36129	Katherine Stewart	After reviewing fact sheets and the videos, I still have some serious concerns about moving forward with 'phase 2'. Forgive me if I missed the disclosure of exactly WHO (besides the 'federal government', or, in other words, the taxpayers) is funding these projects, but I was looking and did not see anything specific. To that point, TAXPAYERS provide the funding that the federal and state government hands out. I have to wonder how much the ski resorts, who are bringing all these people into the canyon, how much is their responsibility? It ought to be a VAST majority of the cost, since it's a select group of people who get to ski. My family loves to ski. But we simply can no longer afford it. Do I work? Two jobs! With inflation surging, we are struggling to make ends meet. I have adult children living at home while they work and go to school. They pay their own tuition and make sacrifices to meet their obligations. I know not everyone else is struggling, but am not sure why my family will be stuck with higher taxes so those who aren't struggling can continue to have those privileges w/o any thought or concern. I'm not anti-wealth, but I am pro-self-reliance. It's wrong to hide the taxpayer burden under the guise of federal funding. Additionally, I heard UDOT has been working on this for 4 years. Inflation wasn't over 8+% four years ago. Maybe the proposed changes will improve reliability and mobility but are they fiscal improvements to the community member's budget? You can't proceed as if everything is the same as it was four years ago!! Our whole world has changed since then. Please please consider the middle class family who is struggling already w/o higher taxes. Saying 'It will take YEARS to secure federal funding' is a deceitful thing to say, as it lulls people into thinking they can let someone else deal with this problem later, when it becomes 'real'. Please don't forget who the taxpayers are, and the reality of how hard it is for many people just to pay their bills right now. Please don't make decisions that will, once again, turn a blind eye to the middle class.
36130	Robert Lewis	57 year Salt Lake County resident here. I am against the Proposed Gondola plan 100%. The traffic issue is simply Seasonal an I feel that the resorts should bear the cost and develop an alternative transportation plan. Thank you
36131	Ben Burch	The plan B for a Gondala across the gorge is an overly expensive, eye-sore, and environmentally irreversible and damaging project. Better parking, bus schedules/car sharing, traffic controllers are all more effective ways to manage traffic through the canyon without ruining the perspective of the canyon.
36132	Lauren Crane	Hi! A gondola is not the right option given the damage that will be done to the environment. Public transportation should be the first solution.
36133	Logan Mitchell	In LCC I like to rock climb and backcountry ski, so the gondola will have zero benefit for someone like me and I am opposed to building it. Beyond my own needs, I think it will be a complicated rube goldberg transit option that few people will use, won't solve traffic congestion, will negatively affect the scenery in the canyon, and will be too expensive for a negligible benefit. Instead I am supportive of tolling, consideration of all canyon users, not just resort visitors, keeping existing recreation opportunities intact, and maintaining the existing visual experience. Realistically we need electric buses and tolls for single occupancy vehicles and free passes for low-income families (through an application process).
36134	barbara gentry	I am a skier and I am firmly opposed to the gondola
36135	Alex Chowen	I do not support the gondola. There are intermediate (and reversible) solutions we should try first, such as tolling and bussing. These options are more flexible, can be expanded or eliminated as needed, would be less destructive on the environment and cheaper in overall cost. The gondola does not support the various day use or hiking sites in the canyon and would be a permanent blight on the scenery of the landscape. Please do not go forward with the gondola.
36136	JB Russell	My family has been in Utah for 6 generations - literally Mormon Pioneers, and I know they would be devastated to see the state of the valley they once called, "The Place". This project, which uses public tax dollars to serve private businesses, and ONLY private businesses, is an actual travesty. It will damage our mountains, recreation, and of course, Utah's reputation. It is a mistake that can never be recovered from, and the names of those who support it will be remembered as wilderness terrorists. The corruption here is so blatantly obvious that it hurts to even have to comment on this again. Please - NO GONDOLA!
36137	Audrey Miller	The gondola will not alleviate traffic up little cottonwood canyon, it will just move the traffic to the bottom of the canyon at the Wasatch Blvd intersection. Then in a few years people will complain about the traffic there. The tram up at Snowbird is closed when the wind changes direction, I'm guessing the gondola will be too? With ski season approaching soon will the gondola be operational during/after a snow storm when everyone and their mother wants to go skiing? I think that instead of the years of construction that it will take to build the gondola, the stops at Snowbird and Alta, and the parking lots required to accommodate the people that ride the gondola. Make the UTA system more accessible during and not during ski season. Encourage car pooling up the canyon. anything but a gondola.
36138	Nathan Grover	I am not in favor of the gondola for the reason that it seems like an expensive bandaid to a larger transportation problem within the canyons, and along the Wasatch Front. The Governor, the Legislature, UDOT, the UTA, and the coalition of stake holders of the canyons need to do the hard work of coming together to bring to the table a more comprehensive plan for addressing traffic of all people up the canyon, not just the skiers and snowboarders for 4 months out of the year. I am in favor of a train solution that goes up one canyon, and down the other, and then can also go over Guardsmans Pass to Park City. This will also help with the potential Olympic games. A train system could also run out to the airport and up to Park City allowing tourists, and others to travel to and from the mountains without touching the roads. Again, this is hard work but a much better, more sustainable, and scalable solution to the traffic issues that are here and are sure to come with Utah's expected populations growth.
36139	Patti Vorce	No, I do not support the gondola idea. I think it's insanely cruel to the wildlife and environment in the surrounding areas. It will attract way too many people to the area which we already can't support. And then, there is the added congestion to our already busy roads and the expense to an already inflated economy. So many of us here do not support this and cannot afford the added taxes and expenses we would have to bear. NO,NO,NO!!
36140	Macy Rowland	I don't want me tax dollars going to a Gondola I won't use!
36141	Jill Thackeray	No to the Gondola and especially a NO to using tax dollars to pay for it. If the resorts want it, they should pay for it. It is not worth the damage it will do to the scenic canyon and the wreckage it will cause to recreation areas used by those who are not skiers.

36142	Rachel Clark	Please find a solution that isn't going to destroy the canyon and will give everyone, not just the rich, access to it.
36143	Patrick Kunkel	Gondola is Not a good option as it only transports users to and from resorts, not to other trail heads.
36144	Steven Fisher	I have an insurance agency in Sandy and live in Cottonwood Heights. Having talked with many clients, friends and neighbors about the Gondola, I feel I can state with strong accuracy that the majority of people in our valley do not want the gondola. It's a lot of money for two resorts to benefit from. The number of days it might be used are minimal and it won't solve the problems. Most people, including the skiers I've discussed this with are very frustrated that UDOT is trying to get more people up the canyon. The most frequent comment is that it's too crowded or congested up there already. Many stated they don't even want to ski or go up the canyon anymore due to the crowds. The other comment is that it will only cater to those with money. One doctor stated that he wouldn't take his grandkids on it. People with kids have stated they aren't going to deal with a gondola (too much work) and they're definitely not going to pay to ride it and add that to the expense. Another comment is that it will just be a tourist "activity" from for out state people with money and time. UDOT needs to look at other options that will preserve the canyon and reduce the crowding. The ski resorts should not be dictating how the canyon is used and enjoyed.
36145	Eric Odenthal	Please keep the canyon in its current state, do not damage this incredible location which is used by many user groups. Hikers, bikers and most importantly rock climbers who have maintained its beauty for decades. The gondola is an eyesore and not needed. Think ahead! Save little cottonwood canyon.
36146	stuart gleason	<p>This project is very concerning to me. I am an avid user of the canyon for not only skiing but also, biking, climbing and flying. This place is special. My primary concern is the destruction of such a beautiful place. Then to put a ridiculous price tag to this is insane. It is particularly insane when it is communicated that we cannot even staff the busses which are already stated as a viable option to help reduce the impact of the canyon.</p> <p>I use this can almost as much to climb as I do to ski. We must support all users of this magnificent place.</p> <p>If personnel vehicles are still allowed, why are people going to be incentivized to use the gondola? The anticipated price of gondola use can't even be publicized!!</p> <p>I would be open to tolling on the road similar to Millcreek</p> <p>please focus on the use of electric buses. this would also require the need for facilities at the base and top of the canyon so that people can park and then safely store their gear while enjoying the canyon.</p> <p>I am disgusted that 500million would be spent on this. My wife is a teacher in a title 1 school. We need to support the education and health systems before we focus on a small percentage of people (myself included) who mostly have the means to deal with the inconvenience of a busy canyon.</p> <p>Thank you for spending the time to review these comments and I hope to see you in the canyon soon.</p>
36147	Joe Brunhart	<p>I work up at snowbird.</p> <p>I am in favor of the gondola. I am in favor of tolling, but I feel it needs to be at the base of the canyon and be year round, not just high impact powder days. Between Oktoberfest, leaf peeping and other canyon items, tolling at the base of the resorts will solve nothing. White pine, spruces, and lake Blanche are already over following year round. Also, use the money from tolling to improve trail heads and camp grounds.</p> <p>Thank you for your time.</p>
36148	Ian Gordon	I am 100% against a gondola as a solution to canyon traffic. The fact that the public will have to fund this rather than the resorts tells the entire story. Only the resorts will benefit so they should be the only ones to fund it. I will be moving if I see any tax money going towards this, if we have extra money then give it to the schools and if it will cause taxes to go up then its unacceptable.
36149	Brent Gundry	Yes, to UTA for more buses
36150	Zachary Shifrel	If nothing else, those associated with planning and building the gondola will forever be remembered as vile human beings who destroyed nature. The oldest among us live for tiny amounts of time compared to the Earth: don't use your short life to destroy something that will last for millions of years after your death.
36151	Tyler Mifflin	I believe that the gondola will only create more problems long term. I am against the building of the gondola. It is going to be a money pit for tax payers. I believe that most locals will still drive up the canyon in their own vehicles regardless of having a gondola. People would rather pay a toll or have a better bus system. If we go through with the gondola, we will waste taxpayers money, and destroy the natural environment in Little Cottonwood for a very diminished return. I hope the people over this project can see the big picture and realize it isn't all about making money. Little cottonwood canyon is a gem to the locals here. It is one of the precious places that makes Utah worth living in. Please do not destroy it! Please listen to the voice of the people, as mostly everyone is against this project. Please do not build the Gondola!
36152	Michelle Davidson	As a 60 year resident of Utah (minus a decade in CA where I saw how things can get?), and a current resident of BCC, I'm heartsick and astonished that the gondola plan has made it this far. Please look beyond the big money whose influence is pushing this terrible idea and think about the repercussions. There are easier and much simpler and more effective and much less costly ways to manage traffic in LCC (tolls, busses, reservations at resorts-all of these working together could solve the problem completely). Greed is in charge here. Can somebody with character and foresight please stand up and put in place an alternate to this terrible plan?
36153	Kerri Ramseyer	I'd like to see Little Cottonwood stay the same, as I feel like doing anything different would disturb the wildlife that exists in the canyon. No Gandola!
36154	Karen Spiroff	I am strongly opposed to having a gondola in Little Cottonwood Canyon. The thought of having this kind of construction that takes out even one tree breaks my heart. I don't even know why we are having a conversation about this in these times of drought and water shortage and the shrinking of the Great Salt Lake. We have so many other issues that need to be addressed than the fact that skiers can't get up the canyon on good snow days. If the climate crisis continues, snow will be a thing of the past anyway. Please stop wasting time and energy on a gondola!

36155	Steven Lloyd	I have lived in Utah my entire life. Little cottonwood has been my spot to recreate and meditate. The granite walls carved by glaciers are like no others around. It truly is unique. Please don't put a gondola in and ruin the aesthetics of the canyon. There are other solutions. Please don't let this be one an attraction for snowbird, ski Utah, visit salt lake and the tourism board to use as an attraction to get people to come here. The canyon is already at capacity. We don't need a tourist attraction. For my children, please leave it and figure out a solution on the ground.
36156	William Bowerbank	No to the gondola that will ruin the beauty of the canyon. Please listen to what the citizens want and not the developer/government that only wants to make money. Remember who you represent (the tax paying citizens)!!!
36157	Todd Bryant	As evidenced by leaf-color seeking traffic over the past couple of weeks in the Cottonwoods, we don't need a solution that focuses on just the busiest days of the winter like the gondola option. Not only that, but we don't need additional impact to the visual air space of the area caused by the Gondola that would impact the views people seek. Buses are imperfect, but they are the only option of the preferred choices that gets the job done with minimal impact visually. At least with buses, we have the option to grow service where needed, such as adding trailhead stops in the future during both winter and summer months. As for reliability is concerned, we can continue to address canyon snow removal and ground traffic via improved processes and additional funding. Questions about the reliability of buses vs passenger cars are valid. Though buses suffer from some of the same issues as cars (noise, pollution, traction issues, etc) these can be addressed as technology improves. We will one day have the ability to produce AWD/4WD buses that are electric or use another alternative to diesel. I have limited my winter travel in the canyons in the past several winters due to traffic; I understand the desire to get up canyon, but we must not lose sight of what makes the Cottonwoods special and we must seek to preserve it even if it means not getting exactly what we want 100% of the time. Utah is special and it's Department of Transportation is also. We need to focus on creative long-term solutions that uphold the beauty of the canyons while delivering people reasonably to their destinations. Buses arent perfect, but they are preferred to the gondola. Thank you for your time and service. Todd Bryant, Cottonwood Heights
36158	Erin Geesaman Rabk	I am strongly opposed to the building of a gondola in little cottonwood canyon. This does not center the preservation of our watershed, local species, and we humans who love the canyon but do not engage with resorts. Please find an alternative that is better for all in the community, humans and the more than human beings with whom we share the canyon.
36159	Christopher Niebuhr	Please do not implement the gondola option in LCC. It does not solve the problem of congestion if cars are still allowed up the canyon. Given the option to wait in traffic for 50 min to get to the resort but have my vehicle to store gear/ transport children is still going to win over a 50 min ride in a gondola with no bathroom. This option is so biased and only serves the for-profit resorts. It does not help users get to other places in the canyon and in fact not only degrades the visual resource, but it removes climbing resources and extremely disrupts the way the rest of the users see and interact with the canyon. Please do not cater to these resorts, one of which (Alta) discriminates against half of winter resort users(snowboarders). Utahns should not have to pay for this! This is so much money for such a tiny fraction of users, none of which will be here in ten years if we do not save the lake. Save the lake first, utilize funds to create a better public transit system to the canyons from the city and utilize a regular bus schedule up the canyon. People will use it if there are enough of them and they can get to them easily. I strongly disapprove of the gondola option.
36160	Jordan Leeman	Residents who live in the area do not want this gondola. It will do nothing to solve the traffic problem around the mouth of LCC. Cars still will block the roads in order to travel to the gondola parking. We need more buses! The gondola will forever change the beautiful landscape of our neighborhood. Once the damage is done you cannot undo it. Please consider other less invasive solutions to solve this problem.
36161	Colton Elliott	No Gondola, expensive, tax payer pay for it, harms the wildlife and beauty of canyon, serves 2 ski resorts only, and will still be expensive to ride, most people will still drive. Seems rushed and not well thought out.
36162	Kayla Belnap	Please reconsider the transportation alternative! Would hate to see the gondola impact our beloved canyon.
38353	Bekah Lekah	To whomever it may concern, I am reaching regarding the proposed gondola. I understand the benefits it could have during the ski season and the added safety it could contribute to individuals. However during the rest of the year the mountains are used by countless others, such as rock climbers, hikers, backpackers, and more. The gondola would positively impact one niche of outdoor tourism, but it negatively detracts from so many other important outlets. This is why I, a citizen of Utah who climbs and hikes and snowboards in Little Cottonwood Canyon urge you not to build the gondola. It would do more cause more harm than good in the long term and cause irreversible damage to our beautiful canyon. Please do not build this proposed gondola. Thank you for your time and your continued efforts to enhancing Little Cottonwood Canyon, but please realize this gondola would only detract from the value the canyon possesses. Respectfully, Rebekah Hakala
36163	Tim Moore	It is very clear that the local residents do not want the Goldola, and have expressed that to their elected representatives. I would encourage those making the decision to vote in line with their electorate and say NO to the gondola. Any representative voting yes are doing so against the wishes of the people who voted them in. Please, say NO to the gondola.
36164	Chris Tran	Could you plz just make busses better and mandate busses on WE.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36165	Alex Hunt	<p>After reading the 3 proposed options I think that a large number of avy snow sheds and tunnels should be built on the road (Euro style) with electric buses used to transport individuals up/down. Additionally, multi story parking garages could be constructed at the current parking locations to house a much larger quantity of vehicles and serve as transport hubs.</p> <p>The gondola idea has a kitschy sight seeing uniqueness to it, but ultimately isn't a strong solution. I am not convinced UDOT can efficiently handle a new form of transportation (gondola) that is much more complicated than a bus. Would you want to be stuck in a gondola car waiting to be evacuated from a cabin when it eventually has a mechanical issue?</p> <p>Thanks for taking time to read, and consider these thoughts.</p>
36166	Tristian Osborne	<p>The gondola is a horrific idea. It will destroy our canyon and is a MASSIVE waste of tax dollars for such an immense budget. It's unnecessary and destructive.</p>
36167	Justin Tapper	<p>Don't build the gondola please</p>
36168	Chris Goodhue	<p>No gondola please. I'd love to see a toll be implemented to help reduce traffic and encourage carpooling. The idea of building a gondola before any of these options seems ludicrous and it's benefiting the ski areas at the taxpayers expense.</p>
36169	Robert Topham	<p>The Gondola plan that UDOT has proposed as the best option is a TERRIBLE option and will be as big a boondoggle as the Great Salt Lake pumps are.</p> <p>The traffic over the 2021 - 2022 winter in Little Cottonwood Canyon was VASTLY improved compared to prior years due to Alta charging for parking. This forced common sense solutions like car pooling and buses to make the commute more affordable. Snowbird tried to do the same two seasons ago but was a terrible ineffective system that didn't work. If Snowbird would adopt a program forcing people to pay for parking the traffic and parking problems would "magically" vbe largely resolved. Snowbird wants traffic problems because they want the gondola. Hmmmmmmm.</p> <p>The ecological destruction that would be wrought on that canyon is unthinkable. In order to bring more people up to resorts that already have lift lines that are far too long?</p> <p>This plan is absolutely horrific and needs to be scrapped completely.</p> <p>I am season pass holder at Alta and sometimes Snowbird continuously since 1998 and a local outdoor enthusiast since moving here in 1974.</p> <p>Quite sincerely Robert Topham</p>
36170	Jan Pierce	<p>I am against building a gondola Little Cottonwood canyon. It makes more sense building a connecting gondola from little to big to park city.</p>
38623	David George	<p>Dear UDOT Study Team,</p> <p>Attached are my comments on the subject EIS. I am concerned that the EIS and the Gondola design in particular have not properly considered the risks associated with operating a Gondola in a turbulent mountain weather. I am also not in agreement that the gondola can or should operate when the road is under threat from high avalanche conditions.</p> <p>I will also submit abbreviated comments using the EIS web link just to make sure you receive my thoughts.</p> <p>Kind regards,</p>
36171	Irv Nielsen	<p>This proposal is not user friendly. Only rich people will be able to afford a Gondola pass. Electric buses could be more user friendly and cheaper.</p>

ID	Full Name	Comment
36172	John Bovard	<p>Herein, I am a resident of Salt Lake City. I am a strong supporter of the addition of public transit options in Little Cottonwood Canyon as well as the Salt Lake Valley as a whole.</p> <p>I have previously been a supporter of the gondola option, but have since learned more details about the cog rail proposal made by Stadler in 2021. Since learning more about Stadler's proposal, I have a very difficult time supporting the gondola for the following reasons:</p> <ol style="list-style-type: none"> 1. Stadler proposed a south side alignment which would be cheaper than the north side alignment and avoid avalanche paths. Yet it appears that UDOT has only considered a north side alignment. The south side may not require snow sheds. 2. Stadler estimates the total cost of the cog rail to be \$488 million (excluding parking garage estimate and assuming electrification). This is approximately 1.5 times the cost of the gondola option. 3. Stadler proposed a \$487 million rail connection to the Frontrunner along 9400 S which could connect directly to the cog rail line with the same cars and track. 4. A cog rail has the ability to make stops for canyon destinations other than Alta and Snowbird, making the canyon more accessible for more than just resort skiers. This would benefit hikers, snowshoers, rock climbers, backcountry skiers, etc. 5. The cog rail proposal has an estimated capacity of 3-5000 riders. 6. The operations and maintenance costs of the cog rail are approximately \$1.4 million lower than the gondola option. Though this would take a very long time to break even, it is still relevant. 7. The scenic impact of a cog rail would be significantly less than that of a gondola. <p>With these points in mind, I believe the cog rail option far better serves the goals of public transportation. The cog rail would help increase accessibility to LCC for many types of recreation while reducing private vehicle traffic. Furthermore, I am strongly opposed to any road-widening or parking garage projects. Research has shown that these do not help to reduce congestion but only encourage more drivers. Any infrastructure to support more cars would only serve as a temporary bandaid instead of as a solution to the problem.</p>
36173	Mark Seguin	<p>There needs to be a stronger focus on helping recreators make the journey into the canyons entirely by public transit than Please allow time to let alternatives to the gondola take root and show their effectiveness. A gondola is an irreversible option.</p>
36174	Earl Middlemiss	<p>Good job UDOT, gondola is the best solution! Little Cottonwood Canyon EIS Comments October 17, 2022</p>
38354	Peter Leichliter	<p>To Whom It May Concern,</p> <p>Please consider my following comments on the EIS.</p> <p>I appreciate the review that has occurred thus far, and I favor the phased approach of implementing different transit options. I however do not believe that a gondola is the correct solution.</p> <p>It is unfortunate that the selected gondola alternative has the greatest visual impact. The images displayed in the report are so unnatural, ugly, and visually intrusive that the gondola does not belong. Little Cottonwood Canyon is a wild environment with beautiful views, and the preservation of it is important.</p> <p>From an economic standpoint, the gondola option appears to be chosen to benefit the ski resorts, their users, and land developers at the expense of the rest of the public. Why should the taxpayers pay for something they may never use, and does not benefit us all? The ski resorts should pay for the construction and maintenance of a gondola since they are the ones benefiting from it. The gondola is just an extension of the base of the resorts to the bottom of the Canyon, and public money should not be used to build a private development.</p> <p>Building a gondola seems to be a massive expense for something that is only to be necessary for a certain number of days of the year, and not even planned to be used for the entire year. If it is intended to reduce overall traffic in the canyons, shouldn't it be available the entire year?</p> <p>It also appears that public opinion and opposition by the governments of the areas impacted by the gondola plan are being ignored.</p> <p>Hopefully the phased implementation approach is allowed the time and opportunity to work before the decision to fund the gondola occurs.</p> <p>Sincerely, Peter Leichliter Salt Lake City, UT</p>
36175	BRUCE BURKHART	<p>There is something inherently wrong when the people who will benefit the most from the gondolas, ie. the ski resorts, are not paying for it, but the cost, again, is placed on the backs of the taxpayers, many of whom will not use it. Also, once again our "representatives" have ignored the wishes of the their constituents, and gone ahead with their own selfish agenda. I guess I was misinformed when I was taught that we live in a representative form of government, and the office holders we voted in were to represent the PEOPLE.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
38355	Sharon Marston	No gondola. I really don't see how this will solve basic parking problems. It seems to only benefit tourists. As a hiker and skier, a greatly improved busing system seems more practical and a quicker and less expensive solution.
36176	Cameron Heyward	A gondola is not only impractical, but charging a fee to ride is ridiculous.
36177	Lukas Aaro-Hansen	Horrible
36178	David George	<p>I submitted written comments to UDOT at the e-mail address noted. My comments are safety related. I do not believe the gondola options have properly considered the potential for high winds. stranding a thousand passengers on 30 gondola cabins. There is no valid design basis without long term meteorological data from multiple sites on the route.</p> <p>I also do not believe it is reasonable to operate the gondola when avalanche conditions close highway 201. No responsible operator would allow a gondola to operate in the midst of avalanche control work.</p> <p>In my view these are fatal flaws.</p> <p>I posed some questions to UDOT to seek clarification of the design basis and how emergencies will be addressed.</p> <p>Kind regards,</p> <p>David George</p>
36179	kiernan brady	this plan is absolutely disastrous, and serves a very small user group at the cost of many others
36180	Shannon Coates	The community does not want the gondola! There are other lower-cost solutions that will reduce canyon traffic congestion including parking reservations, priority parking for carpooling, reduced fare UTA ski buses all season long, digital signs at the base of the canyons indicating number of parking spaces available, building multi-tiered parking at bottom of canyons and riding buses up the canyons (like is done at Zions National Park). The Gondola would only serve Little Cottonwood Canyon but these other solutions can address congestion in both Big & Little Cottonwood Canyons! No to the Gondola!
36181	Robert Robinson	This problem is too expensive. It is not the tax payer job to pick up this whole bill. You are just moving the traffic problem to a new area. Stop the project.
36182	James MacInnes	We do NOT need an expensive(taxpayer paid) gondola now or anytime in the future. It is environmentally destructive, unsightly, and benefits only a few of the population. Of course, Snowbird wants it; it's to their benefit at virtually no out-of-pocket expense to them. Once again, a few folks are trying to cram it down our throats. There are other solutions such as alternate license plate days, ride-sharing, fees for parking, more busses etc. Let's do the right thing and listen to the people for once.
36183	Lenice Paulsen	I am SO AGAINST the gondola being put in. It has been voted on. Please actually DO the right thing and listen to the people instead of pretending to be doing the right thing. I literally don't know One person who is in favor of this and I've spoken to many people. Please do not move forward with this plan. It is not wanted among the people.
36184	Slattery Donohoe	The decision to go forward with the gondola plan is in the absolute worst interests of Utahns, and it will put a financial burden on resort guests and workers alike to the benefit of corporate interests at the top and the bottom of the canyon. The gondola is a deliberate decision to do harm to the broader community for the benefit of the few.
36185	Tony Martus	This is a terrible proposal that ignores externalities. Externalities are real... having the tax payers of utah pay for a transportation service fee for two resorts while ignoring all other canyon users and in some cases irreparably destroying their recreating area is unacceptable externalities
36186	Wynter Abby Johnson	<p>To whom it may concern, I am writing in hopes that our voices will be heard in our great state of Utah. I wish I could submit a photo of the view I had every morning I would drive to work when I lived at the mouth of little cottonwood canyon. When the sun rise's and hits the mountain tops, it's the most intense and incredible scene. It reminds me of how grateful I am to live in this wonderful state. The idea of our beautiful canyon being torn apart to help with Ski traffic saddens me. I am a true Alta skier and pay extras for my parking pass.</p> <p>I don't believe in this gondola. It's going to ruin our water, wildlife and over all well being. It will be so expensive, our taxes right now in Cottonwood Heights alone are ridiculously high. Not to mention the maintenance will require more work and money, the parking to use the gondola will not be worth it. We do not live in Switzerland where the ski resorts are far from cities. This is a total over kill. It will increase crime and safety and over all is not the answer. Please hear what the people are saying. Save our canyon, keep it beautiful and unique.</p> <p>Thank you</p> <p>Abby Johnson</p>
36187	Nicole Nelson	Does this hold a lot of people and their equipment?
36188	Codin Chiritescu	Please don't spend our hard earned tax dollars on a proposed solution that will have a detrimental affect on our beautiful canyon. The proposed gondola solution will not help congestion, it will not improve the lives of tax paying Utahn's, nor will it provide a more convenient solution to canyon access. It's a complete waste of our hard earned tax \$'s.

36189	Mallory Sandoval Lam	<p>I am against UDOT's recommendation of installing a gondola up Little Cottonwood Canyon (LCC) as a way to mitigate the traffic up the canyon. The biggest issue with the gondola is that it would only serve one type of user: resort skiers and snowboarders. This is due to the fact that the gondola has one stop at Snowbird and one stop at Alta. There are a plethora of other outdoor recreationists up the canyon: backcountry skiers and snowboarders, snow shoers, rock climbers, mountain bikers, and sledders. With that many outdoor recreationists who are unable to use the gondola, there will still be traffic up the canyon. Thus, the gondola is 1) a publicity stunt designed to draw in EVEN MORE resort users from around the world and 2) not designed to truly address the traffic issue up the canyon. Further, the traffic is mainly an issue in winter and much less so in the summer. So, the gondola is a one-season "solution" that will compromise the glorious viewshed that exists today. Finally, as a wildlife ecologist that studies wildlife movement in response to human-induced land-use change, I have major concerns about how wildlife will respond to not only the footprint the gondola will create, but also the sight and sound of it. Previous studies show that wildlife (including mountain goats, black grouse, mountain hares, and others) alter their behavior in response to ski resort infrastructure (https://www.diva-portal.org/smash/get/diva2:1568670/FULLTEXT01.pdf, https://wildlife.onlinelibrary.wiley.com/doi/full/10.1002/jwmg.21243, https://wildlife.onlinelibrary.wiley.com/doi/full/10.1002/jwmg.1028, https://besjournals.onlinelibrary.wiley.com/doi/10.1111/j.1365-2664.2008.01547.x, https://besjournals.onlinelibrary.wiley.com/doi/full/10.1111/1365-2664.12174). Resorts and resort infrastructure, such as a gondola, reduce habitat connectivity and cause wildlife to avoid areas near infrastructure. This reduction in connectivity and avoidance behavior by wildlife interferes with wildlife's ability to 1) seek out mates and 2) capitalize on available forage, both of which can have profound effects on entire wildlife populations. I cannot argue against UDOT's recommendation without offering a better solution, luckily, Utah already has a great example of an inclusive, cost-effective, and environmentally friendly traffic mitigation method: Zion National Park. Years ago, Zion was facing a similar nightmare with traffic backing up the entire canyon as visitors waited in their cars to see the glory of the canyon for themselves. To mitigate traffic, Zion planners incorporated a shuttle system and increased available parking. Now, Zion has 4.5 million visitors each year (LCC has 5.5 million, for reference), there are no more traffic jams, and visitors are able to access all parts of the canyon that was previously available by personal vehicle. An improved bus or shuttle system combined with increased parking and tolls for single-occupancy vehicles is the best solution to address LCC's winter traffic issue. This solution is more inclusive, less destructive of the viewshed, less costly, and will use infrastructure that is already in place. I do not support UDOT's decision to recommend the gondola. It is a short-sided solution that will serve few of LCC's outdoor recreators and will ruin the incredible views up and down the entire length of the canyon.</p>
36190	Jenny Heumann	<p>I am not in support of the gondola as it will overpopulate our canyons and force taxpayers to move. I would likely move out of the area to avoid tax increases related to this costly suggestion. The road still closes and UDOT still has to work during storms, so it doesn't solve it 100%. Thanks</p>
36191	courtney pitts	<p>I oppose any actions in Little Cottonwood Canyon that will impact climbing or bouldering areas that mean so much to the climbing and outdoor community. Please don't ruin our wonderful canyon.</p>
36192	Sylvia Kinosian	<p>I am very disappointed to see that the gondola has been chosen as the preferred solution to the traffic issues in Little Cottonwood Canyon. This decision seems to have been made with little to no regard for the community; additionally, it does not adequately provide a solution to winter traffic issues. The gondola will not help clear the canyon in the event of avalanche closures - it would not be able to run safely as it would pass over multiple avalanche paths, which would put anyone inside at a huge risk of injury or death. Any rescue operations for such a gondola will be incredibly difficult, dangerous, and costly. Local SAR personnel or LCC resort ski patrollers would also need extensive training to be able to conduct such rescues. The gondola will not help lower the number of cars at the White Pine and other LCC trailheads. The gondola will not help ski patrollers or other ski resort employees get to work in the event of bad weather or large crowds - delays would be the same as driving. The gondola will be an eyesore and ruin the character of LCC. It will also disturb many aspects of the natural ecosystem, such as wildlife movement and water quality. This project would only benefit the company hired to build it, and any benefits it provides would be negated by the many, many detrimental effects caused by a gondola in LCC. I urge UDOT to actually consider public opinion and reevaluate this decision.</p>
36193	Sarah Nelson	<p>stop destroying utah!</p>
36194	DENNIS MAGARO	<p>I cannot imagine a 2500 cars garage and a building to house all the cars at the mouth of the canyon . It would an eyesore . Plus the ski areas should be paying for their new lift</p>
36195	Deborah Moore	<p>I would urge UDOT to reconsider any form of the gondola proposal for congestion in Little Cottonwood Canyon. It will permanently scar the beauty of this canyon with its towers, cables, and cable cars that have a limited life span. There are limitations to the number of individuals it can transport with excessively longer travel times to commute up the canyon. Its exorbitant construction and annual maintenance costs will not eliminate need for other transportation options. It is not prudent to utilize public funds for such a project. Construction of the gondola towers jeopardizes the fragile ecosystem and watershed. The issue of limiting access to multiple trailheads and other users of the canyon still exists.</p> <p>A better answer for congestion in this canyon would be to encourage more carpooling through the implementation of a variable toll in the canyon. I also believe an enhanced bus service is a sound approach to addressing the congestion. It allows adjustment to needs rather than constructing a permanent structure that has a limited life and will require maintenance and service on a regular basis.</p> <p>I wish to express my opposition to the Alternate B Gondola construction as the preferred solution to traffic congestion in Little Cottonwood Canyon. While addressing concerns for a relatively few individuals, it does not appropriately represent the needs and opinions of the majority of individuals in the local community and more widely, state residents. This proposal benefits the private operation of Snowbird and Alta and provides business opportunities and profitability for private land owners at the base of Little Cottonwood Canyon. It uses public funds to benefit a select few in our state.</p>

ID	Full Name	Comment
36196	Emily Meadows	<p>As a passionate environmentalist, concerned community member, and trained professional planner, the proposed alternative gondola raises many questions and concerns for me.</p> <p>I recognize the time it takes to read through each public comment so I will try to be brief but in my opinion, the proposed solution does not actually solve the problem at hand. Systemic changes can take years if not decades to change and from my perspective, the problem at hand is traffic in the canyon due to the increased population of residents in the Salt Lake area, escaping to the mountains becoming more popular, along with the culture of residents driving personal vehicles every where they go. This habit of driving a car is largely a result of inefficient public transit services and the convenience of a car. However, the gondola will not solve this issue, rather it merely serves as a very expensive and unnecessary bandaid solution, pushing the traffic issue further down the canyon onto Wasatch Blvd.</p> <p>I believe the phased solution approach is necessary and can help illuminate both the REAL problem and an effective solution. Improving bus services, and bus stop infrastructure, and creating a BRT system would be my first suggestion for combating the traffic. If busses came frequently and on time, more people would be motivated and incentivized to take the bus rather than their own car.</p> <p>Tolling is another solution that should be considered and trialed before we resort to an outrageously expensive gondola that will both require invasive infrastructure, and only serve a small portion of the population.</p> <p>The gondola is not the right solution for the issue at hand and I do not believe many people will use it, thus not solving the problem of congestion in the canyon.</p> <p>I hope UDOT will truly consider the other alternatives which are less invasive to the natural habitat of the canyon and that will actually promote behavioral change. I hope that they will recognize that the gondola will only serve ski resorts rather than creating more equitable access to the mountains, and I hope that public comments will be listened to and taken seriously-- or else the public engagement process is worthless and many people will give up trying to be involved and engaged citizens in their communities.</p>
36197	Denise Marlowe	<p>There is simply no reason to invest \$500 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws.</p> <p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) are trying to convince Utahns a gondola is the best LCC transportation solution.</p> <p>We dont need to pay millions to fix a problem two private businesses created.</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how „Áclean,“ the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 „Ápremium,“ parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. 4. Also, the gondola will not run when howitzers are active during avalanche mitigation in the lower canyon from Lisa Falls to Monte Cristo. And I can't even think of an argument for the gondola to be operating for the other eight months of the year.
36198	Bill Jackman	<p>I am very much opposed to both the gondola plan as well as the extreme widening of the road. This feels very much like a taxpayer funded benefit for mostly the owners and operators of two ski resorts rather than something that is an overall significant benefit to the population and area in general. It should be saying something worth noting when Salt Lake County and several cities who are impacted by this the most have weighed in with resolutions opposing the gondola plan. I attended community meetings put on by UDOT several times in the past in the Holiday offices regarding this issue and it seems to have been something of a foregone conclusion to be announced after pretending to listen to constituents. There are many less impactful and less costly plans that could and should be implemented before this. So much of the year the road goes lightly used with no change needed. Please reconsider this plan that would benefit so few at such a cost to so many. Bill Jackman [REDACTED]</p>
36199	Margaret Zeemer	<p>Much needed and necessary improvements to the traffic flow at the Canyon! The best cities in the wells utilize Gondolas!! Can't wait!</p>
36200	Michael Windley	<p>I personally feel the cost of this gondola is not in the best interest of the taxpayers. It only benefits a select group. The cost far out ways the benefit. There are better alternatives on the table that should be implemented.</p>

ID	Full Name	Comment
36201	Linda Campbell	I think you should do whatever has the least impact on the canyon regardless off cost. If you project millions more moving to Utah & wanting to use the canyon & the gondola would be the least disruptive to our Canyon then do that . I'm not in favor of tearing up the road to make room for lots more of buses.
36202	Mallory Sandoval Lambert	<p>I am against UDOT's recommendation of installing a gondola up Little Cottonwood Canyon (LCC) as a way to mitigate the traffic up the canyon. The biggest issue with the gondola is that it would only serve one type of user: resort skiers and snowboarders. This is due to the fact that the gondola has one stop at Snowbird and one stop at Alta. This solution is more inclusive, less destructive of the viewshed, less costly, and will use infrastructure that is already in place. I do not support UDOT's decision to recommend the gondola. It is a short-sided solution that will serve few of LCC's outdoor recreators and will ruin the incredible views up and down the entire length of the canyon.</p> <p>I tried to submit a comment earlier and it seemed like it did not go through. My apologies if this is my second comment.</p>
36203	Shaun Jacobsen	I am against the gondola. This is not a transportation solution but an extension of two resorts at the expense of the public and the environment. Increases bud service and automobile tolls are the answer. If you can spend half a billion on a gondola, you can recruit bus drivers and pay a living wage.
36204	Paul Rasmussen	The cost of the Gondola proposal is way too high and too invasive. Improve the bus service. Maybe restrict access to the canyon on an every other day based on license plate ending...which would promote more car pooling. Having a Toll maybe on weekends or during the ski season is OK, but not 365 days a year.
36205	Katie Barton	Please do not do this. It will be catastrophic to landscape, watershed, not to mention cost taxpayers.
36206	Susan Elmer	the cost is out of site for tax payers so two ski resorts can expand their lift to carry more skiers and make more money. The ski resorts should look to cover a high percentage of the cost or limit the number of skiers by limiting the number of passes sold in a day by reservations. Or look at more bus service to the resorts and use more electric buses, or encourage car pooling. The Ikon pass that the resorts have expanded this problem and they may need to limit the number of passes sold. but NOT the GONDOLA!! Cost is too high and benefit is too limited for the general public.
36207	Cheri Heaton	I don't this gondola is in the best interest of our community. The price is outrageous and I believe we could work with what we currently have to improve this situation. There is no need to spend over half a billion dollars to remedy this situation. Even if the gondola were built, there would still be plenty of negative repercussions from building it. The congestion it will cause in the surrounding neighborhood concerns me. We live nearby and we chose the location due to the peaceful, quiet nature of the area.
36208	Richard Cox	I'm totally opposed to the Gondola project. It's a waste of taxpayers money. The project will almost entirely benefit the sky resorts and skiers. I would not be surprised if another driver of this idea is the suppliers of the Gondola and contractors who will get a no bid contracts. That seems to be the way these projects are handled in our state.
36209	Hannah Sutherland	<p>I oppose UDOT's preferred alternative: Gondola B (From La Caille).</p> <p>As evidenced by the original public comments for S.R. 210 Draft EIS, I, and most the public, strongly oppose building a Gondola in Little Cottonwood Canyon, and support an enhanced bus service, tolling, and other restrictions be implemented before any new construction is considered.</p> <p>In UDOT's executive summary for the Final EIS, UDOT claims there is "support for gondola and bus alternatives." While this is true, it misconstrues the overarching message from the 13,443 public comments UDOT received. While UDOT's 258-page public comment response is quite comprehensive, it failed to statistically summarize major themes of the public's wishes.</p> <p>Because UDOT's 258-page public comment response sufficiently documents all the reasons the gondola is a bad idea, there is no reason to expand on that here. Rather, I call on UDOT to present a statistical summary of the major themes from the original public comments and act in accordance with the majority themes, that is: enhanced bus service, restrictions to single occupancy traffic, and no gondola in Little Cottonwood Canyon.</p> <p>Thank you for your careful consideration!</p>
36210	Kyle Melzer	This gondola would be an atocity. Using public funds to only service private resorts is outrageous. Not to mention the impact on the beauty of the canyon. Create bus only lanes and potential toll vehicles. A gondola is an irreversible mistake.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36211	Joshua Wood	I strongly urge UDOT to reconsider the gondola option. I see no need to invest so much money on transportation for relatively few recreation days. The damage to the canyon far outweighs transportation benefits, developer profits, and skier convenience. Increased busing, enforcement of tire/chain regulations, and ticketing would achieve similar traffic benefits for a fraction of the cost and environmental damage.
36212	Matt Swaim	As a year-round recreational user of Little Cottonwood, I am strongly opposed to the gondola installation. I feel like there has been no attempt at mitigation of the traffic problem by more reasonable means such as extended bus service. This is an example of a taxpayer funded project for the benefit of a select few businesses and individuals. I don't believe the gondola is a sustainable or cost efficient option. Additionally, it will impact the year round recreating that I do in Little Cottonwood as a Sandy resident. These include mountain biking, climbing and backcountry skiing. It is rare for a city of our size to have such a pristine environment to recreate in. The gondola would be much more than merely an eyesore, it will be an irreversible mistake.
36213	Zoe Parmeter	NO GONDOLA. The implications are far more than just how expensive it will be. The natural habitat it will destroy, the climbing areas, and the natural beauty of the canyon are just scratching the surface. Pave paradise and put up a parking lot is not something I ever thought udot would lean toward. There are other options to try first-extended bus service, hello! Please don't ruin LCC with this monstrosity :(
36214	Saralynn White	It's a ridiculous waste of taxpayer money! Why should we pay to deliver customers to resorts owned by the wealthy? There are no other stops, and it will ruin the canyon.
36215	Courtney LaDue	I am against the building of a gondola in Little Cottonwood Canyon. It does not make sense for taxpayers to foot the bill for transportation that will only benefit the two privately owned resorts in the canyon. It will deter from the beauty of the canyon. It will only be of use one season of the year, which again, is only to benefit and generate revenue to the resorts. The gondola will do nothing to reduce traffic during other seasons or for other purposes (hiking, biking, site seeing)
36216	Matt Wilkins	I do not think this would be a good idea as it would ruin the landscape and distract from the beauty.
36217	Evan Hirn	Gondola is not the answer!! Please consider year round mandatory bussing! The gondola does not fix any problems and will only lead to a worse situation! It won't fix any summer traffic, bcc traffic, or lcc traffic. People will still try to drive up the canyon in the morning to try to get parking at the resorts. A huge construction project such as the gondola will affect wildlife and local recreation such as climbing and backcountry skiing. The resorts are not the only attraction in lcc. Utilize the parking you would have to make for a gondola, and make it a bus hub! Force people to take busses, and have the occasional backcountry bus that has the ability to stop at any fork along the road by request. Try it out without widening the road and if need be, that can be an option for the future. I know some people don't like riding busses, so nicer busses may help, or make them fit the skiing theme somehow. Please don't let the wealthy resorts sway your vote, it's clear what the community wants and this isn't a reversible decision. In the end, it's the taxpayers money so please please do what the community wants :)
36218	Grace Cushing	Please reconsider the decision to install a gondola in LCC.
36219	DAVID PORTER	I am against this proposal. The gondola does not resolve the issue and is only a solution during ski season. There are better options that will not impact the environment. The bus system in Zion National Park is a superior solution and could be applied to both Big and Little Cottonwood canyons during the busy ski season months.
38356	Mike Lyons	It seems the most conservative approach is to just start with a parking lot for more bus service and ride sharing. Make an app for ride sharing. A gondola could be added later if needed. A gondola seems to be seems to be a pretty drastic and impactful way to start!
36220	Liz Abel	I am strongly opposed to the gondola option for Little Cottonwood canyon. Permanently marring the scenic beauty of the Wasatch Front and negatively impacting recreation to whisk a few rich people up to two ski resorts is a terrible solution to the traffic problems and a massive waste of taxpayer dollars. The best solution is an expanded bus service that runs so many buses in such high frequency, that cars other than those of employees and residents up the canyon can be banned. NO to the gondola!
36221	Dora Romney	I have no faith that this comment will even be read. The leaders in Salt Lake County and in UDOT and in the legislature will do exactly as they wish. There are certain individuals who will benefit immensely with the gondola and we know who they are. I just wish we had a voice because we'll get to pay for this albatross as taxpayers. LISTEN to the people for a refreshing change and don't ruin our glorious canyon. PLEASE!!!!!!
36222	Otto Jenkins	Don't build a gondola.. support wider roads with avalanche sheds & busses
36223	Fred Schoenbrunn	A gondola is the most environmentally friendly way of getting people up and down the canyon as it avoids driving cars and busses up and down the canyon and avoids the damage from adding a lane to the whole canyon. With that said, an alternative electric bus system with the same 2500 car parking garage at the bottom could be very effective at moving people up and down in good weather conditions without the damage of adding lanes or a gondola. it doesn't solve the winter storm situations the way the gondola does, but adds considerable parking capacity.
36224	Lynne Sutherland	I oppose UDOT's preferred alternative: Gondola B (From La Caille). As evidenced by the original public comments for S.R. 210 Draft EIS, I, and most the public, strongly oppose building a Gondola in Little Cottonwood Canyon, and support an enhanced bus service, tolling, and other restrictions be implemented before any new construction is considered. In UDOT's executive summary for the Final EIS, UDOT claims there is "support for gondola and bus alternatives." While this is true, it misconstrues the overarching message from the 13,443 public comments UDOT received. While UDOT's 258-page public comment response is quite comprehensive, it failed to statistically summarize major themes of the public's wishes. Because UDOT's 258-page public comment response sufficiently documents all the reasons the gondola is a bad idea, there is no reason to expand on that here. Rather, I call on UDOT to present a statistical summary of the major themes from the original public comments and act in accordance with the majority themes, that is: enhanced bus service, restrictions to single occupancy traffic, and no gondola in Little Cottonwood Canyon. Thank you for your careful consideration!
36225	Claire Bjornson	I'm an avid skier and I don't own a car! I have been an avid bus user and I can tell you it works! Please increase bus routes on the weekends, and do NOT waste our tax dollars on an environmental catastrophe that will in no way fix our transportation issue. The answer is much simpler than the gondola- simple, usable bussing.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36226	LAWRENCE WOOLSON	better bus schedule (more often). Alta direct buses, not every bus stopping at Snowbird multiple times
36227	Julia Gappmaier	Please preserve the natural beauty of Little Cottonwood Canyon by voting NO to the gondola project. The gondolas will ruin the view and will only benefit the ski resorts. There are better options that won't permanently scare this breathtaking landscape. Thank you!
36228	Jeff Bierce	Build a roof over road in avalanche areas, instead of gondola.. the gondola idea is not good
36229	Higinio Gonzalez	Please try to solve our transportation problems. We need buses, not a new toy to destroy our natural resources. Not to the gondola.
36230	Kali Sutherland	I oppose UDOT's preferred alternative: Gondola B (From La Caille). As evidenced by the original public comments for S.R. 210 Draft EIS, I, and most the public, strongly oppose building a Gondola in Little Cottonwood Canyon, and support an enhanced bus service, tolling, and other restrictions be implemented before any new construction is considered. In UDOT's executive summary for the Final EIS, UDOT claims there is "support for gondola and bus alternatives." While this is true, it misconstrues the overarching message from the 13,443 public comments UDOT received. While UDOT's 258-page public comment response is quite comprehensive, it failed to statistically summarize major themes of the public's wishes. Because UDOT's 258-page public comment response sufficiently documents all the reasons the gondola is a bad idea, there is no reason to expand on that here. Rather, I call on UDOT to present a statistical summary of the major themes from the original public comments and act in accordance with the majority themes, that is: enhanced bus service, restrictions to single occupancy traffic, and no gondola in Little Cottonwood Canyon. Thank you for your careful consideration!
36231	Michael Coulam	Please, whatever decision is made, don't charge a fee to use Big Cottonwood Canyon for those of us that own cabins/property in the canyon. My family has owned a cabin in the Silverfork area of Big Cottonwood Canyon since the 1950s. We frequent the canyon often. Charging a canyon use fee or road access fee would not be right for those of us that have invested in property up the canyon. Thank you for your consideration.
36232	Seth Mower	I vehemently oppose the gondola as a viable option to improve congestion in Big Cottonwood Canyon. There is no reason this gondola should be considered "the best option" - it will permanently mar the stunning beauty of the canyon, it will affect watershed coming from snow-runoff, it will only function to serve the private ski resorts that will not be asked to foot the bill, and a gondola is perhaps the least efficient way to move a large amount of people over long distances. It's slow, the service cannot be expanded like buses, the infrastructure is expensive, and it will not encourage people to drive less. It's a money grab for developers and it will not solve the seasonal issue.
36233	Eileen Brown	no gondola!!!! More electric buses.
36234	Chase Novack	I do not support the gondola construction. Please put money into buses and shuttles and tolling as needed to keep the canyon accessible and beautiful for all.
36235	Doug Arnold	I support Phased Implementation of the project (Gondola Phase B). Increase bus service and widening of Little Cottonwood Canyon Road (if necessary).
36236	Robert Cardwell	I strongly oppose the gondola. I support more bus service and more ski area locker rooms to provide a safe place to store your items without having to carry equipment on the public transport.
36237	Jonathan Egbert	I think year round busses would be a good initial solution for both big and little cottonwood. The ski bus is currently \$10 for a round trip and cost of car fuel less than \$5, so that price needs to come down. Limiting roadside parking can promote bus use and improve cyclist safety. Entry/parking for cars should be more than the cost for the bus. If people are angry about a gondola before one is built they probably won't want to ride it.
36238	Jonathan Creel	The gondola is not a solution at all. This would take a heavy toll on the environment, the aesthetics and viewshed, and the overall experience in the canyon. It completely misses the point of why people recreate and chose to live here, let alone the impact it would have to the resource. There are other options that are more effective and efficient than an extraordinarily expensive gondola. Thank you. Jonathan Creel
36239	Isaac Shaw	Funds should be allocated to increase access for everyone by expanding mass transit. The gondola won't solve anything and will impact our watershed. Please keep the gondola out of our canyon.
36240	Robert Ostler	I encourage the phased approach to the building of the gondola, with a thorough review at the enhanced bussing phase to see if that could, in fact, be a solution. The gondola is not an equitable solution and will perpetuate environmental marginalization and injustice in the Wasatch Front. The building of the gondola is fiscally irresponsible, with half a billion in initial construction costs alone.
36241	Rosemary Winters	Please preserve the beauty and protect the watershed in Little Cottonwood canyon by prohibiting a gondola. We need to get cars out of the canyon and focus on mass transit. I support a reservation system and electric buses.
36242	Delaney Marks	Please do not build! As a fellow Utah resident I hope we can keep that nonsense out of our beautiful mountains
36243	paige connolly	here to support and fight for safety and for the beautiful mountains that we too often take for granted!! #youneverknowuntilyoutry
36244	David Comber	I have lived full time in SLC for the past 6 years. A key reason why I chose to move across the country to SLC was its close proximity to backcountry access, including LCC. The Gondola B option is the wrong solution for many reasons, including: Taxpayer dollars will be benefiting not the taxpayer, but rather two private ski areas. The number of cars visiting the ski areas will likely remain the same, while the total skier visits will boost resort revenue by 20%. A Deseret/Hinckley poll suggests that 80% of Utahns are opposed to the gondola. How about listening to local consensus, a consensus also reflected by our elected mayors? The gondola will not run during avalanche mitigation with the howitzers. At the very time when skiers most want to get back down LCC, the gondola is no help. The 2,500 spaces parking lot to service the gondola at the canyon base will create major congestion for the surrounding community. Lower cost alternatives have not been given a fair chance. It is reckless to invest just south of \$1B USD (the project won't stay within estimated 550M budget), while there are still unanswered questions.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36245	Meera Rajaram	I am resident of Sandy and love the Little Cottonwood Canyon. Introducing Gondolas to the beautiful natural environment that we have here would be a travesty of the highest order. It will become a permanent graffiti on nature's creation. And, it does not make it any convenient for the nature-loving public at large. It will be a drain on additional energy consumption to keep the infrastructure running plus the added costs towards ensuring safety. Residents should not have to bear this added burden to satisfy some narrow-minded business interests. I am totally against the Gondola project and I hope my comments will be considered positively to reject the proposal. Thanks.
36246	Robert Gorelik	When trax was first proposed 90% of the population was against it, today 90% want more of it. I support the Gondola, but also recommend we also make improvements to the ground traffic including a bus lane. Go all in!!!
36247	Reed Heil	I find it interesting that LCC is pushing so hard for something when you haven't acknowledged the success of the parking lot reservations or the bus system never running at maximum capacity. Until that happens, there is no reason to pursue the gondola but I would recommend a toll like in millcreek with season passes available for super users
38624	Laura Briefer	<p>Good afternoon, Josh:</p> <p>Attached please find Salt Lake City's comments concerning the Little Cottonwood Canyon Final Environmental Impact Statement (LCC FEIS). I also uploaded these comments on October 16th as plain text in the submittal form on the LCC FEIS website in case it is easier to compile our comments from the submittal database.</p> <p>Thank you for the continued partnership and coordination.</p> <p>Laura Briefer, MPA</p>
36248	John Nelson	What we really need is enforcement of no dogs in our canyons and smart solutions to solving air quality issues. Money should be spent on traffic light timing, enforcement of diesel pickup air emission violations, clunker car emission violations, & better traffic management. I rarely ski so why do my tax dollars have to fund a gondola?
38625	Dave Fields	<p>Hello,</p> <p>Attached is a letter for submission to the Final EIS comment period on behalf of the four Cottonwood canyons ski resort general managers.</p> <p>Thank you</p> <p>Dave</p>
36249	Matt Painter	I'm against the Gondola for many reasons. First is the eyesore it will make among the beauty of the canyon. Second is we are catering to private companies with taxpayer money. I haven't read anywhere where snowbird and alta will be taxed to pay for this. Third, no one wants it. I'm sure taxpayers in southern Utah do not want it. I know the people of Sandy do not want it. The elite are those that think this is a good idea and want to shove it down our throats. Fourth, this will create more visitors up an already crowded canyon. Fifth, this will do nothing to alleviate the traffic on Wasatch Blvd. It will only make it worse. Please do not proceed with this terrible plan.
36250	amanda giordano	this gondola will ruin the environment as well as provide a way to exclude even more of the community from accessing mountains.
36251	Francesca Audia	<p>As a frequent user of Little Cottonwood Canyon for resort skiing, backcountry skiing, trail running, and hiking, I firmly believe we need a transportation alternative to private vehicles. However, I am disappointed with UDOT's choice of the gondola as the preferred transportation alternative in Little Cottonwood Canyon. While there is no perfect solution, implementing a gondola at an estimated cost of half a billion dollars (presumably with major taxpayer funding) that financially benefits two private companies, and that there is major public backlash against, does not strike me as the best solution.</p> <p>One of my concerns is that the proposed solution is short-sighted. If one of the goals is to improve safety, why not operate the proposed solution year-round? Regularly on weekends, trailhead parking lots fill up and people park up to a half mile from the trailhead on the road, creating a dangerous situation for pedestrians and drivers. Furthermore, given the long time horizon in implementing the gondola and Utah's warming climate and shrinking Great Salt Lake, realistically, what will Utah's ski demand look like when the gondola is finally running?</p> <p>The travel time of the proposed gondola solution is almost 1.5 times that of driving a personal vehicle. Even with the addition of tolling, there are many people who would prefer to drive a vehicle in exchange for a shorter commute. We've seen that with paid parking at ski resorts; they still fill up every weekend, despite buses offering a cheaper ride.</p> <p>Last, the construction of a gondola will permanently scar Little Cottonwood Canyon.</p> <p>I appreciate that UDOT is considering a phased implementation plan with enhanced bussing, but at the same time, with UDOT's recent announcement of reduced bus service to the canyons, I question how serious UDOT is about this.</p>
36252	Isabella Bertagnolli	Do not build the gondola. Increased electric bus presence would carry way more people through the canyon than the gondola. The Enhanced Bus Service alternative is much preferred to the building of the gondola.
36253	George Hogelin	Just say no to the Neiderhauser boondogle!!

36254	Eric Van den Akker	<p>First of all, bless the person who has to read all these comments! Having been to some public meetings before, I know you're getting some crazy ones, but also some really really good ones - some probably better than mine. Anyway, I'd suggest this meshing of current proposed alternatives (hoping that it's at least among the really really good ones!)</p> <ul style="list-style-type: none"> * Keep the big parking lot/structure at the base station - gotta keep this simple for it to be successful. (after all, parking at the resorts is one of the problems being solved here, which frankly is a resort problem, not a UDOT problem, but I digress...we can kill 2 birds with one stone). This way, the only transfer is from their own vehicle to the ride up the canyon. * For said ride up the canyon, instead of regular buses, operate electric shuttles (such as USU Aggie Bus or those they use on Denver's 16th street, but for heaven's sake, they don't have to look the same as a city bus). Then you'd have the wireless charging pads (like the USU bus uses) at the 3 stops (base parking structure, Snowbird, and Alta) combined with regenerative braking, and charging becomes a very small or nonexistent problem (running a few extra shuttles could give extra time to charge if needed). * I'd still recommend the snowsheds with this plan. * Having the express shuttle lane would also help "sell" the service to those stuck in slower traffic, but does add a LOT to the capital cost, so I'd say probably delay implementing that part, but am generally favorable to it. <p>I think that would solve most of the downsides to the enhanced bus system alternative, without the big downsides of the gondola alternative.</p> <p>As much fun as it is to ride a gondola (the one in Telluride was free last week, which also encourages ridership), it's totally inflexible. We're talking about something that's a problem - in your words - approximately 50 days a year; just a fraction of the year, and really only affects a very small part of the community & community members. It seems clear to me that better bus service is the better option overall, but buses aren't sexy.</p> <p>So...</p> <p>Make the buses sexy! Make them very frequent, electric (electric has its problems, but it's also very sexy) (and there are ways to work around the downsides), SIMPLE & EASY to both get to & use, and frankly, look different. Once they look different and operate like shuttles, you can call them shuttles and that frankly helps improve their public image too (I'm just telling it how it is). Then when the shuttles aren't needed (you know, for the other 315 days of the year), they can either be parked or used elsewhere in your system. The gondola would be stuck. Immovable. Inflexible. And omnipresent for the vast majority of the year that it'd still not be in use.</p> <p>For the enormous costs of this project, I think the flexibility needs to carry higher weight. And let's be honest - this isn't just a solution for Little Cottonwood Canyon, it's also basically going to be a test run for Big Cottonwood Canyon's similar issues.</p>
36255	Jared Schneider	<p>The landscape will forever change. This will bring a huge scar on the canyon. I am NOT for this. I urge to find other solutions to solve the transportation challenges.</p>
36256	Eric Van den Akker	<p>First of all, bless the person who has to read all these comments! 36257	Heather Dove	<p>I am requesting that UDOT table its plan to build a a gondola system in Little Cottonwood Canyon. The price is far too high, the payment would unfairly fall on the public rather than the benefactors (Snowbird and Alta), and in the end, would do nothing to address the traffic congestion in that canyon.</p> <p>I am in favor of better bus service to and in the canyon year round, a toll on cars entering the canyon on big ski days, and even a limit to the number of cars allowed to enter the canyon. These measures make far more sense to me than the view-marring, environmentally damaging and disruptive, exorbitantly expensive project of building a gondola system.</p>
36258	Gabriel Sherman	Do not do the gondola. There are better solutions.
36259	Allison Beck	<p>I am a resident of Alta. While I support the gondola a million times over than the enhanced bus alternative, I am very concerned over what sort of impacts this alternative will have on the lower canyon, traffic, and public transportation leading up to the base station. Very careful, comprehensive planning NEEDS to be done to ensure we don't create another traffic nightmare. I'd also like to see road tolling and reservations continue to help fill the VERY large pot that will be needed to build this gondola. I would also like you to engage residents of LCC so that our voices may be heard as design and other changes move forward. I think that something needs to be done to save the canyon, and CARS and other pollution emitting vehicles are not the solution. I'd like to see a sustainability element to the footprint of this gondola (green energy? natural gas power? wind based electricity feeding the gondola), because this is the way of the future. This is a huge opportunity for us in LCC to lead the way with an innovative solution. Rushing or cutting corners as we do this is not the way (and I'm a little worried about our development-minded friends on the Hill with this one).</p>
36260	Amy Jenness	<p>Hello!</p> <p>First off, thank you for your attention to these public comments.</p> <p>I believe that building a gondola is a very wrong choice to solve the problem of traffic in LCC during essentially 6 weeks (or less) during the winter months to serve a very small portion of the population.</p> <p>This project is set to take years to build- that's years of disruption to traffic, people, landscape, DRINKING WATER, and so many other factors before the project is completed. The risk to reward here is weighted so heavily to the risk that it seems wholly unnecessary.</p> <p>What LCC has to offer is so much greater than resort skiing, and it is entirely unfair to everyone who does not resort ski at Snowbird and Alta to commit this much money and disruption to the irreversible gondola project.</p> <p>Additional points are as follows:</p> <ul style="list-style-type: none"> -The gondola would have a huge negative effect on one of Salt Lake City's biggest economic drivers: dispersed recreation (hiking, climbing, running, backcountry skiing). This is more difficult to quantify than resort skiing, but is a huge factor when people choose to visit and/or relocate to Salt Lake City and is surely the largest economic driver in our local canyons -Access to climbing areas will be compromised for the next decade while the area is under construction, and some may be permanently affected or lost -The building of the gondola will come with the destruction and/or removal of irreplaceable and historic world-class climbing and views -The gondola is not an equitable solution and will perpetuate environmental marginalization and injustice in the Wasatch Front -The building of the gondola is fiscally irresponsible, with half a billion in initial construction costs alone <p>Thank you for your consideration.</p>
36261	Hairy Johnson	<p>you if you build the gondola</p>
36262	Robinson Mackey	<p>The gondola does not support mixed use of the canyons and alienates a ton of people. Listen to the community not the money</p>
36263	andrea korval fabbri	<p>My stake: as a vacation visitor to LCC for more than 20 years (my own personal spending at Snowbird totals close to half a million over the years) I am heartbroken to see the proposed gondola and road tolling. The beauty of the canyon will be forever destroyed by the ugly new infrastructure. The cost increases will spell the death of Snowbird and Alta and eventually turn them into payroll members-only rich-only private clubs. Surely there aren't enough day lockers and bathrooms for thousands of people per hour. / If climate change doesn't kill Snowbird and Alta, UDOT definitely will. This all seems like opportunistic timing by a failed restaurant owner and knee-jerk reaction to pandemic factors that may not last. I guess it might be time to take my family vacations somewhere else which is beyond sad.</p>
36264	Bruce Williams	<p>I am against a gondola in the canyons for several reasons.</p> <p>First, the cost of such a transportation method for the purpose of alleviating traffic that is mainly produced by ski traffic should be shouldered by those private entities, not the taxpayer.</p> <p>Second, a gondola will mar some of the natural views in the canyons. It will also have many other unforeseen environmental impacts involved in the construction and maintenance of the gondola.</p> <p>Third, it will be subject to many dangers know in our canyons, to include very high winds.</p> <p>Fourth, there are many other dangers to female riders that are largely ignored in the planning of this type of transportation. I would not allow my daughters to ride when they could end up on a gondola alone with a person of questionable character. I don't expect my comments to amount to anything as UDOT has already made up their minds as they do on every project.</p>

ID	Full Name	Comment
36265	Robert Douglass	<p>The Final EIS modified an alternative in the Draft EIS to create a new alternative, never presented to the public for comment. This new alternative requires a supplement to the EIS per the NEPA process. The EIS, however, states that a supplement will not be released. The EIS appears to acknowledge and attempt to mitigate this omission and error by requesting public comment after the release of the final EIS. Having finalized the EIS, UDOT cannot make any revisions to the EIS identified as necessary by public comment without releasing a supplement. There appears to be no reason to request public comment other than as an attempt to sidestep the NEPA requirement for a supplement when Alternatives are modified and cause additional new impacts that are not minimal. Requesting public comment after a final EIS with the stated intention of not releasing a supplement violates the NEPA process. It is an error in the NEPA and EIS process. The impacts of the new alternative are not de minimis, minimal, or insignificant. Moving all the gondola traffic to the mouth of the canyon and removing bus operations from the hubs at BCC and 9400 S. will add significant additional traffic to the mouth of the canyon. Removing 1,000 vehicles worth of bus service into the Canyon mouth and reducing public transit will absolutely increase in a significant manner traffic for the high-traffic roadways of 9400 S. and Wasatch from BCC to LCC. This puts as many additional vehicles into the mouth of the Canyon as the Draft EIS proposed to remove. It is a substantial change to the environmental impact of Wasatch Blvd and Sandy and demands the submission of an EIS supplement to explain and assess the impact. It appears that the EIS is negligent in not following the NEPA processing due to the error of calling this impact 'minimal', omitting an impact assessment for the change, and denying the need for a supplement.</p>
36266	Meg Emory	<p>It is not encouraging to the citizens of SLC that this is the best their DOT can come up with. A clear case of lobbying while ignoring the interest of the public is disgusting. A solution that benefits all canyon users, not just the ski resorts, is greatly needed and the gondola is not that solution.</p>
36267	Ducie Chads	<p>Comments By Ducie Chris Chads on LCC EISOctober 17, 2022 I recreate somewhat in LCC throughout the year but mainly in winter. I predominately ski at Alta although in my 40+ years living in Utah I have skied Snowbird on some sort of season pass. My main summer activities are road biking and hiking. For my liking LCC is too steep for enjoyable road biking. I have enjoyed hiking many of the trails in both LCC and BCC. Phased Implementation Plan- I like this idea as it may avoid the need for the 'Gondola' (see below). It allows for the development of improved busing options, snow roofs at the problematic 'avalanche onto the road areas' (White Pine, etc.), and improved parking areas. LCC road will have to be open year around so the residents and commercial businesses can receive deliveries and have normal access. LCC road will exist for the foreseeable future with all its faults and expensive maintenance. Please proceed with expansion of the White Pine Parking Lot as proposed ASAP. Vehicles leaving this lot currently are subject to high-speed crashes from cars driving uphill. The proposed exit for the new lot (about 1/2 mile uphill) gives much improved sight lines to egress the lot safely. Avoid the installation of a Gondola- While romantic in concept this idea is not desirable to my thinking ever. The project would ruin various sightlines in the canyon, it would be a 'white elephant' about 6 months out of the year as it would not be used (operated), and it is limited in scope as it does not provide access to recreation other than the two ski areas it serves. One of the claims of the project is the towers will only occupy two acres of land. But in building those towers how many acres will be disturbed building access roads to the tower bases? If I was to use the Gondola, your EIS states my ride time vs. driving the road will increase by 30 minutes. In addition, my time waiting in line to board a Gondola car at the bottom and top is not known but might add 15-30 minutes to my travel time. And the proposed Gondola terminals do not drop me where I want to be at either ski area. So, add more travel time, say 15-30 minutes, each day. So, the Gondola would add an hour to 1.5 hours each day to my travel time. No thanks. The gondola project is a very complicated engineering endeavor of a scope not attempted in the World. Frequently these projects run into unforeseen problems that increase costs. As a member of the public, I am not convinced that capital and operational costs could be managed to protect taxpayers from additional expenses. In addition the Gondola benefits a very small portion of the populous and certainly not the general public who would pay for this project. Toll Booths- recently the implementation of fees to drive up either LCC or BCC canyon have been mentioned by the news media. The proposals have mentioned 'fees charged only on busy days'. Please explain what is to be considered a busy day. Toll Booths have largely (if not completely) been abandoned throughout the World in favor of using Transponders in cars or license plate readers. Simply there is not room at the base of either canyon for Toll Booths and the ensuing backup of cars to wherever. I feel a use toll as has been in place for years in Millcreek Canyon is fairer and more useable. As in Millcreek monies collected can be used to maintain and improve the two Cottonwood Canyons.</p>
36268	Bryson Bellacomo	<p>The gondola does not have the ability to adapt or to scale to changes in demands and conditions. There are better options that consider a longer timeline along with lower costs.</p>
36269	Jackie Howard	<p>I am against a gondola going up little cottonwood canyon. Yay</p>
36270	Robert Douglass	<p>The final EIS is in error in its characterization of the number of stories in the 2,500-vehicle parking garage. The footprint for the entry floor of the garage exactly matches the design drawings provided by Gondola Works and CW Management. The match is complete in both the dimension of the structure and its internal design. Using the vehicle layout of this floor and the additional floors of the structure provided by the designer show that 8 to 10 floors will be required. The EIS needs to be modified to reflect either the correct number of floors per the design drawings or a new design with a substantially larger footprint needs to be provided. This error requires an EIS supplement to be published assessing the additional cost and environmental impact.</p>
36271	Sarah Parkinson	<p>We do NOT net a gondola in little cottonwood canyon. It will not be beneficial to what Utah needs and will only provide profit while hurting the wildlife that is there now. Please please give the wildlife the chances they deserve and STOP putting profit over our planet.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36272	Libby Snoke	<p>As an avid outdoor user and someone who is immersed in the industry, I strongly oppose the construction of a gondola in Little Cottonwood. I moved to Utah a year and a half ago, my first trail was in Little Cottonwood. I remember that is what sold me on staying in Utah. The way that you can escape the hustle and bustle of the city and dip into a true wilderness in thirty minutes was incredible. I hiked to the top of a ridgeline and looked out through the canyon. It reminded me of the Colorado Valley's I moved from. Total solice, peace, and wilderness except for a simple road snaking the base oif the canyon.</p> <p>It hurts me, the community, & the visitors Little Cottonwood will house. Building a gondola takes away the pure wilderness and isolation the canyon is able to offer. I am begging that other options be considered over the gondola, options that are less obstructive to the incredible views that is offered.</p> <p>I hope you listen to the hundreds of folks that are offering their comment and stay true to the people of your city.</p> <p>Thank you, Libby Snoke</p>
36273	Rachael Fisher	<p>This process is flawed, the EIS's own purpose and need statement is not addressed by this alternative. The gondola was excluded from initial screening for not reducing traffic, and was therefore not evaluated to the same standards that the widening of the road, bus services, and no action alternative were. The whole process has been skewed and unfairly beneficial to the two ski resorts up Little Cottonwood. It excludes those who cannot afford this option, and the taxpayer base who are bank rolling this criminal operation have no say. This is unfair, arbitrary and capricious. The communities most affected by this decision are opposed to this decision. This goes against what Utahans stand for and actually disregards all of the public outcry. It is a shame and a sham, we are all disappointed to see what UDOT has decided. The fact that you are both the applicant AND the decision maker is laughable. There is no chance of an unbiased decision, even the law makers benefit financially from this endeavor. Most disgusting of all is the charade that these „Áúcomments,Áú will ever be considered. The process is broken, the public trust is broken, and ultimately Little Cottonwood will forever be marred by greedy rich people for their benefit and the demise of the beauty and wildness that brought most of us here. I'm sorry for this waste of time. Sorry to my children for a gondola built justified by „Áúproblems,Áú (like avalanches) that won't even exist in 25 years. Neither will skiing in the Wasatch that this was justified for, certainly not the quality that it is now. Divert the billion dollars this will cost to save us from the cancer winds of the dried up lake.</p>
36274	Tom Pollard	<p>Thank you for allowing me to comment on this matter. During my time as Mayor of the Town of Alta, I was very involved in the beginning stages of this process. It is exciting that we are at this point. Traffic congestion and public safety of travelers in Little Cottonwood Canyon has been a challenge for many years. My hope in being involved was that this process would recommend a new innovative solution. I feel that the Gondola option is on track for that outcome. From the information I have seen on the initial designs, it is not the perfect solution as it is. It needs more work. It is discouraging to me that so many people and organizations have come out in full opposition to the concept without being open to exploring the concept of the gondola option.</p> <p>All of the opponents are placing the solution on concepts (except for tolling) that over the years have been tried at one time or another. As we have seen on the last few weeks placing the long-term solution on busses within a regional system is tenuous. The solution needs to based on its own dedicated program.</p> <p>If you have traveled the canyon this summer, you have seen that this is no longer just a winter time problem. I support moving forward with the gondola concept and hope that the energy going forward can be put towards making it a viable long-term solution.</p>
36275	Tiffany Quilter	<p>The Gondola is the best idea. Buses won't do anything. An immediate toll needs to be enacted as well. The canyon(s) is(are) being lived to death and I no longer enjoy visiting them. The gondola will be a year round novel attraction to view the canyon without being stuck in traffic, nor subjst to avalanche/road clearing holds.</p>
36276	Joey Wilson	<p>The Gondola should not be approved at this time. It is still too controversial and is too expensive to be reversed once it is started. In the meantime, tolls and bus systems can help reduce the traffic at peak hours in the canyon. Let's see how that works before diving in so deep with a Gondola. The Gondola should really only happen after many other solutions have been tried.</p>
36277	Marianne Ricks	<p>I do not support the idea of a gondola at this time. Too much tax payer money, and there are plenty of things we can do first to limit traffic and congestions in the area.</p>
36278	Jenny Robertson	<p>Absolutely no gondola!!</p>
36279	Tom Turley	<p>Don't want the gondola. Put out tax dollars somewhere else.</p>
36280	Robert Douglass	<p>Standard design criteria for parking structures require an entrance and exit for each 500 vehicle spaces. The design provided by the EIS shows only two entrances and exits for 2,500 vehicles. A redesign is required in a modified EIS to show a conforming parking structure design. The cost needs to be revised to account for the 3 additional entrances and exits and the access ramps for them.</p>
36281	Kezia Nakagawa	<p>Putting in a gondola isn't a solution and will only make things worse before they just stay bad. What we need is a quick and more long term solution, one we can even try before committing to it... like a better more constant bus schedule.</p> <p>We are tired of construction projects and we want something that will work for everyone.</p>

ID	Full Name	Comment
36282	TEGAN TINGLEY	<p>The proposed plan is effectively corporate welfare. If you were to take the resorts out of the equation, there would be no need to invest this money in any transportation upgrades. This plan almost exclusively benefits the resorts and they should be burdened with most if not all of the cost. If they had to pay for it themselves, this plan would not be moving forward. Furthermore, this is only an issue for less than 30 days a year! Why oh why are we investing millions of tax payer money in a solution that doesn't even fix the problem + only helps less than 1 month out of the year!</p> <p>With the extensive cost as well as environmental impacts, we should really be questioning if any changes should be made at all. Why not limit the amount of people that can ski at the resorts on a given day + use tolling to encourage carpooling? Adding buses - furthermore rapid bus transit - from locations along the I-15 and I-215 corridors would make much more sense.</p> <p>Most of the residents of this state would not even utilize the gondola let alone benefit from it. Skiing is a sport dominated by white people with money. We should focus our UTA dollars to improve public transit for the people who need it the most - emphasis on need. This plan does not make sense for anyone other than greedy corporations and corrupt politicians.</p>
36283	Colleen Flanagan	I am absolutely opposed to the Gondola!
36284	Guy Mendenhall	I have lived in cottonwood Heights and Sandy .. I cannot think of a worse thing than to jam the roads with more traffic , more tourists. The go saola only serves one entity full of greed .. Snowbird ! No Gondola!!
36285	Kolton Smith	As an employee of Snowbird and an avid skier who spends 5 - 6 days a week in Little Cottonwood Canyon, I'm in support of the gondola as the most efficient, Safest and least harmful option for the canyon. I'm also in support of tolling in the winter.
36286	Erin Curtis	I think the gondola is a terrible idea. The expense benefits primarily one industry. The cost would be borne by many who will receive no benefit (other than tax revenue). What about spending those dollars on saving the Great Salt Lake, so we can have a ski industry? The gondola plan is a thumbs down for me.
36287	Gary Greaves	Please do not use my tax money to gift two private businesses over half of a billion dollars(initial cost estimate). Try a progressive toll on private vehicles. The more people in the vehicle, the less you pay. A tram will not be able to send enough people up the canyon in the mornings, when people rush to the slopes, to have a significant impact on traffic.
36288	Ashleigh Monaco	<p>With the threats of climate change looming over us more and more everyday -- ESPECIALLY in Northern Utah -- we need to be more considerate of the impact we're having on the environment as a whole. We need to stop only paying attention to the things we think will make the most money in the short-term, or please the wealthy. The gondola will only make problems worse, not just for people but for the wildlife that have called this place home long before we ever did. It will greatly disrupt the ecosystem of Cottonwood Canyon, harming wildlife migrations and critical wildlife habitat. A better, more accessible bus system is a fantastic alternative to encouraging people to take public transit to access the beauty of the canyon. Another opportunity to take here is to educate the public -- vistors and locals alike -- about OTHER recreational areas in Utah and in surrounding states. There are so many accessible, beautiful, natural areas in Utah and beyond -- why are we encouraging everyone to crowd into the same, already crowded place? You can easily use the money you'd put towards a useless, ugly gondola instead towards educational outreach and guided programs that show visitors and locals how to explore (safely and responsibly) all that Utah has to offer. Please do not establish the gondola and continue to limit outdoors access to the wealthiest people while harming the environment, the wildlife, and the locals/ visitors who genuinely care for the Canyon.</p>
36289	Stanley Holmes	<p>Public Comment: Opposed to Gondola B Alternative for Little Cottonwood Canyon</p> <p>Dear UDOT,</p> <p>I am writing to register my opposition to your preferred transit plan for Little Cottonwood Canyon (LCC): the Gondola B Alternative. Implementing this alternative would expend \$550 million or more for a project that unnecessarily damages the environment and aesthetic of the canyon, disservices the general public while prioritizing ski resort profits and the most affluent recreationists, and fails to provide a viable transportation solution to the growing set of LCC problems. UDOT should discard Gondola B and seriously consider all reasonable alternatives.</p> <p>Improved bus service and tighter regulation of private vehicular traffic in the canyon should be part of a reasonable alternative that does not visually pollute LCC with a multi-mile line of gondola towers that primarily serve the economic interests of wealthy of Alta and Snowbird ski resorts owner-operators and their elite clientele. The Gondola B Alternative is a slap-in-the-face to mainstream Utahns who would fund, but not benefit, from that proposal.</p> <p>I concur with the Salt Lake County Council and other community leaders who have expressed adamant opposition to the Gondola B alternative. At this time they, not UDOT, speak to the interests of me and my family.</p> <p>Thank you for registering my opposition to the Gondola B Alternaive.</p> <p>Sincerely</p> <p>/s/ Stanley T. Holmes</p>

36290	Danny Gonza	<p>No to the gondola. The gondola is going to be an eye sore but it's literally going to serve people from the mouth of the canyon to snowbird and Alta during the winter. The build is funded by taxpayer It doesn't operate during the summer And it doesn't offer any other stops You're going to have a gondola down the middle of the canyon. It's not going to do much to alleviate the traffic in the canyon and issues with the canyon. Plus people forget bridal veil used to have a gondola and it was destroyed by an avalanche and never got rebuild. Also it's believed that some former representatives have financial interest in the gondola even though the city and county have also said no</p>
36291	Jena Frioux	<p>I am writing to strongly oppose the gondola proposition for Little Cottonwood Canyon. I have lived in Cottonwood Heights my whole life. The canyons have been my backyard and playground not just for snowboarding and winter use but climbing, hiking, picnicking with my family and camping. I have seen the traffic increase over the years, gotten stuck in long lines going up the canyon, and have taken the bus many times up to Snowbird. This gondola proposition is not only irresponsible for the environment but also an irresponsible use of tax money! The gondola does not protect our water supply, does not enhance access for the non-resort patrons, doesn't stop the loss of species, and does not remove development pressures from the Wasatch. It does the opposite!</p> <p>I not only recreate in the canyons but I am a landscape artist. I draw inspiration mainly from the Wasatch mountains. If this gondola was constructed, it would create a major eyesore in the middle of of the incredible vistas in the canyon. The correct solution in my opinion with many others is to increase bus accessibility and frequency.</p> <p>I plead with you to STOP THE GONDOLA and create a more responsible transportation solution that benefits our whole community, not just the rich few resort owners.</p>
36292	Stevan Baxter	<p>I am against the gondola. It is a waste of taxpayer money and a harm to a natural environment and habitat.</p>
36293	Amber L Broadaway	<p>I am submitting comments on behalf of Solitude Mountain Resort, a member of the Alterra Mountain Company community and located in the Town of Brighton, Big Cottonwood Canyon. I would first like to applaud and thank your team for the tremendous amount of work and effort you have put forth in attempting to solve for some very complex environmental and capacity issues in the Cottonwoods. While new to Utah, having arrived just over a year ago from Vermont, it has been the primary topic of my short tenure thus far as President & COO of Solitude. But over these past few months, I have watched and participated in what seems to be a very thoughtful and inclusive process of engaging and soliciting feedback from all relevant stakeholders.</p> <p>My areas of concern are primarily relative to Big Cottonwood and S.R. 190, given the location of Solitude in that area. First and foremost, the notion of tolling as detailed in your Environmental Impact Statement (EIS) applies to both Canyons and raises some problems for Solitude:</p> <ul style="list-style-type: none"> -Unfair economic impact on Big Cottonwood resort guests, especially prior to there being an enhanced public transport system oThe Big Cottonwood resorts already have parking fee structures in place, and the U.S. Forest Service (USFS) has announced that it will be adding user fees at nearby locations as well oAdding tolling fees on top of these existing fees is excessive and creates a poor guest experience oThe location of the toll as proposed, at the Big Cottonwood resort entrances, discriminates against resort guests versus other canyon users. -The creation of new traffic congestion issues that would undermine one of the project's fundamental goals of reducing traffic congestion oToll-related vehicle stoppages near the resorts will likely increase congestion at existing pressure points near the resorts. oThe toll location is not effective in relation to vehicle turnaround areas and thus will create traffic back-ups further up the canyon. oIf the intent is to maintain the Utah Traction Law, let us put this verification and toll in the same location - at the bottom of the canyon <p>Your tolling fact sheet states „with improved transit options, tolls during the ski season. I would appreciate clarification on whether tolling will or will not be implemented prior to improved transit in Big Cottonwood. Some of the recent commentary by UDOT suggests tolling may be implemented before an enhanced bus system and/or the gondola are complete, including as soon as next ski season. Is this true?</p>
36294	Lara Gallacher	<p>The community is not supportive of this as a comprehensive and cost effective strategy to reduce traffic in the canyons without irreparably damaging the environment and canyons we have protected for decades. I would like to be clear that I directly and vehemently oppose the constitution of the gondola that is proposed. This is not an effective solution.</p>
36295	Diane Coles	<p>No gondola. Charge skiers for a bus pass when buying a parking ticket unless they have 4 people for a carpool, which would give them a free parking pass.</p>

ID	Full Name	Comment
36296	Teresa Stringham	<p>I am a local. I grew up in Sandy, and I have lived in Salt Lake County for 43 years. I enjoy the canyons year-round for hiking, mountain biking, and skiing. I do not agree with the gondola as a solution, and I do not agree with local taxpayers, who may not ski or use the canyon, funding the gondola.</p> <p>The timeframe during which the bottleneck exists, a few months during ski season, is quite small compared to the full year of use in the canyon. Why are we spending so much time and energy to find a „Äsolution,Ä, when perhaps our canyons are at max capacity and there should not be more people in the canyon during those times. Yes, the ski resorts have more capacity and are certainly advocating for more ski-pass purchasers and dollars, but I do not know a single person who lives in Salt Lake who is in favor, despite also being personally frustrated that it is so much more difficult to ski than it used to be and reminiscing about the good old days when it was a quick 15 minute drive up to endless powder skiing. The gondola will not decrease the traffic on Wasatch Boulevard, as skiers will all still congregate to park or take the gondola at the base of the canyon on Wasatch Boulevard.</p> <p>If something must be done, the gondola will not be less impactful than expanding the road to add a bus lane. The gondola will require an access road cut along the bottom of the entire canyon to each tower for maintenance. There will be a shortage of gondola workers, just as there is a shortage of bus drivers.</p> <p>A major reason people use the canyon is to spend time in nature. A gondola that expands the entire length of the canyon will detract from that experience the remaining 9 months of the year for all who hike, rock climb, bike, trail run, go for scenic drives, picnic, etc.</p> <p>Adding an extremely expensive gondola which locals will still have to pay for to ride and/or park, for only skiers to access the resorts in winter is too narrow and costly of a solution.</p>
36297	Ali Vom Dorp	.
36298	Patrick Morrison	<p>I would like to add my opposition to both the gondola and road widening proposals, and encourage UDOT to consider less impactful options, such as increased bus service, preferably electric, as well as controlling traffic through the simplest measure, asking the ski resorts to meter their own guests. Many great organizations have submitted exceptionally detailed explanations of why these options are short-sighted, expensive, and inequitable. I ask you take these seriously and give them as much weight as the well-funded private enterprises aggressively pushing the gondola. Along with this, it is my experience that the vast majority of residents do not want a gondola, as well as the neighboring cities and counties, many of whom have recently made official condemnation of these transportation alternatives. Please don't forever change our beautiful canyon for 10 powder days each winter.</p>
36299	Teresa Stringham	<p>I am a local. I grew up in Sandy, and I have lived in Salt Lake County for 43 years. I enjoy the canyons year-round for hiking, mountain biking, and skiing. I do not agree with the gondola as a solution, and I do not agree with local taxpayers, who may not ski or use the canyon, funding the gondola.</p> <p>The timeframe during which the bottleneck exists, a few months during ski season, is quite small compared to the full year of use in the canyon. Why are we spending so much time and energy to find a „Äsolution,Ä, when perhaps our canyons are at max capacity and there should not be more people in the canyon during those times. Yes, the ski resorts have more capacity and are certainly advocating for more ski-pass purchasers and dollars, but I do not know a single person who lives in Salt Lake who is in favor, despite also being personally frustrated that it is so much more difficult to ski than it used to be and reminiscing about the good old days when it was a quick 15 minute drive up to endless powder skiing. The gondola will not decrease the traffic on Wasatch Boulevard, as skiers will all still congregate to park or take the gondola at the base of the canyon on Wasatch Boulevard.</p> <p>If something must be done, the gondola will not be less impactful than expanding the road to add a bus lane. The gondola will require an access road cut along the bottom of the entire canyon to each tower for maintenance. There will be a shortage of gondola workers, just as there is a shortage of bus drivers.</p> <p>A major reason people use the canyon is to spend time in nature. 36300	Alex Montgomery	<p>I do not want a gondola. It will ruin climbing areas, ruin the views, and create more mess than it solves. Find another solution to the traffic problem that doesn't involve ruining LCC. This is not the right solution.</p>
36301	Emily Ponder	<p>I am a Sandy resident, as well as a frequent hiker and backcountry skier in Little Cottonwood. I strongly oppose the gondola and urge you to reject the proposed gondola plan. The disruption of Little Cottonwood's pristine beauty and the cost to tax payers is outrageous. While I frequent Little Cottonwood, I rarely ski at Alta or Snowbird. Putting a gondola in to serve two private businesses comes at far too great a price - monetarily and environmentally. I strongly believe that a gondola is not best for the Greater Salt Lake community. Pumping people up the canyon will lessen the experience at the resorts, while the existence of a gondola will scar the canyon and require a massive dollar amount. I plead with you to consider a shuttle alternative similar to Zion, a toll road, or an increased number of busses. This gondola will have a permanent mark on a cherished piece of land and ultimately is only truly needed a handful of days each year. As a member of the community, I am strongly against the proposed gondola.</p>
36302	Robert Douglass	<p>The EIS anticipates 1,050 people per hour riding the gondola at peak times. This represents approximately 400 to 500 vehicles parked every hour using the average person/vehicle number provided in the EIS. This means that a vehicle must park every 8 seconds or less at peak times. The EIS provides no analysis showing that this is possible given the layout of the structure provided by the EIS. The average parking time to gondola boarding shown in the total transit time for the gondola at peak times is therefore in error. The EIS is also in error when it states what the maximum backup distance would be on Wasatch Blvd because it does not use a realistic parking rate. The EIS needs to be corrected in a supplement to increase the total transit time by gondola to account for reasonable parking rates at peak times and explain how vehicles would not choke Wasatch back to at least BCC waiting to park at a reasonable rate.</p>
36303	Bill Jensen	<p>All of the options considered do nothing to alleviate the traffic leading up to the mouth of the canyon. Road designs and speed limits have encouraged drivers to use hwy 209 to Wasatch Blvd and points North even though it is not the shortest route. Drivers use it because while driving a greater distance it is faster - and as such most drivers drive well above the posted speed limit because they are in a hurry. The gondola will only increase the traffic leading up to the mouth of the canyon regardless of what it does within the canyon itself. UDOT is turning what has been a residential road into a high traffic corridor.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36304	Deva Bourbeau	It would be a shame for a city with some of the most beautiful natural landscapes in the world right on its doorstep to denigrate its own value in this way. Especially when alternative methods such as increased bus service haven't even been tried yet. I stand wholly against construction of the gondola.
36305	Margaret Brown	no gondola fr
36306	LORI CAMPBELL	As a tax payer funded project that only serves two ski resorts, this gondola is a financial burden on the citizens of Utah. Furthermore, a taxpayer funded gondola that does harms climbing and recreation areas in the canyon is forcing Utah tax payers to fund a project that harms their public recreation areas. The traffic can be better controlled without spending this level of money on a form of transportation that solely benefits two private businesses and not the public at large. Do not go through with the gondola project, I do not want to pay for private business to harm more public lands.
36307	Alex Montgomery	I do not want a gondola ruining the views and climbing areas. Find another solution that doesn't involve a gondola or ruining the canyon. Listen to the people when we say we don't want the gondola.
36308	Gigi Thorsen	I am a resident of the east bench near LCC. I vehemently object to the gondola. It would be a permanent scar on the land for the good of skiers only for a few months of the year (and then not daily during those months). UTA can instead implement an effective bus system for skiers, with a park-and-ride or two, even a few miles away. Thank you for accepting citizen feedback.
36309	Marcus Smith	This kind of expenditure is unwarranted (1) because its eventual use would be far from egalitarian. The wealthiest would benefit, both the industry owners and the wealthy clientele. It would be like the Concorde jetliners in this regard. (2) It would compromise the natural vista of a wondrous nature-scape, already too scarred by development.
36310	Jenivere Stotesbery	I do not agree with the gondola. While I understand the need for a change I do not understand the reasoning behind the gondola. It does not serve the purpose of needs. Drive in the canyon any day and you can see the areas of use beside 2 ski resorts. During leaf season the road was lined with cars. Solving for A few snow days each year doesn't help the overall situation. The solution needs to include year round accessibility with multiple stops for hiking , climbing, viewing etc. snowsheds and constant bus service would afford this better.
36311	Ryan Lauck	As a long time climber, mountain biker, trail runner and Backcountry skier I am deeply saddened by the permanent damage or loss to the world class recreation opportunities lower Little Cottonwood canyon offers. The canyon is so much more than just Alta and Snowbird.
36312	Bradley Vernon	In reviewing the EIS regarding the proposed Little Cottonwood Canyon Gondola project, I didn't see any consideration of the feasibility of using a subway train system. The Boring Company should be consulted to see if they could come up with a plan to bore a tunnel up Big Cottonwood Canyon, then over to Little Cottonwood Canyon, then on to Park City. This alternative would not only alleviate traffic in Little Cottonwood Canyon, but in Big Cottonwood and Parley's Canyons as well. It could be, in the long run the most cost-effective and have the least amount of negative environmental impacts as any of the alternatives I've seen.
36313	Lexi Dowdall	I would like to first see meaningful investment in carpooling and imposing a toll on single-driver vehicles before we invest in extremely expensive options that permanently change the character of the canyon, damage the riparian environment, or widen the road. Having spent my entire life in Little Cottonwood Canyon, it would be a shame to erect an expensive gondola that will simply promote more traffic while failing to serve users who do not wish to recreate at Snowbird or Alta. It is not what I would wish for the canyon's future or my tax dollars.
36314	Tanner Lertsongkham	No to the gondola. The gondola is going to be an eye sore but it's literally going to serve people from the mouth of the canyon to snowbird and Alta during the winter. The build is funded by taxpayer It doesn't operate during the summer And it doesn't offer any other stops You're going to have a gondola down the middle of the canyon. It's not going to do much to alleviate the traffic in the canyon and issues with the canyon. Plus people forget bridal veil used to have a gondola and it was destroyed by an avalanche and never got rebuild. Also it's believed that some former representatives have financial interest in the gondola even though the city and county have also said no
36315	Dan Grolley	As a salt lake county taxpayer I am writing in opposition to the planned gondola in LCC. I oppose the gondola because I do not think Utah taxpayers should be paying for a project that benefits private ski resorts the most, while there are other transportation solutions. Why aren't the private ski resorts paying for the project if they benefit the most from it with increased visitation? The traffic solution to benefit the taxpayer would only be applicable on a very small percentage of days during the calendar year. The gondola would have significant negative impact on the the canyons aesthetics, it would push traffic problems further down into the valley and for the vast majority of days, would not be more convenient transportation to the resorts. The gondola does not support the many trailheads in the canyon and would be a massive undertaking a visual eyesore forever. After polling, the vast majority(80%) of Utahns oppose the gondola. Why is public sentiment being ignored if we the public are funding the project? In general I would like to see a more simple transportation solution implemented to address the traffic situation in Little and Big Cottonwood Canyons. Thank you for the opportunity submit my comments. I hope an alternative to gondola will be considered moving forward. Dan

Some of the recent commentary by UDOT suggests tolling may be implemented before an enhanced bus system and/or the gondola are complete, including as soon as next ski season. Is this true?</p> <p>If that is true, I respectfully request that UDOT delay tolling until all stakeholders in the Cottonwoods (businesses, residents,</p>
36317	Robert Douglass	<p>The new Gondola B Alternative introduces a new entrance (a second entrance) to the gondola parking structure off Wasatch near the entrance to La Caille. This will require a new traffic light on Wasatch between SR-210 and SR-209. There is no analysis on how this new traffic light and new traffic pattern will affect waiting times and back-up lengths on Wasatch for skiers nor how it will affect commuter traffic flow. 9400 S. and Wasatch Blvd between SR-209 and SR-210 are major commuter corridors for traffic coming from the south and west heading toward the central metro area. Adding a new traffic light and mixing in 40% of the morning and evening ski traffic will have a substantial impact on traffic flow, an impact the EIS omits to consider calling it 'minimal' in error. The EIS needs to be supplemented to address this omission and to assess this impact.</p>
36318	Molly Jahne	Building a gondola is the worst idea possible. Do better, try harder.
36319	James Murphy	I do not support the gondola and I intend to campaign the federal and state legislature to vote against any bill that will provide funds for the gondola. With the looming great salt lake crisis, it is irresponsible to spend public money on any major projects not related to solving that problem.
36320	Bradley Tanner	The downside to all the towers the cables and the cable cars in our pretty Canyon is substantial . In addition they do not offset the fact that they provide access to only two commercial locations and likely will not be sufficient in terms of assuring that the traffic in the Sandy area is not miserably congested as it is now. I strongly support controlling access via a fee-based system.
36321	Kim Olmore	<p>Please do NOT build the Gondola. It would permanently ruin our community's beautiful canyon in an attempt solve a congestion problem that occurs infrequently during winter powder days. It is UNACCEPTABLE to spend our taxpayer's money while the majority of us oppose the Gondola. The Gondola would just spread the congestion problem to the mouth of Little Cottonwood and Wasatch Blvd. The Gondola would potentially kill and/or injure raptors and birding migrations that occur in the dark. The Gondola will be an eyesore. The Gondola will ruin the sanctuary and iconic landscape features of our canyon. The Gondola is NOT the answer.</p> <p>We need slower speed limits on Wasatch Blvd to create a safe corridor for cyclists and pedestrians and vehicles. We need sidewalks on Wasatch Blvd.</p> <p>SOLUTIONS: * Charge a canyon fee to every passenger vehicle that enters the canyon (similar to Millcreek Canyon, but charge higher fees). * On Wasatch Blvd: Add sidewalks for pedestrians. Add cycling lanes to increase safety for cyclists. Lower the speed limit. PLEASE NO GONDOLA.</p>
36322	Jinjin Cai	It won't solve the problem of traffic during skiing season by building Gondola. Public transportation is the best way and good for environment and view of cottonwood canyon
36323	Scott Rissmann	What about reserved parking for both areas? What about not taking the ikon pass? What about avalanche tunnels?
36324	Annie Karras	No gondola
36325	Brian M	A gondola is a great option. People who wish to use it can pay a fee and get a great view of the area. Others who are not going to the ski resorts can drive without the need to pay a toll. A toll placed on people to enjoy the canyons is just wrong. It creates a have, and a have not for the lower class.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36326	Kaela Rollins	Firstly the gondola feels like an excuse for the rich to get richer. It isn't a solution. If anything it's creating a new problem. Second it will ruin the landscape and environment. And lastly people wishing to avoid the cost of using it will drive up the canyon instead which is the whole "reason" it being pushed
36327	Sara Colosimo	<p>There is one clear advantage of the Gondola Alternative. It is in a completely separate physical space from the existing SR-210. Inevitably the road will be blocked by traffic flow, snow, boulders or vehicles. A gondola provides a separate right-of-way and thus greater public access and safety.</p> <p>As a former transportation engineer, I understand the necessity of the design year 2050 for planning. In reality the benefit of the project will be much longer. The study period is until 2050. It should be stressed that at some point the lower maintenance costs will outweigh the additional capital costs. In many European cities, tram cars over 100 years old are still in use. The snowbird tram was functional and heavily used for fifty years.</p> <p>The visual impact is noted as a negative in many public comments. Zermatt Switzerland is served by a system of gondolas which are functional and are generally not seen as a visual negative. The Swiss gondola images are used heavily in marketing the resort, as are the images of the Snowbird Tram.</p> <p>The Matterhorn in Switzerland is one of most stunning peaks in the world. Following is a link from the Official Zermatt instagram that shows how beautiful everything can work together. This photo was used by permission of my daughter, the dog's owner.</p> <p>https://www.instagram.com/p/CZWMR2KKf13/?igshid=NzNkNDdiOGI=</p> <p>I am in support of Gondola Alternative B.</p> <p>Sara Riley Colosimo, P.E.</p>
36328	Scott Keller	<p>First, I'd like to say thank you for reading this feedback.</p> <p>I'm an avid skier, rock climber, and hiker that has lived in Cottonwood Heights for more than 30 years. I have skied ~3,000+ days in the Central Wasatch and been extremely active in local mountaineering activities ranging from resort and backcountry skiing to climbing area maintenance, mentoring, and trailhead cleanups. I live here by choice and the incredible environment of these canyons is why. My home is 1 block off Wasatch Boulevard and my road access is heavily affected when traffic is backed up. I'm right in the thick of it.</p> <p>Despite that reality, I feel very strongly that the Gondola option (in any form) should be removed from consideration for Little Cottonwood Canyon. Why? My reasons follow:</p> <ol style="list-style-type: none"> 1. It is the most expensive option in terms of taxpayer impact. the final cost would be something like 40x the annual state education budget. The exact number may be debatable but it's not debatable that it's an irresponsible spend of public money. 2. It serves the fewest interests (aka, ONLY Snowbird, Alta, and a few landowners at the base). Your EIS also calls this out. The public calls it a "boondoggle". The optics are terrible for DOT, the resorts, and any public figures promoting it. It's hard to defend in the public eye. 3. It does not serve the needs of hikers, most backcountry skiers, or climbers in any way by stopping mid-canyon 4. The vast majority of the public surveyed is against it 5. The EIS failed to do any real impact study on the animal populations in and around the canyon 6. The impact on the watershed is drastic and inevitable, as per the SLCO water authority position, as well as common sense 7. The physical destruction to the precious climbing resources near the mouth of the canyon is untenable. The long list of magnificent climbing boulders that will be moved, removed, or destroyed can never be replaced. The permanent damage to these rare assets would be egregious. 8. The blight created by numerous, looming lift towers will forever impact the canyon's aesthetics from countless vantage points. This is incredibly irresponsible because it will destroy the intrinsic value of the canyon: natural beauty. 9. It will further compress people into the upper canyon, only to further impact the ski areas with human traffic and the activities that spawn from them. The already long lift lines will just get longer. 10. It doesn't remove significant traffic from Wasatch Boulevard because the traffic will simply be split at La Caille turnoff. The two lanes you plan to build will be just as backed up as the single lane has been anyway. It fails to achieve the primary (stated) goal.
36329	Linda Wainscott	Gondola is not necessary, too expensive. Leave the canyon the way it is.
36330	Abbie Long	It seems the owners of the ski resorts have pulled the wool over the eyes of everyone. It has clear they have more and more people visiting their resorts all while continuing to raise prices. The increase in demand has fallen in the public when all it takes is for the resorts to put back some of the money they're making hand over foot and update their parking areas and build a garage type parking structure. They should also offer rebates and not a dollar here or there but a large rebate to anyone that uses their bus pass a certain amount of dates once the season is over. Say no to the gondola!
36331	Lindsey Spencer	I do not support this. I think it will take away from the beauty of this area and crowd our wild nature.
36332	Jane Rissmann	Is anything going to be done in big cottonwood canyon?
36333	Phoenix Sheranian	I am a 15 year old who has lived in Little Cottonwood my whole life. I have witnessed the beauty and memories the canyon is capable of giving all of us. I have climbed, hiked, biked, skied and snowshoed all over it. The only thing the gondola is going to do is hurt. It will hurt alot of the amazing climbing we have access too. It will hurt the purity of the canyon we have worked hard to keep over all these years. And worst of all it will ruin the beauty of the canyon that is one of Utahs most beautiful and beloved landmarks. It makes me sick that future generations might not be able to see the gorgeous canyon in its prime and see the stunning views that we will lose if this gets built.

36334	Rebecca Horn	<p>Dear UDOT,</p> <p>I am writing to register my strong opposition to the transit plan being considered for Little Cottonwood Canyon: the Gondola B Alternative. Implementing this transit plan would cost \$550 million or more for a project that unnecessarily and seriously damages the environment and beauty of the canyon; fails to serve the public while prioritizing ski resort profits and the most affluent recreationists; and does not provide a viable transportation solution to the growing set of Little Cottonwood Canyon problems. UDOT should discard Gondola B and seriously consider all reasonable alternatives.</p> <p>Improved bus service and tighter regulation of private vehicular traffic in the canyon should be part of a reasonable alternative that does not visually pollute the canyon with a multi-mile line of gondola towers that primarily serve the economic interests of wealthy Alta and Snowbird ski resorts owner-operators and their elite clientele. The Gondola B Alternative is a slap-in-the-face to mainstream Utahns who would fund, but not benefit, from that proposal.</p> <p>I agree with the Salt Lake County Council and other community leaders who have expressed adamant opposition to the Gondola B alternative. The Gondola B alternative does not represent the interests of me and my family and I remain adamantly opposed to it.</p> <p>Thank you for registering my opposition to the Gondola B Alternative.</p> <p>Sincerely, Rebecca Horn</p>
36335	Wendell Memmott	<p>The Little Cottonwood access issue has been the topic of much discussion and everyone involved should be thanked for their effort and everyone should recognize that not everyone will ever get the resolution they would personally prefer. One of my concern with the gondola solution is the comment I have read frequently is that the gondola car can load 35 people and depart every 2 minutes. I would assume this has been tested and can in fact work but I can not believe that 35 skiers wearing ski boots with skies, poles and backpack can move forward and load that many people in 2 minutes. I would hope someone would actually visit a site where this is actually being done. I have not heard any discussion about where the loading station might be located or where the parking for that many vehicles will be built. I think it will also necessitate building a lot of day use lockers at the resorts. A lot of skiers take a lunch, drinks, etc. that they currently store in their cars until needed as well as a place to put their heavier coats as the day warms up.</p> <p>The other thing I am concerned about is the growing access needed during the summer (and other good weather times of the year). Currently when you drive up the canyon in the summer, all parking areas are filled as well as any pull off areas and parking space along the highway. I don't believe there is a plan to transport people up the canyon and get them down to the bottom of the canyon where a lot of summer visitors would want to be or start from. Summer use of the canyon has begun to increase as quickly as winter use and I think we should anticipate continued growth as we do this planning.</p> <p>Like most people, I don't think widening the road is a feasible solution because of the natural impact on the canyon and it would basically shut down the canyon for a large portion of the year for an unknown number of years.</p> <p>I appreciate everyone's effort and hope my comments can provide thoughts that will be useful.</p>
36336	Patrick Schulz	<p>UDOT is ignoring the needs of all other users of LCC and BCC to service and enrich only the two ski resorts at the head of the canyon. The "preferred solution" amounts to not much more than negligence, taxing taxpayer dollars to ignore taxpayer needs and ruin the viewshed, destroy recreation opportunities, and if that weren't enough, it fails to solve the problem! UDOT should make improved bus access, tolling, and inventive traffic patterns a priority, rather than lining the pockets of the resorts. NO gondola in LCC!</p>
36337	Robert Douglass	<p>The new Gondola Option B Alternative introduces a new entrance (a second entrance) to the gondola parking structure off Wasatch near the entrance to La Caille. This will require a new road to be cut through the EPA Super Fund Sites OU3 and OU1 penetrating areas that have not been remediated because they were tree-covered or too steeply sloped per the EPA 1st and 2nd 5-year reports. It passes close by the site of the Flagstaff Smelter, the primary source of lead and arsenic contamination. The new Gondola B Alternative, therefore, has a much bigger cost impact than the old alternative. It also has a much bigger safety risk to public health, at a minimum during remediation of the site - a cost not included in the gondola B alternative as stated by the EIS. The impact on the public safety of residents and vehicle passengers during construction could be considerable. This impact was not addressed. Even though the risk and cost of this new penetration of the Superfund Site are identified in the EIS, its impact on the environment was explicitly excluded from consideration and assessment. The public cannot comment on this public health risk at present because it is not assessed in the EIS even though it is introduced for the first time in the final EIS. This is a significant omission in the EIS that represents a new impact created in the Final EIS due to the introduction of a modification of the gondola B alternative presented for the first time in the final EIS. This change to an Alternative is not in any way de minimis, minimal, or insignificant, as such it represents an error in following NEPA requirements. This change alone requires a Supplement to the EIS and published for public comment per the NEPA process.</p>

ID	Full Name	Comment
36338	Richard Peterson	<p>The Project Overview and Final EIS Alternatives Summary describes four Evaluation Criteria for whether the alternative meets the Purpose and Need of the EIS. The Gondola B alternative does not meet the first two criteria, specifically the "Improve peak-hour per-person travel time" and the "Meet peak-hour demand on busy ski days" criteria. Here's why: You can't fight mother nature. On powder days, the winners are those people who stay at the hotels, inns, lodges, dormitories, and residences in Little Cottonwood Canyon. All others, Gondola riders, bus riders and drivers alike, need to wait for the completion of avalanche artillery operations. Busses, shuttles, and privately owned vehicles will also need to wait for the snow to be removed from S.R. 210.</p> <p>The additional delay for snow removal will entice drivers to the Gondola. According to the EIS statement, with Gondola capacity limited to maximum of 1,050 people per hour (30 Gondolas with 35 people per cabin, all loading in 2 minutes per cabin - an optimistic number in my humble opinion), Gondola wait times could exceed three hours in addition to the 55 minute travel time (parking, riding, and exiting the Gondola). A four hour wait for an expensive Gondola ride doesn't meet the first two criteria for improving mobility and you have missed more than half the ski day!</p> <p>Thus, the Gondola B alternative doesn't solve the problem UDOT is trying to solve.</p> <p>On non-powder days, transit, tolling, and carpooling are more than sufficient. Alta and Snowbird should have some skin in the game by investing in eco-friendly parking decks on the very spaces where they currently have only ground level parking. Put a grass roof on those parking decks (like Snowbird already does with some of its buildings) and imagine the parking capacity and improvement of their respective ski experiences. The 2500 space garage at the Gondola base station is estimated to cost \$53M. That cost is less than 10% of the estimated \$550M cost of the Gondola B plan. Imagine what a multi-acre parking deck at Alta and another at Snowbird could do to ease the backlog at the top of the canyon.</p>
36339	Allison Fresques	<p>I oppose the Final EIS and the proposed Gondola Alternative B. The proposed Gondola does not adequately address the traffic concerns, is a huge cost that will be borne by myself and other taxpayers, and services only two private businesses. Both BCC and LCC need traffic solutions, and building a giant gondola that only services LCC is short sighted and would have significant negative impacts on our wildlife, view corridors, watershed, and the overall natural environment that cannot be repaired once the gondola is built. The gondola will likely only increase the traffic at the mouth of both canyons, as parking is already limited. Before making such a drastic decision to build a gondola, UDOT should consider all other options, including tolling, and designate park and rides at other locations throughout the Salt Lake Valley with increased public transportation. For these reasons, I oppose the Gondola Alternative B.</p> <p>-Allison Fresques</p>
36340	Richard Peterson	Come clean - Is the Gondola really just all about an Olympic bid for the 2030 or 2034 Olympic games?
36341	Richard Peterson	What will it cost to ride the Gondola?
36342	Neah Bois	<p>Again, I would like to reiterate that a Gondola is NOT a smart, sensible, and long-term solution for LCC. I find it ludicrous that UDOT is implementing a phased approach while they will try to scrounge up money from investors and the ski resorts to pay for the Gondola. If the gondola is the best solution, why are you implementing buses and tolls? It's clear you think these solutions can work, so why is the gondola even on the table? You are clearly going against the will of the people (the taxpayers who will be funding this scam to line the pockets of the rich) and are buying into the interests of the ski resorts and outside investors. Busses and tolls CAN work, which you must know because you are planning to implement that. A gondola is not a viable option. It will destroy the canyon's natural beauty, bring thousands more people into a watershed already on the brink, and catalyze the resorts to grow bigger and faster when they cannot handle that capacity.</p> <p>Furthermore, this will make LCC a viable option for the Olympics, which is NOT in the area's best interest. Why is the state spending upwards of \$500 million to fund a gondola for ski resorts, but won't fund saving the great salt lake which makes it so we have such great snow? This is an absolute waste of money, money which could be funding the advancement of electric busses, wage increases for bus drivers, toll booths/operators, and road widening. The gondola should and must be taken off the table as an option. In 10 years if the canyon's traffic is still problematic, then maybe we look to other solutions. UDOT is putting the cart before the horse and we are being run over by the cart. There are better solutions, solutions that will work and make a positive impact for all of us. Reminder, you are a state entity and are responsible to the people. Do not lose sight due to the money symbols in your eyes.</p> <p>Do not move forward with the gondola. Move forward with busses and tolls. Do the right thing.</p>
36343	Justin Webster	I don't want my taxpayer money used to make improvements that will benefit the business of the resorts. If tax payers are funding the gondola, it should be free to ride for residents of Utah.
36344	Clark Whiting	<p>I'm a Utah local and have lived here for 44 years and I grew up right near the base of big cottonwood canyon. I love these mountains and I cannot handle what is being proposed to ruin our wasatch mountains. If you understand the problem, it's the tourists and the disastrous IKON pass that is creating these problems. Cut the head off the IKON pass and our canyons go back to normal. Why would we do something to further ruin our canyons so more tourists can ruin what makes this place special? Help me understand why one Utahn would ever want to pay for this astronomical tax nightmare and so more tourists can come here and ruin this place? The gondola is not the answer, buses are not the answer. Boycott the IKON pass and the reason why our canyons have turned into such a nightmare. Support Utahns, not every tourist that wants to come and take a gondola ride. This is an absolute joke on every level. This is about putting money into dirty pockets, do something that's right and eliminate those things that create this disaster. No gondola, no bus system, no train system.</p>
36345	Tiana Chambers	<p>I am writing in opposition to the gondola installation. The community this impacts does not support it, and we know that it is not the most effective solution to congestion in the canyon. Please concentrate on other effective solutions that benefit ALL canyon users (including climbers and hikers) that use the canyon year round, instead of just a few rich resort owners looking to make a profit without care for one of the natural beauties that makes Utah so unique. Permanent destruction of world class climbing routes and an industrial fixture plopped in the middle of a breathtaking view the Salt Lake Valley population love and appreciate is not worth keeping a handful of extremely wealthy people happy. Please halt progress on the gondola and explore other, better solutions.</p>

ID	Full Name	Comment
36346	Richard Peterson	How much money will the LDS church receive for allowing the Gondola to cross their property? Is there litigation risk to Utah with the planned route of the Gondola going directly over the church property in Little Cottonwood Canyon? What are the "Separation of Church and State" issues here?
36347	Richard Peterson	Where will the electricity come from to power the Gondola? How loud will the emergency diesel generators be at the base station? How often will they be tested? For how long? How much will nearby residents be compensated for this significant loss of peaceful enjoyment of their property?
36348	Edwin Miller	<p>My name is Edwin Miller, and I am a 25-year-old Salt Lake City resident. I moved here three years ago, mainly for the amazing recreational opportunities that the area has to offer. Of the entire surroundings of the Salt Lake City area, Little Cottonwood Canyon has the most amazing natural resources. The steep mountainous terrain that is easily accessible from anywhere in the region provides a place for thousands of people to recreate and escape daily life. For me, as for many others, the best part about LCC is the extensive rock climbing opportunities that it provides. The incredible climbing in LCC was one of the main reasons that I moved to Salt Lake City. One of the most essential parts to a rewarding climbing experience is being able to enjoy the astounding scenery and vantages that can be accessed only on the side of a cliff. However, this scenery is currently being threatened by the proposed gondola project in LCC. The years of construction will create an excessive amount of noise and debris, and the final product will still be detrimental to the overall aesthetics of the canyon. If this gondola project moves forward, the overall Salt Lake climbing experience will irreparably suffer.</p> <p>The gondola also poses other major problems in addition to destroying the serene beauty of LCC. Given that this project is the most ambitious of its kind, its astronomical price tag is only destined to increase. The cost of this project will mean that Utahns (many of whom do not recreate in the canyons) will have to foot an expensive bill. As of yet, it is unclear where this money could even come from.</p> <p>Practically, this project is necessary to facilitate transportation in the canyon for only a very short period every year. Additionally, traffic during winter months almost exclusively serves the ski resorts at the top of LCC. Road closures affect ski resort profits, as people are unable to travel during these times. However, given the small number of residences in LCC, the vast majority of traffic delays purely affect ski-related activities. Large support for this project by the ski resorts in LCC is to be expected, as it is a way to increase their profits without having to spend a dime. However, the benefit to canyon users will be minimal. Being a skier, I can sympathize with the frustration of road closures affecting ski access. However, these closures are very minimal compared to the overall length of the ski season, and do not significantly affect overall access to the LCC ski areas.</p> <p>During construction, it is also unavoidable that water quality in the canyon will suffer from earth-moving activities. Water quality in LCC is strictly protected, given that it is the water supply for much of the greater Salt Lake area. However, the significant adverse effects that this project will have on the drinking water of thousands of people cannot be ignored.</p> <p>Overall, it is clear that other options need to be explored first before choosing the gondola as an expensive, permanent, and environmentally damaging solution. Carpooling and bus service could be incentivized simply by adding a toll booth (like the one in Millcreek Canyon) at the bottom of the LCC. With the option to drive up the canyon with no fee, most users forgo public transportation, and often do not carpool. (This trend could be expected to continue even with a gondola. Local users will still favor driving up the canyon to a long wait to use the gondola). However, improved bussing service and the implementation of a canyon use fee are two legitimate options that have not yet been explored. The gondola project in LCC is an expensive, misguided solution to a problem that can be effectively addressed by simpler means.</p>
36349	Carol Spackman Mos	I am opposed to the gondola for several reasons: 1. Other methods which wouldn't forever alter the landscape of LCCC should be tried first to mitigate the traffic. 2. The gondola tower bases would take out parts of many trails, as well as boulders that have been used for decades in the sport of bouldering. 3. The gondola would be used primarily for skiers of two ski resorts, not the general public who either don't ski or couldn't afford to ski at those resorts or pay the cost of a gondola ride. 4. The biggest one of all is the cost-\$500 million to 1 billion for taxpayers of Utah, most who would get no benefit from the gondola, not to mention the annual cost estimate to keep it running. I fear it would be another boondoggle of waste and mismanagement like the Inland Port. Only the wealthy developers would come out as winners. My constituents in HD 34, Holladay, Millcreek, and Murray and overwhelmingly opposed as well.
36350	Robert Mehregan	<p>In alignment with the Salt Lake County Council, I strongly agree that the Gondola Alternative B proposal should be put on hold until additional alternatives have been put in place and properly studied. Considerations are as follows:</p> <p>A. The enhanced bus service, as recommended by UDOT, is in effect and a proper study on usage occurs;</p> <p>B. Updated analysis of S.R. 210 recreational use and impact data, in coordination with the United States Forest Service and an updated Management Plan for the area;</p> <p>C. Tolls for road usage, as recommended by UDOT, are in effect and a proper study on usage occurs</p> <p>D. Further plans for S.R. 190 congestion are insufficiently addressed in the FEIS</p>
36351	Ezra Nielsen	Strongly oppose the Gondola primarily for the following reasons: 1. No service to any mid-canyon trailheads 2. Diverts traffic problem to mouth of Canyon 3. Corporate welfare 4. Shady business dealings by Neiderhauser and McCandless (C.W. Management) to acquire the property where base station would be located and then to pass the necessary legislation to (road tolling bill primarily) to make riding the gondola mandatory.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36352	Olivia Olsen	<p>As a lifelong resident of Sandy, I oppose the gondola for many reasons.</p> <p>1- Using public tax dollars to benefit private industries is unethical. The gondola will not be serving individuals who recreate in LCC who do not ski at Snowbird or Alta. Many individuals climb, hike and backcountry ski in the winter and the gondola does not serve them.</p> <p>2- Climate change is the single most pressing issue of our lifetime. We should be improving upon the systems we have in place instead of creating a new transportation method. The gondola will pollute our watershed and not solve our air quality problems.</p> <p>3- LCC is a pristine and beautiful canyon full of wildlife and endless recreation opportunities. The gondola will pollute the image of what makes Utah unique as well as limit the recreation opportunities available to us.</p> <p>4- How is this more accessible for individuals with disabilities? Individuals with disabilities already face several barriers to winter sports and the gondola is only going to add to them. By forcing people to park at mobility hubs, then transferring busses more than once before getting on the gondola and charging \$35 per ride, the gondola is further perpetrating the barriers that already exist.</p> <p>5- A 1,500 car parking garage is not enough parking for the individuals who recreate in LCC. The congestion is not going to improve, it's going to migrate towards the mobility hubs in Sandy, decreasing the quality of life for the residents.</p> <p>6- If the gondola only runs during good weather, what is the point of it in the first place? The reason anyone would want to ride the gondola instead of drive is so they don't have to drive in the snow.</p> <p>Overall, improving upon the bus system is not only a more inexpensive option, but it makes the most sense environmentally as well.</p>
36353	Richard Peterson	<p>What's up with the announcement by UDOT on October 14, 2022 that UDOT is cancelling all bus service up Little Cottonwood Canyon? Many employees of Alta and Snowbird rely on that mode of transportation to get them safely to and from their jobs in the canyon. If anything, we could take the money used for the Gondola and instead put it towards buying a new fleet of electric buses to take passengers up and down the canyon.</p>
36354	Caryn Wascovich	<p>I highly disagree with the gondola, I think it will increase traffic at the base of little cottonwood, ruin the natural beauty of the canyon, access to trails and climbing, and will cost tax payers billions of dollars. I don't see how the traffic problem will be solved by a gondola. It works in Europe but America is different. Here people rely on cars more, so the base it going to be chaotic with parking and residents navigating the roads.</p>
36355	William Knick Knicker	<p>I feel that WAY TO MUCH TIME has been lost on this traffic issue in Little Cottonwood Canyon - as well as Big Cottonwood Canyon. I am very much AGAINST any construction of a gondola system that would only benefit the two ski areas in Little Cottonwood Canyon and would NOT benefit any backcountry trailheads.</p> <p>I feel that you need to have a fee - as in Millcreek Canyon has had for years - that would allow for parking at all trailheads. Also increase the year around use of buses to stop at trailheads on a regular decent schedule.</p> <p>Again, I am against the gondola, PERIOD!</p>
36356	Richard Peterson	<p>What is the litigation risk that Utah brings upon itself by building the Gondola? Vail Resorts is sure to sue since Utah is favoring Snowbird and Alta with the Gondola. What financial reserves are required to prudently protect against this eventuality? Or does Utah intend to be blackmailed by Vail Resorts into building similar boondoggle projects for Vail Resorts up in Park City?</p>
36357	Devin Devin	<p>A gondola is a ridiculous way to address the traffic and pollution problems in the canyon. Why would you spend so much money and create so much new infrastructure when you can just have more frequent and regular bus service? Why re-invent the wheel here? I would gladly take a bus but taking a gondola sounds slow and irritating.</p>
36358	Alex Dickerson	<p>I am opposed to the gondola. This would only be a benefit to the resorts and would ruin the beauty of the canyon. It would greatly impact my photography in the canyon as well as hiking and climbing.</p>
36359	Joseph Coates	<p>A nearly 1 billion dollar gondola is bad for Salt Lake, let's use common sense solutions to address canyon congestion. There are solutions without widening the road, but it appears to me that special interest groups are being heard over the will of the people. There are other areas in the Salt Lake Valley that have bigger problems that exist all year.</p> <p>A gondola will desecrate Little Cottonwood Canyon. The gondola is the wrong choice for Little Cottonwood Canyon and an unfair deal for Utah taxpayers.</p>
36360	Shelley Brooks	<p>I don't support the gondola project. I think we should have a large parking lot at the base with lots of battery powered buses, which stops for hiking trails, etc. along the way to reduce traffic.</p>
36361	Richard Peterson	<p>Frankly, the EIS makes it seem like Little Cottonwood Canyon is a crisis. It is not. It is a bunch of private equity investors trying to profit off of Utah taxpayers. The investors are not involved in this project because they love Little Cottonwood Canyon, Utah or skiing; they are involved for one reason, to make money! Otherwise, they wouldn't bother. They expect a return on their investment within a specific amount of time. As soon as they get that return on their investment, they will take the money and run. After they spoil our environment, the taxpayers of Utah will be left to foot the bill for the maintenance, replacement and repair of all aspects of the Gondola and its base stations.</p>
36362	Richard Peterson	<p>Regardless of the source of funding (private or public), will there be a ballot referendum in an upcoming Utah voting cycle as to whether the residents of Utah want a Gondola?</p>
36363	Debra Youngbreg	<p>As a lifelong resident of the foothills of Big and Little Cottonwood Canyon and as a taxpayer I am opposed to the proposed gondola B solution to the congestion on SR 210. Local taxpayers should not be footing the bill for infrastructure that solely benefits business owners of the resorts and restaurants in the canyons by allowing increased out-t-town visitors. If the current roads are inadequate, limits to use should be put in place. Increased use only benefits a few business owners, not the local residents. We would rather see the canyone stay in its current condition. No changes should be paid for by local taxpayers, but by the businesses in the canyon that would benefit.</p>
36364	Saunders Abbie	<p>I think Utah's priority right now needs to be on preserving the great salt lake. Although the ski traffic is definitely an issue, it should be put on the back burner until more important issues like the Great Salt Lake are addressed. I don't think the gondola is a smart financial decision. A more efficient bus system would be a better option for the canyon.</p>

ID	Full Name	Comment
38667	Jerry Rogers	Hi, my name's Jerry Rogers. Live at [redacted] phone number [redacted] Yes, I want the gondola put in. Thank you.
36365	Bridget Grim	Tax payers should not be paying for a gondola that only stops at the ski resorts.
36366	C. Peterson	I am against building the gondola in the canyon.
36367	Mark Furlong	This project is neither cost effective or beneficial for the canyon. There are other solutions that are more cost effective and not as destructive to the canyon. I disagree with this project moving forward and ask for UDOT to review other options.
36368	Cathie Lanham	No one wants this. Stop the madness! Listen to the people!
36369	Rachel Diehl	Please, no gondola! It just subsidizes the ski industry and doesn't improve access for other recreational activities throughout the rest of the year.
36370	Sean McKay	I specifically moved here for the amazing climbing. Please don't take that away from us!
36371	Carolyn LeValley	Absolutely, do NOT want to see our tax paying dollars go to a gondola which will only solve the traffic problems for a relatively few days out of the year!
36372	red oelerich	<p>10/17/2022 Dave Fields, President/General Manager Snowbird Ski & Summer Resort</p> <p>Re: Salt Lake Tribune op-ed 10/16/2022 Dave: My wife and I, along with our immediate and extended family, have been recreating year-round in Little Cottonwood Canyon since 1961. Do the math - over 60 years. Several of the family, including us, have been employed by either Alta, Snowbird or both at one time or another. In the early '70's, at the request of Snowbird founder Ted Johnson, we closed a small but successful company in the Chicago area to relocate our family of four young children to Salt Lake City to assist in the development of the resort by constructing and operating a lodge. After two years, unforeseen circumstances halted the project.</p> <p>We stayed in Salt Lake to recreate at Snowbird and in LCC and continue to do so to this day. Both have been like a second home. We consider a gondola in LCC akin to coal mines on the Kaiparowits Plateau and oil rigs on Cedar Mesa. Perhaps you can understand why we are vehemently opposed to gondola towers in our back yard.</p> <p>We have a much better and much cheaper solution to the congestion problem in LCC that we'd be happy to share with you anytime. But before that, we'd like your answer to two questions:</p> <ol style="list-style-type: none"> 1. What would T.J. say? 2. Closer to home, at what level of economic benefit to Wayne County and the town of Torrey would you be in favor of a gravel pit off highway 24 just west of the entry to Capitol Reef National Park?
36373	Gwyneth Porter	I strongly oppose the building of the gondola. I think that it will cost many and only serve a few. It will not help the flow of traffic and will ultimately hurt our community. I plead that UDOT looks at other options. Please do not build the gondola, it is not what the community wants. The community is begging!
36374	Marco Valero	<p>I am a strong advocate for environmental conservation, access and protection, and I agree with preferred alternative opponents that a canyon gondola would significantly impact the scenery of the canyon and represent an expensive solution to a problem that could probably be more easily mitigated with stronger winter traction enforcement, tolling/carpool incentives, and expanded park & ride facilities to get more people out of cars with better, more frequent bus service. UDOT already recognizes this because they are already proposing a phased approach to LCC regardless of which alternative is selected.</p> <p>However, after reading the Final EIS, I must support the gondola as the best long-term solution to LCC congestion for the following reasons:</p> <ol style="list-style-type: none"> 1 - While the gondola significantly impacts the viewshed of LCC, it has the least actual impact on the watershed and wildlife of LCC because it has the smallest physical footprint on the landscape. Both the cog railway and enhanced bus concept would require more pavement, more avalanche sheds and more construction in the canyon than the Gondola. That has a far greater impact on the canyon than towers holding the gondola up, despite the viewshed impacts. 2 - It is clear that the vast, vast majority of traffic congestion in LCC is directed towards Alta & Snowbird; the vehicle counts for those touring, camping, hiking and other activities in the canyon pale in comparison to the fact that thousands of skiers go to Alta & Snowbird on weekends in the winter. This issue becomes even worse during inclement weather and avalanche mitigation events because congestion spills over into the neighborhoods surrounding the base of the canyon. The gondola would directly connect the vast majority of LCC users to their destination without having to drive up the canyon, and it is a far more resilient mode of transportation when compared to a cog railway or enhanced bus alternative as it bypasses the delays and dangers associated with driving through a steep, narrow mountain road. 3 - The Final EIS has already gone into detail about how other alternatives, such as a Zion National Park shuttle network, have neither the capacity or reliability needed to effectively serve Little Cottonwood Canyons needs. The gondola already has far less projected O&M costs despite a similar construction price tag to the enhanced bus network, and far less than the cog railway. <p>As someone who has worked in the transportation planning industry, as well as recently completing a Masters Degree in Transportation Engineering, I appreciate the detail to which UDOT has analyzed Little Cottonwood Canyon. Many of the comments I've seen criticizing the LCC Gondola are, despite good intentions, misinformed on the realities of providing reliable mobility in challenging terrain and conditions, and do not provide any real alternatives outside of previously considered options that were ruled out and responded to in the massive comments section of the Final EIS.</p>
36375	Jason Shumaker	A gondola is not needed at this point and intermediate steps should be taken first. Reopening the bus stop at the bottom of lcc would be a great first step.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36376	Charles Fuller	Why implement a gondola system? Why not ban private vehicles and have a fleet of electric buses transport people from the mouth of LCC to the resorts. This is similar to what is being done in many of the busier national parks. The number of buses running would be determined by the demand. To eliminate the need for parking at the mouth of the canyon, have the main starting point for the buses be in the city rather than creating a gigantic parking lot in a pristine (relatively) location. With sophistication, the buses may not require drivers, but be controlled remotely.
36377	Alex Moskal	NO GONDOLA!!!!
36378	Brett Huras	<p>Hello, I am totally against this solution to the LCC traffic problem. The justification for picking the gondola option is full of misleading information and the truth is the most cost-effective, reliable, and environmentally safe solution will be to increase the bus capacity (whether just more buses, wider roads...or some combination) to reduce the number of single person vehicles riding up the canyon everyday. This will be the solution that benefits the greatest number of people. It feels like government agencies like DOT and proponents of the government (including legislators) are trying to force this unpopular decision to go with the gondola. I find it very strange that UTA is cutting bus routes up the canyon as well as park city at this point in time too. Very convenient timing for this to happen as people will need to scramble for solution. As a side note I literally have not met a single person who is in favorable of the gondola.</p> <p>Thanks to whoever is reading this.</p> <p>Brett</p>
36379	Dennis Lee	A gondola would be an eyesore with a large clearing for each post. Natural gas or solar powered buses are the answer.
36380	Robert Plachta	I frequently hike in Little Cottonwood Canyon. I recognize the need for controlling the traffic to minimize pollution and environmental impacts. However, I believe the proposed gondola is a terrible approach for doing this. It only benefits the two ski resorts, at taxpayer expense, and doesn't address the ongoing problems the rest of the year. A combination of other proposals such as electric buses, a fee for cars, discounts for carpooling/ridesharing, etc would be much more effective, flexible, and inclusive while costing far less. If the option of the gondola is selected then I think that the ski resorts should pay for it.
36381	Robert Douglass	The Final EIS falsely states or miscalculates the cost of the 2,500-vehicle parking structure at the Preferred Alternative Base. The FEIS states that 4 to 5 stories would need to be built below ground. For each story built below ground, the costs increase per vehicle space by 50-100% according to industry standards as stated by one of the larger construction firms in Utah. Using \$52M for the estimated cost of this structure is clearly way below industry standards. The cost estimate in the Final EIS also fails to account for the hazardous lead and arsenic waste mitigation required for the parking structure. The FEIS says that it is highly probable that this contamination exists, yet costs to mitigate it are not included. The EPA 5-year report says the steep slope where the structure will be excavated has probably not been remediated at all because remediation was not performed on steep, undeveloped slopes. Much of the remediation around the parking structure was done was done by the property owner and not by the EPA, so the quality of the remediation may not be up to federal standards. This is not only a serious environmental impact omitted by the FEIS, but also a significant cost-driver that is not included. This constitutes a serious error in the EIS and negligence in conforming to the NEPA process. A supplement to the FEIS is required to address this deficiency.
38357	Virginia Timmons	<p>Use electric buses that run every 15 minutes during the 4 months of ski season. Avalanche danger, environmental damage to tower areas</p> <p>The canyon is pristine until you get to snowbird maintenance area. We don't need 23 tower stations that look like that.</p>
36382	Norma Wills	<p>I am writing to express my concerns about the Final LCC EIS. While I commend UDOT for proposing a phased approach to solving transportation issues in the canyon, I am dismayed that a gondola is the preferred option. By implementing low impact measures such as tolls, incentives to use mass transit, more frequent and efficient bus services (preferably electric), restrictions on single-occupancy vehicles and expanded parking reservation systems at the ski resorts, the Department would have time to assess the impact of such measures before moving ahead with building a gondola. The canyon is a vital watershed for the Salt Lake Valley and encouraging further overuse of the canyon risks endangering that precious water source. In addition, the gondola will serve only those accessing Snowbird and Alta doing little to accommodate hikers, rock climbers, cross-country skiers and other users of the canyon. A publicly funded project should responsibly serve all canyon users, not only skiers and ski resort owners.</p> <p>Thank you for your consideration.</p>
36383	Lorie Andersen	In reality the gondola will end up costing Tax Payers far more than it has been represented to cost and Sandy residents will end up with a special tax or assessment represented as a recreation tax or something along those lines. All for a truly unnecessary project.
36384	Landon McBrayer	I am opposed to the Gondola B proposal. The idea of the EIS study is fantastic, but somehow the final recommendation turns out to be the one alternative--Gondola B--that explicitly goes against the stated mission of the EIS. The stated purpose of the EIS is to find a solution that "meets the needs of the community while preserving the value of the Wasatch Mountains." The gondola merely meets the needs (and strong desires) of two ski resorts. No other canyon users will benefit from a gondola that only stops at Snowbird and Alta and that ruins the natural beauty of Little Cottonwood Canyon.
36385	Cristine Rasmussen	The gondola is ridiculous and expensive. Need more electric busses and more stops to hop-on and hop-off. Gondola will only go one place and that's NOT how people use the canyon!

ID	Full Name	Comment
36386	William Gilmer	<p>17 October 2022</p> <p>Based on information provided in the Final EIS UDOT should not construct the proposed Gondola Alternative B and proceed with the Enhanced Bus Service Alternative. For the following reasons the Gondola Alternative B should not be considered:</p> <ol style="list-style-type: none"> 1. The economics as stated in Section 6 do not adequately justify the mandate as directed by SB 277. Of the \$12.3B generated by the recreation industry, \$1.322B are attributed to the ski industry of which, based on pg 6-13 numbers Alta and Snowbird contribute \$1.76.3M. This breaks down to the ski industry contributing approximately 13.3% of total recreation dollars with the Little Cottonwood Canyon ski areas contributing less than 2% of that amount. Construction of a gondola that will only benefit 2 ski areas for a brief period of the year cannot justify a +600 Million dollar project. 2. The taxpayers of Utah should not be subsidizing private industry. If, after many years of stepwise enhancement of public transport do not adequately mitigate transportation issues, consideration for the two ski areas constructing and paying the total cost of a gondola system could be contemplated. 3. Reliability and maintenance issues are not adequately understood for a gondola of this length. Currently, many storm days and inclement weather shutdown the Snowbird tram on a regular basis. 4. Who will be responsible for the operation and maintenance of the gondola? This is not in UDOT's purview and the report does not address the cost of rides nor who will receive the revenue from Gondola fares. The taxpayers of Utah should not build a system that will generate revenue for private businesses. 5. The La Caille development will only benefit private business (Snowbird?) and should not be subsidized by the Utah taxpayers. 6. The Gondola Alternative B does not, nor will it, address any issues of traffic congestion in Big Cottonwood Canyon which also contains two ski areas. <p>On the basis of the FEIS UDOT should immediately implement the proposed Enhanced Bus Service Alternative. Aspects of this implementation should include:</p> <ol style="list-style-type: none"> 1. Acquisition and construction of mobility hubs at the Gravel Pit and 9400 South locations. The full 1500 and 1000 space units should be built as this will: <ol style="list-style-type: none"> a. Lock up the required space from future development encroachment, b. Allow future growth and implementation of a variety of public transportation options, c. Potentially mitigate SR 210 issues without the need for a gondola, and d. Mitigate traffic issues in both Big and Little Cottonwood Canyons and benefit 4, not two, ski areas. 2. Complete the Five-lane Alternative and upgrades to Wasatch Boulevard extending to North Little Cottonwood Road as necessary. Consider lane reversal options as needed to relieve congestion in the morning and afternoon peak traffic times. 3. Implement only one snowshed installation at the highest incidence avalanche zone.
36387	Katherine Domann	<p>I am opposed to the gondola project up Little Cottonwood Canyon. There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws. Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging. 80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll.</p> <p>Salt Lake County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski and many other elected officials agree.</p> <p>"Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions. Parking hubs in the valley, electric busing with regular routes, carpooling and tolling, reservations, common-sense solutions that are fiscally sound," Wilson said at the Truth About the Proposed Gondola event in June. The proposed budget to build the gondola comes in at approximately \$550 million. But many estimate that number would ultimately come in closer to \$1 billion. How many days per winter are you in a complete standstill in Little Cottonwood Canyon? No doubt the red snake is real. But real enough for an expensive, permanent gondola?</p> <p>Plus, the gondola will not run when howitzers are active during avalanche mitigation in the lower canyon from Lisa Falls to Monte Cristo.</p> <p>And we can't even think of an argument for the gondola to be operating for the other eight months of the year.</p>
36388	Kenneth Donarski	<p>Not in favor of the Gondola. It will wreck the beautiful of the canyon</p>
36389	Matt Pizza	<p>How would anyone access trail heads, climbing spots, fishing holes, and anything else along the canyon from the base to the top?</p>

ID	Full Name	Comment
36390	Eli Davis	<p>- Irreversible & Rushed Decision</p> <p>There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws.</p> <p>We have seen parking reservations work throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon.</p> <p>As Salt Lake County Mayor Jenny Wilson said, these are "common-sense solutions that are fiscally sound."</p> <p>- Tax-Payer-Funded, Serving Private Resorts</p> <p>Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging.</p> <p>They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses.</p> <p>UDOT's EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6]</p> <p>- Ignoring Local Public & Political Opinion</p> <p>80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll.</p> <p>Salt Lake County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski and many other elected officials agree.</p> <p>"Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions. Parking hubs in the valley, electric busing with regular routes, carpooling and tolling, reservations, common sense solutions that are fiscally</p>
36391	Cody Tanner	<p>GONDOLA ALTERNATIVE B would be problematic for 2 main reasons. 1) There is a great section for bouldering and climbing that would be greatly impacted. It seems unfair to prioritize productized snow sports at the expense of all the other uses that tax payers get out of this area. 2) It would have large ecological impacts to the wildlife in the area.</p> <p>I suggest alternatives that don't have such devastating impacts. Perhaps limiting the number of people traveling to the resorts via a sign up or lottery system.</p>
36392	Neil Mckenzie	<p>Under no circumstances would a Gondola help. Gondola should NOT BE AN OPTION. It's going to be a massive eye sore on a beautiful canyon, only to zip tourist up with out actually solving any traffic problems</p>
36393	javin smolka	<p>i do not want a gondola to be built up little cottonwood. i have lived in utah my whole life and that canyon carries many memories. it's extremely beautiful and rare to see a canyon mostly untouched by corporate hands, and building the gondola would totally ruin that delicate balance. don't do it. please don't</p>
36394	Jon Buxton	<p>This is a great idea. The air pollution from idling cars needs to end. This is the best way to achieve year round improvement. Gondola rides, yay</p>
36395	Cassia Dippo	<p>I am opposed to the Gondola in Little Cottonwood Canyon. I favor an incremental approach with guidelines for reassessment, that when reached would remove the Gondola from consideration.</p> <p>Though I have many reasons for my opposition, I know that many have already been addressed. So I will try to not be redundant.</p> <ol style="list-style-type: none"> 1. If the Gondola fails, how will mitigation work without millions upon millions of dollars. Will there be a required bond for this? My guess is that it would just remain forever an eyesore. Remember this would be the longest Gondola in the world. What could possibly go wrong? Note the abandoned Gondolas in Moab. 2. Is there really a problem to be solved. At present, on average there are only congested traffic on fewer than 2 dozen days a year. On a really big year there might be 3 dozen. Are the people of Utah willing to spend enormous amounts of money for something that is needed on fewer than 10% of the days per year? Climate change may reduce this number even further due to decrease snowfall. 3. What happens during the days that there are considerably fewer skiers? Do they continue to run empty cars up and down the canyon all day to service the 100 or so riders, who may choose to end or start their day at different times. The Gondola is not scalable. 4. There is no benefit to either the skier/snowboarder experience, or the watershed, by putting more and more people in the canyon. The Gondola presents one of its selling points as the the 1000's of people/hour it can transport. Presently parking is the limiting factor that insures the protection of the watershed, and preserves the visitor's experience. <p>Please consider these comments in your deliberations.</p> <p>Sincerely, Cassia Dippo</p>
36396	Janet Jamison	<p>Little Cottonwood Canyon is a treasure. Building a gondola would be a travesty and should not be built. Expand bus service, charge for winter ski area parking, just don't build a gondola. It would benefit the ski areas and no other users, such as back country skiers and hikers. The canyon does not belong to Snowbird and Alta. With the disaster befalling the Great Salt Lake, resources should be spent on saving it, not building a gondola in a fragile ecosystem.</p>

ID	Full Name	Comment
36397	Patrick Ferguson	I am strongly against the proposed gondola. Seems quite a price tag that benefits so few. Tolls/increased bus service. Please don't let the needs of the few outweigh the pockets of the many.
36398	Larry Sweeney	I am against building a gondola in Little Cottonwood Canyon. It would negatively affect the environment of the canyon. This is also a huge tax payer subsidy for skiers and two ski resorts. On busy days, reservations should be required to limit the number of cars going up the canyon. Bus service should be offered where skiers that choose to drive their cars up the canyon subsidize of the cost of the buses. This would encourage more bus ridership.
36399	Richy Nydegger	Please, no gondola! Not every problem needs a solution. Certainly not a \$600 million "solution." Yeah the canyons are crowded. So be it. Nothing is the best solution. Just like how the locals treated the funding in hanalei. They decided not to widen the road and bridges. Yeah it's crowded, it's because it's a cool place. Nothing for LCC. No more roads, parking lots and certainly no gondola!
36400	Allie Henderson	As a Utah voter that is a frequent user for hiking and rock climbing I do appreciate UDOT trying to find an effective solution to the transportation congestion in Little Cottonwood canyon. I do think it is important to find an improvement to the current conditions, but I do not believe that the gondola is the best choice. By adding the gondola it will take away from the experience of non-ski users of the canyon. It is not a responsible choice in consideration of cost, recreation user equity, and environmental impact. It will negatively impact the use of many historic climbing resources. In addition, many seek the canyon for the full experience of being in nature. Having a gondola will take away from that solitude due to the noise from machinery and construction. It would be more ideal for all parties to consider adding a toll to the road. That will encourage people to ride share and drive revenue to upkeep the canyon. Increased bus service would be another great improvement. Thank you for your time.
36401	Gabe Glosband	I do not think this is a good idea for many reasons as the gondola will not improve the traffic situation for residents nor the public. This is nothing more than a way to make the resorts more money and more crowded while eluding the conversation of reasonable capacity for the resorts and the canyon. The proposal ignorantly ignores the traffic issues that cause problems for residents who reside proximal to the canyons as well as the fact that it will be an eyesore to the Canyons. There are reasonable alternatives that would work and this is not a reasonable solution that addresses the issues.
36402	Zane Holmberg	Sorry to see views of nature disrupted by man made structures. Not looking forward to the increased taxes. Would prefer user and public reassessment as the phases are implemented. For instance bussing and tolls for single occupant vehicles may be enough for many years before a decision on infrastructure implementation is needed.
36403	Rich Ross	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean" the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium" parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36404	James McGauley	<p>Josh -- UDOT's data does not support the need to expand Wasatch Blvd or to construct a gondola/garage complex as described in the final EIS report.</p> <p>You know this is true because we discussed some of these details in my meeting with you, Terry Warner of HDR and Jon Nepstad and Chris Bender of Fehr & Peers on September 15, 2022 in HDR's office.</p> <p>The flawed data needs to be examined in great detail before any changes are initiated.</p> <p>My comments refer to, but are not limited to, these documents:</p> <p>-The SR-210 EIS Traffic Study by Fehr & Peers, May 2019 (revised July 2019) which covers the segment from Fort Union to the 210/North Little Cottonwood Rd. junction</p> <p>-The Draft Vehicle Mobility Analysis for the LCC EIS, April 3, 2020 which deals with the segment beyond the 210/North Little Cottonwood Rd junction</p> <p>-The La Caille Station Traffic Study by Hales Engineering, September 18, 2020 which describes the road design modifications used in the Final EIS</p> <p>Respectfully, but disappointed /James McGauley</p>
36405	Jennifer Hurlbut	<p>I am opposed to a gondola. The potential impact of a gondola is that taxpayers will pay for an expensive method of transportation that benefits two ski resorts. Let them create and pay for transportation solutions such as increased bus service and parking in Sandy. Or, let the traffic problems continue as they are, and people will learn to avoid the area and the resorts if they don't like the traffic.</p>
36406	YAVONNE LILJENQU	<p>Removing buses and cars from the road are well worth the support poles and short term environmental impact of the proposed gondola. Having visited other areas where gondolas, or a funicular, are in place they are not an eyesore. In most of those spots the transportation becomes a draw of it's own during non-peak times. It's a good alternative to fossil fuels and traffic.</p>
36407	Iffer Mitchell	<p>You obviously do not care whether or not we, the taxpayers who will foot this bill, want this. All of the proposals are unacceptable. Destroying the beautiful canyon and disrupting the environment is clearly not your concern. More money for the wealthy who will be the beneficiaries is the bottom line. This is a terrible and tragic plan which I vehemently oppose.</p>
36408	Jason Hatch	<p>Please keep the gondola from Little Cottonwood Canyon, there are multiple other choices involving less destruction and degradation of such pristine wilderness which by definition should be difficult to access and protected by the wards of this community.</p>
36409	Paul Clayton	<p>I live in east Sandy just south of Bell Canyon. I oppose the gondola. The visual of giant metal towers all the way up the canyon is sad to contemplate.</p>
36410	Hunter Page	<p>I believe in keeping the canyon as environmentally intact as possible. A gondola would RUIN all outdoor activities such as hiking, backpacking, climbing etc.</p> <p>when I recreate in the canyons, hearing and seeing man-made objects takes me out of enjoyment and connecting with nature.</p> <p>I believe using the public transit such as buses would be the best option but only for the winter months. And one way to still go hiking and backcountry skiing would be to make a permit reservation a day in advance in order to drive personal vehicles into the canyon during those peak winter months.</p>
36411	Mary Bingham	<p>I am not in favor of a gondola. Pay more on roads, better bus system, Limit cars is what I want</p>
36412	KENDALL RATHUND	<p>UDOT's gondola proposal feels like an attention grab meant to vie for public transportation awards. There are more sensible alternatives (buses and tolling) that can be implemented before changing the landscape of the canyon for the sake of resort users. There is no reason to pass off this expense to tax payers before seriously exploring other options.</p>
36413	Amy Devlin	<p>Please consider something less invasive, less permanent, less expensive!</p>
36414	Dan Davis	<p>Utah resident with no activities at Alta or Snowbird should not be taxed to pay for this project.</p>
36415	Eve Rickles-Young	<p>Thank you for compiling the detailed EIS report that clearly lists out the main options and an overall review of how the analysis and impact study was conducted.</p> <p>The main concern with the final EIS proposal is the very narrow focused scope of the project being the evaluation of options being considered to improving the mobility and reliability of transportation on S.R. 210 overall for winter ski traffic.</p> <p>The problem regarding mobility and reliability is now becoming a matter year-round and impacts S.R. 190. Seeking scope expansion to cover recreation users for the 2.1m users as listed in section 1.1.2.1 for S.R. 210 and the additional users for S.R. 190</p> <p>My first suggestion is to expand the Scope of purpose statement to include improving the mobility and reliability of transportation in S.R. 210 during year round peak periods.</p> <p>As an avid hiker, I want to see a long-term solution that also addresses access to other parts of the canyon beyond the ski resorts.</p> <p>I support enhanced bus service because it is more accessible, could allow for more bus stops in the future or a longer season for accessing the canyons in the summer as well. With bus service, plans can be modified and more can be added. If we build a gondola, we'll never be able to add more stops than point A to point B, where SLC residents will still need to use their car for part of the journey and will only be able to access the ski resorts. I think this plan is shortsighted.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36416	Olivia Etz	The gondola is a bad idea. The alternative that I think should be considered is restricting or even banning private vehicles in the canyon for visitors and relying on a robust bussing system to solve the transportation issues of Little Cottonwood Canyon. The residential community of the town of Alta, deliveries, and other services passing through would be allowed to drive up the canyon but recreational users and workers of the resorts should be required to utilize public transportation provided in the canyon. I know you guys are working hard and this is a very emotional issue for a lot of people but please consider the lasting impact that the Gondola would have and the philosophy that it is promoting for your organization.
36417	Melanie Lambert	Please don't make the tax payers pay for this when it primarily only benefits two private businesses. Electric busses would make more sense paid for by increased parking fees.
36418	Madison Sudweeks	As someone born and raised in the south valley, I do not support the addition of a gondola to LCC. I believe that other less environmentally detrimental alternatives can be found to solve the same issues. Please reconsider alternatives to find a more sustainable alternative.
36419	Andrew Rapp	NO to the gondola. A gondola is not the most effective way to curb canyon traffic. I and many other believes the gondola mainly serves proponents/ organizers as a way to serve their own needs. Not that of the peoples.
36420	Octavia Haines	I support electric buses and dispersed parking. I do not support a gondola.
36421	Missy Weeks	NO TO THE GONDOLA
36422	Wiley Speckmann	I do not think this gondola is the best alternative for transportation in Little Cottonwood Canyon. I think the best solution is to have more busses and bus drivers to take people up the canyon. The construction of this gondola would change environment in Little Cottonwood Canyon forever, and not in a positive way. I think there are more important issues that this money could be used for that do not take away this canyons natural beauty.
36423	George Osmun	For \$550 million, a 4,000 space, multi-level parking facility could be built at the mouth of the canyon and 100 72-seat electric buses could be purchased with money left over. Everything about the gondola is wrong for the environment, the congestion and the people who will be forced to use it. Another example of crony based, back channel negotiating and a solution being rammed down our throats by the people and companies who stand to profit from it's approval.
36424	Patti Hobfoll	<p>I continue to see the creation of a bigger problem than currently exists in order to justify this enormous gondola project. I am whole heartedly against the construction of a gondola in Little Cottonwood Canyon.</p> <p>The construction of a 2,500 car parking lot is a large amount of paved space and continues to look backward to the status quo of accommodating cars instead of forward towards innovation and alternative transportation as a priority. Not only that, it does nothing to alleviate the congestion at Wasatch Blvd. and the 6200 S. exit.</p> <p>We need to be looking for more mass transit opportunities in our city as a whole, and especially in regard to the winter congestion in the Cottonwoods. For example, mass transit should have been considered when planning the construction and rebuilding of I-215 that is still underway. Why couldn't we have built a Trax line (or similar) into the East/West corridor from Foothill to 6200 S? That would have created an opportunity for BCC and LCC users to access existing and very large parking lots along Parleys Way as park-and-rides, and prevent those personal vehicles from ever arriving on Wasatch Blvd in the first place. I have seen this kind of train system along freeways in such cities as Chicago, so the proof of viability is there. Perhaps it can be considered in the future.</p> <p>I understand that, even if the gondola is built, the road will continue to be a necessity. I don't really understand how the cost of the gondola coupled with the length of the ride will mitigate drivers on the road at all, even with tolling. The drive is still shorter, and I think that most people would gladly pay \$9 to drive themselves up the canyon rather than \$9 to ride the gondola. This makes the gondola moot even before it exists.</p> <p>Some ideas I have (or agree with) regarding mitigating car traffic up the canyon includes:</p> <ul style="list-style-type: none"> -Allowing and encouraging carpooling and hitchhiking at park-and-rides -Increased bussing- This has not yet been tried. Perhaps there could also be an increased incentive to ride the bus if ONLY busses were allowed up the canyon from 8-9am. Ski busses should be free. -Tolling- I believe that tolling is only needed on the busiest days. Traffic in the canyon is only a problem for maybe 30 days out of the year, so, instill a toll for those days. Residents, municipal and service vehicles, lodge guests, and employees will be able to scan a pass (or room key) to open the gate and drive up.

36425	Abby Hudson	<p>As a resident of Utah that lives very close to the bottom of Little Cottonwood Canyon, I say no to the gondola.</p> <p>As an engineer with work dedicated to systems engineering, there will always be unforeseeable problems. This is especially true where time and money are concerned. Unless the systems engineering was/is airtight things will inevitably go wrong. Requirements will change, risk matrices will expand, the bill of materials will grow, more and more money is dedicated, etc. It seems like a massive amount of money to be spending on something that:</p> <ul style="list-style-type: none"> a) many locals do not want b) may very well not fix the problem (I will expand upon this below) c) takes away the beauty of the canyon d) will require a constant supply of money for maintenance separate from the building cost e) may cause liability for the city should failure occur at any point in the gondola's timeline f) only accommodates a fraction of the population g) will exacerbate the problem in the short term (i.e. during building) h) does not seem fair for Utah regulars who are aware of the problem and do everything possible to not contribute to the problem trying to be solved <p>While the gondola may seem like a solution to a problem, I am fairly certain that it is actually going to make the traffic worse. There is not enough room at the entrance of the canyon for such a complicated transportation mechanism, especially because the gondola will have a limit of passengers per trip. This leads to the need for space dedicated to waiting, boarding, parking, etc. This, in turn, may lead to people choosing to drive anyway instead of waiting. This may also happen as a result of not wanting to deal with the multiple transfers of the gondola. All things considered, the already limited space will be further minimized, many people will still choose to drive, and the gondola won't have solved any problems. Please keep in mind that I pass by the entrance to the canyon constantly as a consequence of where I live and have first-hand experience with the traffic problems.</p> <p>It is my opinion as someone directly affected, that this is not the solution.</p>
36426	Patrick Keenan	<p>I am a SLC resident and work at one of the resorts in the canyons. While I agree that there is a problem with congestion, the simple fact is that the proposed gondola will not solve this problem. It is incredibly troubling that this plan is moving forward against the will of most Utahns. According to a Deseret News/Hinckley Institute of Politics poll, 80% of Utahns oppose the gondola. Why should the taxpayers be responsible for paying for a gondola that only services private resorts? Why are we permanently changing the landscape of the canyon for a gondola that won't even be able to run on windy days or when avalanche mitigation is taking place? Furthermore, the gondola is pointless if people don't choose to use it. In order to push people to use the gondola, tolling and parking reservations will likely need to be implemented. If that is the case, why not start with those measures while also expanding the bussing system. This alternative would be drastically cheaper, would have less environmental impacts, and could also serve all of the backcountry trailheads in the canyon.</p>
36427	Sara Yazdian	<p>Please consider a parking garage (similar to what is proposed in conjunction with the Gondola) with a dedicated bus loop from the garage to the resorts in Little Cottonwood Canyon. Zion NP has been operating a similar that works well during high volume season. It makes more sense that the resort have ownership in this solution. Resorts offer free UTA bus service with season passes. It seems reasonable for a small fee to be charged with a season pass purchase to help offset the cost associated with owning and operating a bus services for their patrons that bring in a their revenue. Thank you from a loyal season pass owner of 20+ years that lives at base of the canyon and would love a viable solution on many levels!</p>
36428	Timothy Kemple	<p>We don't need a gondola. We need solution that supports access and movement of people in the canyons year around. The current EIS plan is a gross misuse of taxpayer money and a negligent lack of consideration for all user groups of Little Cottonwood Canyon. 1) Buses and carpools in winter fit the needs better. 2) Better trailheads and trail networks for the ENTIRE canyon year round are a necessity, at a much more significant investment than has been suggested.</p>
36429	Holden Wolfenbarger	<p>The gondola is an inequitable and impractical solution to LCC congestion. Better alternatives exist. Majority of taxpayers do not support the gondola. Don't let the ski resorts make this public decision.</p>
36430	Elliott Barcikowski	<p>I was extremely disappointed to see that gondola "solution" was chosen as the preferred solution for the issues with traffic in LLC. This is quite simply not a transportation solution at all but a give away to the ski industry. This only reveals the enormous amount of corruption in the entire review process and makes a mockery of so many people that made good faith efforts for a solutions.</p> <p>The gondola will be extremely unsightly and mar the visual beauty through the canyon. Additionally, many great places in the canyon will become effectively industrial zones.</p> <p>The straightforward and obvious solution to the actual traffic issue would be run many buses, eventually expanding a bus lane.</p> <p>Sincerely,</p> <p>Elliott Barcikowski</p>
36431	Vita Rice	<p>I am 1000% against the Gondola. There is substantial support against this project, both in impact research and public opinion. Everyone knows it is a power grab by people with money, land, and influence in the canyon and greater Salt Lake area. Ridiculous, ugly, harmful, extremely disturbance causing on ALL fronts - and for what? Against. Against. Against. Do not pass. No Gondola!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
38627	Mike Johnson	<p>UDOT LCC EIS Officials: Please see attached public comment regarding the Final EIS on behalf of the Cottonwood Heights Mayor and City Council.</p> <p>Sincerely,</p>
36432	Tom Shroeder	<p>I am very much against the gondola. The price tag will easily reach \$1B, and the destruction to the canyon during construction will be hard to recover from. The gondola will really only benefit the skiers, not other users of the canyon so let's try something else first - 3 lanes on the road, extended bus service, etc. Surely our "leaders" can try alternative solutions before something so expensive and destructive!!</p> <p>OCTOBER 17, 2022</p>
36433	Jason Keith	<p>Little Cottonwood Canyon EIS Utah Department of Transportation, c/o HDR, 2825 E Cottonwood Parkway, Suite 200, Cottonwood Heights, UT 84121</p> <p>RE: Access Fund Comments regarding Little Cottonwood Canyon Transportation Alternatives UDOT Final Environmental Impact Statement</p> <p>UDOT Planners,</p> <p>The Access Fund welcomes this opportunity to provide comments to the Utah Department of Transportation's (UDOT) Little Cottonwood Canyon (LCC) Final Environmental Impact Statement (FEIS). The Wasatch Mountains and Little Cottonwood Canyon in particular host nationally significant climbing resources that have a long history and attract visitors from all over the world, contributing significantly to the local economy. Like its draft proposals, UDOT's FEIS focuses far too much on the needs of two ski areas at the head of LCC at the expense of dispersed recreational users who visit the entire canyon. UDOT's preferred Alternative B would destroy climbing resources, significantly impair the canyon's natural experience, and limit parking and damage trails in a highly popular recreation area. Accordingly, the Access Fund opposes UDOT's proposal because less destructive and cheaper options are available to effectively address transportation problems in LCC.</p> <p>The Access Fund</p> <p>The Access Fund is a national advocacy organization whose mission keeps climbing areas open and conserves the climbing environment. A 501(c)(3) nonprofit and accredited land trust representing millions of climbers nationwide in all forms of climbing-rock climbing, ice climbing, mountaineering, and bouldering-the Access Fund is a US climbing advocacy organization with over 20,000 members and 123 local affiliates. Access Fund provides climbing management expertise, stewardship, project-specific funding, and educational outreach. Utah is one of Access Fund's largest member states and many of our members climb regularly in Little Cottonwood Canyon. For more information about Access Fund, visit www.accessfund.org.</p> <p>The Access Fund supports the position of the Salt Lake Climbers Alliance (SLCA), and hereby incorporates their position on this proposal by reference into this comment letter. Specifically, we endorse SLCA's proposal that before any permanent changes are made to Little Cottonwood Canyon, a new alternative must be considered that is based on 1) an expanded bus</p>

ID	Full Name	Comment
38358	Bryson Michael Wardrop	<p>Hello,</p> <p>I am writing to express my local issues with the infrastructure bill proposed for Little Cottonwood Canyon and S.R. 210.</p> <p>I have the understanding that the least environmentally impactful use of the canyon alterations would be utilizing: a toll for both S.R. 190 & 210, adding snowsheds for better road clearing and avalanche mitigation. My primary concern arises when we discuss issues with expanding capacity of the Little Cottonwood Canyon generally. The Gondola has the supposed least environmental impact, as well as the lowest cost for general maintenance and repair when looked at with respect to operation, maintenance, and construction.</p> <p>I believe this may however be another problem when we start to look at the sheer amount of energy used to generate this type of machine for passenger use. I am also under the belief that over time this type of transportation loses its capability of maintenance after approximately 20 years of operation and servicing. Without incredulous amounts of overhaul this presents a problem to the tax payer in support of the gondola system going through the Little Cottonwood Canyon.</p> <p>I understand capacity for this canyon is detrimental to the tourism industry, but looking at the amount of time passengers spend simply going to and from the canyon; I think it would be more beneficial to focus on a timely arrival for tourists.</p> <p>That aside, managing the watershed to the highest quality and spending the extra money to enforce more stringent and cleaner access through this canyon. Over time as we make the transition to clean air vehicles it may be more beneficial to change the type of vehicles allowed through the canyon as it is an ecologically dependent canyon that provides many of the residents with clean water to use. Not to mention the various changes to the canyon that will dramatically shape how the environment in this canyon is used. By removing the canyon's ability for diversity in the wildlife and changing the water ecology we may see consequences further down the road that are brought on by overbuilding this canyon. As a state that is already suffering from drought I believe it may be in the better interest to invest in a more robust infrastructure that will reduce that impacts that tourism has on the climate, both locally and generally.</p> <p>Please consider these things looking forward, if you have any questions feel free to reach out.</p> <p>My regards, Bryson Wardrop</p>
36434	Tracy Hansen	<p>I am against building a gondola up the canyon, no matter who pays for it.</p>
36435	Miguel Pabon	<p>I support any project that ensures locals and visitor have the opportunity to enjoy the canyons without the traffic issues that have arisen due to overpopulation and winter sports rise in popularity. Any approach that makes economic and environmental sense should be implemented. I believe this approach should take into consideration ALL THE USERS of the canyon, which include resort skiers, backcountry skiers, snowshoers, hikers, climbers, picnickers, sightseers, residents, employees, property owners, and anyone who for whatever reason uses the canyon at their own discretion. I am particularly bias towards the current, preferred alternative, as it will definitively remove people from the roads, which is the goal, it will improve infrastructure, and it will modernize the canyon, which will in turn add economic value to nearby communities. In any case, we are all in need of solutions, and the hope is, whatever it is decided it will benefit all the parties involved.</p>
36436	Ben Christensen	<p>Please reconsider your decision on transportation alternatives for little cottonwood canyon. In addition to the alternate routes, consider stops at popular trailheads. Finally, if the gondola is in fact the final decision, and it only stops at two private institutions (snowbird and Alta) it should be 100% funded by those institutions, for obvious capitalistic monopolistic reasons.</p>
36437	Bonnie Schroeder	<p>I vehemently oppose the gondola. It is obvious that real estate developers and politicians with insider knowledge invested in real estate that is necessary for the gondola infrastructure. The slickly-produced commercials and videos to garner public approval attest to this. If the gondola is such a good idea, why does it need an advertising campaign and budget to sway the public? It says in the EIS that the gondola has the highest visual impact of the options. Again, getting the public to accept such an eyesore had to be achieved by manipulation.</p> <p>The gondola should be excluded due to corruption and negative visual impact.</p> <p>During the ski season, close the canyon and allow mass transportation only. UTA should be considered the primary provider with electric buses. Private transportation companies can supply service, but the cost to the customer should be so outrageously expensive (\$1,000 r/t per person) as to make it unrealistic.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36438	Joseph Sczurko	<p>No to the Gondola!</p> <p>I am deeply concerned by and DO NOT under any circumstances support the plans for a gondola up Little Cottonwood Canyon.</p> <p>The public and local residents as references by data also overwhelmingly do not support this plan. To anyone who has been following the money and paper trail, the ski areas along with two prominent Utah residents who have used their political power within the legislature and local government to put the stones in place for this gondola, as an attempt to milk taxpayer money into private entities pockets.</p> <p>The gondola would be a huge environmental eyesore, and would negatively effect the ecosystem and natural beauty of little cottonwood canyon. The proposed tower locations have been show to directly effect popular recreation areas for climbing and hiking. Furthermore, Little Cottonwood Canyon has the same issues as Big Cottonwood Canyon in regards to traffic and there is no pull to get a gondola there.</p> <p>I support a HIGLY INCREASED bus system with a dedicated bus lane up Little Cottonwood Canyon with MORE busses both in terms of frequency and stops, as well as DIRECT busses to alta or snowbird. Tolling the road is also acceptable if these measures are to be taken.</p> <p>As a Utah resident and taxpayer I do not support this gondola for the reasons stated, and would much rather see a push towards an efficient and effective bus system for this beautiful canyon we all hold near and dear to our hearts. Thank you.</p>
36439	Nole Walkingshaw	<p>The gondola is not the right answer! Invest in other areas first. Develop parking so folks can ride a bus or job share. Use transportation mitigation tactics like fees and exceptions for carpooling</p>
36440	Andrew Chandler	<p>Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions. Parking hubs in the valley, electric busing with regular routes, carpooling and tolling, reservations, common-sense solutions that are fiscally sound, Wilson. I support this sentiment.</p>
36441	Natalie Bottema	<p>Hello, I am writing in opposition to the proposal for gondolas. I strongly encourage the officials to consider alternatives that will not cause more damage to the canyons or the environment. Please oppose and reconsider this option as not only will it ruin the beautiful scenery but will cause harm to nature and wildlife. Thank you.</p>
36442	Kate Cavin	<p>From an environmental standpoint, I appreciate that of all the options, gondola b seems to be the most eco-friendly in terms of greenhouse gas emissions. However, I'm concerned about the visual impacts of a gondola, the user impacts of "no winter parking," canyon widening, and the additional noise a gondola service would bring. Large towers would be quite the eye sore and decrease the aesthetic value (and potentially recreational value as a result) of the canyon. Noise pollution would be harmful to the people's value of the canyon as well. As for no winter parking, it seems to me that this would be problematic for people driving through the canyon without the intent of visiting a resort. I know many people who enjoy driving far up that canyon in the winter, whether it be for recreation like hiking or sledding, visiting their cabins, or simply enjoying the beauty of the canyon. As for widening the canyon for more road, wouldn't that be harmful to the ecosystems in the canyon? It would remove wildlife and thus reduce the resilience of those ecosystems by reducing biodiversity and soil strength. Do the environmental benefits of less congested traffic outweigh the consequences of a widened canyon road? I feel like widening the canyon wouldn't actually reduce the number of cars, it would allow for increase. I know the community at the mouth of the canyon is opposed to a gondola, and it seems many other people are as well. Little Cottonwood Canyon is a beautiful, serene place; and I don't want that to change. I believe in preserving Utah's natural beauty.</p>
36443	Robert Furbee	<p>I implore you to listen to the taxpayers. Polls are 80% opposed. The Gondola is not a viable option. Too much \$. Will not resolve the issue. Horrible damage to the community as well</p>
36444	brooke smith	<p>I ask that you reconsider better options other than the gondola. This gondola would be invasive and ruin the beauty of little cottonwood. There are better options. Don't allow greed of the ski resorts ruin the beauty of this canyon!</p>
36445	Jali Ortiz	<p>I am opposed to this plan because it is for private benefit of the resort and the public does not want to pay for it. No gondola. Being a Millcreek city resident we do not see any benefits for a gondola. It will only impact our environment negatively.</p>
36446	Michelle Rhodes	<p>It is not a good use of taxpayer dollars to ask people who will never use this gondola to pay for something that only a portion of the population will use</p>
38628	Evelyn Everton	<p>Please find attached Sandy Mayor Monica Zoltanski's public comment on the final EIS for Little Cottonwood Canyon. Thank you.</p>

ID	Full Name	Comment
36447	Ashley Brown	<p>Hi, and thank you for taking the time to read my comment.</p> <p>From a conservational perspective, the best decision for LCC (and BCC) transportation crisis is to increase public transportation. A decision to destroy and alter LCC geography for the infrastructure of a gondola means that the natural beauty will never be restored in our lifetime (or the lifetimes of our children, grandchildren, etc..) Through researching and writing "Urban Trails: Salt Lake City" (publication date fall 2023), I've learned that access to LCC and BCC is restricted to folks wealthy enough to own a car and pay for the gas. There is no public transportation outside of ski season. Increased transit should include access during all seasons.</p> <p>If we increase the number of buses, we don't need to destroy the beauty. Beyond increasing existing buses, there should be a toll to enter the canyon in a car (particularly during busy ski days). I already stated that access to the canyons is currently restricted to wealthy people. So let the wealthy pay to use the area and, in turn, create opportunities for those who currently can not access the canyons. As a winter canyon user and LCC annual pass holder, I am all in favor of a toll booth. Let the rate be high enough to deter people from driving up the canyon solo (like \$60 Or \$80 during peak days). Offer a discounted rate for cars filled with passengers. What's great is that the money from the toll booth will hopefully go to the USFS or UDOT, two organizations that put the funds to good use.</p> <p>The idea of a gondola seems frivolous without actually solving the access problems. As a taxpayer, I find the idea that my tax dollars are funding a project that exclusively benefits Snowbird and Alta Ski Resort repulsive. If the resorts must have a gondola at the cost of destroying LCC's natural beauty, let them pay for it in full.</p> <p>Please use my tax dollars responsibly. Throwing them at the gondola not only seems ridiculous, it only increases the crisis of canyon access being restricted to the wealthy. Increasing public transportation also means increasing access for less privileged people. One of Utah's strong points is caring for those in need. Let's extend that care by making decisions that allow access to Utah's beauty for all, not just the wealthy.</p> <p>Thank you for all your hard work and for taking the time to read my comment.</p> <p>All my best, Ashley Brown</p>
36448	William Gifford	<p>The gondola is not necessary at this time - please try lower cost and easier options first, such as improved bus service and parking reservations/fees at the resorts at peak times (weekends).</p>
36449	Erin Smeeding	<p>I am opposed to the gondola because it will negatively impact our watershed while simultaneously not solving the transportation issue.</p>
36450	Kristin Schreiner	<p>I oppose a gondola in any phase of the proposed solution.</p> <p>I support improved efficiencies of existing transit systems and requirements/incentives to use them.</p> <p>I support Mayor Wilson's widely shared common sense solutions.</p> <p>I support Salt Lake County Council's opposition to the gondola.</p>
36451	Carol Douglass	<p>No.</p> <p>The Wasatch Front, Great Salt Lake area is suffering severe drought issues. Prioritize needed investments including buses. Not a gondola.</p>
36452	Cullen Battle	<p>The Final EIS does not contain enough information to reasonably conclude that Gondola B will actually accomplish the purpose of reducing traffic and congestion on SR 201 and other roads on peak travel days in winter. According to the EIS, peak winter use in 2017 was 14,000 vehicles per day, and that number is expected to grow to 18,000 by 2050. With a parking capacity of 2500 vehicles, the gondola will reduce peak daily traffic by no more than 18% currently, and 14% by 2050. There is nothing in the EIS to show that these reductions will be enough to prevent congestion on peak days.</p> <p>Although the EIS concludes that Gondola B will reduce average vehicle travel time in the canyon from 80-85 min to 43 min, the report does not show how these numbers were arrived at, nor is it clear whether these numbers represent average peak days or some other average. The report needs to be more open and transparent in showing how an 18% reduction in daily traffic can lead to a 50% reduction in travel time.</p> <p>Moreover, the report fails to consider whether a reduction in road congestion resulting from gondola use will merely stimulate additional demand to replace the traffic diverted to the gondola. It is well known that many people choose not to travel to the ski resorts on peak days because of congestion in the canyon and long travel times. If congestion and travel times are reduced, some of those people will choose to travel, and will continue to do so until unacceptable levels of congestion are again reached. The report should have considered the degree to which this phenomenon will offset the benefits of a gondola.</p> <p>Another major flaw of the report is speculation about how tolling might suppress private vehicle travel demand if the gondola is built. Tolling is not part of this project and there is no way to ensure that tolling will accompany a gondola. The report admits that the amount of any toll is unknown. Therefore, it is impossible to reach any reasonable conclusions as to whether and to what degree tolling will drive traffic to the gondola or will discourage other vehicles from replacing that traffic.</p> <p>The same is true with parking capacity at the resorts. There is no way within the scope of this project to guarantee that the resorts will limit parking. If the resorts expand their parking capacity, this will stimulate additional demand that could more than make up for the traffic diverted to the gondola.</p> <p>Finally, the report contains no meaningful analysis of the cost of using the gondola and how that will influence travel behavior. These costs are unknown and any discussion of them is sheer speculation.</p> <p>Given these unknowns, it is impossible to reasonably conclude that one alternative is better than another in reducing travel times and congestion, or that Gondola B is the best alternative in that regard. For all we know, Gondola B, at a cost that could approach \$1 billion, will accomplish nothing more than providing an express service for ski resort patrons seeking a faster trip up the canyon.</p>
36453	Kevin Wise	<p>I am strongly opposed to the gondola solution. This would have significant impacts to many who enjoy the Wasatch in other ways besides just skiing. It will have significant impacts on the water shed. How can we spend \$550 million of tax payer money to benefit private businesses!? We need to use electric buses, tolling, and other solutions.</p>

ID	Full Name	Comment
36454	Chris Parks	<p>Please do not ruin the canyon aesthetic by building a massive Gondola system or expanding the roadway in the canyon. Both alternatives take away from the unique mountain experience that we as Utahns have enjoyed for decades and will instead turn this into a carnival. The only reason that we need to address the traffic issue, is in reapocto the greed of the two ski areas in the canyon. Address the congestion by limiting use (actually protecting this resource) or do it at the initiative of the resort, with them investing in the infrastructure for their own desired growth. If Snowbird wants more people coming to ski, let them build, and pay for, a gondola in AF canyon in the land that they own.</p>
36455	Jeremy Middlemiss	<p>To the builders of Utah's future,</p> <p>I am a resident of Sandy city. I also own and operate a ski business (The Sport Loft) in Millcreek. I am writing in SUPPORT of Gondola option B.</p> <p>SR 210 if a very common topic of discussion with customers at our business. I have heard many different opinions. Though these opinions vary wildly the common theme of emotion is always attached. The majority of these emotions are linked to the participants chosen outdoor activity, with little vision for the future. With the population growth in Northern Utah and those participating in outdoor activities of all types infrastructure in high use areas is the solution. Without the proper infrastructure the level of frustration and dissatisfaction of the users will only increase.</p> <p>Little Cottonwood is special. I've been skiing there since I was 3. My parents were both instructors at Alta before my birth. I've seen the canyon change. It's stating the obvious that most do not like change and nostalgia runs deep. Those tasked with the future however must embrace change. Change that allows Utahn's and those visiting Utah to use SR 210 however they see fit within current laws. That again is why I strongly encourage you, our elected officials to implement Gondola option B, and make it the decision of record for SR 210 (Little Cottonwood Canyon).</p> <p>The Gondola option B will add safety in a way no other option can. With the exception of an underground train that would make the Cog-rail look inexpensive there is no safer option. Please remember that ALL should have access to these state and National Forest lands. For many that access may only be visual as they may not want or be physically able to go there any other way. The unique experience that the Gondola will offer will prove a legacy project. In the 1980's this can was "kicked down the road" for both Big and Little Cottonwood Canyons. It's a major reason we are where we are today. Please don't make the same mistake as your predecessors. The addition of the Gondola with the addition of the avalanche sheds will prove invaluable. For the future of the state please help all those that choose to live life elevated do so in Little Cottonwood Canyon.</p> <p>Sincerely,</p> <p>Jeremy Middlemiss</p>
36456	Randy Keinz	<p>No to the Gondola, it only beneficial for winter options. Better option would be increase road safely and busing for use all year long. Also not to tolling, one introduce, they NEVER are removed. I would have a capacity limit, monitor by local police.</p>
36457	Jonathan Herrera	<p>I oppose UDOT's preferred alternative: Gondola B (From La Caille).</p> <p>As evidenced by the original public comments for S.R. 210 Draft EIS, I, and most the public, strongly oppose building a Gondola in Little Cottonwood Canyon, and support an enhanced bus service, tolling, and other restrictions be implemented before any new construction is considered.</p> <p>In UDOT's executive summary for the Final EIS, UDOT claims there is "support for gondola and bus alternatives." While this is true, it misconstrues the overarching message from the 13,443 public comments UDOT received. While UDOT's 258-page public comment response is quite comprehensive, it failed to statistically summarize major themes of the public's wishes.</p> <p>Because UDOT's 258-page public comment response sufficiently documents all the reasons the gondola is a bad idea, there is no reason to expand on that here. Rather, I call on UDOT to present a statistical summary of the major themes from the original public comments and act in accordance with the majority themes, that is: enhanced bus service, restrictions to single occupancy traffic, and no gondola in Little Cottonwood Canyon.</p> <p>Thank you for your careful consideration!</p>
36458	Kevin Engh	<p>Gondola= worst idea ever. It's ludicrous to think that we as Utah tax payers flip the bill for privately owned ski resorts. It absolutely does not fix the traffic problem.</p>

ID	Full Name	Comment
36459	John Badila	<p>As a Salt Lake City resident, a skier, rock climber and a photographer I have followed the LCC EIS transportation process very closely. I have spent a great deal of time in Little Cottonwood Canyon over the past 14 years as a recreationist and a resort employee. I'm familiar with the challenges facing transportation in this canyon, having used the ski buses extensively, as well as carpooling and (more often than I'd like) driving a car with a single occupant.</p> <p>I strongly oppose UDOT's preferred alternative, the Gondola Alternative B. There are several major drawbacks to this proposed project, and even leaving the obvious problems out of consideration, it seems unlikely that this alternative will even succeed in alleviating traffic problems significantly.</p> <p>Dispersed Use- The gondola as proposed leaves dispersed use of LCC out of consideration entirely. The White Pine trailhead is very popular year-round with hikers and backcountry skiers, to the point that the lot is full and parking on the shoulder for a mile uphill and down is common, but the gondola will not stop here, leaving this problem unabated.</p> <p>Impact on Rock Climbing and Viewshed- The proposed gondola will have irreversible and highly detrimental impacts on rock climbing in the lower part of Little Cottonwood Canyon, and these impacts have been minimized or ignored in the EIS. These impacts include the destruction or removal of popular boulders for climbing to build the access roads and gondola support towers. Further, there will be major visual and noise impacts to the majority of areas where rock climbing is popular in LCC. The gondola will pass directly over or nearly alongside many climbing routes and bouldering areas. The proposed 200-foot tall towers and 35-person gondola cars will be visible to all visitors to Little Cottonwood Canyon, whether they are driving, hiking, climbing, skiing, or otherwise recreating in the south or north facing terrain of LCC, as well as simply doing a leisurely drive up the canyon.</p> <p>Seasonality- As proposed, the gondola will only operate from December through April. This will benefit the ski resorts, Alta and Snowbird while doing nothing to alleviate traffic from June to October, which is already at similar levels to winter use.</p> <p>Failure to Alleviate Traffic Congestion- It is still unknown what fees will be charged to gondola riders, but given the high estimated cost of the project (\$550 million in the initial proposal) it is likely to be expensive, which will incentivise most canyon users to continue taking private vehicles up the canyon. Further, the gondola cannot operate while avalanche control work is being done, so it may not run at all on some of the most congested mornings on storm days.</p> <p>Private Profit at Public Expense- The proposed Gondola Alternative B stands to provide an economic benefit primarily to two private businesses, Alta and Snowbird ski resorts. This seems like an unreasonable use of more than 500 million dollars of taxpayer money, especially when most Utahns don't visit these resorts, and many live in parts of the state far</p>
36460	Gene Cutak	<p>Those who use the canyon should pay to use it and the maintenance there of. The public should not have to pay for the elitist who have the means and resources to vacation and ski which is a primary reason for the congestion problem at hand. Pay for use is the right thing to do but lets see how that works out. My guess is everyone wants big government to take care of everything for them.</p>
38629	Jason Keith	<p>UDOT Planners - find attached comments from the Access Fund to the Utah Department of Transportation regarding the Little Cottonwood Canyon Final Environmental Impact Statement.</p>

ID	Full Name	Comment
36461	Tracy Wager	<p>I oppose the gondola in Little Cottonwood Canyon for 3 primary reasons.</p> <ol style="list-style-type: none"> 1.The gondola solution for traffic issues in Little Cottonwood ignores the similar traffic issues in Big Cottonwood on the same powder days that cause issues in Little Cottonwood. 2.All citizens will be burdened with taxes to pay for a transportation solution that serves only two ski areas in Little Cottonwood. Canyon users other than skiers will pay this tax AND also potential parking fees and road tolls recently proposed. These additional charges on top of paying for the Gondola with our taxes will discriminate against low-income canyon users, and our canyons will become the playground for the wealthy. 3.A gondola will have a negative and long-term impact on the visual beauty and solitude of the canyon for all users who are not just accessing the ski areas during winter months. <p>Expanded electric bus services offers the most practical, equitable, fiscally and environmentally sound solution to the traffic issues plaguing both the Cottonwood Canyons.</p> <p>Big Cottonwood, with its small ski areas was the forgotten Canyon compared with Little Cottonwood and the Big ski areas, until the Ikon/Epic passes came along in 2018. The quiet days of easy parking at Solitude and Brighton followed on the heels of Big Cottonwood with traffic jams, parking issues and crowded ski runs, especially on powder days. The solution to the crowds in Big Cottonwood that came with increased usage, was to charge for parking. Parking costs added even more to the cost of a day of skiing, pushing out lower income users.</p> <p>After the Gondola option was presented to the public as the preferred option by UDOT, they then trotted out the idea that a toll may be added to the Canyons, so we the taxpayer get to pay twice. First, we will all pay for a gondola we may never use but then pay again when entering our Canyons for other recreation purposes. Since the toll proposal was popped on the public after the fact of the Gondola being UDOTs preferred option, there is very little info on pros and cons the toll will have. As proposed, the toll may be \$20 to \$30 a pop, that excludes even more low-income non-skiing users and our Canyons become a playground for elite wealthy users.</p> <p>It is suspicious, as the toll was presented after the fact, as was UDOTs sudden announcement of a reduction of bus service to the Canyons right after the toll proposal was mentioned. One of the opposing options to the Gondola option is an enhanced bus system. While UDOT raises the money to proceed with their Gondola, enhanced bus service was to be part of their phased approach. But gee, wouldn't want the bus option to be too successful or you wouldn't need the Gondola? Hmmm...</p>
36462	Mike McEvoy	<p>The gondola should not be built in any form. I am a resident of Sandy and both a skier and a hiker. My wife and I enjoy the canyons a great deal. A gondola will not solve the problems of congestion in the Little Cottonwood canyon. And it will have no impact on traffic during the summer and provide no service for recreation areas and trail heads This should absolutely not be funded by Utah Taxpayers. Snowbird and Alta should fund all of this project.</p>
36463	David Schreiner	<p>I oppose the gondola in any phase of the proposed solution. I support improved efficiencies of existing transit systems and requirements/incentives to use them. I support Mayor Wilson's common sense solutions. I support Salt Lake County Council's opposition to the gondola.</p>
36464	Joely Huggard	<p>Please do not spend my tax money on the gondola. I think that it is a horrible use of money that will benefit a small group of wealthy people and companies at the expense of Utah taxpayers, the majority of which will never use the gondola.</p>
36465	Kelly Konopa	<p>My name is Kelly Konopa and I oppose the gondola option for Little Cottonwood Canyon. I am a Utah voter and user of Little Cottonwood Canyon. I think that a solution that only takes people to the 2 ski resorts (the proposed gondola) is not a solution worth the monster price tag. Enhanced bus service (year-round and with multiple drop-off and pick-up points) and tolls would allow increased usage for all (not just resort skiers) without a major infrastructure bill and impact. Thank you to UDOT for taking comments in order represent our community.</p>
36466	Kate Christensen	<p>No one wants the gondola. This is all an example of greed. Who benefits from the gondola? Not the tax payers. The gondola will NOT solve any of the problems with canyon use and it is the most expensive "solution." I can't believe the corruption in our government! I wanted to believe that at least on the local level democracy was still alive and well but it isn't. We don't want your [redacted] gondola. UDOT please make a different choice, please think of future citizens and don't obstruct the beauty of the canyon all for a "tourist activity." We don't want more tourists in the canyon. We want the canyon to be accessible to everyone. No one wants to pay \$50-100 to use the gondola. We want more bus routes (how about electric buses?). Any solution would be better than the gondola. I really wish there were people of conscience in leadership right now. Please don't overlook what the majority wants because it doesn't work for the few people who will benefit from the gondola.</p>
36467	Betsy Haws	<p>I'm strongly opposed to constructing a gondola in LLC. I don't believe it will solve the traffic problems in the canyon and will exacerbate ancillary issues related to overuse, including environmental impact from construction, impact to bio diversity and wildlife, degradation of the views, all at a huge cost. Close the road and set up a bus service.</p>
36468	Isabel Kinikini	<p>The canyon does not need yet another man made structure sitting upon its sacred and let us not forget, STOLEN land. As if we haven't seen the consequences of capitalism enough? Let the land be.</p>
36469	Marci Houseman	<p>I appreciate the time that has been spent on carefully considering the solutions for the current AND future traffic congestion in Little Cottonwood Canyon. Doing nothing is not a solution and I appreciate the effort that has been made to solve the problem. I applaud the phased approach to solutions and believe that layering one effective solution on top of additional effective solutions will ultimately achieve the goal of getting people out of their cars and into transit. I support a phased approach so long as we are looking at the long term solution of the gondola. In looking at a long term transit solution, the gondola aligns with many priorities that are important to me: emergency egress, reliability (even during avalanches and traffic accidents), reduced emissions, year round access to canyons for those with mobility issues, protection of the watershed and environment. The layers of solutions must include incentives for people to get out of their cars. My goal is to get as many people out of cars and into transit and I believe the gondola is the right long term solution to accomplish just that.</p>

36470	Robert Douglass	The cost estimate for the 2,500-vehicle parking structure is not consistent with having only two floors above grade. The new preferred alternative will therefore have additional environmental impacts on the area not previously described. The EIS is in error calling these impacts 'minimal'. They are significant. The parking structure footprint provided by the EIS appears to be provided by Gondola Works and CM Management LLC - it is identical in scale and layout. Counting the number of vehicle spaces in this design shows that an 8 to 10-story parking structure will be needed to house 2,500 vehicles. Cost considerations will require that many more than two levels will be above ground. A high-rise parking structure introduced for the first time in the final EIS will create a significant visual and noise impact on the surrounding environment, both to residential areas and the public recreation area immediately adjacent. In addition, adding extra floors to the structure to increase its capacity to 2,500 and eliminating bus service to the structure will result in 400-500 additional cars arriving and departing from the structure at peak times versus the original gondola Option B Alternative. This will have significant additional noise, pollution, and traffic impacts on the public recreational area of the Cottonwood Heights Open Space as well as on residents and businesses in the area. This omission and error must be corrected by issuing a supplement to the EIS as required by the NEPA process to assess and report this new impact.
36471	Joseph Spataro	I literally just moved here to climb the rocks in LCC and now you want to destroy them. Just build another lane or add some busses or something you don't have the money to build a gondola and if you did that's wicked cringe and everyone will hate you.
36472	Julie Anna Facelli	The plan to put in a gondola does damage to our beautiful canyons, is expensive and only serves a small fraction of the community. There are many other solutions that do not have as many downsides and can be executed on a trial basis with no permanent commitment and destruction of precious natural resources.
36473	Matthew Wolfe	The fact of the matter is that the gondola is a massive public expenditure that will benefit a very small fraction of the population on very few days each year. Living at the base of Little Cottonwood, I travel up the canyon at least 3-4 days each week in the winter. It is a very small fraction of those days when significant congestion is an issue. The resorts have already implemented parking strategies that are helping with the amount of cars in the canyon. A very easy solution would be to build a large parking structure in the valley that had buses constantly flowing through it, especially at peak times of the mornings and afternoons allowing people a viable way to use increased bus service. Spending this amount of money on a project that benefits so few people is asinine. There are so many other critical issues in our valley, such as homelessness and the Great Salt Lake, that have an impact on so many more people than the inconvenience of the amount of time it takes to go skiing, that would benefit so much more from this type of funding. Not to mention whatever amount is quoted at this time for this project will unquestionably become inflated to a much larger number if the project actually proceeds. Lastly, the fact is our winters will continue to become shorter over the coming decades, further limiting the amount of days a gondola is in any way necessary. This project is so obviously a conspiracy between those who stand to gain significantly financially from it with such blatant disregard for public opinion that it should be criminal. Let the people vote, it's pretty obvious what public opinion thinks.
36474	Jo Hopkin	I am opposed to the Gondola. Many citizens have already given detailed responses, so I would just be repeating what has already been said. Please, please listen to the residents' opposition to this plan.
36475	Paul Flores	Not fair to tax payers who don't use the canyon and it only benefits the profits of 2 ski resorts.
36476	Annette Pressley	Just very disappointed. I have to say I am against the gondola for what it's worth. Seems like many are opposed but decisions made with little regard for constituents wishes.
36477	Mary Ellen Navas	The public does not want taxpayer money to pay for a gondola that benefits Utah tourists, two ski resorts, and a handful of developers including former Utah Legislators. We agree. We want an iterative slow approach to reducing the car traffic up LCC. That can include clean fuel public buses and vans, tolls, and incentives to carpool. No major investment or fouling of the landscape should occur until all other remedies have failed, and even then the pros and cons must be considered and the people are given more than a tacit role. NO GONDOLA. NO GONDOLA. A gazillion times, NO GONDOLA!
38359	Mark Lowrance	As an avid hiker/mountaineer/Utahn of 30+years, I'm very confused as to why the Gondola option in Little Cottonwood Canyon was selected as the best choice and holds so much appeal to some. I understand there's certainly a congestion problem on a handful of days each year during peak ski season. I believe this problem should not be addressed by spending what will most likely be close to \$1,000,000,000 of taxpayer money. (drinking from firehose...?) Even more important to me and a whole lot of others is conserving the beauty of the canyon by not destroying our serene views with large towers, wires and base stations spread throughout, while also destroying several world class boulders and climbing areas that are a massive part of the climbing/bouldering community. This just makes no sense to me, especially as we haven't even tried shuttles/tolls/improved bus service/reservations. This will negatively impacts thousands of people for 330 days per year, while potentially having a positive impact on skiers for maybe 30days per year. Please consider a phased approach and more common-sense solutions to managing traffic in Little Cottonwood Canyon. Thank you for all your efforts, we really appreciate the time you spend on our behalf. -- MARK LOWRANCE cell- [REDACTED] fax- [REDACTED]
36478	Robert Morrison	Let's be smart and do nothing. By the time we finish whatever is planned it will not be enough. Then we'll just move on the next foolish plan.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36479	Kait Hinckley	This is a terrible idea, I'm shocked that Utah would consider ruining one of it's prized canyons with such a horrendous looking thing, not to mention the implications of what the construction would do to the ecosystem. I really, really hope that this awful gondola gets shut down. Money would be better spent investing in electric buses to eliminate emissions and traffic up the canyon. They wouldn't require billions of Utah's dollars in construction either. NO to the gondola!
36480	Thomas Gibbs	I support the Gondola.
36481	Robert Douglass	Creating a large parking structure in the mouth of LCC will move 30% of the traffic (by design) from the LCC Road and back it up on Wasatch from BCC and on 9400 S. into Sandy. This is a significant additional environmental impact - 1,000 additional cars waiting to enter the parking structure that would have been in the Canyon, may reduce the environmental impact on the Canyon, but it substantially increases the impact on residential neighborhoods and community open space which is a public recreation area. None of these impacts were judged significant enough to warrant analysis in the EIS. They are significant and need to be addressed in a supplement to the EIS. It is an error to label the impacts as minimal and an omission to leave out an assessment of their impact arising from the alternatives. It amounts to negligence in the EIS process.
36482	Mindy McNeil	I don't personally know anyone in favor of the gondola. The people who want the gondola seem to all have a financial stake in having the gondola built and that is definitely the minority. Please, please listen to the overwhelming majority and stop any movement to installing the gondola. There are many options that should be instituted before a gondola. It appears the gondola is not an actual solution for managing the transportation "problems" of Little Cottonwood - it only benefits a few and better options are out there.
36483	Randall Speck	Strongly opposed to gondola system Will be an eyesore and not terribly efficient Add more buses at a fraction of the cost
36484	LuAnna Maxson	I am 100% AGAINST tax payers money going to build a gondola up Little Cottonwood Canyon. In my opinion it only gives my tax money to a select few to aid in their recreation for a few months. I prefer bus routes and have other people who use the canyon during that time pay for transportation by bus. Please don't ruin the beauty of the canyon by putting up towers and cables thru it!
36485	Richard Howard	Stop wasting my money on this kind of nonsense. Restrict access, giving priority to actual residents, and limit access by visitors. We do not need to spend any more money on this subject.
36486	David Fillmore	I am concerned about the potential damage to the roadside bouldering areas with the gondola plan. These bouldering areas, while not as well known as "Snowbird" and "Alta" are fantastic and should be protected. In addition there is a lower barrier of entry to enjoy bouldering. Bouldering is less expensive than skiing. If the bouldering areas are protected people with less money can enjoy the canyon of in a different way during non peak seasons. I am also concerned as a tax payer to to hear so much money is being spent on a project that caters to resorts and a sport that is generally exclusive with cost.
36487	Jamie Lorenzo	The people in Utah are struggling enough to pay for the increasing rents and inflation. The gondola is only going to add to this burden and stress of the people. Please implement more electric buses. No one wants the gondola. It would only go to 2 resorts and the people of Utah don't want to pay for it. It is unfair.
36488	Heather Phipps	If reducing traffics and carbon combustion is the real intent, this gandula does not solve that problem. It will only create more issues. We need expansion of public bus systems and electrical fleets up and down the canyon. \$6 billion should go towards decarbonizing our energy sector and making zero carbon transportation for all to every part of the part of the canyon a free and easy option.
36489	Porter Williams	Please don't build a gondola. Invest in bus-services. The gondola has no true benefit, and will require significant development. Buses could be implemented very quickly, and have immediate impact, with huge scalability and flexibility options that could be experimented with.
36490	Greg Barltrop	I do not support a gondola in lcc. It does not serve the greater community and should not be tax funded as its only delivering people to two private resorts for 5 months of the year. You should expand bus services (despite the increased cost) as these are the most scalable and once electric they will also reduce emissions. We want the cottonwoods to be green and not marred by steel towers that only work when not windy not even in the summer. If avalanche days are only a minor inconvenience according to Alta mayor, then we should focus on solutions that match, like expanded bus services along Wasatch front. So you can allocate more buses to wherever they are needed in the valley. Gondola is too limited in its approach and destructive in the trails and climbing areas impacted. Since snow sheds mitigate the avalanche delays, stick to reasonable solutions even if they won't be perfect in your spreadsheet. We want solutions that don't change the view and are scalable. Especially since the great salt lake is so low and we expect lower snow years in the future. What if we don't get all these visitors in the canyon and the gondola goes un used? At least you will always use buses somewhere. Thank you and listen to what the people want.
36491	lindsay keegan	I do not support a gondola in lcc. It does not serve the greater community and should not be tax funded as its only delivering people to two private resorts for 5 months of the year. At least you will always use buses somewhere. Thank you and listen to what the people want.
36492	Michelle Cruz	None of us want this money maker [redacted] up our canyon! [redacted] off with this [redacted]

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36493	Richard Coleman	Most of my concerns about the two final alternatives selected by UDOT, which I expressed in an email during the draft EIS comment period, have been addressed. And mostly ignored or rejected. However, the phased implementation elements of Gondola Plan B - that would precede the construction of the gondola, are good ideas. Beyond those, the gondola itself brings little value to Utah citizens at enormous expense. The gondola itself should never be erected.
36494	Joseph Ammirato	The Gondola is a terrible idea. It's a massive waste of money and resources and will not solve the issues at hand. Please do not allow this to be built and ruin our pristine canyon.
36495	Gwyn Fisher	Would much prefer busses. Gondola will spoil the landscape and be of little use to folks wanting to get off halfway up or anywhere that's not a premium ski resort.
36496	Shelly Walters	I strongly OPPOSE the gondola proposed for Little Cottonwood Canyon. \$55 Billion paid by all the citizens for a handful of elites to use is NOT ok. Find a different solution!
36497	ROBERT TRISHMAN	Please do not move forward with the gondola idea. A train would be great, but expanded bus service would be satisfactory.
36498	Azalea Thompson	This is extremely unethical and not sustainable for the future of our beautiful cottonwoods. There are other alternatives that should be heavily considered to save both the wildlife in these areas as well as the rock climbing that everyone has enjoyed for many many years.
36499	Liam Getzloff	Preferred alternative: bolstered bus system and hefty car tolls.
36500	Blaine Nielson	I'm a big no for the gondola in Little Cottonwood canyon. It would be way too expensive and would be corporate welfare to the ski resorts. It's a stupid proposal, that is nothing more than a money grab for U.D.O.T. and their preferred contractors. Sincerely, Blaine Nielson
36501	Rebecca Johnson	I am against the gondola - there are better solutions. Fee to ride up the canyon, required parking reservations at resorts, and snow tires for every car going up the canyon would be better I think.
36502	Chuck Thoman	Do it! Smartest transportation idea since Trax. Such a great idea!!
36503	Dana Conway	The gondola is not the answer - the damage to the canyon is irreversible and there are better options
36504	Joseph Burt	I firmly oppose the gondola proposal. While it could theoretically reduce the travel time to Alta and Snowbird, its lack of flexibility, enormous cost, huge impact on the appearance of the canyon, and the readily-available alternatives make it absolutely unconscionable use of public funds.
38630	Julie Smith	<p>Good afternoon, Josh.</p> <p>The U.S. Environmental Protection Agency Region 8 NEPA staff reviewed the Final Environmental Impact Statement (EIS) for the Little Cottonwood Canyon/S.R. 210 Wasatch Boulevard to Alta Project (Project) (CEQ No.20210078) prepared by the Utah Department of Transportation (UDOT). In accordance with our role as a Cooperating Agency, as well as with our responsibilities under Section 102(2)(C) of the National Environmental Policy Act (NEPA) and pursuant to Section 309 of the Clean Air Act (CAA), the EPA provides the attached comments on the EIS.</p> <p>We provide these comments and observations in our good faith effort to help improve overall consistency between resource analyses in the conclusions to be reached by UDOT in a Record of Decision. Please do not hesitate to contact me with any questions or points of clarification. We look forward to continuing to work with UDOT in the preparation of its supports effective and efficient agency decision making.</p> <p>Best regards - Julie</p>
36505	Dylan May	<p>While I understand there are pros and cons of each option, the suggestion of the gondola really disappointed me. It's such a high visual impact for everyone all year round, and primarily benefits only a specific group of people for a small amount of time. I fully recognize the popularity of skiing/snowboarding-I myself love it-but I question our willingness to permanently modify the canyon to accommodate this endlessly growing group rather than considering restricting the amount of people to meet what the canyon can reasonably accommodate. Placing caps on ticket sales could reduce traffic and open up access to the canyon to those not wishing-or unable to afford-to pay for recreation or are wanting to recreate it different way. I'd love to do more snowshoeing or hiking, but it's just not an option simply because of the resorts impacting the entire canyon. Increasing shuttle support paired with being responsible about crowd sizes would make the experience more enjoyable for everyone regardless of whether they're at a resort or not. It feels like we thought "how do we get more people up" and not "should we get more people up".</p> <p>Thanks. Either way, it really has been interesting following the assessment of the options.</p>
36506	Matthew Utley	I'm opposed to the gondola option. I prefer bus options. I'm an avid user of LCC. Logged 24 ski days both at resort and backcountry in LCC last year. I don't think the gondola would work to meet the end user needs. Bus is more convenient and less expensive. No Gondola!!!
36507	Jackie Daytona	I would suggest NO GONDOLA...ESPECIALLY on the backs of tax payers when the resorts NEED TO FIGURE IT OUT...NOT everyone skis, some hike and want to preserve as much as we possibly can bc unfortunately the earth can't make more mountains after developers strip them clean! I imagine they could figure this out at \$100+ ticket for a day pass. DON'T PUT THIS ON OUR BACKS or our beautiful canyons

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36508	Robert Douglass	The EIS implies in several places that single-occupant vehicles will be barred from driving past the toll station in LCC for the preferred alternative. In public statements, for example at the CWC meeting, LCC Project lead Josh Van Jura has said that no single-occupant vehicle will be allowed to access Alta or Snowbird or points in between during tolling times. The EIS failed to assess the impact of no single-occupant vehicles on the residents, visitors, employees, governments, and businesses in the upper Canyon. However, individuals, businesses, and the town of Alta all require supplies and transport services of commercial vehicles that are overwhelmingly driven by a single driver with no passengers. Banning these single-occupant vehicles will have a measurable and important economic impact on businesses and will create inconvenience and possible safety impacts on individuals. For example, food deliveries cannot be made, and for-hire vehicles, such as UBER, cannot pick up individuals. These impacts will hurt restaurants, hotels, law enforcement, and taxi services as well as other services. The EIS fails to consider the important economic, convenience, and safety impacts of the preferred alternative. Without considering them, the EIS is defective and negligent. The EIS requires a supplement at a minimum.
36509	Ally Siegel	I am against the Little Cottonwood Canyon Gondola due to its negative environmental impacts and harm to world class rock climbing areas. The gondola is a solution for people who ski/snowboard at the resorts, but the land in little cottonwood is made for all user groups. A solution for one user group (resort skiers) should not cause a huge loss to another (climbers). While the gondola does address many important pressing issues, there are other solutions that have not been fully explored. These include, traction laws, increased busing, tolls, and increased avalanche control systems. Without having fully worked through other possible solutions, there is no justification to destroy incredibly precious climbing areas.
36510	Landon Bistline	I think it will greatly reduce the carbon footprint in the canyon because of the reduction in traffic.
36511	Randy Coombs	Snowbird skier since the late seventies and can not for the life of understand why it is the taxpayers obligation to buy Snowbird another lift. The traffic is typically only a major issue when the road is snow covered on the weekends. On this sunny October day it is useless and an eyesore. Not the taxpayers obligation to aid a few skiers and resorts involved in a sport few can afford anyway. This is tax money malfeasance.
36512	Deyna Mangone	Please leave the canyon alone. There are other options that would protect the canyon and cost less. Don't ruin the canyon.
36513	Kristen Soelberg	Please do not move forward with the plan to install a gondola. It benefits only the ski resorts and resort goers at the expense of taxpayers, rock climbers, and anyone else who visits the canyon for any reason other than skiing. We are experiencing climate change and drought like never before and we're planning to risk the use and views of our canyon for one season of use? That's not helpful. There are numerous other ways that can solve the ski resorts' problems that will be more efficient and cost less. The Salt Lake County mayor and council don't support this. Neither should UDOT. Choose common sense methods.
36514	Nicolina Baldassari	In hopes that you read this, It's important to understand the how LCC has played a very important role in many lives, as those who recreate within the canyon and have been doing so for many years. Saddened to hear the preferred alternative was the invasive choice of the gondola, it is only right to fight for what you want. The gondola not only disturbs many crucial environments within the canyon, it's invasive to the ecosystem and causes many harmful impacts such as toxifying our water source and putting a cease to the beauty of nature. UDOT has explained in the past that 11 days out of the year the road is considered failing. 11 days out of the entire ski season we need to find some alternative to alleviate the problem with traffic. Is this really enough to build the longest gondola in our little canyon just to help out on 11 days out of the year? Why don't we shift our focus on a transportation solution that many may benefit from, from skiers, to climbers, backpackers, backcountry skiers, snowshoers and more. Enhancing our bus system is the only right answer that we know would make a significant improvement in our canyon as it would be utilized by many recreationists, not just resort skiers. It is crucial to understand how to benefit all, and not just the few. The bus system that is present is useful to many, as it makes several stops within the canyon, adhering to whatever activity you will be conducting in the canyon. If we are able to have more buses, electric ones of course, it would substantially have a much lower carbon footprint than it's counterpart, the gondola. The bus is already used by many, despite what may be perceived as bus routes and times get stripped away from the people to ultimately make the bus seem less appealing. What do we do to transport people nowadays? Within cities, towns, landscapes? Public transportation; buses. Why now do we think that gondola's are the new buses? If anything, a gondola is a tourist attraction just to cram as many people as possible into a box that transport them to an area that now sees increased visitation. What problem are we solving here? The answer is clear. None. UDOTs preferred alternative isnt benefitting the canyon, nor the people, nor the experience. It is cramming more and more people into these canyons, making no change to the amount of vehicles entering the canyon. The problem is not solved. Canyons will be just as congested as they were pre-gondola. The only problem you are creating is the one that overexploits our canyon's resources, overpopulating the ski resorts, resulting in an unhappy and terrible experience for people, and the canyon. The answer is not to overcrowd the resorts, lets actually get cars out of the canyon, and put people on buses. We know for a fact this already works, despite the odd and skeptical decrease in bus routes and time frames. You may be able to brainwash the public and the tourists, but you won't be doing good for the betterment of the people, the canyon, the environment, and the planet. Is the last thing you want to build something thats worth billions of dollars just to fail and now you have created two major problems. Understand that you have the ability to make a positive change and we hope that UDOT makes the only right choice here.
36515	Melinda Mangone	Don't kill the canyon with the gondola!
36516	Jeninne Park	I do not think the gondola is a good idea. This would ruin the beauty of the mountains. It is too much of an environmental impact-not for the better. Please listen to those that use the canyon for other purposes than skiing and how it would affect other sports etc. in the canyon.
36517	Ryan Call	I support the proposed gondola. It would alleviate some traffic and provide a unique tourist opportunity for those visiting the state.
36518	Penny Spangler	I am having a hard time envisioning a gondola that will not require tax payer funding in perpetuity. Will we really be able to charge for parking and fees to ride the gondola that is attractive? Will the ski resorts chip in funds since they will benefit greatly from this tax payer project? Will the gondola have multiple stops throughout the canyon to encourage ridership? If the answers to all of these is "no", then I am a "hard no". No gondola.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36519	Kerry Regan	I do not want the gondola. It has a huge environmental impact to solve a problem that doesn't need solving. It will not hurt the canyon if less people are able to ski each day. More buses and tolls would be fine. I also do not understand why the ski resorts want to waste tax dollars on this but they are silent about problems associated with climate change that could put them out of business.
36520	Ariel Fillmore	I am a Salt Lake native. I love to ski and hike and climb in little cottonwood canyon. The gondola proposed would tarnish the majestic landscape we so value. Please reconsider alternative options!
38360	Jeremy Middlemiss	<p>To the builders of Utah's future,</p> <p>I am a resident of Sandy city. I also own and operate a ski business (The Sport Loft) in Millcreek. I am writing in SUPPORT of Gondola option B.</p> <p>SR 210 if a very common topic of discussion with customers at our business. I have heard many different opinions. Though these opinions vary wildly the common theme of emotion is always attached. The majority of these emotions are linked to the participants chosen outdoor activity, with little vision for the future. With the population growth in Northern Utah and those participating in outdoor activities of all types infrastructure in high use areas is the solution. Without the proper infrastructure the level of frustration and dissatisfaction of the users will only increase.</p> <p>Little Cottonwood is special. I've been skiing there since I was 3. My parents were both instructors at Alta before my birth. I've seen the canyon change. It's stating the obvious that most do not like change and nostalgia runs deep. Those tasked with the future however must embrace change. Change that allows Utah's and those visiting Utah to use SR 210 however they see fit within current laws. That again is why I strongly encourage you, our elected officials to implement Gondola option B, and make it the decision of record for SR 210 (Little Cottonwood Canyon).</p> <p>The Gondola option B will add safety in a way no other option can. With the exception of an underground train that would make the Cog-rail look inexpensive there is no safer option.</p> <p>Please remember that ALL should have access to these state and National Forest lands. For many that access may only be visual as they may not want or be physically able to go there any other way. The unique experience that the Gondola will offer will prove a legacy project. In the 1980's this can was "kicked down the road," for both Big and Little Cottonwood Canyons. It's a major reason we are where we are today. Please don't make the same mistake as your predecessors. The addition of the Gondola with the addition of the avalanche sheds will prove invaluable. For the future of the state please help all those that choose to live life elevated do so in Little Cottonwood Canyon.</p> <p>Sincerely, Jeremy Middlemiss</p>
36521	David Muraco	<p>The price is too high for the tax payer. This needs to be 100% user funded. This only benefits users of two for profit businesses, let them pay the bill.</p> <p>Further, this route is bad. The route should start at Jordanelle Reservoir and take a route that is 50% less distance and can additionally service additional ski resorts.</p>

36522	Scott Barrell	<p>I wholeheartedly disagree with and strongly object to the construction of the Gondola as an attempt to fix the Canyon transportation and traffic related issues. This is a horrible idea that will both negatively impact the natural beauty of the canyon and simultaneously not solve any traffic/congestion issue in the canyon.</p> <p>My main thoughts I would like to express:</p> <p>1) Large towers and gondola lines will be visible throughout the entire canyon and will have a serious negative impact on the natural serenity and beauty of the canyon. Not everyone using the canyon are going to the resorts, and those of us trying to enjoy the canyon for its natural beauty, will be having to look at this development built exclusively for the resort access. The back side of the Wasatch (PC/Deer Valley/Canyons area) have already developed just about every inch and we know what that looks like. What separates the Front Wasatch (BCC/LCC) from PC/Deer Valley/Canyons is that the Front Wasatch has a reasonable amount of development in designated areas. Wilderness and natural resources for public recreation is still the priority for the area. This very exposed and elevated development will taint the experience for everyone trying to use the canyon for something other than the resorts.</p> <p>2) This will not solve any traffic or congestion issues in any substantial way. Many issues arise at the base, or even well before the base. Even with the current traffic and congestion issues, driving is and will still be a preferred mode of transport to the Canyons. People like to drive because they strongly prefer to have their car. I assume the gondola isn't going to be free? I assume it will be fairly expensive. This will not add any convenience and people will not be incentivized to drive.</p> <p>3) I. Do. Not. Want my tax dollars to fund this insanely expensive absurdly hair-brained transportation scheme. How is this supposed to benefit anyone but the resorts? I view this as essentially another chairlift to the resorts, and why the hell should I have to pay for a solution that will only deliver people straight to the resorts? (assuming anyone actually rides it).</p> <p>4) This is permanent and not scalable. I heard that expanding bus lanes would cost just as much as building the gondola. Regardless if this statement is actually true or not, the vastly superior advantage of a bus-based program is that you can instantly scale-up or scale-down a bus program depending on demand. Perhaps buses/bus lanes only need to be active during the winter? There is no way to scale a Gondola based infrastructure. Once the gondola is there, it will be there for good. Sure, you decide to turn it off because people aren't using it, the gondola will still be hanging overhead, casting a shadow over the entire canyon.</p> <p>I strongly urge you to Not. Build. This. Gondola. Something obviously needs to be done to help fix congestion in the Canyons, but this is not the answer. we as a society can come up with a better solution.</p>
36523	Dan Fullmer	NO GONDOLA!!! Cost will explode. Find alternatives
36524	Robert Waldrop	I don't want to see a gondola in the canyon. Wider roads and busses
36525	Seth Dobson	The residents near the mouth of the canyon that I know are largely against the gondola project. That in and of itself should be a great reason against the proposal. I personally do not want to park at the base of the canyon and ride a crowded gondola with my skis and ski gear up the canyon to a ski resort.
36526	Buzz Fontana	Please don't forget the impact of surrounding neighborhoods with either choice.
36527	York Fitzgerald	<p>Yes, yes, yes.</p> <p>Quiet, efficient, novel. All over Europe you'll find gondolas going to the tops of the mountains. They figured it out. Great for the winter, great for the summer. Better than busses, better than cars, better than motorcycles.</p>
36528	Connie Morgan	I have no desire for my tax dollars or funds for UT to be used to fund transportation for skiers. That will only benefit a small portion of the total population as many are from out of state. It is not the residents of UT that need to fund anything related to the ski resort making profit. Also I do not live near it and do not want to use my tax dollars for such waste. Get a clue Utah, we are already paying more than we should in taxes. Let's fund something more responsible.
36529	Robert Douglass	The Final EIS is in error in its assessment of the environmental impacts on the watershed, wildlife, and vegetation caused by access roads to construct the gondola towers. The EIS assumes that several of the towers will be constructed using helicopters instead of building roads that access the towers from SR-210. It is unlikely that helicopters could feasibly support the excavation of the large footings required for towers that are up to 232 feet tall or deliver the large quantities of concrete necessary to install towers. Access for the necessary heavy equipment, large crews, and massive amounts of material could only be supplied by the largest helicopters at an exorbitant cost. Besides construction, access roads would be needed for maintenance and repair and emergency evacuation of cabins. The EIS did not calculate the additional square footage that will be required and the associated visual, noise, watershed, and other environmental impacts resulting.
36530	Kristen Kessler	Please protect the wild, the animals. Preserve the lands.
36531	Jack Parks	I am vehemently opposed to the gondola project. It is a boondoggle and an epic waste and misuse of taxpayer dollars. Billions of dollars of public capital will be squandered in order to improve the profits of two private entities (ski resorts). It will take years to construct, cause untold damage to LCC, and be an at best poor solution to the problem at hand. In conclusion, I insist that alternative solutions be created and implemented.
36532	Sandra Hiskey	I am against the gondola proposal, as I think that is the most expensive option, plus I think it will severely impact the environment. I think they will be an eyesore and will not serve the public good. It's so expensive, and I (as a taxpayer) am totally against investing so much tax money into this proposal. There must be other options that would be more feasible and affordable.
36533	Patricia Brown	The gondola will interfere with the beautiful canyon and the tax papers should not fund something only skiers will use. The money can be better spent on needs of everyday citizens of Utah.
36534	Whitney Bath	I vote no for the gondola.
36535	Paul Barber	We need to get going on the gondola. It is clearly the best choice
36536	George Burkhard	Traffic is bad in the canyon, but the answer is mandatory bussing! A bus carrying 100 people going 45mph will take a lot more cars off the road than a gondola with 50 people going much slower. Solutions shouldn't support the ski resorts at the expense of other users.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36537	Ryan Harris	I do believe this gondola is a improper use of tax dollars and will only benefit a small margin of the population. The second issue I have With this is how invasive this process will be for other recreation such as boulders, hiking trails, etc. the benefit of this gondola doesn't out weigh the consequences of this project
36538	Lynn Sorensen	The EIS fails to take into account too many factors and elides others. As far as I can see, it is just an overly expensive vanity project. There are far more reasonable and better solutions than the gondola.
36539	Alisa Quist	BUILD THE GONDOLA!! It is a progressive, low impact project that would benefit the canyon and all visitors, all year. Road construction is unsustainable.
36540	Hannah Kertesz	Please please PLEASE do not ruin this canyon with a gondola. What we need is more accessible buses and bigger parking lots and less people.
36541	Christena Gates	I have been traveling to Alta for over 57 yrs both in winter & summer seasons and have always found a parking spot especially during the week. Last year when Alta instigated reserved parking, I always had a reservation. That satisfied the parking spaces for many people and comments were very positive on the new system. During the week there was never a problem. I am very OPPOSED to the gondola. It is an open ended expense as costs will rise in the future from the projected costs. It will ruin the landscape and ecology of the canyon. Before our Olympics, decisions were made by ecologists that Little Cottonwood Cyn was too fragile to support the venues. Costs for riding the gondola, costs for parking at the base, costs for riding the bus to the gondola have only been estimates. The costs for the gondola will greatly limit the users of the ski resorts whose lift tickets are now over \$100. for the day. The gondola does not need to be used in the summer as crowds are very manageable. Because of the severe drought, Utah is experiencing and because the Great Salt Lake is at a record low, moisture that feeds our mountain snowfall has been greatly reduced and will effect the snowfall in years to come. Over the past few years snowfall has consistently been on the decline. Money now is be3tter spent taking care of the GSL to assure our snow fall in the future as well as our air quality from the dust. I am hoping using electric buses will be greatly considered and not impacting the ecology of this unique canyon. We do not need another large amount of money that was spent on the GSL water pumps that sit idle now as the gondolas would do especially if snowfall is greatly reduced for our mountains. As the Catholic Diocese said - "The moral decision is lets put that kind of money into things that are going to benefit the least among us"
36542	Marie Midboe	I'd meant to write a well-planned comment. Time is short so I'll purge the main ideas. I'm a NO for the gondola. So many reasons. I believe it will also cause more problems than it solves. It will only serve Alta and Snowbird. So many other activities happen in the canyon and the rest of that crowd will have to stare at the ugly oversized towers they will not be using. If the ski areas want the gondola so bad, let them pay for it. And let them pay restitution to the rest of us for spoiling our view. Parking at the base to take the gondola will turn that area into a crazy rat race to get to that lot and others. That neighborhood will be ruined. So many people, both skiers and non-skiers, will want to ride the gondola just for the novelty of it. It will bring MORE MOBS of people, not less, to the canyons further creating more crowding. This will open the canyon to MORE development. When is enough enough? You're opening a can of worms here. Utah has done great damage to it's beautiful lands by over selling and glorifying the incredible beauty here (thank you, and NO thank you again Olympics and city planners). Salt Lake City Council's goal is to increase the population of SLC - presumably to increase tax base. Then they whine there is not enough housing (and our roads are still full of holes). Then they want to bend and break every zoning and building code to fit those coming in. Our national parks were over promoted. Now you need a reservation to get in. I see the same thing happening here with the canyons. You've over-promoted and over-sold a VERY limited resource, the Cottonwood Canyons. Do you think it will stop ant LCC? So many people. So LITTLE water. We don't have the water to support the population we have and those in power just want more people (read: more money, more, more, more for them - at everyone's else's expense). No thank you. Stop. Think again. Figure out something ELSE. The gondola is NOT the answer. I agree with increased bus service and carpooling. Make a ride share site for those who might otherwise drive up alone. Encourage bus ridership. I loved that my Snowbird pass came with a bus pass. I was more than happy to let them drive and find a lot that didn't even have to be right on the doorstep of the canyon. Very convenient. The comment deadline is today. I've more thoughts. Please DO NOT BUILD THE GONDOLA. It is ill conceived and reckless.
36543	Joel Smith	As a east sandy resident I am interested in what is best for the area. I do not consider this a viable solution or option. I do not want to have an increase in taxes to pay for this. Please open this up for a binding vote.
36544	Casey Ferguson	I am a resident of Cottonwood Heights and think the decision to support the gondola as a "solution" is negligent. This decision is based on money and tourism and is not a long-term solution. A better solution would be a bus system similar to that in Zion NP. Not only would a bus system allow for less traffic in the canyon but also help with air quality issues. Less cars in the canyon=better air quality. I know myself and many others in Salt Lake would gladly park and ride the bus to resorts, trailheads, etc. The costs associated with the gondola should be used for other projects in the valley such as the poor air quality and decreasing water levels. I urge you to reconsider this "solution". Listen to the residents of Salt Lake.
36545	Nathan Siegal	Before spending millions of taxpayer dollars to promote a private interest, Utah owes it to its citizens to implement the phased options such as busses and tolling, and assess their effectiveness in reducing traffic. The estimates for the cost of the gondola are already dramatically out of touch after covid and significant inflation - it would not be surprising to see that the cost doubled in two to three years. Please do not ruin this incredible corner of our world with a solution that only a powerful few think is valid, and a majority of actual users detest.

36546	Christina Arvidson	<p>to whom it may concern.</p> <p>I respectfully request that you step back from the decision you put forth and continue efforts in researching the solution for Little Cottonwood Canyon to find a more inclusive answer with less impact than building multiple permanent structures across our beautiful canyon.</p> <p>This decision doesn't solve for the entire problem. One comment I heard in response to issues with only having two stops was that the bus system also currently only stops at the resorts. That's the point - we are trying to change that. Having only two stops is part of the traffic problem that needs consideration and it is shortsighted to not address it. We cannot solve the traffic issue without adding a resolution for the trailheads that so many enthusiasts use.</p> <p>The current plan reduces the number of parking spaces at these lots. Meanwhile, the number of backcountry users increases yearly. This trend will continue as resorts become increasingly unaffordable for many.</p> <p>In addition, roadside parking will be eliminated in these areas- which I don't disagree with, because vehicles are often poorly parked and block the road. Unfortunately, I do not see any proposed resolutions for the displaced vehicles so that the growing backcountry community can experience the beauty that brought them to live in this incredible state. I strongly urge that you consider bus routes which include stops at these trailheads with hubs or stations where we can store shoes, etc while out in the wilderness.</p> <p>I want to also address a few other items that concern me about this project.</p> <p>The videos were highly unclear about the distance from parking lots to the gondola loading station. One said that the issue was resolved but the parking seems to be approximately .75mi from the loading dock. This will add a huge barrier for those who will struggle to get there, including for those with small children or with less mobility. Having buses shuttle people is a bit of a slap in the face since those buses could just continue right up the canyon. Where will others park when the premium lot is full?</p> <p>The conflict of interest in this project is completely unavoidable. Having members from Snowbird and Alta directly involved in the decision of what happens in our beloved canyon - and having that outcome be something that directly benefits themselves - should not be allowed. Anyone involved in either mountain should step aside from this decision because whether or not they are willing to admit this, their affiliation with the resorts is preventing them from making an objective decision. You can call this shrewd business, but you're ruining our landscape for a buck. Look to Yves Chapard as an</p>

36548	Thomas King	<p>Solving the canyons transport problem should be pursued in this order:</p> <ol style="list-style-type: none"> 1. EZ-Pass toll gates at the mouth of each canyon. \$20 toll to enter the canyons with a private automobile. Time-of-day toll pricing could be used. Vehicles belonging to canyon residents and commercial vehicles servicing the ski resorts exempted. 2. Only UTA buses allowed on canyon roads except for commercial vehicles servicing ski resorts and vehicles owned by canyon residents. 3. Cog railway. This is the world class solution. Just copy what the Swiss have done between Tasch and Zermatt. Then ban all motor vehicle traffic except for canyon residents and certain commercial vehicles. 4. No gondola. Very few people will use it. High winds will shut it down too often. It's too slow. Go ride the gondola from the parking lot to the main center at the old Canyons ski resort to get an idea of how slow this mode of transport is.
36549	August Bigelow	<p>A gondola in of itself is not a terrible idea. But the amount of money that would be dedicated to this small subset of the population is ridiculous! Where is UDOT when it comes to funding transit options that benefit the common person? There are so many projects that deserve the funding instead of this: FrontRunner double tracking and electrification, light rail in Utah County, long distance rail to St. George.</p> <p>ALL of these are far more important than the gondola and I will absolutely not support this until the common person in this state is attended to. This is a project for the well-off. And the people in this state need freedom of transportation and clean air way before the wealthy need a gondola.</p> <p>Stop building so many wasteful roads, proposing a wasteful gondola, and realize that T in UDOT needs to provide for all of us.</p>
36550	Claire Russon	<p>Do not build the gondola which prioritizes ski and snowboarders to the detriment of other canyon recreation and the fragile mountain ecosystem. Protect historic and invaluable Little Cottonwood Canyon climbing.</p>
36551	Kathy Warnick	<p>Find a better solution than the gondola \$550 million is too much from tax payers, for those who ski. Target funds from those who directly benefit.</p>
36552	Dustin Lyons	<p>Please do not approve a gondola. It will be more destructive than productive. There have to be other alternatives that will maintain the integrity of the canyon.</p>
36553	Torrey Udall	<p>I'm an SLC resident, business leader, and avid outdoor enthusiast. We need to address a sustainable solution for our ski industry but a gondola is NOT an effective (across cost, environmental impact, and efficiency of moving people) way to address the problem.</p>
36554	August Bigelow	<p>A gondola in of itself is not a terrible idea. But the amount of money that would be dedicated to this small subset of the population is ridiculous! Where is UDOT when it comes to funding transit options that benefit the common person? There are so many projects that deserve the funding instead of this: FrontRunner double tracking and electrification, light rail in Utah County, long distance rail to St. George.</p> <p>ALL of these are far more important than the gondola and I will absolutely not support this until the common person in this state is attended to. This is a project for the well-off. And the people in this state need freedom of transportation and clean air way before the wealthy need a gondola.</p> <p>Stop building so many wasteful roads, proposing a wasteful gondola, and realize that T in UDOT needs to provide for all of us.</p>
36555	Sarah Alicandro	<p>This is a terrible idea and no one likes it. No gondola! We need something that aids all people going to enjoy the canyons, not just skiers. And something that will be good year round. Invest in public transportation!!</p>
36556	Michael Stewart	<p>I would like to comment about the impact of the proposed gondola. I like the idea and it would be a nice tourist attraction, however it SHOULD NOT be funded by the taxpayers. The installation of this project is a direct benefit to the ski resorts and their bottom line. This should be a private industry investment and have no connection to public funds. UDOT currently maintains sufficient roads for canyon travel and needs. If the resorts feel that additional development is necessary to improve their business transactions, then let the resorts fund the project. There are much better places for funds to go before placing it into a canyon that is used by some and not by most. This project should not be a public endeavor as the existing infrastructure serves the current purpose satisfactorily. Please DO NOT use the taxpayers funds to develop something for the few that will not support the mass.</p>
36557	Sidney Lanham	<p>Why build this if the citizens don't want it and it won't solve the problem?</p>
36558	Jared Lisonbee	<p>I am concerned that the proposed gondola really only supports the two ski resorts at the top of the canyon. Those of us who use the canyon for hiking and climbing (flyover activities, apparently) will not really benefit from the gondola but will be required to pay for it through taxes. Please keep looking for a more equitable solution that will ease canyon congestion while serving all canyon users and not just the resorts (which many of us cannot afford to use anyway).</p>
36559	Rodger Rowe	<p>we should i pay tax for the sky gondola. i don't sky. i do not ride the UTA bus but pay the tax for it, my kids are out of school, and I pay tax for other kids that cannot even read, or have math skills, all the teachers I know take vacation during school time get paid for the whole year work less than 180 days. I pay road tax, but the roads are terrible, this year have over 50000 id road repair on my truck, perfect driving record</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36560	Robert Douglass	<p>The final EIS failed to provide a model and flow analysis to support the preferred Alternative's transit times. Drawings of the parking structure show small stairways with one small elevator. The EIS says it will take gondola passengers 12 minutes to park and board the gondola. This timing is not supported by any data or analysis and appears to be selected to match the time to park and board a bus. But with the gondola B Alternative, skiers at peak times must park their vehicles within 8 seconds, retrieve their equipment from their vehicle, transport themselves and equipment to the stairs or single elevator, wait for an elevator that is not full to arrive or instead scale the stairs, and wait in line for to purchase a gondola ticket, and then wait again in line to board the gondola. At peak times, there is no reason, data, or analysis provided in the EIS that says this is possible to do in 12 minutes at peak times. Given that the parking structure according to its floor plan will be 8 to 10 stories high, and over 1,000 people per hour will be flowing through it, it is likely that many skiers will have to wait for multiple elevator cycles to even reach the gondola level to exit the parking structure. Their alternative would be to climb up as many as 16 flights of stairs in ski boots carrying skies and other equipment. The EIS estimate of 12 minutes to accomplish these tasks at peak times seems hopelessly unrealistic and is clearly in error. Either the EIS requires a supplement to justify this estimated time using a traffic flow model or else the EIS needs to be modified to show a more realistic vehicle to ski resort transit time. Failure to perform even a simplified traffic flow analysis or present the methodology is a negligent omission on the part of the EIS leading to errors in the estimates of transit times for the preferred alternative. These errors and omissions render the EIS environmental assessment in error and invalid.</p>
36561	Jim Carpenter	<p>No Gondola! Basically, Powder Corp. Snowbird "The Cumming boys", John & David want taxpayer money to build an aerial driveway straight to the Snowbird resort. I need a new driveway how about some free money here? As a dead-end canyon Little Cottonwood can only support so many people, crushing people, standing room only into a box on a cable seems unreasonable.</p> <p>I recently camped at Tanners Flat, while enjoying the peace of a mountain stream I couldn't help but think how awful it would be to have a cable box car floating overhead.</p> <p>Maintenance of a gondola is also a big undertaking, Snowbird dropped one of their own tram cars off the cable this spring. How many lives are in peril with Snowbirds excellent crew?</p> <p>Politicians and developers have already purchased land and planned an alpine development at or near mouth of canyon. Money, Power and Greed will kill the canyon.</p> <p>Limit cars, toll the canyon and enjoy the resorts as they are.</p>
36562	Adam Howard	<p>I do not want a Gondola. Too expensive and not helpful enough. I dont like that it would impact other mountain sports including climbing and hiking. Thanks</p>
36563	Emily Jackson Earnes	<p>Absolutely NOT</p>
36564	Lee Moss	<p>To begin, I am against the proposed placement of a gondola in Little Cottonwood Canyon (LCC). I agree with the comments previously submitted by the Wasatch Backcountry Alliance, Save Our Canyons and others so I will not repeat these but in addition to these I would like to add one. I've been a ski patroller, both professional and volunteer over the past 48 years. I have had to evacuate a number of aerial lifts in my day, most commonly in their first year of service. In addition to safely getting the riders from the lift to the ground, we have to make sure they can safely get to the base of the mountain. Riders of the LCC gondola will be skiers, snowboarders and even people who are just accessing the resorts for a meal, other events or just to watch their families on the mountain. Rescuers will likely place people of all or no mountain travel abilities into the wilderness including avalanche paths, cliffs, and other hazards. Who will be esponsible for rescuing evacuees, Alta and Snowbird ski patrols, Salt Lake County Search and Rescue, others? I believe The LCC gondola is a fools errand. I believe many of UTA's proposed interim options including carpooling, parking reservations, additional buses (preferably electric), tolling, etc. may solve the problem without the huge expense and permanent canyon damage a gondola will create. Big Cottonwood Canyon (BCC) has similar weekend traffic problems. Are we going to consider a gondola for the BCC also? Please don't destroy the reasons many of us access the canyons. Again, I oppose the construction of a gondola in LCC. Thank you for your consideration.</p>
36565	Anne Thomsen	<p>The building of a gondola seems to be a thing for wealthy people to get to their playground. It is not something that Utah taxpayers should pay anything for. I recently had the opportunity to take short hike in Little Cottonwood Canyon. I reached a viewpoint where I could see down the canyon and into the Salt Lake Valley. I realized that the view would have been destroyed if there were several gondola towers obstructing what should be a beautiful view of nature. I am against the gondola, and I am against having the tax payers pay for it. We have far more important issues to focus on over and above how a few more skiers will get into the mountains when it snows.</p>
36566	Chris Collier	<p>Thank you for allowing me to comment publicly on such an important matter. I can understand the frustration of hordes of cars on the side of the roads and the parking lot mayhem in both the Cottonwood Canyons. Over the years, I have been a season pass holder 7 times at Snowbird, 5 at Brighton, 2 at Solitude, a Big Cottonwood Season Pass, a Mountain Collective pass and a Canyons Season Pass. I dearly love these canyons. I love the beauty. I love the sense of adventure. The thrill of being alive. I too have been stuck in the red snake and been turned around by police. I get it. While the hope is to remove some of the cars off the road from what I can tell is that this will create induced demand resulting in more people at the base of the chair lifts (ideal for the resorts). I hope any solution would take cars off the road but I feel that is unrealistic. Tragically I don't see a gondola as fixing the problem and worry about the aesthetics. I love trains and think electric, cog railway would be preferable but not sold on that either. I wasn't a fan of the SkiLink proposal several years ago. I hope to change my mind in the future, seeing better proposals or actions. Perhaps, now, the only solution is the worst option - do nothing and save the money for capital expenses and damages caused by our collective utilization of the greatest recreational resource in the country.</p>
36567	Benjamin Lindsay	<p>Please don't build this gondola. This will only benefit the wealthy while also destroying even more of Utah's beauty. The only people who really want this are investors, but Utahans, including myself, do not want this.</p>

ID	Full Name	Comment
36568	Carol Hayes	<p>I am a user of little cottonwood canyon year round. I enjoy hiking and skiing, and love this canyon which offers so much in the way of wilderness and solitude.</p> <p>I believe that the gondola "solution" would simply destroy our canyon. The environmental impact alone would be catastrophic, and last forever. It would never be the same place. The experience that one person can have in this canyon is more valuable than this far-fetched and over-reaching "solution" to our vehicle problem!</p> <p>There are more reasonable and conservative solutions that would fix traffic, decrease environmental impact, minimize cost to taxpayers, and ease vehicle use. I believe that most of these problems can be solved by a creative use of buses, transportation hubs, additional "free shuttles" which are already in use, and lots more thoughtfully created places for people to park their cars in the valley.</p> <p>Alta has been successful at implementing a parking reservation system that has helped--Snowbird should be pressured to create solutions for this avalanche of vehicles in the canyon.</p> <p>In conclusion, the gondola is an ineffective traffic solution, has massive negative environmental impact, and is costly to taxpayers. In addition it would be horribly ugly in a pristine natural canyon. We can't afford to make such a huge mistake. Thanks you for taking time to read my comments.</p>
36569	Sage Acord	<p>I oppose the construction of the expensive, invasive, and ineffective (at decreasing traffic) gondola. I support the cheaper, phased approach that instead involves electric buses.</p>
36570	Tracy Griffall	<p>WE (the taxpayers, our elected leaders, and UDOT) are admittedly faced with a challenging issue to try to design safe, reasonable, and functional methods to reduce traffic and congestion to, and within, Little Cottonwood Canyon. That said, I am absolutely, unequivocally opposed to both UDOT's Gondola B plan as well as the widening of Wasatch Blvd.</p> <p>As a born-and-raised Salt Lake resident of 60 years, I have watched the Salt Lake and surrounding areas go through many growth spurts and consequent growing pains. These growing pains required widening of many roadways; installation of new interstates and highways; development of/ disappearance of farmlands and open spaces; etc. The one thing that has always been a constant priority through it all has been the preservation of our beautiful canyons and watershed areas. I am heartbroken that UDOT continues to pursue the gondola which they state "has the highest visual impacts" but can't claim it has the lowest impact to watershed and other areas.</p> <p>As a healthcare professional, we are taught that you should always consider the WHOLE patient before starting treatment and then start with the least invasive option. Little Cottonwood Canyon, Wasatch Blvd, the residential areas near the canyon(s), citizens of Salt Lake who utilize the canyon, and tourism, ALL need to be considered when designing a solution. Many alternate recommendations have been made and seem to fall on UDOT's deaf ears.</p> <p>There are SO MANY less invasive options that could and should be implemented, in a staged manner, before EVER considering the gondola. Some options could include in part or in whole:</p> <p>BUSES AND PARK-N-RIDE SITES:</p> <ul style="list-style-type: none"> -A fleet of electric buses with designated routes: <ul style="list-style-type: none"> > to ski areas during the winter > in the summer and fall, have stops at major trailheads, rock-climb sites, and resorts > in the fall, have designated sight-seeing buses for fall color observation. -Increase park-and-ride sites. Existing park-and-ride sites are inadequate as I can attest from personal experience. Additional sites away from the canyon-mouths could be strategically placed. <p>WASATCH BLVD:</p> <ul style="list-style-type: none"> Traffic bottlenecks at Ft. Union Blvd. and Wasatch Blvd. during peak ski season. -We must reduce the desirability of driving your own vehicle, often by one person, up the canyon to park. <ul style="list-style-type: none"> > Place toll booths at the mouth of the canyon. > Add a bypass lane for buses and HOV (high occupancy vehicles) so only single-passenger vehicles are tolled. <p>RESORTS TAKE RESPONSIBILITY: Resorts should carry some burden of solution since they benefit most.</p> <ul style="list-style-type: none"> -Resorts have a finite number of parking spaces. <ul style="list-style-type: none"> > Especially in ski season, require resorts to manage their own parking by utilizing an online reservation system for daily/weekly/monthly parking permits. > Resort parking lots should have their own parking staff. Implement the following individually or combined.
36571	Alexandra Gero	<p>I am a resident of and tax payer in the state of Utah, and I do not support building a gondola as the preferred solution to combat traffic in Little Cottonwood Canyon.</p> <p>A gondola will only serve people visiting the two ski resorts in the canyon, and will not address traffic or parking concerns anywhere else in the canyon - anyone who has ever visited White Pine trailhead on a weekend day in summer or winter knows that parking for this area is severely limited for the number of visitors it sees.</p> <p>The gondola also will only run in the winter. A preferable solution to this problem should be one that offers transportation alternatives to single occupancy vehicles all year long, not just during the winter months.</p> <p>The \$550 million dollar price tag is just the baseline estimate for this project, and is sure to be an underestimate of the actual cost. Not only will the project result ultimately in a terrible eyesore, its construction will drastically disrupt the natural habitat for the wildlife that live in the canyon. At a time when the Great Salt Lake is at the verge of collapse, it seems that more of the state's resources should be dedicated to ensuring the health, safety and wellbeing of Utah residents (including the native animals and plants).</p> <p>On the subject of climate change, ample research suggests that a warming climate will not see as much, or perhaps any, snow in as few as fifty years. A gondola now (that serves two ski resorts, only in winter months) is incredibly short-sighted by ignoring this long-term reality.</p> <p>I support a toll for every single-occupancy car that enters the canyon. I support paid parking at both ski resorts, in addition to the cost of a lift ticket. And I support expanded bus service. Until those changes are implemented and prove to be insufficient, it does not wise nor fair to move forward with the most expensive, most destructive, and least sustainable option for reducing traffic in the canyon.</p>

ID	Full Name	Comment
36572	Edward Patron	I believe the gondola would only be a small bandage to a much bigger problem of getting people up and down the canyon. The problem can't be solved with pricing people out of driving up there. The only way to win over the public is to create a solution for travel that is a competitive and more convenient option than driving so that people would rather not drive. I believe this starts with a robust bussing system that takes people up from lots further from the canyon so that there isn't a central point of congestion of traffic, because even with a gondola being put in, without there being a good method of getting to the gondola the problem of traffic still isn't solved.
36573	Jim Stanley	With the existing drought and long range climate forecasts predicting much less winter snow I believe a gondola system a very poor idea. A wasteful, pointless idea that would have a negative impact on this beautiful canyon.
36574	Amy Austin	The Gondola is a great solution to relieve the congestion on Wasatch Boulevard and the Canyon Roads. This aerial solution would be the ultimate way to remove vehicles from the roads and can be done in a beautiful aesthetic manner to be complimentary to the Canyons. Other cities have done this in a beautiful way. The objection to the Gondola is stunningly short-sided for a minority of people who believe their property would be negatively impacted. Our family has skied for years and there is no longer joy in trying to get up to the resorts. This is the first year we are contemplating not getting a family pass.
36575	Ingrid Norton	The gondola is a really bad idea and politically motivated by a few people who will make a lot of money while the canyon, wildlife and everyone else suffers the consequences and pays dearly.
36576	Jacob thaler	don't put a [REDACTED] gondola in the canyon
36577	Nick Sorenson	As a longtime resident of the area and a weekly user of the canyon (LCC), I am strongly opposed to the gondola. This plan forces tax payers to pay for something that benefits a select few who own the resort. Why don't we stop lining the pockets of resort owners and listen to the people. I have used the bus for many years and it is a great system that could be expanded to accommodate all of the traffic that the canyon can handle. This also allows for stops at other key points in the canyon. NO GONDOLA!
36578	Craig Brown	I'd like to see the sub alternatives of enhanced bus usage leveraged more thoroughly with no plan of a gondola in the future at this point. While, bus departures every 5 minutes has been proposed, that capacity could likely be doubled by using 2.5 minute departures, or even more by using more frequent departures with slight modifications to parking and boarding logistic plans. I'm strongly opposed to the building of the gondola as described in option B due to cost of expenditures, environmental impacts from construction, and loss of the ability to flexibly control transit routes. As mass transportation continually uses less polluting fuels (like electric), the impacts of increasing bus use has all the advantages of the gondola and enhances flexibility of travel methods at a fraction of the cost for construction and to the environments within the canyon. The money saved by not building the gondola can be used to address the similar concerns in Big Cottonwood Canyon, which will also be necessary in a very short time. Thanks for your consideration.
36579	Stan Kelley	Please don't charge toll fees for driving up Little Cottonwood Cyn.
36580	Courtney Cavalieri	The increase in traffic through the canyon seems to be directly related to the ski resorts opening their ticketing to multi-resort passes, increasing the amount of non-Utah residents in our canyons. It doesn't seem justifiable then to put the cost of this new transportation system solely on the tax payers of the surrounding communities. The resorts should be held financially accountable for creating this problem.
36581	Karen DuBroff	<p>I'm writing to oppose the "preferred" alternative. The gondola is a costly, absurd, tourist attraction that will be paid for - but not regularly used by - local users of Little Cottonwood Canyon. It is clear that the gondola will only serve the two resorts at the top of the canyon, and there are many other, year-round activities that people use the canyon for that the gondola simply will not serve including hiking, biking, climbing, camping, and backcountry skiing.</p> <p>As Mayor Jenny Wilson argues, we still haven't exhausted all other - less expensive, less intrusive - options to clear traffic congestion in the canyon. We haven't tried expanded bus service, we haven't tried tolls, and Snowbird hasn't tried parking reservations (something that absolutely helped with Alta congestion evidenced by the vanishing traffic past Snowbird last year). Expanding busses in addition to these efforts would make a huge difference. Use the infrastructure that is already in place!</p> <p>How will the gondola fare with avalanche mitigation? How will it fare in high winds? Do we know?</p> <p>It is proven that busses are faster than the gondola - what about busses leaving regularly from all over the valley that make stops at other places of interest (like White Pine trailhead) on the way up to the resorts?</p> <p>It honestly seems like an expensive and harried decision that should be the last resort.</p>
36582	Paul Hansen	<p>I do NOT support the gondola alternative, and would rather urge acceptance of the enhanced bus service with road widening for the following reasons:</p> <ol style="list-style-type: none"> 1. It has the lowest average per person travel time; and, 2. Has a lower initial capital cost than the gondola; and, 3. Has less visual impact. <p>The bus and expanded widening should be the preferred alternative.</p>
36583	Tim Stewart	I am opposed to installing a gondola in little cottonwood canyon. The proposed gondola lacks the capacity to carry enough people up and down in a timely manner. There will be really long wait time at the beginning and end of each powder day. People will stop using it after experiencing these delays. Additional, the proposed cost at half a billion dollars is too much, especially in light of the fact that these types of projects always go over budget. It will destroy the beautiful scenery in little cottonwood canyon. It seems to only really benefit snowbird and alta, as such shouldn't they be picking up most of the cost to construct it.
36584	Shane Duncan	Sorry, but I cannot agree with wasting what we all know will cost a billion +\$ to benefit 2 privately owned companies. Our taxes already pay for UTA so build some parking lots and line up busses that we already fund. If traffic is slowing people down from doing a recreational activity, not everyone else's problem.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36585	Mike Rylant	This will wreck the canyon. It only suits the ones who stand to benefit from it. If you build this obscenity, you truly do NOT care about the environment or the beauty of Utah.
36586	Bridget Shears	NO GONDOLA!! I am appalled by UDOT, developers and ski resort corporation's efforts to spend hard earned taxpayer income to supplement their already money-lined pockets to place this monstrosity in LCC. I am appalled because I, as a resident of the area which will be affected the most, will only become more congested and commercialized to support something that is not needed. Using electric buses and limiting automobile access are the most reasonable and cost appropriate solutions to this problem. The ski resorts won't suffer any financial loss and it won't cost the taxpayers as much. Having to watch what the development will do to the beauty and environment of the canyon is a great concern. I am also concerned about the impact a gondola will have on users during the most weather affected times of the year and there is the fact that it will be rarely used for nearly 6 months of the year. Once the gondola is built who will provide maintenance (because it will be needed once that canyon wind works on it) and what will be the ongoing cost to, once again, the taxpayers. Any benefits of the gondola, which I cannot think of, are certainly outweighed by the risks, specifically the financial and environmental costs. Please don't do this!
36587	Gloria Williams	I read a comment earlier that mentioned About how it will be paid for. Our taxes of course! And only having the wealthy to the wealthiest being able to afford to use it! Unless you have at least 20-30 super high end galas, auctions, donations, etc to raise all the money. Then I vote a big NO! After all have you seen all the homeless families , and people who need mental help that I am seeing living under bridges that could use those tax dollars for much needed housing or better mental institutions? The idea is a good one but not a great one so plz "No!" Thank you , Gloria
36588	Jeremy Storvick	No gondola!!!!
36589	Janice Kerby	I like this plan and I think it could help pay for itself as a year round attraction. I don't ski - but I'd use it.
36590	delin wareham	I oppose the gondola. 1. Too expensive to build, 2. Too expensive to ride, 3. Only services ski resorts. Please go back to the drawing board. This plan does not benefit the general public.
36591	Steph Shotorbani	The short-term solution of busses and tolling is the more sustainable, easier, and less damaging solution to this issue. Please look at the canyon as more than just a skier's destination, but land that provides to Utahns in many ways. Taxpayers do not need to spend on a gondola when another, better solution is an option.
36592	Chris Collier	Thank you for allowing me to comment publicly on such an important matter. I can understand the frustration of hordes of cars on the side of the roads and the parking lot mayhem in both the Cottonwood Canyons. Over the years, I have been a season pass holder 7 times at Snowbird, 5 at Brighton, 2 at Solitude, a Big Cottonwood Season Pass, a Mountain Collective pass and a Canyons Season Pass. I dearly love these canyons. I love the beauty. I love the sense of adventure. The thrill of being alive. I too have been stuck in the red snake and been turned around by police. I get it. While the hope is to remove some of the cars off the road from what I can tell is that this will create induced demand resulting in more people at the base of the chair lifts (ideal for the resorts). I hope any solution would take cars off the road but I feel that is unrealistic. Tragically I don't see a gondola as fixing the problem and worry about the aesthetics. I love trains and think electric, cog railway would be preferable but not sold on that either. I wasn't a fan of the SkiLink proposal several years ago. I hope my mind will change and better solutions are presented, analysis paralysis is real, something needs to happen and I don't know what that is. Perhaps the only solution is the worst option - do nothing and save the money for capital expenses and damages caused by our collective utilization of the greatest recreational resource in the country.
36593	Ian Boys	I do not believe that the gondola is in the best interest of Utah's future. From what I have read, it does not solve the problems it sets out to address. It cannot accommodate the current volumes in LCC on peak days, it will still lead to traffic issues in the area around the canyon, and, most frustratingly, it will involve damaging some of the terrain that people visit the canyon to enjoy. I firmly believe that a comprehensive approach that leans on expanded public transit options in the form of a ski bus and limits/fees on single or even low-occupant vehicles would be a more future-proof solution that would help preserve the canyon that we all hold dear.
36594	Robert Douglass	The final EIS states that it will evaluate electric buses in the future as an option for reducing CO2 and other harmful particulate emissions, reducing the environmental impact of the bus Alternatives. However, the environmental impact can't be truly assessed without considering low-emission options for buses. This oversight represents a serious omission leading to errors in assessing the environmental impact of the bus alternatives. Additionally, the cost for the bus alternatives does not consider savings from electric buses and is therefore in error. A study by the U.S. Department of Transportation in 2020 shows that electric buses are cheaper in terms of life cycle costs in many instances than the diesel buses assumed in the EIS. Electric buses are cheaper still since the cost of diesel has risen sharply since the study. The final EIS fails to consider and analyze this important environmental impact reduction. It says they will be considered in the future, but buses will not be used in the future in the Preferred Gondola Option B Alternative, so they are likely to never be considered. This is a serious omission and error in the EIS. A complete, accurate, and fair EIS must consider electric buses when comparing alternatives to the gondola alternative. A supplement is required to address this failure at a minimum.
36595	Chris Collier	Thank you for allowing me to comment publicly on such an important matter. I can understand the frustration of hordes of cars on the side of the roads and the parking lot mayhem in both the Cottonwood Canyons. Over the years, I have been a season pass holder 7 times at Snowbird, 5 at Brighton, 2 at Solitude, a Big Cottonwood Season Pass, a Mountain Collective pass and a Canyons Season Pass. I dearly love these canyons. I love the beauty. I love the sense of adventure. The thrill of being alive. I too have been stuck in the red snake and been turned around by police. I get it. While the hope is to remove some of the cars off the road from what I can tell is that this will create induced demand resulting in more people at the base of the chair lifts (ideal for the resorts). I hope any solution would take cars off the road but I feel that is unrealistic. Tragically I don't see a gondola as fixing the problem and worry about the aesthetics. Perhaps the only solution is the worst option - do nothing and save the money for capital expenses and damages caused by our collective utilization of the greatest recreational resource in the country.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36596	Jay Hansen	<p>Hello, my name is JP Hansen and I have been a Cottonwood Heights resident for (12) years. I am writing today in opposition to the gondola alternative. First, the environmental and financial impacts of the gondola are far too large. The gondola stands to destroy the aesthetic property of LCC, as well as parts of the Temple Quarry trail and rock climbing routes throughout the canyon. This is a solution that stands to benefit private ski resorts (Alta and Snowbird) due to increased access for their customers. However, the public at large sees the canyon as far more than a business prospect and certainly should not be fronting the bill. The best solution for LCC is an increased bus system with a weekend/holiday morning toll. The busses need to be frequent enough during peak hours (every 15-20 min) and free of charge in order to be most effective. The buses should be subsidized by state taxes and the weekend/holiday toll; the money funneled into a bus system would certainly be less than the >\$500 million needed for a gondola. Lastly, I disagree with UDOT's ultimate goal of moving more people up the canyon as quickly as possible. This is a great goal for getting people across our state on our freeways. But this goal should not and does not translate to a dead-end canyon with limited capacity. Unlimited growth is not possible in Little Cottonwood Canyon, and our environment, drinking water, and recreation will suffer from it.</p>
36597	Joakim Orton	Please don't add more infrastructure to an already crowded and over used piece of the wasatch front . Thank you
36598	Pat Buniva	Please, NO gondola!
36599	Cathy Anderegg	<p>We have lived at the mouth of Alta Canyon since 1975 and have suffered terrible traffic congestion each time it snows. Last winter when cars now only were bumper to bumper up 94th south, but many also tried to take side streets, we could not even get out of our driveway to get to church. PLEASE build the gondola!</p>
36600	Patricia Hobfoll	<p>I continue to see the creation of a bigger problem than currently exists in order to justify this enormous gondola project. I am whole heartedly against the construction of a gondola in Little Cottonwood Canyon.</p> <p>The construction of a 2500 car parking lot is a large amount of paved space and continues to look backward to the status quo of accommodating cars instead of forward towards innovation and alternative transportation as a priority. Not only that, it does nothing to alleviate the congestion at Wasatch Blvd. and the 6200 S. exit.</p> <p>We need to be looking for more mass transit opportunities in our city as a whole, and especially in regard to the winter congestion in the Cottonwoods. For example, mass transit should have been considered when planning the construction and rebuilding of I-215 that is still underway. Why couldn't we have built a Trax line (or similar) into the East/West corridor from Foothill to 6200 S? That would have created an opportunity for BCC and LCC users to access existing and very large parking lots along Parleys Way as park-and-rides, and prevent those personal vehicles from ever arriving on Wasatch Blvd in the first place. I have seen this kind of train system along freeways in such cities as Chicago, so the proof of viability is there. Perhaps it can be considered in the future.</p> <p>I understand that, even if the gondola is built, the road will continue to be a necessity. I don't really understand how the cost of the gondola coupled with the length of the ride will mitigate drivers on the road at all, even with tolling. The drive is still shorter, and I think that most people would gladly pay \$9 to drive themselves up the canyon rather than \$9 to ride the gondola. This makes the gondola moot even before it exists.</p> <p>Some ideas I have (or agree with) regarding mitigating car traffic up the canyon includes: -Allowing and encouraging carpooling and hitchhiking at park-and-rides -Increased bussing- This has not yet been tried. Perhaps there could also be an increased incentive to ride the bus if ONLY busses were allowed up the canyon from 8-9am. Ski busses should be free. -Tolling- I believe that tolling is only needed on the busiest days. Traffic in the canyon is only a problem for maybe 30 days out of the year, so, instill a toll for those days. Residents, municipal and service vehicles, lodge guests, and employees will be able to scan a pass (or room key) to open the gate and drive up.</p>
36601	Bonnie Larsen	<p>I'm strongly opposed to building the infrastructure for a gondola in LCC. The major beneficiaries of this expensive project are private businesses (not even owned by Utahns). Very few of the tax payers who will pay for it will in any benefit. Our tax dollars would be better spent on saving the Great Salt Lake so there will be snow in the canyons for anyone to ski on. Make the current road a toll road, use electric buses to move people up and down canyon, develop more parking areas for those taking buses. Our canyons belong to all of us - not just the privileged few who ski or own ski resorts.</p>
36602	Suzanne Roderick	I absolutely DO NOT want the gondola through the canyon and I object to taxpayers money throwing at it.
36603	Janet Spedden	<p>I am a Utah resident and taxpayer and I ski at both Alta and Snowbird on a regular basis. I am 100% opposed to the Gondola option. We have a marvelous resource in Little Cottonwood Canyon and putting a gondola up right between two wilderness areas to serve two private businesses at the top of the canyon is a terrible idea. The fact that this expensive installation is inflexible in how it is used only adds to the travesty. I think snowsheds and electric busses fit the requirements far better. The same ski resorts can't operate without a functioning road to get all the food and other necessities of functioning businesses up the canyon. Without the snowsheds, you will have to continue to control the avalanches, even if you build the gondola. Finally, putting a gondola station at the mouth of the canyon is not going to solve the issue of traffic congestion in that area. (The argument that bus service will bring people to the gondola station, is a better argument for bus service all the way to the resorts).</p>
38631	Chris Cawley	<p>Dear UDOT EIS Project Team,</p> <p>Please find attached a letter providing comments on the Final Little Cottonwood Canyon Impact Statement. Thank you for your continued engagement with the Town of Alta on the EIS.</p> <p>Sincerely,</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36604	Jordan King	<p>I do not support the Gondola. This strategy assumes that Utah's goal is to get more people up LCC ("Meet peak-hour demand on busy ski days"). Obviously, this in the best interest of Snowbird and Alta financially, but I highly doubt this is in the best interest of the canyon or the residents of Utah. Rationing access to the canyon is, in my opinion, a more preferable long-term strategy to protect the canyons from being loved to death and to protect the quality of recreational opportunities available for locals. For those of us who have been recreating in LCC for years, it is already quite obvious that there are substantially more people every year recreating in the canyon. And this increase has had a negative impact on overall experience. Do we really want to see just how many people will physically fit in the canyon? How would this benefit Utah resident? I would much rather have fewer high quality days in the canyon, than have every day look and feel like a crowded national park.</p> <p>I support limiting car access up the canyon by requiring online timed entry sign-ups and using tolls with different rates for in-state vs out-of-state residents (our goal should not be to limit access to Utah residents with low income status).</p>
36605	Courtney DeGraw	<p>Absolutely AGAINST this gondola. It will ruin the natural views of one of the beautiful canyons that make Utah what it is. Don't ruin this place for those of us who live here in the surrounding county permanently and have to deal with the fall out, for the few who visit to ski. No more letting money and corrupt politics rule out, a gondola is wrong.</p>
36606	Paul Christensen	<p>I don't think the gondola would be environmentally responsible for the area. I also think that the local population is not wanting the gondola. The people who want a gondola are out of state residents who want to cut lines while on vacation, forcing locals to go without in the process. There are other option to consider. There is something about being in a car or bud with friends on the ride up the canyon that I have very fond memories of. I believe that slapping a gondola bandaid on this issue is not just an issue oversight but a seen as disingenuousness toward the people who live in and around the mouth of the canyon and to the lower class of people who have such tremendous passion for nature and skiing/snowboarding. This has been an issue for decades and has yet to see real change from where I'm seeing things. Thanks for your time.</p> <p>Paul.</p>
36607	Andrea Campian	<p>I am strongly opposed to the proposed gondola. The damage it will do to recreational areas and the backcountry impacts it will have. PLEASE CONSIDER options such as mandatory paid permits to drive up LLC, private transportation provided by the resorts on powder days, etc. There are other options. This huge project will cost the valley's residents, but only benefit private ski resorts. There are no stops for snowshoers or skiers so this is not a multi-use project benefiting anyone recreating in LLC. This is exclusively to benefit Alta and Snowbird. Maybe they should spend a 10th of the gondola project on their own private bus system.</p>
36608	Robert Douglass	<p>The EIS fails to address the increase in Canyon visits fostered by creating a major tourist attraction - the world's longest gondola. This will increase Canyon visitation throughout the year and likely have a greater impact on summer visitation. As a result, the commercial development planned by members of the Gondola Works advocacy group will see a large increase in the value of their property and will be stimulated to create yet more tourist facilities to encourage yet more Canyon visits. The resultant traffic, noise, visual, and people pollution at the base of the Canyon will be a significant environmental impact - one not addressed at all in the EIS. This EIS omission is negligent in considering the environmental impact caused by a gondola that will certainly encourage accelerated commercial development at the bottom of the Canyon and even more tourist visits into the Canyon.</p>
36609	Jordan Porter	<p>I am an avid recreationist. I use both canyons almost daily. A gondola in LCC will destroy the beautiful canyon skyline as well as the fact that the environmental impact over time will be great. I am a public land user and am saddened that the gondola poorly services my group of people. I have no desire to support an apparatus that is only serving for profit companies. A gondola will destroy LCC as we know it and hope for it to be in the future. This is the wrong path.</p> <p>Consider this solution: a large parking lot at the bottom of the canyon and forced busing service. If certain individuals would like, they can purchase a very expensive pass (proceeds paid to UDOT or UTA) to drive their own car up. Otherwise, everyone must take the bus up. This would significantly reduce traffic issues, as well as the fact that the ultra-wealthy will feel satisfied.</p> <p>Thanks.</p>
36610	Holly Mahoney	<p>I completely disagree with UDOT's determination that the Gondola B solution should move forward. The fact that the goldola only serves two major ski areas and will only be fully utilized during the winter months. The traffic and safety issues exist in both big and little cottonwood canyons and people use the canyons year round and not exclusively at the ski resorts. This seems like a blatant corrupt scheme to provide an exclusive benefit to Alta and Snowbird resorts and not a comprehensive solution to the problem of traffic in the canyons. UDOT should go back to the drawing board and look at all available solutions to the year round issue of traffic in the cottonwood canyons before ruining the natural beauty and environment of the canyons for the benefit of two private companies with little to no benefit to the public. No to the gondola. Yes to the canyons and fining real solutions.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36611	Camille Phillips	I have taken the time to review the final EIS, and am still completely opposed to the gondola. Mr. Van Jura, made a statement in his video that makes it clear UDOT does not understand public opinion and does not understand this issue. He said that UDOT is trying to "meet the needs of the community, while preserving the values of the Wasatch mountains." The gondola will not meet the needs of the community, the community has spoken and we DO NOT want the gondola! It will serve the needs of tourists, not the community. It will also NOT preserve the values of the Wasatch Mountains, it will cause irreversible visual pollution to our beautiful mountains which goes against the values of our Wasatch Mountains. I would like to see enhanced bus with no widening of the road at this time, with a possible widening in the future. UDOT and the ski resorts need to focus on enhanced bus routes, a bus that goes straight to Alta and one that goes straight to snowbird. In addition, the resorts need to incentivize ride sharing options. There is an app that was developed 3 years ago that both resorts used to incentivized riders to carpool. These options need to be explored further before we cause irreparable damage to little cottonwood canyon. I implore you not to place a gondola in our beloved canyons. Please be a good steward of this earth. Increase bus routes, increase ride share, toll, pay for parking, require reservations. There are so many options that have not been fully explored to see their impact! Last year was the first year Alta implemented reservations and it limited traffic substantially. Again, please do not destroy our canyon. NO GONDOLA!!!!
36612	Henry Boland	No to the gondola. Please consider mandatory parking reservations for only the number of people that the ski resorts can accommodate.
36613	John Spear	To whom it may concern: I strongly object to your proposed Gondola boondoggle proposal for Little Cottonwood Canyon. Why subsidize two Ski Resorts for a problem they created. Also, it will ruin that beautiful canyon. I would think UDOT could come up with a more realistic solution like some sort of Light Rail etc. Thanks for your consideration, John K. Spear
36614	Sarah Szymanski	I am strongly in favor of increasing the frequency of buses up and down the canyon. And/or a toll for non local residents.
36615	Tann Yates	I feel the gondola should be paid for directly by those whom use and benefit (skiers and resorts). Taxpayers should be freed from the burden of yet another bill in which they see no gain. I am a native Utahn and have lived here for 5 decades and while I am a skier, I have used this canyon maybe twice in my life. I certainly don't see the need for taxpayer monies in general going toward this boondoggle. Not one cent. Seems to me that ski resorts are overwhelmingly the greatest beneficiary of this project and therefore should shoulder the cost with users.
36616	Mia Barth	UDOT should be considering options that are less destructive to the environment, cost less, and serve everyone - not just ski resorts, like incentivizing carpooling, increasing public transportation, etc. The gondola is an expensive, destructive idea that will decrease the beauty of the canyon and increase the already high flow of traffic and do little to actually help the congestion.
36617	michael allegra	The Best solution is still the Cog rail for the following reasons:1.)It is the best long term transit solution when considering a 50 year horizon. Keeping in mind, that UTA developed the original Canyon transit plan 50 years ago, the impacts of today's decisions will impact us for at least the next 50 years. 2.)The real issue is the need to reduce or eliminate autos in the canyon. When a transit priority philosophy is applied (as opposed to a car centric attitude) COG rail is undisputedly the best environmentally sensitive solution and the least costly solution. 3.)A COG rail can be built for half of what the highway department has projected. As a point of reference, Pikes Peak just upgraded their COG railway for \$10 million dollars per mile. There is NO rationale explanation for UDOT's \$100 million dollars per mile. 4.) The COG rail would be a battery electric vehicle and become connected and run on UTA's TRAX line, thereby eliminated the need for transfers. 5.) With appropriate pricing and auto policies, a COG rail could pay for its operating expenses from the farebox. 6.) Stops at trailheads would be allowed (and encouraged). 7.) a COG railway (without the concurrent traffic recommended by UDOT) would have the least (and best) impact on our watershed. Please keep in mind that under UDOT's proposal, traffic will continue to increase. 8.)A COG rail alignment is available that eliminates the need for costly, unsightly and environmentally damaging avalanche sheds. A COG rail (without more auto traffic) is the only solution that brings the diverse interests of economic development and environmentalists together without costly and time consuming litigious outcomes. Change in these canyons are difficult. Strong leadership with a vision are required.
36618	Mark Crosby	Please do not put a gondola in the canyon. Try other options that are easier, cost less, and less invasive.
36619	Krystal Goetz	Please leave our beloved canyon as is.
36620	Noah Miterko	Please do not proceed with the gondola. This is a poor solution that will have negative environmental impacts on wildlife due to construction, ongoing noise, and other related hazards. It will also shift traffic to Wasatch Blvd and the 215 Corridor while failing to address transportation for those wanting to go to places other than Alta and Snowbird. It's too expensive and Utahns don't want it.
36621	Mark Edlund	Please don't do this. I don't want to have to look at that thing the rest of my life. I would never use it. I'm not going to drive 3 minutes to get on a 30 minute ride when I can just drive an extra 14 minutes. NO GONDOLA
36622	Timothy Felt	Im opposed to the gondola idea. It's environmentally destructive, will cost taxpayers, and only those who can pay up can use it once it's in operation. It'll enable more traffic to an already limited area
36623	Alma Baste	I do not support putting a gondola in Little Cottonwood Canyon. As a climber, and more specifically a boulder, I am concerned about access issues as well as the overall experience- I go climbing to enjoy nature and get away from the city, and I do not want that tainted by a gondola floating about my head. Furthermore, I am concerned about the impacts this would have on air quality. On the off chance that this gondola and the tolling does decrease traffic in the canyon, by building a parking lot further away you are concentrating more pollution in the valley and pushing traffic back into neighboring communities. This money would be better spent funding FREE public transit THROUGHOUT the valley which would do more to alleviate congestion issues (across the board) as well as improve air quality, than a gondola. Increasing and funding busing in the canyon throughout the year and providing numerous stops, would also do more for both of these issues. Incentivizing carpooling, would, again, do more for these problems than wasting tax payer money on an absurd capitalist adventure. Little Cottonwood Canyon is more than just a tourist trap for rich people, it is a beautiful destination and recreation space for everyone.

ID	Full Name	Comment
36624	Deveraux Dern	<p>I first skied Alta in 1971. As a local it was always my first choice to ski. Alta has the best snow conditions and runs it my opinion.</p> <p>But the Alta ski destination was not my only enjoyment. I enjoyed every minute of my drives up and down the canyon in my CJ 5 Jeep no matter the weather conditions. The uninterrupted scenery of the granite walls, pines, quakies and peaks is always spectacular.</p> <p>This was my favorite time of the year to drive my Jeep with no top and enjoy the fall colors.</p> <p>This will all be ruined with the addition of structural towers and maintenance access roads to gondola towers.</p> <p>I would like to know how much terrain will be disturbed for towers and maintenance roads versus improving the existing roadway.</p> <p>Not to mention \$550 million in taxpayer money for private businesses.</p> <p>NO GONDOLA! IT IS NOT NEEDED. THERE ARE OTHER OPTIONS. DON'T BE PUSHED AROUND BY ALTA AND SNOWBIRD.</p>
36625	Sheryl Boehme	<p>Please do not put the giant eye sores in Little Cottonwood Canyon. The number of people who would not benefit from the gondola, far out weight those who would. The gondola is not for Utah. End of discussion.</p>
36626	Madeleine Roe	<p>I appreciate public leaders looking for creative solutions to transportation problems. However, this gondola would be paid for by the community but would only benefit a small portion of the population. I fail to see why the resorts would not pay for the project. We have more urgent transportation needs to address to help the community prosper.</p>
36627	steve russell	<p>Thank you for your diligence in this matter. I and my friends look forward to the Gondola. We think it will be a long awaited addition to our state.</p>
36628	William Cass	<p>Bus service is the best option. A gondola will spoil the ambience of Little Cottonwood Canyon.</p>
38632	Dave Fields	<p>Good Afternoon,</p> <p>Attached are comments on behalf of Snowbird for submission to the Final UDOT EIS comment period.</p> <p>Thank you</p> <p>Dave Date: October 10, 2022</p>
36629	Shauna Bona	<p>To:UDOT LCC EIS Consultant Team</p> <p>From:League of Women Voters of Salt Lake City</p> <p>Re:Comments on Final LCC EIS</p> <p>Dear UDOT Personnel and Consultant Team,</p> <p>The League of Women Voters of Salt Lake City (LWVSL) is disappointed in the final EIS that identified the gondola as the solution to transportation issues in Little Cottonwood Canyon. This solution threatens to overwhelm the canyon with too many visitors to the detriment of this important watershed for the Salt Lake Valley and the ecological balance in the canyon. In addition, the spectacular visual vistas in the canyon will be permanently altered by the presence of large support towers.</p> <p>We are pleased to see a proposal with a phased approach and urge the Department to undertake less impactful alternatives; incentives to promote mass transit use, more frequent and efficient bus service (preferably electric), tolls to encourage car-pooling, restrictions on single-occupancy vehicles, and a parking reservation system at the ski resorts. We encourage a systematic analysis of the effects of such measures before going forward with building a gondola that may not be necessary.</p> <p>Specifically, we have the following comments:</p> <p>We believe that the proposed snow sheds are unnecessary when balancing the minor inconvenience of waiting for snow to be cleared a few days a year, with the unavoidable environmental damage that will result from their construction and maintenance.</p> <p>We support more and strategically placed bus access points that reduce congestion at the canyons and incentives to mass transit use valley-wide.</p> <p>We support bus service that is fairly allocated to serve a variety of recreational areas and uses and not just the ski resorts; thus we support year-round bus service.</p> <p>We support options and actions that increase opportunities for all recreational interests including those of underserved populations.</p> <p>We support all efforts to more fully understand all canyon users and their expectations when visiting the canyons, and the</p>
36630	Steffie Sotkin	<p>Hi- I feel that the identified preferred alternative (Gondola Alternative B) will not help solve any of the transportation issues and will only move them into the surrounding cities, cities that have expressly said they do not support this alternative. The gondola is extremely expensive and benefits a very few, namely the private resorts and developers. Parking, taking a bus a ride, then waiting to transfer to a 30+ minute gondola ride, then having to the reverse at the end of the day is not at all convenient. If people won't use the existing bus that is probably free for most users, why would they do the same thing for the gondola? The gondola can't run during active control or during interlodge so doesn't offer an alternative for when the road is closed. The gondola won't operate during the summer months, which as seen increasing crowds in the summer, particularly with Snowbirds Octoberfest. And the gondola will act as an attraction itself, causing more people and more traffic by people who are only coming to ride the gondola. Parking reservations and canyon tolling are 2 options already in place that can help limit the number of vehicles that enter the canyon. The only word that describe the gondola being built is boondogle.</p>

36631	Irina Ermolaeva	<p>Gondola is NOT a solution for the LCC at all. Neither from technical, ecological, or financial perspective. You cannot make plans based on the old techniques. All transportation is switching to ELECTRIC. Buses included. And when comparisons and considerations was made - it was assumed for the diesel buses. Which would NOT be the case anymore. New electric buses are much more economical and require NO maintenance. So, the economic numbers would be completely different as well as ecological impact.</p> <p>The gondola will destroy the beautiful views forever and will affect natural habitats. While the road was there for more than hundred years, and the ecology is settled already for the existing road in some way.</p> <p>Third: why the whole people of Utah must pay to the thing that will ONLY benefit very certain group? (gondola will only serve skiers and will NOT work for hikers, campers, climbers). If ski resort wants it - they must finance it completely. 80-85 percent of residents in SLC valley do NOT want it.</p> <p>As a resident of Sandy, I am very concerned as have not seen how any document in EIS that explains how new parking for 2400 cars will affect traffic in Sandy and Cottonwood Heights (most negatively), will affect crime levels in the area, and emissions exhausts.</p> <p>Also, projects like gondola are very stiff and any error in planning or engineering will cause the ballooning of the costs, while the system will remain dysfunctional. While buses or other phased approaches are FLEXIBLE. Like you can easily move bus stops, sell buses, repurpose to other DOT needs. With gondola all those things are impossible. If something goes wrong it will remain the grand monument of stupidity (like the gondola near Moab, UT) or will be consuming more and more taxpayer's money. The road was there and will be there for rest of the times and we shall use all benefits of that. Thank you for reading.</p>
36632	Marshall Seal	<p>No to the gondola. It will permanently scar our canyon. It is not a good solution. Get rid of the Ikon pass. That's a start. The gondola is too expensive And for the use that it is intended. I won't use it.</p>
36633	David Lloyd	<p>I am against the gondola. Try less impactful mitigation strategies first. The gondola uses taxpayer funds and only benefits ski resorts and resort skiers.</p>
36634	Timothy Alley	<p>No gondola more buses and road widening with snow sheds thank you</p>
36635	Timothy Alley	<p>No gondola more buses and road widening with snow sheds thank you</p>
36636	Outdoor Mavens LLC	<p>We believe there are other options than a gondola. NO gondola. As a small guiding outfitter in SLC we strongly feel in opposition to the gondola due to its negative watershed and overa environmental impact. Please explore less invasive options.</p>
36637	Jerome DeStefano	<p>As a frequent, year round user of the canyon, I would like to see alternative measures implemented before the gondola. I enjoy bouldering and climbing on the north side of the canyon and feel the gondola would interfere with the opportunity to recreate. As a Snowbird employee, I use canyon transportation or buses to get up and down the canyon in summer and winter. I would like to see and expanded shuttle and bus system implemented before deciding on a gondola. Thank you.</p>
36638	Stephanie Weems	<p>Please do not pursue the gondola option. There are are other options that would be more efficient, less expensive and much more effective.</p>
36639	Heidi Gillmor	<p>I'm against the Gondola. I think it only benefits people who ski, yet it's the taxpayers who are paying for it. I would rather see that \$ go into Education.</p>
36640	Andrea Truitt	<p>The gondola will destroy the canyon and it's beauty. This is absurd! Please do not do it, don't ruin our canyon.</p>
36641	Dimitrije Milovich	<p>I am opposed to the gondola because I think it will not serve the general public well. Specifically. It will not allow access to areas besides Snowbird and Alta. I favor instead using more buses that use natural no gas or electric buses as they become available.</p>
36642	Baylee Baker	<p>nooooo thanks</p>
36643	Katy Fleury	<p>Please remove the gondola from consideration for Little Cottonwood Canyon. I don't believe taxpayers should pay for the construction of such a project, and don't want to see the beautiful canyon destroyed by gondola towers. In addition, I believe investment in regular and reliable electric buses would be better for the canyon and the valley at large. Please prioritize buses, mobility hubs, and transportation management strategies like parking reservations, app technology, and ride-share and carpool incentives to resolve the traffic issues. As a skier, I believe these tools have the ability to solve the issue without destroying the canyon.</p>
36644	Sandra Johnson	<p>Why are you risking the watershed this canyon provides. In years of extreme drought this seems very irresponsible. Where are you going to put all the vehicles using the gondola system? You are only relocating all those vehicles to residential areas and those residential streets of those who live at the mouth of the canyon. Please don't build this gondola system.</p>
36645	Cole Gonsalves	<p>Please, no gondola!!! The Gondola is not the right solution. There should be some government regulation due to the negative externalities that Snowbird and Alta are causing by being incorporated with the Ikon pass, not more infrastructure, paid for by taxpayers, to facilitate this money grab. Eliminate the sale of Ikon passes for little cottonwood canyon resorts and you will see a significant decrease in canyon traffic. That would give some time for some potential better solutions to this problem.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36646	Angela Isaacs	<p>The gondola option serves a limited sector of our community, irrevocably changes the nature and beauty of the canyon, disrupts or does not serve other recreation in the canyon (such as hiking, bouldering, backcountry use), is likely to cost much more than is outlined in the EIS, and overall will truly serve the canyon and our community poorly. It does not appear capable of accomplishing many of the stated needs in the EIS Purpose and Need; for example, I do not see how it will decrease traffic on Wasatch Boulevard. It may, very occasionally, increase mobility during peak travel periods, but I am skeptical even of this. With longer travel times, parking, and cost, it may only be used by some on the very best of powder days to two single resorts. This can't be our best solution; one that serves powder hounds on a handful of days a year? It will not address rapidly growing backcountry usage and diverse activities in the canyon. And it cannot even run during avalanche mitigation. It does not do anything to solve limited parking at trailheads and usage of the road by cyclists and pedestrians - as again, it only serves two single ski resorts, and I am very skeptical that it will even remove the amount of traffic from the road that the EIS shoots for (which seems shockingly low for any lasting solution considering our air quality and population growth). It will alter the canyon forever without solving our traffic problem. It is not adaptable and scalable, and it is NOT a good solution for Little Cottonwood. Our local SLC government believes that, the CWC believes that, and many other organizations who have truly studied the traffic problem and solutions believe this.</p> <p>We need a solution that promotes Salt Lake residents and visitors to use transit in our canyons (yes, all of our canyons, for all uses). We need a solution that is adaptable and long-lasting. We need a solution that considers the health and beauty and longevity of the canyon. There should be affordable options so that we close no one off from access to the canyons. I value our resorts; we should make getting to them safer and easier. We also should not continue to change the character of the canyon so that we can shuttle the most people possible into the canyons. Natural barriers are ok. Keeping our canyons the beautiful places that they are is ok. I am disappointed with what seems to be a lack of actual study and consideration of environmental impact in the scope of this EIS as well as realistic, long-lasting, sustainable transportation solutions. My preference is that we limit cars and use buses that are integrated with a better public transit system in the valley. This should absolutely be an option work on first, and not just as a stop-gap, but as a genuine forward looking plan for Salt Lake valley as a whole! It benefits those using the canyons, including outside of two resorts, as well as those just living life and working every day in the valley. The gondola will not meet our goals (or UDOT's goals) and will not serve our community.</p>
36647	Katie Gaertner	<p>I believe there are other solutions that will help mitigate traffic in Little Cottonwood outside of the incredibly unnecessary expense and environmental impact of a gondola. I have traveled to other highly populated recreation areas and believe times entries, permits and fees could be implemented to solve not only the winter months but all year long. Rocky Mountain National Park has timed entries for peak tourist time and something this simple (compared to a gondola) will all around assist the traffic flow and volumes in the canyon!</p>
36648	Jannette E Dokmo	<p>This gondola shouldn't happen and it's a mistake.</p>
36649	Maria Griffith	<p>We are really against the gondola for all of the stated reasons.</p>
36650	Michael Vahle	<p>The Towers with their Wires may fail, causing harm to the Gondola passengers! This is an accident waiting to happen. I'm happy riding the Ski Bus. Thank you.</p>
36651	Kevin Wise	<p>I am strongly opposed to the gondola solution. It will destroy the natural beauty of Little Cottonwood Canyon. It will significantly impact the watershed of the area and impact the water delivery to Salt Lake City. It will irreparably alter world famous bouldering and rock climbing in the canyon. We MUST pursue alternative solutions like electric buses, ridesharing, and tolling.</p>
36652	David Pease	<p>Dear UDOT,</p> <p>I am strongly opposed to the gondola. I feel like we should be focusing on simpler measures such as car pooling, increased bussing and shuttles. The cost of the gondola is enormous and the burden of the cost will be paid by the Utah tax payers. The gondola only services two businesses. Those ski areas are heavily invested in having the gondola built. The lower trailheads are not accessed. We don't even know the cost of a ticket. I assume it would be very expensive. Please do not force this on Utah tax payers.</p> <p>Kind regards</p> <p>David Pease</p>
36653	Robert Bruce	<p>I like to mountain bike and backcountry ski the canyon and DO NOT want a gondola.</p>
36654	Kevin Radzinski	<p>Why I like the Gondola - most traffic issues seem to happen when it is snowing and rental cars that are not equipped for canyon driving a sliding down the road. Gondola takes the steering wheel out of peoples hands - fewer mistakes and accidents instead of increasing the changes with more lanes for more cars.</p>
36655	Annika Smith	<p>This is not long-term cost-effective and is harmful to wildlife. There is nothing about this that will benefit wildlife in response to managing Little Cottonwood Canyon traffic.</p>

ID	Full Name	Comment
36656	Shirley Hutson	<p>First I want to thank UDOT for the time they put into studying the Little Cottonwood Canyon traffic reduction and the Gondola subject.</p> <p>UDOT's announcement to move forward with the gondola plan deeply saddened and perplexed me. Why the fast track when several other perfect legitimate and healthy ideas for our community have not even been considered, much less tried. I was under the impression UDOT was adopting a phased approach. Using the phased approach will allow all involved working parties to come up with real solutions to traffic reduction while at the same time preserve and protect the canyon we all love.</p> <p>Alta and Snowbird resorts are backing the construction of the gondola. They are the ones who get the benefit on the backs of taxpayers. Many of which don't even ski or use their facilities, so why should "WE THE PEOPLE" have to foot the bill for their business needs.</p> <p>The congestion problem only exists about 2 to three weeks, a month at best and even that is a stretch. The gondolas will block the view of the canyon; it does not solve mobility.</p> <p>I, along with many others, would have preferred UDOT to focus on enhancing busing and further explore with ski resorts, especially seeing the great improvement after Alta implemented its parking reservation system.</p> <p>I have lived in Sandy for 29 years. my family and I do use the canyon for family camping, picnicking, hiking etc. The Gondola will impact the natural beauty and open space of the canyon we treasure and enjoy.</p> <p>Putting the gondola plan into action will not only ruin the natural beauty of the canyon but put an unnecessary burden on the tax payers for years to come, at an already especially hard time in our lives financially.</p> <p>I urge you, please find it in your heart to change course and stand with your Sandy City residents.</p> <p>Please, support the Mayor and the phased approach. Thank you."</p>
36657	Daisy DeMarco	<p>much to say here regarding the decision to go ahead with the gondola project for Little Cottonwood Canyon (LCC) - I am very much against it - though there are a couple of key points I would like to highlight.</p> <p>#1: There are many ways to address the problem prior to building a gondola, including the important step of creating a bus depot (where the parking for the gondola is planned to be) and testing out various bus options before any additional steps are taken. The depot could range from one extreme, shutting down public access to the canyon for several months/weeks/days per year - save residents/workers (e.g. Zion NP), to simply enhancing the bus boarding/unboarding process via the depot. Buses also have the additional benefit of being able to service far more places in the canyon (e.g., trailheads - not everyone wants to go to Snowbird or Alta) and if the buses are electric - which has been proven to work in the canyon - then the environmental impact is lower.</p> <p>#2: While you cannot place a price on this, the aesthetic loss of value within the canyon itself is worth noting. Currently the sightlines, the contours of the granite walls near the mouth of the canyon and the unobstructed views up the various gulches and forks (Tanner's Gulch, White Pine Fork, Red Pine Fork, etc.) are highly valued by those of us who utilize the canyon year-round. The varied gondola towers, cables, and cars would permanently scar the canyon and the natural feeling currently cherished throughout the canyon would be lost.</p> <p>#3: One underlying assumption behind building a gondola is the thought that far fewer cars will drive up the canyon in the winter (part of the environmental impact study). That is a questionable assumption at best. Yes, some will decide to take the gondola up rather than driving - particularly during storms...this of course assuming the gondola itself isn't shut down due to high winds during said storms. Given the projected travel time for the gondola it will be faster to travel via personal vehicle, which will be especially true if some cars are removed via the gondola. Meaning the same number of cars will use the canyon, and more people in total would be up the canyon with gondola usage - which highlights yet another ignored issue: what is the tipping point for usage in LCC? The failure to address this critical issue is point #4.</p> <p>#5: The fact that the public is footing the bill for a solution that will only run 6(ish) months out of the year, and one that will only benefit two entities, is concerning to say the least. Make it a shared expense between UDOT, Snowbird, and Alta and the public could stomach the costs more. Nothing has been stated to indicate this has been discussed.</p> <p>#6: The increased traffic wherever the gondola is built (currently slated for the land purchased by LCC Base Property LLC, which of course is owned by Cummings family - who also own Snowbird) will be severe even on good days. Between the entry areas for Snowbird and Alta there are currently five places where cars can gain access to those resorts. Even if there are two entry points for the gondola base station the strain felt on high snow days will be immense. Getting into and then</p>
36658	Michael Trussell	<p>No Gondola. I don't believe this is an appropriate use of tax payers dollars. This is a resort problem not a community problem.</p> <p>I think this is a reckless use of funds that only benefits the resorts.</p> <p>Secondly, the traffic problem begins long before you even enter the canyon. Driving on Wasatch BLVD from I215 to the mouth of the canyon is half the battle and there will still be an insane amount of congestion just to get to the gondola. I feel like implementing a bus only lane along Wasatch where buses merge into the flow of traffic once in the canyon is much better alternative to a billion dollar project.</p>
36659	Todd Baker	<p>NO Why would taxpayers burden a one stop tram to a multimillion resort. I use the canyon dozens of times a year. A tram should be paid for by resort funds cars should be limited</p>
36660	Juli Riches	<p>I think we can focus on other avenues rather than spend so much money on something that isn't going to be that effective. Please use other options first.</p>
36661	Shannon Woolley	<p>NO GONDOLA. How did UDOT come to this conclusion after the last comment period. A bus system similar to ZNP would be better for serving the local population and all types of actives up the canyon. A gondola only serves the ski resorts and should not be paid for by tax dollars. This is a terrible plan.</p>
36662	Maxine Johnson	<p>I strongly believe that no gondola should be built in Little Cottonwood canyon. A multi-shuttle system and adequate parking makes more sense.</p>

ID	Full Name	Comment
36663	John L Clark	I am a long time resident who lives directly west of the LCC. I am not a skier but I am proud of the legacy our ski industry has gifted us. Having said this, I am vehemently against establishing a gondola for the primary transportation in the canyon. I do not believe building a Gondola is in the best interest of the majority of canyon users and visitors but it will benefit a well endowed minority. I hereby plead that we do not build the Gondola!
36664	Carla Thorup	I do not agree that a 550 million dollar project, with at least 4-7 million to operate annually, is best for Sandy (or Utah.) We rely on tourism and skiing, but are not doing enough to slow down climate change for our state (and therefore, our SNOW.) I believe more buses plus a reservation system for parking & the resorts is a better now solution, while also allowing more time to discuss future plans. I haven't been on the side of the Gondola since the inception of the plan, and am still not convinced it is the best solution at this time.
36665	Ana Stamenkovic	No gondola! It's going to destroy the already altered ecosystem :(there are far less invasive alternatives like electric busses (pay the fn bus drivers!) tolls (you can use toll fees to fund more cash flow into parks n recreation), create a more efficient bus schedule/parking system. NO. GONDOLA. NOT NOW. NOT EVER!
36666	Rebecca Campbell	Not that you'll listen, BUT... don't mess up the view with an ugly gondola. Leave the canyon how it is.
36667	Elizabeth Lauderback	In all the time since the gondola proposal, I have yet to speak to a single person who actually supports this idea. It is an unnecessary, incredibly costly and destructive project. Upgrading bus routes, which use existing infrastructure, and implementing a metering system for the exceptionally busy winter days would be a far better solution. Destroying one half of the canyon for a vanity project is a terrible idea that, once again, local canyon users do not at all want.
36668	Steve Pruitt	<p>1. I see nothing in the EIS that addresses the resident birds of prey - red tail hawks and eagles that regularly are visible in flight and perching in trees below the 209/210 junction. How are you addressing the elimination of them with the gondola?</p> <p>2. The loading of the additional bus cost only onto the La Caille alternative has the appearance of putting UDOT's fingers on the scale to produce a preferred outcome. Why would the small incremental distance between the two gondola alternatives mean one has to have a line item bus expense while the other does not if the ridership from the terminal and access thereto is the same?</p> <p>3. Of the 50 days per year this project is supposed to impact, where are the figures on the portion of these days that accompany these 50 days when winds approach hurricane force and the operation of this folly?</p> <p>4. You have stated that there will be a projected 45% increase in southbound Wasatch traffic at peak periods but you have not provided anything to support this claim. As the east bench is virtually built-out limiting future traffic increases, where are the new trips being generated from that support this claim.</p> <p>5. Your plan makes all access to the parking solely from 210 and in doing so you have provided no study or support on the impact on Wasatch between 9400 South and the 210 signalized intersection; the impact on this signalized intersection itself; the impact on Wasatch Blvd. south of 9400 South; and 209 altogether particularly given that the alternative at the 209/210 intersection would level the traffic flow between 209 and 210 for such access.</p> <p>6. I see nothing in your gondola budget for legal defense of your selection which will most certainly occur and last for years and what is your defense to the destruction of the view corridor from all of the impacted property owners as such view corridors have been historically and legally defended when compromised.</p> <p>7. As the ordinary tax payer will have no benefit whatsoever from your preferred alternative but are being asked to pay for much like the student loan forgiveness plan currently at play and as sunshine is the best disinfectant, you should have to provide an assessment or explanation of the following:</p> <p>A. The projected economic value to the two ski areas that are the terminal beneficiaries of the gondola but will be shouldering none of the cost.</p> <p>B. Identification of the base beneficiaries including the names of all land owners, speculators and contract buyers such as Niederhauser, McCandless and La Caille together with any disclosures that may exist or be found through FOIA or</p>
36669	Chris Hedrick	I oppose the gondola in it's current form. I do not believe this is a wise use of public funds as it only benefits a small number of Utahns. The ski resorts are welcome to use their private dollars to build a gondola. Buses are the answers to canyon congestion. All over the world buses are used to transport people efficiently; it doesnt have to be a mystery.
36670	Nolan Thomas	The gondola does not even remotely help with the overcrowding of the canyon. Not only will this create greater traffic within the Cottonwood Heights region but it will continue to promote unsustainable rates of tourism within the canyon itself.
36671	Jeff Dokmo	There should be a bus system instead of a gondola. The gondola is a stupid idea
36672	Richard Agnew	I support the gondola plan. Thank you.
36673	Michelle Ashton	I spend at least once a week, every week in LCC, climbing, hiking, bouldering, and skiing. When the roads are closed due to snow, I do not wish that I could get up to the resort, I instead hope that the roads will be safely cleared and that no one gets hurt or dies. If the roads were closed, I would never ever get in a gondola. I would have the good sense to stay home. Using the thought process that the gondola will help provide access to the ski resorts when the road is closed is faulty at best and deadly at worst. Continued avalanche control, better maintenance, and thoughtful snow breaks are the way to ensure that the roads are not closed during ski season. Increased bus service all year around would help instill a practice of using the bus thus alleviating so many cars in the canyon during certain parts of the year. I would also be happy to pay or toll or get a pass to access the canyon. Having traveled all over to ski, I can say that I have first hand experienced expensive projects that were created to get people to ski resorts that are not used to their full capacity and create a huge financial burden on future generations.

36674	Tim Pautler	This is not a real solution for the residents of Cottonwood Heights. It removes no cars from Wasatch Blvd, requires longer travel times/transfers and does not address Big Cottonwood Canyon. Before spending \$1Billion of tax payer money please attempt some lower cost options like busses, tolling, vehicle inspections, reservations. Thank you.
36675	Ellesse Balli	I am firmly opposed to the gondola. Buses and tolling are a far more environmentally-friendly and cost-effective solution.
36676	Shane Moreno	<p>At first I thought the LCC Gondola might be a good idea but after many months to review I am completely against it for many reasons:</p> <ol style="list-style-type: none"> 1) Corruption: The two politicians that purchased the land by LaCaille (sp?) just to turn around and sell it to the State is very corrupt. They clearly had insight into UDOT's plans and should not be profiting from Tax Payers this way. 2) Tax Payers Funding Private Businesses: Snowbird & Alta will directly profit from the gondola being funded by tax payers. Tax payers should not be responsible to provide a gondola delivering patrons to private businesses. Instead they should be delivering solutions to their customers outside of public funds or at the very least paying much of the tab. 3) Ikon: The Ikon Pass has clearly created much of this traffic mess without any skin in the game. They are profiting on the sell of their underpriced passes but do nothing to help alleviate or pay for the road improvements, busses or gondola. 4) Environment: Roads will need to be built & maintained to install and service the gondola towers. Trees will be lost, animals misplaced, erosion increased & our watershed potentially polluted. 5) Aesthetics: Placing a Gondola in LCC will be highly visible and deter from the natural beauty of the canyon. 6) Slow The Flow: Traffic is already an issue in Cottonwood Heights. Widening Wasatch & adding a Gondola Base on Wasatch will simply create more traffic, more noise, more pollution. This corridor next to the mountain should be protected and tamed with Traffic Calming measures rather than built up. Residents & tourists alike visit this great state to enjoy the beauty & to recreate so why destroy the purpose. 7) Lack of Services: UTA has proven they cannot run a bus system efficiently or effectively up the canyons. Many employees & patrons try to catch the buses on Wasatch Blvd. just to learn the bus is full as it drives by. Furthermore its crazy the busses don't run during Octoberfest when thousands of people go up LCC to enjoy the festivities and many drive drunk down the canyon. Why arnt they offering services to make this event safer? Why would we build this crazy expensive gondola not to run it during the summer? The solution needs to be offered year round to mitigate the traffic and provide clean and safe transportation to all.
36677	Jay Love	<p>To the UDOT,</p> <p>Please do not build a gondola from the base of Little Cottonwood Canyon to the ski resorts. The problem, as I understand it, of too many skiers going to/from the ski resorts for a few hours on a handful of days each year, coinciding with slippery roads and high avalanche activity, and causing lots of traffic. This problem (which have experienced firsthand) affects exactly those people who choose to participate in that activity and very few others. Burdening taxpayers with the cost of constructing a Gondola is altogether not justified. The ski resorts need to accept responsibility for the problem and limit visitation, just as some other well-known ski resorts do (for example, Vail resorts is capping visitation all season this year).</p> <p>In addition to the undue cost to the non-skiing taxpayer, a gondola would be a visual disturbance to what is currently a beautiful canyon, home to many pursuits that do not involve the ski resorts. This visual disturbance would decrease visitation of locals and visitors and diminish the pleasurable experience of living so near a natural area, a reason which so many of us live in the area.</p> <p>In addition, the proposed gondola serves only the resorts, not all of the other popular spots throughout the canyon. Who gains from this "solution"? The resorts do. The people of this region do not.</p> <p>In summary, please don't build a gondola.</p> <p>Sincerely, Jay Love Salt Lake City, UT</p>
36678	Michael Romero	I prefer the GONDOLA option
36679	Bryce Catten	First off, I don't believe the gondola is the right choice. I think that we should wait another year for more time to study. Also the fact that there are former politicians involved in what seems to be unfair practices since they are going to profit off this. How can access roads and large gondola poles be less impact than widening an already existing road? Has anyone researched a tunnel?!
36680	Calvin Tew	I don't think taxpayer dollars should fund a piece of transportation that only operates during the winter season and only benefits a private company. Also we need to preserve the beauty of little cottonwood canyon and protect the many trailheads and recreation areas that would be destroyed by this.

36681	Santiago Vega	<p>The gondola option is flawed for many reasons, including that it will:</p> <ul style="list-style-type: none"> Cost over a half billion dollars (not considering inflationary cost increases); Only make stops at two private ski resorts: Snowbird & Alta; Remove no more than 30% of car traffic from the canyon road; Operate only during the winter ski season; and Permanently mar the inherent beauty and public lands of Little Cottonwood Canyon. <p>The gondola is an unwise public investment for a 50+ year solution serving a limited group of people, given that it's irreversible and incapable of pivoting in the face of changing circumstances. But it isn't the only option.</p> <p>Best,</p>
36682	Shane Pace	<p>Thank you for the opportunity to comment on the EIS for Little Cottonwood Canyon. The Canyon is a beautiful and wonderful part of our State. I do not support the Gondola option. Nor do I support the road widening option. I grew up in Utah County and loved Provo Canyon. When they widened the road going through the Canyon they destroyed it. It really affected the beauty of the Canyon. I recognize the road needed to be widened because it is a major transportation corridor. In fact, my family lost friends in a semi-tractor vs. vehicle accident on that road. It was unfortunate the damage that occurred but necessary. Little Cottonwood Canyon is different. It is not the major transportation corridor that Provo Canyon is and should be treated differently. Neither the Gondola or road widening options treat it differently. UDOT immediately went to two options that are not necessary at this time. Other options can and should be considered for many years before either the Gondola or road widening is considered. We have a number of very similar canyons that are focused on tourism that make it work with shuttle systems and tolling booths. If UDOT is set on moving forward with the Gondola, the Ski resorts should pay a major portion of the costs. Thank you for the chance to participate in this process.</p>
36683	Micah Ownbey	<p>I strongly oppose the little cottonwood gondola proposal. I have been skiing the wasatch since I was four years old, growing up in salt lake and continuing to enjoy the resort and backcountry terrain. I am disappointed in the choice to pursue the gondola, which may be an attractive gimmick for tourists but is unlikely to help with traffic. I also feel this is a poor use of funds which would be more useful in any number of other areas. Clearly the resorts do not need a marketing boost if they already can't handle the current volume. So why are we pursuing this option? I am further disheartened to feel that these comments will likely have no impact on the decision. The gondola does not appeal to me and my family in any way. I think we can find a more cost-effective, and more usable option for management of high traffic in the canyon.</p>
36684	Bryan Christenson	<p>As a taxpayer and advocate for the canyons, I am NOT in favor of the gondola project. I realize something must be done, and believe other options like: additional buses and/or lanes, mandatory buses for peak times (like Zions), or toll gates are more practical and moneywise.</p>
36685	Will Peterson	<p>I'm very concerned about the possibility of the gondola being constructed in Little Cottonwood.</p> <ol style="list-style-type: none"> 1. This is a solution that only benefits two private users (Snowbird & Alta) & requires significant payment from Utah taxpayers 2. Only provides benefit in winter (we're seeing increased traffic year round) 3. Only focuses on Little Cottonwood (as Big Cottonwood is seeing increased traffic) 4. impact to Little cottonwood watershed <p>Recommend consideration of lower cost, phased solutions - adding tolling to incentivize carpooling, expanded bus service, alternating uphill/downhill services</p>
36686	David Alter	<p>After looking into the options of gondola vs. added buses, I am an advocate of the gondola, for the following reasons:</p> <ol style="list-style-type: none"> 1. Likely lower long-term operational costs 2. Fewer employees required to operated the gondola 3. Greater reliability with the gondola (no interruptions from avalanches or heavy storm events) 4. Lower emissions 5. Quieter, more pleasant experience traveling up the canyon, including an enhanced ability for riders to enjoy the views 6. Less maintenance 7. More enjoyable experience, which will encourage more people to travel up the canyon and enjoy hiking or site seeing 8. Wild life will be less effected by the gondola vs. bus traffic (fewer animal deaths from collisions, and lower noise/pollution)
36687	Michael Taylor	<p>No on the gondola. It will destroy too much wildlife habitat and is unnecessary.</p>
36688	Brittany Flynn	<p>I DO NOT SUPPORT THIS GONDOLA. You will be ruining the place I grew up in. The beautiful scenery will be taken over by construction and EVEN MORE PEOPLE THAN THERE ALREADY ARE. If your goal is preservation this is not the way to do it. Listen to the people of Utah, we don't want this.</p>

ID	Full Name	Comment
36689	Kelli McEwan	<p>I work in little cottonwood canyon and haven't been able to keep all of your options/revisions and information straight. It's also been hella depressing to try to read the information that would vastly upset the day to day flow of my life. I want to be objective but also reiterate what I feel like is the experiential side of the public that hasn't really been addressed as well as going back to the original problem were solving for.</p> <p>The problem is traffic as I understand it. but the reason there is traffic is because this area is pristine, and beautiful and nearby a thriving city. I really don't think brining anymore city than we have to up canyon is in our best interest. I'm not a save our canyons person, be I am someone that wants to know when is enough.</p> <p>I also believe in working harder not smarter. We have so many easy minimal physical changes that can be implemented today or in a shorter period of time:</p> <ul style="list-style-type: none"> * incentives weekday use, ski resorts brining back weekday passes, working with companies to incentives sending their employees to the mountains during non peak skiing. * the last two years have been pretty surprisingly less traffic in the canyon. Something you'd expect would the opposite with covid making carpooling less desirable. What was different the last two years was the two resorts taking turns on parking reservations. It's a simple low cost solution, that works off existing infrastructure, and requires a handful of entry level workforce to achieve (which would be automated with gates etc). <p>Those two things alone would alleviate immediate stress, and buy SIGNIFICANT time of city grown, and raising for funds for appropriate infrastructure.</p> <ul style="list-style-type: none"> * Everyone really wants the buses to be the solution, we really really want it. There's problems with getting workers to the union and getting enough drivers now and that's super unfortunate, I wonder what can be down to make the job less demanding more part time, with still significant benefits. It's type we start thinking a-typical and questioning the business status quo and do better for the working class. * We also need more parking at park and ride areas, with proper protection of our vehicles from break ins and catalytic converter theft. It doesn't alleviate any stress if we are too paranoid to take the bus. <p>In regards to the existing proposals it seems like we have completely forgotten what we are solving for.</p> <ul style="list-style-type: none"> * Traffic just at the base of the canyon at any of the proposed locations just moves the traffic there. to an area of public people did nothing to receive this massive project in their backyard. * Traffic in the canyon can take a a considerable amount of time on accident and bad road nights, but to have a gondola that takes more time in travel time let alone loading and unloading than driving the canyon (even moderate red snake levels) is so completely assinine it missing the goal of what you were setting out to solve entirely.
36690	Allyson Kiekhaefer	<p>As a member of the Salt Lake City community that frequently visits Little Cottonwood during all seasons, I believe the gondola is not an effective solution and do not support. If the busses came at a more frequent schedule, I would take them instead of my own personal vehicle. The response to comments mentioned that summer travel did not warrant an extended bus schedule, but I have often been in traffic during the summer months. Also, it is concerning that a visitor capacity analysis was not done during this analysis. How can a gondola be proposed when you do not have any idea the capacity? I am also concerned with the longevity of the gondola. When it no longer is in use, who would be responsible for taking it down? I fear it pollute the canyon long after it is used.</p>
38362	L S	<p>Stop using tax payers' money to support Alta and Snowbird No Gondola!</p>
36691	Jacque Tietjen	<p>Please don't ignore other seasons. They are just as busy. Also, Why has Big cottonwood not been addressed for any consideration in this project? Traffic is just as bad if not worse in BCC. Both canyons have seen substantial traffic for the leaf-peepers this fall and see ample traffic all summer long. And let's not forget all the people that drive up LCC for Oktoberfest at the Bird and then drive down impaired. The gondola won't address any of those problems as it's to be functioning in the winter, no year-round. UTA is definitely not helping by suspending some bus routes and minimizing trips up/down both canyons. All resorts need to implement parking reservations and a toll needs to be added to both canyons.</p>
36692	Nathan Sherbotie	<p>Please reconsider and don't move forward with the gondola. As an avid outdoorsman and nature lover who enjoys skiing and dislikes crowds as much as the next person, this option is not the right one for Utah, Utahns, or our canyon. We need to focus on saving the beauty we have and adapting our lifestyles and land management around the gifts that our landscape provide. This gondola will forever change and scar the canyon and does not reflect the Utah I know and love and want to continue sharing with others for years to come.</p>
36693	Ben Stevenson	<p>This is a blatant misuse of public funds to benefit private companies. Both Snowbird and Alta should pay for this if they want a gondola up the canyon to serve their interests and revenue streams. Literally every other option proposed was better than the gondola.</p>
36694	Jen Nelson	<p>I am disappointed to think how LCC will be so completely impacted for the benefit only of the builders of the gondola as I don't believe that the gondola will be used as much as even the ski resorts believe it will. It also is unacceptable that any group other than Alta and Snowbird should pay for the gondola as it is obviously being considered at the expense of all other activities and residents of Little Cottonwood Canyon.</p>
36695	Rina Corson	<p>I oppose the use of taxed public funds to build the gondola in LLC.</p>
36696	Mark Dixon	<p>I urge the consideration of other alternatives to a gondola for Little Cottonwood Canyon. Frankly, it would be heartbreaking to see the canyon cluttered with a structure like a gondola, particularly considering the invasive construction that would be necessary. Please, let's not subject the beautiful canyon to the abuse, which construction of a gondola would represent.</p> <p>Thanks for your thoughtful consideration.</p> <p>Regards,</p> <p>Mark Dixon</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36697	Ethan Curtis	Do what the people of Utah want and cancel the gondola plans!
36698	Jackson Sandstrom	I don't believe that the Gondola is the way to fix this issue because of the all the negative impacts that it will have drastic impacts on climbing, environment (flora and fauna) and wildlife, watershed. It could be helpful but the cons out way the pros of this projects.
36699	Chris Poynor	At a time with so many needs in the State of Utah, to take Half a Billion taxpayer dollars to fund a pet project that only benefits two private ski resorts and numerous politicians is an egregious act. This has been predetermined from the start. NO to a GONDOLA. NO to widening Wastach.
36700	Jum Brannan	No. The public taxpayer should not furnish a gondola for private businesses
36701	Trey Zobell	I am against the gondola due to the capital cost required to implement it when there are many other solutions that could have large major impacts for a much smaller cost. I also think 22 tram towers lined through LCC would be a disgrace to the beautiful landscape and would ruin the canyon views. I recently was able to listen to the president of Alta ski resort speak at the U of U, and while he said he is for the gondola he also mentioned that we should not be jumping the gun on this project. Most of the traffic in LCC is due to avy control when it snows. I recently learned that the current systems used to do the avy control in LCC are outdated and often take up to 2 hours to complete. In a comparable sense, avy control for Alta can do the same amount of work in about 15 minutes. They do this through Gazex which drops the remote charge to remotely trigger the avalanche. If I remember correctly there may be certain land restrictions that limit the use of Gazex avy control in areas of LCC but could be lifted through the Utah state government (at least that is the impression I got from the president of Alta when he spoke). I think implementing a Gazex system for avy control should be put into place first before spending \$600 million on a gondola that has a fixed capacity. I also think we should look to increase the bus capacity for LCC and BCC. Every time I have ridden the bus it is filled to 100% capacity. There is much demand for more busses (at least on the weekends and pow days). It was also discussed by the president of Alta that electric buses may be a better alternative because they have more power to have a fully loaded bus keep up with traffic. Pretty much Electric buses result in the bus moving faster which means the traffic on the road won't be held up by a slow-moving diesel bus. To sum it up let's not do the gondola and hold off on its consideration until lower-cost alternatives have been implemented such as: - Gazex Avalanche Control - Increased busses (electric)
36702	barton todd	if you build a gondola, future generations will be applauding your foresight.
36703	Linda Potter	I look up at the mouth of Little Cottonwood Canyon every day. While I am not pleased with the idea of looking up at 200+ foot gondola towers, I am even more concerned about what might happen if the gondola system were to break down with passengers on board, especially in high wind conditions. I have lost parts of my roof in the high winds that funnel out of the canyon during storms. While I do not doubt that the gondola system will be designed to withstand such winds as are frequent here, all mechanical systems are subject to breakdown, and my concern is how people could be rescued from a height greater than a 20-story building, especially if such a rescue would need to be enacted during a storm. While the chances of an accident involving the gondola system appear to be much less than most of the proposed alternatives, the magnitude to the challenge of rescuing passengers from a suspended vehicle at such heights concerns me. Utah is known for our disaster preparedness plans, I hope that the potential disaster scenario for the gondola project has been addressed.
36704	Jack Gambassi	The gondola will represent too intrusive of a change to LCC and will represent just another barrier to get charged privately for. The better alternative would be to close the canyon to traffic completely (except for residents) and to provide frequent bussing up the canyon from a park and ride at the mouth. This would be more cost effective and sustainable for the future of the canyon.
36705	Alvin Koritz	Needs to be done.
36706	Peter Anders	To Whom It May Concern: I just wanted to make my voice count in the Gondola alternative issue. I AM STRONGLY AGAINST THE GONDOLA CONSTRUCTION IN THE LITTLE COTTONWOOD CANYON. Let me explain my WHY I am against and what I would like to see instead. First of all the gondola alternative is hugely expensive (500K-1B!), benefits only the ski resorts there (yet everybody is gonna pay the bill) & has a very negative impact on the LLC environment (eye sore, trails destruction). The solution should be focusing on the bus system that I have been using for decades as a resident/skier. The problem that I see with the bus system is that the buses don go up often enough during the busy times & that there is lots of wasted time checking for tickets; the busses should be free for all; not just season pass holders. Honestly, what are we doing trying to put a freeway to the resorts no matter what so the Resorts make profit and the rich get richer? I have seen a huge impact on the quality of my ski experience deminish with the sales of the ICON pass and the resulting crowds. The Gondola Alternative is going to make things even worse and we all gonna be paying for it as a result.
36707	Arthurs Tim	My wife and I do not want the gondola built at all. Increase buses
36708	Roy Bartee	I am sure I am echoing what others have probably more eloquently written. The gondola will be the biggest waste of tax payer money since the Great Salt Lake Pumps. The gondola does not solve any of the other problems in the canyon: Trailhead over crowding, Bicycle safety, access to world famous climbing. Please scrap the gondola and use tried and true methods such as fees to enter the canyon, by all modes of transportation (foot, bike, vehicle); use time entry permitting, for access to ski areas, trail heads, just driving through. Go ahead and building the parking lot, but use shuttle and extra buses. Pay the bus drivers a living wage and you'll have enough drivers. Shuttle at national parks work great. There are so many examples of things that work, you don't need to reinvent the wheel. The gondola should not be built!

ID	Full Name	Comment
36709	Lois Peterson	<p>Don't build the Gondola. The math doesn't add up. At best 30 Gondolas leaving every 2 minutes with 35 passengers in each is 1050 people per hour. If you put 2500 cars in the parking lot with an average of 3 people per car, it will take you 7.14 hours to get all those people up the canyon assuming every Gondola is full and leaves in the 2 minute window. Then, if you have buses to add to the line of passengers, it will take even more hours. Increase electric bus service from hubs near the mouth of the canyon and add parking decks at the resorts.</p>
36710	Shayna Pugh	<p>I am writing to express my concern over the future of Little Cottonwood Canyon. Having grown up in the mouth of the canyon, I have a strong interest in protecting the area. With recent population growth and interest in skiing, traffic in the canyon is increasing dramatically during the ski season. There have been several occasions on which my family and I were unable to get back to our home without waiting over an hour for traffic to clear up. While it is true that this problem is in urgent need of a solution, I am concerned that several of the recently proposed alternatives will be destructive to the canyon's natural environment.</p> <p>As you are aware, UDOT has proposed the following solutions to reduce ski traffic problems in the canyon: The Enhanced Bus System with roadway widening, the Enhanced Bus System without roadway widening, the Gondola, and the Cog Rail. Each of these alternatives will have significant environmental impacts on Little Cottonwood Canyon. However, the alternative with the least negative impact on the canyon is the Enhanced Bus System without roadway widening. Through the course of this letter, I will present major reasons to approve the Enhanced Bus System Alternative with no roadway widening.</p> <p>One of the primary reasons that I support the Bus Alternative is its relative lack of permanence. The installation of a massive gondola or cog rail is largely irreversible. Widening the road for the bus system will also cause damage to the canyon. The only relatively permanent aspect of the Bus System would be the large parking lots that must be constructed outside the canyon (these parking lots would have to be constructed for the Gondola Alternative as well). When choosing between several potentially destructive solutions, it is best to start with the least permanent solution then adapt to improve as needed. Approving the Bus Alternative will protect the canyon from the permanent installations involved with other alternatives.</p> <p>UDOT recently constructed an Environmental Impact Statement (2020) which covers the effects of each alternative. This statement included several categories of natural environment impacts including floodplains, wetlands, streams, and critical habitat. For each of these categories, the Enhanced Bus System without roadway widening had either the lowest or equal impact. Additionally, the Enhanced Bus System alternatives were the only alternatives consistent with local and USDA Forest Service plans for the area. This study makes it clear that the Enhanced Bus System without roadway widening is the most environmentally-friendly option.</p>
36711	Aaron Dekeyzer	<p>32-104 "As part of the Final EIS process, UDOT updated the La Caille parking structure from 1,500 parking spaces to 2,500 parking spaces and conducted a new traffic analysis and still found that North Little Cottonwood Road and Wasatch Boulevard would operate at acceptable levels of congestion. The 2,500-parking space structure would eliminate the need for the mobility hubs and bus service."</p> <p>This is an increase of 66% in the size of the parking structure. Why did this change? One of the major issues concerning the affected neighborhoods and communities is the induced demand this will bring. We never saw this coming, and is a perfect example of how misleading and deceitful the process has been.</p> <p>What is the new traffic analysis and where can I see it? What was level of service for each road? How exactly does the 2,500 structure eliminate the need for bus service?</p> <p>32.7 D "With the additional capacity, UDOT expects that there would be about a 4% increase in traffic on Wasatch Boulevard compared to the No-Action Alternative."</p> <p>Please explain this more clearly. If there is only a 4% increase why the need to expand the road? What "traffic" is this referring to? Ski traffic? Commuter traffic? Which direction?</p> <p>Based on this information I am concerned about the traffic study documents and data provided by Fehr & Peers and Hales Engineering and believe that similar and more specific questions from others needs to be reexamined.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36712	Rich Wilcox	<p>UDOT LCC Planners: Please reconsider your support for construction of a gondola in LCC as the "preferred alternative" for mitigating traffic impacts in this canyon. The gondola option comes with an enormous price-tag that all Utahans will be on the hook for for a very long time, while not doing anything to reduce or control traffic on the highway. By your own analysis, the only benefit will be a potential increase in numbers of ski area visitors. The enormous number of us Salt Lake County residents who love to visit the canyons for purposes other than resort skiing will get nothing in the way of improved transportation options, but will get stuck footing the bill for an incredibly intrusive construction project, one that destroy many of the sites and aesthetic experiences that we come to the canyon to enjoy. Please re-visit the dozens of much more affordable options available, such as improved bus service, various forms of toll-based access, and flexible lane structures. Wisdom is not always in crowds, but the people and public leaders of Salt Lake County have articulated strong opposition to the gondola option, and have made a strong case for why other options must be pursued. UDOT needs to listen to this council.</p> <p>Thank you for your consideration of these comments,</p> <p>Rich Wilcox</p>
36713	Shauna Rohbock	<p>AGAINST gondolas in little cottonwood .. Very interesting on the timing that you dot announces they will have reduced bus service for skiers in the canyon this winter! huge expense that is not justified for 6-7 days days of inconvenience. I am a skier and would never take the time or \$ to use the gondola! It will be a huge blight in our pristine canyon. The only ones that want it are UDOT and shameful politicians! Please listen to the people! We are paying attention to the politicians that are for and against the gondola project when it comes time for re-election!</p>
36714	Casey Fuller	<p>Once it's there, it's there. Let's not put a permanent tattoo on the face of Utah's best quality terrain.</p>
36715	Gabby Nelson	<p>I oppose the gondola in little cottonwood canyon and so does seemingly everyone I know who cares about our beautiful landscapes. It would be a tragedy to approve construction of the gondola and in complete disregard towards what the people of salt lake valley care about, all to ensure money which doesn't matter in the end matters</p>
36716	Nicole Neff	<p>I oppose the gondola. Tax payers should not be paying to benefit private ski resorts. The gondola will not stop the build up of traffic going to the parking for the gondola and would not offer any benefit for those looking to use the mountain for other activities such as rock climbing or hiking. The future of skiing is uncertain with climate changes and it is an expensive gamble to force this upon people to pay for when it is not a guarantee that these ski resorts will still be in high demand in the future.</p>
36717	Quinn Silcox	<p>I live within a couple miles of the canyon and I'm opposed to the gondola. I believe there are more fiscally responsible ways to clear congestion of the canyon. I also don't believe public funds should be used to subsidize private industries. I don't believe tax payers should foot the bill to get skiers up the canyons. Please expand bud service.</p>
36718	Madeline Dunford	<p>I do not support the gondola in little cottonwood canyons. It will destroy the landscape forever.</p>
36719	Lisa Cardone	<p>We are strongly opposed to a Gondola. It would ruin the serenity of this lovely vista and undermine the stability of the roadway. The cost to taxpayers cannot be justified for 4 months of traffic.</p>
36720	Sarah Baker	<p>Adding a gondola in our canyon is a mistake. Little Cottonwood Canyon is enjoyed because it's nature. Adding a gondola will strip away the rugged, beautiful canyon. It requires paving over acres of wild land for parking lots, adding multiple large towers for the gondola to operate. We go to nature to get out of the city, by adding a gondola we're making Little Cottonwood Canyon an extension of the city. Imagine hiking your favorite trail and looking up at the trees or sky and all you see is wires and a gondola. Leave our canyon be.</p>
36721	Christeen Munford	<p>Please stop the madness. We need these canyons to be the same serene and special place in they've always been. Not another attraction! Protect our canyons so we can protect our mental health and overall well being here.</p>
36722	Robert Douglass	<p>The EIS fails to address the increase in Canyon visits fostered by creating a major tourist attraction - the world's longest gondola. This will increase Canyon visitation throughout the year and likely have a greater impact on summer visitation. As a result, the commercial development planned by members of the Gondola Works advocacy group will see a large increase in the value of their property and will be stimulated to create yet more tourist facilities to encourage yet more Canyon visits. The resultant traffic, noise, visual, and people pollution at the base of the Canyon will be a significant environmental impact - one not addressed at all in the EIS. This EIS omission is negligent in considering the environmental impact caused by a gondola that will certainly encourage accelerated commercial development at the bottom of the Canyon and even more tourist visits and traffic into the Canyon.</p>
36723	Keith Brady	<p>Please vote yes on the gondola! It seems expensive but makes sense over time.</p>
36724	David Hotchkiss	<p>As a local resident, I fully support the proposed gondola solution with la Calle parking. I encourage the team to consider interim gondola stops for hiking / climbing / biking but feel the solution as it exists is a massive improvement. Very excited by the continued development and hope we can continue to support the gondola solution.</p>
36725	Paris Wagner	<p>This will disproportionately impact almost all other types of recreation in LCC that are not skiing. Hiking, biking, climbing, birdwatching, etc. will all be negatively impacted during construction and beyond.</p>

36726	SueEllen Cummings	<p>I recommend more busses. I live just 5 minutes from the entrance of Big Cottonwood. I dropped my son and friend at the bus stop at the bottom of the canyon. Every bus came nearly full. Only a couple of people could get on at a time and they had to wait out several busses. They waited 1.5 hours to finally get a bus. I could have driven them up and been back home by the time they were able to get on a bus. If the busses ran more efficiently more people would take it! There is so much traffice that what would normally take 20 minutes from our house to the top of Big Cottonwood can sometime take over 2 hours to ski. It blocks the traffic long before the canyon. It would be true for the people going to the Gondola blocking the traffic long before the canyons. If busses were every 10 minutes more people would take them. Just run them during peak season. Certainly the tourist \$'s coming from skiers can help defray the cost. A gondola would bring more curious tourists and more congestion. It does not seem to be the answer for the canyon woes.</p> <p>It is expensive and would ruin the pristine look of the canyons. Other things can be tried first for less and not a permanent impact with a gondola!</p> <p>Please LISTEN TO THE LOCAL HERE THAT LIVE IN THIS AREA!! We all want to enjoy the canyons!!</p> <p>I do not want to spend more taxes on this 1 canyon!</p>
36727	Kay Ward	<p>My name is Kay Ward and I am a constituent from Millcreek. I am commenting because my relationship with LCC is recreational, I love to ski, hike and just spend time up there during all 4 seasons. I urge UDOT to abandon Gondola B. I do not support it because it will ruin the landscape of LCC and so many acres of land as well as honestly only benefitting a small group of people with money. Have you considered alternative traffic solutions such as electric buses. Thank you for your time and effort to accurately represent your community. Best, Kay Ward</p>
36728	Daxton Hunter	<p>Please don't put a gondola in</p>
36729	Landon Crowther	<p>Dear Little Cottonwood EIS,</p> <p>I am writing today to vocalize my opinion about the traffic problems we currently face today. I am extremely disappointed in the proposed "solution" about installing a gondola in Little Cottonwood Canyon, and would like to address a few talking points.</p> <p>1. Affected Users. The gondola is a massive engineering project which would require millions of taxpayer dollars. These costs are funded by local taxpayers, but unfortunately many of these taxpayers will not even use the infrastructure. One of the biggest flaws with the gondola is the fact that it will only service the Alta and Snowbird ski resorts, which means that only those who are riding at these resorts will use the gondola. This does not appeal to many of the other users of the canyon, such as hikers, snowshoers, backcountry skiers, climbers, and anyone who recreates in the canyon but does not necessarily stop at those locations. How is it fair that local tax payers are paying for infrastructure that only benefits private companies?</p> <p>2. Climate Change and Canyon Longevity While we all would love to imagine a world where the classic Utah storms are still present 30-years from now, the sad truth is that this is not the reality we live in. At the rate climate change is progressing, it is unlikely that the "greatest snow on earth" will still be around in full-force many years from now. If the gondola is installed, we will have spent millions of dollars on a temporary solution to a problem that will no longer exist. That money could be much better spent focusing on reasonable solutions such as additional busses, tolling, and shuttle services.</p> <p>3. Public Opinion. EIS claimed they received over 14,000 responses from the initial comment period. However, I have yet to see any statistical information on the consensus from the thousands of responses received. If the public was overwhelmingly pro-gondola, why were these statistics not shared?</p> <p>Overall, I believe this is a terrible solution. It will permanently destroy the canyon, causing an eye-sore to all those who recreate. Additionally, it only benefits the ski resorts in little cottonwood, but does not impact the thousands of other canyon users. Lastly, this is a solution to a problem that unfortunately may not exist anymore when climate change catches up to us. We should focus on common-sense solutions and prioritize enhanced bussing, tolling, and shuttle services.</p>
36730	Patricia Hise	<p>DO NOT built gondola for 2 private ski resorts on tax payer \$ many other alternatives Use \$500m towards The Great Salt Lake !! You won't have skiing without the salt lake</p>

36731	Stuart Derman	<p>As a resident of Salt Lake County and frequent user of Little Cottonwood Canyon, I'm extremely invested in the outcome of this potential project, and hope to utilize this public comment to clearly and concisely express my perspective on the Gondola project in Little Cottonwood Canyon.</p> <p>I've been deeply involved in this debate as a member of the Central Wasatch Commission Stakeholders Council, Executive Director of Wasatch Mountain Arts and engaged member of our beloved Wasatch community.</p> <p>The gondola is without question a mistake that will permanently alter one of our state's most incredible natural treasures. But the many reasons that this option is a mistake, goes far beyond the visual alteration of the canyon views.</p> <p>1) Practicality - It is clear that consideration around where canyon users are coming from has not been accurately accounted for. We need a solution that gets canyon users from their local area to the areas they wish to enjoy. This involves looking at bus routes from Salt Lake City and other towns/cities where canyon users originate their trips rather than just the base. The proposed Gondola will not make sense on the majority of winter days for users resulting in a high likelihood people will just drive up the canyon anyway. I'm one of them. Why would someone commit to a guarantee of slower transportation vs the risk of making it up and down the canyon faster.</p> <p>2) Ecological Impact - Little Cottonwood is a key watershed. We can't even have dogs in the canyon. How can we possibly accommodate the construction from 22+ towers being constructed and all the roads that will need to be built. This seems like a nightmare for our water supply.</p> <p>3) Traffic Estimates - The numbers presented around current vehicle volume and projected volume simply don't add up. They look hyper inflated to justify the project.</p> <p>4) Long Term Traffic Volume - While foreseeable future winters will hopefully remain strong, the longer term outlook is not as positive. It seems like this long term growth justification for the project is based on unrealistic snowfalls and powder days.</p> <p>5) Only 2 Stops - The Gondola only would stop at Alta & Snowbird. What about that many other places in the canyon that people use? Backcountry skiing and winter human powered recreation is growing at rapid rates and this project doesn't account for these users.</p> <p>6) Not Year Round Solution - Based on all the messaging, the gondola is meant to solve winter traffic. But what about the</p>
36732	Martha Shaub	<p>I do not support the gondola. I believe it is an environmental assault for that canyon, too expensive for tax payers - especially since many do not travel to the resorts. I believe there are strategies that were not considered that would be better.</p>
36733	Ahad Sabet	<p>I am an SLC resident, UT voter, and frequent user of LCC. I access LCC in various capacities both summer and winter. I am opposed to any of the Gondola options. If anything is to be done, an enhanced busing and fee station option would be preferred. Please do not disfigure our gorgeous canyon.</p>
36734	Sallie Shatz	<p>This is a waste of tax payer money. Why are taxpayers paying to solve a problem that Alta and Snowbird have created? SLC might not even have snow by the time this gondola would be finished! Where would people park? Our tax dollars should go towards saving the Great Salt Lake so we can live here.</p>
36735	Richard Fugate	<p>I am agnostic. I ski and will use whichever one is selected. The gondola has a cool factor but how much will it cost to ride? I ride the skibus now and find it works fine. Another lane and more busses may actually be my preference. Either way I'll have to drive to get to trailheads unless busses provide more stops.</p>
36736	Myles Varga	<p>As an avid user of Little Cottonwood Canyon year round, I want to say that I oppose the idea of a gondola being built for a couple reasons. First, I oppose the idea of our tax dollars being used to fund a form of transportation that would not only be highly inefficient at removing car traffic to ski resorts, but will also only benefit the ski resorts. Furthermore it will be a huge eyesore for one of the prettiest and most accessible sections of nature from the Salt Lake valley. The solution to the business in the canyons isn't a gondola, it's more bussing routes (also mad that there have been two bussing routes that went to the canyons that have been cut from service), or, limiting tickets sales, such as what powder mountain does. Overall, the gondola is a costly and inefficient waste of tax payer dollars that will only serve too slightly benefit two ski resorts (one of which doesn't even allow snowboarders, who are about 1/3 of ski resort users). Overall bad look.</p>
36737	Brad Townley	<p>I strongly oppose UDOT's plan to build a gondola in Little Cottonwood Canyon. More bussing would provide greater traffic reduction without the footprint of the towers, and would allow for greater flexibility in public transit based on need during low volume periods for Little Cottonwood Canyon.</p>

Lastly, this is a solution to a problem that unfortunately may not exist anymore when climate change catches up to us. We should focus on common-sense solutions and prioritize enhanced bussing, tolling, and shuttle services.</p>
36739	Robert Douglass	<p>The EIS addressed the visual impact to tourists staying in the lodges at the ski resorts and proposed potential mitigations such as using pole towers rather than lattices. However, tourists are impacted at most for a few days to two weeks. Residents at the base and in LCC are impacted full time forever; yet, no mitigation of visual impacts was considered for residents, even though the impact to them is much higher than to temporary tourists in ski lodges. The EIS is negligent in failing to consider mitigations for gondola impacts on individuals who will be impacted the most, while only considering mitigations for individuals with very short-term impacts.</p>
36740	Jordyn Heyn	<p>My name is Jordyn Heyn and I am a constituent from East Millcreek. I am commenting because my relationship with LCC is related to skiing and hiking. I urge UDOT to abandon Gondola B. I do not support it because of the crucially negative environmental impacts as well as a disregard for canyon users other than skiers and snowboarders. Have you considered alternative traffic solutions such as an electric bussing system such as that used in Zion National Park or simply increasing UTA bus routes to and from the canyon with enforced parking fees at the resorts? Thank you for your time and effort to accurately represent your community. Best, Jordyn Heyn.</p>

36742	Tina Dinh	<p>I do not support the construction of a gondola through LCC. It's a wildly expensive project that can easily be solved by increasing the number of buses that run. It will not solve Salt Lake's air quality problem in the same way that Texas hasn't solved its traffic problems by adding more highway lanes.</p>
36743	Richard Jirik	<p>While I agree with many of UDOT's recommendations as set a forth in the LCC FEIS for addressing the transportation issues facing Little Cottonwood Canyon, I disagree with UDOT's selection of Gondola Alternative B as the preferred alternative. I cannot see the logic in committing to the eventual construction of the gondola and La Caille base station/parking structure unless the Enhance Bus Service alternative (which UDOT is essentially recommending in the interim for the Gondola B Alternative until funding for the gondola and base station are procured) is first implemented, fully tested, and refined as needed, in order to assess if the Enhanced Bus Service alternative is a viable solution to the traffic congestion and safety issues plaguing Wasatch Boulevard and SR 210 during the ski season. The performance and impacts of the Enhanced Bus Service Alternative would be assessed after a minimum five year period had elapsed. Only then should a decision be made on whether to proceed with the execution of the Gondola B Alternative or the Enhanced Bus Service in Peak-Period Shoulder Lane (PPSL) Alternative.</p> <p>I believe that UDOT should recommend the Enhanced Bus Service as the preferred alternative for the ROD, for the following reasons:</p> <ol style="list-style-type: none"> 1) This alternative has the least environmental impact to LCC and Little Cottonwood Creek, and would have minimal visual impact to the scenic views; 2) It has the lowest estimated cost of all of the primary alternatives evaluated as per the FEIS; 3) The alternative is scalable with respect to the number of buses to be operated. 4) Implementation of this alternative would not preclude the possible selection of another of the primary alternatives UDOT has identified, if the Enhanced Bus Service alternative is determined to be 1) unworkable, 2) ineffective in reaching performance goals (i.e., reducing traffic congestion, travel times, safety metrics, etc.) as set by UDOT, and/or 3) cost prohibitive during its full scale operation. <p>I would agree with UDOT that from an efficiency and safety perspective, the Gondola Alternative B makes the most sense for transporting skiers to Snowbird and Alta. But at what cost ? Moreover, there are other factors that need to be considered when evaluating the merits of Gondola Alternative B, among them funding sources, the need to prioritize and address other local and state issues in the face of finite state revenues, and the long term impacts of climate change on Utah's ski industry. Unfortunately, these appear to not to have been considered by UDOT in selecting its preferred</p>
36744	Ann Golden	<p>As an artist it would be a shame not to be able to access trails on the way up the canyon to be able to paint our beautiful mountains.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36745	Rachel Langston	My name is Rachel and I am a constituent from Sandy. I am commenting because my relationship with LCC is so important. I urge UDOT to abandon Gondola B. I do not support it because of the distraction of the natural beauty of the canyon as well the negative impacts this plan will have on the environment. Have you considered alternative traffic solutions such as additional buses and shuttles? Thank you for your time and effort to accurately represent your community. Best, Rachel.
36746	Brandon Agranovich	<p>I am an outdoor enthusiast, a climber, and a skier. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction.</p> <p>The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered. Thank you!</p>
36747	William Flury	Since SLC Utah has the worst air in the Country during the Winter Months and now during the Summer Months due to air pollution and Fires the Canyons need to be preserved with a NON POLLUTING SOLUTION ie EV Buses or Gondola/Trams like Europe. No Discussion.
36748	Julie C	One specific concern I have for the gondola is weather-related, more specifically, wind gust thresholds for operating the gondola. I'm curious what percentage of winter storms would produce wind gusts high enough to cause temporary or extended gondola closures. On these days, which will coincide with busy LCC travel days, the gondola would not solve traffic problems.
36749	Scott Nelson	No gondola! What are you thinking? Ruining the canyon. Put a toll booth up and charge for going up the canyon. Use the money to keep the canyon clean and not over used.
36750	Aaron Cheatwood	Go ahead w/ the gondola. They are not that ugly and I think it could be a really cool solution
36751	Old Sawmill	1. Utah taxpayers should not have to fund a gondola for the benefit of Little Cottonwood Canyon users and Snowbird/Alta. Let Snowbird/Alta pay for it and bake the cost into the price of their passes and lift tickets. 2. The solution to traffic in Little Cottonwood Canyon is to turn it into a toll road. Then the people who use it will be the ones paying for it.
36752	Angela Mastaloudis	I am opposed to the gondola for a variety of reasons, first and foremost because it is entirely unnecessary considering how few days of congestion actually occur in LCC. Those few days could be dealt with through increased bus access, tolls for private cars and/or mandatory carpooling. The gondola is simply going to transfer the congestion and parking issues into the valley while destroying the beauty and ecology of LCC. It is an absolutely impractical project designed to enrich a few developers while destroying the beauty of our canyon for future generations. I fully oppose the gondola.
36753	Chase Brown	Change is need yes, this is a horrible option though.
36754	Derrek Larson	Please do not build a tram or gondola up little cottonwood canyon. It would personally negatively impact me by degrading the beauty of the place where I grew up, live and recreate. I think increased bus service and tolls imposed on cars would limit the vehicle traffic. Quite honestly, we all know how bad traffic can be, but we deal with it. The gondola or tram would only benefit the Utah Lawmakers (who own the land where the gondola is proposed) and the developers and ski resorts. It will negatively impact our watershed and the natural beauty of those who live nearby, not to mention the tax payers of Utah who will be on the hook for the price of the project.
36755	Lloyd Dickson	Build it!! Electrify it and run it year round. This will greatly help in all ways. It's a nighare during the winter months getting up and down the mountain.
36756	Shane Moreno	<p>At first I thought the LCC Gondola might be a good idea but after many months to review I am completely against it for may reasons:</p> <ol style="list-style-type: none"> 1) Corruption: The two politicians that purchased the land by LaCaille (sp?) just to turn around and sell it to the State is very corrupt. They clearly had insight into UDOT's plans and should not be profiting from Tax Payers this way. 2) Tax Payers Funding Private Businesses: Snowbird & Alta will directly profit from the gondola being funded by tax payers. Tax payers should not be responsible to provide a gondola delivering patrons to private businesses. Instead they should be delivering solutions to their customers outside of public funds or at the very least paying much of the tab. 3) Ikon: The Ikon Pass has clearly created much of this traffic mess without any skin in the game. They are profiting on the sell of their underpriced passes but do nothing to help alleviate or pay for the road improvements, busses or gondola. 4) Environment: Roads will need to be built & maintained to install and service the gondola towers. Trees will be lost, animals misplaced, erosion increased & our watershed potentially polluted. 5) Aesthetics: Placing a Gondola in LCC will be highly visible and deter from the natural beauty of the canyon. 6) Slow The Flow: Traffic is already an issue in Cottonwood Heights. Widening Wasatch & adding a Gondola Base on Wasatch will simply create more traffic, more noise, more pollution. This corridor next to the mountain should be protected and tamed with Traffic Calming measures rather than built up. <p>Residents & tourists alike visit this great state to enjoy the beauty & to recreate so why destroy the purpose.</p> <ol style="list-style-type: none"> 7) Lack of Services: UTA has proven they cannot run a bus system efficiently or effectively up the canyons. Many employees & patrons try to catch the buses on Wasatch Blvd. just to learn the bus is full as it drives by. Furthermore its crazy the busses don't run during Octoberfest when thousands of people go up LCC to enjoy the festivities and many drive drunk down the canyon. Why arnt they offering services to make this event safer? Why would we build this crazy expensive gondola not to run it during the summer? The solution needs to be offered year round to mitigate the traffic and provide clean and safe transportation to all.

ID	Full Name	Comment
36757	April Sorbonne	I am strongly opposed to the wasting of millions of tax dollars to help benefit skiers when we have so many other issues that are not being addressed!!! This state should be paying more for quality teachers that will propel our students forward for Utah's future. This is a waste of Utah taxpayer's money!!!
36758	Earl Clegg	The Clegg family, consisting of 10 resident adult voters of Salt Lake County, adamantly opposes the expansion and construction in any form that alters in anyway the physical structure of the landscape of Little Cottonwood canyon. That so many should pay for the pleasure of so few is an issue best decided by individual vote of the residents of Salt Lake County. Unlike construction in the valley, there will be no new natural landscapes created in the future. We are limited to those we currently have. If we can limit attendance to national parks we can manage but, limit traffic in the canyons and still maintain equal and balanced access regardless of residential or visitor needs. Have we not learned anything from the disaster created in the destruction of the Great Salt Lake echo system?
36759	Jeremy Jolley	As a taxpayer and snowboarder I think finding this project is wrong. Not only do I not have public access to Alta ski area now I pay for public transport there. The Gondola solution just seems to benefit few people a few days of the year. Please take time if needed and develop a long term strategy for this canyon.
36760	Derrek Larson	Please do not build a tram or gondola up little cottonwood canyon. It would personally negatively impact me by degrading the beauty of the place where I grew up, live and recreate. I think increased bus service and tolls imposed on cars would limit the vehicle traffic. Quite honestly, we all know how bad traffic can be, but we deal with it. The gondola or tram would only benefit the Utah Lawmakers (who own the land where the gondola is proposed) and the developers and ski resorts. It will negatively impact our watershed and the natural beauty of those who live nearby, not to mention the tax payers of Utah who will be on the hook for the price of the project.
36761	Sharon Butterfield	I have lived at the mouth of Little Cottonwood Canyon for 22 years. We used to have a lot more snow days where the canyon was closed and people waiting to go up the canyon. The last few years I could count on one hand the number of days the canyon was closed due to avalanche danger. They talk about we are in a drought and won't have the lake effect due to the low level in the Great Salt lake. We don't need a gondola, just like the government built the water pumps at the great salt lake that were never used. There are many other options to deal with crowd control. More busses, charge a fee to go up the canyon like Millcreek canyon. Little cottonwood canyon road has been improved greatly with the extra lanes and not having to stop at the bottom of the canyon from Sandy. Listen to the people in our community! Put it up for a vote in our district and see what the public want.
36762	April M Love	One alternative, feasible alternative method of transport that would be less impactful on Little Cottonwood Canyon would be a streetcar system, similar to the "S" line in Sugarhouse. There need be only one rail line up/down the canyon, instead of widening the road for more car traffic.
36763	Lois Peterson	Don't spend \$550 Million on a Gondola. Not when according to those neighborhoods located at the mouth of the canyon, the number of days of traffic delays is in the 15-20 days a year! During the 2002 Winter Olympics, we added direct to venue buses from various locations around the valley and that worked beautifully and people used the buses! Some one made a crisis out of two events, the new resort conglomerate IKON pass and the Covid-19 pandemic. IKON created new demand for visitors because the IKON pass holder had lift tickets in-hand and all they needed was a place to sleep and something to eat. So, to use this new "toy" (the IKON pass) they decided to come to Utah, stay in the valley at a budget hotel (with efficiency kitchen) and rent a car to take them to Snowbird, Alta, Solitude, Brighton, Deer Valley and Snow Basin. Simple and inexpensive when compared to staying for a minimum number of nights at an on-site resort hotel and eating 3 meals a day in a restaurant! Then the Covid-19 pandemic happened and no-one wanted to be in a crowded bus with 44 other people they don't know for a ride up a canyon. So, everyone got into their own cars to drive the canyons. The resorts only allowed more than one person on a chairlift if they were from the same living group, i.e. "if you arrive together, you can ride together". Emphasizing the "stay with your bubble group". We are handling Covid much better now with vaccines, so people will go back to public transportation. Electric buses are convenient and eco-friendly. They also travel twice as fast as the Gondola will travel. Let's increase availability of bus transportation hubs by using high school parking lots near the canyon for Sundays and holiday, and Ward or other church parking lots on Saturdays. For about 10% of the cost of the Gondola, let's build a multi deck parking garage over the existing parking lot and put a grass roof on top. There will be less asphalt for Snowbird to plow and the water can be recaptured to drain down the creek. Alta could do the same thing! Let's do what we all did so well in 2002 and work together to solve a small problem that only is an issue a few days a year!
36764	Janelle Heck	This gondola is a very poor solution to a few days of traffic in the canyons. Our taxpayer dollars should not be used to benefit a few, mainly snowbird and alta. Utah needs to get real...less snow due to climate change. This whole thing reminds me of the giant pumps in the west desert... what a joke.
36765	Evelyn Leavitt	Originally I was in support of the Gondola, but after listening to news and comments, I am now opposed. The monies spend on the Gondola, should be redirected to schools, homeless, mental health services and drug rehab. The Gondola will not be for "everyone" but for higher income people who can afford skiing. Thank you
36766	Tim Thomas	I've skied at Alta since I was 10 years old. I worked at Alta from 1982 until 2012. Needless to say, I've driven the canyon 1000's of times. There were days when it was frustrating and a little scary driving the canyon, but a gondola is not the answer. More carpooling, buses, perhaps another lane would help. One problem is there are so many more people trying to enjoy the canyons now. The state of Utah did way too good of job promoting and advertising to the world the beauty and opportunities of the state, for businesses, for skiers, for southern Utah's amazing country. I moved to Torrey, Utah, in 1974, where I'd live 7 months of the year. You can only imagine the growth I witnessed around Torrey and Capital Reef since the 70's. The Utah Office of Tourism is mainly responsible for the huge increase in visitors to the ski areas and the national parks. They should be sorrow for the unbridled promotion and advertising they did. Thank you

36767	Kellen Busby	<p>I'm very happy to hear that you're going to implement the Enhanced Bus Service Alternative first because it is clearly the better option. Certainly, a gondola ensures the highest likelihood of an individual making it from their home to the ski resort. But, we should not be optimizing for an individual getting to a ski resort.</p> <p>The Enhanced Bus Service Alternative can be implemented immediately and with progressive enhancement. We get immediate benefit that should only increase with feedback and tweaking. The gondola is permanent and foolishly expensive. If it doesn't work we're stuck with it forever and we're not getting that money back. Besides, that money should be going towards more pressing problems - like, oh I don't know, the lake drying up?</p> <p>If saying that the gondola is the preferred option will quell the people who stand to benefit from the tax payers dollar from the gondola being built, then fine. But, the Enhanced Bus Service Alternative, if done well, will be the superior option far before construction of a gondola could even be started.</p> <p>Thanks for reading my comment,</p> <p>Kellen Busby</p>
36768	WENDY HENDERSO	<p>I am all in for the Gondolas. I don't want to fill the canyons with heavy big buses, big lanes going down the canyon still having problems with avalanches etc. yes I live in Cottonwood Heights, yes we have traffic, I am happy with the decision.</p>
36769	Mickey Randle	<p>My name is Mickey Randle and I am a constituent of Salt Lake County. I urge UDOT to abandon Gondola B. I do not support it because it will damage hiking trails and cost tax payers too much money. Thank you for your time and effort to accurately represent your community. Best, Mickey.</p>
36770	Susan Callister	<p>That is a huge amount of money for a three month issue. Let's try parking reservations or let private industry finance the project.</p>
36771	Thomas Niederee	<p>I am opposed to Gondola B as the preferred alternative to improve transportation in the canyon.</p>
36772	Adeline Apedaile	<p>The tram will not solve the problem and will destroy other recreational areas. More time should be put into finding another solution. Also the fact that they will be using tax payers money for this project is unacceptable.</p>
36773	Alan Peterson	<p>I am opposed to the Gondola alternative proposed. The visual impact to this alternative is terrible. It will ruin the visual beauty of the canyon. It will turn the canyon into a Disneyland Gondola ride. Ugly gondolas moving up and down the canyon frequently is a bad option. Throw in the ugly cables that are visual 24/7 and you have an environmentally ugly option. I prefer the bus alternative with the special use lane and the snow sheds. If done correctly, I think the snow sheds should significantly improve the reliability up the canyon during bad weather. Although the buses are not beautiful, they will have a less negative visual impact. Also the buses have the potential option of providing more stops along the route versus the gondola. Please select the bus option. Also in my review of the various options, I didn't see how the options are going to be funded. This should be addressed and communicated to the citizens before a final decision is made. Because the ski resorts are going to receive the most benefit from any alternative, they should fund a majority of the cost. Thank you.</p>
36774	Lindsay Hunt	<p>I am completely against the gondola. We need to try harder with the current infrastructure by providing better options using what we have. It doesn't seem right that the gondola option is only benefiting two of four ski resorts in the cottonwood canyons, let alone completely bypassing trail heads that are also flooded with cars and users. It is incredible wasteful to only serve snowbird and alta.</p> <p>I believe that we need to instate a fee system at the mouth of the canyon, increase bus traffic, incentivize carpooling/bus use, and limit the amount of cars in the canyon. This issue is due to over population and we need to be smart about how many people we are letting in the canyon at one time. It isn't sustainable to overcrowd any one ski area or our precious trailheads. Put a stop to this and make people understand that this is a limited resource. Look into what national parks are doing to limit usage in high numbers and keep trying!! Or go back to the drawing board and come up with a more sustainable option that applies to multiple users and not just two money hungry ski resorts.</p>
36775	Austin Owens	<p>Please do not build the gondola. One road is plenty. Let's keep LCC as wild as we can. Our footprint is big enough as is. This project would be a tragedy.</p>

ID	Full Name	Comment
36776	Steven Schmidt	<p>From: Draper resident and property owner since 2013.</p> <p>Note: My family had season passes at Alta ski resort the past 3 seasons.</p> <p>Comments: I strongly believe that a series of phased approaches to the traffic issues in LCC are appropriate and cost-effective. The current proposal states this approach as well. Organized carpooling, snow sheds in avalanche prone areas of the canyon, tolling or user fees and enhanced bus service should be employed first and evaluated for their effectiveness. Further, the parking reservation system in season 2021-22 at Alta improved crowding and parking issues. For holidays and weekends this reservation system should be employed for all available parking.</p> <p>The two evaluated all-in alternatives can be kept on the shelf until the lower impact and cost ideas can be evaluated.</p> <p>In the preferred alternative, the Wasatch Blvd traffic and parking capacity issues, solutions do not make sense and deserve further refinement. The bottlenecks are simply shifted upstream.</p> <p>I am also a frequent user of Millcreek canyon that has a fee structure- \$25 per year for seniors. The fee for use of that canyon is reasonable and customary (go to any National Park). A simple tolling feature is also another way to control traffic flow and intensity.</p> <p>The major deficiency of the gondola is that there are only 2 stops (the ski resorts). Many users of the canyon cram the available parking at trailheads to hike, run, boulder or simply get away from the hustle-bustle. The gondola does not serve those citizens.</p> <p>If the gondola moves forward in spite of the many governmental and public comments voicing opposition to it, funding is a major issue. As many others commented, the cost of the gondola SHOULD NOT be borne by the general public. It serves the ski resorts and skiers. They should fund it. I would vote no if it comes to a ballot initiative.</p> <p>Thank you</p>
36777	Michael Moore	<p>Yes, yes, and yes, please make this happen and offer locals some sort of incentive such as a discount would be my advice.</p>
36778	Becky Redding	<p>I am very much against the gondola!! only for a very few months, and for skiers only will it even be utilized - but we all have to pay the enormous price for there pleasure!! Not only is it not fair, we already pay for public transportation (busses) just add more during the winter months</p>
36779	Marty Henrie	<p>Little Cottonwood Canyon is a geologic wonder. The traffic in the canyon is problematic but preferable to the eyesore that would be a gondola. The expense of the gondola can be better used to improve the existing infrastructure and incentivize more car-pooling / mass transit. Please do not proceed with Gondola Alternative B.</p>
36780	Roger Folkersen	<p>Installing a Gondola only server the 2 ski resorts at the top. There are so many other areas in the canyon for recreation opportunities. If the Ski Resorts want the Gondola they should fund it 100% and not by public taxes.</p>
36781	Tom Christenson	<p>I favor the gondola for Little Cottonwood Canyon. It would be great summer spring, summer and fall tourist attraction and well as a winter transport for skiers to Alta and Snowbird. A wider road would do more damage to the canyon and as the population grows in the future there will be more pressure on the canyons.</p> <p>More buses will only further contest the canyons. The gondola will offer more access to see the beauty of the canyon, especially the handicapped.</p>
38646	Mike Maughan	<p>Dear UDOT Team,</p> <p>Attached is Alta Ski Area's comments regarding the selection of Gondola B as UDOT's preferred alternative.</p> <p>Thank you for your hard work on this complex and contentious issue.</p>
36782	Amy Sandgren	<p>Our household is fully opposed to building a gondola in Little Cottonwood Canyon. Please consider other ways to minimize traffic flow.</p>
36783	Bonnie Sackett	<p>No Gondola!! I'm a senior citizen who's been hiking LCC for over 50 years. I'm willing to pay a season pass to drive to the trailheads but CANNOT afford a \$30 per car fee for each ride up!! You are making the canyons for the wealthy only !!!</p>
36784	Susan Graves Henne	<p>To Whom It May Concern,</p> <p>As a 33-year long resident in the Wasatch back and a frequent recreationalist in entire Wasatch Range, I believe a gondola in LLC is not the answer. First, not only does it negatively impact the magnificent view-shed but it will greatly impact the watershed during construction. Second, the gondola does not provide trailhead stops for non-resort enthusiasts. So basically UDOT will pay \$550 million that truly only benefits the resorts of LCC and La Caille. Third, the solution needs to occur ASAP, not by 2050. Fourth, gondolas are not a reliable mode of transportation in severe wind and weather. And finally, a gondola will not eliminate cars driving up LCC. They will still be allowed.</p> <p>I believe a better solution would be to try a mix of buses and making SR 210 a toll road. The toll would be determined by the number of people in the car. More people, low cost. One person, high cost.</p> <p>Please, no gondola in the beloved Wasatch's Little Cottonwood Canyon!</p>
36785	Sally Davis	<p>If those invested in the gondola are so interested in preserving Little Cottonwood Canyon, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support.</p> <p>As our friends at Students for the Wasatch pointed out, if the gondola is implemented, the number of cars visiting resorts will remain the same while skier visits will increase by 20%, per UDOT's EIS.</p> <p>The EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6]</p>

36786	Jan Carlston	My wife and I are adamantly against the proposed gondola solution. It isn't the taxpayers job to get more people on Snowbird's lifts and more profit for them as a result. If it takes longer to get up the canyon, so be it. We have skied at Alta for more than 40 years, and this solution will only help the bottom line for Snowbird. Alta slows down their lifts if it gets too crowded. In the not too distant future there will be electric buses that can take people up the canyon. This will maintain the environment and the beauty of the canyon for everyone now and in the future.
36787	Jeff Porter	If they build the gondola, have Snowbird and Alta pay the cost, since they are the ones benefitting from it. If the solution is increased bus service, then have Alta, Snowbird, and the customers pay the cost of the bus service. DO NOT charge a fee to enter the canyon...we already pay plenty of road taxes that go toward maintaining the canyon.
36788	Sydney Simonsen	Please as a skier and a climber and someone who has lived and seen what it is like to do both in this beautiful area. I beg of you find a different solution. The damage that this will do to the environment is not worth the money that you will spend or making continuing on with your current plan. I plead give it more time come up with a better solution talk to more city planners come together and give it more time to make the best solution to this issue. Thank you for your time and consideration I really do hope that you are willing to read this and change your mind.
38686	Helen Peters	Hello, Please see the attached comment letter on UDOT's Final LCC EIS from Salt Lake County as signed by Mayor Jenny Wilson and Councilmembers Laurie Stringham, Jim Bradley, Richard Snelgrove, Arlyn Bradshaw, and Ann Granato. Best, Helen Peters
36789	Lyle Beecher	I a strong supporter of the Gondola B preferred selection by UDOT. This is the most effective solution offered with the most minimal impact on the canyon with only 2 acres of disturbed surface verses 50 acres with the added lane option, not to mention the tremendous impact that would happen to the north side of the road with the widening solution. There would be multiple areas with 30' gunnite walls up the canyon similiar to the Provo canyon walls but even more than there. This is a proven fact documented by the Civil Engineering group of Ensign Engineering. Added and Enhanced Bus solution only puts more rubber on the road which has proven to be an inadequate solution already. The Gondola is the best solution for this challenge and will provide such an enhanced experience that has been proven worthy solution over time in Europe in so many ways. Thank you for your consideration of the Gondola as a Preferred Solution and now let's move forward with it.
36790	Renee Packer	Taxpayers should absolutely NOT pay for something like the gandola that only benefits a few. The canyon should be for all not just those that can afford to pay for a gandola ride.
36791	Kevin Philburne	Sounds based. Let's do it!
36792	Carly Smith	This is very sad for all utah residents other then the resorts profiting from it. It will make the slopes more crowded and will not help the situation.
36793	Diane Ward	What is so hard to understand about STRONG LOCAL CITIZEN AND GOVERNMENTAL OPPOSITION to this gondola proposition. Where is the respect for hard-working, intelligent citizens who pay taxes in our state? I state NO AND NO AND NO - LOUDLY.
36794	Darren Rowley	I drive Wasatch to and from work everyday. I know the traffic patterns throughout the year. Focus on solving the traffic on Wasatch. to resolve high traffic days in the winter. Which is primarily only a major problem in the mornings for a few days of the year. Come up with a solution for the neighborhoods on Wasatch that need to get to work or school and emergency responders. Widen Wasatch where is it only two lanes and then do a flex lane on the busy mornings and afternoons. Or two lanes that are for skiers only and two lanes for local traffic only. If you give local traffic a way to get in and out then it doesn't matter what the skiers experience is. Sitting in traffic is a skiers choice and shouldn't be at the expense of taxpayers to resolve. No gondola! An expensive gondola will not resolve the high traffic gridlock on Wasatch.
36795	Shannon Petty	It seems very hasty to build the gondola, permanently impacting the canyon, for a reduction in traffic for a few days of the year and only to the resorts. It serves so few people overall but paid for by so many. The canyon is forever changed and the impact irreversible. Please don't do it.
36796	Jillian Kershaw	My name is Jillian Kershaw and I am a constituent from Millcreek. I urge UDOT to abandon Gondola B. I do not support it because of the irreparable damage it will do to the canyon and it's wildlife as well as it being irreversible. Have you considered alternative traffic solutions such as tollbooths and expanded bus routes? Thank you for your time and effort to accurately represent your community. Best, Jillian Kershaw.

36797	Kody Fox	<p>Friends of Alta Official Comment Regarding the Selection of Gondola Alternative B</p> <p>In September, UDOT announced that it had selected the Gondola Alternative B with proposed phasing as the preferred alternative in its final EIS. Friends of Alta disagrees strongly with this decision. Below, we would like to highlight the main reasons why.</p> <p>Gondola Alternative B would be funded by taxpayers</p> <p>UDOT is planning on funding Gondola Alternative B in a project estimated to cost Utah taxpayers over half a billion dollars. We believe this is unethical. If a gondola were to be built, it should be paid for by the private multi-million-dollar corporations that stand to benefit from it. Remember, only 2-3% of Utah residents ski Snowbird and Alta on weekends, but every Utah citizen will pay approximately \$175 just to build the gondola, not to mention it's steep operating costs. For a family of four, that is \$700 for a method of transportation they will likely never use.</p> <p>Gondola Alternative B places our vital watershed at risk</p> <p>The gondola poses significant risk to our watershed through its construction and the added pressure on Little Cottonwood Canyon of significantly increased visitation. It risks contaminating the watershed which is responsible for providing swaths of vital culinary water for the Salt Lake Valley.</p> <p>Gondola Alternative B would be permanent</p> <p>Once it's built, it's there forever. The viewscape of Little Cottonwood Canyon would be irreversibly scarred by the more than 20 towers scaling as high as 262 feet into the sky moving 40 large gondolas.</p> <p>Gondola Alternative B was never meant to be a solution to canyon congestion</p> <p>The EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." If the gondola is implemented, the number of cars visiting resorts will remain the same while skier visits will increase by 20%, per UDOT's EIS. The EIS specifically states that UDOT does not anticipate traffic volumes will decrease with their proposed gondola alternative. As stated in EIS 8.4.3.2, "daily traffic volumes would be similar to the existing conditions in 2020."</p> <p>Gondola Alternative B would only service those going to the ski resorts</p> <p>A gondola would only stop at Snowbird and Alta. It would serve only those who pay to access a private ski area, but leave behind the growing population of hikers, mountain bikers, backcountry skiers, photographers, and other canyon visitors. And depending on cost-feasibility and adoption, it may not run in the summer at all.</p> <p>Common sense solutions are the right ones</p> <p>Common sense solutions are a fraction of the cost, scalable, environmentally friendly, and effective. These include tolling, reservations, and improved and more frequent bus service to minimize potential harm to the watershed while maintaining the infrastructure to service the whole canyon. This option is flexible and can be changed to meet changing needs for transportation in LCC.</p>
36798	Herman Mackay	<p>No. We don't need infrastructure to support out of state ski corporations. This will only make the canyon more crowded during peak use days and too expensive for the locals. Not to mention the environmental disaster.</p>
36799	Rob Timmerman	<p>Gondola YES! This is a way to ensure the protection of our canyons and allow reasonable access to all who wish to enjoy them. It's the most efficient, safest, and least environmentally harmful way to get people in and out of the canyon. Thanks!</p>
36800	David Phillips	<p>I am a weekly visitor to Little Cottonwood canyon. The many activities accessible to frequent visitors will be severely deminished all for the benefit of corporate greed. The studies of alternatives has done nothing to address climate change going forward. Also no innovative proposals. Only options that identify with bringing in more out of state tourists, for again just to increase revenue. With all the hubbub about ecofriendly. Why haven't there been any mention of going to electric buses. Benefits are obvious. More torque at wheel no emissions. Scalable. Opportunity to show cutting edge technology, studied and implemented by programs at the local universities. Our great snow conditions are going to diminish year after year because of climate change. Utahs signature "Lake effect" is a thing of the past. So will the popularity of our once Greatest Snow on Earth. Utah tax payers should not have to foot a bill that will be mothballed in not so distant future . Because of climate change adversely diminishing annual snow accumulation . Vote No toGondola</p>

This option is flexible and can be changed to meet changing needs for transportation in LCC.</p>
36802	Alexi Naff	<p>Little cottonwood does not need an "attraction" it already is one. Please don't clutter up our beautiful landscape with needless eyesores.</p>
36803	Madeline voloshin	<p>The gondola has unacceptable impacts on the canyon's natural aesthetic. The gondola will not only decimate many historical boulders but also leave the remaining boulders with limited access due to construction, the gondola is not a benefit to ALL users of the canyon. It is meant to serve users of the ski areas, ignoring other year-round canyon users and dispersed recreators. The gondola is fiscally irresponsible and is not an equitable solution. The gondola perpetuates environmental marginalization and injustice in the Wasatch Front.</p>
36804	Kody Fox	<p>Friends of Alta Official Comment Regarding the Selection of Gondola Alternative B</p> <p>In September, UDOT announced that it had selected the Gondola Alternative B with proposed phasing as the preferred alternative in its final EIS. 36805	TyRone Nicksic	<p>The existing infrastructure is adequate with more frequent bus service and educational campaign will be much greater use of resources.</p>

ID	Full Name	Comment
36806	Cody Lee	<p>UDOT, I am an avid snowboarder, outdoor enthusiast, climber, and your constituent. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction.</p> <p>The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>According to recent polls, the majority of Utahans oppose the gondola and would prefer a different alternative. It's especially concerning that the gondola would service two private ski resorts but at the cost of taxpayers.</p> <p>I hope you will consider opposing the Little Cottonwood Canyon gondola in favor of better solutions.</p>
36807	Peter Floodman	<p>A CogRail System would be much more acceptable to the general public and would benefit more people year round. Yes it would be more expensive but it's the better choice and less intrusive to the canyon(s). It is also extendable over time and would be viewed as a mode of transportation like Trak or FrontRunner. It would be a world class mountain/canyon transportation system that could eventually connect Heber Valley, Park City, Brighton, Solitude, etc. RECONSIDER your options - The public does not want a Gondola that is seasonal and no one will use Buses. A CogRail System is the answer!</p>
36808	Jani Iwamoto	<p>As a resident of the Wasatch Front, I am opposed to the Gondola Alternative B plan that has been selected and do not believe it is the most effective solution. I have significant concerns over how the gondola will negatively impact Little Cottonwood Canyon, including our precious water resources and wildlife in the area.</p> <p>Additionally, I do not believe the gondola is a wise way to spend half a billion dollars in taxpayer money, particularly considering the current proposal would only serve two privately owned ski resorts. Cheaper alternatives exist that would pose less of a burden on both taxpayers and the environment. This includes options like enhanced busing, tolling implementation, and better incentives for the use of public transit.</p> <p>For these reasons, I strongly urge UDOT to reconsider their recommendation of the Gondola Alternative B plan and instead support alternatives that are sustainable and environmentally sound.</p>
36809	Curtis Landgraf	<p>I am against the gondola option. I don't think it is a very efficient use of our tax dollars. It might be beneficial to ease traffic congestion 20-30 times a year but I don't feel like that justifies such a huge investment. The majority of the days of the year don't warrant the need for such a radical solution.</p>
36810	Robert Douglass	<p>EIS failed to consider existing mitigations to limit the invasion of privacy for campers, climbers, hikers, and Canyon residents. For example, 3S cabins that pass residential areas on some gondolas in Germany use windows on the gondola cabins that automatically reduce visibility when transitioning over residential areas in consideration of the substantial impact on privacy. The EIS did not explore or consider such privacy-preserving technology even though it is available and in use by other 3S gondolas. Automated window obscuration technology, which exists and is in use on 3S gondolas today, needs to be used in the gondola design for transit through residential areas, over key climbing areas, and over Tanner's Flat Campground. In many, cases the gondola cabins will be nearly level with private homes, climbers, hikers, and campers. It will look directly into residences as well as look both directly down on and at the level of campers, hikers, and climbers. The EIS substantially underestimates the invasion of privacy caused by transiting more than 1,000 people per hour for 12 hours a day over campers, climbers, and residents. The EIS errors in its assessment of the environmental impact of this invasion of personal privacy by its preferred alternative and fails to consider the use of existing mitigation design factors.</p>
36811	Julia Miller	<p>I'm concerned about the amount of disruption building the gondola would cause to benefit a small group of people, tourist. If UTA is serious about fixing this issue in a way that is cost effective and benefits the most tax payers, why are they reducing bus services? I just don't believe UTA is approaching this in good faith to increase access to the LCC in a safer way if the end "solution" will cost more and perhaps deter people from using LCC. It sad to see the original purpose of this project include a theme of "Consideration of all canyon users, not just resort visitors." and end with a solution with support and with land purchased by the resorts. Will it be feasible for me a Salt Lake resident to pay the gondola fee to ski for a couple hours before or after work with friends? Or is this just a fun idea to attract more tourists? I would love to see more thought given to increased bus services, exploring electric buses, and education on how people can easily use the bus system.</p>
36812	Torey Patenaude	<p>No gondola ! There are other options. There is intense irony is damaging nature in the name of trying to make it more accessible. It would be more expensive than expected. Damage the environment. Forever negatively change a landscape that should be protected- not developed. It is a poorly crafted attempt at marketing the canyon better- not making it more accessible. It caters to the rich. It is a foolish and stupid move. No gondola.</p>
36813	Connie Ford	<p>I am 100% in favor of the gondola. I feel that the gondola would be the most effective option for winter road and slide conditions and the most environmentally friendly choice to preserve the canyon, and the most cost effective to operate and maintain in the long run.</p>
36814	Jessica Cagle	<p>I live near the base of the canyon and do not see the gondola as a reasonable or financially friendly solution to traffic congestion. We should find ways that are less costly, less damaging and definitely less ugly that can easily be replicated to all of our canyons. IF the gondola stopped at hiking spots I might be more inclined to consider it. But it's only an idea that was created to benefit ski resorts. Someone decided to spin the benefit for traffic congestion when I feel like this will attract more tourists and cause even more congestion.</p>

36815	Mary Alessini	Please do not go to the gondola option. It will require tax dollars paid by all locals for a very few users and will forever change the character of the canyon. There are better options, and we need to try them. Who is really benefitting from this gondola?
36816	Ryan Kimball	I am against the gondola. It harms the environment to benefit two companies. It will be an eyesore all year around, but only useful a few weekends per year. Please don't build a gondola.
36817	Emily Taylor	Other alternatives should be considered before jumping to the most expensive and environmentally invasive option. I heard that the proponents of this say that busing won't work because they can't hire drivers. INCREASE THE PAY FOR DRIVERS. Don't say you can't afford to pay drivers when you are considering a half BILLION dollar project. Figure it out! I vote NO on the gondola. It only benefits developers and the ski resorts. As a resident of Sandy, I see zero benefit to me.
36818	Suzanne Sleater	As a resident of Sandy UT and a lifelong Utahan, my husband and I are against the proposed gondola. Asking taxpayers of UT to pay the cost for a gondola that will benefit a small minority of Utahns is not fair or appropriate. The resorts should discontinue selling the IKON Ski Pass as it attracts more people in a short time than can be supported. There are plenty of skiers and winter recreationalists in UT to support the resorts. The canyon is used for more than just skiers during the winter months. Alternatives supported by the Mayor of Salt Lake County and the most affected City Mayors should be first and foremost.
36819	Bridget Koza	I'm a Salt Lake City resident. I'm against putting in a gondola to address any traffic issues in Little Cottonwood Canyon. It would be cheaper and actually reduce any traffic issues to limit cars that can go up the canyon and put in a bus system that is constantly running and bringing people up and down the canyon. It is fiscally irresponsible to put in the gondola and it will permanently damage the environment. The gondola will not reduce the traffic issues in the canyon.
36820	Chris Pieper	I don't understand how this is still being considered as a possible solution. The people of yeah don't want their tax dollars going towards a glorified tourist attraction that will only benefit two ski resorts. I am incredibly skeptical that this will reduce traffic in the slightest especially if the weather is bad. Gondolas are shut down all the time due to high winds and bad weather (when traffic is the worst). I also find it highly distressing and suspicious that you have decided to cut bus lines right before attempting to force this non solution through the system. Please listen to the people of Utah and not the interests of private companies
36821	S. Olani Durrant	Absolutely the gondola. A four-lane road constructed to modern standards will do far more damage to the natural beauty and environment of the canyon than a gondola. Consider the new road in Provo canyon as an example.
36822	Shyan Salkhordeh	No Gondola!!! My zipcode is 84092 and I live on Wasatch Blvd., born and raised near the mouth of Little Cottonwood Canyon (LCC). Tax dollars should not be used for the gondola and should not be used to benefit private interests (Snowbird & Alta). I would rather see an alternative that increases bus services up the canyon - remember this is an issue that impacts LCC only a small portion of the year! Creating this gondola will be a negative impact to the canyon. We MUST explore, study, and discuss other alternatives before we make an irreversible and expensive mistake. Why doesn't Snowbird & Alta consider including shuttles in addition to what UTA/UDOT provide during heavy snow storms or powder days? Maybe they could incorporate more snowplows to assist in clearing S.R. 210? I would rather have the S.R. 210 road closed for safety due to snowfall or road conditions, than see a gondola go up pristine LCC. No Gondola!!!
36823	Jamie Larson	First an foremost we should be using tax payer's money to help solve the REAL problems Utah is facing- like saving the Great Salt Lake. If the lake dies there will be no snow to ski on. Also, the residents of Utah should not be responsible for the cost of a gondola to be built nor should they be responsible for the annual maintenance costs. The use of the gondola would be exclusively for persons traveling to the ski resorts. The for-profit ski resorts should be fully responsible for the entire cost of the gondola that would solely benefit their businesses. Finally, this would be an egregious misuse of public funds, not to mention a huge eye-sore to our beautiful canyon. Also, the environmental impact to the canyon would not be negligible. More buses (electric buses!) and charging tolls would be a much more fair solution to the residents of Utah.

38363	Karl Mudge	<p>to whom it may concern.</p> <p>This email is mainly directed to government officials that may have influence on UDOT's choice of the phased gondola as their preferred alternative for the Environmental Impact Statement (EIS) for the Little Cottonwood Canyon (LCC) S.R. 210 Project. I am also copying organizations that have voiced opposition to this alternative in hopes of garnering support for a solution that I and my wife feel is better than any of those offered in the EIS, or otherwise proposed by the public at large. Our solution is as follows:</p> <p>During the months of December through February, Friday through Monday, holidays, and 'powder days' that typically result in traffic congestion up the canyon, restrict access up and down LCC to 2 fleets of electric shuttle buses. One fleet would serve Snowbird and Alta skiers and businesses, stopping only at Snowbird, or Alta, and/or both. The other fleet would serve dispersed recreation users, stopping at designated stops developed to serve those users, by pulling a cord to ring a bell that notifies the bus driver to stop, just like city bus users do. The same parking development requirements in the valley identified in the EIS will still be required with this solution, but the overall construction and maintenance costs for it will be much less, as will the environmental and aesthetic damages to the canyon; all while serving ALL those that visit LCC. This solution is also easily expandable, both for the number of users and/or duration of the restriction, as well as to other canyons along the Wasatch Front such as Big Cottonwood Canyon, should the need arise.</p> <p>In July 2022 I submitted a comment to UDOT during their latest Draft Environmental Impact Statement (DEIS) for the Little Cottonwood Canyon (LCC) S.R. 210 Project comment period outlining our solution. The response I received from UDOT cited several opinions and at least 1 half truth rejecting our solution and justifying their then 2 preferred alternatives (the gondola and the expanded bus alternatives). The half truth in UDOT's response was:</p> <p>"because S.R. 210 has received federal money in the past it is part of the National Network (NN) under the purview of the Federal Highway Administration (FHWA). FHWA regulations and United States Code of Federal Regulations do not allow public roadways to be closed to private vehicles as they are within the public right of way, only tolling and occupancy restrictions are allowed when specific conditions are met."</p> <p>Since UDOT did not specify what "specific conditions," must be met, my wife contacted the FHWA for the applicable United States Code of Federal Regulations to UDOT's statement above. Following is an excerpt from the applicable code which does specify that "access to roads must be open to public travel EXCEPT during scheduled periods, extreme weather or emergency conditions," (capitalization mine). Although we cannot find a definition for 'scheduled periods', it would seem that the FHWA may approve our proposed solution, as it would/could be considered a 'scheduled period'. In fact, in 2004 the FHWA addressed the need for future solutions to congestion which mentioned the utilization of enhanced public transit</p>
36824	Ronald Van Woerkom	<p>Any solution that leads to an increase in commercial development at the mouth of Little Cottonwood Canyon would decrease the serenity and quality of life in the southeast quadrant of Salt Lake County. The chain reaction would go something like this: The gondola would increase the visitor capacity of the resorts up the canyon. Traffic on both 9400 South and Wasatch Blvd would increase to meet the increased demand. Demand would be generated for hospitality at the mouth of the canyon because people would not want to fight the traffic on 9400 South and on Wasatch Blvd. Development would ensue and congestion would increase on the surface roads and at the mouth of the canyon. Quality of life with respect to serenity, road safety, noise pollution, etc. would be compromised.</p> <p>I am more in favor of solutions that do not generate more capacity for people to go up the canyon. If demand for access to the resorts increases, as it almost certainly will given population increases, allow supply to remain constant and force prices up, rather than increasing capacity and reducing quality of life and putting more pressure on natural resources. Thank you for listening.</p>
36825	Carolyn Chavez	<p>Please do not move forward with the gondola. This is not the answer. There are so many more practical ways to handle the traffic of BCC, this gondola is impractical, expensive, and we don't want it!</p>
36826	Shyan Salkhordeh	<p>No Gondola!!! My zipcode is 84092 and I live on Wasatch Blvd., born and raised near the mouth of Little Cottonwood Canyon (LCC). Tax dollars should not be used for the gondola and should not be used to benefit private interests (Snowbird & Alta). I would rather see an alternative that increases bus services up the canyon - remember this is an issue that impacts LCC only a small portion of the year! Creating this gondola will be a negative impact to the canyon. We MUST explore, study, and discuss other alternatives before we make an irreversible and expensive mistake. Why doesn't Snowbird & Alta consider including shuttles in addition to what UTA/UDOT provide during heavy snow storms or powder days? Maybe they could incorporate more snowplows to assist in clearing S.R. 210? I would rather have the S.R. 210 road closed for safety due to snowfall or road conditions, than see a gondola go up pristine LCC. No Gondola!!!</p>
36827	AJ Marino	<p>The proposed gondola is NOT the solution to Little Cottonwood Canyon's congestion issue. Expanded bus services would quickly solve a large portion of the congestion-no need to develop and build the road. Offer more access, routes, schedules, and buses to the existing UTA infrastructure. An even better solution is to look at the cause of said congestion. The stop light at the base of the canyon and Wastach BLVD on the north entrance plays a significant part in long lines. Building a roundabout at both entrances would greatly improve traffic flow and eliminate a large portion of the congestion. Building upon that, UDOT refuses to actually enforce the Traction Law. Most mountain towns require 4wd or chains at the bases of their major mountain passes. UDOT needs to be at the bottom of both Cottonwood Canyons on storm days to enforce the law. The sticker program is a great way to expedite the process, and tourists must be expected to chain up or rent a 4wd car. Eliminating cars that are unprepared to travel up the canyon in extreme weather will solve (most) of the traffic issues. CALTRANS in Lake Tahoe is an excellent example of how this is solved. Likewise, this past winter, Alta's parking reservation system was wildly successful in reducing the number of cars traveling up the canyon in the first place. With UDOT and resort enforcement at the bottom of the canyon, checking for traction devices and parking reservations, we would reduce the number of cars traveling up the canyon on high-traffic days. Backcountry and recreational users can give a trailhead or a safe pull out in which they intend to travel to. In turn, reducing the amount of illegal parking and snow removal conflicts. There are many possible options for solving the traffic issues in the Cottonwood's (Big Cottonwood arguably has more traffic) None of which destroy the recreation, beauty, natural ecosystem, and watershed more than the gondola. Which, let's be honest here, only benefits the pockets of Snowbird and Alta's C-suite</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36828	Hal Ford	I have been in management of the transportation industry since 1970. Price of tires, spare parts and labor are increasing daily, and a fleet of 50-60 buses needs at least 65-70 drivers to cover sickness, vacation, recertification, etc. Widening the road through the narrows would be massive scaring like is visible on the Provo canyon road wall where they have widened the road above the dam. Buss life cycle is 10 times shorter than Gondola with 50 times more maintenance. Planned avalanche is the goal, but not the reality. Any buss caught in a slide would be catastrophic for occupants, and then where do all the other in canyon buses turn around when there is blockage. Can't imagine anyone who has been to Switzerland and marveled at the pride the Swiss have in protecting the beauty and serenity of the Alps. The upside to Gondola and downside to Buss could not be more dramatic. Gondola makes sense. Thank you for allowing my observation!
36829	Connie Banks	Please dont destroy our canyons. Even if it costs us the Olympics we dont care. Please dont.
36830	Richard Kimble	I do not support the gondola. I do not think it is a good use of money.
36831	Austen Sybert	Hi - I'm strongly opposed to UDOT building a gondola in little cottonwood canyon. I think UDOT needs to seek better alternatives for all stakeholders. Thanks, Austen
36832	Nicole Moreno	At first I thought the LCC Gondola might be a good idea but after many months to review I am completely against it for many reasons: 1) Corruption: The two politicians that purchased the land by LaCaille (sp?) just to turn around and sell it to the State is very corrupt. They clearly had insight into UDOT's plans and should not be profiting from Tax Payers this way. 2) Tax Payers Funding Private Businesses: Snowbird & Alta will directly profit from the gondola being funded by tax payers. Tax payers should not be responsible to provide a gondola delivering patrons to private businesses. Instead they should be delivering solutions to their customers outside of public funds or at the very least paying much of the tab. 3) Ikon: The Ikon Pass has clearly created much of this traffic mess without any skin in the game. They are profiting on the sell of their underpriced passes but do nothing to help alleviate or pay for the road improvements, busses or gondola. 4) Environment: Roads will need to be built & maintained to install and service the gondola towers. Trees will be lost, animals misplaced, erosion increased & our watershed potentially polluted. 5) Aesthetics: Placing a Gondola in LCC will be highly visible and deter from the natural beauty of the canyon. 6) Slow The Flow: Traffic is already an issue in Cottonwood Heights. Widening Wasatch & adding a Gondola Base on Wasatch will simply create more traffic, more noise, more pollution. This corridor next to the mountain should be protected and tamed with Traffic Calming measures rather than built up. Residents & tourists alike visit this great state to enjoy the beauty & to recreate so why destroy the purpose. 7) Lack of Services: UTA has proven they cannot run a bus system efficiently or effectively up the canyons. Many employees & patrons try to catch the buses on Wasatch Blvd. just to learn the bus is full as it drives by. Furthermore its crazy the busses don't run during Octoberfest when thousands of people go up LCC to enjoy the festivities and many drive drunk down the canyon. Why arnt they offering services to make this event safer? Why would we build this crazy expensive gondola not to run it during the summer? The solution needs to be offered year round to mitigate the traffic and provide clean and safe transportation to all.
36833	John Hunter	I have been following the process provided by UDOT to address traffic issues in Little Cottonwood Canyon. I am still a little fuzzy as to the end goal for traffic congestion in the canyon. Is it traffic congestion you are trying to arrest or limit uphill and downhill traffic. Let's start with a theory that begins with parking availability at and around both resorts - Alta and Snowbird. Even with parking allowed on certain parts of the roadway, parking in the canyon is finite therefore limiting the number of skiers unless they rideshare. If the goal of the gondola is to reduce traffic in the canyon then the offset will be more congestion in and around the mouth of canyon. Additionally, who will be responsible to foot the bill for ongoing maintenance and repair of the gondola. Let's continue to now address an alternative which I have not seen addressed. 5400 South westbound from Redwood Road is wildly successful and popular and has exceded its expectations in relieving traffic congestion both in the am and pm. I would propose that an additional lane be added in the canyon with uphill traffic using two lanes until 1:00 PM and downhill traffic using two lanes from 1:00pm til 7:00 pm. This process will alleviate the congestion and as the parking spots are filled, all drivers not able to find a spot will have to return home. Parking is the issue and will always be the issue whether it is at the resorts or at the mouth of the canyon. An extra lane that is monitored akin to 5400 South is the correct solution and long term will cost the taxpayers less over time. Respectfully yours. John P. Hunter
36834	Benjamin Williams	I'm very much in favor of a gondola solution. I would, however, like to see year round service and multiple lines.
36835	Bryan Murdock	I have attempted to read all the responses from UDOT to the comments in the draft and the message I got was that we are addressing the traffic problem in Little Cottonwood Canyon (as opposed to both Big and Little Cottonwood Canyons) simply because when the canyon traffic backs up it blocks the nearby neighborhoods and people can't leave or enter those neighborhoods (for a few hours a day, 22 days a year, projected to be 50 days by 2050). Couldn't we solve that with simple traffic lights at the intersections that get blocked? If not then can we be more clear about what exactly we are trying to accomplish here and why we think it's worth spending half a billion dollars on it? It really does not make sense with the information that has been given.
36836	Kristine Steinke Crock	Don't ruin our canyons by putting in a gondola or trax. Please keep our canyons beautiful!
36837	Vanessa Tall	This gondola is not only a terrible idea, but it'll be an atrocity to look at. Jamming a bunch of people into a gondola seems like a great idea for the pandemic. Unless you intend on this being a free service, I don't see it getting used. Be smarter with finances Utah.
36838	Anonymous Anonymo	Less traffic, less environmental impact, safer overall, fun experience, economic development, less pollution, noise etc., fewer canyon closures. We have yet to see how gondolas have "destroyed" Switzerland. On the contrary, they drive environmental consciousness, economic development, tourism and access for everyone to enjoy the beauty. This is a no brainer.

36839	Lise Crawford	Why is a tunnel option (proven in Europe) not a consideration? Why do we not match supply and demand? Increase busses on holidays and weekends and powder days? A gondola increases supply (capacity) all the time but demand peaks only during certain days and times of the day? Why do we not increase capacity during those times with increased buses and carpooling?
36840	Sasha Zea-Dremann	Absolutely one hundred percent do not support the gondola. It will forever change the canyon. Please stop this from proceeding.
36841	Roberta Barrett	Many reasons for no gondola there never would be enough to solve traffic problems it would ruin view we have earthquake s the distance to great combinations of solution reasonable toll fees, Shuttle bus , UTA bus , reservations, limitations on verticals ,gondola expensive repairs changes of people being such hrs. Yes gondola used all over world but not the distance this one would be UTA excuse cutting service to force people to vote for gondola project and if UTA PASS PRODICTOR THAT GONDOLA PROJUSST COST MORE NEED TO PUT MONEY IN TO BUS IMPROVING ROAD AND TOLL BOOTH AND RESERVATIONS SET UP THINGS THAT CAN BE ADDRESS WITH OUT HARMING VIEW OF CANYON AND UNNESSARY BURDON ON TAX PAYERS THANKYOU
36842	Thuvan Zimmer	This will cause too much damage .. let's preserve nature not destroy it .
36843	Sam Morris	No!
36844	Shayna Pugh	<p>As a local who grew up in the mouth of Little Cottonwood Canyon, I want to express my concerns over the Gondola Solution that has been chosen by UDOT. This solution will cause irreversible damage to the canyon's natural environment, watershed, historically and nationally valued recreation areas. Additionally, it will cost significantly more money than other proposed solutions.</p> <p>Before endorsing the Gondola Solution, UDOT needs to listen to local opinions. The backlash against the gondola has been tremendous. Protests, signage, and speaking events are how the community is using its voice to prevent the destruction of a nationally-valued area. My only hope is that government officials and organizations will hear our voices and protect what we value most.</p> <p>There are many reasons for this intense backlash UDOT is receiving. Local rock climbers are aware that many classic climbs and access to them will be obliterated by gondola construction or road widening. Residents of my neighborhood are aware of the sound pollution heavy construction will bring. Salt Lake Valley residents fear that their water may be contaminated as Little Cottonwood is home to a watershed. Heavy construction can cause pollutants to be introduced into the water. In a time where water is scarce, any unnecessary project that could cause watershed damage should not be considered. The benefit of the Gondola solution only goes to ski resorts. Mountain bikers, rock climbers, backcountry skiers, hikers, and any other recreationist will not receive this benefit, and will instead receive negative impacts. A gondola may not even benefit the resort skiers themselves, as it creates more inconveniences, a longer commute, and traffic will simply be moved to a different road.</p> <p>I'd invite Utah's Legislature and UDOT to consider the following alternatives which do not involve irreversible, expensive, and destructive aspects:</p> <ul style="list-style-type: none"> -Tolling Booth at the base of the canyon -Canyon cap (only a certain amount allowed up and after that users must take the bus) -Enhanced Bus Plan Without Road Widening as proposed by UDOT (invest in electric buses, and provide incentives to ride bus) -increased usage of parking permits -database/app that allows locals, recreationists, and managers to track traffic patterns <p>There are many possibilities when solving the issues of Little Cottonwood Canyon ski traffic. The gondola and the road widening will be irreversible and destructive. Please consider local opinions when finalizing the decision on natural areas we value.</p>

36845	Pauline Kneller	<p>Dear UDOT and UDOT Cottonwood teams,</p> <p>I'm writing today to submit my argument against the gondola transportation solution option in Little Cottonwood Canyon. I hope that this writing, along with all the other comments against the gondola that you are receiving will lead you to change your decision to oppose the gondola and support the UTA bus solution instead.</p> <p>One of the most glaring issues with the gondola option is that it only attempts to solve the traffic in Little Cottonwood Canyon, completely ignoring Big Cottonwood Canyon. Anyone who tries to drive on Wasatch Boulevard during ski traffic rush hour can attest to the fact that Big Cottonwood draws in a massive amount of traffic as well. The goal of this whole transportation solution is primarily to reduce traffic in and around the Cottonwood Canyons, and the gondola wholly fails to even address the traffic in and around Big Cottonwood Canyon.</p> <p>The gondola also does not make logistical sense. The construction of it alone will take years. This construction not only will make the traffic worse in an around the canyon during the entire process, but it will also be incredibly destructive to the environment. Our watershed is decreasing due to climate change, and the construction of the gondola will only contaminate it and place further unnecessary strain on it and our environment. On the contrary, increasing bus service now would eliminate the need for significant construction to the canyon, provides an immediate solution to the traffic problem, will not make the traffic worse, and will not place further strain on our fragile watershed.</p> <p>In addition to the construction nightmare the gondola will cause, the gondola does not solve the traffic problem. The traffic blockages that happen in the canyon right now will only be translated into the surrounding roadways and neighborhoods with the construction of the gondola. Parking lots for the gondola near the base of Little Cottonwood would be overflowing and congested, just like at the base of the resorts currently. With well-planned bus routes and park and rides, ski traffic could actually be reduced rather than just relocated.</p> <p>The cost of the gondola, both for the construction of it and then the use of it, is another main reason it should be avoided. Taxpayers, whether or not they use the canyon, will be forced to fund the gondola project. Taxpayers should not at all be responsible for funding a business venture that only benefits a few businesspeople and the ski resort management teams. In addition, the gondola will also cost money to ride, adding yet another monetary obstacle for skiers and outdoor recreationists.</p> <p>Alternatively, increasing the number of buses servicing the canyons as well as improving and adding bus lines will improve accessibility to the canyons without placing undue financial strain on canyon-goers and taxpayers. Buses are more financially feasible than a potentially expensive gondola ticket or season pass. Buses also will be able to serve the whole</p>
36846	Vicki Johnson	<p>Dear UDOT and UDOT Cottonwood teams,</p> <p>I'm writing today to submit my argument against the gondola transportation solution option in Little Cottonwood Canyon. 36849	Syd Beacham	<p>Ashley Liewer said it best: I oppose the gondola's construction. Not only is it detrimental to our environment, but it also is not equitable. To me, equity in recreation means that all citizens of the county have the opportunity to access recreational opportunities. The current proposal for the gondola is a threat to our watershed and environment. This impacts the equity for individuals in our county to access clean and safe drinking water and access recreational opportunities that allow them to experience what our canyons have to offer.</p> <p>Our canyons should not be for the well-off or a profit-making commodity for a couple of ski resorts. They belong to all of us and need to be protected.</p> <p>We need leaders who understand what equity means and stand with the constituents they represent. We need leaders who do their research and take the time to understand the issues they are being asked to address. We need leaders who will represent the constituents they are elected to serve and not their own personal, partisan interests</p>
36850	George Connor	UDOT's going to do whatever it wants to, regardless of our input.
36851	Mike Mallon	I am not in favor of the Gondola
36852	Ashleigh Bicknell	<p>Thank you for all the work you put in to draft the EIS.</p> <p>As an employee at Alta, backcountry skier, climber, hiker, and user of LCC, the gondola is NOT an option to preserve the wilderness. The best part of climbing, camping, and being in the Wasatch mountains is feeling like you are the only one there. With the gondola, it would be seen from many of the climbs and camping spots. It also doesn't stop at trailheads and only caters to the ski resorts.</p> <p>The logical things to do ASAP to improve the roads is:</p> <ol style="list-style-type: none"> 1) Snowbird and Alta implement reservation systems to limit users to the resorts. 2) Snow sheds get built (road closures and avy danger is one of the main reasons for congestion) 3) Strict policing of cars going up canyon not just when it is snowing, but on days it is predicted to snow. I see way too many cars up canyon on snowy days that shouldn't be up there, and many end up sliding off the road and causing more delays. 4) Improved busses with stops at the TRAILHEADS and an Albion basin only bus up for Alta and the grizzly parking lot. I know many Alta skiers that would ride the bus if there was an Alta express bus. 5) If there is a toll it should ONLY be for cars with two or less people. 6) Improved trailhead parking 7) If busses won't stop at trailheads, support local backcountry programs with rideshare vans. <p>Please reduce construction, get rid of the gondola plan, and make changes ASAP.</p> <p>I hope you truly consider these options and can get things moving to improve the road not just to LCC but to BCC as well.</p>
36853	Nathan Strain	Stadler said they could do rail for a fraction of UDOT's estimated price. Why has this not been considered with their estimated price? Something that could hook into TRAX is common sense.
36854	Gary Karen Lowe	We are very much against the gondola. That is a lot of taxpayer money to spend for a few users. Try other recommended actions first. Users may try it once and then probably go back to convenience of vehicles.
36855	Tracy McArthur	I think the gondola is a great idea but I think it would be more appropriate and less obtrusive if it just goes from the mouth of the canyon rather than from La Caille. Any gondola proposal would be better than more busses going up the canyon and polluting the air.
36856	Julia Gershkoff	Please do not build the Cottonwood gondola. The nature around it will suffer and it will not improve tourism! We need to put that investment towards saving our sweet salt lake and eco system so the snow continues and so does tourism! Thank you for listening
36857	John Hoggan	We initially had some concerns regarding construction and operation of a gondola. After a recent trip to the Austrian alps however, we were able to experience a gondola system first hand and very much enjoyed it - clean, low overall impact, and capability to transport large numbers of tourists.
36858	Michael Mahoney	The Gondola cost overruns will likely hit \$1billion as everything else has. We need to just put a reversible lane for bus and high occupancy and peak travel times. PLUS this will afford pass thru during any accidents or vehicle slides in winter conditions. Plus it is mandatory before construction of any Gondola project.
36859	James Wynn	<p>I do not support the gondola plan. It is a giveaway to Snowbird and Alta. It does not reasonably serve the rest of the public good.</p> <p>If the resorts believed in the long-term viability of their business model, they would and should fund it entirely. They are not willing to do that.</p> <p>Do not approve the gondola proposal. It is not the right solution.</p>

ID	Full Name	Comment
36860	Claudia Wiese	<p>I am adamantly against the gondola proposal for many reasons, but my greatest concern is the impact that years of contribution will have on our watershed.</p> <p>As the FEIS states, "the Salt Lake City Department of Public Utilities (SLCDPU) has authority for watershed and water rights protection...Salt Lake County is integral to managing the watersheds in the Wasatch Mountains". However the Director of SLCDPU, Laura Briefer, has stated "the gondola is industrial infrastructure that presents a significant risk to the LCC watershed and water resources". The FEIS states that UDOT has met with SLCDPU various times, but it has clearly not taken these meetings into consideration in their final choice.</p> <p>How can the FEIS concede that SLCDPU is vital to protection of the watershed, but ignore their own recommendations for protecting the watershed? Especially in the light of various meetings with the department.</p> <p>The impact of polluting our watershed would extend to hundreds of thousands of individuals and potentially constitute a public health crisis, which would have resounding economic and justice consequences for many years. The FEIS needs to address their reasoning for not considering the public statements of SLCDPU. There are numerous less impactful options that would not further risk our watershed.</p> <p>Furthermore, the Forest Plan's management objectives do not include management of the construction process of building the gondola. According to the peer reviewed article "Best Management Practices for Diffuse Nutrient Pollution: Wicked Problems Across Urban and Agricultural Watersheds" by Anna Lintern et al., found that Best Management Practices for protecting watersheds failed 40% of the time, which they reason "was a result of either poor design and/or construction or lack of ongoing or inadequate maintenance." In other words, construction in our watershed is extremely hazardous. The gondola is such an excessive project with large construction requirements, that other solutions would not require it. These other solutions include improving the entire bus system to not only have more buses running more frequently but to extend bus lines throughout the valley.</p> <p>Why doesn't the Forest Plan's management objectives explicitly include reference to how construction will not damage the watershed? Furthermore, how can the assessment of Gondola Alternative B's individual assessment on water quality not include the impact of construction and ongoing maintenance, when it is shown these are major contributors to the degradation of watersheds?</p>
36861	Chad Cordell	No gondola!
36862	Richard Morrey	I SUPPORT the proposed tramway solution
36863	Noel Ballstaedt	<p>I support the Gondola. This is an exciting concept, that will be long remembered by Utah residents and Visitors alike.</p> <p>Roads are everywhere. Land and road development costs in the canyon as well as construction would prohibit an entire generation from using the Canyon.</p> <p>IM FOR THE GONDOLA.</p>
36864	Leisa Lingwall	We should not be funding this ridiculous gondola that will have huge negative impacts o. Our canyons and only benefit the VERY few .
36865	Karla Andersen	I'm opposed to anything that will deface and scare the canyon. You can always hand out passes for an allotment on canyon roads.
36866	Annor Benson	<p>While I understand there is no option that will please everyone, I hope there is an awareness that this process seems performative-that regardless of comments the decision has been made. The people who will be negatively impacted the most seem to be cast aside for those who will benefit the most financially.</p> <p>I am very upset that UTA is as cut this winter instead of doing a full trial run of the bus option; it seems to me there was an opportunity to test an option and see if it was viable which is a rare gift. Instead there is no test and now a created "crisis" that would seem to artificially support a gondola.</p> <p>If gondola is the way, I would hope Alta and Snowbird pay their fair share and are encouraged not to pass the cost on to customers.</p>
36867	Kristen Clifford	The gondola does not solve the root of the problem. Satellite shuttle stops/park n rides based geographically is a much more effective method to move people from all over the valley up the canyons. We love the mountains for its wilderness and the gondola is a serious and negative impact that will forever change the vistas of our canyons and enables poor transportation behavior. No to the gondola.
36868	Christian Anderson	I feel that the proposed gondola will only minimally improve traffic. The cost compared to the benefit of only providing service to the ski resorts does not outweigh the costs. The gondola does not assist any other users of the canyon for backcountry skiers, hikers or trail runners. If the ski resorts want a gondola to their resorts they should pay for the entire project as they are the ones that reap the benefits.
36869	Frank Belko	Absolutely support Gondola. Live in East Sandy and on snow days tired off dealing with long lines of cars down 9400 S. Good option for future congestion.
36870	Tony Civello	Do not build the gondola. This is a total boondoggle, wouldn't solve the problem, would create new problems, costs tons of taxpayer money to benefit private companies, would harm the climbing and natural beauty of lcc, etc. There are tons of reasons to not do this. Do not ruin little cottonwood canyon by building the gondola. Expand bus services. The problem will solve itself. If it gets too bad then people will stop skiing there.

36871	Hailey Griffin	<p>hello, and thank you for your time. I'm sure your eyes are tired and cheeks sore from the smile you have to constantly place on your face while talking to the public.</p> <p>My name is Hailey. I moved to Alta, Utah in January of 2009, lived there for 7 years, 8 ski seasons, before buying my home in Cottonwood Heights. I continue to work a full time, year round job up there. This commentary is strictly my own.</p> <p>I remember traffic on SR210 from my first season and am at awe at how big of a deal it has become in recent years. I worry we have grown impatient as a society and this is a problem we are building up bigger than it is. Yes, action is needed for safety, but is a Gondola the right course?</p> <p>I strongly feel the money being raised for the Gondola project would be much better served being spent on improving transit in the Salt Lake Valley. From my home, I have to drive a considerable distance to take public transport to Salt Lake City, the Airport, the west side of the Valley. I can walk to the ski bus, but more often than not it's full and I end up hitchhiking. There is a major lack of convenience, therefore lack of incentive, to take public transit as it stands.</p> <p>Can we help UTA hire more drivers? Without improving public transportation to the Gondola base, will we even see a benefit in traffic reduction? Or will it simply be placing the traffic into the surrounding neighborhoods? Widening Wasatch, to access a Gondola that may only run 5 months a year, with a limited parking base area, and not improving Valley transit. Ugh. How will this work in the fastest growing state? Will we not just be reevaluating again in 10-15 years?</p> <p>Some thoughts and ideas (disclaimer: I know little, but have experience a lot).</p> <ol style="list-style-type: none"> 1. I love the idea of avalanche sheds. 2. I also believe reflective paint would go a long way in seeing "the edge of the road" to those not so regular canyon drivers. 3. Can we straighten the road in some of those "scary" areas? Especially below Snowbird 1 where we see so many slide offs. 4. How about a UDOT shed in each canyon? Can pop out when those "unexpected" storms roll through, as they always suddenly seem to appear at 2:30/3pm. No more relying on the Snowbird plow that way... Also, creates local jobs. (Hopefully people want them again soon, the jobs I mean) 5. Work with the resorts for carpool incentives... heaven forbid they own any of the traffic issues. 6. Limit parking on the highways. 7. Increase bus service in the valley and have DIRECT routes to the resorts. Less time on the bus, more incentive to ride it. 8. Improve and expand Trax to travel along the Wasatch bench and add some East/West lines in Sandy and/or Cottonwood Heights. Maybe even Holiday to the 6200s park and ride.
36872	Eliza Van Wetter	<p>I am a concerned member of the Salt Lake community and I think that the choice to install a gondola is not a practical solution to the congestion problem in Little Cottonwood Canyon. I think that expanding the bus system would give good results in a more approachable timeline / cost. The gondola option is not scaleable and it is not guaranteed to fix any of the traffic problems in the canyon. While the enhanced busing also is not guaranteed to fix the problem it is at least a better option to try out with less commitment required to building massive/ permanent infrastructure. I hope that UDOT reconsiders its chosen alternative for a more practical solution that will cost tax payers less money.</p>
36873	Lois Peterson	<p>The Gondola will NOT solve the issue for Little Cottonwood Canyon. First the issue boils down to powder days when skiers flock to the slopes. That only happens about 15-20 days a year. With climate change, probably even fewer days in the years to come. Second, the Gondola will be a bottleneck of skier foot traffic. When skiers get to Snowbird or Alta, they park in several different parking lots at each resort. They then proceed to one of 6 lifts (including the 125 passenger tram) at Snowbird AND another 5 lifts (not including all the short hotel lifts) at Alta. At the resorts, skiers disburse from their assorted parking lots; they are not all lining up to ride the same transportation up the mountain/canyon. If the valley buses deliver riders to the Gondola parking lot and not up the canyon to the resorts, the bottle neck of passengers will cripple the base station. Where are all the skiers going to line up while holding all of their gear for the day (skis, helmets, gloves, cell phones, gaiters, goggles, a diaper bag, etc.) and their children's hands while walking in ski boots? What is the willingness of skiers to ride up the canyon for a 40+ minute trip with no bathroom, etc. AFTER they have been waiting in line for a Gondola? It will never work if another pandemic happens, and we are told to "stand at least 6 feet apart" and "not to be in close proximity with anyone outside our bubble for more than 15 minutes". The resorts should step up, build parking decks with grass rooftops, and dormitories for their employees and perhaps a dormitory for guests who want that fresh powder on powder days. Then electric buses from hubs at schools and church parking lots are the next step. We can do this together. Let's not spend \$550 million on a Gondola that doesn't help the issue and scars the beauty of the canyon. Let's wait and see what the climate (literally) is like and what the industry is like after the "newness" of the IKON pass wears off! I think many who decided to try skiing in Utah in those first few years of the IKON pass will end up skiing closer to home with the increasing cost of airfare and fuel to get here. This is just a Venture Capital Group's very expensive toy.</p>
36874	Lauren Nielsen	<p>I am a frequent local user of LCC for trail running, hiking, and skiing. I am commenting to say, please, NO GONDOLA. I can't imagine a more destructive and ineffective option. I would much rather pay canyon fees or use public transit. ANYTHING that doesn't change the beloved landscape is a preferable option. Please listen to the people who love this special place. We resoundingly do NOT want a gondola.</p>
36875	Skyler Kaminski	<p>Instead of building a gondola, try a cog railway system that goes above the road with snow sheds to protect from avalanches.</p>
36876	Julie Branham	<p>To put a gondola up little Cottonwood Canyon would be such an environmental downgrade. Such a small canyon with intense weather and cost to taxpayers is the most ludicrous consideration I have heard in years. Please look beyond profit!</p>
36877	Chloe Kockler	<p>As a senior in environment and civil engineering, I understand the need for a solution to the traffic in LCC. However, the gondola is no such solution. The environmental impact it will have as well as the detriments to boulders lining LCC heavily outweighs any pros the gondola would provide. We need to prioritize the health of the salt lake valley and preserve the canyons we are so fortunate to have.</p>
36878	Theo Stokes	<p>Do not put in this disastrous gondola design</p>

ID	Full Name	Comment
36879	David Posey	This is a stupid waste of taxpayers money. It will end up doing more harm than good. Just leave it as is. The parking lots already limit the traffic.
36880	Beth Bauman	If you build it, they won't come! The project is very flawed. Too high a price tag and it doesn't move enough people in a timely manner. Never mind, the giant towers will be an eye sore! Who wants to look at that!
36881	Jason Malczyk	Why were there only 3 options. 2 with gondi and only 1 with out. It seems that there was a missing option. "Enhanced bus Without gondi." Also the gondi will further add more infrastructure to a area that is so beautiful. We need to preserve what is left. Please no gondi. Lets put tax money toward getting cars off I-15 before we worry about LCC
36882	Sevak Tsaturyan	I am very much in support of a gondola in the little or the big Cottonwood Canyon. We have moved to Cottonwood Heights a few years ago and it amazes me that a beautiful mountain aki town does not have a Gondola or a rail system. What is more unbelievable is that people would be opposed to such opportunity. I have lived in several, mostly European mountain cities such as Garmish, and have seen the ease and success of having Gondolas servicing mountain resorts. It would be well worth our taxpayer funds and or increase of taxes to do this. It has so many benefits, social and environmental. So Yes, Utah lets get a Gondola.
36883	Felicia Alvarez	<p>Dear UDOT people, as a citizen of Salt Lake County and an avid outdoors person, I do not think that everything has been done to limit car congestion up LCC. The cost, which would be funded with tax dollars, will be enormous and it sounds like how things are planner, only Snowbird will really profit. It also truly does nothing to limit the number of vehicles allowed up the canyon so it does nothing for controlling the congestion. It does nothing to preserve the value of the Wasatch Mountains, nor the fragile watershed, environment and wildlife we all care about.</p> <p>Why haven't you all thought of shuttle services, like Zion park has? You HAVE to ride the shuttle, unless you're staying at a hotel in the park. Win win for all. Most people need to take the shuttle, people would be required to park elsewhere (bigger park and ride lots, get rid of the gravel pit) AND if you do have a hotel room booked, then BOOM, you can stay up there and take your own car.</p>
36884	Lindsey Melby	Do not build the gondola!!! Respect the future of our canyons! This cannot be undone!!!! Please!!!! Conserve for our planet, future generations, and ourselves! Please don't prioritize big ski companies.
36885	Calvin Kraydich	I do not support the gondola. I would like to instead see an effort to recruit more bus drivers (better wages and other incentives) and additional busses.
36886	Claudia Wiese	<p>There are multiple other solutions that are not as expensive, invasive and more immediate than the gondola. These proposed approaches extend way beyond what is proposed in the FEIS but should include a suite of solutions that can adapt to the ever changing needs of LCC as well as BCC. As is common in many ski towns/resorts, the amount of people at the resort changes dramatically depending on the time of year, with high concentrations of people in the winter, and much fewer people in the summer. The gondola can only run at one speed and will not be able to adapt to the dynamic nature of the industry. Bussing on the other hand can not only change schedules based on seasons, but also based on expected changes from year to year or even day to day. This type of solution will save energy and money overall as it will not be as wasteful.</p> <p>Here is how buses could be a real solution, more immediately, with less construction and cheaper overhead costs:</p> <p>1. Bus improvements: UTA buses are seeing continual usage increases in the last five years. -Increasing not only the number of buses but the surrounding infrastructure would continue to support this increased demand for the bus. Examples of what this would look like are: having buses run directly from popular hotels downtown so out of town tourists don't have to drive at all (especially in rental cars) (Banff has this structure and it works incredibly well). It would also mean having "pop up" parking on weekends at various locations around the mouth of the canyon and in the city. These "pop up" parking would be lots that are only used M-F and are wide open on weekends. This would remove the congestion at the mouth of the canyon due to limited parking, whether or not you are taking the bus. There could also be priority bussing in the sense that buses can use the shoulder to pass traffic, etc. (Another incentive to take the bus). Buses should run from the Westside and other communities that often lack access to outdoor spaces and that are not considered in the gondola proposal. Ideally a lot of these buses are of the express type, so they only make one or two stops before entering the canyon. Furthermore, electric buses are easier to attach to renewable energy systems than the gondola, which while it will be electric, UT large scale electric grid is mostly coal, so it's not as green. There should also be bussing options that stop at various trailheads for users other than skiers. These bussing options can also work year round, which the gondola is currently not proposed to do. There could also be "mobility hubs" that are covered shelters for canyon users to use to put on/take off equipment at the resorts while they wait for the bus, perhaps they could even be warmed to make the bus better.</p> <p>2. Tolling based on residency and ideally income. WA has a great system with their state parks, where you can buy an annual pass to all state parks. This same system could be established for the canyons and if you present some tax information, you could potentially forgo the cost. If you are an out-of-state visitor, you will either have to pay more or still buy one but for less uses (since you are coming for limited amount of time)</p> <p>3. Incentivize carpooling: Legalizing hitchhiking in the canyon is an idea I've heard of recently. You could even create</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36887	Margaret Allen	<p>Thank you for going to so much effort to study our canyon and suggest solutions!</p> <p>I am not in favor of a gondola to solve the LCC transportation challenges.</p> <p>I agree with using electric transportation vans or half-size buses being deployed from Park N Rides. In winter or busy times, a call-ahead system would expedite accommodating passengers. Passengers could "pull a cord" to request a stop. On busy summer days, we would like to be able to count on a shuttle bus to Albion Basin and hiking trails.</p> <p>At this time, I do not favor a gondola. The cost is out of sight! The construction and placement of giant towers would deface and damage a geological wonder. I'm not sure I could afford to ride it!</p> <p>Sincerely, Margaret A Allen</p>
36888	Bradley Allenick	<p>Little Cottonwood Canyon, while not a wild or untouched place, has been altered enough. Adding numerous towers for a gondola would further impact the forest, ecosystem, and water supply for the Salt Lake Valley. Alta, Snowbird, and the national forest have a limited carrying capacity, especially in terms of skiers, and adding a solution with a goal of increasing the total number of users in the canyon is the wrong way to go. UDOT, the ski national forest, and the ski resorts need to determine the carrying capacity and work on a solution using the infrastructure already in place alongside increased bus service to safely get people up and down the canyon. Finally, the public should not be paying for an amusement park ride so resort skiers can access the resorts. IF a the plan to build a gondola moves forward, Alta and Snowbird should pay for this. Not taxpayers, not federal grants or subsidies, but the private businesses who will directly benefit from it.</p> <p>No gondola! More buses!</p> <p>From a concerned and frequent user of Little Cottonwood Canyon and loyal customer of Alta Ski Lifts.</p> <p>Thanks for your consideration.</p> <p>Brad Allenick</p>
36889	Gary Pratt	<p>I grew up off of Wasatch Blvd between Big and Little Cottonwood Canyons. We moved into our house in 1972. I was young so I don't remember what it was like then but over the years, late 70's to today, there has always been traffic. It really hasn't changed that much and it only is bad on a handful of days a year. It doesn't make any sense to spend most likely a billion dollars for 2 resorts. I work in the civil engineering industry and we design roads. I'm also a part time employee at Snowbird and disagree with managements backing of a gondola. We should expand the road to have a bus only lane and snow sheds which and toll the road or require the 2 resorts to charge for all parking and a portion of those funds go towards expanding the road. A billion dollar gondola paid by tax payers to accommodate 2 private enterprises makes no sense. Then there is the fact the gondola will destroy the canyons natural views that I have known for most of my life, I am 54. Please do not destroy our beautiful canyon.</p>
36890	Amy Ward	<p>My name is Amy Ward and I am a constituent from East Millcreek UT. I am commenting because my relationship with LCC is personal as a born and raised, local, outdoor enthusiast. I urge UDOT to abandon Gondola B. I do not support it for many reasons including, but not limited to, 1) The project timeline isn't clear. 2) The novelty/scale of this project makes it near impossible to estimate actual costs/timeline. There will be unforeseen issues, as there always are in construction. 3) The estimated costs are much lower (inaccurate) than materials in the industry currently cost. Especially with the volatility we experienced in the industry of materials and labor skyrocketing, it seems absurd to guarantee costs to stay where they are. In my several years working in real estate development with Utah local company, Rich Day Group (RDG), the factors surrounding the proposed Gondola B project are very alarming. 4) The trailhead parking, as well as other alternatives needs to be decoupled from the gondola and not used as leverage or a 'phased approach' 5) Programs exist that can better fund buses and local business 6) construction is more complex than can be anticipated. There may be issues with the entire completion of the project, leaving abandoned/unfinished industrial structures 7) operation and maintenance requires large-scale resources that create waste and risk for inadvertent oil spills 8) this is all for 12 days of traffic per year. Most likely a several year project 9) where are contingency costs going to come from? 10) how are damage from disasters (natural or vandalism) going to affect the canyon/project, and who will be responsible to respond to, resolve, and pay for potential damages incurred by them?</p> <p>Have you considered alternative traffic solutions such as dispersed parking hubs around the salt lake valley, and peak day/hour tolling to encourage carpooling? Or even enforcing a carpool or multi-passenger vehicle admittance rule? These alternatives are much more fiscally responsible, less risk, and would protect the fragile wildlife in the canyon. Thank you for your time and effort to accurately represent your community. Best, Amy Ward</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36891	Robert Douglass	<p>The EIS process and the NEPA process for the Little Cottonwood Canyon Project appear to have been possibly compromised by inputs from owners of the land surrounding the proposed gondola base for the preferred alternative as well as by certain Utah State officials and legislators. It has also been potentially compromised by State officials and legislators who advocated for specific EIS outcomes during the EIS process and who also have influence over UDOT's budget. Through requests for public records, letters, and emails, it has become public record that the Governor of Utah's office staff as well as members of the Utah State Senate and former ranking members of the State Senate and elected council members of local municipalities have sent correspondence directly to UDOT or to politicians intended for forwarding to UDOT that urged them to adopt a gondola alternative as the outcome of the EIS process. These letters were sent while the draft EIS was in preparation. Possibly additional letters or meetings, not at present available to the public, have been sent or occurred during the preparation of the final EIS. Some of the individuals urging UDOT to select a gondola have a substantial financial stake in the gondola and stand to gain millions of dollars in increased property values if a gondola option is selected and located near La Caille. Some of them have influenced or attempted to influence the selection of EIS alternatives. In addition, the EIS appears to rely in part on key technical design data and estimates produced by property owners that stand to gain financially if a gondola is built near La Caille. Political pressure on the NEPA lead agency for a project subverts the NEPA process and defeats its intent. Relying on technical design and cost estimates from private parties who have a substantial financial stake in the outcome of the NEPA process without disclosing the source of that information is also in contradiction to the intent of the NEPA process. Given that some political interference or attempted interference during the EIS process has already come to light, UDOT needs to provide a full disclosure of all political influence or attempted influence on the process. In addition, UDOT needs to disclose all cost and technical data that it received and relied on in the EIS process if it came from parties that have a substantial financial interest in the outcome of the EIS.</p>
36892	Matt Binjour	<p>I don't think the gondola proposal will be as beneficial as expected. As inflation has caused many things to increase, I also believe that the proposed cost is extremely low and gives an even larger tax burden to the community. I'm putting in a formal comment to say I do not approve the proposal. Thank you for your time</p>
36893	Brenda Hendricks	<p>I am a Utah resident.</p> <p>I strongly oppose the building of a gondola in Little Cottonwood Canyon!!!</p> <p>The impact of the development on the canyon and the pristine wilderness area would be devastating and far too expensive for Utah taxpayers.</p> <p>As a professional art teacher, I highly recognize the importance of aesthetics and beauty. A gondola would destroy the aesthetics and beauty of Little Cottonwood Canyon!!!</p> <p>This project is NOT NEEDED!!!</p> <p>Stop squandering our precious tax money. Instead, put all the money where it is most needed - to help save the Great Salt Lake.</p> <p>Earlier this year, "The New York Times" wrote an article on our record low, dying Great Salt Lake. It called the Great Salt Lake an "environmental nuclear bomb." Its all-time record low water level is destroying the lake's fragile ecosystem. It is making the Wasatch Front hotter and drier. It is expected to fill the Wasatch Front with dangerous dust containing mercury and arsenic. It is expected to cause Wasatch Front residents to lose 2 years of life expectancy. It is expected to cause less snow and severely hurt Utah's ski industry.</p> <p>With this emergency going on, why would you even consider wasting over half a billion dollars building an unnecessary gondola that would make Little Cottonwood Canyon ugly?</p> <p>Shame on you for wanting to destroy our beautiful Little Cottonwood Canyon for filthy lucre to fill the pockets of two rich ski resorts.</p> <p>I want NO GONDOLA, NO BUSES, and NO ROAD WIDENING. LEAVE THE CANYON ALONE!!!</p> <p>Something this important and expensive should be voted on by all Utah citizens of voting age, NOT decided by bureaucrats and engineers in the Utah Department of Transportation.</p>
36894	Jacob Lloyd	<p>As a resident of Sandy and a frequent visitor to LCC I would like to state my opposition to the gondola. If the canyon is being overused, implement ways to reduce use. A lottery, license plate, occasional toll, or permitting system would restrict access on days where visitation to the area is deemed excessive. I would accept limits on my own ability to visit the canyon if an attitude of preservation could prevail. The gondola solution is not preservation. Its worst attribute is not the often mentioned misuse of taxes or the private entities that stand to benefit. Its worst attribute is further desecration of the natural area. If we must have more people in the canyon, increase busses. If there aren't enough drivers, use the gondola millions to increase pay for drivers. Common sense response to supply and demand can solve these problems without adding permanent infrastructure. No to the gondola.</p>
36895	Sarah Erwin	<p>As a longtime resident of Sandy, I am not in favor of a gondola or other fixture implementation up Little Cottonwood Canyon. I am in favor of limited parking and ski resort areas to encourage do use of buses for those with the main destination of the resorts and feel that these services should be provided by the resorts for their guests with some, reasonable subsidies from the city.</p> <p>Our primary use of the Little Cottonwood Canyon is hiking and snow shoeing. I am in favor of proposal A for parking expansion.</p>
36896	Andrew Gnemi	<p>The proposed gondola is an irresponsible use of taxpayer money and would reduce the beauty and water quality of the canyon.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36897	Lily Canavan	I do not support the construction of the gondola in LCC!! Increasing the amount of busses and making the park and ride bigger (maybe another park and ride built) is a much better solution. Building the gondola will have negative impacts on the viewscape, ecology, activities, and equal access to the canyon. It is also too expensive and the money would be better spent on environmentally friendly measures that Utah desperately needs. I moved to Salt Lake City a few years ago mainly because of the amazing access to climbing in the canyon, and building the gondola would ruin all of that. The gondola only serves those who have enough money to ski at Snowbird and Alta which is not fair to the people from all economic backgrounds who use the canyon for a million other things. Please do not destroy Little Cottonwood
36898	Madeline English	Incentivize carpooling! Have a better bus system! A gondola is not going to be an effective solution!
36899	Luca Terziotti	<p>No gondola. No road expansion. No irreparable harm to the canyon. I don't want my taxes to support this boondoggle to enrich the resort owners. I don't want the climbing and other resources in the canyon to be harmed.</p> <p>The gondola is not a solution to the transportation issues. It's too slow, too limited, and will only push traffic further into the neighborhoods.</p> <p>Try nondestructive solutions first: expanded bus service, discounted bus service, etc.</p>
36900	Stephanie Tuck	<p>Please do not build this gondola. This will have major consequences on our environment, and will only make the congestion in Little Cottonwood worse.</p> <p>I was born and raised here in Salt Lake City. I grew up riding at Snowbird and Alta. I grew up hiking the countless trails this canyon has to offer. I grew up admiring the wildlife we saw along the way. I hope my kids have the same future. It makes me sick that we would not only be financially responsible for this project; that money I don't want to pay, is ultimately going to ruining our environment. There seems to be no regard for the wildlife that will be impacted by this.</p> <p>I am for conservation. Not building into our mountains.</p> <p>The gondola is not a solution. It's a major problem. The Wasatch Front truly is one in a kind place around this world. Adding an eyesore along with the larger hordes of people it will attract will have irreversible damage.</p> <p>Please find other solutions.</p>
36901	Maddie Stagg	I am strongly opposed to the gondola. As someone who has spent their entire life skiing and realizing what a privilege it has been to ski, I want to make skiing more accessible. Currently, at both Alta and Snowbird season passes at both resorts are around \$1,500 a year. Day passes are between \$115-190 at both of the resorts. That's not including the purchase/renting of skis or any other gear. Skiing is already inaccessible to so many individuals, it has become an elitist sport for the rich. Now, it is estimated that the fair to ride up the gondola will be between \$30 and \$35. So on top of those day passes or season passes, you are expected to pay an extra \$30. How is this making skiing more accessible? I think instead of putting a tourist attraction, like the gondola, we should work to make skiing more accessible for people right here in Salt Lake County. For these reasons, I strongly oppose the Gondola. Let's instead put our time and effort to make skiing more accessible for everyone.
36902	Robert Douglass	The UDOT Little Cottonwood EIS web page continued to accept comments past 3:03pm on 17 October 2022, but it failed to provide any additional acknowledgments that submitted comments had been received and accepted. If comments after 3:03pm were indeed not accepted, UDOT needs to extend the period for formally accepting comments on the Final EIS for several days so the submitted, but unacknowledged comments can be resubmitted and accepted into the NEPA record. This commenter has submitted approximately 12 comments after 3:03pm that have gone unacknowledged.
36903	Thomas Howard	Gondola? More like schlongdola.
36904	Daniel Burnham	I do not believe that a Gondola is the correct solution to traffic issues in our canyons.
36905	Sean Patton	If you build this gondola I will vandalize it so bad it won't last a week standing up.

ID	Full Name	Comment
36906	Robert Keeley	<p>Comment.</p> <p>I am writing to oppose the construction of a gondola in Little Cottonwood Canyon, for the following reasons:</p> <ol style="list-style-type: none"> 1. The Environmental Impact Statement (EIS) and process were flawed. <ol style="list-style-type: none"> a. The Little Cottonwood Canyon gondola project is a boondoggle for private interests. No taxpayer money should be spent on this. It is designed to connect a private commercial venture (LaCaille development) to other private commercial venues (Snowbird and Alta Ski Resorts, primarily, but including the involvement of Dopplemeyer the gondola company, construction interests, marketing consultants and others...), using public tax dollars to pay for private interest ventures. That alone is highly problematic when a majority of affected taxpayers oppose the project. Polls indicate that 80% of Utahns prefer a solution other than building a gondola in Little Cottonwood Canyon. (Deseret News, December 9, 2021). b. Additionally, as for the EIS, the boundaries of the study were too narrowly drawn. They did not consider neighboring Big Cottonwood Canyon, the Park City area ski resorts, and many key transportation routes affecting them all. Skier traffic problems are caused by and should be considered for all the resorts: Alta and Snowbird in Little Cottonwood Canyon, AND Brighton and Solitude in Big Cottonwood Canyon, Park City, Deer Valley, and The Canyons in the Park City area. To truly serve the public interest, finding the best solution should be inclusive and holistic, not limited to one canyon and the private interests wishing to build a project there. c. There needs to be a comprehensive transportation strategy that includes the other canyons, not only Little Cottonwood Canyon. Big Cottonwood Canyon at peak times often surpasses the congestion in Little Cottonwood Canyon. A successful traffic mitigation strategy in one canyon will just push traffic into the neighboring canyon, and will not alleviate impacts on the protected watershed. Additionally, the decision on whether or not to connect Little and Big Cottonwood canyons to the Wasatch Back needs to be made before the interests in any single canyon push their own transportation plan. A piecemeal approach would not only be ineffective for the short-term, it would make long-term comprehensive solutions more difficult to accomplish. THAT should be more of a priority in a skier transportation plan for all resorts, not the private interests of a few in a historically important and environmentally fragile, single canyon. d. Speaking of historical significance, the Forest Service's enabling statute requires it to protect, preserve, and enhance the history of Little Cottonwood Canyon, but the draft EIS fails to acknowledge this history as even being relevant. Honoring that history in LCC would not include the construction of a gondola. A single gondola project in one canyon fails to address the overall environmental impact of the industries involved in interconnected areas of the fragile Wasatch Front and Back.
36907	Ann Schneider	<p>I am opposed to the gondola in Little Cottonwood Canyon. There need to be fewer people in the canyon, not more. Ways to limit people are with user and parking fees to those wanting to drive their own cars to the resorts. High-tech, energy-efficient, and frequent public ground transit is the answer. Let the climbers, hikers, backcountry skiers, cyclists, leaf peepers, and other silent sports enthusiasts have their beautiful no-gondola views and the quiet serenity of the canyon. We are not Europe which has had vernaculars, cog trains, and gondolas in their valleys for a long time. Keep Utah unique. Keep the financial interest of the resorts at the lowest priority and the pristine nature of LLC at the top level in your decision.</p>
36908	Hailey Griffin	<p>Hi, and thank you for your time. I'm sure your eyes are tired and cheeks sore from the smile you have to constantly place on your face while talking to the public.</p> <p>My name is Hailey. I moved to Alta, Utah in January of 2009, lived there for 7 years, 8 ski seasons, before buying my home in Cottonwood Heights. I continue to work a full time, year round job up there. This commentary is strictly my own.</p> <p>I remember traffic on SR210 from my first season and am at awe at how big of a deal it has become in recent years. I worry we have grown impatient as a society and this is a problem we are building up bigger than it is. Yes, action is needed for safety, but is a Gondola the right course?</p> <p>I strongly feel the money being raised for the Gondola project would be much better served being spent on improving transit in the Salt Lake Valley. From my home, I have to drive a considerable distance to take public transport to Salt Lake City, the Airport, the west side of the Valley. I can walk to the ski bus, but more often than not it's full and I end up hitchhiking. There is a major lack of convenience, therefore lack of incentive, to take public transit as it stands.</p> <p>Can we help UTA hire more drivers? Without improving public transportation to the Gondola base, will we even see a benefit in traffic reduction? Or will it simply be placing the traffic into the surrounding neighborhoods? Widening Wasatch, to access a Gondola that may only run 5 months a year, with a limited parking base area, and not improving Valley transit. Ugh. How will this work in the fastest growing state? Will we not just be reevaluating again in 10-15 years?</p> <p>Some thoughts and ideas (disclaimer: I know little, but have experience a lot).</p> <ol style="list-style-type: none"> 1. I love the idea of avalanche sheds. 2. I also believe reflective paint would go a long way in seeing "the edge of the road" to those not so regular canyon drivers. 3. Can we straighten the road in some of those "scary" areas? Especially below Snowbird 1 where we see so many slide offs. 4. How about a UDOT shed in each canyon? Can pop out when those "unexpected" storms roll through, as they always suddenly seem to appear at 2:30/3pm. No more relying on the Snowbird plow that way... Also, creates local jobs. (Hopefully people want them again soon, the jobs I mean) 5. Work with the resorts for carpool incentives... heaven forbid they own any of the traffic issues. 6. Limit parking on the highways. 7. Increase bus service in the valley and have DIRECT routes to the resorts. Less time on the bus, more incentive to ride it. 8. Improve and expand Trax to travel along the Wasatch bench and add some East/West lines in Sandy and/or Cottonwood Heights. Maybe even Holladay to the 6200s park and ride.
36909	Sydney Orr	<p>I don't think this is a good idea. It is too invasive and will have a horrible impact on climbing.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36910	Ben Krick	Do not do not do not build a gondola in LCC. This would ruin the environment: trees, recreation, views, etc that are a finite resources. The outdoor climbing and other activities in little cotton wood are world class resources. Building a gondola would destroy these resources for the generations coming next. There is the options that do not include environmental degregation.
36911	Ryan Steele	<p>I am writing in opposition to the current plan/EIS for the Little Cottonwood Gondola, phased or otherwise. My objections are two-fold:</p> <p>(1) The gondola only serves two private businesses, not all users of Little Cottonwood Canyon.</p> <p>(2) The gondola imposes irreparable harm to the Little Cottonwood ecosystem and viewsheds.</p> <p>The gondola option really only serves to expand the functional capacity of two specific ski resorts. Expanding business capacity--although sometimes a reasonable motivation--should never be the sole driver of such an impactful project.</p> <p>In the interest of providing constructive alternatives, however, I will float the following suggestion: First, limit the parking capacity of the ski resorts in question. This restriction neither limits their property rights (via illegal "taking") nor imposes any functional limitation that does not already exist. Second, implement a "pass" system at both the mouth of the canyon and the resort parking lots such that (a) only pass-holders can park in the resort lots and (b) any entrants to the canyon who intend to ski must already hold a pass. Other users of the canyon would not need such passes. Some operational costs would be incurred to implement this gating system, but it would be orders-of-magnitude lower than a gondola and could be shared with the resorts. The resorts could work to load-level the parking availability or even put spaces "out to bid" to adjust for demand. This approach would kill two birds: The traffic impacts, due to skiing, would be mitigated, and it would still allow other users to enter the canyon without restrictions.</p> <p>Certainly, such a plan is not perfect. But it is the type of solution that could be easily implemented with little change to the existing infrastructure...and it certainly should be considered prior to dropping a destructive, billion-dollar+ project into a national forest.</p>
36912	Bren Krug	<p>I'm strongly opposed to the gondola project for Little Cottonwood canyon! Most residents are! Why are we not being heard? Against it on so many levels; negative impact on the beautiful canyon itself. Damage to wildlife, water and vegetation that will NEVER RECOVER!!!</p> <p>Tax payers shouldn't have to pay for such a project that benefits a select few. This should be voted on by the people!!!</p> <p>OPPOSE!!! OPPOSE!!! OPPOSE!!!</p>
36913	alexander boynton	<p>IPlease explore other options. It will be an expensive eyesore, and it will go from bottom to top. There are many areas in between that it won't serve. I think improved bus service is a better option, and a sliding fee scale for cars. \$x for a full car (4or more people) \$2x for 3 people, 4x for 2 people 8x for SOVs.</p>
36914	Samuel Omer	<p>Gondola? More like [REDACTED]. The gondola is a stupid idea and I don't want it in my canyon!!</p>
36915	Cooper Ebbott	<p>I do not approve of the alternative, as it specifically benefits the already wealthy ski resorts, which have exacerbated the traffic problem by not limiting ticket sales. The project filters public money towards the resorts and construction firms, who provide funding to the individuals making the final decision. I don't understand how money is available for the worlds largest, most expensive gondola but not enough to attract enough bus drivers to fully staff routes in the current season.</p>

ID	Full Name	Comment
36916	Rebecca Zitnay	<p>Thank you for taking public comments on this issue! As a regular canyon user, I am excited to see continued forward progress on addressing the issue of traffic in LCC. My preference is for enhanced bus service combined with a parking reservation system at the resorts to limit users up the canyons during peak visiting times. After skiing Alta this past year and using the reservation system, i think it helped reduce traffic substantially and saw the positive impact it had on folks' willingness to ride the bus or carpool If they wanted to head up the canyon. I coordinated with friends to carpool just about every weekend this past winter, when previously I would have just driven up with my partner and met friends up at the resort. I think the snowsheds + widening of wasatch Blvd will drastically reduce congestion and help address the associated safety issues. Without the need for the major road widening project. I am concerned with the environmental impact of widening the road, but I do like that it would serve as a bike lane during the summer.</p> <p>I have ridden the busses on a few occasions and they were not always prioritized in traffic. In one case, I was stuck on the bus for over 4 hours because the bus didn't leave the 9400 park and ride until avalanche control work was completed and we were stuck at the end of the line, despite getting on the bus well before 7 AM. This incident has made me skeptical to ride the bus until there is messaging that UTA busses are prioritized. I am also worried about the shortage of drivers and the limitations that places on meeting the full demand of the proposed enhanced bus service.</p> <p>I am not opposed to the gondola, but since it will take a long time to build, and enhanced bus service is needed in the meantime, I think It would be best to wait on this major project and re-evaluate effectiveness of the wasatch Blvd and snow shed road enhancements at mitigating congestion when paired with parking reservations during peak travel times. I think the gondola option makes sense if there are consistent issues with bus driver shortages and the enhanced bus service isn't sufficient to meet the transit needs of the community.</p> <p>I think a toll is reasonable, and I would have no problem paying it. but it will be unfortunate if the toll is applied during all seasons, yet the bus only runs in the winter. This seems problematic, since the greatest things about the canyons is their accessibility and proximity to a diverse city. If a toll is required even on days when busses are not running up the canyon, it would further contribute to inequality in the mountains. I would like to see a summer bus on weekends that stops at some trailheads if a toll is implemented. Also, traffic cams at trail head parking lots or a monitor that sends updates to a sign at the bottom of the canyon would be nice- so if there just isn't parking at a trailhead I would be able to see that on a notice board at the bottom of the canyon go somewhere else to recreate.</p>
36917	Tommy Chandler	<p>Hello -</p> <p>As a 25 year resident of Salt Lake City, and a year round visitor to Little Cottonwood Canyon, I'd like to voice my stern opposition to the gondola as a solution to the issues of traffic and safety in the canyon during the winter. My opinion is based on three key areas. First is that the gondola is fiscally irresponsible, and relies on taxpayer dollars to serve private interests. Second is that it is inherently inequitable - skiing is already a very elite sport and using the gondola would further widen the gap between being those who are able to access this activity, and those who cannot. Third is the impact on the natural landscape of the canyon. Little Cottonwood is a world class geographical location, and the visual and physical impact would forever change the canyon in a negative way. I favor solutions that limit alterations to the landscape, and would like to see efforts to manage the number of people using the canyon with smart, non-invasive, and equitable solutions.</p> <p>thank you for the hard work of solving this problem. Good luck!</p>
36918	Wendy Christensen	<p>I oppose the construction of the gondola in Little Cottonwood canyon. It benefits Alta and Snowbird, but doesn't address how to improve general impact on the canyon. I don't want my tax money spent on this project. If there is that much money available to build a gondola - why can't the legislature pay our teachers more, and improve our education system in this state?</p>
36919	Scott Carter	<p>I firmly oppose this! As a property owner of a condo and as a citizen of Sandy. This will be an eyesore and will forever damage the view that condo owners have come to know the last 50 years of ownership at the Iron Blossam Lodge and all other south facing residents. I chose my property based on the view of the mountain, and now even my 9th floor view will be interrupted. And I will become part of the site seeing the Gondola riders will see ? I say NO. No to the tower in the parking lot for condo owners, no to the Gondola. It will become a seldom used albatross for 7 months of the year. Please reconsider, this is a bad idea.</p> <p>And will only benefit the ski resorts and not reduce the traffic from hikers, campers, or property owners.</p>
36920	Zach Rioux	<p>I am a Utah resident and a frequent user of Little Cottonwood Canyon. I am fully against the proposed gondola plan. To be frank, the proposal appears to be solving the question of "how can we make the most money for a couple highly-successful ski areas and a small handful of well-connected landowners," rather than "how can we make travel in Little Cottonwood more efficient and safer in the most cost-effective way." Despite a high price tag, it wouldn't solve the existing problems as it would only replace a small percentage of vehicle traffic and it would likely add many new issues (traffic in the valley, longer commute on most days, visual eyesore, overcrowded ski resorts). I would much rather see a smaller and simpler plan - something like a toll, additional buses (from more places), select snow sheds and enforcement of the existing chain restrictions. The current proposal seems completely unnecessary and wasteful, and would add limited value even if its initial cost was zero.</p>
36921	Nick Voorhees	<p>The initial and on going cost are not worth the investment. You could run a lot of buses for a lot of years with that money. I don't think the Gondolas will be used much in the summer time, yet we'll still be paying for them. I'm opposed to the Gondola solution because I think there are better uses for the money that would accomplish similar things.</p>
36922	Candice Thurman	<p>STOP THE GONDOLA Don't scar little Cottonwood canyon by building a gondola. The impact from this will effect animals and the water supply. The community is not for this build nor the cost that it incurs. Let's work on other solution.</p>
36923	Chelsea McGowan	<p>So not build a gondola, the environmental impact alone is too devastating. People won't use it. People are too stubborn and going to drive up the canyon anyway, even if there is a few because of convenience of driving their own car. Create more bus times and a bus lane and people will actually take the bus.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36924	Kelly Fitzgerald	While I support carpooling efforts up the canyon, I do not think the gondola is the best solution. Gondolas are expensive and intrude the scenery around it. More funding to city buses is an affordable solution. This will not ruin the beautiful canyon scenery and utilize existing roads.
36925	Kevin Quire	Please do NOT allow the gondola. There are other options that should be explored and implemented first such as reservation systems for both resorts that will control the amount of traffic. Tolls etc. Widening the road and the gondola are not the only two options and can never be undone. Do not let our generation be the one who permanently scared this beautiful canyon.
36926	Justin Brown	I'm doubt that I have anything unique to say here, but I'll briefly summarize: A) Traffic in LCC is only really a problem on a couple dozen winter storm days a year. A gondola is overkill for the the other 340 days a year. A1) We don't have as much of a "traffic problem in LCC" as we do a "Too many people problem at the top of LCC". Current parking limitations are the only constraint on this. The Gondola will only make our worst problem worse; B) This is a boondoggle for Alta and Snowbird ski resorts, they should be paying for this fully out of pocket if it goes forward; C) other less costly options should be tried first; D) I'm bothered by the huge deep pockets that are lobbying for this, I'm not sure to what extent it is Alta/Snowbird ski resorts or the company that would be paid to build the Gondola, but it feels shady. I hate conspiracy theorists, but the fact that this keeps coming to the top of UDOT makes it hard for me to dismiss the notion that there isn't some kind of a kickback going on. Love UDOT in general, I think you all do a great job on our roads, and being innovative in ways to build and maintain them. Thanks!
36927	James Crofts	I'm against the gondola idea. Strongest reason is we already have a road system that can be widened. To add a second system of transportation means a new set of costs, which will be passed on to taxpayers. It also means a additional set of problems. This will not magically alleviate congestion. Wider roads or a train/trax would be better.
36928	Madie Osborne	I've lived at the base of the canyon my entire life. 5-6 powder days is no excuse to ruin our canyon with a \$500mil project. Absolutely ridiculous. Will ruin the neighborhoods below and the beauty of the canyon!!! Snowbird and Alta charging for use of the gondola just is the icing on the cake. Nobody will use it. Roll the road and expand bussing.
36929	Francis Quevedo	This is gonna hurt our beautiful canyon. Wildlife is gonna be impacted and it seems like the ones pushing for this gondola just care about the money they intent to profit. What's gonna be next? More hotels or luxury apartments at the resorts? Little cottonwood canyon is beautiful in landscape and history. Please no Gondola. Do not destroy our canyon
36930	Matt Kirchner	<p>100% against ANY gondola. Especially with the base and/or parking right at the site of where all the congestion is, regardless of any road widening on Wasatch blvd. People will be driving to park where the congestion exists. This solves nothing.</p> <p>How about starting with JUST more bus service?</p> <p>I'm also against ANY measures to get more people up the mountain unless snowbird/Alta have skin in the game. The crowds AT the resorts have become unbearable, waiting an hour+ to get on a lift on powder days. I absolutely refuse to use my tax dollars to help them make more money without them creating solutions for large crowds. They don't deserve it.</p>
36931	Marilyn Hoffman	<p>As a 45+ year resident of Utah and frequent visitor to both Cottonwood Canyons, I am entirely in opposition of building a gondola in Little Cottonwood Canyon, and outraged at the suggestion that taxpayers foot all or even part of the exorbitant costs to build this proposed monstrosity. I am opposed to the gondola because:</p> <ol style="list-style-type: none"> 1. It benefits only a few, mainly the developers and construction companies (who will make oodles of money at the expense of Utah taxpayers and the canyon environment), and the ski resorts of Alta and Snowbird. It provides no transportation for points in between the resorts when only a fraction of Utahns utilize the ski resorts. Especially in the summer, it makes no sense at all, when hiking trails are located in a myriad of locations. I see this as a greedy developer's dream, and an advantage only to the ski resorts and others who will make an incredible amount of money with this project. 2. Buses will still be required to get people from parking lots to the gondola base. Why not increase but service to begin with? 3. Construction of this magnitude will destroy the pristine environment of this beautiful canyon and be a permanent eyesore. 4. How do we really know what the end cost will be to build what is bragged to be the longest gondola in the world. And what about the safety and engineering feasibility of this massive project? <p>I am in favor of further exploration of expanding bus service preferably electric buses and building avalanche sheds where absolutely necessary. Also, why don't the ski resorts make it more user friendly to travel to their resorts by bus? Such as providing space for lockers to store gear so frequent skiiers don't have to carry gear on the buses and an open gathering place for folks arriving without cars to prepare for their day of skiing. We need to get this right and not move hastily toward a project that will do permanent damage to the canyon and requiring extreme expenses for construction and maintenance.</p>
36932	Brenda Leonard	As a resident of Cottonwood Heights, I am against the gondola.
36933	Christopher Liddell	To whom it may concern- I am submitting my comment in OPPOSITION to the proposed gondola in Little Cottonwood Canyon. I believe the costs outweigh the benefits. Additionally, the primary benefactors will be the ski resorts, Snowbird and Alta as opposed to visitors of the canyon. I don't believe taxpayers should be forced to fund the instalation of the gondola. Furthermore, as someone who frequents the canyon, I believe traffic is truly a problem a handful of times per year. The optics, costs, and environmental impacts are sufficient reasons to stop the project. Let alone the annual maintenance costs going forward. I urge you to reconsider.
36934	Alec Spottiswood	I think the best solution would be to improve the bussing system/ widen the road. I believe the gondola provides too many issues primarily for the back country community.
36935	Mitchell Heyn	My name is Mitchell Heyn and I am a constituent from Millcreek. I am commenting because my relationship with LCC is very important to me. I urge UDOT to abandon Gondola B. I do not support it because of the environmental impact it'll have as well as the fact that it will only serve the ski areas and no hiking or climbing areas. Have you considered alternative traffic solutions such as a bussing system similar to Zion or expanding the current UTA bussing system? Thank you for your time and effort to accurately represent your community. Best, Mitchell.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36936	Tate Silcox	We shouldn't be paying for something that doesn't benefit us. The traffic is bad going up the canyon but we know that and live with it. This hurts us that want to use the canyon for more then just skiing.
36937	Dalan Faulkner Faulkner	No. Plz no. No gondola.
36938	Forrest Edwards	Please do NOT build a gondola in Little Cottonwood Canyon and instead seek to support more user groups then just skiers and snowboarders with the final transportation solution. A gondola only serves one user group during one season and would have a devastatingly negative impact on the local wildlife, recreationists, and casual users of the canyon as well. It would forever take away the natural appearance of the canyon and the feeling of connecting with nature when recreating inside it. We should put more funding towards better/additional buses, an updated park and ride, or tolling instead of an unsightly gondola that only benefits a few users.
36939	Daniel Cottam	the gondola solves none of the issues for the summer and the uses of the whole canyon. It will be an expansive abject failure. Congestive pricing and a bus line that is not hindered by traffic is the only cheap long term solution. nothing else solves all the summer and autumn traffic issues. This can be very green with natural gas or electric buses and it works in big cottonwood as well
36940	Madisen Quesnell	<p>It was truly terrible to hear that despite the overwhelming concern of the public, Udot still intends to move forward with the gondola. I am relieved the plan is a for a phased approach which includes enhanced bussing, which seems like the most practical, effective, and environmentally protective option.</p> <p>-Instead of committing to the gondola at this time, I encourage udot to proceed with the enhanced bussing plan as an end point. If a reasonable time after implementation this solution hasn't reduced traffic for those 11 key winter days, then perhaps additional considerations could be made. At a minimum, I request udot to thoroughly review the efficacy of the bussing solution during gondola rollout, and cancel gondola plans if the bus is found to be effective.</p> <p>-This plan is fiscally irresponsible. The idea of spending such an absurd amount of money to benefit 2 private business is unacceptable.</p> <p>-Dispersed recreation is an incredibly lucrative market for SLC and Utah broadly. I, personally, moved here for the access to peace and solitude in the nearby mountains, and frankly, the gondola would ruin that. Those of us who visit, work, and play in little cottonwood canyon will be negatively impacted by the gondola. While the money brought to the canyon is challenging to quantify compared to resort revenue, it is essential to our local economy.</p> <p>-Access to many classic bouldering areas will be limited for a prolonged period of time during construction, and some may be ruined all together.</p> <p>-The building of the gondola will come with the destruction and/or removal of irreplaceable and historic word-class climbing and views. Suggesting a boulder could be "relocated" is showing a fundamental lack of understand for this sport.</p> <p>-Climbing is becoming an increasingly important sport to the SLC area. The US training center is here. Two of Olympic climbers are based here. Many of the best climbing gyms in the US (maybe the world!) are here. Many climbing brands, including Black Diamond, are here. Climbing is growing like no other sport, and virtually no cities have access to climbing like Salt Lake does. SLC should embrace the climbing access it has, which has a much lower barrier to entry then resort skiing and is not reliant on weather conditions that are becoming more and more rare.</p> <p>-The gondola is not an equitable solution and will perpetuate environmental marginalization and injustice in the Wasatch Front</p>
36941	Mark Leh	As a tax payer in Cottonwood Heights, I do not want my dollars going to the gondola!! There is a simple answer, limit ticket sales and get rid of the Icon pass. Alta and Snowbird stop being greedy!!
36942	Emma Johnson	As someone who has grown up in Salt Lake City and enjoyed Little Cottonwood Canyon for my whole life, I am deeply saddened by the proposal to build a gondola up its scenic center. Proponents of the gondola are almost entirely made up of shareholders and business owners who think they can make extra cash through development, but when we look at all the people affected by the proposal and all the people living in the area it is a wildly unpopular idea. It is already hard enough to cope with the fact of increased use of LCC and the necessitation of a possible road widening, but at least that plan uses already existing infrastructure and preserves the fundamental beauty of the canyon. A gondola is extremely impractical because it would hardly solve any of the actual problems, with the requirement of added parking, long lines and expensive fees to ride the gondola, and still needing to shut down service with heavy winds or other strong weather. Additionally, the overcrowding problem of the canyon would only be exacerbated by the addition of the gondola as an additional tourist attraction. And while we need people in the canyon to keep the tourism industry running, the problem at hand is with managing the existing customer base, not adding a new one which would wholly overwhelm the fragile canyon ecosystem and limited infrastructure in the area. Building the gondola is a poorly-informed money grab which would scar the landscape and become a point of hatred for many years to come.
36943	isabelle galland	I vehemently oppose the gondola. People love climbing and recreating in this canyon and putting a gondola here will destroy hundreds of boulder problems. This is a legendary climbing area where many come to be humbled by the rock. Taking this away takes away a huge part of Salt Lake City. The gondola is tacky and screams ugly tourism. Salt Lake will lose it's locals, and if Utah doesn't care about that then fine. It will just turn into a blown out wasteland of people who don't care about preservation of natural beauty for others to experience. Restricting cars in the canyon and adding buses is a better option. Tolling the canyon is a better option. Please do not go forward with the gondola.
36944	Katie Dahle	A gondola with 2500 parking spaces at the mouth of Little Cottonwood Canyon will not solve the traffic issues that currently affect the larger Cottonwood Heights, Sandy, and Granite communities. The egregious expense of a gondola that only serves two private entities isn't a wise use of taxpayer funds. It doesn't address the many other users that use the canyon year round.

36945	Ryan Bookman	<p>Good evening,</p> <p>I'm Ryan, a local Utah resident. I frequently utilize Little Cottonwood Canyon for various outdoor activities including skiing, hiking, and climbing, and the reason I feel so connected to the canyon is because of the current pristine nature of the environment surrounding it.</p> <p>I urge NO for the Little Cottonwood gondola proposal due to its detrimental environmental impacts and negative impacts on the outdoor sports that I love.</p> <p>Its impact on wildlife is huge, and as someone who's lived through global warming-accelerated wildfire evacuations, conservation to me (and the majority of my community) is huge.</p> <p>That said, we need to address congestion on the canyon in other ways: We must toll drivers in the canyon. We must tax canyon users and employ this tax revenue into conservation. Every other major ski area has such a toll (and reasonably exempts drivers without the means to pay from said toll). We must expand the bus system and further incentivize public transit use. We must build snow sheds over the highway in high-danger avalanche areas (and plant native species on the sheds to minimize disruption).</p> <p>I'd like to emphasize that nobody is in favor of the gondola other than the corporations constructing it.</p> <p>Thank you.</p>
36946	Brian Mortenson	<p>I am an avid skier and snowboarder, and this is not at all a good use of taxpayer money. Here are a few reasons why: The cost is ludicrous - there are far bigger problems that can be solved with that kind of money. Taxpayer-funded projects should have broad public benefit. This project disproportionately benefits two ski resorts, non-taxpaying visitors, and a tiny fraction of high income residents.</p> <p>The gondola is not a good solution to traffic problems in the canyon. The environmental impacts and the cost are too high, and only solves problems for a portion of canyon users for a portion of the year.</p> <p>A solution that would cost far less and do far more to protect the canyons and improve the canyon experience for visitors would be to implement a permit system similar to what Arches and Zion are doing. By finding the right balance of advance reservations, last-minute reservations, and walk up permits, locals who live near the canyons can experience the benefits of living nearby, and the quality of our canyons can be preserved.</p>
36947	Ryan Bookman	<p>Good evening,</p> <p>I'm Ryan, a local Utah student. 36949	Allan Weddick	<p>To start, I am against the planned gondola up LCC.</p> <p>I am a resident of Sandy city and a frequent traveler up LCC. As many in Utah, the mountains are my sanctuary and place for solitude, reflection and outdoor activity. Staring down the valley while hiking to Red Pine lake is a breath-taking view and if you can catch it at the right time of day, there are few better views to see the sunset bounce off the granite walls and settle over the Oquirrns. Selfishly, installing a gondola will impact that view for me and the others which treat these mountains as a spiritual haven. That is one of my reasons I am not in favor of the gondola.</p> <p>What is the true benefit to installing a gondola? Pro gondola crowd will state this is the answer to addressing traffic congestion. Yes, it may for some of the busy days during prime ski season between the hours of 7-10am for uphill traffic and 3-6pm for downhill traffic (excluding avy control, which will most likely shut down the gondola too). As mentioned, I frequently travel LCC all year and other than those peak times from Nov-Mar, I have rarely ran into unreasonable traffic that wasn't cleared up in a timely manner. I don't see why the gondola is the choice to address a seasonal traffic issue which can be resolved with a solution which is scalable and cost less. The gondola is not the answer to any situation in our canyons and should not be a solution which monetarily benefits 2 ski resorts. The gondola is not the answer for many concerned citizens speaking their thoughts with passion and concern. The gondola is not the financially responsible option for Salt Lake County or the state of Utah for that matter. The gondola is not the solution for the outdoor enthusiasts which will most likely lose part of their playground due to the gondolar footprint. Again, what is the true incentive to our community with a gondola. I can't think of any incentives, but maybe thats because my love and respect for these mountains does not include a permanent structure in place, as a gondola will.</p> <p>Please take my concerns and the many thousands of responses you are receiving to heart, we aren't just taking time to tell our story because its fun, its because we care about a solution, not a fancy new toy to show off the mountains. The mountains don't need to be shown off, they are magnificent as they are for all to enjoy with limited scars.</p> <p>Thanks for your time.</p>
36950	Megan Jackson	<p>There are a number of better options for dealing with canyon traffic: charge for parking with discounts for carpools of four or more, improve bussing and shuttle options. But do not build an ugly gondola on tax payers pennies that is an eye sore on our unique and beautiful landscape. Please don't build the gondola.</p>
36951	Lisa Coffin	<p>I am against a gondola in Little Cottonwood canyon.</p>
36952	Bridger Harrison	<p>No</p>
36953	Tim Dau	<p>NOOOO</p>
36954	Alaina Marti	<p>Dear UDOT, Please listen to us. We don't have billions of dollars. Please listen to us. Our interests aren't to increase the traffic flow to Alta and Snowbird Ski resorts. Please listen to us. We care about conserving the land from irreversible damage. Please listen to us.</p> <p>Little Cottonwood Canyon is home to much more than ski resorts. In which the dire state of the Salt Lake, the climate trends show us that very soon these resorts will be experiencing winter droughts. Little Cottonwood is home to some of the most beautiful natural canyon in the world. According to the LCC Environmental Impact statement, it is home to large mammal species such as mule deer, elk, moose, mountain goats, coyotes, cougars and black bear. Smaller animals include raccoons, skunks, foxes, badgers, marmots, pika, porcupines, beavers, rattlesnakes, lizards, rabbits, squirrels, bats, and mice. Intensive building of a gondola would destroy the habitats, migrations, and lives of this wildlife. Additionally, it would cause further destruction of critical geological material and ancient human history. We hope for our state funds to contribute to projects that will sustain the well-being of all creatures in our environment. Far beyond just the lives of those with financial stake in the skiing industry. Please listen. Please and thank you.</p> <p>Alaina - Secondary teacher in Utah schools</p>
36955	Tristram Coffin	<p>I don't want a gondola in Little Cottonwood canyon.</p>
36956	Kathryn Williams	<p>I noticed the carbon emissions are not any better than carpool, bussing and pay to enter. Why are you opposed to trying those options first?</p>

36958	Bert Stolp	<p>Instead of a g[Gondola, a better, and more inclusive plan for the canyons is busing. As the Gondola already involves a parking lot, go ahead with that portion of the plan. But in lieu of the Gondola, build an enclosed bus terminal. Skiers will have a place to park their cars, and a heated inside space to wait for the appropriate bus. The interior space should/could include a food court. Buses would leave at 10 or 15 minute intervals and serve both canyons. And stop at all requested 'backcountry' trailheads. Down canyon buses would also stop at the same trailheads to accommodate backcountry users. Bus service would be year-around to alleviate both winter and summer traffic in the canyons. Additionally, buses are a more flexible alternative as the usage in the canyons change in response to climate change.</p> <p>To address social justice, the savings realized by this much simpler and more appropriate view-shed plan can be placed in a fund that subsidizes lower income members of the community with year-around free bus tickets, free winter ski equipment usage, and an 80% subsidy on lift passes.</p> <p>The Gondola is a gift to Alta and Snowbird Resorts. And to the portions of the populous that can afford the luxury sport of skiing. No matter how you access it, the Gondola is a bad idea. Congratulations to both Salt Lake City and County Councils for opposing the Gondola.</p>
36959	Dawn Cardinale	<p>I oppose the gondola project in Little Cottonwood Canyon. I do not believe other less invasive and less expensive alternatives have been explored or tried. I think other measures need to be considered--and tried--before something of such extreme impact and expense is accepted. For many reasons, as mentioned the expense and impact, a gondola is a poor choice at this time. A more efficient public transportation system, increased lanes, limited capacity in the canyon, reservations, tolls, and more can help alleviate the traffic in the canyon. A gondola unnecessarily burdens the community in multiple ways, including financial and environmental. Please do not make a decision for all for the good of a few.</p>
36960	Douglas Clark	<p>I am a former Managing Director of Business Growth in the Utah Governor's Office of Economic Development under Jon Huntsman Jr. In that role I spent extensive time working to raise the quality of the built environment in the state of Utah. I also worked to coordinate transportation, transit and economic development strategies, something that had never been done before in the state.</p> <p>This project flies in the face of good quality planning. There are far too many risks associated with this project.</p> <p>Register my opposition.</p> <p>Considerations:</p> <ol style="list-style-type: none"> 1. Cost. I have seen projects like this in the past. Not once have I seen them come in at budget or under budget. I will support this project only if UDOT officials agree to foot the cost of any cost overruns personally. Personally. As in selling their homes to cover cost overruns. 2. Public safety. What happens when an avalanche takes out one or two of the towers? Or otherwise disables the system? How will rescue equipment get people out of the gondolas many feet in the air on the road to access those gondola towers is blocked by an avalanche? This is just one scenario regarding inherent dangers in the canyon. 3. Aesthetics. Why take one of the most beautiful canyons in the western United States and spoil it with towers and gondola cars? 4. Who should pay? Why are taxpayers being asked to provide one more example of corporate welfare? This gondola disproportionately benefits ski resorts. They should pay.
36961	Kelly Flint	<p>I strongly support the gondola alternative. I believe it is the most practical and least disruptive approach. It can actually reduce traffic in the narrow canyon without a massive road expansion. I do not believe enhanced bus service can work without dedicated bus lanes, construction of which will irreparably change the canyon for the worse.</p>

38633	Daren Cole	<p>Please see attached document for submission.</p> <p>Thank you for your consideration,</p> <p>Daren</p>
36962	Elizabeth Leh	<p>I am a Cottonwood Heights taxpayer and I do not want my tax dollars going to the gondola. If Snowbird and Alta were not so greedy, there would not be a need for a gondola. Limit their ticket sale, as Deer Valley does, and get rid of the Icon pass. Simple and cheap for all. Snowbird and Alta should foot the bill as they are the ones getting richer.</p>
36963	Steve Preston	<p>One of the great things about the great state of Utah is the great outdoors in our beloved state. This is something that is universally agreed upon. The cottonwood canyons are a major piece to the puzzle in the great environment we live in. Few places in the world have such great access to such breathtaking areas such as these. And with the proposed solution of a gondola in a little cottonwood canyon, we are on the brink of ruining that beautiful landscape. This is only one of several major problems and drawbacks to this gondola. A list of the horrible drawbacks to this plan are the following</p> <p>The way it will destroy the beauty of little cottonwood canyon.</p> <p>The cost of over 550 million dollars.</p> <p>The inability to actually serve its purpose and solve the traffic issue that has plagued the canyons for years.</p> <p>The cost to ride the gondola.</p> <p>The detrimental hit it takes on making skiing in Utah affordable.</p> <p>The fact that a gondola only benefits ski areas profits, as well as the rich.</p> <p>The fact that it is largely paid for by Utah taxpayers, most of which won't even use it.</p> <p>The fact that the ski industry may be ending due to climate change.</p> <p>The fact that a large portion of the people you have making this decision don't even apply or have knowledge on the situation</p> <p>The fact that shoving more people up the canyon kills the skiing environment and experience.</p> <p>The fact that other solutions exist that are way simpler such as parking reservations, canyon tolling, passenger restrictions, continued bus service etc...</p> <p>Firstly, Massive gondola towers all the way up this entire beautiful canyon will destroy the natural beauty of it. Imagine coming up the canyon and having your experience of getting away from all the tall infrastructure in the city ruined by massive gondola towers in the way of your view. Building these towers will require tearing up the land, and building possible service roads to access the gondola towers just to name a few. The community that uses this canyon will not tolerate it being destroyed so that the resorts, gondola works, and rich can pocket an incredibly large check from the people of Utah.</p> <p>Secondly, This is an incredible amount of money to spend on a solution even if this solution was incredibly effective (spoiler, it's not). As popular of a passtime the recreation in the canyon is in Utah, A large portion of Utahns don't use it, let alone ski which is the primary purpose of this gondola. Utah's will be paying for this with their own money even if they don't use it. So many larger issues exist in this state right now and this is not where the money should be going (Skiing is my life and I love it more than anything). Homelessness, Infrastructure, crime, hunger, just to name a few. Don't cheat Utah out of what it really needs by benefiting the minority that is the rich and letting them have a cash grab with a gondola.</p> <p>Thirdly, This solution doesn't come close to solving Utah's traffic issue in the canyon on busy winter days. According to</p>
36964	Rochelle Dickson	<p>I personally would hate if the gondola went through. I've lived 5 minutes away from little cottonwood canyon my whole life. This would severely impact the natural beauty that Utah's Wasatch mountains hold. When you're at the top of little cottonwood canyon looking down, imagining a gondola there, just really breaks my heart.</p> <p>There's so many different ways to impact the traffic issue little cottonwood canyon is experiencing. Toll days. Either 1\$ every day of the year, or 3 dollars every other day. Free if you have more than 1 person in your car, or reduced cost. Multi level parking garage. Electric buses. There's so many ways to improve other than this awful gondola. Thank you for your consideration, have a great day.</p>
36965	Tim Messina	<p>The construction of the gondola to me seems like slapping a bandaid on the issue at hand, and only benefits those who are profiting off it. We don't need to attract more tourists to our precious canyon. It may slightly reduce traffic in the canyon (temporarily), but what about long term? We need to be thinking about long term sustainability of our canyon and it's resources. Paying bus drivers more and implementing an improved shuttle system would reduce the congestion in the canyon significantly. Creating incentives (coupons for guests who take the bus) will encourage tourists to take a bus. This alternative solution might affect the few who are making millions off the gondola. But you can NOT put a price tag on Utah's precious canyons. It is obvious that the gondola is largely AGAINST public interest. Create an improved bus system that goes to various parts of the city! Create incentives! Protect the rare beauty that exists just beyond our city! Protect our watershed! NO GONDOLA!</p>
36966	robert lingstuy	<ul style="list-style-type: none"> - tolling should be steep for all private vehicles. - shuttle/limo/carpool to get around private vehicle should be at 6 ppl in a vehicle; fee still required by shuttle service at reduced cost - bus should stop at trailhead, perhaps a bus less frequent or label buses 'resort direct' that isn't a direct to resort option. - Toll ALL personal vehicles in the canyon

36967	Hailey Griffin	<p>hello, and thank you for your time. I'm sure your eyes are tired and cheeks sore from the smile you have to constantly place on your face while talking to the public.</p> <p>My name is Hailey. I moved to Alta, Utah in January of 2009, lived there for 7 years, 8 ski seasons, before buying my home in Cottonwood Heights. I continue to work a full time, year round job up there. This commentary is strictly my own.</p> <p>I remember traffic on SR210 from my first season and am at awe at how big of a deal it has become in recent years. I worry we have grown impatient as a society and this is a problem we are building up bigger than it is. Yes, action is needed for safety, but is a Gondola the right course?</p> <p>I strongly feel the money being raised for the Gondola project would be much better served being spent on improving transit in the Salt Lake Valley. From my home, I have to drive a considerable distance to take public transport to Salt Lake City, the Airport, the west side of the Valley. I can walk to the ski bus, but more often than not it's full and I end up hitchhiking. There is a major lack of convenience, therefore lack of incentive, to take public transit as it stands.</p> <p>Can we help UTA hire more drivers? Without improving public transportation to the Gondola base, will we even see a benefit in traffic reduction? Or will it simply be placing the traffic into the surrounding neighborhoods? Widening Wasatch, to access a Gondola that may only run 5 months a year, with a limited parking base area, and not improving Valley transit. Ugh. How will this work in the fastest growing state? Will we not just be reevaluating again in 10-15 years?</p> <p>Some thoughts and ideas (disclaimer: I know little, but have experience a lot).</p> <ol style="list-style-type: none"> 1. I love the idea of avalanche sheds. 2. I also believe reflective paint would go a long way in seeing "the edge of the road" to those not so regular canyon drivers. 3. Can we straighten the road in some of those "scary" areas? Especially below Snowbird 1 where we see so many slide offs. 4. How about a UDOT shed in each canyon? Can pop out when those "unexpected" storms roll through, as they always suddenly seem to appear at 2:30/3pm. No more relying on the Snowbird plow that way... Also, creates local jobs. (Hopefully people want them again soon, the jobs I mean) 5. Work with the resorts for carpool incentives... heaven forbid they own any of the traffic issues. 6. Limit parking on the highways. 7. Increase bus service in the valley and have DIRECT routes to the resorts. Less time on the bus, more incentive to ride it. 8. Improve and expand Trax to travel along the Wasatch bench and add some East/West lines in Sandy and/or Cottonwood Heights. Maybe even Holiday to the 6200s park and ride.
36968	Lauren Shields	<p>I am severely disappointed by legislation, and U-dot's lack of concern for the community's grief. The people of Salt Lake are mourning the loss of the sacred Little Cottonwood Canyon. I ask, are we prepared to do irreparable damage to something so integral to the Salt Lake Valley. I understand the issue at hand and how severe the transportation conflict is. However, there must be a solution that does not demolish this stunning canyon making it an industrialized ski hub.</p>
36969	Robert Blake	<p>Hello, I think we should find another solution that meets the needs. Austin, tx was going to a similar project and ended up. It completing it as it would not move people on volume & effectively. In addition, I think it would detract from the beautiful canyon views.</p>
36970	Jessd Grupper	<p>As someone who recently moved to Utah for climbing, I strongly disapprove of building this Gondola. It would greatly detract from the beauty of Little Cottonwood. Please don't go through with this action plan.</p>
36971	Shana Heyn	<p>I am a constituent from Millcreek. I urge UDOT to abandon Gondola B. I do not support it because I want to protect our amazing canyons. We need less people, development and traffic, not more. Thank you for your time and effort to accurately represent your community.</p> <p>Sincerely,</p> <p>Shana Heyn</p>
36972	Gabrielle McQuay	<p>UDOT please reconsider the construction of the gondola. It is going to have irreversible negative consequences on our beautiful mountains and will only be benefiting two ski resorts. Our tax payer dollars should not be spent in such a wasteful way. We are also at risk contaminating our watershed, not something we can take a risk on. We are already facing water scarcity issues and are continuing down points of no return. As a member of this community for the last twenty-five years, I do not support the building of the ineffective and inefficient gondola. Please find an alternative solution to addressing the traffic in the canyons that does not require the destruction of them.</p>

Don't cheat Utah out of what it really needs by benefiting the minority that is the rich and letting them have a cash grab with a gondola.</p> <p>Thirdly, This solution doesn't come close to solving Utah's traffic issue in the canyon on busy winter days. According to</p>
36974	Ben Roa	<p>The gondola proposal is a short sighted, inequitable, and inefficient solution to the traffic problem in Little Cottonwood Canyon. Little Cottonwood is a unique natural resource in its accessibility to the city and the activities it offers, and the gondola will significantly and irreparably effect all recreation in the canyon. In the 16 years I have lived in Salt Lake City, I have discovered new (and often times free) uses of the canyon most every year, but I have also seen the snowpack noticeably decrease season after season. I agree that something must be done to address the traffic seen in the canyon, but there are other measures that are less costly and still allow more equitable access.</p> <p>Tolling or mandatory carpooling are far better alternatives to the gondola, as they are year round measures to preserve the canyon. Tolling can also serve as a revenue stream for maintenance of one of the most trafficked natural recreation zones in the country. The canyon itself is not solely owned by the ski resorts, and as such, the community should take responsibility in the future of Little Cottonwood. If anything, the number of comments you have received should speak to the willingness of the community to participate in this type of solution.</p> <p>The prospect of the trails, boulders, and views of Little Cottonwood being permanently ruined for an industry that is built upon an undeniably changing climate breaks my heart. To allow this to happen is to allow a senseless theft of one of the most valuable assets Utah has to offer for corporate gain, and I implore those involved to consider more equitable, less costly options.</p>
36975	Ginny Dehnert	<p>Big dollar gamble or giant boondoggle. No. Not only would that project would delete the views for everyone including photography opportunities to take views. Also think about how many times a rider would have to carry their gear! Once from the house to the car, from the car to your gondola building, then onto your ride but again once they arrive to the resort. They have to use a locker, then pack up for the ride down and then load the rear back into a car and go home. Is it just me or will this be a major pain in the [redacted] for skiers. Think about that!!!</p> <p>You'd be better off widening the road.</p>
36976	Theyvena Sanders	<p>The gondola is not going to serve a useful purpose in this canyon. It seems like a business move with intentions that will be unsustainable</p>
36977	Ryan de Vries	<p>The Gondola is an inappropriate use of our money to only support 2 businesses in the winter. It will have such a local impact that the actual locals should be able to vote and decide on if it is appropriate. It is not. It is an expensive solution that won't actually solve the issues at hand. Please try other options that have less of an impact.</p>

36978	Thomas Stenger	<p>I was extremely disappointed to fail to find among the comments reproduced in the Final EIS the comment I submitted last year. How can that be? I am resubmitting it here, below. I would be grateful to receive a response to my comment. My only additional comment is that UDOT should consider a strategy in which the "bus only" alternative I describe below is implemented only on certain days (e.g., days with or after significant snow accumulation). Please, do not proceed with the gondola proposal.</p> <p>[The below was submitted 9/10/21, as confirmed by an automatic email reply from UDOT.]</p> <p>Dear Utah Department of Transportation,</p> <p>\$500 million is an incredible sum, and it should buy incredible results. Unfortunately, I'm extremely concerned that the two preferred alternatives would be ineffective--even before considering their environmental impacts.</p> <p>It's simple: Without a materially significant toll on vehicular access to LCC, very few people will choose to ride a gondola (which might frequently lengthen their trip to Snowbird/Alta), and only a modest number more will choose to bus. If one of the two preferred alternatives were chosen, a substantial toll must be imposed as well. Otherwise we'll simply have sent even more winter sports enthusiasts to the resorts, without reducing congestion.</p> <p>In the short term, with population increasing and people heading outdoors more, the best choice would be to adopt a "bus only" model, akin to the one used in Zion National Park. Private vehicular access would be forbidden. No construction/destruction would be necessary. It would be cheapest, fairest, and least environmentally-disruptive option. Honestly, \$500 million of taxpayer money to fund a project that disproportionately benefits the well-to-do? The well-to-do (and resorts) ought to bear the cost themselves (whether enduring the current traffic or paying a toll). I write this as a very fortunate, well-to-do snowboarder.</p> <p>A softer, less permanent touch is all the more advisable given technological advances. Autonomous vehicle technology--at least of the "minimal" sort necessary to travel the LCC--will be here within the next 5 years, latest. Widespread adoption will follow. Perhaps using that technology could be mandated. Cars might then move synchronously up and down the LCC. Drivers could remain in their cars, but the consequences of human driving (slow "domino" starts, slower driving) would be eliminated. Why spend \$500 million tearing up LCC when it might not even be necessary in the near future?</p> <p>If \$500 million simply must be spent, how far would that amount get us toward "snow sheds" spanning the entire length of the LCC? That is, consider what would be, in effect, a miles long tunnel to the resorts. Ideally, the "roofs" of the sheds</p>
36979	Casey Sullivan	<p>The proposed gondola doesn't serve the people of SLC more than it serves the pockets of big ski resorts. It will be an overhead eyesore and will PERMANENTLY alter the canyon. Please say no to the LCC gondola.</p>
36980	Chris Marais	<p>Hello,</p> <p>I believe that the gondola is the wrong choice for LCC. The construction will be harming to well established climbing areas, take far too long. I would strongly hope that UDOT considers tolling, electric buses and other solutions over the Gondola</p>
36981	Rachel Howell	<p>Waste of time (passenger transportation time if it was built and construction time), waste of money, logistically unsound, only benefits a few, would only be used a few months and be a complete eyesore the rest of the year. Would rather see a reservation system in place.</p>

36983	James Roh	<p>Please, I am begging you all to reconsider constructing the gondola. It is plain obvious that Little Cottonwood Canyon suffers from traffic and congestion and the gondola will not adequately address that problem because it does not stop at any trailheads before the resorts, nor is it planning to run during the "off" season. We need a plan that will reduce traffic for ALL users, not just resort skiers. Trailheads are packed year round and a gondola is an expensive and unsightly project that will fail all but the two ski areas.</p>
36984	Garrett Challburg	<p>The gondola is a terrible idea. We must preserve the cottonwood canyons as much as possible, for they truly are wonders of the world. NO GONDOLA</p>
36985	Kat Kinsey	<p>NO GONDOLA. This is NOT what WE the people WANT!</p>
36986	Alex Osborne	<p>I have lived in Little Cottonwood Canyon for almost 20 years. I have never been bothered by the ski traffic. We all know what we signed up for when we moved into this community. We all know when we go up to ski a few days a year we will be stuck in traffic. To spend taxpayer dollars to construct a gondola that won't be used, if you think it will be a solution you're delusional, would be a total waste. Utah is not Switzerland. We don't need gondolas to attract tourists because the mountains do the talking.</p> <p>If you want a solution to parking/traffic. Look elsewhere. I have dear friends who will likely lose their homes should this plan go through. Once this gondola is built, there is no going back. If the plan fails, we are left with an eyesore to plague the canyon until the end of time.</p>
36987	Mia Mortensen	<p>Please use this money to save our Great Salt Lake. There are other solutions. The community is begging you to consider other options before deciding on infrastructure that we never be reversed. LISTEN to your community and environmental advocates and experts. Think about how this money could be used for a more sustainable and environmentally friendly way. PROTECT OUR LAND. We are here because of the Earth, the earth isn't here for us to do whatever we please for our convenience.</p> <p>I implore you to stop, think, listen, brainstorm other options, consult with our community and use this money for something that is actually in dire need of support.</p>
36988	TONYA EGAN	<p>As a tax payer and frequent visitor to LCC I can't support the gondola option. Too expensive, too intrusive, too drastic and too big of an environmental impact. Let's put our tax dollars towards a more sensible plan.</p>

ID	Full Name	Comment
36989	Caroline Canter	<p>To whom it may concern,</p> <p>I am Caroline Canter, a resident of South Salt Lake City and a concerned citizen over the proposal of a gondola up Little Cottonwood Canyon. I have been following the UDOT project over the past few years, continuously submitting my own public comments while encouraging other members of my communities to do. I thank you for providing us the opportunity to share our comments on the FEIS and hope that these are taken into account in the Record of Decision.</p> <p>As we all know, the goal of this project has been to cut down canyon traffic by 30% and the purpose of this EIS is to determine the most environmentally sound solution for the project. After a thorough review of the FEIS, I do not believe there are pertinent points being taken into consideration for the preferred alternative.</p> <p>I am strong supporter of an enhanced bus service, with no roadway widening or large-scale infrastructure. A canyon bus service that runs year-round, stopping at trailheads along with the resorts is the most reliable, affordable and accessible option. A bus service would be malleable to the needs of canyon recreationists and emergency weather conditions. It would be affordable from a UDOT budget perspective and from a user perspective.</p> <p>Please consider this option over the highly destructive, permanent addition of a gondola to our canyon, A gondola up Little Cottonwood Canyon would do severe, irreparable damage to our natural resources. It would have more visual impact across the canyon than any other option, permanently destroying the views of wilderness.</p> <p>The gondola would add traffic at the bottom of the canyon with the addition of a 2500 car parking lot. It would be a burden of cost for taxpayers, along with the cost to ride it. It would be deeply destructive to recreation access points, trailheads and climbing resources all throughout Little Cottonwood Canyon.</p> <p>The FEIS has a disregard to the environmental impact of the construction of a gondola in a protected watershed on Forest Service land. Construction would be a highly destructive multi-year process. It would destroy natural resources we all love. It would have a detrimental impact to the watershed and water resource for the Salt Lake Valley.</p> <p>Please take in the input of these public comments and fully reconsider the preferred alternative.</p> <p>Sincerely, Caroline Canter</p>
36990	Randi Prince	<p>The gondola is the worst idea in the world. It's construction would destroy the beauty of little cottonwood canyon for locals and anyone who travels to come appreciate its beauty. It fixes a resort problem...nothing else yet the tax payers are expected to fund it? Absurd. I will gladly pay taxes on any other solution that won't destroy every beautiful view in the canyon. Also, just because it's there doesn't mean people would even use it...what an absolute waste that would be! NO GONDOLA. NOT NOW. NOT EVER. please do the right thing and throw the gondola idea in the trash where it belongs. Thank you.</p>
38634	Allen Sanderson	<p>Please find attach my comments on the LCC FIES</p>
36991	Kristin Bachman	<p>Enacting a better bus system with tickets would limit the number of cars present in the canyon and will keep invaluable bouldering areas from being destroyed.</p>
38364	Thomas Stenger	<p>Also submitted via the online portal.]</p> <p>I was extremely disappointed to fail to find among the comments reproduced in the Final EIS the comment I submitted last year. I am resubmitting it here, below. I would be grateful to receive a response to my comment. My only additional comment is that UDOT should consider a strategy in which the "bus only" alternative I describe below is implemented only on certain days (e.g., days with or after significant snow accumulation). Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36992	Eric Browning	The gondola is a tourist trap for the rich. It's a greedy wreck less plan that will only permanently ruin one of the best canyons in the country and you will be held responsible for generations for the destruction you cause. Choose a tramway or a better bus system before this idiotic choice. There are much better alternatives if you don't give into bribes from corporation that only want to make money.
36993	Julie Jenkins	The towers that hold the gondola will be unsightly in this beautiful canyon.
36994	Ruth Wolf	I'm from Michigan and have visited Alta many times during all seasons of the year. I have always been struck by the incredible scenic beauty and majesty of of Little Cottonwood Canyon. I am disturbed by the proposal to build a gondola up the canyon. What a horrible and disruptive idea! On my approaching birthday, I'll be 98 years young and I know a special place when I see it. The construction of the gondola will destroy the serenity and beauty of a treasured place for many.
36995	Cathie Fox	I respectfully urge you to not build a gondola. I am a Snowbird skier and believe the best solutions can be found with restarting parking reservations, widening the canyon road, frequent electric buses, and reasonable tolls.
36996	Shannon Jensen	I do not support the gondola. It's a horrible use of taxpayer money. Even if the ski resorts funded the build, I do not agree that this is the solution.
36997	Jeff Bair	Why should Utah taxpayers pay for a gondola that will only run in the Winter, only serve two ski resorts and the wealthy - not ALL Utah residents. Bus routes serving the resorts - along with stops at selected trailheads from Spring through Fall - will truly reduce canyon traffic year round. As reported in the news, there are already sweetheart property and other deals occurring. The gondola is a bad idea for both visitors and residents that visit the canyon - but also Utah taxpayers.
36998	Justin Wettstein	I truly don't believe this is the right choice. How can the state justify spending over half a billion dollars on a project that will have a 30% reduction in its cause at best? And that is if everything goes as planned. I would prefer a toll on the canyon, cheaper for carpooling, and have the funds go toward subsidizing more busses and parking lots for bud pickup. Please don't build this gondola, the money needs to go to schools and other projects in need. (Plus some busses should stop at trailheads)
36999	Kirk Jenkins	This project is too expensive. They would be unsightly in the canyon.
37000	Lee Hyson	I am opposed to the gondola alternative. 1) This is not a robust solution as gondola travel is subject to wind holds and did not see this accounted for in travel comparisons while car travel times included weather/traffic. 2) The solution unfairly restricts travel to the public land in the canyon to people with money. 3) The long-term maintenance associated with a gondola is unfair to the public that does not use the ski resorts. 4) this solution will shift the traffic flow problem of little cottonwood to big cottonwood.
37001	Kara Downey	Taxpayers should not be paying for a service that only benefits two private ski resorts. If Snowbird and Alta want a gondola, they should pay for it. If budge becomes available, UDOT should use it to pay its bus drivers competitive wages.
37002	Zayne Hebbler	Per NEPA, UDOT is required to consider all user groups that spend time in the canyon. This proposal is big, shiny, expensive, and seems to disproportionately benefit the skiing community. With that said, the climbing community is being greatly under considered in this scoping process. Climbing near a metropolitan area is highly precious, and boulders of such quality are a finite resource. By impacting these boulders, UDOT is drastically damaging the quality of climbing near Salt Lake City. Alternative B should be reconsidered, and there should certainly be an aim to lessen the impact on the climbing community - a major recreation group in SLC.
37003	Michael Stern	As an engineer I fail to see how this solution will resolve anything.
37004	Shae Wright	Please don't do this. Realistically, at this rate realistically, by the time it's done the snow will have dried up. Focus on stopping that please. You can fluff it up all you want but the damage will be done. Please stop.
37005	Sydney Greenland	My concern arises around the permanent, impulsive nature of this decision. Construction of the gondola would undeniably harm the existing landscape and watershed, and only serves to benefit resort users. The gondola would be harmful to every other community-climbers, hikers, backcountry skiers, etc., not to mention the many negative impacts it would have on wildlife. It seems to be an extreme measure, one that cannot be scaled or reversed. Buses, for example, can be scaled to fit the need of the public with fewer buses running on slow weekdays and more buses running on weekends. Furthermore, the gondola will not alleviate the traffic issue-it will only perpetuate resort congestion and push traffic further down into the valley. I ask that you please consider the permanent, invasive nature of the gondola.
37006	Philippe Grant	As a professional in the transportation space, the gondola is the least logical recommendation and in my opinion is only begin considered due to the cost. The Rail alternative is the most future-proof option from a capacity perspective. The gondola only creates another bottle neck since there is only one access point. I studied urban planning in Canada and my professors would regularly mention how poor Salt Lake City was at planning. Implementing a gondola would only validate their claims. There is a reason why every other populated mountain town utilizes rail infrastructure, because it works. Make the logical choice Utah and move forward with the rail alternative so we can have sustainable transportation solutions for the mountain community.
37007	Shawn Barney	The gondola would ruin the natural beauty of the canyon, please do not build this.
37008	Julia Wong	My name is Julia Wong. I grew up and currently live in the Salt Lake valley. I'm proud of my hometown and Little Cottonwood Canyon is one of my favorite places to take visitors and tourists from out of state. Constructing a gondola will completely destroy the magic of LCC and its effect on tourism. Not to mention the climbing, hiking, running, and biking that takes place in that canyon on a daily basis. Nature is healing and residents of the SLC valley need that space to reconnect to themselves and recharge. I urge you to PLEASE consider a new way to save this beautiful canyon and make it accessible. Thank you for your time and energy in protecting the spaces that make Utah a one-of-a-kind state.
37009	Paul Sanders	I support the gondola and look forward to it's ability to reduce traffic
37010	Chelsea Cline	Let we the people vote on this matter. No taxation without representation!

ID	Full Name	Comment
37011	Steve McIntosh	<p>I think it is incredibly irresponsible to burden the entire state of Utah for a project that is essentially only needed for fifteen days a year, I need only look at the Big Dig project in Boston to understand how this proposal will not only double or triple in cost, but also double or triple in the estimated timeline from beginning to completion. A preliminary budget estimate provided by UDOT of 550 million dollars is guaranteed to be well in excess of a billion dollars before the project is completed. Dave Fields from Snowbird compared the Light rail project to the gondola project. While i admire the comparison, the Light rail was built primarily with federal dollars and was rushed through to accommodate the anticipated influx of visitors due to the 2002 Olympics. The burdening of the taxpayers is simply not a valid comparison and does nothing but increase the traffic in Big Cottonwood Canyon which already has more traffic numbers than Little Cottonwood and puts the cost squarely on the taxpayers backs, unlike the light rail system.</p> <p>I am not a fan of this project since I believe it does not do enough to solve transportation issues state wide and sincerely hope the legislature will deny the funding of this behemoth which will only cause more travelers to come to the state of Utah and exacerbate an already dangerous situation in both Little Cottonwood and Big Cottonwood. As someone who travels both canyons multiple times every day, I feel I am eminently qualified to proffer an educated opinion as to the realities of the two state highways. The necessary widening of Wasatch Boulevard to accommodate this project will only serve to put more vehicle traffic at the mouth of both canyons thereby causing an inordinate amount of traffic that cannot be cured between the Gravel pit all the way to 9400 South. Years ago, before the 6200 S interchange was built traffic had to exit at 3300 S. Yes, it was a bit inefficient, however you were always moving and the canyons operated in a much more orderly fashion. in my opinion, the current speed on Wasatch Boulevard from Ft. union to the La Caille sign is too high and should be reduced to 35 mph to align with the current speed limit of the rest of the road from 3300 South to 11700 south. One may wonder why that particular section had the speed limit raised? Simply to put more skier traffic up Little Cottonwood canyon to benefit the continually growing Snowbird ski and summer resort. Wasatch Boulevard is a high-speed neighborhood road which has the potential for catastrophe by increasing the number of lanes. Crossing at 3500 E. is already extremely dangerous to access Golden Hills park, and there have been fatalities. My feeling to control traffic is to increase the cost of a day pass for visitors so as to lessen the number of vehicles at the mouth of the canyon and give the residents of the state a reduced rate for recreating. What happens when the 2,500 parking stalls in the garage are full and the transfer stations for the buses are full? Well, at that point the gondola rides up the canyon empty due to the traffic being unable to get to the station. There are answers to effectively manage both canyon roads, however, the installation of a gondola in one canyon at the expense of the other canyon is not prudent and simply must be denied.</p> <p>Thank you for the opportunity to comment</p>
37012	Eric Wynn	<p>As a longtime Salt Lake City resident and regular Little Cottonwood Canyon visitor (resort and backcountry skier, climber hiker, and trail runner), I disagree fundamentally with UDOT's proposed alternative of a gondola. The gondola will not solve any of the transportation issues it is purported to address and will only negatively impact the canyon - view shed, water quality, destruction of natural habitat, heavy impact on climbing and boulders areas...just to name a few.</p> <p>First and foremost, I ask UDOT, legislators, and other decision makers to reconsider and not fund this ill-advised and fiscally irresponsible plan, especially at a time when the Wasatch Front is facing an existential threat from a drying Great Salt Lake. Money and resources would be more wisely used to find solutions to that threat than this gondola boondoggle (I understand these issues are mostly unrelated, but allocation of limited resources and funding is a choice).</p> <p>And while I am 100% against the gondola plan, I appreciate the phased approach put forward by UDOT. These "interim" measures (enhanced bussing, toiling, carpool restrictions, etc.) are actually the long-term solutions to traffic issues in the canyon. Before ground is broken for access roads and massive pylons, a thorough review should be performed to determine if those less impactful transportation measures offer solutions to the issues facing the canyon. Development and construction of the gondola infrastructure should be contingent on a project reassessment once those lower impact measures have been given a chance to succeed.</p> <p>It's clear from the recent resolutions against the gondola from Salt Lake City and County Councils that this is not the desired solution to winter traffic issues in the canyon.</p> <p>Thank you for your time and I appreciate the chance to provide input on this very consequential decision.</p>
37013	Kathy Bryan	<p>No it only benefits 2 ski areas should benefit all of them!</p>
37014	Peter Hauer	<p>Please do not put a gondola in our canyons. Please limit the number of humans going up canyon like powder mountain does. Money grabs like paying for parking and tolls are overtaxation. We already pay taxes on these roads. Thanks</p>
37015	Rose Struble	<p>I do NOT support an gondola in little cottonwood canyon. We need transportation solutions that alleviate the grid lock at the base of the canyon and that stop at trailheads in addition to alta and snowbird. Busses that run in the summer months would be helpful too! We need more buses!! And routes from downtown and u of u. NOT a gondola that increases congestion at the mouth of the canyon, that is invasive, and doesn't stop at any trailhead only access to Alta and Snowbird. A toll may be a solution but how do people pay with out causing more congestion and grid lock? Charge for parking at the resorts. A fast pass system. Any of that is fine but what we really need is more buses. And how does UDOT release this unnecessary proposal while cutting bus routes??? WE NEED MORE BUSES!!! Please do the right thing for the people of Salt Lake</p>
37016	Ella Solomon	<p>I think that the gondola wouldn't be good for little cottonwood canyon. I am a 17 year old that has lived in Utah my entire life who has enjoyed little cottonwood canyon and it's beauty and activities year round. I think that the natural landscape and beauty of the canyon would be ruined if a gondola goes in. I also don't think it is cost effective or the most environmentally smart choice. I think that there shouldn't be a gondola and there's other viable options to cut down and decrease canyon traffic.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37017	Allison Liddle	Hi! The Gondola is not a solution. As a resident of salt lake and a frequent visitor of these canyons, there are year round capacity problems in these canyons. The gondolas impact, if it has any at all on the issue with cars, would be minimal but the cost is enormous. Please reject the gondola plan. It is not a solution to the root problem.
37018	Hilary Jacobsen	NO to the gondola!!
37019	Christian Newby	Do not put a gondola in LCC. Nature is good and should be protected in such a fragile water shed. Thing if the amount of pollution that building will cause.
37020	Tyler Tadych	Please re-consider more cost effective and less impactful solutions. The gondola is not the most beneficial for the most user groups who deserve to access and enjoy all aspects of little cottonwood canyon.
37021	Bo Torrey	<p>First, I would like to thank everyone from UDOT for their work to prepare the EIS proposals and creating a space for members of the public to have their voices heard. I would especially like to thank Josh Van Jura for managing this project. I urge UDOT, Josh and all others involved to not take any criticism of the proposals personally or become defensive. It is human nature to do so when one's work is publicly criticized however, this is not aimed to be a personal jab but rather a passionate critique of the proposals themselves and a desire to find a solution that best serves the canyon, the city, and the people who live here. On that note, I think it's unacceptable how UDOT has postured itself and the entire draft and final proposal of the EIS so that public perception is thus that we have to pick between the two proposed "solutions" instead of acknowledging that other solutions exist and can be considered.</p> <p>I do not support either of the proposed solutions and it's clear from attending public hearings that the overwhelming majority of community members also reject the proposals. I am advocating that we adequately fund programs and resources that leverage the existing infrastructure the Cottonwood Canyons have in place today. It is at best irresponsible, at worst irreversibly destructive to move forward with either of the proposals. The gondola does not solve the traffic and congestion problem and only truly serves as a cheeky tourist attraction with no practical improvement to canyon visitors other than those wishing to visit the ski areas. What about those looking to backcountry ski? Or visit another trailhead within the canyons? The gondola would continue to be at the mercy of the unpredictable weather of the canyon. It's not uncommon for lightning to occur during heavy snowstorms as cold fronts approach, strong winds to shut down gondolas, or icing to prevent gondolas from operating. How reliable and efficient would the gondola be able to operate during those snow events that correspond to the days when traffic and congestion are at their worst? What are the safety procedures for reopening the gondola following an avalanche mitigation mission?</p> <p>Widening the road should not be an option either given the numerous historical mine sites located along the road that contain hazardous materials and metals within them. Opening those sites up increases the number of hazardous materials flowing into a primary water source for a growing city, and a shrinking water supply. For decades the solution to traffic problems has continued to be to add another lane. If history has taught us anything it's that that does not solve congestion it only furthers the capacity for congestion to worsen. These proposals are completely unacceptable and prioritize tourism, and financial growth for ski areas, and continue to push locals out of the canyons.</p> <p>There are other options to address the canyon transportation issues that are far less invasive to the viewshed, the landscape, and the water as well as significantly cheaper and more holistic. If the proposed solutions are based on 2050 projections then why is there no added focus on a more holistic city-wide transportation plan? Why would UDOT not partner with UTA and conduct canyon user surveys to gather data on where people are traveling from within the Salt Lake valley to understand transportation habits and identify the most practical locations for transportation hubs? Hubs located at or near</p>
37022	Jason True	I do not support the proposed plan for a gondola up Little Cottonwood Canyon. This is not a transportation alternative for those that recreate outside of resorts, backcountry skiing, climbing, hiking, etc. This serves one purpose, driving revenue to the resorts and opening up Little Cottonwood to further development. Please take this comment into consideration when finalizing your decision.
37023	Carlton Talina	NOOO GONDOLA!!! It would ruin the beauty of the canyon. It would also ruin access to all of the hikes, climbing, and protection of the water shed. It would also destroy the wildlife including certain plants or animals that are in LCC. NO gondola!!!
37024	Allison Gibbons	Driving home today on Wasatch Blvd, past 7200 South. Little Cottonwood Canyon started to come into view. My thoughts turned to the prospects of having a gondola built in the canyon. I could imagine the system in place. Big metal towers, cables running from each one, and I thought "What a shame that would be to take away of the beauty that naturally exist. We are blessed to have these mountains in our backyard. Surely, we can select an option for transportation that will not take away from the beauty. If I could vote, I would vote NO to building the gondola.
37025	Richard Layman	My comments include a pdf attachment. Therefore I have emailed them separately to littlecottonwoodeis@udot.gov I expect that the comments will be taken into equal consideration as those submitted in this online form.
37026	Jerusha Burningham	This is a terrible idea that has made me question my participation in working at and skiing at resorts. Please drop these plans and put effort into exploring more viable and environmentally-friendly options.
37027	McKay Grange	little cottonwood has some of the worlds most incredible climbing and a gondola would make much of it permanently inaccessible or altered. something else has to be done.
37028	LUCY ANDERSON	I am OPPOSED to gondola alternative. Other very feasible and implementable options need to be put into place prior to even considering gondola. Tax dollars to fund a gondola that would benefit two private businesses is not the approach that makes sense.
37029	Courtney Cookson	Projects of this scale are way over budget. How can we keep the gondola to be \$580 million? Where did these estimates come from? When it takes \$100 million more to complete, who is getting the bill?
37030	McCall Biddle	I oppose the gondola proposition.
37031	Tami Hansen	NO Gondola

ID	Full Name	Comment
37032	Siani Weston	<p>The gondola is not a solution to LCC traffic. It does not address traffic and packed trailhead parking in the summer and fall when other recreation is popular. As such, It only serves to bring more people to the ski resorts in the winter, leading to overcrowding. There is also an INCREASE in commute time for those who take the gondola compared to cars. This means that people will still be more likely to take their personal vehicles up the canyon to save an extra 10+ minutes. The bus has been an alternative for years but because it is a longer commute, it has never been really successful. Moreover, the gondola is an expensive solution to the winter traffic problem in LCC. For something that will only bring more customers and money to ski resorts, it is completely unfair for the costs to be fronted by taxpayer money. No other cost-effective solutions have been attempted and carpooling had only been weakly attempted by the ski resorts. This is a problem caused by the popularity of the ski resorts and should be up to them to resolve it using their own funds. Other resorts like Deer Valley have a limit on how many people can ski there each day. Solitude has a parking fee with lowering rates dependent on vehicle occupancy. These ideas help control traffic and overcrowded parking and should be implemented by Snowbird and Alta as a means to further reduce singly occupied vehicles, and thus traffic. I also suggest a toll booth with rates dependent on occupancy, the toll booth can also be used as a checkpoint for vehicle readiness to reduce accidents related to poor traction. The ski bus can also be improved to be nicer and more appealing to riders. Ski resorts can also provide free day lockers for bus users to store their excess items while at the resort to encourage bus use. The gondola will also run through premier bouldering and climbing sites which is and has been a popular for recreation for locals and visitors. For an expensive project that will leave a huge impact environmentally and visually, we really need to consider other options.</p>
37033	Mary Fairbanks	No Gondola wanted
37034	Tami Hansen	NO gondola
37035	Michael Tsuji	<p>I feel proceeding with the gondola would be ignoring the opinions of the vast majority of respondents to the proposed LCC traffic "solutions". The gondola will not only irreparably change the environment in LCC, but would also saddle the taxpayer with hundreds of millions of dollars in debt so Snowbird and Alta can profit. I urge UDOT to use common sense and listen to the opinion of the general public.</p>
37036	Tami Hansen	No gondola
37037	Jordan Gomez	<p>sustainable transportation is needed. pay for this on ticket sales to recreation areas for non locals. A tram or public transit solution is not a tourist attraction, but a smart decision.</p>
37038	genevieve vahl	<p>No gondola. No one wants this. This is for profit only. The only ones benefiting from this are the CEOs of the ski resorts. Little Cottonwood Canyon is not another Disney Land. It is a precious natural resource. Our watershed. There are ordinances in place to preserve that precious resource we need for survival in order to live in this place - like no dogs in the canyon or no swimming. Yet when making money for the already elite arises, those ordinances no longer apply and destructive, invasive development in a place we have long preserved takes precedence.</p> <p>The cleaner air can be found in other, less invasive ways. If Snowbird and Alta want to have a positive impact on this, they should limit their ticket sales to a capacity this canyon can hold. Which may have to reconsider ties with the Ikon Pass. The CEOs would obviously not like that, but if we are so concerned about this mitigation process, there needs to be options that are alternative to ruining the exact thing these tourists are coming to see. It is ironic to ruin the natural beauty with mechanized, industrial structures when that natural beauty is exactly why people are coming to the Wasatch. Why we live here. Why we come to Little Cottonwood Canyon. To see the mountains, to immerse in nature. It is no longer getting out in nature when flocks of tourists are floating through my view and natural space.</p> <p>Not to mention the under-spoken incentive of this whole project - the bid for the 2030 Olympics. Building this Disney ride as infrastructure and appeal to our area so we can host another world event. Attracting hoards of people to a place that cannot support hoards of people.</p> <p>A privately owned and lobbied business should not be using millions of tax-payer dollars to fund its activities. Especially when the only benefactors are ski resorts. Skiers are not the only ones using the canyon. \$35 to ride the gondola will not promote people riding it. It will only dissuade. Especially younger generations whose wages are by no means matching the prices of inflation.</p> <p>Increasing bus routes were also promised. Yet due to severe shortages with finding bus drivers, UDOT has in fact cut routes. This is exactly where millions of tax payer dollars should be going. Creating incentives to increase bus driving desirability and making that viable career options for folks.</p> <p>I don't know if you have heard, but we are in a bit of an environmental crisis right now, especially acute in the Salt Lake Valley. The Great Salt Lake is drying because there is not enough water returning down stream from the mountains due to the influx of people to this place using so much more water. Arsenic is going to blow into our air from the dried lake bed. We have people unable to afford basic survival needs like food, water nor shelter, left on the streets of downtown Salt Lake City. And yet, a tourist trap is what we are putting our taxpayer dollars towards?</p>

ID	Full Name	Comment
37039	Joseph Campanelli	<p>I certainly do not envy UDOT's position. There is no solution to make everyone happy. But I do believe that any action that gets more people in the canyon is not a solution. If teleportation becomes an option, are we going to have infinite people at the resort? NO. And I know, I'm just making a point. WE NEED TO COME UP WITH A CAPACITY LIMIT at some point, like yesterday. I think the Gondola does not solve any real problems. It doesn't eliminate the road and so there will be more people. It will create more problems but also more revenue for the resorts. I think the less development we do as humans the better. We are over consuming (not living with the planet). If the gondola were a winner of a solution, head and shoulders above everything else; sure maybe we destroy and build it. But the gondola doesn't solve the summer, trailheads, or non resort time skiers(hours). It's not even a great environmental solution. The gondola is just another problem creator. Do we restrict access? I don't know. I know I don't want to be restricted. But I think tolling, restricting (capacity limit!), and charging for parking is a good place to start. But we need to make sure other people are included in hours/restrictions. Not just the resorts. Remember the resorts are kind of the problem. Let us see how this goes, but we are NOT building a gondola. So lets get that money to hiring bus drivers!</p> <p>I have included the Wasatch Backcountry Alliance's comments below. I agree with their point of view and how they address each issue in detail. I wish I could articulate as well as they have but I cannot.</p> <p>The Wasatch Backcountry Alliance (WBA) is a local SLC nonprofit representing the interests of thousands of backcountry - and resort - users both locally and nationally as they pertain to the preservation of the famous non-resort terrain in the Tri-Canyon area. We have paid very close attention to the LCC EIS transportation process, and this is our formal comment.</p> <p>WBA agrees with UDOT that a preferred solution will represent a summary of key concerns expressed within the public comments that were received and processed: EQUITABLE PUBLIC ACCESS to dispersed recreation, OVERCROWDING, VISUAL IMPACTS, WATER QUALITY IMPACTS, AND YEAR-ROUND ACCESS for a majority of visitors. The proposed solution does not address these aspects - below is a list of issues that we see with UDOT choosing Gondola Alternative B as its preferred alternative:</p> <p>Dispersed Use - UDOT claims to have "Consideration of all canyon users, not just resort visitors" but by only having resort terminals and not operating year-round it's clear that this is disingenuous at best. It is well known that the White Pine trailhead is wildly popular year-round, with cars parking up and down the highway for up to a mile in either direction at all times of the year. This not only forces people to be far from their intended destination, it also creates a significant safety hazard along the state highway. The argument that UDOT uses for not stopping at White Pine is that there will be less traffic on the highway due to the gondola, thereby enabling White Pine users to drive to the lot is a red herring. WBA does</p>
37040	Nelson Powers	Please don't build the gondola. Restrict traffic and use buses more. Low cost and more effective.
37041	Brandon Morton	<p>I am against the entire idea of a gondola. Especially given our economic outlook and current situation.</p> <p>This will be a financial burden that benefits the few while the many are forced to pay for something they will never use.</p> <p>Given the state of our roads in general and the traffic congestion we experience every day from Logan to Nephi, this is a VERY poor use of funds.</p> <p>Let the resorts and those who will benefit pay for it, not the millions of Utahns struggling to put gas in our cars to get to work only to sit in traffic idling it away because the roads have not been updated to keep up with the demand.</p> <p>Enough! Stop spending frivolously to benefit the rich!</p>
37042	Dallas Scott	NO GONDOLA!
37043	Monica Petersen	Whatever is decided upon should be paid for by the resorts who will benefit - not the taxpayers.
37044	Gina Grapentine	<p>I do not believe the gondola is not a viable solution. The gondola is not a flexible solution, it is short sighted and permanent; vastly changing the canyon forever. Buses can be scaled, modified as needed and could, if implemented correctly, decrease the volume of cars in the canyon. I believe that tolling those who choose to drive up canyon could be implemented as well.</p> <p>I am against tax payer money being used to build a tourist attraction that only serves private businesses and does not alleviate summer and fall canyon traffic/congestion.</p>

ID	Full Name	Comment
37045	Lance Fairbanks	<p>October 17, 2022</p> <p>To Whom It May Concern, State Agencies: UDOT, UTA, Re: Gondola Project in Little Cottonwood Canyon</p> <p>Preservation of our Canyons environmental and aesthetic quality should be a top priority. Spending millions of dollars on a Gondola in Little Cottonwood Canyon, a Grandiose Elitist Infrastructure Project for the profit of some at the expense of others is not a responsible solution. Putting profit before Stewardship is irresponsible. There are other less expensive solutions; say NO to the Gondola.</p> <p>Consider the Great Salt Lake and the Lucin Cutoff of 1904 turned earthen causeway in the 1950's. This division creating the North Arm and South Arm has had an embarrassing impact on the "Pink Side" of the Lake, resulting in an economic loss and altered ecosystem. With an even more complicated issue of Water Management, drought and diversions, the problems have compounded. Read it in the News. How can Utah claim to be a good Steward of Little Cottonwood Canyon if we struggle to manage the Lake? More new infrastructure is not the solution; say No to the Gondola.</p> <p>The People have spoken in opposition to this Project again and again. As Friends of Little Cottonwood Canyon have said No and residents in the area have said No, large towering structures and suspended cables operating over private and public lands is "unsightly and invasive." The whole Project contradicts the concept of the Foothills and Canyon Overlay Zone, FCOZ. The installation of the Gondola would be a striking violation of that governing covenant. Preservation of the Canyon Aesthetics for both public and private enjoyment commands respect, say NO to the Gondola.</p> <p>People have expressed their thoughts for or against the project and other solutions. A poll taken on social media found that only 3% were in favor of the Gondola, 44% in favor of Highway/Bus Improvements, 20% in favor of a Reservation System, 12% in favor of Shuttle System (provided by the Resorts), 16% Limiting Passes, 1% other [504 audience with 54 votes]. My support for an alternative to the Gondola is in favor of Highway/Bus improvements, Parking/Reservation System with both Public Transportation and Carpooling as the emphasis to reduce traffic, say NO to the Gondola.</p> <p>As it is, the Ski Resorts are already at capacity, getting more people there by Gondola certainly won't improve the experience. The ability to regulate parking and passes per day is already a viable option given internet technology. Reservations may be made online ahead of time. A Parking/Reservations System can be implemented relatively easily. There is No need to spend Millions of Dollars before attempting other measures, say NO to the Gondola.</p> <p>The Gondola is an Elitist Project solving a temporary traffic problem on Snow Days, fewer than 24 out of 365. The profit motives of the "players" is all too transparent. Five to Six Hundred Million Dollars is a lot of money that some people, builders, developers and certain private land owners are going to gain wealth at the expense of others. Billing Taxpayers would not be a popular option and charging Riders a fee upwards of \$60 seems too expensive. If the Resorts want unlimited access for profit, let them put up the Money. But if such a high stakes project is not feasible on its own merit, say NO to the Gondola.</p> <p>Implementing a Toll Booth to collect upwards of \$30 to Vehicle Drivers for "access" to public lands is a terrible social</p>
37046	Emma Ireton	<p>My concern with this EIS and proposed plan is not fully explored or explained environmental impacts and detriments from the construction and implementation of the gondola and this option.</p>
37047	Johnny Utah	<p>This gondola is absurdly stupid. This state loves their money grabs and this might take the cake.</p>
37048	Michael Mower	<p>Following are a few things that leave a foul taste in my mouth regarding the UDOT's gondola option in Little Cottonwood Canyon.</p> <ol style="list-style-type: none"> 1. As a frequent user of Little Cottonwood Canyon, I and can safely say there are not many days that traffic is a significant problem. The days that are a bother tend to coincide with powder days and temporary road issues. With better planning and financial investment in bussing, these delay days would drastically reduce traffic inconvenience. See Park City as an example of what a competent bussing scheme would look like. If the plan is to spend hundreds of millions of dollars, use the money to modify the routes and the time schedules to better fit the needs of the canyon adventurers. 2. The beauty and charm of our wild areas should not be for sale. Wise minds have limited growth in our canyons to maintain as much of the wilderness appeal as possible in such close proximity to our metro area. I suspect most of those that have bought into the exaggerated merits of the gondola option, have not had the opportunity to see the 3D renderings of what our canyons would look like, with massive towers formidably looming for the rest of our lives and for generations to come. To allow the annihilation of the character and awesome beauty of our canyon, to benefit primarily two ski resorts and its few users is an abomination. That the gondola option somehow made it to the final two options is mystifying and reeks of minds that have no respect for our natural and wild world, and value monetary gain as the ultimate goal. 3. The ski resorts and canyon recreation areas have limits to what is sustainable for our use and to maintain a level of wilderness. Not wilderness as in wilderness designated areas, but wilderness in the sense that when you go to these areas, you feel nature, and just a few steps away from a campground or parking lot, you can feel essentially alone and one with the wild life that abounds. These feelings of being so near and within wilderness, are the very things that attract people from all over the world. They are the very things that would be forever scared and desecrated in the name of unbridled growth and profits should the gondola proposal be approved. Our population is growing and the wonders of the canyons are being appreciated by ever more people. It is not reasonable to consider that by any means possible, we allow for the continued growth of the ski resorts. The gondola proposal is a meager plan to address the wise use of Little Cottonwood Canyon. It is a hideous plan to disrupt the tranquility of our limited natural space.
37049	Adam Moretti	<p>The gondola option is not in the best interest of all salt lake residents nor all users of the canyon. Widen the road for bus only lanes or ban all cars from the canyon and allow buses only like Zion NP</p>
37050	Pieter Leeflang	<p>My childhood and teenage years were spent running around the crags of little cottonwood canyon. When I'm in the canyon my soul is at peace in the quiet granite walls. I 100% believe a gondola will rob the canyon of it's character and change it's tranquility forever. There is no going back from a decision like this and the ex politicians who bought the land have tried to spin this and corrupt the true impact of the canyon. Roads will need to be built to towers ripping up much more than people think. It is not the solution and I ask you to not choose the gondola.</p>
37051	Benjamin Quarles	<p>It's ridiculous that Utah taxpayers would foot the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37052	Debbie Carlson	I am against running a gondola up Little Cottonwood Canyon. Utahans should not be forced to pay for it and it has a negative affect on environment and watershed. The problem is that it is overused for the size of the canyon. There are reasonable solutions such as implementing a reservation system, use permits, canyon user fees, and car pooling. Utahans should be given use priority and/or lower fees than out of states.
37053	Whitney Warren	Tax payers shouldn't pay for the gondola. I don't care if they put one in but we're not paying for it. It should be paid for by the ski resorts.
37054	Eric Wynn	<p>As a longtime Salt Lake City resident and regular Little Cottonwood Canyon visitor (resort and backcountry skier, climber hiker, and trail runner), I disagree fundamentally with UDOT's proposed alternative of a gondola. The gondola will not solve any of the transportation issues it is purported to address and will only negatively impact the canyon - view shed, water quality, destruction of natural habitat, heavy impact on climbing and boulders areas...just to name a few.</p> <p>First and foremost, I ask UDOT, legislators, and other decision makers to reconsider and not fund this ill-advised and fiscally irresponsible plan, especially at a time when the Wasatch Front is facing an existential threat from a drying Great Salt Lake. Money and resources would be more wisely used to find solutions to that threat than this gondola boondoggle (I understand these issues are mostly unrelated, but allocation of limited resources and funding is a choice).</p> <p>And while I am 100% against the gondola plan, I appreciate the phased approach put forward by UDOT. These "interim" measures (enhanced bussing, toiling, carpool restrictions, etc.) are actually the long-term solutions to traffic issues in the canyon. Before ground is broken for access roads and massive pylons, a thorough review should be performed to determine if those less impactful transportation measures offer solutions to the issues facing the canyon. Development and construction of the gondola infrastructure should be contingent on a project reassessment once those lower impact measures have been given a chance to succeed.</p> <p>It's clear from the recent resolutions against the gondola from Salt Lake City and County Councils that this is not the desired solution to winter traffic issues in the canyon.</p> <p>Thank you for your time and I appreciate the chance to provide input on this very consequential decision.</p>
37055	Elliot Gorr	Defacing the scenic and valuable Little Cottonwood Canyon watershed with a gondola would be a tragedy. I am sure the reader of this comment will read more articulate and specific thoughts on solutions to the transportation challenges faced on SR 210. I will keep it big picture here. A multi-billion dollar carnival ride that stops only at the two large corporations in the canyon is not a fair or equitable solution for anyone recreating in LCC. It is simply a tourist attraction that will only bring MORE traffic to this sensitive canyon. Increase the buses, and limit passenger vehicle traffic with a reservation system (not tolling). This solution is equitable, scalable for seasons and peak travel times, and much lower impact than building the longest gondola in the world.
37056	Alec Wodowski	Please please do not waste taxpayer funds on a gondola. This is such an asinine waste of money and it does not represent the will of the people.
37057	Yumi Shimizu	I am against gondola. I think that will ruin the beautiful canyon.
37058	Mark Huffaker	I know the traffic is a very big problem, but I can't in good conscience support the amount of money spent on this project when so many people and especially child go hungry each day. If we can come up with the money for this project, why can't we do it to feed and house those who need it?
37059	Doris Reid	I think it's an awesome idea!!!
37060	Caroline Willis	Please do not go through with the gondola and disrupt the hiking trails and natural environment further.
37061	Sarah Hubbard	<p>Hello and thank you for consideration!</p> <p>I'm writing to let you know I OPPOSE the gondola option for the following reasons:</p> <ol style="list-style-type: none"> 1) Why am I, a taxpayer, footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses? With no trailhead or backcountry access, the gondola is far from a solution that benefits all of LCC's users throughout the year. 2) How many visitors can LCC support? The EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." I would like to see a capacity/visitor management study to better understand how many visitors LCC can support. 3) I care about the beauty of LCC. How is constructing more than 20 towers reaching 200 feet tall and stretching 8 miles through the heart of LCC maintaining the canyon's natural beauty? It's not. 4) I am one of the 80% of Utahns who oppose the gondola -- please don't ignore public opinion. 5) Let's start with common sense solutions and see where that takes us: parking hubs in the valley, electric busing with regular routes, carpooling and tolling, and reservations. <p>Sincerely, Sarah Hubbard</p>
37062	Tom Nied	A gondola is a waste of money and will not solve the problem. Increased bus service is the way to go. Why spend \$500M for Alta and Snowbird? \$500M will buy a lot of bus service and parking facilities.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37063	Bethany Allen	Please listen to what the public and experts are saying about the impacts of the gondola. This is so unnecessary, not cost effective and would be a defamtion to the landscape of the canyon. While I'm aware the traffic in the canyons is unsafe and unsustainable, there are so many other options to be considered first. The idea of a gondola through one of the most serene, historical canyons, makes me sick to my stomach. Oh and UTA just miraculously happens to decrease bus routes a few weeks back? Convenient. Buses are the answer here and there are so many brilliant environmentally conscious humans in this state, I am positive we can come up with a good plan. The gondola doesn't solve the traffic problems and is a band aid to a much bigger problem and isn't a viable solution for the future. We should be looking to do everything possible in our power to protect the canyon first and second make it accessible in an environmentally friendly way for those wanting to visit. I love driving up the canyon probably more than the next person, it's been a part of my life my whole life, but I would forfeit that for buses and a solution that actually makes sense and is scalable. Please please consider the many other options and protect our beautiful canyon.
37064	Landon Arnold	I agree with the Catholic Church! This is a substantial amount of money to benefit the rich and not benefit the poor. It's a very huge bill to benefit a very slim amount of people. I am very against the gondola.
37065	Justin Gibbs	Please don't build the gondola, at least without a tax payers vote. As someone who skis and enjoys many activities in the wasatch I ask you seek alternatives to the lcc traffic issue, or simply allow it to persist. Skiing is a choice made by an affluent minority, we can wait to ski. Burdening tax payers with the bill and eyesore of the gondola is not responsible public governance.
37066	Caleb Grow	I am a resident of Sandy and have grown up hiking, biking, and skiing in Little Cottonwood Canyon. I am opposed to the gondola because it puts the interests of the two ski resorts over everything else in the canyon, including all other recreation. The gondola would also fundamentally change the world-class aesthetics of the canyon. The citizens of Utah recognize this. Public opinion polls have shown great opposition to the gondola. In addition, the gondola option would require a huge expense (likely much more than the current estimates given inflation, legal challenges, etc.). We should not do this just to solve the ski traffic on the few days that it is truly bad every year in the canyon. There are other innovative approaches that could be taken to solve the problem on those days. I urge state leaders to do the responsible thing and to not select the gondola.
37067	Stephen Barg	No gondola, use buses.
37068	Beverly Stout	Please do not use taxpayer funds to purchase an expensive amenity (gondola) to relieve a short-lived seasonal difficulty (traffic flow) that would benefit a single industry (winter recreation) but ruin the esthetics of a rarely beautiful and permanent natural asset (Little Cottonwood Canyon) loved by all.
37069	Stephen Spanel	I am against the gondola.
37070	Bill Gowski	I just don't understand why we haven't tried piloting a bus oriented solution. These traffic issues are problematic around 15 days a year. Why spend a fortune to benefit developers when buses sit idle each weekend. Build transit hubs and INCENTIVIZE bus travel
37071	CJ Beckstrom	No gondola.
37072	Leona Olsen	I do not think that a condola is good for Utah. There are those who don't even ski. I am against putting a condola in our canyon.
37073	Kevin Mathews	Why am i as a tax payor having to foot the bill on something i will never use? You wall scare more land with the gondola. This is We say Utah the beautiful yet you want to put crap up. This is the worst idea. I am so against it
37074	Jessica Dall	We live right at the bottom of the canyon and feel this will not solve a long term problem. I believe people will find this "fun" one time, but will not be a solution for people skiing multiple times a year and people will choose driving over the gondola. Our Canyon is so beautiful and this big structure will take away from the beauty as it sits now.. and in my opinion not one that is worth it or beneficial.
37075	Elizabeth Arnold	I'm opposed to the gondola option as it is using taxpayer money to benefit only a select, privileged group on Utahns. I'd like to see more of the money being footed by Alta and Snowbird and big corporations that stand to benefit from the gondola.
37076	Rachelle McRae	The gondola accomplishes nothing that buses can't do. During busy times, just require people to use a shuttle like they do at Zion/Arches. The gondola only benefits the ski resorts so public money shouldn't be used for them.
37077	Suzanne Bridgeman	It's simple - NO GONDOLA!!! It would ruin the beauty of the canyon and will disrupt the ecosystems in the canyon!!!!!!
37078	Tom Gonzales	This is such a waste of money that could really help all people of Utah. Not just the privileged few that can afford to go up the canyon. Why are we not trying to invest in schools, Teachers, food shortages in our communities or homelessness ? Why are we not tackling real problems in Utah instead of a recreation area 1% of Utahn's will never use or even see in person ? So wasteful and selfish shame on you.
37079	Sharon Carlson	I am against the gondola for many reasons. 1: it only serves the ski resorts. Many people, myself included use the canyon to go hiking at various places 2: offering free bus service to the resorts would be far more user friendly and less costly. 3: if individuals had a choice between free buses vs \$30 parking, I think many would use the buses. Thus less cars in the canyon. What is really the goal?? 4. Having buses stop at trail heads would also help decrease the use of cars. If I could ride the bus to Red Pine trail head I would definitely take advantage.
37080	Joergen pilz	I am against the gondola concept. It is a taxpayer give away to the ski resorts having a unique way up the canyon that doesn't solve the problem. Reasons against: the visual impact of the gondola would be greater than a roadway widening; the (daily) gondola usage cost would add to the already high expense of skiing; and at \$550M cost that money could go to other improvements serving the general public, not just out of state skiers. lastly, people or using the UTA buses (they are crowded) and the car pooling Apps that both resorts provide. Expanding bus usage would be a better expenditure serving all of SLC.
37081	Brent Mitchell	The gondola seems like a short sighted solution. It will only serve the ski resorts, will take away from the aesthetics of the canyon, and other alternatives like increased buses seem like a more common sense alternative. Little Cottonwood Canyon is a state treasure and a slice of wilderness that promotes the wellbeing of our population, by developing the gondola UDOT would be compromising the benefits the canyon gives to the human population in the valley, just to support a fraction of the users. Please consider all users and consider alternatives
37082	Nancy Dunfield	Absolutely no! It will ruin our beautiful canyon.

ID	Full Name	Comment
37083	Chris Hill	Don't put a gondola in the canyon!! You will totally destroy the beauty and appeal of it. If you go through with this, I will vote others into office.
37084	Nate Knudsen	I do NOT support this bill in any way shape or form. I was born in raised in Sandy, Utah and spent many days enjoying both big and little cottonwood canyon. I am an avid climber, hiker and mountain biker and would hate to have such a massive structure built in the middle of the canyon. It is by no means a great solution to the problem. I have seen proposals for electric busses which are exponentially cheaper and better for the environment that will solve both the traffic issue as well as the pollution problem. I plead with you not to let this ridiculous proposal pass.
37085	Clark Walker	No to gondola!
37086	Jeff Richards	The community has spoken. The majority of people are strongly opposed. We don't need a European style canyon. We should not spend \$1BB to solve for 10-15 days a year. Tax dollars should be spent on the citizens, not Alta and Powder corp. Do the right thing!!
37087	Thomas Raty	I'm against the public paying for the gondolas. Let the resorts pay. The gondolas only benefit them.
37088	Josh K	No gondola please. There has been too much corruption already with this proposed project and hush-hush land deals. The ski resorts will need to find alternative solutions to the overcrowding in the canyons. Most of the local would-be skiers were priced-out of being able to afford to ski in the Cottonwood canyons years ago. The ski resorts will need to limit patrons. The ski resorts will need to limit parking, fund expanded bus service, road maintenance, and park 'n ride lots elsewhere. Tax payers should not be required to pay for projects to benefit only the ski resorts. No tax money for these projects.
37089	Daniel Poulson	This is the worst and most expensive solution to the traffic problems (especially during ski season) in Little Cottonwood Canyon. It only benefits 2 private business ski resorts and uses state money from all the state to fund it. It will ruin the scenic value of the canyon, operate only in the winter, have a high cost per ride, and shift the parking problems mostly to Sandy City. DO NOT put a Gondola in this canyon. Busses will be a much better, more versatile solution by far!
37090	Elise Barrett	Please please save our canyon. I am against a gondola. It will not solve the traffic problems. It will make more and it will destroy our beautiful canyon to only serve the rich. Please consider other alternatives. Increased busing and tolls
37091	Nathan Brown	No gondola. Why don't we try some less expensive/invasive fixes for the canyon first and see how that goes. Alta/snowbird need to foot the bill
37092	Nathan Hill	Please DO NOT move forward with the Gondola Project. There are better ways, this project will only make it more difficult to get up the canyon and more expensive.
37093	Scott Schaefer	Hello My family and I are winter and summer outdoor recreation users of Little Cottonwood Canyon. We are also residents of Salt Lake City. We strongly oppose the construction of the gondola as access the ski resorts in this canyon. The gondola will only serve the ski resorts and not the other users of the canyon. This is a beautiful canyon that will be forever changed with the construction of the gondola. We would rather see a bus system similar to what has been successful in Zion National Park. Irreversible & Rushed Decision
37094	Claire Dvorak	There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions. If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws. We have seen parking reservations work throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon. As Salt Lake County Mayor Jenny Wilson said, these are "common-sense solutions that are fiscally sound." Tax-Payer-Funded, Serving Private Resorts Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses? As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging. They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses. UDOT's EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6] Ignoring Local Public & Political Opinion 80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll. Salt Lake County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski and many other elected officials agree. "Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions. Parking hubs in the valley, electric busing with regular routes, carpooling and tolling, reservations, common sense solutions that are fiscally
37095	Carla Fostet	I am in favor of the Toll in Little Cottonwood Canyon. I vote "No" on a gondola.
37096	Jeff Walker	Please do not proceed with the gondola plan. It will impede on the canyons natural beauty and most of us local residents do not want it.

37098	Mandi Christensen	<p>STOP THE GONDOLA! Why on earth would this go through when the grand majority of valley citizens DO NOT WANT IT! Something seems off about this? What have the ski resorts been doing to enable this?!? It makes no sense!!!</p>
37099	John Jackson	<p>We are opposed to any further disruption to the ecology of the canyon which will come with the installation of a gondola. Why not just use busses? Go ahead and build a transit hub in the valley. But then put the skiers in busses instead of gondolas! Property owners in the canyon could have windshield stickers that let them through.</p>
37100	Hayden Price	<p>No gondola please.</p>
37101	Brighton Peachey	<p>Please do not build a gondola. It will have a huge negative impact on the Esthetic of the canyon and the natural environment. It is a drastic approach for something that could be helped with more cost effective and less impactful means .</p>
37102	Alta Fairbourne	<p>As an active little cottonwood user, I do not support the building of the gondola. Listen to us please. The community does not support this.</p>
37103	Josh Greer	<p>This gondola is not a good use of taxpayer money. Only alta and snowbird ski areas have fiscal benefit. They are already too crowded. We do not to make access even easier to get there! Protect our canyons! Please listen to the public. This is not a popular decision. Expand bus access. Think about making buses mandatory like Zion canyon. Us skiers are down for that!</p>
37104	Kendall Price	<p>This is so dumb. Stop wasting tax dollars on unnecessary things. We do not need to cause more harm to the salt lake valley and utahs environment.</p>
37105	Benjamin Eyer	<p>I support Winter Wildlands Alliance, Wasatch Backcountry Alliance and all the other groups in opposition of this gondola. This will forever tarnish the natural beauty of the canyon while coat taxpayers a lot of money and benefit a select few. This is not how government funds should be allocated and there should not be a gondola in Little Cottonwood Canyon.</p> <p>Best,</p> <p>Ben Eyer</p>
37106	Ann Odom	<p>As a resident of Sandy, I don't want a gondola in little cottonwood canyon. The cons outweigh the pros. Thank you.</p>
37107	Jim Wavle	<p>In my opinion, the Gondola B Alternative makes the most sense. However, I believe it is a mistake to limit the project to Little Cottonwood Canyon. Rather, the project ought to include transportation in Big Cottonwood Canyon and to Park City as well. A survey of visitors to Alta several years ago, showed that as many as 40% of the visitors there on a typical winter day actually drove from Park City. The results of this survey comported with my own experience in that I have found that virtually every visitor to my home in Park City also wants to ski in the Cottonwoods, thus leading us to drive there many days each winter. And the traffic congestion and automobile exhaust pollution in the Big canyon is every bit as bad as it is in Little Cottonwood Canyon.</p> <p>I further believe that the gondolas through the Canyons and to Park City should be built and run -primarily by private enterprise with some government assistance such as by tax advantaged municipal bonds to help fund construction. Clearly, the ski area operators will benefit from having a gondola system that improves the experience of their customers whether visitors or locals. And Utah citizens will benefit from having a system that reduces pollution, and allows us to accommodate visitors from around the world in a manner that supports an important element of our economy without detracting from our own enjoyment of the mountains.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37108	Andrew Thaller	Installing a Gondola in Little Cottonwood is a costly and highly invasive proposal. It has the potential to affect our water supply. It only benefits one user group (Skiers,) and should only be a consideration if the Ski resorts pay the full upfront cost. I do not want my tax dollars paying for a Gondola that benefits the rich. This damages the bouldering community and the view shed of a wonderful canyon. Salt Lake City should focus there multimillion dollar budget on addressing the drought and high cost of living. Furthermore, if making commutes faster and reducing traffic are truly a concern, Gate B in the airport has a 7 min walk that could use that gondola. Put it in the airport.
37109	Elizabeth Seeley	I would like to see a fiscally conservative approach to the traffic congestion problem. It seems that Zion National Park is able to efficiently handle large volumes of tourists daily. The buses are an easy solution. I understand that ski gear complicates the issue for some individuals and families. The ski resorts could offer free lockers to those that ride the buses so people have places to stash items. Maybe season ticket holders could even have seasonal lockers. Another idea would be to restrict cars during the peak hours of 7-9am and then 3-5 pm. I think with some creative thinking there are many less invasive and less expensive options than a gondola.
37110	Anastasia Kellogg	I disagree with the gondola. First, this project should not be funded with taxpayer money as it has minimal benefit to the general taxpayer. I do not ski, I am a hiker. With this project you'll happily steal my cash and make my experience in the canyon significantly worse, as well as charging residents who may never step foot in the canyon their entire lives. We all know UDOT is in bed with the resorts, but if the resorts want the gondola so badly they can pay for it. I'm sure they have plenty of cash and if the gondola will only service the resorts, then public money should NOT be used in order to fund PRIVATE business. Tell the resorts to get off the government tit and pull themselves up by their own bootstraps. It's very clear you only care about wealthy skiers while making the canyon worse for anyone who is not a skier. Ruin the canyon forever for a few days of skiing. Additionally, as the lake dries up and winters get drier, those days will be dwindling making this project even more useless. Additionally, the gondola doesn't offer any additional convenience. You will need to take a car, to a bus, to the gondola. Now imagine doing that with ski equipment, and maybe a few kids. Now reverse that after a day of skiing with cranky, tired adults and kids. I predict once the novelty wears off, people will be back to driving up the canyon and the gondola will not see the usage you claim it will have. Additionally, LCC is a crucial part of the watershed. How much damage will be done to the watershed after you take heavy construction equipment up there to build the supports for the gondola? What about maintenance roads? There is already a trail which follows little cottonwood creek. Will access to this trail be lost in favor of access roads to perform maintenance on the gondola? All your renders fail to show the access roads you will have to build for maintenance. Have you discussed this road access with the USFS? We have already seen a conflict in neighboring Big Cottonwood Canyon with road access between public (USFS) and private interests, leading to total loss of access. Also facilitating additional traffic to LCC puts additional burden and stress on the ecosystem, as well as our watershed. To my understanding, no work has been done to determine the capacity of LCC and if we are going to exceed the number of visitors it can reasonably carry. I also doubt your transparency on the cost of the gondola. Numbers appear to have been fudged to make it comparable to the bus option. This would be the longest gondola in the world if it was built. I highly doubt it costs only half a billion dollars and third party estimates have put the price closer to a billion dollars. This will also cost us millions in order to operate, for little payoff. Buses offer flexibility and don't destroy the viewshed of the canyon. What good is a gondola which will run only a few days during the year? Is it worth the ruined canyon? Who would ride it in the summer if it isn't stopping at trailheads? The canyon is used by more than just skiers. Additionally, this will not stop traffic but will just push it to surrounding roadways such as Wasatch Blvd, I-215, and surrounding neighborhoods. You know the gondola is an unpopular option. It only benefits PRIVATE businesses, and this isn't right and is a scam to steal taxpayer money. If you really want to push this put it on the ballot, so the citizens of Utah can kill it outright, instead of trying to hide behind your backdoor deals.
37111	Lyn Ellis	I do not support any form of gondola in Little Cottonwood Canyon! It would definitely negatively impact the canyon.
37112	Elizabeth Ahlstrom	No gondola. A bus service would be cheaper and more effective.

37113	Kimberly Kraan	<p>From: Kimberly Kraan. Cottonwood Heights, UT TO: UDOT RE: Public comment for record, re: Final EIS Gondola B, Oct 17, 2022: Opening, and preface for opposing a gondola in LLC as part of UDOTS' FINAL EIS : UDOT seems to miss the mark time and again on this issue. In presenting its latest FINAL EIS Gondola B Plan, they appear to have slipped over the ethical edge, narrowing the EIS focus in supporting privatized development interest of contrasting a gondola, which is to be funded by public tax dollars; the UDOT gondola-centric solution serves only private interest profiteering over greater public needs as formerly outlined in the originally drafted EIS purpose, 2018. No doubt in mind that the state senators, who crafted the legislative bill setting the \$66 million of EIS study money in motion, were careful in providing wiggle-room language within the bill to allow for any scope modifications. UDOT proclaims in its purpose of the revised Final EIS, that it is charged with: "substantially improving transportation-related safety, reliability, and mobility for all users on S.R. 210 from Fort Union Boulevard through the Town of Alta". Let's read that again: "For all users on S.R. 210". With that statement alone a gondola fails to meet the EIS criterion. In fact, a gondola would severely degrade and worsen conditions for all users on SR210, by inducing traffic into the area through both planned road widening and construction of a massive 2,500 tall parking garage/ gondola base station, thereby increasing risks for incidents, and increased emissions pollution along SR210 while simultaneously decreasing public safety. A gondola fails to meet any safety, reliability, or mobility issues on SR210/LCC: Per Uot's Chpt 32.2.4: "To meet the project purpose, UDOT does not need to eliminate all personal vehicles From Little Cottonwood Canyon. Personal vehicles would still be allowed into the canyon at all times (except during temporary closures for avalanches or accidents) to access recreational activities, the ski resorts, and personal residences." Continuing on, paraphrasing 'under US title 23 UDOT cannot close a state roadway...' SR210 will experience the same traffic flow, traffic incidents, etc, and traffic will not be limited within LLC, nor or will UDOT close the roadway, it cannot under Federal prevailing laws. So, nothing about safety, reliability, or mobility is improved for those using SR210 under UDOT's Final EIS Gondola B plan. The only purpose left standing is that a gondola serves is to increase canyon capacity be delivering more patrons to the ski resorts located within the canyon, snowbird and alta, that purpose is indirectly stated in UDOT's EIS purpose 'as the preferred alternative to improve transportation in the canyon'. To claim a gondola meets the criteria of: "substantially improving transportation-related safety, reliability, and mobility for all users on S.R. 210", is to offer-up self-serving skewed statistical data. This claim does nothing more than support the gondola narrative presented by UDOT, it serves only to increasing canyon capacity, but fails to decrease number of incidents within LLC. While it presents an alternative system/module of transportation, so too do busses, trains, and zeppelins. The gondola comes at a hefty price tag, a price public has already questioned as being too much money for a</p>
37114	Eric Gustafson	<p>I agree with a point from this comment. Public has already considered the decision carefully as a big mistake to put a Gondola up this beautiful Canyon. Thank you Eric Gustafson. Utah Mountain Adventures WBA agrees with UDOT that a preferred solution will represent a summary of key concerns expressed within the public comments that were received and processed: EQUITABLE PUBLIC ACCESS to dispersed recreation, OVERCROWDING, VISUAL IMPACTS, WATER QUALITY IMPACTS, AND YEAR-ROUND ACCESS for a majority of visitors. The proposed solution does not address these aspects - below is a list of issues that we see with UDOT choosing Gondola Alternative B as its preferred alternative:</p> <p>Dispersed Use - UDOT claims to have "Consideration of all canyon users, not just resort visitors" but by only having resort terminals and not operating year-round it's clear that this is disingenuous at best. It is well known that the White Pine trailhead is wildly popular year-round, with cars parking up and down the highway for up to a mile in either direction at all times of the year. This not only forces people to be far from their intended destination, it also creates a significant safety hazard along the state highway. The argument that UDOT uses for not stopping at White Pine is that there will be less traffic on the highway due to the gondola, thereby enabling White Pine users to drive to the lot is a red herring. WBA does not think that vehicle traffic will be abated enough (if at all) by the gondola to justify this conclusion. Backcountry users - like resort patrons - want to be able to use public transit in lieu of their own vehicles to access the canyon, but that is not possible under the current proposal.</p> <p>Economic Benefit - The EIS states: "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." WBA does not feel that enriching two private entities is UDOT's mission or responsibility and that applying taxpayer dollars to that end is a reckless use of public funds. Meanwhile, it should be noted that the latest Snowsports Industries of America participation numbers (2021-22) show a nearly 6% decrease in resort skiers and a 96% increase in backcountry skiers. Furthermore, data from the National Ski Area Association likewise indicates that participation in resort skiing has remained essentially flat for the last 30 years. More broadly accessible, dispersed activities such as backcountry skiing, snowboard touring, nordic skiing and snowshoeing on the other hand are among the fastest growing segments of the snowsports industry. And yet these increasingly popular activities, which should be made accessible to a majority of visitors to LCC, are fundamentally ignored by this proposal.</p> <p>Expense - The initial cost proposed by UDOT for the gondola was \$550M. This was pre-inflationary times, so even in the last year that figure will have risen to \$600M, if not significantly higher (which WBA suspects to be the case). Even if the cost has only increased by \$50M, that means that every single person in Utah is "paying" \$200 each to have what is effectively the most expensive chairlift in history installed for the benefit of two businesses (and auxiliary businesses). Any benefit associated with the proposed gondola will likely never be realized by the many Utahns who don't ski and/or live in</p>
37115	Amy Antonini	<p>Please DO NOT put a gondola in LCC. It only serves 2 private ski resorts and ignores all other uses like climbers. I do not need my taxes to help get more people to Snowbird and Alta. It is already too busy! The price of gas and ski tickets will automatically fix the traffic problem. Don't ruin our beautiful, unique granite canyons that we all enjoy for the sake of a few skiers.</p>

Public has demanded for increased, flex bus type service as an</p>
37117	Amy Painter	<p>I do not believe that a gondola solves the problems that we're facing in little cottonwood canyon and it's an expensive project to only serve a portion of the population who can afford to ski at the two resorts in the canyon. Additionally, this will ruin irreplaceable recreation for a number of enthusiasts and will be an eyesore in the canyon that cannot be undone. As a climber, hiker, skier and Sandy city resident i fervently oppose the gondola and would like our tax dollars to go towards a solution that serves the broader population and is sustainable. I'm writing so my tax dollars go to a solution that serves the largest group of people and not two for profit ski resorts that seek to benefit their stakeholders.</p>
37118	Oakley James	<p>Please we love LCC climbing</p>
37119	Amy Bannon	<p>Please do not install a gondola in LCC. Instead, listen to the majority who have suggested much more efficient alternatives. This would be a devastating loss for all.</p>
37120	Larry Buck	<p>Please NO GONDOLA, we are already being taxed out of our homes. The ski resorts should pay for it if they think it's needed. Joe Biden is already pricing us out of a good life, you don't need to pile on! Thank you</p>
37121	Finn Navidomskis	<p>The EIS says there won't be any impact to the watershed from the gondola construction project. However I find that hard to believe due to the scale of the project. Additionally, there are no precautions outlined in the EIS that will be taken during the construction of the project. Since such a large portion of the population of Utah is reliant on that watershed, it seems extremely risky to plan such a large construction project running the entire length of the drainage. How will the danger to the watershed be mitigated?</p>
37122	Meghan Brockmeyer	<p>I strongly oppose the gondola recommendation. This is actually the worst out of all the options. I would strongly advocate for a train or an option with much more effective carrying capacity.</p>
37123	Hailey Terry	<p>This gondola seems like a huge waste of money. As an Utah resident and someone who doesn't ski, I don't want my money going towards thing that I will never use. I love to hike and recreate up little cottonwood and a huge eye sore that only benefits a small handful of people and mostly the ski resorts (?????) this seems like a ridiculous answer to the issue of traffic up the mountain. Let's find a more simple answer that doesn't waste all my hard earned money.</p>
37124	Even Barrett-Caston	<p>No Gondola. The environmental impact is tragic. The cost does not belong to the community but to the resorts who will profit most. Please reconsider this mistaken approach to solving the traffic problem up LCC Thanks</p>

ID	Full Name	Comment
37125	Eric Klotz	<p>I appreciate the opportunity to comment on the Preferred Alternative Gondola B to improve transportation options up Little Cottonwood Canyon. I believe that the Gondola B would improve transportation up the canyon - However, getting people to the mouth of the canyon would not be improved. Wasatch Blvd traffic on weekends and powder days would be atrocious. There is a better way.</p> <p>As an avid skier here in Utah and all over the world, I have noticed that at many European Resorts they have multiple access points of getting people to the major ski resorts. They do this by offering multiple ways to access, from completely different directions. Busses, trains, trams, lifts, etc all coming from different directions and yet getting people to the same resort. By doing this they disperse traffic - not contain it in one canyon! The Gondola B and the existing road up Little Cottonwood basically draw people from and to the same place - the mouth of the canyon. This does not disperse traffic and will lead to a nightmare traffic scenario around the mouth of the canyon.</p> <p>What I am proposing UDOT do is to look at a wider scope of the problem. I am proposing that the same Gondola type system be built, but have it start near Mountain Dell Golf Course and bring the Gondola up Lambs Canyon - first stopping the top of the Canyons Ski area of Park City. A surprisingly short distance. Then the Gondola continues up to the top of Empire Canyon of Deer Valley - again a very short distance. After that the Gondola continues up and over to the top of Big Cottonwood Canyon near Brighton/Solitude. After that, up and over to the top of Little Cottonwood near Snowbird/Alta. This way you regionalize this transportation issue. It is not just a Little Cottonwood problem. All of the resorts are creating snarled traffic issues on weekends and powder days. This is a regional problem - it needs to be improved with a regional solution. This Gondola plan I am proposing begins to do that. This Gondola would be the same as the Preferred Alternative in that it is transportation solution, not a ski lift. You don't ski back down, you ride it down back to a large parking structure that could be built right next to I-80 on either side of the freeway. The exit ramp is there, the freeway is there. You give people a different entrance access point to the ski resort of their choice. This is what they do in Europe - we could do it here too!</p> <p>Thank you and I look forward to hearing from you about my proposal. I have actually looked and drawn out preliminary routes on quad maps to see that this would indeed, be a far better solution to solve Little Cottonwood traffic issues as well as addressing the other ski resort traffic issues as well. And because it enters at the top of each of the canyons, it would be less intrusive and better for the environment than the Preferred Alternative would be. Thanks</p>
37126	Kate Heins	<p>The gondola will greatly increase environmental stressors on the canyon ecosystem. Construction, increased tourist traffic, etc. will compromise the delicate balance of the area.</p>
37127	Paula Clemente	<p>Gondola will solve a problem for the 3 months that the skii season last, but it will destroy lot of land and recreation for the remiaining 9 months. There has to be other solutions than destroying our beautiful canyons. Not to the gondola!!!</p>
37128	Rebecca Rick	<p>Thanks for your efforts in addressing the need for a change to the current transportation system capabilities in Little Cottonwood Canyon. Given the overwhelming public voice that represents taxpayers who are also accessing the recreation in LCC yearlong, it seems obvious to first pursue a more robust bus system. Reliable bus access through the canyon will have little impact on the environment surrounding the road, and is significantly more fiscally responsible alternative to a gondola system. Please consider the voice of and impact to residents who find the service you provide. Many thanks for your thoughtful, thorough consideration of all comments.</p>
37129	Michael Buchanan	<p>Im not sure spending \$0.50 billion dollars on a gondola that will benefit two businesses is a wise a prudent public expenditure whene there are so many better (and less expensive) options. I am also afraid of the negative visual impacts within the canyon, the possible disruption of clean drinking water during constructions, and the impacts to traffic on surface streets around Little cottonwood canyon. It seems that this is quite the extravagant solution for a problem that occurs, at most, 60 days of the year. Im not sure if the gondola will run during heavy avalanche days (I don't see how it could safely). I also don't think people will ride the gondola for 35 minutes when they can drive the canyon anyway. I am a citizen of Salt Lake County and I am fully against the gondola.</p>
37130	Roy Zettel	<p>After reading the final EIS statement and recommendation the whole gondola program will only benefit the ski resorts. The people of Utah should not have to support the billion dollar ski resorts. The price for parking and gondola ride will price many hard working Utahans out of the LCC and it will become the plan ground for the rich</p>
37131	Dan Malmstrom	<p>I was born, raised and lived in Sandy for 50 years. I've been skiing for over 40. I am strongly against a giant billion dollar gondola that is only needed a dozen or less days for the whole snow season. My really hope you reconsider any other option.</p>
37132	Jim Frazer	<p>No to the gondola!</p>
37133	Niklas Aardema	<p>The LCC would only benefit the ski resorts located in the canyon, and they stand to gain financially from it's construction. Other users of LCC would have to deal with this unsightly addition to the canyon, and it's construction would damage the natural that makes LCC such a special place. Additionally, it would not be in use for most of the year. Traffic in LCC is largely a seasonal issue, and thus should also have a seasonal solution. Increased ski bus utilization, widening of the existing highway to accommodate bus only lanes, and toll access are all cheaper, seasonal solutions to solve the issue at hand. NO GONDOLA!!</p>
37134	Parker Landgren	<p>Little cottonwood canyon is what it's name is LITTLE. the canyon is already over populated by the ski resorts. adding a gondola will not stop people or traffic. People will now drive up the canyon and use the gondola possible doubling the population inside the canyon. If the problem is over crowding why create a transportation system that increase the problem. Ski resorts need to have limited tickets and reservations. As someone who grew up here a used to love the resorts I have come to realize that if we want to keep these beautiful mountains the resorts need to be limited. These mountains and canyons are more then the ski resorts</p>

ID	Full Name	Comment
37135	Dustin Renken	<p>I am a home owner and a taxpayer in Millcreek. I also recreate with my family in BCC and LCC. I do not support the Gondola as is it designed with the proposed funding. The Gondola's true, current purpose is to serve the LCC resort owners. This is evident by the lack of gondola stations between the base and the resorts. There is no opportunity to take the Gondola if you wish the backcountry ski or hike any of the trail heads in between. Also, as a taxpayer, I do not approve of paying to support the Gondola and also paying tolls and fees to access the canyon. If the resorts will benefit from the access at taxpayer expense then let them pay with revenue from resort patrons. That's how you keep everything fair and allow Utahans and visitors contribute fairly based on use. Let Alta and Snowbird pay for the Gondola or don't build it all together. It is a gimmick that will cause irreversible damage to our canyon. We haven't solved any of the problems with sustainable solutions, only supported corporate greed. LCC and the people of Utah deserve better solutions.</p>
37136	Mel Sanders	<p>I appreciate you allowing comments from the public regarding the gondola. As a cottonwood heights citizen I strongly appose the gondola. I believe the gondola would deface the beautiful mountains and is a shorty sighted solution. Please come up with a different plan.</p>
37137	Elaine Miller	<p>I do not want our neighborhoods ruined. I do not want our canyon and watershed ruined. I do not want my tax dollars spent irresponsibly. This will be expensive and will only benefit the owners of two ski resorts for a short time each year. Why should we pay for this? Why should all of the shuttle buses have to use Wasatch Blvd? Why not have locations throughout the valley using other roads? The residents will lose. They will not be the ones profiting.</p>
37138	Kaitlin Abare	<p>Setting aside the incredibly destructive nature of installing a gondola, it's not a practical solution, nor should I as a taxpayer pay for infrastructure benefiting a private enterprise. I am a long time passholder of both Alta and Snowbird and would never take a gondola. A gondola would take me longer than driving most days and I would never want to be stuck in a gondola with people I don't know for such a long time and distance. It is at best annoying and at worst a serious risk to my safety. I would not get in a car with someone I don't know so why would I get in a gondola with no possibility of getting out for miles?! I am opening myself to sexual assault or worse with no accessible help. At least at a resort pass purchases are largely tracked, the ride is MUCH shorter, and there are people nearby to hear cries for help. I would rather ensure my safety and sit in traffic than put myself at risk with strangers.</p>
37139	Carolyn Johnson	<p>I live in close proximity to Little Cottonwood Canyon and a resident of East Sandy, near the 9400 S Highman Park and Ride. I use both Little Cottonwood Canyon as a runner, hiker, and skier. On a day-to-day basis, what happens in Little Cottonwood Canyon affects me and my neighbors much more than politicians and tourists. I highly recommend the enhanced bus service.</p> <p>Why?</p> <p>_____</p> <p>Gondola Estimated Capital Cost - \$550 Million</p> <p>Enhanced Bus Service Capital Cost - \$324 Million</p> <p>_____</p> <p>Gondola - 2 stops</p> <p>Enhanced Bus - Numerous stops including hiking and skiing and can drop off runners and bikers</p> <p>_____</p> <p>Gondola - runs during the ski season</p> <p>Enhanced Bus - runs year round</p> <p>_____</p> <p>Gondola - most likely will be down during high winds and snow storms - much like the Snowbird Tram</p> <p>Buses -Buses run in windy and snowy conditions.</p> <p>_____</p> <p>Gondola - permanently scars and mars the canyon beauty</p> <ul style="list-style-type: none"> - infrastructure also displaces the habitat for animals - only used during the winter ski season <p>Buses - Electric, - use current roads,</p> <ul style="list-style-type: none"> - higher frequency of electric buses, - more people can be carried to more specific sites. - Runs throughout the year on a clear and enhanced schedule - Enhanced bus system enables people to pick up their ride from their hotels, and neighborhoods so that our neighborhoods close to the canyons won't need to have high rise parking in our neighborhoods bringing more car/truck traffic congestion and worsening air pollution as well as leaving the high rise parking garages out of neighborhoods built to have views of the mountains.
37140	Rebecca Poretzky	<p>First of all, people come to little cotton wood to enjoy the beauty of the mountains. Not only would this gondola ruin the aesthetics of the landscape, it would also cause physical harm to the natural cycles that the people of Salt Lake City rely on. It's impact would cause great stress due to noise pollution and environmental degradation. Therefore, disrupting life for humans, wildlife, and all living organisms.</p>
37141	Jonathan Brooks	<p>I oppose the gondola. The environmental and visual impact on the canyon will be a significant loss and irreparable.</p>
37142	Ammon Cloward	<p>the gondola will be detrimental for the canyon and the people of Utah for so many reasons. It is going to make a construction zone of our watershed, which creates possibilities for contamination, affecting every Utahn and visitor who wants clean water to drink. The gondola will damage many of our recreational areas, including climbing areas, hiking and biking trails and precious nature that many come to enjoy. The gondola itself will not alleviate traffic in the canyon, its goal is just to shovel more people into an already over crowded canyon. A much more effective and environmentally friendly idea would be buses with mobility hubs, paid parking on busy days at resorts, and tolling for canyon driving. I really hope that the fate of the canyon can lie in the hands of the people who actually care about and recreate in the canyon and not "Gondola Works" and those who invest.</p>

ID	Full Name	Comment
37143	Giray Dadali	Hello. I believe that the number one cause of traffic in Little Cottonwood Canyon stems from the growing use of users of this specific canyon. The main users of this Canyon come from Provo, Salt Lake, and Park City. Winter enthusiasts from the north in Ogden have both Snowbasin and Powder mountain to choose from, Park city has their resorts though some people still drive around, Salt Lake County users have BCC or LCC for the most part, and Orem through Payson only really have the cottonwoods as well. Sundance is a small resorts that little people in that region actually visit. So, I believe the money is best utilized in solving the stem of the traffic problem -- to create a unique winter experience for those in Utah County, where there are 600,000+ people. There already exists Provo Canyon, a well developed highway, and a small road (E S Fork Road) into Cascade Mountain. Cascade Mountain is a massive peak with 10 large bowls from Cascade peak to Shingle Mill, reaching 10,875ft tall -- just barely shy of Snowbird. Utilize this budget to solve the traffic issue with one that offers an abundance of jobs, recreation, tourism, and enhancement of life for those in the Utah Valley. While the resort is being developed, an enhanced bus system and weekend parking permits can be utilized in LCC to alleviate the congestion.
37144	William Jackson	I don't want the Gondola.. I would prefer UDOT to provide a parking structure and Bus people to the Resorts. Electric busses would be the BEST Option.
37145	Rena Power	I'm concerned that the gondola will cost over a half billion dollars, and only help a small minority of the upper middle class population to get to their ski destination. This will is not something intended to be used year round, and will only cut the traffic down by 30%. This will be an eye sore and ruin the most beautiful canyon in our nation forever.
37146	Carolyn Ancil	<p>The gondola is a horrific idea: The goal of the project is? To help more people enjoy LCC? But it doesn't stop for hiking at popular spots?</p> <p>The goal is environmentally sound? Scarring our beautiful canyons with enormous towers seems so ugly</p> <p>What have we really tried? UDOT has made several fantastic road changes, we need more Money changes peoples behavior, tolling he road will help significantly. A steep toll similar to bridges in San Francisco would change everything. This would need to be supplemented with frequent buses during peak times. The simple change of \$25 a vehicle would alter behavior drastically. You could issue yearly residence and employee passes and frequent user passes for a more reasonable fee of \$1,000 year. This would rapidly pay for the infrastructure needed to support this system</p> <p>PLEASE try some tolling before spending billions on a horrific tall tower metal scar to our pristine canyon</p>
37147	Bethany Moon	No! Please and thanks
37148	Susie Albertson	The Snowsheds need to be put in first. It has been the top recommendation of Avalanche experts. If Resort employees were required to ride the bus, a Gondola or 4 lane highway would not be necessary.
37149	Grey Jensen	I strongly oppose the implementation of a gondola in Little Cottonwood. I have lived in Utah my entire life and have grown up learning to climb, bike, ski, and hike there. As a skier, I know that the dreaded "red snake" causes immense traffic problems in the canyon and surrounding areas; however, I do not believe that the destruction of the canyon is necessary, and a gondola would be a complete waste of tax-payer money. The gondola has a huge price tag to only serve a singular user group, to a singular location that people experience less than 50 days a year. I support tolling, reservations, and enhance bus services which would actually mitigate traffic, do no damage to the canyon and would cost a fraction of this proposal. As a climber, I also do not want to see the boulders I learned to climb on destroyed. I want future generations to get to enjoy the beauty of the LCC without a gondola in it. The absurd proposal of implementing a gondola would only benefit a few at the cost of many.
37150	James Shelton	I believe that implementing the Gondola in Little Cottonwood Canyon would be a horrible and irreversible mistake made by this committee and our legislators. This project is unsupported by the only two ski resorts that it benefits while the entire SLC and Utah community is forced to pay the installation, upkeep, and operational price-tag of the Gondola. Having an expanded bus route would allow for a more flexible option based more closely on need (weather/climate/lack of snow) that could be increased or decreased without a huge chance in operational budget and expense on tax payers. I would be curious to see the ties and conflicts of interest that our law makers and committee members have with pursuing the installation of the Gondola in LCW.
37151	Finn Navidomskis	It is well known that the gondola is widely unpopular among local Utahns. Another example of a similar project, a widely unpopular gondola over a large recreation area is British Columbia's Sea To Sky gondola in Squamish. This gondola has been in the news several times since it's construction due to the ongoing opposition of it. In fact, the gondola cable has been intentionally cut twice already. Each time every car on the line plummeted to the ground and cost millions to repair and replace. Since the gondola is so unpopular, could this type of thing happen in Little Cottonwood Canyon? What measure, security and otherwise, will be taken to protect the gondola? It seems necessary that a public investment do this scale should be protected from anything that might damage it. But wouldn't it seem ironic to have to protect the gondola from the people it's meant to serve? I believe that the gondola shouldn't be built, since it is opposed by the majority of people it is meant to help.
37152	Anne Nelsen	The gondola plan will cost all Utah taxpayers to benefit just two private ski resorts and a handful of politician/developers and do irreparable ppharm to the environment in Little Cottonwood Canyon. There are better, more fair incremental solutions the traffic problems that could be built on or reversed as needed and that cost less than the gondola. Those other options should be selected.
37153	Matthew Seely	we have got to do something, the gondola is the first out of the "keep relying on fossil fuels and cars" there is. hopefully it won't just cater to the ski resorts but have stops at other hiking areas too.
37154	Adrienne Aperghis	Please do not construct a gondola in the canyon.
37155	Scott Hicks	I must admit, I don't understand the fight against it. I really like the idea of a gondola going up the canyon for the skiers and visitors. I wholeheartedly support it.
37156	Ruby Hammel	I am strongly opposed to the Gondolas being built! A big expensive cost to benefit a few people! I would hate to see what is will do to our beautiful canyon!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37157	Mia McNeil	<p>The Gondola project is not accepted by the citizens of Utah and this is clearly demonstrated. We have written letters to representatives, held meetings with government officials, created activist groups, and shown how much we care. When Little Cottonwood Canyons first posted about this proposal, all people saw was the Gondola being pushed for production. The comment section was full of upset people and explanations why this method will not work. Millions of taxpayer dollars all across the state of Utah will go towards this project (\$550 million to be exact, but probably more). Including thousands of people who do not actively go up LCC. Such as citizens in lower income communities, other counties, and those who don't actively participate in outdoor recreation. This is a blatant biased project towards not only tourism, but also towards the ski resorts. The production would also cause environmental damage and takes years to build. This means years of the same problem, but with the additional issues of production.</p> <p>Overall, I do not want this proposal to be accepted. The citizens of Utah do not want the Gondola.</p>
37158	Kerry Cowley	<p>I am strongly opposed to the gondola proposal. I don't ski and don't want to be paying for something that only mostly out of stators would use And ski resorts would benefit from. I would never pay the inflated prices to use the gondola just out of curiosity. I like to hike up Little Cottonwood Canyon in the summer and think a gondola would also be a big eyesore and take away from some of the natural beauty of the canyon.</p>
37159	Daniel Cureton	<p>Instead of putting in a fancy gondola that will not be free, it would be infinitely better to install a trolley train line (like Sugar House S line) up to the mouth of the canyon or to the ski area. This wouldn't add much to the road way, could be a public transit option up the canyon-from airport to ski by train-imagine the slogan!</p> <p>This also wouldn't block anyones scenic view in the area.</p>
37160	Lucie Jensen	<p>I'm opposed to it! I think it benefits a small, privileged group of people who can already afford to ski and doesn't benefit any of our poorer citizens yet their tax dollars are paying for it. I am already struggling to make it right now.. I have to go to the food bank for food and live pay check to pay check. Please don't take my tax dollars for something I won't benefit from.</p>
37161	Crissie Christenson	<p>The Gondola project to address the traffic issues in Little Cottonwood is not going to solve the issue any better than Trax did for the salt lake valley. The gondola is not convenient and only services the resorts. It is meant to make ski resort more accessible not the canyon recreation areas. You need to create wider roads with bike lanes and better recreation parking to create a better canyon experience.</p>
37162	Carolyn Petrick	<p>I have strong feelings against the gondola being built in our canyon. I truly believe there is a better solution. I am completely opposed I am convinced that it is being pushed on us by individuals that will benefit financially from it. Surely there is a better option.</p>
37163	Mark Benson	<p>I am NOT in favor of this transportation system being built.</p>
37164	Adrian Martino	<p>Hi there. I writing to show my disapproval of the selection of Gondola be as the preferred alternative in the FEIS. I think putting a Gondola up LCC is an incredibly short-sighted solution. I also feel like a properly funded, expanded bussing solution has not been fully explored and should be tried first before making drastic choices that will forever change the landscape of Little Cottonwood.</p> <p>On top of that, I don't believe that this alternative is broad enough in covering the needs of all users of LCC. It seems very focused on supporting only resort ski users and resorts. I don't believe that this many tax payer dollars should be spent giving such an economic boost to two ski resorts.</p> <p>I hope our lawmakers can see this too and seriously consider further options before it comes time to fund any projects.</p> <p>Thank you, Adrian Martino</p>
38365	Carly Alleman	<p>Please do not build a gondola. It will be a horrible eye sore and only a bandaid to the problem. Prioritize bussing and charging tolls for vehicles. Please don't do something that can never be undone. And don't make tax payers pay for this senseless machine.</p> <p>Thank you, Carly Alleman</p>
37165	Nancy Gillette	<p>I am adamantly opposed to the gondola in Little Cottonwood Canyon.</p>
37166	MacLean Wright	<p>I strongly disagree with the decision with regards to the implementation of the gondola transportation option in Little Cottonwood Canyon. The fact of the matter is that an expensive and environmentally damaging option such as the gondola should be a last resort, not a first one. Before any transportation option is implemented, tolling and enforcement of the traction law from October thru April needs to happen. This is a simple and affordable option. The tolling needs to be implemented and traction law needs to be wholeheartedly enforced for several years while UDOT collects data, only then would it be appropriate to look at alternative transportation options. The fact of the matter is that the lack of enforcement of the traction law and lack of tolling is what creates traffic and congestion in the canyon. This is blatantly obvious.</p>
37167	Mandi Christensen	<p>STOP THE GONDOLA!!!!!!!</p>
37168	Laurel Livezey	<p>I don't really understand the facts enough to know what I think is best. It sounds like you are going to go ahead with the Gondola and make us all pay for it whether we want it or not. And as everyone says if that is what is chosen. No one that i know or have heard voice and opinion like the idea of our tax dollars for paying for it. It is to help the ski resorts which take in way more money then they should already. Many people can't even afford to ski anymore. So why are they not paying for this stuff?? I belong to the nextdoor neighborhood internet site. What I have seen that is the opinion. People don't think that we should have to pay for whatever it is that is chosen. I don't ski and I don't go up there very much at all . Why should my taxes pay for something that I most likely will never use, because I don't ski and neither does my son. I have even heard they want to implement some kind of a toll for people to just drive up there in the winter?? Wow, that doesn't seem very fair either. That is all I am going to say.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37169	Marlon Solomita	This gondola is incredibly obtrusive. As an avid skier, I don't mind waiting in some traffic to ski. There is no guarantee that people will actually use the gondola. There is no sufficient plan for parking. It is entirely useless outside of ski season, which is becoming shorter and shorter every year. We will not need this gondola in 50 years when climate change effects take place and there is no snow left to ski. I strongly discourage this gondola proposal for ethical, environmental, and logistical reasons. Please listen to the community as you weigh this undoable and invasive decision.
37170	Danielle Droitsch	Please do not build the gondola!! I support increased and improved bus service, tolling or restrictions on single occupancy vehicles, and the construction of mobility hubs, as described in the phased implementation. I am opposed to Gondola B for its financial costs, destruction of the beauty of the canyon, and environmental impacts.
37171	Galen Staats	I mean really? How is this helpful? Who really benefits? Maybe less traffic, maybe less congestion but at the end of the day this isnt for the public.
37172	Jeremiah Watt	100% AGAINST! - better options exist - the gondola doesn't fix the problem - the gondola does detract from the canyon experience and does impact climbing - spending 550 million dollars to serve the few, 50 days a year, at the cost of the majority is an outrage
37173	Jeremiah Watt	Totally against!
37174	Lorraine Martinez	This plan would be a better use of public funds which would benefit more than the elite group that would benefit from the building of the gondola. It also would no distract from the beauty of the canyon. https://youtu.be/Xz0V1XCmRkc
37175	Boyd Anderson	Please go with the gondola. It uses less land and seems to be the best solution for clean air.
37176	Elena Wright	I disagree with the proposed gondola. This is an expensive solution that does not benefit all users equally. I am a backcountry user and the benefit does not serve my interests. I'm saying no to the gondola (as has SLC mayor and SLC Co Mayor & council)!
37177	Nick Smith	I am in favor of a year round gondola that serves skiers, hikers and bikers.
37178	Jeremiah Watt	There's few things I've been more opposed to. 100% AGAINST!
37179	Rachel Detwiler	Hi, I think the enhanced bussing is the way to go to solve the current mobility issues while preserving the beauty and values of the Wasatch. The fact sheets and videos really make the current plan clear, however I am deeply concerned by the intentions behind the gondola proposal. I think the current improvement to bus service sounds like a great option especially paired with incentives to take the bus and disincentives to single or low occupancy vehicles. One thought I have to improve upon this plan is consideration of school parking lots as bus stops on weekends. I think piloting this with express busses from the U could be a good first step, but limited times for routes to hit all elementary schools would be really awesome! I love taking public transit and would like to see summer routes and increased bussing in BCC also. I think that would be well utilized, especially by people passionate about reducing their carbon footprint. Another concern of mine is the UTAs recent statement that bussing including ski bussing is to be reduced this year due to difficulty with staffing (at the current wage.) This reads to me like there isn't really an effort being made to enhance bus service and that plan A will purposely be a failure to push the gondola agenda. Thanks for listening! I am looking forward to learning more and seeing how this project evolves!
37180	Jeremiah Watt	A land grab for the few at cost of many. Totally AGAINST!

ID	Full Name	Comment
37181	Adam Lenkowski	<p>I am STRONGLY OPPOSED to any and all gondola alternatives. The people of Utah who live and recreate here have made it very clear, we do not want this ridiculous "solution" pushed on us that will RUIN all that makes little cottonwood great. Also, what about Big Cottonwood, that arguably has a WORSE TRAFFIC PROBLEM than little cottonwood ever since the introduction of the IKON pass? Are we going to build another 15 mile long gondola for that canyon? Obviously not. The negatives far outweigh any "benefit" from this and the reasons are blatantly obvious, but I'll list them out again.</p> <p>-Gondola WILL NOT solve the traffic problem. Carrying capacity would take all day to transport the 5-7k people that go up the canyon on a busy powder day. Also, traffic will build up even further down backing up into the neighborhoods than it already does with the base station location. The canyon itself has a subjective carrying capacity, and trying to push more and more people up is not the solution.</p> <p>-Due to the aesthetic degradation and major visual impact this option should have been thrown out from the start. YOU WILL SEE 250+ ft tall towers with FAA lighting at the mouth of the canyon from everywhere in the salt lake valley. From inside the Canyon, the visual impact will detract from the inherent beauty that makes the canyon great, so much so that it will not feel like forest, wilderness lands. It will have the feel of an AMUSEMENT PARK.</p> <p>-I'm not a climber, but I've listened to the climbing communities concerns of impact to many famous bouldering routes. Not to mention, you will be staring at a giant Gondola on all the historic climbing routes on the famous granite slabs on the lower canyon.</p> <p>We, the people of Utah have spoken. We do not want this monstrosity that only benefits wealthy developers, and giant ski resort companies. UTA bus service was CUT soon after the gondola alternative was announced as the "preferred alternative". What a joke. This is absolutely disgusting behavior, as we are used to seeing from our leaders in this State. This solution sounds similar to "Lets build a multi billion dollar pipeline from the ocean to the great salt lake" mentality. Reads like a sad joke, but it's true. Its time to make informed COMMON SENSE decisions. Such as, we need to change our behavior and habits:</p> <ul style="list-style-type: none"> -More buses that are FREE or at least very cheap. More stops, more parking garages. -Tolling on the busiest days. -Limiting the amount of people in the canyon. -GREATLY INSCENTIVISING CARPOOLING <p>NONE OF THESE options have ever even been attempted. We are going to jump straight to lets bulldoze the canyon. Anyone that supports this should be ashamed of themselves. Shame on UDOT, the developers, and ski resort execs.</p>
37182	Riley Frazier	<p>I feel that, despite some obvious benefits of the gondola, the recreation users of the Salt Lake valley will not adjust and will continue to use private vehicles or busses to travel the canyon. I believe that a very robust, efficient, and frequent bus service will be more accessible to a larger population group and provide similar environmental benefits and alleviate some traffic. We have to address the current car centric infrastructure issues head on. A great bus system is the best possible compromise, especially considering it has the lowest visual alteration factor. Please do not go forward with the gondola, and instead look to solve the issues on the road; we mustn't take up more fragile space than we have to! Thanks :)</p>
37183	Eric Salmi	<p>Gondola is not the way. There are less destructive options that is good for all user of this great canyon.</p>
37184	Nancy Hobbs Orme	<p>I am totally opposed to the gondola for several reasons: 1) who benefits: Snowbird and Alta skiers. Period. 2) who pays: All of us (literally and figuratively), regardless of whether we ski or not; 3) visual pollution - probably my strongest objection. (These are not listed in order of importance.) 4) Better alternatives, ie, electric buses. Thanks to SL valley mayors, this alternative has been tested and seems to work. Certainly put electric buses to the test (don't scrimp on trips - consider the gondola cost!) for a couple of years before throwing a bunch of money at a hyper-expensive gondola. 5) Speaking of which, how about invest some of that prospective gondola \$\$\$ into the Great Salt Lake's restoration? Without the lake, the snow's not going to be "the greatest." First things first. 6) Saving our environment for future generations. So much is already lost; we owe the canyons to our grandchildren and our great-great-great-great-grandchildren.</p> <p>The cost of a gondola ride up the canyon is going to be so prohibitive that, even as someone I believe is probably better able to afford it than most, I don't believe, I could -- or would -- pay for it. Is it anything beyond a Snowbird (and big development investors) pipe dream?</p>

ID	Full Name	Comment
37185	Sage Mack	<p>1. UDOT's own criteria emphasize that the preferred alternative must benefit all users of the canyon. The gondola only benefits patrons of Alta and Snowbird and, not incidentally, the owners of these resorts who would be, in effect, receiving an enormous public subsidy.</p> <p>2. The gondola towers would permanently deface the natural beauty of the canyon, diminishing the experience of all future visitors, including those who derive no benefit from the gondola.</p> <p>3. The traffic delays and crowds foreseeable at the gondola base will cause many prospective users to drive instead.</p> <p>4. Better and much cheaper alternatives exist that UDOT has not considered. One would be to implement alternate day access depending on whether a vehicle's license plate number is even or odd. Another would be mandatory carpooling enabled by an app (similar to Uber's) to match drivers and riders who would meet at a designated place near the bottom of the canyon. It's understandable, although not in the public's interest, that the ski resorts would object to such arrangements for fear they would reduce the number of skier-days.</p> <p>5. However, the resorts, and all of us, must realize that the only way to save Little Cottonwood Canyon is to limit the number of people who use it. This should be done in an equitable way (i.e. not a toll).</p> <p>6. Finally, it is short-sighted to spend half a billion public dollars on an industry whose economic importance will decline as our snowpack thins. By the time the gondola is finished, it is entirely possible that Utah will no longer be the ski destination that it has been in the past. Of course, the ski resorts refuse to consider this future. Whatever solution is adopted, it should minimally impact the experience of the canyon in case this future becomes reality. If the gondola is built, we will have permanently defaced the canyon and spent a huge sum of money for no purpose.</p>
37186	Randy Winkler	<p>I am strongly against the proposal to build a Gondola in Little Cottonwood canyon. Why should the citizens of Utah pay so much, to benefit so few?</p>
37187	Gregory Liles	<p>A gondola should not be built in Little Cottonwood Canyon. It will only be useful to skiers. I do not want to pay taxes on a project that only benefits a small group of people. If the gondola is built on public funds, I will retire in another state.</p>
37188	Joseph Reese	<p>First, Institute odd/even day license plate access up the canyon, second establish several hov waiting lanes (4,3,2,1 occupants per car) at the bottom of little cottonwood canyon and let the higher occupancy cars go up Canyon more often. Build a dedicated bottom of canyon hov lane to exit the Canyon. Change to a round-a-bout intersection at the bottom of Big Cottonwood canyon so no one has to stop. Finally build the parking structure for 1500+ vehicles in little cottonwood canyon (as currently planned) to park cars so skiers can meet and combine riders to one car before entering a hov waiting lane, or take busses up. Do all these before re-considering a gondola or widening the whole road, after seeing the effect of the above actions on traffic congestion.</p>
37189	Richard Peterson	<p>If the Gondola costs more than a fleet of electric busses, why would UDOT even consider it? The Gondola idea is crazy stupid. Put it on the ballot and let the Utah residents decide rather than the politicians and private equity profiteers.</p>
37190	Connon Williams	<p>As a lifelong sandy resident who lives near little cottonwood road, any solution that includes a gondola is not a solution at all. Any and all other solutions would be preferable.</p>
37191	Cameron Sjoblom	<p>I am a big snowboarder and hiker in little cottonwood canyon. I think the gondola would be an eyesore in the canyon and harmful to the beautiful environment in our very unique canyon. I believe an improved bussing system, wether you make it mandatory to take the bus or not, would be a much better solution. Out of all my friends and family I don't know one person who would support the construction of a gondola in the canyon. I beg that you choose an alternative solution for traffic up and down the canyon in order to provide access to the canyon, but also keep our canyon views and environment in its current state.</p>

ID	Full Name	Comment
37192	Scot Wilcox	<p>After reviewing the EIS documents in its current form, the obvious lack of credible research and the lack of a legal audit trail, along with the lack of proper vetting of ALL issues pertaining to this project is appalling. The only issue made clearly transparent, is the sad attempt to compile "data" that is so blatantly weighted to the benefit of a small group of a has-been politician (owns massive real estate earmarked for the project, his greedy cronies who stand to make a windfall profits on the backs of taxpayers in Utah. The aforementioned individuals and entities have worked diligently to keep this entire project 'below the radar and withholding critical and substantive disclosures and information from state taxpayers. A small group of 'power-brokers' as they like to perceive themselves, have built a secretive coalition to quietly develop and implement the idea of a gondola in Little Cottonwood Canyon, without providing the legally required notice to the public and the taxpayers who will be affected by this project.</p> <p>The assertion made in the document, that ALL possible options, alternatives and solutions have been investigated, researched and numerically quantified is an outright lie. Evidence of weighted analysis of these options and their short and long-term cost/benefit data, is woefully lacking and would be discredited in a court of law in 15 minutes. If the findings contained in this EIS are indeed the final statement that UDOT is prepared to make and to stand by, then it fails the taxpayers of Utah in every way. The document on its face is an embarrassment to UDOT and the lackey's involved in its creation. It also speaks volumes about the current lack of leadership at UDOT. Critical questions not properly addressed or transparency provided:</p> <ol style="list-style-type: none"> 1- Where is the financial commitment that a citizen and taxpayer can understand, outlining the financial commitment(s) of Alta and Snowbird ski resorts respectively? What contract, agreement, written or verbal, intent or maybe even a smoke signal have the resorts been obligated to or offered for the potential project? 2- Where is the supporting data outlining the feasibility of having controlled numbers of skiers at each resort rather than allowing an open-door unlimited access policy which has been used for years? Where's the output representing the controlled numbers approach used by Deer Valley for years and quite successfully? 3- Who ran the 'analysis' for the numbers and financial representations made in the EIS document? UDOT? The ski resort accounting offices? <p>I've been in financial services for 28 years. I'm fully aware, as are UDOT and Neiderhauser et al, that you can spin and roll numbers that benefit the entity or individuals paying for and benefiting from said 'analysis' and subsequent output.</p> <ol style="list-style-type: none"> 4- How does UDOT benefit? To represent themselves as independent from the 'group' of greedy enthusiasts, may have worked 25 years ago, but not now. A full forensic audit from an legally authorized, independent certified tax and accounting entity or entities, i.e. KPMG, Ernst and Young, Deloitte, for the taxpayers of Utah must be brought before the Utah Courts by way of petition and mandated by the court to protect the taxpayers, most of whom, don't have the background to understand the 'findings' in the EIS. <p>5. What other state entities are involved in this 'club' of politically active enthusiasts/landholders/greedy secretive minions?</p>
37193	Joseph Reese	If a gondola is built, is UDOT going to supplement (or pay for) the future gondola ride fare forever.
37194	Anna Done	NO GONDOLA!!!!
37195	Sean Done	NO GONDOLA! I don't get a comment submitted confirmation, so I'm submitting it again.
37196	Adam Lenkowski	<p>I am STRONGLY OPPOSED to any and all gondola alternatives. The people of Utah who live and recreate here have made it very clear, we do not want this ridiculous "solution" pushed on us that will RUIN all that makes little cottonwood great. Also, what about Big Cottonwood, that arguably has a WORSE TRAFFIC PROBLEM than little cottonwood ever since the introduction of the IKON pass? Are we going to build another 15 mile long gondola for that canyon? Obviously not. The negatives far outweigh any "benefit" from this and the reasons are blatantly obvious, but I'll list them out again.</p> <p>-Gondola WILL NOT solve the traffic problem. Carrying capacity would take all day to transport the 5-7k people that go up the canyon on a busy powder day. Also, traffic will build up even further down backing up into the neighborhoods than it already does with the base station location. The canyon itself has a subjective carrying capacity, and trying to push more and more people up is not the solution.</p> <p>-Due to the aesthetic degradation and major visual impact this option should have been thrown out from the start. YOU WILL SEE 250+ ft tall towers with FAA lighting at the mouth of the canyon from everywhere in the salt lake valley. From inside the Canyon, the visual impact will detract from the inherent beauty that makes the canyon great, so much so that it will not feel like forest, wilderness lands. It will have the feel of an AMUSEMENT PARK.</p> <p>-I'm not a climber, but I've listened to the climbing communities concerns of impact to many famous bouldering routes. Not to mention, you will be staring at a giant Gondola on all the historic climbing routes on the famous granite slabs on the lower canyon.</p> <p>We, the people of Utah have spoken. We do not want this monstrosity that only benefits wealthy developers, and giant ski resort companies. UTA bus service was CUT soon after the gondola alternative was announced as the "preferred alternative". What a joke. This is absolutely disgusting behavior, as we are used to seeing from our leaders in this State. This solution sounds similar to "Lets build a multi billion dollar pipeline from the ocean to the great salt lake" mentality. Reads like a sad joke, but it's true. Its time to make informed COMMON SENSE decisions. Such as, we need to change our behavior and habits:</p> <ul style="list-style-type: none"> -More buses that are FREE or at least very cheap. More stops, more parking garages. -Tolling on the busiest days. -Limiting the amount of people in the canyon. -GREATLY INSCENTIVISING CARPOOLING

ID	Full Name	Comment
37197	Cate Dolan Mitchell	<p>I am writing in opposition to use of the gondola, and in support of increasing bus access to the canyons. I also have additional questions and concerns about the implementation of the enhanced bus service - how will the canyon toll be collected (to avoid affecting traffic flow), and will this toll reduce the number of low-income visitors from other parts of the valley and region? There is very little information about this in the EIS documents.</p> <p>Also, as someone who rarely visits resorts but who frequently visits trailheads/backcountry, I am concerned about the cost and ease of access to trailheads - I would ride public transit if this was an option to access a trailhead in a timely/efficient manner.</p> <p>I am concerned about the visual impact that a gondola would have, permanently altering the character of the canyons. In the Impact Summary, enhanced bus services reduced traffic buildup by 70-80%, whereas more expensive options only reduce traffic by 75-95% -- is the increased cost of more expensive options like the gondola worth the marginally greater reduction in traffic buildup?</p> <p>I don't see a compelling reason to add a gondola to the canyon other than to benefit ski areas - and I don't think that this is an appropriate use of tax payer money.</p>
37198	Dan Stampfl	<p>I have lived in Cottonwood Heights right off Wasatch Boulevard with my wife since 1998. The preferred option for Wasatch is not acceptable because it does not include a Shared Use Path on both sides of the road. This is the main north-south roadway but it does us no good for foot travel if the Shared Use Path is on the opposite side of the road. Also, please do not turn the Boulevard into a speedway, which it surely will when widened to 4 lanes. The minimal time saved to drive the 4 miles between the canyons at the posted 50 miles an hour is outweighed by the decreased safety to our community. Design it for 35 miles an hour please. As far Little Cottonwood Canyon, by all means use enhanced busing using the current roadway. The gondola is too narrowly focused to the two ski resorts, and ultimately would take away from the visual beauty of the canyon. Thank you for taking my comment.</p>
37199	Nya Peterson	<p>No. Please just don't. It is not worth ruining our canyons and our city. This is a sad display of greed. Please don't do this. We are all begging you</p>
37200	Rebecca Stevenson	<p>I do not believe Gondola B is the right decision. I think the best option for LCC financially, morally, and environmentally is more electric busses with better transportation hubs. Take a page out of Park City transit. More busses running more frequently. It defeats the purpose and discourages users if an individual makes the effort to ride the buss but the buss takes an hour to get there and then its full and they cant get on. I think there should be enhanced bus lanes on Wasatch Blvd. but not in LCC. I think the Gondola is a mistake for the future of SLC and LCC. -Becky</p>
37201	Clay Dean-Perry	<p>A gondola is a horrid idea. It is obtrusive and a financial mystery. We can accomplish traffic control for much less using consumption models and tolls.</p>
37202	Ryan McDermott	<p>I am a lifetime resident of Utah and oppose the Gondola. Better, less invasive solutions exist (expanded bus, carpooling, tolls) that will have less impact on the canyon. I am disappointed but not surprised this is the solution UDOT picked.</p>
37203	Holly Hendrickson	<p>As a local taxpayer, I don't want to foot the bill for a gondola. We already subsidize public transit, force people to use it, rather than pay for an ultra overpriced alternative.</p>
37204	Michelle McLaren	<p>The proposed gondola plan is a large waste of tax dollars, cuts into the visual aesthetics of Little Cottonwood, harms our precious natural resources, and only stands to serve a small fraction of canyon users who utilize it for skiing and snowboarding during winter months. It seems that increased bus transit with more stops throughout the canyon (or other alternate solutions) could serve not only skiers at the two resorts, but those who visit the canyon year round and desire to backcountry ski, snowshoe, hike, bike, climb, birdwatch, etc. The gondola only serves resort-goers and is a strenuous impact on the tax paying citizens of Utah as well as the canyon.</p> <p>Wouldn't it be better to increase/improve bus operations and hours of the day for a much smaller investment while reallocating much of the proposed gondola budget to improve mass transit throughout the rest of the Wasatch Front? Perhaps two rail lines for the FrontRunner? Additional rail lines? Utah's governing authorities could provide solutions that majority of Utahns (not just those who support two ski resorts) can benefit from - especially as our population will begin to reach 4 million people by 2032. This seems like a narrow-minded proposal which aims to benefit the few and privileged who can afford to ski at these two corporations, line the pockets of legislative landowners where the parking garages will be built, impact the aesthetics and wildlife of the canyon, and not address/fix the underlying issue with overcrowded canyon use.</p> <p>I know this solution seems exciting and like a fun way to advertise tourism to our great state. However, for the reasons above, please reconsider and think long-term about the impact of your decision to support on current residents, future generations, wildlife, water resources, erosion components, and sustainable solutions.</p>

ID	Full Name	Comment
37205	Richard Ross	<p>To those with authority to avoid desecration of a Wasatch Front Wonder of Nature: I raised my family in the mouth of Little Cottonwood Canyon and for nearly 40 years enjoyed the amazing beauty of the glacial formed canyon to the east of my home. Many of my closest friends lived in awe of the majesty of this creative masterpiece in our backyards. Most of us enjoyed hiking, picnicking, skiing, and fishing in this wonderful reserve adjacent to our homes. I would liken the current proposal to create a large parking lot in the mouth of the canyon and installation of one of the world's largest arial tram systems to destroying the petroglyphs in Fremont, Anasazi Ridge or Torrey and taking the position that visitors could still enjoy hiking where the historical record was covered with graffiti. Having taxpayers approve and fund such nonsense is difficult to imagine. One must wonder why we would choose to do this for the benefit of a couple of ski resorts. Nothing speaks louder and more profanely than special interests that will benefit from this irresponsible use of public treasure and which will in the process, substantially diminish the beauty of this canyon. Please do not move forward with this horrible transportation proposal. Richard Ross</p>
37206	Chris Farmer	<p>Please do not destroy little cottonwood canyon. Better alternatives exist and the resorts must be part of the problem. We can't sacrifice our incredible Canyon for their unrelenting growth. I know skiing is super popular and I myself love our resorts in Lcc. But we can't do permanent environmental and visual damage to the canyon so people can get to the resorts a little bit faster. Please stop the gondola. Mandate buses, tolling, whatever you need to do. Better yet - build a hyper loop under the road and don't change anything else :)</p>
37207	Andrew Whitney	<p>Just leave the canyon alone. Don't ruin one of the most grand and accessible canyons just because mr ikon wants his money. This is such a plain waste of time money and nature when you realize the issue is 30/365 days. Just let it be. Get some electric buses from park city or something but just leave the canyon alone. How is this not the most obvious thing to do?</p>
37208	Hunter Gvozdoch	<p>I strongly oppose the gondola option for little cottonwood canyon. As an almost daily user of the canyon for skiing, climbing and biking it would be a tragedy to see it destroyed. While the canyon can get congested throughout the year there are less impactful options that will better serve the community year round. An improved bus system, with an incentive to use the bus, or the ski resort reservation system are both simpler options that should be explored. The gondola option only solves a problem for the busiest days in the winter and only those skiing the resort. There are so many other users in the canyon that are not being considered in this option. I really hope that we can find a less impactful solution that will benefit all.</p>
37209	Tienna Rainey	<p>I do not think that this will help relieve traffic, I believe it will increase it. This is greedy to demand more of our precious canyon. These resorts just want more customers so they can make more money. I believe this will leave customers unsatisfied due to longer lines and more traffic at the resort. Do not build this gondola. It is a horrible idea and will be detrimental to the environment.</p>
37210	Richard Peterson	<p>Put the Gondola at position A and you'll avoid huge negative local resident push back, lawsuits, compensation to residents for their loss of peaceful enjoyment. Otherwise, stand by. This project touches a nerve of the locals. Epic (Vail) and Ikon (KSL) will pillage and plunder Utah, then walk away like Russian mercenaries.</p>
37211	Terry Miller	<p>I DO NOT support the gondola solution. Our money would be better spent using other solutions.</p>
37212	Jennie messer	<p>Hi, a huge issue that seems to be overlooked is the lack of parking at the base of both canyons. A gondola or increase in bus ride doesn't mean anything if there is no place to park. No one wants to ride a bus from downtown SLC to the resorts because it takes more than 2 hours. However, people and more employees could take buses if there was available parking at the base. Four years ago I worked at a ski resort for three years prior. The park n ride lots at the bases of the canyons would sometimes be too full for employees to park, despite having to be at the resort an hour before opening. Parking as the base, in order for people to take any form of transportation up the canyon, needs to be addressed first.</p> <p>The gondola is also a terrible thing for taxpayers to pay for, because it will primarily benefit the ski resorts. If this solution is picked, the ski resorts should foot all or most of the bill.</p> <p>As a skier born and raised in SLC, there should be a canyon access pass that's discounted for locals (available as an annual pass). This would encourage carpooling.</p>
37213	Alisa Farley	<p>Please please please NO GONDOLA. It will be such an eye sore and disturb the natural beauty of the canyon. Please consider another option.</p>
37214	Kyra Condie	<p>The gondola is an insult to the public of Salt Lake City, taking away a free and beautiful public resource to impact only the richest of the upper middle class, and really benefit the extremely wealthy ski resorts, that are functional only open a tiny portion of the year. It's not only a gross misuse of taxpayer funds but also perturbing a beautiful canyon that doesn't need to be perturbed.</p>
37215	Hazel Bay	<p>I don't think we should have a gondola going up the canyon. It is going to ruin the beautiful site of the canyon and is not environmentally healthy. I love to go up there and climb, ski and just enjoy the wonderful nature we have. We should not ruin that for a gondola.</p>
37216	Tori Perkins	<p>Voting against a gondola in little cottonwood canyon.</p>
37217	James Ramsay	<p>I oppose the proposed gondola. Service roads will destroy recreationally valuable terrain. The cables and towers will present an objective hazard to air ambulances and search and rescue workers. The proposed cost/ride is exorbitant and will actually drive more people in to personal cars. Finally, I work in the ski industry, lifts break and have to be evacuated. How are you going to evacuate these cars WHEN this huge lift breaks? In Europe they use helicopters to hoist two people at a time off of the roofs of gondola and tram cars. If the weather is bad people have been left hanging for days. Additionally, as far as I know there are only two organization in the region (Life Flight and The Dept. of Public Safety) with hoist approved ships. Both organizations only have a couple of ships each, at best. So how are you going to get the customers down? Utah is littered with abandoned trams, we do not need another one. Build a train, build snow sheds. Please do not waste our tax payer money of this boondoggle.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37218	Ryan Barrett	The decision to build this gondola is against the wishes of the overwhelming majority of the citizens of Salt Lake and its surrounding counties. This incredibly costly endeavor is being pushed through by a small group of individuals that stand to gain from it financially. I will continue to oppose its construction at every opportunity, including challenging every piece of legislation directed at its funding, and the election of anyone responsible for allowing it to move forward.
37219	Dermott Mchugh	I am concerned about the gondola project. I do not feel that a bus program or other program that is less impactful to the canyon overall has been given sufficient attention. I think the gondola will make me use the canyon less and not be a good option.
37220	Ken Kizer	I am for implementing alternatives like dedicated bus times when only buses are allowed up the canyon. Dedicated carpool times, etc. Does that mean some people might avoid Little Cottonwood Canyon? I'm sure yes. But have you seen the parking lots up there on heavy snow days? Those who insist on traveling alone won't be missed.
37221	Alexander Farley	This Gondola is a bad idea and not the solution. It is a waste of money and will only ruin the canyon. Make the canyon a "bus only" canyon or charge tolls. The gondola is not the answer. Please do not proceed with the gondola. Say no to the gondola!
37222	Amy Finch	A gondola in LCC is a terrible plan to manage traffic in the canyon. Tax payer money should be used to improve tax payer quality of living not for skiers. Maybe use that money to buy vans or have all lanes go up hill for 2 or 3 hrs in morning and all lanes go down in the afternoon. If we have money for a gondola why don't we have money for a year round farmers market like Pikes Place. Why does SL always spend money on developments that benefit few people, for example the Inland Port.
37223	Amy Poulsen	Please Do NOT build a gondola!!!! I personally can't afford skiing and I believe a gondola would just make it even more expensive. As a nature lover, I try to hike the Wasatch Canyons year round and a gondola would destroy the beautiful views!!!
37224	Taylor Litwin	<p>As of August 31, 2022, UDOT has announced its intentions to pursue Gondola B as the preferred transportation alternative for Little Cottonwood Canyon. With an extensive background in invasive species management and ecological restoration, I would like to bring attention to the immediate threat of invasive species in Little Cottonwood Canyon should the gondola alternative be pursued.</p> <p>Invasive weeds have been described as "a raging biological wildfire - out of control, spreading rapidly, and causing enormous economic losses." I have witnessed firsthand the impacts of invasive weeds in Little Cottonwood Canyon, as dense fields of thistle and myrtle spurge creep into populations of native wildflowers, ultimately leading to their decline. This summer alone, I have facilitated the removal of over ten thousand pounds of invasive weeds by hand- a fraction of what exists in the canyons but enough to contain encroaching populations for the time being. Invasive species have contributed to the decline of 42% of U.S. endangered and threatened species, and for 18% of U.S. endangered or threatened species, invasives are the main cause of their decline (USFS).</p> <p>Not only do invasive weeds lead to the decline of native biodiversity, but they also threaten watershed health, erosion rates, conductivity of wildfire, and overall forest health and resilience as we continue to face the effects of climate change. Invasive weeds thrive in disturbed soil. With any new infrastructure or construction comes the inevitable colonization of invasive weeds- as I have witnessed alongside every road, pit toilet, parking lot, and even trailhead sign across Little Cottonwood Canyon. With 22 proposed towers and 3 loading stations accompanying the proposed gondola comes 25 new epicenters for invasive weeds. This must be considered before breaking ground on an irreversibly damaging project. The impacts of such disturbance may not be immediate, but will become exponentially worse year after year.</p> <p>With already limited manpower and resources for such a widespread issue, the increased spread of invasive weeds from the installation of this gondola will be incredibly costly and likely irreparable.</p> <p>Eradicating invasive weeds at this scale will eventually only be possible with the use of herbicide- which will quickly contaminate the critical watershed of Little Cottonwood Canyon which provides drinking water to Salt Lake City residents. A study of these impacts must be conducted for the long-term sustainability and ecological health of Little Cottonwood Canyon.</p>
37225	Joshua Repman	<p>The decision to move forward with the gondola has been made without listening to the voice of the citizens of this valley.</p> <p>There are a number of alternatives that need to be completely exhausted before considering the gondola.</p> <p>If UDOT cares about the voice of the people, they will not consider this option.</p>
37226	Brook Moulder	A car more effective solution would be I creased access to public shuttles and tolls at high traffic times of day
37227	JAIME MARGOLIS	I am opposed to the UDOT Gondola Alternative B plan. It negatively impacts our beautiful canyon, it is not a solution to traffic congestion and is a prohibitively costly undertaking that will be an unnecessary tax burden.
37228	Charles Gregg	Incredible waste of public funds to support two private businesses. This is so rife with corruption and graft and the enrichment of a former Speaker of the House and a local council member. It is not in the best interest of the citizens of Utah.

37230	Chris Schmittle	<p>Permanently altering little cottonwood canyon for the benefit of private (ski) industry at taxpayer expense makes no sense. Although the ski industry obviously brings in tons of money & tourists, this industry is not guaranteed to be profitable forever. While we all hope for the greatest snow on earth for years to come, Climate change, the drying of the salt lake, and other factors may not guarantee this forever. A gondola through the canyon is a permanent, destructive solution to a temporary problem that only presents itself on a few days a year to a small subset of the local population. Hiking, rock climbing, and other activities are skyrocketing in popularity, and the proposed solution does nothing to benefit these users while actually hurting access to some of the best climbing and hiking in the canyon. Further, the vast majority of local residents oppose the gondola and a non destructive solution that benefits local users must be implemented first. Tolls for private vehicles and increased clean/electric bus service will benefit all users, increase revenue, and decrease traffic, pollution, congestion, and overuse. Though tempting to increase revenue and drive tourism, history will show that the proposed solution will be a mistake.</p>
37231	Nicholas Hall	<p>I can find no good reason to build a gondola unless the existing road is removed and replaced by it to promote natural growth in our canyons</p>
37232	Kyle Barratt	<p>Gondola ? is best solution long term.</p>

ID	Full Name	Comment
37233	Steve Erickson	<p>October 17, 2022</p> <p>To Whom It May Concern:</p> <p>Utah Audubon Council submits the following comments on the Little Cottonwood Canyon Final Environmental Impact Statement.</p> <p>Utah Audubon Council is the public policy arm of the five Audubon societies in Utah, whose leaders serve as the Council Board of Directors. The mission of the Audubon Council of Utah is to conserve and enhance Utah's natural environment with special emphasis on birds and their habitat, for the benefit of humanity and the biological diversity of the Earth. The five Audubon societies that comprise the Council are: Bridgerland Audubon Society, Great Salt Lake Audubon, Red Cliffs Audubon Society, Utah Lake Audubon, and Wasatch Audubon Society. Many of our Audubon members have skied, hiked, biked, birded, photographed, and camped in Little Cottonwood Canyon, as well as recreated at its two ski resorts.</p> <p>We urge UDOT to drop its support for the gondola in the FEIS and proceed with the "phased implementation plan starting with components of the Enhanced Bus Service" and associated infrastructure improvements, tolling and single occupancy vehicles, additional valley parking, and limited roadside improvements.</p> <p>We previously commented on the DEIS that UDOT should have withdrawn the DEIS prior to issuing the FEIS due to its fundamental flaws, and instead proceed with a Supplemental EIS. We reiterate this as UDOT considers its Record of Decision.</p> <p>We emphasize that the gondola will have negative impacts that are irreversible and extremely detrimental to the canyon environment. These include impacts to migrating birds, visual pollution, lack of access to trail heads in both winter and summer and complete lack of functionality for any access during the ski off-season, when most Utahns enjoy LCC. The failure of the EIS to address the more comprehensive issues of transit and transportation in the area should have been a deal killer for the gondola, as it simply fails to solve the transportation problems in LCC or the Cottonwood Canyons.</p> <p>Of course, the gondola will also be paid for by taxpayer who will never ride it to access the beneficiaries - the ski resort owners and those well-off enough to afford to ski LCC, including a large percentage of out-of-state skiers. The positive economic impact of tax revenues generated is out-weighted by the regressive and unfair negative impacts upon the 90+ percent of Utahns who don't ski, much less ski at Alta or Snowbird. With these access problems and the tax inequities for such a large percentage of the local populations, the gondola should be considered an environmental and economic injustice.</p> <p>Lastly, assuming that UDOT will proceed with the phased implementation plan, we urge that due consideration and time be given to assessing the impact of the current bus driver shortage on the overall evaluation of the plan. This driver shortage is likely a short term impact, but its impact upon transit up and down the canyon this winter at least will be very significant, and it should not be ignored or downplayed as UDOT proceeds with its on going analysis of LCC transportation.</p>
37234	Doug Richardson	NO! Do Not build a stupid Gondola! It does not solve this problem and adds billions to our backs NO! NO! NO!
37235	Nathan Dorfman	The proposed gondola is possibly the worst boondoggle in the history of boondoggles. One can only imagine how long the line will be to board downhill from the resorts at 4pm -- it would probably be faster to just walk all the way down the canyon.
37236	Charles Gregg	Environmentally disastrous. The ruination of a scenic canyon with towers, service roads, and gondola cars. A very expensive eyesore in an ever shortening winter ski season.
37237	Forbes Slater	Please bring this issue to a vote on a ballot. The gondola project has been pushed along without the support of the General public. This project ultimately benefits the ski resorts while Salt Lake City is in the midst of a crisis. There will be no need for a gondola when the Great Salt Lake dries up and the mountains lose the lake effect. I hope that the committee will honestly present the feedback from this public comment period. As a skier, a local Utahn and a small business owner I do not, and cannot support this "public works" project.
37238	Robin Pendergrast	Are you guys...UDOT ... nuts? Seriously listen to the folks that care.. Please.
37239	Sharon Horton	Do not do it! The gondola will be an eyesore and ruin the canyon. I believe this decision is political and will personally benefit certain individuals.
37240	Guy Eroh	I am AGAINST the planned gondala. Zion NP has had effective elimination of traffic in their park through the use of busses on regular routes and parking lots outside the park. That could be a solution to LCC traffic congestion. An 8 mile tram is ludicrous. NO on the tram idea.

ID	Full Name	Comment
38366	Kimberly Simons-Kraan	<p>From: Kimberly Kraan.</p> <p>Cottonwood Heights, UT</p> <p>TO: UDOT</p> <p>RE: Public comment for record, re: Final EIS Gondola B, Oct 17, 2022:</p> <p>Opening, and preface for opposing a gondola in LLC as part of UDOTS' FINAL EIS : UDOT seems to miss the mark time and again on this issue. In presenting its latest FINAL EIS Gondola B Plan, they appear to have slipped over the ethical edge, narrowing the EIS focus in supporting privatized development interest of contrasting a gondola, which is to be funded by public tax dollars; the UDOT gondola-centric solution serves only private interest profiteering over greater public needs as formerly outlined in the originally drafted EIS purpose, 2018. No doubt in mind that the state senators, who crafted the legislative bill setting the \$66 million of EIS study money in motion, were careful in providing wiggle-room language within the bill to allow for any scope modifications. UDOT proclaims in its purpose of the revised Final EIS, that it is charged with: "substantially improving transportation-related safety, reliability, and mobility for all users on S.R. 210 from Fort Union Boulevard through the Town of Alta." Let's read that again: "For all users on S.R. 210,.". With that statement alone a gondola fails to meet the EIS criterion. In fact, a gondola would severely degrade and worsen conditions for all users on SR210, by inducing traffic into the area through both planned road widening and construction of a massive 2,500 tall parking garage/ gondola base station, thereby increasing risks for incidents, and increased emissions pollution along SR210 while simultaneously decreasing public safety.</p> <p>A gondola fails to meet any safety, reliability, or mobility issues on SR210/LCC: Per Uot's Chpt 32.2.4:</p> <p>"To meet the project purpose, UDOT does not need to eliminate all personal vehicles From Little Cottonwood Canyon. Personal vehicles would still be allowed into the canyon at all times (except during temporary closures for avalanches or accidents) to access recreational activities, the ski resorts, and personal residences.,"</p> <p>Continuing on, paraphrasing 'under US title 23 UDOT cannot close a state roadway...'</p> <p>SR210 will experience the same traffic flow, traffic incidents, etc, and traffic will not be limited within LLC, nor or will UDOT close the roadway, it cannot under Federal prevailing laws. So, nothing about safety, reliability, or mobility is improved for those using SR210 under UDOT's Final EIS Gondola B plan. The only purpose left standing is that a gondola serves is to</p>
37241	Brent Bell	I am against polluting the pristine view up and down the canyon with gondola towers.
37242	Deborah Mraz	Do not Assume that your residents of Sandy support the installation of a gondola. WE do NOT and strongly oppose the use of tax payer dollars to install and run the gondola which will NOT be used by us, as citizens of Sandy. Monica Zoltanski has shown that electric buses can work in our canyons. Why is that option not being persued??? DO NOT install a gondola and expect the taxpayers to fund this project for the rich!
37243	Joshua Fryer	No gondala. Bus system!!
37244	Susan Sulfridge	While I agree that something must be done to alleviate the traffic during the winter months, a gondola only solves a small part of the problem while creating new ones. We also have a responsibility to protect the lands and natural resources. Improving the bus schedules and Increasing routes feels like a better option to start.
37245	Tori Burns	I oppose the proposed gondola. Service roads will destroy recreationally valuable terrain. The cables and towers will present an objective hazard to air ambulances and search and rescue workers. The proposed cost/ride is exorbitant and will actually drive more people in to personal cars. Only wealthy skiers and riders will gain from this transportation solution. Further, the gondola will do nothing to help hikers, back country skiers, or summer visitors access the canyon. This summer has clearly proven that canyon congestion is NOT just a winter issue anymore. We need a year around solution that is accessable to all Utahans. Utah is littered with abandoned trams, we do not need another one. Build a train, build snow sheds. Please do not waste our tax payer money of this boondoggle.
37246	Talia Shilling Rabin	The gondola should not be built because it's a destruction to the environment and won't be worth the costs it will cause.
37247	John Maxwell	I am for the gondala
37248	Kellie Ingram	The proposed gondola plan is a large waste of tax dollars, cuts into the visual aesthetics of the canyon, harms natural resources, and only serves a percentage of canyon users during winter months. It seems that increased bus transit with more stops throughout the canyon (or other alternate solutions) could serve not only skiers at the two resorts, but those who visit the canyon year round and desire to backcountry ski, snowshoe, hike, bike, climb, birdwatch, etc. The gondola only serves resort-goers and is a strenuous impact on the tax paying citizens of Utah as well as the natural environment of the canyon.
37249	Becky Ward	I do not think a gondola is the best use of tax payers money to reduce traffic in the canyons. It's expensive, slow, disruptive to nature, and not necessary on most week days throughout the year. I think a better bus system, maybe similar to Zions national park would be a cheaper more effective means of transportation on busy days.
37250	Randy Tesch	No on Gondola
37251	Sean Kelley	<p>The Gondola B plan is egregious. It will add to more traffic and overcrowding in the canyon and not solve the problem. There needs to be more transportation hubs with more busses operating more frequently. A fast bus lane on Wasatch Blvd. that can pass car traffic would entice people to be more involved with taking the buss. The Gondola will be inoperable in many situations such as wind, inclement weather, avalanche mitigation, power outages, mechanical issues etc. What happens when all those people cant use the gondola?? I do not advocate for widening LCC, I think it makes more sense to make a fast bus lane on Wasatch Blvd. that uses the transit hubs more efficiently and they would run in the summer as well. Some of the worst traffic is in the summer especially during October Fest.</p> <p>-Sean</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37252	Charles Gregg	You are building this expensive monstrosity to address traffic problems that occur maybe 15-20 days a year. You will have hundreds of days with little or no riders. The time to get to the resorts will be much longer. Dedicated bus lanes with electric buses will far better serve the public and have the ability to increase and decrease as demand dictates.
37253	Scott Peterson	I am against the Gondola. The cost of the project and the burden of ongoing fees and costs cannot be put on the non-skiers. Summer visitors to the canyon- big cottonwood and little cottonwood cannot be burdened with such a toll-- that is excessive. Just to pay for the few that will use a gondola that takes 40 minutes to the resort. The gondola will remain unused most of the year. A toll is not fair for those that don't use it -- it is only a preventative measure to lessen the summer use of our canyons.
37254	Chris Lundquist	I'm in favor of the gondola. To pay for it just sell the soccer stadium.
37255	Richard Whiting	I choose the gondola. People need to give up their cars more. Please make it world class with ample parking and excellent views. I want to ride it please
37256	Susan McCandless	<p>I heartily support the gondola-as the ONLY option that solves the traffic problem in Little Cottonwood Canyon and has an eye to the future. Any other option would have only minimal impact on even today's traffic and does not take into consideration growth, which is inevitable. The gondola provides uninterrupted access, enhanced safety, and is the better environmental solution. The footprints of the combined towers will be far less than the devastation that would be required to carve out a four-lane road; the impact to watershed would be less; the impact to climbing routes would be less. The emissions in the canyon would be less. It would even be less invasive and impactful during the construction phase.</p> <p>The gondola option-with its continuous loading/unloading system-would prevent the log-jam of buses at the resorts that would occur as riders exit. The initial investment (not including avalanche bunkers and trailhead improvements) is less than the alternative of road widening and buses, and the annual operating cost would be significantly less. There are additionally public/private funding opportunities with the gondola that would off-set operating costs that are not a possibility with a bus system. The number of employees required to run the gondola is a fraction of what would be needed for buses, and even today-with fewer buses going up the canyon-UTA cannot hire enough bus drivers and recently announced it would drastically curtail bus service this winter</p> <p>While much as been made of tax-payer funds going to "build a gondola for rich resorts," opponents never mention that the road widening / bus system option (which is actually more expensive with the needed avalanche bunkers) would also be using tax-payer funds for those same resorts. In both options, the buses or the gondola would only stop at Snowbird and Alta.</p> <p>As a substantial gesture of support, Snowbird has offered to put private property lands such as Superior Peak into a conservation easement that would preclude future development. That gift is not included with any other option. UDOT, as well as other agencies, has studied this issue for years. Every option and combination of options have been considered: tolls, parking reservations, parking fees, car pooling incentives, etc. Most of these have been tried with only minimal impact. Many people continue to ask that it be studied more. This has been done. Eventually we have to act, and that time is now.</p> <p>I wish I could throw my skis in the car and drive the canyon without traffic and find easy parking. I wish there were not so many people in the canyon. I wish there were cheaper, easier solutions. But that is wishful thinking. Build the gondola. It is the only option that solves the problem and helps us move from wishful thinking to future thinking.</p>
38635	Stephen Erickson	Comment attached, Utah Audubon Council
37257	Abby Jorgensen	The gondola is not the best option!! Think about it, people are never going to not drive up. This will create even more congestion at the mouth. More crowded resorts, and tax payer dollars for something that is just too costly on the wallet and the environment. Destroying beautiful views of mountains that are unlike anywhere else. Listen to the community! I've sat in plenty of red snakes and that's better than exploiting little cottonwood canyon for some tourist trap.

37258	Emily Sullivan	<p>Please see my comments</p> <p>Irreversible & Rushed Decision</p> <p>There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws.</p> <p>We have seen parking reservations work throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon.</p> <p>As Salt Lake County Mayor Jenny Wilson said, these are "common-sense solutions that are fiscally sound."</p> <p>Tax-Payer-Funded, Serving Private Resorts</p> <p>Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging.</p> <p>They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses.</p> <p>UDOT's EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6]</p> <p>Ignoring Local Public & Political Opinion</p> <p>80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll.</p> <p>Salt Lake County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski and many other elected officials agree.</p>
37259	Audrey Kamerath	<p>"Rather than rip up the canyon with a half a billion dollar price tag, let's invest in common sense solutions. Parking bubs in</p> <p>I do not think that Gondola B should be built.</p>
37260	Katherine Ricks	<p>Protect our lands and nature and do not put in a gondola.</p>
37261	Debbie Shepherd-Gre	<p>I am against building a gondola up LCC for many reasons:</p> <ul style="list-style-type: none"> Cost to taxpayers Ongoing costs not disclosed Environmental impact of towers Only services private venues Increase traffic at base area Cost to ride and park not disclosed Private individuals who are directly link to Utah government will profit from it-shame on them and the legislature's who backed them <p>Increased bus service, a dedicated bus lane with more available parking will help solve problem</p>

ID	Full Name	Comment
37262	Bret Backman	<p>Does spending a billion dollars (since we all know that the \$550 million price tag is a pipe dream) of taxpayer money on a problem that 1) affects a very small portion of the SLC population, and 2) affects those people for a maximum of 10-15 days a year really make sense?</p> <p>No one will ride a slow, expensive gondola except on the days when traffic is bad. They just won't.</p> <p>On the other hand, requiring reserved parking - paid or not - has been shown to be VERY effective at reducing traffic in the canyon for the past 3 years (two years for Snowbird, and last year at Alta).</p> <p>Do I love paying for parking? No.</p> <p>Is is better than any other option? Absolutely. And it's already been shown to work. Well.</p> <p>Also, I believe one of the major flaws in the whole gondola (or road widening) argument is this: That on a powder day, it is important for EVERYONE who wants to go up LCC to be able to do so.</p> <p>That is simply madness. Have you every experienced lift lines on a powder day? If so, you would not think that we need to get MORE people onto the ski resorts. It's not only the traffic that ruins the experience on a powder day. Lift lines do, too. We don't need more people in the canyon on those days.</p> <p>Instead, we should acknowledge that space in LCC on a great ski day is - wait for it - FINITE. There is only so much to go around.</p> <p>So, first ones who get a parking reservation win. Sorry, that's how limited resources work.</p> <p>So, I beg you to PLEASE abandon both of the ridiculous options you've chosen between (gondola and road widening) and go with common sense solutions that are scalable, and have already been shown to work.</p> <p>Reserved parking - whether paid or not. Incentives for carpooling (paid reserved parking is probably the easiest to administer, more than directly charging for low occupancy vehicles) More buses on routes that start AWAY FROM the mouth of the canyon.</p>
38637	Betsy Wolf	<p>Please see attached file for my comments. Thank you.</p>
38636	David Ream	<p>Please see my comments below. Thank you for this opportunity. Dave Ream</p>
37263	Richard Grossen	<ol style="list-style-type: none"> 1- Why should this amount of money be spent to primarily benefit two private businesses? 2- Why should this kind of funding be provided, when for the 2022/2023 ski season UTA has already announced they won't have enough bus service to handle the load? Wait, there isn't enough budget are resource for buses, but there would be for a gondola? 3- Snowbird has challenges with the tram on stormy days, especially with wind and frost. The gondola would be far more cable than the tram, have those issues been addressed? The Peruvian tunnel was built to avert delays and weather delays to the tram. Has a tunnel option been given serious consideration as an option? 4- Winds are predominantly from the west, and the can be significant. How is that being addressed? 5- What about the conflict of interest of land ownership, currently and in the past, being addressed? 6- Has the public been fully informed of the potential business/hotel/public impact at the mouth of the canyon? 7- The resorts can't handle the current traffic they get, in terms of people on the mountain. Why create a system that enables the resorts to be even more crowded? 8- I have yet to see any type of environmental impact study 9- Doing some simple math, using a search on Salt Lake County: 835,644 adults - 124,572 seniors = 711,072. Using the budget number, which certainly will go up after construction begins and unforeseen costs and inflation hit: \$500,000,00 / 711,072 = \$703/adult for the tram. Seriously, how many of those people don't even ski?

37264	Jarid Waniger	<p>It has been very disappointing to learn that, despite the overwhelming concern of the public, UDOT still intends to progress with the proposed gondola project. One aspect I find relieving, however, is that the plan is for a phased roll out, which includes bussing that is enhanced. This seems like best choice, as it's environmentally protective, effective, and practical.</p> <p>The enhanced bussing plan is a much better solution to pursue compared to the gondola. I am confident that the increasing in bussing will significantly reduce traffic and congestion for those 11 key winter days. UDOT should this data before implementing the gondola and cancel the plan all together if bussing is found to be effective. The canyons are meant to be for everyone, but this plan only benefits two private businesses. The sheer amount of money going into the gondola project is irresponsible and unacceptable. Little Cottonwood Canyon is home to one of Salt Lake City's biggest economic drivers: dispersed recreation. While it might not be as easy to quantify as skiing, activities such as hiking, climbing, running, and backcountry skiing play a huge role in determining when people choose to visit and re-locate to Salt Lake City. The addition of the gondola will significantly reduce the areas these activities can be done, and reduce the overall money coming into the city.</p> <p>There are many historically significant bouldering routes that will rendered inaccessible during the decade-long construction of the gondola, and, some will be destroyed completely. The suggestions that boulder routes could be "relocated" show's a complete lacking of understanding on UDOT's part as to how bouldering and climbing works. This makes me doubt that meaningful thought was actually put into this plan. To me, it feels extremely irresponsible to spend that much money on a project this big without fully understanding the implications of it. Overall I truly believe that the gondola is not an equitable nor reasonable solution to any issue with canyon traffic and congestion. It will only continue to perpetuate the increasing environmental marginalization and unacceptable injustice in the Wasatch Front. For these reasons and more, I implore that UDOT not continue with the proposed gondola project. Thank you for your time.</p>
37265	Andrew Farley	<p>I live 10 minutes from the base of the canyon and would hate to see a gondola in such a beautiful spot. There are better options. Please no gondola.</p>
37266	Abby Jorgensen	<p>The gondola is not the best option!! Think about it, people are never going to not drive up. This will create even more congestion at the mouth. More crowded resorts, and tax payer dollars for something that is just too costly on the wallet and the environment. Destroying beautiful views of mountains that are unlike anywhere else. Listen to the community! I've sat in plenty of red snakes and that's better than exploiting little cottonwood canyon for some tourist trap.</p>
37267	Steven Strong	<p>PLEASE DON'T ROIN THE NATURAL BEAUTY OF LITTLE COTTONWOOD CANYON WITH GONDOLA TOWERS! PLEASE DON'T WASTE half a billion to one billion dollars of public funds (including my money) to built the gondola system, which would primarily benefit only two private ski resorts! I support increased and improved bus service, tolling or restrictions on single occupancy vehicles, and the construction of mobility hubs, as described in the phased implementation. I am strongly opposed to Gondola B. The views of the people who live in and around the canyons should be given high consideration.</p> <p>The FEIS doesn't address goals of the Central Wasatch Commission Pillars statement, it doesn't spend tax dollars in ways that benefit all Utahns, and it doesn't protect the iconic beauty of Little Cottonwood Canyon.</p> <p>I support the Pillars Statement issued by the Central Wasatch Commission in 2021. "The opinion considers visitor use capacity, watershed protection, traffic demand management and parking strategies, a year-round transit service, and integration into the broader regional transportation network, as well as the overall and long-term goal of protection of critical areas in the Central Wasatch Mountains through federal legislation, the Central Wasatch National Conservation and Recreation Area Act (CWNCRA)."</p> <p>The FEIS fails to adequately address traffic demand management and parking strategies, year-round transit service and integration into the broader regional transportation network, as well as the overall and long-term goal of protection of critical areas in the Central Wasatch Mountains.</p> <p>The FEIS fails to take account of improvements to traffic flow with parking reservation system at Alta Ski Resort. The 2,500 parking structure at the base station would exacerbate traffic flow along S.R. 210 rather than reduce the traffic, which could be achieved through transit hubs, which are now under study by Central Wasatch Commission.</p> <p>It fails to provide a depiction of the impacts to the viewshed in Alta itself. THE SUPPORTING STRUCTURES WOULD REQUIRE ILLIMINATION AT NIGHT, ACCORDING TO THE FAA, FOREVER CHANGING ANOTHER UNIQUE CHARACTERISTIC OF THE PRISTINE NATURE OF THE CANYON. It would disturb 0.63 acres of an archaeological site and has no clarification for the site of a new bus stop. There is no plan to provide facilities needed to absorb the thousands of people disembarking from the gondola, ignoring obvious further development to accommodate this change in flow of users. IT IS NOT SCALABLE OR FLEXIBLE, which is a high priority given the lower accumulations of snow the area is experiencing, and would permanently scar and negatively impact the beautiful area it is intended to service.</p> <p>The people of Utah will not adequately benefit from the more than \$600-800 million which will specifically benefit two ski resorts and the tiny percentage of Utahns who ski there (including me). The problem it addresses involves at most around 20-30 high usage snow days in the winter, but the visual impact would be felt by all users of the canyons year-round and forever into the foreseeable future.</p> <p>The FEIS also doesn't adequately address the superfund site which will be impacted and will potentially require costly mitigation where the parking structure would be sited.</p> <p>Join by elected representative, Gov Lynn Rasmussen, in her request for immediate steps to sunset for LCC winter long vehicle</p>

Comments on Little Cottonwood Canyon Final EIS

37268	Henry Hartzler	As a climber, skier, and avid user of Little Cottonwood Canyon, I urge UDOT to reject the gondola proposal and move forward with an increased bus service, combined with the tolling already proposed. The gondola would be an irreversible fixture that would destroy classic boulders in Little Cottonwood and not solve the traffic congestion problem. If buses were more regular (instead of cutting existing routes, as has been done this season) and continue to be free to the public with a ski pass, then the tolls for cars alone should be enough of a deterrent for users to opt for the bus system. If they won't take the bus over a toll, why would they take the gondola instead? Let's focus on improving the public transportation that we already have before spending millions of taxpayer dollars on a gondola that primarily benefits the private ski resorts of Alta / Snowbird. Furthermore, the Salt Lake County Council and mayor have formally denounced the construction of the gondola. The community at the base of the canyon has been vocally opposed to the gondola as well. Do not impose a gondola on the people of Salt Lake City that have overwhelmingly voiced their opposition. Thank you for your time.
37269	Lori Fairbanks	No gondola, please! Instead, please consider common sense solutions such as reservation systems that limit capacity or require skiers to use the bus if they don't have parking reservations. The gondola will permanently scar the canyon. Also, it's ridiculously expensive - and it is highly likely that cost will exceed estimates due to inflation and escalating material and labor costs. We are in a recession - as such, any projects that will increase the tax burden of residents should be eliminated.
37270	Jimmy Miklavcic	I believe that the best option is the COG Rail Alternative. I realize that it is far more expensive than the other options, but I believe that, in the long run, it is the safest and efficient method of transporting thousands of riders up and down the canyon.
37271	Henry Hartzler	As a climber, skier, and avid user of Little Cottonwood Canyon, I urge UDOT to reject the gondola proposal and move forward with an increased bus service, combined with the tolling already proposed. The gondola would be an irreversible fixture that would destroy classic boulders in Little Cottonwood and not solve the traffic congestion problem. If buses were more regular (instead of cutting existing routes, as has been done this season) and continue to be free to the public with a ski pass, then the tolls for cars alone should be enough of a deterrent for users to opt for the bus system. Do not impose a gondola on the people of Salt Lake City that have overwhelmingly voiced their opposition. Thank you for your time.
37272	Kim Engar	I say NO to a gondola in LLC canyon!
37273	Jennifer Dial Santoro	<p>I live between the bases of LCC and BCC. My family skis in LCC many months of the year. We take the 953 (which I was very sad to see is suspended this year).</p> <p>The gondola is not a solution for this canyon.</p> <ol style="list-style-type: none"> 1. It stops only at the resorts and doesn't take into consideration dispersed users. 2. It will make skiing so expensive, most of the passholders in town won't be able to continue to ski. That's on top of charging us in taxes. Although the resorts make money on visitors, the passholders open the doors every year by purchasing those passes before we have a chance to see what kind of snow year it is. We also were here recreating and buying food on the mountains when nobody wanted to get on a plane during covid. And we're not happy. 3. That is an immense amount of destruction to our land. Every tower will have some kind of cleared access and infrastructure. When Snowbird wanted to put in a rollercoaster across the road, we all said "no" and they were not permitted. This is infinitely more destructive to the land, and will forever scar the gorgeous canyon. 4. People take the bus, when the bus comes. Except when there's no parking for the bus. Numerous times last year we were forced to drive away from our house the opposite direction of the canyon to find parking at a bus stop. Fix the parking and you'll mostly fix the bus. 5. How about certain hours of the day are "bus only" I mean after the parking problem is fixed. That way employees and prime time skiers (say, 8:00-10:00 am and 3:00-5:00 PM) would take a bus more often if they knew there would be parking and the bus would not have to compete with cars. In the last few years parking has been taken away, making the bus a harder option. <p>There is a much easier, less expensive, less destructive model. More parking down here, more busses going just from parking to the resorts and the stops in between for trailheads for dispersed use. Please do not go against the will of the majority of people who live here just because a few affluent developers have money. In the long run, we don't want this thing and it's not reversible.</p>
37274	Alec Lowe	This is seriously so dumb that this is even being considered. I bet 99% of people that use that canyon won't even use the gondola
37275	Jeff Nilsen	I am all for the Gondola solution. It just makes sense. I live at the bottom of LCC in Sandy and do not have a single neighbor that is against it. Please move forward with this solution.
37276	Jill Meyer	Please do NOT pick this option of building a gondola with great aesthetic, environmental, and economic costs without doing anything to limit the number of cars driving up and down the canyon. This is a short-sighted as pumps for the overflow Great Salt Lake were in the 1980s. Unlike those wasted pumps, which are rusting in the dry desert now, this project will do irreversible damage to our mountains and eco systems, not to mention exploiting limited resources in the mountains, all in the name of profit for a few.
37277	Austin Smock	No gondola
37278	Ken Corneliusen	I do not support the gondola option as it only services and exclusively benefits the Snowbird and Alta ski resorts at the rate of 550 million publicly funded dollars. I believe this is a poor choice and other options need to reviewed more closely, with less physical and visual impact on this fragile canyon.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37279	Ronald Jones	I do not support Gondolas for Little Cottonwood Canyon. The \$550million cost estimate is going to end up costing a lot more when completed. The funding still has to be determined and likely a fair share of it will be from Utah taxpayers. Most Utah paying taxpayers are not skiers nor do they frequent the canyon. Leave the canyon alone. I urge you not to destroy one of the most beautiful natural sites in Utah. Brainstorm to explore other methods to reduce traffic congestion.
37280	Sue Stevenson	I am against the Gondola because of the negative impact it will have on the beauty of the canyon. Please consider the busing and road toll option for the canyon.
37281	Diane Busch	I oppose the use of tax monies for the Little Cottonwood canyon gondola project. The benefit goes to very few, compared to the number of those taxed. Current multi-year drought conditions should also weigh heavily against this consideration. Our Utah UDOT resources would be better spent in providing our larger communities with truly walkable transportation options, including neighborhood van or small bus pick up and delivery of passengers to and from Trax and Fronrunner depots and grocery and other local services.
37282	Robert Greener	I'm in favor of the Gondola.
37283	Mitch Longson	This serves nobody but the ski resorts. It does not get skiers to resorts faster, it will minimally impact traffic on snow days, and it will be a brutal hit to taxpayers, all for nothing but an irreparable hit to the canyon's beauty. Please PLEASE explain how this benefits anyone but the ski resorts and possibly wealthy out of state skiers.
37284	David Bresnahan	I am strongly against the LCC gondola. Taxpayer money should not be used to support private business interests; it will damage delicate ecosystems and ruin the visual landscape and soundscape of the canyon.
37285	Ben Miller	I am opposed to further development of any type. Please focus on improving help for early education, free school lunches, and reducing homelessness. We don't need to spend our collective resources on increasing access to the outdoors
37286	Karin Westlen-Boyer	I am against having a Gondola built in Little Cottonwood canyon, also in Big Cottonwood canyon if that will come up for discussion. 1) This will just be for the skiers and snowboarders using the canyons ski-resorts as that is the only place they are going to stop. The majority who do not use the canyon for this will be forced to pay up with increased taxes. 2) It is really only over the weekend this will be used as that is when the canyons become so crowded. Building a Gondola at this high price for these reasons is too expensive! 3) What an eye-sore it will be and extra roads that need to be built and maintained! 4) Start by having several buses that go up and down the canyon so the people who use the buses do not need to stand and wait for 2-4 buses before they can get on. We do not need a Gondola up the Canyons, it is a poor idea that will only benefit the few, cost far too much, and create an eye-sore to a most beautiful and treasured area.
37287	Susan A Rich	I am against spending money on the gondola that will only benefit a small portion of the population. Please focus on enhanced bus service. The gondola option is an extraordinarily expensive option that only benefits a small fraction of Salt Lake County and Utah residents. The reserved parking requirements at Alta and Snowbird have made significant improvements to peak traffic. The LCC project is an inefficient use of tax money. Winter recreation and the community would be much better served by using the money to save the Great Salt Lake.
37288	Victor Blanton	Your "options" ignore local seniors. The gondola, which requires multiple times loading, unloading, and transporting between boarding, seating, and exiting while lifting and carrying skis, poles, boards, and bags, is only practical for the younger, more physically capable patron. The bus, which you encourage as an alternative to the gondola, puts Americans with Disabilities Act and Amendments (ADAAA) protected individuals with compromised immune systems at considerable risk of viral and bacterial infections should they choose to ignore doctors' advice to refrain from using public transportation. Only the private vehicle is practical for said senior and/or immune-suppressed population, yet you threaten its use with an outrageous suggestion to impose upon the driver a toll of \$25 to \$30 per day if he or she drives up the canyon. Among locals, its highly possible that he or she has driven the canyon for much of his or her lifetime, to gain access to the reason they made their homes here. No less troubling as it pertains to local seniors is the seemingly seemingly willful intent to force a senior or immunosuppressed person to carry at least one other occupant in their vehicle else pay a higher toll or parking rate. Otherwise, as for the gondola, it will not run when the canyon is closed for avalanche danger; it likely will not get any serious powder skier or boarder to Snowbird or Alta in time to enjoy a morning of fresh powder; it will cause long term degradation to the water shed (from setting and continuously maintaining the base towers, cables, etc); and it will be an eyesore that takes from the canyon's beauty. It will be an attraction to tourists from around the world, and it will compound traffic problems on Wasatch Boulevard and 9400 South. I believe that traffic problems in both Little Cottonwood and Big Cottonwood Canyons are overstated by the local "visionaries." I drive LCC more than 100 days per year, mostly during skiing season. Yes, there are days when the canyon is appropriately closed due to risk of avalanche danger. Loyal locals take the good with bad. And October fest will cause a parking lot on the road for those who set out in mid to late morning. The load of traffic on the road has come and gone, peaking in later years largely due to the IKON PASS. But many old-timers will remember when travel up the canyon was slowed to less than 10 miles an hour behind four buses that, when parked in Alta's Goldminer parking lot, could number more than 50 or 60. This sometimes caused a 30 to 40 minute lift line when the resort opened. The merge lane at the canyon entrance has helped the uphill flow, and changes routing traffic exiting the resorts has lessened exit difficulty and improved safety. Nothing's perfect. The road is fine without making changes that could invite more harmful development in the canyons.
37289	Trevor Hansen	We don't need more people up the canyon. The parking lots naturally control the ski crowds. Weekend skiing is done in Utah as there are too many people up the canyon as it is. Getting more people up the canyon is not the answer Utah is looking for.
37290	Nicole Reitz-Larsen	I oppose the Gondola. There are other resources. The cutbacks on busses going up the canyons is a wrong move.
37291	Bobbi Palmer	You have heard the community on this! Absolutely none of the Utah residents want this! We want to protect our environment, not monetize and ruin it! NO GONDOLA!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37292	Debbra Ralston	I'm against construction of a gondola for several reasons. Disruption to the canyon landscape, inevitably of excluding those who can't afford the associated costs to enjoy the canyon. The cost/benefit does not balance in my mind - drought conditions do not guarantee conditions for skiing far into the future.
37293	Daniel Peck	Please do not build a gondola up LCC. It is too expensive in money and ecosystem and it simply does not solve the problems of canyon access and transportation. Please know that the easiest and most cost effective solution is to use a shuttle system. Ideally all electric. The road is already in place. Have some express shuttles that go strait to the ski areas. Then have some smaller shuttles that stop along trail heads and other backcountry access points. Cars would only be allowed for residents and staff. All you need to do is build a few shuttle access points in already existing parking areas near the mouth of the canyon. People can pay for a shuttle pass for the year/season/daily. People will love it because they don't have to worry about driving and parking. No traffic jams. Resorts will love it because people can be take. Straight to the ski area ready to pay for expensive food etc. Its a flexible way to go. Easy to repair as opposed to a broken gondola. The gondola is not flexible and is just terrible for everyone including the ski areas. Please just do the least expensive thing for money and the local ecosystem. No need to expand the road. The gondola will turn me and my family away and we will take our skiing and outdoor recreation elsewhere. Please use electric shuttles to easily solve your troubles. All the best. Daniel G. Peck
37294	Erika Latimer	The proposed plan to build a gondola is a waste of tax dollars, takes away from the beauty of the canyon, harms natural resources, and serves only a portion of those using the canyon in the winter. Please reconsider this decision for these reasons.
37295	John Metz	The gondola as the A and B alternative, makes no sense. The cost for both is \$100's of millions of dollars more expensive than improving existing public transit. Will take years longer, if approved at all against increasing opposition from the public. And after all that time, money and effort, the uphill capacity is less than bus service, and takes 15 minutes longer, with more transfers than either the bus or a personal vehicle. Pursue increased bus service, carpooling and tolls to increase person/vehicle density without spending half a billion dollars on a gondola.
37296	Vasiliki Anemikos	Please! For the love of this earth and it's community consider the environmental impact this will have as well as the recreational impact for the folx who treat this place with love.
37297	Sam Hartvigsen	<p>I do not support the selection of the gondola. As a skier and climber, the visual impact the gondola would have would forever change the character of the canyon and is unacceptable. The gondola would also destroy historic bouldering resources that cannot be replaced, and would severely detract from climbing experience on the walls of the canyon due to the visual impact. The selection of the gondola puts the convenience for users of the ski resorts on peak days during winter above other user groups that use the canyon year round. I am also concerned about how the gondola would effect parking in the lower canyon, especially near the gate buttress climbing areas.</p> <p>The gondola is also fiscally irresponsible as it is a huge cost to the taxpayer to benefit two ski resorts. I am also skeptical of the estimated price, and think it would probably now cost much more to build the gondola.</p> <p>I do not understand why UDOT chose to recommend the gondola when according to the Deseret News only 20% of people interviewed preferred the gondola.</p> <p>I think increased busing with a variable toll for cars based on passenger count should be implemented on peak days. This solution would leave the beautiful nature of little cottonwood canyon intact, and still alleviate traffic on peak days, without forever damaging the world class climbing that Little Cottonwood Canyon offers.</p>
37298	Tina Brown	UDOT is going against the wants and needs of the community in Salt Lake County. The public has spoken widely that they do not support the gondola. This is government fraud to force the public to pay 500 billion for a gondola that only benefits two privately owned ski resorts. UDOT is not listening to the people. Utah doesn't have a problem with traffic going up to the ski resorts, Colorado has a traffic problem with the ski resorts, skiers sit in traffic for 2+ hours each way, LCC may be backed up 45 minutes to an hour. This gondola is self serving and someone is benefiting from the proceeds. With the increase in cost of living, higher property taxes, higher housing prices and higher food prices, now is not the time to consider a gondola at the tax payer expense. Be transparent UDOT and tell the people who are benefiting from this option, who's getting paid under the table for this option? Don't ruin our canyons and our scenery for greed. Shame on UDOT, shame on Snowbird, shame on Alta! Listen to the people and the politicians. If UDOT proceeds with the gondola you can guarantee there will be boycotts, protests and riots.
37299	Shannon Rudd	The gondola seems like a poor solution to the problem. The problem is the policy of the ski resorts doing the 'Ikon pass' which is why the roads are so much more crowded. Why should residents pay for a gondola, when this ski pass policy is what places the heavy burden on our mountains and roads. Require the ski resorts to eliminate passes like the ikon pass and limit the number of passes they can sell, period.
37300	Mel Humphrey	Not in favor of Gondola.
37301	Jacob Turnbull	I am respectful opposed to the construction of a gondola in Little Cottonwood Canyon. In order to consider myself pro Gondola all of the following would need to be guaranteed: 1.) the gondola would need to be cheaper then travel in a personal vehicle for every canyon user on every trip. 2.) The gondola would need to be faster then taking my personal vehicle directly from my house to the resort or trailhead. 3.) The gondola would need to be open 365 days per year 4AM-10PM 4.) The gondola needs to in some way provide the same trailhead access the bus does now. 5.) the bus would need to be available at increased service then is already. All of this points time towards enhanced roadway capacity and enhanced bus. All of the above can be accomplished with this alternative not the gondola.
37302	Karin Westlen-Boyer	Do NOT build a Gondola up the Canyons. 1) It will be costly and only benefit the few that ski and snowboard there. It will also mainly work over the week-ends when the lines are so bad. Add more UTA buses and let several go up an down the Canyon . Buying some new buses will be a fraction of the cost of the Gondola. It will be an eye-sore in the Canyon and destroy sensitive habitats for wildlife.
37303	Scott Degen	I personally am against this idea of installing a gondola in Little Cottowood canyon. I think it will be a waste of TAX PAYER \$. Im not going skiing. Besides we are in a DROUGHT THIS YEAR & I BELIEVE WE WILL BE IN FOR YEARS TO COME. I want to say im against it. Thats all.

37304	Chris Neville	<p>The gondola is an utterly impractical solution to canyon congestion. It serves the wrong interests, mainly private industry rather than the broader needs of the average citizen. The issues in the canyon run the length of the canyon. There are numerous destinations that could benefit from an enhanced bus system and vehicle tolls. Destinations that the gondola could never serve. The gondola will reduce traffic in a very limited manner and on too few days. A bus system can serve the length of the canyon and reduce congestion year round at a much lower cost. The estimated cost now approaching 600 million dollars will most certainly cost much more than that, not to mention the several million dollars required annually for maintenance. Once built it will mar the beauty of the canyon. If current climate trends continue the utility of the gondola will be further diminished and is too specialized to be of use for other purposes. A bus system will be of far greater value. It can be redeployed for other purposes such as natural disaster management eg evacuations after earthquakes, fires, or other emergencies. Busses will likely be far more affordable for the average person who otherwise would be footing the tax bill that serves private businesses. Businesses that will still benefit from an enhanced bus service and car pooling. Canyon tolls could offset the tax bill of an enhanced bus system and would direct the fees to the people visiting the canyon. Canyon tolls would also encourage car pooling further reducing congestion.</p>
37305	Ethan Benzon	No gondola
37306	Trent Richards	<p>At first I thought the gondola sounded like a great solution. I have 100% changed my opinion though. I grew up at the mouth of the canyons and still enjoy recreating in the little cottonwood canyon a few times a week all year round. Being able to cruise up the canyon and park across from Alta at 5 am for a dawn patrol tour will likely be gone as the gondola will take away all of the parking up there. I feel like the gondola is a very myopic and extremely expensive solution. The view from the top or bottom of the canyon is breathtaking and will forever be changed with a gondola. Personally I have no desire to consistently take a 2 hour round trip gondola up the canyon. I also worry that increasing the ability to get a significant number of people up the canyon will absolutely destroy the skiing experience at the resorts. We have seen how Colorado ski resorts have been ruined by allowing too many people on the mountain. The lift lines extend all the way up the hillside and people end up paying hundreds of dollars for a few runs. Even with the canyon transportation problem our ski resorts are borderline too crowded. I would much rather not be able to go ski because I know the parking or canyon is full instead of getting up there and wishing I hadn't wasted my time and money due to frustratingly long lift lines. I also worry that the cost will be closer to a billion dollars that tax payers will be stuck with. An exorbitant amount of money to basically just allow the ski resorts to make even more money. I'm confident that 10 years from now we will have a much better solution but at that point it will be too late as we will already have a giant eye sore up the canyon and a debt that will take decades to pay off. All of this to help mitigate traffic a few days a year when it is actually a big problem. PLEASE don't be myopic and jump at the only solution you can immediately think of and leave all of us with the lasting consequences of your short sighted decision.</p>
37307	Mike Peterson	<p>I'd like to be on the record as opposing the Gondola B option.</p> <p>First, we should exhaust a set of low-cost, environmentally friendly measure such as busses, tolling, reservations (capping resort capacity), and actual enforcement of traction laws. And measure the impact these have on road congestion on the relatively few days per year that this issue is at its worst.</p> <p>Second, we should consider the question, "do we really need to find a way to get even more skiers to Snowbird and Alta on the busiest powder day weekends and holidays?" This question represents two major issues for me, one being that tax payers are going to be on the hook for funding a project designed to increase visitation to private ski resorts. As a local taxpayer I have zero interest in trying to get to these resorts on the busiest days, nor funding the ability of others to do so. I prefer to recreate in the backcountry, accessed via the many trailheads that this gondola will not service. At some point Alta and Snowbird should do right by their customers and their surrounding community and cap the number of skiers that can buy a ski pass. Not find a way to make the slopes even more crowded and the lift lines all the more unbearable.</p> <p>According to a Deseret News/Hinckley Institute of Politics poll, 80% of Utahns oppose the gondola. That number should make UDOT pause. Why build a project of this scale that is opposed by a great majority of the state and that benefits the owners of two ski resorts and a few key landowners?</p> <p>And then there are the stress to LCC and the destruction of the natural beauty of the canyon. Constructing 20 200+ foot towers right through one of the most stunning canyons on earth would be a tragic miscalculation. When we think about the legacy of land stewardship we are passing down to the next generations this would be a monumental embarrassment.</p> <p>Please do the right thing and don't permanently destroy the beauty of LCC in order to overcrowd a couple of ski resorts further at the expense of tax payers who don't want this gondola. Let's add busses, tolls, permits, and enforce traction laws, and involve all of the passionate canyon users who want to come together and find much more reasonable solutions for the 20 or so busiest days of the year.</p>
37308	Matthew Perry	I am against the development of a gondola in LCC.
37309	Mary Brinen	Don't build it!! Protect the environment and nature. There is so much beauty and so much to do already in this area. Don't build the gondola.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37310	Pam Hackley	<p>1) To UDOT: Please do not implement the gondola in LCC, nor the two centralized 2000-plus parking garages near the mouth of the canyon.</p> <p>2) Recommend to implement as a primary alternative option to increase flexible bus service for peak ski season periods and holidays.</p> <p>3) In addition to bus service for peak demand periods, each private car is charged a nominal fee that is scaled based on occupancy, e.g., one person per car pays higher amount than full car that pays a vey low access fee.</p> <p>4) For vey busy periods utilize one way lane access a specific time windows for which all traffic lanes are heading either up or down hill.</p>
37311	Kara McFarland	<p>Please don't vote to put a gondola in LCC. While it may seem like a solution it causes the canyon much more damage and is only considering ski resort traffic. There is so much more to Little Cottonwood than resort skiing and it depresses me to see the possibility of it being permanently altered. No gondola!</p>
37312	Mandy Allen	<p>I am against UDOT's preferred alternative of installing a gondola in Little Cottonwood Canyon. I live in Sandy and have been hiking, climbing and sometimes skiing up Little Cottonwood Canyon for decades. I have seen the use in the canyon skyrocket during this time period. A gondola installation and subsequent increase in visitors to the canyon would lead to negative impacts on the watershed. Our watershed is a very precious resource, especially as we are in the midst of a megadrought. Installing a gondola is completely short sighted.</p> <p>Tax payers should not be on the hook to pay for a \$500 million dollar gondola that only benefits the ski industry. Locals who are in the middle to low income cannot even afford to ski in our resorts, and yet are going to be paying for a gondola that won't even solve the parking issues up the canyon.</p> <p>UDOT needs to listen to those who are using the canyon and would have to pay for this decision. We do not want the eye sore and negative environmental impacts of a gondola. We do not want to pay for something that is only for the ski industry.</p> <p>Better alternatives would be a toll system, increased buses, and other alternatives that do not permanently impact the watershed, beauty of Little Cottonwood, and cost the taxpayers half a billion dollars.</p>
37313	Julie Collett	<p>I feel like spending this amount of taxpayer money for a gondola that benefits a small percentage of our population and 2 businesses is unwarranted. There are other options that are less money that should be utilized before we build something so permanent and expensive. There are not many days that the canyon is backed up with traffic, making people pay to park for skiing and limiting access would solve this issue.</p> <p>Has anyone thought of the amount of noise that a gondola would make as it reverbrates between the narrow canyon walls? I have been in a couple towns with open space surrounding their gondolas and the noise can be heard from miles away. In our small canyon with close rock walls the noise would be unbearable to both wildlife and humans. The noise would ruin thd peaceful mountain experience and spill out of the canyon to nearby neighborhoods.</p> <p>Also, the construction and path of the gondola would ruin world class rock climbing routes that attract people here from all over the world. Why should the special interests of one group destroy the ability of another group to enjoy the same space? I disagree with the need of an expensive and permanent eyesore when we can start small and work at it till a solution that meets everyone's needs can be found without destroying the canyon.</p>
37314	Landon Bartlett	<p>I don't believe this is the right answer to the problems in this canyon. There are many other options to fix this without leaving lasting impacts in the canyon. Why not try other solutions before using half a billion dollars to realize this won't actually fix the problems.</p>
37315	Amy Wareham	<p>No- tax payers should not be paying for this. Put it on the ballot for the voters to decide.</p>
37316	Mick Martin	<p>When thinking about Trax i think about how many lives have been taken and how much destruction has been caused because the train is on the ground mixed in with traffic. How many delays with traffic and the train itself because they are intertwined. The same thing will happen if we don't use a gondola or monorail system.</p>
37317	Erik Badger	<p>Born and raised in the shadow of this majestic little mountain range we call the Wasatch, it breaks my heart to see ideas like those proposed by UDOT. I am an avid skier both back country and resort and I am 100% opposed to the gondola as a solution to the traffic and parking problems in Little Cottonwood Canyon (LCC). Placing an over \$500 million dollar burden on the tax payers of Utah (most of whom will not use nor benefit from this expensive project) is inappropriate and irresponsible. This project is incredibly destructive to the flora, fauna, and water quality of LCC and would be an atrocious eyesore. The view down canyon of this glacier carved paradise is a wonder of nature that needs to be preserved without gondola towers and cables running down the middle of it. The traffic problem in LCC needs to be addressed with less destructive, less expensive solutions. An efficient bus system utilizing the existing road (no expansion) with hubs/parking scattered strategically throughout the valley is a solution the public can get behind and support and can solve the traffic and parking problems not only in LCC but Big Cottonwood Canyon (BCC) as well. (Odd that the same parking and traffic issues exist in BCC but nothing has been proposed to address it). To discourage personal vehicle use in both LCC and BCC during the winter months, I propose implementation of a parking reservation system not through the resorts but through UTA. Anyone wishing to drive and park their own vehicle up canyon of white pine trail head in LCC and Silver fork lodge in BCC between the hours of 6 am and 2 pm must make a reservation through UTA with a \$30 dollar price tag. UTA would enforce this and ticket violators with \$50 dollar ticket. All proceeds from the reservation system would go to funding the new and improved bus system NOT the resorts. Improve upon existing infrastructure through less costly, less destructive, less elaborate ways. This is forward thinking. We don't need human made tourist attractions. The canyons in their natural state are attraction enough. The Wasatch mountains are special, unique, sacred. It's the responsibility of this generation to preserve what's left of it. Thank you for your consideration.</p> <p>Sincerely,</p> <p>Erik Badger, DDS,MS</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37318	Steven Strong	I just submitted a detailed comment opposing the proposed gondola. But I must write one more time to ask why UDOT continues to use the inane euphemism "Gondola B has been identified as the preferred alternative"???? Why can't UDOT own up to this seriously flawed decision by simply stating the truth: UDOT has IGNORED what is best for nature and the environment and the public good and our children's future -- to push the Gondola alternative because that's what the powerful developers and ski resorts want. UDOT simply caved. Stop saying the gondola was "identified as the PREFERRED alternative" in the passive voice as if it was preferred by anyone except UDOT and those private interests UDOT is trying to please using public funds.
37319	LeeAnn Bywaters	Building the gondola in LCC will destroy the natural beauty of the canyon and will only move the parking issue to another area (the base of the gondola). I better solution might be more busses and/or a toll or the paid parking that is already in use. Another solution could even be adding night skiing at Alta and Snowbird so all of the skiers are not leaving at the same time.
37320	Andy Marr	There are many other options besides a permanent installation in LCC. The pinnacle of congestion in LCC occurred during the "super-pass" introduction, especially with the Ikon Pass. The Ikon and other passes are geared to bolster visits and private gain at Alta and Snowbird in this case. Similar effects have been seen in popular ski destinations worldwide concurrent with the introduction of these passes. Public funds should not be used to enhance private gain, and consequently, degrade the environment and watershed of LCC. Let's try some less invasive and more practical measures prior to moving forward with a drastic alteration to the canyon forever. I think we can all agree this is drastic and all other options have not been considered fully. Be responsible stewards of tax-payer funds and be responsible stewards of the environment by looking towards other options. Please do not adopt the gondola as option 1.
37321	Leah Filley	Help make the canyons available to people of all socioeconomic statuses: build the gondola.
37322	Cynthia Levinthal	I have commented at all stages of this process and each time, I have argued strongly against the gondola option. The gondola is not a transit solution. The gondola will be in only one of our two resort canyons. The gondola only serves Snowbird and Alta. The gondola is prohibitively expensive. The gondola is an absolutely irresponsible choice that the majority of Utahns do NOT want. I have completely lost trust in this process and UDOT. You have heard over and over that we do not want it, yet you continue to say it is the preferred option. I smell a rat. The corruption is clear. Other options were promised while the gondola is being considered and instead many busses that serve the canyons have been canceled. Please put aside cronyism and lining your pockets and do what is best for the canyons and the people of Utah.
37323	Galen Carter	Hello, my name is Galen Carter and I have been a Salt Lake City resident for 26 years. I am writing today in opposition to the gondola alternative. First, the environmental and financial impacts of the gondola are too large. The gondola stands to destroy the aesthetic property of LCC, as well as parts of the Temple Quarry trail and rock climbing routes throughout the canyon. This is a solution that will benefit private ski resorts (Alta and Snowbird) due to increased access for their customers. However, the public at large sees the canyon as far more than a business prospect and certainly should not be fronting the bill for two already massively successful private companies. The best solution for LCC is an increased bus system with a weekend/holiday toll on private vehicles. The buses need to be frequent enough during peak hours (every 15-20 min) and free of charge in order to be most effective. The buses should be subsidized by state taxes and the weekend/holiday toll, and UTA should provide enough hourly pay to avoid the current worker shortage. The money funneled into a bus system would certainly be less than the >\$500 million needed for a gondola. Lastly, I disagree with UDOT's ultimate goal of moving more people up the canyon as quickly as possible. This is an appropriate goal for getting people across our state on our freeways. But this goal should not and does not translate to a dead-end canyon with limited capacity. Unlimited growth is not possible in Little Cottonwood Canyon, and our environment, drinking water, and recreation will suffer from it.
37324	Peter Daines	I write in opposition to the gondola proposal. While mighty, the Wasatch is a small range and LCC may be its crown jewel. To severely undermine its beautify with a permanent gondola that primarily serves two private interests would be a tragedy. The gondola's shortcomings are well-documented in this community in ways I couldn't add to. I would reiterate that in addition to undermining LLC's aesthetic, it does not solve the traffic issue and seems to discriminate against all non-Alta/Bird users. Last, the permanence is frightening. We are in an odd time with growth and pandemic related outdoor use increase. That the number of outdoor users may actually naturally decrease in the coming years is a serious possibility. Please do not build it.
37325	Josh Thurman	A gondola would be such a travesty for LCC and it's legacy in the Wasatch front... All for the benefit of an elite class and 2 large private enterprises - at my expense to boot! Put it to a vote if you are so confident in your "survey" and let the people of Utah decide what's to be for LCC and all of its majestic animals and geological wonders. Snowbird patron for 35+ years and a Sandy resident for almost 20 and I will no longer be supporting Snowbird in any way or fashion going forward. Give 'em the Bird indeed! FSB

ID	Full Name	Comment
37326	Viktor Simovski	<p>My name is Viktor. I'm a 31 year old naturalized citizen from North Macedonia. I am your constituent, an active registered voter in the great state of Utah, and level-headedly & whole-heartedly against the gondola as a solution to LCC's congestion woes. I moved to Utah in 2019 and currently live in SLC's Guadalupe Neighborhood.</p> <p>This project is important to me because my inspiration to move to Utah was skiing big mountains. Skiing introduced me to nature, and nature showed me tranquility and guidance in a hectic world the same way religion does onto others. Not all feel this way but I know there are many who do, and I hope those reading can find a way to understand that and hear it in my words.</p> <p>Those are the personal words. Now the technical:</p> <p>1. (1) Typically with any motorized vehicles (cars, trains, airplanes, buses), a Design Failure Mode and Effects Analysis (DFMEA) is provided by the manufacturer to show each system is robust enough to withstand failures within it. For example, a DFMEA from a motorized vehicle manufacturer would show the probability, severity, and recommended actions if an engine fails from decreased fuel line pressure. Has UDOT compiled any FMEA documentation of their own to consider traffic failures and do they plan to share that with the public? Where, or why not?</p> <p>2. The Final EIS does not consider the flexibility of each EIS solution in the future based on traffic failures that could happen down the road. This is important because the gondola is a permanent structure more so than just tolling or adding ski-specific busses - why wasn't this considered?</p> <p>3. Based on simple data on monthly snowfall in Alta from the Utah Avalanche Center [https://utahavalanchecenter.org/alta-monthly-snowfall], Alta shows a decreasing trendline in overall snowfall as well as total snowfall in the months of December, January, and March (simovski.v+ [REDACTED] for the excel sheet I'd be happy to share). Considering that UDOT states the project purpose is based on peak-period winter traffic and safety regarding avalanches (Executive Summary, Chaper S.2), what cost-benefit analysis has been done that incorporates snowfall data since UDOT stated that lower snowfall months do not require transportation solutions at this time?</p> <p>4. The NOAA published a paper in 2018 [https://www.climate.gov/news-features/climate-and/climate-skiing] which states: Utah will probably face a similar problem [where the warmer mountain climate causes climbing snowlines]. Melnarov [REDACTED]</p>
37327	Pamela Brooks	<p>I do not think a gondola will solve any of the congestion in the canyon, but it will cost a ton of taxpayer money and line the pockets of former politicians. I love to ski but would not pay a lot of money (estimated at around \$110 per person) to ride the gondola. It is too expensive. I also think that if the gondola were to be built, it should be funded in large part by the ski companies who stand to benefit from it the most.</p>
37328	Jesse Brown	<p>I vote NO for the gondola. Email me if you wanna know why...</p>
37329	Eden Preston	<p>I oppose the little cottonwood gondola. I think it would harm the views, and would generally damage the environment I enjoy there.</p>
37330	Keely Vandenberg	<p>Gondola because Europe has them and possibly creates more access for people to explore. Really though the road just needs to be shut down. ONLY have buses going up and down year round, starting early in the morning with lots of stops. Carpooling only works to a certain extent and people are selfish and taking a car is "easier" than the bus for a quick lap. There needs to be an incentive with tourists to ride transportation i.e. free tickets if they stay at a certain place or something. This state makes a lot of money from tourism and we want to keep people coming. Access to the outdoors isn't something having a special car should dictate.</p>
37331	Devin Regan	<p>Although I do agree that the traffic up the canyons has gotten worse. I struggle with the fact that only the resorts would benefit from the eye sore 4 months out of the year. This seems like the lazy solution that is being lobbied by the resorts. I think our tax dollars would be better served taking care of the community.</p>
38620	Jason Keith	<p>Please find attached American Mountain Guide Association comments to UDOT's Final EIS for Little Cottonwood Canyon.</p> <p>Regards,</p>
37332	Owen Wright	<p>The installation of a gondola on Little Cottonwood would permanently damage the incredible climbing we have in Salt Lake City. People go climbing for the natural beauty and erecting an enormous man made tower hurts that experience. The Wasatch Mountains deserve better than 200 foot towers eating into their beauty. Moreover, this gondola really only serves to benefit those that use the canyon for the resorts. Increased bus service could accomplish the same goal without leaving out Solitude and Brighton.</p>
37333	Jodie Taylor	<p>Please do not build a gondola. This will not decrease the traffic. Instead it will increase the load of people on the mountains. Because people will still drive up and then you now have the additional amount of people from the gondola.</p>
37334	Sasha Oncley	<p>Little cottonwood is a huge climbing spot for hundreds of thousands of climbers and people. Putting a stupid gondola won't solve anything, stop being a self centered piece of garbage and think about someone else for once. This is why no one likes rich people. Cause they don't care about anyone but themselves and there own self interests. They hide behind helping others with helping themselves</p>
37335	Vincente Herrera	<p>I hate this don't do it. It's just a way for snowbird to make more money.</p>

ID	Full Name	Comment
37336	Viktor Simovski	<p>My name is Viktor. I'm a 31 year old naturalized citizen from North Macedonia. I am your constituent, an active registered voter in the great state of Utah, and level-headedly & whole-heartedly against the gondola as a solution to LCC's congestion woes. I moved to Utah in 2019 and currently live in SLC's Guadalupe Neighborhood.</p> <p>This project is important to me because my inspiration to move to Utah was skiing big mountains. Skiing introduced me to nature, and nature showed me tranquility and guidance in a hectic world the same way religion does onto others. Not all feel this way but I know there are many who do, and I hope those reading can find a way to understand that and hear it in my words.</p> <p>Those are the personal words. Now the technical:</p> <p>1. (1) Typically with any motorized vehicles (cars, trains, airplanes, buses), a Design Failure Mode and Effects Analysis (DFMEA) is provided by the manufacturer to show each system is robust enough to withstand failures within it. For example, a DFMEA from a motorized vehicle manufacturer would show the probability, severity, and recommended actions if an engine fails from decreased fuel line pressure. Has UDOT compiled any FMEA documentation of their own to consider traffic failures and do they plan to share that with the public? Where, or why not?</p> <p>2. The Final EIS does not consider the flexibility of each EIS solution in the future based on traffic failures that could happen down the road. This is important because the gondola is a permanent structure more so than just tolling or adding ski-specific busses - why wasn't this considered?</p> <p>3. Based on simple data on monthly snowfall in Alta from the Utah Avalanche Center [https://utahavalanchecenter.org/alta-monthly-snowfall], Alta shows a decreasing trendline in overall snowfall as well as total snowfall in the months of December, January, and March (simovski.v+ [REDACTED] for excel sheet with trendlines I'd be happy to share). Considering that UDOT states the project purpose is based on peak-period winter traffic and safety regarding avalanches (Executive Summary, Chaper S.2), what cost-benefit analysis has been done that incorporates snowfall data since UDOT stated that lower snowfall months do not require transportation solutions at this time?</p> <p>4. The NOAA published a paper in 2018 [https://www.climate.gov/news-features/climate-and/climate-skiing] which states: Utah will probably face a similar problem [where the warmer mountain climate causes climbing snowlines]. Melnarov [REDACTED]</p>
37337	Steve Downes	<p>I have commented at all stages of this process and each time, I have argued strongly against the gondola option. The gondola is not a transit solution. The gondola will be in only one of our two resort canyons. The gondola only serves Snowbird and Alta. The gondola is prohibitively expensive. Work on the gondola will cause massive destruction of wildlife habitat and irrevocable damage to recreational resources, such as rock climbing. The massive expenditure could be used to benefit the lives of hundreds of thousands of Utahns who do not ski or snowboard at Alta and Snowbird. 80% of Utahns stated opposition to the gondola in a recent poll. This result makes me think that you don't believe in public input. I fear that the gondola project is just another classic Utah, enrich the already rich project.</p>
37338	Mike Simmons	<p>Please don't put a gondola in LCC. I think we can come up better solutions, like tolls and more buses at peak times. Buses can be regulated if the demand is lower. I think tolls should be every day of the year because demand on the canyon keeps going up, and only allow so many cars to go up the canyon a day. We also need to tolls and buses up BCC to keep that canyon under control. The gondola doesn't stop at the hiking trails so I will still have to drive up the canyon to get to the places that I want to. The gondola solution won't do anything to help Wasatch blvd traffic if anything it will make it worse. I think the gondola is a tourist attraction that won't help the problem.</p>
37339	Derek Averill	<p>Please do not make the environmental mistake and install a gondola. Can we really justify environmental destruction for a few snowy days? The canyon is beautiful and adding the gondola is irreversible. Save the canyons for everyone. This seems corrupt and one-sided.</p>

ID	Full Name	Comment
37340	Ashley Patterson	<p>As a Salt Lake City resident and regular visitor to Little Cottonwood Canyon, I have closely followed the LCC EIS transportation process, and am puzzled by the advancement of the gondola as a preferred alternative.</p> <p>The key concerns I see with UDOT choosing Gondola Alternative B as its preferred alternative are:</p> <p>Dispersed Use - The White Pine parking lot is crowded with vehicles year-round, with cars parking up and down the highway for up to a mile in either direction at all times of the year but particularly in summer when the gondola does not intend to operate. This creates a significant safety hazard along the state highway. The gondola does not plan to stop at White Pine thus the traffic at that trailhead will continue to get worse not better. This is the premier hiking destination in Little Cottonwood Canyon.</p> <p>Economic Benefit - The EIS states: "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." This has been rightfully controversial given that this gondola is simply serving two private entities and using massive amounts of taxpayer dollars to do so. Service to free or low cost winter recreational opportunities (snowshoeing, nordic skiing, backcountry skiing, sledding, or winter hiking) when the gondola is running are minimal meaning this proposed alternative is serving only relatively affluent resort skiers and snowboarders.</p> <p>Expense - The initial cost proposed by UDOT for the gondola was \$550M and given typical cost overruns for large infrastructure projects, this is likely looking closer to \$1 billion taxpayer dollars for a solution with no parking in a residential neighborhood that serves two ski resorts in the winter.</p> <p>Gondola Fees - Along with the rising costs of construction and UDOT's admission that funds may not be available, the prospect of high costs for people to ride the gondola exists. There has been little discussion from UDOT or the ski resorts regarding fees for riding the gondola. It seems logical that high or even exorbitant fees to ride the gondola will drive ridership down.</p> <p>Seasonality - As currently proposed, the gondola will only run from December through April. This is despite the fact that traffic in LCC between June and October is effectively at the same level as the winter, with Snowbird actually parking more cars for their Oktoberfest celebration than they do on winter powder days. Relegating the gondola to winter use only confirms that this is NOT a public transit option and is instead a wholly-taxpayer-funded chairlift to benefit two private ski areas.</p> <p>Controversial - This project has been controversial in the community. A recent survey showed that 80% of respondents did</p>
37341	Joseph Smith	<p>To start the canyons should be bus only on weekends. With increased service and stops for Backcountry skiers. It is cheaper and the infrastructure is already in place. Try the gondola later if busses cannot solve the problem. The gondola will mess up the sight lines in the canyon, disrupt climbing routes, and has no access for Backcountry skiers</p>
37342	Leo Ahrens	<p>Decisions made today will last with us forever. Let every voice be heard and all concerns be settled. Our goal is sustainable growth, healthy growth, community growth. Today our community is divided. Today is no day for action.</p>
37343	Mandi Christensen	<p>STOP THE DESTRUCTION OF THE ENVIRONMENT! STOP THE GONDOLA!!!!!! The only entity it benefits are the ski resorts!</p>
37344	Rachel Warner	<p>I support further study of a sustainable solution beyond the impacts of a gondola option.</p>
37345	Bryan Konnick	<p>As a long time sandy resident I do not think the gondola is the best course of action. This is the most expensive and least helpful solution. This solution just moves the problem down the canyon to Wasatch boulevard. Please do not allow this to live forward.</p>
37346	S Streff	<p>We don't need a gondola. Parking reservations at Alta worked. Snow sheds are needed. Making a 3rd lane that alternates morning and evening is another better solution as many parts of the road are already three lanes. The head of UDOT on Snowbirds board seems to be influencing decisions.</p>
37347	Kelan Albertson	<p>Please listen to your community! The harm that the gondola will cause to the canyon and our watershed is not worth the ability to increase the number of people at the resorts. I do not feel that fewer people will drive to the resorts and so this will only add the people on the gondola to same number of people in their cars. The environmental damage and the immense price tag to build the gondola has been enough to turn your community against it, so why do you keep pursuing the gondola as if it is the only option? Let's try a less damaging and less costly alternative first. If implementing a toll or improving the bus service truly does not work then I will be able to accept that a gondola may be the best option. But until we try that first, I am very strongly against the gondola. Please listen to your community.</p>
37348	John Canner	<p>I overwhelmingly support the gondola. It is the most environmentally friendly alternative and progressive for the economy and ascetics. It gives the most reasonable alternative for tourists and locals alike to get up the canyons in not only an efficient way, but also provides a visually pleasing ride that provides great views and airflow. A bus route is something that is already done in the canyon and is something tourists are far less likely to take. The gondola is a tourist draw for sight seeing views in all four seasons. It will alleviate congestion in the canyons and those such as back country enthusiasts that would like to access the national parks where the gondola does not stop, driving is still an option. With a viable alternative it is more likely we will see less cars up the canyons in dangerous winter conditions that are not equipped to handle the conditions further alleviating congestion issues on some of the most trafficked days. I am excited at the opportunity to take the gondola and see it operating. I think it will be great from a perspective of helping locals access their favorite activities, school aged children who can't drive, and draw more tourist into our mountains in an environmentally friendly way.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37349	Tom Adams	<p>When it comes to the gondola I agree with Mayor Jenni Wilson when she said, "Although I applaud UDOT's acknowledgment of the value of a phased approach, I disagree with its conclusion that the gondola should be the preferred alternative. The gondola option is flawed for many reasons, including that it will:</p> <p>Cost over a half billion dollars (not considering inflationary cost increases); Only make stops at two private ski resorts: Snowbird & Alta; Remove no more than 30% of car traffic from the canyon road; Operate only during the winter ski season; and Permanently mar the inherent beauty and public lands of Little Cottonwood Canyon.</p> <p>The gondola is an unwise public investment for a 50+ year solution serving a limited group of people, given that it's irreversible and incapable of pivoting in the face of changing circumstances. But it isn't the only option. "a</p> <p>In addition I strongly disagree with the expansion of Wasatch Blvd between Bengal and 9400 so. The community between Danish and Wasatch already has no safe route to school for kids and Bike Utah continues to highlight the growing number of cycling deaths in Utah due to cars. The proposed solution for Wasatch adds speed to the Highway and danger to our community. At minimum Wasatch needs a protected path on both the East and West side.</p> <p>Furthermore an expansion will only gather more cars and pollution in our community especially on the busy powder and/or weekend days.</p>
37350	richard gregersen	<p>so much to be done before a Gondola is built in LLC. 1) do nothing (if people dont like it, they dont have to wait in traffic 2) enhanced buses, 3) toll/carpooling(based on how many people are in a car (sliding scale), 4) Reservations (only so many parking spaces), 5) resorts build parking garages to allow more people at their resorts 6) enforce traction law. 7) public funds should not be used to build gondola anyway 8) Gondola does not serve other peoples use of the canyon. DO NOT DESTROY LITTLE COTTONWOOD CANYON - lets preserve it for the future. GONDOLA does not solve ANYTHING!</p>
37351	Christine Riggie	<p>YES to enhanced bussing NO NO NO TO GONDOLA It's not needed, except for the developers, Snowbird and Alta</p>
37352	Max Koszinowski	<p>I almost did not feel the need to make a comment during this final period. I do not think that this decision to build the gondola is representative of what the people want. I am almost at a loss for words in regards to this topic, but on the small chance that someone actually reads this I do feel like contributing a few more of my opinions. Even though I feel that mine along with many others are not even being considered.</p> <p>I'm greatly saddened by the prospect of this gondola being built. I do not see it as a solution to any of the problems facing our canyon. In my opinion the sole purpose of the gondola is to get more people up to the resorts to generate more and more wealth. I cannot pretend that our economic prosperity is not vastly important. Yet it bothers me greatly how this need to generate wealth has gone from a thriving tourist industry, to an avaricious machine that has no regard for our local lands, animals, or peoples. In many ways it has made the issues facing our cities even worse ranging from air quality, to the lake drying up, and overcrowding of our natural spaces.</p> <p>I anxiously and sadly wait for the day that I will see the canyon I've been fortunate enough to grow up in, forever marred irreparably, while I still wait in the traffic that will always be present as a gondola ferries more crowds up to the resorts.</p>
37353	Kade Elison	<p>As a citizen of the state, I am ashamed that business is being prioritized over conservation and has been deemed more important than public lands. As a climber I am saddened that we will lose historic climbing areas to the greed of a few with the construction of this gondola. As a snowboarder I am appalled at the behavior of the ski industry. We can and should do better than this gondola. It is unwanted, unnecessary, and absurd!</p>
37354	Garrett Tiede	<p>I am opposed to the Gondola option in Little Cottonwood Canyon. I have lived in Sandy for over 35 years, and while traffic has become more problematic over the years at the mouth of the canyon on heavy snow days, the vast majority of the year sees no issue at all. I simply cannot get behind a nearly billion dollar option that only feeds the two resorts with no other stops. I can't imagine the money would ever be worth it for the handful of days that the traffic is actually a problem. Who is going to choose the gondola option on a low to mid-traffic day? It's going to take longer, be less convenient, and cost as much or more than simply driving up the canyon. The biggest problem with current public transit in Utah is the lack of convenience and expedience. The gondola solves neither of those issues. My money as a taxpayer would be much better spent on an alternative solution or other causes all together.</p>
37355	Gabriel Greenlaw	<p>There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws. These actions do not irreversibly change the landscape and community forever.</p> <p>With no trailhead or backcountry access, the gondola is far from a solution that benefits all of LCC's users throughout the year. I would be more aggregable to the gondola if trailhead access was available during the winter and at the very least, ran year round.</p> <p>Little Cottonwood Canyon is a true treasure of our local environment and attracts skiers, climbers and hikers from around the world to enjoy its beauty.</p> <p>Constructing more than 20 towers reaching 200 feet tall and stretching eight miles through the heart of LCC would destroy the canyon's natural beauty. Again, there are other options that do not alter the landscape.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37356	Allan Young	I am not in favor of the proposed gondola, a train or sub terrain makes more sense if service is only to the ski resorts paid in part by resorts s
37357	Mike Marker	UDOT errs in presenting Gondola B option in that it has been modified from its presented version in the DEIS. By eliminating the remote parking garages on 9400 and at the gravel pit and proposing to almost double the size of the parking garage at the mouth of the canyon UDOT will be directing more passenger car traffic onto Wasatch Blvd increasing congesting. Presenting this new Gondola B option is negligence on UDOT'S part as it violates UDOT standards and conditions that in earlier studies ruled out this location altogether.
37358	Jen Colby	<p>I am writing to comment on the Little Cottonwood Canyon EIS for transportation. In the past, I worked for the Content Analysis team and reviewed and analyzed NEPA comment as my work. I understand the process and the technical reviews versus general public comment.</p> <p>I worked for a ski lodge and also ran a small business in Little Cottonwood Canyon for most of a decade and lived in the canyon, too. I am quite aware of the issues, constraints, and values inherent in this astounding natural area so close to a major population center and international airport.</p> <p>Regarding the EIS, the preferred alternative of a gondola is so flawed it seems as though it can only have been selected due to political and corporate pressure and an incomplete, biased, arbitrary and capricious analysis. As such it fail to meet NEPA standards. Even if such an expensive boondoggle were constructed, without robust and greatly increased transit and a strong demand management element, the gondola will fail to meet its intended goals and purpose. The congestion will be effectively as bad while those who decide to use the gondola will also face wait times - just not in the line of cars at the top of LCC. However, the traffic congestion will simply be displaced to valley streets and roads. The modeling for traffic must be completely flawed and needs to be evaluated by an unbiased, external expert team. Moreover, the amount of base parking that will be needed will have unacceptable environmental impacts, much less the tower and structural components directly.</p> <p>The only rational, conservative, and cost effective alternative puts the responsibility where it belongs on the commercial ski resorts and entities that drive demand, and reduces environmental impact (I would have hated to code that sentence lol). A demand management alternative must include</p> <ul style="list-style-type: none"> -market rate parking fees for every private vehicle entering LCC; -tolling during high season; -limiting season and daily resort pass sales; -variable and time dependent ski lift ticket pricing to match demand; -other relevant evidence-based options for demand management. <p>The impacts of climate change are not adequately analyzed, given the high end estimates are unfortunately already coming true at a much accelerated and frankly terrifying pace. The ski season will likely shorten substantially with 2-3 decades, lessening any need further. There is essentially no summer need for all of this - at most congestion is 120-150 days in the year, driven entirely by the commercial ski business. It is also congestion experienced and caused by those responsible for it, so it is atrocious to ask general taxpayers to foot the bill for a gondola for the highest income residents and visitors - about the only people who can afford to resort ski anymore.</p> <p>As an avid skier, I object to the public subsidies - including permit fees and all the other support from the public sector and woefully underfunded USFS - to this highly environmentally impactful industry. Only mining has more environmental impact. I endorse and incorporate by reference the Wasatch Backcountry Alliance's comments.</p> <p>The gondola boondoggle cannot meet the demand, has enormous visual impacts, and cannot pass any serious cost benefit</p>
37359	Steve Romano	I've seen the lines of cars its not good. Both the Gondola and widening the roads are not well thought out ideas, they come off as panicked decision making. Limit the number of cars and skiers to both resorts, a reservation system with no toll booths.
37360	Deborah Case	.
37361	Jaclyn Long	Please push pause on the gondola. Implement tolls, improve bus systems. A big project like a gondola seems like a hasty decision on a long time coming problem. Let the resorts take more ownership of their problem of parking, run their own shuttles etc; as they end up with the most profit. Winters are changing; shortening and raising in elevation. If the gondola does not have year round purpose then it seems a complete over construction to solve a couple month problem.
37362	Emily Decker	The gondola is not needed. We should be trying charging for parking and giving incentives for carpooling before spending such a large sum of money. The parking reservation system at Alta last year helped a ton. I am against the gondola. It will only push the traffic problem into our neighborhoods at the base of the canyon.

ID	Full Name	Comment
37363	Natalie Bay	<p>I am against the Gondola option in Little Cottonwood Canyon. Building a gondola in the canyon would be destructive to our precious watershed, the habitat for the flora and fauna, as well as compromise and, in some places, destroy areas of decades old recreation. The visual eyesore alone would be detrimental to the value that Little Cottonwood Canyon currently offers to so many varied user groups. The gondola would change the serene beauties of the natural canyon to one likened only to an amusement park. This canyon is loved dearly, and almost to death by so many. If the gondola were to actually move as many people as it claims to be capable of, and there are that many that would fork out the fees to ride it to the ski resorts, the end result would be more miserably crowded than it already is. How many is too many? Remember, this is a canyon, not a city that requires trains, subways and gondolas. Relevant perspective seems to be lost on this issue.</p> <p>As the cost for the gondola listed in UDOT's EIS is much less than is currently being reported in the news, it is not as cost effective as the other options. I do not support the gondola option as it will be limited to only those that can afford to pay for parking at the LaCaille Base Station as well as the fee to ride the gondola. This cost on top of the cost for a ski pass is even more limiting. Those that currently ride the UTA buses up the canyon pay for a bus pass that benefits them every day of the week anywhere along the Wasatch. The fiscal benefit of the gondola benefits the owners of the proposed base station location and Alta and Snowbird Ski Areas only. To expect the tax payers to pay for an option that is exclusive and not benefitting the majority is egregious.</p> <p>Other options without the large environmental impacts that the gondola option brings with it should be implemented first instead of going straight to such a detrimental and exclusive option. I support funding with my tax dollars enhanced (electric) buses and appropriated lanes, widening the road where necessary for peak period driving. I support tolls (similar to Mirror Lake Hwy format) as well as incentivizing those that carpool as well as locals that steward the canyon. Ultimately, I support preserving the natural canyon as best as we can and that should be the top priority. Following that, providing transportation up the canyon that is available and feasible for the majority is key.</p>
37364	Sharon Schriewer	<p>I have lived [REDACTED] for 24 years. As someone in the medical field, I have travelled to downtown via Wasatch and I-215 for all 24 years and this has included most Saturday and Sunday mornings, summer and winter. Over this time, my ingress to Wasatch hasn't worsened during prime morning ski traffic time and actually the last couple of years has improved with less new powder days due to drought and the parking reservations systems at Snowbird and Alta. The gondola is a huge unnecessary, expensive effort for the 10-15 days a year when uphill traffic is busy. With drought and a shrinking Great Salt Lake there will certainly be fewer new powder days making a gondola outdated before it is even built to benefit only the 2 businesses, Alta and Snowbird. Please give the enhanced bus system, tolling and other options a chance before seeking gondola funding from legislature.</p> <p>With regards to Wasatch Blvd expansion, I walk on the west side 5 days a week for exercise. Please provide pedestrian safe, walkable space on both east and west sides of the road and please keep the speed limit at 35MPH so it remains safe for the ingress and egress of neighborhood cars, bikes and pedestrians. It shouldn't end up being a 50mph speedway for commuters with the safety of local residents on foot or bike disregarded.</p> <p>Thanks for your considerations of all options....</p>
37365	Julia Sorenson	<p>I completely oppose the gondola as an irresponsible use of taxpayer funds. UDOT has not addressed the additional traffic a gondola would create on Wasatch Boulevard and 9400 S. And the major impact on big Cottonwood Canyon. UDOT has also not addressed the risk of earthquakes and wildfires to a gondola.</p>

ID	Full Name	Comment
37366	Hannah Baxter	<p>The proposed gondola is an unrealistic and harmful option for several reasons. First, the gondola would only stop at Snowbird and Alta, but over 3/4th of canyon users don't go to those destinations when they go up the canyons (source: An Estimation of Visitor Use in Little Cottonwood, Big Cottonwood, and Millcreek Canyons, written by Chase C. Lamborn and Steven W. Burr). This means that the gondola would not be improving access and will not be cutting down on the majority of traffic. In order to offset the \$600 million spent to build the gondola, the gondola will likely cost money to use, with no estimate cost released, whereas public transportation is free, and even the ski buses are only \$5 (Deseret News "What Now? Will New Buses or a Gondola be the Answer to a Congested Canyon?"). UDOT has itself admitted that the gondola will not reduce traffic, but instead get more people to the ski resorts. According to EIS 8.4.3.2, with the increase in resort visitation from UDOT's proposals, "daily traffic volumes would be similar to the existing conditions in 2020", but "the [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts" (UDOT's EIS Ch. 6.). This shows that even UDOT is aware the gondola is not actually meant to improve traffic and accessibility, and that it is instead simply a way for those who already have more than enough money to increase their wealth at the cost of the citizens of Sandy and the health of the canyon. In other words, UDOT says the gondola will increase resort visitation and profit while using public funds and not reducing traffic. Using public funds to increase the wealth of ski resorts, which are private companies, is governmental corruption. Those in the government who support this plan will be know as corrupt politicians who harmed instead of helped the people they were supposed to be serving.</p> <p>Beyond affecting canyon users, proposed construction of the gondola is harmful to the health of the citizens of Salt Lake Valley. On average, 90% of SLC's water supply comes from the Wasatch. UDOT construction projects have polluted streams before (KSL - concrete spill in Mill Creek).</p> <p>In total, the pros list for the gondola is short, and the cons list is very long. The pros are that it will increase resort profit (by using public funds, yippee for corruption!), increase profit for private developers (who obviously need all that extra money), will be a tourist attraction, and will get more people to the ski resorts (who, just like the private developers, are in dire need for more money). The cons are many. It will irreparably damage the canyon's beauty, will require \$600 million in tax dollars to build, will not address traffic, will not improve accessibility, only services the resorts, will require years of construction in our very sensitive and crucial watershed, will require dispersed users to pay for access to their public lands, and will not address Big Cottonwood Canyon traffic.</p> <p>Let us remember that this whole issue originally was meant to address canyon traffic and accessibility. What would be the best solutions for those? Adding bus stops around the valley that could take anyone straight to the canyons. Buses that stop at ski resorts AND hiking trailheads and climbing approaches. Buses are the best solution. They are already cheap, could be incentivized to increase ridership, and can be implemented far quicker than a gondola, and do not affect the</p>
37367	Kelly Lear	<p>I am strongly apposed to the plan to place a gondola in Little Cottonwood Canyon. I do not believe this serves the people of Utah. I think it would serve only a small group of people. The cost is too great and mostly I think it ruins the beauty of the canyon. I strongly oppose!!</p>
37368	Cariann Hughes	<p>The gondola will not solve the traffic problem. If it is built, traffic will still pile up on Wasatch BLVD and be just as bad if not worse. There will never be enough parking, and busses will still be required. Paying for the Gondola will effect tax payers of SLC who don't even ski or use the canyon, which is unfair to them. Please add more busses with bigger park and ride lots and pay the UDOT bus drivers more to make it a desirable career. NO gondola.</p>
37369	Mark Poelman	<p>Once again the use for a very few is paid for by the majority of Utah'ns who will never need or use this extremely expensive and exotic transportation system. why arn't the multi billion dollar resorts and the wealthy skiers that live in Salt Lake paying for it?? UDOT's finished product is usually sub par and over budget, and thats asphalt and concrete. I cant imagine how bad you'll screw up something your completely unfamiliar with. I give it a big "Thumbs Down" and i'm a skier.</p>
37370	Kathryn Clifford	<p>As a skier I am opposed to a solution that is an environmental nightmare, doesn't really solve traffic, and is using taxpayers for something not that many people actually have access to. I'll pay more for my pass, pay a toll, or get a reservation if I have to. This gondola is a messy answer to a problem that is actually pretty limited to a few weeks of the year.</p>

ID	Full Name	Comment
37371	Jackson Arvidson	<p>As a frequent user of LCC during all months of the year I have several comments regarding your findings.</p> <p>First & foremost LCC is an amazing natural playground with many different types of outdoor recreation opportunities and it is awesome that so many people want to take part in them. Like many amazing places LCC cannot handle all the people that want to recreate all the time.</p> <p>The absolute worst traffic days are in part caused by more people attempting to recreate in the canyon than the canyon can handle. Does it make sense to spend millions on infrastructure to maximize the number of people in the canyon when it is overcrowded and the quality of experience is being eroded in concert with canyon conditions. There has to be a limit- time should be spent identifying an actual limit rather than figuring out how to move all the people up the canyon in the shortest amount of time.</p> <p>Jumping into the gondola path before exhausting all other, much less impactful approaches seems quite foolhardy. The gondola tower construction and visual appearance will permanently alter the canyon for the worse. All other less impactful strategies must be implemented prior to moving forward on this gondola project.</p> <p>Many of the severe traffic events are caused by car accidents mid canyon. Spending the money to enforce traction laws would go a long way in preventing those mid canyon accidents that exponentially increase canyon transit time.</p> <p>There already is a bus system, which has mobility hubs miles from the mouth of the canyon. Focusing on improving the bus experience and</p>
37372	Brad Drennan	<p>I support the gondola if, and only if, the resorts foot the bill. Tax payers should not be covering the cost of an issue caused by the resorts.</p>
37373	Conrad Tallackson	<p>A gondola up Little Cottonwood Canyon fails to address the year-round traffic issues it experiences. It fails to serve the multitude of trailheads which bring people into the canyon while prioritizing the private interest of snowbird and Alta while relying on public money to fund it.</p> <p>Before making an irreversible decision, UTA should be exhausting less-intrusive and more flexible solutions like year round bussing up the canyons. Consistent bus service will keep people out of their personal vehicles and clogging up the canyon. While this issue has much nuance and there is no perfect solution, the gondola truly fails to make sense at any level.</p> <p>I implore UTA along with thousands of fellow residents and canyon users when I say no to the gondola. Find a better way to support recreation in LCC with more public support.</p>
37374	Roberto Diaz	<p>Please NO to the Gondola. There has to be another solution. This will harm the canyon with the infrastructure alone. License plate restrictions, electric UTA buses, front wheel car restrictions. Widen the road.</p> <p>No gondola.</p>
37375	Gordon Hatt	<p>I don't believe the budgeted dollars for little cottonwood gondola is money well spent, let alone be enough to complete the project! This is being put in place to benefit two businesses Snowbird and Alta ski resorts. It is being pushed as a clean and better way to transport people up the mountain, but not good enough to be used to transport people year round, Stating it would be too expensive to benefit the people who do use the canyon during the winter months. If it will only be beneficial for the ski resorts they need to be the ones that are funding this project. I also believe the visual continuation the the canyon with towers being placed that would block the view. How will it affect those who use the north side of the canyon for rock climbing?</p> <p>Will moving the parking lot, do anything but move the congestion a little further west? What hours will the gondola run up and down the canyon? Will there be a ride back to the parking lot for those who decide to stay after a day skiing for dinner? What about those (ski patrol)who need to be up on the mountain to prep the area for public use? Will the gondola be there for them? How does this benefit the residents of Salt Lake County and the residents of the state of Utah?</p>
37376	Lillie Barnish	<p>Please do not use tax payer money to install a gondola that negatively impacts the environment and mainly benefits users of ski resorts. There are better ways to improve tourism in Utah without destroying the beautiful view of our mountains.</p>

37377	brian moench	<p>1. The aesthetic value of the canyon, the reason it attracts so many visitors, would be permanently, irreparably degraded by the Gondola towers, with 40 poles, each 15 feet in diameter, serviced by new roads big enough for huge trucks, will cut through the wilderness of Little Cottonwood Canyon. To damage the canyon like that in order to "save" it from traffic congestion evokes the infamous statement from an American officer regarding a battle in the Vietnam War, "We had to destroy the village in order to save it."</p> <p>2. The average person will be priced out of even using the gondola.</p> <p>3. Because it only services two sites, Alta and Snowbird, it is at its core, a public subsidy for ski industry corporations.</p> <p>4. Global warming is almost certain to make the ski industry collapse within the next two decades.</p> <p>5. The excavation, blasting, and surface disruption associated with tower construction is almost certain to be a source of water contamination for decades.</p> <p>6. UDOT states as its priority "travel reliability." The public's priority regarding the canyon is almost certainly preservation of the aesthetic value of the canyon. UDOT says it has received 14,000 public comments already and took that into consideration. But UDOT has not disclosed how many of those comments oppose the gondola. I believe the overwhelming majority of them oppose it.</p> <p>7. The gondola stands to make a few well connected land owners rich, but will do little to reduce traffic congestion and improve air quality, especially at the mouth of the canyon. There are much better alternatives to improving air quality, and much better ways to spend well over half a billion dollars.</p>
37378	Beverly Crangle	<p>Please give serious attention to developing Smart Bus Transit using an app that allows for more flexible all-season pickups and stops. Pickups and stops should extend out for many miles, especially during the peak days. This will decrease the need for more parking. Bus transit can be combined with tolling and/or other less dramatic options.</p> <p>"Smart" transit activity needs to be established as a first priority, and will benefit many:</p> <ol style="list-style-type: none"> 1. With dramatic and increasing inflation and traffic, many city-wide workers (and skiers) will prefer to take transit more often, if available. More flexible transit options need to be designed, anyway, to handle the increasing population throughout the towns and cities. 2. The cost of maintaining and fueling vehicles is already prohibitive for many workers. Therefore, many more workers could commute and lessen the labor shortage. 3. The gondola will only stop at the ski resorts. Many visitors to the canyon want to stop at other locations in the canyon. 4. With the escalating costs of ski passes, the wealthy will be buying most of the ski passes. They usually prefer to drive, anyway, especially with young children. 5. Increased crowds traveling to one destination with a massive gondola will diminish the enjoyment of any time spent at the resort and stress the canyon resources. 6. The gondola is the most costly of the ideas. More skiers will ride buses if lockers and restrooms are provided at the ski resorts. Those amenities will encourage skiers to use an increased flexible mass transportation system. 7. The dramatic costs in materials, supplies, and labor for a gondola will deprive other cities and counties of funding some of their projects. 8. Where will the gondola riders park? With the promise of a gondola leaving every 2 minutes, the number of parking spaces below or mass transit options to arrive at the gondola will need to be increased. 9. The continuing upkeep and maintenance of a gondola system will also contribute to an increase in taxes. The least costly and most beneficial solution, the addition of a more effective flexible mass transportation, should be given priority. <p>Let's start with various sizes of vans and buses to accommodate the visitors to the canyon. With scheduled stops at trailheads and picnic areas, along with the ski resorts without adding two more traffic lanes or building a gondola that would only stop at the ski resorts.</p> <p>Whether "extra heavy traffic days" number 20 or 50 days per year, there are more practical and effective ways to lessen traffic before burdening the taxpayers with costs to benefit the ski resorts and about 7% of the population.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37379	ruby bay	<p>I am against the Gondola option in Little Cottonwood Canyon. Building a gondola in the canyon would be destructive to our precious watershed, the habitat for the flora and fauna, as well as compromise and, in some places, destroy areas of decades old recreation. The visual eyesore alone would be detrimental to the value that Little Cottonwood Canyon currently offers to so many varied user groups. The gondola would change the serene beauties of the natural canyon to one likened only to an amusement park. This canyon is loved dearly, and almost to death by so many. If the gondola were to actually move as many people as it claims to be capable of, and there are that many that would fork out the fees to ride it to the ski resorts, the end result would be more miserably crowded than it already is. How many is too many? Remember, this is a canyon, not a city that requires trains, subways and gondolas. Relevant perspective seems to be lost on this issue.</p> <p>As the cost for the gondola listed in UDOT's EIS is much less than is currently being reported in the news, it is not as cost effective as the other options. I do not support the gondola option as it will be limited to only those that can afford to pay for parking at the LaCaille Base Station as well as the fee to ride the gondola. This cost on top of the cost for a ski pass is even more limiting. Those that currently ride the UTA buses up the canyon pay for a bus pass that benefits them every day of the week anywhere along the Wasatch. The fiscal benefit of the gondola benefits the owners of the proposed base station location and Alta and Snowbird Ski Areas only. To expect the tax payers to pay for an option that is exclusive and not benefitting the majority is egregious.</p> <p>Other options without the large environmental impacts that the gondola option brings with it should be implemented first instead of going straight to such a detrimental and exclusive option. I support funding with my tax dollars enhanced (electric) buses and appropriated lanes, widening the road where necessary for peak period driving. I support tolls (similar to Mirror Lake Hwy format) as well as incentivizing those that carpool as well as locals that steward the canyon. Ultimately, I support preserving the natural canyon as best as we can and that should be the top priority. Following that, providing transportation up the canyon that is available and feasible for the majority is key.</p>
37380	James Saarela	<p>I'm a skier. I'm also a climber and hiker. I've lived in the Wasatch my whole life. Little Cottonwood Canyon and the condition it's in right now are very important to me. Yes, Little Cottonwood traffic is atrocious for a handful of days each season. I'd rather have to deal with that than never be able to climb historic boulders again. The convenience of one user group should not be predicated on the destruction of irreplaceable venues of another.</p> <p>The resorts are at the top of Little Cottonwood. That's where the lifts should stay. It may be just be personal opinion, but I'm not alone in thinking that hearing the buzzing of tower sheaves, and having massive gondola cars and towers stain the view really distorts the experience people look for when they go up Little Cottonwood in the first place.</p> <p>Snowbird and Alta will still make plenty of money without a (even if only partly) taxpayer funded amusement park ride to get more people up there (it really reads like Disneyland to me). Tourist dollars will still flow like they have for decades. They don't need this. We don't need this.</p> <p>The gondola proposal is destructive to the aesthetic, to recreational resources, and to the overall experience of being in Little Cottonwood Canyon. We can do better to maintain the inherent value and beauty of this canyon for future generations.</p>
37381	Mary Allen	<p>Where there are issues that will be seemingly fixed by the gondola's construction, negative consequences will absolutely appear. As a lifelong, tax-paying resident of Salt Lake who has a deep love for these canyons, please do not ruin them with this ill-conceived plan.</p>

ID	Full Name	Comment
37382	robert jacobs	<p>Selecting Gondola B as the preferred alternative ignores many considerations .</p> <p>It is too inflexible. It cannot be modified to allow for new developments - economical, climatic, transport innovations, etc. Once built the gondola will be there whether needed or not, whether wanted or not. Think West Desert Pumps!</p> <p>It is still unclear what will convince anyone who has driven to the mouth of LCC, to now park, get out of their car with ski equipment, walk to the loading platform, stand in a line to get on a gondola, pay for the ride, take longer to get up the canyon, and if they are going to Alta either wait a little longer on the gondola or get off and onto another gondola for the remainder of the trip.</p> <p>Whatever mechanism is used to get anyone out of their vehicle(a toll I guess), it will be just as effective in inducing people to ride a bus.</p> <p>Buses significantly reduce vehicle traffic on Wasatch Blvd. by eliminating the 2500 vehicles which will be parked in the Gondola Parking Structure. Parking for ski bus transfer should be at the Gravel Pit and 9400 South as originally proposed. This would allow for easy access by users of public transportation(PT) as well as vehicles.</p> <p>Buses can be utilized by other users of the canyon - hikers, climbers, cross country skiers, .. whomever by providing other stops along the canyon. Imagine being able to take a bus up to trailheads instead of fighting for parking spaces in limited lots. In fact trail head parking could be eliminated and hikers required to take the bus to reach trailheads - think Zion NP shuttle.</p> <p>Electric busses would be ideal for the canyon. using regenerative techniques to recover a good portion of energy used to travel up the canyon on the way down. My electric car recovers 50-60%.</p> <p>The Gondola B alternative was introduced so late in the process, it really avoided the extensive examination which was promised for this process. Many questions have still not been answered which would allow citizens or UDOT to adequately analyze the Gondola B alternative - access to the 2500 car parking structure, will parking be free, cost to ride the Gondola, cost of toll to drive, mountain capacity, how will tolling be implemented, how will skiers who use PT get to the Gondola - there is already adequate PT to gravel Pit and 9400 South hubs.</p> <p>Allow ski resorts to help solve their problem - resorts should implement a parking reservation system, if you don't have a reservation don't drive to the resort. This could be the way the toll is implemented for skiers and would solve the problem of dealing with people who live in Alta, etc., only skiers would pay the toll(parking fee). We could eliminate the entire cost of the tolling part of the proposal.</p> <p>If climate change does adversely affect ski conditions, we may not have a problem for the Gondola to solve - but we will still have the Gondola and the HUGE debt and maintenance costs to deal with. Busses? not so much, just scale back the bus service. A Snowbird VP said don't be misled by the fact that there wasn't much of a traffic problem the last couple of years because they were an anomaly due to the mild winters. Is he sure they were an anomaly or are they the new norm with climate change? Does UDOT know?</p>
37383	Danielle roussel	I oppose the gondola.
37384	Elizabeth Layne	<p>This comment is in opposition to the gondola and road widening. The entire plan fails to take in to account the relatively low cost and simple solutions that in the 21/22 season already showed promise in reducing skier traffic. This is the resorts and the town of Alta charging for parking. Immediate implementation of tolls for certain travel times, premier parking for large carpools, and enhanced bus service might meet the skier movement goals. None of these would have the negative environmental, visual, or economic impacts of the gondola or road widening. The gondola also fails to take in to account future projections for the climate here, ie if the lake dries up and drought persists, there won't be any snow to ski on, so that gondola will really look like a boondoggle. Please listen to the community that is opposed to this plan and implement these simple solutions that are already showing positive results.</p>
37385	Cloey Roper	As a lifelong resident of Utah, I adamantly oppose building a gondola in Little Cottonwood Canyon. Doing so goes against the people's values and plays into corporate interests. Protect access to the canyon in its entirety for all types of recreators. Do not build the gondola.
37386	K.L. Naylor	I am opposed to the gondola idea. I am especially against my taxpayers money being used to deface the canyons, please reconsider!!!
37387	Celeste Tholen Roser	<p>I oppose the gondola and support lower-impact, common-sense solutions to easing congestion and improving access for more Utahns. Please invest in cheaper and more sustainable options first.</p> <p>Thank you, Celeste</p>
37388	Theron Simpkins	There will always be traffic going up the canyons, but this is not the right direction to move in. This gondola is a pure money grab via greedy individuals and is not what this outdoor community here in Utah wants.
37389	Mark GIANNIS	<p>Hello,</p> <p>As both a skier and someone who tries to take public transport as much as possible, I oppose the gondola option.</p> <p>The gondola would permanently alter the canyon for a ski season that is shrinking with climate change. Investing such a large amount of money with such uncertainty seems unwise. An enhanced bus service would accomplish the needs of providing better public transport service as well as allowing flexibility in reallocating buses in the future if needs change.</p> <p>Additionally, there is only a fixed and known number of parking spaces in the canyon. The total cars that would have parking spaces is a set figure. It would be easier to reduce congestion by only letting residents or those who have parking reservations up the upper canyon.</p> <p>Thanks, Mark</p>
37390	Bernadette Cole	I am opposed to the taxpayer funding of this project. I live in Washington County and do not want to be taxed to pay for this. It is being paraded as a mass transit solution but in reality is a tourist option. The national approach of public funds supporting private sports arenas has bothered me for some time. This seems along those same lines. I don't support this project.

37391	Toni Schwarz	The gondola is not a solution to the year round parking and traffic issues that LCC experiences. The gondola only stops at the ski resorts and spans the entire valley floor, not what you would expect to see in Europe for example. Gondolas typically take skiers, non-skiers, etc to the top via the steep slopes too difficult to tackle from the valley floor. There will be no benefit for the tax payer who does not ski or does not ski at Alta/Snowbird. There will be no benefit for those people who want to visit other parts of the canyon. Let's develop a better solution for everyone.
37392	David Mackay	I support option 2 - Add more bus services to Little Cottonwood travel. Increase parking lots for buses outside the canyon. Do not widen the roads. Add tolls for private vehicles to encourage bus usage. A Gondola is very expensive and there is better usage for Utah funds. Widening the roads encourage more single vehicle traffic and is worse for the environment. Better use of more busses can improve canyon traffic without the expensive cost of a Gondola or negative environment impact of wider roads.
37393	Stephanie Seewer	Putting in the gondola is not the option we want or need. I am an advocate for the environment and I am here to say this is not the choice you should choose! No gondola!!!!!!
37394	Katy Robertson	I am strongly opposed to the gondola project. This is waste of taxpayer money. It seems the only people who truly benefit from this are the ski resorts and the contractors. Don't build it!!!
37395	Aubriele Jarman	There are so many other valid travel options rather than a gondola. The gondola option is expensive, destructive, and only benefitting the ski resort. Even as a skier, I think this is a horribly sad response to the problem.
37396	Elle Rogers	I think the gondola is a terrible idea for our community. I think it is a huge waste of money to benefit a few. Utilize more and smaller buses or shuttles. Create a parking place/garage at the bottom of the canyon. Make everyone take public transportation. Make it free with all the money saved from not doing the gondola. Please do not make the mistake of building a multi million dollar gondola to benefit a select few. I do not support this in anyway.
38638	Richard Jirik	Dear Sirs: Please find my comments on the Little Cottonwood Canyon Final Environmental Impact Statement in the attached WORD document. Note that I have also submitted my comments via the UDOT website at Home - Little Cottonwood EIS
37397	Kyle Trettin	<p>As local resident that frequents Little Cottonwood Canyon, I think transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>I think Mayor Jenny Wilson also says it really well: "Although I applaud UDOT's acknowledgment of the value of a phased approach, I disagree with its conclusion that the gondola should be the preferred alternative. The gondola option is flawed for many reasons, including that it will: Cost over a half billion dollars (not considering inflationary cost increases); Only make stops at two private ski resorts: Snowbird & Alta; Remove no more than 30% of car traffic from the canyon road; Operate only during the winter ski season; and Permanently mar the inherent beauty and public lands of Little Cottonwood Canyon. The gondola is an unwise public investment for a 50+ year solution serving a limited group of people, given that it's irreversible and incapable of pivoting in the face of changing circumstances. But it isn't the only option."</p> <p>I think we should try less permanent solutions first and evaluate their effectiveness before even considering something like the gondola. There is little downside to doing that, unlike spending 600 million dollars to just build something (the gondola) that doesn't actually solve the problem it is intended to.</p>
37398	Dorothy Worman	NOT in favor of gondola
37399	Joemy Ramsay	<p>The gondola poses a potential safety hazard as there is no good way to evacuate it in case of failure, mechanical or otherwise. In addition, the presence of towers and cables would limit helicopter access to the canyon for search and rescue or other activities.</p> <p>The gondola is detrimental to LLC as it requires at least 40 poles, each 15 feet in diameter, serviced by new roads big enough for huge trucks, will cut through the wilderness of Little Cottonwood Canyon, impacting the watershed and access to outdoor recreation.</p> <p>Although the exact price has not been released, it will be expensive, likely \$50- \$110 per trip which is massively more expensive than existing public transport options and further limits access to winter recreation activities to affluent individuals.</p> <p>The gondola excludes the rest of the canyon, preventing it from reliving traffic impact for access to non-resort activities. Additionally, it won't run in the summer or fall which also experience high congestion.</p> <p>It's paid for by taxpayers with funds taken from transportation money meant for the entire state of Utah. However, the gondola will only benefit private corporations/individuals due to the limited locations served.</p> <p>New evidence from Hawkwatch International suggests that the gondola would kill and injure birds during night migrations through the canyon</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37400	Clayton Barnes	<p>My name is Clayton Barnes I am a 61 years old native Utahan and I am very opposed to the gondola in Little Cottonwood Canyon. I have hiked, explored and skied in this canyon hundreds of times and I truly love this canyon as did my dad. What God has created in this canyon needs to be protected for future generations.</p> <p>Regarding the EIS, it is my understanding that the coordinates of each supporting tower are unknown. The natural features of this canyon are extremely diverse and the rugged conditions will make constructing support towers extremely challenging. In my opinion every proposed tower site deserves a separate environmental assessment that takes into consideration ingress/egress, construction area, land survey/site development plan, geotechnical investigations are needed to determine foundation depth and design, staging area for materials also need to be considered. All towers will require FAA evaluation and towers over 199' will require lighting and tower marking. How will this affect the mammals, reptiles and birds that call this canyon home? The animals in this canyon must be protected.</p> <p>Utilizing a gondola for moving people is a primitive outdated solution that will ruin the canyon views and potentially put animal populations at risk.</p>
37401	Drew Meyer	<p>On average a new electric bus cost approximately 1,000,000. Plus the salary of a bus driver over ten years on the high end 500k plus maintenance over ten year approximately 50k. Multiply that by 10, and you get 10 electric buses, ten employees over 10 years and maintenance for \$15,500,000. Now I understand that this is a large simplification of the situation. But that is a minuscule cost in comparison to a gondola that only benefits the ski resorts while irreversibly changing the canyon, it's spectacular views, and cost a \$500,000,000.00. A gondola is a cool idea but not the right solution. The people of Salt Lake City have unanimously spoken against this. Please listen and be the hero's that implement a better solution, not the big ugly one.</p>
37402	Kyle Trettin	<p>As local resident that frequents Little Cottonwood Canyon, I think transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>I think Mayor Jenny Wilson also says it really well: "Although I applaud UDOT's acknowledgment of the value of a phased approach, I disagree with its conclusion that the gondola should be the preferred alternative. There is little downside to doing that, unlike spending 600 million dollars to just build something (the gondola) that doesn't actually solve the problem it is intended to.</p>
37403	Amy Darling	<p>I've lived in Salt Lake for 6 years, now. I am a local hiker, trail runner, climber, and backcountry skier. I use the canyons a LOT. I've been so proud to call this place my home and to have access to the Cottonwood Canyons. The Gondola would negatively impact me. Not only does the gondola only serve the ski resorts (which is mostly not where me, nor many others are traveling to in the winter) but it also destroys actively used boulders and rock climbing routes. I am a part of a strong local outdoor community here, and have literally not met a single friend in that community who is in support of, or would benefit from the gondola.</p>
37404	Heather Elswood	<p>Horrid. Soo many reasons. A gondola would be a massive eye sore. Vastly a bad idea. Outrageous cost. Destruction of environment. Destruction of land and ecological damage at mouth of canyon, plus installing the large amount of parking. Still the exact same amount of traffic to mouth of canyon & getting to a gondola. Increased costs of year round maintenance, security, and employment of a gondola also further increases flow to canyon and up canyon. Increased cost to tax payers. Cost to people riding a gondola is expensive.</p> <p>But it wont change the amount of people coming up the canyon. All still need to take buses cars to mouth of canyon and it will actually increase. The numbers of people just required working the gondola, and riding. It will ruining existing landscape, a watershed canyon and long standing neighborhoods of surrounding areas. Despite a gondola, people will still drive up and down the canyon: all workers to the ski resorts, busses will still go up, trucks with supplies, people who can't afford the fees of the gondola or planning of staying at resorts, etc. The cost of building a gondola will only benefit ski resort owners by allowing even more infux of people to their resorts, ultimately lining their pockets with money, publicly funded, for their benefit. I've lived in the Granite community my whole life. A Gondola is not a good idea. It is a bad one. Traffic in the neighborhoods and roads is horrible and a gondola won't change that it will increase it. If solving the carbon footprint and traffic in Little Cottonwood Canyon was the goal then resolution was NOT a gondola. Rethink this. Electric busses ought to be the option. Since a gondola will not stop busses from traveling the canyon. Besides, an electric bus holds as many people as a gondola car. I am vehemently opposed to the Gondola project that will ruin my canyon.</p>
37405	Carbon Lundgren	<p>Too much money. Taxpayers should not support businesses.</p>
37406	Jake Cowden	<p>Please don't do this</p>

ID	Full Name	Comment
37407	Chuck Newton	<p>Since I returned to Utah in 1988, the population has grown from 1.1 million to 3.1 million roughly at present. Yet from 1988 to present, the arguments have gone back and forth over Canyon traffic and suitable resolutions with nothing but complaints about every proposed solution. I believe UDOT's proposed solution utilizing a future gondola build with a bridge to the future using an expanded bus system is brilliant! I am assuming that UDOT will use the future gondola base parking hub for immediate parking build out.</p> <p>As for tolling, I'd suggest an alternative. Simply close the canyon (similar to Guardsman's Pass) except for the bus system. Ski resorts will be given a limited number of permanent season passes that allow 1 person (perhaps for mgmt). Remaining employees will ride the bus depending on bus schedules (yes, will need massaging). Permanent live-in home owners receive a pass. Any home owners renting out as AirBNB/VRBO could have renters park at hub below, and bus stops at predetermined cutouts only if person looking to ride up or down partway (buses could alternate every other as pickup/no pickup). This would cut down on additional traffic leaving bus majority. Chuck Newton, former S Jordan City Council</p>
37408	Luke Linscott	<p>I am opposed to the LCC gondola. This project will result in greater time to destination, more transitions, and less access to public land. The construction of the gondola will cause permanent damage to existing climbing (bouldering) and other recreational opportunities in the canyon. Overall, it will increase cost of use of the canyon for all users. Let the existing parking and the existing road be the rate-limiter for canyon use.</p>
37409	Kate Wendel	<p>Please do not build this gondola, we don't need it! Americans need more fresh air and space, not more machinery and excuses to avoid the fun of a good sweat. Do not build the gondola!</p>
37410	Nicole Maila	<p>Honestly, it makes no sense! Why destroy a beautiful canyon for the sake of getting to two ski resorts? Why are tax payers paying for it when it is only one stop, and will probably cost \$30-\$40 to take it. I enjoy recreating in the canyon by other means than skiing at the resorts. The gondola will destroy world class boulders that people love to climb. Honestly, there are only a handful of days a year where the traffic is bad, why do we need this silly expensive thing down the rest of the year? Who is even going to ride it? PEOPLE WILL STILL DRIVE, so the canyon will be even more jam packed than it should. I believe weekends in peak winter months we should have ONLY busses and shuttles, similar to Zion. Common people, don't ruin the canyon when we haven't tried less expensive, less destructive options. Not to mention the effect on the environment and the water shed!</p>
37411	Mary Norris	<p>Please leave Little Cottonwood Canyon alone. No gondola. No billions of dollars of waste. Add busses. Add a toll. Tax the resorts. No gondola. Let the tourists go to Park City. A gondola will not run with avalanche possibilities any more than driving. It's just a tax payers nightmare for rich and corrupt politicians to get richer and further hurt our watershed. Just say NO!!!</p>
37412	Davis Anderson	<p>The preferred solution being suggested by UDOT does not address accessibility of riding the gondola. Loading a gondola requires a quick load time to allow all passengers to board. Is there a study of what belongings passengers will be bringing? Many people will need to bring bags and extra gear with them for the ski day. Additionally, I have not seen discussion about serving the many hotels in the canyon. Loading a moving gondola will be a challenge for guests that need to bring multiple luggage bags. Why is this not being considered? A train would allow more loading time and a more comfortable ride for visitors. It would also be possible to add more than the two proposed stops. A gondola will be absolutely crammed at full capacity. It is not the right method of transportation to travel over 8 miles. A train is much better. Look at Wengen and Zermatt. In most European towns served by public transit, private cars are not allowed. Building a gondola but still allowing private vehicle access is unnecessary and unreasonable.</p> <p>Snow sheds should first be implemented before any of the other extreme solutions are considered. Reducing the time of road closures will significantly improve the canyon flow on the crowded powder days. Please listen to all the concerned citizens and groups. You will make a massive mistake that will negatively impact generations to come if you chose to move forward with large scale canyon destruction by building a gondola.</p>
37413	Travis Mullen	<p>We should not spend close to 1 BILLION dollars on a transit solution over 80% of people who live in the area do not want. SLC needs transportation solutions around the valley and the gondola does nothing to improve the life of average utahans. Transportation up the canyon on snowy days is simply not worth this massive expense.</p> <p>Even as a skier I see no benefits to the gondola. There isn't enough parking at the baes, it doesn't service summer usage and traffic will still be an issue.</p> <p>I skied Alta every weekend last season, I have two kids in ski school. The parking reservation system worked. The only days we had trouble were on days before and after parking reservations we required.</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users. 3. Tolling is supposed to be part of the EIS but there has been little to no discussion about it. 4. Enforce the snow tire traction law requirement for every single car on every single day. All season tires don't cut it. If we can build a gondola we can enforce the traction requirement. Don't let cars without 3 peak rated snow tires up the canyon on snowy days and don't let the park. <p>Travis Mullen</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37414	Andrew Robinson	<p>I directly oppose the construction of a Gondola in Little Cottonwood Canyon. This option only serves as a vehicle to increase the financial return of the ski resorts who occupy the canyon. It does not serve most of the users of the canyon, only those who use the ski resorts. It will not reduce traffic, but only allow for more customers to reach the resorts. It will forever damage the topography of the canyon. As one who uses the canyon frequently for various activities, I cannot stress how valuable this resource is. Climbing, hiking, backcountry skiing and biking are activities that will be impacted by the devastating construction of the gondola. It is absolutely unnecessary, and is also a costly venture for taxpayers like myself.</p> <p>Please explore expanded public transit options for the canyon as this is feasible and will create far less impact on the priceless resource that is Little Cottonwood Canyon.</p> <p>Sincerely,</p> <p>Dr. Andrew Robinson</p>
37415	Dana Patterson	<p>It does not appear that the cost to ride the gondola has been discussed anywhere in the EIS. Why has this been left out? The cost to individual riders has the potential to significantly impact whether or not people will actually ride the gondola. Will the ski resorts be handing out free gondola tickets when someone buys a ski ticket? Or will individuals have to spend another \$100 or \$10 for a gondola ride? This is an important detail that needs to be included in the analysis before moving forward with the gondola.</p>
37416	Tony Church	<p>I would like to submit my comment against building a gondola up Little Cottonwood Canyon. I believe the permanent visual scarring of the canyon makes the gondola an unthinkable choice. I would propose as an alternative radically increased bussing combined with no private automobile traffic (with the exception of canyon residents). A cog rail would be my second choice.</p>
37417	Dani Howard	<p>As a Sandy resident I often drive up the canyon and marvel at the beauty minutes from my home. As I took a drive last week to see the changing leaves I couldn't help but think of the destruction a gondola would cause to the natural beauty of the canyon. I thought of how many trees, plants, and animals would be displaced. I thought of the constant construction and destruction that would take place for years to build it. Then I thought about how selfish as a human race we have become that we would choose profit of ski resorts over maintaining the natural environment around us. Please listen to the citizens of Utah and the salt lake valley because we are very against the gondola.</p>
37418	Moushumi A	<p>Last week a runner was hit by car early am on Wasatch Boulevard just at the bottom of the Little Cottonwood Canyon. This is even before the gondola is built. Already the speeds on Wasatch is so high and is so dangerous for runners, walkers and bicyclists. With the gondola and increased traffic, we won't be able to do any of these activities. Almost everyone in my neighborhood uses Wasatch to walk, run or bike. Please don't change my neighborhood with my tax money- when I don't want it changed.</p>
37419	Nicole Behrmann	<p>I do not support the idea of the gondola. Terrible economic waste, eye sore, environment harm. I ski up at those resorts and would not use the gondola, seems unconventional and inconvenient. I would rather take buses, use tolls on the canyon, have a paid pass etc. Please no gondola!!</p>
37420	Mark Cavazos	<p>I am in favor of the gondola alternative. From what I have learned it has less impact on the environment, and water shed. It can operate during inclement weather whereas, a vehicle has restrictions, and creates emissions (non-electric). I think widening the road, and utilizing electric buses is antiquated. The gondola is a long term solution with a greater return on investment. Also, there are animals that get hit by vehicles within the canyon frequently. I think the gondola would reduce this as well as car accidents. I have been on the canyon road when a flash flood has taken place. The water washes out the road with rocks (debris). I've been stranded in the canyon for several hours before. The gondola would eliminate this. I strongly recommend running it year-around. I don't take this decision lightly but believe between the two alternatives the gondola is a better one. I had the experience of riding on a 3S gondola in Austria. It was a great experience.</p>
37421	Barbara Chavira	<p>I'm against a gondola in the canyon, the canyon is too small to consider a gondola which will only obstruct views and further encroach upon the limited natural environment. If the ability to even begin constructing the gondola is not in the near future, consider other options which can alleviate pressure in the canyons in the present and less costly than the gondola. I've taken buses up Big Cottonwood during ski season and it is a pleasant ride and a community building experience. Looking at less invasive ways to elevate traffic in Little Cottonwood will only benefit other canyons which are also currently traffic compromised.</p> <p>Thank you!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37422	Tim Rogers	<p>I don't know how much it matters, and I'm sure a lot of these comments start with "I've skied Alta for 35 years" or something like that, but I feel like it might help whoever is reading this to know that I've worked for UDOT as an Avalanche Forecaster in Big and Little Cottonwood Canyons since 2018. Prior to that I lived and worked in Alta for over a decade. I've seen the growth and change in both LCC and SLC. I feel like my viewpoint is unique and deeply informed, but also, it's just one of many who moved to Utah and fallen in love with the Wasatch Front.</p> <p>I'll cut to the chase. I'm a fan of the preferred alternative. I still don't think a gondola is the best solution or the first thing LCC needs to alleviate the traffic pressure, but as it's stated in the draft, I'm in support of the phased approach and believe if the other measures don't make enough of an impact, the gondola could be an appealing addition to mobility in the canyon.</p> <p>The first and biggest concerns I have are that the working capacity study for LCC is over 20 years old. This is absolutely ridiculous, to have a thorough understanding of how many people are using the canyon and what they're doing / where they're going is absolutely required before deciding on and investing in costly solutions. The fact that UDOT would not complete a new capacity study or require the USFS to complete one as part of the EIS is confusing and troubling. Without a current capacity study how do we expect to get a thorough understanding of who is using the canyon, where they're going, and how many people the Cottonwoods can safely or reasonably accommodate on a daily basis?</p> <p>I'm in support of starting with less invasive maneuvers like enhanced bus service, avalanche sheds, and mobility hubs (not to mention, tolling) and believe that they would have a drastic impact on the congestion problems in LCC. But if those measures aren't enough, I'm open to considering a transportation alternative like a gondola to have another option for canyon travel. As every Avalanche Supervisor in LCC has said for the last 30+ years, avalanche sheds in the mid-canyon could reduce mid-day closures by close to 80%. And while the traffic problem is no longer just caused by these closures for avalanche control, this change alone could alleviate many of the long waits in down-canyon travel.</p> <p>I think it's important for solutions or alternatives to be usable year-round, even if it's only on a reduced schedule. Congestion is no longer just a winter issue. I also think any alternatives should be accommodating to access USFS trailheads as I have witnessed these user groups grow drastically over the last decade and a half.</p> <p>I can appreciate the tough position UDOT finds itself in proposing or confirming the gondola or any construction as a traffic alternative. I think it's unfortunate that this problem was created by the ski areas, compounded by the popularity of backcountry skiing and the lack of action from the forest service, but then blamed on UDOT. I wish the USFS would allocate more money to management of the Cottonwoods. I wish the ski areas would limit their business in a way so they</p>
37423	Kristin Mullen	<p>The gondola is too expensive. It is too invasive and it doesn't solve the problem. We need common sense solutions now.</p> <ol style="list-style-type: none"> 1. Parking reservations for every day at ALL the resorts 2. Enforce the snow tire traction law / no 3 peak mountain tires. The vehicle is not allowed up the canyon or allowed to reserve parking. 3. More busses and dispersed parking though the valley to get people from closer to where they live directly to the resorts. Allow people to park closer to home with direct express bus service to the resorts. Removing much of the traffic on Wasatch If we cannot afford busses, we surely cannot afford a gondola <p>Lets try these before we waste tax payer money on a project that local people do not want and will not address the problems this season let alone of the future.</p>
37424	Ian Housman	<p>While no solution is perfect, a gondola is a permanent step in the wrong direction. A large parking structure at the bottom of the canyon with free frequent buses that stop at the resorts and the many trailheads and a toll to drive up the canyon makes the most sense.</p>

37426	Ken Ringsen	<p>I'm all for the gondola. It will be an amazing way to travel the canyon. I understand that the canyon is too overused to remain as-is and I am adamantly opposed to snow sheds. That is what would be the blight on the canyon and a horrible means of travel.</p>
37427	Nich Hanson	<p>NO GONDOLA!!!! I support public transit in the canyons, but an exciting route to the ski fields for out-of-towners is not the same thing. NO GONDOLA!!!</p>
37428	Davis Anderson	<p>Implement 3 lanes the entire length of the canyon. 2 lanes up in the morning. 2 lanes down in the afternoon. Add snowsheds to vulnerable areas for avalanches. Try these solutions first before embarking on a half billion dollar endeavor that the majority of canyon users are opposed to. Thank you.</p>
37429	Tim Rogers	<p>I don't know how much it matters, and I'm sure a lot of these comments start with "I've skied Alta for 35 years" or something like that, but I feel like it might help whoever is reading this to know that I've worked for UDOT as an Avalanche Forecaster in Big and Little Cottonwood Canyons since 2018. Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37430	Dana Patterson	I support the UDOH's phased implementation approach so that the simpler, less invasive strategies can be tried first. However, I still do not support moving forward with the gondola. It only serves to benefit the ski resorts and does not address summer visitation/traffic or provide access to other points within the canyon.
37431	Emma Mejia	I oppose the plan to build a gondola in Little Cottonwood Canyon. I worry that the environmental damage that comes from building this gondola will be significant. There are less invasive and expensive alternatives, one of which would be expanding the bus service up the canyon. Little Cottonwood has always been a place for people to enjoy being in a completely natural setting, and adding a gondola would take away from this.
37432	Michael Garner	<p>I do NOT endorse the currently plan for the LCC Gondola. Here are my major points of objection.</p> <ol style="list-style-type: none"> 1. It only services private businesses. Snowbird & Alta resorts should not be the sole beneficiaries of taxpayer funds. There is no consideration of other users of LCC, like hikers, bikers, backcountry skiers, snowshoers, climbers, etc. 2. The decision feels rushed and forced, which leads to questions about "behind closed doors dealings". There are just too many unanswered questions with this project, and we cannot address unanswered questions once the project begins. 3. Why are our government officials ignoring the overwhelming feedback from tax paying citizens against this project? Per Deseret News/Hinckley Institute of Politics poll, 80% of Utahns oppose the LCC gondola proposal. 4. This is NOT a convenient solution. Since most parking will not be at the gondola base, users of the gondola will have to take a bus to the gondola base. The overall inconvenience of parking, carrying gear, and often children onto a bus, only to unload and stand in a line to ride a gondola really brings into question why would anyone want to even use the gondola? Why not just use enhanced bus schedules and some road improvements at a much lower overall cost to the taxpayers?! 5. Cost. With an estimated \$550 million cost to build the gondola, it is almost guaranteed to exceed the original estimate, which often can end up costing the taxpayers 50-100% more than the original estimate. <p>In summation, let's not rush into an irreversible decision to spend such a large amount of taxpayer funds on a project that will not provide services to more people in the community.</p> <p>Michael Garner</p>
37433	Andrew Martin	<p>I would like my name to be added to those who strongly oppose the gondola. The reality is that there are about 10 to 15 weekends a year when the traffic is really bad. This could easily be mediated with a few different strategies. One of reasons more people don't/won't catch the bus is the lack of parking. The gravel pit area is an incredible opportunity to put in a decent parking lot. Next buses should have a lane to get in the canyon so that if you are in the bus you are by-passing traffic not in it. That encourages people to ride the bus. I have hitch-hiked up both canyons many times (parking at the 7-11) and while waiting for a ride you get to see cars passing you. Many have one person in them and we need to discourage that. Also talking to folks who give me a ride sometimes they have waited an hour to an hour and a half to get to the 7-ll but once one gets in the canyon (BCC) usually it's a bit slow but the traffic speed is not too bad Better buses that are more suitable for going up a steep canyon. Another option would be to charge for going up the canyon on busy or all winter weekends. A sliding scale \$25 with one person in the car, \$15 with two in the car and free with 3 or more in the car. These fees could be used to subsidise the bus service to make it even more attractive. The sliding scale would also mean the families wouldn't be affected and could still drive up there. It is harder with kids not to have a car handy with spare gloves, clothes etc. My guess is the if we could reduce the amount of cars by 25 or 30% it would significantly improve the traffic situation on busy weekends.</p> <p>A gondola will severely impact one of the beautiful canyons that are one of the great benefits of living in the Salt Lake area It will also not do anything to help mitigate the traffic in BCC canyon so it the plan to build one there also?</p> <p>I believe that commercial interests are having way to much influence on the process but in reality over a year I would guess that most of the visitors to the canyons are not at ski areas. They are hiking, biking, backcountry skiing, site-seeing, picnicking etc.</p> <p>I would suggest that all the other avenues be tried before committing to a gondola.</p> <p>Andrew Martin</p>
37434	Molly Grenlie	I do not support the gondola. This is not a good solution for canyon traffic. I believe increased bus services & tolling to better options.
37435	Hayden Sybrant	I would propose turning one of the driving lanes into a train lane and only allow a flow of traffic, up the canyon or down, through the driving lane during certain times of the day. Don't build more than you already have.
37436	Maria Katsanevas	I'm for the Gondola. I think it will eliminate all the traffic. Can't wait for it.
37437	Ron Hinkley	The gondola is a bad idea
37438	Laurie Carruth	<p>Please please do not do huge projects to solve a problem that can be solved in much simpler ways. If the ski resorts would implement a parking reservation system, most of the issues would be resolved. If necessary, during peak ski times only, a toll could be charged to drive up the canyon, perhaps reduced or free if the car carries multiple people. Run buses more often (free, or very inexpensively, to incentivize ridership). Please do not build a huge gondola that would be expensive to ride, would not carry enough riders quickly enough to solve the traffic problem, would only serve the ski resorts, would create a horrible traffic bottleneck at the parking area at the base of the canyon, and would take longer to arrive at the resorts. It would upset the delicate ecosystem of the canyon. Widening the road to put in an express bus system would do the same. Please, there is a road there that works except on the biggest-demand ski days, which are a very small proportion of the year, and which can be managed with parking reservations and incentivizing bus ridership. PLEASE LISTEN TO THE COMMUNITIES WHICH WILL BE MOST IMPACTED BY THIS DECISION.</p> <p>Most of us who live near the canyon use it frequently, but not for skiing. Please do not assume the canyon is used only for skiing. WE DON'T WANT THE GONDOLA. WE DON'T WANT A HIGHWAY UP THE CANYON. Neither is necessary. There are several other options that should be tried.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37439	Jaren Brooks	The idea of ruining our canyon for a select few people that use it for 3 months out of the year is unbelievable to me. I dont know one person that actually enjoys the recreation in the canyon besides the ski resorts that is for this gondola. The only people that want it are those special interests that will make money off of the tourism it brings or those that dont care about the damage it will do to the rest of the canyon. Stop the gondola proposal immediately
37440	William Zietz	The bus system with a few changes works well and will serve the community well into the future. The proposed gondola and its associated parking will create a mess that will last long into the future. The citizens who live near LCC will be negatively effected by the gondola and the required changes in traffic. The gondola will only help the wealthy men behind this plan that is not supported by the cities surrounding LCC - nor it's citizens. An improved road with designated bus lanes will better serve those of us who ski each winter in LCC. Having designated buses for each of the two resorts, combined with the bus lanes will provide more than adequate service to get people up the mountain year round. I urge you to say no the wealthy few and yes to citizens, skiers, and riders. I urge you to say no to the gondola!
37441	W. Preston Lear	I was raised at the base of Little Cottonwood Canyon. I currently live in California, but I come back to Utah frequently, and Little Cottonwood remains a draw for my visits. This said, I am strongly opposed to the proposal of building a gondola up the canyon for transport. There are far more cost-effective and environmentally sensitive measures that can allow the (paying) public to enjoy this resource.
37442	Adam Crew	Please consider the preserving the beauty of the canyon by saying NO to the gondola. There are other transportation options that are more sustainable and help everyone access our canyons.
37443	June Thirawat	would like my name to be added to those who strongly oppose the gondola. I am an avid skier and have driven up both LCC and Big CC to the resorts. Last season, I took the bus more often because I didn't want to pay for parking or drive up the canyon. Some ideas I have instead of Gondola: 1. More available parking for people who want to take the bus. 2. Perhaps having a bus lane just to the mouth of the canyon. This way the bus doesn't have to wait in line with the other cars to make the left turn. 2. Toll system for people who want to drive up the canyon on weekends in the winter. Also have a reduced amount for people who are carpooling. A gondola will severely impact a beautiful canyon which is one of the great benefits of living in the Salt Lake area. I believe that the commercial interests are having way to much influence on the process but in reality over a year , I would guess that most of the visitors to the canyons are not at ski areas. They are hiking, biking, backcountry skiing and site-seeing, picnicking etc. I would suggest that all the other avenues be tried before committing to a gondola.
37444	Ken Huff	I'm from Carbon County. I will never use this and I hope if this is built I won't end up paying for it in one way or another!
37445	Cathy Bradley	NO Gondola of any kind, absolutely NOT!
37446	Lisa Leopardi	I do not want a gondala built to access Little Cottonwood Canyon. I am against the gondala being built. Many Thanx, Lisa Leooardi
37447	Kelly Bollow	Gondola is not the solution. Please no gondola!!
37448	Sarah Evans Phillips	Do an elevated train. So many great cities have subways and trains. Utah is way behind the times.
37449	David Richards	The canyons need toll boths to manage traffic and to become self sustaining - income could go to improve road, tunnels and bathrooms!!! It works in Millcreek...forget the big tram - all that is needed is better management!!!
37450	Sarah Cady	The gondola is quite possibly the worst solution for little cottonwood canyon. Not only is it insanelly expensive, It will detract from the natural beauty that the canyon is world renowned for. Before jumping to such a drastic change inch we should look harder into alternative solutions. This includes increasing and incentivizing public transportation. It is also possible to limit passenger car access during peak hours to promote public transportation. It is also possible to promote car pooling and set up ride share programs. The gondola is an ugly, expensive, and intrusive solution that would ruin the natural beauty of little cottonwood canyon that needs to be preserved for generations to come. No gondola! Promote and reassess the exisiting public transit system.
37451	Regina Diaz	I am sharing my thoughts regarding the proposed Gondola in LCC. I don't see this as a benefit to families with small children. Our national parks have started using a reservation system. Let's set up some type of reservation system with mandatory ride share or min # of people in a car. Increase buses. Protect our water shed. I don't see how the Gondola benefits anyone.

37452	Anna DeMonte	<p>UDOT,</p> <p>First off, I'd like to make sure to separate the two main issues that I believe are most at-play when it comes to the EIS proposal.</p> <ol style="list-style-type: none"> 1. Improving the mobility and reliability of transportation in S.R 210 2. Preserving the beauty of Little Cottonwood Canyon <p>The reason for clear separation of the two is to acknowledge that, while I am passionate about preserving the beauty of our mountains, I understand that it can be difficult to look at an issue objectively when there is passion involved. With that, I'll first start by focusing on the first point above; improving the mobility and reliability of transportation in S.R 210.</p> <p>I am an avid visitor of Little Cottonwood Canyon, but the gondola recommendation by UDOT would certainly not improve mobility and reliability for those like me. Why? In both the summer and the winter, I spend the majority of my days visiting trailheads all along the canyon's length, not at the resorts. Two destinations I rarely visit are Alta and Snowbird, which happen to be the two locations in which the gondola recommendation would operate. For backcountry users in both summer and winter, there needs to be a long-term solution that also addresses areas I use in the canyon such as White Pine trailhead, Grizzly Gulch, and Gate Buttress.</p> <p>When considering the current scope of the Final EIS statement - My recommendation is enhanced bus service without road expansion in S.R. 210. This is the best solution moving forward as it is a scalable solution that minimizes permanent environmental impact in S.R. 210. Per page 2-142 of the Final EIS, "the cost of phase implementation is \$110 Million with a \$7 million operating budget." This solution can be implemented without permanently changing the landscape. This solution has a 54 minute proposed transit concept which is one minute shorter than the Gondola B alternative as recommended by UDOT.</p> <p>Additionally, it would be fiscally irresponsible for UDOT to recommend moving forward with a \$550 Million dollar construction project that will still require the \$110 Million cost of the enhanced bussing to bridge the time gap. That brings the total of the gondola system to a baseline of \$650 Million, not adjusting for price changes between 2020 and 2025 or later when the construction would begin.</p> <p>The enhanced bus system can be rolled out in smaller phases and tested/proven method while it is initiated. Per UDOT statements, they acknowledge that the current SKI bus system frequently reaches max capacity and there is an issue with lack of parking based on current infrastructure. During Free Fare February 2022, Page 7 of the UTA, Free Fare February</p>
37453	Isaac Bowen	<p>NO! I don't like how this is to help with traffic but going to lead to traffic at the bottom. The price to build the gondola is a ridiculous amount and could be used for something much more important. The amount of busy days are not enough for a 550 million gondola. Keep the peace of the canyon and rock climbing areas and don't disrupt this!! Please no!!!</p>
37454	John Pikus	<p>I have already commented multiple times with potential solutions and ideas to fix the maybe 20 day a year problem of wintertime traffic in LCC. I also understand that UDOT was charged with the task of improving the reliability and mobility of SR 210 in Little Cottonwood Canyon. However, this is way too narrow of a scope to view Little Cottonwood as a place. It is so much more than just a highway and two ski resorts. It is a place where myself and many others have had incredible experiences of solitude in nature even just a few minutes off the road in this beautiful glacier-carved canyon. It is a place where I have marveled so many times at the quality natural experience that can be had just minutes from the bustling city. It is a special place to me and so many others that call Salt Lake City their home, and we would love to see that experience preserved for our children and grandchildren.</p> <p>I applaud UDOT for taking some steps of a phased approach to the canyon's traffic problem. Snowsheds are a great idea that I believe will help significantly. Have someone check tires at the mouth of the canyon and perhaps institute a mandatory sticker policy so that this can be done quickly? I drive a small car with snow tires (I did get a sticker from Burt Brothers too) and was never once checked. I am honestly confused as to why this is so difficult to do. It would solve so many of the wintertime road problems in LCC. Accept that driving the buses in the winter is not a desirable job and that UTA is going to have to pay drivers a lot of money in order to hire enough to satisfy demands (yes, I understand that UDOT is not directly involved in this, however the money being used to fund the hypothetical gondola could instead be used to pay bus drivers lots of money.)</p> <p>I also appreciate that UDOT is looking forward to issues that will arise with population growth in the Salt Lake Valley. We all need to acknowledge that times are changing and we cannot keep living the way we used to. However, I want to see future people enjoying the canyon in the same way I have been fortunate enough to. Ski uncrowded resort slopes at Snowbird and Alta without waiting in huge liftlines. Skiing off the summit of Red Baldy early in the morning and marvelling at the view of the canyon. Topping out world class boulder problems in a beautiful and undisturbed deep forest setting. The only solution will be to place a capacity limit on the canyon (and most importantly the resorts.) What good is cramming so many people up there going to do? Other than make big bucks for the resorts and their executives? The experience is just going to be worse for everyone. I'd happily sacrifice being able to ski at the resorts whenever I want so that everyone can have a better experience (and no, resort expansion is not the answer... they already take up the most coveted ski terrain in the canyon and what is left must be preserved for backcountry skiers.)</p> <p>Another thing to think about is with the effects of climate change already evident, how much longer is skiing going to be viable in Little Cottonwood? I could see a future where it does not snow enough for the resorts to provide the same great ski experience that they have in the past. And we will be left with the monstrosity of an aging and rusting gondola that no longer serves a purpose... very sad. Listen to the people and elected politicians of Salt Lake County who share these</p>
37455	Trish Park	<p>I would like to see a gondola not a bus</p>
37456	Christian Smith	<p>Build the gondola please and stop listening to people talking trash on it, you can't please everyone. Gondola is the best solution we have ! Just do it!</p>
37457	Jeff Bitton	<p>Gondola is a great idea.</p>

37458	Todd Bjorklund	Gondola B should be rejected. 53 yr resident of SL County, current resident of Salt Lake City, past resident Midvale and Sandy. The gondola benefits Snowbird and Alta directly, and as private businesses, they should pay for it if they want it. They should also pay any canyon tolls. Public funds should not subsidize private businesses like this. This project is not in the public interest, it is in the interest of two private companies. I've skied many days at both resorts, and believe strongly that they should pay for this themselves.
37459	Kathy Wood	The natural world is more than just a resource. It is more than just another thing Humans can manipulate and capitalize on. I am against another natural resource being turned into another playground for a small population.
37460	Eric Sharp	Easy solution. Limit the number of passes that are sold. If you don't have a parking reservation you don't get up the canyon. This goes for backcountry users as well. Skiing/snowboarding is a finite resource that can't be available to everyone. If you try to open it to everyone it will ruin it for everyone. Skiing now vs even five years ago is such a different experience and not in a good way. For once care about us Utah natives and do the right thing. Don't destroy the canyon just for moneys sake And especially don't use our tax dollars to do it.
37461	John Boswell	I strongly oppose the Little Cottonwood Canyon Gondola, in any form; especially one that is paid for by taxpayers.
37462	John Mejia	Please do not build a gondola up Little Cottonwood Canyon. We have plenty of other alternatives that will not require a massive, years-long construction project that will kill thousands of trees and snarl traffic indefinitely. We can work with the resorts to create sustainable, long term options.
37463	Makay McIntosh	Against gondola ? I little Cottonwood canyon, it caters to a small group of people, not everyone in Utah skis
37464	Nick Donovan	No gondola. It's an eyesore, would forever destroy the local ecosystem, and demolish a number of climbing areas. No gondola.
37465	Kyle Trettin	As local resident that frequents Little Cottonwood Canyon, I think transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered. I think Mayor Jenny Wilson also says it really well: "Although I applaud UDOT's acknowledgment of the value of a phased approach, I disagree with its conclusion that the gondola should be the preferred alternative. The gondola option is flawed for many reasons, including that it will: Cost over a half billion dollars (not considering inflationary cost increases); Only make stops at two private ski resorts: Snowbird & Alta; Remove no more than 30% of car traffic from the canyon road; Operate only during the winter ski season; and Permanently mar the inherent beauty and public lands of Little Cottonwood Canyon. The gondola is an unwise public investment for a 50+ year solution serving a limited group of people, given that it's irreversible and incapable of pivoting in the face of changing circumstances. But it isn't the only option." I think we should try less permanent solutions first and evaluate their effectiveness before even considering something like the gondola. I think the features of the phase implementation, such as increased bus service without road widening, should be implemented and evaluated first before deciding whether more costly and impactful solutions, such as the gondola or road widening, are required.
37466	Casey Larson	I am an avid skier and snowboarder, and this is not at all a good use of taxpayer money. Here are a few reasons why: The cost is ludicrous - there are far bigger problems that can be solved with that kind of money. Taxpayer-funded projects should have broad public benefit. This project disproportionately benefits two ski resorts, non-taxpaying visitors, and a tiny fraction of high income residents. The gondola is not a good solution to traffic problems in the canyon. The environmental impacts and the cost are too high, and only solves problems for a portion of canyon users for a portion of the year. A solution that would cost far less and do far more to protect the canyons and improve the canyon experience for visitors would be to implement a permit system similar to what Arches and Zion are doing. By finding the right balance of advance reservations, last-minute reservations, and walk up permits, locals who live near the canyons can experience the benefits of living nearby, and the quality of our canyons can be preserved.
37467	Randall Winegar	I have been traveling little cottonwood for 50+ years. The proposed gondola will not solve the transportation issue. Lots of money being spent to support 2 resort businesses. I vote NO on this. There are other options. Thx
37468	Gordon Slade	I'm deeply opposed to the Gondola in Little cottonwood. I grew up at the base of the canyon and cherish this canyon as part of my life. Now as baby boomer, I can't imagine the permanent scaring of the land visual impact of gondolas. As an EV owner, use of electric busses makes much more sense for the environment and very doable at much lower cost than a gondola. Please do not pursue a Gondola when do many better options exists.
37469	Adam Quist	I like the gondola. It adds to our community and gets people up the canyon even when roads are closed due to avalanches.
37470	Jack Birch	Way too much tax payer money when there are only two ski resorts to profit from it. Electric busses please
37471	Paula Summers	No to gondola. Please. Realize, the ski resort is what it is. Small. Go with the beauty that it offers and don't try to make it what it is not through excavation. Don't destroy the mountain and other people's property for revenue. It was never meant to be a large resort. It's just going to have to be a lottery on what days people can ski. Thank you.
37472	Eric Soto	I am against the gondola. It only benefits private companies at the heavy expense of taxpayers. The money should go towards public services such as schools, libraries, and parks.
37473	Jan Franzen	A solution needs to address all recreational activities in the canyon and not only ski resorts. Parking reservations in combination with snow sheds and busses would solve the congestion without the high cost and eyesore of gondola towers.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37474	Elizabeth Conde	I am a part time resident of Big Cottonwood Canyon, and strongly oppose the gondola. It seems like an astronomical price tag for something that would ruin the beauty canyon. From what I can tell, it is unclear how many people would even use the gondola, and at some point our canyons have capacity limits. Please do not bug business determine the future of our canyon. It is disappointing to me that it has gotten this far along in the process. I hope you vote down the gondola.
37475	Mark Wuthrich	The gondola only serves the ski resorts and they should be paying for it, not the public. The gondola will be an environmental disaster and an eternal economic boondoggle. Any other alternative is preferable.
37476	Andrea Tiede	I am opposed to the Gondola option in Little Cottonwood Canyon. I have lived in the Salt Lake Valley for over 30 years, and skiing has never been a large appeal for doing so. I am adamantly opposed to so many of my taxpayer dollars going to something that benefits so few. It doesn't benefit the needy. It doesn't benefit the common good. It benefits skiers. On busy days. While paying taxes isn't something I can opt out of, I can opt out of living in a community that misspends its budget on vanity projects. Please reconsider. Thank you.
37477	Marshall King	The gondola will not solve the underlying issues in this canyon, and while it may be a benefit to some involved, for the vast majority of people who commute on this road, and use the beautiful facilities available in this area, it will reduce their quality of life. Traffic will continue to be backed up on Wasatch Boulevard as people will still drive their cars, just to the gondola parking instead of all the way up the canyon.
37478	Allen Maxson	Five and half million dollars to please a specific special interest group seems to be poor fiscal policy. Also, the beautiful nature of the little Cottonwood canyon will be damaged forever.
37479	Richard Hauley	you UDOT!!!! You spend money as if you are printing it. We don't need anymore out-of-state coming here....if you have more trouble getting to the ski resorts, maybe you won't come....!
37480	Cole Frost	A gondola does not provide a solution to traffic concerns other than the few snow days a year when the LOS is a F. Why would the tax payers pay for the high Gondola cost and maintenance that only benefits the revenue of the ski resorts. They should share in the cost of the improvements if there are no other stops on the route.
37481	Wendy Zeigler	<p>Dear UDOT staff, I have been a user of LCC most of my 60 years. As a Utah resident and a property owner in BCC I have the following comments:</p> <p>First, thank you for your tiered approach, the phase in is important to get people using public transportation. I believe if public transport is less expensive, faster, and more reliable more people will use it. The fact that you believe we only need to reduce traffic by 30% means that buses are even more practicable. If we ran a bus every 3 min, one to Alta, the next to Snowbird and the next stopping at Trail heads, you could reduce traffic by at least 30%. A Van might work to TH's at first. Part of the problem with this EIS and what you are tasked to solve, is that this is not just a winter problem, but a 4 season problem and it is a problem at all trailheads. You have an opportunity to solve this year round problem with the buses. We need summer buses!</p> <p>Second, your larger parking lots are very short sighted. They will put a dent in the parking issues we have today, but not in the future parking issues at all trailheads, only helping the ski areas. With population increasing every year, plus the increased use among existing population, this problem of cars on the road will just continue. A bus stop at White pine could help significantly, but I could not find a bus turn out/stop in the EIS for this location. We could also have stops at the most popular climbing areas.</p> <p>The gondola will ruin the view shed of one of the most beautiful canyons in the world! Imagine a gondola going up the middle of the Grand Canyon with that many cars on it. It would be a travesty, LCC is the same value of view to most users of LCC. That is why 80% of residents oppose this option.</p> <p>The gondola will not be able to run on Inter-lodge days for obvious reasons. It will only shift the traffic jam onto Wasatch Blvd.</p> <p>To that point, you are faced with the same problem, everyone wants to arrive for first tracks on a powder day. There is no way all of those cars will be able to enter the single parking garage in a timely manner to not back up onto Wasatch BLVD. You are just shifting the problem down canyon. After people drive around in the parking garage, they will give up and drive up. The next time, they won't even bother trying.</p> <p>I am very sad to see widening of Wasatch Blvd. You will bring more and more traffic to this road by doing this. As it is now, many Draper cars use I-15, I am concerned this will change for commuting. Here again, a more efficient bus service would be the answer. The tolling idea only at the top of the canyon on busy days is interesting and has some merits However I fully support a</p>
37482	Mike Christenson	I feel like all alternative options to the gondola have not been thoroughly reviewed. The gondola is only serving the needs of 5he ski resorts and the community as a whole. I encourage you to review ALL other options. There are more fiscally and environmental friendly options aside from the gondola. This decision should be put in the hands of the public through a vote and not driven by the money of the resorts.
37483	Sheridan Davis	Before we use a dollar of taxpayer money for UDOT's preferred alternatives, let's disincentivize cars in the canyon by having express bus lanes using the current highway without expansion from 8-10am up and 3-5pm down daily. Only bus traffic will be allowed in the uphill lanes in the morning, and downhill lanes in the afternoon during those times. Let's use taxpayer monies and Snowbird and Alta subsidies to make those buses available at no cost to the public. And let's make those buses hybrid or fully electric to minimize their impacts. This will create high bus ridership, fewer car accidents during peak times and greater safety in the canyon overall. As an aside, if people won't ride buses as public transportation, what makes anyone believe they'd use an aerial tramway? Thank you for considering these ideas.
37484	Nicole Zaugg	I don't think that the Gondola is the best solution for the traffic and problems with Little Cottonwood Canyon. The gondola will take tax payers money to fund something that most tax payers will not use or be unable to use. I don't think there has been enough research to determine the effects the gondola will have on the state, environment and many others. I don't think they have tried to come up with a different solution that wouldn't cost as much or have the environmental impact. I think there are other solutions like a toll or increasing bus service.

But it isn't the only option."</p>
38367	Sheldon Ortiz	<p>Dear sirs I do not think we need a \$550 million gondola in little cottonwood canyon if the skiers want to go skiing that bad let them suck it up and have a nice day this is my vote saying no to the gondola</p>
37485	Martha Castillo	<p>No. Do not build this gondola.</p>
37486	James Tidwell	<p>Tax payers should not pay for snowbird profits. Not everyone skis, ridiculous costs, bad for environment.</p>
37487	Veronica Reimann	<p>Too expensive & for elite who want to ski. dangerous with the winds out of the canyon. I would rather if we must, have an electric railroad built up the canyon on the south side of the canyon that all Utah citizens can use & enjoy but as a citizen of Cottonwood heights since 1965 I vote no on the gondola</p>
37488	Matthew Basso	<p>I oppose the gondola. I don't believe that it makes sense for the wide range of recreational users in Little Cottonwood Canyon. Because it will only stop at Alta and Snowbird that does not allow backcountry skiers snowshoe ours and others in the winter to use the gondola. Likewise it would be ideal to have a solution that also offered non-winter users mass transportation. Hence I suggest either going back to the drawing board and reconsidering a cog railway. Or choosing a electric bus option. That of course would be in addition to whining and snowsheds. I should add that the gondolas visual impact as a second reason that I oppose it.</p>
37489	Mike Marker	<p>UDOT errs in presenting Gondola B option in that it has been modified from its presented version in the DEIS. By eliminating the remote parking garages on 9400 and at the gravel pit and proposing to almost double the size of the parking garage at the mouth of the canyon UDOT will be directing more passenger car traffic onto Wasatch Blvd increasing congesting. Presenting this new Gondola B option is negligence on UDOT'S part as it violates UDOT standards and conditions that in earlier studies ruled out this location altogether.</p> <p>UDOT is negligent in their application of Section 4(f), which deals with impacts to public recreation areas. UDOT identifies only 2 "recreation" areas for the sake of the EIS a) a campground and b) a rock climbing area. The campground is a developed area and the climbing not developed but socialized with use over the years. Yet such limited identification of "recreation areas" ignores the reality of this multi-use canyon. This is a narrow scenic canyon located within 15 minutes from the center of a major metropolis area. Its proximity to this urbanized space, its natural beauty in a small narrow canyon creates its own wholistic draw. People escape the urban center to recreate just by visiting as a "respite" from the developed valley floor. Their "recreation" begins at the mouth of the canyon and continues the whole time they reside in it. Such has been the "recreation" that many are experiencing this time of year as they enter the canyon to view scenic beauty in its natural state without the imposition of mini-buses hanging mid-air from 22 200' man-made structures each starkly visible all the way up the canyon. UDOT errs in applying this standard in this very unique setting and ignores what is considered "recreation" in this physically unique space.</p>
37490	Debra Dowse	<p>In my opinion if Snowbird and Alta are the only places the Gondola will stop then The Bird and Alta should foot the entire cost. And if they don't fix the Great Salt Lake first then this Gondola this is just a waste of money. The Utah tax payers should have to pay for any of this !!!!!!!!!!!!!</p>
37491	Brent Carmichael	<p>The gondola will be a great solution for the little cottonwood canyon. Once it's it's finished and operating even the naysayers will ride it and enjoy it. Taking in the views as they silently and cleanly travel up and down the canyon.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37492	Tiffany Richards	Please charge every car going up big and little cottonwood! You would have a huge slush fund just from the last three weeknds!!! People are happy to pay! Look at Millcreek. People pay and They have put the money towards improved parking lots, trail heads and bathrooms! B&L are water sheds! These canyons have been so poorly managed so let's get the much needed funding by charging at the mouth!! If ski resorts pushback, charge from April to November ... 7 or 8 months is better than nothing! Let's start with toll booths and mandatory carpooling . Then build a tram or tunnel for trax from airport tunneling up to Alta/snowbird . These resorts can be the Utah Zermatt!!
37493	Jenn Jansen	An astronomical price tag that does not fix the issue. NO GONDOLA!
38369	Alyssa Grow	Stop the political hoax. A gondola will not serve the people of Utah. Public opinion polls and comments that have been received earlier on this proposal have shown that Utah residents are not in favor of moving forward with a gondola. It will be an abomination on the landscape. It will benefit the political actors and private companies involved. There is a traffic problem in Little Cottonwood Canyon a few days a year. If the gondola is constructed it will be there forever and serving no one and doing no good 360 days of the year. There are so many other ways to solve the few days that are a problem. Spending money on this is not only wasteful, it is irresponsible and corrupt. No gondola!
37494	Griselda Soto	The gondola should NOT be built! It will have a negative impact to our environment. Please do not built it!
37495	Ryan Brinkman	I do not want the gondola to be installed, it will ruin the beautiful mountains and very expensive to build and ride and very inconvenient. The parking structure will take up a large chunk of land as well- basically a horrible idea-
37496	Rebecca May	I absolutely do not want a gondola as the transportation option for Little Cottonwood canyon. It is an expensive, invasive idea that won't take many cars off the road. We should be starting like, Zion National Park, with a bus only approach. We have room to put parking garages at the big bus stops close to the canyon. Make it mandatory during certain times of the year to ride the bus. Make stops for Backcountry skiers and make the bus schedule work for everyone by running service appropriately. Buses wouldn't be late for schedule because they wouldn't get stuck in traffic since they will be the only vehicles in the canyon. You can also replace buses as they get old with electric buses, again, like Zion Park that has a proven bus system already.
37497	Scott Quist	It only stops at two places. Much slower than driving therefore I would never use it. I am an avid skier. It would destroy the natural beauty of our canyon.
37498	Robert Brown	I think putting up a gondola up the canyons would be a bad idea. First I don't think it would help the traffic situation up the canyon, I think it would actually increase it everyone will want to go on the gondola and also it would destroy the beauty of the canyons. Also every resident of cottonwood heights that I've heard is opposed to the gondola. No one wants it, so please don't install a gondola up our gorgeous canyons.
37499	Carson Darling	<p>As a resident of Salt Lake City that recreates multiple times a week in Little Cottonwood Canyon year round, I do not want to have a gondola built. I love spending time in LCC, it's one of my favorite places in Utah, and is one of the primary reasons I live where I do. The proposed "Gondola Alternative B" would have an overall negative impact on my experience in LCC. I do not want the gondola in my face as I climb on the gate buttress. I do not want to lose my favorite boulder problems to gondola towers, and I do not want the beauty of LCC permanently destroyed by towers and cables.</p> <p>There are better, common sense alternatives that solve the traffic problem, provide actual benefits to all of the users of the canyon (not just those spending money at the ski resorts), and don't depend on a single, massively immutable piece of infrastructure. The communities most strongly impacted by this EIS have clearly spoken. Salt Lake City and County councils have both rejected the gondola proposal, and polling shows that the majority of residents do not want a gondola.</p> <p>If UDOT believes that building a gondola is the best fit for their chosen criteria, then those criteria need to be re-evaluated.</p>
37500	Susan Kwon	Shuttle station for just buses to run year round for the canyon. Maybe like Zion national park?
37501	Russ Shepherd	Favor the Gondola
37502	Ryan Rowland	The idea that a \$500,000,000+ gondola project is needed to meet UDOTs primary objective for SR210 is simply ridiculous. Enhanced bus service, combined with enhanced avalanche mitigation structures AND reserved parking at the ski resorts are far more sensible and effective measures to meet UDOTs primary and secondary objectives. The primary objective met by the gondola will be increased revenue for two ski resorts at taxpayer expense. Its an insult to taxpayers for UDOT to push the gondola plan when there are other effective and less costly alternatives. Its immoral to invest public funds on a gondola project that will benefit a relatively small sector of the population and hugely benefit two privately owned ski resorts.

ID	Full Name	Comment
37503	Jason Wolf	<p>Dear UDOT LCC EIS Project Team,</p> <p>Thank you for taking the public voice into consideration during this very important decision. A decision that will not only have an impact on our current transportation needs but also have a lasting effect on future generations. During the EIS process, it is important to not only consider the needs of skiers that visit Alta and Snowbird but also all visitors to the canyon. Little Cottonwood Canyon has become an iconic natural space that is only elevated in intrinsic value due to its close proximity to a major metropolitan area. Nowhere else in the world can you find Wilderness within minutes of a community of over 1 million residents. It is a place where people from around the globe can admire the natural aesthetic of a glacial carved canyon.</p> <p>I ask that UDOT reconsider the scope of the LCC EIS. I believe that the scope is far too narrow and does not adequately take into consideration the majority of residents of Utah. The very definition of the project's purpose and need will create further barriers to entry for families that already cannot afford the luxury of skiing. We live in a place that brings tourists in from all over the world, but many of the people in our community do not have the financial means to enjoy much of the Wasatch. Currently, much of our public lands are not free to access. I ask UDOT to reconsider the purpose to include providing equitable access for residents who currently cannot access public lands due to financial obstacles that only grow as winter recreation becomes increasingly cost-prohibitive.</p> <p>Public lands belong to everyone, all people have a human right to access nature and the great outdoor experience without obstacles/barriers. In Chapter 5, Environmental Justice, section 5.3 'Affected Environment' and the environmental justice impact analysis area is too narrow of a geographical scope to adequately determine equitable access to the outdoors. UDOT states in the LCC EIS that they "did not identify low-income or minority areas, service providers, or housing near the proposed alternative improvements". This demonstrates that low-income households have to travel further distances to access LCC than more affluent residents who live close by. The EIS also fails to take into account the cost(s) to access the mobility hubs. I believe there is an Environmental Justice concern to equitable access for low-income families if charged per person. The EIS states that one solution for low-income populations is to "wait to recreate after peak hours," this statement suggests unequal access.</p> <p>Thank you for adding the phased approach to the final EIS. I am supportive of increasing Electric Buses that not only reduce traffic on SR210 but also tie into mobility hubs which are part of the many communities throughout the valley. I ask that UDOT add additional bus stops at other locations in LCC outside of the ski resorts. These stops would include White Pine, Tanners Flat, and Grist Mill. I also ask that UDOT add performance metrics to allow a 5-year study to determine if an enhanced bus service could meet the needs of reducing 30% of traffic from SR210. In addition to the enhanced bus</p>
37504	Quin Stevenson	<p>Please see how the bus system works out and be willing to reevaluate how necessary a full gondola is. Either way, I strongly believe a gondola will be an absolute travesty.</p>
37505	Andie Madsen	<p>NO gondola. Listen to Sandy and SLC council! Nobody wants this except the ski resorts.</p>
37506	Emma Crossett	<p>The gondola is the wrong option and is harmful for Utahns. Consider these reasons:</p> <p>Constructing and implementing the gondola will destroy beloved nature areas used by hikers, climbers, bikers, and backcountry skiers. Further it will destroy natural habitat to flora and fauna and will mar the landscape of our beautiful mountains permanently</p> <p>The gondola will not serve the majority of the population using the canyons, it will only serve a small subsection of people paying to patronize two private businesses. I climb in the summer, backcountry ski in the winter, and hike year round throughout the canyon and won't be able to use the gondola for any of these purposes. It is unethical to use public funding for the purpose of increasing profits for private companies, meanwhile decreasing access to public lands for the public.</p> <p>It is impractical as a solution to decrease access to private resorts. The parking at the base of the gondola will be in no way sufficient to serve the number of people looking to use the gondola, and the time it will take to get to and from the resorts at peak hours will discourage use. Mechanical issues are bound to be incredibly disruptive to service and take long periods to fix.</p> <p>There are alternatives to the gondola that are far cheaper, easier to implement, and serve the users of the canyon better. Limiting canyon traffic to NO SINGLE PASSENGER VEHICLES during peak hours requires very very little funding and is easy to enforce with current infrastructure (we already have cops turning people around when canyons are at capacity). Requiring reservations to enter the canyon would also be easy to implement. INCREASING BUS SERVICE AND PARKING FOR BUSES is also very easy to implement. It doesn't make any sense to choose the most expensive and complicated option before trying the cheaper and easier options.</p> <p>We don't need to be increasing the number of people up the canyons. Our canyons have finite resources and cannot hold increasing numbers of people. Why are we trying to remove a bottleneck that is serving the purpose of protecting nature from being destroyed by people it cannot support.</p>
37507	Melanie McDaniels	<p>This unfortunately is a poor decision not only for public lands, but for Utah residents in general. The proposal and subsequent recommendations did not take into, consideration literally the most viable option, which is increased bus service along with tolling of privately owned vehicles. The business in LCC should be working to come up with solutions to problems they have created without the desecration of the watershed, view shed and access to public lands. The USFS should also be proposing anything but a gondola. The facts are that Salt lake county, UDOT and the privately run ski area should invest in parking infrastructure at the mouth of the canyon amongst other areas across the city, vs. A giant eyesore, tax payer funded (which NO ONE WANTS) gondola. Stop providing dollars for the already wealthy and STOP THE GONDOLA NOW!</p>
37508	Holly Silva	<p>I am completely for a gondola route through the Little Cottonwood Canyon in order to help reduce environmental damages from the current traffic & resulting pollution. I believe that the gondola project has a low-impact, low carbon footprint & will greatly improve both high altitude & valley pollution. In light of our high growth density, I also hope that other future gondola projects maybe proposed & reviewed for many other Utah canyon & mountain passes.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37509	Frank Bare	<p>Just a quick comment against the proposed gondola in little cottonwood canyon. NO! It will not solve the traffic congestion, just shift it to the bottom of the hill. It won't remedy the wait times of skiers to enter or exit the canyon. Certainly an antiquated idea. The only real solution to congestion in both little and big cottonwood canyons is a train system. Yes it will cost a bit more, but will definitely solve any current or future transit issues. Please don't waste taxpayers money with the ridiculous idea of a gondola</p>
37510	Lynne Jones	<p>Don't do the gondola.</p>
37511	Kevin Shilling	<p>We don't need a gondola. Step back and keep it simple. Let's start with a toll to incentivize carpooling. I want the ski areas to have skin in the game. They should pay a fee if people don't carpool. More buses. That way people can get to trailheads year round instead of just to ski areas.</p>
37512	Douglas McDowell	<p>The development plan to build a gondola will be a major detraction and disruption to the outdoor recreation scene that makes little cottonwood canyon a destination for climbers worldwide. I've traveled from Texas and now Tennessee to climb the immaculate roadside granite boulders of LCC. The major problem I see is the lack of safe parking near the boulders. If the development of the gondola would require a trail system from a lower parking lot to the bouldering, has the cost of development of that trail been accurately assessed? What is the cost to develop that trail? Would the length of the trail reduce the access to climbers? I've heard many different variations of the plan at this point and yet the common thread is that they all serve the big ski resorts at the expense of the climbing roadside. The millions of dollars spent by visiting and local climbers alike is overlooked when the city weighs the decision to cave to private ski resort interests. Climbing tourism is difficult to measure, but healthy organizations like Access Fund and Salt Lake Climbers Alliance as well as the financial success of climbing gyms in the area should show how large of a climbing advocacy group there is. Please consider the fact that SLC is destination for outdoor bouldering and rock climbing and that would all change if the access was restricted because the implementation of the gondola did not take into consideration the climber's core needs for roadside access to an historic climbing area in North American rock climbing culture.</p>
37513	Elizabeth Palmer	<p>I live in Sandy, and am a short drive from the mouth of Little Cottonwood Canyon. Our family often uses the canyon for hiking and count it as one of the best attractions to living in our area of SL County. We love to take our children and marvel at the beautiful vistas. We also love to use the canyon to ski in the winter. We do not support the plan to mar the views with a gondola that is extremely expensive and most greatly benefits the ski resorts. They do not care about how it would damage the experience of those who use the canyon for its beauty. We know that traffic in the canyon is problematic because we are the ones experiencing it but the problems are mainly a real issue only a few days a year when the weather is bad. The current bus situation is dreadful (my husband once wait an hour for one bus and when it came it was too full for him to get on). We believe that if time and money were invested in making the bus system and the roads in the canyon better that would solve the majority of the problem. This gondola plan is an extreme step to take when no other action or plans have really been tried. I think it is clear from polls that those who actually live here do not want the gondola so why are you doing it? Why make us pay for a plan we absolutely do not want. If you choose to move forward it will be clear that money or some other reason beyond what the people want and need is driving this. Please listen to our voices and do not move forward with the gondola.</p>
37514	Melissa Stamp	<p>I am very disappointed that UDOT has opted to choose the gondola as is preferred alternative. I oppose this alternative because it is unfair, overpriced, inequitable, inflexible, and short-sighted. I am pleased to learn that UDOT is planning to use a phased approach that will initially implement enhanced bus service, measures to promote carpooling, and snow sheds. These measures make sense and have much broader benefits than a gondola that would primarily benefit the companies that own Alta and Snowbird. Please consider adjusting your preferred alternative to eliminate the gondola component and implement only the phased elements.</p>
37515	Rebecca Crosman	<p>I am very against the gondola. It is not worth permanently altering the natural beauty of little cottonwood canyon just for a few busy days a year. I do not believe billions of tax payer dollars should go towards the sole benefit of two private businesses. Plus, it will only run a few months a year while being a year-round eyesore of cables and towers.</p> <p>UTA is already struggling to maintain the current public transportation system. How will UDOT ensure the gondola is adequately staffed?</p> <p>I think improving the current bus system could go a long way in alleviating traffic issues. Every time I ride the bus during peak hours, the wait is long and the bus is crowded and uncomfortable. It's no wonder so many people would rather drive. Please consider more frequent bus service during peak traffic hours and investing in a fleet of buses equipped with room to store gear and more seats.</p> <p>Please listen to your community and understand that a gondola is not the answer.</p>
37516	Suzanne Brown	<p>I moved into this area because of the beautiful mountains. You are ruining the aesthetic value and beauty of the area. No gondola.</p>
37517	Katherine Munn	<p>The trip up the gondola is going to take so much longer than a bus or car ride that no one is going to use it, and then all the money is going to be wasted. Investing in more bus service would be so much more effective and less invasive to the beauty and life within the canyon. Even if that has to look like what Zion National Park does where the canyon is restricted to most cars and requires people to use the buses, the traffic would be significantly reduced and would take even less time to get up the canyon. But literally no one is going to choose the gondola option over others.</p>
37518	Kelly Becker	<p>Please no gondola. I ski the canyon all the time and it's really only bad traffic a few days a year. Reservations at the resorts have made a big difference. The gondola is too expensive for just serving two resorts and a limited population. So many other road / transit issues in Utah to address that would benefit many more people than the rich skiers. I think a toll would encourage car pooling. Don't ruin the pretty canyon for the resorts - there are other options and honestly traffic is not that bad with resort reservations.</p>

ID	Full Name	Comment
37519	Lisa Astin	I do not want the gondola built!! As a Ut native growing up skiing it makes me sad to not be able to ski any more because I have been priced out and can no longer afford it. It has become a recreational sport for the wealthy and now you want me to pay for people who can afford to ski to have a gondola built for them at my expense. What happened to looking out for the locals. It all comes down to greed!
37520	Rachel Stevenson	Please before you do the gondola re evaluate if the bus system is effective. Encouraging people to take buses and carpool for the sake of traffic over the course of a few weeks seems like a better option. Please don't do the gondola in little cottonwood and forever change the landscape and atmosphere of a beautiful natural place. Utah winters are dwindling as it is. Maybe invest the money for a gondola into protecting the great salt lake, air quality and the natural wonders that make people want to call Utah their home in the first place.
37521	Fern Hardin	This gondola is an abomination of our beautiful canyon in which many people in the state of Utah have had the opportunity to enjoy for many many years. I recreate in many different ways in little cottonwood canyon, rarely do I ski at the two ski resorts. I hike, bike, climb and backcountry ski in this canyon all year long. I will be unable to use this gondola for those reasons- I will still have to drive. Let's work on more buses. How hard can this really be? Instead of spending 1 billion dollars on a tourist attraction that will ruin the canyon, let's focus on alternatives that can improve recreation access for EVERYONE. 1 billion dollars can allow for many more buses- I'm sure of it. Please UDOT, we all beg you not to do it. If you do- I will leave utah because my hard earned money will not pay for such a monstrosity.
37522	Ben Jones	The gondola is a bad idea. Expanded bus service and tolls for private cars is the obviously better solution.
37523	Randy Doyle	A great deal of additional study needs to be performed before any implementation of canyon tolling takes place on either SR 210 or SR 190. Canyon tolling as proposed is entirely focused on the ski resorts. It is redundant, given that all four ski areas have implemented or are in the process of further implementing paid parking, or parking reservations, with tiered rates based on occupancy. Tolling would be expensive. It is uncertain that tolling fees would generate enough revenue to cover the operational costs or begin to cover the capital costs of the tolling infrastructure. In addition, even if additional monies were generated, it is unlikely that they would invested back into the canyons. The USFS is preparing to implement a Recreational fee at many of its improved sites in the canyons. Many of the sites in Big Cottonwood canyon are above the location of a tolling facility and would be affected by tolling. Tolling simply is not needed in the long term. The Ski Areas are already acting. The USFS is taking steps with their fee system. Roadside parking is being eliminated, and it would unfairly target one group of canyon users.
37524	Oscar Graff	Don't put up a gondola, it represents the wishes of the rich few of those of the people.
37525	Audra Martinez	No to the gondola. Watershed. Only two resorts benefit. Alta and Snowbird should pay for it. Ruin the canyon. Avalanches!
37526	Maggie Bale	The gondola in LCC is a bad idea, particularly because it will increase the inequity in access to our canyon.
37527	Vickee Boswell	I'm very concerned about the cost of a gondola project both monetarily and to the environment with insufficient benefit to the majority using the canyon throughout the entire year. Such a significant decision deserves more consideration to other less expensive but viable choices.
37528	Alyssa Grow	Stop the political hoax. No gondola. Public opinion polls and comments that have been received earlier on this proposal have made it clear that Utah residents do not support the construction of a gondola. The gondola will be an abomination on the landscape. The traffic problem up Little Cottonwood Canyon is a problem only a few days a year. A gondola will be there forever doing nothing and no good for 360 days a year. There are so many other solutions to the few days that are a problem. The only people who will benefit from the construction of a gondola will be private investors and ski resorts. Spending money to construct the gondola is not only wasteful, but irresponsible and corrupt. No gondola.
37529	Greg Scott	I'm extremely disappointed in the likelihood of a gondola being built in Little cottonwood canyon. It would be an excessively high engineering cost with low cost benefit value to local residents and even tourists. Being stuck on a gondola for 45 minutes to get to the top of the mountain without bathrooms seems like a nightmare, both in riding up with people we don't know and for the resulting condition of less occupied gondola cars. How that would be prioritized over the creation of a middle road lane for high occupancy vehicles that switches between uphill and downhill traffic based on time of day with extra buses to ferry folk, seems like a far less expensive, more convenient, and socially more enjoyable option. My Hope is a more realistic review of the human factors behind these options leads to remove all of the gondola proposal entirely.
37530	Bill Peterson	I do not favor any major construction in Little Cottonwood Canyon. The ski areas are very crowded at present, which should be putting forth the question "where are the people going to go when they get up there?" While the ski areas would love to sell more tickets increasing their revenue, the reality is that for the skiers themselves it translates into more time standing in lift lines. At some point, skiers will choose to do something else. I am certainly aware of the traffic problems, but smaller improvements such as better bus service, and if necessary an additional lane added to the road would likely address the majority of the problem without significant damage to our beautiful canyon. The Gondola proposal is simply too expensive, and too invasive. The available terrain is simply not there to support such a grand plan. While we may need to restrict access in some way, please do not destroy our canyon in an effort to make it so crowded that it loses it's beauty.
37531	Cindy Brown	Tax dollars wasted money. Higher traffic, it won't solve the increased traffic issues, but increase it. No gondola.
37532	K Sharp	No gondola!
37533	Kathy Kessler	As an East Sandy home owner and a frequent skier in LCC, I am against the building of the gondola. Please increase buses and get some UX designers to make the buses more appealing so people will actually want to take the bus instead of driving. A gondola will not cut traffic enough to justify the enormous cost. I take my daughter to ski school at Alta every Saturday in the winter and we will NEVER take the gondola!

37534	Caitlin Erickson	<p>I am all for finding a solution to ease congestion and promote preservation of little cottonwood canyon; however, a gondola that only serves the two ski resorts in the canyon is not the answer, especially when that gondola serving two ski resorts is funded by public money. I would be okay with having a fee (like millcreek canyon) or a shuttle that drops off at popular hiking trails as well as the ski resorts (like Zion National park does), or even both of those things, to eliminate congestion. Perhaps if you use the shuttle you don't have to pay the fee, and perhaps there can be a few free days every year for those who may not be able to afford the fee.</p> <p>TLDR I oppose the gondola and implore you to find better options.</p>
37565	Eli Perry	Save the boulders!
37566	Taylor Fleming	The gondola idea is a mistake for our community and would permanently disfigure the canyon.
37535	Karthik Nadesan	<p>Like most of the public, I am against UDOT's proposal to install a gondola in Little Cottonwood Canyon. Installation of the gondola towers would require the destruction of large swathes of wilderness and recreational areas in the canyon and the gondola and towers themselves would create a large unavoidable eyesore. Construction costs for the gondola would balloon by the time it is funded and, due to its record length, the maintenance costs are unknowable but will be almost certainly higher than projected. Most disappointingly, the gondola would only serve two private ski resorts in the winter and would provide no benefit to other users of the canyon during the winter or to any canyon user in the summer. There appears little need to adopt such an extreme solution before trying increased bus service and a transit hub/park and ride that is closer to the canyon. Given UDOT's failure to adopt these common sense solutions (and it's cutting of bus frequency and routes this winter) I have little confidence that the gondola will do anything other than waste tax payor funds and increase overcrowding (and burden of the canyon's natural ecosystems) at the only true beneficiaries of the project, Alta and Snowbird.</p>
37536	Jacob Jahnke	I am against the gondola as I care about the canyon, its environmental impact, and the locals living there.
37537	stephen dufner	Spend NO TAX MONEY for a gondola! If built, a bad alternative, the ski resorts should pay for it. A toll road with bus exemptions is a better alternative.
37567	Mike Slater	<p>In preparation for the ROD on the preferred alternative B I am concerned about the negative impacts that will be felt by recreationists outside the estimated 50 days in which transportation issues or concerns are felt in Little Cottonwood Canyon and along Wasatch Boulevard. I personally have already elected not to use The Canyon during the ski season however I still use the canyon during other times of the year for hiking, fishing and hunting and fear the preferred alternative is going to restrict me in a negative way. Much of my activity is by myself and I'm worried that I will no longer be able to use the canyon. Please consider putting some of the \$550 million towards fixing the traffic problems by widening roads where the traffic is a problem along Wasatch Boulevard and into the canyon. The footprint of a new gondola the 2500 parking spaces and other things associated with the gondola are going to be a much more negative, an eyesore and impact to the Canyon and Recreation than we would experience should improvements be made down in the valley with more widening of the roads more bus service which I understand is a part of the alternative but could be enhanced and not impact my recreational opportunities as well as many others outside of The problematic 50 days during the ski season. I know it's too late for my final comment but would like it recorded I absolutely oppose the construction and installation of a gondola in Little Cottonwood Canyon and feel the amount of comments approximately 14,000 many of which are opposed to a gondola haven't received enough weight or consideration. Thank you,</p>
37568	David Carrier	I see the gondola as a remarkable bad idea. It will be environmentally destructive, unnecessarily expensive for tax payers, ineffective in the rate of transport, and prone to malfunction. A simple alternative is a fleet of electric buses. Electric buses would bring international attention to our state.
37569	Cindy Solomon	<p>Listen to the locals. We do not want the gondola. We need less environmentally damaging ways to use our canyon. Increase use of buses in the current road. Limit cars. Global warming and a drying up Great Salt Lake will decrease snow fall and we will have fewer days of intense powder traffic days. The gondola only services the pockets of 2 businesses. Also we do not want widening of Wasatch between Big and Little Cottonwood Canyons. There is no reason to widen to only have the canyons be the pinch point. No gondola, no Wasatch widening.</p>
37538	Brenda Jones	<p>We used to own a cabin on Gaurdsman Pass in Big Cottonwood Canyon, so I understand the traffic mess in Little Cottonwood. Big Cottonwood is a total traffic disaster now. Noisy, overcrowded, and polluted by sloppy visitors who don't care about keeping our canyons beautiful. I don't feel that a gondola will serve the locals. and the general public, but rather, it will be used by the elite and tourists who can afford the high fares. How will the traffic change when the majority of local skiers won't be able to afford the high price of a gondola ticket.and how will they get up the canyon with the present inadequate and polluting bus transportation? Our family was priced out of skiing all together years ago. I get super motion sick, so No Way would I ride a crowded stinky bus either. I miss the good old days when our canyons were pristine and peaceful and skiing was affordable.</p>

ID	Full Name	Comment
37539	John Connolly	<p>I am re-sharing the WBA's comment in support of their position against the gondola. Thank you for your consideration.</p> <p>----The Wasatch Backcountry Alliance (WBA) is a local SLC nonprofit representing the interests of thousands of backcountry - and resort - users both locally and nationally as they pertain to the preservation of the famous non-resort terrain in the Tri-Canyon area. We have paid very close attention to the LCC EIS transportation process, and this is our formal comment.</p> <p>WBA agrees with UDOT that a preferred solution will represent a summary of key concerns expressed within the public comments that were received and processed: EQUITABLE PUBLIC ACCESS to dispersed recreation, OVERCROWDING, VISUAL IMPACTS, WATER QUALITY IMPACTS, AND YEAR-ROUND ACCESS for a majority of visitors. The proposed solution does not address these aspects - below is a list of issues that we see with UDOT choosing Gondola Alternative B as its preferred alternative:</p> <p>Dispersed Use - UDOT claims to have "Consideration of all canyon users, not just resort visitors" but by only having resort terminals and not operating year-round it's clear that this is disingenuous at best. It is well known that the White Pine trailhead is wildly popular year-round, with cars parking up and down the highway for up to a mile in either direction at all times of the year. This not only forces people to be far from their intended destination, it also creates a significant safety hazard along the state highway. The argument that UDOT uses for not stopping at White Pine is that there will be less traffic on the highway due to the gondola, thereby enabling White Pine users to drive to the lot is a red herring. WBA does not think that vehicle traffic will be abated enough (if at all) by the gondola to justify this conclusion. Backcountry users - like resort patrons - want to be able to use public transit in lieu of their own vehicles to access the canyon, but that is not possible under the current proposal.</p> <p>Economic Benefit - The EIS states: "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." WBA does not feel that enriching two private entities is UDOT's mission or responsibility and that applying taxpayer dollars to that end is a reckless use of public funds. Meanwhile, it should be noted that the latest Snowsports Industries of America participation numbers (2021-22) show a nearly 6% decrease in resort skiers and a 96% increase in backcountry skiers. Furthermore, data from the National Ski Area Association likewise indicates that participation in resort skiing has remained essentially flat for the last 30 years. More broadly accessible, dispersed activities such as backcountry skiing, snowboard touring, nordic skiing and snowshoeing on the other hand are among the fastest growing segments of the snowsports industry. And yet these increasingly popular activities which should be made</p>
37540	MARY BURNS	<p>No way! The only people who would benefit are the owners of Alta and Snowbird. All other options need to be considered.</p>
37541	John Terrion	<p>I'm not interested in paying for a billion-dollar gondola on fixed retirement income.</p>
37542	Raquel Tolman	<p>The proposed gondola plan is a large waste of tax dollars, cuts into the visual aesthetics of the canyon, harms natural resources, and only serves a percentage of canyon users during winter months. It seems that increased bus transit with more stops throughout the canyon (or other alternate solutions) could serve not only skiers at the two resorts, but those who visit the canyon year round and desire to backcountry ski, snowshoe, hike, bike, climb, birdwatch, etc. The gondola only serves resort-goers and is a strenuous impact on the tax paying citizens of Utah as well as the natural environment of the canyon.</p> <p>Wouldn't it be better to increase/improve bus operations and hours of the day for a much smaller investment while reallocating much of the proposed gondola budget to improve mass transit throughout the rest of the Wasatch Front? Perhaps two rail lines for the FrontRunner? Additional rail lines? Utah's governing authorities could provide solutions that majority of Utahns (not just those who support two ski resorts) can benefit from - especially as our population will begin to reach 4 million people by 2032. This seems like a narrow-minded proposal which aims to benefit the few and privileged who can afford to ski at these two corporations, line the pockets of legislative landowners where the parking garages will be built, impact the aesthetics and wildlife of the canyon, and not address/fix the underlying issue with overcrowded canyon use.</p> <p>I know this solution seems exciting and like a fun way to advertise tourism to our great state. However, for the reasons above, please reconsider and think long-term about the impact of your decision to support on current residents, future generations, wildlife, water resources, erosion components, and sustainable solutions.</p>
37543	Justine Goebel	<p>Please don't do the gondola. It is the most drastic and expensive choice of the solutions. Do something simple and less expensive first and see how it goes. I think the best solution is a bus system only in the canyon like Zion national park. This will fix the traffic issue and be better for the environment because UTA has electric buses. The gondola only helps resorts at the end of the canyon for one season while buses can stop throughout the canyon and fluctuate through the year depending on the demand. The gondola is not a good solution at all. Do the expanded bus system.</p>

ID	Full Name	Comment
37544	Dennis Cavazos	I am in favor of the gondola alternative. The longevity, return on investment, and utilization for generations to come makes sense to me. It is a more environmentally friendly alternative. I have driven the canyon many times, and it is very hard on your vehicle. I would much rather ride a gondola for safety, less emissions, not hitting a animal crossing the road, avoiding a flash flood or avalanche, and being able to enjoy the scenery. Widening the road, and increasing vehicle traffic frequency will increase noise, emissions, accidents etc. There is a reason UDOT chose the gondola alternative. It is the better alternative.
37570	Daniel Brady	The gondola is an incredibly expensive solution to a problem that really only exists on a limited number of days each year. I think a much more reasonable approach would be to expand the public bus transportation system. If transportation issues become acute enough, perhaps a shuttle service similar to that operation in Zion National Park could be considered. That could be utilized in conjunction with a pass system that would allow those who work or live in the canyon to continue to use their private vehicles. Thank you for your consideration.
37571	Will Selfridge	Widening wasatch boulevard will cause long lasting problems like erosion, destroying more of the canyons beauty as well as our ability to use it.
37572	Thomas F. O'Meara II	My vote is in favor of the Gondola. I agree with the EIS that it will have the least impact on the canyon, and that is and should be the ultimate goal.
37573	denise adams	Please consider common sense solutions instead of the gondola, which is only to benefit the ski resorts and cost the community unnecessary millions of dollars. The traffic has always been a problem and always will. A gondola will only get more people up to a space where there is not room enough for everyone to be crammed up there. Please take care of our precious canyons and do not exploit them for a short term solution for a long term problem. Please increase the bus use, start there and then try other options. A gondola will ruin the canyon. What about the environment? How has the forest service allowed this money making scheme by two major businesses (Alta and Snowbird) to potentially devastate this beautiful area? Please consider and try other options such as improving and increasing the bus services or fees to enter the canyon first. Thank you.
37574	Anne Fritz	I oppose the gondola project for environmental, financial, and other reasons. Why kill the beauty which is the very reason people go to the canyons to seek? Using a sledgehammer to swat a fly is called overkill. I support paying a competitive wage to hire the drivers for electric busses. We don't need more lanes up the canyon, so people are encouraged to ride the busses.
37575	France Barral	I find it telling that this decision has been tearing our community apart. While some opposition is to be expected, the large amount of pushback is an indicator of a concerning lack of consensus. Could it be because the solution chosen does not make as much as sense as expected? I am disappointed because the most onerous (by far) solution was chosen. Will we be surprised when the cost overruns cost taxpayers double the original cost? I will not be. But UDOT will not be held to account. The solution chosen only caters to 2 destinations and none others. Yes, it could be the case that 95% of the traffic goes to the end of the line.... then have the resort pay the price! This is a public transportation project that will benefit private enterprise. The bus solution, charging fees to vehicles with few passagers are immediate solutions that could be pursued immediately at a much less costs. Why is UDOT not pursuing them, leaving it to the resorts to do their best? Sadly, UDOT is not accountable to the public. The taxpayers will be left with a "larger than expected bill", scandal, corruption, but that's OK, because the project will have moved, democracy be [REDACTED]
37576	Omar Bishti	Hey! Let's not build this thing! We don't need more Gondolas... we need to preserve precious wild spaces as much as possible. We don't need more beauty spoilt. Spend the money elsewhere! Please!
37545	Tyler Valovic	I beg you, please do not build the gondola. This decision will determine the fate of little cottonwood canyon, and I sincerely hope you do not destroy it forever. There are much better effective options that we need to implement instead. Busses and even electric busses are and a roll booth seem like more effective solutions, that can always be changed and adapted, unlike the gondola. A toll booth/fee also seems like a great idea (especially with a year long pass for residents). The most frustrating thing about this is how it is solely helping the ski resorts to make money. This is not an efficient and productive transportation solution. It's Disney world. This is not helping the people of Salt Lake City. We do not want this. Please reconsider, and do not change such an amazing part of Utah for the worse forever. Thank you
37546	Piper Kunst	LCC does not need a gondola. There are other beneficial solutions that don't involve altering LCC for the worse.
37547	Dylan Munn	The gondola does not provide a solution to the growing needs of Little Cottonwood Canyon. It is a partial solution only benefitting the ski resorts, and does not provide an attractive alternative to transportation in the canyon throughout the year. I ride the bus 90% of the time in the winter, and I'm saddened to see a cut in bus service this season which will only prevent others from showing new support for bus alternatives. The information has stated that tolls will be in line with gondola fares to encourage gondola usage, but what control will the state have over gondola prices? If prices rise to \$40-\$50 per roundtrip to cover the enormous cost, will you really raise tolls to that level? We want year-round solutions that serve the entire canyon, not just resorts.
37548	Thomas Thulin	I am not a skier, I'm a retired person 71 years old and on Social Security. I'm going to be taxed to pay for this gondola if it passes, which I'm reasonably sure it will because of the comments on all of the news channels, and I can barely pay for the things I need daily like medications, food, rent and transportation to get me to church and the doctors. Please have the skiers that are going to use it pay for it and leave everyone else alone.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37577	Clyde Thomas	<p>Little Cottonwood Canyon means a great deal to me. I have lived close to it in Sandy much of my life and have spent a lot of time in Little Cottonwood Canyon over my 69 year life time.</p> <p>I am concerned about the Gondola and the visual impacts. I question putting so much money into this project to benefit skiers and ski areas for just 15 or 16 weekends a year. Are there ways to create more incentives for people to use the ski areas more during the week and ways to move more people up the canyon by bus on weekends without a major widening of the road? Since the project is primarily needed for and being pushed by the skiers and ski areas, should the cost of the project primarily be paid by the ski areas and the skiers? The average citizen and taxpayer of Utah won't benefit from this project. This is not an ordinary road project.</p> <p>Did any former Utah Legislators and developers have inside information when they were involved in buying the land that will be used for the base terminal in the La Caille area? I heard the name of one of our former State Senators for Sandy as an owner of that land. I wondered if people have benefited from inside information.</p> <p>I also like the cog railroad idea however it appears to be much more expensive. Years ago during the mining times a railroad was used in the canyon. Could that former rail bed, now a bike path, be used again? Could snow slide sheds or roofs be used to allow the snow slides to go over the rail tracks?</p> <p>Is the average citizen aware of this project? I request more time to discuss it and more outreach to involve more people.</p>
37578	Nadene Davis	<p>I feel like the gondola is specifically geared to the wealthy who have the money to ski and the need to get there at their convenience and in a comfortable way. It seems like the rest of us will be the ones paying for their convenience and comfort. I was hearing that the gondola is run using a diesel power source. If this is true, I do not see how it will cut down on pollution.</p>
37579	Julie Gold	<p>I am very opposed to building the Little Cottonwood Canyon gondola. We don't need to burden Utah citizens for this when there are more important needs in our state; such as education, water concerns, highway issues, and making our roads safer. This gondola will serve mostly people who can afford to ski. Most of us can't afford to ski. Let the retailers and other private stakeholders finance this project.</p>
37580	Adam Smart	<p>Don't do this. There are more practical and cheaper ways to create transportation in little cottonwood canyon.</p>
37549	Ben Rainville	<p>No gondola</p>
37550	ANNE JANSSEN	<p>I am NOT in favor of a gondola. Please use increased bussing.</p>
37551	Angela Hawkins	<p>I am opposed to the proposed gondola in Little Cottonwood Canyon.</p> <p>Beyond the damage that it will do to the habitat, both flora and fauna, it will also be visual pollution to the iconic canyon.</p> <p>In the interest of environmental justice, it leaves a large part of the population unable to enjoy the canyon through prohibitive costs of parking.</p> <p>Other options without the large environmental impacts that the gondola option brings with it should be implemented first instead of going straight to such a detrimental and exclusive option. I support funding with my tax dollars enhanced (electric) buses and appropriated lanes, widening the road where necessary for peak period driving. I support tolls (similar to Mirror Lake Hwy format) as well as incentivizing those that carpool as well as locals that steward the canyon. Ultimately, I support preserving the natural canyon as best as we can and that should be the top priority. Following that, providing transportation up the canyon that is available and feasible for the majority is key.</p>
37552	Pam Logsdon	<p>I love our canyons and I am in opposition to the gondola proposal for Little Cottonwood Canyon. Before investing millions of dollars for a project that many of the citizens of Utah would not or could not use and would only benefit those who visit the canyon for skiing and recreation, further research and cost effective solutions need to be made. . For example: a parking reservation system, incentives for carpools and reservations for the resorts.</p> <p>The decision to build a gondola will affect many generations to come, both environmentally and economically. We all need to work together, local residents, environmental groups, ski resorts, developers and elected officials. Please listen to our voices.</p> <p>Thank you, Pam Logsdon</p>
37553	Kim Halamicek	<p>The gondola would be invasive and take away from the natural beauty of the area. Additionally, it would only benefit developers and two private ski resorts. It would not be available for use in the summer, it doesn't stop at hiking trails meaning I still have to drive up there. There is not adequate parking for passengers so I don't understand why this is the best option. I live off of Fort Union and I do not want a gondala here.</p>
37554	Travis Owen	<p>As a local resident of cottonwood heights I am FOR the gondola. I think it solves a complex problem long term and the main items of concern should be minimizing environmental impact and ensuring affordability.</p>
37555	Melissa Jardine	<p>As a Salt Lake City homeowner who frequents Brighton and Little Cottonwood canyon I strongly oppose the Gondola project. The price tag, the environmental impact, the lack of compelling data that it would actually be used (a 45+ minute ride), etc. has me very concerned. There are other ways to troubleshoot the congestion in the canyon, and a gondola is not the answer.</p>
37556	Trent Oldroyd	<p>I don't believe the gondola is a sensible solution. It appears to only shift the traffic bottleneck to the gondola base. It is too slow, therefore I will continue to drive up the canyon. Finally, it is a terrible eyesore that will forever scar the beauty of Little Cottonwood Canyon. Please do not proceed with the Gondola plan.</p>

37581	Luke Behrmann	To whom it may concern, I am writing to express deep concern at what has to be ill-thought reasoning to justify the construction of a gondola up little cottonwood canyon. I am one of those who loves skiing in the winter and have myself been frustrated with the long lines of cars and winter road closures. The fact however remains that the road, as it is, is already putting more people on the mountains and slopes that the mountains and slopes have capacity to absorb. There is only so many acres and so many ski lifts. Putting even more people up in the mountains via a gondola when there is no more space just makes no sense! The unfortunate reality is we need to be protecting the mountains be reducing our footprint, not putting ghastly eye-sour of a gondola that only for a hand full of days each year will put more people into the canyon than what any logical person could expect the canyon to be able to hold. It's not worth the cost. The simplest approach is to simply limit traffic with a pay booth at the bottom - you could probably buy one at home depot for a few thousand dollars. I have struggled to find people who support the gondola and am not sure why this is being forced on those whose mountains these are!
37582	Richard Thomas	It is inappropriate to spend so much public funding on a project that favors two private businesses while not devoting comparable resources to homelessness and other social ills first. Bad solution. Put real money behind electric bus mass transit to the canyons with frequent service from dispersed transit hubs instead.
37583	Brian Engstrom	Please rethink your decision to make the gondola the preferred choice in Little Cottonwood Canyon. As someone who lives and pays taxes in the Salt Lake Valley and utilizes LCC for recreation all year round I do not think there could be a worse outcome. In the summers I hike/backpack/climb all throughout the canyon and it is one of the magnificent treasures that keeps me living in the area. It is a respite from all of the hustle and bustle that an increasing population in the surrounding areas brings. I am also someone who patronizes the resorts who have campaigned so ardently against the wishes of the locals to put in a gondola. Snowbird and Alta have great resorts that help to show off the true beauty that awaits in Little Cottonwood Canyon. However, we should not then tarnish the natural magnificence we have in our backyards just to get the resorts a few extra ticket sales on powder days. Most can attest that on most good weekend days there are already pretty severe crowds at the resorts even with all the supposed issues with the LCC transportation situation. What are we really doing here? The solution has become to attempt to build the worlds longest gondola? Did we ever stop to ask why this would be the longest gondola? As someone who works in finance I can also say that this is just begging to be a project that gets started and flies over budget, but once you have started there is no going back. Who is this really for? Who is going to then deal with traffic to park at a gondola station and then pay a large sum of money to jump on a long gondola ride? This is a permanent decision that will forever hinder the landscape of LCC. Are you okay being the ones to make that decision against the will of a majority of your residents? There are thousands of less impactful alternatives that have not been tried. Lets spend some of this proposed money to make common sense changes that will make a real impact. That is the way forward. Please do not destroy the climbing and natural beauty in Little Cottonwood Canyon to build a large and untested method of transportation to appease a few people. For the sake of Little Cottonwood Canyon and all those who gain so much from this place, please help us save and preserve what we have! With much respect! -Brian Engstrom
37584	Iuliia Hiekel	I am adamantly opposed to a gondola for Little Cottonwood canyon, which would permanently destroy its incredible natural beauty with giant towers to support the gondola cars. This project is destructive in so many ways... along with scarring such a beautiful local place with such massive and irrevocable construction, the cost to current and future taxpayers is beyond irresponsible. Hopefully the right decision will be reached and an absolute stop will be put to this ruinous project. Thank you, Hiekel family
37585	Judy Neil	After having just returned from a very busy national park at the Grand Canyon I feel like the very best solution is more buses more often. I do not want a gondola.
37586	Olivia Sons	Can we not.
37587	L H	While I can see the attractiveness of a gondola I have to admit that very few people will ride it. When we look up the canyon do we really want to see wires and cables and poles? It is a beautiful site to behold as is. Charge an entrance fee, make a reservation system. There are so many other options that are cheaper and more effective than building something people won't use because they like to have their independence and control over transportation. After waiting I. Horrible lines at the lifts the anger at having to wait in another horrible line to get down. At least cars move. Don't pollute our canyon with such a vulgar concoction.
37588	Esther Nemethy	Every single person I know who actually cares about the environment and the quality of life here in the cottonwoods opposes the gondola. It is the worst possible idea, wreaks havoc on the landscape and outdoors culture, and is incredibly stupid and a waste of money. Invest in busses, car share apps, quite literally ANYTHING else. Say NO to the gondola.
37557	Jeff Holce	PleaSe don't built it. Unless you guys do built it then destroy everything so then there is no reason to go to the canyon

37558	Logan Jamison	<p>Hello, I am writing to express my opposition to the proposed gondola alternative. The canyon bottom of Little Cottonwood canyon lies on Forest Service land, which means it must follow a mixed-use policy. The gondola would benefit patrons of only two ski resorts during only those busiest days of winter while offering no benefit to the tens of thousands of canyon users outside that relatively small niche. Hikers, snowshoers, canyon residents, sightseers, backcountry skiers, rock climbers, and others would not benefit from the gondola. These user groups vastly outweigh the number of user-days represented annually in the canyon when compared to Alta/Snowbird skiers. A transportation solution in Little Cottonwood needs to benefit all user groups, not just those wealthy enough to afford the hefty price tag of a ski area pass. Additionally, the economic impact of Alta and Snowbird on the Utah ski and tourism industry needs to be better evaluated to determine if such a huge taxpayer-funded project is justified for the benefit of Utah's economy, as these two resorts make up a relatively small fraction of Utah's ski industry. Asking the public to pay for what is essentially a new ski lift for two private resorts is incredibly irresponsible.</p> <p>UDOT has proposed a massive project without any prior legitimate attempt at controlling the traffic in the canyon. Tolling (or simply banning) single-occupant vehicles on the busiest/snowiest days would be an obvious and relatively easy-to-execute strategy. Increased bus service has not been seriously implemented, and the fact that UTA is significantly reducing Little Cottonwood bus service for the 2022-23 winter is very disappointing. At a minimum, increased bus service and tolling need to be implemented before any intrusive construction project is even considered. Increased bus service and tolling can additionally be used in Big Cottonwood Canyon and other high-use areas as needed. The environmental impact and taxpayer-funded price tag on the proposed gondola are simply too great to consider it as a viable alternative when UDOT has not made any legitimate attempts at lower-impact solutions.</p> <p>Thank you for your consideration.</p>
37559	Tina Hughes	<p>There's a reason people love this state...nature, raw beauty. To drive up there, and picturing towers is heartbreaking. Ruins the beauty, the pictures, the essence, the whole concept of God's beauty. Our canyons are amazing. There are more against this than for it. Does that not mean anything?!!! Not everything in this state needs to be ruined. It's sickening and heartless.</p>
37560	Dianne Orcutt	<p>I am firmly OPPOSED to a gondola in the canyon. Frankly I am surprised this is the option we are discussing at this point. It does nothing to alleviate traffic for the variety of users of the canyon, and does everything to boost, at taxpayer expense - while also damaging the canyon, the use of private ski resorts (one at least that barely hides its utter disdain for actual Utahns). I would MUCH rather see a bus rapid transit system implemented. Public transit should be the first option. If this terrible gondola idea comes to fruition, the resorts should pay the full cost as they will be the ones receiving the bulk of the benefit.</p>
37561	Raechel Eck	<p>The gondola is an awful idea. It is crazy to me that it is being considered as 95% of Utahns hate the idea of putting a gondola. There are other options to at dont scar LCC</p>
37562	Michael Shelton	<p>I don't think the citizens of Utah should have to pay for a luxury that few citizens can afford or would use. Since the road in the canyon has to be cleared, as happens now, adding more frequent bus service would be more economical and at a more reasonable cost.</p>
37589	Andrew Ferrer	<p>First, and again, thank you for thorough consideration of the public's response to the initial and updated EIS review process and proposals.</p> <p>These draft comment reviews (of ~13,000 comments) take great care to pinpoint public commenter's failures to come to the same conclusion of the UDOT board's recognition of Gondola Alternative B as the "preferred alternative." The preferred alternative, Gondola Alternative B, still does not effectively take into consideration a more meaningful approach to the management of transportation issues to be addressed - which should include a more thorough analysis of transportation needs in other Wasatch canyons and the Salt Lake community at large.</p> <p>The Gondola options would immediately and irreparably begin to damage the natural environment in LCC without being able to guarantee proper mitigation of the traffic issues. The projections used to design these solutions are effective at estimating, for instance, possible reductions car volume to maintain car and bus progress up the canyon. In no instance are the promised reductions from Gondola Alternative B a viable guarantee that its operation will be forever smooth and more efficient than smaller, incremental changes that leave smaller impacts on the environment and taxpayer burden.</p> <p>The Gondola Alternative B includes an abridged version of enhanced bus service. The final review indicates the final state of these new constructions (hubs, bus stops, and buses) are yet to be determined. This indicates that, if followed, the gondola would begin operations and the smaller footprint bus facilities are then abandoned? There should be a clear life-cycle and ideally a reuse solution to any resources constructed during major transportation changes to the public realm.</p> <p>The primary objective here is to more efficiently move people up to the resorts and minimize congestion. UDOT repeatedly and accurately claims that it maintains no authority to specifically limit attendance at resorts, use of the road (outside of emergencies), or public lands. This is technically true but lacks the kind of vision that would lead to more holistic construction of a real solution to transportation problems. By focusing on the narrow scope of Little Cottonwood Canyon and its narrow feeder roads, the resources being marshalled here for a huge public infrastructure spending project will only potentially benefit a small percentage of the winter sport recreating population and more likely only benefit two private ski resorts.</p> <p>There is discussion of activating the Gondola service for year-round operation; would it receive any use or just hang limp for 9 months? Would the presence of the Gondola, towers, and cables be a preferred feature in some of LCC's busiest days to photograph fall colors? The Gondola plan also considers that advising people to rideshare would only be met with implementation of fees to passenger car use in the canyon in a tiered structure dependent on traffic conditions. Why is there an assumption that people will prefer the use of the Gondola over the use of an existing bus service? This process is</p>
37590	Bruce Harper	<p>Given that "interim" projects will be undertaken, and add to the expenses, this project seems ill advised. It seems to me it will directly benefit only the ski resorts and, of course, the skiers. So It seems reasonable that they should pay for it, rather than the general public. No tax funds should be used to profit the gondola company.</p>

37591	Ronald McKay	NO, NO, NO to the gondola. I predicted months ago that the gondola would be UDOT's choice- because of course it is the obvious "feather in the cap" for the stake holders with the most to gain- politicians and big business. Funny how "conservative principles" go out the door when it comes to flashy projects. Spend over \$550 million (at least!) of TAXPAYERS money to benefit who? Very conservative. It is a garbage choice that is unnecessary and a blight on a beautiful and unique landscape. And to those Snowbird and Alta locals that support this- shame on you. These comments are a waste of time, as you've already made your decision. I sure hope the lawsuits pile up on you. Good luck.
37592	Strauss Van Wagene	<p>Please DO NOT build the gondola. It won't address the traffic issues in the canyon, will crowd the slopes even more, destroy the grandeur of the canyon, hurt so many climbing areas impacting the sport throughout the canyon that the community thrives on in the off season and so much more. Udot needs to incentivize people to use public transportation. That means heated bus stops throughout the valley with more parking and coverings for folks. Buses on a constant 2 minute schedule, etc. in the off season these could be used by adding more bus stops in the canyon maybe but this can be fixed by improving what already exists and making people WANT to use public transportation. Please consider other options.</p> <p>Best, A fellow Utahn and lover of many sports in the canyon (including skiing).</p> <p>Strauss Van Wagenen</p>
37593	Frederick LaCasse	<p>The gondola primarily adresses ski resort use. For the gondola to be a more viable transportation option, it should have more stops at more popular recreation areas.</p> <p>The current traffic issue stays bad because UTA has not reliably expanded bus service with poor bus coverage during mid day. i.e. If you try to get a ride up to resorts from anywhere in the Salt Lake Valley, it takes 1.5 to 2 hours to get to the resorts since canyon bus service is 1 bus every 30 minutes. Furthermore, how is it that the parking hubs have not been developed on a larger scale and bus service expanded mid day.</p> <p>I feel that a better option is to build the parking hubs and expand the bus service. In addition, create a third land in the canyon for busses only. Have the bus lane equipped with variable directions. Morning til 1:00 PM have the third lane is one way going up the canyon. 1:00 PM til 7:00 PM one way going down.</p> <p>I am opposed to the gondola without more stops to more recreation points.</p>
37594	Blair Carruth	<p>Thank you for the opportunity to comment regarding the environmental impact statement relative to Little Cottonwood Canyon. As a resident of Sandy living approximately one mile west the mouth of Little Cottonwood Canyon, I frequently use the canyon for recreational purposes, mostly for hiking and fishing. I am greatly concerned about plans to build a gondola. The traffic problem the proposed gondola attempts to resolve is an issue for only a few months per year, and then typically only on weekends and holidays, yet the gondola is an expensive, permanent addition to the canyon's infrastructure. It is not needed. Other traffic mitigation solutions are better options such as more frequent bus service using low or no carbon emitting buses, parking limits at the ski resorts (as was implemented by Alta this past winter), and financial incentives that encourage car pooling and use of public transportation. Solutions such as these are less costly, more flexible, and better serve the interests of tax payers and canyon users. These are far better approaches than a gondola to address the seasonal transportation needs associated with the canyon.</p>
37563	Jay Bjorklund	Little cottonwood no gondola
37595	Brian Engstrom	<p>Please rethink your decision to make the gondola the preferred choice in Little Cottonwood Canyon. As someone who lives and pays taxes in the Salt Lake Valley and utilizes LCC for recreation all year round I do not think there could be a worse outcome. In the summers I hike/backpack/climb all throughout the canyon and it is one of the magnificent treasures that keeps me living in the area. 37564	Nicholas Gabel	I strongly support the addition of a gondola in LCC. It is forward thinking idea that will move people up the canyon easily, especially in bad weather. Buses have been tried and are not effective.
37596	Justin Kessler	Gondola and cog railway options are irresponsible use of taxpayer funds, nor are they responsible options to protect the beauty of LCC. They would, destroy the ability of everyone to enjoy the canyon 365 days a year to save some traffic time 10 days a year. More and better bus service is the way to go.

37597	Jake B	<p>Listen to your customers, and to your neighbors. Most, if not all, are vehemently opposed to the gondola proposition. Please think with your hearts and not with your wallets. The bus plan is a much better plan. Additionally, use some of the money you're willing to spend on the gondola to partially subsidize resorts to provide cheaper season passes to people who use the buses to get up the canyon. This option could be introduced as soon as this upcoming season, as it requires zero initial construction. After it is implemented, you can then spend time to properly expand the busing program. A gondola will not magically fix the problems plaguing this canyon. It will destroy the scenery and impact the environment around it. Please do not install a gondola in our home.</p>
37598	Kelsey Oliver	<p>Dear EIS Team in Little Cottonwood,</p> <p>I strongly urge you to support any alternatives to the gondola idea. This could include improving the transportation-related safety, reliability, and mobility for all users on S.R. 210 from Fort Union Boulevard through the Town of Alta. UDOT must also consider an alternative's environmental impacts, which includes impacts to water quality, air quality, and visual and noise impacts, among others.</p> <p>I'm a backcountry skier and Grew up in Utah. I have so many fond memories of enjoying the wilderness. Gondola construction will not play out the way UDOT sees it. There may be a flurry of use at the beginning, but tourists will stop using it often and locals will want to use other alternatives. This is also the worst time to install a gondola. With snowfall dwindling every year, how can we think of enhancing our tourism industry if there's not much snow to ski on in 15-45 years?</p> <p>The gondola will be a huge waste of resources and public land, land that is already used for recreating for backcountry skiers, rock climbers, trail runners, and trekkers. UDOT must prioritize other options and Utahns themselves for this decision.</p> <p>Thank you for considering my comment,</p> <p>Kelsey</p>
37599	Brian Engstrom	<p>Please rethink your decision to make the gondola the preferred choice in Little Cottonwood Canyon. As someone who lives and pays taxes in the Salt Lake Valley and utilizes LCC for recreation all year round I do not think there could be a worse outcome. In the summers I hike/backpack/climb all throughout the canyon and it is one of the magnificent treasures that keeps me living in the area. 37600	Dan Washington	<p>I think you should relook at the train system that was suggested in a study done in the late 60's. It would not only solve the problem in Little Cottonwood Canyon, but would help Big Cottonwood Canyon and Park City. The gondola is not the best option, and if anything is done the taxpayer's should not have to bear the burden of the cost, to the bring great profits to private businesses.</p>
37601	Diana Hendricksen	<p>Please try everything before building the tram. I don't think I should have my tax dollars pay for it at all. Ski reservations should be tried first.</p>
37602	Brian Keyes	<p>It's disappointing that after so much public input against the gondola that the preferred alternative gondola only benefits the canyon for about 20 days per year and will have operational issues in high winds or heavy snows as the gondola at Snowbird has already shown. For the heavy year round impact the gondola will have whether needed or not. Also the preferred alternative will forever impact the canyon and with snow level decreasing every year, it is doubtful that the gondola will be a logical option in 30 to 40 years.</p> <p>I still support common sense measures first like enhanced bus services without widening the road that will not have decades long impacts if the skiing or tourism in Utah declines as is expected with the drying of the Salt Lake and worse and worse air quality every year.</p> <p>It is clear that UDoT has not put forth the effort to maintain the bus service and I am skeptical it could maintain a gondola effectively. Cutting the bus service in half for the upcoming season for not being able to attract driver seems at odds with the proposed gondola budget.</p> <p>Please reconsider the chosen alternative in favor of an option that does not permanently mar our beautiful canyons in favor of a short-sighted money grab that could be useless in a few decades.</p>

37604	Ben Rich	<p>I would like to voice my opinion that I am against UDOT's proposal and feel that a gondola is the wrong choice for the canyon. I am a frequent user and property holder in [REDACTED] I ski and use the canyon frequently. The gondola would come at immense cost with very little benefit for the amount of cost. It would make use of the canyon even more exclusive due to the ride cost. I feel that expanding the road and adding additional bus service with better parking options is a much better solution. Overall, I think that the recent changes to the parking at Alta have greatly improved the parking situation. Please, please, please do not put a condola up little cottonwood Canyon.</p>
37605	Raichle Urban	<p>A trax train in an above ground enclosure/tunnel would be a wiser idea.</p> <p>This would not scare the landscape, would operate regardless of weather and move more people faster</p> <p>A tram in the canyon would suffer the same problems related to high winds.</p> <p>I oppose the building of the tram and encourage a brighter solution to be found</p>
37606	Ian May	<p>I believe we need to do a bus system with stops up the canyon. And not allow anyone to drive up the canyon during ski hours. With the final solution being a possible train up the canyon</p>
37607	Jake Berrett	<p>Terrible use of funds. Benefits few and will not be efficient. Not a good idea. No to the Gondola!</p>
37608	Laura Sullivan	<p>The gondola is NOT the best option for Little Cottonwood Canyon for many reasons:</p> <ul style="list-style-type: none"> -It will be extremely expensive for the taxpayers. A solution that costs the ski resorts and the skiers is the fair solution (the gondola stops at the 2 ski resorts; it's obvious who will benefit-resort owners and skiers, not the common citizen) -the canyon is beautiful and should not be marred by a gondola (one of the biggest in the country I believe) -this is not popular with the citizens, who are the taxpayers; their voice must be heard -it is debatable if this will even reduce the traffic greatly; therefore an enormous cost is not warranted <p>Please come up with a more sensible and cost-effective approach that will not put this burden on thousands of taxpayers that will not benefit from this monstrosity.</p>
37609	Katie Shuman	<p>It is a disgrace to the canyon to build this gondola. This will only benefit a select few at the cost, financially and emotionally, of the many people who love this canyon. It has been home to some of the most amazing skiing, climbing, and hiking trails with incredible views. That will be tarnished by the gondola.</p> <p>There also will be more people transported up the canyon. The canyon cannot hold many more people before collapsing. Please, do not build this gondola. This is taking \$600 million of taxpayer money to build a gondola the taxpayers do not want. Do not let our tax dollars fall into the hands of greedy capitalists.</p>
37610	Arlene Shepherd	<p>Totally for the gondola</p>
37611	Lindsay Jones	<p>The gondola is CLEARLY a pet project that is going to get rammed through no matter what. No one is working "for the people" or their constituents - the majority do not want this gondola. This isn't the way. Maybe resorts SHOULDN'T issue out IKON or Epic passes because that is truly a huge issue. I know many people have submitted some really great and more innovative ideas. It's all about money and what a certain few people want and that is obvious to pretty much everyone. This is absolutely ridiculous. All of the people in charge of this and pushing this through clearly don't care. Skiers aren't the only ones who use these mountains! Alta and Snowbird do not own these mountains.</p>

37612	Jess Petkow Fraser	<p>My name is Jess Petkow, I'm resident of Holladay and I do not support the current proposed gondola solution. As a hiker, climber, skier, nature enthusiast and biologist I understand there are less invasive and cheaper alternatives to the traffic situation at LCC. A better and expanded bus system could be a more feasible alternative addressing the issue and keeping the canyon pristine. The total investment for the current gondola solution is extremely high taking the size of the state in consideration and would only favor the private business that are based in LCC. There will be a risk to the watershed as well that could be a great risk. More busses (paired with an improved system) would allow more people to transit in and out the canyon without impacting natural resources, the landscape and intrinsic value of LCC. I appreciate Udot reevaluating the current proposed gondola solution and I'm looking forward to hearing from you.</p> <p>My best, Jess Petkow [REDACTED]</p>
37613	Emily Spoth	<p>I was on one of the most glorious hikes of my life in LCC on 10/9 - the falls colors were absolutely peaking, the weather was perfect, and the scrambling was ideal. However, I could not fully enjoy this restorative time in nature at the very thought that the view I was taking in is at risk of being marred by an unsightly gondola. Transportation infrastructure that permanently alters the canyon should never be considered. Why would we mar some of the only beautiful land we have left in the valley? Not to mention, there is literally no money for this project and its primary goal seems to be to make more money for the ski resorts that already put up millions in revenue. Additionally, there is irrefutable evidence that our winters will just never be the same, making the long term use of a gondola servicing just the resorts completely short-sighted. Imagine spending that money on actually trying to combat the climate crisis.</p> <p>Point blank, there are better solutions for LCC than a gondola that absolutely deserve UDOT's attention and consideration.</p>
37614	Emily Sharp	<p>The gondola is not good for the majority of Utahns. Air quality from construction to water quality to the fact that traffic wouldn't diminish just because some wealthy few can ride to ski slopes that may not even be snowy in a few decades. A colossal waste of public money which will benefit a few landowners.</p>
37615	Gina Sombatsaphay	<p>I am against the gondola. I do not believe this is in the best interest of Utahns. Put tolls in, make buses more viable, and consider that this landscape cannot sustain the amount of people ski resorts want to cram in there.</p>
37616	ARLYNE ARTEAGA	<p>First and foremost, it is disgraceful that although the public wishes to not proceed with any gondola plan, UDOT still is pushing for this agenda. A plan that asks for tax payer money, where the tax payers themselves do not want it, is truly disgusting.</p> <p>That aside, the gondola B plan should be scrapped in its entirety. This cannot go into effect until CONCRETE and TRANSPARENT plans are released regarding the new bus system and parking lot plan. There needs to be a statement and full plan given out to the public regarding HOW the gondola B plan will affect the canyons. This plan will ultimately affect the integrity of the canyon, where it's target users will only use it for a small amount of the year. The average Salt Lake City citizen cannot have access to the resorts for which this gondola is for. The average citizen enjoys their time outside in places that are accesible and free. Free and accesible options for our salt lake residents helps keep them healthy physically and emotionally. Forever changing the demographics of the canyon will negatively impact the access these residents have to the outdoors. Something that is ultimately needed for our well being. Little cottonwood canyon is one of the few areas where residents can enjoy the outdoors in their backyard. Salt Lake City urges you to take into account the needs of the public and not the needs of the financial stakeholders.</p>
37617	Hannah McNutt	<p>Please do not move forward with the gondola. I want my daughter to be able to experience the natural beauty as we did. People are still going to drive up the canyon and I don't think our tax dollars should go to something that is going to negatively impact nature.</p>
37618	Monica Valovic	<p>Please, please do not destroy our beautiful canyon. Did you go up there this weekend? How would the gondola fix that mess? How would the thousands of people hiking get to use it? White pine alone was completely blown. Better solutions can be found. The gondola is not it.</p>
37619	Jon Poulson	<p>I live in cottonwood heights, just off of Wasatch.</p> <p>No gondola. Take the community's voice into your decisions. Big business controlling has to stop. If this is about recreational access. Include all canyon recreation into the decision, not just the deep pockets.</p>
37620	Bette Shertill	<p>I am against the Taxpayers paying for this project. Because most of the local citizens can not afford to even go skiing. Instead this UFOT proposed monies should be used to build a pipe to the California coast in order to fill the Great Salt Lake. This would help all people living or visiting the Salt Lake City & surrounding by having non toxic air coming from the Great Salt Lake. We should consider building a 2nd pipeline along beside the designed for the Great Salt Lake to be used for our farmers land to water & to be used for the citizens usage in surrounding areas. Beside it everyone will leave Salt Lake City area. New businesses will not want be here either. Plus no use building new schools either as people are made sick. sick. No people will stay. They will go to another state.</p>
37621	Tim Barnett	<p>Who are the people paying for this? I can tell it will be like the 2002 Olympics, the local tax payers will. I don't want to see this built.</p>
37622	Emily Snow	<p>As a taxpayer in Salt Lake City and user of public lands in Utah, I am strongly opposed to the preferred primary recommendation- the gondola. This option comes at a huge cost to the general public, for the benefit of only a few. A project that primarily benefits private corporations, of this massive scale, which will forever change the natural landscape of LCC, is NOT an appropriate use of public funding- the public by and large does NOT support this option. This issue is more complicated and far reaching than this short-sighted solution takes into consideration. It will only be a band-aid to the growth issues we face, while irrevocably damaging the natural environment of our canyons and paving the way for further development. Please do not pursue this option. Thank you.</p>
37623	Brynna Robbins	<p>Don't build the gondola!!!!</p>

37624	Julie Halverson	No to the gondola! It does not solve traffic problems, only moves them down. The towers will be a visual disaster and disgrace to the beauty of the canyon. The time to get to ski slopes will not be faster than sitting in traffic. Up the bus system, don't scale it back like you are doing this year (nice trick!). Have better bus stations that protect riders from weather. Add tolls for private cars.
37625	Elaine Erickson	I absolutely hate the gondola idea. I can't think of a worse way of marring our canyon and preventing free access.
37626	Cassady Lyons	A gondola will RUIN our precious mountains. STOP HARMING NATURAL RESOURCES.
37627	Adrienne Poulsen	
37628	Ellise Shuman	Hello, I have lived in Salt Lake City since I was a little girl. I grew up at the base of little cottonwood canyon, it is my home. This proposed gondola will be utilizing a majority of taxpayer dollars to build and only be used 5 months out of the year. Why are we focusing our taxpayer dollars on this gondola instead of saving the salt lake, or funding for figuring out a solution to the bad air quality that causes high rates of asthma in The Valley? Furthermore, this gondola will not ease the flow of traffic up the canyon. People are still going to have to wait in traffic jams to get to the gondola in the morning. There are going to be massive lines in the gondola instead of in the canyon-this does not fix the problem. Also, what about the world-class climbing in little cottonwood? If this gondola goes in, some of these climbs will no longer exist. Also, this gondola will significantly detract from the natural beauty of little cottonwood canyon and the wildlife that comes with it. Please reconsider, and listen to the community, the local community who have put their lives into this canyon, who have grown up in this canyon, who go into this canyon to escape society and experience the outdoor activities little cottonwood has to offer.
37629	Kyle Daly	We do not want a gondola in Little Cottonwood Canyon. Instead, I urge UDOT to adopt enhanced bus service with no peak period shoulder lane as a solution to traffic congestion on S.R. 210. This solution should be implemented first, as it creates the least impact to our natural and cultural resources, including the Alpenbock Loop and Grit Mill climbing areas. Additionally, I implore UDOT to consider providing bus service to the popular trailheads including Gate Buttress, Bridge, Lisa Falls and White Pine, to further incentivize bus use among all canyon users. Again, NO GONDOLA in Little Cottonwood Canyon. Instead, we demand increased bus service.
37630	Catherine Staes	The permanent impact of gondola towers that only support access to ski resorts and are only advantageous for a set of weekends during ski season is not worth the negative impact on the environment. I am a skier and understand the desire but it is not worth it. Costs (financial and environmental and aesthetics) is NOT worth the benefit.
37631	Laura Peterson	A gondola is not the solution to Little Cottonwood Canyon's traffic problems. The gondola will not relieve congestion. It serves only to prop up privately-owned businesses who will contribute little, if anything, to the overwhelming cost of this project. A gondola will forever change the landscape and ecology of these precious canyons while doing little to change the traffic status quo. As a frequent hiker, runner, skier and biker in LCC, I am well aware of the traffic challenges in the canyon. The better solution to deal with this problem is frequent bus and/or shuttle service that will service not only the two ski areas, but the many trailheads in the canyon. Any weekend visit to the Red Pine/White Pine trailhead makes clear that LCC would benefit from frequent, inexpensive and accessible public transit options. UDOT must stop being so myopically focused on the gondola and instead look for more realistic options. These public transit options also need to connect to Salt Lake City. Throughout its governance and management, UDOT ignores the needs of people who want to travel in any way other than personal vehicle. That is very much reflected on its insistence on the gondola option (while at the same time planning to reduce bus service in the canyons in a transparent attempt to induce "need" for the gondola). Instead of moving forward with the gondola, UDOT needs to focus on providing year-round, frequent bus service throughout the canyon that will stop at trailheads in addition to the ski areas. The gondola is not the answer.
37632	Debbie Mudge	I do not think that the Gondola is a good idea. It would destroy the scenic beauty of the canyon. Most of the people I know could not afford to use it. I think the parking reservation system at Alta and the bus system is working well. I think our tax money should be spent wisely. Especially in this time of inflation. The Gondola is not a wise use of our tax dollars.
37633	Julie Wood	No to gondola. Up bus service with better stations which protect riders from weather. Aim for train system long term. Gondola does not solve traffic issue, only moves it.
37634	Kyle Daly	We do not want a Gondola in Little Cottonwood Canyon, Instead, I urge UDOT to adopt enhanced bus service as a solution to traffic congestion on S.R. 210. This solution should be implemented first, as it creates the least impact to our natural and cultural resources, including the Alpenbock Loop and Grit Mill climbing areas. Additionally, I implore UDOT to consider providing bus service to the popular trailheads including Gate Buttress, Bridge, Lisa Falls and White Pine, to further incentivize bus use among all canyon users. Again, NO GONDOLA in Little Cottonwood Canyon. We demand increased bus service.
37635	Sarah Miles	Little Cottonwood Canyon needs something more realistic than a gondola. Please do not decimate the canyon with something so nonsensical.

37636	Nancy Radigan-Hoffm	<p>The gondola is a bad deal for Utah. Its excessive cost and the impact on canyon users besides resort skiers are reasons to look for alternative solutions to canyon traffic. Increased bus service combined with tolls on private vehicles are such an obvious solution that it strains credulity that UDOT prefers a project that will cost the better part of a billion dollars and that will only serve resort skiers in a canyon that is full of climbers, hikers, and backcountry skiers/snowboarders. Bus routes could be easily modified to serve popular trailheads during warm months -- and warm months are starting to outnumber cold months due to climate change. More buses and more drivers could also allow UDOT to address the traffic in Big Cottonwood Canyon. Buses would not even be appreciably slower than the gondola, especially since the gondola solution itself envisions an unnecessarily complicated series of shuttles.</p> <p>The fact that UDOT announced that it will be cutting ski bus service by half for the upcoming ski season speaks to UDOT's bad faith in this entire process: if reducing canyon traffic was truly the priority, then all efforts would be made to make driving for UTA an attractive job with good pay and benefits. Instead, it is clear that UDOT's priority is to maximize developer profits, not to mention the profits of Snowbird and Alta, both of which are for-profit businesses operating on public land.</p> <p>I am for a public solution that works as well as possible for as many canyon users as possible. That solution is increased bus service, with no more additional construction than strictly necessary. I believe we must be responsible and careful stewards of the land, and it is folly to destroy so much of what makes Little Cottonwood Canyon a special place. Gondola piers or a widened road will destroy the world-class bouldering in the canyon. Popular trails and areas may be restricted underneath the gondola's path. The earth does not exist for the cleverest and best-connected among us to profit from. There are values that are more important than profits, and I believe that it is entirely feasible to improve public access to the beauty of Little Cottonwood Canyon without the invasive boondoggle of the gondola. Buses might not be glamorous, but what's the need for such an expensive, visually impactful, and destructive "solution" when we have an easy answer at our fingertips?</p> <p>I, like 80 percent of Utahns, strongly oppose the gondola. We have serious environmental problems staring us in the face: the Great Salt Lake is drying up, and if we allow that to happen, our state's economy is sunk. Tourists aren't going to flock to a toxic dustbowl for the dusty, crusty "greatest snow on Earth." Why would UDOT obtain hundreds of millions of dollars in public funding to enrich a private few when we so obviously need to allocate that money toward conservation?</p>
37637	Griffin Jardine	<p>I am strongly opposed to the gondola. The canyons are already full to capacity and all this would do is ruin the natural beauty of the glacial canyon and add to the overcrowdedness of the ski resorts.</p>
37638	Kyle Daly	<p>We do not want a gondola in Little Cottonwood Canyon, Instead, I urge UDOT to adopt enhanced bus service as a solution to traffic congestion on S.R. 210. This solution should be implemented first, as it creates the least impact to our natural and cultural resources, including the Alpenbock Loop and Grit Mill climbing areas. Additionally, I implore UDOT to consider providing bus service to the popular trailheads including Gate Buttress, Bridge, Lisa Falls and White Pine, to further incentivize bus use among all canyon users. Again, NO GONDOLA in Little Cottonwood Canyon. We demand increased bus service.</p>
37639	Lance Lindberg	<p>As an avid user of Little Cottonwood Canyon I am very concerned and disappointed with the decision to move forward with the Gondola. I believe this decision serves the interest of a few with the reasons explained below. 1. The gondola only give access to Snowbird and Alta. There is far more to the canyon than these two resorts and it is concerning that this decision is only in the best interest of the resorts. 2. The resorts have the ability to impact canyon traffic be making changes to parking on busy days with reserved parking. This has been clear over the past couple years. Alta made changes to their parking during the 2021-2022 season on busy days that lead to individuals spreading out their arrival times. If both resorts were willing to make similar changes this could greatly impact the flow of traffic on busy days. This is a very inexpensive decision that have great impact. 3. The decision to build a gondola is based on current circumstances. It is clear global warming is changing the skiing environment in the canyon. This proposal does not take into account that global warming may limit the ski season altogether leaving tax payers with and expensive and useless gondola. 4. UDOT is now proposing a toll for the canyon as well. This further creates an environment of access to the outdoors limited to those with wealth. Access to the outdoors as a public space should be available to all not just the wealthy. I recommend that UDOT work with the resorts to find a solution that is not a taxpayer give away to further financial gain for Alta and Snowbird. I recommend the resorts look to find solutions with parking reservations and other means to solve the traffic problems. There are other solutions with for less expense.</p>
37640	Kyle Daly	<p>We do not want a gondola in Little Cottonwood Canyon, Instead, I urge UDOT to adopt enhanced bus service as a solution to traffic congestion on S.R. 210. This solution should be implemented first, as it creates the least impact to our natural and cultural resources, including the Alpenbock Loop and Grit Mill climbing areas. Additionally, I implore UDOT to consider providing bus service to the popular trailheads including Gate Buttress, Bridge, Lisa Falls and White Pine, to further incentivize bus use among all canyon users. Again, NO GONDOLA in Little Cottonwood Canyon. We demand increased bus service.</p>
37641	lauren tregnaghi	<p>the gondala is ugly and expensive. domt be lazy and walk up the mountain if you hate traffic that bad. we have way more important issues to use that money on.</p>
37642	Jake Nelson	<p>As a sandy local born and raised I'm extremely against the proposition for a gondola. Locals do not believe it is a long term solution for the canyon. We need a solution that can provide access for all people, all activities, all seasons, and all aspects of the canyon. Another the reason the gondola is a not beneficial is the dirty money that flows behind it. Former politicians who own the property around the la caille area should be a red flag. The gondola would dramatically change the view and damage pristine areas for rock climbers. I have sympathy for Carlos Braceras who has been thrown in the middle of this political issue. I would much rather have toll or road widening as a sufficient long term solution. We need to listen to the locals speak about this issue since after all it is our tax money. We should have a say or a vote on this issue.</p>

37643	Patrick Penne	Little Cottonwood Canyon holds great aesthetic and recreational value, and unnecessary development should be avoided. The canyon should not be drastically altered further by the construction of the gondola that would primarily exist to serve ski resorts. Other Alternatives should be given more consideration, such as buses or other public transit options
37644	Kyle Daly	We do not want a gondola in Little Cottonwood Canyon, Instead, I urge UDOT to adopt enhanced bus service as a solution to traffic congestion on S.R. 210. This solution should be implemented first, as it creates the least impact to our natural and cultural resources, including the Alpenbock Loop and Grit Mill climbing areas. Additionally, I implore UDOT to consider providing bus service to the popular trailheads including Gate Butress, Bridge, Lisa Falls and White Pine, to further incentivize bus use among all canyon users. Again, NO GONDOLA in Little Cottonwood Canyon. We demand increased bus service.
37645	Cory Linton	I support the gondola. It will be much, much less impact on the environment - pollution, surface area impact, noise, etc. it will also become a year round attraction, to ride up the gondola.
37646	Todd Glew	Please no gondola!!!!
37647	Jessica Arnold	Please no gondola. This is not what the community wants. Please invest this money elsewhere - better public transportation where it matters most, saving the great salt lake, etc.
37648	Cindy Perez	I do not think te gondola should come from the tax payer dollars or fund. The only people benefiting from this gondola are people who have the funds to be skiing or use the resorts. If the gondola goes up it should come from the resorts where it is benefiting them and their revenue.
37649	Jarrold Lummis	Hello! My name is Jarrod Lummis and I live in the Mill Creek neighborhood of Salt Lake City. The reason I am commenting is because I strongly disagree with the development of a Gondola in LCC. As a climber, runner, hiker, snowboarder, hunter, fisherman and overall general conservationist this issue is important to me because I care deeply about the land not only where we recreate, but the land that also provides sustainability to our valley as part of our precious watershed. With the influx of residents and the ever growing demand for water, further development in our canyons of this magnitude would have a significant impact on our watershed. I applaud the efforts of UDOT in ensuring that the community's voice be heard ensuring appropriate and accurate representation. Thank you for your time and I look forward to a time when increased electric buses and public awareness of the detriment of single occupancy vehicle use significantly reduces the congestion in our canyons! Thanks, Jarrod
37650	Jenessa Henrie	A gondola up LCC is not going to do anything to alleviate the amount of traffic going up the canyon. It will just provide another avenue to get more people up the canyon. The money for the Gondola can be better spent on a better bus/shuttle service, incentives for carpooling, better infrastructure, etc. It would be nice if priority could be given to Utah residents on peak days as it relates to getting up the canyon (I.e. tolls or reservations required for non residents). Hopefully the beauty of LCC can be preserved with whatever decision is made!
37651	Brian Engstrom	Please rethink your decision to make the gondola the preferred choice in Little Cottonwood Canyon. As someone who lives and pays taxes in the Salt Lake Valley and utilizes LCC for recreation all year round I do not think there could be a worse outcome. In the summers I hike/backpack/climb all throughout the canyon and it is one of the magnificent treasures that keeps me living in the area. It is a respite from all of the hustle and bustle that an increasing population in the surrounding areas brings. I am also someone who patronizes the resorts who have campaigned so ardently against the wishes of the locals to put in a gondola. Snowbird and Alta have great resorts that help to show off the true beauty that awaits in Little Cottonwood Canyon. However, we should not then tarnish the natural magnificence we have in our backyards just to get the resorts a few extra ticket sales on powder days. Most can attest that on most good weekend days there are already pretty severe crowds at the resorts even with all the supposed issues with the LCC transportation situation. What are we really doing here? The solution has become to attempt to build the worlds longest gondola? Did we ever stop to ask why this would be the longest gondola? As someone who works in finance I can also say that this is just begging to be a project that gets started and flies over budget, but once you have started there is no going back. Who is this really for? Who is going to deal with traffic to park at a gondola station and then pay a large sum of money to jump on a long gondola ride? This is a permanent decision that will forever hinder the landscape of LCC. Are you okay being the ones to make that decision against the will of a majority of your residents? There are thousands of less impactful alternatives that have not been tried. Lets spend some of this proposed money to make common sense changes that will make a real impact. That is the way forward. Please do not destroy the climbing and natural beauty in Little Cottonwood Canyon to build a large and untested method of transportation to appease a few people. For the sake of Little Cottonwood Canyon and all those who gain so much from this place, please help us save and preserve what we have! With much respect! -Brian Engstrom
37652	Cheryl Kelly	I am not for the Gondola plan. This plan will obstruct the beauty of the canyon and alter the area. It's disappointing. Let's invest in preserving an area that we proudly get to share with so many visitors. This is also a solution with a big price tag. How is the project being funded to support the resorts? Share other options that were researched and how they would work and the impact they would have on the area. Many residents are against it. Councils have voted against it. Please respect the locals. Finally, the advertising to promote the gondola honestly made me question who is behind the campaign and what's in it for them. No to the Gondola is my vote.
37653	Tim Irwin	As a non resort user of the canyon, I am deeply disappointed at the idea of so much taxpayer money being used to fund a gondola for a very select group of users. Please no gondola
37654	Monika Brickson	The gondola is not a benefit to everyone in our recreational community. It targets a specific segment. Say no to the gondola which will scar our beautiful canyon. Explore another way.

37655	Carlee Spencer	I prefer the electronic bus alternative, as we already have multiple park and ride lots set up around the valley that can continue to bus individuals up the canyon. I believe that a gondola will add more congestion in areas of our canyon and/or elsewhere in Sandy , where there does not already have space or infrastructure created. If infrastructure is built, it will further destroy the beauty of our canyons. Given that towers will need to be erected to allow gondolas to cable through the canyon, the beauty we get to see now will be polluted with such infrastructure, as well as gondolas in the view of our beautiful canyons. I am a firm believer that the taxpayer should not be paying for whatever the choice is. If the ski resorts need a solution to allow more skiers up the canyon, they should be the ones paying for the solution and ensuring it does not impact the residence and taxpayers of Utah or Sandy City.
37656	Carol Linder	No to the gondola plan. It destroys the environment in parts of the canyon for its construction & maintenance. It serves only two ski resorts for a few weeks in the winter. It is of no use to hikers. It destroys the canyon views & scenery. Much better to arrange ample parking & frequent shuttles to the resorts for the few weeks transportation to the resorts is needed. Tax dollars should not be used for this project which benefits only a small number of Utah residents.
37657	Natasha Andreasen	I do not support the gondola
37658	Matt Rawlings	<p>First things first, building a gondola is not the only option nor is it the best one!</p> <p>There are claims that the gondola will serve more than just ski resort users but that is not the case. With the only stops being the base of the canyon and the ski resorts, it makes no sense for any other people to use the gondola. This heavily ignores other year-round recreators.</p> <p>The erection of such machinery will destroy so much! This includes views and historic world-class climbing resources. The gondola is fiscally irresponsible. The gorgeous views of pristine granite and pines will forever be interrupted by towers and cables. The rush of the river will be replaced with the consistent hum of machinery and construction.</p> <p>Why go for an option that costs over half a billion dollars when other, better options haven't been exhausted? Why not tolling up the canyon during the busy season? (which is usually only about less than a month out of the entire year)</p> <p>Reducing cars up the canyon, increasing the number of buses would be a simple solution to increase travel safety during busy times.</p> <p>The ski resort lifts wouldn't even be able to handle the number of people that the gondola should shove up the canyon! This would just cause people to wait at the top of the canyon now.</p> <p>There are better options for Little Cottonwood Canyon and for the people who care about it.</p>
37659	Kelsey Higgins	As a resident of SLC and someone who regularly commutes up LCC for work I understand the beauty of the canyon and the desire to preserve it. The move towards reviewing and altering our current transportation system to preserve the lands we have access to is long overdue and very welcome. This being said, I do not feel that the proposed gondola is the best solution. The issues I see with the proposed plan is that the gondola will not benefit those who access the canyon for lands below the resorts, many of whom are residents who will be contributing tax dollars to this project. I also feel that this does not appropriately address the issue of environment equity. Those of us who are able to regularly access the canyons do not represent the greater population of Salt Lake City and the greater valley, all of whom are equally impacted by climate change and will be contributing monetarily to this project. While I have a desire to work to keep the canyons and other natural lands healthy I do not think we can do this while the same amount of funding is not being given to projects to reduce emissions and the environment impact of the greater valley. I feel that the funding needed for the gondola would be better spent improving transportation infrastructure in the valley and other projects such as increasing free transportation programs, electrifying school buses and incentivizing large employers to offset transportation costs. Again, I support the effort to reduce the environmental impact of our transportation however I do not feel the gondola is the most equitable solution.
37660	Adrienne Poulsen	My husband and family and four children have been skiing at Snowbird for over 15 years. And I as a child grew up skiing at Snowbird. I am asking you to reconsider the gondola. I do not feel that it is the best plan for that beautiful canyon. My kids are on the Alta bird free ride ski team and with increased bus system and good buses we could spend a lot less and do less damage to the environment! Please don't let that go in and ruin that beautiful canyon and the mouth of that canyon!
37661	AR Thomsen	The gondola is a ridiculous waste of taxpayer money when there are more pressing transportation needs in Utah. Prior to the pandemic there was a UTA bus that went from approximately one block from my home to across the street from my workplace. That bus has been discontinued with no plans, per UTA, to reinstate it. I am now forced to drive to work because the public transportation options are limited and require a great deal of walking up hill to reach my employer. If any money is to be spent on transit problems, it should be focused on getting working class people quickly and efficiently around the Salt Lake Valley all year long rather than on getting rich people out of the valley a few months of the year.

ID	Full Name	Comment
37662	Miles Mokolke	<p>I am COMPLETELY AGAINST the LCC Gondola.</p> <p>My name is Miles Mokolke and I am a freshman at the University of Utah. I am from Flagstaff, Arizona, and am a lover of and advocate for the outdoors. I have grown up in the outdoors, being fortunate enough to have passionate parents and the ability to access the places I love. One of the biggest reasons I decided to attend the University of Utah is because of the access to outdoor recreation that the Salt Lake City area has. I am an avid cyclist/mountain biker, skier, and I absolutely love hiking, backpacking, swimming, and just spending quality time outdoors. If I'm being honest, when I first heard about the gondola, I thought it sounded like a good idea. I think that public transportation is going to be an important part of our future, and to me it sounded like a good way to get cars out of the canyon and a lot of people up the mountain with less of an environmental footprint. However, in my first weeks in Salt Lake City, I learned more about the horrifying reality of the proposed gondola. I joined the Students for the Wasatch club at the U, and attended the Sandy city council meeting on behalf of them, and vehemently against the gondola. I was not planning on speaking at the meeting at all, but was motivated to because of how strongly I feel about issues like this. I was moved to tears even in my short public comment due to my passion. As I said in my comment, I see this debate as part of a much larger theme that our society is battling with right now, one of climate change. There is absolutely undeniable scientific evidence that climate change is not only a human-caused, increasingly catastrophic phenomenon, but also one which must be addressed within the next few decades to avoid irreparable damage. You don't even have to listen to the scientific evidence for climate change, because nowadays the consequences of it are so severe that, more often than not, the entire West coast is on fire, the Midwest's agriculture and ecosystems are being demolished, and the east coast is drowning in record-breaking hurricanes.</p> <p>One thing that struck me in my visit to the Sandy City council meeting was all the talk about money. I UNDERSTAND the importance of money in our society, but I (and countless others from my generation) am positive that money is far less important than preserving our environment.</p> <p>Here is just one of the many reasons that the LCC gondola is an awful idea: it is an IRREVERSIBLE and rushed decision. There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws.</p> <p>We have seen parking reservations work throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon. I am asking you from the bottom of my heart, PLEASE make the right decision to take care of our planet and NOT go forward with the gondola.</p> <p>Thank you for your time</p>
37663	Marcia Furner	No gondola! Save our canyons!
37664	Sam Sather Brogna	<p>I am against the Gondola option in Little Cottonwood Canyon. Building a gondola in the canyon would be destructive to our precious watershed, the habitat for the flora and fauna, as well as compromise and, in some places, destroy areas of decades old recreation. The visual eyesore alone would be detrimental to the value that Little Cottonwood Canyon currently offers to so many varied user groups. The gondola would change the serene beauties of the natural canyon to one likened only to an amusement park. This canyon is loved dearly, and almost to death by so many. If the gondola were to actually move as many people as it claims to be capable of, and there are that many that would fork out the fees to ride it to the ski resorts, the end result would be more miserably crowded than it already is. How many is too many? Remember, this is a canyon, not a city that requires trains, subways and gondolas. Relevant perspective seems to be lost on this issue.</p> <p>As the cost for the gondola listed in UDOT's EIS is much less than is currently being reported in the news, it is not as cost effective as the other options. I do not support the gondola option as it will be limited to only those that can afford to pay for parking at the LaCaille Base Station as well as the fee to ride the gondola. This cost on top of the cost for a ski pass is even more limiting. Those that currently ride the UTA buses up the canyon pay for a bus pass that benefits them every day of the week anywhere along the Wasatch. The fiscal benefit of the gondola benefits the owners of the proposed base station location and Alta and Snowbird Ski Areas only. To expect the tax payers to pay for an option that is exclusive and not benefitting the majority is egregious.</p> <p>Other options without the large environmental impacts that the gondola option brings with it should be implemented first instead of going straight to such a detrimental and exclusive option. I support funding with my tax dollars enhanced (electric) buses and appropriated lanes, widening the road where necessary for peak period driving. I support tolls (similar to Mirror Lake Hwy format) as well as incentivizing those that carpool as well as locals that steward the canyon. Ultimately, I support preserving the natural canyon as best as we can and that should be the top priority. Following that, providing transportation up the canyon that is available and feasible for the majority is key.</p>
37665	Cathie Costanzo	As a mother to a disabled adult it is hard enough now to get to the creeks there due to the pipes. Autism menas we will never be able to see the canyons again. if you do this. The crowds on a gondola will be to much. You do this you will be in violation of ADA laws. Discrimination by this mode of transporation. Shame on you. Life long tax payer and vet family. here. You must hate us.
37666	Genevieve Smith	Please do not build the gondola. We are already working so hard to preserve the beauty of this state. My sick dad who lives downtown already cannot leave his house in the winter because of how the air quality already affects his health, please don't add more.
37667	Phillip Schulte	I am for the gondola, due to the long range environmental impact and will attract tourists to ride it year long.
37668	Steven Rokeach	<p>My wife and I live near the base of Big Cottonwood Canyon just off Wasatch Blvd.</p> <p>We are opposed to the Gondola as being excessively expensive and will relieve severe traffic congestion a handful of days. The infrastructure needed to support the plan is not built, either at the base of LCC or at the destinations and will require a huge investment, likely to be born by the taxpayers and not necessarily by the users.</p> <p>We continue to favor tolling the road and improving bus service.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37669	Christian Faber	To Whomever Will Read This, My name is Christian. I'm an EMT here in Utah and Ive grown up in Holladay near the Cottonwood Canyons, recreating in them for as long as I can remember. I am very concerned about the grandiose plan to erect the longest gondola in the world up Little Cottonwood Canyon. This permanent and rushed decision will disproportionately cater to resort skiers over all other people who choose to recreate in the canyon. Other options should be explored first. Thank you for your consideration.
37670	Valerie Neilson	Please do NOT allow the gondola to be permitted up Little Cottonwood. It would destroy the canyon and cost a fortune.
37671	Monica Gardner	There are other means to solve the congestion problem in Little Cottonwood that are not seriously being considered (more buses, tolling, limiting traffic)! The gondola is an expensive and invasive method of moving congestion to the bottom of the canyon and into those local neighborhoods. Preserve what makes Little Cottonwood special instead of contributing to its demise for the sake of more business in ski tickets sold. The canyon is a public good we should all protect and enjoy, NOT develop. As a climber, skier, and canyon employee, I and most of my community, do not support the gondola. Protect LCC! No gondola!!
37672	Nancy Curtis	Definitely "no"to gondola.
37673	Janet Hemming	I oppose the Gondola recommended by UDOT to solve traffic congestion in Little Cottonwood Canyon. It is a terrible waste of taxpayer dollars and will result in this beautiful canyon being permanently scarred with 20 steel towers -- the height of skyscrapers. For what? So traffic can be alleviated for a mere 55 days of the year? It doesn't add up. A half billion dollars is the estimate for the gondola -- and that's in 2022 dollars, which could escalate each year before the project even begins. UDOT has not secured a funding source and we've learned from Secretary of Transportation Buttigieg that the project doesn't qualify for federal money. It is unfair to place this burden on the backs of hard-working Utahns who are already burdened with severe pocketbook issues -- inflation, a housing crunch, sufficient funding for education, a drastic water shortage, a dwindling Great Salt Lake and more. This is a frivolous project that should not come to fruition. It's a huge giveaway that only benefits a small interest group -- skiers who wish to use two ski resorts during the busiest ski days of the year. Let's find better ways to achieve a win-win by preserving our beautiful canyon and keeping these man-made monstrosities out, while either limiting access to the canyon, getting skiers to "draw" for certain ski days, using electric buses, or something else.
37674	Barbara Bartee	Please do not put not put the overpriced eyesore of a gondola in my backyard. Please try other ideas like reserved parking, timed entry, increased bussing, fees for cars to access they canyon, etc. ideas that are working for our national parks. There is no reason to waste so many of our tax dollars on a gondola that will ruin the look of our canyon before trying to alleviate congestion in the canyon using less invasive and more cost effective means. I personally don't know of any person in favor of the gondola. Because of it's unpopularity I believe it's important to try other alternatives. Thanks you
37675	Mike Christensen	The LCC EIS lacks any vision that would substantially advance the goals of improving transportation, economic viability, environmental sustainability, and recreation stewardship in Little Cottonwood Canyon. The underlying assumption of the statement is that models project that traffic volumes will significantly increase by 2050. Since widening the highway in Little Cottonwood Canyon to accommodate the increase is not feasible, the EIS is seeking transit alternatives solely to handle the projected increase. The prime directive of the EIS is to ensure the free flow of traffic and not advance the aforementioned goals. As such, the means under consideration to address that end will not produce a transportation solution that fosters the vision that is needed for the Wasatch Canyons. In summary, I feel that the LCC EIS is antithetical to those goals.
37676	Taylor Brody	The proposed solution does not address many concerns like equitable public access to trailheads and resorts, potential for overcrowding, visual and environmental impact and year round access. I think UDOT should skip the Gondola and focus its efforts on simpler, more easily attained transit solutions using existing infrastructure: tolling for all canyon users to disincentivize SOV's, enhanced bus lanes, enhanced and potential electric bus service (already being cut for the 22-23 season), alternating uphill/downhill flex lanes, etc.
37677	Shelby Cinea	The future of the Great Salt Lake is in jeopardy, and is so much more important than supporting two resorts that cater to a few. All of our lives, and the surrounding ecosystem, are on the line if the Great Salt Lake is ignored. It is an immensely important area for migrating birds, among other benefits. Gondolas do not need to be built with taxpayer dollars. You can find a donor, or donors, for such frivolous spending. Invest in what matters.
38639	Carl Fisher	Please find Save Our Canyons comments on the FEIS for Little Cottonwood Canyon, attached.
37678	Maria Gordoia	I do not to see a gondola in little cottonwood. I do not support the ski resorts and this solution is catering to them. There are more effective alternatives that are less expensive and more convenient. I do not want to see the big towers and cables. I want to see trees and rocks and mountains. Do not ruin that. This can't be undone. Try harder and create a better solution for all users of the canyon.

37679	Jonathan Remein	<p>To whom it may concern,</p> <p>Regarding the preferred alternative and Final Environmental Impact Statement...</p> <p>The impact to the area between and including the Alpenbock Loop Trail and the Grit Mill Trailhead alone far exceeds de minimis impact that would be sustained to the boulders within that resource, which should be considered a major contributor to the section 4(f) resource designation. A minimum of 4 boulders being completely removed, with many more impacted due to the road widening or gondola easement, is already more than enough to create an "adverse effect" on the protected activities, features, or attributes of this resource. Other impacts are wholly left out of the Revised Chapter 26 including noise attributed to the gondola and impacts to the viewshed from within the boulder field and from the cliffs above, which would further contribute to a lasting effect of the activities and features of the area.</p> <p>It is also stated that if the use of a Section 4(f) resource is indeed deemed to be of de minimus impact, there also must be "no prudent and feasible avoidance alternative." Initial cost estimates for the preferred alternatives are over \$500 million, and other (more prudent and feasible) alternatives such as increased bus usage without road widening, tolling, incentive programs, etc. have yet to be tried.</p> <p>One of the largest problems with the preferred alternative is that the massive amount of temporary and permanent impacts to the canyon will be benefiting only a certain user group for a very small portion of the year that is only getting shorter with the onset of climate change. Considering this highlights how remarkably imprudent the massive investment is to construct a gondola up Little Cottonwood Canyon. Everyone knows other, less intensive options exist to mitigate the problems facing the canyon. Jumping full on into this massive investment that will take years to come to fruition would be irresponsible and a poor use of taxpayer money considering other areas which could use these resources.</p> <p>I hope that my comments help you in your decisions regarding our beloved Little Cottonwood Canyon. I really believe a better alternative can be reached for satisfying all parties.</p>
37680	Elizabeth Jones	<p>My primary concerns are accessibility. What would it cost to take the Gondola? Is this feasible, in addition to the \$160+ lift ticket? If the taxpayers are paying for the Gondola then the taxpayers should be able to afford it.</p> <p>Additionally, will each car have an employee to crowd control? Or would the people in the Gondola be left to themselves on a 30 minute (or more) ride up the canyon in the air. Without opportunity to get off? What is the plan for a medical condition? For a confrontational instance?</p> <p>Actually how long would this ride be? I would imagine that Gondolas do not move 40 mph (the speed limit in the canyon). So would it take over an hour to get up the canyon?</p>
37681	Leslye Penticoff	<p>I strongly oppose the Gondola B Alternative. I do not support spending \$550 million of taxpayer dollars, which I contribute to as a resident and homeowner in Salt Lake City, on a project that will mainly benefit private ski resorts. Not only is this project an irresponsible use of my taxpayer dollars, but it will also cause irreversible damage to the natural resources in Little Cottonwood Canyon that all Salt Lake residents enjoy the other three seasons of the year. I ask UDOT to reconsider the much less expensive, less destructive solution of expanding the use of electric shuttle buses.</p>
37682	Randy Lucero	<p>I'm in favor of the gondola protect. The traffic up the canyon has become unmanageable and unsustainable. The people recreating choose not to use the bus given the schedule and how crowded it is. This is off-subject, but the cause of this are the epic and icon passes that have increased the traffic beyond what it can hold. I used to live at the mouth of the canyon 25 years ago, and it took me 14 minutes to go from my driveway to entry Four at Snowbird. Today on a good day, that would take an hour. The past few years, I have chosen to go elsewhere skiing. However, if the gondola is approved and constructed, then I will once again, frequent Alta and Snowbird.</p>

37683	Simon Fraser	<p>My name is Simon. I am a resident in Holladay and a registered Utah voter. I'm writing a comment because it's very important to me that you deny the Gondola project in Little Cottonwood Canyon.</p> <p>The reason I moved to Utah 3 years ago was because Salt Lake City has some of the best access to pristine outdoors you can find. Being in nature, away from the hustle and bustle of the city fills my soul, so I make sure to venture into Little Cottonwood Canyon at least once a week. I go there year-round to climb, hike, run, and soak in the beauty of the canyon. This is why this issue is so important to me.</p> <p>The cost of the gondola project, as laid out in the EIS, is extremely expensive. When compared to the entire Utah State budget (which is paid for by taxpayers), it is quite a large chunk of money disproportionately going towards a solution that is meant to serve a very small portion of the taxpayers in the state.</p> <p>It will also permanently alter the view, sound, and natural environment of the canyon for myself and for thousands of year-round users of the canyon.</p> <p>I urge you to not only consider, but to recommend and to move forward with less invasive and less expensive options such as expanding the parking and bus system in the canyon. A solution truly geared towards serving the humans and constituents of the state of Utah and preserving the natural environment, while also spending a proportional amount of tax dollars is an obvious first choice instead of the gondola.</p> <p>Thank you so much for taking the time to accept and read all of our comments. It means a lot to me that you care about what the residents and regular people who use this canyon on a regular basis, year-round, have to say about it. I look forward to seeing what you come up with, and for you to find a solution that is much more proportional and less invasive.</p> <p>Simon Fraser </p>
37684	Jeri Haacke	Do not put a gondola up the canyon. It would ruin the beauty of the canyon. The best solution is an assigned time and/or busses.
37685	Sean Mason	Please do not build a gondola in LCC, this will destroy the natural beauty of this pristine canyon forever!
37686	Suzi Page	I am sad to think about all the beautiful trees that will need to be cut down for this project. We are already taking over too many animals' homes and are seeing more wildlife in the valleys because they have nowhere else to go. Just leave it alone.
37687	Nadine Cooper	Bussing is the best way. Europe busses people and it is working very well for them. Look at other countries for what is working for other sites
37688	Bill Hammond	I think this is a poor reason to spend so much money. It will prove to be folly. No... Please
38640	Valerie Neilson	Please do NOT allow the expensive and destructive construction of a gondola in Little Cottonwood Canyon! NO gondola! No!
37689	Christopher Johnson	No gondola! please! It's too expensive.
37690	Glenda Galbraith	NO to the gondola. Period.
37691	Eric Villadsen	Please reconsider the use of electric/propane busses running frequent routes with the addition of snow sheds. Maintain the amazing all canyon access that Backcountry skiers have come to love.
37692	Elliott Coda	Impractical, taxing on the environment/wildlife, costly, and time inefficient. "Short Term" solutions should not take >5 years to build.
37693	Kristin Schelin-Davis	Don't waste your money on something people won't ride. Trax, UTA busses, front runner are all barely full. Especially if it will take 1 hour to get to the top! No one will ride it. Why waste your time.
37694	Kim Wilson	Create mandatory bussing like Zion NP. The only people who can drive up will have to have a resident pass. People will adapt.
37695	Elliott Spencer	you are trying to funnel us like cows into a forced option: gondola or buses. i say none of the above on my dime and my dime includes more than increased taxes. the irony is that we already pay this syndicate with plenty of taxes so they can find ever new ways to tax us more to placate special interests. morality has evaporated into thin air. is this 45 day comment window for the well-informed serve any purpose other than filling a checkbox?
37696	Adelaide Slack	<p>A gondola does not well serve all people who access Little Cottonwood Canyon as it solely brings people to ski areas. The use of tax payer's dollars to support private industry is poor stewardship of governmental monies which are collected and should be spent in way that equitably serve all socioeconomic classes rather than those who have the means to recreate in the expensive sport of skiing and snowboarding.</p> <p>I support a traffic solution that promotes increased bus use and a toll for use of the canyon with an awareness of max capacity of an otherwise small geographic area.</p>
37697	Nancy Pomeroy	No gondola. No massive steel in canyons. Widen the road.
37698	Sierra Adams	My name is Sierra Adams and i'm a 15 year old who learned how to ski up this canyon when i was very young and have been skiing there for the past 13 years. Alta and Snowbird are my favorite resorts however the traffic recently has been causing an issue for us getting up there. as a someone who cannot get up there by myself, it's very important to have good transportation methods. the gondola however is not one. it requires many transitions to even get there and causes horrible global impacts. it also will not even run reliably because of weather and maintenance issues. it is very expensive and there are much better ways to spend this money that create a better solution.
37699	Zack Anderson	Improved bus system like an additional bus lane is a better option for access to the canyons and all they have to offer including hiking trails and various trailheads. A gondola only services two private companies with taxpayer dollars and does not serve to improve access to the entire canyon. Using OUR money solely for private company gain should be against all of our morals as a collective outdoor community.
37700	Linda Brill	I am for the gondola

Comments on Little Cottonwood Canyon Final EIS

37701	Brian Engstrom	Please rethink your decision to make the gondola the preferred choice in Little Cottonwood Canyon. As someone who lives and pays taxes in the Salt Lake Valley and utilizes LCC for recreation all year round I do not think there could be a worse outcome. In the summers I hike/backpack/climb all throughout the canyon and it is one of the magnificent treasures that keeps me living in the area. It is a respite from all of the hustle and bustle that an increasing population in the surrounding areas brings. I am also someone who patronizes the resorts who have campaigned so ardently against the wishes of the locals to put in a gondola. Snowbird and Alta have great resorts that help to show off the true beauty that awaits in Little Cottonwood Canyon. However, we should not then tarnish the natural magnificence we have in our backyards just to get the resorts a few extra ticket sales on powder days. Most can attest that on most good weekend days there are already pretty severe crowds at the resorts even with all the supposed issues with the LCC transportation situation. What are we really doing here? The solution has become to attempt to build the worlds longest gondola? Did we ever stop to ask why this would be the longest gondola? As someone who works in finance I can also say that this is just begging to be a project that gets started and flies over budget, but once you have started there is no going back. Who is this really for? Who is going to deal with traffic to park at a gondola station and then pay a large sum of money to jump on a long gondola ride? This is a permanent decision that will forever hinder the landscape of LCC. Are you okay being the ones to make that decision against the will of a majority of your residents? There are thousands of less impactful alternatives that have not been tried. Lets spend some of this proposed money to make common sense changes that will make a real impact. That is the way forward. Please do not destroy the climbing and natural beauty in Little Cottonwood Canyon to build a large and untested method of transportation to appease a few people. For the sake of Little Cottonwood Canyon and all those who gain so much from this place, please help us save and preserve what we have! With much respect! -Brian Engstrom
37702	S Brinkman	No gondola because of the land ownership priority changes. I don't want to see cables and concrete in my nature photographs.
37703	Carter Norris	Im worried about the environmental toll that the gondola could have
37704	Michelle Morse	I am extremely against the gondola in any of the cottonwood canyons. This proposal is not equatable to any local tax payer. The gondola only services the 2 ski resorts in LCC and does not provide service to others that want to access other parts of the canyon. The implementation of this proposal infringes on the protected areas in the canyon. The gondola will restrict the access to entire canyon except the bottom and top. The building of the system will take away from parking areas within the canyon and remove many boulders and natural elements that add to the natural beauty. The people and community do not want the gondola! It is very apparently that there are other interests involved. Money seems to be the driver of this. Who in the end benefits from this.. those that own the land where the gondola station will reside and those resorts that would bring more patrons to their resort. The \$500M price tag is astronomical in comparison to what it will bring to our community. Please listen to the people. They do not want this.
37705	Cydney Rollins	I am in support of the Gondola. Whether we want to believe it or not, more people are moving here and accessing the canyon. It is the best long term solution. Anything else is a short term solution that will not fix the long term issue.
37706	Li-Chun Cheng	I'm a new resident of Cottonwood Heights and since I moved here I have actually never experienced traffic issue in Little Cottonwood Canyon. The carpooling policy and paid parking reservation system at Alta/Snowbird had dramatically improved traffic issue. I hate to waste tax money on an issue that can be addressed by a simpler method. Besides the gondola is going to destroy several world class rock climbing areas. Once it's built it's going to change the landscape forever.
38641	Shirin Spangenberg	I can't log onto the website, but I just want to say that I love the idea of the gondola. It has less impact on the area. So smart! Shirin Spangenberg
37707	Harris Simmons	Please don't forever scar Little Cottonwood Canyon with a gondola. Implement a toll for vehicles, and use the proceeds to subsidize natural gas busses. People pay big bucks for ski passes; many would certainly pay \$15-20 to drive up the canyon. Use market forces to allocate the scarce resource of vehicular access. That's the Utah way!
37708	Alice Kunkel	No gondola. It will irreversibly degrade the quality of LCC. The corporations benefiting from never ending growth are driving this decision, not community benefit. The resorts are full, there is no transportation problem with filling the resorts. It's not worth ripping up our beautiful canyon. Consider other alternatives. Listen to the community - no gondola. Thank you
37709	Heidi Yentsch	NO!!!! TO THE GONDOLA!
37710	L Tucker	I am totally against the gondolas and toll roads. The price, looks, and overall project really disappoint me. It makes me sick the thought of them going up. I am also against toll roads. Our canyons are here for us to enjoy. I never go up Millcreek canyon how that their is a fee and I grew up going up that canyon. We are encouraged to get out, don't make it a price we have to pay for to enjoy. Ski season can use buses. A lot more affordable.
37711	Justin Shah	How is the Gondola above and beyond better than proposed alternatives? Please state how. Otherwise detriment to climbing and looks of the canyon can't be traded. Show how it reduces traffic per hour at different times. Show how its more environmentally sustainable. What climbing routes will be impacted. Thanks
37712	David Weiss	I am for the gondola
37713	Ann Fadel	No no no. Please don't make savoring gorgeous canyons an experience for only the wealthy. Gondolas are for just a small fraction of enthusiasts. Broaden availability. Don't stricture it.
37714	Mike Ruzek	I appreciate the need for a transit solution for canyons, I think direct buses from transit hubs would have better usage and less issues but long term the trap/train solution brought up years ago going up and through canyons into park city and down parleys is the best solution for the future,

37715	Jacqueline Radigan-H	<p>The gondola solution is not a solution for all canyon users. It benefits two major ski resorts who have lobbied strongly for it as it will increase their own capacity and profits. This solution does not serve other canyon users who climb, hike and backcountry ski in LCC. It does not help address similar problems in BCC. Public funds should not be used to create a direct line to Snowbird and Alta to the exclusion of all other recreation in the canyons. Investing in a fleet of electric busses that arrive on a regular schedule in conjunction with tolling personal vehicles that go up the canyons would be a better solution.</p> <p>A world class bus service that is dependable and frequent is an infinitely more inclusive and financially responsible solution (and would also be a boon for tourism and the ski resorts!). With all the challenges ahead of us - climate crisis, the drying up of the Great Salt Lake - we must invest in conservation rather than tourism and corporate profits. If we don't preserve the environment there will be no lake effect snow, clean air, or recreation for locals or tourists alike. I stand with the majority of Utahns in urging you to reconsider plans for a gondola in LCC and to instead consider the obvious solution of increased and improved bus service.</p>
37716	ROSEMARY LUCER	<p>I see no problem putting a gondola in the Canyon. The Canyon will still be beautiful. There's many mountainous areas in the whole world that have gondolas. The scenery is still beautiful there. I think it's the most sensible solution to a major problem with traffic for the ski areas. Those people who want to go hiking can still drive up the canyon with less traffic now.</p>
37717	Brian Engstrom	<p>Please rethink your decision to make the gondola the preferred choice in Little Cottonwood Canyon. As someone who lives and pays taxes in the Salt Lake Valley and utilizes LCC for recreation all year round I do not think there could be a worse outcome. 37718	John Behrman	<p>I grew up skiing at Alta my first day I was 3 years old. Little Cottonwood Canyon is one of the most Beautiful National Treasures in our State and Country. It would be absolutely Trajic. To Ruin the natural beauty by constructing this gondola! Please keep our Canyon free from the steel and cable. Sincerely John Behrman</p>
37719	Monica Gardner	<p>Protect LCC! We do not want the gondola. I support tolling, a more extensive bus system, and limiting traffic. The canyon is a public good used by many for different things- it is not right to build the gondola as a solution to solve ski parking issues And Octoberfest congestion, we can do better! No gondola.</p>
37720	David Arnold	<p>I do not think a very expensive Godola is needed for a problem which only exists four months out of the year. I would rather Park City connected via chair lifts or godolas to both Big and Little Cottonwood Canyons. This has been talked about for over 40 years and would not be that hard or expensive to do.</p>
37721	Jimmy Holfeltz	<p>I think an approach to move people up and down the canyon the will not limit the view will be best, the tram would destroy the natural beauty of the canyon and create infrastructure that is costly. No tram please.</p>
37722	Linda Brill	<p>I am for the gondola</p>
38668	Valerie Nelson	<p>Hi, my name is Valerie Nelson. My phone number is [REDACTED] And I just wanted to be on the record stating that as a native Utahn and a resident of Utah, I am passionately opposed to the construction of a gondola. Please do not allow that to go through. It would be wildly costly and massively destructive to a canyon that I absolutely adore. Please do not allow the gondola. Thank you.</p>

37723	Katherine Peterson	<p>Greetings to UDOT: Thank you for the opportunity for offering Cottonwood Heights residents a chance to give UDOT feedback regarding our ideas on Little Cottonwood Canyon.</p> <p>1.) Little Cottonwood Canyon is a delicate ecosystem and needs to be treated and respected as such. I fully support buses; as they are not destructive to the environment like the proposed building of an unneeded gondola, the raising of the speed limit and the widening of Wasatch Blvd.</p> <p>2.) There are at least three reports regarding the projects mentioned above that are flawed with inaccurate data. UDOT; please create and make decisions based on reports with correct data and science.</p> <p>3.) There are countless fatal accidents on Wasatch Blvd every year. The victims are Innocent people, wild animals and beloved pets. There are about 11 streets that intersect with Wasatch Blvd. Tax-paying Cottonwood Heights citizens need to drive, bike, and walk in and out of our neighborhoods safely. It's not safe now; and will not be safe IF you raise the speed limit. I fully support a 35 mile-an-hour speed limit that will create a "safety zone" for Cottonwood Heights residents, who live in the vicinity of Wasatch Blvd.</p> <p>4.) UDOT'S gondola proposal is reminiscent of the scene near the end of the movie "Pandora," where the huge machines come into Pandora; the Utopian and Garden of Eden-like country. The monster machines tear Pandora apart and frighten the inhabitants.</p> <p>5.) I vote for UDOT doing everything they can to protect and restore the beauty of Little Cottonwood Canyon. UDOT'S gondola proposal reminds me of the the "Hen that lays the Golden Eggs." After collecting countless golden eggs from the Hen; the greedy farmer, who wants more and more eggs, kills the hen. UDOT is like the "greedy farmer. UDOT'S gondola plan would destroy and ravage the exquisite beauty of Little Cottonwood Canyon. It would destroy the financial well-being of the tax payers, and the Paradise, where we can play year-round. Cottonwood Heights residents will be HELD HOSTAGE for paying for the hideous, UNWANTED and UNNEEDED projects mentioned above. None of the needs to happen. There are enough residents and civic leaders opposing the projects mentioned above; that these projects will be squashed and ruled illegal! Thank you.</p>
37724	Boden Dumas	No Gondola! Not environmentally Friendly, 5 years is not short term, adds to commute time with driving/parking/riding. A train would be better!
37725	Mike Laws	I don't want the gondola period.
37726	Rachel Wisniewski	I do not support the gondola and do not want this to be the chosen option. I support other options to handle our canyons traffic however the gondola will irreparably damage our beautiful canyons. I do not support the use of taxpayer funds to build a gondola that serves private resorts. I do not support building an enormous structure and thus blocking views of pristine mountains and trees.
37727	Elizabeth Scott	The gondola is a great solution to the congestion in the canyon. I had a brother who was almost killed in the 1000 warriors bike race associated with the professional tour of Utah race about 13 years ago and it was a direct result of too much congestion in the canyon-cars going down and coming up the canyon, swerving in each others lanes. His accident took place in American Fork canyon, but I know there have been other bike accidents in the cottonwood canyons as well. The gondola would not interfere with the beauty of the canyon, and it would probably make it even easier to see the beauty from above as you don't have to worry about navigating the busy turns of the road as you drive. Buses don't make a lot of sense as they are slow, and they cannot run in high enough numbers or on fast enough scheduled to meet the needs of the canyon. They will also add to a lot more air pollution which is a legitimate concern in Utah.
37728	AJ King	I live near Little Cottonwood Canyon and am against the building of a gondala. There are so many things our state needs that money for rather than something trendy that will not get nearly enough to use to justify it being built. I favor a toll road option up the canyon. Many I know who ski up LCC would carpool if there was a fee. Or a reservation system with set times to go up. Anything is worth a try before we ruin the beauty of the canyon. We should be willing to exhaust all other options first.
37729	Everett Bird	Do not move forward with the gondola. It is a horrible idea, will ruin the natural atmosphere and feel of the canyon.
37730	Karina Dickson	<p>I believe this gondola is a huge mistake. It's going to greatly impact wildlife in the area. You're going to take the homes of lots of animals who won't have a choice. They'll probably move into dangerous areas and possibly invade our homes and yards. Which in turn will become a pest problem. The gondola will be such an eye sore. Why can't there be specified days for people to go up the canyon. With a certain pass only people can go up even days or those only on odd days. Offer the bus passes as part of the season pass. Maybe give people incentives to ride the bus. Like if you ride the bus you get ski cash to buy food or drinks up there on the slopes.</p> <p>Please there has to be a better way.</p>
37731	Chris Glasser	I am against the gondola....
37732	Deon Baker	As cool as the gondolas might seem, I believe electric buses with designated park & ride areas at several locations in the valley will be a better solution.
37733	Anelia Parks	The gondola doesn't solve the problem at all. Lifts (including gondolas) cannot run if there are high winds, lightning or avalanche danger, which are common occurrences in the canyon. Has nobody really thought of this?! Further, the gondola only serves two private businesses, not the public. Do not waste our money on this mess! And more importantly, do not destroy what is a unique and sacred piece of land with a tacky tourist gimmick. No to the gondola!
37734	Korinne Gilbert	Wholeheartedly support gondola
37735	Leland Johnson	I am opposed to the gondola because of the impact to the beauty of Little Cottonwood Canyon and irreversible damage to the canyon.

37736	Richard Gee	Putting a gondola in Little Cottonwood Canyon is the dumbest idea I have ever heard. It would carry very few people to the ski resorts and it would take too long. An expanded bus service is the only logical solution. Also, who wants to see the canyon spoiled by ugly cables and gondolas going up and down the canyon. This idea is as dumb as building a road across Utah Lake. These idiots have to be from out of state. Nobody in their right mind would build a gondola system or a road across Utah Lake.
37737	Sherrey Cowley	Please reconsider the gondola, placing parking in such an expensive and scenic location is a shame. If a parking lot is needed can't the lot at highland drive and 9400 south be used as a parking terrace. Increased bus service using more enviromental friendly buses. Many folks do not want to use buses because they don not run frequently or long enough. The price tag is too steep.
37738	Jerry Silcox	I am against the gondola.
37739	Christine Tepley-Pratt	The gondola only serves the resorts. Not the environment or the people that already ski in the canyon. It changes the appearance of a beautiful place. Do not bring more into a busy ski resort.
37740	Carla Shelton	Sadly, this state is entertaining the construction of a gondola in our overpopulated, scenic mountains only to remove and destroy more lands of this state for the entertainment of those that want their entertainment paid for by the citizens who do not ski but enjoy the serene beauty of our mountains. Our resorts have been overbuilt and over used. This state needs to stop and evaluate the density of the housing and condo' already invading our beautiful mountains. This state is already overbuilt, overpopulated, overtaxed and no water. We need to reevaluate our water resources, our infrastructure, our freeways, highways and recreational areas. I am opposed to any new development involving the destruction of precious mountains and water sheds. We do not need a gondola. With one will come more and more. We must stop with the development of our mountains.N The resorts are already overbuilt. NO TO GONDOLA(S).
37741	Bryce Jorgensen	The snowbird Tram charges \$20 per person in the summer, plus Last time I checked a lift pass was over \$125 per day. Plus whatever the charge will be for the gondola. Average people won't even be able to use it. It will likely cost \$20 per person just to ride the gondola up the canyon. This will shut out average families from using it. Yeh come on up. Family of 5 for \$100. If taxes pay for it, the public should have access to it. Not just rich skiers.
37742	Trevor Holt	Please consider improved bus service before a gondola. It is vastly cheaper, could benefit canyon users other than resort visitors (even if that is not the plan immediately), and has very little/no impact on water quality, noise, scenery, and other recreational activities such as climbing. The gondola would also require making more transfers for most people than the ski buses. I believe that a gondola would be a harmful and unjustifiably massive subsidy to the resorts.
37743	JoAn Ellsworth	I don't want our tax money paying for the gondola, what a bad waste of tax payer money. An avalanche will hit it and it will cost even more to fix it! Do Not build the gondola!
37744	Ted Reid	I really struggle to comprehend how we've reached this point. If there were not huge, profit generating resorts benefiting from this, it would have never gotten this far. I would much rather see UDOT close the canyon to resort traffic in the winter, instead requiring the resorts to provide their own transportation to their facilities from the valley. This is true insanity to sully the entire canyon for the benefit of the resorts.
37745	Matt Crockett	I agree with the gondola
37746	Kristi Foote	I think that the ski resorts should pay for the gondolas. After all they are getting the biggest benefit from them.
37747	Jack Vitek	The gondola makes no practical sense for the issue at hand. To start, the toll on the environment around will be severe, and it will be at the cost of the taxpayer. I say NO
37748	Judson Armstrong	The gondola up Little Cottonwood Canyon is an absolutely ridiculous concept that wastes tax dollars on two private businesses who are geared to profit and exploit the deal. The parking lot at the base of the canyon will be an eyesore and create traffic/parking issues for the adjoining neighborhoods and the canyon road. I grew up at the base of the canyon and support both resorts with business and season passes and I am completely against the gondola plan. Save our canyons, decrease and manage season overflow of traffic the supports Utahns and locals instead of providing profit based access for out to state tourist dollars exacerbated by the Ikon and Epic passes. Support our canyons and spend tax dollars wisely. Judson Armstrong
37749	Brian Davis	I am not sure if I full understand all the ramifications of the gondola. I do not want to wait for long periods to wait for a gondola. In the summer I often ride my bicycle up the canyon. I want to continue to do so. It does not seem that the gondola will reduce congestion or wait to go up the canyon. If it is not going to reduce congestion and time then it is not worth it. It will just reduce the beauty of the canyon.
37750	Olivia Myers	Please do not build a gondala! This does not solve the bigger problems, there are so many other solutions that are better for the community and environment!
37751	Suzanne Simpson	Why should taxpayers foot the cost of a gondola that benefits Alta and Snowbird, and ruins the canyon? It's ridiculous. Let the resorts run electric buses and pay for what benefits only them.
37752	Chris Mikell	I do not support the gondola alternative. I support adding a lane for buses only to encourage public transport and a limited set of Avy sheds along the road. I support the ski areas stepping up and providing free or very near free adequate, convenient, reliable, bus service.
37753	Richard Laxman	I do not want a gondola installed in Little Cottonwood canyon that will only resolve an issue that does/will occur a few days during the ski season. I also do not want the billion dollar price tag that will be placed on future generations of Utah citizens!
37754	Curtis Clayton	I feel the better option is a privately operated tandem bus system (not UTA) paid for by the ski resorts and part of the expensive ski ticket price as the only time I ever feel there is a problem is during ski season at opening and closing time. I believe building an eyesore up the canyon for the problem during a very short (and shortening more each year) ski season is a waste of public funds and resources. Public funds going towards recreation while the ski resorts pad their pockets more and more raising prices but not being required to offer better transportation solutions as the benefactor of the public lands they lease and profit from is backwards.

37755	Miles Mokolke	<p>I am ABSOLUTELY against the gondola, and here are some more reasons why:</p> <p>This abhorrent proposition is COMPLETELY ignoring the strong-held sentiments of the local public</p> <p>This project is TAX-PAYER FUNDED, yet it only serves the interests of two PRIVATELY-OWNED resorts.</p> <p>It is NOT A CONVENIENT SOLUTION. DO THE MATH!</p> <p>It increases the visitation stress on the Little Cottonwood Canyon (need I remind you that our winter seasons are already decreasing at an ALARMING rate?!)</p> <p>Absolutely no way it's only going to cost \$550m. Get out of here.</p> <p>A gondola simply is not necessary to solve this problem. It is a hasty, greed-driven decision. Numerous alternatives have been suggested by actually-competent people and organizations, such as Save our Canyons.</p> <p>This will push traffic onto Wasatch Boulevard.</p> <p>Please, NO GONDOLA</p> <p>Thank you for your time.</p>
37756	Kathleen Stone	<p>Please do not implement the gondola. I was born and raised in Salt Lake, and grew up skiing at Alta. I've seen the traffic get worse and worse, and that's been hard to see as a local. But a gondola would be significantly worse. I just drove up during the peak fall leaves' colors, and couldn't help but think about the plans for the gondola and the models for how the gondola would look. It would fundamentally change the look of Little Cottonwood for the worse, to the embarrassment of Salt Lake. I implore you to look into buses as an alternative. They're easier and more flexible, and don't cause a year-round eyesore.</p> <p>The eyesore aside, it's also an insult to put so much money toward a private enterprise when there are public enterprises who could see much more benefit with the funds. Utah has the lowest educational funding in the country, a lake that's shrinking rapidly, and air that's making all of us sick. Is half a billion dollars really best spent on a ski resort? Really? I know UDOT isn't involved in these other issues, but it's immoral nonetheless.</p> <p>Thank you for your time, whoever you are, as you read this commentary.</p>
37757	Janene Bonnemort	<p>As a life long resident living near the canyon entrances for 40 + years I plead with you to reconsider the gondola solution as it will permanently destroy this beautiful landscape with towers which do not enhance the natural beauty. We mismanaged the great salt lake, please find another solution to access which benefits so few. Our canyons are not a replaceable resource! Look harder for a better solution. We must save these canyons.</p> <p>Sincerely Janene Bonnemort</p>
37758	Debra Skillicorn	<p>Go with the Gondola. Look at Switzerland and how that is how you get to the ski resorts and towns.</p>
37759	Hazel Weight	<p>I prefer the enhanced bus service. Gondola is too costly and impacts the natural beauty of the canyon.</p>
37760	CHERYNE Sandberg	<p>I don't want the scenery ruined with a gondola. And it is horribly expensive. Just have limited number of people at a time in the canyon. Or do the reservation system like arches had. Also charge a little fee like mirror lake highway.</p>
37761	Stephen Clarke	<p>I do not want a Gondola . This is crazy. the extra time to travel in a Gondola is not feasible. The cost in time and TAX DOLLARS is too high. Busses and a wider road is better and will save tax dollars. UDOT just likes to TAX AND SPEND, Tax and Spend . NO</p>
37762	Pierce Alexander	<p>After investigating the proposed gondola project, I am opposed to it on a number of grounds. First and foremost, skiing as a sport is dying in this region of the country due to climate change. Projections show that the snow water equivalent will decrease by 50% by 2100 and 35% by 2075. It is claimed that the project will be "carbon neutral" however, there is no evidence given on how this was determined or what assumptions were made in those calculations. I find "carbon neutrality" highly unlikely given the amount of steel and concrete that will be needed for such a megaproject. Furthermore, the gondola will damage the natural beauty of the canyons and compromise access to climbing and hiking areas during the years of construction. My suggestion to alleviate the congestion in the canyon would be to install a checkpoint at the base of the canyon to restrict the access of high risk vehicles (like those without all wheel drive and chains) as well as single passenger vehicles. If high risk vehicles are turned away and single passenger vehicles are required to pay a fee, then these steps alone would go a long way in alleviating congestion without the need of a half a billion dollar megaproject.</p>
37763	Jamed Jeffries	<p>The proposed gondola isn't the answer. It's not the best solution to traffic congestion and canyon access and it only serves the best interest of the resorts and not the general population. I agree with Stan Christiansen from Stanford in his assessment that costs are excessive. There are better alternatives. UDOT should start with increased bussing and additional parking at the base of the canyon..</p>
37764	Laura Mascari	<p>Consider alternate transportation such as more busses or tolls. No gondola!</p>
37765	Pascal Begin	<p>No to gondola</p>
37766	Sabrina Neilson	<p>I am wildly opposed to this project. There has been far too much destruction of the cottonwoods already, this would cause great destruction of natural beauty at an obscene cost. We've all seen the wide swath of hideous clearing that is entailed in running these things through. The cottonwoods are uniquely spectacular and to destroy that beauty is a crime against God and nature. Too much of our natural beauty has been destroyed in the pursuit of profit and greed as it is. Please choose to preserve what we have left.</p> <p>Thank you, Sabrina Neilson</p>

37767	Teresa Homel	While the gondola option is flashy and would no doubt be used by the ski resorts ads to drum up business it is not an effective solution to the traffic in the canyon. It would be an eyesore and interfere with the visual impact of this beautiful canyon. And it isn't useful for all of the hikers and other users of the canyon. Plus the plan for the parking lot for thousands of cars creates an eyesore. I support expansion of electric busses and a process to limits access when the canyon is at capacity.
37768	Alan Nasson	Please do not build the gondola system to move traffic up and down Little Cottonwood Canyon. Please maintain the natural beauty of the canyon.
37769	Colleen Monk	I say NO to the gondola project! It would be a blight to the beauty of the canyon. This project serves a small portion of our state, but the entire state would be forced to pay for it. Yes, people from Utah and tourists would use it if it were there. But the resorts are the big beneficiaries. The gondola project is an ugly project for more reasons than one. Put a toll on the road, charge for parking and make the buss free to those who get it punched or validated by the resorts who can then reimburse UTA.
37770	Alexis Davis	I feel as though the gondola is NOT the answer for little cottonwood canyon. There are several people like the owner snowbird John Cumming, the GM of snowbird Dave Fields, Chris McCandless and Wayne Niederhauser who are all going to benefit from this. It is all about the money. These people all grew up in Utah and do not care about how invasive this gondola will be to the community, watershed, and wildlife. As we know the land was bought from a secret LLC that snowbird created so people wouldn't be concerned as to why they bought it. Chris McCandless and Wayne Niederhauser were both involved in selling the land and are both part of CW Management Corp. They were also involved in selling land at the bottom of big cottonwood where there was a bar called The Canyon Inn. Cottonwood heights cops were paid to harass the bar owner and staff to get it closed down and this is all public information. The Canyon Inn was one of the top 25 destination skier bars to go to that has been there Eight Settlers Restaurant and Distillery. If you really cared about you cities and your communities you wouldn't be closing down historical places. This is why I believe they do not care about little cottonwood canyon. Snowbird has also gone into business with IKON passes so that skiers will have the option to ski Snowbird, Alta, Brighton and other resorts in Utah. With this pass Snowbird is losing money since these people will no longer be buying day passes they are purchasing the IKON pass and having to share that money as opposed to paying \$120 for a day pass. Snowbird is looking to make more money which is understandable. My question is why wouldn't you do it in the most efficient way possible and try different options that will work before ruining such a beautiful canyon. Little cotton wood canyon is not Europe. Utah is not Europe. There are so many more options and solutions that even locals are not worried about doing because they are concerned for the canyon and community. Park city is having the same issue. So many people have moved to Utah in the last 4-5 years that it is no longer "small lake city". Just because thousands are moving to our state does not mean that we need to change things just to cater to them. Park city is now making people carpool and having you set reservations for parking spots so they can reduce traffic. Also enforcing a toll that you will have to pay, which locals don't mind! We do not want to ruin our canyons. Especially when the Gondola will only have 2 stops. Thats insanity. We are going to build a \$550 million dollar gondola that will only really be used and help a few days out of the year. Only for a few days in the winter? For less traffic? Is that worth it? No! There are only 2 stops and you will not even need to use it during the summer because the traffic is never bad unless it's Oktoberfest. So you will not even be able to use it to get dropped off at an earlier location to get to a hike that you like. This \$550 million could be used towards thousands of better things. Give it to the community, schools, help people and children in need. There are so many better ways to use this money than to bring skiers up a mountain so they don't have to wait in traffic. The thing that doesn't quite make sense to me is that people are still going to be driving up the canyon. There is still going to be a wait to park. Skiers and snowboarders are not going to stop driving up the canyon just because there is a gondola. I have listened to many interviews and podcasts with Dave Fields and Chris McCandless and they are trying to instill fear into the community by talking about how many avalanches there are up the long snake like canyon. Has it ever stopped anyone from driving up before? No. They want to make us nervous so we will agree with them and have them build a gondola so you can get up and down with no issues. What about the wildlife and how it is going to impact the lives of all of those animals that call this
37771	kevin dolan	I'm a long time utah resident, biker, skier, hiker and strongly support the savenotpave.org options for both Wasatch blvd and the LCC traffic problems. For Wasatch I encourage UDOT to use the savenotpave.org option for three lanes and separate bike lanes on either side of Wasatch. For LCC, listen to the public and do not use the gondola option. Do not fall for the cronyism of Niederhauser and Mccandless to stick utah taxpayers with a 600 million dollar debt for a gondola that we don't need. Please explore other cheaper options first; e.g. electric buses, canyon fees, etc.
37772	Susan Edwards	I am totally against a gondola. This EXPENSIVE option would still require large parking facility, be very disruptive to the peaceful nature of the canyon and not hlep with much of the traffic. It will not service multiple trailheads only ski areas. For the few days a year that we have traffic issues in the canyon the gondola is a terrible ongoing expense. Some kind of bus option with more parking is much preferred, as when not busy it's just less traffic and not empty gondolas
37773	Rachel Wisniewski	I do not support building a gondola. This is a financially irresponsible option that uses taxpayer money to build transportation to private corporations. Additionally, it will irreparably damage our beautiful canyons and ruin pristine views of mountains and trees with large structures. I recognize our canyon traffic is a concern and I support other alternatives to manage traffic. I do not support the gondola as a solution.

37774	Kate Kopischke	<p>Scenic Utah is a statewide nonprofit working to protect and enhance Utah's extraordinary visual resources. It is an affiliate of the national organization Scenic America.</p> <p>We appreciate the opportunity to submit these comments.</p> <p>Our focus is on Chapter 17 of the FEIS: Visual Resources, which provides a thorough analysis of the range of visual impacts of a gondola (coupled with improved bus service).</p> <p>The FEIS makes clear that from a scenic preservation and protection perspective, the gondola alternative - with the massive infrastructure it will entail - will create a high level of visual impact for canyon visitors and viewers and will forever alter the scenic integrity of this stunning eight-mile canyon.</p> <p>In addition, the gondola as envisioned fails to meet the U.S. Forest Service's (USFS) visual quality standards.</p> <p>Little Cottonwood Canyon (LCC) Road (SR 210) was designated as a State Scenic Byway in 1990. Central to such a designation is that key features of a byway's visual environment are relatively undisturbed - features that predate human development and typically include geologic formations, landforms, water bodies, vegetation, and wildlife.</p> <p>USFS sets visual quality objectives for each of its 155 national forests that focus on protecting the scenic integrity of those landscapes and protecting their natural visual appearance and intrinsic scenic qualities. On the Wasatch-Cache National Forest, the Forest Plan identifies one standard (S22) for scenery management that must be met: "Management actions that would result in a scenic-integrity level of 'Unacceptably Low' are prohibited in all landscape character themes."</p> <p>Without question, the proposed gondola - with its 200-plus-foot towers, large cabins traveling along its cableway, and its bright lighting (described, optimistically, as 'periodic') - would result in an unacceptably low scenic-integrity level. It would contradict the aims and requirements of both the Utah Scenic Byway program and the USFS visual protection objectives. And it would destroy the exceptional visual character of a cherished natural wonder that has inspired generations of residents and visitors.</p> <p>For gondola passengers, the views may well be awe-inspiring. But for the many more at ground level, the gondola's highly industrialized, mechanized infrastructure will be an unwelcome eyesore; a permanent visual intrusion in one of Utah's most iconic and beloved landscapes.</p>
37775	Ryan Metzger	<p>To whom it may concern,</p> <p>I believe the the Gondola Alternative B is a poor environmental choice for addressing the traffic-related issues in Little Cottonwood Canyon. This option will not do enough to reduce traffic, particularly in the summer, or on most week days at any time of the year. It really only benefits customers of 2 ski resorts. Compared to the cost incurred by Utahns, the benefits are minimal. Other options make more fiscal and environmental sense for this issue, such as: 1) Enhanced electric buses with higher frequency and improved reliability, together with strategically placed mobility hubs; 2) Tolling infrastructure; 4) Multi-passenger vehicle incentives; and traction device requirements with expanded inspection hours and enforcement.</p> <p>Thank you</p>
37776	Alexis Davis	<p>I feel as though the gondola is NOT the answer for little cottonwood canyon. Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37777	Larry Fox	I would just like to comment on the proposed solutions for Little Cottonwood Canyon! I think it is prudent and wise to try expanding bus services, as well as other possible solutions. However, at the end of the day, I believe the Gondola will be the more permanent solution. It will pay for itself with the increased tourist traffic during all seasons. I myself will use it. I love the fact that it should run even if the road experiences an avalanche or other closure.
37778	Brent Dalton	Tax the ski resorts, more bus services needed. A gondola would ruin the beauty
37779	Jan Johnson	A gondola might be the right direction but why bring all the traffic to the mouth of little cottonwood? Wouldn't it make more sense to base it from the gravel pit that's closer to 215 and if designed right could begin a network of gondola lifts between all resorts along the wasatch front and back. Doing it with the plan as is is a mistake.
37780	K Barnes	You will ruin the beauty of the canyon with a gondola! If i go to the canyon to hike or picnic, I am not going to lug all of my gear onto a gondola to get there. Also your idea for a \$30 toll is VERY unreasonable. The canyons don't belong to you and you have no right to keep people out of them by making it unaffordable to go there. A yearly pass at a reasonable amount or a \$6.00 per visit cost i would be a lot better.
37781	Bob Zanetti	The gondola is a good start but other options must be added to cut the traffic down in the canyons. The ski resorts must take ownership for the majority of the traffic problems. The resorts need to offer more insensitive for people who carpool, take public transportation, ride a bike, or in the future take the gondola.
37782	Jared Aranda	The gondola project concerns me because of all the forest land that would have to be razed (both at the tower sites and below the cables.) I would prefer a large parking structure and bus station be constructed at the base of the canyon where more frequent/higher occupancy bus service can shuttle people up the canyon. Bifurcated busses such as those used on MAX lines could be used. Variable tolling could be implemented during peak times to discourage single occupant drivers and divert more drivers to the buses. A toll booth could also enforce chain laws.
37783	Shirin Spangenberg	I think the gondola is brilliant and should happen. It helps people get up to the mountain without ruining the mountain. Again, brilliant.
37784	Jan Osterstock	The gondola is to expensive,it detracts significantly from the beauty of the canyon,and additionally it would increase the risk of acquiring respiratory diseases; and there have been enough of those.
37785	Bobbie Baird	The gondola is not a responsible choice. It will have a long impact on our environment and beautiful mountains. I'd like to see more buses. If a tunnel is necessary then I'm for that, that's okay. Thank you:)
37786	Carly Moore	Adamantly against this gondola. It is such a misuse of tax dollars, and not way it is environmentally sound. We are also in a severe drought and our watershed land should be protected. The canyon is such an amazing force of nature, and putting a gondola in is a complete joke. It is extremely expensive and ineffective at truly solving the problem. This isn't even for both canyons, for ONE canyon. Please do better for the people, environment and future of our canyons and landscape. This would be heartbreaking and such an embarrassing thing to happen in this beautiful place.
37787	Ryan Metzger	To whom it may concern, I believe the the Gondola Alternative B is a poor environmental choice for addressing the traffic-related issues in Little Cottonwood Canyon. This option will not do enough to reduce traffic, particularly in the summer, or on most week days at any time of the year. It really only benefits customers of 2 ski resorts. Compared to the cost incurred by Utahns, the benefits are minimal. Other options make more fiscal and environmental sense for this issue, such as: 1) Enhanced electric buses with higher frequency and improved reliability, together with strategically placed mobility hubs; 2) Tolling infrastructure; 4) Multi-passenger vehicle incentives; and traction device requirements with expanded inspection hours and enforcement. Thank you
37788	Steven Froebe	I vote against gondola and support busing and restricting access to private vehicles during peak periods to reduce traffic delays to buses
37789	Carla Garrison	Gondola in Little Cottonwood Cyn? No, no, no! It will only benefit ski resorts. At some point we need to address a fundamental issue; we will need to decide how many people can the canyon take on any given day. Our population and demands on this and other canyons, have grown so much in the decades I have lived here. Perhaps we need to initiate "reservation" systems as some national parks have done.
37790	Mike Laws	The gondola is expensive and will not be used much . The cost to tax payer is high for limited use of people skiers.
37791	Michael Hansen	PLEASE, PLEASE, PLEASE Do not put a gondola in this beautiful canyon. A gondola is NOT the solution. You will ruin the natural beauty of this canyon forever if you ALLOW this project to go forward.
37792	Amy Fruge	UDOT, thank you so much for your continued efforts in making travel up & down our canyons safe & efficient. I'm Dr. Amy Frugé, DPT, and love everything about these Wasatch mountains & our access here in Salt Lake County. As a Mountain Athlete Physical Therapist, I treat olympic level runners, climbers, skiers, snowboarders, mountain bikers & more. These people (myself included) are here because of the mountains & its abundance of opportunities. I'm commenting to beg you to reconsider a safer alternative for our wildlife & the Utahn \$\$ contribution in opposition to the gondola. First, how can we build a gondola when it will impact a detrimental number of ecosystems & thus a vast number of wildlife? UDOT, I watched you safely escort a sick Moose off the road during a snow storm! I know you care! Second, to charge \$500/person to every Utahn, including the kid in Nephi that doesnt ski so that a stranger can get up the mountain with less traffic is not just. I know that tourism has a positive impact on our community but let's not get rid of the rock climbs & nature that people also come around the world from to see, just to build a gondola that supports 2 businesses. Please please PLEASE, let's reconsider this. Thank you so much.

37793	Kay Tanner	As a long time resident of Cottonwood Heights who lives just off [REDACTED] this decision impacts me far more than most people. I am NOT a skier, a hiker, a biker, a rock climber or anyone who does more than drive up the canyon to look at the leaves in the fall. I am also a 71 year old woman with two part time jobs just trying to have enough money to stay in my house. I can't retire!!! Inflation on EVERYTHING is killing me. I do not know where UDOT will get money for a gondola. I am scared to death that it will mean more taxes for the residents of CWH. Whenever people come up with grandiose ideas, they just think there is an endless supply of money to pay for whatever it is they want to do. I am sick of it. My property taxes were skyhigh this year. Sandy has cheaper taxes and utilities. Living here is becoming unaffordable. No to the gondola and NO to an increase in taxes to pay for it. Nowhere does UDOT say how they are going to pay for whatever they decide to do, but I know that somehow the residents of CWH will get stuck with paying higher taxes. This has got to stop!
37794	Lindsay Strain	I am definitely not in favor of this project. The effects on Cottonwood Heights, my neighborhood, and my bank account would be completely negative. The fix is not a gondola. There are many ways to help ease canyon traffic, one being that the resorts enforce paid parking. Buy a season parking pass for \$1500 or pay \$100 for the day. People will definitely carpool or take the bus a lot more if that's the case. The passes have already eased the traffic this last season, this would take it even further. But a gondola is going to put a huge strain on our city, so I greatly oppose this.
37795	Terry Rogers	I want the gondola
37796	Mary Peterson	Do you remember when the medical helicopter crashed in Little Cottonwood Canyon during a "thundersnow" storm in 2003? No one forecasted that one. Is the Gondola ready for that severity of storm? We get canyon winds frequently. What do the simulations, that UDOT surely has completed, say about the days per year that the Gondola will be shut down due to high winds? The Gondola remains a solution in search of a problem. Do the right thing and just have Snowbird and Alta build covered parking decks (and emergency dormitory space) on top of the vast acreage already dedicated to parking. They need to share in the actual dollar cost of any improvements (not just make a conservation easement donation), because they are the true cash beneficiaries of any improvements.
37797	Alexis Brown	If the gondola is built it will destroy the beauty of the canyon and also hurts the water supply of Salt Lake City. Please do not build it.
37798	Bruce Ward	We have the worst air quality in the nation we can not add more buses and make are air quality worse the gondola should be the only option will get cars and busses off the road. The gondola is also way less expensive to run. If we want to save money take the snow shed out of the gondola plan. We should also charge a fee to drive up the canyon to encourage people to ride the gondola and improve are air quality if we keep the cost down on the gondola this will also improve ridership thanks for accepting this comment
37799	Glen Tanner	NO TO THE GONDOLA!! Figure out a better solution that will not scar the landscape and will not cost an absurd amount of money. I say NO!
38678	Anonymous	No gondola!!! Please! The financial and environmental toll of a gondola would be disastrous. No gondola!
37800	Lauren Henrie	I strongly oppose Gondola Alternative B, and am frankly surprised that this proposal has made it so far. Not only would a gondola be a permanent eyesore and scar on the beautiful landscape that is Little Cottonwood Canyon, it would also exacerbate the overcrowding issues at our ski resorts and recreational areas. Please protect the canyon by NOT moving forward with the gondola.
37801	Amy Reich	NO ON THE GONDOLA!!! I am a resident of the Granite community minutes away from the canyon. I feel the Gondola is not a good idea for multiple reasons! Please listen to those of us who live in close proximity and do not allow the gondola!! Thank you
37802	Richard Holman	This is a complete and total economic injustice. To spend this much money on a well to do segment of the population is a slap in the face to those who experience food insecurity, lack the tools of a modern world such as computers and internet and the homeless that we struggle to house and care for. This gondola and all of it's infrastructure is a complete and total misappropriation of tax dollars and what's more a completely offensive use of public funds to again benefit those who already have the benefits lacked by so many others. This needs to be put to a vote comparing the benefits of this project vs. other potential projects that could benefit the many and not the few. I am opposed based on the economic injustice that this project represents.
37803	Kerri Fabry	I do NOT support the gondola! I can't imagine ruining our beautiful canyon with steel pillars and cables. There are plenty of other resort areas in the world with similar issues. We need a solution that will preserve our canyon, not deface it. We Don't Want a Gondola for miles and miles up our canyon costing millions!

ID	Full Name	Comment
37804	Colby Frazier	<p>I am opposed to UDOT's gondola plan, and ask that the government allow the status quo of cars as the limiting factor in the canyon to continue unchanged. My reasons for this are simple: UDOT and the ski resort corporations that are in favor of the gondola wish to facilitate the transport of more people into the canyons via gondola. They prey upon the anti-vehicle sentiments of good-intentioned people who believe that burning fossil fuels is bad. And of course, burning fossil fuels is bad. But the cars in the Cottonwood canyons are not driving themselves: they are being driven by people; more and more people. There is a people problem in the Cottonwood canyons, and its only limiter is the number of people that can cram into automobiles and the number of automobiles that can fit inside the canyons. With a gondola, or some other mass transportation system, the transport of infinite numbers of people will be achieved in the canyons, turning the canyons into little more than a single file nightmare, much like Zion Canyon, where vehicles were long ago banned in favor of a mass transit bus system that has been highly effective at eliminating the vehicle traffic problem, while exacerbating by many million fold the people problem. A gondola, or a highly effective bus mass transit system in the canyons will do the same. At present, any human can access the Cottonwood canyons via a vehicle, bicycle, bus or on foot. A gondola will be one more prohibitive force ensuring that the less fortunate, who rely on their cars, cannot access their very own public lands. The present price tag for the gondola is somewhere near a half a billion dollars. Even if this is close to accurate, this is little more than a half a billion dollar taxpayer funded gift to a pair of ski resort corporations. This is despicable, even akin to the horrendous dam building era of the last century, where hundreds of billions of dollars of taxpayer money was spent on water projects that benefited on a good day very few politically connected farmers, and in many cases, none. Then, of course, there is the environment. As a resident of Salt Lake County, and a Utah native, little is more important to me, aside perhaps from the filthy air that I must breathe, than the water I drink. I am unconvinced that UDOT and its partners have satisfied the concerns from myself and my neighbors that our watershed will be protected, or enhanced, in any way by the construction of a ski gondola up Little Cottonwood Canyon. There is, of course, a way to appease me, and I am a reasonable man. I believe that UDOT and its Ivy League engineers could put their brains together with the National Forest Service and design a number to identify the daily carrying capacity of the Cottonwood Canyons. Identify this number. Speak to the private corporations who operate their businesses on much of my public land, but regard what they say with grave caution. Once you have that number, be it 1,000, or 10,000, build your Gondola, or your train, or your bus system. But do so for the betterment of the wilderness, the betterment of our water, the betterment of the human need for wilderness and the need for solitude. Yes, identify the number, then offer a lottery system where all can enter free of charge. Random numbers will be drawn, ski days and hiking days will be doled out. It will not be ideal for many, but on vast swathes of America's public lands, this is precisely the solution for the people problem. So, build your sexy new infrastructure if you must and solve the horrible 10-day per year vehicle problem. But don't solve the vehicle problem unless you have a solution to solve the problem that causes that vehicle problem. Thank you for considering my comment.</p>
37805	Matthew Jensen	<p>If your in favor of building a gondola you are a slimy politician and should go die in a hole. It literally would do nothing but help the 1% and destroy a watershed. Listen to your constituents!</p>
37806	Alyson Eyre	<p>The gondola is a terrible concept for the well being of Little Cottonwood Canyon. I completely disagree with the destructive "development" and the many unanswered questions of how much the gondola costs, how does that impact ticket prices (already astronomical), who will profit from this, the existence of the parking structure in a residential neighborhood, the cost of parking, (who will profit from this), the impact on mouth of the canyon traffic and the impact of climate change on snow patterns. This is another grift on the people of Utah to benefit some development individuals and private businesses that should be planning their own long term business model in a time that markets to tourists with Ikon and Epic passes while filling the canyon with out of state rental cars and pushing out local customers and canyon wellbeing. This is an absolutely crazy idea that I do not support.</p>
37807	Kenneth Louie	<p>No gondola, for all the reasons previously stated</p>
37808	Narissa Haggerty	<p>My Name is Narissa Haggerty, I live in the salt lake valley and I oppose the gondola. Listen to the locals. Government is about what the people want, and we've spoken.</p>
37809	Heather Harris	<p>I am not ok with the gondola being proposed in Little Cottonwood Canyon. The environmental and even human impact it will have-far outweighs any benefit it will have. And the fact that it would use tax dollars and then we still have to pay to use it? Nothing sounds good about this project. I have driven often in the traffic thru the canyon-and I would prefer that over all the ecosystems and environmental disruptions and destruction it will cause.</p>
37810	Jill Christensrn	<p>Do not want the gondola. The cost is to high and only benefits a small part of the population of the valley. UDOT has cancelled badly needed bus routes but wants to waste money on this project Tax payers should not have to subsidize this costly transportation for two ski resorts.</p>
37811	Greg Ward	<p>The Gondola is a money-maker for a few greedy developers - not the best solution for the surrounding cities. Be brave and out it to a vote by thee citizens.</p>
37812	Taunja Nauman	<p>The inversion layer experienced in this beautiful valley is unprecedented. Please, Utah, the gondola is a step in the right direction to assist with cleaning up our dirty air. In addition to fighting pollution, the gondola will reduce auto accidents exponentially, thus saving lives.</p>
37813	Loraca Peterson	<p>Please no gondola. Please try less invasive transportation before disrupting our canyon. My family rock climbs, mountain bike, hikes and snowboards. Gondola is not the solution. I beg you to not take away this precious space. For the few days a year that it's stop and go traffic have reservations in place or toll. Stop doing what big corporations want and keep this as it is. We don't need to find a way to get more people in the canyon we need to preserve what makes Utah rad. It's the outdoors.</p>
37814	Jon Paulding	<p>I am very opposed to the Gondola option. The Wasatch and Utah only have a small amount of beautiful alpine terrain like LCC and a gondola would marr the views in the canyon unacceptably. I also feel this option would not be well utilized except 5 months per year and would be a taxpayer bailout of a private for profit 2 companies.</p>
37815	Brad Di Iorio	<p>Yes, gondola or cog rail would be best and I believe that they toad should be a taxed for folks that want to use it heavily now. I was up there this sunday just trying to get to Alta and the current mergin system doesn't work. It should be a single lane road on both sides until the raised, flagged concrete divider near Snowbird. Limit buses and cars cuz its only going to get more crowded causing more damage. It's like the Olympics. We can't have the Olympics in Utah cuz it will fuin everything here. It's about preserving and its a fair, equitable way to stem the crowds. If they don't like it they can go to Snow Basin.</p>

Comments on Little Cottonwood Canyon Final EIS

37816	Grant Calder	The gondola is NOT the way to go to solve transportation issues in LCC. There are many other ways that are more effective and efficient to solve the issue, including widening the road directionally, which will have to happen at some point anyway, and using economics (tolling) to change traffic behavior based on usage. Please keep the Wasatch clear of massive towers that will destroy beauty of LCC. NO GONDOLA!
37817	Sienna Kopf	Please preserve LCCs beauty and boulders. No gondola.
37818	Kaya May	The gondola would not only interrupt hikers, climbers, mountain bikers, and the people that live in the mouth of the canyon, but it will also interrupt the wildlife. Additionally, the construction will put so many emissions into the air. I know it's something that most people don't care about, but it's incredibly important to me and all the others in our valley, locals or tourists, that have any type of breathing issues like lung cancer or asthma. It's hard enough to breathe here, adding even more construction would only increase that. The gondola will also decrease the rugged beauty that can be seen and visited right out of the city that people come all over the world to see. This gondola would be a grave mistake that so many other people in this state already abhor. As I'm sure you've seen, neighborhoods all over the state have been posting signs about saying no to the gondola. What ever happened to listening to the people? On another note, I do apologize that my comment has been all over the place, I just feel so strongly about this construction that you all have seemingly decided on without your supporters. Keep this state full of it's rugged beauty that inspires it's visitors to pursue the spiritual journey that is adventure. Please head mine and others comments about wanting to keep us wild. Thank you for your time.
37819	Grant Kates	<p>I am 100% against the gondola. I believe it to be in the best interest of less than 1%.</p> <p>We're taking about a natural increase in population that can be battled by other means.</p> <p>There is no reason to dig up and establish such an eye sore in his beautiful area.</p> <p>Look at the cost, we simply can't afford it. Coupled with issues with the great salt lake I think we all need to make better priorities and allocate the states funds in a proper fashion.</p> <p>This mentality of let's build a gondola and our issues will go away is silly and immature.</p> <p>As leaders of the community and elected officials, let's look at this situation for what it is and take the time to rethink the. Eat solution for the earth, the state, the locals who love living here, and the tourists who will never stop visiting.</p>
37820	Bryce John	<p>Perhaps this is outside of the scope of UDOT responsibilities but it seems very unwise to simply try to put as many people as possible in that canyon.</p> <p>As a representative of a company that relies on Little Cottonwood Canyon water, I clearly see the effects of over use. We need to limit the impact rather than simply send more people up there.</p> <p>Spending the amount of money required for a gondola - which primarily benefits 2 resorts is insane.</p>
37821	Marjorie Bsumek	In our tiny canyons a gondola is a very bad solution. So many reasons. Short ski season and getting shorter - too long a time to reach the resorts, must find parking at the base of the canyon, line-up, wait, very expensive, devastate the scenery. This is only to line the pockets of the developers and their cronies at UDOT and others.. Many better solutions.
37822	Natalie Mitchell	No gondola!
37823	Lindsay McAllister	Do it! What a world class addition to our world class mountains and snow. Why wasn't this proposed sooner?! Let's get moving on it! ♥
37824	Taylor Street	I've lived in Utah for nearly two decades and have never skied there. I have, however, hiked, rock climbed, and mountain biked probably hundreds of time in the canyon. Why should I have to pay, in more than one way, for the destruction of this place that I love so much? All so that a few hundred rich folks can make it up the mountain faster?? This must be a joke. Let's not start destroying the very things that make us all love Utah.
37825	Diane Laxman	I do not want the environmental damage that will occur with the installation and operation of the gondola. There are much less expensive options such as parking reservations, better use of buses, and encouraging carpooling. The canyons belong to everybody, and not just the ski resort owners or skiers. UDOT should keep in mind people other than just a special interest group!
37826	Wendell Miller	Transporting many people up Little Cottonwood Canyon has no value to me. If you insist on taking more people up the canyon, those who use the canyon should be the ones who pay for roads or gondola necessary to provide transportation. I don't like the idea of more people in the water shed area from which I get my drinking water.
37827	Suphithaya Anders	I am against the gondola Using huge amount of tax money to profit private ski resort Cheaper and less of environmental impact to fund more buses going (make them fare free) and lottery for private parking at the two ski resprts
37828	Duane Swasey	I live in Moab and I do not want my 1/2 billion dollars of my tax dollars spent on the gondola project. More buses to get skiers to resorts. That much money is better spent else where like highway 191 from crescent to Monticello . 4 lanes would be good to solve a lot of traffic issues. To [redacted] with the skiers at snowbird and alta.
37829	Abby Van Blarcom	This gondola would have an extreme environmental toll of the canyon and wouldn't solve any problems, only create them. It would be better if we could introduce new bus alternatives instead of making the tax payer donate 750+ million dollars to something they may not even use.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37830	Zoe Adams	My name is Zoe Adams, and I am senior in high school in SLC. I learned how to ski at Alta at age 2, and have made some of my best memories in Little Cottonwood Canyon. I love the accessibility and beauty and uniqueness, and that is what makes LCC one of a kind. The gondola would take away all of that. The gondola just wants to ship as many people up the canyon as it can, not worrying about the destruction that would have on the snow pack. The gondola is said to cost \$500 million, but with inflation, it would be closer to \$750 million. And who's paying for this? The taxpayers- even the ones who don't use the canyon to recreate. The process required to take the gondola is absurd. You have to drive to a lot, park, get on a bus with all of your gear for the day, wait in line, and then take a 45 minute gondola ride to the resort. This doesn't include weather delays, which could cause the gondola to shut down and not be used anyway. The gondola wouldn't be built for 5+ years, so it isn't even a short term solution, and the traffic will still be prevalent this season and the next and the next. The environmental impact from adding in massive supports would be massive, and the river and wildlife and plants would be severely damaged. There are other solutions! We can have a better bus system with more stops and buses running, tolls, and reduction of cars allowed. These are all solutions that are cheap, easy, and accessible. The gondola is NOT the answer, and I hope you all can see why it just doesn't make sense.
37831	Dixie Brown	I support the added bus system. It is way less costly and will have less impact on the canyon. I fear that the Gondola will ruin the beauty and also cost way to much money for the taxpayers. Most of them will not even benefit from it. Please vote no to the gondola.
37832	Denise Love	Try alternative transportation options first. Toll booth with high fee for single drivers. Smaller shuttles and regular buses more frequent schedules. Assess impact before moving to an extreme option, gondola.
37833	Greta O'Brien	Having been an avid skier in Little Cottonwood Canyon for over 50 years, I am excited to see the forethought of installing a gondola to get not only skiers but other folks up the mountain without having to drive themselves. The bus idea is only as good as the bus drivers. I have personally witnessed bus drivers just crashing into the side of the mountain due to their fear of the road conditions. This is an opportunity for Utah to show the world our forward thinking for transport up the canyon. Europe has been doing this for years. As a home grown Utahn, who has enjoyed this Canyon my entire life I am saddened to see the special interest groups and a few homeowners have turned this fabulous option that will solve so many problems for the majority of the public to the interest of the few. This is truly an opportunity to show the world that we respect our canyons and are doing something that will ensure for generations they will be treasured and respected for ALL to enjoy! I truly hope and pray that you will go forward with the gondola!
37834	Hannah Preston	The gondola is not the solution to the traffic problem in little cottonwood canyon. It is too expensive, and disruptive. I do not want such a big obstruction to the view of the beautiful mountains. I don't want to pay every time I visit the canyon to ride a gondola I never wanted. The gondola would cause more problems than it would fix! I favor increased bus services, as they are more accessible, less expensive, and don't diminish the beauty of the canyon.
37835	Duane Swasey	No to the gondola!!!! Money spent better elsewhere!!!!
37836	Susan Boskoff	I do not support Gondola B for Little Cottonwood Canyon and am aghast the UDOT selected this option. Rather than focus on the natural beauty of our geology of region and strategically approach a problem that has existed for decades, it appears backroom agreements are "driving" this choice. Gondolas have been successfully designed site-specifically; this one a design catastrophe. And the price tag outrageous. The traffic bottleneck at the base of the canyon has been raised by the locals, and the outcome will only increase our valley's pollution, traffic and crashes. It is my understanding that the majority of those surveyed do not support the Gondola Plan. Do better with new and different voices at the table; and start over.
37837	Jacqueline Catten	No gondola! Extended bus routes and widening roads preferred!
37838	Laurie Tuckfield	Vote NO for the gondola. It makes no sense financially and environmentally.
38650	Blake Perez	Hello Josh, I'm writing to provide you with the CWC comments for the FEIS and the preferred alternative. Please see attached. Also, so many thanks to you and your team for agreeing to join our recent board meeting and the upcoming Stakeholders Council meeting. Very appreciative of you joining the meetings, sharing, and taking questions. Also, I'm missing one signature on the comment page. I'll have that signature tomorrow and will send you the fully signed copy as well. Thanks again!
37839	Renee Schmid	When there is a snow storm there is no way a car, truck, or bus can make it through the ice and snow in Little Cottonwood Canyon. The gondola is the answer, it does not need wheels on asphalt to go through ice, snow and avalanches. It is way safer and the better way to go up the canyon. My vote is gondola all the way!
37840	Sienna Kopf	The gondola will gate-keep LCC canyon and perpetuate unequal access to the outdoors. No gondola.
37841	Shawn Alfonsi	We support building the gondola! Great all year around, less cars, less noise.
37842	David Monk	I disagree with building a gondola. The towers and cabling would destroy the beauty of the canyon. More concerning is the cost to the tax payer who would likely never from the expense. The majority of people on the state have never and will never use such facilities, but would have to for the bill. The winners in this are the ski resorts. They get the people at no apparent cost and time time it would take to get there would discourage use anyway so initial use would be high but it will drop due to negative impact on time. Better solutions would be enhanced bus service and/or tolls for access to the canyon.
37843	Debbie Eggett	The gondola will in no way shape or form benefit me or my family!
37844	Zachary Davis	I think the gondola would be great. I would love to take my family up the canyon and enjoy the views.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37845	Matthew Melancon	As so many others have already commented, this "solution" is not satisfactory in any way shape or form. It is incredibly costly and unreasonable that the money for this project come from taxpayer money when two private entities are the primary beneficiaries. There is overwhelming opposition from the public to this proposal. The proposed gondola line will have a permanent effect on the viewshed of the canyon. As a photographer, this poses a significant problem for my subject of choice: landscape. The alteration of the canyon visually will significantly impact my work, the potential to photograph and profit from the images taken from the area. The value of the canyon extends far beyond aesthetic appeal however; a majority of water in the Salt Lake Valley comes from little cottonwood canyon. A construction project in this canyon has a potential to contaminate a large volume of the area's potable water supply. In a state with serious water supply issues, this is completely irresponsible. As stated in other comments, the gondola will only serve the upper part of the canyon and will not solve traffic issues for the backcountry skiing community. For these reasons and myriad other reasons detailed by wasatch backcountry alliance and so many others in this forum, I am vehemently opposed to the construction of the gondola. Don't put the burden of half a million dollars (or much more) on the citizens of Utah. Expand the bus service during the winter season. Protect the natural beauty of the wilderness that is Little Cottonwood Canyon. It is our responsibility to preserve the land for the appreciation and enjoyment of future generations.
37846	John Langer	I am against the gondola plan as it would only serve the ski resorts and not those of us who use the spaces between the base of Little Cottonwood and Snowbird. It would destroy the views for those of us who hike and recreate in the canyon, and the cost to use it would favor only the wealthiest of Utah residents. Please consider an alternative solution.
37847	Sylvia King	Please consider trying alternative plans first before constructing the gondola. I like hiking and camping out but haven't skied for years. The gondola does not accommodate so many of us. It sounds like it will not be affordable for most of us. In addition, the environment will be ruined with huge poles, construction, etc. I would prefer money go towards helping those who are less fortunate than skiers who can afford to ride a bus but refuse to do so. Thank you.
37848	Anna Clare Shepherd	I am very opposed to the gondola. It just benefits the ski resorts and not all us other users of the canyon. It also encourages more usage of the g e canyon-- especially by those using the ski resorts. There are other remedies much better.
37849	Sharon Spaulding	No to The gondola!
37850	Peter Dahlberg	The fact that UDOT has not publicly addressed the vehicle tunnel alternative makes me believe that UDOT is mainly interested in building the Gondola and is not concerned with finding the best solution to address traffic issues in Little Cottonwood. Why not investigate a vehicle tunnel when it appears that it is lower cost, higher capacity, lower environmental impact and does not destroy the natural ambience of the canyon?
37851	Anna Alfonsi	We support building the gondola! Vote for gondola alternative please. Great all year around; less cars, less noise.
37852	Caren Beeman	I think this is a bad idea. The canyons can not handle that many people.
37853	Allan Nichols	I think the cost of a gondola in Little Cottonwood Canyon is too high and the towers will be ugly. There is no reason to rush to such an expensive decision. Widening the road is also not needed. Increases in carpooling, buses and potential fees to skiers (not residents of Alta) should be looked at first.
37854	David Brown	I'm opposed to the Gondola. Please count my vote.
37855	Allison Emery	I cannot believe that a gondola is even an option for solving traffic in our gorgeous Little Cottonwood canyon. One of Utahs most incredible places. Why oh why would anyone want to destroy this amazing landscape with skyscraper towers of metal and destruction of a such a pristine place? The traffic is only bad a few days a year...why destroy a canyon for that? What this would destroy could never be brought back. Please oh please do a phased approach that would preserve Little Cottonwood canyon forever. The generations to come deserve for you to reconsider destroying this canyon that I've loved all my life. Thank you for doing all you can to stop the gondola from ruining this canyon for the people in the state of Utah. Don't let the outsiders take over. Let the people who love this canyon be heard!! Please listen to my plea!!
37856	Mary Ann H Dresher	I oppose the gondola as serving only a limited population and terribly ugly and expensive
37857	Renee Fasbender	to be brief: 1) totally opposed - do not want to view it as I occasionally drive up canyon - destroys view 2) we're currently in a recession - how can you justify spending even a penny on such an expensive project that so few of the local residents in the valley or state would even use - only a small percent would ever use it. 3) would never use it - don't sky and if I hike to Lower or Upper Red Pine Lakes or White Pine Lake from Tanner Flats, it doesn't even stop there so it wouldn't help me or many other people. 4) You have not tried maximizing bus service which is far cheaper and could possibly be used which could also make a stop at popular climbing or hiking spots. 5) this should be voted on as a referendum (or whatever you call it, rather than such a tax burden be made by a few in power. 6) there are many who will be paying the tax burden who can afford it, but there are so many, many more that are struggling to make it day to day with expenses up. Particularly while the cost of everything has escalated. Far more people are trying to survive, food, transportation, gasoline, school expense/loans, and on and on. It is the wrong time for any big expense. 7) Why should the many be paying for a billion dollar gondola that only the wealthy can afford to use as they go skiing. It is wrong and those in support of this are off their rocker. If you want to build it and ruin the canyon, those of us opposed should be given a tax waiver. I am 100% against it. Alternative options have not been tried that are far less expensive and as I said before, could drop people off up and down the canyon as trailheads, etc.
37858	Lorie Swaydan	I like the gondola idea. It would cut down on traffic while providing clean transportation up the canyon. It would be a fun attraction even in the summer months.
37859	Mark Foote	I am strongly against the proposed gondola project. The gondola is very expensive "solution" that will only service two ski areas with a very slow and unsightly method. I feel an elevated monorail that serviced both canyons as a loop service would be far faster and more efficient.
37860	Andrew Copenhagen	Not in favor of this gondola not in the least bit
37861	Sienna Kopf	The gondola is not a reasonable solution for recreation expansion in LCC. UDOT, do better.
37862	Spencer Cawley	No gondola. Not now or ever. UDOT needs to be more collaborative.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37863	Steve Meyer	This gondola benefits only two private companies. If this is such a great idea, let them finance and pay for this. Save our tax money for uses that benefit all citizens and canyon users.
37864	Suzann Withers	Absolutely AGAINST the gondola. At some point we have to put a limit on how many people can be at the ski resorts. We have to accept limits in a variety of places and this needs to happen here as well. The resorts will have to suck it up and not have unlimited profits at the expense of the canyon and the residents here.
37865	McCall Wade	Please do not put a tram up the beautiful canyon. Keep our state from ruining the peacefulness and tranquility the canyon brings. Just say no to the tram.
37866	Russ Dow	Definitely against a gondola. It will destroy an amazing view. In the 80's someone suggested tunneling and having a subway. The study showed that the water from this project would fund the project. This is a win win for our community. It also will allow the canyon to keep its incredible views, will keep the canyon open after storms and not subject to avalanche control. Long term this is the solution that should be funded through water revenues, resort and public funding. We will all benefit from this feasible approach. Thank you for your consideration!
37867	Nico Metzler	I'm wholly against the gondola and believe it should be removed as an option. Basic understanding of traffic suggests that the addition of another lane (even an aerial one) will be compensated by additional people who would then be willing to drive this thus restoring traffic to the initial level. So unless total flow of people can fill the resorts in some acceptable time it doesn't offer a promising solution. This ignores that it's an incredibly costly solution to a private business problem. I'm confident that non-infrastructure based solutions, enhanced bussing, parking reservations, etc. suggested in the initial phasing will substantially improve traffic without unsure expense
37868	Aidan McPherson	I think that the gondola would damage not only the residential area near the bottom of LCC, but also the ecosystems of the canyon that are enjoyed by many people year-round.
37869	Joel Trachtenberg	The Gondola proposal looks like a multi-million dollar infrastructure project, rather than a transportation solution. There have been countless arguments against the wisdom of a gondola, and for these reasons there are far more people against this proposal than for it. For the people who live near the proposed base station and Wasatch BLVD, this will create worse even worse traffic, and lawsuits are ready if UDOT goes forward with this plan. The gondola will only serve those people, often tourists, who frequent the ski resorts. But even for them, this is not an efficient system. This plan does not look holistically at LCC and BCC as a traffic problem. BCC often has worse traffic than LCC. Has there been a study on how a gondola in LCC will effect traffic in BCC? A much simpler, cheaper, and better idea would be enhanced electric bus service up and down both canyons. There should be express buses to the resorts in both LCC and BCC, and other buses which stop at trailheads. This plan would be much more equitable for non-resort users for which the gondola has no value. As well, bus service can be ramped up and tamped down based on snow conditions, weekdays vs weekends, time of year, and anticipated crowds. A gondola has no flexibility. Lastly, as climate change negatively effects the Wasatch snowpack, and as the Great Salt Lake dries up, thus reducing "lake effect" snow, skier-days at the resorts are not projected to increase, and will likely decrease. How will the decision to build this gondola look in 10-20 years if it is underutilized. You will have a huge infrastructure project serving an area with almost zero permanent population. Another "bridge to nowhere."
37870	Andrew Copenhaver	This is [REDACTED]
37871	Jake Barney	I grew up in Cottonwood Heights and use both Big and Little Cottonwood canyons regularly. I am an avid skier and literally no one I know who frequents the canyons on the most crowded days wants this that doesn't have a vested interest in the project. The people you will be forcing to pay for this don't want it because it's not needed. This is a clear example of socializing the cost for private profits. This is not in the public interest.
37872	Edwin Solomon	i would like to express my opposition to the gondola project in Little Cottonwood Canyon. It seems that the environmental and aesthetic cost of such a project is just not worth it. Just another project to put money in the pockets of a favored few. All this does is push overcrowding problems into neighborhoods at the base of the canyon.
37873	Douglas Tolman	Moving forward with a Gondola is against the needs of Little Cottonwood Canyon and its recreators. As a lifelong Wasatch climber, hiker, and skier who does not ski at resorts, the gondola does not serve me, it will primarily serve wealthy tourists, and the owners of the very ski resorts responsible for so much traffic. It is apparent that a majority of canyon users also feel this way. We do not want our tax dollars spent on a subsidy to the ski resort corporations. Additionally, the lawsuits that take place due to conflicts of interest regarding land ownership of the proposed gondola base location will inevitably add many years and dollars onto the actual time it would take for the gondola to be built. I suggest bolstering the bus system with more regular schedule, and large multi-level parking garages in the valley along major entry points to the canyon. In combination with a canyon toll, this is the only option that will solve the traffic problem equitably, efficiently, and sustainably.
37874	Calvin Richardson	No gondola. Leave it as is. Udot already has done a good job of improving roads.
37875	Robin Fults	I am a resident of Cottonwood Heights and am a Holladay native. As an avid climber and skier I've spent my entire life falling in love with and exploring Little Cottonwood Canyon. While I have seen the traffic grow at alarming rates over the years, I am certain that the gondola is not the solution to our problems. The thought of the gondola infrastructure ruining the natural splendor of the canyon for generations to come is abhorrent and tragic. It is my belief that both a canyon toll and an improved electric bus system (like park city has) should be the first step that we take toward solving the traffic problems. The gondola will only serve to shuttle tourists to the resorts and locals will be left to foot the bill. The public has spoken. I do not want the gondola!
37876	Logan Millsap	Many highly trafficked, space-constrained destinations (e.g. National Parks) have already demonstrated there are better, less expensive ways to move people than a gondola. It seems clear to me that the gondola only addresses a very narrow set of problems for a very narrow set of users during a narrow portion of the year. But the list of other options presented to Utahns was also too narrow. I'd rather take more time to arrive at the right solution. The process needs to begin again and take a more holistic view of the canyon and all of the canyon's visitors in a wider context. The number of private automobiles in the canyon should be reduced through tolling and metering to a degree that allows buses (with increased frequency) to become the most obvious and most convenient choice for visitors and employees. We don't need to tear up the canyon with road widening or build expensive, low-capacity, single-purpose gondolas. We can solve LCC's problems with the humble bus for a fraction of the cost.

ID	Full Name	Comment
37877	Sherry Allen	No on the gondola. I'm a skier but feel the gondola only serves the ski resorts. Other options such as improved bus service should be tried first.
37878	Marilyn Thomas	Please consider our future generations when making this decision. Our pollution is not improving and we need to do something now. This is just one small step to be a part of change that will affect generations to come. The gondola will cut down on road closures due to traffic accidents. Please listen.
37879	Lauren Henrie	Please do not implement Gondola Alternative B. Not only would it be a permanent eyesore and scar to the landscape of Little Cottonwood Canyon, it would also add to the crowding problems we already have in the canyon.
37880	Brent Mitchell	Born and raised here and have watched the valley and canyons get more crowded every year. Gave up going to Little Cottonwood for skiing recently due to the traffic hassles even as I did construction work on both resorts. UTA causes more traffic jams here in the valley, while stuck behind trax and virtually empty buses. UTA can only screw up that canyon worse. A gondola will be used year round as it is Albuquerque while riding "above" the avalanches. No slide offs and stuck behind I'll equipped cars that can't make the grade. As our cars slowly convert to electrics, let's place a system in that is ahead of its time and not trying to play catch up. GONDOLA for sure!
37881	Barbara Cockayne	I am not in favor of the gondola proposal. It will ruin the mountain sites, and be so expensive, millions of dollars. Thank you for letting us share our views.
37882	Dan Simons	IN FAVOR of the Gondola option. I am not in favor of widening the road with further/additional large cuts into the toes of the mountain adding additional erosion challenges, giving it a gunite look like Provo Canyon, unsightly avalanche sheds, and more buses that can't make it up or down the canyon with heavy snow fall having to send tow vehicles to pull them up the mountain. Get rid of the "Ikon" Ski Pass to help relief pressure. Make Snow Bird and Alta pay for their share of the cost. Its a benefit to them to get more skiers to their resorts.
37883	Fuaad Hararah	It's perplexing and not beneficial to have a gondola that serves ONLY private business. Create tolls - have a season pass and fund the bus system. Stop making things complex.
37884	Kent Jensen	I am 100% AGAINST gondolas being put in the canyons and vote AGAINST such a proposal.
37885	Doug Cahoon	NO to the tram. Way to expensive and not needed. It is the wrong thing to do.
37886	Cory Reich	I do not support the Gondola option. The visual and actual impact upon the canyon and upon the Granite area would be horribly negative. I believe there are more viable and less impactful solutions to mitigate the traffic and number of vehicles that go into the canyon. I believe buses and other auto occupancy rules are better solutions.
37887	Savannah Clark	I believe that the gondola does not serve enough people to be a viable reason to build a permeant structure in one of the most beautiful canyons in the Wasatch mountains. The gondola does not serve enough of the people who access LCC year round. It serves a very small subset of people within a sport that only happens 1/3 of the year. I am a snowboarder. I deal with the traffic that takes over the canyons during certain times of year. It is undoubtedly annoying but if you want to live in a place with unparalleled access to mountain terrain that is booming in population then you have to know what your up against. You need to make plans to carpool and take the ski bus. The ski bus should run every 15 minutes. This would make transit up the canyon via ski buses that can become increasingly electric and reduce emissions in the future more efficient and easy. Tax payer dollars are what is proposed to pay for the gondola, well I don't want my tax money paying for that. The gondola serves a private company not public land or the people who love the Wasatch mountains.
37888	Sienna Kopf	The gondola will ruin this historic canyon forever, please reconsider. No gondola. Save LCC.
37889	Michelle Degeus	Absolutely want the Gondola and save the canyon. Vote yes for the gondola
37890	John Zumbrennen	The gondola may become as popular a tourist attractuon as Temple Square. Gondola will allow for cleaner air. Why isn't there a way to park in American Fork Canyon and get to the Mineral Basin Chair to ease the demand on Little Cottonwood Canyon????????????????
37891	Tamara Carlson	I am against the proposed gondola transportation system in little cottonwood canyon. The cost is too much money and could be used in a better way to help more of the public.
37892	Nick Marucci	NO GONDOLA!!!
37893	Michelle Degeus	Vote yes for the gondola!!!
37894	CARL OLSON	To me the Gondola is a given. We must think big and go for the best long-term plan. The plan should include the ultimate inclusion of additional larger passenger cars with the availability oof tour guides and refreshment capabilities and supply cars. The plan should include stops along the way to pick up and drop off sight seers, mountain climbers, bicycle riders, supplies, waste retrieval, etc. The plan should include hotel locations at the base and en-route at controlled locations. There are so many examples to prove my point, the interstate system, airports, dams, railroads, ships and on and on.
37895	Ray Thomas	(I don't know if an earlier attempt got through.) Honestly, I don't know if visual impact is part of an EIS. However, while the physical footprint of a gondola would be less than any expansion of Highway 210 putting steel towers more than 220 feet high with connecting cables all the way up the Canyon would literally destroy Little Cottonwood Canyon as we know it. A couple of hundred yards and you are away from 210. It would be impossible to escape seeing a gondola. And the Canyon with a gondola would no longer be Little Cottonwood Canyon. Further, a gondola is the most inflexible solution unable to adjust destination or volume. Snow sheds are a great, essential idea. I recently saw proven examples in Glacier National Park, British Columbia. Expanding 210 to three lanes with one switching to accommodate traffic flow; electric buses; requiring car pooling; limiting the number of cars permitted up canyon, even a cog railway! almost any alternative is preferable to the immediate and irreparable damage of a gondola. Thank you for your many hours and great efforts investigating ways to protect and preserve Little Cottonwood Canyon. I truly appreciate it. Ray Thomas Sandy, Utah

ID	Full Name	Comment
38370	Kevin Damon	<p>Dear Sir or Madam:</p> <p>My name is Kevin Damon and I oppose the gondola proposed for Little Cottonwood Canyon (LCC).</p> <p>My wife and I have been Utah voters for 30 years. My wife moved to Utah to teach skiing in 1984. We are regular skiers. For the last decade we have had Alta passes. Our kids are skiers and also active rock climbers. They are frequent users of LCC.</p> <p>I oppose the gondola as I believe it is too expensive, has a fixed capacity and will be difficult to modify in the future. Buses are not a good idea, but they are a better idea. They can be added in increments and the system can be modified as needed later.</p> <p>Let me go further, the gondola is ridiculously expensive. The cost I have heard bandied about is \$500 million, or \$200 per person in the state. I estimate that less than 10 percent of the population skis, and only about 1% of the population are serious skiers with annual passes. At most there might be 25,000 Utah residents with season ski passes in LCC. They will be the only real beneficiaries of the gondola. \$500 million dollars to benefit 25,000 people, works out to \$20,000 per pass holder. The number of skiers with passes in LCC may be lower, say 12,500. In that case the cost will be \$40,000 per pass holder. That is ridiculous.</p> <p>Looking at it another way, I have a friend who has experience in the ski industry. He has actually built ski areas. He tells me a local day use ski area costs less than \$100 million dollars to get up and running. So for the price of the gondola, which will only transport local pass holders, we could build five ski areas, vastly expand the opportunity of Utah residents to ski, and relieve the pressure on LCC.</p> <p>The real difficulty is that UDOT has been asked to address a problem that is not actually a transportation problem. The problem is really two fold. First LCC is a fixed size, but our population doubles every 30 years, so more people are trying to use the same number of acres. That is not a transportation problem. Second, the ski resorts choose to sell an unlimited number of passes, without considering how those pass holders are going to get to the slopes. While that has a transportation component, it is not a UDOT problem. That is a problem ski area operators brought on themselves and they can fix it themselves, for a lot less than \$500 million.</p> <p>Kevin Damon</p>
37896	Jerry Cowley	I personally would never ride a gondola. It's frivolous and a grab for money.
37897	Blanca Vazquez	No, I don't agree with the idea of the gondola, is really expensive and will not solve the problem. If UDOT, corrupt law makers and sky resorts want the gondola, then they can pay from their pockets, not fr9m hard earned taxpayers money. There is more important things to use the taxes money.
37898	Nathan Florence	<p>To Whom it May Concern,</p> <p>I am a lifetime skier and frequent user of Little Cottonwood Canyon over the years for camping, hiking, skiing, cycling, etc. I am also a taxpayer and parent and manager of my own expenses, etc. I mention this because the resorts stand to get all of the advantages of this proposal over sound data and over the will of most users/lovers of the canyon and nearby mountains.</p> <p>I have carefully watched the presentation by the Department of Transportation. I also read, with interest, Dave Fields' editorial, which presents some crucial data that he chooses to interpret in exactly the wrong way.</p> <p>Fields argues that because most of the heavy traffic is going to the resorts it makes the most sense to have the gondola to get rid of that traffic. He then compares the gondola, (in an apples to oranges analogy) to mass transit for daily commuting arguing that it should be funded by taxpayers as a good investment. Mass transit is not an accurate term for this proposal. It is a resort delivery service for most, not a commute to work.</p> <p>There is no reason that this gondola cost should be absorbed by taxpayers when it basically serves to expand parking options for resort skiers (their existing parking options pretty well maxed out). Maximizing resort traffic is not in the public best interest. It amounts to corporate welfare in a state that usually claims to oppose welfare systems. Just the gondola portion of the LCC project budget is likely more expensive than what it was rumored that the majority ownership share in all of Snowbird resort sold for, just a few years back. The resorts stand to gain everything from this.</p> <p>Please do not fall for the lobbying by resorts and wealthy developers to railroad this proposal over the objections of the public.</p> <p>Nathan Florence</p>
37899	Marcus Fechner	I'm a Salt Lake local who frequents Little Cotton Wood Canyon and I strongly disapprove of this project on public lands. The construction alone would have a lasting impact on the canyon's ecology as well as the surrounding residents.
37900	David Robinson	I feel that you understated the impacts when the main line under Superior closees durring snow events. the bypass road is a poor alternative under dry road conditions and becomes a bottlenck and cork in the bottle when snow packed. finding a solution with a combinationof RAC devices and snow sheds should be a part of this project.
37901	tori adamo	I don't support the Gondola in Little Cottonwood.
37902	Carl Spaulding	No to the Gondola plan

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37903	Macy Baker	The gondola only benefits those going to Alta / Snowbird, changes the natural skyline, and ruins climbing routes. The resorts aren't actually going to chip in for it, they'll just raise their ticket prices so the skier pays. Then if Sandy citizens have to pay through tax dollars, those who ski and live in Sandy are double paying for a gondola that is solving the problem of over tourism. Some of the other transportation options better service all types of recreational activities instead of catering to 2 stakeholders (Alta and Snowbird).
37904	Shelley Alvord	Against the gondola. Unsightly and huge impact on ability to take more ski gear on a small gondola. And what about everyone who wants to enjoy the canyon all year? It's a huge cost for a small segment of society. The skiing has already become so expensive that most locals can't afford it. So we have to pay for something that's going to negatively impact locals financially for something they can't afford to use. It's just wrong.
37905	Brian French	Please don't turn Little Cottonwood into a development eyesore. Minimize the impact on the views in the canyon, by adding a bus lane.
37906	David Platt	I vehemently oppose the gondola. The cost to taxpayers for the benefit of two private businesses (and other corporate and private stakeholders) is a gross misuse of funds and not a real solution. The canyons deserve better. Expanded bus service, road improvements, and periodic restrictions and tolling are all solutions that could be implemented with less cost and impact while providing improved access and capacity management.
37907	Robert Kastelic	Bad idea. The installation of the gondola will heavily damage the land, the towers will impact the visual quality of the canyon, doesn't address Summer congestion and only serves the ski resorts as no stops at the areas that are heavily congested, taxpayers should not fund a private company to operate on public lands and it has a short operating window compared to cost. Do not let this abomination to the landscape go forward.
37908	Patrick Kruger	Please try more buses during peak winter skiing. Gondola is too expensive & benefits the few. With climate change, we may experience less moisture.
37909	John Pulli	Locals do not want this! A complete obstruction to the grand views of the cottonwoods! Only benefitting Snowbird as a corporation and not to the common public land user. I encourage our local legislation to find other solutions!
37910	Heather Hadley	Please do not pollute the beauty of our canyon with a gondola. The visual impact is an even higher price than the astronomical price tag presented to tax payers. We are very happy to frequently use this amazing resource as is. Let the ski resorts deal with the overcrowding with their own resources. Why should tax payers bankroll a project that benefits two private companies.
37911	James Bown	I am in favor of the Gondola. I believe it is the best option for solving transportation problems going up and down the canyon. Gondolas are commonly use for such things in Europe, this is a well proven solution.
37912	john sanford	Vote yea for the gondola
37913	Eric Loosle	The gondola is NOT the solution! The rest of the phased approach is good. Use some of the \$550 million to increase the pay of bus drivers for the cottonwoods to make the job more appealing.
37914	Michael Affleck	<p>I am writing in opposition to the gondola. The greatest part of greater SLC is the natural beauty that surrounds it. As stewards of this place, it is our responsibility to preserve that beauty. Erecting a gondola through the Little Cottonwood Canyon would destroy the natural aesthetic of our beautiful home.</p> <p>The benefits derived from the Gondola also also myopic. It is obviously catering only corporate ski resorts, while its construction and mere presence would disrupt other seasonal recreational activities, especially climbing.</p> <p>It is not worth destroying our beautiful views by permanently altering the canyon.</p> <p>Please reconsider any decision in favor of the gondola.</p>
37915	Autumn West	I vehemently oppose the gondola. The cost to taxpayers for the benefit of two private businesses (and other corporate and private stakeholders) is a gross misuse of funds and not a real solution. The canyons deserve better. Expanded bus service, road improvements, and periodic restrictions and tolling are all solutions that could be implemented with less cost and impact while providing improved access and capacity management.
37916	Lauren Hronek	<p>The proposed gondola plan is a large waste of tax dollars, cuts into the visual aesthetics of the canyon, harms natural resources, and only serves a percentage of canyon users during winter months. It seems that increased bus transit with more stops throughout the canyon (or other alternate solutions) could serve not only skiers at the two resorts, but those who visit the canyon year-round and desire to backcountry ski, snowshoe, hike, bike, climb, birdwatch, etc. The gondola only serves resort-goers and is a strenuous impact on the tax paying citizens of Utah as well as the natural environment of the canyon.</p> <p>Wouldn't it be better to increase/improve bus operations and hours of the day for a much smaller investment Then reallocating much of the proposed gondola budget to improve mass transit along the Wasatch front. Utah's governing authorities could provide solutions that majority of Utahns (not just those who support two ski resorts) can benefit from -- especially as our population will begin to reach 4 million people by 2032. This seems like a narrow-minded proposal which aims to benefit the few and privileged who can afford to ski at these two corporations, line the pockets of legislative landowners where the parking garages will be built, impact the aesthetics and wildlife of the canyon, and not address/fix the underlying issue with overcrowded canyon use.</p> <p>I also take issue that you are still incentivizing all other users "non-resort" skiers to drive the canyon but then also penalizing them with tolls, parking fees and these users have no other way to access the canyon. This is not an equitable solution and would only serve the privileged.</p> <p>I would advocate for a system similar to Zion NPS. Shut the canyon down in the winter and have it only accessible by bus. And have stops all along the way for all users.</p> <p>LCC is more than just skiing and powder days.</p> <p>For the reasons above, please reconsider and think long-term about the impact of your decision to support on current residents, future generations, wildlife, water resources, erosion components, and sustainable solutions.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37917	James Phillips	The gondola project does not serve the majority of the people in Utah, Salt Lake County nor the cities of Cottonwood Heights and Sandy. The \$500,000,000.00 price tag is too high just to transport people up the canyon only to Snowbird and Alta. It only helps the ski areas expand their respective resorts (parking lots become condos) and leave taxpayers with a massive tax bill for over 50 years at 5% on 500,000,000 that is \$25,000,000 a year just to transport skiers up the canyon. (The guys that the interest payments you have to make every year all year round even when the tram cars are empty during the shoulder and summer seasons) It does not serve the family that wants to XC ski at Tanners Flat or the people who want to snowshoe. The answer is no because the tram does not stop there. Does the tram stop in the summertime anywhere between the tram base to Snowbird/Alta stop? The answer is no. So why does this tram serve Snowbird and Alta exclusively. Does it serve the road biker or the mountain biker .25 of the way up the mountain, halfway up the mountain. No you have no choice. You are going to lose 100,000 of thousands of dollars on this one way project that does not serve the public. Don't be short sighted if you are going to do something spend the \$ on a cog rail system that goes to Park City and serve everyone. Even the handicapped all year long. The homeless who can see the fall foliage and the tourists who visit SLC and PC. If you are going to spend 500,000,000 think of my grandkids kids. It's a no brainer. Backcountry skiers and resort skiers are not going to wait for a full hour BOTH WAYS. Traffic will be the same thank ICON for that. The toothpaste is out of the tube. Use the mining right of way and make it an even greater place to ski, hike, walk and bike. I will buy a Muni bond that builds a train or cog rail because that will pay for itself. The tram will fail folks just ask the people in Las Vegas. Their transportation system failed and your gondola bonds will fail too!! Trust me I know I make a living buying and selling Muni bonds to people all over the country for the last 35 years. Have a good day! Good luck and don't waste my tax dollars or my kids tax dollars and my grandkids tax \$
37918	Thomas Atkinson	With only a limited number of days (10 or so) when the canyon is at capacity for driving and parking at the ski resorts, I feel the gondola will be under used and a waste of resources.
37919	Christine Calder	I am absolutely opposed to the Gondola option. It is a boondoggle for the ski resorts at taxpayer expense. Less intrusive changes should be tried. Like electric buses and shuttles.
37920	Hailey Leek	Against proposal: this gondola benefits a small amount of commuters. It's built at the expense of taxpayers and destroys the environment during construction and around the base. More shuttles and coordinating/funding by the ski resorts is a better solution.
37921	Sharon McLaughlin	No to gondola and no to taxpayers paying for it!
37922	Marilyn Frost	The gondola would ruin the natural beauty of the canyon which is one of the things Utah is known for. The bus system would not put all the manufactured metal throughout the canyon and would cost less.
37923	Lois Huebner	I believe we should explore use of more frequent bus options before doing anything as invasive as a gondola and the associated infrastructure. A gondola also seems to mainly serve Alta and Snowbird and will likely disadvantage people who want to engage in activities in other parts of the canyon. It also seems likely to bankrupt restaurants and other businesses outside of Alta and Snowbird
37924	LG Foote	I am against the idea to build a gondola.
37925	Elizabeth Burnham	I am against the gondola. It is too expensive for the average consumer. The public will have to pay to support the gondola on a yearly basis. Public transportation is for the general public not just for the richer consumer. The price for a ride on the gondola is out of reach for the common person. Electric buses and parking in areas of the SLC area would be assessable for all people in Utah. If buses were frequent you would probably not have to do major work on the roads.
37926	Victoria Brunner	It's not ok for taxpayers to foot a \$550 million project to benefit resorts only for peak weeks in canyon. The gondola only serves a single user group resorts and resort customers. Does not benefit hikers, runners, bikers, climbers, backcountry skiers. The canyon is public land and should be treated as such is access to the canyon is not unanimously agreed upon the gondola project should not go through. During peak ski season resorts customers could pay a toll or implement a reservation system in the canyon. As well as expanded bus routes in the canyon
37927	JACK HIGGINS	Just charge \$100 per car to go up the Canyon during ski season!! Add more busses and SAVE OUR CANYON!!! Please NO GONDOLA!!!!!!
37928	Lynne Cartwright	My husband and I are strongly against the gondola in Big Cottonwood. The environmental impact of installing towers is appalling. Additionally, the state's taxpayers would be paying for something very few use. There are other alternatives that would be less impactful on the canyon and more fair to the public. This comment is just a distillation of my thoughts.
37929	Betty Sturdevant	This proposal to build the gondola to service Little Cottonwood Canyon for the benefit of two ski resorts is not the answer to the traffic problem. Limit single rider cars, expand the bus service and possible toll charge make much more sense.
37930	KENNETH MURRI	I believe the Gondola B option is in the best option for the long term interest of all canyon visitors. The Gondola offers an optional mode of travel in addition to a road which will remain. The phase in of the Gondola option is understandable due to the capital cost. As a CPA...I perceive that the long term control of cost will result in an attractive Net Present Value.
37931	Jennifer Curtis	As nearly lifelong residents of Sandy, and devout canyon goers, my husband and I are opposed to the gondola. The years of construction will severely impede the quiet and solitude and beauty we find in the canyon with our young children. We do not want Wasatch Blvd widened nor a huge parking structure constructed near La Cai. This is the city we live in - it will never be the same if you make these changes - which in our opinion, are for the worse. Besides the enjoyment of the canyon for all, the impact on residents in the area of the canyon needs to be a top priority!! Sandy residents deserve a greater say. Thank you!!
37932	Hailey Leek	Against proposal: this gondola benefits a small amount of commuters. It's built at the expense of taxpayers and destroys the environment during construction and around the base. More shuttles and coordinating/funding by the ski resorts is a better solution.
37933	Richard Peterson	The Gondola is a solution looking for a problem. Do we build more restaurants to handle Mother's Day Brunch crowds? No. Do we build larger churches to handle Christmas and Easter Sunday crowds? No. It simply doesn't make sense to do that. The same is true for powder days. If you really want to be there for first tracks, then get up the Canyon and stay overnight somewhere. If that doesn't work, then be first in line for when avalanche control and snow removal is done, and if that doesn't work gather your friends, get a warm beverage and some donuts and enjoy the trip up the canyon. NO GONDOLA.

ID	Full Name	Comment
37934	Ann Smyth	<p>I think this is not a good plan. It isn't a good idea to use public tax dollars to build a gondola that will serve only a small portion of the citizens. It will ruin our canyons for posterity. I am AGAINST building a gondola in the canyons.</p> <p>The proposed gondola is the wrong choice. If the purpose of the EIS has narrowed to "get more paying customers to Snowbird and Alta at any cost" than the project purpose is helplessly, fundamentally flawed. However, I believe the proposal falls short regardless.</p> <p>The proposal does nothing to solve the congestion that occurs before reaching the gondola base and the mouth of the canyon. Riding the gondola actually involves additional unappealing steps for users to take in order to continue their journey up canyon. If someone has already waited in immense traffic by the time they reach the gondola base, are they likely to turn off the main road, search for a parking spot, walk from the parking spot to wait on line for the gondola, then ride up from there? I believe this process will not encourage anyone to opt for the gondola over driving themselves, and that's before people find out that the gondola ride won't even be free. It is not a mobility alternative. It is a gimmick. An ungodly expensive gimmick.</p> <p>Even if funded with tax payer money, it is obvious we will still be charged to even use the unwanted monstrosity. The utter lack of transparency about this crucial detail is incredibly alarming. If this information was widely known, you would even lose the support of the tiny minority of naive onlookers who support this misguided blunder. It is misguided to go through with this solution that is so outrageously expensive to build, expensive to ride, expensive to operate in winter, expensive to operate in the summer, and it is downright criminal to consider asking the taxpayer to foot the bill for such a tourist trap and Ski Utah marketing tagline.</p> <p>It is also shortsighted to seek solutions for Little Cottonwood that can't also be repurposed in Big Cottonwood in the future. When additional barriers are created for traveling into LCC, users will flock to BCC. Compounding the problem in one canyon will not be an indicator of success for this project, as much as I know it would be touted as one when this inevitably happens. Not only will the gondola fail to fix the core issues in LCC, it will not provide a viable blueprint to apply to BCC.</p> <p>The detrimental effects the gondola would have on literally all other user groups other than paying winter season resort guests should be so obvious that I'm angry I even feel the need to touch on it. All canyon visitors including but not limited to backcountry skiers, snowboarders, snowshoers, hikers, fisherman, mountain bikers, road cyclists, photographers, rock climbers, boulderers, trail runners, road runners, and anyone simply looking to escape the city to experience the mental and physical benefits associated with existing in nature, will be negatively impacted by the irreversible decision you are making by recommending the gondola. It will be an eyesore and its construction threatens natural and recreational assets that predate and will outlast the viable Utah ski season in the future.</p> <p>Other less destructive options exist, and must be considered and implemented first, but even doing nothing is better than</p>
37935	Kenneth Meleta	<p>What a tough decision someone is going to make. The gondolas make the most sense environmentally, efficiency wise and going green. Let's do it now so we don't have to redo latter.</p> <p>Randy</p>
37936	Randy Orison	<p>in the proposed phased approach to the goldola project i suggest that the portion from the mouth to snowbird be completed, and the portion from snowbird to alta be abandoned. the 50 milion or so not spent on the upper portion could be used for increased UDOT man power and equipment to be deployed durring snow events.</p>
37937	David Robinson	<p>No! To the gondola in our canyon! This will serve a limited and now elite group of people only! Take Reservations like they do at glacier Nationsl Park.</p> <p>Charge skiers and boarders with reservations to go up the canyon. Why do we want so badly to destroy beautiful properties for parking lots. We keep 'paving paradise'. There will be none for the next generations. But then, we know that. No. Please. Listen to the people of theirs beautiful state.</p>
37938	peggy farrell	<p>I oppose the building of a gondola in Little Cottonwood Canyon. I believe that there are other more cost effective and less environmentally damaging options.</p>
37939	ELLEN BRADY	<p>The proposed gondola plan is a large waste of tax dollars, cuts into the visual aesthetics of the canyon, harms natural resources, and only serves a percentage of canyon users during winter months. It seems that increased bus transit with more stops throughout the canyon (or other alternate solutions) could serve not only skiers at the two resorts, but those who visit the canyon year-round and desire to backcountry ski, snowshoe, hike, bike, climb, birdwatch, etc. The gondola only serves resort-goers and is a strenuous impact on the tax paying citizens of Utah as well as the natural environment of the canyon.</p> <p>Wouldn't it be better to increase/improve bus operations and hours of the day for a much smaller investment while reallocating much of the proposed gondola budget to improve mass transit throughout the rest of the Wasatch Front? Perhaps two rail lines for the FrontRunner? Additional rail lines? Utah's governing authorities could provide solutions that majority of Utahns (not just those who support two ski resorts) can benefit from -- especially as our population will begin to reach 4 million people by 2032. This seems like a narrow-minded proposal which aims to benefit the few and privileged who can afford to ski at these two corporations, line the pockets of legislative landowners where the parking garages will be built, impact the aesthetics and wildlife of the canyon, and not address/fix the underlying issue with overcrowded canyon use.</p> <p>I know this solution seems exciting and like a fun way to advertise tourism to our great state. However, for the reasons above, please reconsider and think long-term about the impact of your decision to support on current residents, future generations, wildlife, water resources, erosion components, and sustainable solutions.</p>
37940	Chris Hronek	<p>Oppose this idea. It will ruin the land and be visually disgusting. Does not address traffic in the Summer that is not going to the ski resorts, which will be the only two stops. Taxpayer money should not be used in such a wasteful manner. This is a terrible, terrible idea that needs to be rejected.</p>
37941	Tiffany Kastelic	<p>This should be on the ballot. The people are against the gondola overwhelmingly. The resorts should pay for it if they want it, not taxpayers. Make Little Cottonwood canyon buses only and delivery vehicles. Build a parking lot where the unsightly, polluting gravel pit is with food and beverage outlets. Only cars allowed in the canyon should be residents by paid permit. Workers and the public can ride the bus with increased service.</p>
37942	Tasia Olsen	<p>Workers and the public can ride the bus with increased service.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37943	Mike E. Hale	<p>It is hard to justify a single use expense as large as the gondola. Not to mention the fact that the primary beneficiaries will be ski resorts owned and operated by foreign entities. Instead, we should expand the roadways, increase the number of buses and utilize these buses elsewhere for public transport during the slow season. The additional parking could be utilized for events during the summer, and we would maintain the aesthetic beauty of Little Cottonwood Canyon. Simply put, Building a gondola will frustrate local residents; benefit out of state companies and primarily be used less than half the year..</p> <p>Lastly, I've heard the argument about avalanche, road closures frequently. If you ski, you understand that when avalanche conditions are hazardous enough to close roadways, they are too hazardous to open much of the ski resorts in Little Cottonwood. Those days saved will result in disproportionately less skier days.</p> <p>Please, look at the broader picture. Increasing skier days isn't the only thing that matters. As a community, we need to consider aesthetics, multi use solutions (meaning buses that can be utilized elsewhere) and recognize the primary beneficiaries aren't Utahns.</p>
37944	Cheryl Kruger	Climate change may affect future ski seasons. Gondola project is too expensive when this state needs other things done with tax payer money. UTA should be a major player getting people to the ski resorts.
37945	Robert Carlson	I am against the proposed gondola for Little Cottonwood Canyon because it will only benefit the wealthy.
37946	Lexie Chamberlain	Lower impact solutions should be first priority in order to explore alternative solutions that don't impact the environment and locals in an extreme way.
37947	Emily Moroz	I am strongly opposed to the gondola. As a Cottonwood Heights resident, I live here for access to beautiful, pristine, protected nature. I use the canyons for all of my hobbies (trail running, bouldering, skiing, mountain biking, backpacking, and day-hiking). Should the gondola be constructed, the world class boulders this community cherishes would be destroyed, as would the beauty of the canyon. Installing a transportation method that serves only a small portion of canyon-users, namely the richest canyon-users, is nonsensical. It serves only greedy business moguls, doesn't take the community's wants into account, and fails to solve the larger issues at hand. There are alternative solutions that are far less destructive, invasive, and greedy. Not to mention these options serve the needs of the residents of the valley more closely.
37948	Misky Merino	I would like to comment AGAINST the construction of the gondola. The construction of the gondola is a recipe for disaster - specifically for the health and well-being of the wildlife, land and humans. Not only is the construction wasteful it has potential for contaminating the watershed and destroying habitats for animals. Expanding access to bus passes and carpooling should be the first step in reducing traffic and pollution! Please stop putting profits before the health of our people, land, water and animals! Many problems are linked to the construction of the gondola and the damaging effects are not worth it!
37949	Nannette Burnham	Absolutely NO on the gondola!!!! No..... Only rich people will be able to use it. It will be elitist.
37950	Janet Landon	Greed. Disgusting. Who cares about the environment. PLEASE say no to the Gondola. Spend that money on the infrastructure since all SLC wants to do is increase the tax base by building inordinate amount of condos. City planning? I don't think so. All that matters is \$\$\$. Salt Lake was beautiful and could have been but all that matters is lining pockets. Greed. I am glad I left.
37951	Karen Thomas	I have been volunteering hundreds of hours on a project to build a Disaster Discovery Center with a price tag of around \$20 million for the past 10 years. This project is designed to empower the public with lifesaving knowledge and skills through interactive experiences. To hear \$550 million is the desired solution to provide gondola transportation in Little Cottonwood Canyon is incredibly disheartening. I am a Sandy resident. We love driving up our canyon and have stayed at the Cliff Club several times with our extended family. We would gladly take a bus to visit the area, especially if it meant not widening the road or putting up the unsightly gondola. We likely would not be riding a gondola, along with many Utah residents, who would not be able to afford a ticket. The gondola would not benefit many Utahns. Please do not spend our tax money on this extravagant project that would not benefit a majority of Utah residents. Consider instead a project that could save lives and property and prevent injury rather than a gondola.
37952	Linda Burton	I am very concerned and worried about the gondola in Little Cottonwood canyon. I am totally against it. I think the gondola would destroy much of the beauty of the canyon. It is way to costly and parking would be an entire additional issue. Please protect our canyons by voting no to a gondola.
37953	K V	I support the plan for a gondola in Little Cottonwood Canyon. It is important to ease traffic congestion and from an environmental standpoint.
37954	Andrew Nelson	<p>The gondola will ruin the unique view of the canyon. There are very few cans that offer that unique view. Please don't take that from us!</p> <p>The only groups that want it are the ski areas so if you must, MAKE THEM PAY FOR IT. The average citizen in Salt Lake and Utah does not want and and certainly doesn't want to pay for it. The cost for initial build and maintenance is way too high. Make UDOT be better.</p>
37955	Carolyn Wold	I'm all for the gondola, yet afraid to speak out. We do need to make sure there is parking and more public transportation from parking lots as well as more restrictions driving up both LCC and BCC. There should be an incentive to use public transportation like free.
37956	Roger Baird	I feel that a Gondola will be detrimental to the quality of life for the average Utahan. The cost will be excessive and will only benefit the wealthy ski resorts and tourists. the Gondola will price the " joe public " out of accessing the canyon. Little Cottonwood canyon needs to be kept accessible for the public. What ever keeps access, is the least expensive and has the least environmental impact is the best solution. that is not the Gondola , thank you for your time.
37957	Karen Haynes	I am not in support of building a gondola. It will cost way to much money to benefit private business. We have too many other real needs in the state to spend this much, again, for private business.
37958	Hope Candelaria	This project will be wasteful & take away the Natural Beauty of this area. Please don't do this, I'm Shure there are better ideas you can come up with.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37959	Vicki Wells	I am against the gondola. Its Implementation high price tag for the tax payers for only 2 ski resorts is outrageous and its high ride cost will put its use out of many lower income families price range. I would prefer to see a canyon use fee and increased bus service year round that would also serve train heads .
37960	Bruce and Rene' Bow	We are absolutely OPPOSED to building a gondola in our mountains! Nor do we want to pay for it with our taxes. Please stop this ludicrous idea!!!!
37961	Allie Kolaski	Please please consider options that are not the gondola. We need year round strategies to aid access, prevent damage to natural spaces, and reduce traffic. The gondola is NOT the answer. It serves a small group of users and prioritizes the profits of ski resort owners over locals accessing public lands. Yuck.
37962	Jeff Stowell	I am a frequent user of Little Cottonwood Canyon. I strongly oppose the building of the gondola. I'll tell you why: <ol style="list-style-type: none"> 1. Buses are already paid for. The gondola system will cost millions. I don't want to have to pay to subsidize transportation of high income demographic people to play at a high income demographic sport. I will only support a Canyon transportation plan that serves all users of the canyon - not just skiers. 2. Buses can stop anywhere, serving all users of the canyon. The Gondola plan will only have 2 stops at the ski resorts. Canyon recreation doesn't just occur at the ski resorts. Whatever transportation plan is adopted needs to serve all canyon users, not just ski resort customers. For example visitors to canyon trailheads that park a half mile up and down canyon at the sides of the road creating traffic hazards for both canyon drivers and pedestrians. 3. Buses can pickup skiers and other Canyon users from park and ride lots all over the Salt Lake Valley. The gondola plan will only have a single point of departure at the mouth of the canyon. 4. The gondola will only have a relatively small proposed canyon mouth parking lot (I recall reading 1,800 car spaces), indicates the gondola proposal isn't adequate to fulfill its stated purpose - moving people up and down the canyon. Buses aren't constrained by capacity limits. <p>The fact the state is actually considering the gondola alternative demonstrates poor logic, analysis or forethought for the future. It's right in line with past UDOT money wasting boondoggles like syncrete for resurfacing state highways. It makes me angry that I have to comment to try and keep supposed "experts" from making such a money wasting decision that will not serve the needs of the tourist economy, residents or the canyon preservation.</p>
37963	Devin McCurdy	Please please please! No gondola!
37964	Pat McLaughlin	This is a waste of public money to subsidize two privately owned ski resorts for 3-4 months of the year. In 20-30 years, skiing in Utah will be much less than it is now due to climate change. Spend the \$1B (you know it will cost at least that by the time it's done) on fixing the Great Salt Lake or no one will come to Utah to ski ever again.
37965	Annalisa Jensen	More consideration needs to be taken, more research needs to be done, to approach any changes in little cottonwood canyon with absolutely the most environmentally responsible way possible. Really there needs to be greater consideration of how can transportation be approached with greater safety, less pollution, & better benefit to society throughout the state. & everyone must face how hypocritical it is to cut bus routes & minimize public transportation access in other places while centering public transportation resources around ski resorts. I appreciate and agree with the research and statements made by Both Save out Canyons and Wasatch Backcountry Alliance. The Gondolas project as proposed does not represent an adequate solution to the needs and concerns of the public. We need year round solutions that are truly environmentally responsible, & socially responsible, to serve the best interest of everyone, not to benefit the ski resorts while treating the rest of Utah residents like second class citizens
37966	Reese Higgins	NO GONDOLA.!!! Charge \$200 per car load.! add more busses.!! Don't Kill the beautiful View up the canyon.!!!!
37967	Thomas Utter	I think the gondola is a great idea.
37968	John Neill	Since "UDOT also proposes, as part of the preferred alternative, a phased implementation of components of the Enhanced Bus Service Alternative until funding is obtained and construction of Gondola Alternative B is complete," shouldn't the effects of these components be monitored before any gondola construction be initiated? What of these components improve the flow of traffic beyond what was estimated? Would the gondola alternative B be reconsidered? UDOT should also get the okay from the county, local municipalities, Salt Lake City Public Utilities, and the Forest Service for their approvals before any alternative is chosen. Elected public officials should have a say in how the UDOT project is implemented. John Neill
37969	Karla Hortin	I looked over all the reasons for a gondola vs an elaborate bus system, and I could see why so many people are in favor of the gondola. I just couldn't figure out how a bus service could do what a gondola can. It will work well as long as the gondola doesn't break down a lot.. And I do worry about that. Will it be run by electricy, or by fuel? That would make a big difference to me.
37970	Andrew McCrea	No!!!
37971	Raymond Reynolds	Don't build it!!!! It's going to be a disaster. There are much better alternatives, like a robust bud system!!!
37972	Cary Egbert	I'm a resident of CWH but believe Little & Big Cottonwood Canyons belong to all Utah residents. Please ignore pleas from CWH City Council and go with the Gondola option! It will be a grand experience for residents & tourists that can't be viewed well via moving vehicles. Also, Wasatch Blvd belongs to all and should be widened with a 50-mph speed limit between the canyons.
37973	Karen Smith	I am against a gondola. As a tax payer I feel you are asking me to subsidize the ski industry. They have over sold tickets resulting in even more congestion. If they would charge and require parking reservations like Alta did last year it would cut down on the congestion. No one wants to see those nasty cables ruining the beauty of the little bit of natural beauty we have in this desert valley. Hard no on gondola!
37974	Jane Hill	Please reconsider other options instead of the gondola. The proposed gondola will do irreparable damage to our natural resources and does not serve the needs of the local community who will pay for it. There are many interim solutions that should be put in place. No to the gondola!

ID	Full Name	Comment
37975	Mark Borba	Me, avid skier, North Ogden resident, who owns 4 weeks of Timeshares at Snowbird. Against the gondola concept which is nothing more than a marketing gimmick and attraction for Alta and Bird. Their argument that ski slides close the road and a Gondola will keep on running is a lie. Gondola's hang from a cable which is supported by towers that exist within the slide fields. Should a slide come down it's obvious that the Gondola would need to halt while the towers are inspected for damage. Couple that with the fact the Gondola only benefits the resorts and the eyesore of the towers. A dedicated bus/HOV lane is the answer. It's cheaper and if done right people will use it. Transit parking can be away from the lower canyon relieving congestion on the feeder roads. It's funding can be supplemented by the resorts via season pass sales and a small levy. Yes, if there is a ski, everything stops, but most likely the resorts are buried as well.
37976	Ron Burton	No gondola. Too expensive, ugly, and creates another issue with parking. Please vote NO, NO, NO
37977	Kevin Walkenhurst	A gondola is an invasive step that would permanently disfigure a beautiful canyon. Public transportation should be increased and utilized better before a gondola is even considered. Similar to that of Zion National Park.
37978	David Robinson	the concept of tolling as a traffic management tool does not seem to be in the public best interest. first off day use capacity is the responsibility of the stakeholders, USFS, Alta, and Snowbird, not UDOT. give the Alta paid parking program time to see how it impacts user behaviors before applying a punitive program. when the gondola becomes a reality it should be attractive to users who agree with its goals outcomes and values, not be forced to use that option as a cost savings decision.
37979	Angela Bailey	The gondola is not the answer. It is too expensive, using far too much public money to benefit only two ski resorts. It is destructive to the natural habitat of LCC, dangerous to the water supply and damages the view shed. But you know all this and you don't care. You are following the money and the whims of the few who will immensely benefit despite the fact that 80% of Utahns are against the gondola. Please please do the right thing. Not a gondola (and not a cog railway either).
37980	Katie Jardine	I would like to add my voice to this issue and oppose the gondola in cottonwood canyon. The more I've read on the issue the more I feel it costs are astronomical for the purpose and could be better used in serving the needs of our city. I have spoken with multiple friends who ski, hike, bike and climb up the canyon who would not use the gondola. I personally would not use the gondola. We have a place up big cottonwood and our favorite part of going to our cabin is driving together. We love to drive during the fall as well and be in the colors of the changing leaves. Thanks for taking the time to read and consider my opinion.
37981	Brian Evans	As someone who spends a lot of time recreating year-round in Little Cottonwood Canyon, I strongly oppose the gondola proposal. Certainly a much less costly and obtrusive solution can be agreed upon. If UDOT decides to proceed with the construction of a gondola, I believe that the future sentiment of the majority of Utah residents will be that it was wasteful use of taxpayer funds and an eyesore in that beautiful canyon.
37982	Rob Phillips	<p>I am against the gondola proposal. I have lived in Salt Lake City for 25 years. I am a skier. I am a rock climber. I am a father of two boys who love to ski. I ride the bus.</p> <p>Here are a few reasons I oppose the gondola in Little Cottonwood canyon:</p> <ol style="list-style-type: none"> 1. It is attempting to solve a problem for one limited user group at the expense of other user groups experience. Worse still, it only serves two ski resorts, but intends to use massive amounts of public money to do so. 2. Currently, only a small percentage of people use the busses. Why would an aerial bus hanging from a cable miraculously make them want to use an even less convenient alternative. People may use it once because it's novel. However, most people will continue to opt for the convenience of their personal vehicle, most of the time. 3. It will be an eyesore. It will detract from the natural beauty of the canyon. The fact that we have this incredible place right in "our backyard" is one of reasons I continue to live here. We don't need to turn it into an industrialized theme park. 4. The canyons don't need more people in them, only the ski reports do. It should be ok to set a limit to the number of users in the canyon. Try this analogy. Poring 10 gallons of water into a 5-gallon bucket, makes a 5 gallon mess. 5. The gondola solution is not dynamic, or scalable. <p>Alternative solutions:</p> <ol style="list-style-type: none"> 1. The parking reservation system that was used during Covid was a great example of how to set limits. If you didn't get a parking reservation, then you carpool with someone who did, you took the bus, or you found something else to do that day. Driving a personal vehicle is a privilege, not a right. 2. The bus must win. If people are expected to start using the bus voluntarily, then the experience of using it must be equal to, or better than that of driving a personal vehicle. A three-lane road along Wasatch Blvd, and in portions of the canyon itself could create that advantage. Road widening would only happen in areas where it would not adversely affect other users, the resources they use, their experience, or the aesthetics of the canyon. The third lane would be a bus only lane used in the direction of peak travel. (Up in the morning, down in the afternoon). When the red snake of personal vehicles is at a standstill, the busses would cruise right on by. Giving them a clear advantage over the personal vehicle. <p>Here is a link to an excellent article with more details about this concept: https://rocksteadybodyworks.com/blogs/rocksteady-journal/the-cottonwood-debate-the-bus-must-win</p>

ID	Full Name	Comment
37983	Deborah Simmons	<p>Óªø</p> <p>ÓªøAs a life long Utah resident and lover of the Cottonwood Canyons, I am very disappointed with the UDOT backing of the Gondola B plan. The gondola itself is an expensive special interest project that only supports and services the special interests of the Ski resorts and should not be the burden of the taxpayer. I will support every effort to make sure the gondola does not get funding.</p> <p>However, I do support some of the phased implementation parts such as enhanced busing with no road widening, snow sheds with road realignment, and some form of tolling. However the tolling should be at the mouth of the canyon for all canyon users alike. We are all adding to the congestion no matter our "perceived" income and should all share the same responsibility. Single occupancy vehicle restrictions is also acceptable, as well as no roadside parking.</p> <p>All studies show how bad the traffic will be in 2050 but what about beyond that? Even with an expensive Gondola, the traffic problem will never be solved. There are other common sense solutions. There should be a limit to how many vehicles/buses the canyon can support and when it reaches that number, it is "sold out". Both ski resorts should implement the same parking reservation system and add locker areas for gear storage that will help make bus transit more appealing. Those are solutions that will work now as well as in 50 years. As a regular canyon user I prefer to go less and have the "get away" canyon experience. In addition, the Ski resort's support of the gondola is part of a big money grab. The lift lines are already extremely long on weekends with the current number of skiers without implementing any of the suggested transportation fixes. It is not uncommon to wait up to an hour to get on a lift. Additional people means even longer lift lines and less skiing, but at a much high price with the ever increasing lift ticket price and the crazy cost of parking. (And if you don't like the lines, you can even pay more for a fast pass!). Current Gondola plans only service the ski resorts.</p> <p>Please save my Canyon Experience and no Gondola!</p>
37984	Stewart Robbins	<p>Please consider the other non-Gondola options for Little Cottonwood Canyon. As frequent visitors to this canyon for recreation, my family and I would prefer to see an increased focus on things such as tolling, increased bus routes and highway improvements, such as snow/avalanche tunnels. This seems much less invasive and expensive than a Gondola. Thank you.</p>
37985	Elsie Grow	<p>There is simply no reason to invest so much money into a permanent project that will be an eyesore in Little Cottonwood Canyon. No need to pour so many resources into a gondola that won't even solve the traffic problem and largely benefits rich owners of ski resorts.</p>
37986	Keith Mahoney	<p>No gondola! Put in a gate at the bottom of the canyon and close it when the maximum number of vehicles is reached, open it when a number of vehicles have exited.</p>
37987	linda Nelson	<p>I am strongly against the gondola as I believe this benefits the ski resorts at the expense of the tax payer.</p>
37988	Mikako Trachtenberg	<p>The proposed Gondola is a multi-million dollar project which does seem to be either efficient nor necessary for the traffic problem it is meant to solve. The best way to limit traffic up both LCC and BCC is with enhanced bus service, and possibly tolling to encourage bus use. The Gondola will not address any problems in BCC, and will create more traffic problems at the proposed base. Why spend millions of dollars, and destroy the beauty of one of Utah's most iconic locations when a simpler, less expensive, more equitable, more efficient and flexible system is available with bus service? The traffic solution has to include BCC as well, as BCC and LCC traffic conditions are clearly linked during the most crowded times of the year. Skiers will determine their destination (BCC vs LCC) based in part on traffic. The Gondola will not solve anything in BCC. Lastly the gondola will likely be underutilized most of the year, and even underutilized for much of the winter.</p>
37989	Will L	<p>Hey! Super random but, Will you please submit a comment on this website to stop the gondola. It's due tonite by midnight. Here's some ideas or things to include in your comment:</p> <ul style="list-style-type: none"> -gondola is 750 million + -taxpayers paying- even if they don't ski or board -if windy or snowy, would have to shut down -ready in 5 years- so not a short term solution -it will take a toll on the environment -have to drive, park, take a bus to gondola with all ski equipment for the day, then get On the gondola -how does this work if you have kids? -climate change -better alternatives- better bus services with no road widening, tolling, and vehicle restrictions -positive example you have from the canyon
37990	Ronald Mangone	<p>I am adamantly opposed to the installations of the Gondola. I am an avid skier who lives just outside of Little Cottonwood Canyon. The reality is, such an enormous capital expenditure and tax burden on the general citizenry of Utah is not warranted solely for the economic benefit of two ski resorts. Also, travel Big Cottonwood Canyon summer or winter and the traffic pressure far exceeds that of Little Cottonwood. Thus, there needs to be a more economical and efficient solution that addresses both canyons. Also, I believe the real attraction to Snowbird and Alta is to entice out of state skiers to their resorts. Those who can afford to pay the cost of riding the gondola. Even though the price of riding the gondola has not been announced, I speculate it will be a minimum of \$25 to \$35 per person. Most Utah families will not be able afford that cost in addition to the cost of a day skiing. Utah is a family state and the Gondola will eliminate Utah families. The Gondola is nothing more than a carnival ride for Snowbird and Alta to entice out of state tourist to go to their resorts. In conclusion, I implore you not to go forward with the Gondola but find more economical, environmentally friendly and efficient solutions. Thank you.</p>

37991	stephanie rasmussen	<p>I don't think enough specific information has been provided to the public about how it will be installed and how a family can access it. I know busses are not first choice for families as they can't take all their stuff with them or have a place to chill while skiing with youngsters. I don't think a gondola really solves the traffic problem it is more of a tourist accommodation. I think UDOT has already made up it's mind to spend a lot of money for a small population of people and I think the building of it will hurt the environment more than the cars do. I was once involved in a UDOT acquisition for Trax and public comment didn't matter as UDOT already had it's mind made up. This is the same as UDOT already bought land and made an investment and some people will make lots of money and the benefit will not justify the means. Better to try forced bussing or reservations or some other measure before building a forever gondola that requires maintenance and probably a fee to use. No one has talked about that or how one gets from huge parking lot to the gondola. A long line like the ski lifts and the energy to run it will cost a lot too. Much more needs to be spelled out to the public before such a radical change is made. What about big cottonwood, will it be next?</p>
37992	Blake Fogle	<p>I oppose UDOT's preferred alternative: Gondola B (From La Caille). As evidenced by the original public comments for S.R. 210 Draft EIS, I, and most the public, strongly oppose building a Gondola in Little Cottonwood Canyon, and support an enhanced bus service, tolling, and other restrictions be implemented before any new construction is considered. In UDOT's executive summary for the Final EIS, UDOT claims there is "support for gondola and bus alternatives." While this is true, it misconstrues the overarching message from the 13,443 public comments UDOT received. While UDOT's 258-page public comment response is quite comprehensive, it failed to statistically summarize major themes of the public's wishes. Because UDOT's 258-page public comment response sufficiently documents all the reasons the gondola is a bad idea, there is no reason to expand on that here. Rather, I call on UDOT to present a statistical summary of the major themes from the original public comments and act in accordance with the majority themes, that is: enhanced bus service, restrictions to single occupancy traffic, and no gondola in Little Cottonwood Canyon.</p> <p>Thank you for your careful consideration!</p>
37993	Jordan Backman	<p>I would like to voice my opposition to Gondola Alternative B in the Little Cottonwood Canyon EIS. While I appreciate the thoughtful analysis and hard work that has gone into the EIS, I am opposed to the gondola alternative for at least the three reasons below. I have tried to be concise, because I am certain that many others have already expressed similar views in greater detail.</p> <p>(1) This alternative would permanently change the character of one of the most beautiful places in the state of Utah. The gondola would create a visual blight that would degrade the natural aesthetics that so many (not just skiers) come to enjoy all year round (not just in the winter).</p> <p>(2) The alternative serves only the Alta and Snowbird ski resorts. I am a skier and have spent several winter days enjoying what these two areas have to offer. I also dislike sitting in traffic as much as the next person. However, the canyon is home to so many more activities than just skiing, and the gondola's foremost utility seems to be in cramming even more skiers into the canyon on the busiest winter days.</p> <p>(3) If the gondola's construction and operations were to be publicly-funded, it would be an unconscionable use of taxpayer dollars, given that it would almost exclusively benefit two premier resorts and those who can already afford to ski there.</p> <p>Thank you for your time and consideration.</p>
37994	Amber Phillips	<p>I am against the gondola proposal. I have lived in Salt Lake City for 25 years. I am a skier. I am a rock climber. I am a father of two boys who love to ski. I ride the bus. Here are a few reasons I oppose the gondola in Little Cottonwood canyon:</p> <ol style="list-style-type: none"> 1. It is attempting to solve a problem for one limited user group at the expense of other user groups experience. Worse still, it only serves two ski resorts, but intends to use massive amounts of public money to do so. 2. Currently, only a small percentage of people use the busses. Why would an arial bus hanging from a cable miraculously make them want to use an even less convenient alternative. People may use it once because it's novel. However, most people will continue to opt for the convenience of their personal vehicle, most of the time. 3. It will be an eyesore. It will detract from the natural beauty of the canyon. The fact that we have this incredible place right in "our backyard" is one of reasons I continue to live here. We don't need to turn it into an industrialized theme park. 4. The canyons don't need more people in them, only the ski reports do. It should be ok to set a limit to the number of users in the canyon. Try this analogy. Poring 10 gallons of water into a 5-gallon bucket, makes a 5 gallon mess. 5. The gondola solution is not dynamic, or scalable. <p>Alternative solutions:</p> <ol style="list-style-type: none"> 1. The parking reservation system that was used during Covid was a great example of how to set limits. If you didn't get a parking reservation, then you carpool with someone who did, you took the bus, or you found something else to do that day. Driving a personal vehicle is a privilege, not a right. 2. The bus must win. If people are expected to start using the bus voluntarily, then the experience of using it must be equal to, or better than that of driving a personal vehicle. A three-lane road along Wasatch Blvd, and in portions of the canyon itself could create that advantage. Road widening would only happen in areas where it would not adversely affect other users, the resources they use, their experience, or the aesthetics of the canyon. The third lane would be a bus only lane used in the direction of peak travel. (Up in the morning, down in the afternoon). When the red snake of personal vehicles is at a standstill, the busses would cruise right on by. Giving them a clear advantage over the personal vehicle. Here is a link to an excellent article with more detail about this concept: https://rocksteadybodyworks.com/blogs/rocksteady-journal/the-cottonwood-debate-the-bus-must-win

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
37995	Ashlyn Chambers	I have spent so much time in LCC. As a Midwest girl growing up surrounded by cornfields I can vividly remember my first drive up little cottonwood canyon. It was magical, it changed my life and opened a whole new world of possibilities. After moving to Salt Lake I became a frequent all season recreational user of this canyon. No one can deny the need to address traffic in this canyon, but putting up an insanely expensive tax payer funded gondola that benefits ski resorts only and tourists is irresponsible. Other options need to be attempted first. The ski resorts are pushing a gondola agenda because it benefits them. It's will not benefit backcountry users, hikers, snowshoers, climbers, and many other people utilizing all the trailheads in the canyon. The cost and length of time to ride the gondola will deter people. Tolling, carpool incentives, and an enhanced bussing system make so much more sense and preserve the natural beauty that so many people cherish in Little Cottonwood Canyon. Please consider protecting this small slice of heaven we are lucky enough to call home.
37996	Barbara Gifford	Please do not put a gondola system in our canyon. I am opposed to it because of the initial cost as well as the continuing operating costs. I am also opposed because I feel it will detract from the beauty of the canyon and will negatively impact hiking and similar outdoor activities.
38371	Quinton Block	<p>Hello, my name is Quinton Block and I am 15 years old. I love skiing. My mom has been both a mountain host at snowbird and a nurse at snowbird. I have skied Alta and snowbird since I could barely walk and they are my most favorite places in the state. I ride the bus up or drive every weekend to ski. However, when the snow gets good the traffic gets bad. Something needs to be done, and the gondola is not it. I'm sorry but the gondola is quite simply a horrible idea. For many reasons. Given how much snow we get, it would require constant maintenance and a large workforce just to keep it running which costs a lot of money that should be put elsewhere. Also, there would be avalanches which could easily take down towers and that would cost a lot to fix. Not to mention the cost of building the thing. The cost of electricity would be stupendous. It would take much longer than a bus, and it would not be more efficient. No matter which way you look at it there are blaring problems. I could sit here and type out all of the reasons I hate it. However, that would be a long and boring email and I'm not about that. I'm sure other people have done that and I agree with them and their reasons. I want to be able to access my favorite resorts, but I will not do it via a gondola that takes forever and will waste a ton of money that could be used for literally anything else. Hope you realize what you are doing because everybody hates it.</p> <p>Lots of love, Quinton Block</p> <p>P.s. - Do humans actually read this? I hope so.</p>
37997	Darla Silcox	My husband and I are against the gondola! We own a business; a rental property and our home are all in Sandy. We pay thousands of dollars in property tax every year. As my husband and I were discussing the gondola tonight he said you know the gondla will go through because big business always wins. It would be nice if the people who live and work in Sandy could actually have say in what happens in their city and area around them. Please listen to the people who it will affect the most!
38669	Linda Nelson	Linda Nelson [REDACTED] I am strongly in disfavor of the gondola of Little Cottonwood Canyon. I feel it benefits the ski resorts, private interest groups. I also realize that when enough money is passed between people, public comments don't really matter very much and decisions have already been made, but I would hope that it's not true.
37998	Marcia Scoville	Don't destroy the beauty of Little Cottonwood canyon so a relatively small number of elite skiers and two ski companies can benefit at cost to all citizens. We are paying for this. Don't do it!!!!
37999	Gary Phillips	<p>Since the gondola will mostly be used in the winter, it's obvious that it's purpose is solely to bring skiers to Alta and Snowbird. It's no wonder that taxing those of us who don't ski for any project seems like a bad idea. It seems like the resorts should pay the cost. Why should they have increased profit and I have decreased profit through higher taxes? I don't want to fund those 2 resorts. I don't want money going out of my pocket so more can go in theirs. If the resorts aren't paying for at least 80% of whatever you decide, I'm against it.</p> <p>Utah advertised the big 5 national parks to the point where reservations are now needed in some of them. We who live in this state don't see advertising and growing recreation here as a good thing when it affects us negatively. Bringing more tourists into the state, whether into the national parks or into the ski resorts is not always good growth. So please, quit using our tax dollars to do it.</p>
38000	Tim Conde	It is far from obvious to me that this gondola plan has been thought through from a fiscal or environmental perspective. I believe that it would be irresponsible to build it without further data and support from these two perspectives.
38001	Blair Monell	No gondola.
38002	Lynn Jorde	Please do not ruin the beauty of LCC with this monstrosity. It will only benefit two wealthy ski resorts.
38003	Josh Hafele	The current gondola plan is shortsighted and expensive. As a skier, if Snowbird and Alta want to pay for a gondola to carry their customers, let them pursue that on their own dime. Utah in general has been slow to address infrastructure problems, and the gondola is no exception. Please reconsider more bussing as a solution, instead of cutting routes during the busiest hours.

ID	Full Name	Comment
38004	Julia Case	<p>I am vehemently opposed to the gondola for several reasons. Construction and maintenance of a gondola would be large contributors to the degradation of our already threatened watershed. We cannot afford to stress our system any more than it already is, and the construction of a gondola will cause permanent, irreversible damage to our ultimate life-giving resource.</p> <p>Additionally, funding a project of this size with taxpayer dollars when the largest beneficiaries are private entities is extremely unethical. Citizens are facing a bill for what is estimated to cost \$1 billion or more to build and millions more to operate, yet this "solution" is not designed with citizens in mind.</p> <p>The gondola is simply not an effective solution for reducing stress on our canyons; rather, it would have the opposite effect. Per the EIS, implementing a gondola will not decrease car traffic up the canyons but will increase visitation to the ski resorts by 20%. This serves to increase stress on our canyons through increased traffic and will also increase the traffic on Wasatch Blvd. This is quite clearly a plan to increase resort profits at the expense of taxpayers' pockets and our collective life-giving ecosystem.</p> <p>The gondola would be used for a maximum 6 months of the year during ski season, rendered defunct the rest of the year. It is not worth ravaging Little Cottonwood Canyon for an ineffective, expensive, and unethical gondola. I urge you to consider common-sense, lower-impact, cheaper, and more effective solutions such as increased bus operations.</p>
38372	Zac Stephens	<p>Dearest UDOT,</p> <p>The proposed gondola is a poor solution that no matter how it would be funded is an unbalanced and unfair deal for the public. The current busing is a disgrace and embarrassment. Resorts need to contribute more meaningful efforts to encourage use of busing before anything else is considered. This means solutions at the resorts themselves for better storage and paying for increased buses themselves. Only solutions that serve the whole canyon user population equitably should be considered when all canyon users will be impacted. Gondolas even with one or two extra stops cannot accomplish this and disproportionately serve ski resorts. Frankly, I think consideration of this proposal illustrates many have lived in Utah too long and take its awe for granted. While many man-made structures, including some of UDOT's own, inspire awe at their engineering and expanse, a certain kind of sublime is found only in the awe from nature alone. In Utah, these sites are almost too common, yet finding this on the sprawling granite faces of LCC as if ripped from a vast Tolkien landscape right next to a city the size of Salt Lake is exceedingly rare. We've certainly begun to take Utah for granted. The number of towers and scale will have a much larger impact on the environment than proponents suggest. The gondola is the absolute worst solution for all and should not be considered any further no matter how it is funded.</p> <p>Zac Stephens </p>
38005	Madison Cook	<p>Let's not do this. We want to keep the natural beauty.</p>
38006	Emily Pitsch	<p>"UDOT's purpose is reflected in one primary objective for S.R. 210: to substantially improve roadway safety, reliability, and mobility on S.R. 210 from Fort Union Boulevard through the town of Alta for all users on S.R. 210" (p. 1-7). According to UDOT, the gondola meets the "reliability and mobility" goals in the primary objective (and safety met by roadway/TH improvements). But, the gondola does nothing to improve reliability and mobility on SR210, as the gondola would not operate on the road or be considered part of the road. If UDOT must respond to this comment they might argue that other aspects of the gondola system improve reliability and mobility, but then what does the gondola do to improve reliability and mobility ON SR210? UDOT's primary objective reflects intent to improve road-based transportation and I believe UDOT fails to accomplish this by pursuing the gondola.</p>
38007	Debbra Rufener	<p>I am against the implementation of the gondola system for the reasons that follow: It will diminish the natural beauty of the canyon, it benefits the fewest number of people for the greatest cost, there are alternatives such as a reservation system(such as the national park service has implemented in certain national parks) or a toll system that charges for travel up the canyon at peak periods, it will be an ongoing operating expense that will increase yearly, it benefits two resorts only and increases their profits at the expense of Utah taxpayers, the initial expense will more than likely to be much more than what is expected due to increase in materials and labor, in getting up the canyon skiers will be inclined to use their cars so they can come and go at their leisure and not have to wait for the gondola also making their commute time less than riding the gondola. I am tired of the majority of the population paying for the pleasure of the minority.</p>

ID	Full Name	Comment
38008	Lori Okino	<p>The gondola B alternative will not solve the canyon transportation issues. Perhaps from the standpoint of reliability, the gondola would seem like the best choice. Given public outcry against it, perhaps UDOT needs to reassess the weight of public choice in their decision making. Afterall, it IS the public who will bear the burden of the cost.</p> <p>The gondola reminds me of another costly, poor decision back in the early 80's. Governor Norm Bangerter spent \$60 million on three pumps at the Great Salt Lake. This quick fix was only used for two years! What a legacy to leave! Now he is the butt of many jokes.</p> <p>When my husband and I built our home 17 years ago, Little Cottonwood Canyon Road was backed-up mainly on days when avalanche control had it closed. Today, the road is backed-up every morning after a storm, every weekend, and every day avalanche control has it closed. If I leave the house, I can't get back home until 11 am! This is a bigger problem now that covid has allowed me to work from home.</p> <p>However, traffic isn't a problem just in the winter. In the summer, the streets get used by noisy, cars racing around the "golden triangle" at all hours of the day and night. I can always tell when the wild flowers at Alta are blooming. Vehicles stream up and down the road during the day. When Snowbird hosts October fest, the number of cars and motorcycles going up and down the canyon are constant throughout the day. Let's add to the noise and pollution when everyone decides to go for a drive to see the fall foliage.</p> <p>The problem is the number of vehicles. It is not limited to the time of day, season, or air quality. It is a problem to some degree on most days.</p> <p>I love to travel abroad. This has given me the opportunity to use public transportation in other countries. The one that sets the bar high is Japan. While I'm not proposing to put trains up the canyon, there were four things that made it stand out. First, there were three levels of transportation service: full service, limited express, and express. The difference between them were the number of stops and the frequency of the trains. Second, the trains were always on time. If I was 1 minute late to the platform, the train was gone. Third, the cost to ride was dependent on the distance to the stop and service level. The farther the ride, the fewer the stops, the higher the cost. Finally, the train platforms were clean, well lit, and safe.</p> <p>Here is my five-prong approach to the Little Cottonwood Canyon transportation issues.</p> <ol style="list-style-type: none"> 1) Since the issue is the number of vehicles, limit usage to locals, group transportation, buses, vehicles with camping reservations, delivery and service vehicles, and emergency and public works vehicles. This will guarantee ridership. Locals will not pay to take the gondola when driving up the canyon is cheaper and more convenient. 2) Expand Wasatch Blvd to include a dedicated lane for buses. 3) Set up three levels of bus service. An example is below. <ol style="list-style-type: none"> a. Full-service i. Summer - <ol style="list-style-type: none"> 1. Stops at every trailhead 2. Stops at every rock climbing location
38009	Moya Kessig	<p>I think increase bus service, tolls and reservations are the best solution. The national parks are using a reservations system so should the ski resorts.</p>
38010	DOUGLAS THARP	<p>The public should not pay for a for profit organization's infrastructure</p>
38011	Cheryln Pittman	<p>Dear UDOT...</p> <p>Please, please listen to the large majority of the people. This canyon is unique - it has a shape and beauty that others don't, and this gondola would take that pristine beauty away. I live in the triangle, and I would SO much rather have a handful of days that I can't return home, or that my kids can't get to school on time. I honestly think you already know this, but a gondola is absolutely not going to alleviate those powder day jams. It will still be faster and cheaper and much more convenient to be selfish and drive up the canyon to get first tracks. PLEASE don't listen to the people with all the power and money that want something that ain't in the best interest of Utahns and our beloved canyon. Please. I'm begging you to do the right thing. The cynicism and distrust in govt and UDOT is high right now. Please show that common sense and the voice of the people matters.</p> <p>Sincerely, Cheryln Pittman</p> <p>ps - if you let 10 buses up the canyon first on powder days, I can guarantee that people will ride the bus more. :)</p>

ID	Full Name	Comment
38012	David Handwerger	<p>The preferred alternative of a gondola from the base of LCC to Snowbird/Alta is a ludicrously expensive and environmentally harmful solution to a problem that only exists a few times a ski season, and only serves two private commercial entities. I have driven up LCC to ski Alta/Snowbird >100 times a season for each of the last 6 seasons (and had an AltaBird pass the past 14). The number of times per season that I get stuck in an unmoving "red snake" coming down the canyon or a stop-and-go going up it can be counted on one hand - maybe 2 in a good snow year. When they do occur, they each last only a couple of hours. Overall, we're talking 24-36 hours of severe traffic congestion PER SEASON (including and estimate of the number of times I alter my travel plans to avoid potential congestion, yet still go skiing in LCC).</p> <p>With the parking reservation system implemented at Alta, and the somewhat looser system at Snowbird (because road parking is still allowed), congestion has eased, with much of it attributable to people parking along the side of LCC at Snowbird to avoid parking fees or reservation exclusions. I suggest that it is these people that cause much of the uphill congestion, as most have to flip U-turns to get down the canyon, thus holding up traffic while they do so. By the time one gets past Snowbird, traffic is almost always flowing. Maybe not at 40 mph, but certainly fast enough for an efficient ride down.</p> <p>If Alta and Snowbird feel that a gondola is the best way to alleviate traffic congestion, even though parking reservations have gone a long way to already achieving this, then let them pay for it - all of it: planning, studies, construction, maintenance and operation. The gondola would serve no one other than them. If the estimated \$500 million price tag (almost certainly much more than that) is too much for them, they can drop out of the IKON pass, or any other multi-resort passes that come their way, to lessen the number of people heading up the canyon in the first place. If the number of skiers these passes provide cannot support a (probably) >\$1 billion boondoggle, then they have a choice to make. Furthermore, there are numerous, far less expensive things that UDOT, Alta and Snowbird can do that would make the gondola totally unnecessary:</p> <ol style="list-style-type: none"> 1. Direct busses to Alta and Snowbird, rather than one bus that serves both, would make the trip to Alta for more palatable. As of now, it takes longer to take the bus from the nearest bus stop to LCC to Alta/Wildcat (45') than it does from my house at 9th and 9th in SLC (35'-40'), not to mention the time it would take to drive to that bus stop (either Wasatch & 6200 S - if I can even find parking there) or 9400 S. and Highland. If busses to Alta didn't make 3 stops at Snowbird, that trip would be 20 minutes shorter (each way), which would largely compensate for the time it takes to drive to the park and ride. 2. If traffic is backed up, the bus will be stuck as well. I then have a choice of either spending the extra time in the comfort of my own vehicle, sitting down, listening to my car stereo and drinking my coffee - or being in a crowded, noisy, smelly bus, laden down with gear, and quite possibly forced to stand the whole way. That choice is a no-brainer - I'll drive (as will many others). If LCC road were widened by a single reversible lane, uphill in the morning and downhill in the afternoon, and reserved ONLY for busses, then the value proposition for bussing goes WAY up, because the bus will be able to beat the traffic. This would surely be cheaper than a) a gondola, or b) a 4 lane road. Reversible lanes are not unheard of - they
38013	Fara Williams	<p>I DO NOT FEEL THE GONDOLA IS A GOOD IDEA!! 1. My sons and I do not ski. WE CAN'T AFFORD IT!! 2. I know very well you will make the residence of Salt Lake County pay for the [REDACTED] thing whether we wanted it or not. You'll raise taxes on my house AGAIN or extricate the money from us somehow. Let the tourists and those who pour into Utah to recreate, pay for widening the road by charging a toll fee to get to the ski resorts. They are the ones that use the canyons, let them pay for it!! I VOTE NO ON A GONDOLA.</p>
38014	Lynette Conrad	<p>I am in favor of keeping the recreation and visual experience of the canyon. Implementing a gondola would distract from the natural beauty and environment of the canyon and bring even larger crowds to access the canyon.</p>
38015	Ashley Kern	<p>I am a resident of Murray, and I know that Gondola Alternative B is a solution that the Salt Lake County community does not desire. There are several reasons for this including several heavy environmental impacts to our public lands and poor usage of public funds. There are also a much better, immediate solutions available to alleviate the traffic issues. The impacts from the construction process alone will be frustrating. In order to move heavy equipment to the job site, trees would have to be removed and animal habitats would be run over. The ground surface would be regraded and watershed impacts will occur. The project will also permanently destroy some recreational climbing spots and cause inaccess to others for the duration of construction. Little Cottonwood Canyon is a world-class climbing area, where Olympians and climbing legends have trained. For all users of the canyon including hikers, climbers, wildlife lovers, and more it would be shame to ruin the beauty of the canyon with the cables and support structures required for the gondola. Construction would take several years and cost the community over half of a billion dollars, excluding cost and schedule overruns that are likely to happen. This is an unfair and unequitable use of taxpayer dollars; residents who cannot afford to ski or snowboard will also be contributing towards the cost of building the expensive gondola.</p> <p>The Gondola "solution" also ignores the factor that climate change should play in the decision-making process. A study published in Nature Reviews Earth and Environment in November 2021 by Erica R. Siirila-Woodburn et al estimates that snow-water equivalents are expected to decrease in the western United States by 25% by 2050. The study also estimates that snow-water equivalents will reduce 50% by 2100. It is inappropriate (both in cost and environmental impact) to build additional infrastructure for an industry that will experience this level of decline in Utah in the coming decades.</p> <p>I agree with UDOT that reducing single-car traffic in LCC is key to achieving better traffic flow. However, the best way to do this would be to implement a checkpoint at the mouth of the canyon during the winter months only. This checkpoint would ensure that vehicles are prepared to enter the canyon (by having AWD/4WD and appropriate tires). It would also only allow cars which are utilizing carpooling and/or require a large toll. Another idea would be to only allow tourists' cars which have a hotel/accommodation reservation in the canyon and only allow residents' vehicles whom carpool with 3 or 4+ people per car. Cutting down on unprepared vehicles in the canyon would reduce the number of traffic slowdowns. Forcing a "carpool or large toll" situation would heavily incentivize locals to take the ski busses. In conjunction with the traffic checkpoint rules, I'd encourage UDOT to increase the number of busses running in both LCC and Big Cottonwood Canyon (BCC). Both of these canyons have traffic issues and the gondola doesn't address the traffic issues in BCC at all. Implementing winter checkpoints and increasing bus options in both canyons would fix issues in both of the canyons. These better solutions could be implemented as soon as this winter! The gondola would take much longer. UDOT staff, thank you for coordinating with the public and taking the time to gather these comments. Please consider the alternative outlined above and consider not going forward with Gondola Alternative B.</p>
38016	Nancy Eckhout	<p>Do not destroy Alta Canyon by building a gondola system that will deface the canyon for the sole benefit of Snowbird. We do not need our taxes misused to destroy the pristine beauty of this state.</p>

ID	Full Name	Comment
38017	Thomas Hofmann	Please do not destroy the canyons where the gondola This installation is a permanent mar on the beauty of nature nor is it needed to sustain the canyons business environment.
38018	Rebecca Ross	Do not build the gondola without several years of trialing very good bus access and tolling to get up and down the canyon. It would be so much simpler to run a toll on the road to discourage driving and offer buses. Then all your need is several bus terminals outside of the canyon, spread across the valley. Toll every car that drives up to Bird/Alta in peak times (or deny car access outright in peak times (except for employees or people staying at the mountains)), and run buses continuously from the base of canyon parking lot. Jackson Hole basically does this and it keeps traffic down. it's clear that this is a big ol' bonus to Alta and Snowbird's pockets while killing the skier experience. To say that busses aren't feasible without developing the infrastructure to reliably allow people to leave their cars down canyon is completely disingenuous to me. This is going to be an epic [redacted] of traffic and parking dystopia at the base of the gondola.
38019	Emily Pitsch	"UDOT's purpose is reflected in one primary objective for S.R. 210: to substantially improve roadway safety, reliability, and mobility on S.R. 210 from Fort Union Boulevard through the town of Alta for all users on S.R. 210" (p. 1-7). According to UDOT, the gondola meets the "reliability and mobility" goals in the primary objective (and safety met by roadway/TH improvements). But, the gondola does nothing to improve reliability and mobility on SR210, as the gondola would not operate on the road or be considered part of the road. If UDOT must respond to this comment they might argue that other aspects of the gondola system improve reliability and mobility, but then what does the gondola do to improve reliability and mobility ON SR210? UDOT's primary objective reflects intent to improve road-based transportation and I believe UDOT fails to accomplish this by pursuing the gondola.
38020	Ethan Owen	Building a gondola only gives more access to more people this is a problem because this means people with no respect for the canyon can access the canyon leading to vandalism an litter to the trails if people want to access them they can but most get turned away with the hike this most the time people going are there for the scenic view meaning they have more respect for these trails trails will become more damaged and people with no respect for the animals can possibly get hurt or hurt the animals trails will need to be maintained more and the traffic coming in and I'll be Canyon Canyon would be much worse. tearing up the canyon for justification of a gondola and easy access to people who do not care, makes no sense
38021	Jeremy Bach	I live at the mouth of Little Cottonwood. I oppose any effort to limit access to anyone. Do not limit the road. A gondola is fine as an additional mode.
38022	Sharon Snow	<p>At some point, Utah needs to say "Enough is enough!"</p> <p>And that proactive stance can start by opposing the ill-advised Gondola B project in Little Cottonwood Canyon.</p> <p>Years ago, my city considered a dense condo project near my home, adjacent to a river bridge. Studies by the would-be developer (not the city nor the neighborhood) reportedly showed that the river bridge "could" handle several hundred cars an hour, substantially more than the use at that time. Although the bridge had minimal shoulder area, it needed to accommodate school children walking and biking to and from an elementary school. There was overwhelming neighborhood opposition to the condos due to the density, proximity to the bridge, children's safety, and increased traffic.</p> <p>As the greedy, out-of-state developer continued to push for approval, I made a simple statement that finally seemed to make sense. "Even if (repeat-even if) the bridge can handle hundreds of cars an hour, it doesn't have to."</p> <p>The city denied the condo project.</p> <p>Just because some people want a canyon gondola to be built to dense pack people into the resorts, doesn't mean that it should be built.</p> <p>Utah doesn't need to be the 24/7 playground for everyone from everywhere else...just because they want it.</p> <p>If there is a single-car traffic problem in the canyon, then figure out a way to give priority to the full-time Utah residents of the area, and make the rest use the Enhanced Bus Service or wait their turn.</p> <p>One of your themes is:</p> <p>Consideration of all canyon users, not just resort visitors.</p> <p>You should be considering the local/Utah residents FIRST and then the resort visitors.</p> <p>\$550 million plus millions every year for maintenance is ridiculous.</p>
38023	George LaGrange	Please don't waste our tax dollars on this. Let's not forget that there's a carbon footprint associated with every dollar of the \$500,000,000 spent on this thing. Follow the money... who financially benefits from this eyesore?

38024	Daniel Barrell	<p>As a native Utahn and a frequent user and lover of Little Cottonwood canyon it was devastating to learn that UDOT chose the Gondola for the transportation solution.</p> <p>Here are the reasons why this is a mis-guided choice:</p> <p>1)The Gondola will be MUCH SLOWER than the enhanced bus. Why would anyone ride something that takes 1 hour each way (via bus at the gravel pit)....outside of snow days and the occasional novelty ride? Due to this extremely long travel time, I believe no one will ride it and we will still suffer from the same crippling traffic problems (only after wasting a half billion dollars and ruining the canyon view in the process).</p> <p>2)The Gondola offers nothing to other users in the canyon and is essentially a half billion-dollar giveaway to the ski resorts.</p> <p>3)It is not versatile and cannot change based on changing circumstances.</p> <p>4)It COMPLETELY RUINS the canyon viewshed through this industrialized massive monstrosity cutting up the middle of the canyon...it will never be the same.</p> <p>5)This outcome and rationale provide make me question how independent the process was. Despite these obvious significant flaws listed above and public lining up in staunch opposition to the Gondola, it seems that influential stakeholders (key congressmen, resort owners and governor) who wanted the gondola were able to pull strings behind the scenes to ensure that they overrode the will of the majority.</p> <p>To offer constructive feedback I support the enhanced bussing option or the expanded existing bus service. This service could utilize the gravel pit parking structure. I would even support a train that goes up Little Cottonwood, tunnels to Brighton/Solitude and eventually Park City (returning down I-80), but I'm sure this is not on the table.</p> <p>I hope that UDOT gives the community ample time to demonstrate that they can reduce traffic through less costly means (expanded bussing / 4-wheel drive / tolls), but know that I will be fighting the legislature tooth and nail to ensure that my hard earned tax dollars are not wasted on such a poor transportation solution.</p> <p>Thanks for taking my comment, Dan Barrell</p>
38025	Allyson Sorensen	<p>I am opposed to the gondola B plan. I do not feel that the cost to benefit ratio is worth it. I do not think that Utahs will use the gondola. It will be a fun novelty initially and then will not be utilized. It will ruin the beauty of the canyon. We should start with a toll or restrictions on vehicles accessing the canyon and see if that improves the situation before spending \$550 million on a terrible plan.</p>
38026	Kirk Petersen	<p>UDOT must realize by now how unpopular this gondola project is. There are enough people and organizations to keep the gondola portion in litigation for many years to come. That litigation will just add to the unmanageable cost of the gondola project. There is no way UDOT can justify this project with so much opposition. UDOT needs to realize the will of the majority of the people, especially us Sandy residents that are against the gondola, for so many reasons. There are other good alternatives and options.</p>
38027	Sean Dwello	<p>Please do not build these gondolas. The mountain needs better public transit but this project will do more harm than good. I'd be happy to discuss other alternatives, just not gondolas.</p>
38028	Christian Sorensen	<p>Utahns will not utilize this long term, and it will change the view dramatically.</p>
38029	Emma Furman	<p>As a Utah resident, active community member, and someone who frequently recreates in Little Cottonwood Canyon and the surrounding areas of the Wasatch, I truly appreciate the time, dedication, thoughtfulness, and care that the UDOT team has put into researching the different transportation options to help support recreation in Little Cottonwood Canyon. It's a very special and unique ecosystem that all Utahns and those who visit here should be able to experience and enjoy. Personally, some of my first times climbing were in the canyon, and I'll never forget the literally breathtaking feeling of looking out over the vast expanses of granite across the canyon, and down into the Salt Lake Valley below. It galvanizes and humbles you all at the same time, and I support the alternatives that protect this uniquely special place, and allow those from all backgrounds to better access them.</p> <p>I wholeheartedly support the enhanced bus (with no additional roadway capacity) alternative as the best solution outlined in UDOT's Little Cottonwood EIS. Not only does it meet the UDOT's goals of improving mobility in the canyon during peak hours and reducing vehicle use, but it is by far the most cost effective and cheapest option for taxpayers, with the ability to help folks from all economic and social backgrounds access Utah's public lands.</p> <p>There is also a huge, unmet demand for bus service. As someone who frequently takes the bus up the Cottonwoods in the winter, I've firsthand witnessed long lines with not everyone at the bus stop able to get on, sometimes groups of 20 or more left behind. The recently announced cuts to bus service do little to help answer the demand for this affordable service, and the answer to labor shortages seems simpler and much less expensive than a multi-million dollar gondola; simply pay the bus drivers more for the amazing service they provide in frequently hazardous winter driving conditions.</p> <p>I vehemently oppose the gondola option for a multitude of reasons:</p> <ul style="list-style-type: none"> -It's the most expensive option for taxpayers by far (\$592 million versus \$355 for the enhanced bus service without a corresponding substantial increase in canyon mobility or increase in people it will be able to move during peak hours. -Per the EIS, it's not scalable and UDOT would not be able "to determine the operational success until after a major capital investment is made into the system." As Utah's population increases at a rapid rate, we need transportation methods that we can scale for future generations of outdoor recreators. The enhanced bus service is easily scalable. -The gondola alternative has a high environmental footprint, forever altering the landscape and destroying well loved climbing areas, including 35 boulders and 142 problems. It impacts 17 acres of irreplaceable canyon land, as opposed to only 13 with the enhanced bus service. <p>The gondola is also not immune to avalanche mitigation, and per the EIS, structures and gondola cars would need to be inspected after avalanche mitigation blasting, and the gondola would not operate while artillery is in use. So the gondola would be subject to the same avalanche mitigation pauses that roadway travel and buses are.</p>
38030	Erin Richards	<p>I do not support the gondola. The need doesn't justify the price tag to tax payers! More importantly the citizens have voted and don't want it! If the taxpayers don't want it and don't want to pay for it, why is UDOT even considering it? An improved bus system system seems a better less expensive option. Why not limit the amount of people on the ski resorts!?! Problem solved!</p>

38031	Tanner Lundell	Please do not support the gondola. It would totally change daily dynamics in little cottonwood and would only increase total visitor traffic especially during ski season. If people would leave there house before 8am on a Saturday powder day maybe they wouldn't sit in traffic. Or if they think about leaving before 4pm. Please no gondola from a Draper local.
38383	DONNA PAULSON	<p>Building a gondola to benefit two ski resorts for 5-6 months of the year is a huge waste of public funding. Access to other areas in Little Cottonwood Canyon would not benefit from a Gondola. A Gondola will not only cost millions to build, but a disproportionate amount of money to operate and maintain. This doesn't even take into account the environmental impact - regardless of the "studies," that say such an impact would be minimal.</p> <p>Alternate solution: make Little Cottonwood Canyon a toll road to help with costs to keep the road clear and safe in winter but offer special discounts to canyon residents and ski corporation employees. Continue to offer bus/shuttle services using alternate fuel to reduce canyon pollution. The ski areas are already charging for parking, so just limit access like some of the National Parks.</p> <p>Why is UDOT intent on using public funding to benefit a small slice of the population who ski ? With climate change upon us , ski seasons could be even shorter than 6 months a year in the very near future.</p> <p>No, no, please no to a gondola.</p> <p>Donna Paulson</p> <p>Sent from my iPhone</p>
38374	Emily Pitsch	<p>Hello,</p> <p>There appears to be problems with the comments going through. I have heard from multiple people that they are not getting receipts of their comments, and one person mentioned the website said "no server found.". I just tried to submit a comment and it did not go through. I hope there will be some kind of extension or grace period. Below is what I am trying to submit.</p> <p>Thank you, Emily Pitsch</p> <p>"UDOT's purpose is reflected in one primary objective for S.R. 210: to substantially improve roadway safety, reliability, and mobility on S.R. 210 from Fort Union Boulevard through the town of Alta for all users on S.R. 210," (p. 1-7).</p> <p>According to UDOT, the gondola meets the "reliability and mobility," goals in the primary objective (and safety met by roadway/TH improvements etc). But, the gondola does nothing to improve reliability and mobility on SR210, as the gondola would not operate on the road or be considered part of the road. If UDOT must respond to this comment they might argue that other aspects of the gondola system improve reliability and mobility, but then what does the gondola do to improve reliability and mobility on SR210? UDOT's primary objective reflects intent to improve road-based transportation and I believe UDOT fails to accomplish this by pursuing the gondola.</p>
38032	Zubin Emsley	The fundamental assumption that all Utah taxpayers should pay for a project that benefits ONLY the 2 ski areas and the skiers that patronize them is flawed and unfair. The owners of Alta & Snowbirds, and through the increased ticket prices, the skiers who go there should pay for the gondola.
38033	Vernon Warner	I believe that we need to be futuristic and show the world a step towards it. A East bound and a West bound monorail system. Here's the reasons: 1) The view of the canyon, will not be clogged with ugly cables and cable cars. 2) Buses are slow and subject to road closures (avalanches), pollution, clogging the canyon entrances with parking and the limited number of people on each bus! 3) Limit number on each gondola for people. 4) Lack of expansion. 5) A monorail could be built as to not restrict views of the canyon, interfere with traffic, withstand avalanches and expandable. I vision the system reaching westward to I15 and interlink with the trax system. The monorail could run right up to Snowbird and Alta, delivering the passengers to each in one stop. 6) The monorail cars could be built with glass top, so no matter which side you sit on the view would be fantastic. 7) Speed. 8) Delivering alot of people at one time would make it better and more cost efficient. 9) Would not be subject to weather conditions, wind, large dumps of snow.
38034	Randy Hollbrook	To improve air quality and water quality in Little Cottonwood Canyon the gondola is a must to get us there.
38035	Jake Neerings	<p>There is no need for a gondola.</p> <p>Between a toll road, parking reservations and getting rid of lkon the canyon will be just fine.</p> <p>Cheers Jake</p>

38036	Karen Heath	<p>After reading all the interim plans prior to maybe getting a preferred gondola in 2030, I hardly know where to start.</p> <ol style="list-style-type: none"> 1. Interim use of buses is totally useless unless a toll is initiated way before the lower Snowbird entrance or the lower Solitude entrance. It needs to be initiated at a much earlier point-like the mouth of the canyons. Additionally, it needs to be charged on ALL cars going up the canyon not just solo drivers. Of course, this option would require ramping up purchase of buses. <ol style="list-style-type: none"> 1a. However, where would said buses be stored when it is not ski season, and this is a huge investment, so how are funds actually raised for a Gondola? Extra buses do seem to defeat the potential need for the Gondola, and maintenance of them could kill the Gondola project-that is if you can force people to take the buses (which they mainly do not take now) 2. The proposed wall system along Wasatch is totally ridiculous. The indicated areas on Wasatch are either where homes are actually above the walls, or where there are currently no homes. I live on Wasatch and there is no wall where I live, but I currently hear all the traffic noise now. (Not that it bothers me, and I don't want my East view blocked by a wall anyway). I suppose if you are just looking at doing retaining walls for dirt that would be affected by widening Wasatch, then, So be it, but the map is not clear on that. 3. Wasatch road desperately needs to be the first thing taken care of. Despite what many commenters will say, the traffic is terrible between 4:30-5:30, virtually every workday, when Oktoberfest is happening at Snowbird on the weekends both in the morning and in the later afternoon, weekends during ski season AND any day of the week if there happens to be a snowfall the night or day before (cause it's sick of work day so they can get fresh powder skiing). Where we live on Wasatch does not have a light or a traffic circle, and getting out on to Wasatch is just waiting for an accident. 4. Many of the commenters will say that speeds need to be lowered. That is ridiculous and obtuse thinking. Wasatch IS and will continue to be a commuter route. Speeds rarely reach 50 during rush hour due to the lights at 7200, Bengal Blvd, 3500 East connector to Wasatch and the High T light combined with the volume of traffic. It certainly never reaches 50 MPH speed on a good snow day or during Oktoberfest or during the rush hours. The road originally was designed for faster speeds, and lowering them hinders those trying to leave earlier or later to avoid the rush of other times. <ol style="list-style-type: none"> 4. Having been to Zermatt Switzerland several times in the last eight years, I do not see the gondola towers spoiling any scenery. I do believe that the six-seater cars are more efficient than the larger tram cars currently used at Snowbird and some other places in Switzerland. While requiring more cars, the car doors do open and close automatically, requiring less personnel to load and help unload so the whole system runs more efficiently. The bigger team cars are much more of an
38037	Justine Hewitt	<p>The gondola simply is not a solution for Utahns. It will severely damage the beautiful canyon and only serves the owners of snowbird and Alta. There are far better and less intrusive solutions. These are much easier to explore before making such a drastic change. Listen to the people. We don't want a gondola.</p>
38038	Dale Hughes	<p>Assess this statement: Build a massive amount of machinery to save the canyon. It even sounds stupid. There are obvious answers and this is not one of them.</p>
38039	Laili Couper	<p>I don't believe a gondola is the best choice for our canyons. It primarily serves individuals doing snow sports, which is all well and good, but little cottonwood canyon caters to far more than just skiers and snowboarders. Rock climbers, hikers, and mountain bikers are all avid users of the canyon as well, and they would not be served well by a gondola. Additionally, a gondola would be a carbuncle on Little Cottonwood Canyon's wild beauty and unimpeded vistas. Rather, I feel expanding bus service and limiting private automobile traffic up the canyon would help solve the transportation bottlenecks, and keep the canyon as accessible for as many types of user as possible and not disfigure the canyons natural beauty. Please reconsider your plans for a gondola.</p>
38040	Brianna Cochlin	<p>I believe that the gondola is an invasive solution to a problem that should be attempted to be solved by other means first. Options such as electric busses, tolls, and restricting single occupancy cars during peak hours should be integrated first to lower traffic before building a structure that will forever alter the landscape. Many climbing areas will be negatively impacted by this project.</p>
38041	Zachary Hildebrand	<p>Bad idea! A gondola ONLY helps the ski resort owners. It does NOT help with summer hikers or back country skiers. Public tax dollars should NOT be so 1 dimensional. Let's create a dedicated bus lane. Offer service all year long. I'll fund that with a smile.</p>
38042	Sam Webber	<p>Start with increased bus services with a bus dedicated lane. The gondola will serve no other purpose but to benefit private ski corporations at the expense of tax payers. If a gondola is to be considered, then the ski resorts MUST pay for it. This would be a huge waste of money and a destruction of the natural landscape, for what? Create tolls, bus dedicated lanes, carpool initiatives, etc. The gondola will not work. It serves no purpose in our canyon.</p>
38043	Benjamin Scoville	<p>I do not want to see the gondola built in the canyon at public expense benefitting the resorts and mostly wealthy individuals</p>
38044	Kara Grieb	<p>Building a gondola in LCC will forever change the views and climbing in the canyon. There are many historic climbing areas that are world famous that will be impacted or damaged due to the gondola. Please look at more sustainable options like running more electric buses, incentives for carpooling and tolls on really busy days. Please preserve the landscape and climbs in LCC for the future generations.</p>
38045	McCayla Smith	<p>I am 10000% against the gondola that will cost millions to only serve a few of the general public and only service 2 ski resorts. The aesthetic beauty of the canyon is an invaluable public health asset and the reason it attracts so many visitors. The gondola would permanently and irreparable degrade and devalue this beautiful canyon. Climate change is almost certain to make the ski industry collapse within the next 2 decades making the cost for this project invalid. UDOT, I am begging you to listen to the public, the people who have loved and grown up with this canyon, the people who want to protect it from urbanization. DO NOT PUT IN THE GONDOLA. There are several ways to combat the ongoing traffic issues in the canyon during winter such as tolling those who use the canyon, limiting the number of people using the canyon, as well as increasing bus services. Please listen to the public.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
38046	Donna Uhlendorf	<p>Please, no gondola. Many who use the canyon don't ski, but enjoy the canyon in 3 seasons for hiking, biking, and climbing. A gondola doesn't help trailhead parking overloads. My suggestions: 1- seasonal paid passes (inexpensive) for locals; and charge others. 2-Frequent ski buses, specific to each ski resort.</p> <p>\$500 million taxpayer dollars benefits the smallest number of local taxpayers.</p> <p>It will damage the environment while being built, and spoil the natural beauty of the canyon. Not reversible. NO gondola.</p>
38375	Ashley Kern	<p>Hello, UDOT Staff! I am a resident of Murray, UT. I submitted my comment via the website, but didn't get confirmation that it went through, so I thought I'd email it as well. Please see below: Gondola Alternative B is a solution that the Salt Lake County community does not desire. There are several reasons for this including several heavy environmental impacts to our public lands and poor usage of public funds. There are also a much better, immediate solutions available to alleviate the traffic issues.</p> <p>The impacts from the construction process alone will be frustrating. In order to move heavy equipment to the job site, trees would have to be removed and animal habitats would be run over. The ground surface would be regraded which destroys the microbiome and ecology of the soil for a time. The project will also permanently destroy some recreational climbing spots and cause non-access to others for the duration of construction. Little Cottonwood Canyon is a world-class climbing area, where Olympians and climbing legends have trained. For all users of the canyon including hikers, climbers, wildlife lovers, and more it would be shame to ruin the beauty of the canyon with the cables and support structures required for the gondola. Construction would take several years and cost the community over half of a billion dollars, excluding cost and schedule overruns that are likely to happen. This is an unfair and unequitable use of taxpayer dollars; residents who cannot afford to ski or snowboard will also be contributing towards the cost of building the expensive gondola.</p> <p>The Gondola "solution" also ignores the factor that climate change should play in the decision-making process. A study published in Nature Reviews Earth and Environment in November 2021 by Erica R. Siirila-Woodburn et al estimates that snow-water equivalents are expected to decrease in the western United States by 25% by 2050. The study also estimates that snow-water equivalents will reduce 50% by 2100. It is inappropriate (both in cost and environmental impact) to build additional infrastructure for an industry that will experience this level of decline in Utah in the coming decades.</p> <p>I agree with UDOT that reducing single-car traffic in LCC is key to achieving better traffic flow. However, the best way to do this would be to implement a checkpoint at the mouth of the canyon during the winter months only. This checkpoint would ensure that vehicles are prepared to enter the canyon (by having AWD/4WD and appropriate tires). It would also only allow cars which are utilizing carpooling and/or require a large toll. Another idea would be to only allow tourists' cars which have a hotel/accommodation reservation in the canyon and only allow residents' vehicles whom carpool with 3 or 4+ people per car. Cutting down on unprepared vehicles in the canyon would reduce the number of traffic slowdowns. Forcing a "carpool or large toll" situation would heavily incentivize locals to take the ski busses. In conjunction with the traffic checkpoint rules, I'd encourage UDOT to increase the number of busses running in both LCC and Big Cottonwood Canyon (BCC). Both of these canyons have traffic issues and the gondola doesn't address the traffic issues in BCC at all. Implementing winter</p>
38047	Elicia Lytle	<p>In order to improve air quality and safety in the Canyon a gondola is the best longterm solution</p>
38048	Catie Quigley	<p>The gondola is a terrible solution to the traffic that plagues LCC. Little Cottonwood serves so many purposes besides Alta and Snowbird, the two stops that the gondola would make. Climbers, backcountry skiers, mountain bikers, hikers, and tourists use this canyon throughout the year, far outside of the few days a year that ski season clogs up the canyon. The gondola will serve none of them and will prevent many of these activities from taking place during construction (which could end up taking years). This would significantly harm the recreational value of LCC, along with spending a massive amount of taxpayer money on a solution that isn't supported by 80% of the voters. It will be an eyesore and will mainly profit resorts and Gondola Works. This is not a solution, so let's focus on some real ones... better bus systems (if the road gets closed, we can always go build a jump somewhere), tolls (just for Alta and Snowbird, as suggested on your website), or a plethora of other possible solutions that benefit the environment as well as the users of the canyons.</p>
38049	Lydia Keenan	<p>I strongly oppose the gondola in Little Cottonwood Canyon. It is an extremely expensive and invasive option that provides only a small solution to the traffic and overcrowding issues in the canyon. Please consider the short and long term ecological and financial implications. I would prefer to see cheaper, most sustainable, smaller scale solutions tested and implemented first. Things such as expanded bus service, tolls, and high traffic limits could have huge success. A gondola is not the answer for our canyon, it is unpopular, exorbitantly expensive, and impractical. It benefits only a small number of stakeholders and is not a viable solution for LCC.</p>
38050	David Leo	<p>Please don't ruin our beautiful canyon with an ugly gondola. It's only a matter of time before technology advances to the point of developing a better solution. A permanent and overwhelmingly intrusive structure system like the gondola will forever scar the canyon. It's not necessary, and ultimately, technology will produce a better and less intrusive alternative. Be patient.</p>
38051	Stephen Green	<p>I am 100% against the installation of a gondola in little cottonwood canyon. It is too expensive. It will permanently harm the view shed. It will irreversibly impact many climbing areas that will never be able to be restored. It is a solution that is using a giant unnecessary tool, like a chainsaw, that could be solved much more efficiently and with more flexibility with a hand saw. The amount of users that will utilize the gondola is grossly overestimated. The amount of high traffic days in the canyon that the gondola is being touted as a solution to are not enough to justify its construction. This is a giant taxpayer giveaway to giant corporations in our state and it is wrong.</p>

ID	Full Name	Comment
38052	Scott Kafesjian	<p>I believe the cost of the proposed solutions is way out of line with the benefit that might be realized.</p> <p>Estimates of ridership on the proposed gondola may be way off. It seems to me that there would be high interest initially but the cost/benefit for most people would deter them from riding it. It would be like an amusement park ride, or a tourist attraction and would provide access only to 2 stops - Alta and Snowbird. It may not operate at all during the summer (?). Cost estimates for construction are most likely well below current cost to build, and way below future cost to build a gondola. Detailed design discoveries and unforeseen design requirements will undoubtedly result in major overruns above the cost estimates. Such are very common for projects like this that are out of the ordinary and represent major increases in complexity, permitting, seismic issues, etc.</p> <p>It seems that the gondola offers little or no time savings vs. driving or taking a bus. The only possible benefit of the gondola is that it "might" offer an alternate transportation mode if the canyon road is impassable. The number of times this happens in a winter is relatively small. In this event, it is highly likely that ski resorts would be also closed for avalanche mitigation, thus there would be little reason to get to one of the 2 resorts where the proposed gondola would stop.</p> <p>In fact, during bad weather and high wind events (the very things that tends to result in road closure) the proposed gondola may not be able to operate.</p> <p>These points do not even represent the major reason that the gondola is a poor choice. That is the extremely negative visual impact of the towers and the environmental disruption that construction and operation would bring. The towers will be visible from essentially everywhere in the canyon, and much of the S.L. Valley nearby, thereby changing the very nature of the canyon that is one of the most beautiful features of the Wasatch.</p> <p>Further, UDOTs own projections of ridership levels seem to be extremely optimistic. What motivation will there be to pay an as yet unknown price, park and carry everything you will need for a day of skiing from your car to the base station, wait in line (yes, there will probably be a line to board), take the long ride to the upper station, carry all your gear from the station to the resort, and reverse it all at the end of the day?? Seems like an epic adventure that is not likely to be undertaken by many resort-goers.</p> <p>I agree there are traffic problems in the canyon. However, these problems are not of the same impact as traffic congestion on major roads in the state that are used by many more people than the LCC road and have much broader consequences. The traffic in the canyon may occasionally result in decreased revenue for Alta and Snowbird. However, that is the nature of the winter sport they offer. Sometimes it snows a lot in LCC! During those times, skiing may not be possible!</p> <p>Efficient, powerful, electric buses with purposeful design (for carrying skiers, hikers, etc.) are a much more workable solution than a gondola, and result in much less environmental and visual impact and will be much more likely to be used. Coupled with a toll and restrictions on personal vehicles on the busiest days, this is the most attractive approach for traffic mitigation. Buses can also stop at locations other than the designated end stations of a gondola as conditions dictate or travel trends change. The buses must be design for the purpose at hand - comfortably transporting skiers and their equipment up and down a steep mountain road, not for moving commuters on suburban and urban roads.</p>
38053	John Winder	I favor the gondola.
38054	Emily England	<p>It's got a \$550 million dollar price tag, the only people supporting it are the ski resorts and UDOT (public opinion has been strongly opposed), the towers will forever be part of the view up and down the canyon, the studies have not shown that people would ride it (it will take 45 minutes), it will ruin several rock climbing areas, and at some point I think our canyons have a capacity limit. My favorite thing about Little Cottonwood is that it is a glacial canyon so you can see the city from the top and all the way up the canyon from the bottom. The gondola would ruin that.</p>
38055	Susanne Sheston	<p>I am strongly opposed to the gondola proposal for Little Cottonwood. The long-lived and forward-thinking solution for the canyon and the state would be a rail system, similar to those in Switzerland. The rail would be more expensive initially, but would move massively more people, making it superior for the longevity of the canyon. The rail system could be integrated into the canyon, without creating the eyesores of the gondola towers throughout the canyon. In the short term, enhanced busing with dedicated lanes would create far less environmental impact than an 8-mile-long gondola.</p>
38056	Julia DiNardo	<p>It feels overly optimistic to assume that there are that many ski seasons remaining to make a gondola-especially when it is at the sacrifice of the warm weather sport and beauty of the canyon-really worth it</p>
38057	Damian Domanski	<p>I like the idea of gondola- I think it would be a tourist attraction. It should be heavily discounted or free for local residents, as it will be paid from our taxes</p> <p>Thank you</p>

38058	Zane Frey	<p>The proposed Gondola B is not the most future-proof and environmentally conscious solution to this very complex problem. The primary issues of Gondola B are as follows. A gondola that must reach above the trees up LCC is visually unappealing to public land users and will destroy several very popular sites for public land use including climbing locations and trail intersections. While the gondola seeks to be environmentally friendly, it will be powered by RMP's coal and will not follow through on said claim because of that. The introduction of the gondola will not solve the problem of the base of LCC's traffic either as skiers and public land users will still have to funnel towards the base of the canyon to either park at the gondola base or drive up the canyon, further crowding the surrounding residential area. This residential area is already stuffed full of cars in the winter, and the addition of a gondola base will not alleviate these issues without road expansion in these neighborhoods.</p> <p>While there is obvious concern for widening the road of SR 210 instead of implementing Gondola B, there are more viable alternatives that solve the aforementioned issues. By implementing a toll to private vehicles going up LCC, drivers will be more inclined to carpool. This, paired with a system like that implemented by Solitude Mountain Resort in which private vehicles with more passengers pay less can ensure that there are less vehicles entering the canyon. Additionally, this solution is relatively low cost, with a simple fee station at the base of the canyon being constructed. Season-long revenue can be created from this implementation and can better fund road maintenance and public transport and is environmentally sustainable as less people are driving individual vehicles up the canyon. This, paired with an increase in city-wide bus availability can be a sustainable, low-cost solution that not only benefits the users of our public lands, but also our environment, and the people of Salt Lake City as traffic will be reduced city-wide. With an increase in UTA funding and buses, more people are inclined to take public transportation up the canyon at a lower cost (as compared to the previously mentioned toll system), reducing bottlenecks at the base of the canyon. If more citizens are on public transport at more dispersed sections in the city, there will be less individual private vehicles attempting to park and drive up the same route. The public opposes Gondola B. The writing is on the wall with over 80% of locals opposing the issue. Please listen and consider that there are viable options to this complex problem that do not include building a flashy transportation mode that will not solve the problems of the canyon, but only make them worse.</p>
38059	Elyse Tate	<p>We are against the construction of the gondola. This is not what the people want. Listen to the communities, listen to the people</p>
38060	Nicholas von Stackelberg	<ol style="list-style-type: none"> 1. The preferred phased alternative is in actuality a blended alternative of two of the considered alternatives. The elements, impacts and costs for this preferred alternative are very confusing for the general public to follow and incompletely addressed in the document. 2. Considering SR 190 Big Cottonwood Creek as an indirect effect of the project is bad planning and public policy. SR 190 and SR 210 are inextricably linked and should be considered in unison to fully understand project impacts and make the most informed selection. 3. The traffic analysis states that the traffic impacts of the preferred alternative on Wasatch Boulevard would be the same as the Enhanced Bus Service alternative (Section 7.5.4.1). This seems highly implausible given the preferred alternative includes a 2,500 car garage that would be serviced by Wasatch Boulevard and likely will very negatively impact the local community during peak hours. 4. The consideration that the Enhanced Bus Service alternative could serve many trailheads and recreational user types, whereas the Gondola alternatives would only serve two private ski resorts is either not addressed or understated. 5. Since cost doesn't seem to be an issue in selection of the preferred alternative, why wouldn't summer service be added to the Enhanced Bus Service alternative?
38061	Martin June Vanderst	<p>As 30 year residents of [REDACTED] we are Very Very Very Very Very Very much against having the tram built in this canyon.</p> <ol style="list-style-type: none"> 1. The construction of the tram would harm the canyon as well as the wild life. 2. The Tram would be going over our home and back yard destroying our right to privacy and quiet enjoyment. 3. It would increase the amount of traffic, people and tourists in our neighborhood and in the canyon affecting our daily lives. 4. Once a tram is built, that will only be the beginning of the commercial development in Little Cottonwood Canyon. <p>Shouldn't Little Cottonwood Canyon residences have the most to say about this project?</p>
38062	Dharlene Cranney	<p>I am not in favor of the gondola. I wonder why so much money is being spent on such a small amount of our population. Our state is growing fast and we need roads that will be beneficial to more of our population.</p>
38063	Steven Elwood	<p>I am for the Gondola. I think it would help relieve traffic and also, itself, become a tourist attraction.</p>
38064	Johnny Stanzione	<p>My name is Johnny Stanzione and I am a freshman this year at The University of Utah. A huge draw to the U and Salt Lake City are the mountains and Little Cottonwood Canyon specifically. I love skiing and climbing and everything outdoors, and to see that threatened by the proposed gondola is terrifying. I want to do everything in my power to protect this canyon for my generation and for generations to come.</p>

38065	Jason Dymock	<p>to whom it may concern,</p> <p>Little Cottonwood Canyon holds a special place in my heart. I have been backcountry skiing, climbing, hiking, and visiting the ski resorts up the cottonwood canyons for the majority of my life. Some of my best days of skiing have been at Snowbird and the views from hiking up Mt. Superior in the summer always take my breath away. In recent years the crowds and traffic have definitely increased in the canyon and with that, my enjoyment of this beautiful area has decreased. Something needs to be done. At first, I thought the proposed gondola seemed like a good idea, but as I learned more it has become obvious that it is not a good solution and should not be implemented. Many less expensive and more effective options exist that should be evaluated instead of the gondola. While there may not be one perfect solution, the proposed gondola is one of the worst options out there.</p> <p>The main problem is high traffic on weekends and powder days, along with backups caused by closures for avalanche mitigation. We should take into consideration all affected parties, including both inbound and backcountry skiers/snowboarders, hikers, climbers, mountain bikers, taxpayers, the resorts, neighborhoods near the mouth of the canyon, and future generations.</p> <p>The gondola would be an eye sore for the many people who use the lower sections of the canyon and would ruin many climbing areas. It would only be of use in the winter, on weekends and a handful of powder days. It has a negative effect on climbers, hikers, and taxpayers and does not stop at any backcountry trailheads. Charging to ride the gondola will increase the cost of skiing and therefore limit skiing in the canyon to the wealthy (though with the price of lift tickets it is already limited to the wealthy).</p> <p>As a Utah resident, the price tag alone is reason enough to avoid the gondola. Nearly half a billion dollars put onto taxpayers for something that only benefits two private companies seems ridiculous. If the problem is caused by the two resorts, then they should have to pay for the solution.</p> <p>Some better options:</p> <ul style="list-style-type: none"> - Cap the number of skiers allowed per day at the resorts, similar to what they do at Powder Mountain. Fewer skiers = less traffic. - Build a tunnel system, It avoids avalanche paths, does not require snow removal, is less expensive than a gondola, is out of sight and not an eye sore, and you could connect all the ski resorts in the central Wasatch together. A tunnel from near park city to BCC and a tunnel from BCC to LCC would provide quick and easy access to all resorts and would route traffic through Parleys canyon which is much safer than driving LCC. The total tunnel length would be between 6-10 miles.
38066	James Webster	<p>I hold a masters degree from Harvard in environmental planning and architectural history. I was on the faculty of USU's department of landscape architecture and environmental planning. I have prepared numerous visual simulations of impact for geothermal, mining, tar sands and culinary water development projects. I've been a guest instructor at Harvard's MBA program and presented case studies of real estate site location preference based on visual attractiveness. I've been a guest lecturer on environmental planning at the architecture, history and engineering departments at the following universities: Guelph, Hawaii, Utah, California Poly, and USU. I prepared the "Master Development Master Plan for Saltair Beach at the Great Salt Lake State Park for Utah State Parks. I prepared the "Inter-Resort Transportation Plan" (UMTA grant), and the "Tri-county Railroad Study" for the Mountainlands Association of Governments. I worked my way through school as a brakeman and conductor for the Southern Pacific Railroad in the Cascade mountains of Oregon and Sierra mountains of California and Nevada. I've worked as an advisor to railway roadmasters and have conducted feasibility analysis of unit train feasibility for interstate ore transport. I served a LDS mission in Switzerland and became very familiar with the efficiency, historical significance, tourism attractiveness, and minimal visual and environmental impact of cog railway systems. The advantages of a cog railway over a gondola are indisputable, enabling less visual and environmental impact, higher flexibility of interim destination access, unique historic continuity as related to Utah's mining heritage, greater long-term durability and reduced maintenance commitment, and a significantly enhanced attractiveness for year-round tourism. My family has lived in the ski regions of Europe and have hosted friends from these areas who have visited Utah and am confident that they would be insulted and offended if UDOT would elect to impact the natural terrain and unique visual significance of Little Cottonwood Canyon with an arbitrary and limited functional gondola.</p> <p>James Webster, RLA</p>
38067	Gabe Shuster	<p>Please don't destroy the rocks in little cottonwood canyon to build a gondola. The climbing, specifically the bouldering in lcc is one of a kind and should be protected for people to enjoy. There are other alternatives to the traffic issue that don't involve permanently harming the landscape.</p>
38068	RW Holbrook	<p>A typical passenger vehicle emits about 4.6 metric tons of carbon dioxide per year. In Utah we have a real problem with clean air. A gondola is the necessary solution to improve air quality</p>
38069	Wendy Stein	<p>After driving home on the evening of October 16 in the red snake lasting an hour and a half, it's clear that the problem isn't just during the winter. It is anytime there's a peak event in Little Cottonwood - heavy snow days, weekend ski days and days that Snowbird are having large events.</p> <p>Not only is it ethically wrong to ask tax payers to foot the bill for a problem created by the for profit entities, Alta and Snowbird, it is an aesthetic eyesore that isn't even available year round.</p> <p>The people have spoken. It is time for you to listen. We do not want a gondola.</p>
38070	Gabe Shuster	<p>Please don't destroy the rocks in little cottonwood canyon to build a gondola. The climbing, specifically the bouldering in lcc is one of a kind and should be protected for people to enjoy. There are other alternatives to the traffic issue that don't involve permanently harming the landscape.</p>
38071	Emma Beard	<p>Please leave our canyons wild and free! The people of Utah don't want this!! KEEP OUR CANYONS WILD</p>

38072	Eric Rodriguez	The gondola is going to kill part of LCC only for the benefit of ski resorts in LCC during winter. We have 3 other seasons and another canyon that needs a better solution than an obtrusive destructive expensive gondola. Invest more heavily in shuttles instead. I will literally stand at the boulder field and tie myself to the boulders in LCC before I let you tear them down. The climbing is the whole reason I'm living here.
38073	R W	The great outdoorsman in John Cumming, the founder of POWDR should understand the concerns we have with the proposed gondola. He knows [REDACTED] well that every mountain guide, adventure junkie, all around dirtbag or person with a reasonable conscience out there will not stand for this. We need to protect this sacred canyon for the future generations and not let finance ruin this beautiful monument of glacier carved granite.
38074	Melissa Gibbs	I have lived in Sandy all my life. As a 46 year resident of the city I love little Cottonwood Canyon. I snowboard and hike and spend lots of time with my family in the canyon. I do not want the gondola! It's going to ruin the beautiful scenery. There are other options than this terrible idea. No gondola! I don't want my taxpayer money funding it and I don't want the eyesore that it's going to create in the canyon. No gondola! Don't cave to the developers. No amount of money is worth ruining our canyon! I want my grandchildren to experience the canyon as I did as a child. No gondola!
38075	Linda Mabey	I think the gondola would mar the beauty of the canyon. I would support restrictions on driving or tolls
38076	Devin Eaton	<p>There are obviously downsides with each proposed solution to mitigate travel time up Little Cottonwood Canyon. All options will require multiple year construction projects, cost hundreds of millions of dollars, and degrade dozens of acres in LCC. As someone who has worked and recreated in LCC for nine winters, I ask you to consider not charging those who work and/or live up the canyon the road-use toll. This project will be making their homes significantly busier. For it to mean a greater cost burden on life and make their home (LCC) more intolerable is not right. I do not plan to live or work in the canyon by the time this project comes to conclusion, but please treat those who will fairly.</p> <p>I would also like to add that LCC is not the Alps. When I say this, I refer to the limited size of the Wasatch range, especially LCC. Everyone loves the gondolas and trams which carry people country to country in Europe. The Wasatch Range next to Salt Lake is not very large. Getting as many people as possible up the canyon on busy days does not necessarily mean more people are going to have more fun. The ski resorts already feel above capacity on busy days. If a gondola or alternative transportation method were to permit the crowds to double in size, the experience of being in the canyon on those special days could likely half.</p> <p>To our legislatives, lobbyists, and big businesses of Utah, money is not everything. The state constantly pushes to increase population in the Salt Lake valley, ignoring the signs that we do not have the water to support these projected increases. A gondola or alternative transportation project is a small piece in this mindset driven issue, if we build it, they will come. One day if we build too much, there will no longer be reason to stay.</p> <p>Please make a decision which takes into consideration the current generation, and future generations. Please do your best to make sure this canyon can be enjoyed by those who love it, and that it remains something that is worth coming back to for centuries to come. Please make the most careful decision possible.</p>
38077	Willy Chandler	<p>The number one goal of the Little Cottonwood Canyon EIS is to reduce the number of vehicles in the canyon in order to increase safety and reduce carbon emissions and other human impacts. Mobility hubs and enhanced bus service are the most cost effective solution with the greatest impact. This solution should be given at least five years of service, with time allowed for fine tuning, to determine efficacy. Tolling, paid parking at resorts, and other strategies must be implemented concurrently with enhanced bus service in order to truly incentivize the use of buses and carpooling.</p> <p>Details of bus service must be thoroughly studied to determine the most effective means of moving recreation users quickly and safely up and down the canyon. Dedicated canyon bus routes must be considered as they will best be able to adapt to rapidly changing demand, weather, and road conditions throughout the day. These buses should be electric. Bus routes that serve the greater metro area must be scheduled and routed to provide reliable, frequent transportation to and from mobility hubs.</p> <p>Because of the limited number of stops, a gondola does not adequately provide equitable access to various canyon uses as a genuine mode of public transportation. Furthermore, it cannot adapt to future unforeseen changes without significant investment. The high price tag does not equate with a highly effective public transportation solution and is a blight to the natural beauty of the canyon.</p>
38078	Nika Belova	Increased bus services, including better parking at and near the base, is a far and away better option than a gondola. Its flexible, cheaper, and better suits the needs of both locals and tourists. As not only a Utah native, a skier, and a climber, but also a scientist - the data backing the gondola makes no sense. It does about the same amount of good allivating traffic as increased bus service, but comes with a whole host of bad - limited capacity, limited ability to run in bad weather, destruction of natural habitats, destruction of wilderness recreation areas, more congestion at the base, and more. It makes no sense. Increase bus service and institute a toll for passenger car instead.
38079	Gerry Hassell	The gondola isn't the answer. With that much money, simply widen the road. I'm not for the gondola

The total tunnel length would be between 6-10 miles. <p>Interconnecting from Park City can provide parking and a long-term solution. The Future will eventually result in a connection between resorts and canyons. Better to do it now. There are more worthy UDOT projects that benefit our community.</p>
38081	Gary McDougal	<p>My concern, causing me to be strongly opposed to the tram project is economic. First, the cost is estimated to be \$550 million, a cost so high that it can never pay for itself. If the cost were, for example \$20 round trip, it would take 27 million trips to recoup the construction cost. Not an attainable goal. This does not take into account operating costs and maintenance. Second, the State of Utah has a horrible record on large building projects. The tram will most likely cost far more than projected. Third, the tram will not deliver transportation except for two ski resorts. There will be no stops for hikers or anyone not funneled to the resorts. Its usefulness is very limited. Fourth, this is a huge subsidy to the rich companies that own the ski resorts. The tram will help only them. They are highly profitable and have been coddled and subsidized in many ways for years. They receive zoning that has allowed over-development of the canyon and have had low capital costs thanks to decades of tax subsidies. Fifth, this will reduce economic activity in Utah. You are proposing to suck hundreds of millions of dollars out of the State's overall economy and redirecting it in the most narrow way possible. Sixth, the tram is economically immoral because it will be paid for mostly by residents who cannot afford to use it. Skiing has become so expensive that only a relative few can afford to participate. The bottom line is this: once again the State is proposing a huge subsidy for the few rich with little to no benefit for the common citizenry.</p>
38083	Steven Hamilton	<p>This Sandy resident does not wish for any project like this to go forward. No gondola.</p>
38084	Roger Dodge	<p>I am apposed to the tram option in Little Cottonwood Canyon.</p>
38085	D M	<p>You will not build this gondola.</p>
38086	David Uhlendorf	<p>I am opposed to the gondola construction. The construction and installation will destroy a natural beauty that can never be restored. Bus service would better serve all the users of the canyon , not only the skiers</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
38087	Nina Roberts	<p>I am a resident of Salt Lake City, Utah. I have lived in Utah all my life.</p> <p>I strongly oppose building a gondola in Little Cottonwood Canyon. It would make the canyon ugly and look like an amusement park. It would ruin the beauty of Utah that people come to see from all over the world.</p> <p>There are only about ten winter days per year the road has problems. Due to global warming, some scientists predict there won't be snow in North America by 2050. That is only 28 years from now.</p> <p>Therefore, an ugly gondola and these other projects you propose are not needed. They are a waste of money.</p> <p>I would much rather the \$500 million to \$600 million be spent saving the Great Salt Lake. It is what most Utah residents care about since it directly affects our health and our way of life. Due to the lake being the lowest level in recorded history, our summers are now unbearably hot and dry. We are running out of water.</p> <p>The Catholic Church in Utah recently came out against building the gondola. It said the money could be much better spent, that it is enough money to pay for everyone in Utah to use mass transit for free.</p> <p>My first choice is use all of the money to help save the Great Salt Lake.</p> <p>My second choice is use the money to pay for everyone in Utah to use mass transit for free. But this choice makes no sense if the Utah becomes so hot and dry due to a falling lake level that we have to move away.</p> <p>Use the money to help save the Great Salt Lake. Do NOT waste it building a gondola or widening Little Cottonwood Canyon's road. Use the money where it is most needed.</p>
38088	Spencer Burt	<p>I think building a gondola is a bad idea.</p> <p>Just increase buses and add more parking near the mouth of the canyon. If need be, with the minor inconvenience to people driving themselves who may get "stuck" behind buses that are slower than they'd like to drive, add a few passing lane areas.</p> <p>Don't build the gondola. Also don't widen the whole highway, at least not right away.</p> <p>Based on everything I've read and heard, the gondola is a bad idea. It will add an eyesore to the majestic vistas, be super expensive and time-consuming, and it seems like its main proponents are private business owners (although I DO recognize some environmental activists are on board). Also, just speculation, but I'd imagine there would be extremely long lines and wait times to board the gondola cars/cabins during peak ski season mornings. The answer (to this and MANY of UDOT's never-ending projects) is PUBLIC TRANSIT. BUSES.</p>
38089	Julissa Byington	<p>No Gondola! Leave canyon alone</p>
38090	Phil Start	<p>The gondola is not the solution. I commuted to Alta for 4 years on the 953 route and preferred taking the bus. There is so much opportunity to expand public transportation use with bus routes and in little cottonwood. This place will never be the same and a gondola would truly lead to the degradation of little cottonwood. As a local skier employee and lover of the wasatch please consider the logical alternatives to this temporary issue.</p>
38091	Cindy Rothfeder	<p>I am not in favor of the gondola B as the preferred alternative, for the following reasons: the cost is prohibitive; stops only at Snowbird and Alta serve to benefit only downhill skiers, not the general populace; it will remove only 30% of the traffic from the road; it will permanently destroy the wildness of the canyon and surrounding areas, not to mention the traffic and parking problems it would create at the base of the canyon. I think that some of the alternative solutions should be tried first: using electric buses; charging a toll to cars for use of the road; better parking management; incentives for multi passenger vehicles; strict enforcement of requirements for chains and snow tires. Surely some cheaper common sense solutions could be tried before ruining the canyon with this fancy high priced "European"option.</p>
38376	Vernon Warner	<p>I believe that we need to be futuristic and show the world a step towards it. A East bound and a West bound monorail system. Here's the reasons: 1) The view of the canyon, will not be clogged with ugly cables and cable cars. 2) Buses are slow and subject to road closures (avalanches), pollution, clogging the canyon entrances with parking and the limited number of people on each bus! 3) Limit number on each gondola for people. 4) Lack of expansion. 5) A monorail could be built as to not restrict views of the canyon, interfere with traffic, withstand avalanches and expandable. I vision the system reaching westward to I15 and interlink with the trax system. The monorail could run right up to Snowbird and Alta, delivering the passengers to each in one stop. 6) The monorail cars could be built with glass top, so no matter which side you sit on the view would be fantastic. 7) Speed. 8) Delivering alot of people at one time would make it better and more cost efficient. 9) Would not be subject to weather conditions, wind and large dumps of snow. 10) Various stops could be made through the canyon for those living in the canyon to leave for work, outdoor enthusiasts reaching their spots during winter or summer. 11) Could link the other resorts considered to the outback connection.</p> <p>Think Big</p> <p>Vernon Warner</p>
38092	Kacie Omaley	<p>as a resident of Salt Lake and frequent users of LCC during all seasons I oppose the proposal to install a gondola as a solution to the traffic problems in LCC. There are many other options that are less invasive that should be tried and tested before such a drastic, expensive and environmentally unfriendly gondola is installed.</p> <p>Expanding parking options below the canyon, funding UTA so adequate busing can be utilized, installing a pay system for single cars going up the canyon are all viable option that should be explored and implemented.</p>
38093	Janet Utt	<p>No gondola in cottonwood canyon</p>
38094	Janet Utt	<p>No gondola in cottonwood canyon</p>

Please make the most careful decision possible.</p>
38096	Janet Parberry	<p>No Gondola: too costly, creates damage to environment, and scenic natural beauty. Please consider the California Hollywood Bowl Solution: Ski tickets indicate specific existing parking lots (cost control) for skiers to park vehicles. Skiers board new electric buses (pollution control) to travel to ski destination and to return to vehicles in designated parking lots.</p> <p>The Hollywood Bowl has successfully used this method to control pollution and traffic and to please the attending public and all tax payers.</p>
38377	brendon mackay	<p>I am a resident of Millcreek and Alta and frequent user of Little Cottonwood Canyon, and I strongly oppose the gondola proposal. Please go with a common sense alternative like this one:</p> <p>Employ an automated toll station at the base of the canyon between the road in and out of the park and ride. Have two tiers of passes: a general pass and a pass for vehicles equipped with 4 wheel drive and snow tires to prevent cars from going up the canyon on snowy days in inappropriate vehicles. Vehicles that violate the toll are sent a citation. Vehicles without a pass can turn around in the park and ride and go back to a station to purchase a pass to avoid a citation. Set up 3 stations for toll pass purchase: one coming from wasatch, one from 94th, and one near the base of the canyon where the base of the gondola is proposed. Turn the gondola parking area into a large parking area and bus stop for improved bus service, which includes the turnout to one or two toll pass sales stations.</p> <p>A toll and significantly improved bus service/parking will incentivize people to utilize public transport at a much cheaper price to the taxpayers than the gondola, and it would also be flexible. You can employ more buses on busy days and vary the toll price to moderate traffic based on demand and anticipated crowds.</p> <p>I work in real estate development and construction, and I can say with certainty that the gondola will cost far more than anticipated. You are undoubtedly aware that construction costs have skyrocketed and project timelines massively delayed. We will see some construction costs coming down as the economy slows, like lumber and local labor, but most of the costs associated with a gondola won't come down anywhere near those seen at the time you made your estimates. The best case is inflation slows and they don't get a lot higher than the currently inflated costs.</p> <p>Best Regards, Brendon MacKay</p>
38097	Lois Peterson	<p>How did that Zugspitze "training exercise" go for Dopplmayr in September 2018? And we're using the same gondola "scientists" for an unnecessary Gondola in Little Cottonwood Canyon that would be over twice as long as anything ever built. What could possibly go wrong? NO GONDOLA. Wrong on so many levels. Not safe. Not what Utahns want or need.</p>
38098	Alex Bate	<p>I am a resident of salt lake and frequent user of LCC during all seasons. I oppose the proposal to install a gondola as a solution to the traffic problems in LCC. There are many other options that are less invasive that should be tried and tested before such a drastic, expensive and environmentally unfriendly gondola is installed.</p> <p>Expanding parking options below the canyon, funding UTA so adequate busing can be utilized, installing a pay system for single cars going up the canyon are all viable option that should be explored and implemented.</p>
38099	Ann Jackson	<p>I am opposed to the gondola. It seems like a huge tax burden for the people in our state and will only benefit those who own ski resorts and those who are already wealthy. I prefer to have limits on the traffic and use shuttles.</p>

38100	Tom Burdett	<p>Little Cottonwood Canyon EIS</p> <p>The mission of the U.S. Forest Service is: "To sustain the health, diversity, and productivity of the Nation's forests and grasslands to meet the needs of present and future generations." And the Forest Service motto is: "Caring for the Land and Serving People," capturing the spirit of its mission is accomplished through five main activities:</p> <ul style="list-style-type: none"> -Protection and management of natural resources on lands we manage. -Research on all aspects of forestry, rangeland management, and forest resource utilization. -Community assistance and cooperation with State and local governments, forest industries, and private landowners to help protect and manage non-Federal forest and associated range and watershed lands to improve conditions in rural areas. -Achievement and support of an effective workforce that reflects the diversity of the American people. -International assistance to formulate policy and coordinate U.S. support for the protection and sound management of the world's forest resources. <p>This principal vision statement should guide the environmental impact statement (EIS) for transportation planning for Little Cottonwood Canyon. This EIS recommendation is not in concert with this vision. The final EIS recommending Gondola B alternative is flawed on several levels. It is flawed with addressing the following objectives:</p> <ul style="list-style-type: none"> -Protecting forests and grasslands -Assistance with protecting watersheds -Improving conditions in rural areas -Community assistance and cooperation with emergency management -Impacts to wildlife migration <ol style="list-style-type: none"> 1. Protecting forests and grasslands: The impact of high wire conveyance systems requires the forest to be cleared of tall trees below it. It also requires the removal of trees and maintain fire clearance for a certain radius around support structures and service roads. 2. Assistance with protecting watersheds: The removal of the trees and grass lands will promote erosion in the canyon, interrupt natural drainage and cause sediment to be deposited into the streams. 3. Improving conditions in rural areas: The selected alternative should improve community structure by enhancing access for year-round residents of the canyon, not simply cater to destination tourists. In high wind conditions, an aerial gondola is shut down and useless. And, that maybe the time when enhanced transportation is needed most. 4. Community assistance and cooperation with emergency management: One of the reasons that the 2002 Olympics could not hold events in Little Cottonwood Canyon is because it lacks two routes of travel for evacuation. Emergency service should be weighted higher with the selection of alternatives. For example, in the "Big Run" rail transportation was
38101	Glenn Matthews	<p>This project should not go ahead, besides damage to the ecosystem, with continually rising costs in materials and fuel, I doubt that the project would come in anywhere near budget</p>
38102	Ann Kamp	<p>I am against the gondola but I don't expect that the legislature will take any negative comments into consideration. They do just what they want and to [redacted] with what their constituents want. I don't believe that the gondola will be of use to any one except the ski places. I don't ski but would like to hike but the gondola won't get me to the trail heads. Our climate is changing and skiing will be less and less. So we'll have gondolas that won't be useful for ski resorts and won't take us to trail heads. What a waste of money--well except for the ski resorts owners for about 10-20 years and for the legislators right now.</p>
38103	Johnny Stanzione	<p>There are many reasons that the gondola is not the right solution for the Little Cottonwood Canyon traffic problem. Firstly it will forever scar the canyon and take away from its beauty. It is a natural treasure of Salt Lake City and I could not imagine the canyon with huge metal towers and cables running above me throughout it. The decision about the gondola has been made too hastily and is irreversible. The decision to move forward completely disregards local and political opinions. It is tax-payer funded and primarily benefits private resorts.</p>
38104	Taylor Brown	<p>No good argument for the gondola has been made. You say that a bus plan doesn't meet the program goals... whose goals? Why do we need 3000 people traveling up the canyon every hour? The bus program could be doubled in scope for a fraction of what the gondola would cost. The people have already spoken, and they don't want to foot the bill for a gondola that only benefits the ski resorts. This is an insane idea - but of course we all know UDOT's support for this program has been bought and paid for by the resorts themselves. It's infuriating to live in a state whose greatest resource is its natural beauty but whose corrupt government is absolutely determined to destroy it. Do you care about anything other than lining your own pockets? In 20 years all you'll have to show for this project is a dry winter and a once-beautiful canyon full of dead machinery that no one will want to use anymore.</p> <p>Do the right thing. Listen to the vast majority of Utahns that are telling you they want a less destructive solution. Put aside the hundreds of millions of dollars you'll save and focus on saving the Great Salt Lake instead. If you don't, we'll be out of snow before the project is anywhere near completion.</p>

ID	Full Name	Comment
38105	Jordan Conroy	<p>I am writing to strongly oppose the Utah Department of Transportation's (UDOT) Gondola Alternative B plan.</p> <p>The massive 200-foot gondola comes with an even more massive \$600 million price tag, paid for by Utah residents to benefit wealthy ski resorts. This proposed solution to congestion is nothing more than corporate welfare. The casualties of this bad decision will be the watershed and pristine environment of Little Cottonwood Canyon.</p> <p>There are many reasons I oppose the Gondola Alternative B project, specifically:</p> <ol style="list-style-type: none"> 1. The gondola is too expensive and Utah taxpayers are picking up the bill: UDOT is funding a \$600 million project that should be paid for by the private multi-million dollar corporations that stand to benefit from it. Only 2-3% of Utah residents ski Snowbird and Alta on weekends, but every Utah citizen will pay approximately \$175 just to build the gondola, not to mention the steep operating costs. For a family of four, that is \$700 for a method of transportation they will likely never use. This is corporate welfare and I don't believe these wealthy companies need Utah families to pay so they can profit. 2. The gondola poses a tremendous risk to the environment and vital watershed in Little Cottonwood Canyon: With a proposed 19 towers up to 262 feet tall running through the canyon, the gondola will irreversibly change the landscape we all know and love. It will also risk contamination of the Little Cottonwood Canyon watershed, which is responsible for providing swaths of vital water in Salt Lake Valley. 3. The gondola will not improve traffic congestion in Little Cottonwood Canyon: The Little Cottonwood EIS specifically states that UDOT does not anticipate traffic volumes will decrease with their proposed gondola alternative. As stated in EIS 8.4.3.2, "daily traffic volumes would be similar to the existing conditions in 2020." The proposed gondola fails to serve its intended purpose of reducing traffic congestion. <p>I am not alone in my objections. Myself, along with 80% of Utahans oppose the building of a gondola in Little Cottonwood Canyon. I urge you to consider alternatives that are less costly and less damaging to the landscape.</p> <p>Signed, Jordan Conroy</p>
38106	Christopher Grieb	<p>Please put a stop to this destructive, expensive waste of tax payer dollars and environmental resources. The gondola must not be built.</p>
38644	Malin Moench	<p>Please accept the attached Comments of Malin Moench on UDOT's Gondola B Preferred Transit Alternative for Little Cottonwood Canyon.</p> <p>I am submitting them via email, because my lengthy comments lost their formatting when I tried to copy and paste them into the comment box provided on the UDOT website.</p> <p>Please let me know if submitting them via email is acceptable.</p> <p>Malin Moench</p>
38107	Ian Willard	<p>I am a Cottonwood Heights resident and I use the stretch of Wasatch (SR210) on a daily basis for both recreation (cycling) and travel by motor vehicle. I oppose the decision to put a gondola in Little Cottonwood Canyon. It does not solve the transportation issues of the present or the future. Ridership on the gondola has not been established and the gondola would be an expensive blight on what is now a beautiful canyon. There are better alternatives, not the least of which would be enhanced bus routes, with a dedicated bus lane in the canyon. The environmental impact of this would be less than the gondola. Additionally I am adamantly opposed to the widening of Wasatch (SR 210). Doing so does not ease traffic concerns related to Little Cottonwood Canyon. Yet widening the road creates a host of problems for the neighborhoods that surround that road and impacts both residents and non-residents alike, by ruining a road that is a very popular bike route. Measures should be taken to improve the road and make it safer for both residents and recreational it's alike-not widen the road, making it less safe for both residents and recreationalists. I am available for further comment or discussion. If needed, I have provided my contact information if further comment or clarification are needed.</p>
38379	tom albano	<p>I am a long time Snowbird season ticket holder and I have skied the Cottonwood Canyons for 40 years. A Gondola would be the biggest boondoggle since the great Salt Lake Pumps. 40 years ago, after three record years of moisture, Governor Bangerter spent 54 million on pumps that were never used because you don't get record moisture forever. Little Cottonwood has 10 or 15 days a year where the traffic is really bad. It makes no sense to defile the beauty of the canyon with something that is not needed. I will never in a million years take the Gondola up. I live at the mouth of the Canyon. Why would I pay big money to go park, wait in line, and turn a 15 minute drive into an hour or more of inconvenience to take the Gondola. If you build it they will not come as it will be a total hassle and expensive to get up the canyon that way. Please don't waste all this money and destroy the beauty of the canyon.</p> <p>Thomas Albano</p>
38108	Christopher Moran	<p>Its interesting to see the growth in the last 5 years working at snowbird is quite the experience. I guess people might never find the limit of a canyon if people are paying more. It also [redacted] that playing outside always ends costing so much money. So i think snowbird and alta should come up with better actual ways if they want more people to pay for there stuff. I might of missed it but i didnt see an option for just building at parking garage somewhere close and maybe just start with that. It would solve parking down canyon for big and little. And wouldnt cost a crazy amount. Then add more buses or just only do it on the weekends. But just like people who work here(Snowbird) theres better options.</p>

ID	Full Name	Comment
38109	Hyojung Na	<p>I think a very loud and logical argument has been made that the gondola project is in no valuable way, benefitting the people living in the valley nor the environment. The sheer cost of the project could be so much better utilized than for the sole benefit of the ski resort that a gondola will service. The gondola will dramatically, for the worse, change the character and impression of our canyon. The days of wild winter storms that back up traffic to create the "Wasangeles snake" only happen a handful of days a year. The impact of efforts made to mitigate the dangers of these few days a year should be made with better public transportation options where UDOT has not been given the resources to properly service the canyon. Any other large resort, like some in Tahoe and Colorado have bus service from parking lots that arrive so frequently that one barely has to wait outside their car before getting picked up. These buses are also specifically equipped to handle a snowsports crowd. They have racks made to carry ski equipment and storage for other gear that make the ride much more pleasant than standing in a bus for an hour trying to hold up your skis. If bus service were better configured, it would be a much much more common sense solution than to destroy the canyon for a gondola that does not even allow anyone to go anywhere except the ski resort. Public transport does not sound as glamorous as a gondola but it makes so much more sense. The idea of destroying the beauty of the canyon, which makes the Salt Lake Valley so desirable to live in, is a travesty. A gondola does not create any meaningful employment. It does not serve the community, some of whom are just looking to stop at a trailhead. We do not need a gondola. We do not want a gondola. Let's preserve the canyon for the beauty it is for the present and future community.</p>
38110	Lauren Cromar	<p>Our family visits Little Cottonwood Canyon frequently as skiers as well as throughout the year and we are very much against the gondola. Please choose an alternative that is better for Utah locals. During ski season we go skiing multiple times a week and honestly, the traffic is not usually that bad, not nearly bad enough to warrant the cost and disruption that the gondola would bring. The gondola would significantly impact the accessibility to the canyon for our family and others for several reasons: the extra time and effort required to ride it would turn quick ski trips to lengthy, arduous days. Public transportation can be very difficult to manage for families like ours with multiple small children and members with health issues, all trying to lug their ski gear. I honestly don't know how often we could manage our trips if we were forced to use the gondola to get to the ski resort. We recently were stuck in traffic coming back from Snowbird after Oktoberfest and while we were surprised by how bad the traffic was, it was interesting to note that it was still quicker than riding the gondola. We also don't like the concept that the gondola can help get more people to the ski resort on busy ski days. While it would make more money for the ski resorts, the lift wait times and, more importantly, the safety on the hill really can't absorb more people and yield a good experience. The gondola is an abandonment of Utah locals who love our canyons in favor of businesses and tourists. It's a terrible choice, one that I can't believe was selected.</p>
38111	Ron Faerber	<p>STOP - Please do not allow this EIS (Environmental Impact Statement) to proceed. Please do not allow the Proposed Gondola to proceed.</p>
38112	Christopher Perry	<p>This project will harm the environment in many ways. The construction of the project would damage the homes of many species and damaging to popular hiking and climbing throughout little Cottonwood</p>
38113	Alex Sun	<p>I don't think the gondola makes sense.</p> <ol style="list-style-type: none"> 1) Traffic up the canyon is only bad a handful of days per year (mainly powder days). It doesn't make sense to build a gondola that's an eyesore for the whole valley to fix a problem that's really only present for a small number of days during the winter. 2) It also doesn't make sense to have a gondola that prioritizes skiing above every other outdoor recreational activities. The gondola really only stops at ski resorts, so they are the main beneficiaries. Also, skiing is expensive, so the only people being served are the middle / upper middle class. 3) There's already public transit in place. Why not improve existing public transit by adding buses on peak days before building something new that we don't know people will take?

ID	Full Name	Comment
38114	Sydney Stephens	<p>In regards to the detriment caused by a gondola, as a wildlife biologist I am concerned with the EIS's ecosystem section and believe it inadequately assesses the risk to wildlife- which has subsequent impacts on the wellbeing and relationships of humans to their environment. For example, as you saw from the Metropolitan Water District and Public Utility Comments, the affect on water quality is not likely negligible. Small changes in pH and sediment deposit have drastic and deadly affects on wildlife, aquatic and terrestrial. Cleansing this water for public (human) use will have added costs: how has UDOT anticipated/budgeted for these costs?</p> <p>Habitat fragmentation by presence of anthropogenic structures (i.e. large towers), noise disturbance from construction and high-decibel machinery (i.e. gears on a gondola which will easily disturb airborne creatures - UDOT's analysis of the peak-to-peak gondola's dB heard from the ground is inadequate in assessing wildlife hearing ranges and proximity to source) are shown in many studies to affect health, reproduction, and survival of many species. These effects can be seen miles from the source and have spill over throughout many canyons. Furthermore, this causes dispersal into bordering urban areas where we see an increase in human-wildlife conflict following disturbance events and habitat fragmentation. Increase in domestic pet predation, garbage/food scavenging, denning/destruction of property, and even attacks on human will ensue. This is strongly correlated with habitat/resource disturbance in multitudes of peer-reviewed studies. When rises in human-conflict increase as a result of habitat alteration, in the U.S. we most often punish the wildlife (removal/euthanasia from management agencies to keep people comfortable) instead of changing human behaviors/attacking the root of the problem. Subsequently, wildlife populations further decrease. What, if any, plans does UDOT have to rectify changes in wildlife population, particularly those that are sensitive species, locally endangered, threatened, or migratory, throughout the entire Wasatch as a result? What collaborations with NGO expertise and state wildlife agencies are in place for proper management? What monitoring and surveys are in place to ensure awareness in wildlife presence/populations are up-to-date and responses are appropriate and flexible? If adequate management under a gondola is deemed impossible, what actions is UDOT willing to take to change construction plans- and is it even able to do so after a Record of Decision is made?</p> <p>The operations of construction machinery, and manufacturing costs of these structures have significant carbon emissions. The removal of vegetation, and disturbance of soil, releases additional carbon into the atmosphere. Each plant sequesters CO2 from the atmosphere and converts it to oxygen- removing the natural systems that aid in fixing our air quality is a poor choice. Furthermore, the gondola is not carbon-neutral; aside from the steep carbon costs of construction, its operations also add to the environment. Since it does not currently plan to remove cars from the canyon, but to be an added transportation system, this is also added emissions. As a city with some of the worst air quality in the country- this not an insignificant factor. What, if any, climate mitigation/carbon offset strategies has UDOT considered?</p>
38115	Karen McDougal	<p>I have lived in Utah my entire life. I don't think it's fair to subsidize ski resorts and tourists at my expense. Heber and Park City could be a good alternative for a long-term solution. The Gondola will not be adequate now or in the future.</p>
38116	Dan Barrell	<p>We all know about the problem. I think there is a good solution, but we have to get it RIGHT the 1st time. Also, we CANNOT allow the head of snowbird and/or alta to make the call. Let them do their job (running a resort) and you guys do your job, getting people there. Its hard and a pain in the [redacted] but there is a good, viable solution. However, the gondola solution is not a good one. Its like, I'm staying up there . . . you need to drive, I've got these kids and their gear . . . you need to drive, I'm hiking white pine . . . you need to drive, I'm delivering stuff . . . you need to drive, etc. It is only going to be used by skiers and some employees. It can't be used during a storm (lighting), can't be used after a snow storm (avalanche blasting). You will need to have a full time maintenance crew there (like the resorts have). You will need to have a full time evacuation crew there, when it breaks down (and it will break down). Windows will have to open for ventilation, who is going to pick up the litter coming out of the windows? (The resorts hire people to walk the hills under the lifts each year, will you?). On the icon pass, I go to several resorts each year. There isn't one (except for Jackson hole if I pay 30.00) that I do not have to ride on a shuttle bus. Ok, so the cottonwoods are a long shuttle, that is our physical situation. Electric busses capture most of their energy on a round trip, so they use NO FUEL. They do not have to return to the hub each night for fuel or maintenance. We don't have enough seasonal drivers; pay them more! - give them a season pass! - let some of them ski for 2-3 hours in the middle of the day! Come on . . . get creative. Here is what I envision; you NEED A PASS to get up the canyon in a car. Someone at the Gravel Pit or maybe jiffy lube or maybe at the base inspects your car (for snow tires) and charges you for your pass. Single riders pay 20.00 - Double riders pay 10.00 - Triple pay 5.00 - 4 or more pay nothing! Get busses from the Biden admin for free (Inflation Reduction Act funds). They are good for a million miles. Take the canyon toll funds and pay your drivers; well! - and give them a ski pass. DO NOT cut them when you need drivers in town! We need busses every 10 - 15 minutes in the am rush and every 10 - 15 minutes in the pm rush. The fuel is free and the busses should be free. Then (and this is the hard part), make a single bus lane. Buses travel up in the am (come down with traffic on the return) and at 1:00, busses travel down in the pm. The people who need/want to drive up in their snow tired vehicle, must pay or ride up on a bus for no charge. Vehicles who get in a wreck must be pushed to the side by a cop car with a massive front bumper (make a larger shoulder) and MUST be retrieved AFTER midnight (ok; maybe 10ish). How about this: on snow days, after the canyon has been cleared of avalanches; the busses get a 2 hour head start of the cars. We know the problem. The solution is and will always be mass transit on busses. The gondola is a Disneyland solution. Its like a snowbird's roller coaster extension. Don't get distracted. Put in parking at the gravel pit, put in booths at the canyon bases (yes, big cottonwood needs help as well). Get electric busses only! Put in a bus lane; you can do it. And hey, put the ski racks on the outside of the busses, please. Thanks for allowing me to comment about this problem. I did my job, now it is time to do yours. Dan Barrell</p>
38117	Jonathan White	<p>I do not agree with this end product. I believe the best and most equitable option at hand (increasing overall public transportation ability and force with proper parking) was overlooked in contracts, micro scaled lobbying efforts and overall misuse of public interest. The mountains are a connection to freedom for some, and the upmost connection to God for others; in any case, any and all humans deserve an opportunity to these public lands. This option doesn't solve the issue at hand, simply takes care of a single symptom to have it grow another head a few years down the line.</p>

ID	Full Name	Comment
38118	Grace Hoeller	I climb and ski in LCC 5 days a week. The gondola is a massive waste of resources and tax dollars. I would hope that we can honestly explore more options before committing to such a massive project that many people cannot afford. Thanks.
38119	Thomas Jameson	As a taxpayer I do not wish to have my funds used for this project. It will benefit only the private corporations of the contractors and ski resorts. Please do not build a gondola
38120	Manina Hilbck	Please consider a tollbooth like in Millcreek Canyon. 5.00 fee. When so many cars the canyon can hold is accounted for, send the overflow to Smiths Parking on Bengal where UDOT Busses are waiting for skiers with Specific Alta and Snowbird Destinations.
38121	Katie C	Putting in a gondola up Little Cottonwood Canyon is not the solution to decreasing canyon traffic. A gondola is costly and will obstruct much of the canyon's natural beauty, preventing people from enjoying certain rock climbing routes and other aspects of the canyon. There are better, more environmentally friendly solutions that will still allow us to maintain the beauty of the canyon while decreasing traffic.
38122	J Merch	<p>I'm very against the boondoggle that is a gondola in LCC. It's a very myopic view to an issue that may help solve traffic a problem that is 4 months of any given year. It won't help those who recreate anywhere other than the resorts. It doesn't address the increase in traffic into areas that are also ill-equipped to handle the inevitable issues further down the canyon.</p> <p>It also sours the mouths of the masses who understand that politicians who pushed this option will also profit from it.</p> <p>I think any one of the other options will not only better serve us, but will also help the entire 12 months of the year rather than 3-4.</p>
38123	Thomas Albano	The Gondola will be a huge boondoggle that will destroy the beauty of the Canyon, and nobody will use it. I live at the bottom of the canyon and it takes me 15 minutes to get to Snowbird. Why would I waste an hour or more parking, waiting in line, and then taking the Gondola. I wouldn't take it if it was free and I am hearing it will be very expensive to ride. I am a season ticket holder and there are maybe 10 or 15 days a year where the traffic is really bad. This is a horrible idea. It will cost hundreds of millions of dollars. It will destroy the beauty of the canyon. And very few people will want to waste their time and money riding it up.
38124	Mardie Johnson	It is the most irresponsible way to spend the taxpayers money building a gondola that only benefits two businesses, one of which doesn't want the gondola (Alta) I grew up here in cottonwood heights hiking and walking little and big cottonwood canyons. The gondola will ruin what little we have left to preserve of the natural beauty of our local canyons!!!!
38125	Chad Wyatt	Absolutely ridiculous way to spend tons of money to benefit a few! So many ways to better benefit a broader group of people. For example, make better ways in and out of Tooele and benefit thousands daily. Also, should be ashamed of yourselves for limiting bus service. Quite timely if you ask me. UDOT so desperately needs new leadership with a vision to benefit masses vs. being in the pockets of a wealthy few looking out for only themselves.
38126	Sarah Jackson	<p>Shame on you UDOT. It is unfathomable to me why you would jump to such an insanely expensive taxpayer solution when there are so many inexpensive solutions to start with. Namely: canyon tolling, enhanced bus service, and using the proposed gondola parking lot as a new parking lot for bus transit.</p> <p>You state that one of the reasons to push the gondola is to avoid winter operations fees of \$4 million per year. That cost won't go away as we still have a road there and SO many people and services will still drive their cars up there whether there is a gondola or not. Not to mention that 30 years (which you propose will equal out the gondola cost) of that \$4 million per year is only one quarter of the cost of the gondola. Everyone alive right now will be dead and the gondola still won't have paid for itself.</p> <p>The percentage of Utah residents (who will be paying for this) that actually benefit from it is insanely minimal. TEN percent of Utahns ski. Since when is it ok to push a project like this on tax payers when only 10% even benefit? And a huge portion of those 10% don't even want the gondola! At the very least, if it has to go in, those who benefit from a gondola should be the ones who pay for it. Snowbird, Alta and the tourism industry, which makes \$12 billion a year. There ought to be a way to tax tourism income.</p> <p>Please spend UDOT funds on projects that impact more Utahns and not more tourists. Tourists already plan to pay a lot for their ski trips. They will keep increasing their numbers with or without a gondola. They can handle paying for tolling and carpooling too.</p> <p>In the meantime, everyone's property taxes keep shooting through the roof and no one can buy a house anymore. Finally, The wasatch mountains can't even hold that many people in a day. The only good snow days left in big and little cottonwood are the days that no one can get up the canyon. Let the mountain limit itself instead of destroying the uniqueness of the Wasatch and plastering the mountain with too many people.</p>
38127	Amalia Smith	<p>I support the phased approach to implement several changes ahead of a potential gondola option. I'm glad the updated EIS version included additional parking at the main hubs, and snow sheds seem like a great idea. I still support the gondola option, though hopefully with the snow sheds some of the cause for road issues will be alleviated, and also hopefully the ski resorts and private parties will provide a good chunk of the funding vs. it coming mostly from normal Utah taxpayers that do not ski (perhaps tolling fees could go specifically to the effort of improvements in the canyon).</p> <p>As someone who tries to use the ski bus whenever possible (and carpooling isn't usually an option), I hope that the enhanced bus service even in the shorter term means it is actually more reliable, ideally with more frequent timing and without the large gaps in service during the day like there are today. I support tolling and other measures to limit single occupancy vehicles, but I'd really like to make sure that bus service is improved such that it's actually a good and reliable option ahead of time. If bus service isn't improved but those measures are put in place it doesn't really feel fair to people who are more price sensitive, live alone and/or don't have ski friends close by, etc.</p> <p>In terms of other ideas: Maybe they could check tires at the base of the canyon on more snow days, to help prevent more accidents/slides? Perhaps there's some technology that could be used to try and help people carpool with others they don't know?</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
38128	Elizabeth Hardwick	At all stages of the EIS process, I have argued against the gondola option, as it is simply not a transit solution. It will only serve users of two resorts in one of the Cottonwood Canyons. And it is too expensive and unfair for the Utah taxpayers, only a tiny sliver of which would actually use the Gondola. Not to mention that construction of the Gondola would cause massive destruction of wildlife habitat, our watershed, and recreation resources that are important to thousands of Utahns who rock climb in the canyon. A recent poll showed that 80% of Utahns are opposed to the gondola. Please listen to this overwhelming majority of Utah taxpayers and go with other cheaper and less permanently destructive options like tolling and increased bus service.
38129	Lorna Landon	No gondola! More buses and fee for private cars.
38130	Michael Pfafflin	NO to the gondola. Widen little cottonwood by one dedicated bus lane. Use ELECTRIC buses to keep the canyon air clean. Charge a toll equal to the toll being considered for the gondola for private cars wanting to go directly to the resorts to pay for buses , and parking garages. Done, minimum damage to the canyon and environmental friendly.
38131	Janice Nelson	<p>I am strongly opposed to the building of gondolas in LCC. Nor do I support widening the road as a good option. I am greatly concerned about the environmental and water-shed impacts, and how such projects would ruin the vistas and beauty of the canyon. There are other common sense, fiscally responsible solutions to handle the traffic such as implementing carpooling & tolling, regular electric buses with parking hubs in the valley, and reservations.</p> <p>Another great concern I have with the gondola (and road widening) proposal is the prospect of having taxpayers subsidize two, already successful, private entities in order to provide greater accessibility to their ski resorts. In addition to only stopping at the two ski resorts I understand that the gondolas will only operate for 3 months during the ski season. How will this serve the general public? Why should I as a taxpayer have to support such an irresponsible project that only serves a few private and elite interests? Our property taxes are ever increasing, inflation is out of control and yet special interests want to heap more taxes on our backs with a proposed half billion dollar plus project. And that won't be enough. Then the ski resorts will be complaining that they don't have enough ski runs to support their increased business and they'll be submitting proposals to take over more forest service land in order to expand.</p> <p>We need to protect our natural resources. They are a big part of what makes Utah special. With this being the most avalanche prone canyon in North America, maybe it's time to step back and acknowledge that it doesn't make sense to keep increasing the winter usage of the canyon to and past the point of breaking. We need to act NOW to protect our natural resources before it's too late to save the canyon and impossible for damage done in the name of 'progress' to be restored. Avalanches are a fact of life in the canyon. There have been and will continue be times when the canyon is closed during ski season (summer time too) due to weather conditions. If people want to ski in the canyon then this is the condition that needs to be accepted - and respected.</p> <p>This proposal does not have the support of the vast majority of the public nor numerous community groups such as Save Our Canyons, the League of Women Voters of Salt Lake, Salt Lake Climbers Alliance, Wasatch Mountain Club, etc. It does not have the support of the Salt Lake County Council, the Salt Lake City Council, Cottonwood Heights, etc. PLEASE listen to the people! We do not want a gondola which only mar the beauty of our canyon and will not serve the general public. Please protect our beautiful canyon! It is irreplaceable!</p>
38132	ALEXYS Brown	<p>Hello, my name is Lexy and I am a Cottonwood Heights resident here in the beautiful Salt Lake valley. My husband and I are avid climbers and are looking forward to dipping our toes into the waters of back country skiing this year. As a local resident I have quite a few hesitations regarding the UDOT gondola.</p> <p>While I can understand the desire to create a safe driving environment for the attendees of Alta and Snowbird, I can't help but wonder if there isn't a better way? The idea of spending \$600 million taxpayer dollars on a gondola that will only serve the two resorts makes me feel very upset. If anything the resorts should be paying for this themselves, seeing as they will be the only ones benefiting from it.</p> <p>As the Utah government it is your job to protect Utahs wild landscape and playgrounds of ALL kinds. Not to cater to those who can write the biggest checks. Please, for the love of god, let's just figure out how to make busses work better, or maybe let's have a reservation system for the ski resorts to avoid the roads getting so backed up. Anything but destroying our beautiful canyon with that monstrosity.</p> <p>Thank you, Lexy</p>

38133	Robert Paxton	<p>I have skied at Alta Ski Area for nearly 50 years. I love the traditions, powder and intent of the resort to offer a quality experience - independent of changing outside pressures. Michael Crichton, MD and author stated, when speaking on global warming, many research programs start with a solution in mind instead of looking at a project with an 'independent' point of view. I feel this is how traffic mitigation in LCC has proceeded, sometimes with potential conflict of interests. The disparate committees didn't exist in my mind, only if someone is a 'yes' person. I have several concerns: Tolling = \$35, paid parking = \$25, ski pass = \$180, total = \$240 without equipment rentals. More than double Disneyland and very expensive for residents of Utah, who have lower incomes than many tourists. We are being left out. What about storage of ski bags and equipment for 2000 gondola riders at each resort. These changing areas don't exist. But they might for another fee. And, as ridership expands the resorts may need to expand to offer a quality ski experience. You talk of safety _ but my experience has seen very few accidents, mostly involving a bus. Perhaps a few slide-offs. If air pollution is truly a concern then we must put a stop to all growth in the valley, homes, businesses, etc, anything that adds to pollution. now for a few solutions to the traffic: We could use more parking areas for non resort activities, with a right turn out lane so non skiers can slow down and park outside of the main travel lane so traffic to the resorts isn't slowed. encourage the forest service and resorts to expand parking to accommodate more cars thus shifting the expense to the resorts and the people going to the resorts. This saves tax expense to the people, most of whom do not ski. The tax expense to the people is a real problem for me and people I know. Skiing is not essential to most residents. Have UDOT start avalanche mitigation earlier in the day so the road can be opened by 6:30 am instead of the current 8:30 am protocol. when resorts open around 9:00 am traffic will always back up. It has for 50 years. Also have the resorts open the parking lots by at least 7 am so early birds can have breakfast with friends and help ease the rush hour. Then spend the \$550M to bring water to the Great Salt Lake so we can maintain an acceptable snowpack and operational resorts. Thank you. Bob Paxton</p>
38134	Nathan Veillon	<p>The Gondola B Proposal seems to be a solution only works when narrowly describing the scope of the problem. The EIS report talks about how funding isn't secured and that in the interim solution of improved bus service with restrictions on single occupancy vehicles. This interim solution however seems to be more likely to reduce the problems of congestion then the Gondola B proposal will do when it is finished.</p> <p>The biggest problem with the Gondola B proposal as I see it is that it assumes a high percentage ridership that will take it even though it will be a substantially slower travel time then driving through the canyon.</p> <p>The EIS report shows that the the only proposed solution with a travel time lower than the average travel time (36 minutes compared to 37 minutes) would be a dedicated bus lane, this however it rates with the same effect on congestion as gondola travel times of 55 and 63 minutes. This only makes sense if the capacity of the gondola proposals is radically higher even though it would be much slower than other modes of transit.</p> <p>The Gondola Works group, comprised of the Ski resorts and property developers who will be the main beneficiaries of this project still push for the gondola despite this and have continued to peddle falsehoods about what the project would actually contain. I don't know why they push for half-baked solution but I do know that UDOT should know better.</p> <p>A reliable future of little cottonwood canyon with no private passenger vehicles and instead with a robust bus route may not be as flashy as a future with "one of the longest gondola's in the world" but it will be a better one. And I know that we all can make sure that, that better future comes to pass.</p>
38135	Eric Steckel	<p>The transportation plan to install a gondola system in Little Cottonwood Canyon appears to be a system that will never succeed for several reasons. 1) It will fail because it will not have the capacity to transport the public to the ski resorts in a reasonable amount of time that will result in the revenues of Alta and Snowbird to decline due to the discouraging experience of its users. Ultimately this will lead to a reopening of the roads for car traffic. 2) Operating the proposed complex gondola system increases the potential of operational failures and therefore further decreasing the overall efficiency of transporting people. 3) Riding in a gondola for an extended period increases the health risk to all. Have you already forgotten about viral diseases, the flu, etc? This alone should be enough reason to abort the idiotic idea of using a gondola system. There are more reasons to list, but those listed above should be enough to bring pause to this poorly thought out answer to a solution that deserves so much more.</p> <p>I found that none of the top three leading solutions were any good. There is an excellent solution and is something I mentioned in one of my earlier comments - a tunnel that is large enough for 2 independent rails and would connect Little Cottonwood to Big Cottonwood to Park City where it would exit the tunnel or continue underground. The next stop in the circuit would be downtown Salt Lake and would connect to the Little Cottonwood Station completing the circuit. There are easy solutions to limit the passengers exiting the train to satisfy the ski resort's maximum attendance or limits imposed by other governing bodies.</p> <p>This solution would obviously not only improve transportability of people up the canyons, it would improve the transportability of people into and out of Salt Lake City and Park City. Of course there is the added environmental benefit of reducing automobile pollution and increasing the overall safety of those travelers, especially during the winter months. The old adage "you get what you pay for" could not be more true in this case. Let's welcome Utah to the 21st century with a system that would make the people of Utah proud.</p>
38136	David Scott	<p>Of the choices presented, I believe all three will need to be done. Gondola will really help in the winter. Improving the road is needed for both winter and summer months. Bus service is only a solution if they have a way to by pass the private vehicles, especially the access roads to the canyons. This applies to Big Cottonwood also.</p>

38137	Sofia Del Fiol	<p>The Gondola is an unnecessary solution that will be very detrimental to LCC. Building it will be expensive, and not yield any benefits besides a temporary adjustment to traffic on certain ski season days when people have work or school off. The cons outweigh the pros when it comes to the Gondola, especially in a community full of climbers, mountain bikers, hikers, and skiers who value the outdoors and the preservation of it.</p> <p>There are alternate solutions to this problem. The bus system could be expanded, or ski resorts could require paid parking/reservations to ski. Either of these options would help solve the problem in a quicker and more cost-effective way, while still preserving the beauty and spirit of LCC.</p>
38138	Nate Hartwig	<p>Hi, My name is Nate and I have lived in the little cottonwood area my whole life, I am a skier, mountain biker, and climber. Little Cottonwood provides access to all of those activities and many others, but the gondola is not the solution to this growing problem of traffic in all canyons. The gondola is a billion-dollar project that will only provide a minor solution while affecting the ecosystem and world-class climbing routes. For me being a local I understand safety and avalanche danger in the canyon, by using Avalanche mitigation systems up on Superior and neighboring mountainsides we can lower the risk of road closers and fatal car crashes. Not only will this effect the environment but this is a tax-payer project that will only be a solution to 30% of the canyons traffic problems. This is a rushed decision Utah make your comment count!</p>
38139	Judith Pugh	<p>I'm opposed to the gondola. There are better solutions to be considered.</p>
38140	Nate Hartwig	<p>Hi, My name is Nate and I have lived in the little cottonwood area my whole life, I am a skier, mountain biker, and climber. Little Cottonwood provides access to all of those activities and many others, but the gondola is not the solution to this growing problem of traffic in all canyons. The gondola is a billion-dollar project that will only provide a minor solution while affecting the ecosystem and world-class climbing routes. For me being a local I understand safety and avalanche danger in the canyon, by using Avalanche mitigation systems up on Superior and neighboring mountainsides we can lower the risk of road closers and fatal car crashes. Not only will this effect the environment but this is a tax-payer project that will only be a solution to 30% of the canyons traffic problems. This is a rushed decision Utah, make your comment count!</p>
38141	Zak Hazlett	<p>Please just chill for a sec and don't do anything irrational. Nobody wants a Gondola except the people making money from it. Gracias.</p>
38142	David North	<p>Saving five minutes should be the last thing on the mind of anyone going up the canyons. Widening the roads and increasing cars and busses should also be a DEFINITELY NOT no-brainer. The road should still be there as it has always been. Gondolas make the most sense and pleasurable method for the increase of new people who want to see the canyons with the minimal environmental impact.</p>
38143	Jake Ross	<p>There are a million things that can solve the traffic issue in little cottonwood that do not include building a massive gondola. We can increase buses and we can build better parking lots that are less invasive of the natural land in little cottonwood that is used by many different groups of people's including climbers, hikers, bikers, etc. I feel like the parking pass situation the resorts introduced was just the tip of the iceberg and it needs refinement but we can continue on this path and create a better plan to better the traffic flow up and down the canyon</p>
38144	Joleen Scott	<p>We need a gondola to help with the traffic jams especially in winter, but the summer is getting busier too. Buses are stuck in the traffic.</p>
38145	Morgan Cardon	<p>to whom it may concern,</p> <p>I appreciate the time and energy that was put into looking at viable solutions for a real problem. It is apparent that the traffic congestion up LCC does cause some real issues that are worth addressing appropriately. I can see some of the assets associated with using Gondola B as transportation and a potential solution. However, I do question if this is truly the best option when considering costs, future climate alterations, and user experience for all canyon visitors.</p> <p>The cost of Gondola B is projected to be in the hundreds of millions, and is funded using tax-payer dollars. Tax-dollars are to be used for the benefit of society as a whole, yet the Gondola would serve primarily skiers visiting local resorts. It is my opinion that using tax-payer dollars for a venture that benefits such a small portion of the group is not in alignment with the purpose of tax-dollars.</p> <p>Another question to consider is the future of our local Utah climate. After visiting the Salt Lake today, it is apparent that it is in extreme danger. It is drying up. And with it drying up, there will be implications on air quality, local temperature, and snowpack. It is short-sighted to consider building a multi-million-dollar gondola to benefit skiers for only a handful of days during the year, while we let our Great Salt Lake die and cause an increase in health complications and a loss of snow, both of which will adversely affect the economy through increased healthcare costs and loss of ski-tourism. I believe the funding should be used to help mitigate this very immediate need. If there is no snow, then there will be no congestion up LCC making the Gondola obsolete.</p> <p>My third greatest concern is the user experience for canyon-goers. The Gondola provides service to the ski resorts, which benefits only visitors of those resorts. Even though I could see it benefiting other users in the form of clearer roads for driving to trailheads, the fact still remains that this would relieve an issue that is only present for about 50 days a year. Also, I do imagine that the same reasons why people do not take the bus would be the same reason why people won't want to take the Gondola: it simply isn't as convenient as driving. When you are taking an entire family skiing, you need snacks and diapers and changes of clothes and the ability to get warm fast. For these reasons, any family is going to opt to drive over taking a bus OR a Gondola. Considering the Gondola will cost to ride, you also eliminate college students who are trying to come up as cheaply as possible. That leaves tourist visitors, who will probably have rental cars and luggage and want to drive as well, as well as rich people who won't want to take any form of public transportation. I urge you to strongly consider just how much Gondola B will be utilized, and if the demographics targeted will actually be interested in using it.</p> <p>In short, although Gondola B is an option, I do not believe it is the best option. This is a serious investment of tax-dollars, that may become obsolete if we fail to preserve our current climate, and that I'm skeptical will even have the traction</p>
38146	Kai Bjorkman	<p>Please, please do not further irreversibly damage little Cottonwood canyon. There are other options that are less intrusive, cheaper, and more intuitive. Buses only on weekends and avalanche tunnels to name a couple.</p>

ID	Full Name	Comment
38147	Howard Clauson	<p>The proposed gondola for Little Cottonwood Canyon is the only proposal that "checks all of the boxes". The proposed bus service still relies on rubber tires contacting the road surface and as such is subject to slipping and sliding on snowy and/or icy roads. This slipping and sliding imperils passengers on the bus as well as other automobiles. Buses have the ability to block traffic in the event of an accident. Avalanches would block buses, completely shutting down transportation up and down the canyon as they now do. The gondola is impervious to these issues, is safer and more reliable than buses, and would not leave resort guests and workers stranded in the canyon in the event of road closure. Thank you.</p>
38148	Evan Jackson	<p>The people have spoken, no gondola in Little Cottonwood Canyon.</p> <p>The Hinckley Institute of Politics conducted a poll in November 2021. 80% of respondents favor other alternatives over the gondola. This alone should be enough reason for UDOT to forgo the gondola. But just in case UDOTs needs additional reason to forgo the gondola (because obviously they don't care about public opinion), here are a few others.</p> <p>Cost of a failure. UDOT claims the gondola is more reliable than other alternatives, but this is a myopic point of view. I have yet to see a fair comparison regarding the cost of failure vs other alternatives. Consider enhanced bussing. If a bus breaks down, the rest of the system continues to work and function as planned and thus the system can operate at diminished capacity. If the gondola breaks down, the entire system fails, there are no back up gondolas but there are back up busses. Now, consider a gondola failure with active riders. How does UDOT plan to manage a long-term shutdown while there are riders onboard? How long will it take to rescue riders from each car? How will UDOT manage the added complications of elderly, diabetic, pregnant, or physically disabled riders? This would be a large-scale rescue effort. This isn't a chair lift where riders can be lowered/rappeled down onto a groomed ski run. In the case of the gondola, the only below is rough untraveled terrain. The gondola cannot be considered a viable option until a robust comprehensive rescue plan is in place. Failure to do otherwise is grossly irresponsible and borderline negligent. I encourage UDOT to consider not just reliability when comparing alternatives but also the cost of failure. A few small failures are inconvenient; one major failure would be catastrophic.</p> <p>Cost. As an engineer, I speak from experience regarding what the industry calls "serial number 1". With any brand-new complex system, there is more uncertainty, and more unknowns than existing solutions. Thus, general guidance is to avoid "serial number 1" (i.e. brand new alternatives) whenever possible. I have yet to see any comprehensive discussion regarding the additional financial and schedule risk surrounding the gondola vs other alternatives. There is more than one construction company and more than one bus supplier. The gondola would be single sourced and thus there is even greater supply chain risk compared to other alternatives. Furthermore, the gondola is new territory for UDOT. This isn't a project within their scope, in fact it's outside everyone's. There are no other alternatives globally for comparison. To think the gondola a "serial number 1" project will be built within the \$500-600 million budget isn't optimistic, it is naive. Mike Douglass, a former engineer and founding member of the anti-gondola group Friends of Little Cottonwood Canyon, conducted his own analysis that puts the cost between \$977 million and \$1.06 billion by 2053.</p> <p>Financing. How does UDOT expect to finance the project? I and many I know have vowed to solicit our state and federal government representatives to vote against any bill that will fund the gondola. 80% of the public favor other alternatives; it won't be hard to find and organize others like me to put pressure on our government to deny funding for this heinous project.</p> <p>I strongly encourage UDOT to listen to the people rather than the corporations and development companies (e.g. CW).</p>
38149	Thomas Oesleby	<p>To whom it may concern:</p> <p>I am strongly against the gondola option. It is a huge expenditure of funds that will benefit two private organizations, Alta and Snowbird Ski areas. It will have an enormous detrimental effect on the spectacular scenery of Little Cottonwood Canyon. Per person ride costs are not in the option description but they will most likely be affordable only by the very rich. The enhanced capacity (50%) will increase skier load at the two areas by 50%, which will be detrimental to the skier experience. The gondola will not be used nearly as much during the 7-8 month-long off season. The cog railway will be less visually detrimental but that option suffers from similar negative aspects as the gondola. The canyon is being intensely used as is and does not need additional user load.</p> <p>Respectfully, Thomas Oesleby</p>

ID	Full Name	Comment
38150	Jeremy Moore	<p>It is disappointing and honestly a little baffling that the Gondola has been identified as the preferred alternative. While I understand the attraction of a transportation solution that could potentially rise above road closures and weather conditions, it does not represent a practical improvement to movement of individuals into and out of the canyon. There will always be a need for the road for moving goods and employees to the resorts and any solution that does not involve making the road safer to use is not going to improve the experience for the majority of tax payers that will be footing the bill for such improvements.</p> <p>I am glad that UDOT has identified that it does not currently have the funds to construct the Gondola and I hope that supporting alternatives like enhanced bus service, tolling, and snow sheds can prove that the implementation of a Gondola is not necessary to improve the experience of Little Cottonwood Canyon Users. However it is difficult to understand that as soon as the support of these alternatives has been announced UTA (which I understand is a separate organization) greatly reduces its bus service. We need an opportunity to prove that these solutions can work before spending 600 million tax payer dollars (which we all know will be much more by the time the project is finished), but at the current moment it seems that there is little to no support of these alternatives because those who stand to gain from the Gondola (and the major financial campaigners to this point) do not wish to support these alternatives. Will UDOT invest in these things like you have said you will? I hope so..but I am rapidly losing faith in that possibility.</p> <p>I do not believe that the Gondola will improve the experience of the average Little Cottonwood user, it will be a major eye sore and environmental impact that will only be necessary for moving people on 10 to 20 days a year, the other 350 it will stand as a billion dollar monument to our misunderstanding of Canyon usage. Alta's parking policy this past season proved that the problem lies in the crush of individuals who feel the necessity to be the first in line at when the canyon opens because they fear being left out, if Snowbird implemented their own parking program this early morning crush would evaporate. If the traction law was actually enforced on a daily basis, not just when the canyon is closed, then we would not have 2 wheel drive vehicles getting stuck on the way up and down causing major back ups in both directions. If we eliminated road side parking at Snowbird then traffic could flow more smoothly down canyon at the end of the ski day and if we limited Snowbird to 1 or 2 exits instead of 4 and stationed police officers to meter traffic then we could have much smoother flow downhill. The solutions to the problem involve the engagement of all parties which currently exist not introducing another one into the mix. The gondola will be a marvel and tourists will love it the 2 times they ride it in a season, but the average user will get nothing out of it because they won't use it, it will be slower than driving, gives them no flexibility, and will be its own bottle neck/traffic jam on busy days. I believe that the Gondola is not the answer and I hope that UDOT puts serious time and money into the proposed alternatives and gives the public a legitimate chance to prove that they can work.</p>
38151	Don Thorne	<p>Defiling the beauty of the canyon with a Gondola is a traversity ' Servicing only Snowbird and Alta does not meet the needs of backcountry skiers, Hikes and tourists in search of recreation. I have been using the canyon for some 35 years Skiing both down hill and backcountry. Also hiking and climbing. Do not destroy the Canyon experience. There are only around eleven to 15 days that really cause parking and traffic and parking problems, This is more than about downhill skiers and ski resorts wishes. Take in to account the people who use the canyon the year around and not the people who are in it for the money only.</p>
38152	Carston Oliver	<p>While I am somewhat encouraged by, and support UDOT's identification of a phased approach to reducing traffic in the canyon that includes tolling and better utilization of busses; as a whole I am extremely disappointed. I do not support the Gondola B option, and I do not support widening the road at this time.</p> <p>The Gondola B option not only fails to meet the purpose and need of the project, but is grossly overpriced, will likely be underutilized, will permanently damage the environment, watershed, and recreation within the canyon, and is far more likely to make traffic in and around the canyon worse, rather than improve it.</p> <p>The EIS to begin with is too narrow in scope. By looking at Little Cottonwood traffic in isolation, you are failing to acknowledge and appropriately address the way that LCC traffic directly affects not only traffic on Wasatch Boulevard feeding into the canyon, but the entire neighborhood, nearby freeway, and traffic into and in Big Cottonwood Canyon, Millcreek, and Parleys Canyon.</p> <p>70% of total annual visitation to the Central Wasatch (tri-canyon area) is dispersed, 30% is to ski areas, and of that total only 8% goes to Alta, and 9% to Snowbird.</p> <p>There are 21 visitor sites in Little Cottonwood Canyon, and the gondola will only go to 2. While this will help visitors going to ski areas and may help traffic on a handful of particularly bad days in the winter season will not do any good to aid in high traffic times outside of the winter season when most canyon recreation is dispersed. It will also damage other visitor sites and recreation areas, harm riparian corridors, likely dump construction debris into the watershed, and permanently damage the views throughout the canyon. This is an utter failure to aid in mobility and safety for all canyon users.</p> <p>The LaCaille Gondola base parking exists beyond where traffic already builds up, and has insufficient parking spaces to meet the needs of gondola users; this will likely make traffic worse, and disincentivize utilization of the gondola. The additional parking at the gravel pit is still insufficient, especially when accounting for the likelihood that many of those additional parking spaces will be used by visitors of Big Cottonwood Canyon.</p> <p>The Gondola comes at a high price, and as a permanent fixture that allows little flexibility to deal with changing canyon usage and traffic patterns.</p> <p>I would much rather see some common sense solutions that make better use of and improve upon existing infrastructure: combining tolls that scale prices based on vehicle occupancy and increase on high-traffic days with canyon express busses and shuttles that originate from transit hubs throughout the valley and offer relatively direct service to the canyons makes far more sense. This would incentivize carpooling and transit usage, and would help distribute the traffic load throughout the valley rather than concentrating the buildup near the mouths of Big and Little Cottonwood Canyons.</p> <p>This system would be flexible, allowing the number of busses and shuttles per day to be scaled based upon season and visitor patterns, and it would allow for service to trailheads for dispersed users. On the handful of particularly busy days/weekends per year, canyon traffic could be restricted to only busses, shuttles, and canyon residents.</p> <p>Additionally, CNG and Electric busses could and should be utilized to offer cleaner power for transit, especially to replace older busses as they go out of service.</p>
38153	Emma Hunt	<p>No gondola! This hurts access and conservation and serves a single wealthy group of recreators: skiers.</p>

ID	Full Name	Comment
38647	Ron Faerber	<p>We appreciate your comments and information back to our organization (LUCC), but we still have too many concerns and questions with regards to the Proposed Gondola and EIS.</p> <p>Again, attached is our letter of recommendation to not proceed with the proposed Gondola.</p>
38380	bruce plenk	<p>I oppose the gondola proposal for several reasons.</p> <p>1-Most importantly, it favors the ski areas to the exclusion of hikers and cross country skiers who need access to mid-canyon, not the top of the canyon.</p> <p>2-The expense of building the gondola will b borne by the public, but the benefit of the gondola, more people at the resorts to buy ski tickets, food and lodging, is all for theski areas.</p> <p>3-Building the gondola will not reduce the number of cars on the road, which will still be too much for the canyon to handle, especially during construction of the gondola. The gondola proposal ADDS cars to the canyon, not reducing that number.</p> <p>4-Building the gondola and operating it will have a huge negative impact on the narrow canyon itself, with the construction of the towers and the required ongoing maintenance of towers, cables, etc</p> <p>5-Other places where gondolas have been successful are not in avalanche prone narrow canyons. This will be an expensive experiment in that regard.</p> <p>6-Other alternatives, especially an electric train, would deliver people to stops in the canyon with greatly reduced environmental construction and operating costs.</p> <p>Please reject the gondola proposal</p> <p>Thank you</p> <p>Bruce Plenk</p>
38154	Noah Kuhns	<p>to whom it may concern,</p> <p>For much of my life Little Cottonwood Canyon has been a place that I hold close to my heart. I spend as much time as I can traveling through those mountains. Hiking, running, and climbing during the summer, and backcountry skiing in the winter. All those who have spent time in the Cottonwoods are all too familiar with the issues at hand. Congested roads, overcrowded resorts accompanied by minimal parking, and limited public transit options available. I strongly feel that placing a gondola through the canyon would not solve these issues, and will drastically increase our environmental impact on one of the most important resources that we have.</p> <p>From my understanding the studies have shown that putting a gondola through the canyon would not actually reduce the amount of vehicle traffic on highway 210. What it does do is create a fast track to already overcrowded ski resorts that stand to have substantial increases in profit directly related to it's installation. The fact that this financial burden will fall into the taxpayers hands is unacceptable. This project fails to address the need for increased parking at the mouth of the canyon and surrounding area, as well as the need for a viable bus transit system. If these options were paired with a toll system that could be applied on heavy traffic days(weekends, holidays, etc.) then I believe that we'd see real positive changes to the dynamic of the canyon. I believe that UDOT and the state of Utah have an obligation to the people that live here to do whatever they can to protect our natural resources and promote long term solutions that keep conservation and accessibility in mind.</p> <p>A gondola is problematic for several reasons. The environmental impact of the construction that would be required, and the impact that that construction would have on recreation in the canyon are concerning. It would entail the loss of access to historic climbing and skiing routes that stretch the entirety of Little Cottonwood Canyon. Spending taxpayer dollars on a project that limits recreational access to backcountry trail heads and climbing areas is not an equitable transit solution. The solutions needs to have more in mind than just shipping people to and from a ski resort. The Cottonwoods are so much more than Snowbird, Alta, Brighton and Solitude. The more human impact that is impressed upon these canyons, the more we risk losing a delicate resource that is the watershed that we all rely on to survive. A gondola is wildly impactful, both from a financial stand point as well as an environmental.</p> <p>I think that the state should consider creating a substantial transit center to facilitate travel in and out of both Cottonwood canyons. This would address the greater problem that affects the entire area including both highways as well as the residential areas that surround the mouths of both canyons. A transit center could provide bus travel, carpooling opportunities, and even allow smaller shuttle services to operate alongside it. Shuttle or bus services could intermittently have a route that would run and make several stops up each canyon to support backcountry recreation and provide better access for the general public. This system partnered with a substantial increase in parking infrastructure could solve traffic congestion in the area, and be an equitable approach to access in both Big and Little Cottonwood Canyons. These systems benefit the resorts, but also benefit those that desire access outside of the resorts. If we can accomplish these goals and</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
38155	Taitwoine Sanders	The gondola is going to be an eye sore. The plan is to serve people from the mouth of the canyon to snowbird and Alta during the winter. It doesn't operate during the summer. And it doesn't offer any other stops. A gondola down the middle of the canyon doesn't make sense as it is not going to do much to alleviate the traffic in the canyon and issues with the canyon. people forget bridal veil used to have a gondola and it was destroyed by an avalanche and never got rebuilt. Also it's believed that some former representatives have financial interest in the gondola even though the city and county have also said no. The build is funded by taxpayers. There are taxpayers who don't want this.
38156	Richard Peterson	This is a first for Dopplymayr. Nothing like it exists anywhere. Think Zugspitze 2018. Whistler can't handle winds in excess of 50 miles per hour. Robert J. Debry and Associates are licking their chops. What is UDOT thinking? Why?
38157	Maria Kron	I am against the gondola proposal for Little Cottonwood Canyon at this time. It would definitely take away from the natural beauty of the canyon, which is a negative environmental impact.
38158	James Santelli	Noooooo gondola! Why? I also don't think my voice will be heard. I submitted last time yet we are still here. Why! So pointless! Stop!!!!
38159	Vicki turner	<p>UDOT EIS final comment period 10/17/2022</p> <p>The gondola as proposed does not seem to be a transportation solution and creates a blight on the landscape. Ground transit is most cost effective and efficient for multiple trailhead access(gondola does not achieve this)and, in light of climate change and drought, allows for adjustments and and is a more sincere attempt at achieving a better solution(White Pine parking lot and others should accomodate buses and vans for transit, BTW). In fact, the EIS process to solve transportation problems was not entirely addressed due to the omission of BCC in the process.</p> <p>We have a Wasatch front transportation problem. I've been following this process for decades now. I don't think there was ever honest participation of some parties in this process and it seems to follow what has become the "Utah way" regarding the needs and wants of common citizens. There is no coordination of transit and now UTA is cutting routes(I'm more concerned about people who are trying to get to work!). The road will still be there, people will still require ground transport, avalanches will still be there. There are still many unanswered questions regarding cost, end terminals and impact on the 2 resorts, cost of riding gondola, safety concerns and under what conditions the gondola may be closed, schedule for operation, and the cost of using the road. How will the number of people proposed to ride the gondola be accommodated in the event of bad weather while waiting for gondola, how will resorts handle the numbers in good weather? The biggest problem is this appears to be a lift for 2 private businesses. Will people tolerate such a long ride? The cost of such transit in Switzerland is \$64 round trip for half the distance. What will the cost for this thing be by the time it is built, if ever? Who's paying for it? This perhaps is just another boondoggle to enrich a few?</p> <p>Ultimately, we have an environmental problem that is being ignored. What are we doing to protect this resource, are we facing the reality of continued degradation of our canyons due to sheer numbers of people, what about preserving water quality? How can we continue to enjoy these canyons? None of this is adequately addressed in any of these plans. Thank you.</p>
38160	Trevor Dahl	Everyone I know despises the idea of a gondola and would much prefer to mitigate traffic with expanded bussing and carpool incentives, like a fee station, etc. If you can't find bus drivers, pay them more.
38161	Jonathan Sandberg	Increased construction in the canyons is not the answer to our congestion problems. Please implement improved bus service, fees, and other measures that do not encroach on the wilderness or wildness of the canyons. I am firmly against gondolas.
38162	Emma Marshall	This is not a solution that should be considered by a state agency for the solution of a public problem. The average person will be priced out of using the gondola yet their tax dollars will still be spent on the gondola rather than elsewhere. It services two private businesses instead of public lands and services. This solution enriches private actors while not even effectively alleviating the public transit concerns it pretends to address. The stakeholders that UDOT should be listening to and serving are the people of Utah, not ski resorts and other land owning groups. Please actually work toward UDOT's mandate of improving quality of life through transportation rather than crafting transportation "solutions" to serve the few at the expense of the many as well as our state's natural landscapes.
38163	Beth Bauman	Gondolagate. Follow the money. Utahns say NO GONDOLA.
38164	Michelle Ludema	<p>I urge UDOT to try alternative solutions, like tolling and funding more busses to alleviate winter traffic, and to say NO to a gondola in Little Cottonwood Canyon. A gondola would ruin the natural experience of being in the canyon for those of us that hike, climb, snowshoe, and otherwise do not ski at Alta or Snowbird. I go to this beautiful canyon to escape the city, and love being able to look up into the golden aspens above me without the presence of machines or tourists hovering above. It would also be a public handout to the ski resorts, with an unfair burden on tax payers that will rarely, if ever, use the amenity. I appreciate the time and effort UDOT has put into listening and gathering input and hope you will heavily consider not just traffic needs, but a solution that will best protect this beautiful public land we all share.</p> <p>Thanks for your consideration,</p> <p>Michelle Ludema</p>

38165	Catherine Nuar	<p>AS a resident of Salt Lake County and a frequent visitor to Little Cottonwood Canyon, I appreciate this organization's efforts to find a transportation system that improves the reliability, mobility, and safety for those who use S.R. 210. I do not believe that the gondola proposed as the preferred alternative adequately addresses the challenges as they exist.</p> <p>Some key areas of concern are as follows....</p> <p>Equitable Outdoor Access - Any solution to canyon crowding should consider all canyon users. The proposed gondola, however, would not operate during the winter and would only service the resorts. This does not address the needs of the many, many individuals who recreate further south in the canyons. Without restricting all private vehicles from driving past White Pine, a gondola would increase the number of visitors accessing the ski resorts while doing little to mitigate traffic concerns. As well, the proposed gondola would disrupt bouldering areas, climbing routes, and trails that are used and loved by residents and visitors alike.</p> <p>Economic Benefit to Private Entities - A gondola would benefit the resorts by increasing the number of guests who could access those areas. Currently limited by parking and bus capacity, a gondola would be a significant boon to the resorts as more visitors who be able to access them. Applying public funds to the gondola would be a reckless use of taxpayer funds.</p> <p>Seasonal Shortfalls - The proposed gondola is not planned to be run in summer. Summer traffic meets or exceeds winter usage between wildflower season, leaf peepers, and Snowbird's Octoberfest in addition to the many residents and visitors who recreate in the canyon.</p> <p>Weather/Avalanche Mitigation Shortfalls - The proposed gondola would not be able to operate during certain periods of inclement weather. Additionally, it would not run while avalanche control work is happening. It is unclear how long after avalanche mitigation is completed before the proposed gondola would be able to run again. A study must be conducted to determine this before accepting the gondola proposal. Additionally, road closures could be mitigated by building snow sheds, which is a much lower cost solution.</p> <p>Resort Capacity - Building a gondola that would significantly increase the number of guests able to access the resorts in Little Cottonwood without addressing the real capacity limits of said resorts is shortsighted at best. Overcrowded resorts create a safety issue as congested resorts have lead to significant injuries and deaths due to collisions.</p>

38167	GARRY TRUE	<p>My support and vote is for bus service in Little Cottonwood Canyon. Please keep the Little Cottonwood Canyon views and vistas "clean" and free of towers, cables and gondolas</p>

ID	Full Name	Comment
38168	Steve Van Maren	<p>1) I appreciate you hearing the requests to have a phased approach, rather than the all or nothing Gondola. However, this needs to be given a chance to demonstrate it could work. Requiring all funding in place before starting on the common elements is not necessary. Get started on the common elements, add busses and tolling and see how it works. It may be there is not enough snow in the canyon to proceed any further. Like the additional parking and restroom facilities; but enable bus service to those locations.</p> <p>2) As I understand this process, all aspects of a solution have to be addressed. Regional transportation would be a part of that; just implementing the large parking garage, without addressing regional transportation connections is leaving out part of the puzzle.</p> <p>3) So too is adding 2500 more people in the canyon without addressing the facilities and services they will utilize the day they are there. If you are convinced there are no issues, state that.</p> <p>4) Do the resorts actually want 2500 more patrons on a snow day? If that is their business model, the locals will not be very happy about it. Longer lines on the better ski days? I suspect locals will avoid the canyon; then the resorts and transportation services will not be at capacity with locals.</p>
38169	Soren Pearce	<p>I dont want the gondola. I think it will harm the environment, and the natural beauty of the canyon. There are already cheap and accessible public transportation routes up the canyon.</p>
38170	Jean Thomas	<p>I am against the gondola project. The \$500 million dollars instead needs to be used to save the Great Salt Lake. When toxic dust is blowing all over the Salt Lake Valley, there will be no tourists visiting Salt Lake. The dust from the lake will cover the snow on the mountains causing faster snow melt, or at the very least inferior snow to ski on. No snow, no skiers, no problem for Little Cottonwood Canyon, no gondola needed. The only people the gondola project benefits is the contractor building the project. Saving the Great Salt Lake will benefit more people. You can run a lot of buses up and down Little Cottonwood Canyon for 500 million dollars!</p>
38171	Ryan Kirkham	<p>Thanks for asking for comments. I'm certain the variety of comments is immense.</p> <p>I am in support of the gondola. I shooort it because I think it's safer, better for the environment and it helps to combat our never ending growth. Because of our growth, we need to get ahead of the problem. Do it. You'll never make everyone happy. Leaders make hard decisions that are the right thing to do. This is the right thing to do.</p> <p>Best,</p> <p>Ryan Kirkham</p>
38172	Grace Whitehead	<p>Please reconsider. The gondola will only benefit the ski resorts, excluding the small businesses in the canyon. Additionally, this is a huge cost on taxpayers, many of whom never go skiing.</p>
38173	Lauren Carron	<p>Tolls during peak months, or changing the bus system would take less of a toll on the beauty of the mountain.</p>
38174	Walt Packer	<p>I am not sure how this will help the canyon at all? I wish you would make the resorts bus everybody up and down and only people accessing their property or using backcountry trailheads could drive up. Even if you had a bus for the backcountry ski areas that would be better. This will be super expensive and not be used except the resorts.</p>
38175	PAUL JEX	<p>I'm a Salt Lake resident & I strongly oppose the proposed gondola plan. Adding the visual monstrous towers to our beautiful canyon would be a crime. I favor increased bussing or a cogwheel railway. Also I believe the ski resorts & special interests should pay a good portion of the costs associated with the gondola project if it's unfortunately approved.</p>
38176	Zach Hodgson	<p>To whomever is reading this,</p> <p>First off I want to say thank you for going through the process of reading each and every letter or response to both the draft and final EIS. I feel that you are the unlucky soul to have to bear the brunt of the anger and frustration that has manifested in his whole process.</p> <p>My one ask of you is to not proceed with funding of the Gondola until it is certain that it is needed and we have exhausted all options.</p> <p>One thing that has disappointed me is the lack of effort to put ideas into the bussing option. One of your rebuttals to the bussing option suggests that trailhead stops would increase the amount of time for the bus to ascend the canyon. While this is true, a simple alternative is to have designated express and trailhead variations of bus routes and people will plan accordingly.</p> <p>Another thing that is disappointing is the destruction of world class climbing and the restrictions that will occur around the construction of the gondola. I think it would be unfair of the USFS to restrict Alta's special use permit during the season, so why is it fair to close climbing areas during construction? Both are world class sport destinations, the only difference being one being more popular than the other. I believe part of the EIS should include timeframe and exact closures of climbing areas to be transparent and face the reality of how the construction of the gondola or extra bus lane in order to maximize fairness to all users.</p> <p>I've taken so much time trying to figure out what to say, relevant to the EIS while acknowledging that the directive that created the EIS hampered UDOT in finding the year-round solution we need. Unfortunately this is all I have time to say with the deadline fast approaching, but would be happy to sit down and have a level headed conversation to fully discuss my concerns.</p> <p>Best, Zach Hodgson</p>

38177	Jonna Young	If the average family has to pay (\$30 -50) per person to ride the gondola it would make it impossibly expensive when you add the cost of a ski pass. They would have to drive the canyon. Others could carpool, a fee per car to drive in the winter, or increased bus service with a reasonable fee. Ski passes are so expensive. When you add the cost of a gondola ride locals could not afford it and yet their taxes will go up to pay for a Gondola they can't afford to ride. Our taxes in some areas of Sandy went up \$1,000 this year. The gondola will make home ownership worse due to more taxes than the rising interest rates and home prices. Please no Gondola! We can't afford it.
38178	Rob Ence	I am adamantly opposed to the gondola. Once a structure goes up, the vistas and purity of the canyon are gone. There is no turning back. And if it doesn't get used because of cost, too much time, etc. we're stuck. I live in Cottonwood Heights and the mess this would make in the canyon and the parking area planned by La Caille will be an eyesore and created unwanted congestion. It is not practical and will not be utilized. Those of us who like to hike various routes, etc. (I am not a skier) think other solutions, buses, better highway plan, maybe even toll days of heavy use. Things we can plan and have flexibility of usage. The gondola monster would be a huge mistake to support the few, the resorts, and the higher income users - but I bet they won't use it either.
38179	Elizabeth Goott	No, No, No gondola keep our canyon beautiful
38180	Vanessa Do	Hello UDOT, I know that a lot of time and effort was put into making the decision that narrowed it down to Gondola Alternative B, but I kindly ask that you reconsider as this would highly affect climbers, hikers, and canyon users such as myself mentally and spiritually. I was born in Utah and as a climber and hiker myself, it's heartbreaking that multiple things will be taken away as the benefits will mainly go towards skiers. The purpose is reduce traffic congestion, however in my opinion, I see that this will increase the number of people coming which in turn may not completely put an end to the overall issue. Furthermore, the natural canyon views, the historic world-class climbing, the peacefulness, and natural wildlife will never be the same again once this project is started. I kindly ask that you reconsider buses or electric buses as the permanent solution for now as people may carpool together to decrease the traffic congestion as well. Thank you for your time.
38181	Karen Heath	One last comment I forgot. 1. I am definitely for the gondola system, but I think it would be much more likely to pay for itself if there were an interim platform placed near the Tanners Flat Campground, and that the gondola could then be used year-round for skiers, hikers, cross-country skiers. It seems a very real lost opportunity to only have it operating during the winter. The summer traffics for hiking ist horrible, and there definitely are not enough parking places in the Tanners Flat area for hikers in the summers. Even on the weekdays. Thank you, Karen W. Heath
38182	Josh Mickelson	Listen, you've gotten thousands of comments and I doubt you'll end up reading them all. I don't even know what to say that hasn't already been said by hundreds of others that love the canyon. The gondola is not the solution. The gondola does not serve all users of the canyon. That is beyond debate. Climbers, hikers, campers, and other recreations gain nothing from this, and lose some too. The stated UDOT purpose was to find something beneficial for all users of the canyon. Start with more buses, or institute a toll at the mouth of the canyon based on vehicle occupancy. People will DEFINITELY pay 8 bucks or whatever rather than 30-60 to ride a gondola. Zion national park has found great success with seasonal limitations for years. Electric buses are climate friendly and quiet too. The sad truth is that we're getting less powder days each year. It is only pow days and weekends where traffic is a severe problem. Frankly, people need to plan ahead. A project of this size for a problem that only occurs a few days a year makes no sense. NOVEL IDEA OTHERS MAY NOT HAVE SAID: Add more amenities at the resorts! If there an option for affordable and tasty meals at the resorts, more people will be willing to stay up the canyon later in the day, thus spacing out the traffic over a wider period of time and improving the general driving experience. Even if these restaurants had to be subsidized a little to be appealing, this option makes sense. Listen, the gondola will ruin the view. Come on. Take care of the canyon! There are so many special interests among politicians involved in these decisions. It hurts my heart a lot. Please step above your own selfish interests. Listen to the voice of the masses. Also, if you're actually reading this, I love you mate. It's probably pretty exhausting and draining getting through these all. Keep smiling.
38183	Noah Stein	Fix the traffic like you did in Zion for everyone to benefit. The gondola is shown to only benefit resorts and a small percentage of tourists.
38184	Joey Ginsburg	The gondola, or a rail for that matter, are massive infrastructure projects that will disrupt the canyon and all of its activities for years throughout their construction. Once completed, they would be eyesores in the canyon, and make many popular hiking and climbing spots unusable. They would help mitigate traffic in the canyon in the winter yes, but all of that traffic still has to go somewhere, and that somewhere will be pushed into the neighborhoods below LCC, spanning in a large radius around the proposed base station. A shuttle system to this base from the quarry would push traffic back onto I-215. This gondola proposal only has true upside for Snowbird and Alta, leaving all who use the canyon, and the surrounding canyons, at a loss for the majority of the year. I'm not alone when I say that I hope you strongly consider other alternatives to alleviate traffic in LCC and it's adjacent areas.

38185	Richard Udell	Each tower will require construction and service roads that will impact the environment more than has been accounted for. Let alone, I don't believe this solution addresses the access for residents in other parts of the valley that are farther away from the cottonwoods. No gondola please! It's an eye sore and pollution of construction and service is too much. Also, it will be too expensive and even once it's built the operation cost will be too much. It only services the wealthy and privileged few and doesn't support equality of access to the outdoors that is engrained in the ideals of American recreation and public land.
38186	Jim King	I can't imagine skiers with ski boots walking to a gondola.
38187	Josh Mick	You could fix so much more with \$600 million than 20 days of traffic a year. Education, the great salt lake? Think about it.
38188	Andrew Brown	I don't know what everyone's complaining about. Personally, I look forward to when Little Cottonwood Canyon is rescued from it's curse of beauty and tranquility, enjoyed by so many Utahns, by the blessing of this undoubtedly unintrusive and graceful construction project aiming to erect the most massive gondola ever built in the history of the world. I'm sure it will look quite elegant from absolutely every hiking trail and climbing route in the whole canyon (but probably not from some of our favorite boulders, sorry everyone :(.) However, these casualties are a worthwhile sacrifice to be made for the good of our selfless heroes at Gondolaworks, who fearlessly fight for the desires of the people who call LCC home and have nothing to gain from this project: Snowbird Alta Ski Area POWDR Ski Utah UCAIR Utah Clean Cities Love Communications Exoro Group CW Management
38189	James Osborne	I am opposed to the gondola it does not serve the needs of 100% of the population of Utah Dear UDOT,
38381	Sydney Rae Stephens	<p>My name is Sydney Stephens, I was raised in Cottonwood Heights in Sandy, as were all of my ancestors dating back to the initial European-descended establishment of the Salt Lake valley by pioneers in the 1800s. My family is deeply connected to Utah and the Wasatch mountains as such. Little Cottonwood is where I learned to ski and rock climb, its where I went on some of my first dates with my husband, where I first began observing wildlife as a child which would lead to my career as a biologist, and where I shared many more personal and profound moments. I have hiked virtually every trail, climbed virtually every established climb, been involved in wildlife surveys throughout the canyon, and used both Alta and Snowbird on multiple occasions. I can say confidently that I have had a well-rounded experience of the canyon both physically through different seasons, sports and location, mentally through different socioeconomic statuses, and intellectually through a wider objective and historical view as a biologist.</p> <p>In regards to the detriment caused by a gondola, as a wildlife biologist I am concerned with the EIS's ecosystem section and believe it inadequately assesses the risk to wildlife- which has subsequent impacts on the wellbeing and relationships of humans to their environment. For example, as you saw from the Metropolitan Water District and Public Utility Comments, the affect on water quality is not likely negligible. Small changes in pH and sediment deposit have drastic and deadly affects on wildlife, aquatic and terrestrial. Cleansing this water for public (human) use will have added costs: how has UDOT anticipated/budgeted for these costs?</p> <p>Habitat fragmentation by presence of anthropogenic structures (i.e. large towers), noise disturbance from construction and high-decibel machinery (i.e. gears on a gondola which will easily disturb airborne creatures - UDOT's analysis of the peak-to-peak gondola's dB heard from the ground is inadequate in assessing wildlife hearing ranges and proximity to source) are shown in many studies to affect health, reproduction, and survival of many species. These effects can be seen miles from the source and have spill over throughout many canyons. Furthermore, this causes dispersal into bordering urban areas where we see an increase in human-wildlife conflict following disturbance events and habitat fragmentation. Increase in domestic pet predation, garbage/food scavenging, denning/destruction of property, and even attacks on human will ensue. This is strongly correlated with habitat/resource disturbance in multitudes of peer-reviewed studies. When rises in human-conflict increase as a result of habitat alteration, in the U.S. we most often punish the wildlife (removal/euthanasia from management agencies to keep people comfortable) instead of changing human behaviors/attacking the root of the problem. Subsequently, wildlife populations further decrease. What, if any, plans does UDOT have to rectify changes in wildlife population, particularly those that are sensitive species, locally endangered, threatened, or migratory, throughout the entire Wasatch as a result? What collaborations with NGO expertise and state wildlife agencies are in place for proper management? What monitoring and surveys are in place to ensure awareness in wildlife presence/populations are up to</p>
38190	Holly Stone	I would like to register my opposition to the proposed gondola in little cottonwood canyon. I feel this proposal will detrimental to the beauty of the canyon and benefit only the two ski resorts and their patrons.

ID	Full Name	Comment
38191	Ana Sullivan	<p>The Gondola B option is not going to solve the traffic problem in LCC. The solution needs to be much more nuanced than the exorbitantly expensive, short-sighted, nature marring approach that UDOT, Snowbird and Alta have proposed.</p> <p>Why? Because it's not going to solve the problem, it will just put more traffic to the base of the canyon, impacting both Sandy and Cottonwood Heights cities, causing another separate issue for the residents who live there, who have spoken out against the gondola in overwhelming numbers.</p> <p>Another glaring reason the gondola is not the best solution, is that it will forever destroy the natural beauty of the glacier cut canyon that recreationists of ALL kinds, come to enjoy. This decision cannot be taken back once it is implemented.</p> <p>The gondola only benefits the ski resorts, and does not consider other user issues in the canyon. Several parking areas along the road, both in the summer and the winter seasons are overcrowded. A gondola will not help with this, as there are simply no more parking areas that can accommodate the users in the canyon. Furthermore, the gondola is proposed to only run during the winter. Really? Just restating that sentence seems asinine.</p> <p>The overall price of the project is estimated at 550 billion, with many reports suggesting it could cost twice as much or more. That is simply not a good bet if you're looking at cost/benefit scenarios by any measure. Unless your only variables are the ski resorts and the developers. To add insult to injury, the construction will take a decade, with traffic issues constant. Just look at Big Cottonwood's example currently with the Fire Mitigation Project. Traffic delays are a major issue. This gondola proposal just keeps getting more ridiculous as I write.</p> <p>And even more absurd was the alternative to the gondola in the first comment period, with Expanded Bus Service which included widening the road and adding 200 foot retaining walls. How is that really an alternative worth pursuing? It appears to be the solution only to make the gondola appear to be the better option. Both are flawed and terrible options.</p> <p>Which brings me to my final comment, as I'm running out of time:</p> <p>The addition of more buses and routes to and from the ski areas seems like a much better alternative to implement, and I am glad to see that UDOT has proposed this solution as a "phased approach". Interestingly enough however, UTA announced that it is removing selected ski bus service routes to the canyon this 2022/23 season. Coincidence?</p> <p>How about using the Traction Law at all times and enforcing it? Several times over the past three years especially, UDOT has refrained from turning on the 4x4 or chains signs on at the bottom of the canyon during or before a predicted storm.</p>
38192	Keegan Dohm	<p>The little cottonwood canyon gondola is at a glance an unnecessary project. On further inspection it becomes clear that it is a flagrant waste of taxpayer money. It is an outrage that a project that provides minimal or no benefit to your typical Utah taxpayer would be paid for with public funds, especially considering that it stands to grossly increase the profits of highly profitable ski resorts that could certainly pay for it themselves.</p> <p>From every perspective the gondola is a waste of taxpayer money that would be better spent on improving public transportation within Salt Lake City itself. If there is to be a gondola, let the resorts fund it. If the state is to solve the transportation problem, implement policies limiting the number of cars allowed up the canyon and expand the bus system. Limiting the number of cars going up would encourage more people to use the bus. It is clear from the documentation that UDOT has not fully explored these alternatives. As a resident of Utah and a Salt Lake City local, I am painfully disappointed in our administrations choice of direction on this. We can do better.</p>
38193	Emma Sun	<p>Hi. I'm a Little Cottonwood local who strongly opposes the proposed construction of the gondola. There are a few points I'd like to make. I tried to leave a comment before but think it got deleted when I tried to submit it, so apologies if this is a repeat.</p> <p>1) As someone who has lived at the base of the canyon for the past 15 years, I can confirm that traffic up the canyon can get busy. BUT I can also confirm that this only happens a couple of days a year. Building a massive infrastructure project that costs millions of dollars and necessitates permanent destruction and alteration of the canyon for such a minimal problem makes no sense to me. There are other ways to decrease congestion on these days (such as the proposed increased bussing with no road widening and tolling). And worse comes to worse, there's ways to decrease numbers up the canyon on these days. I know that that last statement is controversial, as people want to get up the canyon to ski. I believe there are ways to get people up that aren't the gondola or road widening. But even if there wasn't, I don't think that the profit/enjoyment of a few days of skiing a year makes the gondola's impacts worth it.</p> <p>2) The gondola prioritizes skiing--a wealthy, largely inaccessible sport--over all other types of recreation of the canyon, including hiking and climbing. The gondola will impact the natural beauty of the canyon--which is a large part of what people go up it for. Additionally, the construction of the gondola puts climbing routes at risk. It seems like the gondola is only focused on skiers and ski resorts, but that's not all the canyon is! It's a refuge for people who want to connect with nature.</p> <p>3) It makes no sense to spend 550 million taxpayer dollars on transportation that only goes to the doorstep of private companies.</p> <p>If we can't prioritize preserving our canyon over a few days of skiing, what hope do our other natural wonders have? The proposed plan states that the gondola will "increase the quality of life for residents" but from everyone I've talked to, it seems that the local Little Cottonwood Community overwhelmingly opposes this option. Let's instead support the increased bussing without road widening and the tolling!</p>

ID	Full Name	Comment
38194	Adam Dunford	<p>As a Utah resident, my family has enjoyed the use of Little Cottonwood Canyon for many generations. We have hiked, picnicked, enjoyed scenic drives, and skied there frequently, as did my father when he was young, as did my grandparent's families, and so on. We have enjoyed our time in this canyon as a beautiful natural resource, and that is the frame in which I view this project.</p> <p>Little Cottonwood Canyon is the jewel of the Wasatch Front that we are proud to call our home. The preservation of this wild and striking landscape ought to be the business of the Utah State government, not commodification and so-called development. The construction of miles and miles of gondola will forever change the face of this incredible place. No matter how thoughtfully the pylons are planned so not to disturb climbing zones or how much car traffic is reduced, this project will create a new unnatural sight for every step along the canyon floor, spoiling any semblance of wildness that we long to find there.</p> <p>Many have complained about the cost of the project. It is very high for a state the size of Utah. It is my understanding the cost compares to Los Angeles' recently rebuilt 6th Street Bridge, a project which saw many delays and budgets rises. How will UDOT protect LCC from years of delays? Do you want to turn Little Cottonwood Canyon into a zone comparable to the East LA Interchange?</p> <p>Many have complained that the project benefits only the corporate owners of the ski resorts, and appeals to outside tourism, while overlooking the wants of people who use the whole canyon, who live and pay taxes in this state.</p> <p>Many have complained that the gondola will not solve the traffic problems. It does not run at high enough capacity to facilitate the crowds on high traffic mornings, and it will not be able to run while explosives are in the air during avalanche mitigation, rendering the whole idea pointless.</p> <p>I understand that the State of Utah wants to improve access to resources, and UDOT is in the business of making sure that happens. I understand that UDOT wants to be able to leave a legacy, and improve the image of Utah as a mountain destination. I contend that if the State of Utah truly wants to leave a legacy and if you want to show you care for our stewardship of our land, the conservation of our natural landscape should be your number one priority. I understand that along with the Gondola project there are plans to preserve and protect the slopes of Mt. Superior. What about Maybird Gulch, Red Pine and White Pine? The gondola will strip each of them of more natural charm every minute that a car of 32 people soars by. The whole canyon deserves the respect of conservation that you offer as a pittance to one lone mountain.</p>
38195	Geoffrey Heath	<p>I live on the border of Wasatch Blvd. and 6300 South. My wife and I will be affected as this intrusive mode of travel is implemented. I disagree with the local voices who are screaming against the gondola proposal, and am in the minority who support the gondola (based at the La Caille site) as the best concept, for reasons summarized below. I think several points must be kept in mind. They include the following:</p> <ol style="list-style-type: none"> 1. It seems that most (not all, but most) of the opponents of the gondola in the local area here really want to turn Wasatch Blvd. back into a quiet road with traffic more like it was 30 or 40 years ago. They don't like the commuter traffic or the volume of recreational traffic. While that is understandable, they seem to think we could turn the clock back by lowering the speed limit to 35 along the whole road and making current commuters from Sandy and Draper so frustrated that they will use Highland Drive or some other route to avoid having to go slower on Wasatch Blvd. That perspective strikes me as utterly unrealistic and unreasonable. Because of how the southeastern part of the valley has developed over the last few decades, Wasatch Boulevard will always be a commuter artery. It will remain a commuter artery even if Highland Drive is eventually extended southward. 2. Additional bus service up Little Cottonwood Canyon (LCC) during peak ski days will not solve the traffic problem, or probably even significantly affect it favorably. The estimates of how much additional buses would reduce traffic are misleading because they are based on either transparently false or unrealistic assumptions. (1) The estimates assume that there would be no affect on bus traffic from snow and ice on the road up the canyon. That is so laughable as to require no further comment. Even if a bus can handle snow and ice better than most cars, the buses will still suffer the consequences on the traffic of the cars that can't handle it as well. (2) Taking the bus will not reduce the time needed to access the ski areas, because the buses will be stuck in the same traffic jams as the cars. So those who take the bus will have to drive to one of the bus hubs from their home(s), wait for the bus, then climb on into a crowd with several dozen of their best friends who they've never met, and then go through the same traffic nightmare as they do when driving in their cars, and then be subject to the bus schedules in coming back down. In their cars, they have complete control over who they are with, when they go and when they return, are not jammed together with strangers, and the situation is physically a lot more comfortable. The only real incentive for folks who do not now take the bus to switch over to the bus is if a big enough fee were imposed to drive up the canyon so as to make enduring the discomfort of the bus financially worth the trade-off. (What that dollar amount would be I don't know, but it probably would have to be relatively stiff.) But the EIS doesn't actually propose to do that. If I read it correctly, it proposes a fee only for single-occupancy vehicles. I suspect most people who drive now are driving with at least one other person. Consequently, the proposed fee for only single-occupancy vehicles would have little effect. (3) Fortunately, the EIS does not recommend adopting the proposal for additional bus-only lanes up the canyon itself. Construction of additional lanes on the canon road itself would have some of the worst environmental effects and would mar the canyon more than any of the other proposals and still cost an enormous amount.
38196	Amy Keller-Bills	<p>UDOT study has 2019 budget estimate numbers, which don't reflect the reality of inflation increases to taxpayer costs. The towers are in the avalanche center of the world, literally, and will need massive, costly, repairs as a result. The accessibility to the canyon will decrease for most of the population, and will adversely effect watershed, environment, wildlife, natural beauty of one of the most iconic canyons in North America, & Utah Taxpayers' wallets. Result, an ugly, broken, waste of money, that clogs the resorts & canyon with a waste of time gondola to [redacted] Don't do this. Make Snowbird & Alta buy 10 shuttles each and run them routed from strategic parking or hotel hubs. Keep your dirty developer buddies out of our pockets, & our canyon.</p>

ID	Full Name	Comment
38197	Brian Smith	I am NOT in favor of the proposed gondola in Little Cottonwood Canyon. Limiting traffic flow would be my vote. Whether that be by fees for access to enter the canyon or reservations and paid parking at the ski resorts, carpool incentives and more buses on weekends would be a better solution. Avalanche days will always be a problem. The skiing is limited on those days anyway. The gondola will only be used by out of state Visitors. The resorts can only accommodate so many people safely. Let's go to a reservation system and save our tax dollars in more important ways. Preserving our Great Salt Lake. I'm a definite NO to the gondola!
38198	Alexa Kalandiak	<p>UDOT should reconsider the gondola as the best option for Little Cottonwood Canyon. There are many negative outcomes, and any positives are vastly underwhelming.</p> <p>The proposed solution has unacceptable effects/destruction Little Cottonwood's natural character and environment.</p> <p>Access to many areas will be severely restricted during years of construction, pushing crowds to other locations that are already facing overcrowding issues, and it will compromise Little Cottonwood's repudiation as a destination.</p> <p>Classic climbing routes and hikes would be irrevocably changed/destroyed, and the sights and sounds of nature would be replaced with views of cables and the noise of machinery.</p> <p>The gondola as it is proposed right now only serves ski resort users, ignoring other trailheads and recreation users.</p> <p>Cars will still be permitted in the canyon, and many will choose the comfort of their cars over a slow moving gondola.</p> <p>Unless it is free, a paid gondola will only perpetuate existing inequalities for those wishing to access outdoor recreation.</p> <p>There are undoubtedly other drawbacks, and the positives are limited. UDOT has failed to try and address the issue in a less dramatic way, instead making issues worse by cutting bus routes and frequency of buses. If we can't find the money to raise driver wages and increase bussing, how are we going to find half a billion dollars to build the gondola. UDOT needs to scrap the current solution and go back to the drawing board.</p>
38199	Shanae Tate	The gondola is the most costly option, financially and environmentally. There are many more practical options that will solve the issues the gondola claims to solve, while preserving the canyon and people's experience in it. This gondola is not practical, is expensive, will interrupt the Canyon views and reduce the "remoteness" feeling. Meanwhile, I am doubtful that there will be payoff on it. I believe ridership for the gondola will be so low that it will all have been a waste and our Canyon will never be the same for nothing.

38202	patrick shea	<p>October 17, 2022</p> <p>Mr. Josh Van Jura, Project Manager Little Cottonwood Canyon's EIA Utah Department of Transportation (UTA)</p> <p>Re: Personal and Friends of Alta (FOA) Comments for the proposed Final Environmental Impact Statement (EIS)</p> <p>Dear Mr. Van Jura and other UDOT employees involved in this effort,</p> <p>This letter is written both in my individual capacity and as a 42 year long legal representative of the Friends of Alta (FOA) regarding the proposed Final Environmental Impact Statement (FEIS) issued in early September with a closing date for comment of today, October 17, 2022. First, I recognize the legal gamesmanship that UDOT is attempting to achieve, that is, to avoid the error-prone process of the Legacy Highway. This desired goal thou aspired to, will not be achieved for the reasons enurated below. Before listing the various flaws and needed revisions, I want to state clearly, the entire UDOT EIS process has been corrupted by predetermination. That is, various individuals and organizations who will profit from the proposed "Preferred Alternative Gondola Plan B" (PAGP) have guided the process directly or indirectly from the onset. The actual details of this web of improper influence is not publicly known as the date of this letter, and the public's right to know weeps at this charade.</p> <ol style="list-style-type: none"> 1. The PAGP is predetermined. 2. A wealthy or wanting to be wealthy interested individuals and/or organizations stand to make considerable profit by having the proposed Gondola service on or near their private property investments, which will be referred to as the LaCamille Village (LCV). 3. The LCV is an aspirational effort to effectively create another Yellowstone Club (Yellowstone Club) like Charles Schwab and other ultrarich individuals created in Montana, where the minimum membership entrance fee is \$13 to 15 million dollars. For this sum, or larger, an individual or organization would be able to be a member of LCV which would feature private residents either in the form of individual domestic sites, condounums, time shares and/or hotels with accompanying accreuments of exclusive restaurants and shopping opportunities. 4. It is not known who conceived the idea of the LCV, but three individuals have between intricately entwined in promoting, in my opinion, the concept with the prospect of significant private profit - former Sandy City Councilmen Chris McCandless, former President of the Utah Senate Wayne Neiderhauser and Kevin Gates, owner of LaCaille. These three individuals and possibly others acquired "mysteriously" the acreage of the Gondola base where it would be located, plus 23, and possibly 37.5 acres surrounding the gondola base. 5. Recently Snowbird, a private for profit ski resort, acquired the real estate where the gondola base would be located <p>6. CW Management Corp (C is for Chris McCandless and the W is for Wayne Niderhauser) submitted a 73 page "LaCaille Canyon Village" in Salt Lake City, Utah. It never got to the public hearing. 17, 2022</p>
38203	Brian Roberts	<p>I strongly oppose building a gondola in Little Cottonwood Canyon. It would make the canyon ugly and look like an amusement park. It would ruin the beauty of Utah that people come from all over the world to see.</p> <p>There are only about ten winter days per year the road has problems. Due to global warming, some scientists predict there won't be snow in North America by 2050. That is only 28 years from now.</p> <p>Therefore, an ugly gondola and these other projects you propose are not needed. They are a waste of taxpayer money.</p> <p>I believe you are out of touch since you are even considering such a foolish thing!</p> <p>The Utah Department of Transportation has a history of making BAD decisions. You raised the speed limit from 65 mph to 70 and 80 plus even though the Utah Highway Patrol strongly advised against this, begged you NOT to do this. You did it anyway. Since then Utah highway deaths have skyrocketed. It is a joke to hear you talk about zero fatality goals when you are doing this and highway deaths have skyrocketed because of it. It is also not good for the environment and not good for saving fuel.</p> <p>Now you want to squander \$500 million to \$600 million building an unnecessary 8 plus mile long gondola in Little Cottonwood Canyon that is not needed. It will make the canyon ugly.</p> <p>Just because something CAN be done does not mean it SHOULD be done. As engineers, you appear to only care about numbers. You are ignoring what matters most - keeping our Utah beautiful.</p> <p>Years ago I traveled by raft through the Grand Canyon. While in the Grand Canyon I saw old scars where the Federal Government drilled and tested different locations in the canyon to build a dam and fill the Grand Canyon with water. Luckily, people came to their senses and this didn't happen. I hope you come to your senses and don't build the gondola or widen the road. Don't do anything that will make the canyon ugly.</p> <p>Those in favor of the gondola are speaking out of both sides of their mouth. They say it is necessary because the road is icy and dangerous during the winter. If that was their main reason for a gondola, they would want to end road travel in the canyon. They don't want this. They want BOTH. Why? The ski resorts want as many customers per day as possible. Since the road can only move a given number of vehicles per day, they want it to continue (no matter how dangerous) and</p>
38204	Shanae Tate	<p>The gondola is the most costly option, financially and environmentally. There are many more practical options that will solve the issues the gondola claims to solve, while preserving the canyon and people's experience in it. Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
38205	Wayne Harrell	<p>No gondola! There are several other alternatives to the traffic issues in the canyon. This Disneyland type ride has no place in the beautiful Little Cottonwood Canyon. The canyon has wonderful natural views from the mouth to Snowbird. A gondola would destroy the natural view shed of the canyon. It would be impossible to look anywhere in the canyon without seeing the disgusting gondola. Even miles up a trail the hiker would look down into the canyon and see the disgusting gondola. It's a terrible idea brought about by greed and people who care more about making money than the quality of the natural environment. The people who are selling out the canyon and making the profits don't even live in SLC or use the canyon. The UDOT has been wined and dined by the gondola company in order to destroy the environment in the canyon and make tons of money. I wouldn't be surprised if we find out about bribes and kick-backs paid to UDOT to help grease the poor decision making. Do the UDOT decision makers even use the canyon? Do they have any clue as to what they are destroying? No they don't! If they understood the canyon then they wouldn't destroy it with a pathetic disgusting gondola. A gondola is no solution. UDOT knows this is and should save LCC from the destruction of a gondola.</p>
38206	Ian Miller	<p>Investment in the gondola instead of the bus would be a huge misallocation of resources. If a similar investment into bussing can make the canyon more drivable year round, support investment in bussing, and not cause the same visual disturbance the gondola will, how can the gondola possibly be justified?</p>
38645	Patrick Shea	<p>Josh,, I am not sure if my comments, personal and on behalf of the Friends of Alta, were properly sent, so I am sending it to you directly. Let me know if there is a problem. Pat</p>
38207	Alex Forsberg	<p>The gondola is a stupid tourist attraction that solves none of the canyons issues. Find a better place to spend all that money. It is definitely needed elsewhere.</p>
38208	Rosie O'Grady	<p>I believe there are many superior solutions to the proposed gondola in Little Cottonwood Canyon. Improved public transport and snow sheds are more cost effective and would allow for immediate impact.</p>
38209	Rodger Renstrom	<p>UDOT's selection of a gondola as the preferred alternative to transportation management in Little Cottonwood Canyon puts the numerous impacts of that option and the EIS process on the back burner in favor of unrestricted canyon development and degradation. The UDOT process has selected an alternative that fails in multiple ways to, as its mission dictates, "deliver transportation options that meet the needs of the community while preserving the values of the Wasatch Mountains." Emphasis mine.</p> <p>UDOT has made little effort to focus on what should be the initial step in determining transportation concerns for LCC: what is the carrying capacity of the canyon and the two privately operated ski corporations that will benefit from unlimited access to LCC? UDOT gives lip service to carrying capacity by stating "UDOT received numerous comments that a visitor capacity analysis should be conducted to determine how many recreation users can be supported by the natural resources in Little Cottonwood Canyon before the environment and the recreation experience are degraded." However UDOT's response seems to simply be that "the Forest Service keeps track of that, we don't really care. We just want to move as many people as possible to benefit developers and private corporations with connections."</p> <p>It would seem elementary that a billion dollar construction project designed to encourage unlimited access that forever alters one of America's great Urban canyons and the designated wildernesses it harbors demands a serious assessment of what the carrying capacity of that canyon is and what transportation options best meet those needs with minimal impact.</p> <p>UDOT admits that "the Forest Service acknowledges that, in the future, management might be needed to limit resource impacts from user visitation in Little Cottonwood Canyon." However, the gondola alternative selected by UDOT is designed to produce unlimited conveyance to the two private corporations operating in the canyon (and ONLY those two entities). In other words, UDOT is proposing a transportation solution that may need to be restricted in the future to control canyon access.</p> <p>The project fails to "deliver transportation options that meet the "needs of the community" in part because the majority of the community does use the ski resorts in the winter nor travel on Wasatch Blvd., and it is unlikely that those members of the community who do ski and snowboard will opt to use the gondola, leaving it primarily as a transportation option for tourists, not the community.</p> <p>UDOT seeks to address the following concerns, however its analysis is woefully simplistic in its conception and ultimately presents a solution inconsistent with canyon needs.</p>
38210	Aretha Flowers	<p>1) Decreased mobility in winter during the morning (AM) and afternoon (PM) peak travel periods related to visits to ski I strongly oppose any implementation of Gondola Alternative B as a longtime user of Little Cottonwood Canyon for hiking and climbing (over 30 years). The process for making this the preferred alternative appears non-transparent and contrary to local opinion, and according to recent news coverage, possibly a corrupt process abusing public resources that should be investigated by Federal authorities (Inspector General of relevant agencies due to conflict of interest shown by state agencies and leadership). The result will severely limit public access to other uses (recreational, personal renewal and inspiration) for the benefit and enrichment of the most already privileged few, and certain special interests and individuals connected to large corporations and state government.</p>
38211	Mike Beck	<p>This comment is in opposition to the gondola. It is total overkill to solve a minimal problem that only benefits Alta and Snowbird. It will forever ruin the majestic views of the canyon and will be useless for all others wishing to recreate in other areas of the canyon besides the resorts. Unlike a better bus system, it will do nothing to ameliorate the traffic problems in big cottonwood canyon on those same high traffic ski days (only 23 days a year!). It will overcrowd the ski resorts and raise the price of skiing significantly. Other options exist before permanently destroying the canyon.</p>
38212	Tamra Koch	<p>I feel UDOT has done a great job in all the research to find the best solution for Little Cottonwood Canyon. I am in favor of the Gondola. I live in Sandy City and enjoy the canyon in all seasons. It is very hard to enjoy the canyon with all the traffic. Gondola is the best option.</p>

ID	Full Name	Comment
38213	Craig Steury	<p>Hello,</p> <p>I'm opposed to the Gondola option and believe an improved bus option should be explored before making permanent and irreversible changes to Little Cottonwood Canyon. A canyon like this so close to an urban center like Salt Lake City is a rare treasure. Adding a gondola will permanently alter and many would say mar the beautiful vistas in this canyon. It would benefit mainly 2 ski resorts and not the majority of people who use the canyon and would amount to a taxpayer subsidy of the 2 resorts. It most likely would not be the most cost-effective and best solution to the problem of over-crowding in the canyon.</p> <p>I propose instead improved bus service with the following suggestions:</p> <ol style="list-style-type: none"> 1. Enforce 4-wheel drive and chain requirements! 2. Increase the number of buses and decrease the wait time for buses.. 3. Increase the capacity of buses and implement an easy to use outside storage setup on the outside of the bus. The current storage system on the inside wastes space and is slow and clumsy for passengers. 4. Provide lockers at a reasonable price at the ski resorts. This would encourage pass holders to leave their equipment at the resorts. 5. Improved parking at bus lots would distribute parking congestion. 6. Provide drop-off/pickup at climbing, hiking, and backcountry skiing trail-heads. <p>For the record, I am a 40 year resident of Salt Lake City and am a Alta-Bird passholder. I believe a Gondola would destroy LCC and one of the chief reasons I moved here!</p> <p>Thanks,</p> <p>Craig Steury</p>
38214	Brad Stone	<p>I am registering my opposition to the gondola proposal in Little Cottonwood Canyon. The state tax payers should not be funding improvements to private enterprise and I feel strongly that the building of the gondola will cause environmental harm.</p>
38215	Pat Holmes	<p>The gondola is bad for all around...for many residents of the surrounding communities and for Utah taxpayers. All this seems to benefit two ski resorts and won't really help to reduce traffic. In fact, there will be a huge increase in traffic in the area with a huge parking garage right in the middle of a family neighborhood. And, with the price of the gondola it will not be an option for all people...only the upper echelon. And, it won't even be available during the summer months. What a waste! We need to try other methods to reduce traffic before we make this huge expense and ruin the beauty of LCC. Toll road, increased and convenient bus schedules, charging for parking at the ski resorts.</p> <p>This gondola idea is not fiscally sound to use taxpayer money, it's going to actually bring more traffic, congestion, and pollution, and won't solve the problems with traffic.</p>
38216	Maria Kron	<p>I am against the gondola proposal for Little Cottonwood Canyon at this time. It would definitely take away from the natural beauty of the canyon, which is a negative environmental impact. Electric busses might be the best alternative. Thank you.</p>
38217	Brian Hutchinson	<p>It has been quite a ride for the Wasatch Canyons since the arrival of pioneers and miners in the 19th Century. Looking back, we recognize the long-term damage brought by the extractive industries dealing with lumber and precious metals. Yet, as we charge into the future, we ignore the environmental damage that accompanies ski resort and other development on the once-pristine mountain terrain.</p> <p>The public watches in horror as public agencies act as agents of private enterprise in their quest to exploit the many resources of the canyons. Once-trusted political leaders have traded their reputations for personal profit. And the legislature is poised to shell out as much as \$1 billion in taxpayer money for archaic technology that will surely damage the canyons.</p> <p>This boondoggle will do nothing to reduce congestion and air pollution in the canyon and valleys. It will displace the wildlife and those who would like access to the canyons for lower-impact activity.</p> <p>As for the 98% of valley citizens who will never reach the canyons, by the time we have public transit sufficient to get you there, the wild places will be gone.</p>
38218	Ryan Brown	<p>UDOT is a developer, not an organization chartered with solving problems. The real problem with LCC is too many vehicles and the air pollution they cause. If UDOT would simply tackle those problems-not as a developer but as an organization looking to solve the root causes-it wouldn't be difficult. Issue #1 is that the road is open to everyone. It should be closed to single-rider vehicles every weekend-in other words make it a dedicated carpool road every Friday, Saturday and Sunday, and Monday-holidays. This will cut congestion by 30% immediately. The early morning backcountry crowd, employees who miss the bus and other public-transit averse people would learn new behaviors. Issue #2 is that we don't charge a toll. Other public services are fee based, in fact, your gondola would be. Why should a road be any different? Charge a toll for every vehicle going up the canyon. The more riders in the vehicle, the less you pay. Single riders would be able to drive up, but they'd pay 4x what a 3-person car would pay. Suddenly bussing and shuttles make great sense-especially in a recession. Lastly, Utah has a knack lately of using government overreach and funds to enable a handful of developer businesses. The gondola, Utah Lake cluster_____, and the Inland Port are all handouts cut from the same back-room, soiled cloth that allows Utah politicians to continue to give handouts to their friends whom they've placed in pseudo government positions. This will unravel UDOT and it's backroom development agenda.</p>
38219	PAUL HOREHLED	<p>I own a block long pc of property on _____ . I have a house inbetween _____ I came here from Chicago 46 years ago to ski and live best decision of my life.</p> <p>This canyon and its Ski areas are truly world class Ive skied may ski areas in my life living in a number of them This canyon deserves saving from the stench of buses and noise. Pls adorn this canyon with a gem The Gondola any skier in his right mind should be proud to have this happen as it has in other world class ski areas If what it takes to save the canyon from the indignity of motorized vehicles contaminating my canyon then so be someone can look out the Gondola window and see my property and wish they were lucky enough skiers to live where I do SAVE OUR CANYON the world will thank you</p>

ID	Full Name	Comment
38220	Chad Smith	<p>Well here I am submitting my comment in the last few minutes before this final public comment period closes. I wasn't going to write, because I have grown to feel that UDOT doesn't really want my input. But a friend convinced me that I should write as a protest, if nothing else. And this took me almost an hour to write, so I hope you actually read it and try to care.</p> <p>I would like you to know that, as I have attended multiple open houses, town halls and online input sessions over the last four years, I have gone from being excited and inspired by the opportunities and impressed by the planned process to feeling disempowered, frustrated and disgusted at the process and (apparent) result. The process appears to be broken and inept at best and corrupt at worst. I really don't get why this planning for something so important has been done so very badly. It is clear that we need a holistic solution for a variety of issues, for the entirety of the canyon, and year round (not to mention for additional locations like Big Cottonwood, too). And yet, we've been fed partial solutions for a limited problem happening during a relatively small number of hours and days per year. And when so many of us have repeatedly pointed out the inadequate scope of the now-preferred "solution" and the better solutions available, we have been told again and again something to the effect of "Sorry, but as good as those solutions may be, they are outside the scope of this EIS, which is strictly intended only to address a relatively small number of high-traffic snow days in Little Cottonwood Canyon. (A small, specific problem that appears to have been custom made for the Gondola Works coalition.) Ugh!</p> <p>So many are like me: we care passionately about this, we have tried to be educated and involved, because it is so important. And we are aware that we have flooded the system with feedback that is overwhelmingly negative about the gondola. And yet it is your preferred alternative and now the selected alternative? And your UDOT representative now has a slide presentation with a slide about UDOT's take aways from public input, with the first bullet point claiming that the gondola is popular? It's not, and for good reason!</p> <p>I could write so much about this, but I saw the presentation given by the UDOT representative to the Salt Lake County Council just the other day. I heard the many, excellent points made and concerns raised by the council members there. I know that you're already aware. Please just consider my message here as a strong echo of those many points. The process has been done wrongly. The gondola is not the right solution, and it is also the least popular solution. Beyond that, I will venture a guess that it is the alternative with the biggest likelihood for going over budget and making UDOT and the Gondola Works coalition even worse than they already do.</p> <p>Please do not make this mistake. I and thousands of others will take no joy in seeing the failure of an overpriced eyesore that ends up being underutilized and (even if it were utilized to capacity) will absolutely not solve the issues we currently face in LCC. Not to mention the issues we will be facing decades from now. Again, I will take no joy in saying "I told you so."</p>
38221	Michael Miller	<p>I strongly oppose the gondola in Little Cottonwood Canyon. It will destroy the beauty the canyon provides, cost lots of money and really not solve the problem. It is a boondoggle and waste of taxpayers money. I propose a tolling system and alternative traffic options such as car pooling and more buses.</p>
38222	Julie Holtrop	<p>Please no gondola! It will scar the canyon and only serve ski areas.</p>
38223	James Jackson	<p>I am, and many people who I know who love Little Cottonwood Canyon, are very much against UDOT taking measures to build a gondola. It just doesn't make sense; it is impractical. It "might" in a best case scenario alleviate some traffic, but will cause a bottleneck at the mouth, and a whole other set of parking nightmares to deal with. The most prudent plan has always been a greatly expanded bus service. We as taxpayers don't want to foot the bill for this! It's ludicrous, and a ridiculous amount to spend for something that won't even solve the problem--- *especially with only two stops as I understand it* at the top of the canyon. what about all the people going to parking spots mid canyon? This is especially problematic in the summer and peak seasons--- like now, when many people want to go up the canyon! I was just in my first ever traffic jam outside of winter season near the base of BCC yesterday-- attempting to go for a hike. LCC is just as bad on some days I could imagine recently with all the people moving here. A gondola will do nothing to solve this!! Please take another look at the true feasibility of this proposal, instead of focusing on profits for some, and having it be a tourist attraction. Will it actually solve the problem? I strongly disagree that it will. Also a massive destructive force environmentally to a canyon many of us hold close to our hearts. It's not worth it!!</p>
38224	Shannon Bailey	<ol style="list-style-type: none"> 1. My main concern is there is no outlined plan for if phase one solves the congestion issue. What if having more busses and/or limiting private cars solves the problem at hand. There would be no need to move forward with a 500 million dollar Gondola. With that being said, what metrics are being used to track a decrease in congestion, and if so, what percentage decrease is acceptable to avoid building this structure? Can the public have a say in these metrics? 2. If there turns out not to be a need for the gondola, where will the extra funds go? Will the money be poured back into enhancing the UTA bus system? 3. Congestion is the issue, which wont be mitigated by the Gondola. Cars will need to be parked, people will need to wait in line, just at a different location. There are more fiscally responsible solutions than a 500 million dollar Gondola. Other alternative plans were not proposed in the Draft EIS. One thought is improving public transport to decrease the number of private vehicles being driven to the canyons from the city. Expanding TRAX and adding a line running from Sugarhouse or other places that draw people may assist with this. 4. Implementing tolling to private vehicles to cut down on amount of vehicles entering the canyon continues to be a solution that is overlooked. Rewarding those who carpool should be paramount. Once again, if this part of phase one works, what metrics are being tracked to determine that this is sufficient. 5. None of the proposed solutions take into account anyone who is not going to a ski resort. This means hikers, climbers and backcountry skiers are a bit limited in their options, and must drive if they would like to recreate in the canyons on any given day. What is the point of adding trailheads as proposed, if the busses do not stop there.
38225	Erich Nygaard	<p>I believe it is important to be addressing the transportation issues in Little Cottonwood Canyon, and it looks like UDOT has put significant effort into incorporating past feedback into the current proposal. Regardless of the near term availability of the full funding amount, it would be wise to proceed with the measures that minimally impact recreation and the visual quality of the canyon first, before considering the gondola, as its cost represents over half of the capital cost of this solution and its impacts are the most significant. This is the most financially and environmentally conscientious course of action.</p>

38226	Diane McQuay	<p>I have been a resident of Cottonwood Heights for over 30 years. I live [REDACTED]. For the past 3 years or so, my neighborhood has experienced 3-4 weekends of skier traffic blocking Fort Union as they try to get up into either Big or Little Cottonwood Canyon. For us, it's a minor inconvenience as we have other streets to use. Wasatch Boulevard does need help .</p> <p>I am completely opposed to the Gondola up Little Cottonwood Canyon for many reasons. The most important reasons are:</p> <ol style="list-style-type: none"> 1. The Gondola will do absolutely nothing to improve traffic on Wasatch Boulevard as cars will still be driving to the Gondola parking structure. 2. Building a huge parking structure in a purely residential area is abhorrent. No matter how it is constructed, it will be a huge eyesore and ruin the neighborhood. This is a quiet, rural area served by a narrow 2-lane country road. The Gondola and parking structure does not improve the traffic. It only moves the traffic (assuming that the skiing public will be willing and/or able to fork over \$40 per person to ride the Gondola) to a narrower 2-lane road. The late afternoon traffic jam, when all the skiers leave at the same time, will be worse than the current situation. #3. Building the Gondola in a highly sensitive area, a watershed area no less, will cause irreparable damage and the scars will be visible for decades. #4. And the most obvious reason, the plans for this Gondola is to serve 2 private companies, no one else. Why in the world should us taxpayers, most of whom live on very tight budgets, spend hundreds of millions of dollars on transportation up the canon to 2 private ski resorts - not to any of the popular trailheads, not to any of the popular campsites and picnic areas and not even to the town of Alta itself <p>Please reconsider the optio of increased and improved bus service plus tolling during ski season weekends. That will entice people to carpool or use buses. And if all the ski resorts in Big as well as Little Cottonwood Canyon would enact parking reservation systems, as Alta has, all of these improvements will substantially reduce traffic along Wasatch and up the canyons.</p> <p>I speak for many, many neighbors with this letter. Not one wants the Gondola. Please reject the Gondola.</p>
38227	Chad Smith	<p>Didn't see a verification of submittal, so I'm trying this again, just in case...</p> <p>Well here I am submitting my comment in the last few minutes before this final public comment period closes. I wasn't going to write, because I have grown to feel that UDOT doesn't really want my input. But a friend convinced me that I should write as a protest, if nothing else. And this took me almost an hour to write, so I hope you actually read it and try to care.</p> <p>I would like you to know that, as I have attended multiple open houses, town halls and online input sessions over the last four years, I have gone from being excited and inspired by the opportunities and impressed by the planned process to feeling disempowered, frustrated and disgusted at the process and (apparent) result. The process appears to be broken and inept at best and corrupt at worst. I really don't get why this planning for something so important has been done so very badly. It is clear that we need a holistic solution for a variety of issues, for the entirety of the canyon, and year round (not to mention for additional locations like Big Cottonwood, too). And yet, we've been fed partial solutions for a limited problem happening during a relatively small number of hours and days per year. And when so many of us have repeatedly pointed out the inadequate scope of the now-preferred "solution" and the better solutions available, we have been told again and again something to the effect of "Sorry, but as good as those solutions may be, they are outside the scope of this EIS, which is strictly intended only to address a relatively small number of high-traffic snow days in Little Cottonwood Canyon. (A small, specific problem that appears to have been custom made for the Gondola Works coalition.) Ugh!</p> <p>So many are like me: we care passionately about this, we have tried to be educated and involved, because it is so important. And we are aware that we have flooded the system with feedback that is overwhelmingly negative about the gondola. And yet it is your preferred alternative and now the selected alternative? And your UDOT representative now has a slide presentation with a slide about UDOT's take aways from public input, with the first bullet point claiming that the gondola is popular? It's not, and for good reason!</p> <p>I could write so much about this, but I saw the presentation given by the UDOT representative to the Salt Lake County Council just the other day. I heard the many, excellent points made and concerns raised by the council members there. I know that you're already aware. Please just consider my message here as a strong echo of those many points. The process has been done wrongly. The gondola is not the right solution, and it is also the least popular solution. Beyond that, I will venture a guess that it is the alternative with the biggest likelihood for going over budget and making UDOT and the Gondola Works coalition even worse than they already do.</p> <p>Please do not make this mistake. I and thousands of others will take no joy in seeing the failure of an overpriced eyesore</p>
38382	Becky Mickelson	<p>My name is Becky Mickelson. I have been a resident of Sandy City for almost 50 years. One of the things that has kept me here throughout my life is my love of the mountains and the canyons that are so close and easily accessible. I want to make it known that I strongly oppose the LLC Gondola project. Despite the fact that there are traffic issues a few days a year, there is absolutely no justification to spend that much Utah taxpayer money, nor is there any justification for the detriment to the beauty and enjoyment so many people enjoy from the canyon in its current state.</p> <p>I know there are much less invasive and expensive ways to approach the traffic problems in the canyon. I strongly encourage you to eliminate the gondola as a viable solution.</p> <p>Thank you, Becky Mickelson</p>

Comments on Little Cottonwood Canyon Final EIS

38719	Ralph Becker	<p>Josh, I've submitted these comments through your form and below, but the formatting seems to be screwy, so I'm attaching a document below for your consideration. If you or your team has a desire to discuss any of these comments further, I welcome any communication.</p> <p>Thank you for your incredible investment of time and professionalism in approaching your PM job, Ralph</p>
38784	Olivia Juarez	<p>Hello, GreenLatinos would like to encourage public participation in the Little Cottonwood Canyon EIS public comment period. Is there an email that we can direct individuals to send public comment to in lieu of the comment form on https://littlecottonwoodeis.udot.utah.gov/? Thank you, Olivia</p>
38785	Olivia Juarez	<p>I'm writing to you because I believe winter transportation in Little Cottonwood should serve all members of the public, not just those who can afford to recreate at Alta and Snowbird. I do not support a gondola because it prohibits me from having improved access to snowshoeing, walking, and enjoying nature anywhere else in Little Cottonwood Canyon during the winter. UDOT's recommendation to build a gondola will leave me with no way of enjoying Little Cottonwood Canyon throughout the winter and spring seasons. UDOT should exclusively support the Enhanced Bus option with no road widening to support full recreational use of all trailheads and recreation areas in the Canyon throughout the winter. Without exclusive support for this option, I will have no way of enjoying Little Cottonwood Canyon throughout the winter and spring seasons.</p> <p>The gondola recommendation insults Latinos in Utah, Utah's communities of color, and Utah's low-income communities. They will have less access to the gondola station and less access to Little Cottonwood Canyon. Latinos have half as much access to a car compared to White Americans and are twice as likely to rely on public transit. But buses are only proposed as a part-time solution to enjoying the beauty of Little Cottonwood Canyon. UDOT should exclusively recommend the Enhanced Bus option with no road widening and invest in transportation hubs all over the Wasatch front, including locations centrally in West Valley City and other west-side cities where residents of color and low-income residents live.</p> <p>Poor air quality diminishes public health along the Wasatch front, especially among residents of color and low-income residents who are more exposed to air pollution than white or affluent residents. The Gondola Alternative will not take many vehicles off Salt Lake County roads since you need a car to access the gondola station to access the canyon in a reasonable amount of time. UDOT can improve air quality for everyone and significantly increase public health among low-income and residents of color by exclusively supporting Enhanced Bus service with no road widening.</p> <p>Thank you for your consideration. Sincerely, Olivia Juarez</p>

38795	Erin Beltran	<p>Dear Utah Department of Transportation,</p> <p>I'm writing to you because I believe winter transportation in Little Cottonwood should serve all members of the public, not just those who can afford to recreate at Alta and Snowbird. I do not support a gondola because it prohibits me from having improved access to snowshoeing, walking, and enjoying nature anywhere else in Little Cottonwood Canyon during the winter. UDOT,Às recommendation to build a gondola will leave me with no way of enjoying Little Cottonwood Canyon throughout the winter and spring seasons. UDOT should exclusively support the Enhanced Bus option with no road widening to support full recreational use of all trailheads and recreation areas in the Canyon throughout the winter. Without exclusive support for this option, I will have no way of enjoying Little Cottonwood Canyon throughout the winter and spring seasons.</p> <p>I recently moved to Cottonwood Heights near the mouth of BCC from SLC proper. Our opinion hasn't changed about this maddening, insulting gondola idea. NO ONE up here wants the gondola! You've already been shown that by referendum! Stop pretending that this is of any benefit or justice. It will benefit only a handful of businesses at the top and bottom of the canyon and its construction/engineering. I even know an engineer on the project who hates it but can't say so professionally! The engineers want our tax dollars but not the gondola itself! Arghhhh. I know a nail technician who worked in LCC who couldn't get to work already because the busses didn't run at her shift times. These are real people's lives.</p> <p>The gondola will also mar the aesthetic of the canyon for ALL recreators, residents, and other users. I REALLY don't want to have to look at it while I'm hiking, backcountry tour skiing, etc. Ugghh. It won't be able to run in high winds! It's ridiculous! Busses can run in higher winds than gondolas because of their lower ground profile. Ski resort employees already get stuck up there, away from their families and obligations, too often during season for storms. Don't give them a fake option that would run even less frequently; just increase bussing! If it's snowing so hard that even the busses with chains can't run, then, okay, no one should be traveling in any way at all.</p> <p>It denies communities of color and Utah,Às low-income communities access to physically and mentally healthy recreation, exercise, and therapy opportunities. It's so racist! Latinos, for example, have half as many cars as whites to get to a gondola station. We need more busses! They need to stop at every major trailhead and campground, not just businesses (like ski resorts), in LCC (and BCC). They need to run year-round, not just in winter! Bicycles, backpacks, and skis/snowboards need space on them, too. We need these bus networks to also extend throughout the county so that people, say in West Valley City, can actually get there. No one should be driving cars so much up the canyons or to them,</p>

38796	Olivia Jensen	<p>Dear Utah Department of Transportation, I'm writing to you because I believe winter transportation in Little Cottonwood should serve all members of the public, not just those who can afford to recreate at Alta and Snowbird. I do not support a gondola because it prohibits me from having improved access to snowshoeing, walking, and enjoying nature anywhere else in Little Cottonwood Canyon during the winter. UDOT, recommendation to build a gondola will leave me with no way of enjoying Little Cottonwood Canyon throughout the winter and spring seasons. UDOT should exclusively support the Enhanced Bus option with no road widening to support full recreational use of all trailheads and recreation areas in the Canyon throughout the winter. Without exclusive support for this option, I will have no way of enjoying Little Cottonwood Canyon throughout the winter and spring seasons.</p> <p>The gondola recommendation insults Latinos in Utah, Utah, communities of color, and Utah, low-income communities. They will have less access to the gondola station and less access to Little Cottonwood Canyon. Latinos have half as much access to a car compared to White Americans and are twice as likely to rely on public transit. But buses are only proposed as a part-time solution to enjoying the beauty of Little Cottonwood Canyon. UDOT should exclusively recommend the Enhanced Bus option with no road widening and invest in transportation hubs all over the Wasatch front, including locations centrally in West Valley City and other west-side cities where residents of color and low-income residents live.</p> <p>Tax dollars should be focused towards projects that most *residents* will be able to use. Not increasing access to private resorts used primarily by tourists and upper class locals. Poor air quality diminishes public health along the Wasatch front, especially among residents of color and low-income residents who are more exposed to air pollution than white or affluent residents. The Gondola Alternative will not take many vehicles off Salt Lake County roads since you need a car to access the gondola station to access the canyon in a reasonable amount of time. UDOT can improve air quality for everyone and significantly increase public health among low-income and residents of color by exclusively supporting Enhanced Bus service with no road widening.</p> <p>Thank you for your consideration. Sincerely,</p>

38801	Karl & Jackii Mudge	<p>(Phased Gondola) To Whom it May Concern: This email is mainly directed to government officials that may have influence on UDOT's choice of the phased gondola as their preferred alternative for the Environmental Impact Statement (EIS) for the Little Cottonwood Canyon (LCC) S.R. 210 Project. I am also copying organizations that have voiced opposition to this alternative in hopes of garnering support for a solution that I and my wife feel is better than any of those offered in the EIS, or otherwise proposed by the public at large. Our solution is as follows: During the months of December through February, Friday through Monday, holidays, and "powder days," that typically result in traffic congestion up the canyon, restrict access up and down LCC to 2 fleets of electric shuttle buses. One fleet would serve Snowbird and Alta skiers and businesses, stopping only at Snowbird, or Alta, and/or both. The other fleet would serve dispersed recreation users, stopping at designated stops developed to serve those users, by pulling a cord to ring a bell that notifies the bus driver to stop, just like city bus users do. The same parking development requirements in the valley identified in the EIS will still be required with this solution, but the overall construction and maintenance costs for it will be much less, as will the environmental and aesthetic damages to the canyon; all while serving ALL those that visit LCC. This solution is also easily expandable, both for the number of users and/or duration of the restriction, as well as to other canyons along the Wasatch Front such as Big Cottonwood Canyon, should the need arise.</p> <p>In July 2022 I submitted a comment to UDOT during their latest Draft Environmental Impact Statement (DEIS) for the Little Cottonwood Canyon (LCC) S.R. 210 Project comment period outlining our solution. The response I received from UDOT cited several opinions and at least 1 half truth rejecting our solution and justifying their then 2 preferred alternatives (the gondola and the expanded bus alternatives). The half truth in UDOT's response was: "because S.R. 210 has received federal money in the past it is part of the National Network (NN) under the purview of the Federal Highway</p>
