon and our tax dollars!!! Please listen to the people. We don't want this!!! Thank you.</p>
32132	Douglas Stark	<p>According to the US 2020 Census Utah has the highest population growth rate in the US. Since the current Utah fertility rate is below replacement the growth is coming from people moving into Utah partly because of Utah's good economic and recreational opportunities. The Covid pandemic and an increased Wasatch Front population is creating traffic jams and overcrowding in Little Cottonwood Canyons (LCC).</p> <p>Climatologist think future precipitation will be more in the form of rain in the summer and less snow fall in the winter. Because of the Wasatch Front temperature warming the snow season will be shorter and less desirable. Thus, the future of downhill skiing does look bright.</p> <p>The gondola would only travel from the mouth of LCC to Snowbird and Alta. This is an example of corporate/business wanting taxpayer money to support their dying businesses.</p> <p>A much better long -term solution to the traffic problem in LCC is eliminating all private vehicles entering LCC except for LCC residents. All visitors to LCC would have to take an electric bus to access any area in LCC.</p> <p>The human carrying capacity of LCC should be determined for each month of the year based on the environmental impact and the quality of the canyon experience. Once the carrying capacity is reached no more people would be allowed in the canyon.</p> <p>An intermediate solution is a gate/toll booth at the mouth of LCC to monitor this carrying capacity and to change private vehicles a fee similar to Millcreek Canyon. Also, private vehicle parking at the ski resorts should be high enough to discourage using them.</p> <p>Buses offer much more flexibility for year around access to all venues including all trailheads and picnic areas. To help transport people to the bus terminal at the mouth of LCC there should be increased bus service county wide to the mouth of the three Salt Lake County canyons to avoid large parking lots there.</p> <p>Doug Stark According to the US 2020 Census Utah has the highest population growth rate in the US. Since the current Utah fertility rate is below replacement the growth is coming from people moving into Utah partly because of Utah's good economic and recreational opportunities. The Covid pandemic and an increased Wasatch Front population is creating traffic jams and overcrowding in Little Cottonwood Canyons (LCC).</p>

32134	Leslie Timmerman	This is so maddening. Perfect example of the rich getting richer and the poor getting poorer. Let's make sure we tax the servers tips so we can spend it on something the average person won't even be able to afford to use. Beginning estimates ALWAYS increase in reality. How many tiny homes could you build for the homeless with some of that, let alone all of the federal dollars being switched around so it can benefit a few greedy people rather than the entire state of Utah like it was meant to be. This makes me beyond furious.
32133	Matthew Weinstein	I write as a Salt Lake County resident to oppose the gondola proposal. I agree with the Salt Lake County Mayor and Council that "the Gondola Alternative [should] be eliminated from consideration in the final ROD, and, instead, UDOT [should] adopt the Common-Sense Solutions Approach, which is a more fiscally conservative and environmentally sound option." I agree with the Save Our Canyons organization that we should first see if a 30% reduction in traffic in the canyon "can be achieved with carpooling, bussing, and a parking fee at ski areas." I would also support creating a mandatory electronic tolling system similar to that used for I-15 express lanes. Until these alternatives have been tried, we should not consider a half-billion dollar gondola.
32136	Peter Lenz	I am utterly and completely opposed to building a tram in Little Cottonwood Canyon. A tram will permanently alter the appearance and experience of the canyon, and will not solve the problem of traffic jams, because it will not transport enough people. The best solution, in my opinion, is the construction of avalanche sheds, such as exist in Europe and in Washington State, and to expand bus service, and include the bus fare in the price of the lift ticket FOR ALL USERS of the canyon. Lift tickets, including season passes should be taxed accordingly. All users of the canyon should share this financial burden. Peter Lenz Every car entering the canyon should be subject to a substantial toll, to support snow shed construction and bus service.
32135	Mary Clarke	I am very much a supporter of the gondola b project. It is very complex in scope and outlook, but it gives alternatives that offer a new dimension and direction in canyon accessibility
32138	Christopher Anderson	We don't want the gondola. The idea should be completely scrapped and other less permanent solutions should be used instead. I support the Zion electric busses idea as a less impactful alternative.
32137	Leo Epstein	The Gondola will be an immensely expensive, project that will only serve to line the pockets of those involved in building and running it. People who utilize the canyons do not want to leave their vehicles, to wait in line to pay to take a Gondola to the ski areas, where they will then wait in line more, while also waiting to get back down. It will be costly and inconvenient for them. Enforce the sticker program UDOT has already to keep vehicles out of the canyon on Snowy days that do not have snow tires, as outlined in this news article: https://www.newschoollers.com/news/read/An-Solution-Traffic-Cottonwood-Canyons
32139	Connie Skliar	I am against the Gondola plan, it only serves the ski areas and will not cut traffic for those who snowshoe, hike or cross country ski in the canyon. I would support increasing buses during peak times. I don't feel people will want to pay the fee for the gondola and I believe I read it will take 55 min from the base up to the top to travel. Again people do not want to wait that long. The current system of reserved parking works well for our family. Thank you for your consideration.
32140	Claudia Wiese	I am concerned about the risk of avalanche mitigation efforts to the gondola cables and potentially the towers or angle stations. Even with the inclusion of snow sheds and berms, there is not sufficient information specifically on how the gondola will interact with current avalanche hazards. This includes the potential sharpenal from avalanche mitigation efforts interacting with the gondola cable. How long will the gondola be paused during this process, which the EIS states will include inspecting the entire length of the cable and all the cable cars? Including this information is necessary to properly understand the reliability of the transportation system, one of UDOT's stated EIS objectives.
32141	Matt Hickman	Little cottonwood is absolutely breathtaking and a gondola would be an eyesore. It would seem to be that more buses and tolling would preserve everything much better. If that's not enough for everyone to go up the canyon then perhaps not everyone should always be able to go up the canyon. The line of thinking of constant expansion will inevitably be the downfall of all of our natural lands.
32142	Leigh Ann Morse	I am opposed to the gondola plan for the Wasatch Front.I live in Utah and a registered Republican.
32143	Joseph Daniels	A much better solution to the Little Cottonwood gondola would be a bi-directional train system that ran between Sugarhouse and Sandy. From Sugarhouse (from the S-Line) up Parleys Canyon to Park City, under the mountain to Brighton, under the mountain again to Alta and then down Little Cottonwood to Sandy. Trains would run in both directions and in the summer, could run a reduced schedule but with increased stops to summer facilities such as the Golf Course in Parleys and the popular White Pine / Red Pine trailhead in Little Cottonwood. This seems to be a much better solution serving far more needs than just Alta and Brighton.
32144	Kate Nicoll	I moved here for the home town feeling of salt lake. The beautiful mountains and the scenery. I've been here 10 years and if this is built you will attract the worst amount of people and give the tax payers the worst experience of living here. If this could be done without defacing the mountain that would be the correct way to do this. Please leave it alone. Figure out another way. We can accomplish it another way!!!
32145	Finn Navidomskis	Why risk destroying a watershed that 60% of the population of utah relies upon, to build a gondola that 80% of the people of Utah oppose?
32146	Susan Scott	I am opposed to the gondola. This seems like the worst of all possible solutions. It has one pickup point, and so does not solve the traffic/bottleneck problem, while buses could easily pick up people from various locations. It is expensive, and so would likely restrict the canyons to only those able to pay for an expensive gondola ride. It does not solve the problem up big cottonwood canyon. It seems like a very expensive, difficult solution that only solves a tiny bit of the problem, yet creates new problems. Wouldn't a fleet of electric buses with a dedicated lane provide better service?

ID	Full Name	Comment
32147	Finn Navidomskis	10. The gondola is estimated to cost 590 million dollars. Adjusting for inflation over the time period of construction puts it well over 700 million dollars. How accurate is that estimate? It could be much more costly. Projects of this scale are often way over budget. Building the new addition to the SLC airport was estimated 2.1 billion, but ended up being over 4 billion dollars. If the gondola project has a similar underestimate that puts it near 1.5 billion tax payer dollars to build. That's unacceptable. Don't build the gondola.
32148	Brad Orton	More and more we are seeing the use of subways. With The Boring Company results in Las Vegas, why not take the commute underground? No weather issues, or sight line complaints. And you could take run tracks/tunnels any where in Utah. Be truly UTA vs mostly SLC but piecemeal other regions of northern UT UTA.
32149	Margaret Hards	I am 100% against the gondola. It is the worst and most outlandish suggestion for traffic concerns of Little Cottonwood Canyon (LCC) of all the suggestions made so far. LCC deserves to be protected in it's entirety AS IS, and as it has been for over 50 decades. An outlandish and expensive idiotic gondola is not the answer for the current traffic congestion during the winter months. A more effective answer is to offer ski passes for different days of the week. This suggestion could also offer bus rides to and from the various ski areas. Another suggestion is to exact a toll in the form of a pass to drive in the canyon for private vehicles during the winter months, thus encouraging car pooling of back-country skiers. Also, higher parking fees at the resorts is another idea. Perhaps having a lottery such as those used by boatmen wanting to row the grand canyon could be tried before such an extreme choice of a gondola. As a community, we stewards of these beautiful canyons must try every possible means within our power that have "LITTLE" to "NO" impact on the canyon, watershed, and already perfect views the entire year, before turning to the most expensive, most serious and most harmful impacts upon the canyon, watershed and views for the problems during such a short period of time in the winter ski season. A gondola is the worst choice of all the choices and should be booted from the table 100%. We Utahans who have roots here are very attached to our accustomed lifestyle of world class views, world class beauty, best snow on earth, as well as public access and use of these canyons by the people of Utah first and foremost, as well as extending an invitation to others who opt to come to ski in OUR beautiful Wasatch Mountains. We, the people of Utah, want the canyons to remain accessible for US and others, but without ruining them for 2 ski resorts, for 3-4 months of the year, and for an exclusive high income group of people that are pushing for the idiotic gondola. The cost of the gondola in money is exorbitant for us taxpayers. But the cost of the gondola in terms of ruining our canyon is too high a price of our current priceless views, and pristine watershed. We do not need to be like Europe. We are American, Utahans, and want to keep our Wasatch the way it is, with the least impact for the least number of months. In light of global warming, the ski industry may be on it's way out, which is one more reason not to cater to 2 of the resorts with the worst possible, highest impact choice available; that being the gondola. If the UDOT decides to push the gondola against the will of 90% of the people who LIVE HERE, let the TWO ski resorts pay for it and expect a fight from US the PEOPLE OF UTAH in the courts. We are not going to give in without a fight. Why do you think the canyons are still so beautiful? Because we have protected them from the mentality behind the gondola & will continue to protect it from those who cater to the ski industry. Keep it the way it is, and keep the cost to charging those who use it during the winter: skiers and the ski resorts. A Lottery, drive passes, parking fees, alternate day ski passes need to be explored before such an over reaching over taxing idiotic expenditure of the gondola. For those who want gondolas, they can afford to go to Europe to ski. For those who want the pristine experience of wilderness of UTAH, let them come here, as is, and be ready to pay for the privilege. Adding my voice to the other 90% of Utahans against the idiotic gondola. M. Hards
32151	Dale Heisler	I am very strongly opposed to any gondola (specifically here gondola alternative B) as transportation up / down either Cottonwood Canyon. They are unsightly, create noise, waste public resources, don't go where most locals want to go, and are a poor substitute for the bus. I've used and watched UDOT for 50 years. UDOT doesn't listen to its ridership, but rather follows its own empire building dreams. It is an over priced, poorly managed obstacle to public transportation in SLCounty. The gondola is its ridiculous extreme concept. It's construction and maintenance are an invasion both to the natural environment in Little Cottonwood Canyon and also would further reduce any sense of solitude or escape from the big noisy city below to those countless folks who hike, climb, run and back-country ski the canyon. NO GONDOLA IN Little Cottonwood Canyon. They serve 2 private businesses and would be funded publicly. No to public funds for any gondola. NO GONDOLA!
32150	Kirsten Kolter	As a small business owner in the Salt Lake Valley and member of the outdoor business community, I vehemently oppose the LCC Gondola project. In my opinion the financial and economic burden is far too great. This problem can be solved with much cheaper and environmentally friendly options. Avalanche sheds over the roads, electric busses, tolls to limit cars, registration for a specific time to travel up the canyon. We did not have a one problem traveling up LCC last season, the measures that were put in place worked.
32152	Georgia Clark	Please listen to the people. We do not want a gondola. We want electric buses that run more frequently & pick up from more locations. I see where you are going to have less busses this ski season, that is horrible, & unacceptable.. What ever you need to do, get more not less busses this season.
32153	Kyle Ticotin	The gondola plan should absolutely NOT be implemented. This is a structure that will permanently alter Little Cottonwood Canyon as we know it. Traffic will build around resident communities causing great damage to local residents. The tax resources planned to be used to implement the gondola should instead be redirected towards additional buses and bus drivers. In addition, road snowsheds could be developed to minimize road avalanche burials. Little Cottonwood does not need permanent canyon altering solutions in order to deal with the current and future traffic problems.
32154	Ben Brisbay	I am strongly opposed to the gondola. It will be an eyesore on our beautiful canyon, and studies that I have seen show only a modest improvement in traffic flow vs. improved bus service. Additionally, we should not be using tax dollars to fund a project that will benefit private corporations, i.e. ski resorts. No corporate welfare, no destruction of our canyon's natural beauty, and no gondola. Thanks, Ben Brisbay
32155	David Anson	As a former geologist and psychologist in Salt Lake City, I am solidly against the gondola scenario that is not a solution, but more of a problem. Thank you for your consideration. David Anson PhD

ID	Full Name	Comment
32156	Ryan McNevin	Hello there, I am commenting here to inquire more about how the gondola is going to affect the watershed in LCC. Is there anything that is going to be done to mitigate any waste runoff or protect the watershed itself? I am a resident of the SLC area and I am worried that the 600,000 people that this water is utilized by are going to be put in danger when this gondola project is started. Are there any initiatives being done to help protect the watershed? How will construction companies change their practices to maintain clean drinking water? Please let me know.
32157	Lillian Daley	As a local resident, I am opposed to a gondola being built in Little Cottonwood Canyon. The gondola would only be beneficial to resort skiers and snowboarders, and would impact the experience of others such as hikers and climbers negatively. I enjoy coming to the canyon to hike to find peace and be in nature. The natural beauty of the canyon will be destroyed with the gondola and most users (who are not resort skiers or riders) will have a less enjoyable experience recreating. Better busses, shuttles, and carpooling (including more parking for carpoolers and public transit riders) would improve the flow of traffic but preserve the beauty of the canyon on busy winter days.
32159	Charlene Crawley	Virulently opposed to Snobird gondola in Little Cottonwood: (1) a billion dollars in taxpayer money must not be spent on a novelty that benefits almost no Utahns and for such a brief period of year. (2) It will be a terrible eyesore with so many steel erector sets layered up and down our precious canyon resource forever and whirring cables and cars marring the still beauty of the pine and granite mountains. (3) Massive and permanent ecological damage when granite is blasted to install towers - streams will be permanently diverted, trees, rocks, animals, trails will be smashed. (4) Snowpack is dwindling with climate change and need for goliath undertaking is vanishing. (5) increase of traffic on Wasatch Blvd and feeder streets which will ruin quality of life and safety. We have always used Little Cottonwood to drive to Albion Basin to hike trails. Leave my canyon alone. It is a pristine treasure and not a gold pit for Snowbird and other persons. I would vote for electric buses during busy ski days.
32158	Jacque Tietjen	<p>I would like to see this up for a vote on our next ballot. I think if tax funds are going to be used, the people as a whole deserve to vote on the matter.</p> <p>I personally am against the gondola. I think alot of problems are still being ignored such as traffic in little cottonwood, and how this effects climbing areas and neighborhoods near the mouth of the canyon. The gondola still cant run on bad weather days with high winds or during avalanche midigation. The gondola is an irreversable and expensive choice. Free and cheaper options should be looked at first.</p> <p>I think it is important to look at and realize that other methods of reducing traffic have been working. reservation systems at resorts, carpooling, and tolling proves effective in other canyons and areas. National Parks have proven their reservation systems work.</p> <p>Please dont waste our money on a gimmick.</p> <p>and please let us VOTE on this matter as it is critically important to us as a community. You said it yourselves that you have recieved more feedback for this project than any other UDOT project EVER.... that should be a pretty good indicator that the public voice needs to be heard and not ignored.</p>
32160	Luke Richins	<p>I am against the Gondola. Having the public support a transportation line to a private business is not the answer. Adding large metal structures as an eyesore to the canyon is not the answer. Destroying climbing walls, impacting backcountry ski routes, and all-in-all only focusing on a limited number of user groups is not the answer.</p> <p>Choose a different alternative!</p>
32161	Kenneth Libre	Please consider making the bus FREE to motivate canyon users to change driving behavior. UDOT should consider running the Canyons bus services (BCC and LCC) since UTA has had a lackluster performance. Resurrect the Alta only bus. It is miserable if you are trying to get to work at Alta to go through Snowbird. The Ski Areas should help fund the bus service (especially Snowbird and Alta) Have the proceeds from tolling vehicles help pay for the bus. Encourage ski resorts to return some of their parking profits to supporting Free Bus Service. The LCC ski resorts are the prime benefactors of the proposed gondola. They should have far more skin in the game than they currently do. Resurrect or reconstruction the Little Cottonwood canyon rideshare app to support carpooling. Anything to lessen vehicular traffic in LCC. Ultimately the proposed gondola would forever scar LCC in an unrecoverable fashion. Please try everything else before descending down this oneway path.
32162	May Lee	<p>I fully agree with Salt Lake County's recent resolution to eliminate the gondola from the Record of Decision. The common sense solutions proposed by the Council must be clearly laid out, implemented and analyzed before any funding consideration is given. Additionally, if these common sense measures work to alleviate traffic and congestion, then SB277 should be modified and the gondola must not be built.</p> <p>80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll. Salt Lake County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski, Cottonwood Heights mayor Mike Weichers and many other elected officials agree.</p> <p>"Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions. Parking hubs in the valley, electric busing with regular routes, carpooling and tolling, reservations, common-sense solutions that are fiscally sound," Wilson said at the Truth About the Proposed Gondola event in June.</p> <p>While UDOT is clear in communicating that the public comments are not a vote, how is it that UDOT and the Utah Legislature continue to support a measure that is simply not wanted by the vast majority of its hard-working, tax-paying citizens? What would be the return on investment on Gondola Alternative B for those same tax-paying Utahns?</p> <p>With no trailhead or backcountry access, the gondola is far from a solution that benefits all of LCC's users throughout the year. UDOT really needs to put the brakes on this project and seriously consider starting over. Why would UDOT continue to push for a vastly unpopular solution which has no funding?</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32163	Sha Koenig	I don't support a gondola because the cost is staggering and it doesn't address access for people who want to hike or cross country ski. Limit the number of skiers who are allowed on the mountains every day.
32164	Ryan McNevin	Hello there, I have a few questions about how this gondola is going to be affected by avalanches during the winter time. I noticed in the EIS that there is an average of 11 hours per season where the canyon is closed due to an avalanche. I understand that the gondola is going to be an alternative and the idea is that it will be able to run and fully functional during this time of closing the canyon. However, what structural changes are going to be made so that the gondola can withstand any dangers, such as an avalanche? Also, how will the maintenance be funded after the gondola is finished to make sure that the structures are able to withstand an avalanche? Will there be employees checking on this regularly? If there is a big issue, who will fund the repair? How long does UDOT expect a delay in the gondola safety to affect travel in the canyon?
32165	Phil Lambertsen	I've seen the different arguments and still feel the gondola is going to be the fastest, cleanest, and most long lasting of all!
32166	Jennifer Andelin	I support the gondola, alternative B. I believe it is best for the public, canyon and environment.
32167	Mary Anderson	I Support using a gondola to go up the canyon.
32169	Micki Harris	<p>If the gondola is built, your ski day will consist of parking off-site (or paying a premium for one of the limited parking spots near the base), taking a bus to the base station then riding the gondola 31 minutes to Snowbird or 37 minutes to Alta.</p> <p>And then doing it all in reverse order at the end of the day.</p> <p>How can it be assured the gondola will be used and actually reduce cars in the canyon?</p> <p>For the gondola strategy to be effective, there will need to be a major change in public habits.</p> <p>With no plan by UDOT to limit cars (it is our understanding they plan to implement bussing until the gondola is built but not continue the program afterward) or any analysis of demand, the original issue of traffic is not being solved. It will simply funnel more visitors to the resorts.</p> <p>Let's talk about the pressure it will put on Wasatch Blvd.. the bottleneck getting to the parking garage only trades traffic from the canyon for traffic on the blvd. Wait! Before you throw this comment out, I know you've provided your own lane to the parking garage. Problem solved? If you have ever been to a concert or sporting event, you know we will have the same problem getting the masses in and again getting them out. Afternoon ski traffic coming out of the gigantic parking garage will now be at a standstill. The cars need to be spread out and limited, hence, that's why a reservation has worked the last 2 years. Knowing you can come any time to Alta's Parking lot with a reservation between 8AM and 12PM limited and spread the cars out thus, not create the red snake.</p> <p>Letting loads of people come in masses is the problem.</p>
32168	Benjamin McMurtry	I am not in favor of the gondola for many reasons, which I'm sure you have already heard before. If the problem is too many private vehicles then put in a toll to discourage cars and add buses as an alternative.
32170	Victoria Meyer	I am a resident of Salt Lake City and I oppose the construction of the gondola. We need to protect our watershed from harmful development by supporting and increasing the existing bus and public transit system. Making buses to the ski resorts more frequent, convenient, and accessible should be the priority. It will have a lower impact on the canyon and on the water supply for salt lake county.
32171	Jordan Emery	A gondola is NOT the solution. There are several questions UDOT has ignored with a proposed gondola as the solution. Lets just discuss a few questions that should be answered before considering such an expensive permanent structure: Where do the traffic jams begin? How many days a year is the traffic at a standstill and is it just stopped in LCC? Would a gondola solve traffic issues in LCC and on Wasatch blvd? The answers are obvious here, UDOT. More research must be put in to find a real solution, the traffic is backed up on all roads leading to BOTH canyons. The traffic is worse on powder days and holidays. On powder days, the traffic would not be improved with a gondola, there will still be a line of cars waiting to enter the canyon and this would stall any progress of cars getting into La Caille to park and wait in a line for a gondola that also cannot operate while there is avalanche mitigation in effect. In proposing solutions to relieve traffic in LCC, consideration of all areas affected by this very traffic must be considered. It is not just SR-210 that is backed up from La Caille. The traffic extends all the way down every road leading to the mouth of both canyons. SR-209 down to 9400 S, SR-210 all the way past the mouth of BCC to Wasatch blvd/6200S and onto the highway I-215, and all the way down Fort Union blvd for miles while UPD manually directs traffic and gives preference to drivers on Wasatch blvd/6200S because of how badly I-215 is backed up. The traffic is not just on SE-210 and up LCC. The gondola must be scrapped, find a real solution.
32173	Paul Stewart	I strongly disagree with the concept of putting in a taxpayer expensive gondola system that is targeted towards relieving stress of wealthy skiers and people that live in the area. It seems to me that it benefits only a very small population of the state of Utah and should be paid for with local funds or privately funded by the ski areas that it supports. Environmental impact is huge I think it is an unsightly thing to have in this beautiful canyon and they simply need to limit the amount of car traffic that can go up. We are seeing the same issue in Sundance where there are lines of traffic all the way down to the bottom of the canyon and I say tough it may not be good because of the exhaust but perhaps you only allow bus traffic up those canyons during the winter months

32172	Matheson Harris	<p>How many days per winter are you in a complete standstill in Little Cottonwood Canyon? No doubt the red snake is real. But real enough for an expensive, permanent gondola?</p> <p>Plus, the gondola will not run when howitzers are active during avalanche mitigation in the lower canyon from Lisa Falls to Monte Cristo.</p> <p>And we can't even think of an argument for the gondola to be operating for the other eight months of the year.</p> <p>And as far as you traffic engineers go, I don't think their conclusion matches your predicted data. I vote for a new traffic survey, because the numbers you're showing are not the numbers that are actually on Wasatch Blvd</p>
32174	Robert Nehren	<p>I remain in full support of the Gondola plan as has been approved. Given that funding needs to be secured, I am also in support of the Phased Implementation of Gondola Alternative B and hope that the funding can be secured as soon as possible.</p>
32175	LeAnn Chandler	<p>No to the Gondola. Listen to what the PEOPLE want. Not the developers and resorts that stand to make profits with our tax dollars!</p>
32176	steve alder	<p>access is already limited by excluding dog owners and by inadequate capacity at certain times. better to limit skiing access than have me a taxpayer whose use is limited subsidize ski industry</p>
32177	Russell Wright	<p>This project is a huge mistake. It won't solve any problems, but will only cost taxpayers money. There will still be long lines at the entrance and exit points on both sides. There are alternative solutions, like incentivizing carpools where single drivers pay a premium and filled cars are allowed to park free. I do not support this effort.</p>
32179	Bradford Adams	<p>This gondola is not only a clear example of unnecessary destruction of the wild lands that so many hold dear, it also showcases the continuing trend that developers completely disregard the best interest of the very land they are trying to showcase. The entire outdoor community, as well as the majority of tourists you hope to attract, are disgusted by the blatant disregard you're showing toward nature and the general populace. Rethink your approach, or the repercussions will likely be more than your investors deem to be worth their money.</p>
32178	Bradford Adams	<p>This gondola is not only a clear example of unnecessary destruction of the wild lands that so many hold dear, it also showcases the continuing trend that developers completely disregard the best interest of the very land they are trying to showcase. The entire outdoor community, as well as the majority of tourists you hope to attract, are disgusted by the blatant disregard you're showing toward nature and the general populace. Rethink your approach, or the repercussions will likely be more than your investors deem to be worth their money.</p>
32180	Thomas Lund	<p>I am a lifetime citizen of Salt Lake City and am against this unprecedented \$500M tax p subsidy that benefits just two companies.</p>
32181	David Jensen	<p>I think the Gondola should be built. It is the most economical choice, it can be used even when weather closes the road, it is better for the environment, and it will be a tourist attraction. UTA already announced reduced bus service due to driver shortages, so how could increasing bus service be possible? I thought a cog railway was a better option, but it would be more expensive and has significant noise pollution. Build the Gondola soon!</p>
32182	Heidi Lujan	<p>NO GONDOLA All the projects have such a large sum of taxpayer money for most of the options only to service 2 ski resorts and maybe one business (LaCaille).</p> <p>I am against the Gondola.</p> <p>I would be okay with the cog rail if it stopped at some of the popular hiking and camping spots in addition to the ski resorts. While I like the idea of increased buses, UTA can't even pay for the current ones, maybe use some of this money they are trying to raise to increase pay for all UTA drivers so we are able to retain them and be fully staffed.</p> <p>I am good with Tolling, especially that it begins most of the way up the canyon closer to the ski resorts.</p> <p>I am opposed to tax payer dollars only benefitting private ski resorts, if they want these projects, they need to contribute some money. The whole population does not ski/ snowboard, so the whole tax base shouldn't have to foot the bill.</p>
32183	Lorin Hansen	<p>I am not in favor of the idea to build a gondola in Little Cottonwood Canyon. As a lifelong Utahn, I don't see the gondola benefitting Utah residents. I am against the idea. With climate change already affecting our snow, I don't believe this is a solution. I believe we can serve Utah residents and tourism better, with more forward-thinking solutions.</p>
32184	Andrew Morse	<p>I am opposed to the Gondola plan for the Wasatch canyons. I live, work and play in Utah.</p>

ID	Full Name	Comment
32185	Jaren Davis	<p>I am in favor of the gondola, as I believe the majority of Utahns are. I posted below to social media as talking points.</p> <p>Let's talk about transportation in Little Cottonwood Canyon</p> <p>Whether you are a resident or guest, you quickly realize our use of the beautiful Wasatch Canyons has outgrown our ability for recreation enthusiasts to commute to desired destinations efficiently.</p> <p>It is often problematic for our transportation infrastructure organizations to plan for unknowns or obtain funding before needs arise. That is the case in Little Cottonwood Canyon. We have exceeded our ability to address the popularity of our outdoor recreation with current roadways and transportation systems.</p> <p>The Utah Department of Transportation (UDOT) was tasked with finding a solution to address the need. After sifting through many ideas, UDOT's engineers, planners, and other associated professional personnel found two possible solutions identified as preferred alternatives-one- enhanced busing with road widening, or two- a gondola.</p> <p>After further study, UDOT determined that the gondola was the best option. As expected, groups had formed, standing ready to oppose anything UDOT would propose. Their target has been primarily the gondola, yet they were against anything that would benefit the continued recreational uses of the canyon. It is important to note that the loudest voices are those who live near the mouth of the Cottonwood Canyons. I live there, too, and I know many people who don't want more people in "the neighborhood." With this emotion, the details of either proposal get exaggerated to the point that they seemingly don't make sense to those of us who seek a meaningful solution.</p> <p>As we talk, remember that our public lands aren't reserved for neighbors, no matter how loud their voices become. Let's look at these options without the neighborhood fluff or emotion. To start, we need to realize the demand isn't merely ski industry related; for those of us who have grown up accessing multiple uses in the canyons, we know it is everything from a relaxing drive to more intense services like hiking, biking, fishing, camping, birdwatching, and cooking a nice outdoor meal with family and friends.</p> <p>Do you wonder why UDOT picked the gondola as its first choice? I found that the interest was to preserve the canyon as the need for increased transportation is addressed and to provide a safe, reliable means of transportation for all users. UDOT found that the bus system would need to add sixty-six buses to the existing fleet and required placing two new dedicated bus-only lanes, one in each direction. As you think of the existing road, ask yourself if you would want one like Provo Canyon going up Little Cottonwood. That roadway is similar to what is needed to provide an adequate system carrying the passengers required. The Provo Canyon road changed the look of the canyon forever. The needed expansion for buses on the Little Cottonwood Canyon road would cover over fifty additional acres, where the gondola needs two-three acres to place towers. It would require destroying many popular roadway areas. No one who loves our canyons would want these improvements if there were an alternative. Would you agree? So far, I feel UDOT has it right.</p> <p>To stop the growth, the neighborhood groups quickly want to work telling horror stories, believing we wouldn't do any</p>
32186	Robert Speiser	<p>This comment will be brief and to the point. A gondola in LCC must not be built. Main reason: to protect the canyon's watershed from harmful impact.</p> <p>There's much more at stake here than just convenient access for the ski resorts. Most people in this valley depend on water from the canyon watersheds, LCC included. Our water is both scarce and vital.</p> <p>When you hike trails up in the canyon, you follow watercourses that were sacred to the early settlers, not to mention the original inhabitants.</p> <p>A far better plan than gondolas would manage traffic in a way that would minimize environmental impact.</p> <p>There are deeper values at stake here than profits for the resorts and a few private landholders. The majority of LCC is public land. Its watershed belongs to all of us.</p> <p>Please work now for the entire community. Many here are watching what you do with great concern. The time has come to step forward bravely and do right!</p>
32188	DeAnn Nelson	<p>Please do not spend money on a Gondola. Not only is it a costly initial investment, but a high recurring amount. It would be an eyesore to our beautiful canyon and it would be the slowest method to transport people and the most expensive for people. A train would be much faster like they do in Europe up to ski resorts, faster, no eye sore, not as costly initial investment and recurring costs. We have a train company not far from my work that manufacturers them (Stadler).</p>
32187	Devon Gibby	<p>I don't know why we don't have a dedicated bus lane in the winter that is a dedicated bike lane in the summer. Add some avalanche sheds in certain areas and make the resorts have reserved parking. I've been going to Alta for a long time, and the parking reservation system has really helped with traffic. No need to spend hundred of millions on a pet project for certain politicians and their buddies. A gondola is a horrible idea and will just back traffic up even more along Wasatch drive while people try to park. It also adds another expense and skiing is expensive enough. Not to mention all the other people who use the canyon year round.</p>
32189	Genevieve Maire Rosol	<p>As a Salt Lake County property owner, I am opposed to a gondola which would only serve the needs of two ski resorts in the winter. There are several camp grounds, hiking trails, private properties that would not benefit in any way. The tax paper monies would be better served by improving current road and making it a pay to access canyon. I would happily pay to access this unique canyon.</p>
32190	Sarah Sloan	<p>I would be devastated to see a gondola constructed as the solution for traffic in LCC. While it could have a slightly smaller environmental impact to the canyon than expanding the road, I don't think either are the answer. It was irrevocably change the landscape of one of the last true wild places close to Salt Lake. We should be looking into alternative solutions like enforcing traction laws, requiring cars to get a decal prior to the season affirming their tires were checked or being forced to get tires checked on heavy snowfall days before entering the canyon if they choose not to get pre-screened. Forcing cars to go through a checkpoint would also manage traffic going up into the canyon. I would rather sit in traffic on a pow day than see a gondola through the canyon. I truly hope UDOT hears the pleas of the entire outdoor community and looks into other resources for alleviating traffic in the canyon.</p>
32192	Trevor Goodman	<p>This is not the solution. This will harm the environment. This will destroy the canyon. It will destroy the views. Locals do not want this. Stop trying to develop this gondola. It's unacceptable. Do not build the gondola.</p>

Comments on Little Cottonwood Canyon Final EIS

32191	Taylor Mazurski	This goes against the wishes of literally 80% of SLC valley. The people have decided. This is the worst solution.
32193	William Hanson	I need a copy of the EIS or a summary
32194	Rowan Chevalier	As someone who has lived near, and recreated in Little Cottonwood Canyon, I am absolutely opposed to the idea of a gondola. The destruction to the habitat, historic climbing areas, as well as the unsightliness of a large gondola operation goes against the wishes of so many who live and recreate in the area. There are alternatives! The gondola is short-sighted, and destructive, and trades the wants if many for the monetary interest of two ski resorts. It is unconscionable. NO GONDOLA!
32195	Tune-SoftMuh Tune-SoftMuh	https://tune-soft.com/
32196	Roger Pate	In today's economy, it seems rather extravagant to spend so much to benefit so few. The potential for watershed degradation is problematic and the overuse of the forest leads to an inevitable tipping point.
32197	Vikki Nelson	Prefer B option
32199	Andrea Chisari	NO gondola!
32198	Noah Humphrey	The planning group has it correct that something must be done to reduce over VMT and total vehicles that travel up little cottonwood canyon road during the winter time. Anyone who enjoys winter recreation is aware that it doesn't take many cars on an icy road to make driving a tricky task. This is why you guys are 100% on the right route by starting this process with increased bus infrastructure and # of routes to accommodate the busy mountain. As much as many people would like to always be able to drive their own vehicles up to the mountain, this is not a reality as nationwide we see an increased population moving to ski towns and an increased population who is partaking in winter sports activities. By increasing the capacity of the bus route going up to the mountain you also make skiing and snowboarding just a little bit more equitable, everyone knows that winter sports are an elitist activity enjoyed in the highest percentage by white people, I'm guilty of being another. By removing the requirement to also have a capable 4WD vehicle in order to get up to the mountain on any days with a winter storm, more people can be apart of winter activities with the park and ride option. Just like mentioned before, winter sports are mostly a white, elitist dominated sector, and who is making the profit in this sector. More likely white individuals who enjoy the gatekeeping that skiing/snowboarding has kept alive for generations. So why on earth do these ski companies need to put in a massive gondola through a beautiful canyon that simply doesn't need such costly and excessive infrastructure. How about taking some of that money and using it instead to increase the walkability/rideability of the Wasatch front communities in areas that could really use it. I would also strongly encourage those with power to influence decisions to really consider what electric options exist, as many electric busses are already economically viable options. I'd warn that we as humans love to think we can solve every problem every, perhaps by 2050 we may run into the issue that simply too many people are trying to ski, that mountains will be over their capacity limits and there isn't any engineering that can fix this. With Climate Change we are very unsure of what winters will even look like in 25 years so I don't believe that centering a large majority of UDOT possible funding around a changing variable like good snow years is the most intelligent option. Those are my thoughts and comments, thank you!
32200	adrienne aldous	Why are we not looking into a train up the canyon. They are in all the canyons in Europe. Seems like a no brainer to me. hell of a log less money too.
32201	Karen Travis	<p>Since my original comments seem to have been ignored, I'd like to add a few more thoughts on the Little Cottonwood Canyon traffic proposals. Since my last submission, new toll and fee ideas have been thrown into the mix, the accumulation of which will not only reduce traffic in the canyon but also kill the businesses that we have spent years creating, especially at Alta.</p> <p>Multiple government and private agencies are now proposing: A gondola with a charge to all who use it. A toll for vehicles to use state highway 210. A fee to park at Alta and Snowbird. A fee to park at major trailheads by the US Forest Ser. Increased prices for ski and snowboard passes.</p> <p>And now UTA says the much-needed comprehensive bus service will not be available due to lack of drivers. Instead, we have always need MORE service, not less. A bus every half hour as is done in other areas is a must. Several up-canyon busses bypassing Snowbird but stopping on the way down are needed to entice Alta skiers to ride since the current scheduling makes the ride to Alta too long and involved.</p> <p>Add up the tolls and fees. If you were going to use the canyon for any of the outdoor activities, would you be willing to pay the various fees and spend the amount of time it takes to make and pay for parking reservations, line up for a gondola ride or to pay a road toll, or pay a toll to use White Pine or Albion trails, whether to snowshoe, ski, hike, or bike?</p> <p>Put yourself in the canyon users' positions and do the math for the fees, tolls, and wasted time. I believe a majority of the people would choose to avoid both Big and Little Cottonwood Canyons. It makes sense to change our motto and license plates to SKI COLORADO!! Colorado would love to recieve the tax money that Utah would not be getting.</p>
32202	Gwen Evenstad	No gondola. Ski resorts should pay 100% of cost and should less invasive electric buses. Robust avalanche control and remediation program development needed.
32203	Charles Brown	This is the solution that we need. Glad to see these plans put into effect!
35188	David Gall	please look into the inverted electric railway operating since 1901 in western Germany. You need to Google Schwebebahn, Wuppertal's electric suspended railway. This is your solution and not cable cars!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32204	Christy Hillock	I strongly oppose the gondola project. It will have a detrimental effect on the beauty of the canyon. It isn't scalable for increasing crowds/usage. It isn't user-friendly, as users will still have to park somewhere and move gear to the gondola. Finally, it requires new infrastructure rather than making use of the roads already built. I would support enhanced bus systems with origin points located closer to people's homes in the valley.
32205	Randy11am Hansen	Purely a pie in the sky project
32206	Brianna Bennett	Please don't build the gondola it would really [redacted] and some things are more important than money
35214	Madison Merrill	I am opposed to the gondola. I think it'll have terrible impacts visually and ecologically to the canyon. I also find it hard to believe that it's an efficient solution... does udot really think that people are going to stand in lines to bus to the gondola? If people have to get on a bus, it would be much better to ride it all the way up the canyon. Also I can't seem to find an analysis of the the public comments... What percentage of the public comments opposed the gondola? How is udot factoring public opinion into their decision process? Thank you.
32207	Shauna Heisler	I am so sad that our beautiful canyon has been made into a vehicle for a few people to make a lot of money at the expense of the canyon and the people of Utah. The gondola will only serve two resorts, and only during the ski seasons, yet will cost millions and stop any discussion about real solutions. While raising money, it is proposed that buses will work to relieve traffic. If this will work, why isn't this the solution? Instead, UTA will obstruct this solution as they have announced they are doing, and the people are the only ones who will suffer. The gondola will create a huge eyesore, noise, years of destructive construction and will be too expensive for most people. It is environmentally damaging, and will only serve the resorts. Why is this the preferred solution?
32208	Callie Martens	I am in favor of not moving ahead with the gondola plan. We should have tolls, extra buses for the Winter season, and a limited number of tickets sold for each resort, so the amount of skiers can be contained. The gondola is so expensive and just benefits the ski resorts. Also, it is an eyesore. Finally, lots of people will still choose to drive up because for the gondola a person or family would have to park, unload their car, wait in line with their equipment to get on the gondola, load the gondola and take the long trip in the gondola. People will realize once the newness wears off, that the gondola takes longer than most other modes of transport. Nay to the gondola. It doesn't make sense.
32209	Sheridan Davis	I am strongly against the Gondola proposal from a fiscally conservative point of view. There are a number of much more affordable options that might assist in regulating the overwhelming numbers of cars and people streaming up and down Little Cottonwood Canyon on a regular basis. These include tolling at the mouth, investing in more buses, designating express bus lanes for 2 hours in the morning and two hours in the afternoon (a proposal that does not require building more lanes) as well as privileging car pooling and most importantly, setting human capacity limits based on scientific studies that need funding and which should guide all our decisions around access in LCC. Handing two privately held for profit businesses a billion dollar taxpayer funded boondoggle such as this Gondola is financially untenable.
32210	Sheridan Davis	I am against the Gondola and highway widening proposal as we should be in the business of eliminating cars and unlimited people from Little Cottonwood Canyon like Zion National Park's efforts to remove individual cars as a means of transportation to move through the park. Biofueled buses work there and can work here as well. Buses govern access. Limiting cars and using buses has quieted the canyon there and animals have come back down to the river level as a result. There is much to recommend setting limits on the number of people in Little Cottonwood, who aren't loving this place to death, they're killing this place we all love. Any efforts to remove the current cap on human access here--parking spaces and cars--by means of a taxpayer funded Gondola, or lane widening Highway 210, should be prevented.
32211	Amy Hartner	As a Cottonwood Heights resident and someone who regularly uses Little Cottonwood Canyon for recreational purposes, I ask that you please oppose the construction of a gondola. Please use various locations around the city as bus stops for buses specifically going to Little Cottonwood Canyon during the ski season. Please use shuttles and tolling. Please do not support the crazy-expensive, view-wrecking gondola. Thank you.
32212	Sheridan Davis	I am against both the Gondola proposal and highway widening ideas promoted by UDOT, as they have not listened to a primary community affected by their ideas--the Town of Alta. As a Councilwoman and citizen, both preferred alternatives ignore concerns we as a Town raised with UDOT. Both preferred alternatives would profoundly and negatively impact this beautiful place that is a natural treasure. Both preferred alternatives ignore other more incremental and flexible potential solutions to the sheer number of people and cars flooding Little Cottonwood. Local community control has been pushed aside in favor of a large agencies designs. That is wrong.
32213	Shereyynn Gray	I am a skier. I have been an Alta pass holder for many years. I am also a tax payer. I am outraged to think my tax dollars might be used to subsidize Alta and Snowbird's profits. The climate is changing. We very likely will no longer boast of "the greatest snow on Earth" by the time this monstrosity is built. Do not use my money to build this gondola. Listen to the people who will be forced to pay for it!
38594	Anonymous	Please NO GONDOLA. Please support other creative ways of transportation. Non-skier taxpayers should not be responsible for paying for skiers' resort access. Buses, shuttles, tolls please.
32214	Don Rudy	Please consider a dedicated bus lane with electric busses similar to Park City. Or light rail with avalanche protection as an alternative. Both would provide mass transit. Allow additional on and off locations and be able to increase and decrease during peak use times. Thank you for your consideration.
32215	Janet Swihart	Protect the Home Planet.
32216	thibaut mounier	Given the amount of the investment at stake (more than 500M\$), in a non-reversible project, I believe smaller steps should be taken to test reversible options

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35192	Nicole Denison	<p>I am writing as someone concerned with the gondola drama. I am hoping and praying that perspective can be used and a choice can be made that is good for the residents, not the tourists, good for the community, not the money hungry ski resort conglomerations, and good for our canyons and ecosystems, not special interest groups or pockets of elected officials and money-powered decision makers. I don't know anyone who lives here who wants the gondola or wants any widening of lanes or further development of these canyons. It's a nice place to live, please don't ruin it my commercializing it to oblivion. I don't even see that we have a problem that needs a solution, other than our political problem. If you want to make money, have a locals pass toll booth. Charge a toll for the tourists and leave us out of this entire money grabbing racket, unless you want to use those funds to pay teachers a reasonable salary.</p> <p>Sincerely, Nicole</p>
32217	thibaut mounier	<p>This is not a cost effective nor an environmental friendly option. We should start with enhanced bus system, tolling and above all a real enforcement of traction laws. Let's at least try a few seasons of this before making shiny but useless investments</p>
32218	thibaut mounier	<p>why would you spend public money on a project with uncertain outcome to serve only 2 private resorts? This is non-sense to me</p>
32219	thibaut mounier	<p>let's give a real shot and test some simple common sense options during a few season before shooting for the big money spent on a non proven solution.</p>
32220	Ella Moss	<p>I strongly oppose the gondola. Run more buses, not fewer - put the money toward more drivers instead.</p>
32221	Matt Hastings	<p>I like the gondola concept, but I don't like that it only services the ski areas, there are plenty of trailheads in the canyon that are overcrowded in the summer months with no parking, then people park on the roadway creating a very dangerous situation. I would also like to see potential expansion plans to connect the gondola over the mountain to big cottonwood ski and hiking areas, as well as park City; the investment being put into this needs to prove that long term it can gain a return, limiting this to only the one nearby canyon won't do that.</p>
32222	Rick Siegrist	<p>100% against this project. I don't second guess this might be most effective plan in scope of UDOT needs. My objection is the limited effectiveness in a year round environment. Spring, summer, fall it is a busy canyon, top to bottom. \$550-\$600 million for such a limited time and scope. Our local community has such more pressing needs than a 3-4 month expressway for skiers.</p> <p>Housing, homelessness, addiction, mental health all need our help. Selfishly, how about improved east west corridors? Just not the best use of anyone's money, let alone taxpayers money.</p>
32223	Caleb Baker	<p>Little cottonwood would be ruined by a gondola. The community stands against a gondola. Period.</p>
32224	Morgan Husmann	<p>The information that has been provided makes it seem like the solution still hasn't been fully considered or fleshed out. It leaves many lingering questions and doesn't seem to address many of the current issues and concerns of the public. Personally, I'm concerned with how parking will be implemented at the base of the gondola. I also think there are some potential issues regarding the limitations of only providing access to Alta and Snowbird. I understand that these are major attractions up the canyon but there is questionable ethics surrounding public funding of a project that will largely aid them and provide them with a competitive advantage over their local competition. Furthermore, this solution is focused heavily on the winter and doesn't account for the year round traffic issues. Additionally, it doesn't provide any short term solution. Finally, this is a very significant investment in an industry that lives or dies by the weather while we are annually experiencing unprecedented weather. So there is no guarantee for any real return on investment for this huge public project.</p>
32225	Meagan Gallagher	<p>As a salt lake city local who values our outdoor spaces and access, I do not think the gondola or widening the road is an acceptable solution to traffic issues. The gondola does not improve traffic for users such as climbers, hikers, bikers, or backcountry skiers. The construction of the gondola will destroy some boulders, destroying some recreation access for rock climbers. Please consider other options such as carpool enforcement, paid parking at the ski resorts, or an annual fee to drive into the canyon with a toll road.</p>

ID	Full Name	Comment
32226	Michael Jablonski	<p>First and foremost, thank you for your work in all aspects of this project. There's no question that Utah is changing before our eyes and a sustainable long-term solution to traffic in LCC must be decided upon soon. Also- big shout out to UTA, USDA Forest Service, and Snowbird and Alta in all working together to make something sustainable happen for the long term.</p> <p>I have spent many hours researching this topic - I am NOT in favor of the gondola as the solution. I do believe it would take away from the natural beauty of the canyon. Maybe the impact to the beauty of the canyon wouldn't be as much as I'm imagining, but I wanted to voice this concern. It would be difficult to tell until built. Snowbird stated in their letter of support for the gondola that "Park n Ride lots have historically paid for the UTA ski bus fares of employees and season passholders". I hope I'm reading this correctly as I give credit to what Snowbird and UTA figured out that my bus fare has been included in previous season passes; they go on to say "we envision a similar funding model if a gondola were to go into place"-- but what about the price to park at La Caille? I very well could have missed this, but I have not seen any parking quotes to park at that structure at La Caille. In the UDOT report, it mentions gondola riders would park at a mobility hub, then take the 13-minute bus ride to the gondola. With that being said, I'd be more apt to just stay on a bus up the canyon (if there are more electric buses/ less impact on the environment). To add, a majority would have to do this anyways with only 2,500 spots at La Caille- not sure how many people want to drive to a bus stop to be shuttled to the gondola. This means that realistically, people are still going to take busses or drive up canyon when they can, so why build the gondola? "The bigger you build it, the more they will come" and I feel as if the gondola would attract that many more people here for reasons outside of its intention: moving skiers and riders up LCC (more on this at the end). And on the huge storm days when people can't drive or take a bus- come on- can you imagine the nightmare that will be the line of people trying to get gondola parking then the line for the gondola?? With all this being said, alternative "A": enhanced bus service gets my vote (if there are additional environmentally friendly buses) between these two "final" options.</p> <p>A few ideas around this: not as much of an eyesore that a gondola would bring to the canyon. Priority to buses on Wasatch Blvd and tolling during peak hours to shy people away from driving up in their cars. This next point might not be realistic- but on huge storm nights (when UDOT puts out the statement that they are blasting until 8am) could a statement also be put out that it will be buses only/ no personal vehicles until noon the following day? (outside of emergency vehicles, workers, canyon homeowners, ect.) and include a statement saying people in personal vehicles can't line up until noon? I'm thinking something similar to Zion NP- how it's buses only at peak visitor times. Having enough buses where people don't need to know schedules- having multiple buses at stops so that as soon as one is full, it takes off for LCC and the next one starts loading. We all know that in addition to the wet, avalanche prone snow that caused such large slides, one of the biggest reasons for such crazy traffic the last few years is that we hear the canyon is closed until 8am, but people start to line up at 5am, which backs things up through 9am (or later, 10:45 on huge snow days) by the time things start</p>
32227	Kurtis Aoki	<p>Why haven't there been a suggestion to build a Gondola from the Heber... Dropping it off to either both Cottonwood Canyons</p>
32228	Bradee Goepper	<p>It saddens me that we are continuing to develop beautiful areas like little Cottonwood. As a climber, I value the minuscule use of tools that I use to access the outdoors, and I hate to see ecosystems destroyed when we try so hard to leave no trace. The climbing community appreciates and wants preserve the beauty of nature. A gondola is the lazy man's outdoor tour bus. Please in a world where we are destroying ecosystems faster than they can replenish themselves. Please do the right thing and stop. Your dearest dirtbag, Bradee</p>
32229	Susan Sandack	<p>Discard Gondola B as an alternate transportation solution. Rather keep the charm of the canyon as a national treasure and the resorts as historic markers. LIMIT the number of people who can access the canyon and demand user respect of the water, land and experiences that feed their souls. Prove that involvement in aerial transportation is a thing that UDOT has any expertise. Snowbird should not be that kind of a partner unless there is full buy-in from the stewards of that land.</p>
32230	Dan Atkinson	<p>I am opposed and have many concerns but of the concerns that I have, there are 3 fundamental issues that I want to address:</p> <p>1- All of the proposed ideas should be voted on by the public and the decision should not be solely up to the Department of Transportation or a council From the Department of Transportation. This is a major event that affects much of the public including cities, counties and we the people. This should be up to the public to vote to make the decision on where or when this happens or if it happens.</p> <p>2 - My understanding that the amount disclosed in the study for the total cost could end up exceeding one billion dollars. I am opposed to not having a cap on the total amount that will be spent, including additional charges that may be found or needed or additional funds that may be needed at a later time to complete the project. I don't think it is fair to the public to not have a total or cap amount and not have to come back later and ask for more funds.</p> <p>3 - I don't feel that the justification for this whole project represents the amount of need from the public. I feel that there is a very small percentage of people that this would even have a benefit for using the Canyon and the transportation up to the Canyon. I don't think that all the public as a whole should be paying for all of this. There is a great number of people paying a big price in comparison to the small amount of public that uses it. I feel that nothing is perfect and that sometimes you may have closures due to snow or condition and other conditions and that it's ok for people that use the Canyon and the recreation associated with it to have an understanding that there are inherent risks for using that area and that things can happen that affect the transportation such as delays and weather.</p>
32232	Mike Feldman	<p>There are many other options to consider other than the gondola, which only serves the benefit of two corporations, and the pockets of private land owners. The general public would be footing the bill and getting no benefit...do not build the gondola!!!</p>

32231	Louise Lightner	<p>Bus service seems the best alternative. You can run more buses when it's busy and decrease easily in the summer. Put in tolls and encourage ridership by discounted lift fees to those that ride the bus.</p> <p>Implementing tolls is also an idea to increase bus service. So the traffic is slow....sell snacks on the bus make it more appealing. There are many ways to slice this. A Gondola, besides being an eye sore is not the best use of tax papers money. It will be a boondoggle!!!! At the expense of the tax payer of salt lake, for what? To get a tourist to the ski area faster??</p> <p>How much money did someone throw under the table to UDOT and throw the tax payer off the Gondola?</p> <p>You need to think outside the gondola box.</p> <p>We're tired of having UDOT shove unwanted projects down the tax payers throat.</p> <p>Have the decency to at least let us know that you're not interested in Salt Lake but interested in special interests.</p> <p>Try EVERYTHING else. You haven't done that!! Before you saddle us with tremendous debt and an eye sore!!!!</p>
32233	Brandon Thomas	<p>Travel time is not being considered as a strong enough driver in the decision making process. An hour plus gondola ride is longer and way more of a pain than even the busiest winter days for skiing. Have you properly considered the reality of an empty gondola and heavy demand remaining for the road instead? Please prioritize travel time along with other factors more purposefully. I think you will find the train option more appealing, consistent, and full of optionality.</p>
32234	Julie Allred	<p>I don't want a gondola! It will drastically change the view of the beautiful canyon. There is only an issue with traffic when the canyon is closed, very few times per season. I live at the base and don't want the natural beauty of the canyon changed!!</p>
32235	Scott Stoddard	<p>The projected driving travel time of 85 minutes on the 20 worst days in 2050 does not justify an ugly extremely expensive gondola that will ruin the natural beauty of the canyon 365 days a year and still take 55 minutes to ride, plus who knows how long to get through the traffic into the parking lot, and ride the shuttle, and lug your gear to the station.</p> <p>30 minutes a few days a year is a terrible trade off.</p> <p>It doesn't seem like people will find it a good option, even on the worst traffic days.</p> <p>On regular days, it will be 30 minutes SLOWER than driving.</p> <p>To pay for itself, tickets will need to be very expensive. The tram ride at Snowbird is already over 30\$.</p> <p>With so few people riding the gondola, what will the ticket price need to be to pay for itself?</p> <p>Are people going to pay 50-100\$ to save 30 minutes? Will they even save 30 minutes with traffic and parking to get to the gondola station?</p> <p>Will a family of four lug their kids gear to the gondola, and pay \$400 to save 30 minutes?</p> <p>Will they pay \$400 to travel 30 minutes slower on regular days?</p> <p>It really doesn't seem like people will see the gondola ride as a good value. It won't be able to pay for itself. It won't solve the problem. It will be ugly.</p> <p>It's a terrible idea.</p>
32236	Matthew Mallon	<p>As both a hiker and a skier who lives in Salt Lake City and frequents this canyon often for recreational purposes, I am strongly opposed to the construction of a gondola. In both summer and winter, I frequently hike in the canyon and the gondola would not stop at trailheads the same way that a bus system would. Parking is already a huge issue at the hiking trailheads and sometimes I am unable to hike my intended route because of lack of parking. I have no bus alternative. A bus would not only serve skiers, but also hikers, and would provide more flexibility with less of an ecological impact from the construction of a gondola.</p>
32237	Michael Doherty	<p>A Gondola is a terrible idea!! We can do better than that, Quit trying to get more and more people up there.</p>
32238	Susan Orr	<p>No to the gondola. Too expensive to build and ride, hauling skis from car to gondola and back is unreasonable, especially to families. Alta has found reserved parking to be very effective. Gondola not needed! Monetary gains for investors is a lame and selfish reason to build.</p>
32239	Whitney Wilkinson	<p>I am against the gondola recommendation and believe there were multiple mistakes, misrepresentations and mis information in the EIS. The gondola is an irresponsible waste of taxpayer money that will not solve the congestion problem that only happens a few days a year. The gondola will destroy the canyon forever and put money in the pockets of corrupt developers.</p>
32240	John Werner	<p>No gondola. Period. Full Stop.</p>
32241	Joel Peterson	<p>My family has a cabin at Brighton. Will part time residents of Brighton have to pay the toll to access their property?</p>
32242	Cheryl Daniels	<p>Please please NO gondola ! I am a resident for Sandy's two years. I love Sandy. Over another my family loves Sandy. We do not want the canyon gondola . We do not support the gondola!!</p>
32243	Jeff Nelson	<p>Tax dollars should not be spent to help out so few people. This is stupid. The businesses Benefiting from this should be the ones paying for it</p>
32244	Scott Allison	<p>The proposed gondola up little cottonwood canyon makes no sense to me. It carries an enormous cost and benefits only a small number of users at the expense of all taxpayers. I urge this recommendation be reconsidered in light of many other opportunities to manage the situation.</p>
32245	Mike Lasatet	<p>Love gondola B solution!! We are CH residents near the proposed base. Busses/wider road are NOT a good solution. Gondola please!! Thank you for your hard work.</p>

32246	Lukas Gabert	Constructing a gondola with half a billion dollars of taxpayer money is a decision which should only be made after all other alternatives have been exhausted. The gondola has a permanent affect on the enjoyment of the canyon, and may negatively impact quality of life in the Wasatch Front. Before such a drastic measure is taken, UDOT and government partners should try a mixture of increased bus service and tolls during peak hours. This solution is much cheaper and would not lead to a degradation of the canyon.
32247	Zach Stumpf	Hello, After reviewing the EIS provided by UDOT, I am strongly opposed to the proposed gondola in Little Cottonwood Canyon. The gondola B alternative is a drastic measure to alleviate a problem that exists for ~30 days a year while ruining the beautiful views of LCC 365 days a year. I cannot fathom the justification of spending an exorbitant amount of taxpayer money to resolve a constraint that primarily impacts two private entities (Alta and Snowbird). If the ski resorts are concerned about getting more people to their businesses, then they can work towards a privately funded and low impact solution as opposed to the government subsidizing the solution to their problem. In addition to the devastating visual impacts of the gondola, this solution would not adequately alleviate traffic within LCC. The White Pine Trailhead is frequently overflowing with people recreating, however these users would not have an alternative method of transportation. Similarly, the gondola is only planned for winter operation, however there has been record levels of traffic this fall in LCC due to Oktoberfest at Snowbird which is attracting more people than ever. Yet these people would still be stuck in traffic as the gondola would be sitting idle and an eye sore. On the busy days in the winter, where the gondola is proposed to have the most significant impact, the traffic jam would shift from the canyon to the parking areas and subsequently the line to load a gondola cabin. 1,000 pph is not enough capacity to handle the crowds on the busiest days for people looking to head up the canyon during peak hours. The gondola B alternative is nothing more than an astronomical expense on the citizens of Utah to support private business while destroying the beauty and appeal of Little Cottonwood Canyon.
32249	McKinley Barlow	I am very concerned about not only the direct environmental impact this will have but also concerned about how it will change the mountain itself. If construction does proceed not only will this be an expensive but long process that will just cause more issues and devalue our gorgeous landscape. Please reconsider or find an alternative way to make it up the mountain
32248	beverly stachowiak	Please do not diminish the natural beauty, splendor and magic that LCC a iconically is for the sake of capitalism. There are other traffic congestion solutions that do not pose irreversible damage to our sacred canyon!
32250	Jon Larsen	I really don't like the gondola concept. It has a high visual impact and only benefits those going to the resorts. Mostly, I don't like that it's a really tax payer subsidy to people that don't really need it. I'd rather spend that money on big transit projects in the valley that benefit many more people from a wider socioeconomic spectrum. Also, please don't widen Wasatch Blvd. It's expensive and impactful with minimal traffic benefits
32251	Joshua Pettit	Please review any European country that has progressed their technology past ours. The gondola is a fantastic answer
32252	Carl Goodfellow	What is the plan to minimize environmental impact? The gas pipeline through Davis County has left a scar on the mountain for over 20 years. I support the plan to reduce emissions only if accompanied by a natural habitat restoration is included.
32253	Steven Fuhr	UDOT needs to look into more bussing before they proceed with this option.
32254	Norma Mannos	I'm against the gondola project because of taxpayer costs and harm to the The canyon.
32255	PATRICK CASADAY	For now: No Action Alternative. No one has coached me and I am not affiliated with any interest group or position - just a Sandy resident and a Utah tax-payer trying to (in my opinion) do what is right. With that, it seems like the initial capital costs of the preferred alternative is quite expensive (\$550,000,000) - when other issues (education, infrastructure, etc) seem more pressing. Undoubtedly this cost will sky-rocket (exp. the Lake Powell Pipeline, initially estimated at about \$550 million is now estimated by some to cost well over \$2 billion). Who pays, and how? Do you plan to somehow pass the construction costs to those who actually use the canyons (out-of-state users, etc)? If so, how? Higher Tram costs? Or, just a state-wide or local tax? I would assume a "relatively few" Utahns outside of Salt Lake County would use our canyons. If a state-wide tax I doubt the people in Kane, Garfield, Box Elder, Washington, etc, would appreciate that. Do we know the "visitor capacity" of the Canyons? Do we want to overcapacitate the canyons? Indeed, there is a limit to the number of visitors we can feasibly accommodate and still maintain watershed and water quality standards. Additional transportation systems should not encourage overuse or use that exceeds "visitor capacity". What about the myriad of law suits that will be filed to prevent this. Have those legal costs been factored in? In the "short term" perhaps the best option is to increase busing service and implement a car toll to discourage POV use. This is scalable and reversible, whereas the gondola is permanent. (i.e once in place, it is there - forever).
32256	Wesley Syphus	NO [REDACTED] GONDOLA.
32257	Lucile Keough	I do not want my tax dollars paying for a gondola. I think there are many ideas being suggested that are less intrusive and scarring of our canyons.
35194	Wesley Syphus	Here's a public comment: NO [REDACTED] GONDOLA Thanks, Wes
32258	Jololene Allan	The gondola project only services the few and not the mass. Tooo expensive and not in our or the canyons best interest.
32259	Andrew Nam	My first impression of Salt Lake City came from looking at the mountains. It's majestic and magical in its natural state and offers so much to mankind. Whether it's a route climbing, an artwork on a canvas, or a place to temporarily hide away from busy a work life we all have something to gain from it. Making little cottonwood canyon more accessible may sound like a good thing at least but slowly the mountain that we in awe of seeing slowly loses its magic and becomes an infrastructure.

32260	RR P	The state should not be providing the funding for something that will only be benefitting two ski resorts. The resorts need to pay for the solution. This is a giveaway of taxpayer dollars to two corporations. The gondola will not solve the spring, summer, fall hiker/climber traffic problems either. UDOT should be working on transportation solutions in Salt Lake City that benefit the state as a whole and improve air quality. They should also be focusing on less invasive and less costly options for both Little Cottonwood Canyon and Big Cottonwood Canyon that address year round traffic problems and not just ski season traffic.
32261	M'Leah Woodard	<p>Gondola B best meets the project purpose and need and provides the highest travel reliability for the public.</p> <p>Disagree with the conclusion; the project purpose and need may need to be revisited.</p> <p>Safety should be #1. Reducing traffic - regardless of modality - will achieve this goal. Why not cap the number of humans up the canyons daily?</p> <p>I am anti-toll or fee to ride any form of transportation. What you are talking about is access to National Forest System lands, which should be free, full stop.</p> <p>I am anti gondola, full stop, for all of the reasons that have been articulated: environmental destruction of world-class climbing resources, preferential treatment of one outdoor activity over another, which itself is antithetical to the controlling law, regulation, and policy governing recreation on National Forest System lands, and the fact that a gondola option is going for the jugular without first rightfully trying other options. Choosing any gondola option is to LCC as the Lake Powell Pipeline is to St. George: the community has an obligation to spend 20 years trying less invasive options before going big.</p> <p>Your project will be litigated. I look forward to that. I hope a Motion for Preliminary Injunction is granted and that the legal battle drains the money-backed special interests dry. You are going about this the Utah way - plowing forward with big money and outside interests in your pocket, and without listening to the will of the people. Just. Say. No.</p>
32262	Mallory Ubbelohde	The gondola is not the answer. Please reconsider. Please protect all the invaluable land and nature in the canyon. Give us a chance to try another less expensive, less damaging option. Please. The gondola is so expensive. There is a better option. Please.
32263	Rebecca RABIGER	We don't want a gondola! This is not the right solution!
32264	Lucy Reed	Little Cottonwood is a beautiful place where so many people (besides skiers) go to recreate. Directing a gondola through the canyon would take away many opportunities for people that have enjoyed the special area for so long. There are other easier and less destructive ways to solve traffic issues. I wish that the city would think a little more creatively about those and involve the opinions of other people who love the canyon besides just the rich skiers who don't realize how their wishes are affecting others.
32265	Carolyn Miner	The gondola is not something people who Live Here and see the mountains almost regularly wanna see or use. It isn't practical, it would be unnecessary damage to the beautiful mountains and it's a Eye sore of an idea. Trash it!
32267	Sabrina Bengtzen	Little Cottonwood Canyon is an iconic destination, and a gondala will destroy the beautiful landscape that exists. The last thing I want to see looking at the mountains is a massive, man made attraction that claims it will limit traffic and congestion concerns. Locals don't want to ride in a gondola and the implementation of it will only cause increased confusion and more traffic. Now the roads can be clogged and the gondola too. I think there are other solutions that are more efficient and less expensive. Please don't destroy our canyon.
32266	David Weinstein	Oppose a taxpayer-funded (or any funded) gondola. Widening Wasatch Blvd will not make Wasatch less car centric and more pedestrian friendly. Things like walking paths on the east and west side, protected bike lanes, adding pedestrian road crossings (not high pedestrian bridges), and slowing down the road through redesign and vegetation will make Wasatch Blvd more pedestrian friendly!
32268	Kimberly walsh	My family and I live nearby LCC and use it all year round for recreation. Unless it's a holiday or bad weather it doesn't take long to travel the road and traffic is tolerable. Spring - fall we hike and in 9 years have never experienced bad traffic. The gondola is not needed. It serves a very narrow need (holidays) and for one narrow group of users- visitors to Snowbird and Alta only. Bad weather will affect any transport you may propose. No escaping the weather. Introduce a ticketed entry like the national parks are trialing for holidays. I a against the gondola. The gondola parking will also create traffic problems as the proposed parking structure is in an area with a few major roads. We are just shifting the traffic west on those few holidays. Plus many I know wouldn't choose a gondola- where would you leave your cooler with food and drinks?... oh wait it's another way The resorts can earn more money. Lift tickets are already pricing out many locals. No gondola!
32269	Justin Anderson	Please re-evaluate. The estimate for the Gondola alternative is likely very low compared to final construction costs as this is a novel structure with no applicable bid history that can be used for a cost basis. Also it requires highly specialized contractors to design and build not only the gondola vehicles but the entire system. On top of that, a phased implementation will dramatically drive up the costs. Then there is the question of long term operation and maintenance. This is not within UDOTs experience and ultimately UDOT would likely rely on an expensive third party to perform these functions. Construction of this plus the interim stop gap measures while funding is sought for this would yield the worst of all options by not solving any problems in a timely manner and wreaking the most environmental havoc. UDOT should re-evaluate traffic models with a canyon entry fee / pass system and investment in electric buses partially funded through a P3 with the resorts.

ID	Full Name	Comment
32270	Cole Fox	<p>A few points against the gondola -</p> <p>What's the real issue here? What is the root cause of the traffic in the canyon? It's so much simpler than "too many people want to ski". It's easy math - you have a large number of people wanting to park at the ski resorts at the same time, and a very finite number of parking spots. This means everyone is up earlier and earlier, battling for the limited parking spots. Occasionally the canyon will close for a few hours for avalanche control, but the gondola actually doesn't offer any advantage there because it won't run during avalanche control anyway. As parking spots fill, cars stop. Eventually, the town of Alta turns people away, which means the line of cars has to wait as each car is turned away, one by one. While accidents do happen, usually they are the result of underprepared vehicles, which would be mitigated if UDOT could afford staff to enforce the traction laws that already exist, but since aren't able to staff that position very well the law is largely ignored.</p> <p>Enter the gondola. You have several thousand people trying to get up the canyon, all vying for first tracks on a powder day. Gondola advocates claim that the gondola will move 3600 people an hour up the canyon, although the UDOT proposal is closer to 1000, but lets use the more generous number. Over 7000 cars will go up the canyon on a busy ski day, and each car has an average of roughly 2.5 people. So generous ballpark, let's say 15000 people want to go up the canyon on a given Saturday. 15000 people/3600 people/hr = 4.167 hrs to move everyone up the canyon. I've listed my sources, but if my methodology is incorrect I'm happy to recalculate, but I feel strongly that the gist is the same - the traffic will simply be moved to the bottom of the canyon. The traffic will be along Wasatch and 9400s, on the way to the parking garages, and from those hubs to the main lot. There are still a finite amount of spaces at the gondola proper, and the convenience of skipping a bus ride means people will be fighting for those spots as early as possible to get in line and beat the 4.5 hour commute up. Allowing cars up the canyon alongside the gondola means easing those wait times, but aside from people seeking the novelty experience for the first time, who will ride the gondola if driving is a faster, more convenient option? The gondola doesn't ease traffic, but rather moves the bottleneck from the resort parking down to the bottom of the canyon, getting into the parking lots for the gondola.</p> <p>So we've established that the gondola doesn't fix the traffic problem. However gondola advocates propose that it is a "long-term, year-round solution", as though it has a purpose outside of the few busy ski days we have every year. Since the gondola serves the resorts exclusively, as do the buses, it would be available for resort employees and patrons to use year round. However, it's no secret that those numbers are significantly lower than peak ski season. With buses, there is the possibility of scaling up or down with demand - summer months require fewer buses, and are therefore cheaper to operate. The gondola has a fixed cost, and will require resources year round to run. Or, if it only runs in the winter, then it is cheaper but why build all the infrastructure for realistically 4 months of the year??</p>
32271	Jenna Bosgieter	<p>No to the gondola! It's going to wreck our beautiful canyon for tourism. Please DONT!</p>
32272	Danielle Gundrum	<p>STRONGLY oppose using such significant state tax payer funds to support private businesses and local real estate moguls. Please reconsider enhanced bus options. The canyon should function like Zion canyon and be shuttle access only during those few, peak days each year (snow, holidays) and tax payer money and resources should be utilized elsewhere.</p>
32273	Jennifer Bridgeman	<p>I am gravely concerned that the impacts of a gondola in LCC are being treated on a black and white scale, and that our priorities are not where they should be. I decided to submit this comment not to discuss facts or figures, but to approach it as myself and how I view the lasting impacts of this decision.</p> <p>I am extremely opposed to a gondola, especially when we haven't even tried other options first that are less destructive and less expensive. We should be working to preserve the pristine environments we live so close to. Why is our focus right now on a gondola, which would cost millions of taxpayer dollars, when we have more time-pressing problems? (For example, being able to live in SLC due to drought and the Great Salt drying up). I would have hoped to see that crazy amount of money go towards more pressing matters that affect our ability to live in this beautiful place! I would rather our state focuses on more innovative, less destructive options that safeguard the ecosystems we depend on for our health, mental and physical. The whole reason many folks live here is to engage and connect with the Wasatch Front- we should be striving to preserve it as we continue to grow, not destroy it when we haven't even tried other options first.</p> <p>I personally choose to connect with Little Cottonwood Canyon in many forms, but most largely through climbing. LCC is actually the most special place on earth to me because of how I have chosen to engage with the landscape there. Climbing is not just recreation for me- it has become my lifestyle, and the highest form in which I connect with environments, nature, and myself. Climbing affords many beautiful, powerful, and meaningful ways of connecting with a specific landscape and place. LCC is arguably one of the most pristine places to do that in the country, and so close to a city! Saying not all of the climbing will be destroyed, and that access would still be available or rerouted, does not detract from the bare fact that a gondola would be forever changing an environment through such a monumental disturbance and change. We cannot go back from altering ecosystems or destroying environments. I climb not for summiting peaks or formations, but to learn and experience the journey. The rock teaches you, and you form lasting connections with the landscape. You form a relationship with a place, and Little Cottonwood is such a special place for many people whether they climb, ski, hike, etc. This is their lifestyle, it goes beyond simply having fun. (Just research the history of climbing in LCC, it's amazing). The best and most beautiful way many climbers experience this connection and relationship is out in nature and away from disturbances- what better way to live and grow and engage in such an activity than to experience it away from construction, the city, and the urban jungles in which we live. We go to, and arguably depend on, these nature spaces for many personal, cultural, spiritual, recreational, and life purposes.</p> <p>I do not believe the true impacts to climbing, and the ecosystem of LCC, were truly explored in this proposal or even given much weight. It feels like this been treated as separate entities or separate parts. LCC is a prime example of how beautiful and pristine the Wasatch Front is, and we shouldn't lose that. Isn't that one reason why people chose to ski in LCC? Ecosystems work as a whole entity. They are similar to a body with all its parts. Regardless of what impacts are considered</p>

32275	Cindy Dolan	NO GONDOLA!
32276	Annie Steadmon	How long will the gondola take to construct? What percentage of taxpayer dollars will contribute to the gondola? Where is the gondola pulling energy from? Will the gondola be free to the public or cost money to utilize?
32277	Betty Winholtz	<p>I appreciate the 5-4 vote to protect Little Cottonwood Canyon; however, I'm surprised it wasn't a stronger vote to protect a watershed that 60% of the population relies upon.</p> <p>I remain steadfastly opposed to a gondola type option and road widening.</p> <p>The phased approach provides opportunity for those who actually want to solve issues confronting Little Cottonwood Canyon.</p> <p>Protect the Wasatch Mountains.</p>
32278	Graham Johnson	I do not agree with the proposed gondola solution. I do not think we should spend taxpayer dollars to support commercial development in addition to it being at the expense of natural resources like the bouldering or trails. I vote no. Making bus service more viable is a better, more sustainable solution.
35197	hot feetab	I find this to be [redacted] You have an agenda! No matter what the public says you will build! Disgusted !
32279	Don Kleinschnitz	Best I can tell this project does not benefit the people of Utah but rather the resorts. It negatively impacts the environment, and it's too expensive to build maintain and use. At a minimum an investigation into who benefits \$\$\$ from this project. The best I can tell it is the resorts and a few builders. If this is true they should pay for it.
32280	Avenue17chiva Avenue17chiva	https://avenue17.ru/
32281	Allen Miller	Gondolas are the only viable means for reducing traffic in LCC. I'm all for it.
38670	Anonymous	I oppose the gondola project as it is too expensive and will be highly destructive to the vegetation in the little Cottonwood canyon.
32282	Jeremy Davies	<p>The gondola would be cool and all, but I still think there are better options. A monorail following the already built road. A toll, but with the option of an annual Tri-Canyon pass (Millcreek, Big & Little Cottonwood). A tunnel from Big to Little Cottonwood making it one big loop. Something other than to benefit just the ski resorts. These are public lands, not ski resort lands.</p> <p>My main concern is that we are limiting the public from enjoying their public lands.</p>

32284	Jackie BAKER	<p>I am glad I have waited to submit my comment, having seen UTA reduce bus services now due to the driver shortage, which will inevitably be counter-productive to reducing canyon traffic in the immediate future. Though the resorts and UDOT do not have the cash to pay for the gondola right now, the reserves they have to spend on the gondola project could be used immediately to help subsidize better pay and benefits for bus drivers who put themselves into the riskiest of conditions both in summer and winter. Driver training and recruitment can be included and this can benefit both Big and Little Cottonwood Canyons.</p> <p>I believe that the 4 resorts in the 2 canyons should work more together to solve traffic problems that don't only exist in LCC. Any restrictions like tolls or road closures due to construction that affect LCC will only increase traffic in BCC and cause congestion, pollution, and frustration in that canyon and from 215 to 9400S.</p> <p>A wholistic approach, not a selfish approach, is what will help everyone move forward and ensure more equitable access to the canyons as a whole, not simply the resorts at the top.</p> <p>Finally, speaking of equity, it is unacceptable to ask the public to fund any project that only benefits two specific businesses but also detracts from the general public's access to our public lands. If tolling happens in Little Cottonwood, it needs to happen in Big too, and be in line with similar tolls imposed in places like Mill Creek Canyon. Those tolls need to be used for facilities maintenance and not to increase profit margins for any specific for-profit business. Taxpayers who do not utilize the canyons, members of the public who are already struggling to pay bills, and those who have no desire to support two private businesses they have no interest in should not be burdened with this issue.</p> <p>I am grateful that many people are speaking out for common sense solutions that will help us alleviate the stress on our infrastructure RIGHT NOW, and help Wasatch users adopt healthier, more sustainable travel habits today and into the future.</p> <p>Thank you!</p>

32285	James viney	<p>I am a resident of Salt Lake City and have serious concerns about the proposal to build a tram to service just the upper part of Little Cottonwood canyon. It's construction will entail new roads to build it and it will need 40 new large poles to build it. we don't know the exact cost to use it but it will be expensive likely over 50\$ a ride . it will only service snowbird and alta and only benefit them and the developers involved. It is proposed to be paid for by all the states taxpayers and come out of transportation money meant to benefit all of us. Please find a better solution.</p>
32286	Carlee Carroll	<p>This is the dumbest idea ever. Let's spend this money elsewhere like the great salt lake drying up????</p>
32287	Ki Brown	<p>No gondola! Use the allocated money for free bus service and charge a car toll. No gondola!</p>
32288	Debra Meyer	<p>Please do NOT build a gondola in Little Cottonwood Canyon. As a resident of this area, I would prefer to pay a fee to access both Big and Little Cottonwood Canyon than to build a gondola. This gondola would be devastating to local animal habitats, to the environment, the view of the canyon, the hikers, the climbers, etc. PLEASE find another alternative and please listen to the local residents who view and use these areas daily - not just for skiing. Thank you.</p>
32289	Edwin McGough	<p>Gondola not a good idea. Taxpayer money for two businesses. Bad for environment and will certainly ruin the aesthetics of the canyon.</p>

32290	Michael Nguyen	<p>One of Utah's primary assets is its natural beauty. People come from around the world to enjoy all kinds of biomes and scenery. To residents of the valley, the mountains are a sanctuary: joyful winter sports to relaxing summer hikes.</p> <p>I bike, climb, hike and am getting my toes wet into skiing. I enjoy the canyons in all seasons. I do NOT support a gondola. The pylons have immense impacts to the visual aesthetics, trails, habitats and rock. I've seen the impacts of gondolas in Vietnam, swaths of dense jungle cut down so tourists can take an easy way up.</p> <p>I support the enhanced bus solution. Buses can be reallocated in non-peak ski seasons to support summer transit-to-trails and to enhance public transportation.</p> <p>I understand the need to keep skiers happy, it's a big part of our economy, but I am apprehensive about public transportation solutions that support private ski resorts and that are environmentally destructive. I hope that UDOT does not implement a gondola.</p> <p>In a greater sense, I support more widely available and low cost/free public transit and will happily vote for good solutions.</p>
32291	James Peterson	I do not want my tax dollars subsidizing two ski resorts. This is a bad idea and a waste of money. It will enrich a privileged few at the expense of many.
32292	Lorena Downey	Please consider the other alternatives to building the Gondola. There has got to be a better way, one that preserves the beauty of the canyon and doesn't come at such a high cost.
32293	Jim Kim Brown	NO TRAM. This is a ridiculous spend. Limit the number of cars, when that number is reached close the road.
32294	Helen Lai	NO GONDOLA!
32296	Amelia Walchli	Very much against the gondola. Will only serve a few at taxpayer expense and will ruin the canyon.
32295	Paul Dalrymple	There is utterly no reason to build a gondola up Little Cottonwood Canyon!! Please be reasonable about other more viable options than the gondola!!
32297	James Dunnigan	I do not support the gondola. Not flexible enough end points for the user
32298	Janeen Viles	Opposed to the gondola
32300	Mike Temple	Half a billion for a gondola that only serves two private businesses is not a public initiative. If it's such a good idea, let Vail Corp pay for it. They've already made the price of skiing ridiculously expensive -- they have the money.
32299	Emily Henderson	<p>While I am not completely against the gondola, I am against using taxpayers money for it. It is a lie that it will reduce traffic. Each parking spot will continue to be filled and used. The private entities up the canyon will continue to allow as many cars up the canyon that will spend money in their resorts. The issue at hand is the traffic at the bottom of the canyons. I don't see how adding another high capacity parking lot will ease the burden of those trying to get there and further up The canyon. My neighborhood is directly effected by this traffic each winter. And while it is inconvenient many days of the year, people are fools to think the gondola will solve that.</p> <p>Furthermore the busses are full as well. Reducing the bus fare won't solve or even change the issue except reduce the revenue of UTA. The busses are already at capacity. Good luck with this. Keep looking for new solutions. Consider putting a second parking lot in Alpine. That will divert a lot of traffic, Shorten the travel distance for many and in turn reducing emissions.</p>
32302	Therese Boone	<p>I am a resident of Holladay, Utah and I am AGAINST building a gondola to solve the traffic problems in Little Cottonwood canyon. Here are the reasons:</p> <ol style="list-style-type: none"> 1. 40 poles, each 15 feet in diameter, serviced by new roads big enough for huge trucks, will cut through the wilderness of Little Cottonwood Canyon. 2. The exact price has not been revealed by UDOT but it will be expensive to ride the gondola. (Between \$50- \$110 per trip) 3. It only services two sites. Ridiculous! 4. It won't run in the summer. Again, ridiculous! 5. It's paid for by taxpayers but only benefits Snowbird, Alta, La Callie, The Tree Farm, and Chris McCandless and Wayne Niederhauser. NOT a good use of taxpayers money. 6. It's taken from transportation money meant for the entire state of Utah. 7. There's new evidence (from Hawkwatch International) that the gondola would kill and injure birds during night migrations through the canyon. <p>Please DO NOT consider this option, especially with less & less snow every year, making skiing less & less viable. Thank you.</p>
32301	Geno Atencio	I am totally against the proposed gondola as many other Sandy residents are. Please Stop!!
32303	Sabrina Clifford	I think a gondola is a great long-term solution that would be as beneficial to the canyon as the Trax system has been to Salt Lake County.
32306	Braden Burrup	Stop the madness and stop the Gondola. There's more responsible ways of using taxpayers money to help the congestion.
32305	Kirk Phillips	No it's not worth the price and for what to get more SKUs to the resort? No ruins experience for everyone anyway leave things as they are

32304	Luanne Schmidt	<p>I am completely against this, short term and long term. Of the 30 people in my family only one would use this, if he could afford it.</p> <p>Further, I agree with the seven points against it listed in a recent op-ed: 40 poles, each 15 feet in diameter, serviced by new roads big enough for huge trucks, will cut through the wilderness of Little Cottonwood Canyon.</p> <p>The exact price has not been revealed by UDOT but it will be expensive to ride the gondola. (Between \$50- \$110 per trip)</p> <p>It only services two sites.</p> <p>It won't run in the summer.</p> <p>It's paid for by taxpayers but only benefits Snowbird, Alta, La Callie, The Tree Farm, and Chris McCandless and Wayne Niederhauser.</p> <p>It's taken from transportation money meant for the entire state of Utah.</p> <p>There's new evidence (from Hawkwatch International) that the gondola would kill and injure birds during night migrations through the canyon.</p> <p>For once, let your decision be made for a reason other than a few individuals' profit.</p>
32307	Charles Huff	<p>I am opposed to the gondola solution in Little Cottonwood Canyon for the following reasons:</p> <ul style="list-style-type: none"> -40 poles, each 15 feet in diameter, serviced by new roads big enough for huge trucks, will cut through the wilderness of Little Cottonwood Canyon. -The exact price has not been revealed by UDOT but it will be expensive to ride the gondola. (Between \$50- \$110 per trip) -It only services two sites. -It won't run in the summer. -It's paid for by taxpayers but only benefits Snowbird, Alta, La Callie, The Tree Farm, and Chris McCandless and Wayne Niederhauser. -It's taken from transportation money meant for the entire state of Utah -There's new evidence (from Hawkwatch International) that the gondola would kill and injure birds during night migrations through the canyon. <p>Sincerely Charles Huff</p>
32310	Laurel Samuels	<p>Residents are asking: Why widen a small portion of Wasatch only to end at the High T intersection, thereby creating a mass bottleneck? How will we residents be able to safely cross 4 + lanes of traffic to travel southbound/ northbound with the additional 50+ MPH traffic induced by those trying to park at the gondola station or going to/ from the canyons? If/ once we get across to make our commute, will we be stuck in line with those waiting to get into the parking lot for the gondola? Will canyon/ resort traffic continue to be prioritized over local users of this stretch of road? WHY WIDEN WASATCH?</p> <p>Why are non-motorized users of Wasatch Blvd not being discussed/ encouraged as the road plans move forward? We don't need more lanes of vehicular traffic and resulting environmental and noise pollution within our state that is already rated as one of the worst in the nation for toxic air. We need to create safe alternatives to driving. Would you feel comfortable sending a teen/ your child to work or school on their bike if they had to ride on the shoulder of Wasatch Blvd as it sits currently? If not, why not? We need to SLOW and DECREASE the traffic on Wasatch, create safe travel paths for non-motorized users, and quit bringing more cars onto the roads of this valley with nowhere to go. We need holistic solutions for everyone within this beautiful state, not band-aids with no healing measures. STOP THE GONDOLA and DON'T ADD ADDITIONAL VEHICLE LANES TO WASATCH!!!</p>
32309	Shelly Filgo	<p>This is my 5th comment. NO THE COMMUNITY DOESNT WANT A GONDOLA. Elizabeth King highlighted the reasons. Tax payers pay NO benefits are to those that the gondola Serves the ski resorts and politicians. Anytime something like this has Local politician/real estate associated with it wouldn't you be a bit skeptical? This is a scam it would ruin the skyline during the summer and winter. At such an expense. There is a simpler way. I believe we would rather wait in line.</p>
32308	THOMAS KOLANKO	<p>Please consider other solutions, a gondola built with tax payer money is not the solution. Especially with there are corporation's that benefit from the misuse of tax payer money. The Gondola up LCC is not the answer.</p>
32313	Charlotte Maloney	<p>I completely oppose putting a gondola up the canyons. In no way should taxpayer funds be used to support leisure activities for the wealthy. Additionally, I oppose cutting into our beautiful mountains, again, for the rich.</p>
32312	Sara Bennion	<p>I do not think the gondola is a good idea. There are so many cheaper ways to solve the traffic problem including bussing and carpools. I also really like the idea of having a sign at the bottom of the canyon showing how many parking spaces are available. this will be so much less expensive and less invasive. Thank you for taking all options into consideration.</p>
32311	Matt Heinig	<p>Put that gondola in! It is the least impactful environmentally in the long run and most dependable mode of transport for the canyon. The only negative is that you can't connect it to big cottonwood as well.</p>
32314	Corinne Daniel	<p>The Gondola just won't address the issue of congestion in the canyon. It doesn't make sense to spend taxpayer money for infrastructure that will generate revenue for private institutions that are already doing quite well! We need to preserve this money for infrastructure updates that the people need. It's corrupt, ineffective, and most importantly - going to deteriorate the most beautiful aspect of the canyon - that it's not overrun with people and infrastructure. This gondola should not be developed. It won't solve our problems and will only help the ski resorts. Keep tax money for taxpayers - not ski resorts!</p>

32315	Rick Pingree	I am apposed to the gondola. I like these alternative: - parking reservations, - priority parking for carpooling, - reduced fare UTA ski buses all season long, - regulated hitchhiking at the designated pick up/drop off spots, - digital signs at the base of the canyons indicating number of parking spaces available.
32316	Jared Suker	I don't want. Gondola when there are reasonable, less expensive options such as implementing a fee and added bus services that have not even been tried yet
32317	Kyle Pepp	I oppose UDOT's preferred alternative: Gondola B (From La Caille). As evidenced by the original public comments for S.R. 210 Draft EIS, I, and most of the public, strongly oppose building a Gondola in Little Cottonwood Canyon, and support an enhanced bus service, tolling, and other restrictions be implemented before any new construction is considered. In UDOT's executive summary for the Final EIS, UDOT claims there is "support for gondola and bus alternatives." While this is true, it misconstrues the overarching message from the 13,443 public comments UDOT received. While UDOT's 258-page public comment response is quite comprehensive, it failed to statistically summarize major themes of the public's wishes. Because UDOT's 258-page public comment response sufficiently documents all the reasons the gondola is a bad idea, there is no reason to expand on that here. Rather, I call on UDOT to present a statistical summary of the major themes from the original public comments and act in accordance with the majority themes, that is: enhanced bus service, restrictions to single occupancy traffic, and no gondola in Little Cottonwood Canyon. Thank you for your careful consideration!
32318	Robert Neff	I am wholeheartedly against the gondola option. The visual impact of a gondola line completely ruins, in my estimation, the incredible views of Little Cottonwood Canyon. More importantly, the gondola impacts only skiers and diminishes canyon access to all other users. For example, in peak hours there will be a \$25 fee to access the canyon from Snowbird to the top of the canyon. This is quite limiting to non-skiers. The plan also presupposes that the only access points that people are interested in are Snowbird and Alta which just isn't the case. Hikers just don't seem to be part of the equation. Additionally, this impacts those unable to afford skiing in a particularly harsh manner by emphasizing skiing and affecting all other uses and users disproportionately. Please reject the gondola plan.
32319	Julie Myers	Thank you to UDOT for all the hard work and concern you show to our community and citizens. I am a big fan! Lived here all my life and appreciate the positive work you strive for to our infrastructure. Orange barrels and all, your are an important provider to our state. Having said that, I'd prefer that a gondala system not be constructed in Little Cottonwood Canyon.
32320	Scott Frame	This is a shirt sided review that only considers one canyon. I am totally against this proposal
32321	Tyra Tanner	I use the canyon frequently, and I don't think the gondola is a good idea. It will simply be too long to be useful in getting to where I want to go. I won't want to use it if I have to wait 45 min for all of the stops until I reach my stop. It's not a functional solution, and I disagree with the cost involved.
32322	kathryn Wilson	To construct the towers to service a gondola in Little Cottonwood Canyon would be a disaster in multiple ways including the beauty of the canyon, watershed and historical nature of our canyons. Don't allow this and I speak for future generations.
32323	Sadie Roestenburg	As a Utah citizen, I do not approve of the gondola plan. It will disrupt many parts of the canyon, nature, and many activities like hiking and climbing. There needs to be more discussion about better alternatives that meet the needs of everyone, not just the ski resorts. Thank you.
32324	JoAn Ishimatsu	In building the gondola, the machinery needed to do so, working on the mountain, I think this will harm the watershed more than the option of improving the road, up the canyon. I say NO to the gondola. Thank You
38506	Andy	Mailed comment
38513	Margaret E Bourke	Mailed comment

38554	Marilyn Johnson	Mailed comment
38577	Dani Martin	Mailed comment
38584	Deanna and Jay Niels	Mailed comment
38613	Anonymous	Please NO GONDOLA! There are better solutions and building the gondola will force away. Buses, reservations for parking are much better solutions. Thank you!
32326	Richard Tyler	Make the road a toll road.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32325	Jeff Sorenson	I'm voicing my strong opposition to the proposed gondola in Little Cottonwood Canyon. Not only is it a massive waste of taxpayer money, but it's a short-sighted environmental disaster. Given the public's strong opposition to the gondola, it's extremely disappointing UDOT is even still considering this proposal. How do you even justify this project when you're unable to secure funding to hire bus drivers--or give existing drivers a raise? The optics on this one is beyond horrible. Listen to locals, don't destroy our canyon, and quit greenwashing this ridiculous gondola proposal. -Jeff Sorenson
38651	Anonymous	Please vote no to the Gondola in little cottonwood. Reducing traffic is the answer not a billion dollars to harm our beautiful canyon
32327	Pamela Holman	Please no gondola. This idea will not serve the people of Utah who want to access the canyon. No gondola!
32330	Patricia Lake	I agree 100% with Richard Snelgrove. A gondola is not the answer for Little Cottonwood Canyon's problems. There are other less expensive and less intrusive solutions for the skiers. Skiing is not everything that is enjoyed in that canyon. Let's not ruin it for the rest of the visitors or incur a huge bill to solve the issues.
32329	Patricia Lake	I agree 100% with Richard Snelgrove. A gondola is not the answer for Little Cottonwood Canyon's problems. There are other less expensive and less intrusive solutions for the skiers. Skiing is not everything that is enjoyed in that canyon. Let's not ruin it for the rest of the visitors or incur a huge bill to solve the issues.
32328	Patricia Lake	I agree 100% with Richard Snelgrove. A gondola is not the answer for Little Cottonwood Canyon's problems. There are other less expensive and less intrusive solutions for the skiers. Skiing is not everything that is enjoyed in that canyon. Let's not ruin it for the rest of the visitors or incur a huge bill to solve the issues.
32331	Margaret Grzybowski	Please, please do not spend public funds on a gondola. Please recognize that other options work very well!! (This last winter was great, thanks to Alta's reservation system!) We do not need more people up these canyons! Building a parking lot will bring more traffic to the foothills. I am very much opposed to the gondola!
32332	Brent Robinson	I think a gondola is a waste of tax payers hard earned money. Put up a toll booth, make the parking lot at the base of the canyon larger to accommodate more vehicles, have the ski resorts run shuttles every 15 minutes or so. Why does everything need to be funded by tax payers? The ski resorts make millions. If they want the skiers then they should foot the bill. No more tax payer money should be used to subsidize the ski industry.
32333	Nic Hales	This gondola proposal seems ridiculous! Why on earth would we spend almost \$1 billion dollars on a gondola that won't get used? I would definitely prefer to spend the money on widening the roads and improving the bus service.
32336	Bridget Berg	I grew up near the mouth of Little Cottonwood and have seen the effects of growth & have been personally affected by the transportation issue on a regular basis as a skier, hiker & nature enthusiast. This topic is very near to my heart, as this canyon is a one of a kind sanctuary that benefits everyone who enjoys it. I am 100% completely opposed to the gondola for the following reasons 1- it serves corporate ski resort interests far more than the public 2- it only serves ski resort users(which I am one of) and not everyone else enjoying the canyon 3-it tears up & permanently changes & destroys the canyon & its quiet unobstructed views 4-it is unethical how ski resort owners from snowbird have been allowed to purchase plots of land for the gondola location & personal property next to the proposed download location to benefit their corporation & personal interests & they should be investigated for legality since this is supposedly a public project which should not benefit individuals & be done in secret to benefit corporate interests Sounds extremely corrupt 5- there are easier, quicker, cheaper & less destructive alternatives-increased busses & tolls 5-if there is \$ for a gondola there is \$ to increase bus drivers pay to accommodate increased bus services 6-increased busses& tolls could be implemented much quicker & help substantially with the issue 7-Save our canyons has done their research & proposed a much better plan which actually serves the public That said-i support an increased bus system as well as tolls for cars, especially single occupant cars. If there are 4 people per car, charge less to carpool. If we run busses up & down every 15 minutes or so then it would be easy to use, like Zions park. We can gradually convert to electric busses to help with the environmental impact In my opinion the canyon will be destroyed & never the same again should this corporate gondola project be approved This is not what the public wants
32335	Claudell Brinkerhoff	The canyon gondola is the worst idea of all time. It will ruin the canyon. It will be a gift to the ski resorts on taxpayers backs. Crooked legislators are already making money off it.
32334	Coby Regehr	Scrap the Gondola idea, too many people with their hands out that are getting greased by the Gondola Company, better known as kick-backs. Shut the canyon down to Electric Buses only during ski season. Oh and by the way, 5 years from now there might not be a ski season.
32337	Jason Hanser	I'm really disheartened and frustrated by UDOT's decision to move forward with the gondola plan. As a skier, I am firmly opposed to the gondola. I strongly favor enhanced bus routes and/or a LCC toll during the winter months.
32338	Tyler Yeates	The canyons belong to all of us. The Gondola will only benefit a few, at a large cost. Please protect our canyons and please drop the gondola project. Thank you.
32339	Janet Tate	Changed my mind! The gondola expense and footprint in the canyon is way too devastating. Agree with Tribune article against it.
32342	Juliana Landis	Changing the natural landscape will be irreversible. Please try other methods first. I love taking the bus up the canyon. More frequent bus service would be preferable to me.
32341	Kurt McFarlane	Make Little cottonwood A toll road. I don't want my tax money going for the people that drive little cottonwood or big cottonwood. If The city and county doesn't want the gondola then make it a toll road and make the users of that road pay for it.

ID	Full Name	Comment
32340	Trevor Silverstein	<p>I think the enhanced bus provides a more flexible, less intrusive option for the canyon. The enhanced bus will decrease travel time and encourage people to shift to public transportation. The community can decide to continue the development in the future by completing the widening option, which I think is the real solution to traffic issues in the canyon. The road widening will decrease the travel times the most out of any option and provide the greatest incentive to switch from a personal vehicle to public transit. In addition, the widened lanes will be useful year-round for cyclists during the summer, providing a safer riding experience in LCC.</p> <p>In conjunction with the busing options, we should consider implementing tolls in both canyons during peak hours. We can use these to encourage carpooling and generate funds for the additional transportation projects in the canyons.</p> <p>We should go all in on the bus and tolling before considering installing a costly gondola that will not be used for most of the year.</p>
32343	Susan Weisenberg	<p>It isn't good government practice to force the taxpayers to pay for a project that will only benefit Snowbird, Alta, La Callie, The Tree Farm, and Chris McCandless and Wayne Niederhauser. The projected price for the riders will be over what the average local citizen could afford to pay. Hawk watch has released a report indicating high raptor loss when the gondola is moving. This is a government welfare program for the wealthy that actually harms the public good as it takes money away from transportation projects meant for the entire state. Please do not build the gondola.</p>
32344	Kelly Harrison	<p>Utah needs action on the Great Salt Lake before tearing up the canyon for gondolas. When we no longer have snow, Utah will not need the gondola.</p>
32345	Brian Zenger	<p>Gondola is absolutely NOT a good option and should not be undertaken. I would move to CLOSE THE CANYON during busy days and ONLY ALLOW BUS TRAVEL, much like Zion national park and other high traffic spaces. This would have a much better long term result and is sustainable.</p>
32346	William Eckert	<p>The idea of putting a gondola in Little Cottonwood Canyon and having the taxpayers fund it to the tune of half a BILLION dollars is absurd and would set a new apex of fiscal irresponsibility. This benefits Snowbird, period. Nobody else. Snowbird - the resort that packages preferred lift lines to out of towners over locals. The only reason I even consider voting for you people is your fiscal conservatism. This would be a boondoggle of historic proportions and scar the most beautiful canyon in the west. Don't do it.</p>
32347	Charles Keller	<p>I definitely oppose an aerial tramway in Little Cottonwood Canyon. It would benefit only the two ski areas in that canyon. If it is important to them, let them bear the complete expense of its construction, with no public funds involved.</p>
32349	Maibam Singh	<p>The cottonwood gondola idea is a great vision but it is NOT going to solve the traffic and congestion issue in the LCC. Also, the proposed route has only one stop, that is at Snowbird. What about all the other commuters who hike, backcountry ski and recreate in the LCC mountains through the trailheads? How are they going to get there? They would still need to use their cars. How does the gondola help then? The gondola proposal is looking more for just skiers to snowbird. That will be a complete waste of resources, tax payers money and valuable time. Instead, utilizing and expanding the current infrastructure of buses is the best approach. Adding 5 times more buses with stops at all trailheads in the LCC and also bus stops within the city through all neighborhoods would provide a much wider public reach and usage. This will significantly reduce traffic and congestion up the canyon. The gondola is a bad idea and its wishful thinking to compare LCC to european twns with gondolas up the mountain. The politics, people's attitude, and personal transport statistics are very different between them and us. So it will be foolish to use the same aspirations here. Expanding the bus service using already available infrastructure is the best solution.</p>
32348	Madeline May	<p>I'm frustrated by the gondola bill me and my neighbors will face for a system that does not benefit us proportionally to the tune of 600mil as non skiers. This feels like a tourist money grab without a real dedication to solving congestion</p>
32350	Trindl COVINGTON	<p>I strongly do not support the gondola alternative. It is too expensive and I don't believe will solve the traffic problem. Only bring more people to an already overrun area of the Wasatch. Bus service needs to be considered more thoroughly. Electric busses could be an option. Put in a light at the park and rides that the bus driver could have a control button to change it so he can pull out without delay. Schedule busses as needed and can stop at other trailheads, not just ski resorts.</p>
32354	Karen McCreary	<p>As a long time resident of Salt Lake County and frequent visitor to Little Cottonwood Canyon, I strongly oppose the building of the gondola. The gondola serves only Alta and Snowbird ski areas in the winter while many people use the canyon throughout the year. The gondola is expensive to build and will be prohibitively expensive to use. Our family took out of town guests to Alta and Snowbird this weekend to hike, eat at the Alta Lodge and visit October fest. There was bumper to bumper traffic with very little room to park if hiking. Our guests were thrilled with the glorious views and vistas and were shocked to learn of the proposed gondola with its immense towers, costs to taxpayers and damage to the environment. We are skiers, both downhill and cross-country and believe there are other options than the expensive gondola. It's hard to believe the UDOT officials making this decision have ever utilized the canyon with their families; the gondolas will not address the needs of those who frequent the canyon throughout the year nor provide the least damage to the canyon; its views, watershed, and wildlife. Rather, UDOT's decision seems motivated by the close connections between corporate owners and legislators who gain from the arrangement.</p>
32353	s south	<p>The gondola idea is another project that would benefit few and feeds the greedy who want to line their pockets. The gondola is not the best option. If there is so much money to even consider this then our state has much greater needs on the docket.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32352	Tom Hudachko	Please register my comment in opposition to Gondola Alternative B as the preferred alternative in the final EIS. The gondola option would result in irreversible, negative environmental impacts within the canyon. Other, less invasive options should be considered prior to going with the nuclear option of the gondola. You are working to solve a problem that occurs on only a handful of days every year. Solutions such as mandatory tolling, mandatory carpooling, and closing the canyon once vehicle occupancy limits have been met should all be considered and implemented prior to the gondola. The gondola is like using a sledgehammer before even trying a flyswatter. The gondola makes zero sense financially when you consider it will only operate for approximately one-third of the year. It makes zero sense when you consider it will be subject to the same closures as the road during avalanche control work and interlodge. It makes zero sense when you consider it still requires people to depend on their vehicles to get them to the base station. It makes zero sense for anybody trying to access other trailheads in the canyon. Please go back to the drawing board and consider implementing something the community here actually supports, as opposed to just a handful of individuals who stand to profit handsomely from its construction.
32351	Kenzie Bird	<p>There are alternative low-cost solutions that will reduce canyon traffic congestion that can be implemented this ski season. These alternative solutions have been effective around the nation, including:</p> <ul style="list-style-type: none"> - parking reservations, - priority parking for carpooling, - reduced fare UTA ski buses all season long, - regulated hitchhiking at the designated pick up/drop off spots, - digital signs at the base of the canyons indicating number of parking spaces available. <p>While the Gondola would only serve Little Cottonwood Canyon, these solutions can address congestion in both Big & Little Cottonwood Canyons!</p>
32355	Susan Martini	I think Alta and Snowbird should pay for this project.
32357	Mary Hansen	I oppose any project that imposes taxes on everyone for the enjoyment or convenience of a few. Let the ones who use the transportation pay for it. Property taxes are already sky high with all the additional taxes being charged for every desire of every group that wants funding! As a senior citizen that is now on a very low income (social security only) I will probably have to leave my home of 40 plus years that I have worked hard to maintain but now don't have the money to pay the taxes on! Let the ones who want a Gondola, pay for the gondola, but please don't fund it from the many who will never use it. Surely there are better alternatives that utilize the current road and transportation facilities! I DO NOT WANT TO LOSE MY HOME TO PAY THE TAXES SO THAT A FEW CAN HAVE FANCY ACCOMMODATIONS TO BE ABLE TO RECREATE!! Thank you
32356	Jason Medeiros	The gondola is not a transportation solution that will adequately serve the taxpayers who are relegated to fund it. If AltaBird wants a gondola, they should pay for it. A real, comprehensive transportation solution would be better received by the general public if it served the public in a meaningful way, that is, if the solution included both LCC, BCC and the Wasatch Back.
32358	Ken Yonemura	Having spent time in places like Wengen, I think the best option would be a train but his option is no longer possible and would be more expensive. Although I am a member of the WBA, I support the gondola as the current use of the roadway is not working and I would rather see new infrastructure support LCC rather than pay more parking fees to the resorts.
38560	Jeffrey Campbell	Just want you to know, this is Jeffrey Campbell in Salt Lake City on Emerson Avenue 84108 and I am way against putting any Gondola up the canyon. Please please please get rid of this option. Thank you, bye-bye.
32360	Dilworth Dianne Strasser	I support Salt lake County ideas on ways to help the canyon problems this year and not funded or support the .goggle plan
32359	Carlo Ciriello	<p>Hi!</p> <p>I am writing to object to the plan for a gondola up LCC. It will be an irreversible blight on the canyon and a massive waste of money - delivering people to private resorts - when there are better solutions.</p> <p>Furthermore, there won't be enough parking at the base of the canyon to support users of the gondola should it actually materialize. There's just so much wrong with the plan.</p> <p>How about dedicating a bus lane? Better restrictions on 4x4 and snow tires entering the canyon?</p> <p>Without a doubt, the most egalitarian solution would be to add dedicated bus lanes with regular service up and down the canyon - with the costs partially offset by the private resorts who want patronage.</p> <p>Thanks for understanding.</p> <p>NO on the gondola.</p>
32361	Vera Christensen	I am against a gondola up Little Cottonwood Canyon. I feel that if a gondola is installed it should be paid for by the ski resorts and not the taxpayers. I think UTA should extend the buses but instead they just reduced service. UTA has never provided adequate service to Big and Little Cottonwood Canyons. Also I found the ads on TV for the gondolas since it was a misrepresentation. The ski buses do not look like the bus they were showing. Apparently they had never been on a ski bus.
32362	Anna Cordes	As a year round user of LCC, and UT resident, I strongly oppose a gondola option which I believe would have lasting negative consequences. I am for a phased approach which incorporates increased public transportation, car pooling, and transportation hubs throughout the valley.
32364	Robert Westover	NO Gondola. Bad deal for taxpayers who won't be using it.
32363	Chris Sveiven	An Expensive gondola that will only help with traffic and congestion issues for one canyon! The resort's are not built to handle this in little Cottonwood or big Cottonwood. There obviously needs to be A different solution for both canyons. I absolutely do not support what is sure to be a giant waste of money. I cannot wait to hear the news of \$600 million-\$1 billion over budget. All of the skiing snowboarding resorts are being ruined by giant lift lines and locals are starting to see how greedy and awful developers are.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32366	Zia Lecuyer	I Zia Lecuyer, a resident of Salt Lake City. Would like to say that the Gondola should not be built. I do not approve of this use of tax dollars. There are better uses for the money and better solutions for transportation up the canyon. Do not build the Gondola.
32365	Kaitlin Price	I do not support the gondola up the canyon! I would prefer another method such as paying per car to go up the canyon to promote carpooling. A bus lane would also be a better option than the gondola ruining the view of the canyon. Anything too expensive will make skiing and enjoying the beautiful outdoors harder for everyone to enjoy. Everyone has the right to go skiing up the canyon, not just the rich people.
38561	Nellie Morgan	Hello, this is the Nellie Morgan. I've had a cabin in the Big Cottonwood Canyon for many many many years, and I oppose this gondola. It's going to be too expensive and it will ruin the canyons and we can do other things and it will only serve a Little Cottonwood. It won't help Big Cottonwood at all, so we need to help both of them and that would be through other methods. My phone number is [REDACTED]. Thank you.
32368	Jake Pruett	I am strongly opposed to the gondola for all of the reasons others have undoubtedly cited. An enhanced, electric bus system with distributed pick up points throughout the valley that can be scaled up and down as needed is a far better option than the gondola which will no longer be needed in just a few decades when there is no longer much snow in the canyons.
32367	Gabriel Bellante	Please preserve the beauty of Little Cottonwood and do NOT put a tram through the heart the majestic Wasatch Mountains. It does not make sense with limited return on investment for helping with the congestion in the canyon. It would be much more prudent to utilize more buses and limit POV use in the canyon. sincerely, Gabriel Bellante
32369	Brady Brajavich	I'm not for this use of tax dollars. This is way too much public money to be spent to solve a problem that happens only a few days out of the year. It also only benefits those already financially well-off enough to ski and the private ski companies. Instead, put 500MM to use in our school system, affordable housing, helping the homeless, roads, or literally anything else that actually benefits the public.
32371	Tyler Leydsman	Please do not go through with this. Little cottonwood canyon is a beautiful scenery that many can enjoy to get out of the city it makes no sense to put this there and ruin little cottonwood
32370	Tom Johnson	More government waste, making it so only the wealthy will be able to enjoy the nature in the canyons.
32372	Chris Hoppe	As a Utah tax payer, and mountain recreationalist. I find committing to a gondola at this point fiscally and environmentally irresponsible. We as a community should be doing our due diligence to try simpler and more readily available tactics first. In the estimated 5 years it will take to build a gondola that reaches limited locations, we could be implementing enhanced bus services, tolling, carpool benefits, which serve users of the entire canyon. As a LCC multi-sport user its important to remember that the resorts served by this gondola are businesses in the canyon and have major draw, they do NOT own that canyon. If the resorts are pushing for gondola they should be paying for it wholly because they are the ONLY ones benefiting from it. I am completely against the installation of the gondola and frankly would probably use LCC MORE if there were better bus services to relieve traffic.
32373	Cindy Lee	No Gondola! It will negatively affect the Canyon and burden taxpayers! NO GONDOLA!
32375	Kourtnee Parkin	I do not support the gondola. There are so many more options to choose from that would be better for the community such as what has been done in millcreek canyon (have a canyon pass to promote carpooling) or what is done in Zion National park (use busses only for transportation and the road will not need to be redone and the mountain will not need to be cut into) the gondola is an expensive option that does not have the community's best interest in mind.
32374	Ronald Anderson	I don't think that a generous gift of a gondola to the two ski resorts in Little Cottonwood Canyon is what I expect of the State of Utah. \$500 million+ of spending is a waste of my money and every taxpayer in the state to support wealthy skiers who are coming from out of the state to recreate. If the ski resorts feel that they need to have this built, they should figure out how to come up with the funds themselves. I have lived in the state for most of my life and continually marvel at the way this state can find so many ways to spend taxpayer fund to benefit the well to do and the wealthy to expand their wealth and prosperity. I would vote no for a gondola system to make it easier for the ski resorts to make more money at the expense of every taxpayer in the state.
32379	Jory Johner	Josh and the LCC EIS Team- Thank you for your hard work and inclusion of WFRC in the Little Cottonwood Canyon Environmental Impact Statement process. Attached you will find the WFRC comment letter for the Little Cottonwood Canyon Final EIS. Looking forward to continued partnership and coordination. Jory
32376	Tyson Bradley	I have for 40 years, and still do spend a great deal of my life in LCC. I'm lead guide for Utah Mountain Adventures, a Forest-permitted mountain-guiding company operating primarily in the Cottonwood Canyons. I oppose the Gondola. Its neither an effective solution to the crowding on SR 210, nor good for the environment. Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions. A third lane, wherever possible in LCC, should be for uphill traffic until noon, and for down hill thereafter. It should be for buses and carpools only. Instead lets implement parking hubs in the valley, enhanced, perhaps electric, busing with regular routes, carpooling and tolling and reservations: common-sense solutions that are fiscally sound. With no trailhead or backcountry access, the gondola is far from a solution that benefits all of LCC's users throughout the year. Its simply a business boondoggle at taxpayer expense.
32377	Janalee Tobias	Please, listen to the taxpaying citizens. We keep saying "no" to the \$500 Million and most likely more...gondola because it serves two PRIVATE ski resorts. Different solutions will serve ALL citizens that use those canyons. If it's approved as the best solution, then...NO Taxpayer funds should be used! Let the ski resorts pay for the gondola and then see how anxious they are to install gondolas for their ski resorts. Poor people shouldn't pay for rich people's entertainment.

ID	Full Name	Comment
32378	Brad Barlage	<p>I am against the Gondola because.</p> <p>Irreversible & Rushed Decision</p> <p>There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws.</p> <p>As Salt Lake County Mayor Jenny Wilson said, these are "common-sense solutions that are fiscally sound."</p> <p>Tax-Payer-Funded, Serving Private Resorts</p> <p>Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging.</p> <p>They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses.</p> <p>UDOT's EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6]</p> <p>Ignoring Local Public & Political Opinion</p> <p>80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll.</p> <p>Salt Lake County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski and many other elected officials agree.</p> <p>"Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions. Parking hubs in the valley, electric busing with regular routes, carpooling and tolling, reservations, common-sense solutions that are fiscally sound." Wilson said at the Truth About the Proposed Gondola event in June.</p>
32380	Roger Anderson	This is a huge waste of taxpayer dollars and is not a viable solution. I'm highly against it.
32381	Joe Blow	The gondola sounds like a gift to the ski resorts at the expense of tax payers!!!!
32382	Patty Wells	<p>The gondola is a permanent solution to a temporary problem. With global warming who knows if we are going to have good ski winters as we have had. It also puts in jeopardy all of the other attractions the canyon has to offer, such as picnic areas, hiking trails, rock climbing etc.</p> <p>The gondola has no place in our beautiful canyon!</p>
32383	Joe Smith	Sounds like a freebie for a few people who ski.
32384	William Forbes	First, this proposal is one more that will be funded by the many for the use of a few. It fosters the unlimited growth of environmental exploitation to benefit the upper class. 2nd, it is time to find ways to limit the use of our environment rather than fund the ever growing, unlimited exploitation of our resources .
32385	Danielle Wayne	<p>To quote the environmental impact statement, "Ultimately, the partners seek to deliver transportation options that meet the needs of the community while preserving the value of the Wasatch Mountains." A gondola system does NOT deliver the transportation needs of our community. Those wanting to hike and climb in the canyon will not be able to utilize the gondola, it does not stop where they need to stop. A gondola would also decrease the value of the Wasatch mountains; it would ruin a perfectly nice view and cost the community MILLIONS and then MILLIONS ANNUALLY.</p> <p>Why don't we make the proposed temporary solution, the permanent solution and literally save \$550 MILLION (PLUS save \$7 Million EACH year)?</p> <p>The temporary plan to increase and improve bus service as described in the Enhanced Bus Service Alternative (with no canyon roadway widening), tolling or restrictions on single occupancy vehicles, and the construction of mobility hubs would make a huge difference (hence why it was listed as a solution by UDOT). The Enhanced Bus Service Alternative would satisfy all parties that care about our canyons. Park City has a line of electric buses that could be modeled after; this would be another pro to the bus system as it would ease environmental impact and still cost a fraction of the proposed gondola. If you drive around any neighborhood around and in the canyon, all community signs says NO gondola, listen to our community PLEASE!</p>
32386	Samuel Debenham	Us locals LOVE snowbird and alta! i myself have skied in LCC for almost ten years, but if you build that massive, hideous gondola, which will cost taxpayers so much and serve only to benefit the super wealthy, LCC will never be the same again. skiing is already so freakin expensive, how are you going to make it even more of the rich man's playground?
32387	Proctor Cynthia	<p>No. Just NO! I don't want my or anyone else's tax dollars paying for this behemoth. It's a subsidy for the wealthy who are the only ones who can afford to ski.</p> <p>It's a ecological disaster that will permanently scar the landscape and interfere with the wildlife.</p> <p>Just no!</p>
32388	Rebecca Richards	I am 100% against such an atrocity to go up the canyon to benefit a few. There are other recourses that can help alleviate the problem. It benefits such an elite group. UDOT... what are you thinking. Listen to the voices that live among thst live here! Our tax dollars can be used much more effectively if another plan is offered. Don't destroy the beauty we have here. I am a taxpayer!
32389	Annette Flores	I love the Gondola idea, it is a great plan for the quality of our air in Utah and the traffic that is out of control up the canyon.
32391	Lon and Laura Perry	Please stop envisioning high-cost solutions (gondola) at taxpayer expense. There's a half dozen or more ideas that are cheap and simple. If the ski resorts want to increase their annual revenues, let them pay for it 100%.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32390	Melissa McGibbon	Please don't ruin the canyons with a gondola. If you drive around the Cottonwood Heights neighborhoods, you will see that everyone who lives here is opposed to the gondola. What we need is fewer people in the canyons, not a way to get even more people crowding the resorts. Skiers and snowboarders hate the gondola idea. If it goes through, it will be a sure sign that our opinions really don't matter to you. Instead, the resorts could implement tee times or the DOT could start charging to go up the canyons and regulate access.
32393	Julia Biner	I am AGAINST a gondola in Little Cottonwood Canyon. I would like electric buses.
32392	Robin Marcus	<p>I am opposed to the plan for a gondola to service Little Cottonwood Canyon for a number of reasons, primarily due to the fact that the benefit of this arrangement will be for a very small number of people at a huge cost to many. Other reasons for my opposition are:</p> <ol style="list-style-type: none"> 1. 40 poles, each 15 feet in diameter, serviced by new roads big enough for huge trucks, will cut through the wilderness of Little Cottonwood Canyon. 2. The exact price has not been revealed by UDOT but it will be expensive to ride the gondola. (Between \$50- \$110 per trip) 3. It only services two sites. 4. It won't run in the summer. 5. It's paid for by taxpayers but only benefits Snowbird, Alta, La Callie, The Tree Farm, and Chris McCandless and Wayne Niederhauser. 6. It's taken from transportation money meant for the entire state of Utah. 7. There's new evidence (from Hawkwatch International) that the gondola would kill and injure birds during night migrations through the canyon. <p>Please consider alternatives that include expanded, electric bus service.</p>
32395	Eli Curry	<p>Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging.</p> <p>They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses.</p> <p>UDOT's EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6]</p>
32394	chris peterson	I am very frustrated at the selection of the gondola. This option completely ignores the public who uses the backcountry. It is a subsidy for ski resorts. tax dollars helping corporations get richer without actually fixing the problem. Please do not choose the gondola. Boondoggle!
32396	Terry Biner	AGAINST THE GONDOLA in little cottonwood canyon!!!
32397	Kristin Winder	NO!!! to gondola proposal. Ruins our canyon when only serving two big corporations' interest.
38671	Anonymous	I am sure that you are aware that 80 % of the population is against the construction of a gondola up our Cottonwood canyon. I hope this is considered when your final decision is made.
32398	Joe Blaylock	I am a murrayite concerned about the gondola project. I like everything in your phased plan except the gondola. Please do have tolling. Please do expand bus service and go to electric buses. Please do improve road maintenance, while protecting the environment, recreation, and ensuring bicycle access. Please do explore other alternatives. But lay off the magic flying sky box, I don't think it's the right way to move people around.
32400	William Crisafulli	I think the gondola is a great idea. Let us join the Europeans and use gondolas to access our mountains from the valleys.
32399	Pauline Smith	I heartily dislike the gondola option. It will ruin the beauty of the canyon, is obscenely expensive and only benefits a few businesses. Please do not carry this ill-conceived plan forward.
32401	Alan Eastman	I'm opposed to the gondola in general, but could reconsider IF and ONLY IF the two ski resorts who are the sole beneficiaries of the plan actually pay for ALL construction of the gondola and related infrastructure, including parking facilities and widening the access roads to the La Caille site.
32402	Chris West	I think that the most sensible approach would be to first implement congestion pricing as necessary to increase carpooling and decrease demand of road space. I would like to see the price increase as necessary and reasonable to keep traffic flowing and the canyon usable. Then if increasing the frequency of the existing bus system is not able to support the demand moving from cars to buses due to tolling, I would fully support the Gondola solution. I do not think we should widen the road. I appreciate the long term financial look at the issue and further feel that the lower environmental impact makes the gondola better than adding extra lanes for buses.

ID	Full Name	Comment
32403	Ned Maxfield	<p>I appreciate UDOT's efforts to reduce traffic in Little Cottonwood Canyon. But I believe this should be a dual project to assess and mitigate traffic in both Little and Big Cottonwood Canyons at the same time. To create a solution for one in isolation, would most likely have unintended consequences for the other.</p> <p>I don't believe the costs for a gondola, and the seasonal use, coupled with the eye sore it creates, is the best solution. One way or another, road widening in both canyons will be needed to accommodate traffic flow, and enjoyment of both canyons and ALL of the beauties of both canyons, not just to cater to the ski resorts. This can be done to create a long term solution, now and for the future. It is and will be needed, and can be done with minimal environmental impact. This should be the number 1 alternative, if the future of the canyons, for 20, 50, 100 years is the vision.</p> <p>Also, I am not in favor of tolls. It will increase traffic congestion, and create undue hardship on those wanting to enjoy the canyons in their pristine nature and create economic divide for those not able to pay the toll. It will increase congestion for the tolling, increase structures for the tolling, and signs, additional lanes of traffic, etc. There are many other alternatives. Increased buses with reduced fees, transit alternatives such as rail, etc.</p> <p>Restricting individual car use to eliminate those traveling individually in a car is discriminatory, and must not be implemented.</p>
32404	Matthew Cobb	I oppose the Little Cottonwood Canyon gondola proposal.
32405	Lyle Olsen	A gondola is a bad idea to serve just two multi million dollar ski resorts. Fixing the road makes a lot more sense and a better use of tax dollars.
32407	Kira Kilmer	Should taxpayers subsidize an industry facing negative climate change forces? Already the ski industry is facing a shorter season and less snow each year. A bad investment in addition to high estimated costs with benefits only to private enterprises. Bad idea!
32406	Donald Brown	<p>Tax-Payer-Funded, Serving Private Resorts</p> <p>Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging.</p> <p>They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses.</p> <p>UDOT's EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6]</p> <p>Ignoring Local Public & Political Opinion</p> <p>80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll.</p> <p>Salt Lake County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski and many other elected officials agree.</p> <p>"Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions. Parking hubs in the valley, electric busing with regular routes, carpooling and tolling, reservations, common-sense solutions that are fiscally sound," Wilson said at the Truth About the Proposed Gondola event in June.</p> <p>With no trailhead or backcountry access, the gondola is far from a solution that benefits all of LCC's users throughout the year.</p> <p>Not a Convenient Solution</p> <p>If the gondola is built, your ski day will consist of parking off-site (or paying a premium for one of the limited parking spots near the base), taking a bus to the base station then riding the gondola 31 minutes to Snowbird or 37 minutes to Alta.</p> <p>And then doing it all in reverse order at the end of the day.</p>
32409	Lynn Alvord	The gondola at best wouldn't solve the problem because there is going to need an additional lane eventually so paying for the less needed gondola now will lower our chance later of getting the extra lane which is a much greater need.
32408	BRAVANT HASLAM	I am opposed to a gondola in Little Cottonwood Canyon. There are so many other more viable alternatives. BWH

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32411	David Swan	<p>Even though I am fairly sure that this comment won't be read or have an impact as it is clear that you will not listen to the people who live in the state and use this canyon. I think that it is irresponsible to allow the gondola to go up in our canyon. For a number of reasons, mainly the cost which the proposed cost is by most accounts is far below what the actual cost will be. This amount of money could be used to support public transit not only through the canyons but through the whole county. And help pay our bus drivers improved wages and improve the bus riding experience. Secondly we are allowing private industry dictate what will be done with public funds which will only support them and the growth of their wealth which does not trickle down stream. I have worked for these companies I know what they pay their employees and most of the time it is not live able. A gondola in this canyon will bring additional tourists which will encourage local traffic to avoid the gondola and over all increasing the traffic in the canyons. Not to mention that this is a permanent solution which will likely become obsolete before the cost is recouped as by all accounts the climate changes that are occurring in the west will leave our mounts with little snow.</p> <p>I encourage the committee for this project to please listen to the people who will be utilizing the canyons regularly and understand the need. You have a responsibility to not only improve the traffic but to keep the beauty of these canyons and natural spaces intact. And not only thinking about lining the pockets of the wealthy and with kickbacks that they will provide. You can already see the unethical behavior that these companies are implementing to influence the public.</p> <p>David</p>
32410	Mia Nafziger	<p>I oppose UDOT's preferred alternative: Gondola B (From La Caille).</p> <p>As evidenced by the original public comments for S.R. 210 Draft EIS, I, and most of the public, strongly oppose building a Gondola in Little Cottonwood Canyon, and support an enhanced bus service, tolling, and other restrictions be implemented before any new construction is considered.</p> <p>In UDOT's executive summary for the Final EIS, UDOT claims there is "support for gondola and bus alternatives." While this is true, it misconstrues the overarching message from the 13,443 public comments UDOT received. While UDOT's 258-page public comment response is quite comprehensive, it failed to statistically summarize major themes of the public's wishes.</p> <p>Because UDOT's 258-page public comment response sufficiently documents all the reasons the gondola is a bad idea, there is no reason to expand on that here. Rather, I call on UDOT to present a statistical summary of the major themes from the original public comments and act in accordance with the majority themes, that is: enhanced bus service, restrictions to single occupancy traffic, and no gondola in Little Cottonwood Canyon.</p> <p>Thank you for your careful consideration!</p>

32413	Lisa Storey	<p>I'm disappointed in the gondola as a solution because it's so inflexible. A bus-based solution would allow for changing needs over time (different stops and schedules, different needs in summer vs winter, potential for shared resources with BCC, bus upgrades) whereas the gondola is significantly more static. It's difficult to predict canyon usage many years into the future because it depends on things like ski passes and weather patterns. There's a huge risk of the gondola not solving the issues as intended, or incorrectly accounting for the changing needs of future users. Invest money in figuring out how to implement buses really well, and course correct as needed until it's right.</p> <p>Also, for any transit solution, there is an unaddressed problem with transit users needing a convenient place to get ready and store belongings (gear, lunch, extra layers) at the resort. There should be lockers that are free (or included with a season/day pass) and easy to access. This is something that still makes a private vehicle much more appealing for many resort users.</p>
32417	Trev Umble	<p>The Gondola is not necessary and only serves private and out of state interests. The resorts and tourists will be the primary benefactors and the local residents will pay the costs. The canyon will be decimated with a permanent scar that will ruin one of the most beautiful places in the Wasatch. The resorts are already at capacity just look at the lines on any given powder day. The runs are to crowded as it is now, implementing this will only make things worse not better for all parties. Please consider nature and the canyon for future generations.</p>
32416	Josiah Kawamura	<p>No one wants the [REDACTED] gondola stop trying please.</p>
32415	Diana Olson	<p>This is ridiculous. I do not want Gondola!!!</p>

ID	Full Name	Comment
32414	Julie Wissler	<p>It sounds like big business has gotten the best of this whole process. This solution is definitely not for the people. It will make the skiing completely unaffordable for me if I have to take the gondola. In addition what a hassle. I would be willing to take the bus, if you could do a direct to Alta bus. Having to stop four times at Snowbird for unloading and loading is ridiculous for Alta Skiers. A Direct Alta bus would greatly improve ridership. I think if you made it affordable and consistent that people could trust if they took the bus they could expect the bus every 30 minutes or so that would work well. We spent a lovely week at Telluride this summer and they provide the tram at no charge. There were so many people enjoying and using the service. The biggest issue is there's not enough summer attractions to pull people up little cottonwood, other than hiking and biking. Telluride has a big vibrant village that people come to for meals etc. In this case I think the tram works well. Regardless, it needs to be accessible to all people.</p> <p>I'm surprised that UDOT is ignoring the best interests of its constituents, and instead supporting large money making ski resorts. I wonder if there's under the table money driving these decisions?</p>
32419	Jamie Zayach	<p>Absolutely opposed to this. It is sinful that Snowbird and Alta would benefit entirely from this on the backs of Utah tax paying citizens. Not to mention the fact that our snowfall continues to decrease every year. Limit the number of cars but I say no to the gondola idea</p>
32418	Erin Lloyd	<p>Please don't add a gondola in Little Cottonwood Canyon. It will only benefit the resorts and will not add value for anyone else. I feel like other options were better to deal with the canyon traffic.</p>
32420	Jane Perkins	<p>I am PERMANENTLY OPPOSED to the proposed Gondola in Little Cottonwood Canyon. As a resident of Utah for over 45 years, I cannot believe this proposal has even made it to this level for consideration and review. It is a ridiculously harmful and destructive proposal that would be paid for by Utah taxpayers but destined to pad the pockets of a very few: Snowbird, Alta, La Callie, The Tree Farm, Chris McCandless, and Wayne Niederhauser.</p> <p>Here are the MAIN points of my opposition:</p> <ol style="list-style-type: none"> 1) The obvious harmful and destructive impact on the canyon wilderness itself by the construction and maintenance of 40 poles, each 15 feet in diameter, serviced by new roads large enough for enormous trucks, cutting through the wilderness of Little Cottonwood Canyon. 2) The INITIAL AND CONTINUED PERMANENT HARM to wildlife, that will be forever impacted by the encroachment of this poorly-planned idea, the Gondola, into this pristine canyon watershed. 3) Per Hawkwatch International, birds will be injured and killed during night migrations through the canyon. Birds globally are suffering mass declines in population due to human encroachment, loss of habitat, human development, the dying of the Great Salt Lake, and other unprecedented impacts, AND THIS GONDOLA DEVELOPMENT WILL FURTHER INCREASE BIRD DEATHS! 4) The HARMFUL effects on the canyon itself: the trees, the creeks and rivers, further pollution of the air and water quality, erosion from further development of this nature, and detriment to the peace, beauty, and solitude of this canyon. 5) The unrealistic and out-of-touch high expense of an average family riding the gondola to ski at the resorts, ON TOP OF the high prices of ski lifts, meals, lodging. This proposal is totally unfeasible for average families to afford and ridership will hence suffer. And why has UDOT failed to disclose the actual price of a ride yet? Somewhere between \$50- \$110 per trip?! 6) Furthermore, such an intrusive, expensive (TO TAXPAYERS), and harmful Gondola that would only service two sites and only in the season of winter? Such an idea is truly not worth the harmful impacts, the time, and the cost to taxpayers for any actual benefit. WITH THIS PROPOSED GONDOLA B, THERE IS MUCH MORE INHERENT HARM THAN BENEFIT! 7) Besides being a high and unnecessary waste of an expense to Utah taxpayers, and in addition to the destructive and harmful impact on the canyon itself, the funds are being taken from transportation money meant for the entire state of Utah. 8) I suggest these planners do their homework and research the effects on mountain canyons in other Western states such as CA and CO. Consider restricting vehicular use in Little Cottonwood Canyon to shuttles as is done in Maroon Bells, CO, Zion National Park, UT, and other locations. Restricting the use of private vehicles with the use of EV shuttles during ski season only will: Improve air and water quality in the canyon; reduce CO2 emissions and negative impacts from too many private cars and SUVs; reduce harmful impacts to the watershed, wildlife, and peace and solitude of the canyon; and provide a kickback to UDOT through the shuttle ridership, with UDOT's ability to fund more clean, green EV shuttles. <p>In summary, I OPPOSE any and all such proposed Gondola developments in Little Cottonwood Canyon.</p> <p>Sincerely,</p>
32422	Thea Brannon	<p>How dare you, a department of our government, even consider a plan using taxpayer money to provide two private businesses special transportation for their mostly elite customers? They worsened their traffic problem by expanding to the Ikon pass, and take no responsibility for it. That money should be spent benefitting the larger community year-round, not monied visitors for maybe 12 weekends a year. You should be ashamed to even suggest such a boondoggle. State taxpayers do not want this gondola and this pipe dream needs to be permanently shelved. Period, full stop.</p>
32421	Carolyn Wyner	<p>I am opposed to putting a gondola in Little Cottonwood Canyon. My main concerns are the destruction of land to build the gondola and the cost to the public. I would like to see other options explored.</p>
32423	Carol Britten	<p>Has a change in traffic patterns for winter season been considered? Restrict traffic to uphill travel only say 7:30-9:30am, then two-way traffic until say 2:00 pm, then downhill travel only from say 2-3:00pm. Provide bus service for mountain employees. Provide more lockers/cubbies,etc. for day guests at the mountain who use public transportation.</p>
32424	Brian Bintz	<p>I can't think of many projects that are a bigger waste of taxpayer dollars. Taxpayer dollars are meant to be used for the public good, not to benefit a privately owned company so they can profit. That is all this project is. To be able to carry more skiers to Alta and Snowbird so they can make more money. The visual aesthetics of the gondola its self isn't very pleasing. When I go up the canyons from Salt Lake I want to see trees and mountains and wildlife. Not a gondola wizzing by from mast to mast. To put it in a nut shell. I vote NO.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35199	David Pearson	<p>I don't agree with your decision to make a gondola in Cottonwood Canyon. It seems like a very expensive plan for taxpayers to participate in. When very few taxpayers will use it. There will be a lot of natural area that you will have to destroy to provide an appropriate amount of parking at the base of the Canyon. If you are trying to decrease air pollution, it doesn't seem to me that this is saving much pollution. If you are trying to decrease congestion, it isn't helping much on the congestion on Wasatch Blvd. or 94th south. It actually could increase congestion. A dedicated bus lane would decrease congestion more and pollution more because it would keep all buses off the Canyon road completely, and the bus pick-ups can be spread across the valley as needed to have people park in diverse places. Busses can be electric and decrease pollution from that. The congestion at the mouth of the Canyon will be much less. I can't understand why you would feel like that exorbitant cost would be the best solution unless you have been influenced by private interests who will benefit from the gondola. I hope this isn't the case. Hope not. Please change your decision.</p> <p>David Pearson</p>
32426	Justin Rinker	<p>I've recreated in this canyon for over 30 years and can't imagine what a gondola would do to the natural landscape. We as humans should be doing everything we can to lessen our footprint on this earth.. not build a ridiculous gondola up the canyon! Let's please reconsider this initiative.</p>
32425	Larry Vise	<p>I do not support the Gondola proposal. There are alternatives which are better suited for this problem. The Gondola financially supports the ski resorts at the expense of public funds.</p>
32427	AJ Lefebvre	<p>Charging a toll on the canyon roads is an awful idea. That is not helping anybody access the areas they want to, easier. That is literally restricting who can afford to go there. That is bad. Let's not charge people money multiple times before they even get their ski boots on. Yes, that will probably reduce cars in the canyon because people won't ski here anymore. You still want people coming to these canyons, do not run everyone except the millionaires out of slc and the cottonwoods.</p>
32428	Amy Kopischke	<p>Please do not build this gondola. It is not a good solution for LCC traffic, because it will destroy the beauty and natural state of the canyon, will be expensive and slow to build and ride, and will not even run all year long. Roads to accommodate the trucks necessary to install the 40 poles would better be used for increased bus traffic. There is also new evidence that those poles will kill and injure birds during night migrations through the canyon.</p> <p>Please do not build this gondola.</p>
32429	DEAN ZOBELL	<p>STRONGLY OPPOSED TO GONDOLA PLAN</p> <ol style="list-style-type: none"> 1. It benefits only Alta and Snowbird - if done, they should pay for it. 2. Cost far too high. Many other projects need the funding more - homeless housing, general highway maintenance, etc.
32431	Gary Hanneman	<p>No gondola in Little Cottonwood Canyon. Construction of it would be detrimental to the ecosystem of the canyon. Other alternatives, widening the road, buses etc would be less so. Tax payers shouldn't be asked to subsidize Snow Bird and Alta. Those resorts should be more concerned about lessening their impact on the canyon.</p>
32430	Evelyn Lamb	<p>Please, let's try to give expanded public transportation and tolling/restriction of private vehicles a real chance to work before going through the expensive and landscape-altering work of building a gondola. If we can get the resorts on board by subsidizing UTA fares for their clients, and get UTA running more frequently, we may be able to address congestion without these drastic means. We really need to work on making transit a better option than driving for more people who use the canyons for recreation.</p>
32432	Christina De Angelis	<p>The Gondola is a TERRIBLE idea. There are many lower cost ideas that have been put forward that should help BOTH canyons that will not increase our taxes for many, many years to come. Projects this large rarely if ever stay within budget so the tax burden is likely much higher than proposed and this proposal should be scrapped.</p>
32433	Angela Deneris	<p>The gondola is an expensive and ridiculous proposal that will only make our canyon ugly and only benefit the dying ski industry. DO NOT BUILD THIS BOONDOGGLE!!</p>
32434	Carmen Cederlof	<p>Why are tax payer dollars going to be spent to ruin a beautiful canyon? The ski industry is dying here due to global warming so this investment is pointless no matter how you cut it. During the ski season turn it into either a toll road, run busses and stop all traffic except for locals who will need a permit. Build some extra parking lots. Problem solved.</p>

ID	Full Name	Comment
32435	James Perkins	<p>I am strongly opposed to the proposed Gondola in Little Cottonwood Canyon. I've been a Utah resident for 35 years, and I find this proposal a very harmful and destructive one for a canyon that needs more protection and preservation than ever. Furthermore, the idea that this planned Gondola would be paid for by Utah taxpayers, but only fatten the pockets of Snowbird, Alta, La Callie, The Tree Farm, Chris McCandless, and Wayne Niederhauser, is not something I'd ever support as a Utahn.</p> <p>Here is why I oppose Gondola B (or any Gondola plan such as this):</p> <ol style="list-style-type: none"> 1) There would be obvious harm and destruction to the canyon wilderness by the construction and maintenance of this project: forty 15-foot diameter poles, new road construction, huge truck traffic, all cutting through the Little Cottonwood Canyon wilderness. 2) Permanent and irreversible harm to wildlife that will be forever impacted by the encroachment of this Gondola into this beautiful canyon watershed. 3) Hawkwatch International studies show that birds will be injured and killed during night migrations through the canyon. With birds globally suffering massive population declines due to human encroachment, loss of habitat, and human development like this project, added to the DYING of the Great Salt Lake which has not been adequately addressed, this Gondola development will hasten the deaths of more bird and other wildlife populations. All of the many people we know in Utah don't want this project to be built! 4) The harm to Little Cottonwood canyon itself: the trees, the creeks, further pollution of the air and water quality, increased erosion from development of this Gondola, and negative impacts to the solitude of the canyon. 5) The cost of a Gondola ride has still not been released by UDOT. But somewhere in their estimated range is truly very unrealistic an expense for the average Utah family to pay to go ski at these resorts, added to ski lifts, meals, lodging. Average families simply cannot afford this and surely ridership will suffer, making this project akin to the 1980's huge taxpayer expense and waste of the pumps constructed in the desert to pump water... a very failed project in all respects. 6) Furthermore, it is noted that this intrusive and expensive (to taxpayers) Gondola would only service two sites in the season of winter. Thus, this proposal has far less merit of benefit given the gross harmful impacts to the canyon and its life species, the time, and the cost to taxpayers. 7) Besides being a high and unnecessary waste of an expense to Utah taxpayers, the funds will be taken from transportation funds meant for the state of Utah. <p>Why not restrict private vehicle use during ski season and use EV shuttles? Far less intrusive and would greatly cut down on emissions during winter months when the inversion is at its worst. UDOT and these developers could still reap monetary benefit AND go green, promoting green, clean energy in the canyon with EV shuttles, reducing fossil fuel emissions in SLC and the mountains, reducing harm to wildlife and the watershed, and serving as a model for other Western state ski resorts. I suggest these developers go back to the drawing table and do more research, looking at other Western states and European models of success.</p>
32436	Allison Richman	<p>I like the ideas suggested as options for decreasing traffic congestion as opposed to the expensive gondola. Please consider utilizing the means already in place and less expensive projects rather than something that will increase taxes hugely for all.</p> <ul style="list-style-type: none"> - parking reservations, - priority parking for carpooling, - reduced fare UTA ski buses all season long, - regulated hitchhiking at the designated pick up/drop off spots, - digital signs at the base of the canyons indicating number of parking spaces available.
32437	Roger Davis	<p>I am against a gondola in Little Cottonwood Canyon for the following reasons:</p> <p>Little Cottonwood Canyon has a finite amount of space that can be utilized for recreation and the gondola does not take this into account.</p> <p>The gondola will serve an increasingly smaller demographic, but will be funded by the whole state.</p> <p>The gondola will only serve to benefit two companies. Not an effective economic decision.</p> <p>The road "problem" on snowy days is only for a couple of days a season. Waste of taxpayer dollars.</p> <p>The gondola attempts to resolve a problem that does not exist. Don't fix it. IT'S NOT BROKEN.</p> <p>It will disrupt our watershed.</p> <p>I will be a visual pollutant every day.</p> <p>The number of skiers is pretty much maxed out at Alta and Snowbird.</p> <p>Gondola parking will create massive problems at the base station before and after lifts open.</p> <p>When the gondola breaks, rescue programs are sketchy at the best and fatal at the worst.</p> <p>Non-users of LCC should not have to pay for something they do not use.</p> <p>The gondola puts up an additional monetary barrier for those who would like to ski.</p>

32438	Patrick Laidlaw	<p>re. UDOT's Special Transportation Operation</p> <p>Dear Boondoggle Folks at UDOT,</p> <p>I am writing as a Little Cottonwood Season Passholder, Cottonwood Heights Resident, and a Licensed Professional Engineer (P.E.) in the State of Utah specializing in infrastructure projects - all for over 25 years. It is beyond pale that the Gondola plan has been approved. I keep questioning - how. The only reasons that I can come up with are - commercial interests (who is in the pockets of the lobbyists?) and this being someone's ego "legacy project."</p> <p>Why should this not be done:</p> <ol style="list-style-type: none"> 1) Cost - Enough said. \$500M+ (which will without a doubt be exceeded) to benefit Snowbird, Alta, and landholders around LaCaille??? 2) Rejected Soundly - not only by Cottonwood Heights residents, but the State as a whole. Are you not listening, or do you really think you know better? 3) Aesthetics - Who wants to drive up or down the canyon with these ridiculous towers? Please save the part about Europe. The Wasatch ain't no Alps. 4) There are better solutions - Seriously for 10 days out of the year, you are going to spend this kind of money? <p>Suggested Solutions:</p> <ol style="list-style-type: none"> 1) Extra Lane for busses - Once the busses start blowing by people sitting in the traffic, ridership habits will change very quickly (me included). This solution can be used all year around. And yes, I fully understand the cost to dig into the granite mountainside to create the extra lane in the tight spots. 2) Make Snowbird and Alta provide an exact number of people that they think they can handle and still provide the "experience" and work backwards from that number. Vail/PC and Deer Valley both limit ticket sales and have significant more lifts and terrain that are (and can be) skied by the average skier. Pose the question this way ... How many people do you plan on jamming on Devil's Elbow and Chip's and still provide the "Alta or Snowbird Experience"? 3) Drop the Ikon Pass - Snowbird and Alta need to figure out a way to get more out of each user. This is a problem faced by nearly every business - they can figure it out. It is not the taxpayer's responsibility to invest this directly in a private business. I would think that having half the people spending twice the money would be a better business model. 4) Charge for Canyon - It works well for Millcreek. One lane fully dedicated to electronic passes. 5) Monitor tires better - This is really the main issue. Cars/tires that are not prepared to handle the snow, even if they are 4WD. One bad actor, can jam the canyon for hours. Having the extra lane for busses and emergency vehicles will allow the issues to be minimized.
32439	Kaye Mickelson	<p>The gondola is no solution, the opposition to such is growing. UTA being without 85 drivers cutting back for ski areas this year highlights the unreasonable solutions presented in the draft EIS. Why are we not re-opening the conversation regarding cog rail as a long term and gracious solution? Let's rethink this.</p>
32440	Craig Buschmann	<p>The gondola is a one-note *partial* solution to transporting people to ski resorts and ski resorts alone.</p> <p>For less total cost, a dedicated bus lane and mass transit provides a *scalable* solution that meets the needs of the resorts AND allows for mass transportation to various backcountry hiking, skiing/snowboarding, camping, leaf peeping, and more at intermediate stops.</p> <p>Buses better meet the objectives of the various stakeholders more effectively and at lower cost without marring the landscape. I urge you to reject the gondola and select a more holistic, less expensive, and scalable solution of mass transit, namely buses.</p>
32441	John Adams	<p>For your project to widen Wasatch Blvd, in order to address southbound commuter traffic, were the traffic numbers you used in your study for current drive times based on drive times before or after the project that was completed to improve the traffic flow at the SR 210 / Wasatch Blvd intersection? This project is highlighted on the Wasatch Front Regional Council website on their TIP map under PIN 14431.</p>
32442	Michelle Sutor	<p>Please do not move forward with this plan, it is expensive, intrusive and does not actually meet the transportation needs of the greater public.</p>
32443	Stephen Nabaum	<p>I live on [redacted]. We are aware of traffic over load in this area Summer and Winter. Wider roads and more parking lots will make more space in the canyon a better place. My son 10 yrs ago worked at Snowbird for 4yrs. Ski traffic then was over crowded. 3000 more people will not make a tiny "one of a kind canyon" enjoyable for anyone standing shoulder. This canyon reached capacity 10 years ago. A billion \$ contraption used to solved a man made problem for less than 15 days out the year. All the while destroying the view with rusty steel towers.</p> <p>My son in law a hiker and a hunter seen, walked climbed thousands of canyons in US, Canada, Alaska even the the Arctic Circle has not seen a canyon comparable in magnitude as Little Cottonwood Canyon. Utah...don't destroy the CANYON that draws the people.</p> <p>PS where is water going to come from to wash, flush and to hydrate these people. millions of people to see</p>

ID	Full Name	Comment
32444	Laura Long	<p>I have several problems with the Utah Department of Transportation's (UDOT) gondola "solution" to the traffic in Little Cottonwood Canyon:</p> <p>40 poles, each 15 feet in diameter, serviced by new roads big enough for huge trucks, will cut through the wilderness of Little Cottonwood Canyon.</p> <p>The exact price has not been revealed by UDOT but it will be expensive to ride the gondola. (Between \$50- \$110 per trip)</p> <p>It only services two sites.</p> <p>It won't run in the summer.</p> <p>It's paid for by taxpayers but only benefits Snowbird, Alta, La Callie, The Tree Farm, and Chris McCandless and Wayne Niederhauser.</p> <p>It's taken from transportation money meant for the entire state of Utah.</p> <p>There's new evidence (from Hawkwatch International) that the gondola would kill and injure birds during night migrations through the canyon.</p>
32445	Ari Rees	<p>On Monday, I was hiking on Red Pine Lake Trail to take pictures of the leaves. I don't know if you've seen that view, but the canyon wall sweeps towards the road like a wave and in the fall, it bursts with red and gold. It's one of the most beautiful views I've ever seen, and one that I find myself preemptively mourning this week.</p> <p>That largely unobstructed view of the canyon from Red Pine lake trail will be one casualty of the proposed gondola up Little Cottonwood Canyon. It matters to me, but it isn't the most important. The gondola's construction would negatively impact beautiful wilderness areas, including some of the best places for climbing, bouldering, and hiking in Salt Lake County. These areas are beautiful and they're accessible for people who cannot afford to visit the resorts out of pocket, of which there are many. I am one of them.</p> <p>The idea of building such high impact infrastructure through this canyon that harms other recreational spaces and only services people wealthy enough to afford to ski feels so at odds with the idea of a welcoming, accessible Utah. There is also the pressing issue of snowpack that will be lost with the critical loss of the Great Salt Lake. The idea of constructing something that will cause irreversible changes in this canyon and only service a narrow demographic of recreationalists during an increasingly narrow on-season feels myopic and unsustainable. There's also no guarantee it will address the traffic issues in the canyon effectively.</p> <p>I am urging UDOT to reconsider their preference for the gondola and instead consider alternatives. This canyon's character and its accessible non-ski areas matter a lot to people who can't afford to experience the canyon like skiers do.</p>
32446	Michelle Montmorency	<p>I believe this gondola decision is the worse possible outcome from UDOT. Why would I, a taxpayer, want this monstrosity built in the canyon where I've hiked and visited all my life? It will be using too much of the beautiful Little Cottonwood canyon. I've skied there all my life and hiked the trails with the beautiful outdoor scenery, I will be forever changed by this supposed gondola. Need to listen to the people of Utah and Salt Lake City. The majority want increased bus service. I think that should be the answer. Or setting up times for cars to be able to go up the canyon and carpooling will go along with that. I don't want my hard earned money, taxes to be used to build this Monstrosity in the middle of our beautiful canyon and only benefiting a few people. I know money talks and people are probably being paid by these few entities to push it through. The Salt Lake City residents are smarter than that. We know what's going on. Listen to the people on this one. We know what's best. Not even our legislature. Hear us And don't let this project go through. Would be a waste of my hard earned money. There are more pressing projects you could put our hard earned tax money Towards. Listen to the people of Utah and Salt Lake City. No gondola!!</p>
32447	Tyler Robinson	<p>I love the idea of the gondola! I feel that it would be the least disruptive to the actual environment and actually put a meaningful dent in the traffic problem in the canyon.</p>
32448	Will Doxey	<p>As a long time user of our canyons, both for hiking as well as skiing, I feel the gondola Approach is a poor choice. The large investment of tax dollars only seems to be helping the ski resorts and a small number of property owners. There are better less costly options available, such as parking reservations on busy snow days as we'll as expanded seasonal bus services.</p>
32449	Jarek Spencer	<p>I am opposed to implementing a short-sighted solution like the gondola in the cottonwood canyon. This will be environmentally detrimental to irreplaceable areas that many people love. It is extremely expensive and mostly just benefits two ski resorts for 1 season of the year. There are much better and cheaper solutions to try first before something that dramatic needs to be used. Increased ride share and public transit will benefit more people for cheaper and will be helpful in more seasons. It's the right decision to try something like this and see if it makes the difference we need first. Thank you for your time.</p>

ID	Full Name	Comment
32451	John Mason	<p>In my opinion it is unfortunate that this expensive project is proposed to serve just two businesses only for a maximum of 90-120 days per year, to remediate traffic conditions that occur just 15-30 days per year, with significant negative visual impacts to the entire canyon. I am, therefore, opposed to the proposed Gondola B project for the following reasons. There are a number of significant negative impacts that would result from construction of the gondola as proposed:</p> <ul style="list-style-type: none"> - Cost - current estimate of \$550 million - Visual impact -significant visual impact to entire main canyon corridor, with some impacts to views from side canyons - Impact to canyon bottom outside existing road corridor (land and access needed for gondola towers) - Terminal and parking location at canyon mouth would negatively impact local traffic compared to enhanced bus from mobility hubs <p>I strongly agree that easier, less invasive options should be implemented in LCC before the gondola construction is considered, such as tolling, parking control, limiting single occupancy vehicles on snow days, building snow sheds, enhancing trailhead parking lots and enhancing the bus service with more, cheaper rides, flexible schedules, and better buses.</p> <p>I would then propose that the schedule of the project be paused for at least two ski seasons to conduct traffic studies to determine if further measures are needed to bring traffic congestion down to acceptable levels. After that, any additional needed improvements should be considered and designed. Such preliminary measures may potentially save a lot of money and impact. Evidence of the impact of such simpler and lower-cost solutions is already visible in the recent implementation of reserved and/or paid parking at canyon resorts with resultant improvement in traffic.</p> <p>The road already exists and will always be needed to service the canyons. It has the potential to service all canyon users for the entire year with only slight improvements, the snow sheds and better mass transit, all at much less expense than the gondola. The visual impact of an expanded road corridor would be much less than that of the gondola. A full-length canyon gondola will greatly diminish the view shed and is too long and expensive a ride to continually attract non-skiing tourists</p>
32450	Rebecca Jacoby	<p>most notably, the privately-held ski resorts of Alta and Snowbird to not merit the significant expenditures of UDOT to build a Gondola System. The Ski Resorts of Alta and Snowbird should sell their daily ticket amounts with their own designated capacity parking lots to support those ticket sales. That would then constitute the amount of vehicles allowed to access Little Cottonwood Canyon for those designated Resorts. Passes only would be required to access the Parking and Skiing use of Alta and Snowbird.</p> <p>As a current estimate for building a Gondola System, the amount of \$600 million to One billion cannot be verified without actual design having been executed and submitted. It is not fair or does not seem legal that Utah State Transportation Budget and Utah State Taxpayer money is to be used to support the Little Cottonwood Ski Trade Entities. If those Ski Resorts have expanded and are selling tickets for the over-crowding of the Little Cottonwood road, then it is essential that they cut back to meet more realistic use and further expansion of a limited road use.</p> <p>The Budget estimate to build a Gondola System for Little Cottonwood represents a Discrimination of all other users than skiers for the canyon and public forest usage.</p> <p>The public expenditure from UDOT to build a Gondola is literally being proposed for Privately-held companies that hold ownership of Alta and Snowbird Resorts. Alta Resort is owned by multiple individuals-the Laughlin family 51%, the Quinney family 25%, the Bass family 11%. Ownership of Utah's Snowbird Ski & Summer Resort changed privately owned hands of co-founder Deck Bass to Wyoming Business man, Ian Cummings, who is also co-founder of Park City-Based Powder Corp. Why does UDOT have any requirement to use Public money to support Privately-owned Resorts?</p> <p>If the Gondola is proposed to have two stops, Snowbird and Alta, it leaves many other important and traditional stopping points will not be available to users? What about the needs for stops or parking access for White Pine, Red Pine, privately-owned residences and condos, hiking trailheads, restaurants that are all beyond designed stops for Gondola passengers.</p> <p>The Gondola as proposed is a Huge Mega Structure with Huge, Unsightly Towers that will significantly interrupt the environmental and aesthetic enjoyment/conditions that now exist in Little Cottonwood Canyon.</p> <p>The Gondola Structure path will encroach on the Edges of The Wilderness Designations of Little Cottonwood Canyon. It does not seem that this has been fully investigated in plans to date.</p> <p>The Parking Structure for a 2,500 'car parking building, represents One Million square feet---an enormous, very Urban Mass. Imagine its size and walls blocking views, imposing on neighborhoods, and roadway excursions.</p> <p>There is a powerful logic to increasing buses and light transit commuter vans, both vehicles types being electric---this is more convincing than Gondola trams moving every three minutes with only 35 persons. Buses carry 40-60 people at a time and could move every 3-5 minutes. How about an army of 1-passenger, electric vans moving every 2 minutes, that could pick up travelers across the valley at designated parking lots.</p> <p>Please consider NO GONDOLA-OTHER BUS AND MULTIPLE-PASSENGER VEHICLES REPRESENT SOLUTIONS WHICH ARE BETTER FOR QUALITY OF ENVIRONMENT AND APPARENT PROTECTIONAL USE OF LITTLE COTTONWOOD CANYON.</p>

32452	Julie Mason	<p>In my opinion it is unfortunate that this expensive project is proposed to serve just two businesses only for a maximum of 90-120 days per year, to remediate traffic conditions that occur just 15-30 days per year, with significant negative visual impacts to the entire canyon. I am, therefore, opposed to the proposed Gondola B project for the following reasons. There are a number of significant negative impacts that would result from construction of the gondola as proposed:</p> <ul style="list-style-type: none"> -Cost - current estimate of \$550 million -Visual impact -significant visual impact to entire main canyon corridor, with some impacts to views from side canyons -Impact to canyon bottom outside existing road corridor (land and access needed for gondola towers) -Terminal and parking location at canyon mouth would negatively impact local traffic compared to enhanced bus from mobility hubs <p>I strongly agree that easier, less invasive options should be implemented in LCC before the gondola construction is considered, such as tolling, parking control, limiting single occupancy vehicles on snow days, building snow sheds, enhancing trailhead parking lots and enhancing the bus service with more, cheaper rides, flexible schedules, and better buses.</p> <p>I would then propose that the schedule of the project be paused for at least two ski seasons to conduct traffic studies to determine if further measures are needed to bring traffic congestion down to acceptable levels. After that, any additional needed improvements should be considered and designed. Such preliminary measures may potentially save a lot of money and impact. Evidence of the impact of such simpler and lower-cost solutions is already visible in the recent implementation of reserved and/or paid parking at canyon resorts with resultant improvement in traffic.</p> <p>The road already exists and will always be needed to service the canyons. It has the potential to service all canyon users for the entire year with only slight improvements, the snow sheds and better mass transit, all at much less expense than the gondola. The visual impact of an expanded road corridor would be much less than that of the gondola. A full-length canyon gondola will greatly diminish the view shed and is too long and expensive a ride to continually attract non-skiing tourists</p>
32454	Phil Sanders	<p>I am strongly opposed to the gondola option. This option has about as high of a likelihood of being on budget as the Utah State Prison was. And for the amount of money we're talking about you can run a lot of buses for many years which would serve people who want to visit other parts of the canyon instead of simply the ski resorts. If the ski resorts are the primary benefactor of the gondola they should be paying a lot for it--not the taxpayers</p>
32453	Kadin Mercer	<p>I am for Gondola. It will improve the environment.</p>
32455	Rebecca Jacoby	<p>most notably, the privately-held ski resorts of Alta and Snowbird to not merit the significant expenditures of UDOT to build a Gondola System. 32456	Gerald Oswald	<p>We do not need a gondola up Little Cottonwood Canyon there is not enough room along the side of the canyon without destroying the aesthetic value of the canyon, and there is not enough room in those gondolas for enough people w/ the hour being jammed it is also a watershed canyon and it would effect that too.</p>
32457	Joel Unroe	<p>Do not proceed with this movement to install the new gondola. It will destroy the natural environment and turn Snowbird and Alta into the likes of Vail with long lift lines and ridiculous wait times. The goal is to preserve our environment so future generations can enjoy it. Not destroy the environment for a financial gain by a corporation. This is a very bad idea.</p>

32458	Eric Turner	It's disappointing to see UDOT bend to the will of lobbyists rather than the people who pay their salaries. The gondola is not a solution to the problems in the canyon, even it's the last step in a series of steps to mitigate traffic. In fact, this gondola proposal will create more issues in the canyon. I will never ride the gondola, bring an avid visitor to LCC, because I cannot imagine being in an emergency situation where it has to be evacuated- from a 1000' high tower, in the middle of a blizzard. What a mess. I would have loved to have seen UDOT release how many comments they received for or against the gondola in their plan. I think that's the only thing that matters.
32459	Natalie Berg	Let's keep taxes low. Please rethink the gondola idea. It sounds way out of our price range and I have a hard enough time paying taxes as it is. Thanks for listening! -Natalie Berg
32461	Sid Tanner	Tram is the best way to go. Toll booth(s)???.... all for it IF: 1) one goes in the parking area at UDOT, (no free passes, no exceptions), and 2) one goes in at every UDOT employees home driveway (no free passes, no exceptions). (to set the proper example) THEN I am all for toll booths We all have to be SLAMED the same.....I mean...we all have to pay our fair share, right!?
32460	Concerend Utahn	There is a major problem with the Little Cottonwood Canyon Environmental Impact Statement (EIS) Draft Alternatives. As a public, we have been fed a false choice between expanded bus service and a gondola to alleviate congestion in Little Cottonwood Canyon. The environmental, congestion, and traffic estimates for both proposals has been well vetted ' but it is still a false dichotomy. To illustrate, I would like to draw an analogy between skiing and a sporting arena. It is not a perfect analogy, but it does illustrate the problems present in this plan quite well. Let's pretend for a moment that at the end of highway 210 (Little Cottonwood Canyon) ' which is a dead-end roadway ' instead of a ski resort (Alta/Snowbird) there was a football stadium. That stadium would have some sort of capacity limit governed primarily by the number of seats/bleachers/boxes available. It may even be limited by egress regulations determined by the state or local governments. Ski resorts likewise have a capacity limit ' but it is not dictated by the number of seats/bleachers/boxes ' rather it is dictated by the number of skiers or snowboarders the mountain can both safely and comfortably accommodate on its runs, in its lines, and on its chairlifts. Over time, the teams that play in that stadium have gotten more and more popular. The stadium went from rarely selling out, to selling out during major sporting events and some concerts, to consistently selling out every single weekend with a line out the door of disgruntled fans wishing they could find a way inside. If you were the owner of that stadium, you'd have a couple of options in front of you. - Ignore Your Constraints You could allow more people into the stadium than there are seats. Fans could sit on each other's laps. Some might sit backwards. Some might sit on stairs. Some could stand in the parking lots. Others could hang out in the locker room or the promenade. To do this, you may have to build a larger parking lot, increase bus service to the stadium, or even ask the city to build you a light-rail connection. This would certainly increase revenue in the short term, but ultimately would lead to a poor fan experience and compromise attendee safety. <u>Increase Pricing to Match Demand</u>
32462	Lise Herriott	A gondola is a terrible idea. It mainly benefits the rich and the ski resorts and will destroy access to climbing and other and will be horribly ugly and expensive to maintain.
32464	Leslie Nazzaro	The gondola is a huge expense that is not necessary. Little Cottonwood Canyon depends on lake effect snow. The Great Salt Lake is drying up at an alarming rate. It is going away and taking the lake effect snow with it. Sooner than later, the traffic congestion will be a mere memory. By the time the gondola is paid for, it will no longer be necessary. We need to employ less expensive techniques to deal with this very temporary problem.
32463	sara quintero	I'd prefer to not even have the Gondola as an option right now. I'd like to try the tolls, restrictions, enhanced bus routes first, for at least a few years, before re-considering the Gondola. The Gondola is too extreme without fully vetting the other alternatives first. This completely changes the landscape of our home. I realize we have to embrace the change that is inevitable for our state; we need to be willing to find ways to do so. But the Gondola only serves winter users, benefits the resorts first, and too greatly harms our landscape and views. There should be higher usage rates for tourists, btw.
32465	MELODY BURT	I oppose the gondola project!
32466	Kaiya Morris	Please please do not go ahead with the gondola project! Not only is this a waste of tax payers money (a majority of Sandy residents did not vote for this solution) but it will not sufficiently solve the problem and will also damage and destroy sections of the canyon. There are many other lower cost (financially and environmentally) solution that are preferable to having a gondola installed.
32467	David Guidry	Please no Gondola. Bad for the environment and views. Only benefits the resorts and alienates all the rest of the recreation
32468	Laura Risto	I am firmly against a gondola. The cost far outweighs the benefit.
32470	Elaine Miller	I am totally against the gondola. The installation cost is too high, and it will not benefit most of the population of the valley. It stands to benefit the people who own the land, the developers, and the ski resorts. I have been in gondolars in multiple continents. They are to go up a hillside, not to transverse a long distance up a canyon. I have to ask who will this benefit. Who will pay the exhorbitant fees to ride it? It will only be used part of the year. This will be a terrible waste of funds and will do so much damage to our hillsides. I have to ask why UDOT chose this. Do the members of UDOT profit by this?

32469	Ashley Jarrett	I love the idea of a gondola. I am hoping it is affordable for my family of 7 to ride. I am sure there will be some kind of a fee, but make it affordable.
32471	Merrilyn Butterfield	NO GONDOLA!
32472	Glennis Waltman	As a Time Share owner of 45 years at Iron Blasam Lodge at Snowbird, I am definitely opposed to the Gondola plan for Little Cottonwood Canyon!
32473	Kevin Hoffman	I have no financial claim in this issue what so ever. I am however invested in Salt Lake City as I am a lifelong resident. The LCC Gondola is the best option to deal with the population and traffic explosion we are all witness to. I do not agree with widening the LCC road and there is no way the needed number of busses can actually run on a daily basis in the winter. The gondola is a viable solution to a real world issue and "kicking the can" down the road for 20 more years is a terrible idea. At some point, the LCC road may still need to be widened and at some point a train might be feasible option as well. We need multiple solutions to the issues we all face. One day we may need a bus, train and gondola to handle traffic up LCC. Let's not wait on the gondola. I say YES to the gondola.
32474	Rainey Tadehara	Please protect our land and do not build another gondola in little cottonwood canyon.
32475	Norma French-Oliver	Please increase the frequency of bus transport up/down the canyon. When this was done at Glacier Park, people left their cars & took the bus. No need to expand the road; just keep it in good repair. Use electric buses.
32477	serena lambiase	Please do not install a gondola. Besides being and eye sore and very expensive, it will disrupt the delicate ecosystem of wildlife, water, and beautiful vegetation that we enjoy today. I would much rather have my tax \$ go to more buses, drivers, and rangers to get people safely up and down the canyons without any construction or disturbance to the animals and plants.
32476	Brittany Linde	When i saw that UDOT was going to be bulldozing through Little Cottonwood i was saddened and disappointed in Utah lawmakers. Did you know that the rock climbing in that canyon is unique and that there are no other places like it? and Utah makes a lot of money on tourism right? Did you know that climbers come from all over the world to climb there? Salt lake area is already awful looking and the amount of people and new construction has essentially ruined that landscape forever, please don't add to the mess that's already there.
32478	Claire M	I do not support a gondola in any one of our canyons. Research shows again and again that it is not a good idea. Overdevelopment is a danger to our delicate ecosystem, and this whole endeavor is a mistake.
32479	Lisa Hendricks	I am 100% against the proposed gondola project. It will ruin the mountainside, affect the beautiful views, the animals in nature and is completely unnecessary. I don't know one individual who is in favor of the gondola and the exorbitant tax dollars this will require. If this goes through I will NEVER go up that canyon again and will encourage all I know to boycott this. I am so disappointed and disgusted that UDOT isn't listening to the masses of people who don't want this. I wish you were more interested in the public's wants and needs. There are multiple other options that would be a much better, logical fix for the canyon.
32480	Zach Tretter	If almost everyone who would ride the gondola is going to Alta and Snowbird why aren't Alta and Snowbird responsible for the gondola? If the reason for awful traffic on powder days is an excess of skiers going to Alta and Snowbird why aren't Alta and Snowbird (and Ikon) accountable for overselling beyond the canyon's capacity? Taxpayers should not pay for corporate welfare of ski resorts. The gondola will make traffic around the mouth of LCC even worse than it is. The Gondola doesn't benefit climbers, hikers, campers, nor any recreation activity in SLC that isn't resort skiing on a powder day. The Gondola benefits almost no one at the cost of many. Why should a billion dollars be spent on a Gondola that will destroy the beauty of LCC when the Great Salt Lake is literally dying? Surely there are more prudent investments than this! The overwhelming majority of public opinion is against the gondola. If the Gondola is the best solution than prove it by showing that buses aren't a viable solution. This is an irreversible and rushed decision that will destroy the beauty of LCC. LCC isn't, never will be, and never should be, Zermatt.
32482	Travis Allen	Please do not build a gondola in Little Cottonwood Canyon. The current plan to build such a gondola is a heinous and colossal waste of taxpayer money, and it will cause irreparable damage to one of Utah's most beautiful natural environments. Abandon this morally reprehensible plan and listen to Utah taxpayers: simply increase bus service in the canyon in the winter, and expand the number of bus routes to begin at other population centers (like in Salt Lake City, for example). This plan will cost less and be able to be scaled back if adjustments are needed. It will not forever change one of the most beautiful places on earth to benefit two businesses. Please do not build a gondola in LCC.
32481	Therese Martin	I vehemently oppose the gondola in Little Cottonwood canyon. It will not address the problem and is an egregious waste of our tax payer dollars.
32484	Kristin Kraus	We do not want a gondola in our canyons. Better alternatives are available.
32483	Rodney L. Dye	Please don't waste our tax dollars and ruin Little Cottonwood canyon with a Gondola.
32485	Kate Schockmel	I am a resident of Holladay and think that the Gondola is a very bad idea. It is reckless to spend so much money to benefit an industry (the ski resorts) that is already in danger of disappearing due to global warming which we are ALREADY experiencing. This, like the "Inland Port" is another example of reckless pursuit of short-term profit at taxpayers expense, in a rapidly shifting global environment. NO! NO! NO!
32486	John Rich	The Gondola is an expensive, unnecessary, and extreme concept. Having traveled and skied in these canyons for 50 years other solutions are more appropriate.
32487	Dax Lamb	I think the gondola is a great idea. The quieter operation of the gondola verses extra buses going up and down the canyon. I think the gondola would also provide a off skiing attraction to the canyon as well. I know I would take a ride to see the beauty of the canyon during the off seasons. Heck even during the skiing season!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35205	Iain Hueton	<p>Thank you for the opportunity to discuss the proposed gondola in Little Cottonwood. You are hearing many many arguments from the public regarding what is wrong with this idea. However, the real mistake is not considering far cheaper, interim solutions that may show that the gondola isn't actually needed. The public has not been particularly supportive of bus services to the Cottonwood resorts. The reasons are clear: the buses are slow, interfere with faster car traffic, and are subject to the same weather and avalanche problems that cars have to deal with.</p> <p>And yet, what if we step back and address those problems directly with the following action plan</p> <p>Build appropriate avalanche sheds at the 6 or 7 locations where the road is at risk of avalanche.</p> <p>Work with a local companies to modify / customize buses so that they have 4-wheel drive or other appropriate traction, with significantly more power to get up the canyon "at speed"</p> <p>Modify the canyon traffic pattern on a twice-daily schedule so that the road is 1-way only for a limited time (say, 8AM-9:30AM up-canyon, and 3:30-4:30pm down-canyon.). Combine this with a substantial car-toll (say, \$30 / car) that applies from 4AM-10AM. to incentivize bus usage.</p> <p>Most importantly make the left-lane BUSES only so that these new high performance buses get skiers to the hill faster and less expensively than individual drivers.</p> <p>Right now, there is no incentive to use the bus because it's less convenient than having your car onsite, it's slow, there's often a line to get on (which is why it's slow), and it's expensive compared to driving.</p> <p>The cost of these proposed solutions is a tiny fraction of the cost of a gondola and avoids much of the conflict that will go on FOREVER if you attempt to build a gondola.</p> <p>Of course there are scheduling and capacity challenges regarding buses. Address them directly, and it can work</p> <p>Iain Hueton (SLC resident, but currently living in HI)</p> <p>Iain Hueton</p>
32488	Joshua Jensen	<p>I've commented on every public comment period concerning this gondola and other proposed solutions. The gondola is a terrible idea. And I'm pretty sure I'm at Jordi of people in this valley have expressed the same thing. So my question for you is, why are we continuing to supply comments, if you've already decided to go against the public wishes. This seems like an exercise in fruition. Please abandon the silly idea it will cost taxpayers a fortune and have a major destructive impact on our canyon, and please consider some of the more reasonable options that we could put in place immediately.</p>
32489	Jordan Buckner	<p>The gondola is the dumbest possible solution. It is NOT the most economical solution NOR is it the solution that would most alleviate the traffic concerns as per the studies that have been performed. If I recall, it was a mixture of adding additional bud service and added lanes that was the cheapest and most effective.</p> <p>The gondola is a boujie boondoggle that will only be used by tourists and those that can afford to ski at the resorts.</p> <p>ADDITIONALLY, the gondola really does nothing to address summer traffic concerns, since it's only proposed stops are at the ski resorts. So anyone going up the canyon to hike, camp, etc. won't be able to use the gondola.</p> <p>Please, for the love of God, do not go with the Gondola.</p>
32490	Scott Strong	<p>This has now real benefit for Utah and only causes short and long term negative impact.</p>
32491	Thomas Chancellor	<p>I am strongly opposed to construction of a gondola in Little Cottonwood Canyon. The major benefits are for the ski resorts in the canyon. It does not solve the traffic problem for people not going to the ski resorts. The better plan is to increase canyon bus service and restrict private vehicles and require car pooling for those cars allowed in the canyon.</p>
32492	Mark Battaglia	<p>Limit the total number of vehicles that can go up the canyons on a daily basis. Once capacity is reached it's closed. If the ski resorts don't like that they can pay for an alternate solution not the public again!</p>
32493	Maxine Babalis	<p>I believe the enormous cost in order to benefit two businesses is totally out of order. Other ideas might be to put a station at the bottom of the canyon. The operator would know how many parking stalls are available, and when another car enters, it should be turned away. Also, maybe cars with licenses ending in an even in an even number would be allowed up the canyon on an even numbered day. The same would apply to odd numbered days. There are so many cheaper solutions to the canyon problems than this enormously expensive gondola.</p>
32494	Mats Hanson	<p>Hi, I believe having a gondola will push traffic from the canyon and into the city. Traffic on Wasatch and 9400 S are already congested. By moving the bottle neck to the base of the canyon, instead of ski area parking lots, you will cause significant traffic which could impact people commuting to work, ambulance/hospital travel, etc. At the end of the day the people sitting in traffic are doing to ski, a leisure activity. Who cares if it takes longer to get home from skiing, if someone doesn't like it then don't go. I have been ridding Snowbird for 25 years, there has always been traffic in the canyon, the reason being when it snows roads get slippery and people drive slow. The solution to this problem is easy: toll for powder day mornings, reduce icon pass in LCC to 2 days (icon blackout days are surprisingly empty), require icon pass holders to ski with a reservation only, if a 2wd car with no chains gets in an accident when the 4x4/chain rule is in effect fine them \$2000 (i-70 in Colorado does this). These solutions are cheap to implement and reasonable. A gondola will only push traffic down canyon resulting in some serious side effects (think an ambulance can't reach someone in the Top of the World neighborhood). Don't waste tax payer money on a gondola that will only benefit the profits of Snowbird and Alta.</p>
32497	Charles Patterson	<p>No gondolas please. Please look at other alternatives</p>
32496	Monet Palmer	<p>NO GONDOLA! I am an occasional Canyon visitor. I visit mostly in the summer for hiking. Building a gondola that will only service two resorts, half the year is a waste of my tax payers dollars. NO GONDOLA!!</p>

32495	Iain Hueton	<p>Thank you for the opportunity to discuss the proposed gondola in Little Cottonwood. You are hearing many many arguments from the public regarding what is wrong with this idea. However, the real mistake is not considering far cheaper, interim solutions that may show that the gondola isn't actually needed. The public has not been particularly supportive of bus services to the Cottonwood resorts. The reasons are clear: the buses are slow, interfere with faster car traffic, and are subject to the same weather and avalanche problems that cars have to deal with.</p> <p>And yet, what if we step back and address those problems directly with the following action plan</p> <ul style="list-style-type: none"> Build appropriate avalanche sheds at the 6 or 7 locations where the road is at risk of avalanche. Work with a local companies to modify / customize buses so that they have 4-wheel drive or other appropriate traction, with significantly more power to get up the canyon "at speed" Modify the canyon traffic pattern on a twice-daily schedule so that the road is 1-way only for a limited time (say, 8AM-9:30AM up-canyon, and 3:30-4:30pm down-canyon.). Combine this with a substantial car-toll (say, \$30 / car) that applies from 4AM-10AM. to incentivize bus usage. Most importantly make the left-lane BUSES only so that these new high performance buses get skiers to the hill faster and less expensively than individual drivers. <p>Right now, there is no incentive to use the bus because it's less convenient than having your car onsite, it's slow, there's often a line to get on (which is why it's slow), and it's expensive compared to driving.</p> <p>The cost of these proposed solutions is a tiny fraction of the cost of a gondola and avoids much of the conflict that will go on FOREVER if you attempt to build a gondola.</p> <p>Of course there are scheduling and capacity challenges regarding buses. Address them directly, and it can work</p> <p>Iain Hueton</p>
32498	ASHLEY Wheeler	<p>I am a lifetime utah resident and would like to see Utah try some less expensive and easier implementations to help alleviate the ski traffic problem up cottonwood canyon. The gondola seems like a big expense for the little bit it could potentially help.</p>
32501	Robert Smith	<p>I think it, electric busses and not letting any cars up the canyon is the only way to go</p>
32500	Elizabeth Braymen	<p>I am AGAINST the gondola. 1) It's too expensive 2) it's ugly and destroys the view of the canyon 3) it services a very limited number of people (skiers) and a very limited number of business interests. I believe a better solution is an electric bus system that runs frequently, all year round, and stops at picnic areas and hiking trails, with parking at the base of that canyon, and spurs to other forms of public transit.</p> <p>My name is Mitch McDermott, I am a software engineer, resident of Sandy and outdoor enthusiast.</p>
32499	Mitchell McDermott	<p>A phrase often said now-a-days about places that are overcrowded and not longer what they once were, are being 'loved to death.' Personally I don't believe such a thing exists. If you love something, you'll care for it, protect it and preserve it for future generations. However, there is such a thing as being 'developed to death', and Little Cottonwood Canyon is at risk of that with both of the proposed solutions. I not only believe these two solutions are not a fix to the problem, but I know there is a better, less invasive option that exists.</p> <p>The two proposed solutions are ignoring a few big issues. First, neither solution will work without a public transportation overhaul. There needs to be adequate mobility hubs across the Salt Lake valley to transport passengers. Having everyone park between a couple of lots will result in the same gridlock that we currently experience, especially if one of those lots is a parking garage. Second, another huge issue being ignored is the canyon capacity. I'm not sure why it's not being discussed, but transporting more people up the canyon than we currently have will result in a worse experience for everyone. Longer lift lines, more angry tourists, a greater number of people to transport down canyon once ski resorts close. No matter the transportation solution, it is not feasibly possible to transport 3000-4000 people down the canyon all at 3 or 4pm. Many people who frequent the canyon know this is already a growing problem, and increasing uphill capacity will only exacerbate it. Lastly, why is Big Cottonwood Canyon being ignored? This issue is just as prevalent in its neighboring canyon and we're talking about preparing for 2030/2050, so why is that not being addressed? The same system I'm proposing could be scaled to fit BCC needs almost flawlessly. Why not kill two birds with one stone?</p> <p>For months I have been voicing my opinion, and in favor of, a Zion-like shuttle system. This means busses would be the only option for getting up and down canyon during peak hours, with no private vehicles on the road. I believe this is the only path to achieve what this project set out to do. In 2000, Zion National Park established a shuttle system to eliminate traffic and parking problems, protect vegetation, and restore tranquility to Zion Canyon. The shuttle system runs during peak periods of the year to transport visitors in Zion Canyon, without giving visitors the option to drive through the canyon. In 2017 alone, the park estimated the shuttles transported more than 6.3 million passengers. It's now been over 20 years and the shuttle system is still in place, and if you've visited in that time, you can appreciate the lack of cars in the canyon. I came across a guy named Brian Kissmer who had the same idea, and he had already crunched the numbers to compare it to proposed solutions. Below is a direct quote pulled from his work discussing costs more in detail:</p> <p>The Proterra Catalyst E2, an all-electric transit bus, has been shown to outcompete both diesel and EV competitors for various metrics including maximum hill grade, climb speed, and maintenance cost. The bus can maintain a speed of 40</p>
32502	Adam Hoffman	<p>Why is it that all the comments for the gondola in the initial comment period are about it being a great new tourist attraction. How does a new tourist attraction solve the traffic problem? Why are we spending money on a tourist attraction to put even more people into a canyon that already is struggling to handle the current load? How does this gondola serve big cottonwood canyon and it's traffic problem? The gondola is not the answer to the problem and everyone knows it, but somehow UDOT selected it as the best candidate. Then they cut the bus service a few weeks after the announcement. This all wrecks of corruption and bribe money. If we don't have money to keep the bus service going at full capacity how exactly are we going to build a billion dollar gondola. Give me a break with this garbage non-solution. Furthermore, even if it did lessen traffic in the canyon, which it won't, it's just going to relocate the traffic problem to the neighborhoods surrounding the gondolas base. This is all just a big money grab, and every single person knows it.</p>

32503	Robert Babcock	There are better, lower cost options to address a problem that does not occur very often. More carpooling (incentivized by parking costs), better bus coverage
32504	Mitch McD	<p>The biggest issue with the gondola is it only addresses resort users. Not only do backcountry users need a solution for a transportation option in the canyon, hiking trailheads during weekends in summer/fall need to be addressed as well. White pine is overflowing with crowds every weekend until Oktoberfest hits, then the congestion forms up in the canyon again. I tried to go for a hike a few weeks ago and was met with an hour long drive down Little Cottonwood thanks to this existing problem. A gondola would not solve this issue, as it would result in a standing line queueing for a gondola cab, instead of users sitting inside their vehicles in congestion. And a gondola would not present a possible solution for Big Cottonwood, while a successful, refined and reliable bus system could easily be applied and scaled to solve the same traffic issue the other canyon suffers from. I would rather see the road widened with bussing services enhanced in a practical way. I also support tolling. The gondola not only destroys more boulders for rock climbers, but drastically ruins the beauty of Little Cottonwood canyon. As a backcountry skier and rock climber, I would hate to see the view obstructed by large towers and gondola cabs. I moved here over anywhere in the US because of this canyon, and I would be devastated to see a permanent eyesore like a gondola go up, when it doesn't seem like a real solution to the problem at hand.</p> <p>A phrase often said now-a-days about places that are overcrowded and not longer what they once were, are being 'loved to death.' Personally I don't believe such a thing exists. If you love something, you'll care for it, protect it and preserve it for future generations. However, there is such a thing as being 'developed to death', and Little Cottonwood Canyon is at risk of that with both of the proposed solutions. I not only believe these two solutions are not a fix to the problem, but I know there is a better, less invasive option that exists.</p>
32505	Micki Harris	<p>If the gondola is built, your ski day will consist of parking off-site (or paying a premium for one of the limited parking spots near the base), taking a bus to the base station then riding the gondola 31 minutes to Snowbird or 37 minutes to Alta.</p> <p>And then doing it all in reverse order at the end of the day.</p> <p>How can it be assured the gondola will be used and actually reduce cars in the canyon?</p> <p>For the gondola strategy to be effective, there will need to be a major change in public habits.</p> <p>With no plan by @utahtransportation to limit cars (it is our understanding they plan to implement bussing until the gondola is built but not continue the program afterward) or any analysis of demand, the original issue of traffic is not being solved. It will simply funnel more visitors to the resorts.</p>
32506	Jonah Hillock	<p>In my opinion I think that UDOT should not build the gondola. I think doing that would take away the beautiful scenery of the mountains because if they do that I will always see giant metal poles up the canyon. I wish that UDOT would make all the other improvements that they are planning to do but just not the gondola. I would also like if UDOT put mobility hubs scattered around the Wasatch area and a bus would leave every morning, and I don't want the bus to be full because one day I was going skiing and we got on the bus and the bus was completely at full capacity and I was stuck in the middle of the giant crowd. When we finally got off the bus I almost vomited. It was horrible, that's why the bus can't be completely full. To make more people use the buses there would be tolling stations at the mouth of the canyon if there is only one person in the car they would be tolled \$25-30. In conclusion I think that they should improve all the problems and not put the gondola up the mouth of the canyon.</p>
32507	Jerry Milne	<p>I prefer e- buses. People who hike, picnic, camp, will have access to the trails, camping areas, fishing spots and etc. besides just the skiing sports. Buses will serve a larger segment of our population</p>
32508	Tara Sudweeks Willgues	<p>An eight mile long environmental, maintenance, and gatekeeping disaster sounds about right for how Utah treats wilderness. Numerous sane alternatives exist, and this plan deserves nothing less than to be binned with great prejudice. But sure, let's kill the creek, put up economic and logistical barriers, and create a nightmare traffic jam when it, inevitably, breaks repeatedly and often. I predict that if this gondola is built, they will eventually need to provide a fleet of electric buses to manage the traffic around the broken eyesore, which is what should be done in the first place.</p>
32509	Heather Choi	<p>This seems like an extravagant spend for a problem with better and equally effective shorter term solutions like electric shuttles. While I understand and appreciate the desire to be proactive and to keep car back ups to a minimum, it still seems like a colossal waste of money, not to even MENTION the potential negative and irreversible effects this construction can have on the environment.</p> <p>How devastating is it to hear about a skier dying in avalanche... do we really need more stories like that each year??</p>

32510	Mary Pautler	I am a local resident of Cottonwood Heights and frequent canyon user in both summer and winter. Traffic congestion is an issue and from my perspective has seen a volume increase over the past 10 years. I appreciate there being a conversation about solutions. I don't support the proposed Gondola option. First, the gondola will not solve the traffic problem in Little Cottonwood, instead just offer an alternative for those who select this method of transport. And, traffic congestion isn't limited to SR210, traffic congestion is also an issue in our community that includes Big Cottonwood, the I-215/Exit 6 backup that regularly occurs, and congestion on Wasatch Blvd. Knowing this option doesn't fully resolve the traffic issues in our community, combined with the cost to tax payers, is a primary reason why I don't support this option. The data shared to justify this solution is hard to believe to be true ' specifically, "Expect 50 days per ski season of traffic jams". Given that I drive up/down SR210 about 40-50 times a year, often during peak (AM/PM weekend days) over the past 10 years, this estimate makes me question the data being relied on to support this option. I would expect supporting data to be more realistic. It's frustrating to see the willingness to spend this amount of tax payer money, both initial cost (\$550 million) and annual winter operations amounts (\$4 million per winter only) for a non-sensible 'solution' that doesn't solve the problem for SR210 and doesn't address Big Cottonwood, Wasatch Blvd, or traffic issues encountered by all these routes in the summer. A more sensible option would be enhanced bus service and leave tax dollars for looming environmental issues that will significantly impact ski resort, such as the shrinking Salt Lake. Thank you.
32511	Tena Rohr	Using tax dollars to destroy the environment and wildlife is ridiculous. The benefit is to only 2 resorts. By the time it's built, there won't be any snow to carry people to. I say boondoggle.
32512	william howell	A frequent low cost bus as well as high cost parking reservations would be a much more sensible option.
32514	Campbell Tom	No gondola! Going to be 999 million by the time it's built with over runs and change orders. Also NO ONE will say how much it will be to ride! Same as bus fee? Triple I say! Another deal killer! It's only a tourist trap for Snowbird and Alta. Local public? Ride it once and then never again. Reminds me of 1950's Timberline ski area transportation bus/gondola. Look it up in history. After much hoopla it went out of favor. Locals won't go for it. Tourist trap, let the Bird and Alta pay for 1/2.
32513	Taylor Currier	I feel that public comments have not been taken into consideration during this process. There have been thousands of public comments made against the gondola and overwhelming opposition to a ski gondola in Little Cottonwood Canyon. Gondola Plan B is not the preferred alternative of the people but it the preferred alternative of UDOT. Salt Lake County and Salt Lake City have passed resolutions against the gondola as well. I believe that Little Cottonwood Canyon is a multi-use canyon that draws people and generates income for the area from more than just skiing. The hiking, climbing, biking, and outdoors are just as important to the canyon. It is not acceptable to build a gondola using tax payer money at the expense of the local tax payers. This public comment is a resounding NO to any plan with a Gondola.
32516	Brayden Skillicorn	I'm very opposed to putting a gondola in little cottonwood canyon! It's incredibly expensive, it will ruin the natural beauty of the canyon, it will destroy many climbing boulder routes that are classics and I believe there are better options to deal with traffic during the winter. Please don't ruin little cottonwood!
32515	Jan Brewer	Our home backs [REDACTED] We have lived here 25 years, the solution is not a gondola but slowing traffic to 35 like it is when you cross 9400 into Sandy. Slowing traffic will lessen the traffic because people will go down to highland drive. Your plans will destroy the beauty of our town and increase the traffic noise in our backyard. I would invite you to come to our home anytime to discuss this any get an idea what you would do to our home. This is very emotional for those of us living on [REDACTED]
32517	Benjamin Lowe	As a resident and tax payer of Cottonwood Heights, I do not support the gondola project proposed as a solution for the traffic problems in Little Cottonwood Canyon. Not only do I see it as an ineffective solution to traffic congestion, I also see it as a terrible misuse of tax payer dollars. It is an absurd investment that truly only benefits two privately held ski resorts. Beyond that initial misuse of public funds, the land needed to create this nonsensical behemoth of a tourist trap is federal property, meaning that it is owned by the citizens such as myself and there again, is being taken, not to benefit the masses, but to feed just two commercial properties in the canyon. Finally, if this gondola is built, it will permanently alter the landscape and will be a blight on the natural vistas that Little Cottonwood Canyon has to offer, not just for residents, but for everyone individual recreating in the canyon that wished to get away from the urban landscape and into nature.
32518	Jim Wissler	I've skied Alta for 58 years. Yes the population has increased, but in those 58 years the avid skiers have been good stewards to Lil Cottonwood. The fact that the eventual cost of a gondola is going to exceed \$1 billion, makes me cringe. No on polluting the gorgeous canyon.
32519	Marla Lundgren	I am NOT in favor of this gondola. There are other more economical options available. I strongly oppose this and feel it would be such an eye sore to our beautiful canyon.
32520	Chris Howells	I am in support of the Gondola Project serving Little Cottonwood Canyon.
32521	Kim Caramelli	What can I say that hasn't already been said in opposition the the "gondola option"? Nothing, likely. I am opposed to this from bottom to top for LCC. I do not want to subsidize further the ski resorts with this monstrosity. I would like to see electric busses, perhaps every other bus is an express. I know there are proposals such as this. No yo the gondola!
32522	Susan Riedley	Toll roads should be illegal. We already pay state, city, and federal taxes for infrastructure. Tolling a road/highway is double-dipping. Oh, and NO GONDOLA to wreck the beauty of Little Cottonwood Canyon! The resorts can build their own expanded parking lots to deal with overflow and offer Early Bird incentives to drive up AND drive down sooner to ease the rush hour traffic.
32524	Emma Kashefsky	No gondola
32523	Julie Wilson	I am absolutely against the proposed gondola system, especially if would be paid for by taxpayers, who would derive little benefit from the gondola system. Plus the damage to the canyons would be major!
32525	Mike Hill	I own property in one of Snowbird's lodges. If a gondola is built, will I be allowed to travel the canyon by automobile without paying a toll?
32526	Lynne Kraus	It makes no sense to spend this amount of money to benefit 2 private organizations. It also does nothing to address those who want to stop at other locations in the canyon. The money would be better spent distributed throughout the state and not focused on a single canyon that has an issue only approx. 20 days out of 365

32527	Paul Hudson	<p>As a business owner in Salt Lake, I am shocked that the State would consider a project of this expense for the primary benefit of 2 private businesses.</p> <p>If the State has \$600M to \$1B available, I'd much prefer that it be used for something that will benefit all businesses ... not just two. Renewal energy development subsidies for business, infrastructure improvements, and solving for the shrinking Great Salt Lake are just a few worthy alternatives that would make a real difference and not just be a tourist diversion.</p> <p>Thank you, Paul Hudson Hudson Printing Company</p>
32528	Clayton Dickerson	<p>There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws.</p> <p>We have seen parking reservations work throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon.</p> <p>As Salt Lake County Mayor Jenny Wilson said, these are "common-sense solutions that are fiscally sound."</p> <p>Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging.</p> <p>They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses.</p> <p>UDOT's EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6]</p>
38562	Denise Chancellor	<p>Oh, good afternoon. I'm on UDOT's EIS page for the Little Cottonwood Canyon and nowhere can I find a link to the final EIS. There's a summary. There's some videos. I actually want to see the EIS document. My name is Denise Chancellor. My phone number is [REDACTED] My email address is [REDACTED] Thank you.</p>
32529	Matthew Allen	<p>Before a decision is made, there needs to be a comprehensive plan for both LCC and BCC as well as a consideration of multiple alternatives. The gondola option only attempts to fix issues in one canyon at an exorbitant expense. The cost will likely be a billion dollars once all is done. Materials and labor costs have increased substantially since the initial estimate was made. It seems far more cost effective to limit the number of vehicles allowed up the canyon on any given day, and implement a reservation and/or variable toll system.</p>
32530	David Barth	<p>I think the gondola is a great idea and will reduce canyon traffic, air, and water pollution. Throughout Europe and the rest of the world, large gondolas are a proven method of transportation with low impact and higher efficiency than individual vehicles or busses. Busses are limited by road conditions, traffic, and the availability of drivers (as seen by the reduction of routes this year due to staffing issues). Long term costs are lower than road and bus expansions, also.</p> <p>I believe the gondola itself would be an attraction to tourists and locals during both the winter and summer. The gondola could help keep intoxicated drivers off the road after a few too many drinks during apres ski or Oktoberfest. While the gondola isn't invisible, its path is no more distracting visually than the existing road. If anything it is quieter. I'd rather see a gondola than have to breathe the emissions from the road.</p> <p>The one issue I have with the proposal is the tolling of the road. I believe this makes the road a class exclusionary, taxpayer funded resource. It reserves the road for those with the means to pay for the road while making others second class citizens for a resource they pay to maintain. The only fair way to manage the road is to close it to all car traffic unless you own property/housing in the canyons, are delivering goods, are an emergency/service vehicle, or have a reservation for lodging. This is done on other roads through the world including roads to resorts like Beaver Creek and Breckenridge Peak 6-8 in Colorado (who also uses a gondola from a far lot to access the mountain). Those with money should have to ride the bus (or future gondola) with the rest of us. I approve of the Gondola Alternative B with minor tolling modification.</p>
32531	Stacey Rabiger	<p>No to the gondola!!</p>

ID	Full Name	Comment
32532	Sidni Johnson	<p>I received a graduate degree from Harvard University in Sustainability and Environmental Management. I am strongly opposed to the gondola. I stand with the opinion of Cottonwood Heights resident, Elizabeth Eve King, and her opinion in the form of a letter to the editor, published in the Salt Lake Tribune.</p> <p>King lists seven major concerns with the Utah Department of Transportation's (UDOT) gondola "solution" to the traffic in Little Cottonwood Canyon:</p> <p>40 poles, each 15 feet in diameter, serviced by new roads big enough for huge trucks, will cut through the wilderness of Little Cottonwood Canyon.</p> <p>The exact price has not been revealed by UDOT but it will be expensive to ride the gondola. (Between \$50- \$110 per trip)</p> <p>It only services two sites.</p> <p>It won't run in the summer.</p> <p>It's paid for by taxpayers but only benefits Snowbird, Alta, La Callie, The Tree Farm, and Chris McCandless and Wayne Niederhauser.</p> <p>It's taken from transportation money meant for the entire state of Utah.</p> <p>There's new evidence (from Hawkwatch International) that the gondola would kill and injure birds during night migrations through the canyon.</p>
32533	Eric Schreiber	<p>If the sky resorts, lawmakers, and UDOT want a gondola ...they can pay for, with money out of their pockets, not with the money that is so hard to earn for us citizens of Utah. THE GONDOLA IS NOT THE SOLUTION.</p>
32534	Alison VanLeeuwen	<p>I live about 10 minutes from the mouth of Little Cottonwood Canyon in the [REDACTED] subdivision. I love to hike in Little Cottonwood Canyon in the warmer months of the year and I snowshoe in Little Cottonwood Canyon during the winter. I just love to take drives up Little Cottonwood Canyon because it is so beautiful. I say "NO to a gondola." The permanent large metal towers and heavy metal wires and gondola cars all thru Little Cottonwood Canyon would destroy the beauty of the canyon. I am sure that I would hear the motor of the gondola from my house all day long and I moved to this neighborhood because it is so quiet and peaceful here. I do not ski nor will I ever ski. Why should my tax dollars pay for something that is only for skiers? And from what I have read, the traffic in the canyon is only terrible for about 10 days during the winter. Whenever I drive up the canyon, the traffic is fine because I'm not going during a busy ski time because I do not ski.</p> <p>Please do not destroy the beauty of Little Cottonwood Canyon by building a gondola in it that will only be useful to a small population of skiers. Widening the road would be useful to everyone who uses the canyon not just a select small group. I say NO to a gondola in Little Cottonwood Canyon. On busy ski days, just limit the number of cars that can go up the canyon. Please save the beauty and peace and quiet of Little Cottonwood Canyon for now and for future generations.</p>
32535	Natalie Shepherd	<p>i grew up right on the bench of little cottonwood. i cant imagine it being destroyed by this proposed project. i remember driving up with my family to go on hikes or go see the fall colors. it is a beautiful place with so much wildlife and nature to see. harming this would not only harm the environment but also the lives of those who enjoy and rely on the canyon itself.</p>
32536	Denise Chancellor	<p>UDOT says its stated purpose in choosing the Gondola alternative is that it "is the most reliable mode of public transit in variable weather conditions and best meets the reliability goal of the project's purpose, while taking into consideration environmental impacts." EIS Project Overview Summary.</p> <p>How can the gondola alternative be the choice mode of transportation when it only operates during the ski season and merely makes two stops? It is obvious that this alternative significantly benefits the two ski resorts, Snowbird and Alta, and does nothing to alleviate traffic to other destinations in Little Cottonwood Canyon. Moreover, the gondola will be extremely expensive to ride, thus only being affordable to the well-off and not the general public. However, it is taxpayers in the entire State of Utah who will be paying for this boondoggle project. There are more worthy state-wide projects that UDOT could pursue rather than is limited and expensive project benefiting an elitist few.</p> <p>UDOT has not taken into consideration the effect that climate change will have on the decline and demise of the ski industry over the expected life of the gondola. Already the ski areas have to resort to man-making snow equipment to supplement a diminishing snow pack. The gondola alternative is a non-starter if UDOT seriously considers the effect of climate change. In sum, the costs do not support the benefits of the project.</p> <p>The gondola alternative will be the most destructive alternative that UDOT has studied. There will be 19 towers constructed in the canyon, some over 200 ft high, and 15 feet in diameter. This obviously will scar the iconic natural canyon views available to all, particularly those enjoying the canyon in non-winter months. Roads will be bulldozed to allow vehicle access to service those towers, further destroying the existing habitat. Given these facts, UDOT cannot claim it has taken environment impacts into consideration.</p> <p>Little Cottonwood Canyon is ill-suited to the gondola option. First, it is a watershed for Salt Lake City. The destruction when constructing and servicing the gondola towers will degrade that critical resource. Second, the towers will be illuminated at night, decreasing the diminishing area where a dark sky is available at night. Third, the towers will be an impediment to raptors and other birds, with likely bird kills from the impacts with the gondola cables..</p> <p>The public is adamantly opposed to the gondola option, for good reason: It is a waste of taxpayer money that destroys a cherished resource for the benefit of a few.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32537	David Dodd	This is far too expensive as a solution. That money must ultimately come from skiers and taxpayers. And many of us cannot afford to ski then and cannot afford much larger taxes. Skiing will diminish with global warming and may be gone completely.
32539	Lee Bromley	I simply want to register my dismay at the proposed gondola up Little Cottonwood Canyon. This project favors two ski resorts at taxpayers expense.
32538	Caitlyn Nielsen	<p>The best option is more busses with a dedicated lane. This can help reduce traffic but also give people a cheap option to get up the canyon. And in the future you may be able to use electric busses which would reduce the carbon footprint of this option significantly. Instead of tolling there should only be a certain amount of cars allowed up the canyon for the resorts each day during the winter. After that number is reached people will need to park and take a bus, which you need to make improving parking availability at the bottom of the canyon a priority. Also the ski resorts should have to help subsidize the cost of people using the bus to keep cost down because they are the one benefiting from having more people use their resorts. Most of your solutions are either ruining the canyon or making it so expensive and hard for people to use the resorts unless they are rich, which the resorts are already doing themselves. Serve everyone, not just high income residents. I am against the tolling option and gondola, see comments below.</p> <p>Tolling the canyon is not a good solution. The only people that support tolling are the ones that make so much money that adding more onto a day of skiing does not matter to them. The resorts are already raising their prices and pricing out most of the residents of Utah. Adding on another cost to be able to enjoy half of the resorts in Utah is unacceptable. Even if it is only for a few hours a day that would make people going outside of those hours only get a half day, which half day passes at the resorts cost almost as much as full day passes and a lot of people can not afford season passes.</p> <p>I do not support the gondola alternative at all. Although it will help reduce congestion on roads leading into the canyon and help the residents, it will mainly only be benefiting people that are going to snowbird and alta in the winter. Spending over 550 million dollars of tax payer money on a gondola is unacceptable. The gondola will ruin the scenery of the whole canyon, for all users not just skiers and snowboarders. The ski resorts should be paying for the gondola if they want to be able to have more customers at their resorts, otherwise it is a large pay out to two Privately owned corporations who are already making a huge profit off of Utahans.</p>
32540	Eldan Hill	Why even consider a gondola. One lane added so two up in the AM and two down in the PM would accomplish the same thing without destroying property in the canyon. Damage that can not be mitigated.
32541	NORLEEN ACKERMAN	I oppose a gondola which will only be of use to skiers visiting 2 ski resorts. My only use of Little Cottonwood Canyon is as a sight seer & hiker, mainly in the warmer months. Yet, as a taxpayer, I will be paying for a gondola which only benefits resort skiers. This is not a fair use of tax monies, which should benefit a much wider population -- especially the less wealthy.
32542	Rebecca Diehl	Please do not put a gondola in Little Cottonwood Canyon- this idea does not fit the site. It is not Chamonix and the character of the Canyon should be preserved without adding an eyesore to the vista. The impact on the unique ecosystem would be mightily degraded and the outcome would still not solve the overuse problems. Many people visiting the canyons stop well before the resorts to seek solitude in the landscape. Dissecting the canyon with a gondola will win favor with those who frequent Disneyland, but not the fall leaf peekers, the backcountry hiker or skier searching for the gifts only nature can bring. Instead, UDOT should focus on public transportation! This option has only lightly been explored. Bring more creativity to this- how about glass dome buses and a schedule with a parking lots that really incentivize people to use it! For cars, require a Canyon pass much like Millcreek to offset costs of the public transit system that has so much room for improvement. I immediately settled on staying in Utah after a drive and a hike up Little Cottonwood Canyon in October of 2000. It is a very very special place (and I have worked and lived in both Yosemite and Grand Canyon National Parks). Yes- the visitation has increased substantially- and like so many beautiful places, it needs to be preserved in as close to its natural state as possible- that includes to view-shed too. NO GONDOLA!!!!
32543	Jane Farrow	I am in favor of the gondola primarily that it will reduce the amount of vehicles in the canyon and surrounding roads which emit pollutions into the air. It would also benefit during avalanches and severe storms people stranded on the road. Also I would love to go back up to Snowbird for dinner or just visiting but unfortunately I'm unable to drive that road. Please think of us non skiers who would love to experience the beauty of the canyon. Thank you
32544	Ken Voytac	Your plan to establish a toll in Little Cottonwood Canyon is in essence a denial of use for many folks who would otherwise use the canyon but do not have the needed financial resources. Please do not use the canyon issue as a smoke screen to 'raise taxes'. Everywhere else when the demand exceeds the size of the road the road is widened.

32545	Paul Hudson	<p>I live in Sandy, travel Wasatch Blvd. every day, and recreate in the Wasatch Mountains multiple times a week. This decision significantly affects my everyday life.</p> <p>The current traffic problem only happens 10 - 15 days a year. Power-day weekends. Throughout the EIS, the transportation problems are projected to get worse with population growth. Sections 1.3, 1.4.1.2, and 1.4.2.2 (just to name a few) discuss this growth and the related problems.</p> <p>Since the canyon traffic problem now only happens a few days a year, the entire argument for this extremely expensive proposal lies in this projected growth.</p> <p>In this light, I find it extraordinarily reckless to ignore the obvious need to examine the level of visitation that this fragile resource can handle without damage. The EIS simply waves off this point in S.12 by saying "The Forest Service acknowledges that, in the future, management might be needed to limit resource impacts from user visitation in Little Cottonwood Canyon. Specific visitor capacities are not being considered by the USDA Forest Service at this time."</p> <p>If we weigh the growth impacts in this equation so heavily that we are willing to spend \$600M to \$1B of taxpayer money for a "future" problem (right now it's 10-15 days a year) ... how can we not ask the Forest Service to "consider visitor capacities?" It is negligent and irresponsible not to do so. We cannot simply blame the Forest Service and wave this away as a "noted" but "ignored" concern!</p> <p>I am adamantly opposed to this process and the chosen preferred alternative until we have asked and answered the correct fundamental question!</p> <p>It's too expensive. It's too invasive. It only serves a portion of the canyon users. It will likely encourage rather than discourage car traffic. And ... it won't solve the powder-day traffic problem, there will just be lines of cars waiting to enter the rapidly-filled gondola parking lot. There will be no difference to the users of 9400 S and Wasatch Blvd (and surrounding neighborhoods) on those days.</p> <p>This is not the right answer. There are many common-sense approaches that could and should be implemented.</p>
32546	Robert Bench	Taxpayers should not fund the gondola. It will benefit two privately owned resorts. The gondola would be of use primarily on weekends during the winter.
32547	Doug Mayor	No gondola! Improve frequency of bus service instead
32548	Allison O'Connor	This project is unjust: It disproportionately benefits a small number of people, but will be paid for by a large number of tax payers. THOSE WITH THE MOST POWER SHOULD NOT HAVE THE BIGGEST BENEFIT FROM TAX DOLLARS
32549	scott angus	Another burden for the tax payer's. Another pet project for UTA. Definitely NO gondola!
32550	Scott Angus	Leave the canyon as it is.
32551	Andrew Adkins	<p>I will start out by saying it's appalling to me that the majority is being ignored on this issue. The public has been clearly tilted against the gondola project, and yet it moves forward full steam ahead because those behind the scenes are oiling the right political gears. Is there nobody who will think of what a dozen 200' tall metal structures will do in permanently defacing the canyon's natural beauty? And for what purpose? So ski resorts can increase their max daily visitation? These resorts have lost the goodwill of the local population by supporting this clear example of crony capitalism. I, and I'm assuming many others, would prefer Udot do absolutely nothing than build this massive wound on our state's natural character. I'm a skier, I've spent a big portion of my life at these very resorts, and have been a snowbird employee in the past. Skiing is great. That being said, skiing is absolutely not worth the toll this project will take on one of our state's most beautiful natural areas. Generations to come will never be able to look upon Little Cottonwood's glacier sculpted canyons in the same way we do now. The "visionary" mock-ups of this project to me are straight out of a horror movie. If Udot is really concerned with helping the resorts cram more people onto their slopes, certainly there are better alternatives. We haven't tried anything, let's take some baby steps first. And let's hold these resorts accountable for their unsustainable business practices. Think of the other canyon users. Please!</p>
32552	P Vu	<p>I do not want my tax dollars to fund this gondola project. If businesses/investors want to fund it privately, I am open to that. However, public funds should fund public services, like roads and mass transit. These benefit the wider community.</p> <p>The gondola will only serve a small part of the community. Those who want the gondola should pay for it. Those who use the gondola should pay for it. Taxpayers should not cover the costs of this project.</p>
32553	H.Blaine Walker	<p>Let's move forward with the Gondola. There have been numerous studies and the EIS is also complete.</p> <p>There appears to be mixed comments on the issue and some without a foundation other than personal opinions. Are we to ignore the studies and the EIS?</p> <p>To those who oppose it and those who favor it, we will and should remain friends regardless of the final outcome.</p>
32554	Sheridan Davis	I am against the Gondola as a preferred alternative. I also feel that a phased alternative that required no infrastructure change should include an hour or two each morning and afternoon that allows a single up lane in the morning to be used for buses and carpooling vehicles. Similarly, a down lane in the afternoon peak hours should be dedicated to the same. This idea requires more buses as an investment and incentivises getting people out of their cars--or into cars with many other people joining them. Please consider adopting this idea as an immediate way to increase public transportation use.
32555	Loch McRae	The gondola is not necessary

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32556	Jennifer Michas	<p>Honestly, this whole thing seems like a big joke to me. It's poorly thought out and won't work to alleviate the traffic issues in LCC. It reminds me of the fiasco occurring now with the Inland Port. This is a huge waste of taxpayer dollars that benefits private individuals and companies, is poorly thought out, and is ultimately useless/won't work. Please DO NOT let this move forward. My top reasons to ditch the gondola plan are as follows:</p> <ol style="list-style-type: none"> 1. The gondola does not benefit the community--only private individuals and companies; 2. The gondola does not solve a transport issue. The last time I checked, the only people in Utah riding public transit are homeless or are very poor. They likely have no interest in going to a ski resort. Seriously, NO ONE will use this aside from novelty. The people who take the bus will continue to take the bus, and the people who drive will continue to drive; 3. The gondola is not efficient. It will take so long to get to the ski resorts, what's the point? People are too impatient to wait in a line to get into LCC, so they proposed some idiotic plan like a gondola. They'll be waiting in a LONGER line for a gondola than it would take to get up by car unless they get there very early. But in that case, they'd just drive because there would be no LCC traffic line, and it's MUCH faster to drive then; 4. IF you disagree with me and think the gondola will work to alleviate traffic and get more people up LCC, then the gondola creates future problems, as more development of LCC and ski resorts will be necessary to accommodate more people. There are more people than the resorts can accommodate when LCC is backed up, so there is really no current problem to solve-only future ones created; 5. The gondola will further destroy the natural beauty of LCC--not to mention wildlife habitats. What little wildlife is left in LCC will certainly move out; 6. Planning won't let Snowbird build more buildings because of "environmental disruption", yet the same is considering something FAR more disruptive and at the same time trying to get MORE people up the canyon...this makes a lot of sense.
32557	mindy taylor	<p>Please look at alternative options before spending money on a gondola. My family of 6 enjoy biking, skiing, and hiking in the canyon. We are happy to carpool, and do most the time, when we use the canyon. Why not start with a carpool mandate? Why are we considering such an expensive solution to a problem that is an issue only a few days a year? Why are the businesses who profit from this not helping to pay for it? None of this makes sense. There is no common sense, only a few people hoping to make a lot of money on our investment. It not a good thing for Sandy.</p>
32558	Katherine Kitterman	<p>I do not want to see the natural beauty of the canyon ruined with a gondola which is an inflexible solution. I hope other solutions will be implemented which are less impactful on the beautiful scenery in the canyon.</p>
32559	Austin Sanchez	<p>This is an atrocious attempt to fix a problem that doesn't need a solution. No one wants a gondola besides those who don't have to pay for. Go eff yourself in your own A utah government.</p>
32560	Jessica Koontz	<p>The gondola is expensive and is invasive to the environment. There are other options that can help to solve the problem in Little Cottonwood Canyon that are less expensive and less harmful to the environment. This can include tolling, more public transit, or parking passes. UDOT should implement more practical, less expensive, and adaptable solutions before jumping to the most costly option.</p>
32561	Linda Morrison	<p>Please do not destroy the character of the canyon with this ridiculous gondola. Better bus service ie. busses running more frequently and from more places in the valley would would be a far better option. It is a ridiculously expensive solution to solve a problem that only takes place a handful of days a season. Unless you close the canyon road, the gondola will not stop the traffic problem on powder days, it will just shift it to the areas around gondola base. As a skier, I don't want my travel time to the resort increased by the slowness of the gondola or the time spent waiting in line at the gondola base to ride it. As a tax payer I find the idea of the public paying for a gondola to service two private businesses unconscionable. As an environmentalist, I do not not want to see either the physical destruction of the canyon nor the visionary blight. It could not be any more clear that this gondola idea is boondoggle to benefit a few at taxpayer expensive.</p>
32562	CHARLES BUTLER	<p>The Gondola option is a massive eyesore that will require public funding to the benefit of 2 private businesses and do nothing for the many non resort trail users. More subsidies for the expansion of the ski industry in Little Cottonwood Canyon is not in the public interest and will only exacerbate the degradation of the this fragile environment</p>
32563	Brian McArthur	<p>Hi My name is Brian McArthur. I am a resident of Salt Lake City Utah I live in [REDACTED]. I am opposed to the gondola project in little cottonwood canyon. I do not feel like it is a fair use of taxpayer dollars and that it will only benefit an elite few. I do not ski at Alta or at snowbird I feel like this project will only benefit those people. It will also enrich the owners of both of these resorts without them having to invest their own money. I also feel like this will be an environmental disaster that will be an irreparable scar and eyesore forever. I am pro other solutions that will help protect the environment as well as benefit a larger demographic of people. Please take me comment into consideration and do what is best for all of Utah not just an elite few. Thanks Brian</p>
38563	Madison MacArthur	<p>Hi, my name is Madison MacArthur and I'm calling to leave a public comment about the proposed Gondola in Little Cottonwood Canyon. I am very much against this project, and I was hoping that I could get somebody to speak to me and get my feedback. I just don't see how this is equitable to the majority of citizens in Salt Lake City and the surrounding area. I also just feel like this is going to be a huge eye sore and ruin the natural beauty of our canyons, and I'm very much in favor of a bus system or just something that's a little bit more of a common sense solution than some giant infrastructure building. If you could give me a call back, I'd be happy to follow up or ask any more questions. My phone number is 714-[REDACTED] and I live on [REDACTED]. Again, my name is Madison MacArthur. All right, cool. Thank you so much. Bye.</p>
32564	Camille Jensen	<p>NO to the gondola.</p>
32565	Jason Erickson	<p>Little cottonwood will forever has changed my heart and soul with the purity it has provided. I want generations to have this</p>

32567	Brad Dalton	<p>I am not in support of the gondola. I don't like the idea of my tax dollars paying for something that only serves the ski resorts. I might be more inclined to support it if there were stops throughout the canyon, but if the gondola is the serve primarily the ski resorts, then they should primarily pay for it.</p>
32566	Linda Walker	<p>I do not support the idea of a gondola in Little Cottonwood Canyon. This is a very expensive solution that will only benefit two ski resorts and will destroy land in the creation of the gondola, destroy more land with the building of parking structures, and will still create bottlenecks of traffic and crowds at the base of the canyon. Our tax dollars need to be used more wisely.</p> <p>Our national parks have been working very hard on traffic and tourist control, and their solutions need to be examined as possible solutions to protecting our canyons. Employees, residence, and hotel guests need separate passes, but everyone else, including backcountry skiers, etc., should make reservations online. A determination of how many parking spots there are available, would limit the number of cars up the canyon and would encourage car pooling. This would leave taking a bus as an option for those without a reservation. Perhaps some of the busses could stop at White Pine.</p> <p>Reservation readers could be installed much like our HOV lanes. If a car passes through without a pass, they would be ticketed, or sent a ticket. While this won't stop everyone, it will deter many people.</p> <p>Please reconsider the idea of the gondola and consider other options.</p>
35225	Josh Reid	<p>I am a regular user of Little Cottonwood in all four seasons of the year. I have traveled and lived in mountains throughout the world. LCC is a remarkably special place.</p> <p>I strongly oppose the building of a gondola in LCC. This would ruin a natural wonder of Utah and America; one that is minutes away from the valley and accessible to a wide range of mountain lovers.</p> <p>It would permanently destroy the beauty of the canyon for current and future generations. The financial benefit of a few construction corporations is insufficient reason to make this irreparable marring of the landscape.</p> <p>Expanded bus service and traffic management is a far better solution on efficacious, economic and environmental grounds.</p> <p>80% of valley residents oppose the gondola. UDOT needs to be responsive to we the people, and not the narrow number of individuals who will financially benefit from this proposed government spending.</p> <p>Thank you for your consideration.</p> <p>Josh Reid</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32568	Kristine Vasic	I am a Sandy resident against the Gondola. I have thoroughly reviewed all the pros and cons. Please do not forever scar our precious resource - Little Cottonwood Canyon by building a gondola in this fragile canyon. The construction alone will be an environmental disaster by polluting the air and water. The towers will be a visible scar year round in the natural environment. Common sense and less intrusive solutions have been proposed by local leaders and those most affected in Salt Lake County. This includes increased bus service options, private shuttles servicing downtown to the ski areas, electric buses or reversible lanes during peak traffic. The gondola will not stop traffic and will only lead to more traffic backups heading to the parking area at La Caille which will jam up the local neighborhoods. Please do not use our tax dollars to fund this project to benefit corporations. I would rather pay user fees and tolls to enter the canyon as a way to reduce traffic, encourage carpooling and shared transportation. Please listen to the people. I am a frequent visitor to Snowbird and Alta but do not want the canyon ruined for a spectacle that is not a transportation solution but rather a tourist enticement to jam more people into the canyon. We can take cues from Zion where shuttles have been successful. We must think innovative about solutions to solve traffic. Thank you
32569	Ryan Hamic	As a back country and resort user of LCC I support any solution that removes cars from the road. If the gondola is estimated to remove 30% of road traffic then I support that option.
32570	Sharon Smith	We should be aware of the canyon and the damage the gondola would create. Just so many people should be in the canyon at anyone time. People will have to car pool or ride buses. I feel my taxes should be put to more important projects.
35227	Bryson Webb	<p>Hi! My name is Bryson Webb and I am a resident, home owner and outdoor enthusiast living in the salt lake valley. I am writting to state that I do NOT want a gondola to be built in the Cottonwood Canyons and for the current EIS proposal to be opposed. I recreate in the cottonwood canyons year round for resort skiing, backcountry skiing, trail running, climbing and for employment. I frequent these canyons more than 50 days a year in the winter alone. The current gondola EIS plan will not solve current problems such as the problem we will see this next winter with decreased bus service. The gondola still relies on buses and will not function without them. What will happen to the gondola when there is not enough bus service to get people to the gondola much like what is going to happen this winter? Please let me know your plans for this.</p> <p>Again, I urge you to NOT follow through with the current gondola EIS plan. Thank you for accepting comments on this issue and remembering that you represent us, the people. We have spoken and we do NOT want a gondola.</p> <p>Thank you,</p> <p>Bryson webb</p>
38564	Hayley Brinkman	Hello, my name is Hayley Brinkman, and I'm just calling because I don't support the gondola, and I just want to make sure that my voice is heard during the comment period. Again, my name's Kaylee. My phone number is [REDACTED] And again, I don't think it's a very good solution because we have been fine without one and maybe trying busses over the gondola would be better and maybe not having a resort that's invested in the success of the gondola that's been like purchasing private property to like have this wouldn't be the best. But, you know then again, please let me know what I can do to further this. Have a great day. Bye now.
32571	Kelsey Hausman	How will years of construction impact access for everyone to LCC? No Gondola!
32572	Kelsey Hausman	I urge UDOT to find a solution that benefits our whole community, not just a small margin. A more equitable solution exists with increased bus transit. No gondola!
32573	Kelsey Hausman	Please remove the gondola as a transportation "solution". How is this equitable for all community members and travelers to LCC?
35229	Andy Parzynski	<p>To UDOT and whomever may read this,</p> <p>I am writing to you to encourage you to deny the FEIS Gondola solution in Little Cottonwood Canyon. As an avid hiker, climber and skier in the canyons, I do not feel that the building of a large permanent structure in the center of the canyon is in the best interest of the environment and the people that visit LCC. While this will most definitely reduce some of the traffic going up to the resorts in the winter, I fear that it will remain mostly unused in the summer. This would be to the waste and detriment of those that visit the canyon in the summer. The building of the gondola will impact the use and traffic in the canyons during the summer for the next several years, and leave the landscape permanently scared. While it may be slightly more expensive to operate on yearly basis, I believe that increasing the amount of shuttles and pickup points for the shuttles will do more in both the long and short term to get people up the canyons. Along with the introduction of a toll, this will limit traffic and also encourage the use of public transportation.</p> <p>If you've made it this far in my letter, thank you for your time and consideration in this matter. I can confidently assume that myself and everyone who lives in the Salt Lake area is concerned about the future of our canyons. Please reconsider building the gondola in LCC. I look forward to voting in the next election that affects this office.</p> <p>Sincerely, a constituent and registered voter, -Andy P.</p>
32574	Kelsey Hausman	Do current office holders expect re-election if this gondola is built? Hear the voices of the voters and community! Please no gondola
32576	Kelsey Hausman	Protect climbing and the tranquility of LCC for future generations. No gondola!

32575	Sydney Rae	<p>My name is Sydney. I'm from Cottonwood Heights & my family has been in SLC for several generations (the first European settlers of the area). Little Cottonwood is a sacred space to everyone in Utah. We love to ski, climb, & hike in LCC. From a personal level, I'm disheartened by the view shed. I feel that prioritize the ski industry over the 60% canyon users that don't use the resort is corrupt. As a wildlife biologist I have ample data showing the destruction this kind of construction does to the ecology. Please consider low destruction options before jumping the gun to such severe measures.</p>
32531	Mackenzie Moran	<p>Dear UDOT,</p> <p>I write to you today to express the need for your attention to the public comments made by your constituents on the proposed LCC gondola project.</p> <p>There is a large, resounding, distaste for the proposed project, from a myriad of members of the community, and I beg you to listen to the community and discontinue the support for the LCC gondola.</p> <p>As an avid LCC resort skier, you would think that I would be excited about the idea of a gondola in the canyon. I've traveled the world as a World Cup ski journalist and have rode many a gondola to access alpine race venues around Europe. This system works Europe. But it will not work in LCC.</p> <p>Salt Lake valley is glorified for its access to recreational paradises, right at its fingertips. Climbers, hikers, skiers, snowboarders, backpackers, families, photographers, birdwatchers, wild flower enthusiasts and folks who enjoy the healing space of nature, recreate in this canyon. Yet this project only serves a sliver of them. And selfishly so, the need of the ski resorts, as a business, is being put above the need of the people, which you were appointed to serve.</p> <p>The immense amount of infrastructure it would take to make this project viable, not to mention the money it would take to fund such a project, is detrimental to ALL locals. Not just tax payers, but all of the life that lives and grows in the Wasatch. This project takes more than it gives. With the intention of only being used for 30% of the year, permanently disturbing and destroying popular bouldering and climbing sites, as well as the natural environments that folks and creatures play in.</p> <p>To increase capacity at a resort by only 30% for the price of permanently destroying an ecosystem, and a main attraction of the Salt Lake Valley would be a shame. Yet another example of putting capitalistic interest first before people and planet.</p> <p>I urge you to reconsider, and say no to the LCC gondola project.</p> <p>Thank you so much for taking the time to read this email. I appreciate your patience and attention in this grueling process.</p> <p>All the best,</p> <p>Mackenzie Moran</p>
38652	Michaela Pree	<p>Hi there, my name is Michaela Pree. Good phone number to reach me at is [REDACTED] I'm calling today to submit a comment opposing the building of the gondola in Little Cottonwood Canyon. I oppose the building because I think that there are much better options in our community such as a bus that has better lasting impact. Salt Lake City is seeing great growth and people moving here and it would be a shame to take away some of the recreational spots that everyone is moving here for. Thank you.</p>
32578	Kelsey Hausman	<p>Gondolas are un-American. ?? #ThisIsntEurope</p>
32577	Sajatah Boyle	<p>To whom it may concern,</p> <p>I do not support the proposal of a gondola in Little Cottonwood Canyon to meet our community's transportation and accessibility needs to access our public land. I ask that the department reconsider an expanded bus service to provide broader, safer, and more reliable transportation for citizens to access their land.</p> <p>My name is SaJatah Boyle-I was born and raised along the Wasatch Front and currently live in Salt Lake City. I have visited Little Cottonwood Canyon throughout my life-in all seasons-for hiking, skiing, climbing, and sightseeing.</p> <p>I greatly appreciate that UDOT is searching for ways to improve transport and public access to public land in Little Cottonwood Canyon-however, the scope of accessibility that the gondola proposal would provide is severely limited compared to the needs of the public.</p> <p>We need increased safety and mobility in the canyon year round, not just in the winter. We need increased transportation options to multiple public locations throughout the canyon-not direct transportation to privately owned resorts. We also need a transportation solution that will seamlessly integrate with our transportation needs throughout the valley-not increase traffic and parking to the mouth of Little Cottonwood Canyon.</p> <p>Please reconsider the flexibility of an expanded, electric bus transportation plan. This would increase safety and mobility in transportation year round; it could transport the public to numerous and changing locations in the canyon depending on demand (sport, season, etc.); and it could easily connect with ever growing transportation hubs throughout Salt Lake Valley and the larger Wasatch Front.</p> <p>Thank you for your consideration, and I look forward to your consideration of our comments and further discussions with the public about our lands and transportation needs.</p> <p>Sincerely, SaJatah Boyle (Salt Lake City, Utah)</p>

35235	Ashley Hagemann	<p>Dear UDOT,</p> <p>As an avid climber, skier, and hiker, the gondola would negatively effect so many of our experiences in the canyon. Please look into alternative options such as an expanded bus system and tolling. The gondola is limited in its ability to help all the people who utilize our beautiful canyon.</p> <p>Ashley Hagemann Voter and SLC local</p>
32582	Albert Kabili	<p>I strongly disagree with constructing a gondola in LCC. I also do not like the road widening option either. A gondola would ruin the natural beauty of the canyon. It would also be very inconvenient, take too long, located in an area that still would bottleneck traffic, and an all around horrible choice. A better bus system, creating a toll, or even prohibiting cars like Zion would be far more desirable and cheaper. And the \$500 million cost estimate is a joke. It will easily cost double that with no contractor willing to do it for a fixed price. No. Just no. Polls show the majority of Utahns do not want this project.</p>

Please look into alternative options such as an expanded bus system and tolling. The gondola is limited in its ability to help all the people who utilize our beautiful canyon.</p> <p>Ashley Hagemann Voter and SLC local 2062349588</p>
35244	Micaela Huhne	<p>Hello,</p> <p>My name is Micaela Huhne and I am emailing today to comment in opposition of the proposal to build a gondola in Little Cottonwood Canyon.</p> <p>I oppose this build because I believe there are better options, like a bus, which will be longer lasting and less impactful to the environment. The building of the gondola will also disrupt much of LCC's climbing, an outdoor activity that brings so many tourists and new residents to the LCC area it would be more harmful to the community, land, and economic growth of Utah than good.</p> <p>I look forward to hearing from you,</p> <p>Micaela Huhne Midvale, Utah 84047</p>
35242	Ashley Hagemann	<p>Dear UDOT,</p> <p>As an avid climber, skier, and hiker, the gondola would negatively effect so many of our experiences in the canyon. Please look into alternative options such as an expanded bus system and tolling. The gondola is limited in its ability to help all the people who utilize our beautiful canyon.</p> <p>Ashley Hagemann Voter and SLC local 2062349588</p>
32583	Thomas R Lomx	<p>I feel that a gondola is very efficient to move skiers from the bottom of a run to the mountain. However, as a non-skier, I want to drive up my canyon and enjoy the ability to stop and enjoy the canyon at anyone of the numerous legal pullouts not just at predesigned places. I am not in favorofthe gondola.</p> <p>Thank you.</p>
32584	Campbell Tom	<p>As a Snowbird employee I take the bus each morning. The gondola will not only be a farther drive to load it but will be slower than a bus. Not my vote for the gondola which will take me longer to come and go to work!</p>
32585	Ilana Fogelson	<p>As a long-time resident of Salt Lake City, who has watched the canyons become overcrowded, it is my firm belief that a gondola will not solve the problem and that it is simply another tourist attraction that will bring more overcrowding to the mountains we should be trying to protect. If UDOT was really trying to solve the issue of traffic up the canyon, they would work to make the bus system more convenient, accessible, and affordable for all entrants. A gondola that simply ferries people to and from the ski resort does nothing but benefit the interests of the ski resort. Expand the bus system, stop trying to milk every last penny out of our natural resources.</p>
32586	Jens Tenbroek	<p>I am firmly against the gondola. I just don't understand why we wouldn't first try non-permanent measures. Why not see if increased bus, tolling, traction device checks and reservations would help first. It really makes no sense to me and honestly makes me distrustful of my leaders here if they were to push for the gondola.</p> <p>That the taxpayers would foot the bill for two private businesses just boggles my mind.</p> <p>These canyons and the water they provide are essential to life in SLC. Please take your time in evaluating the impact of this decision and do the moral thing.</p>
32587	Gary Martin	<p>I support building the gondola. I am a lifetime skier at Snowbird and the traffic has gone crazy and will only get worse</p>
32588	Ben Fogelson	<p>The gondola proposal is, for lack of a better term, insane. It is a fixed infrastructure project that would benefit the ski resorts at the expense of all other winter canyon usage. Enhanced bus service, mandatory parking reservations at the resorts, and canyon entry tolls are all lower cost and lower impact solutions. This proposal is what happens when a bunch of transportation engineers think really hard about what would be super cool to build.</p>
32589	Anita Morse	<p>I am opposed to the gondola alternative. Since this would be paid for with our tax dollars this should be decided by a public vote. I'm afraid it's already decided by those with money and who will benefit from this .</p>

32590	Karl Bayerlein	Gondola idea is the worst public works idea ever proposed. It only benefits very few people. A toll road is a far more economical alternative that would provide revenue to shore up the overused infrastructure in LCC and lessen traffic and usage. This is what occurred in Millcreek canyon when the toll was implemented
32591	A N	I, like many others, oppose the building of a gondola system in Little Cottonwood Canyon. This project will destroy irreplaceable habitats and ruin the natural aesthetic of the canyon. The gondola would be an eye sore all for the benefit of skiers and snowboarders. These are sports that are only available for less than half of the year. For the amount of money needed to complete this project, one would hope it would go toward something that benefits the public year-round - like figuring out how to prevent toxic arsenic clouds from being released from the dried up Salt Lake. Please reconsider moving forward with this project, and consider other methods of addressing the issues that have brought on this proposal.
32592	Jeff Chatelain	It is ridiculous the amount of money that will cost the taxpayers private investors with no real cars other than to make snowbird more money... Canyon traffic is a few days avalanche danger can be prevented there are many other ways to direct and control traffic not with an obtrusive structure that will ruin the canyon in the environment forever... No local citizen is in favor at all for this monstrosity and the greed that goes along with it... We can deal with traffic we can't deal with a permanent structure that will ruin the canyon and surrounding neighborhoods
32593	Rebecca Turville	Please do not ever build a gondola in LCC.
32594	Daniel Poulson	The gondola "solution" will be extremely expensive and only benefit two ski resorts, not run in the summer, cost/ride about \$100 it is set., really compromise the environment (service roads carved out of 5he canyon to build and service the gondola, be paid for by the state to service 2 ski resorts and the skiers (state and out of state skiers) who are a vast minority of the state residents paying for it thru their taxes - I am STRONGLY opposed to this "solution" being done before other, less costly and impactful ones are tried/tested.
32595	Ruth Jacobson	Please do not build a gondola up Little Cottonwood Canyon. The price is too high. There are cheaper alternatives.
32596	Craig Sturm	No to taxpayers carrying the financial burden. No to a gondola forever marring the landscape.
32597	Corvin Deus	No Gondola!!!
32598	Thomas Simmons	I am all for this. The canyon is used by so many people now that can hard to call pristine. Busing more people sounds great but most won't ride. The other problem is UTA can't staff the current schedule let alone enhanced service. I do wish it had a stop at white pine to get that traffic off the road.
32599	James Melton	I am against the gondola because I think there are some very effective ways to control traffic in the canyon. Charging a toll to drive up the canyon will reduce traffic a lot.
32600	Jennifer Deans	I oppose building the Gondola. It will deface our Canyon forever, remove climbing areas, and will increase traffic on Wasatch and 9600 S to access the parking. It only serves two resorts and residents should not have to pay for the gondola to serve them. It ignores the needs of other recreators and other year-round canyon users. The cost per ride would also make it inaccessible for local residents. Reserved parking has been very successful at reducing canyon traffic. The bus service can also be increased significantly and additional bus routes could be made available.
32601	Shauntel Graham	Please do this. Also, please do it soon so i can ride it!
32602	Monica Hight	I oppose the Gondola. It will bring more traffic and cause more harm than good.
32603	Albert VanLeeuwen	Here are five reasons I feel the gondola project should be rejected: 1. Public funds should be used to benefit the maximum amount of people with the least cost. This project will only benefit a small subset of the people who use the canyon, it will only benefit those who want to go to Snowbird or Alta. 2. If we truly want to decrease congestion in the canyons, then why is the study limited to Little Cottonwood Canyon. There are two ski resorts in Big Cottonwood Canyon and Millcreek Canyon is also beyond crowded. 3. If there are peak times when traffic is inconvenient in any canyon (this would be early am on big ski days or when folks are returning home from skiing) the consideration should be made to make all lanes one way at that time. If the objective is to reduce congestion having times when all lanes are one way will really move traffic much faster - for the one and a half hours there is any congestion. 4. The focus of the study seems to only be for transportation. if we really care about the impact on the canyons we should consider limiting access to each canyon to the available parking in the canyon. 5. The visual and sound impact of a gondola would be far greater than expected on the beauty of the canyon and will negatively impact the experience of people using canyon services in places other than Alta or Snowbird. Any solution should improve access to all areas of the canyon and create a more enjoyable experience for all people in the canyon.
32604	Jainee Dial	A gondola is a horrendous idea. For all of us Utahns, for wildlife and for our children.
32605	Kent Olsen	Alford does not represent anyone in our family. No gondola! Please do not proceed with this wasteful construction project which cannot be undone. It would be a monument of shame for those who proposed it.
32606	Mark Hayward	I feel a gandola would take away from the natural beauty of the canyon. Also a lot of money to be paid by taxpayers who already struggle to make ends meet.
32607	Katherine Peterson	No Gondola! It is a very shortsighted Skier/traffic solution that will only benefit a few greedy men...The gondola towers are hideous looking, and building an extravagant gondola would be detrimental to the pristine LCC aesthetics and environment. Put simply: The gondola proposal is a very stupid idea!
32608	Karen Gitch	There is no reason to build a gondola when buses could solve the problem. More buses, more frequently, more availability. Building a gondola for a few days of avalanche "back up" is not a wise choice. There is never a backup of cars in the summer!! It's all about money!!! Please reconsider this rediculous idea of a gondola. Save our canyon

32609	Ryan Fanning	<p>I am concerned that the proposed single occupancy vehicle restrictions will threaten my way of life in the canyon. As an individual who likes to ski for an hour or two in the mornings and afternoons before or after work, I am extremely opposed to implementing any restrictions or tolling on single occupancy vehicles. These policies will require users like myself to utilize an inconvenient gondola - adding significant time to our ski commutes and possibly making it no longer feasible to ski during the week anymore.</p> <p>In addition, I wanted to comment that I believe the traffic problem in LCC is far overblown and that truly no traffic solution is necessary. I skied 70+ days last year and only encountered bad traffic on a handful of occasions, which is completely expected for a road leading to such popular ski resorts (look at Colorado, Mt. Hood, and Tahoe; all have far worse traffic than LCC).</p> <p>In addition, I am even more opposed to implementing single occupancy vehicle restrictions in big cottonwood. Please maintain a way for individuals like myself who do not have any close friends or family in the nearby area to ski on weekdays without the inconvenience of the gondola or bus system. The traffic really isn't that bad (the report that started it all said the 30th worst traffic hour required 45 minutes to access upper LCC - why is this a problem that needs fixing when it only takes 20-25 minutes with zero congestion?!?!?!?!?)</p>
32610	John Harrison	<p>The gondola proposal will permanently alter LCC in order to benefit two private companies 20 days a year. So averaging \$600 million (good luck with that estimate) over the first 10 years of its operation it will cost taxpayers \$3 million per day of usefulness, not including actual operating costs.</p> <p>The only thing it will do is cram more people into the canyon on busy days. It can't handle ALL the traffic to the resorts, or even the majority of it. All it can do is increase the number of people on busy days by 30%.</p> <p>Why on earth would we even consider building this? Most days it will simply be an eyesore. If it even lasts. I can think of a few gondola projects in Utah that have ended up as a pile of rusty junk. Bridal Veil Falls and Moab come to mind as locations where this ill-considered technology proved to be an expensive failure.</p> <p>LCC is a treasure and should be managed as such, don't defile it with this contraption. The gondola is a private pipe dream in search of public money.</p>
32611	Halie West	<p>We've told you enough times we don't want the dang gondola. Pick the cheaper option. Save the canyon from further destruction. Increasing the bus system is a better use of resources and will have greater benefits than a gondola that will take years to build.</p>
32612	Katrina Emery	<p>A gondola is NOT the solution. There are several questions UDOT has ignored with a proposed gondola as the solution. Lets just discuss a few questions that should be answered before considering such an expensive, permanent structure: Where do the traffic jams begin? How many days a year is the traffic at a standstill and is it just stopped in LCC? Would a gondola solve traffic issues in LCC and on Wasatch blvd? The answers are obvious here, UDOT. More research must be put in to find a real solution, the traffic is backed up on all roads leading to BOTH canyons. The traffic is worse on powder days and holidays. On powder days, the traffic would not be improved with a gondola, there will still be a line of cars waiting to enter the canyon and this would stall any progress of cars getting into La Caille to park and wait in a line for a gondola that also cannot operate while there is avalanche mitigation in effect. In proposing solutions to relieve traffic in LCC, consideration of all areas affected by this very traffic must be considered. It is not just SR-210 that is backed up from La Caille. The traffic extends all the way down every road leading to the mouth of both canyons. SR-209 down to 9400 S, SR-210 all the way past the mouth of BCC to Wasatch blvd/6200S and onto the highway I-215, and all the way down Fort Union blvd for miles while UPD manually directs traffic and gives preference to drivers on Wasatch blvd/6200S because of how badly I-215 is backed up. The traffic is not just on SE-210 and up LCC. The gondola must be scrapped, find a real solution.</p>
32613	Farah Mohammed	<p>SAVE LITTLE COTTONWOOD! SAY NO TO THE GONDOLA!</p>
32614	Suzanne Harrison	<p>As the state representative for house district 32, I have heard from numerous constituents in Sandy regarding the gondola proposal. The overwhelming majority are opposed to it.</p> <p>They favor bussing, tolls, and parking reservations as part of a phased approach and believe that these measures will resolve the problems that impact the area.</p> <p>I urge UDOT to continue with the phased approach and carefully evaluate the impact of the less expensive and less invasive measures.</p> <p>Sincerely, Representative Suzanne Harrison</p>
32616	Mark Grenard	<p>Don't allow building in this Natural area, keep it pristine without human interference.</p>
32615	Sage Stott	<p>I have grown up at the base of the mountain my whole life and it would be such a devastation if this went in and permanently destructed the natural beauty of our unique mountains.</p>
32617	Ben Oldham	<p>No, please do not put a gondola in Little Cottonwood Canyon. It is not in anyone's best interest.</p>
32618	Lyssa Jensen	<p>I'm opposed to the gondola. It is cost prohibitive and doesn't create more benefit.</p>
32619	Andrew Odenwald	<p>The toll estimate seems excessive. It's going to be a large tax on the people who work or go to school all week and have already paid a lot of money to use these resorts prior to you making any decision on the future traffic restrictions of little cottonwood. It would effectively double the price of a season ticket or greatly limit our options if it's \$25-\$30 per ride up.</p>
32620	Rocio Soto	<p>I am 100% opposed to a gondola!</p>

32621	Stacey Lowe	I find the Gondola proposal an egregious use of taxpayer funds and irresponsible ecologically in our beautiful canyon. Other options such as reservations for parking, bussing, and carpool requirements that are used in other places have not been adequately explored. This canyon road and transportation services must place equal or greater weight on the impact to our citizens and impact on our mountain than to the businesses operating there. I don't ski but I want it accessible for those that do without the permanent damage to the mountain a gondola would create. As as hiker and married to a rock climber, it's our mountain too. Don't mar her beauty and charge us for it to line the pockets of a few.
32622	Lee Walker	By now the public realizes the UDOT comment system has been like a corporate computer answering service which asks for choices, but never shows the choice you want. Never "none of the above." Tiny square so you can't even look at your own sentences. You get clocked out. Or dropped. Is there an undisclosed word limit? There is an unmistakable threat that only answers responsive to the particular narrow presentation will be recognized. I have been looking for None of the above, picking at times the choice I hated least. For a chance to type in the sentence expressing my first choice: Dump this whole evil mess. Put it on the ballot for the public to vote on. It is a monstrous waste of billions of dollars. UDOT wants both the gondola and the road widening. Whatever they get will cost way too much and fail to solve anything. So they will immediately want the other half of their road and gondola proposal. Still a fail but requiring a sprawling belt route. UDOT always starts redoing or overdoing to keep the money flowing through their hands. They will have the traffic down to one lane, perhaps stopped, for years while they work on this stuff. Dust, blasting, heavy machinery putting out fumes. Horrors for taxpayers, residents, watershed, wildlife, air pollution in whole Salt Lake County.
32624	Lee Walker	There should be restraining orders and an audit ready to go. This thing was sprung on the public whole by people who met with "the relevant stake holders" and cooked up a plan that included people perceived to have money and power to help, or be able bought off so it would appear to have no opposition. I find it impossible to trust a Dept of Trans that refuses to plow the road on snow days instead letting the cars line up and idle in the traffic lane. Their own data says an idling car will produce as much toxic exhaust in an hour as 850 cars passing the point. Residents of the residential neighborhood in Cottonwood Heights are trapped on their home street completely on the east, and also on the west if they have to come over to the two lane Wasatch Blvd to work, school, church, anywhere. We have. A home health care desert, becausehome health companies pay their employees and are paid by the insurance commpanies in one hour blocks. If an aide gets stuck in snow traffic for hours it ruins peoples days and relationships all over town. The aide may never get to the residential job in the hour, but clients all over the valley will make angry calls from people that aide is very late to. And snowy Sundays are big days for skiing in Cottonwood Heights. A church burned in Cottonwood Heights a few years ago not rebuildable. The congregations got parcelled out to nearby chapels, including one group to meet across this road to Top of the World chapel. UDOT eventually made an agreement with the LDS Stake President and Cottonwood heights City recognizing the situation and promising to protect the health and safety of these people. The area should be a scenic byway with 40 mph speed limits and various perks. Sunday driving is a traditional use of the route. There are dozens of recreational uses of the canyon. Bird watching, photograpy, drawing and painting, going for a walk or wheelchair ride or picnic. It isn't all about skiing and big bucks.
32623	Lee Walker	There should be restraining orders and an audit ready to go. Bird watching, photograpy, drawing and painting, going for a walk or wheelchair ride or picnic. It isn't all about skiing and big bucks.
32625	Patricia Medina	We don't need to pay for transportation services for a handful of people on a limited basis. The cost is exorbitant (and not my problem). The damage to the environment is unknown but the look is dreadful. The service area is limited. It will be expensive to ride. This project does not benefit Utahns.
32627	Lee Walker	Astronaut diapers. And private shuttle vans exist. Wikipedia's andarticles on Little Cottonwood Canyon describe the beautiful place that it is. They say good roads and close to City and airport. And Utah tourism agency is pushing hard for more visitors. But UDOT is managing it so as to discourage people into crazy expensive and destructive changes in the Canyon. Any self respecting person is not going to gather a group to drive up the Canyon. A big heavy gas guzzler is going to be safer on the unplowed road without traffic control. It is our watershed, but if you are caught in 6 hours of parking in the traffic lane, you might do as others; open both passenger doors and get between them to defecate on the ground. An electric car is too much of a risk with no charging options. Private shuttle vans with ski holders on the back bumper might be an option but they get no respect from the powers that be. Just stuck in the gridlock instead of waved on through

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32628	Kevin Lawlor	I do not believe that Gondola Alternative B is the best approach to managing transportation in Little Cottonwood Canyon. It irrevocably alters Little Cottonwood Canyon -- diminishing its beauty and feeling of wilderness forever. There are far less costly and impactful alternatives -- such as the scheduling system used by Alta last winter -- that have proved highly effective in addressing the transportation issues. Such approaches strike a better balance between supporting winter recreation and preserving the natural wonder of Little Cottonwood Canyon. They are also far less costly. As stewards of this precious place, these are the approaches we should pursue -- future generations will thank us when they are able to continue to marvel at the beauty of Little Cottonwood Canyon.
32629	Jane Owings-Schaefermeyer	If this gondola happens, it will destroy the canyon. That's my main concern. The other is that it will be funded by taxpayers when only wealthy people will be able to afford to use it. It's a night mare. I live in Cottonwood Heights and I'm completely opposed to this gondola.
32630	Vanessa Bartley	<p>40 poles, each 15 feet in diameter, serviced by new roads big enough for huge trucks, will cut through the wilderness of Little Cottonwood Canyon.</p> <p>The exact price has not been revealed by UDOT but it will be expensive to ride the gondola. (Between \$50- \$110 per trip)</p> <p>It only services two sites.</p> <p>It won't run in the summer.</p> <p>It's paid for by taxpayers but only benefits Snowbird, Alta, La Callie, The Tree Farm, and Chris McCandless and Wayne Niederhauser.</p> <p>It's taken from transportation money meant for the entire state.</p>
32631	Michael Hoffee	No Gondola!!! Using public money to pad the pockets of politicians and private businesses is criminal.
32632	Kelli Guericke	I would prefer more buses (full capacity of travelers) and an access fee for individual cars. The canyon winds can be rather intense, and I'm betting that there will be times that the gondola will be shut down. Please don't ruin the scenery.
32633	Rich Nydegger	No! No gondola, no additional bus lanes. Let's start with simple, inexpensive, Lowe hanging fruit. Tolls for cats with only 1 or 2 people in it. Parking reservation.
32635	Jennifer Cayabyab	I am disappointed that the LCC gondola is even being considered as a transport option. My husband and I moved to SLC 6.5 years ago and have been shocked by the way lawmakers don't value the natural beauty here. The gondola is a money grab for the resorts, and we should not be using taxpayer money to pay for this.
32634	Erin Henrie	I am adamantly opposed to the gondola. It is NOT what the citizens want. It seems those elected to represent us are more concerned with partnering with corporate interests. It's so disappointing that this idea has come this far, in spite of clear and widespread opposition from the community.
32636	Trisha Kingston	I think the gondola is a VERY bad idea! Better to park where we would for gondola and take free bus/van up- billion dollars is alot of free vans!
32637	Theadora Sakata	The more I read about it, the more it seems the Gondola is a bad idea for Little Cottonwood Canyon. The money would be better spent on improving public transit along the Wasatch Front overall rather than just focusing on this small area that really only has a problem a few days per year. This is not a good use of taxpayer money. It only seems to benefit very few people despite its hefty price tag. We have seen a lot of cost comparisons, but no formal cost effectiveness analyses. I suspect other options were much more cost effective. I will eagerly see which legislators want to fund this so that I can enthusiastically donate to the campaigns of their future opponents.
32639	Peter Torres	<p>I am a Salt Lake City native of 47 years and a regular recreational user of LCC. My family has skied at Alta for many years during the winter and hiked the various trailheads - including Albion Basin, during the summer. In all of our year round recreating in the canyon, we only experience traffic concerns on a handful of peak "powder" days during the winter. It is for this reason that I think the gondola proposal is a completely ridiculous solution to the traffic issues in question. I don't believe that my tax dollars should be spent on such a fiscally irresponsible project and I don't like the fact that many of the real estate developers who stand to benefit from the project are the same ones who are using their political positions to influence the direction of the proposal.</p> <p>I would like to see more work done on these traffic concerns that is more financially conservative, less conspicuous and more in harmony with the natural environment of the canyon.</p>
32638	Carolyn Sorensen	The gondola is NOT the answer to the traffic challenges of our canyons. As more people want to recreate in the canyons, not just LCC, we will have to find a more comprehensive solution that deals with the traffic at the mouth and all along the Wasatch corridor. This gondola does nothing to address the real problems, just pushes the problem out into the city. There have been many solutions suggested with more flexibility and practical application that can start relieving traffic woes now.
32640	David Mangum	No gondola!!! Growth has limits, respect undeveloped land.
32641	Robert Wardle	The gondola will not alleviate congestion in our canyons. In fact it will make it worse. Please do not allow this.
32642	Bernard Mo	No gondola. Please support the buses, if they were better run, i.e. shorter headways, more buses at peak, more often. If as much money is put in a bus system it would work.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32643	Christopher Rondem	<p>The gondola project is incomplete, at best, and destructive to the privacy of the local neighbors and wilderness explorers at worst. Myopic comes to mind when thinking of the gondola project. So does corruption.</p> <p>If UDOT and the resorts want to create a comprehensive plan to address traffic and environmental issues in LCC, then a gondola isn't sufficient.</p> <p>The gondola is like Mike Tyson putting a tattoo on his face to distract from his history of undesired behaviors. We aren't laughing with him, we are laughing at him. If this project goes through, all we can do is laugh at UDOT and the resorts for their incompetence and corruption.</p> <p>The canyon is for the people. All people.</p>
32644	Valina Eckley	<p>I live in Taylorsville and love the canyons we have. I am very concerned about the expensive gondola proposal. It will go over budget and be an environmental disaster to little cottonwood. Expanding bus services and reducing cars is by far more substantial</p>
32645	Kevin Vigor	<p>I strongly oppose the gondola. It is an expensive boondoggle that spends public funds to enrich private corporations.</p>
32646	Michael Packham	<p>I do not believe that it is the taxpayers responsibility to build gondolas that benefit only the ski resorts. The solution is to further apply parking restrictions at the top, passes needed to begin the drive up the canyon, restriction of private vehicles, and then provide a good bus / shuttle system.</p>
32647	Alex Wheeler	<p>In my opinion after living in both Little and Big cottonwood canyons for 30 years, the gondola is an extremely short sighted choice. All transportation improvements MUST consider all of the Tri-canyons and the Wasatch back. The present option that UDOT is endorsing does nothing to address the over all traffic issues of the entire area. In addition with all the people parking at the bottom of little cottonwood the traffic bottleneck is no solved.</p>
32648	Aidan Ross	<p>Would more practical means not be possible? Spending so much money to fund a project that will only give use a few weeks out of the year is a horrible use of our money.</p> <p>What would something like a tunnel connecting canyons achieve? If wide or large enough, it could accommodate a significant amount of traffic even without widening the main canyon roads, and would permit more than just one overcrowded way to access the canyons. You could drive from one canyon to another during the winter months without having to exit the canyon, and during the summer could avoid guardsman pass.</p> <p>You already have a swiss train engineering company pulled in for the gondola project, why not implement a tunnel system linking the canyons?</p>
32649	mckell poulson	<p>The gondola would just be commercializing the canyon even more so than it is now. Not to mention that it's purpose is mainly for skiers. What about every other recreational activity? In my opinion the gondola would disfigure our world class canyon.</p>
32650	Marc Gallman	<p>Separate the issue into two parts.... Gondola - Yes or No Funded with Tax \$ - Yes or No I am ok with gondola but only with private funding I.e ski resorts pay for it. Problem is these two are lumped together and as such I have to say no to the gondola proposal as is.</p>
32652	Renee Leonhardt	<p>I am against the gondola. It will cost way to much. It will kill many of the migrationty birds and kill alot of the wildlife in the canyon. I will cost to much to use it. No way should the tax papers have to pay for something like this. There are many alternatives. It would be an ugly eye sore on our beautiful canyon. I have lived in utah all my life and enjoyed little cotton just as it is. I am tired of the few people who come in here and ruin our state. I will definitely be watching to see who in the legislature lets this happen and be voting against them.</p>
32651	Joyce Crandall	<p>Do not build a gondola in Little Cottonwood Canyon, because the canyon road gets too crowded on winter weekends and winter holidays. Increase buses or charge a fee like Millcreek Canyon, but do not spend millions of taxpayer dollars to build a gondola, which will negatively affect most people's enjoyment of the canyon for most of the year.</p>
32653	Ed Mineau	<p>A toll of \$ 25-\$30 per car up Little Cottonwood on snow days is excessive. It discriminates against skiers with limited resources and will overwhelm the bus services. This should be a last resort.</p>
32654	Alice Hiatt	<p>The residents of this canyon should be listened to. They are the ones who will live with this decision.</p>
32655	Madeline Galang	<p>Common Sense solution to LCC traffic problem should be implemented including tolling, rideshare programs, parking reservations, and microtransit.</p>
32659	Brad Morgan	<p>I am glad we are having the conversation about how to reduce traffic, but I don't agree that the gondola is the best solution for the canyon. Please reconsider.</p>
32658	Matt Tetzl	<p>I am kind of appalled at the decision to move forward with a gondola especially after the sheer amount of locals, myself included, who have been starkly opposed to the gondola. All the gondola does is serve the ski resorts in an unreliable manner. Between weather delays the gondola trip is still as long as driving up the canyon in rough traffic. An efficient bus system and varying tolls based off of passengers is a far superior system to control traffic without causing any adverse effects to the natural beauty or other outdoor activities the canyon offers.</p>
32657	Anne Charles	<p>I don't support construction of the gondola. It is inequity in that it will only go to a few ski resorts. This is public dollars going to a private resorts expenditures. Our county council is against it and most constituents in the county are against this.</p>
32656	David Edlund	<p>Not in favor. Taxpayer funded monstrosity that benefits a few people.</p>
32660	Susan Biggs	<p>I am opposed to the gondola approach to solve traffic issues up little cottonwood canyon. It is just too expensive, I am not willing to pay out tax money in that way, I think buses electric could be a better alternative. As a close neighbor to the canyon I could never afford to take Gondola after it was built to enjoy the canyon as I do now. I could s bus if needed.</p>

ID	Full Name	Comment
32661	Adam Riser	<p>Please do not build a gondola up the canyon above my house. I moved to the base of the canyon years ago to be closure to the place where I spend all of my free time rock climbing, ice climbing, mountain biking, and backcountry skiing. The gondola only serves to get more people to already over-crowded resorts without addressing any of the issues that the other user groups have. And although the ski resorts will benefit from it (financially, not functionally), it will be those of us at the base of the canyon who will pay for it (literally) through taxes, not to mention the construction, traffic near our homes, and the permanent eyesore of a giant machine running up the beautiful canyon we all moved to live near. It's clear from the previous round of comments and your response to them that you're not listening to what the actual users of the canyon want, but in case you are, count me 100% in the no gondola category.</p> <p>Adam</p>
32662	John Bianucci	<p>Although the Tram may be the least expensive and invasive I oppose it because 1)it will be mare costly to run and maintain 2) will only serve the ski resorts 3) is only viable in the Winter. Use buses or bite the bullet and add lanes to the existing road.</p>
32664	Jamie Printz	<p>No gondola. The resorts need to pay for more transport costs and provide their own buses in addition to tolls and more buses.</p>
32663	Michale Brunker	<p>Do not let this move forward. This will only service the resorts at the top of the canyon, and is a disaster environmentally.</p>
32666	Kolin Powick	<p>Thanks for the opportunity to provide comments. Moving people up and down LCC on a certain number of specific days in specific seasons IS a problem. Confirmed. I question if the proposed gondola is actually the optimum solution. It would appear that a staged approach to see "if you can get there from here" before going BIG would be a viable first step. For example - the bus program, when implemented in Zion National Park seemed to be a relatively easy thing to implement and appears to have been successful. Would this not be worth trying in LCC prior to signing up for a an incredibly expensive gondola alternative? The dollars alone, to solve this sporadic problem seems excessive.</p> <p>I moved to SLC almost 25 years ago - SOLELY for the access up the canyons - proximity to world class rock and ice climbing, and backcountry skiing, before and after work. The gondola would greatly negatively impact so much of the access that makes SLC so appealing to climbers, skiers, hikers and runners... and it would be a travesty to lose portions of this incredible resource that SLC has to offer...</p> <p>Having easy access to the Wasatch Front is what makes SLC so special... It doesn't seem that the proposed gondola solution considers all users of the canyon equitably...</p> <p>Thanks again for the opportunity...</p> <p>Kolin Powick VP of Product Black Diamond Equipment</p>
32665	Zack Adams	<p>We don't need a grand \$500 million solution to fix this traffic problem in the canyon. We can make small incremental changes that would cost WAY less and easier for the public to handle. Here are some ideas:</p> <ul style="list-style-type: none"> - Have the resorts use parking reservation systems, so people aren't driving up the canyon just to drive back down when they find out the parking lot is full. (maybe even have a big sign at the bottom of the canyon that shows the available parking at the different resorts - similar to what you'd see in high tech parking garages) - Institute Congestion pricing (where the cost to drive up the canyon is dependent on the demand), then use the revenue to increase the service and quality of the ski buses - have the ski buses pick up from more areas in the valley <p>And honestly, if we just did nothing, people will self regulate and just stay home on the crazy traffic days and find ways to avoid the traffic organically.</p>
38614	Jay and Deanna Niels	<p>Here are our thoughts regarding the gondola. Jay and Deanna Nielsen</p>

32667	John Walsh	<p>I am writing to express my opposition to a gondola up Little Cottonwood Canyon as a solution to the traffic problems we face in the winter, especially on big snow days. I believe we have not exhausted other possible solutions that have a much smaller overall impact on LCC. Primarily I'm concerned with the permanent nature of something that is unproven, only addresses a part of the traffic problem (those visiting Snowbird and Alta) and adds an eyesore to the canyon forever. Without question we have a problem. We have a road already, and I believe, unlike some others in the community, that expanding it, and using a combination of snow sheds in key avalanche paths and an alternating traffic pattern of two lanes in the AM going up, one down, and reverse in the afternoon can work. This could be tried for personal vehicles, or we can invest in a real bus system, not buses every 20 minutes, but every 5-8, to really move people up and down the canyon. This allows safer access for all users to their choice of recreation areas in the canyon.</p> <p>Also, let's not forget that Big Cottonwood is experiencing LCC like traffic problems over the last 4-5 years, so that canyon needs addressing very soon as well. It has more natural barriers to widening, and I'm not suggesting a gondola for that canyon, but UDOT and the state leadership in general need to be thinking bigger picture.</p> <p>What we do in LCC could well be leveraged in BCC. At the base of BCC, I personally can't think of an area to put a giant staging/parking area for another gondola. The use of the property at the base of LCC seems driven by money, not wise long term planning or the best interests of the whole of the outdoor community and industry.</p> <p>Let's admit that we're Americans. We love our cars. Other UDOT efforts at traffic mitigation haven't achieved ridership levels that impress me. I commend the effort as it is the right thing to do, but given a choice, people will take their cars anyway and I fear we'll waste a lot of money on something that turns out to be an eyesore that didn't produce the desired effects.</p> <p>We must try a less invasive, destructive and permanent solution than a gondola up the canyon first. The road area is already "given up" as far as environmental impact to a large degree, and incremental changes in that area should be attempted first.</p> <p>Thank you John Walsh Salt Lake City, UT</p>
32668	Lindsy Lake	<p>I would like the UDOT and my government to consider the bus system. There will have to be implemented a better bus system until the gondola is finished (parking, more buses). If it has to be implemented anyway, it makes sense that it could be a solution in and of itself. Thank you.</p>
32669	Faun Turley	<p>Do not install a gondola in that beautiful canyon!!!</p>
32671	Amy Gertig	<p>Please do not build the gondola. Not only will it be an eye sore, it will not work as well as you intend. First off, there is not enough parking. Nobody will want to park at various park and rides, wait for a bus to take them to the gondola, and then wait for the gondola, and then spend ~45-65 min on the gondola. In addition, the fact that you plan on charging passengers to take the gondola is asinine. It's just another way to make the canyons unaffordable for the people that live in the area. Please consider the two bus alternatives instead. I think the second option including the shoulder, will be the most beneficial. It would be incredible if there were a way to move any climbing boulders impacted by road expansion. Thank you for your time!</p>
32670	Jordan Fierley	<p>I'd appreciate if a new bus system is considered as a solution before the implementation of a gondola. If buses are already needed for construction of gonadola, it seems buses could be a permanent solution. Or charge an entry fee/permit the canyon</p>
32672	Elly Murphy	<p>Keep the canyon as pristine as possible no Gondolas or lifts in the canyon.</p>
32673	Rick Olsen	<p>Since there is no funding source identified, perhaps there should be a ballot initiative done, and prevent burdening the taxpayers from funding this venture, which will only financially benefit 2 ski resorts during the ski season.</p>
32674	Timothy Marshall	<p>I live in Herriman but ski mostly in Park City. I've skied in the Cottonwoods before but I really dislike driving those canyons. Especially when there has been recent snow. Parleys is a much better canyon to drive. The traffic is also horrible in and around the base of the mountains. There isn't a silver bullet solution. But a good mix of a gondola, public transport, and car pool incentives would greatly help. I know many oppose the gondola but I don't see an issue. Why don't they have an issue with the lifts and gondolas further up the canyon? What about how those are impacting the natural beauty of the mountains. It can be done right and preserve nature. Not to mention it's not just do ski season. What about taking a scenic trip in the fall to look and the trees changing colors. Taking mountain bikes up in the summer. Overall, I feel a gondola with a solid mix of other transportation will greatly help ease congestion and make the canyons more accessible.</p>
32676	scott hogan	<p>I do not believe the gondola is a good choice. 1) the ticket cost to ride it will be very high (probably) 2) the canyon will be a mess for years while it is being built 3) I have not heard a good reason for not just using busses 4) asking tax payers to fund this project for those that have money and go skiing is not okay</p>
32675	Stephen Capone	<p>I think the gondola is the best option. I don't want this to be missed, though: the goal is to take cars off the road, and closing the road to private traffic should be a goal.</p>
32677	Sarah Lovett	<p>A gondola in the canyon takes away from our natural habitat and the beautiful wasatch mountains... only considering the winter industries is a lack of awareness to the grand scheme of things. Our environment is changing. Put the money toward saving the great salt lake, so we have the snow for future generations that will happily pay a toll to save our mountains!</p>

ID	Full Name	Comment
32680	Jane Hudson	<p>I am wholeheartedly against the Gondola proposal.</p> <p>I live in Millcreek, and recreate in the Wasatch Mountains almost every day (year round). I love the Wasatch and feel that we all need to work hard to preserve its beauty.</p> <p>The current traffic problem only happens less than <15 days a year. Throughout the EIS, the transportation problems are projected to get worse with population growth. Sections 1.3, 1.4.1.2, and 1.4.2.2 (just to name a few) discuss this growth and the related problems. The gondola is not only an eye sore, but will cause major impacts to the canyon (i.e. destroying world class bouldering areas and various ecosystems). We need to put real effort into trying to expand the bus system or try another option like tolling. The gondola parking lot will be almost a mile from the gondola station, it's expensive to ride, it's slower than driving and is less convenient (especially for groups and families). People will not use it.</p> <p>It only serves a portion of canyon users, only those going to resorts and the resorts themselves. There is no disincentive to drive so people will continue to do so.</p> <p>I find it extraordinarily irresponsible to ignore the obvious need to examine the level of visitation that this fragile resource can handle without damage. The EIS simply waves off this point in S.12 by saying "The Forest Service acknowledges that, in the future, management might be needed to limit resource impacts from user visitation in Little Cottonwood Canyon. Specific visitor capacities are not being considered by the USDA Forest Service at this time.</p> <p>"If we weigh the growth impacts in this equation so heavily that we are willing to spend \$600M to \$1B of taxpayer money for a "future" problem (right now it's <15 days a year) ... how can we not ask the Forest Service to "consider visitor capacities?" It is negligent and irresponsible not to do so. We cannot simply blame the Forest Service and wave this away as a "noted" but "ignored" concern!</p> <p>I am adamantly opposed to this proposed alternative and demand that all other options that be tried and exhausted FIRST before building a \$600M gondola that will destroy the canyon.</p> <p>It's too expensive. It's too invasive. It will likely encourage rather than discourage car traffic. And ... it won't solve the powder-day traffic problem, there will just be lines of cars waiting to enter the rapidly-filled gondola parking lot. There will be no difference to the users of 9400 S and Wasatch Blvd (and surrounding neighborhoods) on those days.</p>
32679	Peter Wilk	<p>This also does not help the traffic congestion in the canyon, or the Big and Little Cottonwood Canyon. I would like to see these activities also extend into the other canyons outside Salt Lake City. The health and beauty of these canyons are very important to me. In the ten years I have lived in Salt Lake I've experienced-and been part of-the increased use within the canyons. As a mechanical engineer I spend more time thinking than most users about solutions and the various tradeoffs that might be needed in those solutions to the traffic within the canyons. The UDOT proposed solution for improving traffic within Little Cottonwood Canyon has some positive, but many negative attributes I would like to highlight.</p> <p>The incentives and punishments for low occupancy vehicle traffic, particularly in the winter, that UDOT is proposing make sense to me. I like the possibility of a toll and parking limitations at the ski resorts. These types of changes are extremely useful since it can change human behavior, need little physical infrastructure, and can be frequently tweaked to update to changing needs and efficacy information.</p> <p>Another attribute of the proposed plan I like is the inclusion of snow sheds. I have frequently come across these structures in other areas of the US and Europe that I've traveled. I think they are a relatively low visual and environmental impact to improve downtime due to reduced impact to avalanches over the road. One item of great importance in developing the designs of these structures is that a heavy priority is also placed on their aesthetic design not just their function. Please consider architects and designers with a history of making structures that blend with the environment to not overly impact the beautiful canyon that we have. These structures aren't a generic overpass over I-80 and should be designed by individuals with talents that will allow these safety features to look like natural parts of the landscape.</p> <p>Another easy way to improve traffic into the canyon that requires no infrastructure is more enforcement of snow tires/chains in the canyon. It is frequent that I see a vehicle spun out in the ditch or unable to start moving uphill after coming to a stop and it is purely due to inadequate tires. This includes numerous trucks I've seen with overly worn tires despite technically being of the proper rating.</p> <p>On the other side of the coin is the numerous missteps UDOT has made in this entire process. The biggest of which is the myopic scope of the problem that UDOT is considering. The Big and Little Cottonwood Canyon are not independent entities, they are barely 4 miles apart. Planning a +\$500 million dollar solution to one canyon's traffic problem is not prudent. On the worst traffic days there are simultaneous and related problems in both canyons. Anyone who's traveled up the canyons during these times can see that they are not independent entities and must be treated as a whole.</p> <p>Similarly to the inadequate topographic scope is the time period and users that UDOT is focusing on. The focus is on fixing a problem that is less than 50 days a year and only for users attending two private businesses. A transportation plan for Please do not build this gondolas. Respect nature and offer better solutions for public transportation, and encourage the ski areas to take action too.</p>
32678	Michael Ambrose	<p>Please do not build this gondolas. Respect nature and offer better solutions for public transportation, and encourage the ski areas to take action too.</p>
32681	Marilyn Perkins	<p>The gondolas have no place in our canyons. We are not Europe, better, bus, routes, and different road structures could help alleviate this problem. Do not spend my tax dollars to benefit the few and far between. You are making just a few people wealthy while not considering the vast majority of the neighborhoods and people in the neighborhoods that surround this travesty no gondolas!</p>

ID	Full Name	Comment
32682	Vanessa Block	Good morning! After reviewing the information above, i am very against the gondola. it does not seem like a solution for all users of the canyon, and creates a very unsustainable plan for the residents of Utah. This appears to only benefit and serve the tourists looking to ski, and does not create a long term solution for the use and needs of the canyon. i am in favor of regulating use days, NO GONDOLA
32683	Lloyd Petty	Use my tax money for something else that benefits the community please.
32684	Stacey Cole	I oppose UDOT decision to place a \$550 million dollar gondola up Little Cottonwood Canyon. This would be paid for by taxes and only benefit La Calle, Alta and Snowbird.
32685	Will Robertson	Please do not build a gondola to fix a traffic problem. Building a gondola is a new attraction, not a fix to the existing traffic concerns. If taxpayers are holding the bill for this, we need something useful which this is not. The only people that benefit from a gondola are landowners, ski resorts, and Doppelmayr. A tunnel that connects all ski areas and backcountry stops is a better option. I would prefer to sit in traffic over ruining the scenery of LCC.
32686	Kyle Wagner	This is, frankly, the worst possible solution to a nonexistent problem. The gondola serves only skiers and realistically only provides an improvement for a few weekends out of the year, for a price that is just completely irresponsible. If you really want to reduce traffic in the canyon, the answer is BUSES and TOLLS. Anyone who has lived in another city and used SLC's public transit knows that it leaves much to be desired. Half a billion would go so much farther if it was put toward improving the current bussing system (more lines, better park & rides, etc), and with the bonus of not permanently damaging the natural landscape that so many locals use every day. Improving our public transit would also create year-round improvements that anyone could benefit from, not just skiers. It would also reduce emissions in the valley, which is a MUCH bigger issue than weekend traffic, and been drastically under-addressed by the city over the years. And when it comes to actually getting people to use the bus system, a toll to drive in the canyon on peak days is a really easy way to incentivize that.
32687	Charlie Barta	APPOSE GONDOLA! I love to Wasatch mountains and LCC is a place of endearment and love and the gondola will destroy important ecology, and truly ruin a place that human contact has already greatly effected. The gondola is not the solution, the users of this canyon oppose it, please. Life is not about what money opportunity you can make for yourself, make the right choice. You know this isn't ethical
32689	David Douglas	No gondola in LC Canyon. I am a lifelong SL County resident.
32688	Kennedy Jackson	Don't do it. Protect our canyons. Not everything has to make money to be beautiful.
32691	Thomas Biggs	I disagree that the gondola should be built. I do not agree with the cost and annual maintenance. I do not believe tax payers should be providing this service. If the ski resorts want better access, then they should fund (at a minimum) 50% of the total building cost and its annual maintenance. Right now, ski resorts are getting a free pass, as always, to benefit from the tax dollars of patrons who don't ski or visit that canyon.
32690	Julie Brown	I'm opposed to the Gondola B Plan for several reasons. 1. The construction of the gondola would cause damage to the canyon due to the heavy equipment and excavation that would be needed to construct the support structures. These structures would obstruct the canyon views. 2. This project is very expensive and with the primary benefit going to skiers and ski areas. The majority of the population are neither of those and shouldn't incur the tax liability. I'm opposed to use taxpayer dollars for private business. 3. In neither of the youtube videos was the issue of cars continuing to drive up the canyon if the proposed gondola is built. Would cars still be allowed to drive up? If so why would people take the gondola? Alternatives: 1. During those 50 peak traffic days in the winter, enhanced bus service would be the only means of getting up the canyon. Only cars that can show proof of lodging in the canyon would be allowed similar to Zion Canyon during peak season. I would be opposed to tolling to allow vehicle access as this benefits the rich and discriminates against the poor. Most busses would be express busses stopping only at the ski areas while "local" busses would make stops at potential winter trail head access points. Support of Items in proposal: Increased parking would be necessary for enhance bus. Additional/Improved parking at Trailhead locations. The improvements that were made at Mill D in Big Cottonwood are great! Avalanches are a concerns so preventing these from closing the road would be important.
32694	Tyler Jackson	I would just like to say I am against the gondola.
32693	Elise Hotz	This will not solve the problem and will have devastating environmental repercussions. Better bussing (without widening the road) plus better parking for said bussing is the way to go. Also, fees for cars on high traffic days to encourage use of the busses and carpooling. Why are we only being given the two most expensive and damaging options? No road widening and no gondola.
32692	Geneva Woodmansee	The gondola does seem either like the most logical, most cost effective, or most environmentally friendly option for Little Cottonwood Canyon. It doesn't make sense for the public to be paying for an expensive gondola system that benefits really only the resorts at the top of the canyon. And unless otherwise demonstrated, it also greatly inhibits/destroys current useage of the canyon for outdoor pursuits like hiking and rock climbing. I would like to see a more cost effective solution like additional bus transit in the canyon and parking reservations - things that encourage foresight and ride sharing to reduce traffic.

32695	Brandon Wicks	<p>I'm a Salt Lake resident and I'm against the Gondola. I've been recreating in Little Cotton wood nearly 40 yrs. I'm a climber, skier, fly fisher, hunter and hiker. The idea of a gondola running up the middle of the canyon is a bad idea and bad for the environment. The destruction of even more forests and the impact this would be on many animals would be enormous. I don't see how this would benefit our community and environment. There are other solutions then taking on this enormous project and costing taxpayers a lot of money even though they don't want it. I don't know a single person in my community that is for this gondola. Only the big money people that benefit from it are wanting it like Snowbird. Please hear me and say no to this gondola in LCC.</p> <p>Respectfully, Brandon Wicks Millcreek UT</p>
32696	Tammy Robinson	<p>I am not a skier. But I am a Utah tax payer. This is an extreme misuse of tax payers' dollars for one season of the year and will only benefit the wealthy, while the majority of us hard-working middle-class citizens will be burdened with higher taxes for something we're not even going to use. Please don't mess up our beautiful canyons in order to benefit a few. Why not limit the number of cars allowed per day? Use busses or a reservation service or a lottery system to allow opportunities to those who are going to frequent the slopes. If they want to ski, there are other places within a short drive where they can go.</p>
32698	Jill Thomas	<p>Instead of throwing away all that money so rich people can ride a gondola to ski, how about fixing the potholes in our streets! Most of us will never use the gondola and resent our tax money paying for it. It's simply not fair! Skiers can take a bus.</p>
32697	Spencer McCarthy	<p>Please do not put a gondola up in that canyon! It will be an eyesore for generations to come. Why not use a train and connect it to the TRAX system?</p>
32699	Jeff Boyczuk	<p>You honestly cannot evaluate this project in its current form, including all impacts to the nearby community, and the costs to the taxpayers of Utah, and think this is the correct solution. If so, then you are indeed a corrupt enterprise and should be removed from your positions of authority. The modified solution which removes intermediate parking structures near Big Cottonwood Canyon (BCC) and the Sandy area is only going to make traffic down Wasatch Blvd between BCC and Little Cottonwood Canyon worse than it is today. As a member of that community, that is an unacceptable outcome and one that will not be tolerated. This is an ill-thought out, cost-cutting measure that does not solve any of the primary objectives of traffic easing and congestion and is a simple money-grab by the owners of the La Caille property (aka. Snowbird), and the Alta & Snowbird ski resorts.</p> <p>Now, those of you at UDOT may also be getting kickbacks, so I'm assuming this will fall on deaf ears, but if you can look past your own wallet, and look at what makes sense for the community, then we have still have hope of a better outcome. Please do better than this, the people of Utah, Salt Lake County, and Cottonwood Heights deserve as much.</p> <p>Regards, Jeff Boyczuk</p>
32701	Douglas Worthen	<p>My biggest issue with building and running a gondola as outlined in the current plans is that it does nothing to serve other parts of the canyon. It is incredibly wasteful to build a gondola without adding stops to other trailheads for backcountry skiers. Being public transportation, a gondola should serve more of the public that utilizes other areas of the canyon. A gondola that only serves ski resorts in the winter also ignores the traffic problems of summer usage. Summer operation with stops near major trailheads should be part of the overall plan if the goal is really to provide better public transit in the canyon. Otherwise, using public funds for a gondola to the two ski resorts ignores the public in order to support private business with public funds, which is unwise stewardship of public monies and should not happen.</p>
32700	Tara Kraatz	<p>I'm for tolling the road or adding a tax into programs people use up in that canyon. My family and I dont us that road and so it personally doesn't affect me. I'd rather those who use it pay for it. Either toll the road or let people take public transportation or car pool. But have them cover the costs for whatever is decided</p>
32702	Jim Byrne	<p>Ditch the Gondola. The ideas supporting a phased approach of parking reservations, full car incentives, micro transit, traction enforcement, etc., are far superior and far less costly, and the tax money saved could be spent on the Great Salt Lake.</p>
32704	Jared Ables	<p>The people do not want this. If you let this happen, we will find you, and vote you out of power. It's as simple as that.</p>
32703	Eliza McKinney	<p>I am concerned that the state prioritizes greed over well-being. The gondala will be damaging to our already compromised environment, it will spend millions of dollars that could benefit people in our state who need food, housing, and healthcare (literal life or death situations), and it will do so little to actually improve traffic. To focus even as much time and money that has gone into this project already is a huge waste of vital resources. We need actual innovation to meet climate disaster and our widening class disparities, not tax-funded moneymakers for the rich. Please do NOT build this gondala, we need you to protect our home!</p>
32705	Kathy Howell	<ol style="list-style-type: none"> 1. Doesn't alleviate the traffic on Wasatch Blvd. 2. Services 2 resorts and does not operate in the summer. 3. Invasive and destructive to the canyon.
32707	Ron McKee	<p>I would prefer that my tax money be spent on the gondola which only supports the ski industry. It would be much better to improve the road and increase bus service.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32706	Keith Brown	<p>I DO NOT support the Gondola option identified by UDOT as the preferred alternative. The following are some of my main objections:</p> <p>-With so many urgent transportation needs in Utah that affect so many people across the board relating to safety, capacity, and travel delays it is unconscionable to be dedicating so much funding to satisfy the recreation needs of so few people. The resources required for the gondola to aid the wealthy enjoy expensive recreation on a few premium powder days could be utilized to aid the masses who are in need of better infrastructure to get to work, get children to school, improve the ability of business to transport goods and services. The moral questions that this choice brings have to be addressed.</p> <p>-Again I use the word "unconscionable" to describe the total misuse of the irreplaceable resource of Little Cottonwood canyon. Anything that would permanently mar the space, the views, the character of that unique canyon should forever be banned. We must protect the sacred nature of that canyon. We can not sacrifice that beauty to enhance the profitability of two ski resorts. There are multiple ski resorts along the Wasatch Front that can accommodate additional skiers if access up Little Cottonwood canyon is diminished due to weather or demand.</p> <p>* This comment is starred for emphasis. UDOT does not have a perfect process to evaluate options such as what the transportation future of Little Cottonwood Canyon should be. The process they used to rank the gondola option as the preferred option is far from perfect. Transportation officials need to acknowledge their own limitations and the limitations of the processes that they have developed. This decision is too important and has much too drastic of consequences to allow a flawed process to result in permanent damage to a unique resource.</p> <p>Please halt this project and reset the decision making process, include the moral aspect of the decision in the process. Do not allow the comfort, convenience, and profitability of a few skiers and resorts to permanently mar and disfigure the incredible beauty of Little Cottonwood Canyon.</p>
32708	Ivan Lazarev	<p>We live in the canyon and we are strongly against the gondola as it will not solve the transportation issue. We must ensure that the solution that is ultimately selected will truly allow for a fluid and uninterrupted flow of traffic up and down the canyon. Therefore using a common sense approach and improving the road infrastructure with adequate snow sheds and other solutions where and when needed will provide the best solution for all users of the canyon throughout the year. Spending 600 million dollars is not necessary and is a waste of public money.</p>
32709	Mary Lake	<p>It is NOT ok to use taxpayer dollars to fund a project that only the very rich can afford to use. Make the ski resorts pay for it as they will be the ones who profit from it. Utahns cannot afford another tax that only benefits special interest groups! Start using our hard earned dollars to improve the lives of all of us not just the rich and entitled!</p>
32710	Kathy Gates	<p>No gondola!</p>
32711	Jill Fritsche	<p>Absolutely against this. If the ski resorts want a gondola, they should pay for it. Not the taxpayers.</p>
38656	Angela Wade	<p>Hi, my name is Angela Wade, and I'm a resident of Sandy. But I've also been a resident of this valley my entire life with the exception of living out of state for a while. I am calling to leave a message about the plan to put the gondola in the Little Cottonwood Canyon and my disappointment that the voices of those who are in dissent are, while being considered, don't seem to have very much power because they are not monetized and I just wanted to leave one more comment that maybe might add to those who would rather have you please stop and please consider other things before you go forward mostly because, well, the gondola might have some advantages, the damage that you do by building it takes so much longer to fix than to undo what's already beautiful and special about the canyon and the ways that it is being used. I'm not in denial of the problems and the needs for solution. But I feel like this is the wrong focus. The focus should be on finding a community solution going forward and a stepped process without an outcome that is as controversial as the gondola without trying some other things and without putting the focus on the Gondola, but instead the focus should be on the future, on how children in twenty years will want to use the canyon not what the adults who are nearing retirement or who have business interests how they want to use the canyon, and I just think in wisdom it would be better for you to please consider things and take more time. There is no rush to undo the beauty of that timeless nature in favor of this project specifically when there's so many things that could happen in between and could make a difference for the local community today and in the future. Again, my name is Angela Wade, and my cell phone is [REDACTED] I hope one voice on this proposal matters. Thank you, bye-bye.</p>
32712	Cash Hunsaker	<p>I don't want a gondola blocking the views of the canyon. It wouldn't even reduce the congestion and would just ruin the canyon.</p>
32713	Karen McCoy	<p>I am so tired of UDOT and the greedy politicians of this state pushing the people of Utah off to the side to get what they want because the rich and greedy are the only ones that matter. Leave our [REDACTED] canyons and beautiful outdoors alone! The damage you will cause to benefit a few is absolutely beyond ridiculous. Wake up and go away!</p>
32716	Michelle Johnson	<p>I support Mayor Jenny Wilson with protecting Little Cottonwood Canyon.</p>
32715	Gerrad Lake	<p>Why should I have to pay for something I will never be able to afford to use. How about you spend that money fixing roads and figuring out what to do with the homeless wondering the streets of Salt Lake.</p>
32714	Douglass Hain	<p>Go with the gondola!</p>
32719	David Young	<p>Don't let a few NIMBYs block SLC's larger vision as a world-class mountain destination. Are gondolas an eyesore at Courchevel, Zermatt, or Chamonix? Let's be real, people will take the ride just for the view alone. Put a fondue pot at the top and have a great day :)</p>
32718	Diane Whittaker	<p>I have added comments before against the gondola. Today I lend my full support for Mayor Wilson's plan for LCC. Please take her position as your first choice option. So much more common sense and way less money</p>
32717	Patrick Kelly	<p>Make the ski resorts and skiers pay for it, especially if it's not going to operate outside of the ski season.</p>
32721	Katelyn Miner	<p>As a Sandy local who frequents LCC all year round, I absolutely disagree with putting a gondola in the canyon. This will ruin beautiful views, will cost billions of dollars and will barley reduce car traffic in the canyon. Please do not ruin ur canyon with a gondola!</p>
32720	Susan Fleming	<p>We need a phased approach but no gondola! Eventually maybe a train, but start with shuttle buses. Also we should limit number of people in the canyon on crowded weekends. Conservation of habitat should be priority. We are destroying our environment.</p>
32722	shawn boyle	<p>No Gondola, Wasatch will still remain to be the problem! build the train</p>
32723	Kristin Anderson	<p>This benefits no one with the exception of the Resorts. Too Big, too expensive, not to mention that it's ugly, will be running through and over residential neighborhoods. No way is this the best option for the people or the environment. Buy more buses.</p>

32725	Andy Marks	I'm not concerned with how wealthy skiers are ferried up and down LCC. I am concerned with how the ferry is financed: a bond issue seems best. Participants willingly accept the risk for a compensating reward. It should not be foisted upon taxpayers, most who will never see, let alone use it. The firms lobbying for better transportation to their venues should show the asset on their balance sheets and have considerable skin in the game as well. Thanks for your time: given the sorry state of UT politics I expect this will fall on deaf ears.
32724	Annette Astin	I do not feel a gondola would be flexible or inclusive strategy for traffic concerns in the cottonwood canyons. I think a more viable solution would not include permanent installations of any kind and would also allow for more flexibility as technologies and traffic innovations are part of a forward thinking people.
35252	GALEN SCHUCK	No Gondola! Start ordering electric busses and get a plan ready to expand the road in places. Maybe go with one extra lane all the way up the canyon. Two lanes up in the morning and two lanes for down traffic in the afternoon. We want year round solutions to access the trailheads summer and winter.Gondola will patronize the ski resorts in the winter only. Thank you Galen Schuck Sandy,UT
32727	Robert Mayer	I am opposed to a gondola in Little Cottonwood Canyon. It would fundamentally change the nature of the canyon from a natural area with human activity to a human-dominated landscape.
32726	Taylor Sibbett	The gondola will permanently mark the beautiful canyon that took millions of years to create as a tourist trap with the embellishment of human industrialism. Using electric buses around the clock to shuttle people during peak hours of visitation would not only solve the massive traffic issues Little Cottonwood now faces but would also maintain the natural beauty of the canyon. Please do not implement a Gondola.
32733	Allison Thompson	I do not support the gondola option. We need a cost-effective, year-round solution!
32732	Daniel Hayes	I support Mayor Wilson's common sense alternatives to Gondola B. Further, a public transit solution needs to be affordable for the general public to use, not just the affluent.
32731	Richard Rigby	I think the gondola is a terrible idea and should not be implemented in any form. Other options should be fully explored before.
32730	Sue Johnson	We have experienced the traffic problems created by the ikon pass. We have also experienced a dramatic improvement once parking pass systems were put in place. Such an easy and effective solution. There are so many such solutions still on the table. Pay stations with reduced fees for carpooling, incentives for multi-day ski use, buses, etc. A gondola will ultimately destroy the resource it intends to exploit.
32729	Graydon Harker	The proposed gondola for Little Cottonwood Canyon makes little sense, financially or otherwise. Devise a plan that helps all citizens in the canyon, not just the ski resorts. Impose a daily entrance fee as a start.
32728	Tyler Nelson	No gondola! This is far too expensive and too damaging to our precious canyon. Improve the road and the bus system please!
32739	Joan Ogden	I waver between being appalled and dejected at the idea of "handling traffic" by spending LOTS of taxpayer money to facilitate movement of what will essentially be out-of-state skiers for a limited season of 4 months (if they are lucky). It dishonors all of the residents of the state, indicating to them they must subsidize high-end skiers. As for "supporting tourism" -- what about the other 8 months of the year where the gondola impedes/destroys the natural amenities of the canyon. I heartily vote for revisiting more rational approaches.
32738	Robert Christine Bennett	Absolutely against. It seems like a great way to use an exorbitant amount of taxpayer dollars to underwrite UDOT and the ski industry. Just say no!
32737	Paula Colman	NO to gondola before trying: (1) busing HUNDREDS of ski school kids/families at mouth of LCC on weekend mornings (cost borne by users/resorts); (2) "contraflow" LCC uphill only weekends from 7-9am (free); (3) make passing lanes uphill only from 7-9am; (4) more UTA bus service; (5) paid parking ONLY at both resorts (costs borne by users).
32736	Christine Helfrich	The longest gondola in the world is only 4 miles long. This whole proposal has not been thought out carefully. With extreme storms increasing with climate change, dangling people from gondolas over a narrow steep canyon is insane and a potential public safety nightmare... all to accommodate the "10%" who can afford the ever increasing cost of ski passes. Do not ruin a beautiful canyon that is loved by more than skiers.
32735	Rich Baerwald	As a longtime user of the Little cottonwood canyon , I appose alternative Gondola A and B. As a longtime visitor and recreation user of the rock climbing at the mouth of the canyon, I appose the environmental impact that will occur during construction. The cost to damage and for little gains is untenable.
32734	David Swanwick	Completely against the gondola option. this is ill conceived, hyper expensive to the public, will result in tolls to both canyons, will cost \$30/ride and thus only be used by tourists/one time users. Enhanced busses and a dedicated bus lane is the best option. Please do what is best for the community of canyon enthusiasts and the public at large, not what suits the politicians and developers.
32741	Mary Gibson	I am strongly opposed to the proposed gondola in Little Cottonwood Canyon. It is unethical and unwise to use taxpayer dollars to benefit two private resorts. Consider other alternatives including more storage for ski equipment at resorts so bus transportation is not so cumbersome.
32740	Carter Johnsen	I do not think there should be a gondola. There are other, less expensive solutions that benefit more than just the skier community. This cannot be allowed to happen.
32742	Alex Bocock	The fact that the four impacted municipalities (Alta, Sandy, Salt Lake City, and Salt Lake County) are all opposed ought to carry significant weight. These are the entities that will have to live with this mistake for decades. Please weigh their concerns heavily.
32745	Susan Underwood	Agree the gondola idea, too expensive and will ruin the beautiful mountain scenery!
32744	Margy Dargis	A gondola is ridiculous idea. By the time it get finished we may not even have ski seasons anymore the way global warming is progressing. If this plan goes forward it should be paid for by the ski resorts seeing as they are the only ones that will benefit. I am a skier at both of those resorts and will not ride the gondola just on principle. Having a bus come more often than every 30 minutes would be a good start.
32743	Dennis Kelsch	Too much money to aid a private entity. Will mar the beauty of the canyon. Climate change will end skiing in 5 years anyway. Lets not spend this much money for such a useless purpose. The expenditure could be used to help people with real personal needs. NO GONDOLA!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32746	Andrea Gaglio	The gondola is a horrible idea for the residents of Sandy and Cottonwood Heights. It only benefits the ski resorts and politicians. The residents have spoken against this project. No one wants it. Expand bus service. Have a toll road. Maybe the resorts could build parking garages. Not to mention our winters are getting drier and who knows how much longer we will have winters. Then the gondola will be left to rust. NO GONDOLA!!
32747	Cheryl Loeffler	<p>Please don't put a gondola in our beautiful canyon! Not only will it permanently mar the natural beauty of the canyon, but it is unbelievably expensive, serves only private financial interests.</p> <p>If this idea had come to a vote it, instead of having been undemocratically decreed by an unelected committee, the people would have returned a resounding no.</p> <p>There are better cheaper plans out there. Please go with one of those instead.</p>
32750	Santiago Cortez	This a poor solution and benefits. Only a few Corporations at massive expense to the tax payer. We could use that massive amount of money to deal with our housing crisis.
32749	Davin Grapentine	<p>I strongly oppose the construction of a gondola in Little Cottonwood Canyon for the reasons noted below.</p> <ol style="list-style-type: none"> 1. I oppose the use of taxpayer dollars to fund successful private businesses. The gondola as proposed would only serve the customers of Snowbird/Alta. If the ski resorts want a tourist attraction they should pay for 100% of the construction cost. 2. The gondola as proposed would make traffic worse. Since there is not a proposal for banning/restricting private vehicles from the canyon the influx of additional vehicles going to the gondola terminal will worsen the traffic on Wasatch Blvd and near the mouths of both canyons. 3. The gondola is not a transportation solution and would do nothing for Big Cottonwood. Many people are going to trailhead locations outside the ski resorts and during summer months. Since the gondola would only stop at Snowbird/Alta and only operate in the winter it will do nothing to help solve the year-round transportation issues in both canyons. 4. The gondola is expensive and unnecessary. There are other solutions that would be significantly cheaper, quicker to implement, and have less environmental impact that would actually solve the transportation problems in BOTH canyons. <p>I support expanded year-round bus service in both canyons originating from multiple hubs throughout the valley. This would move the traffic load away from the canyons and actually provide transportation to all canyon users. Along with bus service I support outright banning or restricting private vehicles through high-cost tolling or other methods.</p>
32748	Nathan Shipp	I fully support the conclusion of the study. The gondola is a great solution to resolving the traffic concerns in the canyon.
32751	Elizabeth liz McCoy	<p>To whom it may concern, I oppose the development of a gondola in Little Cottonwood Canyon. I have lived and skied up the canyons in Utah since 1991. The issue re: canyon traffic is the lack of parking at the mouth of the canyon. If there is a plan to build extensive parking for a gondola - why cannot there not be a plan to build extensive parking for carpooling or expanded bus service first. It is less expensive, allows us to use an already existing infrastructure, and has little to no impact to the environment in the canyon.</p> <p>When I travel up Little Cottonwood canyon, I go places other than Alta and Snowbird in the summer and the winter. It is discriminatory to think that all the traffic is solely for skiers and/or resorts skiers. That mindset is playing to the shrinking few people who can afford resort skiing. Therefore, the Gondola will restrict my access to the recreational areas I visit.</p> <p>The Gondola will also provide unnecessary profit to individual people thru their real estate inholdings and/or ownership of certain companies. How about serving the people who need it most rather than the already rich folks who hold legislative and real estate power?</p> <p>The Gondola is an extremely poor choice for tourists and residents of Utah as well as for every aspect of the environment.</p> <p>Please support other alternatives and remove the option of a Gondola from the conversation.</p> <p>Thank you, Liz McCoy</p>
32753	Laurie Bragg	I am categorically opposed to the Little Cottonwood gondola as environmentally destructive and unnecessarily expensive. I am in favor of the common sense options including improved bus service, tolling, multi-passenger vehicle incentives, parking improvement ideas.
32752	Debra Kemp	If it's only going to run in the winter with only 2 stops that price seems totally insane. I am a disabled senior so I get zero benefit from having a two stop high priced gondola. I'll just see higher taxes. It reminds me of the pumps for the flooding at the great salt lake. Does anyone remember that. It seems to me the very same thinking. Choose the absolute most expensive option rater than consider electric buses buses on a loop with lots of stops for people that enjoy other winter adventures other than high priced ski resorts. Still have a parking structure to get the cars off the road but not an insanely priced gondola. If the two ski resorts that are directly impacted with the gondola are willing to pay for the entire project then go for it. If it's our tax dollars get real. There must be a better way. Just REMEMBER THE SALT LAKE PUMPS!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32754	MICHELLE ANDERSEN	<p>I DO NOT support the decision of UDOT that a gondola is the best solution to address traffic congestion in Little Cottonwood Canyon. The use of taxpayers monies, monies designated for ALL of Utah is nothing more than political graft to serve NOT the people of Utah but the ski resorts. I agree with Jenny Wilson's comments: The Utah Department of Transportation (UDOT) has identified the Gondola Alternative B (Base Station at La Caille) with a phased approach as the preferred alternative in its Little Cottonwood Canyon Environmental Impact Statement (EIS). If you agree with me that we should invest in common-sense solutions instead, click here to submit a comment.</p> <p>Although I applaud UDOT's acknowledgment of the value of a phased approach, I disagree with its conclusion that the gondola should be the preferred alternative. The gondola option is flawed for many reasons, including that it will:</p> <ul style="list-style-type: none"> -Cost over a half billion dollars (not considering inflationary cost increases); -Only make stops at two private ski resorts: Snowbird & Alta; -Remove no more than 30% of car traffic from the canyon road; -Operate only during the winter ski season; and -Permanently mar the inherent beauty and public lands of Little Cottonwood Canyon. <p>The gondola is an unwise public investment for a 50+ year solution serving a limited group of people, given that it's irreversible and incapable of pivoting in the face of changing circumstances. But it isn't the only option.</p>
32756	Scott Conway	<p>As an avid skier, climber, and hiker, I moved to SLC strictly for access to the Cottonwoods backcountry. It is well known that the current system is terrible for traffic management during ski season but putting in a gondola that will support only the Ski Resort and greatly affect the rest of the Cottonwood community is extremely selfish of the Ski industry. Please consider alternative solutions like promoting the bus system or designing a parking pass for locals with carpooling benefits. The Cottonwoods are one of the few truly great, classic pieces of the world. Do not put a scar on it.</p>
32755	Tim White	<p>I am writing in opposition to the proposed Gondola. It is a massive liability to the taxpayer while only benefiting 2 ski resorts. Little Cottonwood canyon will be forever degraded. If the gondola goes through, I would like to see a ballot proposal to name the gondola after the UDOT official responsible for making the decision.</p>
32757	Caleb Felicetti	<p>I agree that the gondola is not best approach. Assuming the goal of reducing cars in the canyon I think increase down canyon parking and increased bussing coupled with incentives for carpooling and tolling will reduce car load.</p>
32759	Marita Hart	<p>A gondola is NOT the answer. What a great way to ruin the beauty of the canyon. Has anyone thought of continual electric buses like the Zion's National Park model. It works! No cars in the canyon. If that's too expensive, buses work. We rode them all the time to ski.</p>
32758	Jemina Keller	<p>It would be super easy to implement large, extended passenger vans and a reservation system online to shuttle skiers up LCC. Please consider this option.</p>
32762	Kat Moran	<p>I agree with common sense solution.</p>
32761	Janice Mensink	<p>Please find a common sense alternative to the gondola. I support Jenny Wilson's ideas 100%.</p>
32760	Nathan Rafferty	<p>Ski Utah is grateful to see UDOT's selection of Gondola B for this decades-long issue. While there's certainly no "silver bullet" to easily rectify LCC traffic issues, Gondola B provides the best solution for reliable, efficient, safe and clean transportation for both visitors and residents. We look forward to working with all interested partners in moving UDOT's preferred alternative forward. Thanks again for all your hard work on this issue.</p>
32763	Teresa S Howes	<p>I believe that the Snowbird and Alta Ski resorts should pay big part of the project, they're the ones that will benefit the most. We don't need to subsidized big profit business with our tax money. Sincerely, Teresa S Howes</p>
32765	Lya Wodraska	<p>I am very against the gondola since such an expensive project would only serve private businesses and not the general community.</p>
32764	Steven Gudmundson	<p>Do not use public funds/taxpayer funds for this project. I am not against it on principle if the resorts and guests who benefit from it, pay for it. To use taxpayer funds to assist resorts that only serve a small percentage of local population as well as don't assist the many other resorts isn't an ethical use of taxpayer funds</p>
32766	Bryn Berry	<p>As a salt lake county resident my whole life and a user of this gorgeous canyon for 60 plus years, I strongly disagree that the expenditure for the project for Little Cottonwood Canyon is the best viable option. This project clearly only caters to the ski industry, not benefiting the hundreds of hikers and backcountry users in all seasons. In the decades to follow we could likely have very abbreviated ski seasons or no ski seasons in my children's and grandchildren lifetimes, yet they will be stuck with this blight on the landscape. These precious canyons are why we live here. Do Not Mar Them in This Fashion</p>
32770	Mark Gibson	<p>The gondola is a ham-handed and grandiose excess belying many, and more sensible, cost-effective alternatives. I oppose it.</p>
32769	Jake Scheid	<p>I support the gondola. Thank you Jenny Wilson for the reminders to come and leave a public comment.</p>
32768	Karen Walker	<p>The gondola only serves the privileged few, while all taxpayers in the State are paying for it. The ski resorts should pay the half billion dollars, if this is how the county chooses to address the traffic issues in the canyons. The GSL situation would be a better place to spend the money. If the lake dries up, there won't be a ski season and the pollution will be so bad, no one will want to come here anyway. Electric buses and tolls should remedy the problem at less cost, won't ruin the ecology of the canyon and if the ski industry tanks, we wouldn't have invested in a useless gondola. This is shortsighted and a few former legislators stand to make a ton of money from this project. There is very little upside to this for the average person, living in Utah!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32767	Erin Knoeck	<p>I am happy to see that UDOT is planning to proceed with alternatives. As a skier in both canyons I think adding a toll is a great way to promote use of public transport. However that does only work with increased buses and parking. And how long will the enhanced bus system stay in place? What is the timeline to start the alternatives? Is this something that would be implemented for winter 2024?</p> <p>Is the plan still to continue with the gondola regardless of the effectiveness of these alternatives? Is there going to be a measure of effectiveness? What if it is found that buses and tolls alleviate the problem? A gondola is a HUGE landscape changing item. I know UDOT is still waiting on funding, but if it is found no longer needed, are we still going to pay the price and install this?</p> <p>It saddens me that the plan is to still focus on getting more people up the canyon at the price of destroying the beauty of it. We want the public lands to be available for all, but at what cost? I am sure no one wants to talk about restricting access but is a gondola really what is best for SLC and LCC? Reviewing the comments and feedback, UDOT continues to comment that they do not have the authority to make private companies pay, or enforce traction laws, etc... What if instead, the focus is shifted to collaborative effort between different agencies, groups, companies to find the best overall solution, rather than UDOT deeming what is "best for everyone".</p>
32772	Traci Monson	<p>I disagree with its conclusion that the gondola should be the preferred alternative. Cost over a half billion dollars (not considering inflationary cost increases); Only make stops at two private ski resorts: Snowbird & Alta; Remove no more than 30% of car traffic from the canyon road; Operate only during the winter ski season; and Permanently mar the inherent beauty and public lands of Little Cottonwood Canyon. With no trailhead or backcountry access, the gondola is far from a solution that benefits all of LCC's users throughout the year. Little Cottonwood Canyon is a true treasure of our local environment and attracts skiers, climbers and hikers from around the world to enjoy its beauty.</p> <p>Constructing more than 20 towers reaching 200 feet tall and stretching eight miles through the heart of LCC would destroy the canyon's natural beauty.</p> <p>Altering the canyon's footprint will also destroy popular climbing and hiking areas including Alpenboch Loop Trail. This gondola only benefits a few, not the majority of the public that is against it. This isn't the answer and the damage done will damage the canyon forever. This isn't how I want my tax dollars put to use, not to mention it will be much more than what you are stating. There are better solutions, to permanently mar this beautiful canyon is just devastating.</p>
32771	Steven Pritchett	<p>I cannot support a tax payer funded gondola to benefit 2 private ski resorts. I do support the alternatives outlined by Mayor Wilson and believe we should be implementing those as rapidly as possible. Bus service enhancements should be ramping up this season.</p>
32773	Jackson Miner	<p>Do not build the gondola! We do not want this. Our communities have made it VERY clear that we do not want the gondola, let alone to pay for it with tax dollars when the gondola doesn't even alleviate the problem! Please listen to us and stop this proposal</p>
32774	Scott messersmith	<p>Just want to add that I'm a long time user of lcc and that I am NOT in favor of having a gondola. It's a giant waste of money/giveaway to corporate interests. It's a poor use of taxpayer \$'s and the alternatives are less money, more effective and will have less impact to the area. As a climber and bc skier, our voices have been completely left out of the decision.</p>
32775	Jonna Turrill	<p>Why the hell is the gondola being considered as the solution? Is someone getting kickbacks from the only two PRIVATE resorts that will benefit, because it'll only run during winter? Not to mention how terribly it will permanently scar the beauty of the canyon. This type of 'solution' will only serve one canyon as well, and any solution with such enormous cost should be scalable to other canyons. A gondola is expensive and not scalable. I am OPPOSED to the gondola as solution.</p>
32777	Lauri Taylor	<p>Gondola. Just say no. So many reasons.</p> <ul style="list-style-type: none"> o Destroys the beauty of a canyon loved by many people who appreciate the climbing, hiking, camping, birding--all without major distractions. o A swindle on taxpayers money-- won't benefit anyone but Alta and Snowbird. Just erecting the poles will destroy too much of the canyon. All the roads that need to built on the south side of the canyon just for infrastructure is a terrible solution o This will not solve traffic for people wanting to use lower canyon areas as it only has two stops. It won't take enough traffic off the road to mitigate the damage it will do. o So many more reasons. o Stop this plan and look for better solutions.
32776	Steven Haener	<p>Do not build. The canyon is too valuable.</p>
32779	Dan Housley	<p>Snowbird and Alta should contribute a significant amount of the overall cost as the principle beneficiaries of the solution.</p>
32778	andrew mcneil	<p>A Gondola in Little Cottonwood Canyon is a ridiculous idea on par with dredging Utah Lake and creating islands to develop housing or continuing to let the farmers farm and residents grow grass in counties north of Salt Lake City at the expensive of the Great Salt Lake. A combination of increased bus service and automobile toll is a much better solution. Now I'm hearing bus service in going to be limited rather than expanded; also ridiculous.</p>
32782	Nilda Davila	<p>Totally agreed with the common sense solution</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32781	Gary Logan	I'm 70 years old and have skied this canyon since I was 12. I don't rock-climb any more but LTC is a beautiful and serene experience up on the granite - I don't know of a better place and can only imagine how a gondola system would impact that experience. Please don't build the gondola - there are better alternatives. Regards, Gary Logan
32780	Bill Cutting	Limit or eliminate all private auto traffic. Rely solely on electric busses.
32784	Diane Bradford	I'm 72, Utah native and the Wasatch mountains, especially Little Cottonwood, are deeply beloved to me and most of my family. I do not hike or cross country ski or ski there as much the past couple of years but I have studied this gondola debate much better than any of my family or close friends. If I wrote out all of my thoughts they would be remarkably close to those made by Jenny Wilson. She has the facts and I fully agree there must be much better ways to solve traffic problems in this canyon. I strongly believe other options could be more effective, more efficient more visionary in serving the greater good rather than a small number of people. I beg you to listen carefully to Jenny Wilson on this.
32783	Nathan Gilbert	No Gondola, let's do simpler things first.
32787	Susan McHenry	I don't think the gondola idea is good. Billion dollars for a few is very narrow minded and such a waste. Enhanced bus is friendlier to all. Help with hiring drivers and a fleet of buses environmental friendly.
32786	Cynthia Hepworth	As someone who likes to hike and picnic, but who doesn't ski, I would like to see an alternate to the gondola plan. Since the gondola will only make 2 stops at the ski resorts it will do little to improve the congestion in one of our most beautiful canyons. I'd like to see solutions that would benefit more people and enable our growing population to better utilize our canyons without overrunning them.
32785	Christopher Smith	Can Enhanced Bus Service please include a bus stop at the White Pine trailhead? The number of people trying to park there (and spilling over into the road) has grown exponentially and is just overwhelming. I believe the bus solution is the right one, but that it should serve more than just the ski resorts. Especially since the pandemic, the new people moving to Utah seem to be very interested in accessing that trail system.
32789	Linnea Fong	As a SLC resident and avid skier, I would not want to sit on a gondola for 40 minutes in order to get to the mountain. I realize that traffic is a huge issue, but I would much rather sit in my car or on a bus for extended periods of time than in a gondola where I feel confined. I also realize this project would be destroying and limiting access to many of the climbing areas that I frequent in the summer. Almost everyone I know would be devastated by the undergoing of this gondola project. Please listen to the community and consider alternative solutions to the LCC traffic issues.
32788	Kevin Pferdner	I am opposed to the Gondola. I will not use it for the following reasons: 1. Overall cost - I have a feeling this will run over budget for construction and for ongoing operating expense. 2. Cost - The resorts should bare the majority of the cost since it benefits them the most. 3. Cost - It's unknow how much the daily user fee will be per rider and I am going to guess that although subsidized will still be too expensive for my blood. 4. Time - Do you expect me to park at a location that requires me to get on a bus to get to the base station and then take a 40 minute gondola ride to rent a locker for all my stuff when I can more easily drive my car with all my stuff and lunch to the resort and save time and money? I won't take the Gondola over my car. 5. There are other reasonable options - Resorts need to have their own reservation system while incentivizing carpooling. Lift lines are already bad on busy days given the parking infrastructure. 6. Hire more bus drivers and increase busses for busy days. 7. View Shed - Don't ruin our pretty canyon with this monstrosity. 8+ We need fewer people in the canyon and not more. Stop trying to jam more people at the resorts. Just stop already. Sincerely, Kevin
32791	Kendra Van Horsen	This will tear up a beautiful place that will only be used a small amount during the year. Keep what remaining nature we have left untouched. I support Mendenhalls alternative solution. Please listen to us and not the big corporate dollars.
32790	Halli Taukiueva	I agree that we need to reconsider and review putting a Gondola in the canyon. This will have a MAJOR impact on our environment, wildlife, resources, etc... This is not the best idea for Utah or its residents.
32792	Emily Emmer	As a resident of the Little Cottonwood Canyon area (upper Sandy) for over 30 years, I strongly believe we need to explore common-sense solutions such as electric busses, rideshare, reservations and tolls before we create permanent new infrastructure that detracts from the natural beauty of our canyon.
32794	Claire Kasteler	Gondola is a ridiculous option that is not fluid when we are addressing a fluid situation. We need a solution that is more capable of addressing that crowd control isn't necessary every day... so why have a permanent fixture? Electric busses, incentives and fees are the answer. Force people to use busses...other countries force folks to use trains and if that's the only way to get there, guess what... people still ski. I prefer driving, but if my only choice is a bus, I'd take it... spend the money to make them nice busses with lots of features and give them priority over cars... like bus=free. Car=50\$ toll
32793	James Ash	You forget to note wind as a reliability issue to the gondola. Additionally nothing is mentioned about improving access to no resort recreation. You all note how this is meant to reduce traffic up the canyons but you fail to address the full problem at hand. Why are you trying to spend ridiculous amounts of funds for a non common sense solution. Toll and an enhanced bus system would systemically shift the supply and demand function going up the canyon. The tolls could pay for the improved busses. Additionally this allows stops up the canyon for individuals who cannot afford a resort pass or do not go to resorts. Honestly it seems like the resorts are the ones in charge of these government institutions. Crazy how spending hundreds of millions of tax payer dollars for giant corporations just to be able to squeeze and additional soul buying a day pass into their shareholder returns.

32797	Kellyn Trummer	I am requesting UDOT reevaluate less invasive alternatives to the gondola. Options like increased bus frequency, tolling, ride share, and parking reservations should be tried first for a prolonged period of time. There should also be an easily accessible option so that low income Individuals and families can still access the canyon. The gondola is a permanent option that cannot be undone and only services the resorts. A bus or tolling allows for people to access the whole canyon, not just the resorts. The gondola would forever alter the beauty of the canyon, access to climbing and other recreation, and increased busses and other strategies would not!
32796	Chelsey Rollins	This won't meet my needs. I'm a tax payer and don't want this on my bill. I snowshoe in Little Cottonwood. The gondola would not help get me to my locations during the winter. I also hate the hiking traffic. The gondola won't run in the summer. It is not a well rounded solution
32795	David Pearson	I understand that you have many studies as you have considered the Canyon congestion, but I can't understand how you came to the conclusion to put in a gondola unless you are being influenced inappropriately by people who are going to receive some monetary advantage from its construction. You can decrease pollution and congestion better by using electric buses and have the pick-up stops all over the valley instead of one gathering spot at the mouth of the Canyon. The expense is outrageous. Buses will be much cheaper. Also, at times of the year when there isn't a high demand the buses can be relocated, but the tram can't do something else. It will just be unused. Sorry that you made this poor decision. Please don't be so proud that you won't change the plan. Please don't be in bed with developers and be influenced by them. Thanks
32799	Anne Hamill	I oppose the gondola to be built up little cottonwood canyon. It does not solve the problems that exist and will be an eye sore. Other solutions such as one way traffic up and down during critical traffic hours and bus service only on weekends has not been tried. To make tax payers pay for something two large ski corporations will benefit from is a money grab. Shame on UDOT for even considering this as an alternative.
32798	Greg Packer	No Gondola! Model it after other parks/canyons: Paid car access, paid parking, cars access only for employees and residents, electric busses and avalanche sheds.
32800	Heather Reynolds	Please no gondola. We need our canyons to remain pristine. It only serves two major ski resorts and will forever scar the landscape. There MUST be a better option. Please please please no gondola. :(
32801	Vicki Bourns	I do not support the gondola option. It will not improve traffic for the general public. It appears it is only for one specific interest group. The environmental impact is very important.
32802	Barbara Croft	Please NO!
32803	Kendall Van Horssen	Hello, I'm very much against the gondola option for LCC. The fact that it's only serving two sky resorts (who are not even footing the bill for this project in any way, shape, or form), costs ALL of us money whether or not we use it, and will mar the landscape of the canyon we're trying to recreate in just means this is a TERRIBLE idea. If this gondola is put in, we'll know that private interests and money are the real drivers of the plan, not the opinions of the people whose money is being spent. There's so many reasons NOT to put in the gondola, including: Cost over a half billion dollars (not considering inflationary cost increases); Only make stops at two private ski resorts: Snowbird & Alta; Remove no more than 30% of car traffic from the canyon road; Operate only during the winter ski season; and Permanently mar the inherent beauty and public lands of Little Cottonwood Canyon. DON'T DO IT.
32804	Danielle Heinlein	You need a bigger parking lot for the gondola anyway... why not make your big parking lot first then increase the bus schedule and make the bus reliable and see how that goes. I would take the bus if I could actually park at the park and ride (it's always full) and be able to rely on the bus showing up in time.
32805	Michele Neves	Utah taxpayers should not be charged with paying nearly 1 billion dollars for a gondola that only benefits mostly Snowbird and Alta. It is absolutely mind blowing that this has gotten as far as it has. There are so many more worthwhile projects to spend our money on. Snowbird should not get a free ride. Use some common sense.
32806	Rob Deyerberg	The Gondola Alternatives are not the best long term actions... The best actions, for long term costs, long term effectiveness, and environmental and recreation resource protection, are a combination of Enhanced Bus Service, dedicated bus service lanes, and avalanche mitigation snowsheds.
35253	GALEN SCHUCK	Everyone I've talked to has been opposed to building this mammoth eyesore in our canyon. Don't let greed prevail. No gondola. What would UDOT do with 500 million dollars? What kind of canyon/valley transportation system would that kind of money buy? Thank you Gaeln Schuck Sandy , UT
32807	Malcolm Justice	I have skied at Alta since the mid-60s and at Snowbird since it opened in 1972. I currently ski at the two resorts over 100 days per year. The gondola option would be a costly waste of taxpayer money. If Alta and snowbird want a gondola they should pay for it since they are the only ones that would benefit from it. Expanding SR210 would be an even bigger disaster. I am in favor of significantly increasing the number and frequency of buses going up the canyon and building snow sheds where appropriate. Also, an immediate solution would be to actually enforce the traction laws on snow days. Many valley residents, including myself, participate in the UDOT Cottonwoods sticker program, yet I've never seen it enforced. Much of the traffic problems on powder days are caused by people in cars that are not appropriate to go up the canyon under the conditions. Just stopping those cars on bad weather days would a lot of congestion.
32809	Petra Brandy Farmer	When I moved to Utah in 1977, one of the things I loved most was the sight of our mountains. I loved the colorful sunsets everyday, because I could view them from my dining room window. With all the construction of high-rise apartment buildings on every corner, as the used to say about 7-11 stores, I am offended that you would ruin our mountains by marring our mountains so that we could never see the their natural beauty ever again up a canyon where I use to ski when I was younger. Please do not destroy the beauty of our mountains. I say no! No! No!

32808	Alisha Aravena	I am asking that UDOT reconsider its decision to build a gondola as a solution for traffic in Little Cottonwood Canyon. A gondola will permanently alter one of our state's most beautiful areas, so I think it's important that we exhaust all other less impactful options first - the gondola should be our last resort. I feel that UDOT (and the ski resorts) haven't done enough in leveraging the tools we do have to alleviate traffic in LCC, like increasing buses or supporting carpooling to make it easy and more convenient. The gondola will cost us - Utah taxpayers - \$550 million, and there's very little promise that it is even a solution. Furthermore, this "solution" doesn't support ALL Utah taxpayers' interests - it only supports two ski resorts'. It feels very unfair to make us pay for something that will affect our ability to recreate in LCC as we want (climbing, backcountry skiing). UDOT needs to reconsider this decision with EVERYONE's interests in mind.
32810	Aiden Worth	I'm in favor of the gondola B proposed solution. Anything that reduces cars moving up and down that road is a good thing. As a road cyclist I just wish there was a better option for those riding road bikes up the canyons during peak times. A wider and/or separated shoulder would go a long ways to actually saving lives and improving the quality of everyone traving on the road. Roadside parking makes cycling on the road incredibly dangerous and reducing the cars parked up at the top is a thing I'm very much looking forward to. Love the Gondola option!
32811	Brian Prince	I am a resident of Salt Lake County and visit both Big and Little Cottonwood canyons when I have the chance. Unlike many who have spoken out against this project, I've spent time reviewing the information in the documents that UDOT has provided explaining the various options. While many people have had an emotional response to the Gondola option which has motivated them to view that option as a boondoggle or unnecessary, it is my opinion that the Gondola option appears to be the most commonsense solution. It appears to be the most reliable option for the conditions in the canyon, the most environmentally friendly option, and the most cost-effective option in the long run. I would also like UDOT to look into expanding the gondola over the mountain to the Brighton/Solitude area. This would allow this project to benefit both canyons in the long term.
32814	Christian Lenhart	I appreciate UDOT's phased approach. Tolls and enhanced bus service should be the priority, with other methods (such as road widening and gondolas) used as a last resort. If the tolls and buses do not provide enough capacity, I sincerely hope that the \$500 million cost of the gondola is NOT paid for using public money set aside for public transit. Tolls and contributions from the ski resorts should be enough. There are far more worthy transit projects, such as the Rio Grande Plan, that need public funding, and it would be a tragedy if this gondola were to suck up all the available funds.
32813	Carter Davis	<p>As a native/lifelong resident of Salt Lake City I am writing to voice my opposition to the gondola proposed for Little Cottonwood. Not only would this project irreversibly deface one of Utah's greatest natural spaces, but it would cost resident tax payers an enormous amount of money. How can it be considered fiscally responsible to force utah tax payers to fund a project that will exclusively benefit two private businesses (Alta and Snowbird)??</p> <p>I want to go on record as saying that I am vehemently opposed to this project. At a minimum if the project goes forward I suggest allowing the beneficiaries of the project (Alta and Snowbird) to fund it, not local residents.</p> <p>Regards,</p> <p>Carter</p>
32812	Jain Willis	<p>Don't do the gondola! The gondola will destroy the beauty of the canyon and does not meet the needs of the community. Most of the canyon's use is not for skiing, so a solution that only serves skiers is very short sighted. Especially with climate change and the increasingly drier winters, why focus your energy on a season that may not exist soon?</p> <p>Instead, focus on the problem that plagues the canyon the rest of the year: cars up and down the road due to hikers. Add in a toll booth and some buses and the problem is will probably be 30% fixed, the same rate as the gondola, without the giant price tag and environmental impact. A gondola that doesn't even stop at hiking locations fixes absolutely nothing.</p>
32816	Elizabeth Hinkson	I oppose raising my taxes to support a handful of private businesses. Only those who will use the gondola (or other modes of transportation) should have to pay for it. I live on the other side of the valley and don't ski, so I don't want to have to pay to benefit those few businesses.
32815	Brent and Debbie Anderson	<p>As Sandy residents who frequently access Little Cottonwood Canyon, we are strongly OPPOSED to the gondola alternative. Such a gondola would permanently spoil the natural grandeur and public lands of Little Cottonwood Canyon. In addition to decimating the beauty of the canyon, the exorbitant costs in order to construct and operate only during the winter ski season (and serving only two private ski resorts) should be offensive to all Utah tax payers. Further, climate change may render a gondola obsolete within our lifetimes. Finally, it is our understanding that a gondola would result in the removal of no more than 30% of vehicle traffic from the canyon road.</p> <p>It is evident that a gondola is NOT the solution for Little Cottonwood Canyon.</p> <p>Thank you for your consideration.</p>
32818	Nazanin Galehdari	We are residents of Sandy city. Our community has spoken loudly and clearly THAT WE DO NOT WANT THE GONDOLA. Just drive up Wasatch or Little Cottonwood and you will see our crystal for NO GONDOLA posted for everyone.
32817	Jo-Anne Lee	I want to add my voice to those objecting to the proposed LCC Gondola project. I am a frequent user of LCC, climbing, hiking, and skiing so I am in the canyon all year around, and I live in Millcreek so this project is deeply personal to me. I have spent many afternoons on a mid-climb belay in LCC looking out on the spectacular views of the canyon and the valley below, and the thought of that view being obstructed by huge gondola towers makes me sick to my stomach. They would be an irreversible blight on the scenic beauty of our magnificent canyon. It seems to me that the majority opinion of most people living in SLC is against this proposal, but I fear that UDOT will not heed the objections and build it anyway, even though I have read that UDOT recognizes that even with the gondola, that canyon congestion will not decrease. Moreover, making tax payers foot the enormous bill for something that will only benefit the ski resorts seems wildly unfair. I hope that UDOT will listen to the voices of all citizens and not build the gondola in LCC.

32819	Alecia Gerke	Is there a way to only let as many cars that can fit in the canyon up at a time, then just close it? I'm against the gondola because of cost, only going to two ski resorts in the winter and only reducing 30% traffic. Alecia Gerke
32821	Louree Houston	the gondola seems like a short sighted plan which overlooks a lot of different aspects of the canyon users and access to little cottonwood canyon. It does not address many of the issues nor will it eliminate the traffic issue as there is a lot of users not going to snowbird/alta. Especially when we could implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws. Without investing \$550 million taxpayer dollars in a permanent project with so many unanswered questions.
32820	Aaron Rose	There should absolutely be no taxpayer funds allocated towards the gondola. The costs should fall 100% on the ski resorts that stand to benefit from this.
32822	David K	No local will use the gondola. It needs very easy transportation to the gondola. More important, it is too long of a ride. It takes 23 minute drive from cw hts city hall to snowbird vs close to 50 minutes on the gondola. Make it faster. Won't support until the ride is faster. I will support buses until then.
38653	Max Weinberg	Hi, this is Max Weinberg calling. I've been trying to submit a comment on Little Cottonwood Canyon Gondola project on your website, and the link isn't working. I tried a couple of days now when I try to click on submit comment, nothing happens, so it's difficult to submit a comment online or it's impossible, I guess right now. I'd like to know how I can submit a comment if there's an alternate way to do that. You can reach me at [REDACTED] [REDACTED] Thank you.
32824	Julie Zamora	No gondola! Don't destroy nature for all for the convenience of some! There are better options. Sometimes, we as humans need to practice patience and collaboration; good things can't always be convenient. Carpooling and busing are much more environmentally friendly options and don't ruin the beauty of LCC in the process.
32823	Troy Wixom	Snowbird and Alta are at max capacity for skiers. There is a bottlenecked effect because of the steep terrain and cliffs. All skier traffic must pass narrow runs to get to the bottom of the resort. We need a skier traffic safety study. Getting more people on to the hill will only increase injury and deaths. It's time to spend money on the resort planned above Daybreak. That would reduce stress on the cottonwood canyons.
32828	Kirstin Howard	Do not permanently mar our canyon with a gondola system. It is impractical, damaging to the area where pylons/towers will be placed and SO expensive. Please stop the gondola option, which is overwhelmingly opposed by local residents and let's use other methods to mitigate traffic or at very least do nothing, but absolutely NO GONDOLA.
32827	Spencer Millerberg	I'm against the gondola. Please consider more phased approach including parking passes, increased bus, even/odd days for cars by licence plate number, etc
32826	Larry Dalton	<p>I am an outdoor enthusiast, a climber, and your constituent. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction.</p> <p>The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>I hope you will consider opposing the Little Cottonwood Canyon gondola in favor of better solutions.</p>
32825	Alisha Garrett	The Gondola solution does not benefit the masses and is exceptionally costly for the limited benefit. Please consider alternatives before wasting taxpayer dollars.
32830	Thomas Barber	<p>I am an outdoor enthusiast, a climber, and your constituent. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>If the gondola gets built, I will have to leave the state. I cannot stand for such a gross misrepresentation of what the people of the state of Utah want. I will not let my hard earned tax dollars fund a fiscally irresponsible and environmentally unfriendly gondola. I wish this was a joke, just as I wish the legislation to build a pipeline from the Pacific ocean to the GSL is. Sadly this is not the case and most of our legislators in the state are corrupt and paid off by these corporations making millions off of the taxpayers.</p> <p>I hope you will consider opposing the Little Cottonwood Canyon gondola in favor of better solutions.</p>

ID	Full Name	Comment
32829	Stephanie Weber	The Little Cottonwood Canyon gondola proposal is expensive, benefits only a select group, and harms both the canyon and many of the people who recreate in it. The gondola serves two resorts only, has a massive environmental impact, and simply does not acknowledge that the canyon has a finite capacity which must be respected. Backcountry skiers and climbers alike will not benefit from this year-round and permanent operation, which doesn't account for the natural fluctuation of traffic in the canyon. It limits outdoor access, benefits large corporations, does not preserve the canyon, and does not serve the people and the environment in the way that an alternative solution would. The voice of Salt Lake City citizens has been loud and clear, and the choice to abide by shareholders' and corporations' wishes reflects a deep disrespect towards the canyon, the community, and the environment in favor of short-term profit which will soon come to an end. Refusing to accept the reality that the canyon has a finite capacity will do nothing but harm it's future and punish those who recreate responsibly within it.
32832	Courtney Wightman	I am not in support of the gondola. I feel that it will take away from the natural beauty of the canyon. There are other options that are less obtrusive and less costly.
32831	Michal Lieberman	The idea that the city would use taxpayer money to construct infrastructure that only serves the interest of a private corporation is disgusting. If Alta and Snowbird want customers delivered via gondola, they are very capable of paying for it themselves.
32833	Kenneth Black	The gondola option is a terrible plan. It is very costly. Will only operate during the peak ski season. It also will only take 20 to 30% of cars off the road. This will do nothing but add an ugly eye sore to the canyon while accomplishing nothing but spending money. This is a bad idea. Do not do it.
32834	Cedric Shaskey	The preferred primary option serves the ski industries coffers and not the people of Salt Lake City and Utah. While the gondola would be spiffy, it would not mitigate traffic effectively and would have drastic negative impacts on the environment and other recreation activities (ie climbing, backcountry skiing, snowshoeing, etc). An improved bus system with a bus dedicated lane and selective closing of the canyons to car traffic during peak hours would be more effective, less expensive and less damaging.
32835	Cynthia Lund	I agree with Mayor Jenny Wilson's take on this issue. It's better for us to invest in common sense solutions that benefit more people for less money and leave the landscape beautiful and un-marred.
32837	John C	Love those electric buses!!!
32836	Blaine Sorenson	Please choose the least invasive option. Cost is also a concern. The gondola would serve a fraction of people utilizing the canyon while destroying some of the natural beauty of the canyon. To me, hiking and climbing are a much higher priority than ski resorts. All of the lesser invasive options are much better than a gondola.
32838	James Hansen	Gondola is an exhorbitant expense for an inadequate solution.
38655	Anonymous	I'm calling, excuse me, I'm calling in reference to the gondola and I don't think that it is beneficial to the whole community and I'm against it and the fact of the what it would do to the what it would take to large, to just produce the whole thing I think is environmentally dangerous or too or extensive to the mountains and, not dangerous, but I just don't think it's a good idea and I don't think it benefits very many people in the community and it would cost the community and citizens' taxpayer money and benefit a small portion of people. Thank you. Regarding choosing Gondola Alternative B as its preferred alternative.
32839	Paul Diegel	<p>-Expense: The initial cost proposed by UDOT was \$550M. It is highly likely that this will increase dramatically.</p> <p>-Economic benefit: The EIS states: "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." It is not the mission of UDOT to subsidize private businesses nor is that a responsible use of public funds.</p> <p>-Greatest public benefit: The latest Snowsports Industries of America (SIA) participation numbers (2021-22) show a nearly 6% decrease in resort skiers and a 96% increase in backcountry skiers. Data from the National Ski Area Association (NSAA) shows participation in resort skiing essentially flat for the last 30 years. More broadly accessible, dispersed activities such as backcountry skiing, snowboard touring, Nordic skiing and snowshoeing on the other hand are among the fastest growing segments of the snowsports industry. Alternative B ignores these increasingly popular activities and appears to focus on propping up an industry that is not on the rise.</p> <p>-Gondola fees and ease of access: There has been little discussion regarding fees for riding the gondola. It seems logical that high fees to ride the gondola will drive ridership down. Likewise, it seems unreasonable that people will embrace parking in one location, queuing up for a shuttle ride to the Gondola base, then queuing again, often with kids and extra gear, to get on the Gondola.</p> <p>-Seasonality: As currently proposed, the gondola will only run from December through April. This confirms that this is NOT a public transit option and is instead a wholly-taxpayer-subsidized ski and snowboard lift.</p> <p>-Dispersed Use: Backcountry users want to be able to use public transit in lieu of their own vehicles to access the canyon, but that is not possible under the current proposal. UDOT claims to have "Consideration of all canyon users, not just resort visitors" but by only having resort terminals and not operating year-round it's clear that this is disingenuous at best.</p> <p>-Risk/Flexibility: UDOT's consideration of a gondola as a transportation solution is highly risky. There is little discussion in the DEIS for how a gondola system would be modified physically or operationally if that becomes necessary, or who would be in charge of making those determinations, and on what basis, and for what cost, and what the direct, indirect and cumulative impacts of those changes would be. This creates an inadequate basis for a decision to select the gondola alternative.</p>
32842	Brandi Williams	I don't think tax payer money should to building a gondola that will essentially only serve 2 private ski resorts. If they want a gondola, they should pay for it themselves. I also don't think it will solve the traffic problem in LCC. Instead, expanded electric bus service with park-n-ride hubs would be a better solution while maintaining the pristine beauty of the canyon. Buses can make stops at the major trailheads, which would also relieve the parking congestion at these trailheads. This would serve not only the ski resort community but would be a service for hikers, cross-country skiers, and rock climbers and other users of the canyon.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32841	Rodney Rasmussen	No on gondola. It only helps a few developers that will build and sell super premium Condos. Put in one extra lane (miring up, afternoon down) and limit its use to electric buses.
32840	Shauna Whitelock	I strongly oppose the gondola. It will serve only a select group yet burden all with the cost. And the cost just like the prison will be more than anticipated.
32843	Sam Clinard	I'm strongly against building the gondola for the following reasons and others. 1) Less invasive alternatives haven't been tried. This year buses will be reduced making the problem worse. 2) it will ruin the views in slc, destroy bouldering important for climbers. 3) it only serves two resorts and the expense of other users 4) does nothing for bcc traffic. 5) it's unfair to tax payers It seems that most people who live here don't want a gondola. Please consider the harm to udots integrity if you ignore all these people. The people who stand to make money on this will push it through. Hopefully someone with a spine may stand up for locals majority opinion.
32844	Rowan Henneman	I don't think this gondola is a good idea. Not only are you going to be spending nearly \$600 million of tax payers money, you'll be interrupting the views of granite rocks and pine trees that people find serenity in, you'll be only serving the skiing community, which impacts all of the other people who recreationally use this canyon for however long this project takes (years, I'd assume). You'll be negatively effecting the natural beauty of the canyon with the whirring of construction machinery, and I'd much rather my money go towards something to save our Wasatch, not destroy it even more.
32846	Susan Gomez	I'm for the Gondola choice as it will reduce traffic in the canyon. For those driving in the canyon there should be a fee to enter.
32845	Brian Ann Homer	My only concern with a gondola is it sounds like it doesn't serve hiking trail heads so it just helps skiers. Question: Will the ski resorts who benefit from all this expense be helping to cover any of the costs? Will it allow them to expand ski load? Is so then they need some skin in the game.
32847	Carol Swenson	I have to submit one more comment: the "preferred alternative" is the most expensive solution and does not come close to solving the problem of too much traffic in the canyon year-around. Additionally, with stops being only at the 2 PRIVATE SKI RESORTS, it is obvious that this is a solution for those ski resorts only. It isn't a solution for those who want to access other areas of the canyon, or at times other than winter. It doesn't take into account the other issues, such as permanently ruining the beauty of the canyon, the ongoing environmental impact, and maintenance costs over time. If Alta and Snowbird want a gondola - LET THEM BUILD IT, NOT TAXPAYERS!!! Especially all taxpayers in Utah, including a majority that NEVER use the canyon - why should they be paying the costs for Snowbird and Alta?? This is a ridiculous proposal, and is not a solution! It's plain to see that this is simply for those closest to this proposal to make money, not to solve traffic issues in the canyon year around. Plain ridiculous! Are you already bought??
32848	courtney devine	I believe that electric buses with frequent service, required parking reservations (paid, if necessary) at Snowbird and Alta, and adding a toll would offer a much better solution for reducing vehicular traffic (and encouraging carpooling) in Little Cottonwood Canyon. Keep raising the toll as necessary to encourage carpooling. I am strongly against the Gondola, which would forever scar the landscape and diminish the beauty of the canyon. Just because we can cram more people into the canyon does not mean that we should. Stop the Gondola.
32849	Derek Hein	I love Little Cottonwood Canyon and Snowbird has been at the top of my family destinations since I was a kid. I would like to see the Gondola put into place and used! Modern technology can protect the environment and move forward into the future safely. Additional safe transportation option to this wonderful location are needed. Gondolas exist throughout Europe and are a wonderful way to get to places. Lets let this happen!!
32851	Rob McOmber	No gondola.
32850	Michael Braun	I live in the Granite Community. I visit LCC one to two times per week. The Gondola is senseless. I also ski the canyon. The Gondola will: -Cost over a half billion dollars (not considering inflationary cost increases); I as a taxpayer ask to be excluded to increased taxes to provide SnowBird and Alta increased revenues. -Only make stops at two private ski resorts: Snowbird & Alta; senseless waste of taxpayer monies. -Remove no more than 30% of car traffic from the canyon road; tolling, carpooling incentives, increase electric busses will adequately reduce canyon traffic. AND, what is next? The same for BCC? The traffic to Brighton and Solitude is even worse than in LCC. -Operate only during the winter ski season; and -Permanently SCAR the inherent beauty and public lands of Little Cottonwood Canyon. Michael Braun Stop the governmental ploy to appease a few, to make the developers rich, to make the ski resorts rich.
32853	Tim Gibson	I am a PhD geoscientist and avid climber, and I am adamantly opposed the construction of the Gondola in Little Cottonwood Canyon. Not only is this a poor use of UDOT funds that will benefit a tiny proportion of the UT population, but it will have major environmental implications. Further, it will dramatically alter the natural environment of the canyon in a way that will diminish all users' experience. Please reconsider the Enhanced Bus Alternative!

32852	Henry O Whiteside	The gondola is a gift at public expense to two ski areas. Full stop. At best the gondola will serve even that purpose only a few days a year - and likely fewer as snow pack diminishes over time. Constructing the gondola would itself massively impact the ecology of the canyon. It is the most expensive, least flexible and responsive "solution" that can be managed. It simply ignores the broader question of the canyon's carrying capacity and how to address preserving the resources of the canyon will providing the maximum, equitable access compatible with sustainable management of the canyon. Asking DOT to address this problem asking the wrong question. The only saving grace of the likely \$1 billion proposal is the "let's try everything else first" portion. In truth the gondola is a massive distraction from addressing real solutions to balancing access and sustainability.
32854	Sara Wong	I strongly oppose the gondola. The benefits do not justify the cost or environmental impact. I do not want my taxpayer dollars to be used in this way. If tolling and busing reduce traffic in the next several years, then the gondola should not be built ever.
32855	Dennis Mullen	I agree with Mayor Jenny Wilson's assessment.
32857	Saurabh Samaiya	making outdoor easy to view the beauty of nature by means of Gondola is actually destroying the nature itself .. I oppose the the construction of Gondola in Little Cottonwood canyon.
32856	Wayne Fry	No gondola,period.
32858	Sarah Allen	<p>I am an outdoor enthusiast, a climber, and your constituent. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction.</p> <p>The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>I hope you will consider opposing the Little Cottonwood Canyon gondola in favor of better solutions.</p>
38648	D Melsen	Mailed comment
38649	Marilyn Johnson	Mailed comment
32860	Kathryn Lichfield	Use Buses.
32859	Declan Knies	A gondola is an expensive, unproven solution which would not solve the problem because of induced demand. Simply reintroducing the busses from last year and adding often busses and routes would be cheaper and more effective
32861	Heather Sapiro	I do not believe that a gondola is the best solution for our community. It does not take into account all users of the canyon at all access points and will damage and disrupt other recreational uses of the canyon (like hiking and climbing). I'm in favor of other solutions that can be implemented at less expense to the tax payer, like 'no car days', tolls for canyon users or single occupancy vehicles (along with an annual pass for users, like millcreek), bus only days and expanded bus options. I don't see how the gondola will benefit anyone other than tourists and the ski resorts themselves.
32862	Cate Jackson	I am opposed to the gondola because it is an unnecessary burden to the tax payers, and it will be and ugly addition to our beautiful canyon.
32863	Robyn Seldin	Today, October 13, I read that UDOT is proposing to charge \$25-30 for people who want to drive up Little Cottonwood canyon. Parking problems at all resorts rose with the introduction of the ikon and epic passes. I have noticed that parking lots are filled mostly with cars having out-of-state plates. Why not charge those with out-of-state plates, since they are the ones that have the less expensive ikon and epic passes.
32864	David McCray	I am adamantly against the gondola plan.
32865	Carly Badger	I am opposed to the Gondola because it will ruin our ecosystem by adding pollution and cutting down trees. The tax payer dollars should be used in other more responsible ways. The Gondola is not necessary. We already have roads. We just need a more efficient bus transportation system.
32866	Daniel Frysinger	I live in Sandy and visit Little Cottonwood Canyon multiple times a week to decompress after work. Its one of the most beautiful canyons in the United States and serves a critical purpose to those of us who live here. Creating and maintaining an expensive gondola to benefit the ski resorts comes at the cost of destroying the area for those of use who use it year round as a refuge from the city. I love the idea of increasing investment in public transportation in the area to reduce traffic, but a gondola isn't the right answer. Better bussing, parking reservations and tolling would almost certainly ease the traffic more significantly than a gondola while still providing access for all and ensuring the resorts get the foot traffic they need. Please don't destroy this valuable natural resource for those of us who live here!
32867	Bob Brace	Agree completely with the Mayor's position and alternative approaches as opposed to an expensive and impractical gondola.

32868	Jonathan Higbee	<p>I very strongly approach the "Gondola Alternative B" plan. Please do not implement. This is an approach, which solely benefits Rich People and Two Ski Resorts, not the "common man" as such. This approach, will mar the landscape, forever. This approach is unnecessary, and really is a gift and gift to the in my view nefarious gondola developers.</p> <p>This approach is not environmentally friendly, wastes tax dollars, represents government malpractice and mismanagement, grift, and corruption.</p> <p>Do, not, implement, a gondola for Little Cottonwood Canyon.</p>
38657	Diana Nelson	<p>Hi, my name's Diana Nelson. And I am sending a letter but I don't know if it'll get there with the way our mail system is doing so I just wanted to inform you that I am opposed to having this Gondola built. It will only benefit few and make every taxpayer in Utah from Box Elder to St. George pay and if UODT is really concerned about pollution of buses and, over the course of time, have they thought of using electric buses that are being made at this point in time. The green deal is trying to make everybody do electric cars. So why not electric buses? Another thing is that it's looking pretty, you know, like they're showing favoritism over two ski resorts in our valley and versus the other two ski resorts that are in the other canyon which doesn't make sense to me. And well, they also were doing a projected study of what it would cost for maintenance and upkeep and students down at BYU, I believe it was, said that it would cost over \$10,000,000 a year. So that really makes sense for Utah to keep paying more money. And, if skiers are worried about getting up and down the mountain every day and they can afford to spend \$150 to almost \$200 to for a day pass. Maybe they can get a few buddies and share the cost of a room so that they don't have to run up and down the mountain. So those are my issues and I just hate to have the landscape of that beautiful canyon ruined by having another monstrosity that relates to city life in the canyons when you're trying to escape the city and have some tranquility and be with nature. So those are my comments. Thank you. Bye.</p>
32869	Katie Hawkins	<p>UDOT should conduct a capacity/visitor management study to better understand how many visitors LCC can support before completing the EIS.</p> <p>The gondola won't solve Little Cottonwood Canyon's traffic problems, but we already have solutions that are proven to work, including enhanced buses, tolling, parking reservations and enforcement of traction laws.</p> <p>Constructing more than 20 towers reaching 200 feet tall and stretching eight miles through the heart of Little Cottonwood would destroy the canyon's natural beauty.</p> <p>Committing hundreds of millions of taxpayer dollars to the world's longest gondola without a commensurate effort to reduce auto traffic in the canyon nor addressing spring/summer/fall traffic amounts to a government-paid lift for two ski resorts.</p>
32870	Celine Valentin	<p>Please listen to the people who live in the valley and pay taxes to protect our precious wild spaces. This solution is not in the best interest of the people or environment and just benefits private businesses.</p>
32871	Heidi Jackson	<p>So your telling me all the tax payers in Utah are paying 1 BILLION dollars for a freaking gondola when there are kids with no homes and families that this could help. This could go to countless other things to help all of the people in Utah. This is the ugliest most unnecessary thing you could possibly do. Think of all the people who need help in Utah. It's a LOT. Also you could help them but your choosing to do this stupid thing. This is going to be so bad for our environment as well. The animals have less and less space with everything we build in their homes.</p>
32873	Tom Giarratano	<p>To whom it may concern, I am an outdoor enthusiast, a climber, a skier, an avid hiker. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon.</p> <p>This is not a reasonable solution to the traffic problem. It is a narrow minded solution that only serves Alta and Snowbird. Don't get me wrong I love both of those resorts but don't believe Utah taxpayers should be responsible to pay for this gondola. Not to mention this gondola will only serve the resorts, there could be stops at popular hiking trailheads, bouldering spots etc.</p> <p>Also building a gondola going through Little Cottonwood will permanently alter the beauty of the canyon. Building the towers will lead to the destruction of world famous boulders and access issues for walls people have been climbing on for decades. Little Cottonwood has such deep history and to see it ruined for a few wealthy to profit even more is absolutely unacceptable.</p> <p>We need to consider alternatives that do not permanently alter the canyon landscape first and only then should we consider a gondola.</p> <p>-Tom</p>
32872	Kevin Reedy	<p>I'm 100% with Jenny Wilson and oppose the gondola and instead propose to go for the common-sense and less expensive solutions.</p>

ID	Full Name	Comment
38615	John Knoblock	<p>Good to see you in person the other day!</p> <p>Here are my final LCC EIS comments to improve the LCC EIS document.</p> <p>1) The 'Executive Summary' is too long to be read easily. Section S.1 maybe should be an 'Overview' summary of the findings:</p> <p>"UDOT was directed by the Utah Legislature to improve transportation in the State related to the economy and recreation. Ski resort traffic in LCC rose to the top priority and we studied all aspects of the problem both in and out of the canyon. UDOT has determined that a gondola up the canyon is the best transportation mode for the steep avalanche-prone canyon that provides the needed capacity, safety, and reliability balanced with minimizing the environmental impact, capital cost, and ongoing operational costs. Increased bus service on the existing road can not provide the needed capacity nor the needed reliability. Widening the road for segregated bus service or installing a railway up the canyon would have much larger environmental impacts while not achieving the same degree of reliability nor capacity as the gondola alternative.</p> <p>UDOT recognizes that additional steps can and should be implemented prior to moving forward with the recommended gondola project. These "no project" alternatives could indefinitely postpone this costly project which will change the visual character of the canyon. Developing and implementing these additional steps is outside of the scope of the EIS process but are listed in Section xxx to document these potential traffic mitigation steps." (See my related comment 8. below.)</p> <p>2) The purpose and need should be more clear and plainly stated. There is so much great information in the report that the problem statement and project justification get lost in both the Executive Summary and the Purpose and Need sections. Below are some possible words that you could use, similar to what you told the County Council. The numbers need to be fact-checked and the basis shown in the report. You could even calculate and show the payout period or rate of return on investment based on the economic impact of the traffic disruption.</p> <p>"The resort ski industry is very important to the State of Utah and Salt Lake County as it provides world-class recreation for residents and visitors. The Utah ski resorts attract companies to locate on the Wasatch Front and generate \$750,000,000 in tax revenues annually. The LCC resorts alone generate \$100,000,000 annually in direct and indirect sales, room, and income tax revenue. In a typical winter, traffic into or out of LCC has problematic traffic congestion for 30 days, which is roughly a quarter of the 100 day prime ski season days. Traffic is expected to disrupt over half of the prime ski season days.</p>
32874	Linda Call	<p>Let the ski resorts pay for the gondola, not all taxpayers. I am opposed to the gondola project.</p>
32875	Devin Vernick	<p>UDOT...please seriously consider common-sense solutions that actually have the potential to solve the traffic problem. These strategies include:</p> <ul style="list-style-type: none"> Enhanced electric buses with higher frequency and improved reliability, together with strategically placed mobility hubs; Tolling infrastructure; Parking management technologies and policies, such as ski parking reservations, micro-transit, and rideshare programs; Multi-passenger vehicle incentives; and Traction device requirements with expanded inspection hours and enforcement. <p>UDOT, please be rational and let go of this ridiculous gondola.</p>
32876	Mark Warner	<p>We need a year round solution not just winter time.</p>
32878	Dominique Storni	<p>If the ENTIRE cost of this project is covered BY THE BUSINESSES that will benefit ... what's the big deal?</p> <p>Now, if like all other socialized corporate giveaways, like sports arenas and such, they're asking for WE THE TAXPAYERS to fund their project ... HELLZ NAH!!!</p> <p>I'm pretty sick to death of my taxes going up for the benefit of a few rich corporations and the few wealthier people who benefit from capitalist ideas funded by socializing debt.</p>
32877	Gerald Leonard	<p>I agree with Mayor Wilson for all the reasons she listed</p>

ID	Full Name	Comment
32879	bruce c hochberg	<p>UDOT announced the Gondola B option as its preferred alternative at the end of August. While it may have been a harbinger of the end of a record breaking heat wave along the Wasatch, that's about the best we can say about it. There's still time to submit public comments to UDOT on the final decision until October 17, but we are already looking ahead to the next phase of the process. UDOT's preferred alternative ultimately moves to the legislature where the outcome of the years-long project will finally be decided. Now is the time to start talking to your elected representatives to let them know what you want for the future of the Central Wasatch mountains.</p> <p>Please use the action form to get started today.</p> <p>Here are some talking points to include in your comments to UDOT and elected officials:</p> <p>Irreversible & Rushed Decision</p> <p>There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws.</p> <p>We have seen parking reservations work throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon.</p> <p>As Salt Lake County Mayor Jenny Wilson said, these are "common-sense solutions that are fiscally sound."</p> <p>Tax-Payer-Funded, Serving Private Resorts</p> <p>Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging.</p> <p>They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses.</p>
32881	Nicole Omer	<p>As a resident of Cottonwood heights, I support the gondola but only in concert with a plan to mitigate traffic on Wasatch Blvd. Large parking garages at the base only change the location of the parking problem instead of solving it. I support more public transit to Wasatch including dedicated bus lines or shuttles.</p>
32880	Doug Scanlon	<p>Please do not go forward with the gondola plan.</p>
32882	Randyki Honaker	<p>NO GONDOLA!! Let those who ski foot any bill through bus Fares, ride shares, tolls, pay to park with reservations or whatever. IT IS UNFAIR TO MAKE THE GENERAL POPULATION FOOT THE BILL TO LINE THE POCKETS OF THE RESORT OWNERS! Pay to play is the only fair way but the gondola is a bad idea is all regards. Do not ruin the natural beauty of the area.</p>
32883	Robert McKinnie	<p>The gondola is a boondoggle to subsidize the ski resorts which cannot handle existing traffic, much less any additional traffic. It is an unwarranted and wasted extravagance of public funds.</p> <p>It will:</p> <ul style="list-style-type: none"> Cost over a half billion dollars (not considering inflationary cost increases); Only make stops at two private ski resorts: Snowbird & Alta; Remove no more than 30% of car traffic from the canyon road; Operate only during the winter ski season; and Permanently mar the inherent beauty and public lands of Little Cottonwood Canyon. <p>The UTA needs to get back to Real World matters like improving and expanding public transportation. The gondola boondoggle does not fit here.</p>
32884	William Newmark	<p>I strongly oppose UDOT's preferred option to build a gondola. Not only is option extremely expensive but it will be visually unattractive. Creating a designated bus lane in Little Cottonwood Canyon with increased numbers of buses traveling hourly is a preferable strategy.</p>
32885	Elisabeth Morgan	<p>I will support your common sense solution.</p>
32886	John Prehn	<p>The Gondola is NUTS. Snow will soon be in short supply. Another beautiful natural area degraded. This is 2022, in the thick of climate chaos with far worse to come. Skiing is going to be the last of our worries. CANCEL THIS INANE PROJECT. STAND UP FOR THE PEOPLE AND FOR RATIONAL INTELLIGENCE. THANK YOU!</p>
32887	Ann Madsen	<p>Eye sore. And people want to ski, they can be patient and take the bus</p>
32888	Rocky Pratt	<p>A gondola will just attract more people and cause an additional problem at the base of the canyon. Likely won't solve the actual problem of too many people at the ski resort. Ridiculous to damage an entire canyon because of two businesses. Increased bus service and tolls for people going to the resorts in their own cars would greatly alleviate the issue.</p>
32889	Emma Brown	<p>The purpose of nature is to go out and be in nature, using the gondola as an "attraction" is wrong and should not happen. I am not in support of the gondola but am in support of a toll system and better bus route.</p>
35257	Eldan L Hill	<p>I realize political power is behind this fiasco but one more lane with two up in the morning and two down in the afternoon would be much better. Its criminal in my opinion to use taxpayer money to enhance two ski areas unless the taxpayers get 100% of the revenue. Damage to the canyon can not be mitigated.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32890	Chris Templin	As a 30 year employee in Little Cottonwood Canyon the road on its worst days, 12-15 per year, just needs to be managed better. A 45 minute lag time for a plow is crazy. UDOT has some of the best weather stations in the state. Managing the road during inclement to weather seems to be one solution never talked about. That includes traffic entering and leaving the canyon. The sticker program is a joke. And the management of that program as you approach LCC is non-existent. Snowbird management says nobody wants to ride the bus but yet busses are full and run to infrequently. AS an employee with housing in the Town of Alta this isn't even an option. I arrive in town on a Sunday and leave after my shifts 3 days later. There is no where to park my vehicle in the valley UTA bus stops for days on end. Changing the look of LCC seems extreme to say the least for the hand full of days the canyon has traffic issues. This alternative of gondola building also does nothing to solve traffic problems in the Cottonwood Heights communities which will suffer with building of the gondola.
32892	Irel Rohovit	<p>The gondola approach is not an effective use of taxpayer money as it only services two privately held companies in the canyon, will have a significant negative environmental impact, and will not significantly reduce automobile traffic. Lots of downside with little potential upside, even with optimistic projections.</p> <p>The common sense proposals are far more reasonable for the taxpayer and will work to reduce traffic as much, or more, than the proposed gondola.</p>
