32891	Jon Hager	<p>To Whom It May Concern,</p> <p>I am writing to oppose the gondola plan for Little Cottonwood Canyon. It is obvious, the gondola is meant to support the ski resorts with other goals secondary. There are other options available that are less expensive and have a greater positive impact for Wasatch recreational users and the canyon's natural habitat. These are:</p> <ol style="list-style-type: none"> 1. Enhanced electric buses with higher frequency and improved reliability, together with strategically placed mobility hubs. 2. Tolling infrastructure. 3. Parking management technologies and policies, such as ski parking reservations, micro-transit, and ride share programs. 4. Multi-passenger vehicle incentives; and Traction device requirements with expanded inspection hours and enforcement. <p>Thank You, Jon Hager Riverton, Utah</p>
35261	Sid Lanham	Please do not build the Gondola. It makes no sense to those of us who live near there
32894	Koedy Williams	I am not in favor of the Gondola in LCC. I do not believe that it will save the canyon from traffic but only push it down into the neighborhoods. We do not want to pay taxes for a gondola but I am instead in support of an enhanced bus system and tolling option. The gondola is a corporate issue, the people do not want it, listen to our voices.
32893	Sylvia Nibley	<p>I oppose the Gondola plan for Little Cottonwood Canyon. The cost is too high for the benefit and the benefit is for too few people, and not good for the mountain. Better options are:</p> <ul style="list-style-type: none"> Enhanced electric buses with higher frequency and improved reliability, together with strategically placed mobility hubs; Tolling infrastructure; Parking management technologies and policies, such as ski parking reservations, micro-transit, and rideshare programs; <p>Multi-passenger vehicle incentives; and Traction device requirements with expanded inspection hours and enforcement.</p>
32895	Deb Gleason	No gondola! Please do not deface this stunningly beautiful place & disrupt the wildlife, the watershed and the rest of the non-ski recreation areas. Please, no gondola!
32896	Jim Hunsaker	<p>I am in support of enhanced bus alternatives. No gondola please! I'm a long time Sandy resident and lifelong skier. I am opposed to using public funds for a project that enhances two private businesses. In my view the ski resorts should maybe limit their passes based on their capacity. More people in the canyon only makes it more crowded and more money for the private ski areas. The ski areas have ruined their own backyard by joining the ski collectives IKON pass etc. PWDR is not running Snowbird like it used to be run. The locals are not being treated well and I don't want my tax dollars spent on a boondoggle waste of money. Please no gondola.</p> <p>Limit the cars, tolls, widen the road, enhance the bus system, but no gondola. who really profits from this? Ski resorts, UTA bonuses, and people that don't live here. Sandy residents should have a referendum on this issue and it would not pass.</p>
35264	Taylor Brozovich	Respectfully, no one wants the Gondola. Hawks we'll be killed. It will be hideous. Waste of taxpayer money for private industry. No gondola!
32897	Barbara Fassl	Please do not build this gondola. The gigantic towers will destroy little Cottonwood Canyon's natural beauty and the gondola will not solve the traffic problems in the canyon. Charging a toll, installing a third lane for dedicated uphill or downhill travel depending on the time of day, enhanced bus service (which currently is dreadfully inadequate) are better, less expensive and less impactful alternatives. The gondola would be a terrible mistake that is wrongfully supported by the ski resorts as it is gimmicky and appeals to tourists, but won't help at all!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32898	Charles Henderson	<p>As a former member of the UTA's Board of Trustees, representing SL County, I applaud the bipartisan position on the proposed gondola. As noted, there are several less expensive and taxing alternatives, many of which you have mentioned. I would add to the list exploring the potential for a COG Rail System, like the Pikes Peak COG Rail System.</p> <p>In any case, while serving on the UTA board, we had many discussions about how best to solve the congestion issues in our canyons, and how to serve the need with the least environmentally detrimental approaches. Some of which are proven to reduce some congestion and others with the potential to reduce even more congestion if properly executed, and still allow visitors to enjoy the natural wonderment of our canyons. However, I don't think there's any one solution that solves the problem entirely. I strongly believe we should do what we can now, with low cost or no cost approaches and see where we land before spending dollars on a gondola that will only address part of the problem, cost significantly more money than it is worth and require ongoing costly maintenance. At the end of the day, we should look deeply into the ROI of every option before doing anything that commits significant amounts of public funds. I don't see how the gondola pays for itself and/or provides equity access across the community or solves the congestion issue in all the impacted canyons.</p>
32900	Chris Pratt	<p>I understand that the Gondola will only provide stops at the ski resorts and only operate during the winter season. That does not seem like the best solution to reduce traffic to the canyons. The electric bus option could run year-round and not only stop at the ski resorts, but also the many other popular recreation stops along the way used for hiking and cross-country skiing. Please reconsider the goal and how best to meet it.</p>
32899	Tamara Lazarev	<p>I am 100% against the gondola in beautiful Little Cottonwood Canyon for many reasons but here are just a few 1)\$592 million dollars or more of taxpayers money when approximately 10.1% of Utahns actually ski. There are many schools that could use that money for teaching, materials, earthquake safety measures, etc. 2) It would be an environmental disaster that will irreversibly tarnish the beauty of the canyon 3) Most Utahns will not want to pay to use the gondola - especially since 95% of the time they can get to the resorts much faster and cheaper driving 4) The traffic up the canyon is not a problem more than about 14 days a season and with global warming may be getting less than that 4) In a high wind snow storm the gondola would not be able to run anyway. I think reserved parking (which worked great last season), electric buses, possible tolls, and snow sheds would be a much better alternative. Thank you</p>
38679	Dale Chalmers	<p>If you feel the need to ruin Little Cottonwood Canyon with building a gondola that I will never ride but help pay for, to solve a perceived transportation problem then why is your sister taxpayer funded UTA eliminating a bus route up the canyon this winter? Apparently they don't see a problem. Get your stories straight. No Gondola. No road widening. When the option for do nothing was on the table, that was the correct one. Implement that option!</p>
35267	Dale Chalmers	<p>Stop the gondola Don't widen the road</p>
32902	Darrell Wood	<p>But think of all the acclaim we'll get...especially if we get The Olympics! P-h-h-h!</p>
32901	Faith Bryce	<p>Please don't put in the gondola! It only increases access for skiers while destroying access to crags, and crags themselves, for climbers. Think of solutions that benefit everyone, not just a few. Make lcc accessible. Don't further the environmental destruction!! Listen to the pleas of those who have been asking for this not to happen.</p>
32903	Deb Sussman	<p>Dear folks this is my official email in response to the gondola issue a little Cottonwood Canyon. As an employee and as a skier and as a human that uses the canyon a lot for recreational purposes I do not think that the gondola is the best way to handle that ever increasing traffic that the canyons are now seen. This is a land grab greedy and not a really good solution to our problem. We need better bus service. I have been employed at Alta and Snowbird for many years and have used the bus many many times it is fine. It serves a purpose we just need more buses and more time that the buses go up the canyon. It will be a huge cost to the taxpayers of Salt Lake for this benefit. This is not a good idea please remove this idea from your list of alternatives and let's do something different. Sincerely Deb Sussman</p>
32904	Melissa Brown	<p>Please consider cheaper less intense options FIRST. Then you can consider. Gondola If all else fails. Be smart, don't spend this much money if you don't absolutely have too. I'm sure there's money involved and let's prove that we can do what is right and not most attractive.</p>
32905	Robert McFarland	<p>Please DO NOT build the Gondola. I am a resident of Millcreek, Utah and voting citizen. The gondola is an expensive, environmental disruptive solution to Little Cottonwood Canyon that only benefits Snowbird and Alta resorts. It does not help any hiker, climber, runner, bird watcher, mountain biker, or any other user who wants to access the beauty and resources in the lower canyon and as such will not reduce the traffic for 3/4 of the year. Please consider less impactful options such as increased bussing before choosing the destruction of a gondola. Thank you for your time.</p>

ID	Full Name	Comment
32906	Jane Hudson	<p>I am wholeheartedly against the Gondola proposal.</p> <p>I live in Millcreek, and recreate in the Wasatch Mountains almost every day (year round). I love the Wasatch and feel that we all need to work hard to preserve its beauty.</p> <p>The current traffic problem only happens less than <15 days a year. Throughout the EIS, the transportation problems are projected to get worse with population growth. Sections 1.3, 1.4.1.2, and 1.4.2.2 (just to name a few) discuss this growth and the related problems.</p> <p>The gondola is not only an eye sore, but will cause major impacts to the canyon (i.e. destroying world class bouldering areas and various ecosystems). We need to put real effort into trying to expand the bus system or try another option like tolling. The gondola parking lot will be almost a mile from the gondola station, it's expensive to ride, it's slower than driving and is less convenient (especially for groups and families). People will not use it.</p> <p>It only serves a portion of canyon users, only those going to resorts and the resorts themselves. There is no disincentive to drive so people will continue to do so.</p> <p>I find it extraordinarily irresponsible to ignore the obvious need to examine the level of visitation that this fragile resource can handle without damage. The EIS simply waves off this point in S.12 by saying "The Forest Service acknowledges that, in the future, management might be needed to limit resource impacts from user visitation in Little Cottonwood Canyon. Specific visitor capacities are not being considered by the USDA Forest Service at this time."</p> <p>If we weigh the growth impacts in this equation so heavily that we are willing to spend \$600M to \$1B of taxpayer money for a "future" problem (right now it's <15 days a year) ... how can we not ask the Forest Service to "consider visitor capacities?" It is negligent and irresponsible not to do so. We cannot simply blame the Forest Service and wave this away as a "noted" but "ignored" concern!</p> <p>I am adamantly opposed to this proposed alternative and demand that all other options that be tried and exhausted FIRST before building a \$600M gondola that will destroy the canyon.</p> <p>It's too expensive. It's too invasive. It will likely encourage rather than discourage car traffic. And ... it won't solve the powder-day traffic problem, there will just be lines of cars waiting to enter the rapidly-filled gondola parking lot. There will be no difference to the users of 9400 S and Wasatch Blvd (and surrounding neighborhoods) on these days.</p>
32907	Jessie Pechmann	<p>The gondala does not seem useful and on top of that way too expensive. It wouldn't benefit me in any way I can see and seems to prioritize private interests as opposed to shared public resources in the canyon/tax payers. I support the common sense solutions (electric buses/more frequent easy buses/tolls, etc)</p>
32908	Kyle Goupil	<p>Please do not go through with a gondola in Little Cottonwood. We do not need to be shuttling more skiers up to the resorts! They are already overcrowded. The gondola would only possibly service one user group, while detracting from the wilderness and recreational experience of all other user groups. Please reconsider other less expensive, invasive, and destructive options such as an improved and incentivized bus line.</p>
32909	Jamie MoCrazy	<p>There is a problem in big and little cottonwood canyons. The solution is not a gondola. It is much faster and easier to have MORE electric buses, free parking and bus ride, and charge for each car that makes the drive! We need to incentives individuals to use public transportation and that is making the wait lines much fast for the public transportation, so if you take a bus and have to sit in the same line few people will take buses. However, if you have to pay to use the road and can take the bus every 10 or 15 minutes it will cut down on the lines and incentivize to use the bus. It was be much cheeper and quicker to pay bus drivers a better salary and have more frequent buses then to build the gondola.</p>
32910	Linsey Hsieh	<p>I am shocked and disappointed that the gondola is being seriously considered as an option. It will mar the beautiful landscape, Cost an appalling amount of money, and not actually solve traffic problems the majority of the year. As a hiker and not a skier I can clearly see how this solution does not take into account people like me who are looking to use the entire canyon and not simply the resort. This seems like a clear case of the people with the most money making decisions that benefit them rather than the community.</p>
32912	Danielle Christensen	<p>I am against the gondola and feel it would negatively impact the natural beauty of the canyon. There are other, less invasive, strategies to address traffic and impact concerns.</p>
32911	Lynn Walter	<p>The gondola is a terrible idea. I have talked to many regular skiers about this and nobody wants to take the gondola. It will not solve the problem. More busses that pollute less will solve the problem for a lot less money.</p>
32913	Molly Hutsinpillar	<p>Hello Mayor Wilson,</p> <p>After many years in the Wasatch and much thought, I feel the best way to approach the crowding in the canyons is to judiciously limit the number of people. Getting more people up faster via gondola, cars and buses will only exacerbate our human impact on this local treasure.</p> <p>Thank you.</p> <p>Sincerely, Molly Hutsinpillar MD</p>
32915	Mark Watson	<p>No gondola- bus only traffic in winter except employees and homeowners with permits. Open satellite bus parking and shuttle to dedicated canyon buses. Any cars in canyon without a permit to be towed out of canyon. No hikers. Dropoff bus stops for climbers.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32914	DUSTIN ERICKSON	<p>I am writing to oppose the Gondola B solution. This only goes to serve the resorts which is NOT the reason most locals revere Little Cottonwood Canyon. This will visually ruin the other aspects of the canyon that many of us choose to live here in the first place for while likely only serving to further crowd the canyons as this will not dissipate traffic. Furthermore, if despite the peoples rejection of this proposal it somehow happens to go through under no circumstances should taxpayer dollars be used to fund this project. This only goes to serve the resorts of Alta and Snowbird and not the growing backcountry skiing community. They need to pay for this if it unfortunately happens at all. We know that Neiderhauser has monetary interests in this going forward and that is an obvious conflict of interests.</p> <p>Sincerely Dustin Erickson (a lifelong Sandy citizen)</p>
32916	MaryBeth Brooks	<p>We are escalating to an eyesore gondola ? that will not move people efficiently as it claims. We are bypassing all other efforts that require less planning such as toll booths with use limits. Also we have not even tried using a bus system like Zions national park. The gondola will ruin our vistas. Also a gondola stinks of special interest and business minded capitalists. Please do not build a gondola.</p>
32917	Brooke Beck	<p>Do not put in a Gondola. It is a terrible idea and will do irreparable damage to the environment and canyon! Not to mention there isn't going to be any snow in 5 years because of global warming. Do not put in a gondola!</p>
32918	Katherine Dayton-Kistler	<p>I am in favor of parking reservations and ride sharing including micro buses. I am totally opposed to tax payer money being spent to benefit ski industry only.</p>
32919	Katie Schnell	<p>Hi there - I am against the proposal of the gondola as the transportation solution for Little Cottonwood. I believe the damage/disruption it would cause to the environment and its cost outweigh its benefits. The only people that would benefit from the gondola are those skiing at either resort (those that can afford that leisure), but the financial burden of the project would land on all of us, including those with no interest or investment in Alta or Snowbird. I would encourage you to continue researching more environmentally and financially sustainable options, such as carpool incentives, tolls for those that do not want to take the shuttle, or closing the canyon to be "shuttles only" at certain points in the winter. It feels ridiculous to put in a gondola that will only be used a few months out of the year primarily and by a certain group of people. Please reconsider.</p>
32920	Alex Taft	<p>I oppose the gondola as the preferred alternative. It is environmentally injurious, has a benefit only to the private ski resorts, and has already promoted corrupt activities to make money from your decision.</p>
35274	Kent Grover	<p>Why not restrict traffic on high traffic days to 4 people per vehicle, unless you live in the canyon. Let the resorts be responsible for bus service. Use existing highway. Let those making the money be responsible for the transportation.</p>
32922	Lawrence Smith	<p>The cost should be paid for by the 2 corporations that benefit from the gondola-Snowbird and Alta not Utah tax payers. Limit people entering the canyon when needed and increase bus service</p>
32921	Eliza monson	<p>NO TO THE GONDOLA!!!!</p>
32924	Rayna Scott	<p>We should invest in common sense solutions and not the gondola.</p>
32923	Eian Newland	<p>This only benefits private businesses and should not use tax payers dollars to fund. The businesses that would benefit from it should pay for it.</p>
32925	Andy Rich	<p>I am a resident of Cottonwood Heights, and a regular user of the road up Little Cottonwood Canyons. Something needs to change, it's bad on many days during the winter. And I applaud the idea of starting with the (relatively) simple to implement increased bus service plan. But the Gondola has all the hallmarks of a boondoggle. It looks more like a tourist ride than a transportation solution. It will be slow and expensive (to build and operate) and an eyesore. I have tried and tried to see this as a progressive solution that I can embrace, but I simply can't do it. I HATE THE GONDOLA! Let's try some busses. Build better parking for folks riding the busses. Charge for cars- maybe prorated based on occupancy? (not sure how to do that without just creating another choke point). Take some of the money saved by not building the gondola and make the busses free. If that doesn't solve the problem then consider widening the road and building avalanche sheds. But no Gondola. We need a transportation solution, not an expensive extension of the ski resorts.</p>
32927	Shawn Ivie	<p>I feel like the gondola would be detrimental to the canyon as a whole and would ruin a lot of what makes the canyon special and only highlights the fact that Utah legislators only care about lining the pockets of a few over the wants and needs of the many.</p>
32926	Renny Jackson	<p>I am currently a resident of Grand County, Utah, living in Castle Valley. I grew up in Salt Lake City, attending high school there and at the University of Utah. I have spent a lot of time recreating in Big and Little Cottonwood Canyons over the years and I can well imagine the negative impact that a gondola would have on Little Cottonwood. Not to mention the economic disaster that it would be!</p> <p>I am an outdoor enthusiast, a climber, and your constituent. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction.</p> <p>The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>I hope you will consider opposing the Little Cottonwood Canyon gondola in favor of better solutions.</p> <p>Renny Jackson Castle Valley, Utah</p>
32928	Whitney Sanchez	<p>The canyon's natural beauty needs to be protected. No gondola!</p>
32929	Donna Kesler	<p>I am against the gondola. I would prefer to see more practical alternatives used. The gondola is very expensive. It will penalize all taxpayers to provide entertainment for the few. The money might be better spent providing bus service to the southwest corner of the valley which has been neglected by UDOT/UTA. Thanks.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32931	Amy Oxman	I think building a gondola is a ridiculous solution to traffic issues in Little Cottonwood. The cost is excessive, it primarily only benefits the ski resorts(and they are not contributing at all to the expense), and finally it poses a large negative environmental impact. I do not feel the taxpayers should have to shoulder the burden of a solution that was strongly supported by the ski resorts to benefit themselves.
32930	Kris Carlile	I'm grateful the discussion about traffic in our ever busier canyons is up for discussion. I feel very similar to mayor Wilson I do not feel a seasonal gondola is the best option. We have a robust public transit system. Let's use it and expand its capabilities. I've been an advocate of light rail street car lines in our canyons for a very long time. This would open the access to these areas to a large number of individuals year round. When appropriate the service could be expanded to accommodate winter recreation and special events and then curtailed during times of reduced usage. Baring this improvements to the roads with dedicated bus lanes would be the next best option. Thanks for listening.
32933	Kamie Botkin	Born and raised in Utah and utilize the canyon multiple times a year especially skiing at all resorts. Absolutely do not approve of a gondola. Would much rather see a designated bus lane. Money to ride a gondola are too cost prohibitive when I am bringing 6 people up to ski. Very few lifetime locals want a gondola. Don't ignore us!!!
32932	Hannah Willis	I strongly disagree with the intention of building a gondola in Little Cottonwood Canyon. While I understand the difficulty of traffic and pressure for profit by private ski resorts, I believe that development of the gondola will negatively impact the important ecosystem in Little Cottonwood Canyon. As water scarcity becomes a reality in Utah, it is undoubtedly important to protect our local watershed. Building a gondola risks the safety of water supply for Utahns. Additionally, a publicly funded gondola that benefits private organizations is deeply unfair to the large population of Utahns that can not afford to ski/snowboard/etc. I'm grateful that UDOT has considered a phased approach with tolling. However, I implore UDOT to strongly reconsider the implementation of the gondola on behalf of local Utahns. UDOT is meant to serve the public not private organizations or influence.
32935	Katherine White	No to the gondola. Especially at the expense of residents, tax payers and the canyon!
32934	Matt Zwemke	Please!! No gondola!! Anything but a gondola!! Maybe you have to restrict the amount of traffic going up the canyon. Unfortunately, to many people have moved into our state which has turned it into a show. Every available empty lot in my city of Ogden is building an apartment complex. They are everywhere!!! They tried the gondola in Ogden and it didn't work!! Come up with something else UDOT!!!! ??
32936	Samuel Miller	Don't put this in. Nobody wants it.
32937	Linda and Patricia Morris	I agree with using mass transit through UDOT. Use the smaller buses like for handicapped so they have room for skis and poles. Mass transit could bring people to the parking lots close to the canyon stops and then transport them to the resorts. We disagree with the gondola or road widen in little cottonwood. Nor should more parking lots be made along wasatch blvd. We also agree with tolls for those driving their own vehicle.
32939	David Miller	No to any form of gondola. It will be under utilized and will destroy world class climbing routes and hiking trails during construction. What needs to happen is that you need a reservation to drive up the canyon. Everyone else must park at the bottom and take a shuttle up.
32938	Greg Carlson	I work in West Valley where UDOT decided to put the MAXX BUS down the center of the road making 3500 South the least efficient road in the city and costing 100 million. They should not be allowed to destroy the canyon to save it????? we should make people more responsible with car pools and more mass transit! stop UDOT and UTA they are only after tax money and high wages for the executives>
32940	Austin Rodriguez	Strongly opposed to the gondola. Using tax payer dollars to funnel money to private business is wrong. I understand Utah likely would benefit from the increased tax revenue but the people of Utah do not want it. You would be destroying our landscapes and opening up a ton of construction in the canyon which is one of the only places of peace for hikers, climbers, and outdoors lovers.
32941	Stewart Vassau	It's foolish to embark on a project in LCC that we will never be able to reverse. Place as special as those need to be preserved as they are becoming harder and harder to come by. There are other ways to solve the problem!
32942	Steve Kornet	I say no to the gondola. Not an efficient way to move people.
32943	John Janson	Seems like a more of a trial and error (but really just evaluate) sort of approach is needed - here are some options: Parking reservations Micro-transit Rideshare Programs Multi-passenger vehicle incentives Traction device requirements, as well as increased inspection hours and enforcement Go with a gate and a canyon limit - this will improve the ski experience - obviously this includes reservations. Gondola is just not flexible enough
32945	Tiffany Karrington	Do not use tax money to fix this problem!!!!!!!!!!!! This is not a problem for most of the people in Salt Lake, and will not benefit the Many!! Do not tax all of us for this.
32944	shane larsen	I am for the gondola and will continue to support it with the following comments and clarifications: 1. The cost to ride up/down must be reasonable. Similar to cost to ride a bus. 2. the gondola must be open to ride year round, not just in winter. 3. a ticket to ride the gondola should also include the cost to shuttle to/from parking in lots not at the base of the gondola. 4. the gondola must provide service to all people, not just for skiers during ski season. It must be built and operated as public transportation, not just to help skiers at Alta and Snowbird. 5. Bus service up/down the canyon must remain a dedicated alternative. It can't be only the gondola. It must be the gondola AND bus service.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
32946	Glen Ahrens	I am concerned about the constant addition of people and traffic to many of Utah's treasured natural wonders. Not only our national parks but also areas like Little Cottonwood Canyon. I believe that other methods such as what Mayor Wilson has proposed makes sense. I think electric buses are a great option along with something for parking regulation and other things might be good. A main point that I would like to see considered is regulating over-crowding in a way that affects everyone the same regardless of income level.
32947	John Gipson	As an outdoor enthusiast and professional in the outdoor industry that participates in all types of outdoor activities in Little Cottonwood Canyon, I emphatically do not support the building of a gondola in little cottonwood canyon. The gondola would have a huge negative effect on one of Salt Lake City's biggest economic drivers: dispersed recreation (hiking, climbing, running, backcountry skiing). This is more difficult to quantify than resort skiing, but is a huge factor when people choose to visit and/or relocate to Salt Lake City and is surely the largest economic driver in our local canyons. Without access to those resources, Salt Lake City economy would take a large hit and would suffer in recognition as an enticing community to mix work and recreation. Many industries, especially the outdoor industry where I work, have made moves into Salt Lake City because of its ease of access to the outdoors including Little Cottonwood Canyon. With the building of a gondola and the loss of those resources, it is extremely likely that those companies would no longer consider bringing jobs into the state. Further, the building of the gondola is fiscally irresponsible, with half a billion in initial construction costs alone. The building of the gondola will come with the destruction and/or removal of irreplaceable and historic world-class climbing and views In addition to exorbitant fees and the guaranteed loss of recreation in the canyon, the gondola is not an equitable solution and will perpetuate environmental marginalization and injustice in the Wasatch Front.
32948	Ashley Larsen	No Gondola!!!! ??????
32949	LouAnn Davidson	This is a terrible solution. DON'T BUILD GONDOLA
32950	Christian Huff	This is a blatant overreach of corrupt officials moving taxpayer money to greedy hands. I won't pay for this special interest project. I'm a resident 2 [redacted] and travel this road for my commute. I am against this project.
32951	Kelcie Quilter	Let's find a cheaper, more efficient, and less environmentally impactful solution to the traffic up little cottonwood canyon. The gondola is not the best solution. Thank you
32954	Ana Dall	I say no to gondola. It will scar the landscape. Consider limiting traffic or license plate days, ot appointments, random selection and all the other common sense options. No to gondola.
32953	Frank Miller	Gondola cutting down 30% of traffic is not a solution but back to back bussing would be a better solution and less expensive. Engineering firms in Utah should be contracted to do the math on continual bussing and select parking areas in the valley. The benefit is to the 2 ski areas and most of the cost is born by the Utah public many of whom do not ski or board. The canyon would be scarred forever!
32952	Claire Weeks	I'm honestly a little confused as to how the gondola option has made it this far. It doesn't make any sense financially and it won't be effective at transporting all the people in a timely manner. I agree that the problem needs to be fixed, but this drastic solution isn't helping. Another bus lane should be added.
32955	Sam Johnson	I'ma utah native, and im moving back after 4 years away. The canyons and public lands are what makes utah so incredible! I have missed the views of mountains and the feeling of escape, and I believe moving forward with this type of construction only destroys this! I would much more prefer the bus style systems rafters will use, it will open up so many jobs for local guides and the nat forest dep!!! Making a larger parking lot at the beginning and really implementing this instead of a gondola that invades the entire canyon is much preferred
35277	Chris McFarland	Hello, I am a Utah citizen, voter, and Millcreek resident. I am also an avid outdoorsman, runner, hiker, backpacker, climber, and lover of Little Cottonwood canyon. The gondola is an exorbitantly expensive project with exorbitant environmental impacts. In addition, it will be funded by taxpayers and will only benefit two privately owned ski resorts. The challenge with traffic in the canyon can't be mitigated with a gondola that only serves the ski resorts. We need a more comprehensive solution that seeks to reduce traffic, while also helping a larger percentage of users reach their destinations. Please consider increased bus services that stop in more places along the canyon (i.e. trailheads). This alone would reduce traffic while still supporting a larger percentage of the population. This combined with private vehicle tolling would reduce it even further. Thank you for listening to the overwhelming percentage of the Utah public who is against the gondola proposition. I appreciate your time. Chris McFarland [redacted]
32956	Corliss Lipzinski	Please consider options that will benefit all users of the canyon. It doesn't seem responsible to jump right into spending so much money on this project without working on less expensive alternatives that could work for all the public's interests. There are other solutions, for example the reservation system that Alta Ski Resort started last year, that are adaptable, cheaper, and don't leave a lasting impact on the canyon. Most taxpayers do not ski, but use the canyon to hike and bike in the 3 other seasons. The gondola does nothing to alleviate the parking problems at the hiking trailheads. Spend the money where it will benefit a majority of Utahns, not a select few. Thank you.
32957	Connie Marston	The gondola is an ineffective and too costly choice. Not everyone travelling is going to ski resorts. More bus service in peak periods would be less expensive, have access to more stops, and have fewer system shutdowns.

32959	Peggy Brown	<p>No Gondola Please!!!</p> <p>Certainly there is great demand for skiing in the winter, and also for year-round access to Little Cottonwood Canyon (LCC) for hiking, climbing, etc, because it is an exceptionally beautiful natural area that contributes greatly to the charm of living in this area. That demand for access to LCC, coupled with the American desire for everyone to drive their privately owned vehicle (POV), definitely creates significant traffic congestion issues in and around the canyon, mainly in the wintertime, and these issues need to be addressed. I completely disagree with a gondola as the solution to the traffic congestion problems of LCC. The wild natural beauty of the canyon would be irreversibly marred, at a huge cost to taxpayers, so that private ski resorts can benefit and expand their industry. To jump to a gondola solution - especially if it only stops at the 2 ski resorts - is an unrestrained "more-more-more" approach to growth and population management that serves industry blatantly, and does not serve the people of Sandy City nor Salt Lake County who choose to live here for quality of life. Instead of a gondola, we should increase, improve, and enforce the use of buses. All those people who want to go skiing but currently are unwilling to ride buses will just have to change their attitudes, plan a bit further in advance, and take the bus. It is time for us ALL to use the buses we already have, and break out of the outdated American mindset of POV use everywhere. Let us expand bus service in the canyon, switch to electric buses, predict demand, and increase/decrease the number of buses at a given time per that demand, year-round. Make any needed minimal road improvements. Install a toll booth at the mouth of the canyon and charge an access fee to all, to help fund the improvements and maintenance costs of the canyon infrastructure. During the ski season, charge a prohibitively high fee to go up LCC in any vehicle other than a bus, allowing a minimal number of exceptions (eg, residents of the city of Alta). Parking areas for POVs would need to be established or enlarged, to be serviced by the electric buses - but not near the mouth of the canyon. Residential neighborhoods near the canyon (or anywhere else for that matter) should not be flooded with POV traffic going into and out of ugly parking garages so that the ski industry can prosper, diminishing quality of life in the neighborhoods. Place these parking garages nearer the freeway and nearer to hotels that support the ski industry. Keep them out of residential neighborhoods. Thank-you!</p>
32958	Dave Hortin	My vote is NO gondola! Why subsidies the rich? I haven't been able to afford skiing since a day pass was \$30.00 (Park City...1970'ish)
32961	Dave Hortin	A gondola? STUPID IDEA!..!!
32960	Lauren Armstrong	I think this sounds like a great plan! So much better than trying to drive up the canyon in the winter.
32963	Nils Abramson	<p>I came to Utah as a college student 48 years ago. I was in the ski industry as an owner operator of the Brighton Touring Center in the late 70's through 1986. I am an avid canyon user for backcountry skiing, hiking and climbing as well as alpine skiing. I have a degree in recreation from the University of Utah. I have seen the explosion of use in the canyons first had both as a business owner and individual. I am wondering who paid for the gondola adds and why we didn't hear anything from the pro bus alternative. I am opposed to the gondola B alternative mostly because it promotes only the commercial ski areas of Alta and Snowbird and will be a large tax burden on skiers and non-skiers alike. The environmental impact will be an eyesore forever even when skier days are reduced due to global warming (2060) more rain than snow at Alta. The road is already in place and environmentally is a small impact and works for all users not just resort skiers. I don't believe the ski areas can handle more guests and I feel it is their responsibility to build out parking for their skiers. Please use the bus alternative and don't allow special interest to dominate the conversation or decision.</p>
32962	Richard Brown	I am totally against a gondola being placed in Little Cottonwood Canyon.
32964	Scott Berry	<p>I am an east bench homeowner in Salt Lake County, and skier with more than 50 years of history at Alta and in Little Cottonwood Canyon. I am deeply opposed to the "gondola" proposal. As proposed, the scheme primarily benefits the private owners of Alta and Snowbird, neither of which have made any commitment towards financing the scheme. Only a small fraction of Salt Lake County residents use LCC in winter. Why should Utah taxpayers subsidize a project too benefit corporate interests, at the expense of the Canyon environment? The idea is so preposterous one can't help but wonder what has happened in the "back room", attended only by UDOT and the ski resort owners. Alternating canyon access on winter days to odd/even license plates would solve the traffic problem instantaneously, at no cost to the public, and virtually no cost to UDOT. Why has this obvious solution been ignored? Simply because it might "cut into" the profits accruing to the resort owners. This is embarrassing and shameful.</p>
32966	Rana Williams	Please do NOT put a gondola in Little Cottonwood Canyon. It is wrong to put the burden of paying for this on taxpayers when it will ONLY benefit two private businesses. Why aren't the ski resorts coming up with solutions that are not tax based?
32965	Lauren Judd	I vote AGAINST the Gondola. The cost is outrageous and it will only be used a few months of the year. Additionally, it would take away from the natural beauty.
32968	Evan Unger	I agree that there should be tolls to drive up the canyon. I am a homeowner in Alta. Perhaps homeowners could get yearly passes. I think the road could be widened to three lanes. Have two lanes going up in the morning and two lanes going down in the afternoon.
32967	Max Lundberg	I am strongly opposed to UDOT's plan to build a gondola transport system in Little Cottonwood Canyon. I support looking at ways to improve the efficiency of surface transportation in the canyon, but do not agree with the use of tax dollars to build a transport system that is almost entirely for the benefit of two ski resort areas. We have many more pressing needs for public money. If the ski resorts want this transportation system, they should fund it, not ask the public to do this for them.
32969	Maya Kobe-Rundio	I do not believe the gondola is the solution for LCC. The gondola is an unwise public investment serving a limited group of people, given that it is irreversible and incapable of adapting as circumstances and needs change. It only stops at 2 private ski resorts, only runs during the winter season, ignoring the millions of non-skiers who access LCC year-round while permanently marring the canyon. I urge you to consider alternative options.
32972	Vicki Martin	I am a Utah taxpayer living in Clearfield. I am totally opposed to gondolas up ski resorts. Immediate solutions like ski busses solve the problem at much cheaper or no cost by charging riders the upkeep on busses. NOT MY TAX MONEY11

Comments on Little Cottonwood Canyon Final EIS

32971	Roberta Rose	I am AGAINST THE GONDOLA because it will rape the canyon. Limiting access by mandatory use of electric buses with the use of reservations is the least invasive. Just copy what is done in Zion.
32970	Bibianna Lee	I say NO to Gondola NO to toll. YES TO MORE ECO PUBLIC TRANSPORTATION AND LIMITING PRIVATE VEHICLES DURING PEAK SEASON. Thank you
32973	Darren Levitt	I do not want a Gondola. It is too expensive, benefits too few, does not run year round, and is an environmental and aesthetic nightmare. NO
32974	Carol Hoban	NO GONDOLA!!!!!! Is that clear enough?????
38658	Aaron Levitt	Hi, my name is Aaron Levitt I'm calling to comment and express a emphatic no against the gondola. Paid for by the taxpayers, it's expensive to ride. It only benefits two resorts, doesn't run year-round, and it's an aesthetic blight on the beautiful canyon along with the fact that it interferes with bird migration patterns, and cannot run in a blizzard. For all those reasons, citizens of Utah, I think, do not want this gondola. Thank you.
38680	Kathy	No to the gondola. This is a very short sighted plan.No to the gondola. This is a very short sighted plan.
35278	Kathy Kathy	No to the gondola. This is a very short sighted plan.
32976	kathy jensen	too much \$\$\$\$ for relative few people. I want to see mountains not gondola.
32975	Shane Schaar	Why should my tax dollars help our a already bloated ski industry? I ski 2-3 time a week in little cottonwood but not at the resorts. This is not the correct solution!! Cost over a half billion dollars (not considering inflationary cost increases); Only make stops at two private ski resorts: Snowbird & Alta; Remove no more than 30% of car traffic from the canyon road; Operate only during the winter ski season; and Permanently mar the inherent beauty and public lands of Little Cottonwood Canyon.
35279	Linda patterson	I am disgusted by the fact that the gondola is being pushed on taxpayers. There is nothing that feels correct and democratic about this decision. It feels dirty and dishonest, including your commercials about no one wanting to ride the buses to the ski resorts. You guys know better than that. Those buses are so crowded it is hard to get a seat. Not sure how you live with yourselves.
32978	Saren Fassbinder	A gondola is NOT a good use of Utah's taxpayer dollars. Providing a luxury ride to two private businesses is not something taxpayers should bear the shoulder to fund. Please test other options such as tolls before considering this burden not only on the taxpayers but canyon itself that it will be built in. Thank you.
32977	Lynn Stromness	I'm a skier, I like the gondola, I think us skiers should pay for it
32979	CRISTINA RASPOLLINI	I was extremely disappointed that the preferred alternative identified by UDOT is the Gondola alternative B. The phased approach is not changing the facts: the Gondola is a very expensive alternative that won't solve LCC traffic problems - only two stops at the private ski resorts of Snowbird and Alta during the winter season - and will forever damage the beauty and public lands of LCC. UDOT should be implementing common sense solutions instead - enhanced electric buses, parking management, tolling, etc.
32980	John Gurr	As a lifetime SLC resident and Little Cottonwood skier for over 50 years, I have seen the congestion getting worse to the point that many days it's at a standstill. Mayor Wilson's objections and reasoning, in my opinion, are misplaced: ,úfcost is high, but bus system (which does not resolve many of the problems) is less than 10% lower; ,úíyes, stops are at Snowbird and Alta where the majority of people are going and is what the bus system does now. If buses stop more frequently, there will be fewer riders; ,úí she says only 30% fewer cars (estimated around 1,050 people) but doesn't mention how many people will take the bus ... I would venture to say not nearly as many; ,úíoperates in winter JUST LIKE THE BUS SYSTEM ... could easily be adjusted to run during the summer ,úíYes, there will be towers, but that is a big improvement over the exhaust fumes, extra lanes and pollution created by more buses and electric? There goes the cost advantage. ,úíon the winter subject: with the bus system, there will still be closures due to avalanches and crashes (which are increasing each year). And yeah, taxpayers may pay just like they do for the roads to your homes. This is really no big benefit for the ski areas, it is to help us - the visitors to the area! We are the ones that will no longer have to endure traffic congestion, pollution and higher gas costs due to the slow pace. The gondola system is the best alternative to solve a growing problem.
32982	Sarah Shepherd	I am an outdoor enthusiast, a back country and resort skier (Alta and Snowbird), and a climber, and your constituent. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective through significant, transparent and quantitative study process, that will take much longer study that what has been completed to date. Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction. The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered. I hope you will consider opposing the Little Cottonwood Canyon gondola in favor of better solutions. I also oppose the proposal of the gondola because this disproportionately benefits two private corporations and developers at the public's expense, as well cutting out more inclusive uses and groups of people who should be gaining more access to the canyon through these improvements, not less.

Comments on Little Cottonwood Canyon Final EIS

32981	John Erdmann	I firmly oppose building a gondola. I support increased flexibility and capacity utilizing busses.
32983	Mary Fuller	The beauty and solitude of Little Cottonwood Canyon is a very important part of the environment that I feel UDOT is not considering. Having the large pillars in the canyon and lines overhead with the gondola passing by every few minutes has a tremendous negative impact on this. Once it is done, we can't go back to reclaim this. Also, a 2500-space parking garage will put a terrible traffic burden on a neighborhood that already struggles with too much traffic, not to mention the fumes. It only takes the traffic congestion from the canyon and puts it someplace else. Please try something else first such as enhanced bus service, tolls, and parking fees without widening the road.
32984	Doreen Kulikowski	No gondola! It is too permanent and only serves one set of visitors to our canyons
32986	Brady Adams	Gondolas are an expensive waste that only serves the private resorts at the cost of the public. The gondola would not provide adequate access to the rest of the canyon to serve the general public not paying private companies to use the canyon. Beyond that it doesn't provide room to accommodate increased future use. It would also ruin the natural qualities of the canyon. A bus system with an expanded road would provide much access to ask of the canyon to all users and better serve the tax payers. A bus system would also allow for dispersed pick up points which would alleviate more congestion problems that the gondola whine create by having one pickup point.
32985	Susan Hildebrand	I have already sent in a lengthy comment against the gondola idea. I agree with Mayor Jenny Wilson who has pointed out even more downsides to this idea. How will we ever tell our children and grandchildren how we let that happen, that forever mars our outstanding beauty of the canyons? Something that has always brought in visitors to marvel at. Please listen to the common sense and the view of the majority of citizens, not just two commercial ventures that will profit from this idea. Respectfully submitted, Susan Hildebrand
32987	Marilyn Smith	As a frequent user of LCC but not a skier as are many others who enjoy LCC. We could use access that stops at the various trail heads. The gondola will not do that. In fact it will only be highly utilized in the winter by moneyed people who will not bear the cost of the project. That cost will be shifted to the people who are enjoying the canyon but not skiing and those who are not using the canyon at all. I strongly oppose the installation and subsequent tax increases that will fall on all of us.
32988	Stephanie Glende	I am not in favor of the gondola solution to the canyon traffic problem. Please reconsider.
32989	Garth Tino	I am saddened by the desire to build the gondola in Little Cottonwood Canyon. Having lived in Utah and played and worked in that canyon for over 27 years now, I have seen it's demise with the passing of time. Instead of trying to get people to use other areas or developing more canyons or resources, it seems the state is concerned only with the money the 2 resorts in the canyon create. The destruction of the peace and solitude of the canyon do not seem to factor in. The fact that the "resolution " only serves the 2 resorts, and only in ski season, speaks to the motivation of the decision. Still not addressed, and I imagine it won't be- what about the other overcrowding issues of all the other trailheads in the canyon? What about those of us who work up there but not at the resort? How will it help those of us using, guiding, and teaching in the backcountry? We will have to pay to use the canyon, and again to park to go backcountry skiing, as will our clients, almost as much as a ski pass. Will the access across the base of the gondola be allowed as it is now or will we be cut off from the south side of the canyon? How will the boulders and climbing be effected? Will any regard be given to the giant impact the gondola will have on the climbs? How many will be ruined? Displaced? What about hall the hiking that may be lost? Biking? The benefit is solely to the resorts and downhill skiing. It seems none of the other users or sports the canyon is used for will get any help. I am sure that this will not help ease the burden on Whitepine Trailhead or any of the other trails that are overworked. I have yet to see access issues surrounding any other sport besides downhill skiing be addressed. All the other sports, activities, trailheads, and access loses out. It is disheartening.
32990	Barbara Person	NO to the gondola. I don't ski, it should not be up to taxpayers to pay for it. And the canyon should not be destroyed. Use a reservation system for buses and private cars. The ski resorts should be footing the bill for this.
32991	Terry Heinrich	Just wondering how people will be able to stand for 40 minutes with there boots & skis on a crowded gondola. What will you do to provide for an emergency ? What if the gondolas malfunction & stop from high winds or electric storms? Not too confident in Doppelmayr after the tram incident at Snowbird.
32992	John Bokelman	Putting in a gondola would be a environmental bad move , it would only benefit the rich . NOT the Eviornment which needs to be persevered in these days , of losse of natural beauty . So do the right thing , an don't bow to rich capitalism which only want to benfit off our beauty land . Thank you for listen John Bokelman
32993	mark barrett	The gondola option is a terrible option that will certainly negatively impact this very small ecosystem and will only benefit a few politicians and developers.
32994	Bob Pruitt	The gondola is a bad idea for UDOT. It will be slow, add congestion at the mouth of Little Cottonwood, is expensive to build and operate, and will be affected by wind, just like the tram and chairs are now, leading to closures. The gondola proposal serves only Alta and Snowbird, and that won't eliminate the congestion of climbers in the lower canyon, white pine or Albion basin, which are packed all of the time. Enhance the bus service and make it free and electric. And put up snow sheds....If the investment in canyon transportation is not available to all canyon users, then the ski areas should pay for it. The proposal is corporate welfare. For the money involved, the transportation solution needs to serve all canyon users, like increased bus service in the summer with optional trailhead stops.
32995	Shelly Edmonds	The gondola is corporate welfare at its worst. Those who are profiting from this desecration of our canyon paid a mint to deluge us with commercials that unfairly and inaccurately portrayed bus service to the ski areas. Now the resorts, who have a stake in profits only, expect the taxpayers to spend a billion (yes, cost overruns will reach this amount) dollars to build unsightly towers so they can transport more skiers than they can possibly accommodate on the runs. This is a travesty. Environmentally, this is a disaster that will long outlive its use. Please re-consider a shuttle-only transportation, like Zion Canyon, during the busiest ski days. A billion dollars could purchase more natural gas/electric shuttles, pay drivers, and maintain them for more years than the ski resorts will be in operation. If the resorts had to build this gondola themselves, it would not be happening. It is a mistake.
32997	Doris Long	I favor phase 1 of proposed plan. No to phase 2 . A gondola is an eye sore. Taxpayers from the entire state should not have to pay for a benefit to so few- only ski resorts owners, skiers and a few others.
32996	Carol Elliott	no gondola
32998	Colin Santos	It's wrong to spend half a billion taxpayer dollars on a tiny sliver of affluent skiers. This gondola proposal should leave us embarrassed and ashamed. In any other country we'd call this plan corruption.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33000	Ann Charat	As a hiker, x/country skier and snowshoer, the gondola is of zero benefit to me. Why should my taxpayer dollars pay for something that benefits only the skiers at Alta and snowbird? Absolutely NO to the gondola! How about better bus service that will benefit everyone. NO TO THE GONDOLA!
32999	Martina Conner	I do NOT want the gondola going up in LCC. This is a waste of money that only benefits those companies who put the idea out there. The use of the gondola will only benefit the ski resorts during the short ski season. There is no benefit anywhere else in this proposal. Now UTA is stating they won't have the same number of buses for this year's ski season. How amazing that it falls in line with the already made decision to build a gondola at the people's expense. We the people didn't even get to vote on this decision. We just get to be taxed on this decision. The Sandy City Mayor is also against this decision. She has tried to present alternate ideas which would benefit the business in our city, residents and would also provide the needed help for skiers. So sad that we will all be paying for something we all don't want. I have read very few people who support this already approved idea. Again, I say NO to the gondola. A concerned Sandy citizen who worries about the impact to our canyons environment and the creatures that live there.
33001	Martina Conner	Why are we committing to gondola of which you do not have the funding for yet. Also, why did the citizen of Utah not get to vote on this project. We all know that money is buying this project and only a few will benefit from it. Such a sad day for Utahans.
33002	kathleen bailey	I think the way "public comment" is being organized is bias and manipulative. The government is obviously against the Gondola and when they couldn't block it from happening, they are putting in hurdles and attempting to game the system. The free market should dictate how, when and where the Gondola should go. There is an entitled, environmentalist, minority attempting to control the narrative. There is no mass public outcry. People are not knocking down doors and picketing to "save the canyon". The Gondola is a great solution. I am afraid it can't be built fast enough to handle demand. People want to enjoy the canyons without government interference. When resorts are full and there is no place to park, people will find an alternative - such as the bus, carpooling or just not going. There doesn't need to be a new law every time someone gets bent out of shape.
33004	John D. Gates	Please please please NO GONDOLA!! 1. Toll booth 2. Actual traction enforcement laws!! 3. Snow road bridges/tunnels 4. Widen the road 5. MORE BUSES
33003	Mackey Smith	I'll just keep this brief as the State Chair for Young Republicans. We strongly believe in protecting the environment, and also find the large expense that will only go to benefit two businesses as an inappropriate use of public funds. I speak on behalf of our 1500+ registered members just in Salt Lake County.
33005	Debra Olivier	I oppose the gondola plan for Little Cottonwood canyon because the cost is too high for the benefit and the benefit is for too few people, and not good for the mountain. Better options are: Enhanced electric buses with higher frequency and improved reliability, together with strategically placed mobility hubs; Tolling infrastructure; Parking management technologies and policies, such as ski parking reservations, micro-transit, and rideshare programs; Multi-passenger vehicle incentives; and Traction device requirements with expanded inspection hours and enforcement.
33006	Kathy Gardner	Someone is sure paying a lot of money to tell us how wonderful the gondola system will be. They show buses filled with trash, which I have never seen in 40 years of riding UTA. They also tout how many trees won't be cut down. I guess they don't think we'll notice the roads that will have to be built to install all the towers and how many trees will be cut down to make that happen. They are promoting it as year-round use. Unless it has a lot of stops along the way to let people off the summer hikers won't be using it. The people of Utah should not be paying for something to benefit the resorts. With global warming the ski season keeps getting shorter. What a waste the gondola would be and reminiscent of the fortune the state spent to build the pumps on the west side of the Great Salt Lake. Common sense tells us that the gondola system is meant to line someone's pockets and not to benefit the residents.
33007	Josh McBeain	I do NOT support building a gondola in LCC. I do NOT support tolling in LCC. Enhanced bus service should be considered. Adding an additional lane could also be considered. I believe UDOT is blowing the LCC issue out of proportion to justify expensive and unnecessary action. Use the money you plan to waste on a gondola to hire bus drivers and fill the Great Salt Lake with water.
33008	John Hardy	I do not want to support the gondola. It is too costly, makes no sense as you cannot get off when you want at different hikes. I also resent that 2 legislators are profiting against the WILL OF THE PEOPLE!...stope the gondola. Dr. John Hardy
33010	George Mierisch	A beautiful canyon open to all for hiking, camping and enjoyment should not be spoiled to satisfy the few who enjoy man's engineering feats and their own desire for convenience for expensive skiing. The gondola will be a blight to the natural beauty of this unique canyon.
33009	Ethan Haggard	Hello- I do not support the "preferred alternative" of building a gondola up Little Cottonwood Canyon. This proposed project uses public funds to bring customers to two private businesses (Alta and Snowbird) which are already effectively subsidized through their use of public land. It seems to ignore the fact that there are many members of the public whose uses of the canyon do not involve ski resorts. As I commented in the previous round-if Alta and Snowbird want a gondola up Little Cottonwood Canyon they need to acquire the necessary permits and land and build it themselves.
33011	Carole Sharp	Please do not implement the gondola as an option. It is fiscally and environmentally irresponsible. I suggest only allowing buses up Little Cottonwood and Big Cottonwood Canyons-less hazardous, less polluting, less crowding-it's the truly responsible answer.
33013	Snelson Clark	There are so many easily employed alternatives that the resorts could implement and pay for such as using the area they purchased at the proposed base for a staging area for buses, car pools van pools. Discounts for full cars. They could vary the start times, offer incentives for people to come at off peak times. Charge a premium for those times when traffic is the worst, like London does for downtown traffic. The traffic is only a problem at peak times a few weeks a year, that does not warrant a solution that benefits two resorts and costs the taxpayers a billion dollars before it is done. Please reconsider, the gondola is not the solution to the problem.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33014	Lori Wagner	Please don't saddle taxpayers with a gondola for ski resorts only. This is corporate special interests to an extreme. Please! Common sense solutions that everyone can use for hiking etc. Like buses and trains.
33015	Sean Innes	<p>I personally would hate to see 550 million/ 750 million with inflation / 1 Billion dollars most likely after construction begins spent OF TAXPAYERS MONEY on a gondola that DOES NOT serve the entire Salt Lake Valley NOR the entire Little cottonwood canyon. The gondola would only serve Alta and Snowbird. Additionally I would HATE to see a giant man made structure standing 200 ft tall for the entire length of LCC impeding on the gorgeous landscape that the road does not impede by views. Look to the Ochre mountains, the point of the mountain at Draper/ Lehi or even north salt lake and how we have destroyed Gods green earth in the pursuit of progress and money. It is intolerably sad. The canyons infrastructure is ALREADY AT CAPACITY for plumbing/ water/ electrical. How many more expenses and costs will the gondola incur by bringing more people up LCC to serve only a few and not all taxpayers. To make it fair for everyone, we need to turn LCC into what Zion National Park has done - make busing mandatory with more busing, personal vehicles requiring permit for those that live in or work in LCC and legalize hitchhiking.</p> <p>Respectfully, Sean Innes Draper permanent resident Former Alta employee US Army Combat Veteran West Point 2009 grad University of Utah 2024 US Army Ranger Father of daughters Outdoor enthusiast Climber Skier LDS Convert REI SLC Employee</p>
33016	Holly Molberg	I think that the gondola is not the solution. Too expensive, serves only two destinations, does not run in summer, will not impact even 50% of traffic. Other common sense options such as electric busses, more frequent busses, paid parking, encouraging ride share should be tried.
33017	Kristie Hilton	I think it's a terrible idea for all the reasons already stated. It will change our beautiful mountains forever and the wildlife will be affected, how can they not. It only serves a certain group of people yet you want all the tax payers to pay for it. I am absolutely against it!!
33018	CYNTHIA SPARLING	I think you [REDACTED] as a mayor and so does the governor. So, anything you two are advocating I intend to vote against.
33019	Brenda Moore	There are many more approaches to solving the congestion problem than the \$550 million dollar gondola which will only serve two ski resorts. With climate change by the time the Gondola is built there won't be enough snow to ski on. The towers will forever ruin the views in the canyon. I would love to see summer bus service which would allow through hikes, and less parking problems. The Gondola will only help the ski resort owners. If they think it is a great idea maybe they should pay for it. To solve the parking issues in the Canyon, having the ski resorts build parking structure to handle their clients is another option. Tolling has worked well in other canyons and did wonders for Millcreek canyon. Please look at all other options besides the Gondola.
33020	Molly Daley	<p>UDOT should conduct a capacity/visitor management study to better understand how many visitors LCC can support before completing the EIS.</p> <p>The gondola won't solve Little Cottonwood Canyon's traffic problems, but we already have solutions that are proven to work, including enhanced buses, tolling, parking reservations and enforcement of traction laws.</p> <p>Constructing more than 20 towers reaching 200 feet tall and stretching eight miles through the heart of Little Cottonwood would destroy the canyon's natural beauty.</p> <p>Committing hundreds of millions of taxpayer dollars to the world's longest gondola without a commensurate effort to reduce auto traffic in the canyon nor addressing spring/summer/fall traffic amounts to a government-paid lift for two ski resorts.</p>
33021	Erik Bartsch	Best low environmental impact and practical solution. Fully supported. The canyon doesn't belong to local residents whom have dew problems with access.
33022	William Rudow	More busses, especially electronic + snow sheds are the way to go. Gondolas are bad. They will not be used, take too long, be too expensive, move way too few people, & cause a parking nightmare. Busses will move many more people much more efficiently from many locations to many locations.
33025	Tina Koch	The public and residents has already told all those involved in this project that we do NOT want the gondola or any of the other "improvements" to be made. So why is it still being discussed. The residents of SL and the state of Utah voted against this. It will ruin the canyon, not improve air quality, not solve any of the issues. Other parks and recreation areas are managing without such big changes. I owned my own business and not once did UDOT, the state, or any other office supply transportation to my place of business. Why do the ski resorts get such an advantage. Why do those who live out of state get the benefits and not get their taxes increased. It cannot bring in more tourism because you say there is no room for more. I cannot say it loud or strong enough: NO, NO, NO to the proposal now recommended. Do not put in a gondola, do not build sheds on Wasatch Blvd., do not do the plans you have put forth.

33024	Jim Williams	<p>Im wondering if we are overthinking it? What if we go back in time and reduce the number of vehicles in the canyon by disallowing cars to park on the sides of the road near the resorts? Seems they park on the berm in the am, noon it snows, and then we wonder why we have issues. Less cars less issues. Please stop allowing cars to park on the sides of the road near the resorts, am/pm/summer/winter/spring/fall.</p> <p>Also why not charge a fee or carpool requirements?</p> <p>Odd / even day access based on odd/even liscense plate #s?</p> <p>Good job on getting rid of the down canyon 2 lane to merge at Tanners. That was a bad bottleneck in the canyon. So much safer now... everbody seems to get to the bottom at the same time anyway, the fast guys just hit traffic again</p>
33023	Carl Smith	<p>My name is Carl Smith, I am your constituent and an active, registered voter.</p> <p>I am sending this comment because it is extremely important to me that you DENY the Gondola project in Little Cottonwood Canyon. As a highly active member of the outdoors, I spend my summers climbing the granite and winters, skiing all over LCC.</p> <p>As an Engineer for my career, I don't believe the correct options have been examined. I believe we need to toll the canyon (for better funding). We need to build tunnels/avalanche shelters over the highway in the areas where avys are common (we have the data). We need more parking, at the base of the canyon, and at the resorts, if they want more business. We need to start small and then analyze outcomes before going forward with an irreversible construction mega project in Little Cottonwood Canyon.</p> <p>I urge you/UDOT to deny the gondola project for Little Cottonwood Canyon.</p> <p>Thanks for your time. Please feel free to contact me.</p> <p>Carl Smith </p>
33026	Chelae Beaumont	<p>I do NOT support having a gondola built in little cottonwood canyon. I would prefer to see an improved bus/shuttle system that can be utilized year round, and can offer more stops to support the entire community-not just the resorts.</p> <p>Thank you.</p>
33027	Terry Rose	<p>Not a good use of tax payer funds. gondola benefits small portion of populace. Increased bus service and skier capacity should be tried first. Aldo how much are Alta and Snowbird paying. They are main beneficiaries</p>
33028	Shari Quinney	<p>I am not thrilled about the gondola idea but it has worked in Europe for years. There has also been talk of linking Little Cottonwood Canyon with areas in Park City for years. It would be easy for patrons to get on the gondola, take a lift over to the other side of the mountain, ski, and ride back up to the gondola and get to their cars. The biggest problem I see is PARKING!</p>
33031	Jody Allen-Cotton	<p>Do NOT approve the gondola. Save Little Cottonwood access for hiking and climbing!!</p>
33030	Devin Close	<p>I do not agree that the gondola is the solution. The private ski resorts need to bear more of the burden including limiting the number of passes sold. If the local taxpayers will be funding the project, the project should benefit local taxpayers, not out of state lkon pass holders</p>
33029	Rodney Rigby	<p>The gondola option sounds like it will only benefit skiers and will be both expensive and intrusive to the "wild" nature of the canyon. I prefer less expensive options that rely more on electric buses and incentives for ride sharing.</p>
33034	Michael Palmer	<p>The gondola will destroy so much of the hiking and climbing opportunities of the canyon, while costing the taxpayers money. If the resorts want a gondola, let them build it. Don't destroy so much nature for their sake.</p>
33033	Anna Miech	<p>This is not necessary! There are other better options!</p>
33032	Stephanie Benson	<p>I've used the canyon as a skier and a hiker and I vehemently oppose the gondola. It only serves a small portion of the canyon and will destroy its beauty, which is the main reason that people come to use the canyon. Please reconsider and find another solution.</p>
33036	Matthew Conn	<p>I do not support the gondala. Please find a better option. Little cottonwood is salt lake counties greatest treasure and this will diminish it greatly.</p>

33035	Ken Paulson	<p>I believe that the decision by UDOT to favor the Gondola alternative for access to Little Cottonwood Canyon is inappropriate and short sighted as to the benefit it provides to the people of Utah who not only enjoy the canyon for its skiing activities but also for its scenery, flowers, wildlife, and general environmental aesthetics. Go up to Albion Basin and look down the canyon. Beautiful - oops, there is a Gondola right in the middle of this view. Awful.</p> <p>The Gondola makes limited access to the entire canyon and only favors the ski resorts in increasing their revenue. The financing for this project unfairly falls on the people of Utah to support these private businesses. If the Gondola project is so sorely needed to reduce traffic in the canyon during ski season, then the businesses that benefit from this project should pay for the project.</p> <p>That aside, I don't fully understand how this project is going to positively reduce congestion and make it more convenient to access the canyons during the winter.</p> <p>People are going to need access to the staging points of the Gondola. Anyone that has skied is aware of the lift lines that develop during the day. I believe that at the embarking and disembarking points of the Gondola, huge crowds of skiers will develop both in the morning going up to the resorts and even greater crowds will develop when the lifts close and everyone wants to leave at the same time. With a bus alternative, many busses can line up to take skiers down the canyon much more quickly than herding the crowds through a single loading point to access the Gondola. People are going to be tired and irritated at the that time and it isn't going to be a pleasant experience for anyone.</p> <p>OK then, everybody gets on the Gondola. Where does it take them. To another single staging point where everyone gets off to go to their -- Car? Where is their car? In the great parking lot either at the unloading point or at another offsite parking lot (wherever that has been set up.) Have we reduced the number of cars and the pollution (air, neighborhood congestion, refuse accumulation, etc.) the cars create. No, we have just relocated all of that to somewhere else. OK, we must now develop shuttle service from the lower staging area to offsite parking to get the skiers from point A to their cars. Do we really believe that we will not see the same amount of cars. How are people going to get to the points where they can access their cars. Either develop a shuttle service to offsite parking or a make a huge parking lot at the embarking point itself? Maybe people will drop off and pick up at the embarking point and won't need to park. Cool, do we now have a long line of idling cars waiting for pickups/dropoffs? Has anyone at UDOT ever gone to a school to pick-up their children - ugh. This will be many many times worse.</p> <p>A well organized bus transport system could eliminate the need for shuttles by setting up routes to pick up and drop off skiers at specific loading sites. I am not a particular proponent of a huge bus transport system but to me the</p>
35282	Greg Anderson	The proposed gondola is an absolute terrible idea. Widen the road increase busses. -- Thanks Greg Anderson
33038	Matthew Conn	No Gondola! I am primarily an Alta skier and this is the wrong solution.
33037	A Nelson	Please do not build a gondola in Little Cottonwood. I encourage alternate solutions that do not destroy the environment for users in other three seasons and only serve a small group of people. I oppose the construction.
33040	Hunter Jeppson	Don't do it. It won't alleviate any traffic problems at trailheads in the canyon. It will only be "useful" (not really) in the winter time. The rest of the year it will go unused.
33039	Manuel Rodriguez	A gondola is not going to reduce traffic in the canyon. Most people that drive through there aren't going to the ski resort.
33043	Charles Houtz	Please reconsider building a gondola. It will be a scourge on the canyon's aesthetics and natural appeal that serves a small wealthy subclass of canyon users. Skier traffic on a small number of mornings per year does not warrant such destruction of nature in service of two businesses. Many simpler options exist such as tolling, closing the road to private vehicles before a certain hour, running busses every 3 minutes, etc. also consider climate change's impact, we will look like idiots in 50 years when we have giant steel gondola going to ski resorts that now barely have any snow. to me it seems almost nobody who lives here is in favor of building a gondola. it is shortsighted corporate welfare in service of two wealthy businesses and in flagrant disregard for conservation of what can still be conserved. please do not ruin the canyon with a gondola.
33042	hunter kendrick	PLEASE DONT! The whole beauty of nature is NATURE. Let's not ruin the natural beauty of the canyon that is enjoyed by hikers and climbers just so a few rich people can go skiing easier.
33041	andrew fillmore	Please don't waste our sacred canyons with this horrendous and disastrous proposal. The absolute lack of creative solutions to this transportation debacle is itself a travesty. As a lifelong regular visitor of Little Cottonwood, I absolutely oppose implementation of the Gondola construction.
33045	Alex Harris	I vote NO to the gondola up little cottonwood canyon!
33044	Salem Prouty	No to the gondola plan. Run more buses and stop personal cars from traveling up first.
33046	Roland Thompson	I am a utah native, Sandy resident, voter, and lifelong visiter to little cottonwood canyon for climbing and skiing. Clearly the public does not want a gondola, why sacrifice one sport for another? Why deface our beautiful canyon for the use of a seasonal resort? NO GONDOLA!!!!!!
33048	Kent Thomas	I am definitely against the gondola B option selected by UDOT. Surely there are less expensive options, including tolls and technology to control the traffic using LCC. It shouldn't always be about maximizing the number of people in the canyons but rather limiting the number of people at one time so as to properly protect and preserve them.
33047	Spencer Corey	Save Climbing.
33049	Eli Primmer	I strongly opposed the building of a gondola in Little Cottonwood Canyon. I firmly believe that it will permanently alter the character of the canyon (in a very negative way) at the expense of the tax payer. I don't want taxpayer dollars from hard working utah residents to benefit only wealthy skiers and two huge ski resorts. I see almost no benefit to a gondola in Little Cottonwood Canyon. The skiing is already too busy as it is up at alta and snowbird. If anything, please install tolling and make it free if there are 3+ people in the car. This alone would do almost as much as building a gondola as far as reducing congestion. No Gondola!

33051	Daniel Barton	The proposed gondola doesn't solve the problem and creates a whole lot of other problems. The gondola only serves 2 ski resorts. Why should public funds be used to essentially pad the pockets of 2 ski resorts. The gondola doesn't help traffic for anyone going to trailheads or any other place along the canyon. There are other methods to help traffic such as electric bus service, tolls and other things that don't require destroying trails, historic rock, or other elements of nature. This service would really only be used during peak snow months. Close to a billion dollars of public funds to benefit 2 ski resorts for 3 months out of the year makes no sense and is no where near a "solution" to this problem. I am a voter here in Utah and strongly oppose this action.
33050	Bill Maggs	I am the target audience for the gondola (out of state skier with with lots of disposable income who wants to maximize my time on the mountain) and I say DON'T BUILD IT. It will ruin the Little Cottonwood and serve no real benefit. Build a few parking lots get some really nice buses. I'd pay for it.
33052	Grant Jenkins	There seem to be several non-destructive options outside of a giant gondola bisecting a beautiful canyon
33054	Heidi Heckmann	I am opposed to the gondola. Please vote no.
33053	Elise Caffee	I am a Utah voter, a homeowner in Cottonwood Heights for 13 years, a skier, and an outdoor enthusiast. I am not a fan of the gondola. The gondola solution does not solve a year-round transportation problem and does not provide more access to the canyons year round. The gondola only benefits skiers in Little Cottonwood Canyon and ski resorts. Less intrusive measures, like tolling and additional busing, should be implemented before making such a huge change to the visual landscape of the canyons as well as impeding canyon accessibility for many for years to come during construction. I understand the canyons are getting more crowded (I live in Cottonwood Heights and have a rental cabin in Big Cottonwood Canyon) but the gondola solution is not the right one. Please don't put a gondola in our canyons.
33057	Marsha Kraudy	I am against the gondola big time. Way too expensive to build & ruin the canyon scenery & too expensive to use.
33056	Katherine Lorens	I hate the entire concept of the gondola. It's a money grab by elitist ski resorts and does not serve the canyon as a whole. A bus system is much more feasible and could serve more people. If you increase incentive for the bus usage and increase parking at the base you wouldn't need to expand the road and could have stops at popular trailheads as well
33055	Nate Bryan	Thank you for giving my comment consideration. Are you lies Little Cottonwood Canyon for skiing both back country and at the ski resorts, rock climbing, hiking, and a general get away from the city. I have reviewed to the extent possible, the options presented and am crestfallen that the gondola option has been selected by UDOT. In my mind, there are so many better options that are feasible and at least as easy to accomplish. I sincerely hope that these options can be revisited and a better option can be chosen. The gondola option is shortsighted, serves only a minority of the users, and will further crowd a beautiful canyon. Thank you for allowing me a chance to comment.
33060	John Hanks	This is awful for climbers, and will only be used 3 months of the year
33059	shahzad ahmad	I support the Gondola project 100% Having lived here for 12 years the traffic situation for locals AND tourists is atrocious The ski resorts are world renowned , climbers and hikers have rights also but the impact is on hundreds of thousands of skiers
33058	Guilherme Del Fiol	The Gondola is an expensive solution that will only serve a very small group of people during the skiing season. It will ruin the beauty of LCC. The evidence that it will solve the traffic problems at LCC is very weak and based on overoptimistic assumptions. It is also useless outside the skiing season. Other solutions such as expanding the bus system coupled with paid parking at all ski resorts are cheaper, simpler, more equitable, and more environmentally friendly.
33062	David Chen	My name is Dr. David Chen and I strongly oppose the creation of an LLC gondola. I am a voter within SLC and UT, and I use LLC for hiking, bicycling, and rock climbing. I strongly believe that our remaining natural places should remain undeveloped. I have serious concerns that powerful corporations are exercising political power that opposes popular opinion. I support other options such as tolling and increased bus services in LCC. I would like to thank UDOT for representing the people of SLC and UT.
33061	Spencer Ward	The gondola is destructive to natural habitats, provides no inherent value to the general public (the tax payers that will be paying for the project), and will only benefit the private corporations that will not be supplementing the project. Other low impact solutions will be able to solve the same issue. With large amounts of people also driving up the canyon roads, and taking public transportation, it will only crowd ski resorts past their current capacities. The direct issue that this project is trying to solve, lower canyon traffic and more skiers in ski resorts, will only be made worse because of the gondolas. Other solutions that will actually help the issues are state mandated ski resort limits to how many skiers can be at the resort per acre the resort owns, mandated carpool laws and increased traction requirements, increased bus routes for the cottonwood canyons, dedicated bus lanes in the cottonwood canyons, and carpool incentives/lots further from canyon where single riders/drivers can pick people up outside of their party to fulfill carpool mandates. UDOT has stated that traffic only needs to be reduced by 30% for normalcy. Why can't we focus on direct solutions to the problem that don't affect tax payers. If the private corporations that would directly benefit from the gondolas like a gondola system, they should rally together the funds themselves to pay for it. A perfect example is Snowbird's tram system.
35286	Florin Pustea	To whom it may concern: While there is a campaign against building a gondola, I would like to share my support of it. For us, the main reasons are limited parking availability at resorts, traffic, low bus frequency - which also add to traffic themselves, and the opportunity for picturesque views along the way. Many overseas resorts use them effectively and are a year-round point of interest themselves. With best regards, Florin

33064	Jared Ray	Overall the Gondola proposal for Little Cottonwood Canyon is an abysmal solution to the congestion that the canyon experiences. This is an inappropriate use of money to solve this solution. The cost would be ridiculously high compared to similar solutions that will conserve nature better and save money. This also will create a huge complication of the fact that the canyon only has limited amounts of space. The ski resorts will become even more at capacity than they already are, which will overall ruin the experience of being outdoors during winter. I believe that this gondola solution will only bring overcrowding and other complications with that. Alternative solutions to this problem should be chosen.
33063	Robert Jacoby	I am submitting this response to say that I am adamantly opposed to the gondola alternative for providing access to Little Cottonwood Canyon. My reasons follow: 1. The only beneficiary of the proposed gondola system, will be the privately owned ski resorts in the canyon. The enormous cost of the gondola facilities and its infrastructure, will be the burden of the public, and will in effect, be a subsidy to the Owners of the ski resorts. The overall public will see no benefit. 2. Access during the non-winter months provided by the gondola will be limited and in flexible visitors wanting to stop at trail heads and intermediate destinations. Whereas, an enhanced system of ground transportation, has the potential of providing the flexibility of visiting the many destinations other than the ski resorts. 3. The notion of running an overhead, visually obtrusive, sky-system through one of our state's most beautiful wildernesses is an act of disrespect and short sightedness. 4. As an avid user of LCC, and to enhance the quality of visiting, I would be in favor of potentially limiting the amount of people that can be in the Canyon at any one time. This could be accomplished by reservation or scheduling.
33065	Riley Voss	I am in opposite to the Little Cottonwood Canyon gondola proposal. It would not alleviate traffic and the destruction of the natural environment of the canyon does is not justified.
33067	Robert Farney	We strongly oppose the gondola plans. It will permanently destroy the natural beauty of the canyon.
33066	Jane Yee	I am a Utah resident of 3 years and am appalled that the proposed solution to the cottonwoods traffic is a gondola. This will be a detriment to the environmental in the area as well as only serves and benefits a select group of people. For a smaller sized city, our public transportation can be much improved and should start with increased frequency of buses that can both serve hikers, skiers, and bikers alike.
33068	Shelley Parker	While gondolas may be cool looking, they do not benefit the many, only the privileged few. They will cut into the pristine landscape and still not solve the traffic problem. Not to mention the monstrous cost! I beg you, do not go forward with this plan!
33069	Joe Smith	It literally makes no sense. It will not solve any issues, and will cause permanent damage to the area. What is going on?
33073	Will Hanson	Please consider alternative options to the gondola. Only allow buses up the canyon on weekends(Dec-Feb) and main holidays. Or make it very expensive to drive up with passengers under 3. Very few will benefit from the gondola. Thank you Will
33072	Piotr Tekiel	I do not support the idea of being tolled on top of having limited bus service. How can alternatives be encouraged when they don't exist. I pay for a ski pass for a local resort and now I have to get lucky with reservations and I have to pay to drive up the road. If there is a toll 25-30 dollars is excessive.
33071	Colby Child	Before a project like a gondola is ever considered, I would like to see UDOT give less invasive options an honest try to see if they work. Please give enhanced bussing, increased park and ride parking, tolling, and other strategies a real chance.
33070	Jared Booth	I am commenting against the Gondola. While I am a long time season pass holder at Alta and have skied cumulative thousands of days in the canyon, I am opposed to the Gondola. We need a solution that allows more flexibility, accommodates travel DURING avalanche danger. A gondola is not heated, can't be operated in winds, it is a poor choice, even if it costs less. Please consider an alternative that will accommodate more uses and solve the issues which primarily arise during avalanche danger periods. A road with coverings over the slide paths would be much preferred, even if at greater cost or impact. Thank you.
33074	Joel Kershawwhiles	Absolutely ridiculous to think this expensive monument will actually get use by everyday skiers or families. Catering to rich people at it's finest while ignoring those that have to deal with these areas of traffic
33076	Sydney Ralls	No gondola in little cottonwood canyon.
33075	Corinne Murdock	Little cottonwood is an incredible climbing location. Putting up a gondola will destroy classic boulders and will ruin the view for all users of the canyon. The gondola is an absurd way to address traffic that is only an issue during a few times during the year. We do not want a gondola!
33078	Marysia Watson	No gondola No toll More buses and carpooling
33077	Kristina Suorsa-Johnson	I am a UT resident and voter and I am STRONGLY opposed to the gondola in Little Cottonwood Canyon. This is not a reasonable solution and does not consider the broader needs of LCC users. Having increased bussing would be very much preferable to the gondola, and would help support other uses of LCC besides resort skiing.
33079	Ashley Aardsma	Building parking garages in the main park and rides would be less damage to the environment. Make the canyons bus and locals only for a couple hours in the mornings to incentivize riding public transportation. The gondolas work in other places, but they will not work here. The solution is incentivizing the bus without destroying the canyon and parking garages could be part of the solution.
33081	Claudia Ruby	NO NO NO Gondola!!!!
33080	Sara Clark	Hello The gondola is not a great option for LCC. The gondola is being paid for by tax payer dollars, however it will only be used to service the ski resorts DURING ski season. This makes it primarily for private use, however taxpayers are paying for it. That is wrong. Additionally, the gondola is going to ruin the beauty of the canyon, and destroy prinkic access to hiking trails and climbing routes. Please consider other options and don't rush this decision. The local community is against the gondola. Please listen to the taxpayers and locals.

ID	Full Name	Comment
35288	Joseph Wirthlin	<p>to whom it may concern,</p> <p>I am a long-time Utah resident and voter who has enjoyed the use of Little Cottonwood Canyon since I was three years old and I am opposed to building a gondola for transportation through Little Cottonwood Canyon.</p> <p>I am aware that the canyon has been getting more and more crowded as more people discover how great of a state Utah is and how incredible the canyon is. However, I do not believe that building a gondola is the solution to this problem. I am worried that the construction will cause more damage to the beautiful nature of the canyon and will not provide adequate benefits to offset these damages. I believe that the canyon would benefit from a gondola only in winter months while ski resorts are meeting even greater demand. However, the gondola will be wasted in the spring, summer and fall months when those wanting access to the canyon will hope to access a variety of locations in the canyon that are unrelated to ski and mountain resorts. Thus, automobiles will be the main mode of transportation in the canyon for the majority of the year and the gondola would be wasted.</p> <p>I believe that the damage that the gondola would cause would be great. Construction would damage many sections of the canyon and would destroy popular recreation areas. This would effectively reduce larger crowds gathering at the canyon, but at the price of moving elsewhere to seek those destroyed recreational activities. Thus, the gondola would be wasted by pushing out the people that it is intending to help. Even during winter months, for the gondola to be effective, large parking areas would be required to be built at the mouth of the canyon where space is very limited and would cause even more damage to local aesthetics and natural resources.</p> <p>As a master's student of economics at the University of Utah, I am a strong supporter of creating a toll road for Little Cottonwood Canyon instead of building a gondola. A toll would incentivize carpooling or riding the bus, thus supporting the natural environment by reducing CO2 levels in the atmosphere that can be very important during winter months in Utah. Additionally, while building a gondola would cost the state a large sum to construct, the toll fees would increase government revenues to support natural restoration and outdoor recreation in the canyon. While many individuals may initially be frustrated with a toll put in place for driving up the canyon, I believe that it will not deter individuals away from the canyon because of its incredible, natural and recreational appeal.</p> <p>Thank you for taking the time to consider my opinions.</p> <p>Respectfully,</p>
33082	Joseph Wirthlin	<p>I am a long-time Utah resident and voter who has enjoyed the use of Little Cottonwood Canyon since I was three years old and I am opposed to building a gondola for transportation through Little Cottonwood Canyon.</p> <p>I am aware that the canyon has been getting more and more crowded as more people discover how great of a state Utah is and how incredible the canyon is. 33083	Caroline Newman	<p>I am opposed to the gondola proposal. It caters to the ski industry, who have never had to come up with alternative use options, ie. staggered entrance into the resort, daily caps like the national park has had to do at Arches National Park. They could use the even odd license plates which worked at Arches. We as taxpayers should not have to subsidize the ski industries profits. There are no limits to the resorts growth, they are greedy.</p> <p>The project has no application to hikers. I can't request off the gondola at a fixed trailhead.</p> <p>This projects profits the few, not the majority.</p>
33085	Fabiana Ostronoff	<p>No to gondola</p>
33084	Ashley Judd	<p>This is the most greedy non benefiting plan I've ever heard. If the communities opinion really mattered over ski resorts making money then the gondola wouldn't haven't even gotten this far!! This is not solving any traffic issues and is just a flashy POS that'll ruin so much wildlife and trails and natural rock climbing. Not to mention will completely alter the landscape!</p>

33089	Steve Simbeck	<p>Starting with an expensive and "permanent" gondola is not a prudent plan. Why not try lesser impactful solutions first to see if they alleviate the issue. More buses, for example might reduce cars and, therefore, congestion. If it doesn't work then try something else. If the gondola is not successful we are stuck with a huge expense and permanent structures.</p> <p>Also, there is way too much being hidden. Who is profiting on this? Insiders are running this and it is shameful.</p> <p>No gondola at this time!</p>
33088	Sheryl Dickert	<p>A gondola is not the solution. The money for this project could go a long way to serve both canyons. Like many others, I don't want a gondola in my backyard and humming overhead while I hike or bike or climb in the canyon. Not to mention the boulder problems that will likely be destroyed during the building process. I don't want to see the towers and cables in what is now a pristine landscape. Often I have found myself at gate buttrass for a couple hours of solitude among the boulders. All for the sake of getting more skiers to two resorts? It doesn't serve anyone but them. Not the hikers, climbers, backcountry skiers. It doesn't help anyone in Big Cottonwood at all. The road will still be crowded. The lift lines will be even worse. Before something so extreme, tolls and adequate bussing needs to be implemented. If it is done right and easy to use, people will do it. The reason I choose to carpool instead of taking the bus is because it doesn't come often enough. The resorts also need to take some responsibility. Alta's reserved parking is a start. Capped capacity on busy days like Deer Valley and Big Sky has done helps too.</p>
33087	Stephen Odd	<p>As a native Utahn, a skier, climber, and biologist, I find that the Gondola has the most potential to help promote sustainable recreation in LLC so long as good policy is implemented. I believe that the gondola should be paired with a shuttle system to help recreational users of the canyon get to trailheads or other areas dispersed through out the canyon as well as offer transportation for bikers etc. I also believe that this should be a no/low cost system for users to eliminate economic barriers to recreation.</p>
33086	Todd Smith	<p>Please do not allow the proposed gondola for Little Cottonwood Canyon to move forward. Please continue to work with the various parties to figure out alternatives to ease the traffic in the canyon without dramatically changing the face of that canyon forever. We are blessed to have one of the most beautiful states in the country and I beg you to block this potential eye-sore from happening. Let's find solutions that respect the natural environment...PLEASE!</p>
33091	Michele Urban	<p>Please dont build a gondola. Maybe it is better to have a low lying electric train with two biking paths along the sides. The view of the mountains will be ruined. BCC entry has been scarred. Please dont scar LCC. Lets give decency and respect for nature.</p>
33090	Sheryl Dickert	<p>A gondola is not the solution. The money for this project could go a long way to serve both canyons. Like many others, I don't want a gondola in my backyard and humming overhead while I hike or bike or climb in the canyon. Not to mention the boulder problems that will likely be destroyed during the building process. I don't want to see the towers and cables in what is now a pristine landscape. Often I have found myself at gate buttrass for a couple hours of solitude among the boulders. All for the sake of getting more skiers to two resorts? It doesn't serve anyone but them. Not the hikers, climbers, backcountry skiers. It doesn't help anyone in Big Cottonwood at all. The road will still be crowded. The lift lines will be even worse. Before something so extreme, tolls and adequate bussing needs to be implemented. If it is done right and easy to use, people will do it. The reason I choose to carpool instead of taking the bus is because it doesn't come often enough. The resorts also need to take some responsibility. Alta's reserved parking is a start. Capped capacity on busy days like Deer Valley and Big Sky has done helps too.</p>
33093	Kelli Hutchins	<p>I am opposed to the gondola project as it is limited in capacity. Rather than a gondola while a beautiful and scenic ride for users is a more expensive option. Rather I feel public transportation via a bus system may be more cost effective and efficient at transporting large amounts of users in little cottonwood canyon. Thank you to UDOT for all they are doing within Utah to make public transportation more accessible to users in Salt Lake, Utah, and Weber counties!</p>
33092	Kelli Allen	<p>I'm a Utah voter who lives near the base of little cottonwood canyon for the last 10 years. For those of us who choose to live here, it's because we love the canyon - all of it. We are not just going to the ski resorts, we have our favorite trailheads and reflection spots up and down the canyon. We are hikers, bikers, climbers and mountain goat watchers. The gondola serves the patrons of ski resorts only- not the locals who support the project in our backyard with our tax dollars. We need green solutions that alleviate traffic for the WHOLE canyon. The Gondola is NOT the right solution.</p> <p>Thanks for your attention, Kelli Allen</p>
33094	Heather Boss	<p>This is not a good idea! Destroying views for a few people to get to and from a ski resort, there has to be a better option that serves everyone?!?</p>
33095	Anthony Hedberg	<p>This is a horrible idea and NOT the best solution and you KNOW it. It's money, it's greed, it's corruption. Be better than that. Be good and decent humans.</p>
33096	Emily Pape	<p>NO GONDOLA</p>
33097	Sarah Moles	<p>I am a frequent user of Little Cottonwood Canyon and I am STRONGLY OPPOSED to the gondola. I hike, climb, backcountry ski, and ski at the resorts. My concern is that the gondola will come at a great expense to the county while benefitting a relatively small local population and tourists. I fear the gondola will also simply move traffic down canyon and into town. If there really is a \$45 fee per person to use the gondola, I don't think it will be fully utilized. It will be an eyesore and ruin our beautiful landscape.</p> <p>I am very much in favor of all the other steps included in the phased in approach. I DO support the building of snow sheds, tolling, and increased bussing.</p>
33098	Erin Otterstrom	<p>Setting up a toll booth at the mouth of the canyon would be a lot cheaper and would reduce canyon traffic. A much better option than building a huge gondola and continuing overuse of the canyon.</p>
33099	Joseph Vargyas	<p>A gondola to solve traffic congestion in little cottonwood is farcical, simple math bears it out. This is a scheme designed to enrich certain stakeholders, not an honest attempt to improve circumstances for the majority of residents.</p>

33102	Jennifer Adams	The proposed Gondola is irresponsible spending of our taxes and will destroy our canyons and surrounding neighborhoods. Please do not move forward with the Gondola. There are better fiscally sound and environmentally conscious alternatives for future generations.
33101	Jennifer Adams	The proposed Gondola is irresponsible spending of our taxes and will destroy our canyons and surrounding neighborhoods. Please do not move forward with the Gondola. There are better fiscally sound and environmentally conscious alternatives for future generations.
33100	Madeline Rogers	Maintain existing visual experience
33105	Marcy Laufer	No gondola. It doesn't make any sense, serves a small percentage of the community, and will damage the canyons, nature, climbing, and outdoor recreation forever.
33104	Mike Adams	NO on Gondola!
33103	Adrienne Winter	I am against the gondola. I believe we need to keep looking for cheaper and better options.
33108	Logan Zollinger	I do not support this. This will benefit a very very small group, namely the wealthy that can afford it. It will take so much away from climbers, hikers, bikers, etc! A much bigger and more active group. This will impact the environment and wild life. I truly feel like the majority of people are opposing this while a small more connected group is for this option. Please side with the majority and do what is best for Little Cottonwood canyon as a whole.
33107	Mark Harrington	A gondola the length of Little Cottonwood Canyon will be a visual blight that will forever diminish a spectacular canyon that is in more need of management than convenient access for private ski resorts. A publicly funded scar across the land for a privileged few is unacceptable. The impact of this action will never be offset by the meager benefits. Other options of bussing and/or tolling would serve our needs better
33106	Taggart Cole	I want to see more ride share, public transportation and pay for parking options Not a massive waste of money gondola
33110	Chris Taylor	A gondola will not solve or improve access, parking, and the environmental impact alone is the most outstanding casualty. LCC is an attraction by itself, it doesn't need the proverbial neon cowboy. Rudolph the Red
33109	Jessica Adlard	Hello! Thank you for trying to save our canyon from the busy traffic and the transportation problems especially in the winter season. We qualify as Utah voters and live near little cottonwood canyon and use it regularly throughout the year. The idea of a gondola changing our canyon forever breaks my heart. There are so many ways to enjoy the canyon without putting in a gondola. I love how Zion National park solved the traffic problem there by putting in a shuttle service to control the crowds and protect the canyon and park. It works great! I was just there last month and it serves a wonderful purpose. I hope you will consider how a gondola would change the canyon forever. There is already a road. Put in to place a shuttle service and make people use it year round if you want. Just please don't ad a large eye sore to our beautiful canyon. I am in favor of any option besides a gondola. Please consider my opinion.
33111	Eric Holmstead	Traffic in the canyon is from the residents of the Wasatch front. They will not suddenly decide to use buses when they can hardly be bothered to use existing bus systems. A gondola is the best option if driving up the canyon to resorts is made expensive and riding the gondola is cheap.
33112	Taylor Allen	The gondola is irresponsible. It benefits the ski resorts more than the public or the canyon itself. Frequent busses all year long will be a better solution for the people of Salt Lake County, who will be the ones ultimately funding the project.
35289	Bree Bush	We dont want a gondola Sincerely, Brianna Bush
33114	Angela Wolsey	The gondola is a misuse of public funds. This benefits only two ski resorts, who are not paying for it. Additionally this will only push the ski traffic into the valley, and does not solve any pollution issue. This is an extremely expensive idea to help on at best 10-14 powder days through out the year. It also seems questionable that the gondola is going to function on these days. Misuse of public funds. Disagree with the gondola.
33113	Whitney Douglas	Everyone thinks this will help the traffic but those I've talked to that are avid skiers say that they wouldn't take the gondola. I am not an avid skier and don't want my tax dollars going toward something that will ruin the aesthetics of our beautiful canyon, that no one will use, for a small minority of people that ski. We shouldn't widen the roads either. The best solution is reservations for skiing! First come first serve. Just like Disneyland. Or zions National park. If the canyon is full, too bad, you have to wait for cars to come out! It will break my nature loving heart if this gondola happens. Please no.
33116	Jake George	I vote to keep it as is and find another solution other than widening the road and the gondola. I'm not sure what the ideal solution would be but neither of these options seem like a good maneuver.
33115	Jake Nilson	No thanks! Let me climb! Keep your grubby paws off the mountain
33119	Aubrey McDonald	Find another way to relieve the traffic. NO gauntlet.
33118	Zach Fritzsche	NO - widen wasatch, WIDDEN THE ENTIRE CANYON AND CREATE A BUS ONLY LANE this gondola is LAST RESORT. I would be embarrassed to see this go up our beautiful canyon and I am a liberal, huge in development. This is a wrong move.

33117	Karen Lundberg	<p>Thank you for this opportunity to comment on the proposed changes for both Wasatch Blvd and Little Cottonwood Canyon. I have resided in the mouth of Little Cottonwood for 35 years. During these years I have skied, hiked and biked in the area. All these years I have dreamed of walking paths and protected bike paths. I have visited other communities with dedicated bike lanes and enjoyed the protection from the roadway. I would use my bike more often to run errands if there was a dedicated bike lane. The increased use of bikes is both healthy for the community and adds value to the area. Please consider the funding of the gondola carefully. We do not fully understand the total cost and I believe there are better uses of tax dollars, i.e., The Great Salt Lake and infrastructure especially water and bridges. I do support a phased approach to try other solutions better jumping ahead to something that is so expensive and with a visual impact. Having lived in the mouth of canyon so long, I have witnessed a significant decrease in snow pack these past years. Scientists tell us that global warming is just beginning to affect us. It seems foolish to invest so much money in a possibly dying enterprise with fewer big powder ski days.</p> <p>Also I believe Utah families will not ride the gondola due to the cost and inconvenience. Our family used our parked car to store our sandwiches, warm up and take a brief break. The gondola seems to be of interests to out of town people and not Utah families.</p> <p>Once again, thank for the opportunity to express my concerns.</p>
33120	Catherine McKenzie	<p>We must try other things such as tolling or limiting cars during storms before installing a gondola!</p>
33122	Kelly Nielsen	<p>The gondola is the wrong option. It is crazy expensive and will only be used a few months of the year and won't alleviate traffic. Why put in a permanent gondola and let it sit for 9 months?? Everyone knows powder days are the days with the most traffic but those are only a few days of the season. One estimate predicts that the gondola would only transport 15-20% of the people that cars can. Why spend 500 million+ on 15-20%??!! The gondola only helps the resorts. It's just a stupid idea. If you want help alleviate some traffic get rid of the ikon pass. Since the ikon pass, traffic in both canyons has significantly increased. I'll say it again: Gondola is stupid. Get rid of the ikon.</p>
33121	Sharon Myler	<p>WORST IDEA EVER! Better ways to ensure EVERYONE benefits. Let's find them!</p>
33124	Kristin Burgoyne	<p>No gondola please!!!!</p>
33123	TyAnne Crook	<p>I am adamantly opposed to the gondola.</p>
33126	Kylie Schenck	<p>My name is Kylie Schenck, I've been a Utah resident for 28 years and my family and I spend a significant amount of time in the canyons. Putting a gondola in Little Cottonwood canyon is not only a negative to a beautiful environment, but it will not fix the issue of crowding in the canyons. The best solution to this is increasing bus availability up the canyons. Please do not move forward with this project that will affect our beautiful canyon!</p>
33125	Deirdre Cronin	<p>Hi, I am a Utah voter and a user of Little Cottonwood Canyon. I believe that the environmental and economic impact of building a gondola far outweighs the benefit it would have for a very select population. Not only could it ruin the scenery of one of the most beautiful places in Utah but it will be a permanent reminder of the income disparity of our state, serving only the people who make enough money to spend thousands a year to ski. I implore the DOT to reconsider and attempt to run better public transport. Thank you</p>
33129	Brian Lifferth	<p>Please do not install the gondola</p>
33128	Laura Livnat	<p>No to the gondola. If the ski resorts want a gondola, let them pay for it but I would still oppose the damage a gondola would bring to our watershed. The resorts have priced me as a local out of being able to ski, and I don't want to pay for a gondola that will be obsolete in 10 years. The interim plan is good, make it permanent.</p>
33127	Layne Koldewyn	<p>I am strongly opposed to the gondola in Little Cottonwood Canyon. I actively use this canyon and I feel that the gondola would destroy so much of this beautiful landscape. Please abandon this horrible idea!</p>
38659	Carter Casper	<p>Hi, this is Carter Casper. A number is [REDACTED] I would like to comment my opposition to the gondola up Little Cottonwood Canyon. I've looked at all the information and I just do not, my comment would be that it does not serve. It does not do enough does not serve enough people. It serves people trying to get to the resorts but what about all the trailheads and other recreation that is being used up that canyon that does not come from the two resorts. I would also state the impact to the canyon, while I know what's being said is low, seeing this gondola where the towers would be placed, there's just too much impact. It doesn't have to be any. I would propose and I'm sure that this has been considered and if not then I don't know why, but it would be so much easier to implement a pay per car up the canyon. How is that? If a car has one person in it, then they pay \$30 to drive up the canyon. If a car has two people in it they paid \$20. If a car has three people in it they pay \$10. Any car with four or more people go up the canyon for free. I promise you that would have more impact on the traffic situation for the twenty or so days per year that traffic is an issue in the canyon. The gondola is expensive and I feel that the only people pushing it are developers that want to get their fingers into the money pot in building and planning and carrying out that project. It cannot move forward. We can't let that happen. I don't want to crumbled it the wrong way. There's much easier ways that this can be taken care of. Thank you.</p>
33132	Clay Northrop	<p>The gondola is not a good solution to the traffic issues in Little Cottonwood Canyon. It is a gimmick that serves only two ski resorts, not the public that uses LCC. It's irreversible, inflexible, and likely to be ineffective. Further, it will be an eyesore, forever disfiguring our beautiful canyon. It's an irresponsible use of taxpayers' money. There are many options that are far cheaper, far more flexible, far less disfiguring, and likely to be more effective. And if they prove ineffective, we haven't destroyed the canyon to find out. Thanks for your consideration!</p>
33131	Alex Green	<p>I am a Utah resident and voter and do not support the gondola. It will only help a select group of people and will be expensive. I think a bus system would be better like Zion National Park has. This way you can add or reduce service at peak times and as electric vehicles improve it will have less affect on the environment. Please don't commit to the gondola. There are better options!</p> <p>Thanks Alex</p>
33130	Itorri Sontag	<p>I really don't support the gondola plan. It won't provide any expanded access to trailheads and climbing along the canyon road and may negatively impact the climbing as well. Providing expanded bus access to the canyon year-round (including times later in the day) and possibly considering something like tolls for personal vehicles would help to cut down on the canyon traffic. Tolls seem to work great for Millcreek Canyon, and should help a lot with LCC as well.</p>

Comments on Little Cottonwood Canyon Final EIS

35290	andy beck	<p>My Name's Andy Beck, I own a home in Cottonwood Heights and I am opposed to the gondola.</p> <p>I am a Utah voter and I use Little Cottonwood Canyon multiple times a week, summer and winter. This is a place where my son, my friends and all their families come to enjoy nature and the beautiful canyon. I feel that the gondola may be the worst option available for the future of the canyon.</p> <p>I believe the best solution is more buses and bus stops, or possibly tolling .</p> <p>Thank you for looking into these options, I hope you can represent what the community wants as opposed to what's best for the two ski resorts.</p> <p>Sincerely,</p> <p>Andy Beck</p>
33136	Daniel Buehner	<p>The gondola is a terrible idea. It does not actually solve the problem of congestion in the canyon. Travel time to the ski resorts will actually get longer in the winter, none of the other areas of use in the canyon will benefit, and too much of the natural beauty of the canyon will be destroyed.</p>
33135	Chloe Nuttall	<p>Hi! My names Chloe I'm 18 years old and one of my favorite things to do is drive up the canyon. I do not think putting a gondola in the middle of the canyon would be the best option. Increasing bus services would make much more sense in my opinion!</p>
33134	Benjamin Hansen	<p>I am 100% against the gondola with public funding. This is not what the general public wants, and we should not bear the responsibility for this cost. In addition, access to the beautiful trails should NOT be removed!</p>
33133	Hannah Barton	<p>Please don't move forward with the gondola option. Per the Salt Lake City department of public utilities, it will impact our watershed. Our water and air are our MOST important resources. Without them, nothing else matters. There will be no residents, tourists, skiers, hikers, or climbers to use the canyon if we do not protect our water and air and sustain them as much as possible. Anything that threatens those natural resources should be stopped.</p>
33137	Andrea Sam	<p>I am opposed to the gondola. It is a huge waste of money and is more damaging to the environment than any issues it may solve. I believe there are better ways to deal with traffic in Little Cottonwood canyon.</p>
35291	Deirdre Cronin	<p>Hello, my name is Deirdre Cronin. I have great pride in being a Utahn and that is why I feel the need to express my disappointment and opposition to the gondola project. I do not believe that the economic and environmental impact of the gondola to serve so few individuals is indicative of how important community and nature are to Utahns. A permanent fixture in the canyon to serve the wealthiest Utah citizens would do much more social harm than good. Killing animals and cutting down trees all so skiers are less inconvenienced seems wrong to me. I implore the DOT to explore public transport options to not only save money but Utah's beauty!</p> <p>Deirdre Cronin</p>
33138	Audrey Wade	<p>This serves such a small population and is so expensive for such a poor solution to the problem at hand. So, big nope from me, as someone who loves the view without a hundred steel towers blocking it.</p>
33139	Tim Vanderkamp	<p>I believe adding a lane only for busses and make those busses free while simultaneously adding significant tolling cars as well as charging for parking is the answer. People do not change habits until the right thing is also both the easy and the cheap thing AND at the same time the wrong thing is expensive and difficult. If the goal is truly traffic reduction then make using a car expensive and difficult and limiting and make getting on the bus easy, free, and fast. When people are sitting in their cars in traffic watching that bus zip on by, they will start riding the bus. At Keystone resort nearly everyone parks remotely and rides a bus to the lifts. Also - as far as i can tell the ONLY people who want a gondola are the owners of snowbird and alta and that is who it would benefit and nobody else. If the true goal is traffic reduction, then make the bus easy and affordable and make driving expensive and difficult. Heck, only allow so many cars per hour and make them make a reservation just to go up the canyon like they do in arches.... or ride the bus which is free and leaves every fifteen minutes.</p>
33140	Tracy Graham	<p>Please leave the canyon the way it is. Please don't build a gondola. The buses could work but DO NOT DIG, BUILD, or DISRUPT the natural beauty and peace of little cottonwood canyon. Let it be. Thank you</p>
33142	William Gebauer	<p>I believe it is important to find an alternative to the gondola proposal as it only services skiers and not the broad range of groups that utilize little cottonwood canyon.</p>
33141	Kassy K	<p>I am a resident of Holladay, and oppose the Gondola. Please do not spend half a billion tax payer dollars to fund ski resorts! Bad choice UDOT. The public has spoken that they clearly do not want this. Listen.</p>
33143	Krystal Harris	<p>I oppose the gondola!</p>
33147	Nolan Jahn	<p>This seems like a lofty goal that only benefits a small percentage of outdoor enthusiasts. I believe the majority of those enthusiasts would like trails without towers I know I would. I say no go to the gondola</p>
33146	Tara Steele	<p>I think this is an unacceptable risk to our watershed. A gondola will only benefit people traveling to and from the resorts while spreading the risk and cost to the rest of us. Try the less permanent and/or damaging options first, then reevaluate to see what needs to be done</p>
33145	Wendy Caron	<p>The traffic issue can be solved with required reserved parking. Use a reservation system like Snowbird has for the full canyon and spend some of the proposed gondola money on a marketing and education campaign to spread awareness of the parking requirements. No new high environmental impact, small-market serving, expensive to ride gondola.</p>
33144	Ceyda Ural	<p>These canyons need efforts in restoration, not industrialization. They're beautiful and enjoyed by many but the impact of building these towers and the eyesores they will be is not worth any business. Snowbird and Alta ski resorts make so much money with passes, cafeteria's, parking fees, an increase in business would be too much for the canyon to handle either way. This is not a world record Utah needs. We are known for our nature, not the longest gondola in the world. Please.</p>

ID	Full Name	Comment
33149	Spencer Crow	No Gondola! Millions of tax dollars just to save people 30 minutes of traffic about 60 days a year isn't worth ruining activities for others for 300 days a year. Enhanced bus without lane expansion is way cheaper, and travel times will be approximately the same. If there is too much congestion due to other cars, tolling/restrictions can solve the problem.
33148	Rachel Brothers	I am not supportive of a gondola being put into this beautiful canyon. Imagining the damage it would cause in building, and then the amount of emissions it would cause to run it. Not what we want for the canyon. A strict bus and permit system could be a great way to allow for a way to down for traffic. The greatest thing about this, is it can be tested in real scenarios and then retracted if it truly doesn't work. It would be a daily run permit system. People would only be allowed a permit per day. That have to have a permit to enter the canyon and then return the permit to leave the canyon. As people leave and return permits, a spot can be opened online to purchase it for the day. A full day permit would cost more. While if it is the latter half of the day it would cost less. If it's only the last couple hours, it could be free as long as there is a permit available. Otherwise if no spots are available, then they would have to ride the bus system. I think this would cause for more people to car pool and plan to be up the canyon. If they purchase the permit the day before they would have to be up the canyon by a certain time. Otherwise their permit would prove invalid and be open for another person to by. That way the permit it being used and someone isn't just hogging a spot all day. Allowing for all to participate in the resort life! If staying in the resort that would have a different form of identification to get up and down the canyon without problem. There is a whole lot that could go into this detail wise, but a basic shell of an idea. Maybe a little bit more. I don't know if this comment would be seen but if it is please hear it out!
33150	Rachelle Newman	NO GONDOLA!!
33151	Sam R	The gondola is a terrible idea, that literally only caters so a small percentage of people. This is will ruin the views of the canyon and NOT fix the traffic issue. There are so many options to explore that are considerably cheaper that won't completely destroy the lands Utah locals love to recreate in. This plan does not take climbers, hikers and mountain bikers into consideration which is baffling. I say NO to the gondola, and will never recreate this if you make the poor choice to build this ugly thing. This screams "money maker" and not a care in the world for the locals who live and recreate here. DO BETTER AND DO NOT BUILD THIS GARBAGE IDEA.
33152	Samantha Reich	I OPPOSE THE GONDOLA! I am a voter, avid user of both Little Cottonwood Canyon and Big Cottonwood Canyon. I own a cabin in Big Cottonwood Canyon and my parents own another cabin in Big Cottonwood. I ski, my husband skis and snowboards, and every one of my four children ski or snowboard. We also backcountry ski, rock climb, hike, fish, and use Utah's great outdoor resources often. A gondola does not serve our community or the majority of the users of Little Cottonwood Canyon. It costs more than we need to spend. Please just toll the canyon and add more buses. Tolling alone will cut down on all the unwanted traffic. Buses will serve the resorts just fine. Thank you!
33153	Annie Roper	Please don't make a gondola. I am part of a big community of climbers that frequent that canyon. This will destroy some of our favorite spots to go.
33154	Anthony Johnson	I am a Sandy resident (home and business owner) and I use little cottonwood canyon extensively for recreation year-round. I 100% OPPOSE the gondola! It does nothing to address traffic for most of the year and there is no reason my tax dollars should be misused on ski resort infrastructure. Widen the roads and build parking garages at the resorts!
33156	Olivia Douglass	Absolutely no gondola. Destroying nature, wildlife, and the landscape for human convenience? That is horrible. When are we ever going to learn.
33155	Aaron Hopkinson	Building a gondola is a drastic measure that can't be easily scaled or changed. The obvious solution is to complete 3 lanes with the center being reversable along with several avalanche overpass tunnels for the high avalanche zones. Alta/Snowbird have done almost nothing to address the traffic problem. Make them act in their fully power before spending \$500M+ for their benefit. 1. Parking policies that incentivize serious carepooling and riding the bus. 2. Hours that spread out the traffic - similar to the Brighton model. 3. Only allow carpoolers of 4 or more up the canyon on powder days - any less must take a bus. If the ski resorts aren't serious about the problem, UDOT shouldn't accomodate their 30 or so days of traffic issues by comprimising the canyon the other 300+ days a year.
33157	Elizabeth Benegas	As a resident of Cottonwood Heights, a voter, taxpayer, and frequent user of LCC I strenuously oppose a gondola in any form. This plan benefits very few (namely, two resorts and a bunch of visitors) while burdening many, including property owners and residents, drivers, and recreators in the canyon. That is to say nothing about the tremendous fiscal waste, which could and should be spent in ways that would benefit many more people. Further, the process of building and maintaining a gondola and the parking areas to serve it will ruin our national forest land, including trails and climbing areas (land which is so fragile it cannot even accommodate dogs), and mostly for the benefit of visitors. It will also destroy the aesthetic of LCC, one of Utah's most picturesque landscapes. This poorly designed and unjust plan should be withdrawn. There are many other solutions to decrease traffic in the canyon, including tolls, permits, and improved bus services, that UDOT has never even tried. It only makes sense to start with the least invasive options first before jumping into a half billion dollar project with very limited returns and so many drawbacks.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33158	Olive Zodorozny	<p>My name is Olive Zodorozny and I am opposed to the LLC Gondola project. I am a user of Little Cottonwood Canyon in winter months.</p> <p>I first heard of this proposed gondola (and the accompanying disapproval from most members of the LCC community) when I arrived in LCC eleven years ago and am saddened that it has reached this serious phase of possibility. Part of what makes LCC so special is its feeling of wild remoteness while still being accessible to SLC. I first learned to ski at Alta, and after having visited other ski areas I saw how special Alta truly is. To destroy that epic view with this proposed gondola would be to destroy a huge part of the heart and soul of this place and what makes it so special to me and so many others.</p> <p>With how our wild spaces are becoming less and less wild, taking a stand to pursue other options is a step in the right direction. There are many other options to help decrease congestion on SR 210 as have been mentioned: increased bus service, a toll system that favors carpooling and mobility hubs among other things.</p> <p>Thank you UDOT for your work in representing your community and making decisions in line with the values of that community, decisions we can look back on and be proud of decades down the line.</p> <p>Olive Zodorozny</p>
33159	Dave Lowe	<p>Preserving little cottonwood is an absolute must! Future generations should be able to use and see it as it is today. Climbing, bouldering, and fishing shouldn't suffer just because two resorts are putting profits above everything else. The fact that tax payers are paying for this and UTA is reducing buses at the same time is absolute</p>
33161	Maggie Kutz	<p>I absolutely oppose the gondola and do not believe other options have been addressed properly. I believe that tolls targeting those going to snowbird and farther in the canyon as well as increasing and incentivizing buses would be a much better option. The gondola will not benefit anyone other than skiers and does not take into account other users of the canyons.</p>
33160	Dan Gates	<p>No gondola. Not now, not ever.</p> <p>What a joke of a solution to shove more skiers and riders into the ski areas, while continuing to neglect all other users looking to access public lands. Not a traffic solution and an absolute waste of tax payer money. I mean seriously, how dumb is this? Pretty dumb. Restrict private vehicles dec-mar and increase busing service on 15 min schedules. It's the only way to actually limit congestion in the canyon.</p>
33162	Whitney Werner	<p>I'm strongly against the gondola plan. I encourage an alternative plan. Thank you!</p>
33164	Aleah Bucknum	<p>I comment to defend my home and passion that is Little Cottonwood Canyon.</p>
33163	Ethan Beseris	<p>As a longtime resident of Sandy and a frequent enjoyer of LCC trails I wholeheartedly oppose the proposed gondola solution. The impacts to the environment and outdoor recreation far outweigh the benefits of the gondola. I support finding alternative solutions to alleviate traffic and congestion in LCC that are not as invasive as the proposed gondola.</p>
33167	Nicholas Klick	<p>This gondola idea is really bad. Please find another solution. More Buses etc.</p>
33166	Kristen Simeral	<p>I'm against the gondola. It serves a very small, privileged group and ruins the canyon for everyone else.</p>
33165	Devan Romano	<p>Hello,</p> <p>My name is Devan Romano, I have lived in the Salt Lake Area for about 6 years and have grown to love the beauty of Little Cottonwood Canyon. The first time I visited, I was SHOCKED that there was no toll booth to enter. While I love the free access, tolling presents an opportunity to fund the canyon, and keep vandals out, and control capacity. I will list my reasons why the gondola is a terrible idea below, but before we spend \$1B in construction and millions more to operate, why not try tolling first, and then require bus use on powder days?</p> <p>The gondola proposal has unacceptable impacts on Little Cottonwood Canyon's iconic natural character and aesthetic. The gondola undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. Access to climbing areas will be compromised during years of construction.</p> <p>The gondola proposal will cause the destruction and/or removal of irreplaceable and historic world-class climbing resources and views.</p> <p>The current views of pristine granite and pines will be interrupted by towers and cables; the rush of the river replaced with the consistent hum of machinery and construction</p> <p>The yet-to-be funded gondola is fiscally irresponsible, with half a billion dollars in initial construction costs, alone. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective. Expanded electric bus service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before permanent landscape changes are made.</p> <p>The gondola is designed to serve only ski resort users, ignoring dispersed use recreators and other year-round canyon users.</p> <p>The gondola is not an equitable solution and perpetuates environmental marginalization and injustice in the Wasatch Front.</p> <p>Thanks for considering my concerns. This taxpayer, resident, citizen, climber, and human says NO GONDOLA!</p> <p>Devan</p>
33168	melinda mansouri	<p>I oppose the Gondola. I propose a shuttle system similar to the National parks. Only cars are employees or visitors staying at the resort.</p>

Comments on Little Cottonwood Canyon Final EIS

33170	Bailey Doucette	The gondola would cause irreversible damage to LCC for the benefit of two ski resorts. I think that the time, money and damage is not worth it for the small group of people that the gondola would serve. We need to preserve the beauty of the state, not turn it into an artificial amusement park.
33169	Christopher Sanchez	100% against the gondola. A more frequent bus option is preferred.
33172	Cade Peirce	Don't blemish the beauty of LCC with this gondola. Destroying trails, crags, and lookout vistas is not worth the small consumer base it would serve. Please. Leave it be.
33171	Jake Barman	The gondola isn't a solution to the red snake - it is expensive to build and will be expensive to ride. The wasatch front needs to remain accessible to all locals and visitors. The gondola will be an eye sore and not accessible year round. Expand the road - look for more economical solutions first.
33173	Maranda S	No Gondola! It is a waste of hard working tax payers money. It will not be used enough to make any sense to have it/ if people do use it, majority will be those who do not pay taxes for it or live in the state. will also ruin the beautiful views of the majestic canyon.
33174	Jason Evans	I am against the gondola. There should be a better way that benefits all canyon users and not just the resort visitors and has less visual impact.
33175	Cindy Hurst	I am an avid skier and oppose the gondola. Ski resorts are ugly. Gondolas are ugly. But little cottonwood canyon is beautiful. Even national park worthy in my opinion. A gondola costs tax payers and further crowds the canyons. It doesn't serve other trail users.
33177	Jarom Pueblo	Please do not install a gondola system from the mouth of the canyon up to any resort. That option only serves the resorts, and that is not the only root cause of traffic congestion. Please consider other options, preferably ones that have the least impact on the surrounding lands. Preferably an option that could be scalable to the seasonal needs.
33176	Emily Hadley	Last winter, the Alta and Snowbird parking management systems appeared to substantially impact traffic in the canyon. When people know if they have a parking spot, it helps inform individual decisions on whether or not to drive or take a bus up the canyon. Anecdotaly, I skied more than 80 days in LCC and only waited in substantial traffic a few times last winter. It is not apparent to me that the current recommendations account for the changes that have resulted from paid parking at Alta and Snowbird. Coordination between Alta and Snowbird on daily parking passes supported by expanded bus service seems like an alternative that should be more seriously considered before pursuing a much more expensive and complex gondola proposal.
33178	Kelly Griffith	I am against the gondola project. I personally visit the cottonwood canyon to hike and climb, but have never visited the ski resorts. I don't believe tax payer dollars should be funded towards a project that only serves a minority of the users of the canyon. If you are going to put a gondola in, the ski resorts should foot the bill. I would much prefer a shuttle system similar to the one in Zions.
33179	Stan Smith	A gondola is an overly invasive means to maximize visitors to two ski resorts in Little Cottonwood Canyon. Building the longest gondola system in the world will undoubtedly be rife with setbacks and ballooning costs as the execution of such a system will be more complex than suggested by the gondola proponents. A gondola system will forever change the skyline of the canyon and the beauty that attracts people to the canyon in the first place. Tolling and the limitation of single occupant vehicles and enhanced bus service should be the preferred solution.
33181	Danielle Smull	A gondola is one of the least equitable solutions to the traffic problem in the canyons. Utah would be better served by closing the canyon to buses and local traffic only, similar to what has been done in Arches and Zion during the heavy traffic season.
33180	Matheson Harris	Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses? As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging. They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses. @utahtransportation EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6]
33182	Sydney Loveless	Please do not approve a gondola that will help mitigate traffic for ski resorts only, which is only for 4 months out of the year while destroying views and trail heads that are used 8 months out of the year.
33183	Kevin Alexander	The proposed gondola project will not reduce the number of cars up the canyon, nor will it reduce traffic woes. All it's going to do, just like building extra lanes on a highway to reduce congestion, is to add more people into the equation. The number of cars will stay the same and the resorts will profit, all at the expense of a gorgeous piece of PUBLIC land and the wallets of the public taxpayers. Don't build the gondola.
33186	Steve Leonard	No gondola. The towers will be too tall. It will detract from the beauty of the canyon. The worst traffic is on weekends, not year round. The cost is too high and will be much more by the time it finally would be built. It won't be affordable for all families yet all families would be paying for it. It would only serve the resorts and not stop at trailheads. Don't widen the road. Use more busses and find a way to get skiers to car pool. Such as a good discount on parking or a lift ticket. This whole thing might not be an issue if they had done the interconnect ski resort plan from back in the '80s.
33185	Brittany Poulson	You dont have to ruin our enviorment and mountains to make transportation better up LCC. Please dont change our mountains forever, not everyone skiees and snowboards! This will impact our enviorment forever!
33184	Sam Brown	I am against this gondola. It's a solution that will only address a small part of the problem with canyon access: those people accessing the ski resorts. You can't seriously cut bus service in half and then propose a solution as wild and ridiculous as a gondola and expect any significant traffic relief.
35296	Keturah Miller	Hi, As a Utahn that loves LLC and all the wonderful opportunities it provides, I am fervently opposed to the gondola that is being proposed. I travel extensively and support tourism at home and abroad. The gondola project is a waste to tourism, ecology, economy and community. Please represent the best interests of all and do not further this interest. Sincerely, Keturah Miller

35293	Kate Davis	<p>Please reconsider spending such a large amount of money on a project everyone will try to avoid using.</p> <p>I am a mother of five children, a season pass holder to Alta, and no way would I be interested in loading my children onto a 55 minute gondola ride. We live in Park City, but prefer to drive up little cottonwood to avoid using PCMR's multiple gondolas. The gondola lines are so long; it takes forever to get on the mountain.</p> <p>LCC could implement much more cost efficient methods that would remedy the situation more effectively than a gondola including:</p> <ul style="list-style-type: none"> - continue the reservation parking system for busy days. The 2018 study was performed before parking reservations were required. The congestion was alleviated immensely following the reservation system. - charge a fee for vehicles carrying less than 3 people to be paid at the resort. - increase buses. If they came more often, it would increase their convenience. - enforce traction laws before a storm. Most accidents arise when two wheel drive cars cruise up on a sunny morning and get caught coming down during an evening storm. <p>Thank you for considering my opinion. I love Little Cottonwood and hope to continue to enjoy its vast beauty in the future.</p> <p>Sincerely, Kate Davis</p>
33188	Amanda Martin	<p>I live in Cottonwood Heights area code [REDACTED] I am very much in favor of the gondola! I hope to see more to come in our other canyons</p>
33187	Kate Davis	<p>Please reconsider spending such a large amount of money on a project everyone will try to avoid using (a gondola).</p> <p>I am a mother of five children, a season pass holder to Alta, and no way would I be interested in loading my children onto a 55 minute gondola ride. We live in Park City, but prefer to drive up little cottonwood to avoid using PCMR's multiple gondolas. 33191	Jake Momberger	<p>I am in strong opposition to the gondola option. It does not make sense to start with the most expensive, most complicated most intrusive option before even trying anything else. Start with a toll, increase bussing and make the buses more comfortable. If that doesn't work then look for another option, but it seems asinine to start with the gondola.</p>
33190	Candace Hughes	<p>Don't do the freaking gondola</p>
33189	Micki Harris	<p>I was out for my morning run this morning and just got off Wasatch Blvd to find several police cars and sirens driving by. Unfortunately, a fellow runner was struck this morning by a car at the T on Wasatch Blvd. We see these two running partners frequently heading up the canyon. Just another reason for you to keep fighting for redesign on Wasatch Blvd. Runners had lights, but cars drive too fast and they aren't paying attention. For the little time I try to spend on Wasatch, this is what I see frequently every week. That is not a stretch. If driver's continue to behave this way, then we need to design a road that curbs this behavior. We need your team to design a road that has protection for pedestrians and cyclists or these mornings will be more frequent. We need a road that tells the driver to slow down. There are no pedestrian crossings for runners, and no protection. Again, where UDOT has crosswalks and paths placed, they aren't useful to our citizens, they only serve the skiers for the gondola. The citizens of Cottonwood Heights need a road they will use all year round, not just designed and WIDENED for skier and commuter traffic. Pedestrians and cyclists are an afterthought and I believe it should be the other way around. Next time it could be me that gets taken out. It's a ticking time bomb.</p> <p>Please continue to push your team on this. Safety is not something we compromise on. Lives are not something we compromise on. You guys are the experts, and we need to implement pedestrian friendly streets not stroads. No one wants their wife, mom, or daughter hit on Wasatch like this morning, especially when this could have been prevented. Hopefully my fellow runner will be okay after getting hit by a vehicle, but usually pedestrians get the worst of it.</p> <p>Wasatch does not need to be widened and data shows that from your traffic engineer study protected bike lanes for cyclists that use Wasatch all year round Pedestrian paths on both sides of Wasatch Blvd (not just the east) with road crossing so people can get to the grocery store, city hall, and schools. road design that gets drivers to guide their cars at 35MPH</p> <p>Micki Harris</p>

ID	Full Name	Comment
33193	Rick Holzer	Please do not ruin the canyon with a gondola that only serves the wealthy few.
33192	McKay Strong	This is not an acceptable solution. Please don't build these. Leave the outdoors wild!
33195	Kristen Ward	As a long-time resident of Utah and a recent resident of Cottonwood Heights area, I am writing today to oppose the installment of a gondola system in Little Cottonwood Canyon. This option only seems to offer a long list of negative impacts for the community and the canyon, including the installment of a massive parking structure, the detrimental effects for neighborhood residents, safety issues, and many other problematic concerns. There are many other viable options that are far more beneficial to the canyons, city, and state yet UDOT seems to continue to push for this one and only option. I am writing to voice my concern and my strong opposition against the gondola solution.
33194	DEBORAH WAGNER	No to the gondola! Too expensive, it will destroy the backcountry experience of the canyon, it doesn't benefit the VASR majority of the people who pay for it. Bad idea all the way around.
33196	Rebecca Hunt	<p>Say NO to the gondola!</p> <p>Planning for LLC occurred before parking reservations were implemented. With the introduction of parking reservations, traffic in LLC has been significantly reduced on storm days. I've skied at Alta for the past 40+ years and live in Park City with my husband and six young children. I'm concerned that a gondola is a waste of money and resources. Who will ride the gondola now that traffic has already been alleviated? Who will stand for 55 minutes carrying all their gear? Definitely not any families with young children. Definitely not anyone over the age of 65. Definitely not anyone trying to get in a couple of runs during a lunch break. Definitely not hikers and climbers. And definitely not anyone going up the canyon to stay at a lodge with all of their luggage. So who are you targeting for ridership? Last year, when we didn't have a parking reservation we rode the bus. It took over an hour and we swore to never do it again. You will spend 500 million on something very few people will use.</p> <p>LLC could improve the drive without spending 500 million by doing the following:</p> <ol style="list-style-type: none"> 1. continue the use of parking reservations. 2. Charge cars with single passengers. 3. Strictly enforce traction laws on sunny days with known afternoon storms!! All of those 2-wheel drive cars that go up the canyon when it's sunny and then slide down in the snow are dangerous and really cause the most afternoon traffic issues. Paying a couple officers to enforce and check cars would cost a lot less than 500 million! 4. Improve your bus service - make it faster by increasing the number of busses and have Snowbird and Alta specific busses. The bus we rode was packed like a can of sardines even though it was still under "COVID protocol" because of the lack of busses. Increase your pay to drivers - it will still be a lot less than 500 million! <p>Please say NO to the gondola. It won't be the environment or the LLC users who will benefit from the gondola - only those who own the land and the construction company. Don't waste tax payer money on something the tax payers won't use.</p> <p>Please say NO!!! You won't regret it - you will be supported if you just say NO! Stand up to those wanting to make money off of LLC.</p> <p>Thank you!</p>
33197	Lindsey Wheeler	The little cottonwood gondola plan is horrible. First, it is a waste of tax payer money. It is horribly expensive and will not solve the traffic problems. Second, it won't solve the problem. It will only move the problem to the mouth of the canyon. The parking nightmare just moved to Sandy instead of the canyon. Third, it takes away the natural beauty of little cottonwood and robs Utah citizens of its natural recreation area. With this plan, climbers and hikers will be unable to access to rich beauty of this iconic canyon. Fourth, there are better, cheaper, and more sustainable solutions that other areas use and we know work. For example, in Zion National Park, visitors take a bus up the canyon. Why not only allow people with paid parking or residents or employees up the canyon and make everyone else take a bus? Bus riders can take the bus from their local stop instead of parking all over the mouth of the canyon. Or meter canyon access. In short, this multi year, expensive, grandiose idea is meant only to help a small subset of Utahans and impress visitors. It's not meant to improve the canyon road conditions or recreational access to the majority of Utahans. And that's against everything that Utah stands for.
33199	Daisy Harper	NO. It will be so ugly and literally ruin the whole point of why people go to the cottonwoods. We go there to enjoy nature not to see some giant poles and cables.
33198	Derrick Peatross	The worlds longest Gondola has no place in Utah, along the entire LLC. The issue we are addressing is congestion, safety, and accessibility of that canyon; but only in the winter. The amount of damage this Gondola would cause is simply not the solution we are searching for. Rock climbers, hiking, road bikers, mountain bikers, trail runners, and many more, will all be negatively affected in this massive act to serve a small audience to ski two resorts up the canyon. Please, do not allow the building of this Gondola to move forward. Sincerely, an Utah Native of 31 years.
33200	Ashley Buzard	Hello, I am a SLC resident and Utah State voter who has used and loved the many recreation opportunities that LCC has to offer. I am concerned that the gondola is a bandaied fix to a larger issue throughout the value, and will cost the city a great deal of time and money with benefits only really paying off in the winter. In addition, the gondola will threaten and destroy habitats, and take away some of the gorgeous views that make LCC so desirable. I am also worried that the addition of the gondola will lessen the amount of recreation activities and impose on some of the countries best climbing and hiking routes! Not to mention, also take away the sense of solitude that community members feel when they take the short trip up the canyon. Instead of the gondola I propose that you still use the area around La caille to build a larger parking lot, but that you instead increase the number of buses that drive up and down the canyon as well as tolling it for private vehicle use. I believe during the off season of the canyon, the busses could be repurposed to offer more seamless public transportation throughout the city. So by investing into the public transport system, you not only make the canyon a safer place for all in the winter but you also have a solution that will have a larger impact in the community during the summer. Perhaps the buses in the summer could even run from the city to popular hiking trails, to minimize the amount of stress those areas also see. Thank you for trying to get to the bottom of this issue and make the canyon in the winter safer for everyone, but I truly believe that the gondola is not the answer.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33203	Taunya Lofgran	I like the idea of a gondola. I think it would be a great way to reduce traffic and have less of an impact on the canyon. I've lived in other countries where they utilize gondolas and it seems to be a great long term solution.
33202	Michael Harding	The gondola is not a good option for everyone. There are fewer and fewer ski days, but even in the best years, there is a lot more to do in LCC than ski. I don't want to subsidize a sport I can't even afford, especially when cheap climbing and hiking is negatively impacted. Don't do it.
33201	John Riordan	No gondola please
33205	Danica Loveridge	No to Gondola
33204	Brandon Drown	I am opposed to the gondola and would ask you to please consider other options. Thanks
33206	William Sackewitz	I support this project. The naysayers either ignore the clear benefits of a gondola or just jump on the Sierra Club activist bandwagon. The more permanent the transit option is, the more people are willing to use it. Buses get stuck in traffic, gondolas don't. If we want less traffic up LCC, a gondola is a no brainer. It's time for America to build engineering marvels again and stop falling behind the rest of the world, let's stand out and build the gondola!
33208	Karen Robinson	I am a life-long resident of Salt Lake County east side. The proposed gondola in Little Cottonwood Canyon would be a huge mistake. It is too costly and really doesn't solve the traffic issues in the canyon. We need to try cheaper and more common-sense approaches that can be monitored and revised as the situation changes not some ugly structure that distract from the natural beauty of the canyon.
33207	Jeannine Skinner	I would be disappointed if the view of the valley from the canyon were obstructed by a gondola and it's chains. One reason why I love Little Cottonwood canyon is because of its natural views and escape from the city and city sounds. Increased busses during ski season or increase spaces for carpooling would be an ideal alternative instead of a huge, expensive construction project of a gondola. I am a climber, a hiker, and a Utah resident of 32 years and I ask you to reconsider. Thank you.
33209	Terreal Rogers	I am a Sandy resident and user of Little Cottonwood Canyon all year round. I am opposed to building the gondola as a solution to decrease traffic jams in the canyon. It may be true that building a gondola will reduce the amount of traffic on the road in LCC, but if the gondola is built at the mouth of the canyon, then the traffic jams in Sandy and Cottonwood Heights will be worst than ever. The traffic jams will just be moved farther down the canyon and create huge delays for residents of Sandy and Cottonwood Heights. A one stop gondola parking garage for all the skiers will create a huge bottleneck of traffic and block roads that locals use even more so, because all the traffic that is usually backed up in the canyon will now be backed up into our neighborhoods. I agree that there is an overwhelming need for a solution to the traffic in LCC. I think that reducing the amount of tickets sold per day by the ski resorts, parking reservations, and increasing busing are all better, more cost effective solutions to the traffic issues that face LCC. Thanks for considering my comments.
33211	Merianne Marble	The gondola will only benefit ski resorts. I use the canyon but not the ski resorts. I will still need to drive my car to get to where I want to go, so a gondola will not take my car off the canyon road. And I know I'm not the only one. The gondola will not solve the traffic problem; it will just make it easier for ski resorts to get their customers to the resort.
33210	Rebecca Shogren	As a Sandy resident I respectfully ask that you not build the gondola. It will not only be an eye sore but also not a solution to the transportation problem. I can tell you 100% that I will not use it as a local and ALL the locals I have talked to will refuse to use it as well. There are other solutions to this problem and it disheartens me to see that you would rather spend an huge amount of money on something that does not serve local taxpayers and is a gamble as to whether it will be used by tourists. As a taxpayer, I think it is a huge waste of money. Please take more time to considered other options such as charging for bus services, charging for a day pay per car to enter the canyon, etc. Offer an annual pass to locals to enter the canyon. I would happily do that! My tax money is already paying to help maintain the canyon. Why not charge those coming and going that aren't already paying to use it? Those are my thoughts and I know many others have already shared good ideas. Please take these into consideration.
33213	Lauren G	I think the gondola will only allow access to certain locations, won't solve the traffic problem and won't be that fast- plus it will take up a lot of resources to create- we need a better solution like a high speed train or transit system instead of a system that isn't going to be that efficient or one that people will use or be fast.
33212	Cassandra Fawson	As a long time resident, voter, and tax-payer living in Draper, I would to formally add my opinion that I am opposed to a gondola in Little Cottonwood Canyon. I use those mountains frequently for hiking, biking, and skiing at both of the resorts up the canyon, and a gondola seems the most expensive, the biggest eye-sore, and the least useful option of all those proposed. Before we throw money at this project to help Alta/snowbird, let's try a toll system, more buses, and other phased approaches.
33214	Javier Villanueva	No gondola
33216	Laura Jones	Please do not implement the plans for a gondola in LCC. There are cheaper and more effective alternatives like tolling that will benefit not just skiers but those who also use the canyon for hiking, biking and climbing. I use the canyon on a regular basis and find the idea of jumping to building a gondola absolutely ridiculous. Please do not do this.
33215	Tanya Glines	Don't ruin the canyon with a gondola. There are numerous options for less impact.
33217	Lynne Kraus	The gondola plan is socially unjust. Less than 10% of Utahns are skiers. It is inappropriate to burden non-skiing taxpayers whose average income is typically much less than skiing taxpayers with the cost of the gondola. It is Robinhood in reverse - steal from the poor and give to the rich. This amount of taxpayer dollars should benefit ALL Utah taxpayers, not just the wealthy.
33218	Nicholas Woolsey	This is such a dumb project that benefits a very small amount of people. Please find a different solution.
33221	Wayne Owens	I am opposed to the gondola project in little cottonwood canyon. As much as I love to shred at snowbird, and as much the traffic and parking challenges bum me out, I am willing to endure those challenges indefinitely if that means we get to keep our mountains bare and beautiful. Thankfully, we don't have to choose to pick between the dichotomy of sticking with the status quo or spending inordinate amounts of money to construct an unsightly monstrosity that would desecrate our beautiful canyon. Please be temperate and wise and start with more moderate solutions such as adding more buses or adding a toll. Thank you for listening. Thank you for caring. We can do better than the gondola project!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33220	Jordy Powell	I am a constant user of both cottonwood canyons and this is a TERRIBLE idea. Have you guys thought about the parking at the base where the gondola starts?! That just leave a bigger mess at the base. Do a bus system like Zions NP does. These are world class canyons, they don't need the "longest gondola". I'm the non winter months the canyon isn't even busy or crowded. Waste of money. Snowbird and Alta DO SOMETHING.
33219	Angie Adams	Do not build the gondola. Limit the number of skiers at each resort and make it be reservation based .
33222	Lee Nitchman	I am opposed the the preferred alternative of the gondola in LCC. As a Utah citizen and user of the canyon the gondola is not in the best interest of Utahns. There are less impactful, lower cost, higher benefit alternatives in the EIS. The gondola does not reflect UDOT's values as a good steward of taxpayers money. Please take into consideration the opinions of the majority of Utah taxpayers. Thank you for trying to solve the traffic problem in LCC.
33223	William Eberle	To whom this may concern, UDOT should conduct a capacity/visitor management study to better understand how many visitors LCC can support before completing the EIS. Additionally, the gondola won't solve Little Cottonwood Canyon's traffic problems, but we already have solutions that are proven to work, including enhanced buses, tolling, parking reservations and enforcement of traction laws. Constructing more than 20 towers reaching 200 feet tall and stretching eight miles through the heart of Little Cottonwood would destroy the canyon's natural beauty to ease traffic on 8-10 busy days per year. A permanent gondola for 8-10 days a year. Committing hundreds of millions of taxpayer dollars to the world's longest gondola without a commensurate effort to reduce auto traffic in the canyon nor addressing spring/summer/fall traffic amounts to a government-paid lift for two ski resorts. How are you ok with taxpayers subsidizing these two private ski resorts? Thank you, Will eberle
33224	Laura Wiecks	I am not supportive of the gondola. I do not believe many people will use this as a main form of transportation. It will detract from the natural beauty of the canyon and will likely just be another step towards developing and ruining our natural landscapes. Stop over developing the land, especially in the canyons. We cannot undo the damage and destruction once it's done.
33226	Audrey Jiricko	No to gondola! I'm a Utah voter and enjoy little cottonwood. Let's expand busing and avoid negative consequences of building gondola.
33225	Douglas Owens	I am opposed to the gondola project in little cottonwood canyon. As much as I love to shred at snowbird, and as much the traffic and parking challenges bum me out, I am willing to endure those challenges indefinitely if that means we get to keep our mountains bare and beautiful. Thankfully, we don't have to pick between sticking with the status quo or spending inordinate amounts of money to construct an unsightly monstrosity that would desecrate our beautiful canyon. Please be temperate and wise and start with more moderate solutions such as adding more buses or adding a toll to the road. Thank you for listening. Thank you for caring. We can do better than the gondola!
33229	Isaac Hale	The gondola is not for the people. I'm saddened to see us ready to spend so many dollars on a project that will impact a few days of the year.
33228	Bianca Martin	As a registered voter and active user of Little Cottonwood Canyon ski resorts and trails, please please consider an alternative to the Gondola B proposition. A gondola would forever change this beautiful canyon that I have called home as I have lived at its mouth my entire life. While it would protect watershed and help with air quality it would greatly affect let trails and climbing routes and really be an eye sore in an otherwise stunning canyon. There has to be another solution that can beneficial to all parties. Thank you for your consideration and effort.
33227	Kim Hills	I'm opposed to this project. the cost is too much for a Gondola that benefits too few people. I for one will not be benefited in any way that I can see & my taxes continue to go up every year. Do not fund this project!!!
33230	Local Ski girl	I think the gondola is an awful idea... what happens with wind holds? Wind holds happen all the time at ski resorts they will happen all the time up the canyon too. How will maintenance be ran and how much will that cost over the years? How will parking look and how will Wasatch boulevard look trying to get into parking? I'd like to know Snowbird and Altas stance regarding the Gondola! Is anyone else concerned about the water supply we aren't even allowed to walk our dogs near??? But for a gondola we can contaminate what little water we have in Utah. How much will it cost for people to ride it... will it even be affordable? Let's talk about all the wildlife that gets displaced when we put this eyesore in. It's a no for me and most everyone else in the area... why isn't UDOT listening. People will dislike it so much they won't ride it in spite of the fact UDOT didn't listen! Try again there is another solution... try try again cuz this isn't the solution
33231	Amelia Hilterbrand	I love the idea of a gondola, but PLEASE don't toll this canyon. Nature should be for everyone, not just those who can afford tolls.
33232	Ski Person	Lets put all that money into electric or hybrid busses that go from 5am to 11pm with beyond great pay for bus drivers so that we can hire enough bus drivers to make it possible! If there is enough busses that come frequent enough people will be more include your wait for them! Enhance the bus system you have all this money for the worst idea let's put all that money and really make the bus system amazing!!!
33233	robert clawson	Please don't do it ! It's not worth it .
33235	Kenneth Merrill	The shortsightedness of this proposal is astounding. Ruining a beautiful natural feature of the SLC metro area for the sake of a relatively small group of people (and probably wealthy people at that) is beyond offensive. Leave LCC alone.
33234	Ashley Henrie	I agree with Mayor Jenny Wilson that Common-sense solutions, on their own, have the potential to solve the traffic problem and provide an opportunity to collect data on efficacy and canyon capacity. Not an expensive gondola.
33236	Shawn Saenger	Please do not go with the Gondola option. There are other, cheaper options that should be implemented first and saved funds could be used on projects that more of the populace can benefit from. I strongly oppose the building of the Gondola.
33238	Meghan Taylor	The Proposed Phased Implementation of Gondola Alternative B is a better use of tax dollars and more environmentally friendly than the gondola. Restricting single passenger vehicle and implementing a toll would eventually pay for itself. Please consider the benefits of proposed alternatives to the gondola.
33237	Laura Snow	No to the gondola

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33239	Loaine Holman	I believe that a several approaches would work best. Add a toll, add more busses, charge for parking reservations, etc. Not just one approach will work. But definitely don't put in an expensive, eyesore like a gondola.
35299	Edward DiBella	<p>To whom it may concern,</p> <p>I am very much opposed to the construction of a LLC gondola.</p> <p>Actually, I can't believe it is even being considered. That I, as a taxpayer, would help support people who wish to ski snowbird and alta? (and I do ski there and love it). Even if the cost was far far less it would not be a good solution - the impact on the canyon, the destruction of bouldering areas (that I use), losing the feeling of being at least somewhat in nature are dramatic and incalculable losses.</p> <p>I am even more appalled when I read that ski bus service will be curtailed due to difficulties recruiting staff. Please move money to that! And to increased bus service.</p> <p>I also support a toll for those who use the canyon. (hopefully in some manner so cars do not need to stop at a booth! EZ-pass systems are in widespread use in the East, for example)</p> <p>Thank you, Ed DiBella [REDACTED]</p>
33241	Paul Elias	<p>Hello,</p> <p>I am a former resident of Utah and a continued seasonal visitor. I'm writing to express my strong opposition to the proposed gondola in Little Cottonwood Canyon. The reasons are simple. 1) This will result in permanent destruction and desecration of trails, crags, and other aspects of the natural environment that should be cherished and preserved. 2) This is unnecessary. There are alternative options that will cost less and have substantially fewer negative impacts.</p> <p>I respectfully urge reconsideration of this plan. There is a better way.</p> <p>Sincerely, Paul Elias</p>
33240	K something Whocares	Why ask when the plans are already in motion? Why limit UTA transit while selling IKON garbage passes out the [REDACTED] No such thing as "local" if you live and work in the valley and can't afford to get there. It's all downhill from here, most literally. The cottonwoods are a watershed that feed the valley and everyone suffered last year from parking and transit restrictions. The future is looking bleak and very very expensive.
33242	Andrei Tarassov	I don't think that taxpayers dollars should be spent on building a gondola. The project is very expensive and doesn't benefit the public. There're way cheaper alternatives and they should be considered instead.
33243	Carly Thaw	Giving incentives for riding the buses would be a much better option. No gondola
33245	Anatoliy Shanin	Absolutely No to Gondola. Gondola will benefit just 2-3 businesses and out of state people. It will not benefit hikers and cross-country skiers and it will destroy the LCC beauty forever. Big NO to Gondola. We need to start using electric busses even in the summer on weekends or during Octoberfest with additional stops at most popular areas.
33244	Travis Scott	I am a voter, long time resident and user of Little Cottonwood Canyon. I am against the Gondola and any other plan that alters the canyon. We do not need to use tax payer dollars to build something that only benefits ski resorts. There are other better options like forcing the ski resorts to monitor how many people can come to the resorts or creating a ticket/metering system for the Canyon during peak times or events.
33246	Anique Monfrooy	Please consider a train up Big Cottonwood canyon instead of a gondola! The train will serve more people , hikers, climbers, skiers etc. This is how they do it in Europe and it works so well!
33247	Andrew Verge	Expand the busses, limit road access, and disperse parking throughout the valley. This is a flexible solution required for all other solutions, and it's never been tried. I live on the bus line and ride them avidly. They are a huge success when the busses are scheduled to align with skier traffic.
33250	Angela Krull	No gondola. It serves only a small group and is an eye sore. The same problems will persist. Please don't move forward with the gondola.
33249	Terry Waite	There are ways to spend taxpayer dollars to the benefit of everyone who uses that canyon. THE GONDOLA IS NOT IT! Unless the ski resorts pay for a significant portion of the cost.
33248	Nick --	I often go hiking in LCC. The gondola does not stop near the hiking trails. I see no benefit of a gondola. Corruption is a serious problem in America, please think of a solution that works for everyone.
33252	Aaron Rice	<p>Dear UDOT,</p> <p>No need to dress it up: a gondola won't solve Little Cottonwood Canyon's traffic problems. But our community of skiers and snowboarders already have proposed solutions that are proven to work, including enhanced buses, tolling, parking reservations and enforcement of traction laws.</p> <p>Committing hundreds of millions of taxpayer dollars to this gondola without a commensurate effort to reduce auto traffic in the canyon is much more harmful than helpful.</p> <p>80% of Utah taxpayers and nearly 100% of the skier community oppose this effort. Please listen to the population you are here to serve.</p> <p>Sincerely, Aaron Rice</p>

33251	Amy Stephens	NO GONDOLA!!!!!!!!!!
33254	Katie Karjalahti	<p>This whole proposal is a massive bummer. It's going to remove the nature from hikes and rock climbing routes in little cottonwood canyon. If I want to go out and enjoy nature, I don't want to listen to motors and see massive poles and gandalas moving tourists uphill. It's a solution that will only create more problems. Snowbird and Alta do not have the capacity to support more people. This feels like a money making scheme more than an environmental and traffic solution. Implement a bus system similar to Brighton in big cottonwood canyon that can be adjusted by the amount of people trying to get into the canyon instead of a gandala system that is going to cost so much money and ALWAYS be there to interrupt people trying to enjoy themselves in the canyon. Are you even reading this? Take notice of the neighborhoods in sandy and cottonwood heights and what they are asking for before you make decisions for a community that doesn't want you to. Have a good day.</p> <p>Ps if you remove hiking trails and rock climbing routes you're going to have the SAME problem in different canyons that people go to instead.</p>
33253	Deanna Michaelson	<p>Please save Little Cottonwood Canyon! UDOT should conduct a capacity/visitor management study to better understand how many visitors LCC can support before completing the EIS. The gondola won't solve Little Cottonwood Canyon's traffic problems, but we already have solutions that are proven to work, including enhanced buses, tolling, parking reservations and enforcement of traction laws. Constructing more than 20 towers reaching 200 feet tall and stretching eight miles through the heart of Little Cottonwood would destroy the canyon's natural beauty. Committing hundreds of millions of taxpayer dollars to the world's longest gondola without a commensurate effort to reduce auto traffic in the canyon nor addressing spring/summer/fall traffic amounts to a government-paid lift for two ski resorts. This place is important to me, many people that I love, and future generations of Americans!</p>
33256	Amanda Allen Jenkins	<p>This is just a way to keep UDOT busy. This will not solve any of the problems in Little cottonwood. It will greatly affect climbing, hiking and general recreating n the canyon. The impact for the base and subsequent parking is too great. This project is excessive and will be totally underutilized. Visually the impact is far too great. I grew up at the mouth of this canyon and the thought of gondolas, cables and poles as part of the views is devastating. I say NO to the gondola! Too much money and too many consequences to the canyon. Stop this frivolous project.</p>
33255	Julie Kiefer	<p>Dear UDOT, My name is Julie Kiefer and I oppose the LLC Gondola project. I am a Utah voter and avid user of our beloved Little Cottonwood Canyon. Here are my concerns. When I go to the canyon as a runner, hiker rock climber, sledder, backcountry skier and resort downhill skier, my primary goals are to enjoy the unspoiled beauty of our canyon and recreate on its renowned rocks, trails and slopes. This is my escape from bustling city life. The last thing I want is to see in the canyon are large steel manmade towers, cables and gondolas that spoil the natural setting. Further, building and maintaining these structures will destroy trails and crags that I enjoy. Clearly something needs to be done to address the serious traffic issues. I am in favor of enhanced busing, which is far less detrimental to our precious landscape. Perhaps in time, fuel efficient or hybrid buses can be put in place to help mitigate air quality issues. Further, busing could serve all canyon users, not just resort skiers. This could benefit more people and take those users' cars off the road as well. Living close to and enjoying Little Cottonwood Canyon is one of the primary reasons we moved to Salt Lake City twenty years ago. Sacrificing its beauty for the benefit of two ski resorts would be personally devastating.</p>
35303	Whitney Douglas	<p>To whom it may concern:</p> <p>I express with deep deep passion my love for our beautiful state and mountains, in particular. It saddens me to think that the only solution we have come up with is one that will not only ruin the aesthetics of our canyon, but waste our tax dollars (especially for those who don't ski like myself), and waste our resources because no one will use it (those I've talked to that ski say they won't use it). We don't need a gondola. We don't need wider roads. We need ski resort reservations or canyon closures until more cars come out. Just like Disneyland and zions National park. I hope you'll reconsider the devastating effect this will have on our beautiful mountains, and long term residents of Utah. Please please don't build the gondola. Thank you!</p> <p>Whitney Douglas</p>
33258	James Webster	<p>In my UMTA grant publication "Inter-resort Tranportation Study" of 16 options the gondola only provided a short-term solution, like a band-aid. User preference was marginal and flexibility to provide access to only one destination was a serious deterrent for attracting users. The short-term viability is a serious cost-benefit concern that questions a need for abandonment and outlet reclamation of the impacted landscape. What level of inflation protected bonding has the proponent ensured? I've not seen any documentation. As covid infestation continues to require mitigation forcing users to rowdy into a closed capsule is a public health violation. The immense parking structure imposes a serious heat island impact along with widening of Wasatch Blvd. The single benefactor is discriminatorycorporate welfare with at least 95% of funding taxpayers excluded from any beneficial use or enjoyment. Disabled persons who require ADA access are also excluded in violation of ADA legislation. The gondola is an unjustified investment as regards public cist benefit and cannot be justified.</p>
33257	Alec LaLonde	<p>I am a 15-year SLC resident and active user of Little Cottonwood Canyon for climbing, backcountry skiing, and hiking. I strongly oppose the Gondola, and view it as a tremendous waste of funds that will only help alleviate traffic for tourists a handful of days a winter. Please go back to the drawing board so we can move forward with a more sensible, less obtrusive alternative than the two false choices provided throughout the UDOT LCC planning process.</p>
33260	Tyler Hanson	<p>As an avid rock climber of Little Cottonwood Canyon, this gondola proposition poses as a threat to my enjoyment of the outdoors, rather than a convenience. The traffic is a problem yes, but there are other options we need to explore before spending a billion dollars on a mode of transport that will only serve a select group and potentially ruin the great trails and crags that fill my life with joy. I strongly hope you will reject this proposition and rethink other options.</p>
33259	Brett Moffitt	<p>This will be costly and impact the public and environment greatly! Way to much!</p>

35305	David Cap	<p>to whom it may concern,</p> <p>I would like to provide my feedback and opinion about the current UDOT proposal to build the world's longest gondola in our Little Cottonwood Canyon (LCC).</p> <p>First, let me say clearly that I strongly disagree with the proposed solution. While I understand that traffic is the issue in the LCC and needs to be addressed, I am not convinced that building a series of steel towers and cables in a beautiful canyon really solves the problem.</p> <p>I am a Utah resident and a year round user of the LCC (resort & backcountry skiing, rock climbing, mountain biking, hiking), and I am concerned that the gondola will be in fact detrimental to my and others' ability to visit and recreate in LCC. I have several points to support my opinion:</p> <ul style="list-style-type: none"> * gondola would only serve a really small user group (resort skiers). While I do belong to this group as well, the gondola would not serve other user groups in the canyon (in fact, it would harm other user groups - please see below) * construction of the gondola will forever alter the atmosphere and scenery of the canyon, as well as permanently close some legendary climbing/bouldering areas. When climbing in the LCC, the scenery from the walls high in the canyon is amazing, with the road barely noticeable in the trees. Steel gondola towers will 100% change that * Even though Wasatch mountains may feel huge at times, they are in fact relatively small compared to Alps where gondolas are a bit more common, so keeping the pristine nature of the canyon should be considered as well. * It does not seem that the typical transit time for a passenger would be really shorter than with other options. * I understand the avalanche concerns, but we used to receive significantly more snow in the past with LCC road being closed more frequently than in recent years. With the global warming and less snow overall, the need to shut the road in LCC down for avalanche mitigations does and will decrease, and the added snow sheds would help address this issue as well * On top of that, according to the Gondola B fact sheet, it seems that the gondola would NOT be running during the avalanche mitigation. A strong talking point of those in favor of the gondola is that the gondola would not be affected by the avalanche mitigations - but it actually seems that the avalanche mitigation would stop the traffic both on the road AND in the gondola. * There is usually less than 20 really busy (powder) days in the LCC in the winter season, so implementing such an expensive plan seems irresponsible.
33261	Monica Chiarenza	<p>Thank you so much for your concern for the traffic in Little Cottonwood canyon. As a user of Little Cottonwood canyon I oppose the Gondola project . I prefer to enjoy nature as it is intended. Adding wires and towers will take away from the natural beauty of our canyon. There are other ways to decrease traffic that should be explored first . Please do not build a gondola. Thank you .</p>
33262	Abby Warner	<p>I am not in favor of the gondola! Expanding the bus system is a way more effective solution in every sense. It can serve everyone that uses the canyon without destroying it! Also, require the resorts to charge for parking, it's a very easy solution that will at least help with some congestion!</p>
33263	Ben Nelson	<p>This is unwanted by the public interest, spanning multiple, diverse demographics. There are enough voices to own the majority. Do not build this ignorant gondola.</p>
33265	Zanna Stutz	<p>How are the people supposed to trust that a gondola will adequately alleviate the traffic issues when simpler alternative options such as more rigorously enforcing the chain law and providing bus services just for the canyons have not been successfully implemented or fully tried? The gondola is not supported by the local community. It has been suggested that it will simply add more people to the canyon without recognizing this area's physical and environmental limitations. A responsible way to finance this option has not been identified because public funds through UDOT should not be applied to a solution that so clearly caters only to Snowbird and Alta. The gondola is an expensive, unpopular option. Let's fully commit to trying and incentivizing other less invasive ways to communally travel first.</p>
33264	Joshua Frampton	<p>This gondola is a great plan. I've lived in Europe and honestly was such an efficient way to access terrain. So many ski resorts there had you start at a town or city at the base of the mtn range and the gondola whisked you up to the resort. It was awesome, no traffic, no issues with parking, no loud slow, stinky buses. It truly is a brilliant plan and should move forward immediately.</p>
33267	Chris Sypherd	<p>I strongly oppose this, there's no need to build such an expensive mode of transportation that will serve a very small group</p>
33266	Megan Kenley	<p>Please do not tarnish the beauty of this unique and breathtaking canyon for the sake of making money. The ski resorts have enough traffic any easier access will make them unenjoyable. Leave This canyon the way it is. Use more buses if you need to but please do not make this gondola.</p>
33269	Ian Quigley	<p>This thing stinks, it's expensive, it's subsidizing the resort owners and it destroys historic bouldering areas and makes it harder for backcountry users to get to their destinations. I'd much rather have a) a parking structure at the BCC quarry and then b) police at the canyon entrances denying cars without 4WD and *also* cars with fewer than 3 passengers on storm days/weekends. Also c) why are there fewer buses this year? Cmon.</p>
33268	Lorcan Murphy	<p>Please for the love of God don't build the gondola, we've got so much greater need than rich tourists pissed off about sitting in traffic.</p>

Comments on Little Cottonwood Canyon Final EIS

33270	Jennifer Shah	It is ridiculous that the preferred alternative (Gondola B) would be one that costs much more money to build and that serves a small percentage of the population (mainly tourists without kids). I am a climber, hiker, biker, and skier at resorts serviced by the proposed gondola as well backcountry locations. I am confident I will NOT use the gondola for the following reasons: it doesn't stop at all the locations I intend to frequent, I can't bring my bike with me (or it won't even run in the winter), I don't want to deal with multiple transfers carrying all of the ski gear my family and I bring to the resorts. I also live in the vicinity of the proposed gondola. It would be an EYESORE. I know this from living in Albuquerque, NM for 6 years during which time I used the gondola just once but hated the sight of it every time I was near the foothill trails. If Wasatch is to be altered no matter what, why can't we enhance the existing bus system with preferential lanes and stop lights for buses to leap frog traffic? It would be so much more cost effective and incentivize people to use the bus if it could bypass cars stuck in traffic. It also would be more equitable, as I suspect the cost of the gondola will be more expensive than a bus pass. Finally, I hate the idea of multiple lanes of fast moving traffic (> 35 mph) on Wasatch Blvd and the proposed sound walls. You will isolate those of us who live east of Wasatch. The only safe way to commute will be by car rather than active transportation. Thus, we will all be contributing more to poor air quality in the Salt Lake Valley. And, with more cars in the more lanes of traffic, our neighborhood will have reduced air quality. This equates to an environmental injustice just to better serve others who commute from Sandy and Draper or to serve people who want to access the canyons on powder days. Already, we have more traffic in our neighborhood as a result of people using side streets to circumnavigate Wasatch. Please enhance existing bus services to deal with the problem of canyon traffic congestion. NO GONDOLA!
33271	Kayla Norman	As a Utah voter living in Millcreek who skis, hikes and climbs I have yet to see evidence that the gondola will do anything to improve access to the canyon nor reduce traffic during ski season. The consequences are too great.
33272	Adam Brusven	The Gondola proposal is not sufficient to deal with the issue and is thus obsolete before even being approved. Replace the highway with a train.
33273	Matthew Durrant	LCC doesn't need a gondola. There are many other, better options out there than to just take the most expensive and intrusive option. Please reconsider.
35308	megan bradley	<p>My name is Megan Bradley and I have lived in Utah for 47 years. I am a registered voter and I am against putting a gondola in little cottonwood canyon. We choose to locate our family near the mouth of little cottonwood canyon because of the beauty and recreation it provides. The gondola is a solution that can't be undone and an expensive option that is funded by tax payer dollars that benefits 2 privately owned businesses. Please consider tolls or expanded bus services as a cost effective and less intrusive alternative to the gondola. I appreciate UDOT for considering other options before moving ahead with an irreversible decision.</p> <p>-Megan Bradley </p>
33274	Mark Horstmeier	A gondola is a terrible idea and a boondoggle. Way too expensive to serve a few privileged customers that couldn't be achieved by buses
33276	Matt Schmidt	<p>I am strongly opposed to the LLC gondola project. I grew up in Cottonwood Heights and frequent LLC for recreation including skiing, hiking, and rock climbing.</p> <p>I believe the gondola will not solve the traffic and transportation challenges of the canyon. It seems to be an expensive and complicated solution (the engineering required blows me away). I am in support and believe that we can address the issues through alternative means. I would support tolls, parking fees, annual pass programs, increased busing. All of which would require less disruption of the natural landscape.</p> <p>I would like to thank UDOT for getting to the bottom of the issue and for considering my comments and accurately representing the desires of our community.</p>
33275	Todd Miller	This gondola is bad for the canyon. As a taxpayer, I do not wish my dollars go to support an already overpriced ski industry.
33278	Elizabeth Chengrian	I don't feel that the general public's best interest was taken into account. This is evident by the fact that the proposed solution only accesses the ski resorts. It leaves out solutions and damages hiking trails and climbing areas among other things. There are better, more environmentally and publicly friendly options.
33277	Elizabeth Goott	No, No, No gondola
33279	Elizabeth Goott	I am strongly against gondola
33280	Juliana Eiger	The gondola won't benefit the local population that truly cherish Cottonwood. Please leave our beautiful nature alone!
33281	Carmen Holbrookpx	Please don't put the gondola in
35309	Kristi Kristi	I think that the ski resorts should pay for most of the gondola. Besides help the environment will get the ski resorts are the ones that are getting the biggest benefit. They pay the majority of the cost.
33282	Sam Elander	<p>Hi,</p> <p>There is a lot that could be said here, but I will be brief.</p> <p>The canyon is too long for this type of system and BCC is the canyon that struggles way more with traffic (3x the length and more windy).</p> <p>This would take require a lot of demolishing the forests and boulder fields that people climb on. Those recreation spots will be gone forever. With the length of the Gondola, there would be very long wait times!</p> <p>I highly recommend increased bussing and restrict the canyons to 2+ or 3+ per vehicle to reduce traffic.</p> <p>Thank you.</p>
33283	Joel Smith	Utah is growing fast. We need solutions that will serve a majority of people, doing a wide variety of things, it's better for the community, it's better for the economy, and more people involved will help make it better for the environment.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33284	Jennifer Picklesimer	I'm a Utah voter and I use Cottonwood Canyon all year long. A gondola that will destroy precious land and structures to recreate on is not a great solution to the problem. The use of public transit that is reliable and running more often a a great solution to start with for traffic control. Creating a fee to enter would also be a great solution for those who do not live in the close surrounding area.
33285	Austin Fietkau	I oppose the gondola. Explore the other options at hand, don't ruin our canyons.
33286	Erin Rubin	The gondola will forever tarnish views and scenic landscapes and uproot vegetation and wildlife. It's strictly for ski resorts and for them to make more money. It's about greed. Please stop it.
33287	Jared Kirk	Don't do it
33288	L Kay Willoughby	Please do not do the gondola. It will create an eyesore serving very few for a short time of the year. Find a better way.
33289	Natalie Lane	I am against the building of a gondola. It is not a strong, long term solution. Utahns do not want this. We want our gorgeous state protected from this disaster of an idea.
33290	Megan Cota	As a resident and taxpayer in Little Cottonwood Canyon, I have to please urge you not to build this gondola. Other alternatives cost less, will take less time to implement, and will be less of an eyesore.
33291	Nathan Lane	Not in favor of a gondola being added. It hurts our pure views of nature and couldn't have any meaningful impact on traffic.
33292	Steve Vaughan	I like the concept of the gondola. However, I don't think politicians or ex-politicians that influence the direction of a project should be allowed to have any financial participation in any part of the project. It taints the entire process. Pass a strong conflict of interest policy that prohibits any insider dealings and I would be supportive of the committee's recommendations.
33293	Evan Roundy	I am strongly opposed to the gondola. It is to expensive, only serves a limited number of people, will have a negative environmental impact, won't solve the problem and will create other problems, and will be a burden for tax payers.
33295	Mitchell Hogue	I think the environmental impact this will have far out weighs the potential benefits. The issue seems to be ski resort capacity, not transportation.
33294	Anna Thompson	This isn't a traffic solution, this is a ski industry tourist attraction. I am opposed.
38660	Rich	Yes, my name is Rich. I'm a Utah voter and user of the canyon and I love the gondola idea. I think it would be awesome and it would be just such a great thing to to do. Anyway, that's my comment.
33296	Sarah Christenson	I completely object and feel uncomfortable with putting up a gondola. I have not heard one person say that they want this and I think it is completely unnecessary. It only damages our little cottonwood with no benefit. Put that money into something else that's actually useful!
33297	Michael Adams	<p>First, I will respond to some of the chosen sub-options. I like that parking lot at La Caille would be increased and not rely on the park and ride at Highland...too many transfers to make it work. I suggest that the snow sheds should be designed to fit into the landscape. They should be designed to look natural like a tunnel, and can also be used as a wildlife bridge. On Wasatch Blvd, reduce the pavement as much as possible. Use 11-ft thru lanes, 10-ft turn lanes - get Region approval to do that. Keep the bike lanes 5-6 ft, but do not add the extra pavement beyond the bike lane. Doing this can reduce the pavement width by about 12 to 18 ft.</p> <p>A few concerns: The Purpose and Need statement can be whatever you want the answer to be. This whole process seems like you wrote the P&N to make sure the gondola was chosen. The sub-options to implement first seem like they should greatly cover most of the project goals without needing to add the gondola.</p> <p>Regarding the gondola in general - If tolling would only be during the 50 busiest days, then those are the busiest days that you are trying to mitigate. That sounds like the gondola is really only something that is needed on 50 days of the year. If roadway congestion and LOS is not concerning outside of those 50 days, then why would anyone park the car and pay more money to take a longer ride up the canyon? Seems like few people would use it outside of those 50 days. The gondola is an extremely expensive option to serve only two destinations for only a small fraction of the year. Is the revenue that the ski resorts lose out on because of congestion or the canyon being closed offset by the cost of the gondola?</p> <p>A statement also indicates that the gondola would still run in variable weather conditions. What about during windy conditions during snow storms? Will it still be running during windy storms? At what point would a gondola need to stop? If it stops because of wind during a storm, wouldn't the roadway be closed also due to snow accumulation? Is the gondola really a feasible alternative?</p> <p>Far too many local governments and citizens are opposed to the gondola, and the local leadership should have a say in what happens within and near their cities. For example, Salt Lake City was opposed to the State-drive Inland Port. Then, recently, reports and articles show that the Inland Port is not financially feasible. Again, is the gondola financially feasible? Or has the Purpose and Need been written in such a way to make sure that the gondola is chosen despite any financial concerns? Carlos Braceras has spoken at the UDOT Conference in recent years to make sure that UDOT works with local governments to help them become what they want to be. If the leadership of nearby cities of Cottonwood Heights and Sandy do not want the gondola option that would impact their cities, then UDOT should really listen to them also. But maybe Alta and Snowbird are more important.</p>
33298	Caleb Hintze	I am an avid skier and recreational user of little cottonwood canyon. Though the gondola sounds interesting, it is not a good solution to traffic and will damage the canyon otherwise. Please do not waste my taxes on this expensive and pointless solution!

33299	JD Ethington	<p>I participate in a variety of activities in the canyons and am grateful for all the special interest groups that exist out there. I have participated in many of their programs and events. Unfortunately, their voices tend to shout loudly at projects/stages like this. Hopefully it can be recognized that their noisy, one-sided responses whose arguments lack the thoroughness in the "Response to Comments" document distance themselves from their members and supporters.</p> <p>The "Response to comments" document was very beneficial. While I see that the scope of work has to be well-defined in a project of this size, I think the creators of the document put a little too much emphasis and weight behind the argument that all users will benefit because the gondola will take away some of the resort users. I think that answer doesn't exactly hold water, but also see why the answer to that question is difficult to address. I think it needs to be recognized that future decisions of other stakeholders (such as the forest service, resorts, etc.) will also affect how the gondola can benefit non-resort users, but that those potential benefits, while real, are unknown at this point. Please explore all possible ways the gondola use can directly improve users' experiences- both resort and non-resort users. Please put pressure now on the forest service to make changes that will allow bicycles on the gondola, and please don't place a "forever" ban on bicycles on the gondola just because it's not feasible at this point in time.</p>
33300	Jaime Odin	<p>I don't think putting a gondola in little cottonwood canyon is in the best interest of the canyon itself. We need more long term thinking instead of a quick cash cow</p>
38654	Marilyn Johnson	<p>Yes, my name is Marilyn Johnson. My call back number is [REDACTED] I just wanted to provide comments relative to the proposed Gondola in Little Cottonwood Canyon. I think that is the worst idea ever. The people who lived near the canyon, let alone anyone else who lives in the valley, have already voiced their opinion and said no, we don't want it. So what part of no don't you guys understand? The thing is is that this Gondola situation is going to make the canyon not look any more natural than what it does now. It's going to make it look mechanized and it's only going to provide money for the ski resorts. Probably Snowbird is the one that headed this up. But the thing is is that greed is a big motivator it seems like in this whole thing, and you don't care what the canyon looks like as long as you get your pound of flesh from every skier out of the state. I think this is the worst idea that you could have come up with in the world. Again, my name is Marilyn Johnson 801-[REDACTED] I live in Sandy, Utah at [REDACTED]. Thank you.</p>
33301	Dan Caffee	<p>Scarring the natural beauty of the Canyon isn't the right solution. Buses, parking management, are much better options</p>
33302	Bryan Schreiner	<p>This is a bad idea. If this gondola is built, I'll still drive my car whenever possible because it is way faster and more convenient. Please do not build this!!</p>
33303	Jim Ngo	<p>No gondola!</p>
33304	Bryce Johns	<p>To Whom it may concern,</p> <p>I am Bryce Johns, a Utah voter and user of Little Cotton wood canyon. I am firmly opposed to the LLC Gondola project, which seems like an obvious example of a boondoggle. A gondola service would only service the handful of days a year the canyon is packed with skiers. It does nothing to help the rest of the year and all the other users that aren't going to the ski resorts. I understand that the ski resorts also are not planning on chipping in on this project that only benefits them.</p> <p>I support any of the other solutions and thank you for getting to the bottom of this to accurately represent the community.</p> <p>Thank you, Bryce Johns</p>
33306	Kelsey Brown	<p>No gondola! Save cottonwood canyon!</p>
33305	Jaiden Rhoton	<p>This is a lot of money for a project that will take a long time and that won't help serve enough people to make it worth the cost and space as well as nature destruction. Please do not put up this gondola. Keep our beautiful woods the way they are.</p>
33308	Andrew Lewin	<p>I'm a voter in salt lake county and frequently visit little cottonwood canyon during all seasons. In the winter I ski, but in the summer I climb and hike. Introducing a gondola is an expensive solution to only one of those activities. I would rather see UDOT solve the problem for all activities by increasing bus routes, tolling, or a cog train.</p>
33307	logan rasmussen	<p>I just recently got into climbing at the start of this year and it is truly amazing going to the crags and truly seeing what there is in the canyon. Every piece of wildlife and nature is precious to us and we should protect that.</p>
33310	Charlene Williams	<p>I do not agree that a Gondola is the right solution for Little Cotton Canyon.</p>
33309	Kieu and David Frisby	<p>We live at [REDACTED] and moved here because of the natural beauty of the mountains. We are Utah voter and don't mind the traffic on powder days - we believe tolling and increased bus service would solve this problem as opposed to spending millions of taxpayers money on gondola. We would not want to stay here as we would no longer get to enjoy the natural beauty. Thank you UDOT for reviewing our comments and representing our community's wishes.</p>
33311	Kathy Jensen	<p>The estimated cost of the gondola option is too high and it might go even higher. Taxpayers should not have to fund transportation costs for the 2 ski resorts in Little Cottonwood Canyon - the project does NOT benefit taxpayers enough. I would like to see other, less invasive approaches like frequent electric buses, large parking hubs outside of the canyon for those buses to service and even parking reservations at the resorts (if ANY vehicles are allowed up the canyon during the winter). The go sola will be a blight on our beautiful canyon. Please reconsider the options and throw out the gondola.</p>
33312	Grace Smith	<p>This will destroy the natural environment of LCC - I am 100% against the gondola. It only services one season, one winter activity. We need to preserve the land. NO GONDOLA.</p>
33313	Tara Schafer	<p>This will be detrimental to the beautiful wildlife and habitats for these creatures. People need to learn to enjoy the beauty of nature in its purest form. Go hike!</p>
33314	Leah Davies	<p>I hope an improved bus system will be the first step in addressing the congestion in Little Cottonwood. I couldn't support a Governor who would allow udot officials to disregard the clear will of the majority of our community.</p>

ID	Full Name	Comment
33315	David Weinstein	<p>I wanted to let you know that my family and I oppose a taxpayer-funded gondola for a number of reasons. One is that the gondola would be an extremely costly and expensive taxpayer funded project that will benefit maybe 3% of the population and the two or three ski resorts. \$550 million dollars is too much money to spend on 15-20 bad traffic days a year and that will only benefit a select few. It will only run 120 days a year. There are better sustainable and cost effective options such as reservations, tolling...etc</p> <p>Another objection is that the gondola would only have two stops whereas buses would run all year round and have multiple popular stops. Why not invest in transportation hubs and infrastructure to move people in a more economical way that would benefit all Utahns, not just skiers.</p> <p>What is the cost per person per gondola ride? Estimates range from \$30 to \$100. This is unsustainable and too expensive for most people thus reducing the likelihood it will be a good alternative to things like buses.</p> <p>Widening Wasatch Blvd will not make Wasatch less car centric and more pedestrian friendly. Things like walking paths on the east and west side, protected bike lanes, adding pedestrian road crossings (not high pedestrian bridges), and slowing down the road through redesign and vegetation will make Wasatch Blvd more pedestrian friendly!</p> <p>So to sum up - we need to preserve the beauty of LCC and there are ways to do this! Is a gondola even necessary - no it does not seem so! What will it really cost - probably more money in the long run than \$550 million not to mention what it will cost to ride it! There will be increased visitation stress on LCC. It is not a convenient solution - ignoring local, public and political opinion, being taxpayer-funded, serving only private resorts, and it is an irreversible, and rushed decision!</p>
33311	Jason Harmon	<p>Hello,</p> <p>My name is Jason Harmon. I am a registered Utah voter and I want to state my opposition to the LLC gondola project in Little Cottonwood Canyon. This canyon is an important place to hike and enjoy and to get away from all things metal and electrical and man-made for me and my family. I think the gondola project would be ugly to the sight, frustrating to construct, would disrupt the enjoyment of the canyon for myself, my family, and many of my fellow neighbors, and would be a huge waste of millions of dollars. I believe that other solutions, such as road tolls or more effective and more frequent busing, should be explored more deeply and would provide better solutions for this issue.</p> <p>Thank you.</p>
33316	Caroline Smith	<p>No. Save the look of the canyon. Listen to the people not the \$\$\$\$</p>
33317	Michael Metcalf	<p>A parking garage at the base would be helpful to allow carpooling the peak season toll is also a good idea. But the gonadal is not the answer. Follow the example of Zion national park</p>
33318	Sean Tropso	<p>I think it is great that udot is collecting and responding to comments, however I fear that the comments are not being listened to. The vast majority of comments that I have seen and read, and the general public sentiment including the desires of salt lake county and the city of sandy all point to the gondola being the least desirable solution. I stand with this group and consider the gondola to be the least desirable, most expensive, least useful and most negatively impacting the environment of all of the solutions proposed.</p> <p>Has Udot conducted any market research? At the proposed price to ride the gondola is there any desire to ride the gondola? It seems that this has been overlooked.</p> <p>It was also a bit shocking for UDOT to come out and publicly admit that they are not trying to solve the traffic problem in Little Cottonwood, rather they are very specifically trying to get people to the ski resorts only. This seems a bit outrageous that the tax payers of Utah should pay more than a half a billion dollars for a project that is ONLY trying to get people to ski areas.</p> <p>I would say as a result of this that the entire project is flawed. We need a solution that is good for all of little cottonwood, not just for users that are going to go to a specific private company. You only need to take a drive up little cottonwood on any nice day to see that we need a solution for the whole canyon, not just for alta and snowbird, and this solution needs to be flexible and run year round.</p> <p>It should be done at a price point that is affordable for users as well, as 20-30 dollars PER USER on the gondola is very high and would further drive users to go by car, even with a toll as the toll would be of a similar price. A bus solution can be implemented at a much much lower price point per user that would be much more approachable and, with a 30 dollar per car toll, would drive people to use the bus rather than a personal vehicle.</p> <p>The bus solution would have the flexibility to stop at more than just the ski areas. If we look outside of just subsidizing these private companies with a major infrastructure project to get people to them, we would quickly see that the gondola is not adequate to address usage throughout the entire canyon as it should.</p> <p>I urge UDOT to take a hard look at this project. Why are we making tax payers spend half a billion or more dollars to get people only to snowbird and alta? We need to consider other users in this project and address traffic and usage throughout the canyon in a solution, not just those going up to alta and snowbird. Please consider public sentiment, the sentiment of many usage organizations, companies, and many of our community leaders and politicians here in salt lake and consider other solutions besides the gondola.</p>
33319	Claudine Miller	<p>The gondola is a horrible solution that only serves a limited number of people. Zions uses a bus system which works well without destroying the environment. Please use the buses, no gondola. You are making the canyon ugly.</p>
33320	Lisa Nielsen	<p>Increased his service, no canyon widening & absolutely NO gondola. Thackeray you!!</p>

Comments on Little Cottonwood Canyon Final EIS

33321	Joe Morrison	<p>I strongly oppose the gondola project.</p> <p>I am a Utah Tax payer and I live in Sandy. I am an attorney and community advocate for rock climbers.</p> <p>This gondola is not for the everyday outdoors person or for the Utah tax payer. It only serves the ski resorts and I do not ski. I rock climb, hike, fish, ect and am in the canyon every single day. The traffic does not affect me at all.</p> <p>If this project goes through I will organize community protests and will encourage everyone I know to vote in new politicians that won't sell out the community.</p> <p>There are better alternatives such as a large toll for entering the road on snowy days or expanding the bus service.</p> <p>I live in Sandy and have only been upset with the traffic in the canyon once or twice a season. Spending 1 billion dollars for two days of traffic is absurd.</p> <p>I hope you make the right decision and preserve Utahs natural landmarks.</p> <p>Thank you.</p>
33322	codeiherbgrede	
33323	Kevin Newman	No, no no to gondola, it's a money grab
33324	Karen Jackson	My biggest concern is the parking lot and the number of people allowed up the canyon. When we boat on Jordanelle there is a limit to how many boats can go on the Lake. Our canyons should be the same way. Little Cottonwood can handle only so many people. We should have always had toll booths, just like Millcreek.
33326	Callum Dow	Please do not tear into this precious woodland. For a very long time this was and continues to be a place of refuge and wellbeing for 1000's of Climbers/runners/walkers.
33325	Zach McClellan	<p>The gondola proposal options needs to be cutoff immediately. This option is such a short sighted proposal and doesn't serve the local Utah community and those that love and recreate in the canyons. Let's not permanently scare the mountainside for profiteering resorts. The Wasatch front and LCC/BCC are much more than skiing. This is a human created problem that shouldn't be solved by further exploiting the mountainside.</p> <p>UDOT should conduct a capacity/visitor management study to better understand how many visitors LCC can support before completing the EIS.</p> <p>The gondola won't solve Little Cottonwood Canyon's traffic problems, but we already have solutions that are proven to work, including enhanced buses, tolling, parking reservations and enforcement of traction laws.</p> <p>Constructing more than 20 towers reaching 200 feet tall and stretching eight miles through the heart of Little Cottonwood would destroy the canyon's natural beauty.</p> <p>Committing hundreds of millions of taxpayer dollars to the world's longest gondola without a commensurate effort to reduce auto traffic in the canyon nor addressing spring/summer/fall traffic amounts to a government-paid lift for two ski resorts.</p>
33327	Yotm Ben Reuven	Don't do it! You're just destroying such a special place with such a special community! Please have a second thought and stop it!
35314	Ken Lee	I think a gondola is a great idea. Don't let all of the noise from a few people in opposition change the narrative.
33328	Kate Handley	I am strongly against building a gondola in Little Cottonwood Canyon; I have listened to both sides and I agree that the gondola would be unsightly, too expensive, and not a good solution at all to the problem.
33329	Jennifer Mahoney	This comment is in absolute opposition of destroying the natural landscape of the Cottonwood Canyon by installing a gondola. I, along with a substantial committee vehemently oppose the project, along with thousands of native Utah citizens. We are all registered voters, and will ensure that any legislative candidates or seats, in any capacity (state, city, county, or UDOT) will be highlighted and voted against in the next election & board holding cycle. The beauty of Utah is already under attack. Please hear the voice of the native, life-long residents of Utah.
33330	Courtney Braeger	This gondola removes some of the natural beauty of the canyon and will only service the ski resorts. It does not help others who enjoy the canyon for other uses. Plus, the length of the gondola makes it not beneficial to ride. A bus only lane would encourage more people to ride if they get to bypass the line of traffic.
33331	Mitch McBeth	No no NO! This gondola is such a bad idea for so many reasons.
33332	Alexander Martin	I hate the idea of a gondola put.in LCC. Do we care that little about nature we just impose our will upon it. I think the least amount of people going up the mountains the better. NO GONDOLA!!!!
33333	Daniel Macdonald	I am a citizen and user of little cottonwood canyon. I do not want the canyon ruined by the installation of a gondola
33334	Brian Godsey	I don't support the gondola. I'm a regular LCC user. I support a solution less impactful and more widely usable and applicable to all use groups and parts of the canyon, such as increased bus service
33335	Danny Herman	Please do not construct the proposed gondola system in little cottonwood canyon. The environmental and aesthetic impact would be disastrous.
33336	Sally Jo Zuspan	I do not support the Gondola. It's too much money, only serves a small segment of population, costly, and destructive to the canyon. I am against the gondola (and I am a skier).
33337	Joelle Baxter	<p>No gongola! Put it on the ballot and let the taxpayers vote.</p> <p>With the Great Salt Lake drying up, how can we guarantee snow in the future without the lake effect? It doesn't make sense to put an expensive gondola with the climate changing. It also doesn't make sense to put it in to fix a problem that occurs a handful of times a year.</p> <p>Add more buses. Please make Snowbird only buses and Alta only buses, they would get more riders that way if riders didn't have to go to both resorts.</p> <p>Toll the canyon.</p> <p>I'll take bad traffic any day over the gondola.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35316	Shaun Norman	<p>I appose to the LLC Gondola project in the opening line.</p> <p>I am a Utah voter and a user of Little Cottonwood Canyon</p> <p>There are other solutions (tolling, increased bus service, etc.)</p> <p>I appreciate you trying to find a solution to this issue but will support the gondola project.</p>
33338	Stephanie Tonin	<p>I do not want a gondola system as the preferred alternative at this time. The cost to taxpayers is outrageous and it really serves only Alta and Snowbird - essentially a give away to ski resorts - in a canyon that is meant to serve the entire public. My use of the canyon is for hiking and back-country skiing and snowshoeing. The way this alternative looks, you are pricing everyday Utahns out of this canyon for the winter to serve private interests. There are better alternatives at this time that are focused on curbing people's driving behavior, incentivizing carpools, increasing and making more convenient bus services, tolls, etc.. Please consider a different alternative rather than the gondola, which is permanent and changes all aspects of wildness in this unique canyon.</p>
33339	Neal Moores	<p>No to the gondola</p>
33340	Trinity Grace	<p>Please don't move forward with this project. The gondola isn't the answer. Monitoring traffic and requiring patrons to use busses to access ski resorts is not only more cost effective it's more environmentally conscious. The gondola will cost taxpayers millions of unnecessary funds and be a scar against what is a gorgeous landscape. It will also cut off access to dozens of climbs and hikes. Please make the responsible decision and do not build the gondola.</p>
33341	Melanie Walters	<p>I am totally against the gondola project. As a lifelong resident, we have allowed too many blights on our beautiful canyon. I am for allowing limited use. Metering canyon usage and assure those with less monetary means access. The gondola project is being pushed by big money corporations that are looking to capitalize on the overtaxed community. NO GONDOLA</p>
33342	Dawn Young	<p>Please do not build this gondola! There's so much it will damage. Animal habitats and animals migrating will be impacted and killed. Scenery and places where many of us recreate will be destroyed! Please do not do this. Resort skiing is not the only use of the canyon. This is not the most effective way to minimize impact, preserve the safety of wildlife, or to support equal use of the canyon by all people who recreate there.</p>
33343	Matt Lindstrom	<p>LCC doesn't need a gondola. We need common sense solutions like increased buses, tolling, and winter long traction laws. With Inflation the gondola won't cost 550 million. This is a waste of time and money for the Utah people. The watershed is too important to impact it with a gondola. No gondola. Not now, not ever!</p>
33344	Cameron Chasse	<p>Hi there. As an Alta resident, I see the issues with vehicles in the canyon whether it's winter or summer. I would like to see an alternating three lane traffic format with some sort of toll and increased bus service. The thought of making tax payers fund a gondola is insane to me.</p>
33345	Stephen Heath	<p>I am glad to see UDOT taking into account the publics desire to see alternative options for reducing traffic issues within Little Cottonwood. However it's disappointing that the gondola is still an option that's being seriously considered. The impact to the canyon of building a gondola is far more harmful than the very slight improvement it might bring to reducing traffic issues. I live at the mouth of little cottonwood, and I'm familiar with the red snake that goes on during the winter season, particularly during powder days. However I still believe that these things could be addressed by other, less impactful ways; and, those other less impactful ways (such as increasing bussing, monitoring parking numbers, tolling, alternating days, parking passes, etc) would be effective and useful for the other 80% of the year when the canyon is not socked in. The impact to the whole of LCC's many recreation opportunities is unconscionable. The gondola is akin to cutting off our leg because we scraped our knee - it's a drastic overreaction, being driven by people who are simply looking to make money off of the places that we love, to a problem that can be solved with other means. Please, for the sake of all of those who love little cottonwood canyon as a whole, and not just a place to come vacation with their family once a year.</p>
33346	Barbara Komeyli	<p>I don't agree that a gondola is the answer to canyon access. Not only is it the most expensive option it will ruin the wildness of these beautiful canyons. A gondola would serve a limited number of people, not the majority. The best options would include electric buses and carpooling.</p>
33347	Jonathan Amburgey	<p>As a resident and tax payer of the Mill Creek area, and someone who frequently visits and recreates in the Little Cottonwood Canyon and surrounding canyons, I strongly oppose the proposed gondola. There are more cost-effective and less environmentally damaging alternatives that can be implemented to alleviate vehicle traffic concerns including, but not limited to, rapid bus/transit and limiting visitation in the canyon during peak times of the year. These more cost-effective and less impactful alternatives that don't fundamentally alter the landscape of the canyon are the preferred options. Thank you.</p>
33348	Alicia Derr	<p>I am a life-long resident of Salt Lake City. I strongly oppose the gondola up Little Cottonwood Canyon. Out of all the proposals, this one made the least sense for Utah and I'm appalled UDOT wants to move forward. I'm opposed to the astronomical cost, the environmental impact and it's inability to serve the entire canyon. This is NOT a project that best serves the interests of Utahns.</p>
33349	Teresa Reese	<p>Please please PLEASE do not put the gondola in Little Cottonwood Canyon.</p> <p>I live very near to the canyon and walk in the area several times a week. Please preserve this precious and beautiful part of the world as it is. I have lived here for p years and every time I am outside, no matter the season, the beauty of the canyon takes my breath away. Rather than continually commercializing every beautiful place again please please PLEASE protect and preserve its present beautify not only for us now but also for future generations.</p>
33350	Rafael Lorenzo	<p>The addition of a gandola does not serve the natural preservation of the area and its environment. It only serves the need for use of the resorts. I vote for the improvement of the bud system and the preservation of little cottonwood the way it is now.</p>
33351	Susan Orr	<p>Please NO to the gondola. Put it to a public vote to get a fair opinion. The amount of usage for the cost is unreasonable. It will not be an advantage to traffic on wasatch or the canyon. The 2 resorts can find ways through parking reservations to control the numbers and traffic. Please look at options and not just how it will line the pockets of investors.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33352	Kenny Bergman	Please do not go forward with the gondola. It is a subsidy for the massive ski resorts that should foot the bill instead.
33353	Betsey Welland	Hello, I am a Utah voter and I do not support the gondola as a solution for LCC. I cannot afford to ski, but I do enjoy rock climbing and hiking. I would prefer options such as toll booth and improved bus service as options. Thank you for your time. Sincerely, Betsey Welland
33354	Christopher Locrasto	As a frequent visitor to SLC I am in opposition of the proposed gondola. I enjoy the bouldering and views of LCC and cherish the natural resource. A gondola would forever change the landscape. I support finding other solutions to solve the problems of LCC
33355	Dina Walton	There has to be a better way that still protects the beauty of the canyon from the eyesore that the gondola would be. Also there are many more people that use the canyon than skiers.
33356	Tara Orr	My name is Tara Orr. I am opposed to the LLC Gondola project. I am a Utah voter and US citizen. I feel the gondola will serve a select group of people going to and from 2 ski resorts. Those of us interested in using the canyon for other purposes (hiking, Rock climbing, pickniking, snow shoeing) will be limited in our ability to access the canyon. I am more on board with a toll/fee for canyon use instead of a gondola which seems limiting.
33357	Alisha Brandon	I wanted to voice my concern for the Gondola proposal. As a Utah voter and blessed hiker of Little Cottonwood Canyon, the thought of our trails and views of this beautiful place being ruined by the steel cables and metal towers is saddening. I hope that alternative options will be used instead with either creating a toll or extra bus routes created to help with the traffic needs. I know that UDOT is trying find a solution but let's keep our nature nature and preserve what God has given us for the generations to come. Thank you
33358	Lance Osborne	My name is Lance Osborne, born raised and still living in Cottonwood Heights (around [REDACTED]), and I am opposed to the LLC Gondola project. I am a Utah voter and an AVID user of Little Cottonwood Canyon! The Gondola as our first crack at this IS NOT THE traffic solution for Little Cottonwood Canyon. This series of huge steel towers and cables will only serve a small user group, carrying passengers to only two ski resorts at the top of the canyon. It will not serve climbers, hikers, or other canyon users and will not alleviate any traffic at trailheads throughout the canyon. Alternative options to the gondola exist that can address the greater issue without permanently destroying our cherished trails, crags, and views. The Gondola as our first option is not the way. There are BETTER OPTIONS you've proposed and they can benefit a wider range of people and activities. I'd happily buy a Season Toll Pass or use increased bus service!! Thank you for accurately asking for feedback from me, my family, and our community. Please take these comments to heart and DO NOT CONTINUE WITH THE GONDOLA PROJECT. Maybe do that in 10 years if two other viable options end up not working please... Lance
33359	Kelly Garrett	I am Opposed to the gondola project because it offers a little flexibility to meet future needs and a huge price tag that benefits very few. As a user of Little Cottonwood Canyon Road, I have been frustrated with congestion to Alta. I have also been using the ski bus more frequently and have found the service to be a great alternative to driving and parking. Some improvements to the service are desirable: it would be great to see updates of how many spaces available, perhaps through an app or with signs on the road. If covid has taught us anything it is to build in flexible systems that can be nimble in response to changing resources. Investing in creative solutions for us keep us offers opportunities for everyone, without benefiting just those that ski in the resorts. Backcountry skiers have a stake in the matter too.
33360	Hilary Thirlwell	I am a Utah voter and am opposed to the gondola plan. It seems that it is being pushed by people that stand to preferentially gain from the gondola option. I am in favor of trying other options before any more discussion of building a gondola is engaged in
33361	Jennifer Abernathy	DO NOT build a gondola in the canyon. It will be destructive and wildly expensive. Most of all, it will permanently alter the natural landscape in an irreversible manner. As a lifelong Utahan, I am strongly strongly AGAINST the gondola.
33362	Taylor Vanderwest	Hi, I live in Draper and Little Cottonwood is the closest canyon to me. I frequent there often, almost every one of my few days off. I rarely go to the resorts up this canyon though. Throughout the year I am exploring different trails and following different rivers and streams. I can't imagine having to take time away for construction and how it would permanently change the physical views from in and out side the canyon. Thank you for listening to your public and representing us as a community!
33363	Adria Brooks	Dont do it
33364	Benjamin Peacock	I oppose construction of a gondola in Little Cottonwood Canyon. It'll only serve the ski resorts at taxpayer expense without addressing the needs of other user groups. I frequently hike and bike in the canyons and would like to see a solution that addresses crowding at all trailheads.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33365	Zac Dailey	<p>I am a lifelong resident of Salt Lake City who grew up skiing our local ski resorts. I have also taught my kids to ski on those same Cottonwood Canyon ski resorts.</p> <p>However, I no longer can afford to take my family skiing because we have been priced out of the market of a sport I love. I am opposed to the LLC Gondola project because this project will only serve a small user group of Snowbird and Alta for a short period of time for 4 months of the year.</p> <p>Alternative options exist to better serve the entire community and not cater to just rich users of the two ski resorts. Those include tolling and improved bus routes.</p> <p>I dont agree with tax payer dollars being used to fund this project that only a small percentage of the population will use.</p>
33366	Greg Collins	<p>God is watching ! Don't mess up the Canyon</p>
33367	Dennis Bright	<p>Use of millions of tax dollars to construct a gondola system that basically benefits only two ski businesses and one specific group of the public (skiers/snowboarders) is a waste of the taxpayer's money. The present road will still have to be maintained and even upgraded in the future to accommodate the general public that uses the road 365 days of the year, not just for those who use it during the winter months.</p> <p>The gondola system will result in an eye soar to the beauty of the canyon with the large towers, cables, and gondolas along the proposed route. Construction of the gondola towers will also cause environmental issues. Initially the upgrade to the current roadway could result in some environmental issues, but these issues can be mitigated and would be a part of the current roadway maintenance and any updates or improvements that will eventually be necessary to the roadway in the future. Spend the money now to improve the current roadway instead of wasting that money on a gondola system. This will help to reduce or prevent spending additional money to make necessary improvements to the roadway in the future.</p> <p>Proponents of the gondola system purport that the use of electrical power to operate the gondola system is more environmentally friendly then allowing cars and buses to be driven up and down the roadway. However, they fail to say anything about where the electrical power comes from. The additional electricity to operate the gondola system will have to be generated by power plants that produce the electricity by burning coal, gas, or oil; thus resulting in additional environmental issues in the state that would not be there if the gondola system is not built. The burning of these extra fossil fuels to operate the gondola will impact the environment - maybe not specifically in the canyon, but in another part of the state that could affect even more people.</p>
33368	Bridget Hilbig	<p>The environmental impacts of this are not justified. It is a horrible idea. There is already a form of public transportation that people choose not to use. The ski bus is free transportation up the canyon and yet people would rather have the comfort of their own car at the base. It is so short sighted to believe that a gondola will change human behavior. If the road is not closed to traffic nothing will change. Instead of further damaging the ecosystem for the ski industry, we should force people to use the already available buses on the already available roads by closing the road to anyone that does not live or work up the canyon. Spending 550 million on this is benefiting only the wealthy that have been lobbying for this.</p>
33369	Adam Abernathy	<p>I vote absolutely NO against this proposal. This is not only destructive to public lands and our already precarious water supply, but it is a public works project that only serves to financially empower a few select property owners.</p> <p>The mere existence of this proposed idea is a text book example of fraud, waste, and abuse. The money spent evaluating and debating this topic could have been used to raise bus driver salaries or spent finding a more sustainable solution to the problem.</p> <p>I ask you to immediately cease any effort on this egregiously harmful and wasteful project.</p>
33370	Brandon Bodell	<p>I have changed my opinion on this. I don't think the gondola is the best option. I think there are a few key elements which have contributed to this change. First, the time it takes to get up the canyon is the most prohibitive. There are several days each winter where I just want to go for a quick ski run and running 15-20 minutes up the canyon is super easy and quick. Second, I really think the towers, cables, etc are not great to look at. I think we should do everything possible to preserve the beauty of that canyon. Last, the cost burden. I just simply don't think it's worth all this money.</p>
33371	Lacey MacDuffie	<p>I live in the Ogden/Salt Lake area, and I can tell you that the community does not want a gondola in cottonwood canyons. You would be destroying animal habitats and trails, and further endangering our air quality and environmental health of the region. If you want to get more people to the ski resorts, you need more and better buses. When I've taken the ski bus in the past it was so incredibly packed and there were lines of people at further stops down the road who would be waiting hours to get picked up. The gondola is a waste of money. Money that can be put to better use in our community. If we keep destroying the environment, we'll continue to have poor snowfall, and by the time the gondola would be built, we wouldn't need it. A fleet of electric buses is a simple alternative.</p>
33372	Kendall Nelson	<p>Having travelled abroad quite extensively, I have been really impressed with the use of gondolas throughout Europe, China, and Canada. They provide clean and efficient access to many areas that are otherwise inaccessible to many people with minimal impact. I'm definitely a fan of the efficiency of this mode of transportation which becomes an enjoyable part of the experience rather than a frustration which is often the case when dealing with congestion on the roads and limited parking on the mountain and in the canyon.</p>
33373	Lillia Mauricio	<p>No tax money should be used, not everyone will benefit from it, especially the poor. Majority of the people are not going to use it.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35318	Maycie Gerber	<p>Hello!</p> <p>My name is Maycie Gerber, and I don't think a Gondola should be built in little cottonwood canyon. I am a Utah resident who frequents little cottonwood canyon for various activities such as hiking, rock climbing, and snowboarding. While the gondola may serve a few people heading to the ski resorts, it will not serve the community as a whole. The gondola will cause irreversible damage to different crags in the area and disrupt the beauty of the canyon. It will also not help to alleviate any parking issues at trailheads along the canyon road. It will only slightly alleviate parking issues at ski resorts. This issue can be better solved by implementing tolls and/or increased bus activity in the canyon.</p> <p>Thank you for your efforts in getting to the bottom of this and considering what will be best for the community as a whole.</p> <p>Best,</p> <p>Maycie Gerber</p>
33374	Ana Steele	I do not want a Gondola going up little Cottonwood canyon. I believe it's environmental impact would be very negative.
33375	Abby Pulsipher	I am a resident of Millcreek, Utah voter, environmental enthusiast, and I strongly oppose the LLC Gondola project. I relocated to SLC with my family 8 years ago due to its local access to beautifully pristine outdoor spaces in the Wasatch. We have been rock climbing, hiking, and skiing in LCC since our arrival. Over these past years, we have experienced the increasing effects of climate change and rapid expansion and how it impacts our water sources, air quality, wildlife habitats, and open outdoor spaces. The gondola project will only worsen these challenges we face. I SUPPORT keeping recreational opportunities open and maintaining existing visual experiences, and NOT the gondola project. I also SUPPORT alternate options such as increased bus services and tolling as alternative solutions to the gondola project.
33376	Tisa Conran	I currently reside in Sandy, UT, and I can't think of anything worse than installing that absolute eyesore of a gondola in Little Cottonwood Canyon. Please do not destroy what little beautiful views we have left. There has to be a better alternative.
33377	Kacey Allen	Please look at other options. This will have a massive negative impact on all that people do in the canyon and will only serve the ski resorts during winter months. I am completely opposed to the gondola!!!
33378	Anthony Newman	That exquisite canyon was here long before we were and will be here after we're gone. Obstructing the natural beauty with towers and a gondola is a travesty and an unnecessary endeavor. I feel very strongly that it would only serve very few and, down the line the road will need to get widened anyways. People want to drive the canyon and explore ALL parts of it, not just the two very expensive resorts. Widen the road. Do not build a gondola.
33379	Charles McNall	Oh so many things. I oppose the Gondola as it goes against my religious beliefs of not allowing things that will make the canyons a mess, ruining community resources to climbing, hotboxing people into tin cans that are still subject to wind conditions and benefiting a few select organizations while a majority of taxpaying citizens oppose the project. Wasatch should be 30mph like in sandy, millcreek and foothill. Staggering start times for resorts has worked awesome in big cottonwood. It's about time Snowbird opens at 8am. Everyone lines up for snowbird at 6am anyways... A mini gondola should be placed over each person in charge of approving and implementing the gondola.
33380	carla verhaaren	I strongly oppose the gondola in little cottonwood canyon. I love to hike there with my kids and think the beautiful canyon would be ruined with this project (the views with the gondola and also not solving the traffic). Please consider another option - like maybe tolling or a bus system. Carla Verhaaren
33381	Michael Donnell	Start with closing the canyon to travel to resorts and requiring busses. The economic and visual impact of a gondola doesn't help anyone. You've just built a bus in the sky. A gondola won't help backcountry skiers anyway, whereas a bus is able to drop off and pick people up. The parking situation is the same either way. People need to get to the base of a gondola or to a ski bus. The distributed ski bus parking that exists makes it easy for users to commute to a park 'n' ride and be taken up the canyon without transferring vehicles. A gondola will slow down users because they will need to get off a bus or out of their car to transfer into a gondola. When, not if, the gondola breaks, busses will need to be used anyway. The only argument that even remotely supports a gondola is avalanche danger. But even this is doesn't make sense because avalanches are already understood and managed. At the close of a ski day, there will be a very long line of people waiting to get onto a gondola, which has a fixed capacity, busses can be stacked at key times to alleviate congestion. The image that people are still looking to build a gondola only makes the leadership look corrupt and trying to make a buck at the expense of the tax payers. This is not how Utah citizens want their legislators to act.
33382	Jaime Clement	I am opposed to the gondola. There are other ways to solve problems without adversely affecting the beautiful canyon and spending so much money. Let's take the time and effort to solve these traffic problems in a far less intrusive way.
33383	Marie Newman	I am opposed to gondola! Would prefer a bigger park and ride for bus or carpool.
33384	Paul Harris	Increasing the number of nonpolluting buses would be a better alternative. I have lived in Switzerland; and I only saw gondolas at the base of the mountains, not as an alternative to roads.
33385	Susan parker	Savor what we have! No gondola!!
33386	Shannon Bergmann	No to gondola. Too much \$, impact on environment too high for low percentage of comparative users. More frequent buses, larger buses, utilize parking at existing bus stops on weekends. My kids hated the bus cuz didn't come often enough & always full. This can be solved by frequency increases.
33387	Michele Larsen	No gondola! It is a huge tax payer expense that not everyone benefits from! Charge per car load. Give cars with 3 or more people a free pass.
33388	Brent Hamblin	I believe the gondola is the wrong choice for Little Cottonwood canyon. The cost is not justified. The environmental impact will change the scenery significantly, and I don't believe it skiers as a whole will be keen to use the gondola unleaded forced too. I believe that the solution is to increase the number of buses, keep the road unchanged except for the avalanche tunnels, require reservations at both Alta and Snowbird. As skiers and users of Little Cottonwood canyon in the winter, we just have to put up with traffic.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33389	Sam Wersland	As a frequent user of the canyon and a Utah resident, I would hate to see this implemented as a solution to the traffic.
33390	Alessandro Rigolon	I strongly oppose the gondola. It's a huge waste of taxpayers dollars that will just subsidize the ski resorts and only address winter traffic. Traffic has become unsustainable most weekends of the year. We need an enhanced bus system that connects to multiple transit hubs in the valley
33391	Zach Kastelic	<p>I do not support the Gondola and see multiple EIS issues related to the construction according to the plan laid out by UDOT. My complaints are as follows:</p> <p>The Gondola will massively affect the sightlines of the little cottonwood corridor. The plan calls for at times 150 Ft. concrete pillars. This will have significant negative impact visually for the canyon and detract from the natural visual value of the canyon. Little Cottonwood is one of the most scenic areas within 30 minutes of Salt Lake City, and disrupting that view would detract massively from the natural asset we have. Not only from within the canyon will the views be affected but from hiking trails, ridgelines, and any other way you can view the canyon. Preserving the natural beauty of the area while still being able to recreate is very important to me and I don't see the gondola preserving that.</p> <p>The taxpayers will be funding a public construction project benefitting private industry. Of which the taxpayer sees no direct benefit. Subsidizing the private ski industry at the cost of visual enjoyment of the canyon. I am also concerned about the funding sources for the gondola, as well as operation and maintenance over the life cycle of the gondola. Are those costs being included in the \$500 Million estimate included in the plan. Who would be responsible for O&M on the gondola once constructed?</p> <p>Related to the operation of the gondola little cottonwood is prone to avalanches on those high snow days. Is the gondola going to be able to operate on those days? Traffic flow is most noticeable on days where high snowfall has occurred and if it is unable to operate during that time then I am concerned it will not significantly contribute to the traffic issue.</p> <p>In fact I don't believe the gondola effectively addresses the traffic issue at all. With high estimated ticket prices, no limitations to private vehicles still using the roads, and the gondola perhaps not operating on those days it is needed most, It won't produce an effective reduction of traffic in the canyon.</p> <p>I would propose simply to enact a reservation system in the canyon to limit the number of privately owned vehicles that are able to drive up the canyon, and supplement that with increased bus services for the remainder, as well as expanding the park and ride system. That would address the traffic concerns simply, and without massive costs to both the taxpayers and our natural assets in the Salt Lake Valley.</p>
33392	Victoria Bourcier	<p>Hello, my name is Victoria. I do Not support the LLC Gondola.</p> <p>I am a frequent user of the little cottonwood canyon, for skiing, hiking, and climbing.</p> <p>While I think helping traffic in the winter could be of use, I do not think disrupting the beauty and out cherished trails, and rocks should be the expense.</p> <p>There are many other solutions that would be a greater service to the entire area.</p> <p>Thank you UDOT for hearing us and representing us.</p>
33393	Barbara Olsen	The Gondola is not the solution! It won't solve the year around problem of traffic in the Canyon. We and other users of the Canyon will not ride a Gondola!!!
33394	Zachary Cleary	Many backgrounds and activities use Little Cottonwood Canyon. The gondola only considers one of its users: skiers. If UDOT wanted to consider all of their citizens in equity, they would consider using enhanced bus options or a cog railway. Maybe the gondola will save the UDOT money in a few decades, but the visual, physical, and the experiential impact will be longer lasting and essentially irreversible. Since the heaviest, most crowded use is for a short time period in the winter, why implement a solution that negatively effects the rest of the year? Widening the road is less of an impact that a massive gondola. Buses can transport just as many people in a shorter amount of time. In the summertime, bus transport can cease and the road will be less congested to the non-winter users. Or bus availability can be mitigated in the summertime and stops can be included along the way to decrease overall traffic. The gondola is not the right option among the proposed plans.
33395	Jennifer Radl	I'm a Sandy City resident. I vote No on the gondola. I'm a snowboarder who can't even enjoy riding at Alta. Why should we foot the bill for this when not everyone can ride?
33396	John Shapiro	I am an avid user of little cottonwood canyon and am opposed to the LCC gondola. The gondola is a costly and permanent solution to a problem that affects only a small portion of LCC users during one season of the year. The gondola would negatively impact the visual aesthetics of LCC and the activities that take place in the canyon during the rest of the year.
33397	Sarah Brozek	I do not support the gondola.
33398	Hannah Richards	I am against the gondola
33399	Mackenzie Montague	I grew up here, between the Cottonwood Canyons. So when it was time to buy a home to raise my own family in I came back. The canyons are a corner stone to this community. Their picturesque peaks are the backdrop to the lifestyle of Cottonwood Heights. To mar little Cottonwood with the gondola will damage everything we the community have built. Our responsibility is to our environment and our stewardship over it. The cottonwood heights community has voiced our concerns. We are now out crying, the gondola threat, it looms over all of us who live here. We say NO GONDOLA!
33400	Scott Lockhart	All my life local. Climber and skier. I will never ride that thing. I think it's a terrible idea and not going to solve anything.
33401	Maria Davis	I am a Utah voter and a user of Little Cottonwood Canyon for hiking. PLEASE do not build the gondola! The structure would be an eyesore that would serve mainly tourists and inhibit the enjoyment of the canyon for non-skiing locals. There has to be a better solution that would serve all users of the canyon, including those who live near it. PLEASE DO NOT BUILD THE GONDOLA.
33402	Carrie Eschler	This will be regrettable for generations to come. This canyon was perfect before homes, excessive skiers, traffic etc. leave well enough alone for once. Money doesn't produce oxygen or needed water.
38514	Haley Brenkman	Mailed comment

35320	Konrad Maurer	<p>To whom it may concern,</p> <p>My name is Konrad Maurer. I live and vote in Salt Lake County (Taylorsville). I am a frequent user of Little Cottonwood Canyon for a variety of outdoor activities. I want to register my opposition to the building of a gondola in Little Cottonwood Canyon.</p> <p>Building a gondola goes to extreme lengths and expense to try to solve a problem that only exists on a small number of days throughout the year. I strongly feel that other more affordable and less permanently impactful options (increased bus service, tolls, enforced carpooling, etc.) should be chosen to mitigate the occasional congestion issues that Little Cottonwood Canyon sometimes experiences. Only once all other options are exhausted should something so expensive and largely irreversible as a gondola be considered.</p> <p>I don't think a gondola is a worthy use of taxpayer dollars and I don't want the permanent impact of a gondola on the usefulness (some rock climbing areas will be impacted) and aesthetics of the canyon.</p> <p>Thank you for reading and considering my feedback.</p> <p>Konrad Maurer</p>
33403	Rina Shipley-Walker	Please DO NOT ruin Little Cottonwood Canyon by building an unneeded and fiscally irresponsible gondola. There are many other options that should be investigated and tried first. Perhaps the money that would be spent on a gondola should go toward hiring more bus drivers so that you wouldn't have to discontinue a bus route going up the canyon.
33404	Alexa Dlouhy	I am a frequent user of LCC (climbing, skiing, hiking) and a SLC resident. I am opposed to the gondola. A better solution in my opinion is more park and rides and increased frequency of buses. Tolling is also a great idea. Thank you for your work and for representing the community.
33405	Glen Gravlee	The beauty of this area is best viewed from the ground. I would rather see reservations than gondolas. It would save much money and leave the area untouched by man with so much interference. Thank you
33406	Hanna Larsen	<p>I am an outdoor enthusiast, a climber, and a lifelong resident of Little Cottonwood Canyon. I'm writing today to oppose the plan to build a gondola in the Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction.</p> <p>The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>Please oppose the Little Cottonwood Canyon gondola in favor of better solutions.</p>
33407	ashley kirkham	<p>My name is Ashley Kirkham. I was born and raised in Utah, a registered voter and love the canyons. I have benefited from the canyons my entire life (all seasons). I am now watching my children play, hike, rock climb and ski in our beautiful canyons. Please consider other alternatives to the Little Cottonwood Canyon issues. The gondola is not the right answer. Please consider parking lots, bus transportation, tolls. Please.</p> <p>Thank you, ashley kirkham</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33408	Austin Schenk	As a Utah voter I am against the gondola! We go to the canyon to try and escape the clutter of the city. Don't destroy our canyon to serve the few ski resorts at the top. I use the ski resorts and would rather deal with the traffic than have our canyon ruined. Add more busses, put a toll booth at the bottom. Limit the number of vehicles allowed to go the the resorts and mandate the rest use the busses. So many simple solutions that don't turn our canyon into a mess of a construction site. Give it some thought don't just play the dirty politicians game
33409	Elena Bridges	This gondola is a waste of our resources.
33410	Rory Miller	This will accomplish nothing except make the canyons less accessible for the common person and make the view suddenly an eyesore. Not to mention the environmental complications and pollution. Put our tax dollars to something worthwhile like conserving water, cleaning up trash, affordable housing. Literally anything but this
33411	Mike Anderson	I like the idea of the gondola.
33412	Lindsay Drach	I do NOT support the gondola as an option to control traffic in LCC. This solution primarily serves only the winter resort community yet leaves yearlong impact to the environment and community at large
33413	catherine Greenwald	It's a disgrace that this is being built while vital bus services that help working people (SLC-PC connect) are being cut.
33414	Jessica Scheetz	It is a fact that for Park City School District, 96% of our own tax money is sent out to support other Utah school districts because they are so under funded. It's hard to accept that and watch the county or state fund a \$550 million gondola when their own schools are suffering and Utah's public education and teacher salaries are some of the lowest in the nation. The gondola is not for the good of all tax payers, in fact it's not even to support skiers. It's a feature driven by private companies that are greedy, manipulative, and those who do not respect the land or the ski community.
33415	Tony Petsche	I oppose the construction of a gondola system in our canyons. The Money spent on this project comes from all of us but will only benefit a tiny group of people. Perhaps a better use of 550 million dollars (we all know it will end up being double that) would be to investigate and improve our water resources. Having enough water resources is much more valuable than easy access to two ski resorts. Please don't start making decisions that use massive amounts of taxpayer dollars that only benefit a small and primarily well-off group of people.
33416	Trenton Behunin	No Tram for these reasons. Spending would be better used to improve roadway and create a PATHWAY like Provo canyon which would benefit all the public like biking, walking, hikers, climbers, etc. Next, I think the tram visually scars the landscape more than roadway n path. My vision is a dedicated third lane for busing and the lane would alternate to accommodate busy times and use electric bus. Most bus stops would be express but some would stop for hikers, climbers, sight seeing, etc that are along the way. Please consider everyone and not just skiers and not block the visual awesomeness of the canyon with a tram.
33417	Markell Slighting	The business proposal will destroy the beautiful landscape the little cottonwood offers. Imagine if Yosemite put gondola and the terrain it would destroy. This proposal would do the same thing while only catering to the ski resorts. The gondola would destroy hiking, climbing, and water sources. For a community that loves this area we need to do a better job saving and maintaining its current landscape. Vote no to the placement of the gondola.
33418	David Haak	I am a Utah Voter and a frequent user of Little Cottonwood Canyon. I am opposed to the Gondola in LCC for a few reasons. Largest of which is that it will be taxpayer funded, which I believe is a very poor way to use our tax dollars. This is especially given that it will only benefit a small portion of Utahns (skiers and ski resort operators), and only for a few number of days. I think there are much more responsible ways to solve the traffic issue in LCC, such as through tolling and increasing the bus system. I thank UDOT for looking into multiple options, and for seeking to accurately represent the Utah taxpayers and voters.
33419	Alex Duncan	The proposed plan makes no sense. It has an outsized environmental impact, doesn't carry nearly enough people, and is an incredible eyesore. A better busing system makes more sense. Why is money being spent on something this ridiculous?
33420	Jessica Lambert	We do not want this gondola. It only benefits one group of people while negatively impacting the canyon for everyone.
33421	Elizabeth Larsen	I say "no" to a gondola. A gondola that caters to the two big ski resorts only is irresponsible and should not be considered at all. We need to protect the beauty of the canyon and the water it provides to the valley. Climate change is upon us already. We need to be reasonable and act with intelligence--not with greed. Thank you
33422	Aaron Hancock	For the love of God let us keep the natural beauty of our canyons. You will PERMANENTLY BE SCARRING THE SKYLINE OF THE MOUNTAIN! the construction alone will displace hundreds of local ecosystems.
33423	Lori Carpenter	I am against the Gonodla. It will ruin the natural beauty of the canyon. It is too expensive to build and the fact that the costs would be paid by the taxpayers instead of the ski resorts who are the ONLY ones benefitting, is a criminal sham! The ski resorts are just being greedy. They need to limit the ski passes sold, not only to preserve the experience (less crowded), but to preserve the canyons use. Limited tickets would need to be sold online only, and that is your "ticket" up the canyon as well. To sum up, this is unacceptable that this could possibly pass with so many Utahan's against it. It is pure greed on the developers and ski resorts part. I say, limit the ski passes, win win: less traffic, better ski day experience. NO GONDOLA!
33424	Sarah Lucas	Hello, I think the creation of a gondola seems like a drastic step when there are other far less costly alternatives which have not been piloted yet. I think increased bus service (or bus service only during winter months) should be investigated first before this permanent installation begins.
33425	Briana Lebovitz	It seems like the tolling and increased parking at the mouth of the canyon should be tested before a gondola is perused. The number of days a year where traffic is terrible in the canyon are few and far between. It seems drastic to decide on a gondola when there are other intermediate steps that could be implemented. I also enjoy the sliding scale parking fees that Solitude implemented that encourages carpooling as well. I think this would also work well to encourage carpooling and reduce traffic in the canyon.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33426	Don Wilhelmsen	<p>following sent to Governor Cox: Governor, I am sending a copy of this comment to the UDOT eis page regarding the proposed gondola in Little Cottonwood Canyon. As governor with the authority to appoint the UDOT director, you have the most powerful influence on the misguided decision by UDOT to fund this gondola boondoggle benefiting only the ski resorts and the now wealthy who can afford to ski there. I and my family enjoy visiting the canyons surrounding this valley, but none of us ski, and most of our visits are during the three non-winter seasons. I find it unconscionable that the state of Utah will tax us to the tune of a billion dollars (half a billion estimate is a joke) for the sole benefit of winter skiers and the winter resorts. I urge you to apply what influence you have to move the UDOT director to reverse the decision to build this gondola. As climate change promises to shorten and radically change the winter sports environment, such an expenditure is complete folly. Thanks for your attention to this.</p>
33427	Cheryl Staley	<p>I agree with the phased in approach-no gondola. Just improve the current use of road way. No toll-outdoor recreation is the last, free opportunity for families to be outdoors.</p>
33428	Jerry Rose	<p>Don't build the gondola. Many people don't want it. Listen to the voice of the people.</p>
33429	Sarah Hudson	<p>I am a Utah resident and user of Little Cottonwood Canyon and I adamantly oppose the gondola!!!! This gondola will permanently change our canyon, not for the better it will service only a limited number of canyon users and cost everyone lots of money for the benefit of the ski resorts. I think there are other solutions like tolling and increased bus service with increased parking outside the canyon that would be much better. Thank you for listening to the residents and users of this canyon. -Sarah Hudson</p>
33430	Lynn Kilpatrick	<p>The priority of this project should not be to serve ski resorts but to preserve wilderness for all users. Efficient buses that will serve the whole canyon can do more to preserve the environment while also allowing equal access to the canyon. Limiting the number of cars allowed into the canyon on weekends during peak times would also work, especially if more buses ran during this time. You need to offer incentives to users for carpooling, using public transit, traveling during off hours. The gondola is not the best solution; it's not even a good one.</p>
33431	Susan Wurtzburg	<p>NO gondola. Horrible decision in light of global warning, canyon beauty, public officials making money from the build out, etc. STOP THE GONDOLA. Local citizens and governments do NOT want this Please listen to us. We live here!</p>
33432	Janet Gleue	<p>I am not happy about the idea of having my tax dollars going to support a recreational activity for the privileged who can afford the ski pass and the equipment to enjoy that recreation. I believe there are other options to the congestion caused in the canyon for a short portion of the year. So I am just stating my opposition to putting a gondola in the canyon that will benefit, again, the already privileged few who would use it. My tax dollars should be used to support a bigger population of community.</p>
33433	Anna Yount	<p>Hello, I am troubled by the UDOT proposal to construct a gondola to the ski resorts, Snowbird and Alta, in Little Cottonwood Canyon. This seems like a solution that only benefits the ski resorts and uses tax payers dollars to only benefit their revenue. Why are tax payers dollars being used for private businesses? The gondola solution has been proposed without a capacity study being conducted on the LCC. LCC is a watershed for the Salt Lake valley and excessive use of the canyon will contribute to degradation of the environment and water source. A capacity study needs to be conducted prior to any final solution decisions and the gondola solution needs to be discarded entirely. Tax payers deserve a solution that serves more than two private companies that are looking to increase their profits. The gondola solution doesn't address hikers, climbers, general day use users of the canyon, backcountry skiers, or people who live there. UDOT moving forward with the gondola shows blatant disregard and misuse of tax payers dollars who have spoken overwhelmingly against the gondola as well as the fact that UDOT and the Utah government is only interested in benefitting corporate interests and not the interests of the people.</p>
33434	Jacob Shawback	<p>I strongly oppose the construction of a gondola in Little Cottonwood Canyon.</p> <p>The cost of the gondola is quite high, and there isn't any multiplier effect with this expenditure of taxpayer dollars. The funds for this project will likely go to a few non-local contractors. Most gondola manufacturers are based in Europe, so this would result in taxpayer dollars going abroad. Instead, UDOT should spend \$500 million on building out bus rapid transit (BRT). BRT development has a much greater multiplier effect for the local economy, including: job creation for transit workers; the streamlined connection of commercial areas, businesses and ski resorts; and, more opportunities for local contractors to build and maintain BRT infrastructure. A large scale expenditure on BRT will also likely lower the cost of transitioning to EV buses. With energy and fuel costs likely to increase due to global economic conditions, UDOT needs to invest in widespread, networked, cost effective, and energy efficient modes of transit. A gondola by definition cannot be any of these things.</p> <p>Finally, and perhaps most importantly, the construction of a gondola would forever change - and diminish - the natural beauty and character of the Little Cottonwood Canyon. The natural landscape of this region is what truly makes it unique - and arguably more beautiful than most places in the world. This natural character of the landscape cannot be recreated with human ingenuity. Sadly, misguided human ingenuity can only lead to the permanent destruction of natural beauty.</p> <p>Please protect the Little Cottonwood Canyon and the Wasatch Range. Please do not move forward with the construction of the gondola. Please use the \$500 million in public funds for more effective, efficient, and productive transportation projects.</p>

33435	Dylan Ring	<p>Hello,</p> <p>I am commenting in opposition to the proposed Gondola up LLC. I agree traffic is a problem particularly in winter but have seen great success with busing, car pooling and hitch hiking to get to the ski resorts and back country skiing trail heads. I propose the county look toward increasing the number of buses and perhaps building a much larger park and ride for users of the buses. Even if a gondola was built I believe the parking at the base would still be a significant problem!</p> <p>If these arguments are not enough I would also argue for the preservation of the rock climbing up the canyon. I work in Layton but live in Salt Lake in large part because the granite climbing up LLC is so good. There is a only a limited number of climbing sites that would be effected by the proposed gondola but yet again I fail to see why more buses could not fix the issue without this.</p> <p>Thank you, Dylan</p>
33436	Eric Jones	<p>I am a Utah voter and LCC user and I oppose the construction of a gondola through the canyon. It will not prevent traffic, hinder wildlife and disrupt more than it will do good. Thank you for reading this.</p>
33437	Paden Hansen	<p>It's frustrating to see a canyon I have lived at the base of my whole life, start to turn away locals to cater to visitors. Now that the price of skiing is increased, it's too expensive for many locals to even consider going. The solution to the canyon traffic is not going to be solved by a long gondola ride that is only delivering people to the ski resorts. This dose not make sense. Your going to raise taxes to build this and the people who will pay for it won't be the ones Benefiting from it. Why isn't the ski resort paying for the development? Why are we going with an idea that doesn't benefit other users of the canyon, such as hikers, bikers, rock climbers, ect... My vote as a outdoors men and local resident is for a bus lane that could then stop at different destinations in the canyon to benefit all who uses the canyon.</p>
33438	Kathryn Storrs	<p>A gondola is a terrible idea. It is financially irresponsible to cause tax payers to pay for a service that a fraction of the people use. It will not solve the traffic problem because people are still going to drive. There is more up that canyon than two ski resorts. If people don't want to get up early enough to get a parking spot, who's fault is that? Not UDOT'S. we need to expand bus services and make the buses free. Have them running every 10 minutes or build a parking a garage at the resorts. The gondola would have a tremendous financial and environmental impact. Think of the gondola to the rim in moab that has sat useless and lifeless for 20+ years. The same thing will happen. People don't want it and won't use it.</p>
33439	Pat Ithurralde	<p>No gondola!!!! No widening road for more cars!!! Limit the number of cars and people! Save the Canyon!</p>
33440	Blair Monell	<p>Good morning,</p> <p>I live on [REDACTED] and my residence will be heavily impacted by the proposed Gondola. I am asking for the use of common sense in trying to mitigate canyon traffic. Let's first implementing tolling (similar to Millcreek) and then enhance busing/shuttle services. For a fraction of the proposed \$550 million - could we try expanding the existing park and ride stations along the wasatch & 9400 S? New LCC shuttle could focus on going between these park and rides and the top of the canyon/Alta are - similar to how Zion NP operates. This way taxpayer money can provide stops all along LCC for hikers, rock climbers, and photographers, not just servicing the two private ski resorts using public funds.</p> <p>Thank you for considering these low risk alternatives before plowing ahead with the Gondola option.</p>
38661	Daniel Beesley	<p>Hello, my name is Daniel Beesley, and my phone number is [REDACTED] I would like to raise my support against the gondola. I actually as my final year of college for an economics class did a survey of skiers and snowboarders in Little Cottonwood Canyon and the results that I found were that people would be willing to ride the bus and to carpool if there were some sort of monetary like fee for not carpooling and I just think that using five hundred million dollars to fill up a canyon with metal and gondolas for the few days when during a few hours, there's traffic is insensitive to the rest of everybody else who's using the canyon and I'm strongly against the gondola, and anybody who I don't know if this is a political thing, but I would not vote for anybody who supports this and thank you for all that you do and I appreciate your guy's help and I hope you guys have a wonderful day. Take care, and thank you so much.</p>
33441	Megan VanRoosendaal	<p>This is an awful idea and will impact local wildlife in a very negative way. Stop catering to rich tourists and start preserving the beauty natural resources of our state.</p>
33442	Michael Miller-Imperiale	<p>My opinion is still that the gondola in little cottonwood canyon is a poor decision, and will not serve as the best method to change the traffic patterns of the canyon. I commented in round one, and do not feel that my thoughts were adequately addressed. Please, no gondola.</p>
33443	Jonathan Deesing	<p>As a lifelong resident of Cottonwood Heights and current homeowner at the mouth of the Cottonwood canyons, I am STRONGLY OPPOSED to UDOT's plan to build a gondola up Little Cottonwood Canyon.</p> <p>Beyond the exorbitant price and blatant (borderline cynical) corruption meant to line the pockets of property owners at the base of the canyon, the plan itself is asinine, poorly thought out, and clearly not chosen objectively.</p> <p>Costs will balloon, public lands will be poisoned by the shoddy no-bid contractors you hire, and ultimately the only ones to benefit will be the goons in the state capitol and their cronies. I look forward to you gleefully ignoring mine and everyone else's feedback.</p>
33444	Garrett Johnson	<p>Do not build this gondola!! Why in the world would you build something that the rich will only use more, while those who use this canyon the most by far (climbers, hikers, bikers, etc) will be gone. It won't help traffic like you think. The only reason it will work is because you will be kicking out all of those that actually use the canyon to climb etc. I am very disappointed in the fact that we can't think of solutions that keep the beauty of the earth the way it should be.</p>
33445	Guy Mcatee	<p>I look forward to enjoying this canyon without a gondola in place. I'm hopeful for other alternatives and am confident we can continue to enjoy the little nature we have left in this area.</p>

33446	Hannah Van Alstine	I do not support the gondola project. It will ruin a beautiful natural landscape/habitat and desecrate many climbing crags that are utilized by the community.
33447	Garrett Woolley	I support creating a toll system for the canyon as a means to mitigate traffic. The construction involved in adding a massive gondola to the canyon will have impacts on the natural surroundings that will be irreversible.
33448	James Ruda	Please do not destroy Little Cottonwood Canyon by building a Gondola. This is a resource that many people value in our State. Please adopt more busses.
33449	Brandon Taggart	The cottonwoods are a natural beauty reserved for not just those that ride at the resorts. Tolls increased bus service and resort limits on visitors are all much more viable, cheaper and easier to maintain. If a bus goes out another can be brought in or worst case out just a bus. The gondola has something slightly go wrong and the whole mode of transportation is gone. Maintain the beauty of the cottonwoods the 8 months of the year that the gondola will be useless there are alternatives. Thanks -Brandon T
33450	Daniel Beesley	Please do not build the gondola. There is so much natural beauty in LCC and it would be a disgusting travesty to spend 500 million dollars to fill it with gondola towers and noise in order to alleviate traffic during a few hours of a few days of the year. I strongly oppose this and will not support or vote for any representative who supports the gondola. Thank you for all you do!
33451	Matthew Colemere	Please do not go through with this gondola. It will destroy the beauty of the canyon, ruin access that we've had for years, and benefit the rich while hurting the poor. Please, please, please keep LCC gondola free.
33452	Barbara Hansen	No to the Gondola!!!! Why are we letting a few people outside of our area decide this issue. It should be up to a vote from the people that live in this area! I live on [REDACTED]. Ski traffic effects me directly. May I say that there are only a few days out of the season that it is an issue. When it is - we all know it and plan around it. That being said...I spent the day hiking a little known trail yesterday, up the canyon. It breaks my heart to think that the ugliness of the gondola is going to be a part of that landscape - what a tragedy - for the benefit of skiers - most of whom are not from this area or Salt Lake. It also infuriates me that I will be helping to fund something that will only benefit a few financially- and those few - the land owners where the projected parking/shopping area is and the ski resort are not funding the cost. Yes, there is a concern for the environmental stability of the canyon, but I have ridden on Gondolas all over the world - they do not give you any spectacular view - 30 people in a car - there are still only 2 window seats. Also, what about the hikers, bikers and snow showers that enjoy numerous trails all up and down the canyon. A one stop gondola is not going to accommodate that. Basically, it is an expensive novelty ride and a mode of transportation during the short ski season. The hiking and biking season is a much longer season. Why not run it like Zions. Only access by bus - unless you have a camping permit. The bus has regular pick up and drop offs - all along the canyon that accommodates bikers.
33453	Stephen Pronovost	Do not spend a half billion dollars of taxpayer money (~\$150 for every man, woman and child in the state!) for the benefit of private ski resorts. If Alta and Snowbird want a gondola, they should pay for it.
33454	Mark Kadlec	I'm a local climber that enjoys bouldering and hiking around the Little Cottonwood area and strongly oppose any ski resort pushes to put in a Gondola
33455	Justin Giles	The gondola doesn't make a lot of sense. It's mostly corporate welfare. It only is necessary for around 3 weeks a year. It doesn't stop anywhere other than the two resorts at the top, so it only benefits the resorts. There's zero equity in this solution
33456	Jeff Webb	No gondola! Combination of fee and bus would be a lower impact way of limiting car traffic.
33457	Jeff Thayne	I have been a snowbird pass holder and avid climber for over 20 years. I have been up and down this canyon multiple times a week for those years. I do not understand how this proposal would alleviate traffic other than a very few powder days in the winter. That is a parking problem, nothing more. Most of the time I am in the canyon the congestion areas are at all the fly over areas. For the last 3 weeks traffic has been busy due to lack of parking at trailheads, not due to demand at the 2 resorts. Please reconsider a more flexible solution that meets the needs of users other than the resorts.
33458	Natalie Loots	Opposed to the gondola! Little Cottonwood Canyon is a national treasure and everything should be done to preserve the natural beauty of the canyon. The gondola is a money grab that will only benefit a select few via the sale of land and cost of construction. There are so many other viable options including increased buses (how about snowbird pays for buses??) tolls, etc. A second comment period is silly because the people have already spoken and the consensus is no one wants the gondola!
33459	Natalie Matthews	I am a huge fan of skiing and have spent all of my winters enjoying the resorts up Little Cottonwood Canyon. However, I believe the construction of the gondola is a lose-lose situation. The entire canyon should not be catered to a private ski industry. The implications of the gondola will have far reaching effects that I, as an avid skier, am not willing to compromise on. As a citizen, I demand a solution to canyon traffic that is sustainable, supports clean energy, provides equal access, does not unfairly tax citizens and does not ruin the canyon for everyone else. Increasing the bus system up the canyon is a far more effective solution.

33460	Will Doyle	<p>The gondola is not a logical endeavor because it would only truly make an impact on holiday/weekend powder days. All other days of the year it would just be there and not serve any impactful use that other traffic mitigations couldn't serve - busses, banning single occupancy vehicles, and/or tolling.</p> <p>Other than having a very small window of practical use, it would not serve the population, it would only serve two businesses. The point of the gondola isn't to improve traffic on a main corridor such as I-15, state street, etc. While there are a lot of people on LCC road, they are either a small amount of backcountry users (compared to the population of the valley as a whole) and patrons of either Alta or Snowbird, one of those excluding snowboarders for the sake of their choice of equipment. In short, the gondola would only serve two businesses that are already at or near max capacity for an enjoyable experience.</p> <p>In conclusion, the gondola (1) isn't the best option to mitigate traffic compared to pre-existing or light impact alternatives, (2) only serves two businesses, yet would be paid for by every Utahn, and (3) would not better the experience of people in the canyon, there is a max capacity for the land.</p> <p>As a tax paying Utahn, I HIGHLY OPPOSE the gondola.</p>
33461	Jason Luther	<p>STOP THE GONDOLA! No one but the resorts wants this destructive eye sore. But you want the tax papers to pay for it? Your explanations on IG have even shown just how poorly thought out this is and how buses would be a more flexible and less permanent option. Save the natural beauty of LCC! Listen to the people!</p>
33462	Callie Cordon	<p>Access to climbing areas will be compromised during years of construction. - Destruction and/or removal of irreplaceable and historic world-class climbing and views. - Not an equitable solution and perpetuates environmental marginalization and injustice in the Wasatch Front.</p>
33463	Edward Trageser	<p>Commenting to voice strong opposition to the installation of a gondola in LCC. I am a resident of Salt Lake City in the [redacted] neighborhood adjacent to Millcreek. My family enjoys hiking, rock climbing and occasionally skiing in the canyon. The proposed gondola is a stupendous waste of resources benefitting a very small constituency - namely the two ski resorts and their wealthy patrons. Please consider tolling and expanded bus service to address the congestion issues experienced in the canyon on certain busy ski days. Thank you for giving the public an opportunity to comment on this important issue.</p>
33464	Patricia Girardi	<p>There are many people with more eloquent ways of saying this so I'll keep it short. My opinion is that the gondola is an awful idea because it's fiscally irresponsible, will disrupt the beautiful natural character of the canyon, and serves only a small fraction of the people who recreate in the canyon. Please consider other alternatives that are less expensive, have less environmental impact, and are more equitable to the users of the canyon. Thanks</p>
33465	Emilee Valken	<p>The gondola is NOT a solution to the traffic issue in Little Cottonwood Canyon. There are many public transportation alternatives with less environmental impact on our mountains and canyon. Why would you want to create such a huge structure, ruining the beauty of our natural environment, world class climbing in the area, serving a small group of people to not even solve the problem.</p>
33466	Maria Ly Vanrenen	<p>Oct 14, 2022</p> <p>My name is Maria Ly Vanrenen and as a resident of Salt Lake City's east bench, I am your constituent. I'm writing to you about UDOT's proposed transportation alternatives in Little Cottonwood Canyon and the risk they pose to non-resort users, such as climbers. UDOT has identified two preferred transportation alternatives to mitigate winter-time traffic issues: a gondola or widening the road for additional bus-only lanes. I am advocating for a less impactful alternative: expanded bus service that is fiscally responsible and would serve all canyon users year-round, coupled with other traffic mitigation measures such as tolling AND urging Snowbird to adopt a parking reservation system that Alta has had success doing last ski season.</p> <p>UDOT's transportation proposals are only a partial solution, serving only resort users in the canyon. Little Cottonwood Canyon is popular with many user groups, including hikers, runners, mountain bikers, and climbers. UDOT's proposals are short-sighted and do not stop at trailheads or other parking areas, ignoring these groups.</p> <p>Both of UDOT's proposals come with initial construction cost estimates of over \$500 million. There are more fiscally responsible options. Not only would an expanded bus service be less impactful to the landscape, it would use existing infrastructure and would cost less to implement.</p> <p>UDOT's proposals are aimed only at mitigating wintertime traffic in Little Cottonwood Canyon, even though the canyon is popular in all seasons. A year-round expanded bus service would address traffic problems throughout the year.</p> <p>UDOT's transportation proposals serve only those traveling to resorts, leaving all other canyon users behind. In addition, the proposals threaten world-class climbing resources. The road widening alternative would eliminate a large number of boulders that are used for climbing and the gondola alternative would ruin the climbing experience for everyone. Rock climbing has occurred in Little Cottonwood Canyon since the 1960s and its development has played a major role in the global climbing community. It is unacceptable to remove a single recreation group's access at the benefit of private industry on public land. Less impactful options exist and should be implemented before making permanent changes to the canyon.</p> <p>Sincerely, Maria Ly Vanrenen and Family</p>
33467	Robert Brickley	<p>The gondola will not be a long term solution to traffic congestion and will have a permanent negative impact on access to world class climbing and backcountry skiing areas. The only conceivable argument for the gondola is that someone in a position of power is getting a sweet kickback under the table. Can't you build a gondola to the top of the Oquirrh Mountains instead so then you can get your kickback and the rest of us can keep LCC?</p>

ID	Full Name	Comment
33468	kyle brennan	<p>My name is Kyle Brennan. I am a conservation Earth Scientist and PhD candidate at the University of Utah College of Earth Science. Born and raised in the Wasatch mountains (mainly LCC) this habitat played a key role in becoming the person I am today. As a place to play and as a place to reflect. My family considers little cottonwood canyon as a sacred place because although it has given us nearly 50 years of adventure, happiness, family bonding, and ultimately life. It is the resting place of my dear brother (redacted). At the time of his death, Sean was a rising star in conservation ecology with the overarching motivation of his work aimed at helping society reconcile our relationship with nature. To build a future for the next generation, a future where we sustainably manage ecosystems and planetary resources. He was a force of nature for nature, and that force started and ended in a little cottonwood canyon. He left behind three children (redacted) who ever so often travel up little cottonwood canyon with its steep granite walls and waterfalls, or snow covered pines to visit their dad, to be with him, to play, to hike, to live with him in the spirit of what is little cottonwood canyon. I start with this history in order to draw attention to the culture, people, history, and sacredness that this shortsighted gondola proposal would impact. However, my expertise is in Earth systems and thus the bulk of my comments is going to focus on the shortsightedness of this proposal from an environmental, climate, and vital resources perspective.</p> <p>The Wasatch mountains are the western most range within the continental scale Rocky Mountains. West of their ~10,000ft peaks is an expanse of over 100,000,000 acres of arid desert with an average rainfall of 7" per year. Snow falls in the Wasatch primarily because of two primary factors i) high elevation and ii) the great salt lake, which hydrates (lake effect) storm systems before they hit the high peaks of LCC. This gondola is being built with 2 stops, Alta and Snowbird Ski resorts where the primary activity at those localities is to recreate in the snow during the winter. So let's take an objective look at the snowpack, its history in the west and its projections before we even start on the fact that the great salt lake is less than half its size since the 1980s and shrinking at a stark rate.</p> <p>Over the last 80 years annual snowpack has been measured at 100s of sites seasonally. The trends and near future projections are undeniable and sobering and should be taken into consideration with regards to the go Dal B proposal. S lol These are the numbers from the US Environmental Protection Agency (https://www.wcc.nrcs.usda.gov/).</p> <p>From 1955 to 2022, April snowpack declined at 93 percent of the sites measured (see Figure 1)</p> <p>Large and consistent decreases in April snowpack have been observed throughout the western United States (see Figure 1).</p> <p>All 12 states included in this indicator experienced a decrease in snowpack on average from 1955 to 2022 (see Figure 1).</p> <p>About 84 percent of sites have experienced a shift toward earlier peak snowpack (see Figure 2). This earlier trend is</p>
33469	Mallory Bateman	<p>This will likely be repetitive of my comment on the draft EIS, but crafting a purpose and need to suit your predetermined outcome is a pretty terrible use of the the NEPA process. I understand it happens frequently, but deciding to go with the option that almost solely benefits private entities with federal and state funding is incredibly misguided. This does not serve the public in an inclusive way, it does not serve the canyon in an inclusive way, and this decision does not consider residents and taxpayers of Salt Lake County. Great work on continuing to degrade public trust in processes like this.</p>
33470	Elizabeth Watson	<p>I do not support the installation of the proposed overhead gondola. The unfavorable short term disruption during construction and the long term impact on the environment, biota and natural resources is unacceptable and indefensible. Please vote against this proposal which is only business oriented and motivated and keep this pristine buffer between already existing developed and busy areas intact.</p>
33471	Sara Mitchell	<p>I would like to advocate for electric buses as a scalable and flexible solution to air quality and traffic problems. The LCC traffic problem is an opportunity to build infrastructure that will support future electrification efforts. Please see this link for more information: https://www.sltrib.com/opinion/commentary/2022/10/13/sara-mitchell-electric-buses-are/</p>
33472	Mary Ann Curtis	<p>I am disgusted by the fact that UDOT is not listening to the taxpayers who will be footing a large portion of the bill. Every single person I have met is STRONGLY opposed to a tram being built in the canyon. It will destroy the natural aesthetics, cost taxpayers, will not help the traffic situation and as a dedicated hiker and backcountry skier, it will not benefit me or my family in ANY way shape, or form. From all outside appearances, it looks like LOBBYISTS and self-interested public "servants" have gained too much influence and power in local politics. Absolutely disgusting!</p>
33473	MANDI CHRISTENSEN	<p>STOP THE GONDOLA!!!!</p>
35323	Claudia Struble	<p>Hello, I think that a gondola solution is a very bad use of funds. It services only a very select, small group of people for only a small part of the year. It would also have a much greater environmental impact than is now acknowledged. Support towers cannot be entirely installed by helicopter. Roads will inevitably be built to aid installation. Finally, visually it would be a disaster. Infrastructure is NOT beautiful. It would destroy the unique nature of Little Cottonwood Canyon. Best, Claudia Struble</p>
33474	William Shadrach	<p>No gondolas in the canyon. Use hydrogen fuel cell busses instead.</p>
33475	Mandi Christensen	<p>STOP THE GONDOLA!</p>
33476	Christina Cackler	<p>I am a Salt Lake City resident and I strongly oppose the gondola. It will serve only a sub-population of the people who use the canyon and won't offer a long-term sustainable solution to address traffic and parking limitations. Other options could include buses, metering, or fees. Please do not support an option that would take away the beauty and accessibility of access to other activities in the canyon for recreational and tourism reasons. Thank you.</p>
33477	Dianne McDonald	<p>I believe that the gondola system is the best choice. It will provide the best transportation for the ski resorts with minimal impact on the environment. The alternative adding lanes and busses will impact the canyon and with a shortage of bus drivers is not feasible. The road would still be closed by avalanches whereas the gondola is unlikely to be affected.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33478	Madeline Allen	This gondola is a horrible idea. You are taking bus lines from the west side to serve the already privileged skiers that can easily already drive themselves.
33479	Judson Widner	You will forever alter the beauty and allure of Little Cottonwood by choosing to build gondola. The gondola is a rich man's fix to a rich man's problem. It doesn't focus on the consensus of the Utah population, as a whole, as a viable solution. The canyon suffers from traffic problems only at peak times throughout the year. Believe me, I've spent my adult life in Little Cottonwood. You want a viable solution? Gain revenue to support ride sharing by charging people to use the road year round. That is the ONLY viable solution, because the only people who use the road during peak seasons are the top 0.1% wealthiest people who can actually afford to vacation at Alta/Snowbird. So, why doesn't the focus start there? Thrive off the top 0.1% percenters, and don't ruin the natural beauty and resources that the canyon has to offer. Because, once you decide to 'benefit the rich' only, and pull the trigger on the gondola, you will forever ruin the canyon for ALL users, and the local population.
33480	Timothy Golden	I believe a gondola is going to have a huge price tag both monetarily and aesthetically in Little Cottonwood. This is a problem of traffic on certain days during the busy ski season. There are much more economical ways to address this. Add tolls to increase car pooling. Only allow busses during the busiest hours. There are a lot of things that can be tried without building a gondola or widening the road that would cost far less. Why not try some some easier and cheaper solutions right now instead of building a \$600 million gondola? Please do not move forward with this project.
33481	Erica Hartshorn	Please don't put the Gondola in Little Cottonwood Canyon. It will not be able to serve many hikers and most people using the canyon year round.
33482	Leah Smith	Do not move forward with the gondola! Make the canyon bus only
33483	Kirsten Cantrell	I am against the gondola idea. More intrusive to the canyon, less accessible to include ALL. Why not start with shuttle buses?
33484	Dylan Wayne	The gondola is clearly not what the community of LCC wants or what the people of Utah want. This is a clear sign of corruption in the state. Whether that be Udot, Utah government, and or the skii resorts and rich who are the only ones benefitting from this. If you are for the gondola, YOU ARE THE PROBLEM. Utah people do not want the gondola. WE HAVE SPOKEN.
33485	William Lenkowski	I am totally opposed to the Gondola alternatives for Little Cottonwood Canyon. The changes necessary to provide expanded bus service and Parking restrictions is less damaging to the Canyon EcoSystems.
33486	Susan Courtois	NO Let the resorts pay for it!
33487	Lily Morales	I vote AGAINST the gondola in LCC. Please please please don't ruin our gorgeous canyon and disrupt the ecosystems in that area. An alternative (cheaper and more accessible for all) solution would be to offer shuttle service to ski resorts (in lieu of or in addition to regular bus service), like national parks have started implementing.
33488	Jason Spaulding	It would seem an attempt at fully utilizing public transport, along with limits and tolls for private vehicles would make far more financial and environmental sense than a gondola. Read the room, no one likes this plan.
33489	Dawn Young	As an avid climber, I care that this project will completely destroy places where I, an thousands of other people, recreate. I also care that its purpose isn't even for anyone other than resort users. Mostly, I'm worried that wildlife habitats will be destroyed. There's no way around it! But also birds migrating at night will be killed. Please stop this and go a more environmentally conscious route. There have been more environmentally friendly suggestions. Getting more people into the canyons shouldn't be the goal! Please do not go this route!
33490	Heather Knighton	Please pause this effort and explore options that will not destroy views, and damage more of our canyons. There are so many more of us that enjoy the canyon that are not interested in skiing at Alta or Snowbird. This will does not address congestion at trailheads, does not address traffic in 3 seasons (only winter) and is EXTRAORDINARILY expensive. We are NOT in favor of the Gondola.
33491	Alexander Gulledge	Don't widen Wasatch. Walking paths both sides, protected bike lanes, pedestrian crossings, slow down the traffic with redesign. No LCC gondola.
33492	Aaron Knoll	I do not support building a gondola into LCC. I think traffic issues in the canyons could be better solved by forcing resorts to improve their parking structures up-canyon, and by removing choke-points in the road. In the long term, the best solution by far would be to connect LCC, BCC and Park City via a tunnel or Guardsman Pass, and ensure there are two entrances and exits to both canyons. The gondola will be an expensive eyesore that does not truly solve the problem of access to upper LCC.
33493	Barbara Rasmussen	NO GONDOLA! It serves the needs of two group only; ski resorts and developers that will build hyper-expensive town homes / condos in the La Caille area. The easy sollution is add an lane up the canyon. Use it for Buses only. Alternate its use: up canyon in the morning, and Down canyon in the afternoon. have electric buses only.
33494	Jill Teeples	Do not build the godola up Little Cottonwood Canyon. It is too expensive and ruins the canyon views and will not solve the problem. Make the canyon a 3 lane road (2 up in the morning and switch to 2 down in the afternoon).
33495	Richard Hanzlik	I believe the gondola project is money poorly spent. This solution does not do anything for Big cottonwood canyon and in fact will invade the privacy of all those who live along the canyon with a bunch of looky-loos flying over their property. More ski busses, better ski bus parking and regulated traffic up the canyon would allow trhe money to be spent on both canyons. The gondola is a very bad idea and only severs to line the pockets of those who build it and other special interest groups.

33496	Evan Heyman	<p>I am truly disgusted with and opposed to the plans to build a gondola in LCC. This "solution" is an incredibly narrowminded approach to the problem of traffic in the canyon. This solution will only cause more issues around parking at the base and allow for an already over crowded canyon to be even more crowded. The downsides to the gondola are glaringly obvious: incredibly expensive wasting tax payers money, significant destruction and alteration of the canyon and it's other attractions, and generally not an effective solution. My biggest issue is the gondola's inability to address overall traffic issues in the valley/parking areas and the limited service to resort visitors only. This is clearly only benefits resort visitors and the resorts.</p> <p>Unfortunately, I do wonder if these comments will even make a difference. It is pretty clear to me everyone who spends any real amount of time in LCC is opposed to the gondola. I fear that the gondola project has no regard for frequent users and really only is catering to those who spend and make money at/from the resorts.</p>
33497	Laurel Yeske	<p>I oppose this gondola. This is not a good solution for our valley</p>
33498	Jansen Gunderson	<p>Please eliminate the gondola option. The gondola alternative will have a permanent negative impact on the canyon's view shed throughout the year while only attempting to solve a problem that occurs to a single user group for a handful of days in the winter. The burden of solving winter road crowding on S.R. 210 should be placed on the privately-owned ski areas (one of which is located on public land). Furthermore, the proposed phasing should inform the impacts of the other mitigation efforts of increased bussing, tolling, transit parking, and snowsheds prior to spending tax-payer dollars to build a gondola system.</p>
33499	Will Owens	<p>UDOT & Fellow LCC Stakeholders,</p> <p>For the past 7 years, I've been spending dozens of winter days in Little Cottonwood Canyon. In my experience, the traffic is not a problem; most days you can drive right up. Sure, if it's a holiday or a powder day or a Saturday or there's a car accident there will be some traffic. If two or more of those traffic criteria occur at once, there will be more traffic. But it is truly not that bad. In any case, I agree we need to act now to mitigate the traffic, especially considering that canyon usership will climb as Salt Lake's population increases. That said, our expectation and goal should not be 'no traffic'.</p> <p>As far as the gondola - it's a dreadful solution - if you can even call it that. I was open to the gondola until I read about the capacity. 1 thousand people an hour!? That's not worth the investment and canyon destruction-not even close. That won't solve today's 'problem' and wouldn't scratch a dent in the LCC usership of say, 2045.</p> <p>So we've got a problem that's not that bad, and were are going to 'solve' it with the most expensive and disruptive option?? We are going to forever alter canyon views, destroy climbing terrain, and ruin the majesty of Little Cottonwood BEFORE we try other less intrusive solutions-increased bussing, snow tunnels, or tolling?? Who thinks this is a good idea? I haven't met a single local who thinks it is. This is a horrible idea. We should try other solutions before we build an expensive, ugly, destructive gondola with an offensively puny capacity. C'mon Salt Lake. We're better than this.</p>

We should try other solutions before we build an expensive, ugly, destructive gondola with an offensively puny capacity. C'mon Salt Lake. We're better than this.</p>
33501	Colin Stern	<p>Hi, I am a Utah voter and a user of Little Cottonwood Canyon. I believe that benefits of building the proposed gondola do not outweigh its environmental impacts, and instead prefer the solution of increased bus service to the canyon and tolling. The users who would benefit from the gondola would only be users of the ski area. On the other hand, users of all trailheads and ski areas would benefit from increased bus service. Tolling is likely to reduce traffic by encouraging carpooling and bus usage, and will help to pay for the bus line. Thank you for taking the time to hear my feedback; I hope we can protect this important natural resource to our city.</p>
33502	Madeline Rhodes	<p>Hi, I was born and raised in Sugarhouse in Salt Lake City, Utah. My parents didn't have much money, but they always made an effort to take us on hikes, walks, and more to enjoy Little Cottonwood canyon. I understand the gondola will drastically affect the accessibility, habitat, and beauty of little cottonwood. This is so painful to hear for many reasons, but it's not a decision that has been made yet or has to be made at all, if we take time for deep reflection on the intrinsic value this canyon provides those of us in Utah and who grew up in Utah. These canyons are our home. We were raised walking them, picnicking in them, learning the value and a love for nature among them... however, growing up in Salt Lake City, I have watched many buildings and places be demolished for townhomes, new restaurants, etc. I say this to implore UDOT to envision our canyons differently... they aren't old restaurants or big box shopping malls of the past that can be demolished and replaced. Once these mountains are gone, they will not return. No amount of construction can bring them back. This is a permanent solution to the temporary problem of transit to the ski resorts and will forever alter our landscape for the worse. Please, consider alternative plans that will preserve Little Cottonwood for future generations. If you love Utah, you must love our mountains, canyons, and land. Please.</p>
33503	Bryce Gandy	<p>Don't scar the canyon with a gondola running all the way up it. In my opinion either of the Enhanced Bus options are so much better than constructing a gondola through the canyon.</p>

33504	Desarae Lee	I live in the Salt Lake Valley and regularly recreate in this canyon. I would truly hate to see it marred with the addition of a gondola. Let's add a toll and large park and ride to encourage carpooling. Let's have frequent and regular busses up and down the canyon. The gondola would be a scar on the best part of our home: the beautiful mountains.
33505	Devin Loertscher	Please keep Little Cottonwood Canyon beautiful for future generations. I believe there is another alternative to alleviating the congestion and issues in these beautiful canyons other than a gondola. Thank you, DJ Loertscher
33506	Bryan Johansen	DO NOT APPROVE THE GONDOLA PLAN. The proposal does not have the support of the community along the wasatch front given the enormous footprint it will impose on the native areas through throughout the canyon, the impact it will have on scenery throughout the year, and the unjustifiable cost of a project that is designed solely to benefit the ski resorts for four months out of the year. This problem has transit solutions along the current road corridor that are better suited than doubling the transit footprint and impact on the environment. Other less intrusive options should at a minimum be explored first.
33507	Anne Fuller	I am against the construction of a gondola in LCC. I think that David Scheer in his September 7th letter in the SLC trib spoke eloquently of why there should not be a gondola . I strongly agree with his six points. I want to state emphatically that Taxpayers should not pay for the benefit of two private businesses. In addition the widening of Wasatch Boulevard should be reconsidered. Let's see what enhanced busses and parking reservations help control traffic. It was not as bad last year as previous years.
33508	Ross Anthony	Please do not waste tax payer money to fix a small issue that is present 4 months out of the year. You are going to destroy so much climbing and out door areas in this wasted decision
33509	Matt Park	<p>I am in favor of the enhanced bus service with tolling, widening Wasatch BLVD, snow sheds and mobility hubs. All these alternatives make sense and have low impacts. The Gondola does not make sense to me. As a climber the projected pictures of towers and cable cars makes my heart hurt. The gondola is such a big intrusive permanent solution for a problem that only occurs 50 days out of the year. It does not seem prudent to make such a costly and permanent change when the increased busses, road improvements and snow sheds will ameliorate the traffic problem significantly and the addition of the gondola does not seem to gain substantial improvements over the simpler and less impactful road/bus alternatives. My biggest worry in approving everything all together is that if the simpler bus/road alternatives fixes the problem there is nothing stopping the gondola from going in. I would be in favor of all the road and bus alternatives being approved as they stand with a clause to reevaluate the need for the gondola once the road/bus alternatives are up and running. Just because we can put in a gondola does not me we should. Its a massively impactful solution to a problem that occurs 50 days out of the year and ultimately benefits two private businesses while the public foots the bill and deals with the impacts. Utah is not Europe the gondola is a drastic solution to a problem that can be fixed with less impactful solutions. Please consider a reevaluation of the gondola after the road/bus improvement alternatives has been made.</p> <p>Thank you</p>
33510	Luke Emery-Fertitta	Little Cottonwood has incredible, world-class recreational opportunity in the form of its road-side bouldering. I strongly urge UDOT to select an alternative which will not have any negative impact on this asset.
33511	Nyssa Fleig	<p>I oppose building a Gondola in Little Cottonwood Canyon. I do understand some of the arguments for building - that it takes traffic off the road and that it would take a phased approach. I disagree that this option takes into consideration all canyon users, as it will only stop at the resorts.</p> <p>I would also like more information on how much the gondola will cost to ride. Currently just a tram ride at one of the resorts costs \$20 or more. I wouldn't opt to ride the Gondola if it is \$50 or more, which means we end up spending a lot of money on a transportation option that people don't use. People don't even ride Trax, and that costs \$5 a ride. Let's invest money and resources into free public transportation, incentivizing bus routes, electric buses, parking management, and ride-share options.</p> <p>I also want to voice dissent on widening Wasatch Blvd. Please consider other improvements to the road, including separate bike lanes, pedestrian access, and beautification efforts.</p> <p>Every year, snow fall gets less and less. Every year, the summers get warmer and warmer. Every year, the Great Salt Lake shrinks more and more. Why would we pour money into a transportation option that only runs in the winter, when in a few years we won't have a winter? I know that sounds catastrophizing, and I know it sounds like I'm exaggerating. But we're not investing in large scale efforts to turn the tide on climate change. We need to be making holistic efforts. We need to consider a future when we don't have ski resorts. What about your calculations would change? What would you do differently if the main traffic up the canyon was fall/spring/summer and not winter? If we're taking a phased approach, then let's truly look at what long term solutions mean, in a long term future that may not look the same as today.</p>
33512	Jon Christensen	The gondola subsidizes few while penalizing many. It is not a equitable solution. It will forever be an eyesore in a beautiful canyon.
33513	Scott O'Brien	Please do not build the gondola. I backcountry ski 20-30 days a year up little cottonwood and think that the gondola is single serving and the worst option of any being provided.

33514	Maren Askins	<p>I have been living and working in Alta for a decade, and I am commenting on behalf of myself as an Alta resident and as the General Manager of Alta Lodge, a long-standing business in the Alta community. A gondola is not the best solution to improve transportation-related safety, reliability, and mobility for all users on S.R. 210, nor does it have minimal environmental impact. The only users that would benefit from a gondola are day skiers to the ski resorts. The gondola solution excludes all summer users, lodging guests, hikers, bikers, backcountry skiers, residents, and employees who work a schedule that doesn't align with ski area operating hours. Without seeing the data, I am assuming you are actually excluding a majority of 210 users, thus undermining your goal, at great cost to taxpayers, most of whom probably would not use the gondola. You have also omitted a pivotal goal that must be considered for the long-term preservation of Little Cottonwood Canyon: we should determine a carrying capacity for the canyon and use the data to direct this hugely impactful decision. Mike Maughan himself has said many times that Alta's priority is to manage demand, not cram as many people into our ski area as possible. A gondola is not going to allow us to manage demand-it would cram as many people as possible into our canyon, as fast as possible. This is not a sustainable solution to ensure the long-term health of our canyon, our watershed, our communities, and our recreation.</p> <p>I, with many others, believe there are other credible solutions to be considered before a gondola, which come at significantly lower monetary and environmental costs and manage demand within our canyon, while also serving a greater majority of 210 users. We have already seen the benefits of reservations-based ski resort parking on our traffic and parking situation. Tolling is another cheap and effective solution to mitigate traffic and parking. Continued parking control and tolling alone could probably solve our traffic problems, at low cost and minimal environmental impact. Increased year-round bus service would also improve traffic, at low cost and environmental impact. Safety is a concern that should be addressed and can be improved without a gondola. Snow sheds should be considered for the road, regardless of what other transportation solutions are decided upon. These are the phased solutions you are already proposing, and I believe they are enough, without needing to escalate to building a gondola.</p> <p>A permanent, expensive gondola that does not meet the needs of a majority of 210 users is far from the best solution for Little Cottonwood Canyon, especially when it sits idle for more than half the year. The traffic problems it addresses- primarily the "red snake"-happen maybe 20 days out of the year. Let's start small and stay small, with cheaper, less impactful solutions that will ultimately be more effective. Continue parking regulation, introduce tolling, and increase bus service. Let's also better understand the carrying capacity of Little Cottonwood Canyon and make our decisions with that in mind, so that we can live in and enjoy our canyon for many years to come.</p>
33515	Alvin Holbrook	<p>It is a bummer that such an expensive solution only serves community for part of the year. A mandatory bus system during specific hours of the day without ruining the natural beauty of the area or simply taking up more space than necessary during the off seasons.</p>
33516	Christopher Neider	<p>Please please don't do this. I discovered climbing a couple years after getting sober and it is absolutely changed my life. Please don't go and destroy our beautiful rock. It means so much to me and everybody else that loves to climb.</p>
33517	Tom McFarland	<p>No to gondola. Yes to updating Wasatch Blvd from Fort Union to 9400 So to a four lane road - extend the existing four lanes to the south. I've lived just west of [redacted] since 1977 and have been expecting Wasatch to be improved to 9400 So. I've owned property in the Albion Basin since the mid 1960s. The problem in the canyon is too many people. That results in too many cars, buses, Gondolas, etc. The Gondola solutions proposed do not resolve the traffic on Wasatch problem. It will now bottleneck at a parking facility. And on those powder days when the road is closed/limited much of the ski terrain is closed due to avalanch potential. Should not be funded by tax payer/state government money. Benefits a few and two business entities - Alta & Snowbird. Regards.</p>
33518	Piers Mainwaring	<p>Building new major infrastructure in such a small, unique, sensitive, and cherished canyon, without first demonstrating the insufficiency of all reasonable non-destructive options, is an irreversible mistake.</p> <p>A gondola that impacts the whole canyon evenly in order to serve two private ski resorts in the upper canyon is of course not equivalent to a major highway interchange, as falsely claimed by the project's supporters.</p> <p>This project imposes a heavy burden on taxpayers, the public's enjoyment of canyon recreation, and the irreplaceable natural environment of the canyon itself in a misguided effort to take public responsibility for a problem created by the resorts. The resorts have created an access problem, and we as residents, taxpayers, and stewards of our shared public lands should require them to solve it in a way that doesn't involve the installation of massive infrastructure in a delicate natural environment at huge taxpayer expense.</p> <p>This project would permanently mar the natural beauty of this singular precious canyon and extract a heavy cost from the public to do so. It is a massive failure of public policy, and deeply ironic, to limit public access to the natural features of the canyon in a misguided attempt to increase it.</p>
33519	Christian Faulkner	<p>As a resident of Salt Lake City and a frequent visitor of LCC, I strongly oppose UDOT's final EIS and Gondola Alternative B with proposed phasing. Let's consider more common-sense solutions to change driving habits, rather than permanently change and damage our prized natural landscape. I hope we can try alternative solutions before ever considering something like a gondola.</p>

33520	Marsha Rigby	We moved back to Salt Lake 20 years ago after being gone for 20 years. When we came back we would go up to Albion Basin for a picnic and you could drive there and there were few people in the camp spots. We hadn't ben back for several years and when we took a trip back up there we couldn't drive up. We had to take a bus. We got there and there were people every where. There was no way you could have a picnic with the on slot of people. We left and have not returned. I know there are more people here now and they all want to be able to enjoy the beauty of the outdoors. Look at what is happening to Zions and the other National parks. Allowing more cars up the canyon will destroy everything it has to offer. I'm not for widening a road that has no room to be widened. I think there should be a toll to get up the Canyon. I like the idea of the gondola as I think it will also limit the number of people going up and it also offers a view of the Canyon that you can't get from a car. But I also think that a gondola every 2 minutes is also to much. I'm all for limiting the numbers of people going up the canyon.
33521	Robin Richards	Hi there -- I'm strongly opposed to a gondola. Given how frequently the Peruvian chairlift and the tram at Snowbird stop running due to high winds, and the number of avalanches in LCC, I question the feasibility and safety of a gondola. In addition, funding this publicly amounts to corporate welfare for Alta and Snowbird. I think there are less impactful solutions you should be looking at: make the Ski Bus free (it's actually pretty expensive), charge a toll for cars, limit the number of cars, etc. Thanks, Robin Richards
33522	Rob Davies	My name is Rob Davies and I am a registered Utah voter who is opposed to the gondola project proposed for Little Cottonwood Canyon. As someone who uses LCC for recreation throughout the year I think the environmental and aesthetic impacts of this project are just not worth benefits. The proposed project would forever alter the feel and draw of the canyon in negative ways. Other solutions should be sought!
33523	Michelle Judd	Please consider something else. We don't need more development up our canyons. Make it easier with more bus routes & increase car tolls.
33524	Kendall Fischer	The proposed gondola would cause more harm than good for LCC.
33525	Alexis Petersen	We are rock-climbers. We use the canyon regularly and appreciate the beauty. We would prefer the least environmental impact, maintaining road access to the walls, not disrupting the rock itself where possible, while preserving beauty. The natural rock is beautiful and used by many climbers. The design of the parking garage should be carefully considered as it could easily become a significant eye sore on the land. If it is built, it should be non-obtrusive, possibly underground. We don't like the gondola idea. But, if it is built it should be again as non-obtrusive as possible. But again, we dislike the idea of disrupting the natural beauty of the mountain with a gondola. The road is scenic and widening could destroy its beauty as well. Widen only where safety is a concern. Please don't toll the road itself. Access to natural places is important for people and youth who seem to be less and less connected to the natural world.
33526	Noah Israelsen	If construction starts for this gondola then traffic for the canyon will become absolutely horrible because of all the construction creating delays. Nobody wants their tax dollars paying for some gondola that will destroy countless rock climbing routes and views. Not worth the money, not worth the years of construction, not worth ruining trails and climbing routes.
33527	Jack Berry	It appears that UDOT in partnership with the resorts and those who stand to gain significantly from the government pork barrel, have chosen the least popular LLC transportation solution. During the EIS process the long term slow build-out of three lanes was never really considered. Countless people have suggested two lanes up and one down in the AM, switching to two lanes down and one up in the PM. This alternative was rigged and doomed to failure by UDOT requiring moveable lane wall with the alternative. What nonsense! The smart highways and technologies on the cusp exploding this decade will allow for tremendous advancements driver-roadway communications. We just need 3 lanes long term, with a slow master-planned build out. We are almost there! Oh and did UDOT ever consider the simplicity heard of a "rejection loop". When the parking lots are full cars just turnaround or Mom's drop there kids off , vehicles just get routed back down that 3 lane smart highway - lot of signs and lane signs, wi-fi communicating road conditions and lane switching. By the year 2030 every-ones devices and cars will have chips in them that 1000 times faster. The problem with the canyon road is flow, not parking capacity. The road is a mess only when it doesn't flow. When cars get stuck, or traffic is held up, that when the canyon road becomes a mess. It is that simple. There has never been enough parking and there never will be. With parking reservation systems, rides shares, small buses, designed drop-offs and a three lane 'smart 21st century" roadway design that FLOWS, the problem is mostly solved. I have lived near the mouth of LCC my whole life, skied at Alta for 59 years, and my family has lived on the Wasatch front since 1853. Its always going to be a little crazy in LCC . It comes with the terrain and SLC is not a ski town, SLC is ski capital city. We have maybe 60 "PAC 12" powder days each year. That's the design point!! Lets build three lanes, designed for the 21st century with a reasonable build-out time line that works all year, and provides service for the rich and poor and flexibility. While many may deride the three lane smart design alternative, this alternative provides for compromise. The three lane smart alternative acknowledges that the population is growing, our electric age is advancing rapidly, and little by little we can design and upgrade the canyon road at a reasonable cost to improve the FLOW not capacity. In closing, just to state the obvious, Mother Nature is in charge with regard to avalanche conditions, the gondola alternative will do nothing to alleviate congestion during periods of avalanche control, and during inter-lodge when nobody is going up. Please reconsider the three-lane smart roadway alternative.
33528	Myrna Singleton	This is all about making money at the resorts. To cause damage to a beautiful canyon so resorts can make money is a crime. If there are too many people wanting to ski and cause canyon traffic problems then maybe they can ski someplace else. It is not an emergency for them to go up the canyon. Traffic can be controlled by limiting the number of people allowed to use the canyon at one time. Just to enrich the resorts is not a reason the canyon should be changed forever. It is unnecessary and expensive to change the canyon forever for a few selfish people.
33529	Jeff Perkins	Gondola is not in the best interest of all user groups in the canyon and a waste of public funds to support private interests of Snowbird and Alta. Taxpayers shouldn't bear the burden of subsidizing their already thriving businesses. There are other, more incremental approaches that can help mitigate the traffic problems in the winter AND in the summer without the significant financial burden that will be placed on the entire state for the benefit of private, for profit companies. Please don't go forward with this boondoggle.
33530	Jeni Larsen	No Gongola! It will not ease the traffic and cost too much

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33531	Steven Mckinnon	I very much OPPOSE the plan B alternative Gondola. I believe that more time and study needs to be done based on our decreased winter snow pack from the effects of climate change and the great salt lake. The increase of traffic in all parts of Sandy would not be acceptable. I personally will be putting support group together to have a large constituency of citizens attend and protest to the Appreations committee at the next legislation session on no funding for the Gondola. We need more alternatives to reduce the traffic problems in the canyon and busses do work. The two resorts that would benefit from this alternative B proposal should address the parking and number of Skiers on the most demanding ski day's. Thank you for taking my comment.
33532	Jesse Lee	Though a fun idea, the introduction of a gondola really only serves a small number of individuals, and more importantly, two corporations. As a climber I am saddened to hear about these plans as they will permanently impact the aesthetics of the canyon and reduce/eliminate many of the climbing areas that I grew up enjoying.
33533	David Hoffman	Please listen to local residents: We don't want a gondola. Let's start with tolling and a WORKING bus system. Please provide more bus service, from around the valley (including to the South), and charge a toll on high traffic days, before you even consider the gondola or road widening. A gondola would permanently ruin world class climbing and bouldering routes in lower LCC. Please don't do that.
33534	Matthew Palmer	I live in the [redacted] neighborhood less than a mile walk up to la caille. I love to visit the canyon and have been driving up since I was a child. I have seen problems develop over the years as the canyon has become more and more crowded but I absolutely think that any form of Gondola is the wrong solution. This would cause irreversible damage to the beauty of the landscape and do very little for anyone but the ski resorts. I don't think it is responsible for UDOT to use tax dollars to pad the bottom line of the ski resorts, which are, by the way, already overcrowded with the current transportation solutions. Last year, I tried to take a bus up to ski. I waited for over an hour before giving up. During that time, 4 buses were supposed to have come. That afternoon, I drove and ended up spending 4 hours stuck in bumper to bumper traffic to get to the mouth of the canyon from the Albion basin lot. I wished I had been able to take a bus, but none came. There are definitely great elements to the current plan. Increasing parking at the mouth of the canyon would be amazing and make park and ride much more feasible, but if the bus system were more reliable, people might actually want to use it. Why invest millions of public dollars into something that is almost unanimously opposed by the public when the current options are executed far below their potential? Please, cancel the Gondola and fix the current options!
33535	M. Tanner Clagett	I strongly oppose the effort to build a gondola through Little Cottonwood Canyon. There are numerous untested options that would be far more cost-effective, and more importantly, far less destructive -- environmentally, visually, and historically. I am a member of Salt Lake's climbing community and have been shocked at the cavalier willingness to destroy dozens of historically important--and still often-climbed--boulders and climbing routes that would come with the construction of a gondola. Climbing may be a niche activity, but it is one that has strong historical roots within Little Cottonwood Canyon - a place that has acted as proving ground to climbers for many decades. Let's call the gondola project what it is: a boondoggle supported by a small, but well-heeled minority (specifically, Snowbird and Alta). It is incredibly frustrating that this project has continued to move forward despite widespread opposition and numerous less-impactful, less costly alternatives that have not been given due consideration. Please consider implementing other options: tolling, dedicated bus lane(s), ride-sharing, actual enforcement of vehicle classes and traction devices. None of this has been done, and all of it is cheaper, less destructive, and less farcical than a 12-mile gondola.
33536	Pete Van Slooten	Please do not put in a gondola. The current road does a good job of limiting the traffic to what the canyon environment can handle.
33537	Chiao-ih Hui	I oppose the proposed gondola. It only addresses skiers and does not address hikers and climbers that also utilize the canyon.
33538	Lisa Verzella	Down with the gondola. It is reprehensible that my tax dollars will fund the bloated private ski industry; Utah corporate welfare at its finest. Busses with a big lot, or tunnels giving everyone access are some answers, not the gondola for the tyrannical majority.
33539	John Bickerstaff	My name is John Bickerstaff and I strongly oppose the Gondola "solution" to the problem of transportation within the canyon. I am a registered voter in Utah and I would never vote for this expensive, destructive approach to the problem. Increased busing or other alternatives are far better solutions. The gondola is going to ruin irreplaceable views and damage irreplaceable climbing and hiking within the canyon. A gondola can only serve a few people at a time and is a huge expense. It does nothing to solve crowding at trail heads and other types of crowding in the canyon. It only serves two resorts at the top of the canyon and is not a fair and equitable way of approaching the problem as it favors only those who are going to the ski resorts. PLEASE do not ruin the canyon with a Gondola that is a huge expense and can only serve a few people at a time. Thank you.
33540	Stephen Lander	UDOT has not attempted any non-destructive methods yet. Tax cars coming up the canyons on weekends. Expand bus services and increase parking at the base of the canyon (which would be needed for the gondola anyway) by your own estimates, the gondola would only reduce traffic 30%. Why permanently disfigure a beautiful area and watershed for such a paltry result? Try less destructive methods first and only go with the gondola if those are not effective.

33541	Nathan Underwood	<p>Do not build a Gondola in LCC! The years of construction will disrupt not only traffic in an already busy canyon, but it will disrupt the biking, hiking, backcountry skiing and snowboarding that it is used for today! I bike on the Little Cottonwood Trail regularly and construction will absolutely impact the users of this trail and other trails and areas that outdoor enthusiasts frequent!</p> <p>After construction, how can these people even access areas that the gondola doesn't service?? The Gondola is going to create just as much traffic, lines, and wait times that exist today, just in a different area. What's the point! This is a terrible idea, which is only backed by the greed of private business that might benefit from it. Utah tax payers should not pay for this!</p> <p>Expand the bus service! That is such a better and more cost effective alternative.</p>
33542	Sam West	<p>Stop taking money from ski resort corporations and listen to the outstanding number of voices that said a gondola is UNWANTED. This is a silly response to the problem and will be unneeded most of the year. You could accomplish the same mitigation through strategic avalanche tunnels and INCREASED bus routes. The gondola would be a huge mar on the beauty of little cottonwood. While it may run all year, it certainly would be unnecessary for all but a handful of days. Please consider less drastic measures. At least try out more busses first. The only good part of the eis is that you put the toll stations in a logical place. I thought you wouldn't be able to even handle that...</p> <p>I've lived here long enough to not be surprised by your decision, but am still greatly disappointed.</p> <p>Sam</p>
33543	Carsten Petersen	<p>We are against the plan to build a gondola. It will be an eyesore on the beauty of the land. I am a Utah voter and climber in the canyon. This would disrupt the natural beauty of the canyon. A bus system would allow traffic to improve without making this impact. Children and youth have less and less opportunities to be in natural places, especially nearby. We should support them by not altering the land where possible. This way they can connect with nature. In addition, we prefer to maintain access to the walls. Tthe least disruption to their natural surfaces is best.</p> <p>Thank you for the chance to comment.</p>
33544	Michael DePola	<p>Please seek alternatives to the gondola in LCC! All alternatives should be exhausted before considering ruining the canyon by adding gondola towers - which would ruin many of my beloved climbing crags. As I'm sure UDOT is aware, alternatives include: mobility hubs, enhanced buses, tolling infrastructure, trailhead parking, parking management strategies (smartphone travel app), multi-passenger vehicle initiatives, and expanded traction device requirements.</p>
33545	Misha Bradford	<p>I am opposed. Please don't use tax dollars to fund this very costly project that will have very limited benefit both to taxpayers and to the environment. It just doesn't make sense.</p>
35325	Mary Jolley	<p>Please do not build the gondola. There is so much natural beauty in LCC and it would be a massive wasteful mistake to spend 500 million dollars to fill it with gondola towers and noise in order to alleviate traffic during a few hours of a few days of the year. I strongly oppose this and will not support or vote for any representative who supports the gondola. Thank you for all you do!</p>
33546	Megan Sinner	<p>I am opposed to the gondola in Little Cottonwood Canyon. As someone who uses this canyon for purposes other than ski resorts I believe the gondola will be more of a hinderance than help. Please consider the alternative of increased bus/shuttle availability. I would be more than willing to park at the bottom and carpool/bus up the canyon. Thank you.</p>
33547	Troy Teeples	<p>Do not build a gondola. It is a waste of money. People will still decide to drive up the canyon to save the money it would cost to ride the gondola. I like the idea of expanding the road by one lane and having two lanes go up the canyon in the morning, and two lanes go down the canyon in the afternoon.</p>
33548	Matt Bergman	<p>NO TO THE GONDOLA. NO IMPROVEMENT NECESSARY</p>
33549	Robert A Jones	<p>The gondola is a terrible idea that will move very few people. We should build a train.</p>
33550	Olivia Miller	<p>Hi,</p> <p>I am writing to voice my disapproval of a folsom's in Little Cottonwood Canyon. It sounds horrible to use! I have used the cabriolet at the Canyons ski resort at Park City (similar concept as the LCC gondola) and it is so annoying. There are so many transitions -car-parking lot-cabriolet-chair lift- that it takes forever to get to your destination. The gondola would also spend way too much public money on a project that primarily benefits a few businesses that already get a lot if public resources and aren't suffering. Ski resort visitation has skyrocketed! And their are better uses if the money than a gondola including housing the thousands of homeless pin salt lake valley or preserving the Great Salt Lake. Or if the money is limited to transportation, improve bike infrastructure throughout the valley. It's crazy to spend this much money to help make driving to recreation slightly less congested. Plus the gondola will increase visitation and the canyon is already too crowded.</p> <p>Sincerely, Olivia Miller</p>
33551	Jared Moon	<p>Dear UDOT,</p> <p>I am opposed to the proposed gondola. The dollar amount spent and permanent impact on the canyon are too high. As a Utah tax payer and voter and more importantly, a canyon, user I prefer other options. For example, a toll similar to Millcreek Canyon and/or increased bussing would be more palpable. Even mandatory bussing like in Zion Nation Park would be preferred over the gondola.</p> <p>Thank you for working diligently on this important issue.</p> <p>Jared Moon</p>

Comments on Little Cottonwood Canyon Final EIS

33552	John McCauley	UDOT, I am categorically opposed to the proposed Gondola. It will negatively impact many recreational activities, during and after construction, including the world class rock climbing draw thousands of visitors and millions of dollars to the region each year. Best, John
33553	Daniel Whitaker	I do not support the gondola and the environmental impact it will have on the prestige beauty of little cottonwood canyon.
33554	SEAN FERRELL	Please do not build this horrible thing. I've been a climber in Little Cottonwood for years. The boulders in LCC are magical, and the area is one of the most important and well-loved bouldering areas in the world. When I decided to go to the University of Utah Psychiatry residency, the main reason my wife and I knew we would be happy there was the easy access to Little Cottonwood bouldering, a premier world class bouldering area, just a few minutes from downtown Salt Lake. Among the best bouldering areas in the world, it's extremely rare for being so close to a major metropolitan area. Please do not build this gondola, which would irreversibly destroy boulders in Little Cottonwood, and damage the magical natural space that is there now. Please. And please stop the ski resorts from pushing for it every couple of years -- enough is enough. Protect this magical space forever, please. It's one of the main areas that makes Salt Lake such a desirable place to live.
33555	Jessica Pino	I am a SL County resident. I am against the gondola. Please do not build the gondola.
33556	Julio Cesar Pino	I am a resident of SL County. I enjoy hiking in our mountains and do not want a gondola.
33557	George Battle	We don't want the gondola! This is a horrible idea for the betterment of salt lake and Utah as a whole. Stop the gondola!
33558	Valor	No gondola! Where's the limit.
33559	Max McLeod	The proposed Gondola plan is a shortsighted and inequitable plan. Not only is it an immense cost to taxpayers, but it completely disrespects the landscape and the people who live here. The only people that it serves are those who stand to make money in construction costs and the resort owners. Choosing a plan that permanently affects and destroys the natural habitat and affects the people who use the canyons for all other activities is a massive failure of imagination. Enhancing bus routes and limiting the use of private vehicles is the only acceptable solution.
33560	Tom B	Spend money on literally anything other than gondola. Improve the roads or something come on it isn't hard
33561	Jennifer Nummerdor	It's very disappointing to hear that plans are continuing for the gondola, despite receiving an overall negative reception. This gondola threatens the visual beauty of LCC and also many boulders which myself and many others enjoy climbing on. The pushing forward of this plan is only to serve the corporate interests of Snowbird and does not actually benefit anyone else, as evidenced by the plans to stop nowhere else along the canyon, and the coincidentally timed message that the bus system for Snowbird will be greatly reduced for the upcoming ski season. Like many others, I'm very tired of hearing how tax dollars are going to be used to benefit an already very wealthy company, in a way that is detrimental to almost everyone else, including the wildlife and native species in the area. This gondola plan greatly saddens my community and me. Please do not move forward with these plans.
33562	Susan Wojtalewicz	Based on the presented information I believe that a gondola is not required at this time. Using a tolling system, and an increased bus service this will promote carpooling and alternative modes of transportation on its own. The bus system must be reliably enhanced, running more frequently and more stops in the canyon, to be effective. An alternative bus lane may help with ensuring the enhancement of this system down the line but also is not necessary at this time based on the information provided. I would advocate for the implementation of only the first phase of the 2 phase system and forget about the gondola all together for the next decade.
33563	Michael Tanner	My wife and I are opposed to building a gondola up Little Cottonwood Canyon. This will ruin the aesthetics of the canyon, have an enormous price tag, only benefit one canyon, and only benefits a relative handful of people for maybe 60-90 days per year. A terrible waste of money, when suitable less expensive alternatives recommended by the Salt Lake County Council are available.

33564	Christina Economy	<p>Dear UDOT,</p> <p>As a SLC County resident and Big and Little Cottonwood Canyon year round user, I highly encourage you to look at a more fiscally responsible, effective, and less environmentally impactful solution to traffic mitigation up Little Cottonwood Canyon. I understand that some of the responsibility falls on the public, I believe that shouldn't be at the price of a gondola that doesn't serve the public or the natural spaces. The responsibility that we bear as the public is that of more responsible commuting. We need to first explore more flexible and less impactful solutions such as carpool incentives, checking of proper vehicle safety requirements, and bus priorities. I am the first to admit that, yes riding the bus isn't the most comfortable or easiest but it is something that I do as a consumer of these natural spaces in order to best protect and less impact these areas. As a bus commuter we have sat in traffic along cars with only one driver. I don't fully support widening the road but feel that some common sense traffic changes in the peak times would help best navigate the issue of buses sitting in traffic. If they were prioritized more people would be open to riding in them. We have to give the infrastructure that already exists, buses, a fighting chance. From previous meetings it is clear that not everyone would be happy with tolling or a bus only priority time, but it's our duty to first navigate and exhaust the least impactful solutions. What makes us believe that people who refuse to ride the bus will ride a Gondola that will require them to leave the comfort of their car just like a bus would? If we are going to do transit, let's not try to become a tourist attraction with a Gondola but instead make a statement for our environmental choice, one that would reduce emissions, lead to safer transport, and community involvement. I can't tell you the times my husband and I have been thankful to be riding the bus when it's a heavy snowfall day. I haven't ever felt unsafe while riding in the bus but will say it's scary to see the lack of enforcement on adequate chains or car requirements in the canyon lead to accidents. Riding in the bus has allowed us to meet other people within the community, while knowing we are safely getting to our destination, then we all get to get off and enjoy a beautiful day of skiing. I truly believe that if we incentivise the use of our public buses by giving them a fighting chance we can overcome this traffic issue without the need of a gondola. Those wishing to opt for their personal car could be tolled. There's a reason the buses aren't the majority choice, let's look at why, come up with some solutions and give this several seasons to test out. I appreciate your time and consideration of a solution that doesn't involve a costly gondola or a high impact to our beautiful landscape.</p> <p>Thank you, Christina</p>
33565	Nicole Prado	<p>I do not support the gondola. I know shocker right? Ya I'm not ok with more tearing up of the canyon to effectively call into fruition a good idea fairly that some engineer said hey this looks good on paper. Would it be more useful to perhaps use that money to get a better bus transit system in place? The thing is that the reason you don't see higher ridership is that the system in place is clunky and not user friendly. Further we live in a car centric society, to get people out of the cars and onto busses requires a bit of creativity but also timeliness. The gondola sounds great on paper but how many people can ride in 1 car? 4? 6? Ya you spread that across the line you could probably get 30 to 50 people on a gondola but really does that compete with a bus that could hold 40-50 per bus in one bus and spread out pick up and drop times by 10-15 mins and now by utilizing current infrastructure you have a better use of money and less tearing up of the canyon.</p>
33566	Bryan Economy	<p>Dear UDOT,</p> <p>As a SLC County resident and Big and Little Cottonwood Canyon year round user, I highly encourage you to look at a more fiscally responsible, effective, and less environmentally impactful solution to traffic mitigation up Little Cottonwood Canyon. I understand that some of the responsibility falls on the public, I believe that shouldn't be at the price of a gondola that doesn't serve the public or the natural spaces. The responsibility that we bear as the public is that of more responsible commuting. 33567	Robert Rees	<p>Dear UDOT</p> <p>I am a passionate about the environment, including Utah's incredible natural beauty. Seven years ago I participated in what was called the Great Conference at Claremont, which attracted 2,000 people from around the world who were interested in saving the world from the devastation of global warming and humankind's indifference to the future of the planet. Upon leaving the conference I traveled to Utah's Pando Forest at Fish Lake. That forest of aspens happens to be the largest, oldest living organism on the planet and for the first time, it is showing the effects of global warming. Cottonwood Canyon is like the Pando Forest in the sense that it is an incredible natural wonder that everyone can enjoy. The wonder will be scarred by the proposed gondola. We need to consider that we are the ancestors of the generations who will come after us. If UDOT approves the gondola and uses scarce public funds to build it, I'm afraid our grandchildren and great-grandchildren will wonder what in the world we were thinking to ruin the precious landscape of this beautiful canyon. Thoreau said, "in wilderness is the preservation of the world." Please do you part to be a good ancestor to future generations by not building the gondola.</p>
33568	Joel Wenger	<p>I think this should be paid for by the resorts and not with taxes. It will not be greatly used by the general population. Bus lane makes more sense. I understand that it will help a legislators wallet who lives at the base. Please do not put in gondola, expensive, won't be used that much, put in another lane.</p>
33569	Matt Berry	<p>As a Cottonwood Heights resident and Little Cottonwood Canyon recreational user, I am opposed to the implementation of a gondola. The obvious and significant changes to the landscape are unacceptable. This will destroy climbing access and permanently change the look and feel of this canyon which is a jewel of the Wasatch. This canyon is one of the reasons I moved here to Salt Lake City. Developing the canyon in this way may help with traffic to the ski resorts but completely overlooks all of the other activities and users of the canyon. Runners, backcountry skiers, climbers, bikers, anglers, etc. The implementation of a gondola will only have a negative affect to these user groups and will only benefit the king pin ski resorts. This is a mistake and it needs some serious consideration before the city allows this canyon to be permanently altered forever changing the canyon we all know and love. Other options such as implementing tolls like we use in Millcreek canyon and using dedicated bus lanes / priorities (forcing people to use public transportation) all have less environmental impact and can be used to affect the traffic in the canyon. Why take such drastic measures which will have significant negative environmental effects when we live in one of the most beautiful states in the country just to serve the ski resorts. We should be protecting our wilderness and not destroying it.</p>
33570	Andrew Barker	<p>Hi,</p> <p>I strongly oppose the Little Cottonwood gondola as many residents do. The project would cost us Utah tax payers millions of dollars and would serve only a small section of people. Additionally, the strongest supporters of the project seem to be the two ski resorts that the gondola leads to as well as those wishing to make millions off of the construction project, at the expense of Utah taxpayers.</p> <p>The gondola would do lots of harm to the environment as well as destroy the stunning natural beauty of Little Cottonwood and it's mouth. The towers, lines, and cabins will disrupt the beautiful views that the Cottonwoods are known for. This is also after the gondola is already built. The construction of the gondola will cause even more irreparable damage to LCC as trees will need to be cleared in order to get construction equipment in to set the foundation and install the gondola towers.</p> <p>Traffic up and down LCC is something that absolutely needs to be addressed but the gondola would end up doing more harm than good to the canyon to be warranted. I think that widening the road leading up the canyon to allow for more lanes. Another thing that could be done with more lanes is to have designated bus lanes so that public transportation can still be provided while being able to travel freely, unburdened by regular car traffic.</p> <p>All in all, the gondola would hardly provide a solution to a real problem and would be a burden on taxpayers and damage the environment. There are other possible solutions that should be explored.</p> <p>Thank you, Andrew</p>
35330	Matt Hunter	<p>Hello,</p> <p>I am a Utah-native, avid user of LCC, and a skier at Snowbird nearly my entire life. As an active voter in Utah, I'm begging you don't let this gondola pass. It's only there to make the ski resorts money. It will only further destroy the canyon and showcase human-caused negative environmental impacts.</p> <p>Thanks, Matty</p>
33571	Robert North	<p>I am strongly opposed to spending public (of which I am a part) money to support private business. The gondola project to alleviate traffic and parking for two ski resorts should only be considered if Alta and Snowbird are willing to kick in the majority of funding. The only way public funding should be used is if it benefits the public at large. BIG expenditures for a narrow private entity are an abomination. The ski resorts could buy and build their own parking lot and include the price of their environmentally friendly bus service in the price of their ski passes or work out another way to fund their own fix to the problem.</p>
33572	Jeffrey Gishen	<p>The FEIS indicated that the LCC snowsheds would be implemented during Phase 1, if sufficient budget is available. The construction of these snowsheds would have a temporary, but significant, negative impact on traffic flow on the LCC road. As a result, I recommend that construction of the snowsheds be delayed until after the gondola is installed, so that there is an alternate means of travel up and down the canyon while snowshed construction is taking place.</p>
33573	Kit Kauffman	<p>Please don't put up the gondola, it will only allow more people at the ski resorts which are already overcrowded. This only helps people who stand to benefit from more people skiing (like the resorts) not any of their customers.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33574	Bruce Ostler	The Gondolas are to enhance the skee business, not to save the canyons, no tax money should be spent on this one sided benefit program
33575	David Shaw	We don't need to spend tax payer money for a gondola that only benefits two private corporations. They can foot the bill if that is what they want.
33576	Rich Taxwood	i agree with UDOT's selection of the gondola alternative. It is a reliable, safe, and clean means of transportation. Widening the canyon road for enhanced bus service would be time consuming and have a large impact on the canyon landscape. Also buses don't seem to be a viable solution as UTA has eliminated the 953 bus route in the canyon for this winter due to a driver shortage. This represents almost a 65% reduction in public transportation options,. Going forward the enhanced service would require even more drivers which they can't even staff the old levels of service. The staffing requirements are much less for the gondola and it comes with much less impact to the environment than more busses. Haven ridden several of these gondola systems in Europe the opportunity to combine transportation modes at one terminus increasing options such as car, bus ,train and gondola. We in America are all tied to our personal vehicles and until we adopt a different mindset a positive change will be a long time coming. Please implement the gondola to solve transportation in the canyon for us, our children and generations to come.
33577	Carmen Groom	I do not support the gondola. UDOT should increase bus service, instead of permanently destroying the canyon. The gondola will not solve the problems UDOT/the public is wanting to solve. The gondola will increase traffic on Wasatch Blvd and will permanently negatively alter the landscape. It will destroy world-class climbing (which can be climbed year-round) in order to benefit the small number of wealthy people who can afford ski passes and gondola rides to the ski resorts for a few months out of the year. The gondola is designed to serve only ski resort users, ignoring dispersed use recreators and other year-round canyon users. The gondola is fiscally irresponsible, with half a \$ billion in initial construction costs, alone. Ultimately the gondola is not an equitable solution and perpetuates environmental marginalization and injustice in the Wasatch Front. Please do not move forward with the gondola. Additional impact analyses and alternative solutions such as increased bus service and tolling should be implemented instead.
33578	Sam Helgren	I'm in strong support of increasing bus service, including more centralized pickup locations in metro areas direct to the resorts. I'm also in favor of tolling. We should the very best to TRY alternatives before resorting to the extreme waste of taxpayer funds and environmental destruction that is the gondola B option. However with UDOT announcing cuts in bus schedules, before the season I have concerns about UDOT seriously attempting to try other options than the gondola. Also the onus should be on the resorts, as they are the ones that are creating the congestion. Public dollars should not be used to solve a problem created by private entities.
33579	Melinda Mclwaine	This gondola is a give away to Alta and Snowbird to be paid for by our tax dollars regardless of weather we use the resorts or not. The ecological disruption of the landscape and wildlife will be huge. Winter is vanishing along with the ski industry but this man made aberration will be around for decades. There are other less destructive alternatives. I strongly protest with a resounding no to this gondola.
33580	Mike Kerzhner	I am a homeowner and resident in Salt Lake County. I am very opposed to the Little Cottonwood gondola. The gondola is a blatant transfer of public tax money to ski resorts. Is this really the best way that 500 million (but likely much more than that) can be used to improve lives of Salt Lake City and Utah taxpayers? Besides the fact that the gondola is a corporate handout: - I am a passionate climber, and the gondola will destroy some of my favorite, world-class boulders. - The canyon will be impacted from years of construction. Why should we lose the peace and quiet of the canyon to appease Alta and Snowbird? - Little Cottonwood has amazing views. Just look at all of the published photos of the fall colors from this month of October. Why would you ruin the natural beauty of the canyon with a huge eye sore? Please reconsiders the gondola decision.
33581	Paul Ricketts	No gondola!!!!!!
33582	Frederick Sladen	Marvelous, what a webpage it is! This weblog provides useful information to us, keep it up.
33583	Austin Gust	Please do not move forward with the Gondola. I can't think of any good reasons for it. It will hurt our local climbing and backcountry skiing and snowboarding. Why develop our beautiful canyons anymore? Thats where we retreat to so we can get away from the city and be one with nature. It only serves Alta and snowbird so why is it coming out of our taxes? At ski resorts the tram and lifts shutdown for wind, lightning snow etc won't the same happen with the gondola? I am in favor of increased bussing service and potentially widening the road. But totally against this gondola idea.
33584	Larry White	Oppose the gondola. There are other options to explore. Thank you.
33585	Laurie Rich	I am opposed to the Gondola proposal for Alta Canyon. I learned to ski at Alta when I was 4 years old, I am now 72. I taught skiing at Alta and for the University of Utah. I became an avid climber and gloried in the magnificent views of our canyon for many years - with the large climbing community centered around the world-renowned Alta Canyon Granite. We have summited all the peaks many times - the Pfeiffer Horn, the Salt Lake Twins, the American Fork Twins. We climbed Lone Peak 3 times in Winter. Alta Canyon is a premier destination for climbing, not just skiing. I climbed every route up the granite with world famous climbers Peter Lev, Donny Black, and so many others - signature routes The Thumb, The Green "A" - many more. Why do we climb? To be One with Nature - for the breathtaking majesty of unobstructed views of our beloved Alta Canyon. This world-renowned destination would be irreparably scarred and adulterated by ugly invasive Gondola towers. Such a disfigurement of our sacred canyon would be an abomination and an affront against God. The gondola would only serve the 2 ski resorts, not the multitude of other users for summer hiking and winter mountaineering - and would spoil the experience for all these other users! Added bus services, more passing lanes, toll fees on weekends - so many other solutions would serve to alleviate resort traffic. NOT THE GONDOLA!
33586	Geoff Andersen	This whole idea must be scrapped, there's an overwhelming negative view on the gondola.

ID	Full Name	Comment
33587	Rebecca Espinosa	Mountains/nature undisturbed are a haven, adding more public buildings will ruin my personal experience for the MAIN reason I go to the mountains. DO NOT DO THIS
33588	Karen Hunt	Keep LLC pure and accessible to the local. No gondola.
33589	Melinda McIlwaine	This gondola is a give away to Alta and Snowbird to be paid for by our tax dollars regardless of weather we use the resorts or not. The ecological disruption of the landscape and wildlife will be huge. Winter is vanishing along with the ski industry but this man made aberration will be around for decades. There are other less destructive alternatives. I strongly protest with a resounding no to this gondola.
33590	Mary Walter	<p>I am writing in opposition to the gondola proposal. I submitted a comment in favor of the gondola when public input for the LCC traffic project was first open. At first, the gondola seemed like a creative solution to reduce traffic and improve air quality in the canyon. Although the gondola proposal is a wonderful use of innovation, it will also have devastating impacts on the natural environment and surrounding communities.</p> <p>It is our responsibility to protect and conserve our natural environment. LCC is a world renowned recreation hub. It serves as a place to connect people with wilderness and is worth protecting. Building a gondola through the canyon would drastically change how people recreate in the canyon. This could have serious consequences on recreational tourism and deter visitors from spending money in Salt Lake Valley. Instead of connecting with wild places, you'd be greeted by towering man made structures that block views and negatively impact recreational opportunities in LCC. In addition to the destruction of the forest in LCC, the gondola proposal is a heavy burden on taxpayers. It seems like low income families would be hit the hardest. They would be paying to build transit solutions that they will never use. The gondola fees would be another barrier keeping lower socioeconomic people from recreating in the canyon. I love little cottonwood canyon like it's a second home, but a gondola would drastically change how I recreate in the Wasatch. The gondola would make LCC less accessible. I would have to drive further, and would contribute more to the terrible air conditions, because LCC would neither be affordable or pleasurable to recreate in.</p> <p>It is our responsibility to protect the wild places in the Wasatch. It is our responsibility to protect people who would feel the heaviest burden from the gondola, and maybe don't have the loudest voices. I believe the gondola would negatively impact LCC.</p>
33591	Katie Palfreyman	No no no no no gondola! Only the ski resorts and those who stand to profit want it. I would like to see mandatory busing and whatnot first.
33592	Derek Dapp	A massive project like this shouldn't exist to serve a select few. Increase carpool incentives and bussing systems instead. The gondola will not help with traffic and parking issues at trailheads.
33593	No One	<p>I recommend limiting access to the canyons. I still remember how snowbird politically leveraged UDOT snow safety to keep the canyon open during high hazard storms. This demonstrates the depravity of the ski business. I recommend people who are going to back country ski, snowshoe, or hike be given priority over all other users during the winter. The ski areas must be limited to a set number of skiers and the lift ticket price capped for equality. Anyone who gets to operate on our public land must be regulated and compliance enforced.</p> <p>Gondola's, pipelines and other expensive and wild proposals to fix over consumption of water, snow and other resources are all missing the mark. We must live within our means, which means employing no growth tools, contracting retreating, and using less. In short conservation.</p>
33594	Christy Renfro	I am against the tram because it is destructive to the environment. I feel it does not serve a long term solution. A better solution could be to increase energy efficient buses and possibly tolling for the road. Thanks for supporting your locals views.
35332	Annie Smoot	<p>Hi,</p> <p>My name is Annie, an SLC local and Utah voter, and I respectfully oppose the LLC Gondola project.</p> <p>Through growing up rock and ice climbing with my dad in the Wasatch (he authored the 1984 Wasatch Climbing guidebook), the Wasatch has been a rejuvenating escape from the hustle and bustle of the city. We frequently ice climb up the canyon in the winter and have never had issues with parking, too much traffic (although it can be a little busier around 4pm during ski season), etc and certainly no problems in the summer.</p> <p>Who does the gondola serve? The gondola would not serve climbers, hikers, mountain bikers, sight seers, campers, slack liners, snowshoers, etc. It would only serve skiiers at Alta and Snowbird. It does not make sense to cause such a large expense to taxpayers for something that represents a small minority of the population as a whole. The full parking lots is only an issue for ski resorts 5-10 days of the year on powder days. Additionally, do you think people will actually use this? Or still want to drive their cars with their lunches, jackets, etc to have right at the ski resort parking lot?</p> <p>Could the ski resorts use their funds to build underground parking garages instead of new condos to accommodate their clients aka skiers? Could there possibly be an online reservation system with assigned parking stalls (by number) instead? Let's not tax our local community, families, etc to increase the wealth of a few companies with deep pockets and hired lobbyists.</p> <p>The gondola will also replace our beautiful natural views with human disturbance. Its construction will likely ruin climbing trails which we have fundraised for years to build through the SLCA and will cause years of difficult access as the unwanted gondola would be built.</p> <p>Please take a poll of Utah voters (with advanced notice and access to all voters) to get a correct representation before finalizing a decision.</p> <p>Thank you for all you are doing to represent our community in solving this problem.</p> <p>Kind regards,</p> <p>Annie Smoot</p>

33595	Steve Seegmiller	Please do not put a gondola up the canyon. The paid parking has done a great job in managing canyon traffic. The gondola will only benefit those who own property where the gondola will be installed. This will not bring in more money to the state and will destroy a lot of the summer attractions.
33596	Tyler King	Do not install a gondola in Little Cottonwood Canyon. The gondola will have an unacceptable effect on Little Cottonwood Canyon and will only push the traffic issue downstream. It will benefit the ski corporations but will be a detriment to our community. Do NOT sacrifice the beautiful nature in our state for money. If the goal was to limit impact on the canyon other ideas such as a fee, mandatory electric shuttle systems to the resorts, etc could be employed. My suspicion is the fear of other solutions limiting the income potential of the ski resorts. Again, do not sacrifice our canyon by installing a gondola.
33597	Dylan Harris	<p>Hello, I am a user of the canyon's natural resources and resorts, and I would like to express my support mostly for expensive tolling and bus service.</p> <p>I agree with the phased implementation, and potentially we may have no need for the gondola if the tolling + bus service is adequately implemented.</p> <p>The most important thing is that BUS SERVICE SHOULD BE CHEAPER AND FASTER THAN A CAR. If this is not the case, people will still drive. This means the cost of the toll for a round trip car ride MUST be significantly more expensive than a round trip bus trip. This will also relieve the congestion that private autos contribute to and enable faster bus speeds (likely faster than the gondola in the end).</p> <p>Think of National Parks like Zion that have banned cars and only do bus service. This could work for Little Cottonwood Canyon to keep the visual beauty the same and summers will still be fine with no gondola sitting unused.</p>
33598	Catherine Hawkins	Do not approve the gondola for Little Cottonwood Canyon. It will ruin the canyon in order to serve a small amount of individuals. Our taxes are high enough without this \$billion gondola with its 15" towers and there may be no snow!! Our tax dollars and the environment will suffer dramatically if this is approved. Remember climate change and the forever drought in Utah and the West? I do and I am living here. Vote no!! There are other options that could serve everyone instead of a select few, including politicians bank account. Shame on all of you for even thinking it is a good alternative to traffic congestion for the already rich people in this valley to ski. It is an environmental disaster and serves very few. My taxes are high enough and I want to be able to enjoy the beautiful canyon for a long time. Utah works for the wealthy people only. Who else could afford to use this gondola and ski? Not my family. Shame on you!!
33599	Scott Williams	<p>I'm writing to oppose the selection of the Gondola B option to relieve traffic congestion in Little Cottonwood Canyon for the following reasons:</p> <ol style="list-style-type: none"> 1) The impacts on the visual, habitat and recreational aspects of the canyon are wholly inconsistent with the values of conservation, solitude, wilderness, and wildlife that the canyon has provided for Wasatch Front residents for generations. 2) It does little to improve air quality, merely moving traffic congestion and emissions from the canyon road to the proposed gondola parking at the mouth of the canyon. 3) Asking all Utah taxpayers to heavily subsidize access to two private destination ski resorts in one county violates principles of fairness and the free market. 4) The cost to ride the gondola will be prohibitive for most residents and visitors. 5) The scope of this proposed solution far exceeds the scope of the problem. <p>I propose that the phased approach not include the eventual construction of a gondola but rather include a reevaluation of the needs and options at defined intervals of every 5 years.</p>
33600	Nathaniel Shultz	<p>As a 14 year full time resident of Cottonwood Heights and a avid outdoor enthusiast that spends over 150 plus days a year in the Cottonwood Canyons I strongly discourage the idea of installing a Gondola in Little Cottonwood Canyon. The proposed gondola seems to only serve patrons of both Snowbird and Alta in the winter season at the tax payer's expense. First off, the gondola is not a sufficient solution to traffic management. Secondly, it is clear that it only benefits those who bring business to the ski resorts and therefore should absolutely NOT be funded by taxpayer dollars. Third, the installation of such gondola system would cause irreversible damage and alter the wonderful landscape of the canyon forever. Please please vote to further stop the gondola and continue to explore less damaging, more inclusive (year round benefits with more access points), and less expensive alternatives that will preserve our beautiful canyon for future generations.</p> <p>Thank you. I hope that you will closely listen to the citizens of Cottonwood Heights and Salt Lake City in their concern and disapproval for the proposed gondola project.</p>
33601	Brian Goldman	Installing this gondola would be a horrific and environmentally damaging plan.
33602	Dustin Garner	I strongly oppose the gondola. It hurts virtually all but the wealthiest users and the resorts. No to the gondola.
33603	Nathan Zacharias	<p>Vote NO on the gondola and no on funding for the gondola!!!</p> <p>The only thing more ridiculous than destroying Little Cottonwood Canyon for everyone who isn't an Alta/snowbird passholder is using over \$500 million of taxpayer funds to pay for it.</p> <p>I will vote against any legislator who votes to fund the gondola.</p> <p>Please expand bus services and/or add an entrance fee to the canyon. There are sane ways to preserve the canyon's beauty and reduce traffic.</p> <p>If you wish to throw away \$500 million, at least put it towards saving the great Salt Lake or some thing useful.</p>
33604	Scot Morgan	Please. No tolls in Little Cottonwood.

33605	Lauren Peterson	I object to the gondola, and urge to not go forward with this ill contrived idea. The research shows that installing this expensive gondola will not alleviate that much traffic (30%or less). Furthermore, this project only actually aids a minute group: the resorts. Taxpayers should not be paying for another project where the rich profit with rich. This is an odious proposal that will ruin a canyon beloved for its scenic views and peaceful trails. Please do not obstruct our canyon so a small percentage of wealthy persons can ride an expensive gondola.
35333	Robert North	I am outraged that public money would be used to support private business. If the ski resorts have a problem with parking and traffic in the winter in Little Cottonwood Canyon WHY can't they be required to fund the fix. I am strongly opposed to large sums of public money being used to benefit 2 private business.
33606	Kirsten Crear	<p>I finally decided to write to you after reading Mayor Wilson's Facebook post in which she said "in response to questions about how less affluent families will access Little Cottonwood Canyon if the gondola is chosen as the final alternative, UDOT said those who cannot afford it will have to go during non-peak hours."</p> <p>So essentially, when most people are working, or are in school. Aka: typically the people who are less financially privileged. So essentially that would make it completely inaccessible to them. So. I agree with mayor Wilson. That is NOT OKAY. We need to be expanding access to the outdoors to the less financially privileged, not limiting it.</p> <p>I'm very pro occupancy/peak-based, sliding scale toll. Much like Solitude's parking. We already have occupancy sensors on our HOV/fast lanes on 215. I.e. 4+ people in your car? No toll. For most families this would be easy. 3? \$5 2? \$10. 1? \$20. Non-peak days would be much less, maybe \$5/single occupancy vehicle? Guardians of kids in ski programs would get a validation voucher so they don't have to stay at the mountain the whole day, since they won't actually be parking. Full time residents would also get an unlimited pass, so they can travel to the valley for groceries, work, etc.</p> <p>Also, incorporate toll tags and make a fast lane, and tie it all into the already existing UDOT tire program. If you go through the fast lane and don't have prev approved tires tied to your tag/license plate when the traction law is in effect: 2 days to present yourself at a tire checking station, or get a fine. Tolls and fines can all be paid online, which most toll systems already offer. Ireland has a toll like this on one of their major fairways outside Dublin that's tied to your license plate. We rented a car and used the toll road, and paying the toll was incredibly easy. This would cover people coming in from out of state without toll tags, or renting a car, and would still integrate easily with the rental companies who already participate in the UDOT Cottonwood Canyons sticker program. Make the Brighton/Alta fire stations one of the checking stations so if they're staying at the resort they don't have to drive back down to The Valley.</p> <p>Anyone without qualifying vehicles/tires who would need to have chains on, would go through the usual mouth of canyon checks with a UDOT officer. Just like out east if you go through a toll and don't have a fast pass, you have to go through a booth. This would reduce bottleneck at mouth of the canyon, would be implementable in BOTH canyons, would be far cheaper, would be less impactful to lower income users who probably already carpool, and prevents people from going up the canyon with improper traction, preventing accidents that close down the canyon and create dangerous traffic in the first place.</p> <p>UDOT also already does a great job getting the word out about when traction law is in effect, so I have faith they would do just the same for the increased fee days.</p>
33607	Iars finderup	If tram is built I will never again ski either Alta or Snowbird! One crazy idea! Canyon will be ruined!
33608	Taylor Miller	As a longtime Utah resident and voter and passionate user of LCC through all seasons I strongly oppose the gondola due to its outrageous visual impact and high cost. LCC is stunning for its unbroken geographic splendor. Having this state and nation treasure obscured by unsightly towers and lines is a tragedy that can't be undone.
33609	Rachel Baird Jensen	No to the construction of the gondola. A gondola isn't the answer. It only serves a minority and further negatively impacts our watershed. There will also be historic boulders that have been part of Utah history that will be destroyed. These boulders show the marks left from workers who used the granite to build the temple. Isn't this in conflict with the antiquities act? These boulders are also sought out by outdoor enthusiasts who use this canyon year round and not just during the ski season.
33610	Brad Harvey	UDOT should prioritize cheaper, successful solutions before jumping to the most expensive alternative!!
33611	Reed Snyderman	Why would we have a taxpayer funded solution that isn't running year round and 24/7? No gondola!
33612	Maria Wilson	I do NOT support building a gondola. I do not want my taxes to go towards something that literally only benefits the resorts in little cottonwood canyon. Invest in a robust public transit system like busing systems that are on time and at frequent intervals!!
33613	Lynn Foxx Pease	<p>I am deeply distressed with the proposed gondola for Little Cottonwood Canyon. This is a huge black hole for taxpayers and a boon to only Alta, Snowbird and the assorted individuals involved in the real estate transactions that are making this possible.</p> <p>I have lived in Utah nearly 35 years. When I first moved here skiing was affordable for people in many socioeconomic levels. The longer I have lived here, the more unaffordable it has become. So unfair to the citizens of this great state. Decreasing bus service and putting in the gondola are going to make this entire canyon out of reach except for the wealthy or those subsidized by Alta and Snowbird. A travesty.</p>
33614	Dave Poel	I do not support the Gondola option in Little Cottonwood Canyon. I use this canyon all year around for hiking and a Gondola would be useless as I rarely travel to the Ski Resorts. I realize the Gondola would be a huge benefit for the Ski Resorts but feel the cost of using it would be unaffordable for many lower income people limiting their access to the canyon. Please do not move forward with the Gondola. I would hate to see my tax dollars used for the Gondola project especially with the ski resorts being the main beneficiary of the project.
33615	Kristen Morse	Hi, I live in Cottonwood Heights and think the gondola solution is interesting, but feel strongly there are better alternatives that haven't been fully explored. Building parking garages at bus pickup spots, adding more buses, and more pickup spots as well as a canyon toll seems like a much less expensive solution that doesn't compromise the character of the canyons.

33616	Candice Vogel	As a lifelong Sandy resident and Alta skier, I know that the gondola will not be used, and costs way too much (both in \$ and environmental impact). Little Cottonwood Canyon and its base are unique and valuable. Other better options exist to accommodate ski traffic. Please do not permanently ruin the irreplaceable beauty that is our canyon.
33617	Ruben Stanton Lugo	<p>I oppose the gondola for the following reasons:</p> <ol style="list-style-type: none"> 1. It's too expensive 2. Tax payers are paying for it. It's my understanding that Alta and Snowbird have no "skin in the game" 3. Water concerns 4. Environmentally damaging. 5. The gondola would be an eye sore. Currently it's naturally beautiful. 6. Congestion would still be a concern because vehicles would still need to get to a parking garage <p>Please don't build the gondola. The community does not want it! Thank you, Ruben</p>
33618	Jason Greenwood	Please do not put in the Gondola! We all know the actual price will be more than double, and that the Gondola will only be of significant use a dozen days a year. Finally we are not fixing any of the real problems, the crowded streets on busy days would be pushed into the nearby neighborhoods rather than up the canyon and we would create a new line to wait in for the Gondola as everyone shows up at the same time just like they do now.
33619	Jason Greenwood	Please do not put in the Gondola! We all know the actual price will be more than double, and that the Gondola will only be of significant use a dozen days a year. Finally we are not fixing any of the real problems, the crowded streets on busy days would be pushed into the nearby neighborhoods rather than up the canyon and we would create a new line to wait in for the Gondola as everyone shows up at the same time just like they do now.
33620	Josh Berbert	Why dump a ton of money into a gondola when you could spend a fraction of it making the bus system more reliable?
33621	Amanda Apple	No to the gondola plans. I live [REDACTED], and would have walking access to the Gondola, and still think it is a terrible plan. We need to prioritize the beauty of the mountains and not creating an overrun ski resort. Avalanche shelters or more buses with parking away from canyon openings in the city would not only be more efficient for those recreating, but it would also be more cost effective. Only a small portion of the salt lake valley use the ski resorts (private institutions), and yet, you plan to use taxpayer money to fund two private orgs? I understand the importance of the tourists coming to use the mountain and spend money, but this gondola is likely being used to keep tourists at the mountain with hotels and make locals use the gondola. And finally, the parking structure would be an eye sore on a road that brings many bikers and tourists year round to visit the mountains.
33622	Taylor Rumsey	Should invest in a more robust public transport system like a GOOD busing system that is on time & has frequent intervals so it's a less permanent / destructive solution to the winter traffic. MORE PARKING AT BASE OF CANYON so you can actually carpool
33623	Tim Behuniak	<p>UDOT's Gondola proposal is a JOKE!!!! You will take hundreds of millions of TAXPAYER dollars for a "solution" that will directly benefit private entities - businesses that will probably not even be in business in another 10-20 years due to climate change of lack of snow. Why not take 500 MILLION DOLLARS to incentivize bus driving as a job, update busses, etc. Limit the number of cars up the canyon on peak winter travel days, and add a toll. Make anyone with a Utah license discounted fees, or free, while those without a Utah license have to pay to go up. Use this money to help fund and incentivize bus travel and careers. Get your head on straight, UDOT!</p> <p>Also, the people don't want your gondola. It doesn't benefit all people ...watch this: https://www.youtube.com/watch?v=d2w77nWIPC8</p>

ID	Full Name	Comment
35337	Peter Finn	<p>As a skier for over 71 years, east coast to west coast and Canada, I first made turns at Alta in the early 70s and shortly later in Snowbird driving up whenever I wanted with no concerns for traffic congestion or parking problems.</p> <p>Of course that has degraded to too many days of bumper to bumper traffic with warning no parking availability electronic messages at the canyon bottom.</p> <p>In addition the cost for lift tickets, passes and food has forced fewer days or no longer being able to click into your skis. Compound those deterrents with any parking fees and then gondola ride fees.</p> <p>Another reality is the diminished snow pack, shorter seasons and reducing 'lake effect' from the shrinking Great Salt Lake. Climate Change unfortunately is the new normal that will not give us enough 150% rebound winters to restore our historical 500," plus snow years even into July 4th.</p> <p>Little Cottonwood Canyon geography is uniquely beautiful and enjoyable in all seasons for non- skiers alike.</p> <p>Especially now in the height of fall colors, think of the ugly view of huge steel towers obscuring the spectacular landscapes.</p> <p>Of course the greatest unknown is the true cost which probably will be well north of \$500 million and a lasting eye sore that will be less used as other traffic solutions are tried like shuttle services and sign up car pools.</p> <p>So how else to reduce canyon gridlock and preserve the natural beauty?</p> <p>You've seen suggestions for even/odd license number days, toll fees (maybe just certain days?), eventually a designated lane for electric buses (yes carving a wider road up the canyon but far more aesthetically agreeable).</p> <p>We don't need to permanently butcher one of our most valued resources with an alien structure that I'm sure would be regrettable shortly after built. (Yes the Snowbird tram fits its topography well - -it's the only way up there follows the contours of the mountain).</p> <p>Change your decision and make incremental changes to our access adjusting as needed instead of permanently destroying a natural treasure.</p>
33624	Grace Wilson	I say no to the gondola! Leave our mountains as they are!! Protect this irreplaceable, unique, and beautiful habitat. Do NOT build the gondola.
33625	Dina Cannizzaro	I do not support the gondola.
33626	Joseph Burns	This will destroy the natural awe and beauty of the canyon. Please, please do not go forward with this.
33627	Andreas Cordova	Building the Gondola is a terrible no good very bad decision. Not only will it tarnish the beauty that is Little Cottonwood Canyon, but it will severely limit any outdoor recreation besides resort skiing. As an avid hiker and climber, I will be saddened beyond measure if the Gondola is installed. Further, I do not ski so the tax dollars I pay to the state that would go into funding the Gondola would not serve me in the slightest and the same can be said for everyone else in the state that doesn't or can't afford to ski. Another thing to consider is that in the years it takes to build the Gondola, climate change may have lasting impacts on Salt Lake's winter conditions potentially ending the production of skiable snow in the resorts. If this were to happen, the Gondola will be the greatest waste of money Utah has ever seen. In short, the Gondola is simply NOT a good idea.
33628	Madeline Kaminski	I strongly oppose construction for the LCC gondola. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered. The gondola would forever ruin the natural landscape locals and tourists from all over come to SLC to enjoy.
33629	Maria Lamb	As an avid outdoor recreation, I am writing that you please consider expanding bus services up Little Cottonwood Canyon, rather than the proposed gondola. I ski up Little Cottonwood frequently in the winter, and also hike/run/climb in the canyon during the rest of the year. I am well aware of the traffic problems that exist in the canyon, but adamantly feel that the proposed gondola is not a solution. It would only destroy large amounts of a beautiful place that should be protected and preserved in every way possible. Please consider expanded bus services, or even mandating that non resident take busses up the canyon on busier days to alleviate traffic. I strongly feel that better and expanded bus services and option should be implemented and tried before going forward with such a vast, expensive, and destructive project as the proposed gondola would be.
35340	Sarah Blake	<p>This Gondola is not the right option!!</p> <p>My name is Sarah Blake, I'm a Utah voter and we ski at snowbird all winter. This Gondola does not seem like the right option. With having a family of little kids, it would do nothing more than create a big headache for all families that ski up there. It seems it would be long waits and not not time efficient- and disturb the natural beauty of the canyon and climbing areas. Let alone, the cost it takes to fund this project is CRAZY. That money could be used in such a better fashion. I believe other options are a better choice for our community like better bus service, no single driver cars, tolls etc.</p> <p>Thanks for you time, Sarah Blake</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33630	Alex Garrett	I have lived in Salt Lake City my entire life. The mountains will forever be my home and as such I believe it is essential that we protect them. I would hate to see my home be sold out to the highest bidder and overrun with tourism. As the ski resorts grow so do their impact on the environment and the locals ability to enjoy it. I really appreciate you reading this and I hope you can understand.
33631	Joel Bown	<p>I have been an active user of Little Cottonwood Canyon since 1963 for skiing, hiking, rock climbing and simply enjoying the beauty of the place. I applaud the idea of phased solutions for the current traffic problems, but am adamantly opposed to the final phase of building a gondola.</p> <p>The following list of phases developed by Mayor Wilson makes sense to me and if they are fully implemented, I don't believe further phases will be needed.</p> <ol style="list-style-type: none"> 1. Enhanced electric buses with higher frequency and improved reliability, together with strategically placed mobility hubs; 2. Tolling infrastructure; 3. Parking management technologies and policies, such as ski parking reservations, micro-transit, and rideshare programs; 4. Multi-passenger vehicle incentives; and <p>Traction device requirements with expanded inspection hours and enforcement.</p>
33632	Christopher Cameron	I think that taxpayer money would be much better spent focusing on rehabilitation of The Great Salt Lake. We won't have much of a ski season at all if we don't take action. Don't put my tax money towards a gondola that truthfully only benefits the resorts.
33633	Russell Brown	I think this proposal is a terrible idea and will be a tragedy. It will literally only benefit the ski resort corporations. We the people don't want this.
33634	Rose Olds	I prefer bus system increase during ski season, not gondola.
33635	Jutika Gokarn	I do not support unduly burdening or limiting access for low income families. I would like to see resident discounts, passes or other benefits that will make the gondola accessible to everyone regardless of income. People of Utah should have priority access to facilities in their home state.
33636	Paulette Barrus	Please do not choose the gondola! It is bad for the environment, scenery, and it's permanent damage! Let's try buses, ski parking reservations, micro-transit, and rideshare programs! UDOT should prioritize cheaper, successful solutions before jumping to the most expensive and definitely harmful alternative. Please!
33637	Sam Bennett	The gondola only serves a limited amount of people at a time so it really won't affect traffic flow a lot and then will have to be shut down for high winds or snow storms so it will be shut down a lot during ski season when it is supposed to help the most but it doesn't help with traffic either to other stops in the canyon so in reality it will impact traffic very little but cost millions of dollars to build which could cause traffic problems while building. There are cheaper, more efficient and better for the environment options than the gondola. It should not be put up (just do bus only during ski peak season)
33638	Peter Guinn	As a 47 year old lifelong Wasatch skier, climber and AltaBird season pass holder with two young kids, I can tell you I would NEVER use the gondola because the experience will be TERRIBLE. It will require too many vehicle-to-vehicle gear transfers and take way too much time to get up the canyon. Alta's paid parking reservation system solved the parking problem for me last year every day except two (big powder overnight; those days will always be a frenzy). And the canyon destruction is completely unacceptable. Tolls, paid parking and better bus service are much better solutions from both an experience and cost perspective. NO GONDOLA!
33639	Margaret Gullion	Please do not build this gondola. It will only serve a very small user group and will ruin the canyon for the many other users. It would be a very bad idea to build this.
33640	Kodi hatch	The gondola does not fix the issue, but instead is just a costly eyesore. a better bus system would be better than the gondola, as well as a better storage system for gear once you are up there. but a gondola is not the answer
33641	Veronica Hanson	There are so many other options than defacing and ruining the beauty of Little Cottonwood Canyon with a Gondola! I am entirely opposed to using tax payer dollars to fund this project, which is unsustainable, needless, corrupt and harmful to the environment. NO to the gondola!!
33642	Jo Phillips	A Gondola would ruin the natural beauty of the canyon for everyone who isn't a skier. The proposal favors the wealthy foreign community over the people who use the canyon year round. There are equitable alternatives to the canyon that can preserve the canyons natural beauty for all to enjoy.
33643	David Allen	I think the Gondola is perhaps the most environmentally damaging of all the options. The views in Little Cottonwood Canyon are amazing. A wilderness type view just minutes from the city. The proposal for a gondola will destroy the look and feel of the canyon and do very little to solve traffic issues. It will be a forever destruction that can never be reversed. Just a bad idea and crazy expensive.
33644	Ida Wilson	No Gondola. Too expensive to build & maintain.
33645	Jason Kovach	Not a fan of the gondola. I don't like the way it will impact the canyon. I think the carbon for print for a gondola and it's maintenance is high and silly. Same for busing, or driving cars i know. I also think the gondola would be under utilized.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33646	Cam L	<p>I'm pretty sure the majority of people this affects are not in support of the gondola. The gondola would be fun to ride - once, but only for the first 10 minutes and only if you are near the window. After an hour of standing up with ski boots on, crammed into a crowd of people I'll probably never want to do that again. Have the people making these decisions tried out the snowbird gondola? I'd strongly recommend doing your due diligence and going to snowbird on a busy day to see what it feels like to ride a packed gondola. Have UDOT directors taken trips to other ski towns across the US and abroad to see how other places are doing things? Has UDOT considered that maybe more people in the canyons is not sustainable?</p> <p>obvious answer to this situation is a solution people WANT to use. We need to put down the numbers for a sec and put on our empathy hats. We need a public transit system that is more convenient than driving personal vehicles. I think the answer is improved bus system. routes going straight from SLC neighborhoods to the canyons. routes that stop at popular trailheads. Improved seating and ski racks (why are there no ski racks already???). We need to ask the people what it would take for them to take public transit up the canyons instead of driving.</p>
33647	Lauren Bushnell	I am against the Gondola.
33648	Lynne Nolte	<p>The plan to put a gondola up Little Cottonwood Canyon is a terrible idea. Expensive, disruptive, unsightly, unnecessary and ultimately not able to achieve the stated goals. It only serves the interests of two resorts and doesn't help any of us in summer.</p> <p>This is our watershed! It needs protection, not further development. Who knows? By the time it is completed there may not be any snow in winter.</p>
33649	Rowan Davis	Spend the 600M you would spend on the gondola on research and solutions for the GREAT SALT LAKE. What is the point of building a gondola if the this city will be inhabitable in 10 years?
33650	Bill Peterson	<p>Instead of a Gondola that only serves 2 ski areas..</p> <p>How bout more buses (electric would be good), Tolling cars, Rideshare programs, Multi-passenger vehicle incentives, Traction device requirements with more enforcement.</p>
33651	Mary Beth Vogel-Ferguson	<p>Hello - I am a frequent user of UTA buses and trax. I appreciate the way our public transportation system has been able to adapt to the growing needs of the community. I have every confidence that UTA will be able to serve the needs of the community to reduce the volume of traffic in little cottonwood canyon.</p> <p>The gondola will serve only a very limited set of users in the canyons and is only necessary on a limited number of days each year. The gondola is a very expensive public funded project that significantly benefits Snowbird and Alta financially without considering the needs of others using the canyon. Please do not add to the damage we have already done to our environment by introducing this additional human intrusion into our beautiful canyon. I dare say MOST Utahns will never experience a single benefit from this project but will be taxed to pay for it.</p> <p>No - stop - there are better ways to solve this periodic problem. Please think again and do not build the gondola! Thank you for listening, Mary Beth</p>
33652	Melanie Robertson	Do not move forward with this proposal it is destructive to the area so many come to enjoy and serves too small a user group to be justified
33653	Tami Cummings	Please reconsider this project. The environmental impact to serve only a couple resorts is not feasible. It will cost the taxpayers millions and the average person will not be able to afford to use it. It's doesn't make good sense in any way.
33654	CHRIS FORSDICK	I oppose the Gondola in Little Cottonwood Canyon. I am a registered voter and want to express my concern about where Utah legislators spend our monies. Utah state, the state money, for all the people living in the state will be paying the \$550 million to put in a highly visible and exclusive Gondola to those people who ski at the ski resorts in Little Cottonwood Canyon. Utah has bigger problems. The Ski Industry is 'banking' on continued snow in our canyons. We are currently in our third year of the La Nina climate pattern. I feel it is folly to spend money on a gondola. The road in Little Cottonwood will be expanded to accomodate the construction . A \$30 toll to access the canyon will continue to cater to the elite at the ski resorts. Public transportation does not have to be 'have trash on the seats and stuck gum on the walls' Public transportation should be a priority to reducing private auto's in the canyon.
33655	Dallon Yeager	I have lived in Utah my whole life, and I do NOT support the gondola. It will destroy the natural beauty of the canyon and will not solve the issue of traffic in the canyon. NO TO THE GONDOLA.
33656	henry bogart	STRONGLY OPPOSE GONDOLA! Why destroy the canyon when traffic is only a real problem for some user groups, and only on the snowy weekends.
33657	Adam Duke	Little cottonwood has long been one of utahs biggest spots hiking climbing, and pretty much anything outdoors. Taking away any part of those long cherished areas really isn't worth making such a small group happy. The amount affected by the loss of these hikes would be far greater than those happier with the construction of this project. Keep it as it is!

ID	Full Name	Comment
33658	Sarah Schlaefke	<p>Please remove the gondola as an option for solving the traffic problems in Little Cottonwood Canyon. The act of building such massive infrastructure is irreversible and will permanently damage and destroy ecosystems, our water shed, and our public land. The gondola will only serve a very niche user group, perpetuating inequity and inequality, and inaccessibility in the outdoors.</p> <p>This is OUR COMMUNITY'S public land, not Big Ski's, not just resort skiers'.</p> <p>I will absolutely be holding the outcome of this decision in mind come this and future election seasons.</p> <p>Thanks, Sarah Schlaefke</p>
33659	Joseph Scotten	<p>Please do not construct the gondola in Little Cottonwood Canyon. Increases in traffic are detrimental to the overall health of ecosystems such as this one, and providing such easy access to people will certainly have a negative impact on such a fragile ecosystem.</p>
33660	Michelle Ricketts	<p>LCC Gondola comment.</p> <p>Hello my name is Michelle Ricketts and I'm a Utah state, SL County registered voter and tax payer.</p> <p>I'm am against the gondola for many reasons.</p> <p>The visibility in the canyon. I look at Zion NP and the traffic issues they had. There is a reason a gondola or tram wasn't an option. There is no need to scar up the landscape for ever. There are better options.</p> <p>This gondola will add more people to the canyon. People not from here. People going to the resorts. Spending money at the resorts. Which are there to make money. It will benefit the resorts not me.</p> <p>I go up the canyon for many reasons. One is for skiing. Theo gondola has no use for me other than skiing and I'd not want to add to the cost of skiing.</p> <p>Please please look at the other options and how many different ways this canyon is utilized besides just skiing.</p> <p>I'm a tax payer against this and it's cost.</p>
33661	Audrey Wussow	<p>I am against the gondola for the following reasons:</p> <ol style="list-style-type: none"> 1. Too expensive and a poor waste of taxpayers dollars for the elite few (Snowbird and Alta) 2. We only have problems with the traffic backing up when a big powder day occurs. This only happens maybe once or twice a winter. The cost of the gondola does not make sense in this regards. 3. Paid parking up at Alta made our commute really nice last winter and we support paid parking at both Alta and Snowbird ski resorts 4. Again for the cost of the gondola just for the winter and only because the traffic is back up on powder days, doesn't make sense! 5. Not enough people will be willing to pay to get on bus then to get on a gondola. 6. Environmental eyesore in our beloved canyon 7. Most of Utah population that would be paying for this don't even ski.
33662	Carlos Santana	<p>Don't build the [redacted] gondola with my taxpayer money</p>
33663	Dede Vilven	<p>It is wise for Utah to invest in little cottonwood canyon transportation improvements such as:</p> <ul style="list-style-type: none"> -Enhanced electric buses with higher frequency and improved reliability, together with strategically placed mobility hubs, more hubs and parking at the mouth of the canyon. -Driving technologies such as rideshare programs. -Multi-passenger vehicle incentives. -Traction device requirements with expanded inspection hours and enforcement. <p>Thank you for taking my comment.</p>
33664	Shawna Wilde	<p>NO. Just NO to a gondola.</p>
33665	Mason Shea	<p>Hi, I am writing as a community member, skier, climber, and general recreationalist, against the current proposed transportation changes for LCC, of the phased approach with the gandola.</p> <p>I do not believe that building the gandola through LCC canyon, which will serve to only benefit two private organizations that lease public lands is the best method to reduce the traffic and congestion issue in LCC.</p> <p>I fully believe that by working with residents and resorts to make bus and public transportation more reliable, comfortable and feasible, while also adding incentives or all together restrictions for single occupancy or under capacity vehicles (residents, emergency and other well thought out exceptions not applying), we can solve the major transportation issue that we phase, without permanently changing the landscape of LCC.</p> <p>By improving bus service and and speeds (via widening both in the canyon and on wasatch boulevard) bussing becomes immensely more attractive as an option. With additional incentives or carpool, in 2-3 years time we can have concrete and valid information about if further changes are indeed needed and what can be done about it.</p>
33666	Kelsey Zalac	<p>I do not support the UDOT gondola proposal. This will ONLY benefit winter season skiers and is not fully representative of what the canyon is used for year round. Please reconsider other options like carpooling and more buses.</p>
33667	Spencer Belnap	<p>Just adding my voice to the citizens of SLC adamantly opposed to this project. I do not ski, but visit Snowbird and/or Alta at least a couple times a year. I would hate to stop that entirely for years on end while this gondola is being built, destroying various wildlife habitat and water and blighting out amazing views. Please listen to the everyday and common people of this state and area and not the rich elitist developers. Thank you!</p>
33668	Ben Johnson	<p>As a life long user of LCC (45+ years), I feel that a gondola would negatively impact LCC for generations to come. Not only would it be impacted by large obstructive towers throughout the canyon, but would provide very little year round benefit. For all but the busiest canyon days, a user will always choose to take a short drive up the canyon vs ride a 37 minute gondola ride from the base of LCC. Being a local resident and tax payer, I'd rather see a bus system with more routes, to be better promoted and utilized in the canyon. An enhanced bus system with road widening and snow sheds seem to be a logical choice. Thanks for listening to the current residents and current users of this canyon.</p>

33669	Tyler Simpson	This project would invest too much money into too small of a problem while destroying vital outdoor recreation areas. This project does not represent the interests of the majority but rather a wealthy minority of user groups. We should not build this gondola.
33670	Megan Barfuss	WE DO NOT WANT THIS GONDOLA. IT IS A TERRIBLE IDEA. There is no justification for the negative impacts that this will have on the beauty that is LCC and on the climbing walls/boulders. Please do not go forward with this. Please.
33671	Carina Wells	It seems preposterous that UDOT can't find the money to pay bus workers a living wage in order to keep the buses going and yet can fund this project. Please consider keeping the buses going this year. Please also make the private companies who will profit from the gondola contribute rather than just footing taxpayers with the bill. Finally please consider whether this still makes economic sense if there is no skiing in ten years on account of the Great Salt Lake drying up.
33672	Alex Benning	This is atrocious. Taxpayer money you should not be used for A gondola the only serves private corporations. Furthermore putting in a solution that is not only an eyesore but also affecting the recreation of Little Cottonwood Canyon that does not run year-round or provide any access to public trails before the resorts just shows how Corrupt this option is. If you truly want to help congestion along Wasatch Boulevard and LCC you should have a centralized bussing locations from the city that goes directly to resorts. Investing in busing and common sense solutions is what we need. The people in charge of this project should feel ashamed of themselves that they are looking at only the resorts best interest and not what the people need or want. It's another level of idiocy that you think that there will not be congestion to the gondola from every direction and widening Wasatch Boulevard will not fix this it's just another way to pave paradise. I really hope we could recall the EIS board. WE NEED BUSSES, AND WE NEED BUSSES FROM ALL OVER THE VALLEY. The fact that it takes four hours to go from the University of Utah to LCC on a bus is a travesty. No [redacted] people don't use public transportation. invest this money into putting more buses on the road that come from locations such a Sugarhouse Park Westminster College, the U downtown, Murray etc, so people to don't need to drive half the distance to then wait for multiple busses to get on and up. Resorts should invest in this too, taking a section of parking lots and making them into lockers for a season pass holders So people can take the bus up without all of their gear would be a common sense solution. Use your brain and think of the people when using taxpayer money not private corporations interest.
33673	Frances Lynne Olson	I am opposed to the Little Cottonwood Gondola Alternative. I believe that a gondola will negatively impact the nature of the canyon, and cost too much while providing too little benefit to the general public.
33674	Craig Heimark	<p>my son wrote me on September 30 with a link to an article. The article had the headline "UTA Cuts Public Bus Service to All Utah Ski Resorts Due to Staffing Shortages". In his email was the one line question:</p> <p>"Can't do this... but can build a gondola? What the heck is wrong with Utah?"</p> <p>It prompted some thinking on my part. I have worried for some time, that US politicians have become disconnected from the general citizenry and no longer pursue actions in the common good, instead aiming their initiatives at a very narrow political base. It seems the UTA's persistent and single-minded pursuit of building a gondola for Little Cottonwood Canyon is but the latest example of this trend. I have attended in person hearings on the Gondola. I have also tried as best I can to stay abreast of news reports and skim some of the comments that have been submitted during the public process. While my observations are only anecdotal it seems well more than 50% of the residents are opposed to building the gondola. My estimate from the public hearing I attend was north of 65%. I also know that most of the mayors of the cities and towns most affected are opposed to building the gondola.</p> <p>I do know the benefits of the gondola largely accrue to a very narrow set of business interests but are financed by the public. That is not my definition of political action "for the common good". Rather, it feels like corruption of the democratic process where politician's highjack public servants and public funds for the benefit of a few connected individuals and businesses. It is no wonder that recent surveys all document a marked erosion in the trust between the general populace and the government in the US.</p> <p>I did note that Michael Maughan, the General Manager of Alta Ski Lifts, and one of the obvious beneficiaries of the expenditure of public funds, wrote a very balanced note that identified many far, far cheaper solutions to control and reduce traffic congestion in LCC. Despite his overt conflict of interest, in my opinion, Mike has a more balanced view of the pros and cons of building a Gondola than the UTA or the public officials who are ostensibly elected to serve the public interest.</p> <p>If I were a conspiracy theorist, I would think that the failure to hire enough bus drivers to staff the LCC bus service this coming season was designed to put pressure on the public to support the gondola project. I am not (a conspiracy theorist), so I will instead attribute this unfortunate choice to institutional incompetence.</p> <p>Unfortunately, the incompetence is massive. It seems patently silly that we can spend what will likely be more like \$750m - \$1B on a gondola (after adjusting for inflation and the fact that almost all public work projects come in over initial budget) and cannot afford to staff a busing service up Little Cottonwood Canyon. I am pretty sure if they raised the hourly pay to be the very best in the entire nation we would get a board of applicants.</p>
33675	Whitney Durham	The gondola idea is ridiculous. It will not solve any problems facing LCC. Traffic problems along Wasatch will be as bad as ever. It does nothing to help parking at trailheads. Which is a much bigger issue. Complete waste of taxpayer money on something that benefits very few people. I think that the higher-ups in UTA are in this graft also. With the announcement of reduced bus service to LCC during the winter. I wish there was a law. So many people trying to [redacted] the people of Utah over. I hope we can start to get rid of all of the corruption. UTA, UDOT, Utah government.
33676	luca fresh	Please do NOT destroy beautiful land just to put in an ugly gondola. What's the point? If you set up a gondola the people using it wont be able to see anything if everything is destroyed due to construction.
33677	Brandon Martin	UDOT needs to reevaluate and think outside the box on how to solve the problems at hand. The gondola option appears to have a goal of getting more people to the resorts rather than truly solve transportation issues. If we can consider a gondola, why not a tunnel? It would be less impactful to the important aesthetic value of LCC.

33678	Jessica Ieduc	we should make buses way more accessible!! that would save space on parking and traffic in the canyon, air pollution, and hopefully build a lil community. i used to work at park city and regularly took the bus to commute from sic-same thing would be great for little cottonwood canyon!
33679	Mary Lancaster-Dodson	I am against all expansion plans. This is just another way to exploit our beautiful Utah resources. To think your considering paying for it with tax money is outrageous! If skiers enjoy the sport they should be content with the current conditions. I don't use the ski slopes but enjoy the canyons and all the fragile wild life. Please don't force me to pay to destroy yet another grand treasure for business greed.
33680	Alex Rasmussen	Half a billion dollars seems like a lot of money for a project that would mainly benefit the ski resorts. \$99M also seems like a lot for a transit hub. Also, maybe I missed it in the report, but was there any study done to see the economic benefit of the snow sheds (in terms of safety improvements, reduced delays, and maintenance savings) to see if that even makes sense to spend \$86M on? The gondola option seems like an expensive, drastic, and permanent solution to a seasonal problem. I would prefer to see tolling plus enhanced bus service (with no widening) for Big and Little Cottonwood Canyons, with some value engineering done to reduce the cost of the transit hub. I would also prefer to eliminate the snow sheds unless the cradle-to-grave costs are less than the delays/safety/maintenance savings over the design life. It's not the sexy option but it makes a lot more sense to me.
33681	Heike Mueller	We are bought a house in the [REDACTED] Sub-Division. Our concern is the traffic this projects creates on Wasatch Blvd. with the planned parking garage having 1500-2500 cars in this areas will just make this area more congested. With this project you are moving the congestions into and around neighborhoods. The congestion will now happen in front of the parking garages and blocking the roads around. The parking should happen way earlier and shuttle people to the gondola or ski resorts. Also, this project should not be financed by taxpayers. Let the people pay who like to ride the gondola or ski resorts. We hope you really taking people living in the area into consideration. Goal should be to decongest the mouth of the canyon of the ski resorts on busy days and being considerate of people living there. I don't know many public parking garages which there isn't a long queue when it's a busy day. Kind regards, Heike Mueller
33682	Anthony Gordon	I think a toll road is ridiculous. We live in this state and pay taxes for our roads. In Boulder Colorado out of area people have to pay to go up a road in the flatiron area. At least this doesn't double tax residents. In past we talked about a rail system linking the ski areas. Also traffic monitoring at base of canyon would be helpful. Many people coming from north bypass little Cottonwood north, then take a left at little Cottonwood south blocking traffic and causing gridlock. Making this a no left turn in morning would easily help traffic flow.
33683	David McNay	I don't support the gondola because it only hurts what I'm in the canyon for and doesn't benefit me as a hiker and climber in any way. This is a ski resort problem and should be resolved by the ski resort through carpooling and business solutions that don't harm other users of the canyon and future users of the canyon. Please reject the gondola until the ski resorts have had a chance to solve their problems, and I think you'll see that the need for the gondola as a solution is false.
33684	Susan Daniero	I'm a full time resident of Utah. I'm against building a gondola in LC due to its cost.
33685	Douglas Flegal	A much wiser choice would be to increase parking at the canyon entrance and increase the number of buses. Also, a significant charge could be made for private vehicles during ski season.
33686	Sarah Jessop	This is not going to solve any long term transport issues. The gondola will only serve the two resorts up little cottonwood and will leave our community with an pointless eyesore for decades to come.
33687	Jessalee Winger	Don't build it. Save the boulders.
33688	Paul Matthews	I am against the Gondola. I believe we should limit the number of people who access the canyon and prefer it to remain as it.
33689	Rod Farrimond	A huge vote of NO. We do not need this and it definitely should not be funded by ANY government money.
33690	Chuck Singleton	The gondola idea is ONLY for money for the greedy. To destroy a beautiful canyon for greed is wrong it's bad it's evil. Millions of non skiers use and love the canyon. God didn't place it there for the rich to get richer. Leave the canyon alone. Just restrict the number using it.
33691	Braden Van Leer	Please come up with a solution that preserves the climbing in little cottonwood cnyone
33692	Cory Burgon	Horrible idea and huge waste of money. Please think about something else.... elevated roads or widening the roads.
33693	David Weber	No gondola is needed in the canyon. Find another and less impactful option.
33694	Victoria Adair	Please reconsider the costly gondola project. This will cause so much damage to our beloved canyon and amazing climbing spots. Please save our canyons and don't ruin the integrity of this canyon.
33695	Shenghan Wang	I am against the gondola. If the issue of traffic in the canyon is caused by the ski resorts, then the ski resorts should pay for the solution, not the taxpayers.
33696	Paul Oppenheim	This is a travesty and an assault on nature. A better and more environmentally friendly solution needs to be found
33697	Peter Diamandis	I'm against the gondola...waste of money

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33698	todd s	<p>On crowded days Alta and Snowbird are at peak skier capacity. There is no reason to get more people up the canyon on those days. Adding faster lifts is not the answer. If you add more skiable terrain then you can start adding uphill capacity.</p> <p>On most of the days it takes less time to drive than to take the gondola. I can't imagine parking my car at the bottom and adding an extra mode to my trip.</p> <p>The gondola parking lot is too small to be useful. People will need to take buses to the gondola. This will add more time and make it less desirable.</p> <p>Does the \$500M include the 1000pph or the 4000pph capacity. At 4000pph it will take hours to get people up to the resorts and be slower than cars. At 1000pph it will be no more than a sightseeing gimmick for advertising.</p> <p>The gondola is only useful a couple of dozen days a season. Spend the money better.</p> <p>There are better ways to spend \$500M on reducing pollution.</p>
33699	Bill Lundeen	NO GONDOLA! No Gondola! NO! No! No!!!
33700	Vanessa Stubbs	Against the gondola. No room for that in nature.
33701	Marianne Johnson	I am not favor of the gondola!!! It will detract from the beauty of the mountain scenery. Furthermore it only serves the ski resort and tourists- people who primarily only visit and don't live here. Like tattooing your body to please someone you will only see once or maybe a few times a year. Ridiculous really. I believe a better answer are the simpler ones, charge more for parking and run more buses. The ski resorts should help with that since they would gain more revenue than anyone else. When I was In Zermatt Switzerland I rode a cogwheel train up the mountain. It had multiple stops and was large enough to accommodate bikes and skis. I could get behind a project that was for everyone-not just tourists and ski resort goers.
33702	Emma Gilbert	The gondala is only going to help some people. I think increasing public transportation up the canyon and charging a fee will encourage people to use public transit and drive less. Please don't ruin our hiking trails and climbing crags!
33703	Rebecca Whatley	I think it's ridiculous to build a gondola for the 25 days a year that the canyon is impacted by increased traffic.
33704	Chloe Chavez	Hi my name is Chloe Chavez, I am a 16 year old and I am very passionate about rock climbing little cottonwood canyon is known world wide for some of the greatest climbing and it is also home to my favorite climbs, hikes and beautiful views. If you put a gondola up the canyon our climbs will be destroyed. These climbs have been there for many many years and can not be replaced. Not only will our climbs be gone but also some of the best hikes too. If people can ride a gondola they can also carpool, take the bus or any other form of transit. A gondola is not necessary. If little cottonwood canyon has gone without a gondola for its entirety of existence then why would we need one now? Please take my perspective seriously and listen to what my fellow climbers have to say. We really truly mean what we say and it means a whole lot to us, we love our climbing and will never be able to get these climbs back again. Please don't take away our climbing. If you have any questions while reading this or want more perspective then please reach me at [REDACTED], I mean all of this peacefully, thank you -Chloe Chavez
33705	kc Corrigan	Please do NOT approve this gondola project and give way to destruction and/or removal of irreplaceable and historic world-class climbing and views. Utah is known for its landscaping and beauty and projects like this seek to destroy what we have left of that. Please do not do this.
33706	Chloe Chavez	Hello, I am Chloe Chavez and I am a 16 year old who is very passionate about our mountains especially little cottonwood canyon and it's beautiful and unique rock climbing. Climbing in little cottonwood canyon is something that people travel the world for. If a gondola is put in the mountains it will destroy some of these irreplaceable climbs and obstruct views and hikes as well. These climbs that will be destroyed have existed for many many many years and can not be replaced. Please don't put a gondola up our canyon. People can carpool or take the bus and if a gondola hasn't existed then why would we need one now? I understand that it would be an easy solution for tourists but think about the local rock climbers that have been climbing little cottonwood for years and how that will affect them. I can speak on behalf of all climbers that there are better solutions then causing more traffic with construction, destroying our climbs and obstructing beautiful hikes and views. Please take my comment into consideration and read each and every comment with sincerity and understanding. 33708	Roger Tobar	I am against the gondola. It's a dumb and expensive idea.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33709	Craig Wardle	<p>The gondola is a very bad idea. I live on [REDACTED] and the paid reservation system at the ski resorts has cut the traffic the past year by 80-90%. Common sense measures are the answer and will not destroy the canyon as the Gondola will.</p> <p>Enhanced buses without road widening, tolling, limited cars in canyon, transportation hubs are all good solutions which will not waste taxpayer money.</p> <p>Ski resorts, Neiderhauser, McCandless and LaCaille are the only ones who will PROSPER from the senseless construction of gondola.</p> <p>PLEASE NO GONDOLA - I add my no vote to the 80% who oppose this monstrous destructive unneeded system. Thank you Craig Wardle</p>
33710	Alex Heffron	We don't want a gondola!
33711	Shannon Wolpiuk	This project is terrible for the environment, only serves skiers, and would ruin hiking trails and climbing crags.
33712	Zoey Rodgers	Please please please don't build the gondola for environmental conservation
33713	Zoey Rodgers	Please don't build the gondola for environmental conservation
33714	Roberta Wardle	<p>I live on [REDACTED]. The past year I have seen the traffic to ski resorts reduced by 80-90% with the addition of paid parking and reservation system at the resorts!</p> <p>Please use COMMON SENSE measures to mitigate the traffic situation and SAVE the CANYON from permanent destruction with the construction of a</p> <p>Gondola, which will only offer 2 stops and run 120 days of the entire year. It's ridiculous!</p> <p>Please do not be so careless and reckless with taxpayer money when enhanced bussing, transportation hubs around the valley, tolling, limited car access, etc, will save our canyon and using very little taxpayer funds compared to the gondola!</p> <p>The only recipients of benefits from the gondola are the resorts, Wayne Neiderhauser, Chris McCandless and LaCaille!! all of whom have quietly purchased property where the gondola would be located! Very dirty politics.</p> <p>Please do not allow a 2,500 car parking garage to be constructed in the middle of a residential area!</p> <p>Use transportation hubs around the valley to bring everyone, through every season, to enjoy the beauty with which we are surrounded.</p> <p>Thank you, Roberta Wardle. NO GONDOLA</p>
33715	Leah Frazer	The gondola is expensive and will likely not solve our traffic problem. It will be a permanent ugly scar on the landscape and disrupt the natural environment. Find another solution.
33716	Illian Fifita	Im a frequent visitor to little cottonwood canyon and do not wish to see the beautiful scenery destroyed to cater to a small group of people. I am opposed to the construction of the gondola and hope to not see it built so my children and i can continue to enjoy the outdoors the way it's supposed to be.
33717	Richard Erney	I am opposed to the proposed gondola as a transportation solution. A gondola simply won't move enough people to make it a viable alternative to driving or taking a bus, not to mention the cost of riding said gondola & ignoring shutdowns due to weather, etc. It also completely ignores BCC. Please take another look a the idea of tunneling an express road or train up each canyon to the resorts. It would be an engineering marvel that doesn't have the visual impact on the canyons or ruining sites on the surface where people recreate.
33718	Jessica Roestenburg	I'd rather see Utah go to change driving habits, subsidize more environmentally friendly transportation, etc. than change the natural landscape with a gondola.
33719	Victoria Adair	The gondola is the wrong choice for Little Cottonwood Canyon and an unfair deal for Utah taxpayers. It brings unnecessary pressure to our canyons only to create a larger issue at the mouth of our canyons.
33720	Ryan Cragun	<p>I'm writing to let you know that I oppose the Little Cottonwood canyon gondola. The gondola services only two private Ski resorts and will cost at least a half billion dollars in tax payer money. There's absolutely no reason that the public should finance transportation for wealthy people to access private resorts. Aside from that, I have zero confidence that it will actually reduce traffic. The majority of people that might choose to ride are still going to have to drive to the mouth of the canyon and park and the the same number of parking spaces will be available. I fear this will only increase traffic as both the road will continue to stay clogged in addition to more traffic to get to the gondola. This will serve to only increase the number of customers the resorts can service for absolutely no benefit to other canyon users or residents impacted by the traffic. 80% of Utahns are opposed to the gondola.</p> <p>Instead I'd urge y'all to consider greener solutions with zero canyon impact that might actually work:</p> <ul style="list-style-type: none"> * Electric bus services * Parking reservation requirements * Tolling <p>Thanks</p>
33721	Alexander Hickey	I am firmly opposed to the little cottonwood canyon gondola. It will do irreparable environmental and scenic damage to our canyon. this gondola WILL severely harm the scenic natural beauty of our canyon and for what?? It doesn't fix the canyons congestion, it does nothing during the off season, and it will cost millions to construct. I am not okay with my tax dollars going to a massive money pit that does nothing of value and actively harms the incredible, one of a kind beauty present in little cottonwood canyon. The amount of harm this will do majorly outweighs any good that would come from it. Do not do this.
33722	Julene Mathews	I am opposed to the Gondola concept in Little Cottonwood Canyon. I am on favor of a dedicated bus lane.
33723	Jessica Arnett	The impact to the wildlife and natural environment of Little Cottonwood Canyon, in addition to the nearly 1 billion dollar price tag that this will cost the taxpayers (something that should be paid for by the ski resorts) is not worth whatever benefit that may be to those who use the ski resorts in the winter. NO on the LCC gondola project.
33724	Zach Heuscher	I am a public health worker and business owner in Utah and I oppose to the LLC Gondola project. I am a user of Little Cottonwood Canyon and I was a skier when that activity was affordable. The ski resorts and pass holders and visitors would be the only beneficiary of the gondola for a few busy days of the ski season at the expense everyone else. The ski areas can limit the skiers utilizing the LCC to prevent traffic jams and still provide plenty of people with great skiing but not on the dime of non-skiers. I would promote other solutions including tolling, increased bus service, and working with the ski areas to prevent traffic jams and improve safety in LCC.

ID	Full Name	Comment
33725	David Johnson	Gondolas to get to a resort are useless. You cannot carry equipment to change into at resort. Children can't be aided as all hands are full. Gondolas are the worst solution.
33726	Miles Quick	<p>First off I would like to say thank you for continuing to hear the public's opinion on this topic and keeping the comment period open. I would like to think that UDOT will decide what's best based on what the people of Utah want for their canyons and not necessarily individual investors or the businesses that this decision affects.</p> <p>With that said, I think it's pretty clear what the majority of Utah citizens think and that is to implement another solution besides a gondola up our canyon. Personally there's a few reasons why I think it's a bad idea and why there are better solutions. Firstly, I think there's a big conflict of interest here between the decision being made and the businesses being affected. Just the fact that Snowbird bought land where the gondola's base would be is a clear indicator... On top of this, it's a huge project that is boosting their business while citizens take the hit to fund it. Now with that said, other options would in fact still be funded publicly but other solutions like a more advanced bus system would benefit the greater public as it's not just a two destination ride (what about trail heads? what about getting to the gondola base?), the solution feels very close minded that diverts from the actual problem we face. On top of this, there seems to be a lot of information being thrown around about how this gondola would be unaffected by weather conditions that SR-210 is. Who is doing this analysis? Has anyone making this claim ever been at Snowbird or other resorts during snow storms? The tram and gondolas at other resorts are barely open because of wind hold or ice being built up on the cables when a winter storm rolls through. I can already picture the nightmare of the gondola being closed and then hungry powder hounds during the winter trying to travel up the canyon themselves because of it. Additionally, how is it not affected by avalanche slide paths? I really hope people are not going to be riding on a gondola up a canyon in one of the most avalanche prone canyons in the world when danger is high (which is quite frequent in LCC). I don't think the gondola solution really tackles that issue like people claim it does. With all of that being said, the gondola seems like it would be useless in the summer as well. With a bus system you could at least increase traffic during the busy season and decrease it to save money (and the environment) during the slower season. Not to say that it is not busy during the summer, but who just rides to the resort during the summer months? The summer recreation in that canyon takes place everywhere BUT the resorts (climbing, hiking, etc.). It doesn't make sense from a logistical standpoint.</p> <p>I believe a more robust bus system would be ideal for our current infrastructure (obviously some advancements would need to be put into place), but I also am not a firm believer that a more robust bus system would be the ultimate solution either. I think that the bus solution could be a more viable option if it wasn't so frowned upon by gondola supporters. My biggest opinion on the matter is that these solutions seemed to be not planned out very well to throw bias towards a gondola option as a solution when in fact it seems to be filler for what we want the solution to our problems be. All I'm asking is that you do not continue with these plans without at least getting a public vote and not the opinions of the businesses and organizations affected by it.</p>
33727	Dave Johnson	Gondolas to get to a resort are useless. You cannot carry equipment to change into at resort. Children can't be aided as all hands are full. Gondolas are the worst solution.
33728	Haven Wright	<p>We do not want the gondola!!! As a teenager, climber and skier who has just started driving I have only got to explore parts of the canyon and climbing areas the canyon provides. I want to be able to continue to climb and hike without the disruption of construction, towers or gondolas going over us. The canyon is a place where people can connect with nature and get away from the loud world. With the all the construction that will go on, to the towers and gondola going up the canyon. I believe that it disrupts this environment and feeling of peace that people go to the canyon for. I believe that there are better options to the canyon traffic and parking issues than a gondola. For example a better and more efficient electric bus system. As a skier, I take the bus up to snowbird and I think that if the buses could be provided to more people and have a better effect on the environment than cars or current buses, more people would go on them, including all my friends and I. Although I do understand the few benefits of the gondola solution, as a resident of Sandy living just at the bottom of the canyon for my whole life, seeing a gondola always running up the canyon is not a sight I want to see. These canyons are beautiful and the whole goal is to preserve them and putting large towers and having a gondola run up the canyon is destroying this nature. Although I do understand the future benefits on the environment, the option of the gondola is not the best one due to the effects it will have on the canyon currently. Especially the beloved climbing and hiking areas. I hope you see the side of the residents and not just tourists, they are not the ones who see the canyon everyday, pay extra taxes for the building or experience the effects the gondola will bring. I hope you decide what is best for not only the environment but the residents who live in salt lake valley. Thank you.</p>
33729	Patricia Jones	<p>I thank UDOT for the time they put into studying the Little Cottonwood Canyon traffic reduction and the Gondola subject. However, UDOT's announcement to move forward with the gondola plan to deal with growing traffic concerns was very disappointing. The Gondola construction will bring an adverse consequences to non skiing canyon users such as picnickers, hikers etc as well as impacting the natural beauty and open space of the canyon. In addition, there are other more pressing Utah issues that require taxpayers to sacrifice their hard earned income. I along with many others would have preferred UDOT to focus on enhancing busing and further explore with ski resorts especially seeing the great improvement after Alta implemented its parking reservation system.</p> <p>Many of us were happy to see UDOT adopting a phased approach. We hope the time opened up by the phased approach will allow all involved working parties to come up with real solutions to traffic reduction while at the same time what's best to preserve and protect the canyon we all love.</p> <p>I've been a Sandy resident for 27 years. I fully endorse our Mayor, Monica Zoltanski's statement made on UDOT's gondola announcement. In part she said, "We need real-time, on-demand technologies that offer free market incentives like preferred parking for large group carpools, surge tolling for peak travel times, and lift ticket pricing based on rolling start and end times before the public is tapped for investment. Convenient apps and reservations could go a long way to help customers know how to plan for an enjoyable, affordable day in the mountains. There's a lot that can be done."</p> <p>Double emphasis on the words "before the public is tapped for investment."</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33730	kevin dolan	I'm a long time resident of Sandy and CH as well as an avid road biker along Wasatch for many years. I strongly urge you to consider the options presented by Savenotpave.org through Micki Harris and team. We need a separate bike lane and pedestrian walkway alongside any widening of Wasatch. In addition, we do not need five lanes of fifty mph to accomplish any improvements. Please keep speeds to 40 mph with only three lanes and controlled crosswalks with lights. Again, please listen to the savenot pave.org recommendations. Your data regarding traffic on Wasatch is flawed and there is no need to increase number of lanes and keep speeds at fifty mph. thank you for listening. -Kevin Dolan
33731	Julie Nester	Unnecessary, Colossal, waste of money. Let them ride the bus
33732	Danielle Maroney	No Gondola
33733	Cayce Terrill Wilson	<p>Hi,</p> <p>I'm Cayce and I'm a resident of Sandy, UT, a Utah voter, and an avid user of Little Cottonwood Canyon (LCC). In fact, it was a large factor in the decision for my wife and me to purchase a home in Sandy last year. I rely on LCC year-round to fill my needs for enjoying and exploring nature - from trail running and rock climbing to skiing and hiking. On average, I probably spend 2-3 days/week in LCC. Suffice to say, I care deeply about the future of LCC and am deeply opposed to the plan of adding a gondola to the canyon.</p> <p>My opposition to the gondola is multi-faceted. First, LCC is part of the Uinta-Wasatch-Cache National Forest and the motto for all national forest land is "land of many uses" which is very true for LCC. The canyon is enjoyed and loved by rock climbers, mountain bikers, resort skiers/snowboarders, backcountry, skiers/snowboarders, hikers, trail runners, backpackers, birders, the list goes on. Yet, the gondola only seeks to serve one type of user - resort skiers/snowboarders. It's unfathomable to me that we'd consider a solution that is so limited in who it serves and so universal in who it burdens. The financial burden of the gondola is fiscally irresponsible. It seeks to primarily benefit the resorts of Snowbird and Alta at the cost of the taxpayer. Furthermore, the gondola will create irreversible damage to the aesthetic and natural habitat of the canyon in a way alternatives (such as more buses, imposing a toll on the road (especially a progressive one for private vehicles with single occupants, or widening the road) will not. The gondola is a 0 to 100 solution when there are plenty of reasonable intermediate solutions that are strong candidates to achieve the desired goals for the project.</p> <p>I hope you will reflect on the thoughts and sentiment I've shared and realize there are thousands of citizens that share my opinion. Please listen to the people that pay the taxes not the resorts and individuals that stand to gain fiscally from the gondola. Please protect and preserve LCC by saying no to the gondola and choosing the right path of finding a solution that meets the needs of the many people that access this sacred land of many uses.</p> <p>Thank you, Cayce Terrill Wilson Sandy, UT</p>
33734	Lila Leatherman	I am strongly opposed to putting a gondola in Little Cottonwood Canyon. As a climber and hiker who has lived and recreated in Salt Lake for the last 8 years, I treasure the views and experience of the canyon as is- and would be devastated to have the views and skyline from the top of Mt Superior, or from from the White Pine lake trail, marred by a gondola. LCC is a world-class climbing destination- gondola supports could damage the fragile and sensitive bouldering areas that are key to LCC's climbing experience. I am also a conservationist by career, and am strongly in favor of prioritizing the natural character and environmental integrity of the canyon, rather than the profits of a select few in the ski industry.
33735	Ashley Liewer	The gondola and any of these other solutions that change the physical canyon are not only not good for our environment, but will ruin the recreation opportunities for generations to come. The gondola and toll take away the equity to outdoor recreation and mean that the hardest working people in SLCo will not have the same access to the canyons. I oppose the gondola and the toll at its current \$25-\$30 cost.
33736	Alexander Adair	The gondola is the wrong choice for little cotton wood canyon and an unfair deal for Utah taxpayers
33737	Maggie McCormick	I do not support the gondola! This will not mitigate traffic like we need, we need to increase access to public transportation with buses and make them more affordable.
33738	Miki Karg	I think we need to try enhanced bus service up Little Cottonwood Canyon before we jump into building a gondola. The recent announcement of reduced bus service up the canyon is a ploy to encourage public support of the gondola. Also, there is little being said recently about proposed changes to Wasatch Boulevard, which is a very important topic. If bus service is being cut back due to driver shortage, offer drivers a better wage to encourage more drivers. This is a much more economical and practical solution than spending \$550 million of taxpayer money to fund a gondola and its related costs. Expand bus service -run more buses more frequently from strategically placed bus hubs around the valley!!!!
33739	Debbie Fackrell	I think it only benefits the skiers not the ones that have to pay for it. Since this is part of National Forest, can't people be required to have a National Park pass?
33740	Michael Voth	The plan to install a gondola up Little Cottonwood Canyon is a poor idea. I'm fully against the proposal for this, as I grew up here. The traffic is honestly only bad during the ski season on peak snow and tourism days. It just doesn't make sense to spend money and resources on this, let alone the impact to the canyon as a whole.
33741	Art OConnor	The gondola plan is not in the best interest of anyone except those who stand to profit from it. It is a short sighted money grab plain and simple.
33742	ashley harder	The gondola gouges taxpayers for a problem that isn't that drastic. It ruins a beautiful mountain and completely overlooks more practical and affordable options that you should at least try implementing before jumping into such a massive project. I have frequently taken the bus and that has been a great solution already so increased the buses and make larger parking lots and incentivize carpooling and maybe introducing a toll for out of state visitors. Please preserve the mountain. I do not go and ski/board to feel like I'm still in a city. I do it to get away and the gondola is a great way to ruin that experience

35341	Evan Tobin	<p><u>I am extremely disappointed in the Final EIS as released on August 31, 2022. I made several submissions during the public comment period but some questions were ignored or not answered completely. One comment was completely ignored because it was submitted during the extended comment, it looked like most comments during the extension were ignored. The extension was publicity only, totally useless.</u></p> <p><u>While comments from entities such as Save our Canyons, the Town of Alta, Cottonwood Heights and others were specifically named, comments from individuals like myself were answered in broad generalities or not at all. Some of my comments were addressed and clumped in with the comments of others. Topics like modern solutions being proposed by companies like "The Boring Company," such as tunneling were dismissed outright. Other comments I made regarding running busses later in the day to reduce the traffic at the busiest times were never even addressed. They commented that busses might run till 7pm for the gondola, but never addressed that I suggested busses should run till 10 or 11 at night so people shouldn't be pressured to rush down the canyon. Apres Ski is something that people like and want, but the current bus schedule stops at 6pm, it's part of the problem! I'm not just talking about drinking in bars, there are after ski programs run by both Alta Community Enrichment(the Alta Arts Council) and Snowbird, like films, lectures, workshops, classes and more that people can't attend if they use the busses with the current schedules. People could stay up canyon and have dinner before heading down if busses ran later. Park City's free busses don't stop at 6pm, they have a real transportation system!</u></p> <p><u>I have read the huge volume of pages of response to comments in the EIS and I am appalled by how dismissive UDOT was of important issues and responded only with "outside the scope," or "not under the control of UDOT.": yet UDOT made broad statements over issues which they clearly do not have control over and have now further shown how biased and self serving this EIS document is.</u></p> <p><u>UDOT clearly states they don't even know who would run or manage the gondola after they build this monstrosity for almost a billion dollars! They claim they will have contractual control, yet they also make claims the busses will run every 5 minutes between the mobility hubs and the gondola. This is not under their control as made painfully clear by the fact that they said the "phased implementation," would include more frequent busses and UTA has just announced cancellation of major LCC bus routes and cutting the frequency of the remaining routes in half, not increasing them as UDOT claimed. This entire EIS is a sham. People were finally utilizing busses with the moderately enhanced schedules last year and it really helped traffic along with the parking reservation systems at the resorts. Now with UTA cutting service we will take 2</u> Hi UDOT, my name is Lizz Kralik and I just wish to say I politely oppose the LLC Gondola project in the opening line. I am a Utah voter and a user of Little Cottonwood Canyon. I greatly appreciate the beauty of the canyon, and I do acknowledge the heavier amount of traffic and popularity this area of Utah has garnered. Therefore I want to state my support for other solutions, like tolling, increased bus service, shuttles, and others. Thank you so much UDOT for trying to find a solution and for giving us a chance to voice our concerns.</p>
33743	Lizz Kralik	<p>Hi UDOT, my name is Lizz Kralik and I just wish to say I politely oppose the LLC Gondola project in the opening line. I am a Utah voter and a user of Little Cottonwood Canyon. I greatly appreciate the beauty of the canyon, and I do acknowledge the heavier amount of traffic and popularity this area of Utah has garnered. Therefore I want to state my support for other solutions, like tolling, increased bus service, shuttles, and others. Thank you so much UDOT for trying to find a solution and for giving us a chance to voice our concerns.</p>
33744	Caelan Pike Meter	<p>Having lived in Salt Lake City for over 6 years now I feel that a gondola up Little Cottonwood is not the answer to the traffic issues the area sees during the winter. As both a snowboarder and a rock climber I feel that it's important for these areas to be equally accessible for all forms of recreation. I understand that the winter traffic is an issue, however, I feel that the gondola is going to create more of an impact than it is going to help both financially and environmentally. Using tax payers dollars to fund a project that is designed purely for two businesses bennifits (Alta and Snowbird) is obscene to me especially considering how small of a part of the population actually uses these resorts during the winter. I feel that a better bus system will help ease this issue more effectively than the gondola would and would preserve the beauty of our canyon as well as the tax payers money that would be going into the project. I hope you will reconsider the impact that you are threatening our canyon with and how many people don't approve of it despite what you all claim from the first period of commenting.</p> <p>Sincerely, Caelan Pike Meter</p>
33745	Kathleen Hoenig	<p>I OPPOSE the gondola!</p>
33746	Christine Katzenberger	<p>I've been a resident of Utah since 1970. I grew up skiing Alta and snowbird. Back then there was talk of a rail system. I don't believe a rail system or the gondola makes any sense. I agree with the toll system but it needs to start at the base for backcountry and resort recreation. An improved bus system is also good. Concentrate buses above 1300 East and park and ride areas. Have resorts shuttle their employees. If you don't have employees you won't have open resorts.</p>
33747	Zachary Rohovit	<p>LCC gondola is a bad idea it'll restrict access to lower income communities while destroying famous climbing routes in the area. Everyone deserves access not just skiers.</p>
33748	John Fife	<p>If low income people can't easily afford to ride the gondola -- anytime -- then you're baking social inequity into public transportation and access of our natural resources -- a retrograde move even for Utah.</p>
33749	Lucy Guerrero	<p>I don't want my taxes paid for things we don't need please listen we do not want that God Bless you</p>
33750	Justin Wilde	<p>I am not comfortable with my tax dollars being used on an expensive gondola project. Moreover, a gondola does nothing for canyon visitors who visit lower areas of the canyon. Why not increase bus traffic, decrease costs to improve utilization, and see if it solves our problem?</p>
33751	Sharon Cotterill	<p>NO, HECK NO to the gondola. As a taxpayer, I resoundingly say NO!</p>
33752	Collier Reid	<p>I've been skiing in LCC since 1961. My father was a Forman for the state highway department, (now UDOT) and maintained the roads in big and little cottonwood. I have a lifetime of stories in the canyons. Introducing a toll to drive up the canyon will kill the goose that laid the golden egg. Stop considering it. Nothing could be more wrong.</p>
33753	Alison Stroud	<p>Reevaluate the Boring Company. Whatever you do, quit dragging this out.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33754	Theresa Hotchkiss	<p>I ask UDOT to abandon the gondola option and to study other alternatives. The gondolas will negatively impact the canyon all of the time. They are to single a destination, and therefore do not serve the public but rather are mostly helping the ski resorts in the canyon.</p> <p>Alternate transit, specifically electric busses, will accomplish better service, more flexibility, and multiple stops in the canyon.</p> <p>The gondola option will be the most expensive option to implement, will take years to build, and has no known cost to riders. It does not sound like the best option. Again please do not move forward with the proposal to build a gondola in LCC.</p>
33755	Sey Lau	<p>I am against construction of a gondola.</p> <p>The amount of money spent on the project would be best put to use in trying to conserve water. By the time the gondola is built, we may not have enough snow up in the ski areas to support them. Besides, the fact that the gondola will permanently damage the aesthetics of the canyon. As a rock climber, it would be sad to see certain routes permanently destroyed for a short seasonal sport that is dependent on snow (which is becoming less and less as the years go by).</p> <p>I agree with Enhanced Bus Service Alternative (with no canyon roadway widening), tolling, restrictions on single occupancy vehicles, construction of snow sheds, implementation of trailhead and roadside parking improvements, should be the main priority</p>
33756	Nancy Geisler	<p>What will you do when a fire breaks out at the bottom of cottonwood canyons and the fire travels 1 minute a mile up the canyons and the gondola brings in thousands of people. There are other ways - electric buses that is environmentally sound then the destruction of forest and sensitive areas of building a gondola</p>
33757	Andrew Plewe	<p>The Gondola is a terrible idea. Preserving access to the canyon for people of all levels of means is vital to ensuring Utah remains an welcome place. This is not that. It is difficult urbanizing right up against nature, as we have to do in Salt Lake City. But this is not the solution, it will forever mar the canyon and as a resident of the valley I firmly oppose any and all proposals for a Gondola in Little Cottonwood Canyon.</p>
33758	Kevin Waltz	<p>\$500 million for 15' base diameter towers planted along a pristine canyon for people who pay \$150-\$180 for a day pass; all at taxpayers' expense, is an outrage and criminal disregard of the greater good. I own a winter timeshare at Snowbird and believe that Alta is Mecca for skiers but this doesn't pass any test - financial, social responsibility, environmental. Shame on the resorts for quietly supporting this.</p>
33759	Chris Jankowski	<p>A gondola is not the solution to manage little cotton wood canyon. Please for the habit and beauty of our canyon explore other options.</p>
33760	Jacob Baylis	<p>I am NOT in favor of the Gondola, in very strong terms. I believe a much simpler solution exists such as tolling in some fashion (weekend, <2 people, etc.). As a skier, climber and mountaineer, I see no benefit to a gondola only serving two ski resorts. The space needed for thousands of parking spots will take away from the already limited housing market and the gondola towers will ruin the canyon valley. The cost is much higher than the problem's worth in my opinion and does not seem to be supported by the majority of the public. I personally do not know anyone in favor of the gondola and am very concerned the entities with the most sway in this decision are being influenced by money and greed. Please listen to the majority of people who utilize the canyon, the locals, and concerned organizations voicing their opinions.</p>
33761	Brenna Thomas	<p>I do not approve of a gondola in Little Cottonwood Canyon! It will not allow equal access to this beautiful area, and may destroy some amazing climbing spots.</p>
33762	Michael Tauber	<p>This will not improve the climate nor the traffic. This project will only cause the taxpayers money, and ruin the environment Little Cottonwood Canyon.</p>
33763	Bob Bland	<p>I have lived in SLC since 1988, and regularly recreate in both Little and Big Cottonwood canyons. The proposed gondola "solution" is a solution to a problem that is minimal at best. The negative impacts far outweigh the perceived benefits. The main beneficiaries are to the ski resorts and to the construction companies who receive the contracts. And, I suspect, to the government officials who give out those contracts. It would be of no benefit to me or anyone I know, in fact since my tax dollars will be used, it would be at a cost to us. Not just financial, but also in our access to our PUBLIC recreation lands. This canyon has a long history of use by many, many people for many different activities. Because these are public lands, our access to our preferred activities has every bit as much importance as the proposed "improved" access to the resorts. Do the right thing here. Show that you represent ALL area constituents, not just donors and politicians and the construction companies who are given the contracts. Why not try more buses?</p>
33764	Kassi Harris	<p>100% against the gondola. Tax payers do not deserve to fund this project. We need tolls & buses. A gondola would negatively impact the views in this beautiful canyon.</p>
33765	joseph cieslewicz	<p>After reviewing the material provided to the public concerning the building of the gondola, I am strong against its construction.</p>
33766	Mari Raymer	<p>I don't want the canyon ripped up to put in a gondola. A gondola is a terrible idea, I would rather see increased clean fuel public transportation. Also, the idea of a toll makes it a canyon for rich people. This is not a fair use of public land.</p>
33767	Jesse Dacus	<p>I implore you to please not construct a gondola through an already over developed canyon.</p> <p>Erecting this monstrosity will line the pockets of a few and have numerous deleterious affects on the local ecosystems of cottonwood canyon.</p> <p>Please, just NO!!! Europe has decimated its wilderness. Let's learn from their mistakes.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33768	John Porcher	<p>(Edited)</p> <p>Let's get the facts straight: The nightmare started in 2017 with the Trump tax cut for billionaires. It was exacerbated by the 2020 COVID-19 pandemic -- with spending down during and sellers stocking less product and then a spending surge in 2021 by consumers coming out of the pandemic causing supply-line shortages. Then Russia invaded Ukraine and the U.S. and other NATO allied countries imposed sanctions that cut Russian oil exports (something that was necessary to protect the allied front). And now, Saudi Arabia is cutting its oil production to help Russia. All of those events, but especially the Russian invasion, are to blame for today's inflation and fluctuating gas prices and a possible recession. The problem is global, affecting all countries, not just the U.S. There is very little that the U.S. can do, but the current Biden Administration is trying various remedies, from releasing oil from U.S. reserves -- which helped to lower gas prices-- raising interest rates to rein in consumer spending to alleviate inflation, and resuming the sale of oil and gas drilling leases on federal lands. The Democratically-controlled Congress recently passed the Inflation Reduction Act, which will over time improve the economy and the lives of Americans. History has shown that the Democrats are much better at managing the economy than the Republicans, starting with FDR hauling the country out of the Great Depression that resulted from the 1929 stock market crash under the Republicans. The economy suffered under the Reagan and Bush "supply-side" economics and boomed under Clinton, and Obama saved the nation and its industries from George W. Bush's nearly catastrophic economic management and set the country on historic economic growth, until Trump came along and encouraged a massive giveaway to the wealthy. I am confident that President Joe Biden and the Democrats in Congress will fix what has been broken in the perfect economic storm of the past five years.</p> <p>thumb_upreply</p> <p>share</p> <p>flag</p> <p>remove</p> <p>Dontmeannuthin</p> <p>23 minutes ago</p>
33769	Tom Mi	<p>(Edited)</p> <p>The gondola will negatively impact the canyon for years to come and only benefits the large conglomerate companies/the sport of skiing. There are far better alternatives that have less environmental impact, like a dedicated lane for buses, among others. This directly impacts all other activities/sports in the canyon, and it's already such a controversial topic that building a gondola will cause significant disapproval among many. Please reconsider.</p>
33770	Marcella Ullrich	<p>This is the most poorly conceived idea since the Great Salt Lake pumps. It's a boondoggle for the contractors.</p>
33771	Katherine Supiano	<p>The gondola plan is poor environmental stewardship and an egregious example of eco-injustice. It favors the wealthy at the expense of both mountain and valley citizens. Strongly opposed!</p>
33772	Thomas Chancellor	<p>I am strongly opposed to the Gondola Alternative B proposal as an option (certainly not preferred) for Little Cottonwood canyon. (1) it would be a publicly funded subsidy to Alta and Snowbird ski resorts and of no benefit to summer or winter users not going to Snowbird or Alta; (2) it will be an eyesore for those visiting the canyon by public or private transport; and (3) it will do little to solve the traffic problems in the canyon. The only reasonable solution involves increased parking at the bottom of the canyon with frequent electric buses, and mandatory pooling and an entry fee for private vehicles. The public funded gondola is a terrible idea that doesn't even begin to solve the problem.</p>
33773	Scott Revas	<p>Why spend so much money for a problem that happens maybe 30 days in a year. Seems like we could spend that money on much needed repair's elsewhere</p>
33774	Wendi Beseris	<p>Our family is strongly opposed to building the gondola in Little Cottonwood Canyon. We are voters and residents living in Salt Lake county and close to the canyon. We feel that UDOT should look at a phased approach with the least impactive alternatives for a 2 to 3 year period and then reevaluate and determine if it has improved traffic flow. To consider the gondola as a total solution to the problem is short sighted. There are many other options available. Our Family treasures little Cottonwood Canyon and we spend many hours recreating in the canyon. This is a resource that needs to be preserved and not destroyed for the sake of Business interests. Thank you for your kind consideration. Save LCC. Please.</p>
33775	Joe Neilson	<p>I am a retired Arizona resident who has visited SLC every year since 2016 for winter ski trips of 5 to 6 weeks in January and February. I know that LCC gets quite crowd on powder days, which have become more infrequent with the warming of winters over time. I believe the gondola plan is overkill for a problem that is occurring less and less as time goes on. I think we can better address the overcrowding with tolls, more bus service, and car pooling. The projected cost of the gondola (over a half a billion) is probably way under forecasted. For example we can see from the SLC airport expansion that those expenses were very underestimated. Thank you for considering my comments.</p>
33776	Pamela Ballard	<p>The gondola option is preferred by whom: The investors, UDOT who is acting like a politician in their own interests, all the people who have their hands in this huge pocket. It is time to drastically reduce the power of UDOT so they can no longer use citizens to gain more money and power, one the city should use sued for allowing this to pass in spite of thousands of objections. There are simple and effective ways to handle the traffic without spending a fortune and harming the environment for the ski industry, This is irresponsible and a blatant misuse of political power.</p>
33777	Lee Walker	<p>NO! Everything is wrong. Timing. Failure to use small measures like snow plowing and traffic control and counting parking places.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33778	Stacy Petersen	<p>The gondola will serve the ski resorts not Utah residents. It's already so cost prohibitive to recreate in the canyons this will further push out locals to provide access to high paying tourists. That is not a solution it's a lock out.</p> <p>Put my tax dollars into education not an elite transportation system that will destroy some of the canyons best bouldering and access.</p> <p>It's clear this project is backed by huge money interests and provides no real solution. This should go on the ballot, let us vote on it.</p>
33779	Robert Pretti	<p>Don't use my tax dollars to support multi million dollar businesses (snowbird alta). That is corporate welfare at its worst.</p>
33780	Ryan Little	<p>I believe the gondola is not the solution. It is using the tax payers dollars to only benefit a select few, and only for a short period of the year. Why would someone from Saint George want to pay for the Gondola? If anything, snowbird and Alta should pay for it. As an alternative, tolling for carpooling (like solitude parking) should be considered. Why should UDOT pay for something that won't benefit everyone?</p>
33781	Adriana Morales	<p>I do not believe is the way to use our taxes. There's so many problems/important topics can be solved with that money!</p>
33782	Thomas Huckin	<ol style="list-style-type: none"> 1. How long would it take to do all the construction? 2. How many towers & service roads would there be? 3. How much would a roundtrip ride cost? 4. Would such a gondola only service the two ski areas? 5. If so, why should we taxpaying citizens be forced to subsidize it? <p>Until the owners/beneficiaries of those two ski resorts fully answer such questions, my wife and I are strongly opposed to their scheme!</p>
33783	Brandon Reid	<p>I do NOT support this development. Keep Cottonwood untouched!</p>
33784	Breann Meister	<p>Please take into consideration the canyon itself is enjoyed by many, and making it quicker for resort patrons to travel a few weekends in the year should never be a priority. Please consider other options that will not forever change the canyon experience for those who utilize other recreational activities. Don't be greedy. Preserving all that makes Utah such a special place for EVERYONE, not just skiers, should be taken into full account. Thank you.</p>
33785	Randall Hunsaker	<p>We are STRONGLY OPPOSED to the Little Cottonwood Canyon Gondola. It would be an eye sore, an unnecessary burden on the tax payers, and ridiculous to think that this could possibly be beneficial to our canyon. Interesting they use a File Photo of cars stopped at the bottom of the canyon while the canyon is closed due to weather, in an attempt to convince people that it is over crowded. This in no way proves that the canyon is over crowded. Also, the canyon and resorts can only handle a certain number of skiers. We are totally against this ridiculous proposal and see it as a White Elephant. Please spare the tax payers and the canyon from this awful burden. Why should the tax payers pay for something that is for the benefit of two private companies???</p>
33786	leah oland	<p>I appreciate the effort that has gone into your proposal. I believe that we are still not where we need to be. 550 million dollars is too much to spend on a traffic solution for two businesses and a small minority of Utahns who ski in LCC. There are a multitude of other transportation needs in the Salt Lake Valley. There is no "free" government money regardless of funding ideas.</p> <p>There have been improvements in traffic simply by implementing reservation systems. Imagine what might happen if we really tried low-cost alternatives like tolling.</p> <p>I have read that the gondola would only be able to move 2000 people between 7:30-9:30 while the road with 1.9 passengers per vehicle moves 8000 people in the same time. Seriously the whole point is that people want to be at the ski resort as fast as possible on a powder morning.</p> <p>I have spent a lot of time sitting in traffic in LCC and on 9400. It is inconvenient but it doesn't seem less inconvenient having to deal with parking and maybe a bus before I can even get near the gondola.</p> <p>One of the things that I often hear is that it will be the longest gondola in the world. Like that's a good thing! I don't think that LCC should be the test case. I also believe the visual impact and noise will negatively impact the experience of all canyon users.</p> <p>I believe that some people think that the gondola is so "cool" that it will attract visitors to our state. We do not need gimmicks to attract people to our ski areas. The NATURAL beauty and our snowpack already brings people from all over the world. Skier days have increased over the last few years due to the Ikon and Epic passes. The resorts are crowded which is not necessarily attractive to locals or to our out of state visitors. Success can not only be measured by the number of skier days.</p> <p>Another thing that should be addressed is the way people move between ski areas. Big Cottonwood, Little Cottonwood and Park City ALL have traffic issues and if you are really thinking ahead to 2050 traffic patterns then solutions need to be coordinated.</p> <p>This is a huge, complex project. It should not be rushed.</p>
33787	Eric Baim	<p>I am a Salt Lake resident and an avid skier. My preferred resort is Alta. The gondola is a horrible idea. It will damage our canyon. It will pollute our water supply. It will waste taxpayer money. It will benefit few at the expense of many. Expanding bus service, instituting tolls, and encouraging carpools is a much better option.</p>
33788	Oscar De Anda	<p>Why would we even take tax payer money to build a gondola for private companies? Instead why not charge a toll for cars to try to encourage people to take public transport. More parking with more busses even if the parking is a bit further from the mouth of the canyon.</p> <p>Also, not to mention the fact that we have a possible future fresh water shortage and we want to possibly taint one source of our water with construction for a gondola in that valley?</p>

35343	Samantha Madsen M	<p>Preferred by whom?</p> <p>The public has loudly and vociferously come out against the Gondola. Yet you still plan to move forward, funding in part with tax payer dollars. The public doesn't want it.</p> <p>These public opinions you are holding are nothing but a sham.</p> <p>Samantha L. Madsen, MS, CSCS</p>
33789	Jill Wenneson	<p>I'm a Cottonwood Heights resident. I DO NOT support the building of the gondola. I DO NOT consent to using my tax dollars for this project. I don't need to list all the reasons this project is a horrible idea and plan as I know it's been reported over and over again. I want to add my objection to the Gondola project. There is NO benefit to the canyon, the surrounding areas, the citizens, or the state of Utah.</p>
33790	Sheridan Davis	<p>It's amazing what organizations will do with other people's money. In this case, UDOT's preferred alternative Gondola is expensive and spends taxpayers money to benefit two privately held for profit businesses. See the problem UDOT?</p>
33791	Connor Hill	<p>Stupid idea. Waste of tax payer dollars. Havoc on wildlife and much much more.</p>
33792	Jill Wenneson	<p>I oppose the Gondola and a toll booth</p> <p>The gondola is bad for residents of Sandy and Cottonwood Heights, and Utah taxpayers. All to benefit two former politicians and the ski resorts. We must continue to push back. It's not worth the \$1B price tag for 15 days per year. It's not fiscally conservative to use taxpayer money. It's going to induce demand and bring more traffic, congestion, and pollution. It's corrupt.</p>
33793	Kate Welker	<p>No gondola. Just add a toll.</p>
33794	Kate Splan	<p>please do not put a gondola in for tourists, just add a toll station</p>
33795	daniel honneyman	<p>dont you think it would be most fair to have a referendum and the local population could actually vote on this? Also , it will be a wasteful investment as all the snow will be gone in 20 years !</p>
33796	Sheridan Davis	<p>Expensive projects that build for capacity outliers (red snake days) don't solve the problem of traffic flow-they simply build a bigger pipe for more people to flood the canyon, be it by widening the road or building a gondola. And coming up with a workaround to override capacity limits (which currently are based on parking) is no solution. LCC doesn't have an access problem unless UDOT seeks to blow the lid off of current capacity restraints. And if you seek that, shouldn't you have to prove that won't irreparably harm the fragile ecosystem you're dumping more people on with some independent, science based human capacity studies and not simply the numbers resorts tell you they can handle? Isn't that what an effective NEPA process should gauge? Seems your preferred solution ignores that.</p>
35348	Kate Splan Welker	<p>Please, no gondola. Add a hefty toll, require carpooling and bussing. There are a lot of other ways to change the traffic up the canyon that are far less permanent, drastic and expensive. Preserve Utah. Take care of our canyon. Do not put a gondola there.</p> <p>Thank you, Kate Welker</p>
33797	Hannah McBrayer	<p>The Gondola solution is not in the best interest for Utahns. It caters to our wonderful tourism industry. And while Utah relies a lot on successful tourism and we all love Alta and Snowbird, that industry can still be successful with other transportation alternatives proposed. The gondola creates many more problems than it solves, and local residents take the brunt of the cost (both financial and ecological). Please make this decision with Utahns in mind.</p>
33798	Jessica Dalton	<p>I'm disappointed that we'd carve up our canyon to better serve the needs of Snowbird and Alta.</p> <p>LCC does not belong to the ski resorts and we should not build an invasive system so they can benefit.</p> <p>The solution must serve the people, not the corporations.</p>
33799	Katrina Black	<p>A gondola will be an eyesore, just like the sky resorts. do not cater to the out-of-state rich skiers with our state tax money. An ugly gondola, get real.</p>
33800	Merle French	<p>I am against using tax payer money to build a gondola that serves private businesses, aka, the ski resorts and does nothing for the tax payer</p>
33801	Merle French	<p>I am against using tax payer money to build a gondola that serves private businesses, aka, the ski resorts and does nothing for the tax payer</p>
33802	Brooke Stanislawski	<p>The gondola option is a waste of money and resources. This option has negative effects on climbing, the environment, and the view in the canyon. Enhanced bus service and park n ride lots would be a more cost-effective option and would increase access to more parts of the canyon than just the two ski resorts while reducing traffic.</p>

33803	Cynthia Newman	<p>We are avid downhill skiers and take trips to Alta and Snowbird every winter. We have first-hand experience with the traffic congestion in the canyon. In fact, last March we sat in traffic for 2 hours and had to turn around and not go skiing, missing out on using one of our 2 Alta ski days for the season.</p> <p>We agree that something needs to be done to alleviate the traffic congestion. However, we do not believe this should marginalize other low impact recreational opportunities in the canyon. The proposed gondola or road widening would destroy world class climbing/bouldering in the lower canyon. The proposed changes are not considering multiple use of the canyon. There are lower impact options that should be implemented to alleviate the traffic congestion. Mandatory bussing of skiers and riders from the base of the canyon to the resort is an alternative that would not alter the natural environment of the canyon. There could be exceptions for those with handicapped passengers and those with babies and toddlers.</p> <p>On that day when we were unable to make it up the canyon, we spoke with a friend who had gotten "in line" 1.5 hours before us, she was able to make it to the resort to ski, but she told us that 2-wheel drive cars were spun out on the side of the road and that was causing traffic to back up. A gate could be added at the mouth of the canyon to be staffed during inclement weather to prevent any vehicles without 4-wheel drive or all-wheel drive from entering the canyon.</p> <p>A gondola will change the aesthetics of this beautiful natural canyon. A humming/buzzing sound will be heard when the gondola is in operation, further lessening the natural experience.</p> <p>We do not believe the preferred alternative considers the multiple uses of the canyon and instead prioritizes skiing and snowboarding over all other forms of recreation in the canyon. We urge you to reconsider the alternatives and choose a lower impact alternative.</p>

33806	Eric Hobday	<p>October 14, 2022 </p> <p>Little Cottonwood Canyon EIS c/o HDR 2825 E Cottonwood Parkway, Suite 200 Cottonwood Heights, UT 84121</p> <p>Dear UDOT Project Team, I have resided in the Salt Lake Valley for more than 20 years. I am, and have been, a frequent visitor to LCC throughout this entire time. I hike, trail run, bike, resort ski, back country ski and rock climb in LCC. I am opposed to the Gondola Alternative B (and A for that matter.) UDOT and the USFS have failed to meet the NEPA requirements for an EIS. In the words of Peter Dahlgren in the Salt Lake Tribune on 28 July, 2022, "Shame on UDOT. They should be sent back to the drawing board." I could not agree more. My comments to the EIS are as follows:</p> <ol style="list-style-type: none"> 1. The traffic congestion problems in LCC are caused solely by resort skiers at Snowbird and Alta. 2. These resorts are owned by large and profitable companies. Taxpayers should not be burdened with the cost of fixing a problem the resorts intentionally caused for their own private financial gain. 3. If Alta and Snowbird are subsidized with hundreds of millions of dollars in taxpayer money, it is a foregone conclusion that Brighton and Solitude will demand equal treatment. UDOT should take the cost of the taxpayer subsidy for LCC and double or triple it for BCC. This would be a more honest estimate of the cost to taxpayers. 4. No solution to the traffic congestion problem will be successful without the vast majority of the parking spaces on resort property being removed along with banning resort skiers from parking along the highway near the resorts. As long as there are parking spaces, people will use them, even if there is a good public transportation option (and the gondola is bad option.) 5. The Gondola option is so bad, no one will want to ride it. (See details below.) The resorts will profit handsomely from this as they will be able to charge high prices to park at the base of ski lift, unless they have been forced to remove the vast majority of their parking spaces. The resorts will laugh all the way to the bank while taxpayers are left holding the bill, and the canyon permanently scarred. 6. UDOT has made a tragic and fatal mistake by looking only at LCC. The transportation Needs Assessment Study Area should have included LCC and BCC together. Only by looking at both canyons together can the best alternative be identified, evaluated, debated and selected. As a result of this failure, the entire EIS process should begin anew looking holistically at the best solution for both LCC and BCC. In this regard, the best option for both canyons is a ski train tunnel.
33807	Sierra Newman	<p>We are avid downhill skiers and take trips to Alta and Snowbird every winter. We have first-hand experience with the traffic congestion in the canyon. 35354	Eric Hobday	<p>Dear UDOT Project Team,</p> <p>I submitted my comments via the link on your website. However, the formatting did not carry through well. I am therefore attaching a pdf of my comments which may be easier to read. Same words. Better formatting.</p> <p>Best regards,</p> <p>Eric Hobday</p>
33808	Micki Harris	<p>There have been 10 bicycle deaths on our UDOT streets. If wasatch Blvd is supposed to be widen for cars, ski traffic, what protection are you putting in for cyclists and pedestrians to keep them safe from fast moving cars? Simple measures will save lives and help people to slow down and be aware of people on the roads. You must put a buffer for cyclists using Wasatch Blvd. It is heavily commuted with cyclists all year round. Dan who was hit in his bike in February of 2022 by a drunk driver (.25 alcohol level and cocaine in his blood) and his life is forever changed. He walks with a cane and that's after 75 day of physical therapy. This type of behavior and distracted driving can be prevented with a buffer for those commuting for work. If it is truly a road for commuters, you must include cyclists into the equation and keep them protected too. Slow speed and buffered lanes. You keep your UDOT workers safe when they are working on roads. Signs say. " slow down, workers ahead" Cottonwood Heights residents are asking for the same respect.</p>
33809	Mary Lofgren	<p>Please don't spoil LCC with a gondola that will not benefit the majority of users.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33811	Sheri Gibb	A gondola serves the elite and two ski resorts during 3 months of the year. It doesn't serve the public. Why are tax payers footing a bill that makes these resorts more money? Why should tax payers pay for the elite to be catered to. Limit. Access. Period.
33812	Alana Boso	PLEASE DO NOT PUT UP A GONDOLA THAT WILL ONLY SERVICE PRIVATE COMPANIES!
33813	S G	Ski resorts should foot the bill for a toll booth. Not the residents or the tax payers. They've created the problem, which is a 3 month problem each year. Tax payers shouldn't be charged or responsible for solving it.
33814	CHRISTOPHER TIN	Slc resident here. Gondola is much preferred. Busses already reduced this year so I will need to drive up the canyon and I'm sure many others will do the same. If we don't make skiing easily accessible there's little appeal to being here in Slc and definitely less tourists dollars.
33815	Julie Liston	My name is Julie. I oppose the LLC Gondola project as it does not service the whole canyon, its only focus is ski resorts and disrupts much loved climbing areas. I am a Utah native, life long user of Little Cottonwood and Utah voter Say that you are an Utah voter. I appreciate your time and consideration of alternative ways to ease the canyon traffic problem. I support other solutions such as tolling, increased bus service, or adding a third lane that is traffic directional. Thank you UDOT for getting to the bottom of this and accurately representing the community of Little Cottonwood Canyon users.
33816	Chris Esseltine	I completely oppose the gondola. It will be an environmental nightmare, and it is a ridiculously expensive boondoggle that is wholly unnessesary and will not reduce traffic in any significant way.
33817	Karen Albrand	The estimated cost of the gondola option is too high and it might go even higher. Taxpayers should not have to fund transportation costs for the 2 ski resorts in Little Cottonwood Canyon - the project does NOT benefit taxpayers enough. I would like to see other, less invasive approaches like frequent electric buses, large parking hubs outside of the canyon for those buses to service and even parking reservations at the resorts (if ANY vehicles are allowed up the canyon during the winter). The gondola will be a blight on our beautiful canyon. Please reconsider the options and throw out the gondola.
33818	Olivia Evaga	save our views,ú\$Ö[]è
33819	Anna Robison	I do not think the gondola is a good idea. While all of the options are very expensive, the gondola is not going to help alleviate the crowds and traffic for the vast majority of the year and for the majority of canyon activities.
33820	Kevin Berry	I'm opposed to the gondola. While it may help ease congestion for 50/365 days it will leave its mark every single day. The canyon is used for more than just winter activities and focus should be placed on how these activities, and the nature of getting out of the city, would be impacted by a structure so obviously seen and out of place.
33821	Mont Hays	It really doesn't need to be done, let's move away from municipal expansion and find a better solution that's more sustainable and affordable
33822	Gloria Wood-Fechter	No to the gondola. Enough said.
33823	Jacob Chipman	While having a stop at white pine for the gondola or a switch to rail would be preferable to me I still support the implementation of the gondola and hope it mirrors the videos that were put in place
33824	olivia seager	Ugly just ugly. Who ever came up with this idea is stupid
33825	Stein Ingebretsen	The gondola is a very terrible idea which will ruin the beauty of the canyons, only benefiting the ski resorts, while ruining the free recreational areas. This will disproportionately disadvantage the financially bereft
33826	Bo Mendenhall	I am against any gondola as I feel it serves a small potion of the population and lines pockets of a few. Ultimately all of the options all will have an impact on the environment - you have presented that, and I feel the gondola is not in line with what these canyons mean to this area. Clearly big business is again trying to push what they want, not what is best for the environment or the people of this area/state.
33827	Jordan Miller	The gondola proposal is an all-around absurdity. First, the public has expressed overwhelming disapproval for the project. Second, the project would damage the visual appeal of the canyon. Third, the proposal does not really address traffic issues, it merely shifts those issues from the canyon to communities at the base of the canyon, arguably making overall traffic worse if there are more parking spots at the base of the canyon. Fourth, the gondola option does nothing to provide access to other locations than Alta and Snowbird in the canyon and does nothing to help with summer traffic. Fifth, it is inappropriate to use taxpayer funds to construct a gondola serving two private ski areas. If Alta and Snowbird want a gondola, they should foot 100% of the bill. Sixth, it is wrong to institute a toll in LCC as LCC provides access to large swaths of public land and access to public land should remain free. Seven, given the length of the gondola ride, there are personal safety concerns associated with being in a gondola with a group of strangers, especially at the end of the day when drinking may be involved. Eight, UDOT should attempt less intrusive options before constructing a gondola. Current bus service is inadequate because (A) they do not run with sufficient frequency; (B) there is no express bus to Alta, discouraging those skiing at Alta from using the bus; and (C) the parking at the park n rides is inadequate such that one must arrive at the park n ride by 7:30 to assure a parking spot. Fix these problems and a lot more people would use the bus system.
33828	MICHAEL ADAMS	Surface transport should be limited to mobile installations. Rather than a gondola placement impacting the visual aesthetic of the canyon, perhaps consider tunneling for rail tracks that could be protected from avalanche danger.
33829	Nancy Whipple	No gondola. I have noticed the last few years that the canyon is very full. Perhaps the natural gas buses could be used to help solve the issue. I have lived here for 35 years and have enjoyed the canyon independently all those years. I love the scenery and the natural Landscape.
33830	Erik Albert	Toll the road today and adjust the toll to amount of visitors in the canyon. More busses and make them electric. No Gondola

33831	Peter Ashcroft	<p>When all is said and done, this project is driven by the "need" to deliver a large number of skiers to Alta and Snowbird immediately following a storm. In that sense, it is driven by a tiny fraction of the population for a tiny fraction of the time. In exchange, the rest of the community will be burdened with economic costs, visual blight, and environmental degradation every day of the year.</p> <p>The analysis itself is premised on traffic congestion times projected for 2050. Does anyone seriously believe that we can project traffic congestion times in 2050? Building on that dubious foundation, the analysis assumes that those people in cars will stop driving cars so that they can ride the gondola. If 100 years of adding freeway lanes have taught us anything, it is that congestion reduction claims are inevitably exaggerated. If the gondola is built, I confidently predict that episodic road congestion will persist.</p> <p>UDOT builds things. That's the only tool they have in the box. Asking UDOT what should be built precludes adequate consideration of alternatives that do not involve building things.</p>
33832	James Adamson	<p>Not a good long term, nor a benefit to the general public. Also damage to watershed area is too great. As to the sky industry, the future seems to have a conflict on the horizon with our warming planet. Public monies & efforts should be used for a greater public benefit.</p>
33833	Scott Harris	<p>I shouldn't be surprised that you would pick the worst possible option for everyone in Utah, but I guess I had just a sliver of misplaced hope in you. This is blatant corruption and you're just lining your pockets with snowbird money while we all have to pay for this stupid gondola idea. You are all incompetent or just plain evil. I will not rest until you are all removed from this PUBLIC SERVICE position. How can you sleep at night burdening the state with half a billion dollars to make things WORSE? Listen to the environmental and transit experts, you worthless scum. I cannot express my frustration and disappointment in you. You watch your back. We will organize. We will take back what's ours. We will take back everything you've stolen from us. You will get what you deserve.</p>
33834	Jennifer Call	<p>No gondola! Increase bus services but don't ruin the mountain side for the very few days out of the year that the service would be used.</p>
33835	Ashley Rolfe	<p>I am strongly opposed to UDOTs selection of a gondola as the method to alleviate traffic in LCC. The gondola doesn't serve as a year round method for traffic reduction (have you been up LCC during Oktoberfest or on any Saturday/Sunday year round?) traffic is high in this canyon year round this problem also needs addressing. It also only serves as access to snowbird and Alta and will not remove cars accessing the canyon for backcountry or hiking access. The parking lot allows for a total of 2500 cars so the idea that 3000 cars an hour will be removed is absurd, you will remove 2500 total cars who can park in that lot and spend the entire day (not 1 hour at the resorts), the remaining drivers will see the lot is full and drive up the canyon. The gondola itself is an eyesore and would tarnish a beautiful canyon and trample through our water shed. This solution is a tax payer subsidy for Alta and Snowbird to profit further and it is not the way I want my tax dollars spent. There is a solution that addresses the issue of year round access, backcountry access, and will actually remove cars from the road; that doesn't destroy one of Utah's most beautiful destinations. I urge UDOT to consider these alternatives and to stop pandering the solution strictly to the ski resorts and instead offer a solution that works for everyone who uses LCC.</p>
33836	Jeffery Erney	<p>I sincerely hope that this gondola boondoggle is reconsidered. It's the most expensive and inefficient means of addressing ski resort traffic. The tunnel proposal is a far better idea. Thanks, Jeff.</p>
33837	Alexander Obbard	<p>I am opposed to the gondola. It is an expensive boondoggle that will benefit the owners of Snowbird and Alta, funded by my taxes.</p>
33838	Alexander Obbard	<p>I am opposed to the gondola. Every credible poll repeatedly shows a majority of Utahn opposed to its construction. Why is it still being pursued?>>?</p>
33839	Sheryl Schindler	<p>Alternative low cost such as frequent electric buses, tolls, and limiting number of people going into the canyon after a storm should be tried before jumping to a gondola. A gondola is a poor choice given the expense to taxpayers, it will only stop at 2 private resorts who are not paying for it, people will still drive cars congesting the road, and Operate only during the winter ski season; and it will permanently scar Little Cottonwood so a few more people can ski on powder days. We need to try low cost alternatives first before taking such a drastic step for such little benefit.</p>
33840	Cicely Chipman	<p>I'm not interested in the gondola. There are low-cost solutions that will reduce canyon traffic congestion that can be implemented this ski season. These alternative solutions have been effective around the nation, including:</p> <ul style="list-style-type: none"> - parking reservations, - priority parking for carpooling, - reduced fare UTA ski buses all season long, - regulated hitchhiking at the designated pick up/drop off spots, - digital signs at the base of the canyons indicating number of parking spaces available. <p>While the Gondola would only serve Little Cottonwood Canyon, these solutions can address congestion in both Big & Little Cottonwood Canyons. Thank you!</p>
33841	Alexander Obbard	<p>I am opposed to the gondola. There are so many other, better, less-destructive, less-expensive and more practical solutions to crowding in Little Cottonwood Canyon, including busines, reserved parking, tolls, and enforcement of traction laws.</p>
33842	Alexander Obbard	<p>I am opposed to the gondola. It would provide no trailhead or backcountry access, and benefit only the resort owners.</p>
33843	Alexander Obbard	<p>I am opposed to the gondola. It would be an ugly, destructive eyesore to the most beautiful canyon on the Wasatch Front.</p>
33844	Joshua gracia	<p>No!!!!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33845	Bradley Johnson	<p>The gondola is a bad idea. Especially given the relative small population that will use it, and the larger population that will pay for it. Environmental and local public concerns and views appear to have been ignored in an attempt to appease 2 ski resorts and a few politicians/former politicians. We cannot continue to look for ways to put more bodies in an already overcrowded canyon.</p> <p>Wider roads/dedicated bus lanes are a bad idea. Again, bad for the environment and only provides a tax payer funded means to provide access for a relatively small population.</p>
33846	Justin Hamula	<p>A gondola is a terrible idea if it is going to be paid for by tax payers. If a gondola is needed to fix the problem of overcrowding, maybe the ski resorts should pay for it, for it is their policy of selling icon passes that have created this problem</p>
33847	Thomas Clayton	<p>As someone who does many activities in Little Cottonwood canyon, I am opposed to the gondola. It would ruin a world class tourist attraction rock climbing. People come here for more than just skiing. It will hurt tourism with the decreased climbing access not to mention ruin the quality of life for the local climbing community. It will forever ruin the experience of being away because every time you hike, climb, or trail run in the canyon that will be all you see.</p>
33848	Larry Barrigar	<p>I've enjoyed Little cottonwood most of my adult life and don't downhill ski. In fact most Utahns don't. I don't feel we should add the infrastructure of a gondola and ruin the beauty of the canyon just to help accommodate the business of the ski resorts. The canyon should be there for us all to enjoy.</p>
33849	Priscilla Stewart	<p>I do not believe a gondola would serve the community. It would destroy the canyon especially the world class bouldering area at the base of the canyon. Providing more public transport, toll and limiting the amount of people in the canyon is closer to a better solution.</p>
33850	Michael Gibbons	<p>I am very worried that the ski resorts are going to continue to use this to squeeze money out of us. I'd really like to have the following addressed:</p> <ol style="list-style-type: none"> 1. Without cars at the ski resorts there will be no areas for patrons to eat their own lunch. None of the buildings operated by the ski resorts allow for packed lunches. If we are going to pay for a gondola for the ski resorts, I would like a guarantee of ample public facilities for packed lunches. 2. The only "free" storage areas at the ski resorts are currently inside of personal vehicles. If you aren't going to let us drive up, please provide free public lockers and storage areas for our gear - it is often necessary to remove layers and change gear with weather conditions, and we will now have nowhere to store it. 3. If we are going to put in a gondola, we might as well connect the canyons and greatly expand the footprint of the ski resorts. It is not like it will be a "wild" canyon anymore with giant metal beams and cables running overhead visible everywhere in the canyon. Before we install this let's secure statements from the forest service that we can add tons more lifts. <p>I appreciate the public comment period, and I hope you can address the concerns of having nowhere to eat home lunch and store gear.</p>
33851	Sharlene Butterfield	<p>Reduction in speed limit on Wasatch Blvd..</p>
33852	Chris Erickson	<p>The gondola goes against all common sense: it only serves the resorts, only runs in winter, and is an eyesore. It will take twice as long as a bus to get to the resorts, and cost an absurd amount of money.</p> <p>Why are we not committed to trying common sense solutions (look what parking reservations did last year!) and re-evaluating before making such a colossal mistake?</p>
33853	Amber Allen	<p>I do not support this project! The gondola will take away from the beauty of the canyon and only serve skiers during 4 months of the year. It will be an eyesore, expensive, and will not cut down on traffic in the canyon.</p>
33854	Chris Erickson	<p>Why do we keep moving forward on an EIS that is fundamentally misguided: we need to solve more than just getting traffic to the ski areas on the 5-10 busiest weekends. Sacrificing the aesthetics of the entire canyon to solve the problems of a few weekends is insanity.</p>
33855	Lisa Bowers	<p>I do not support the gondola. This solution primarily benefits the ski resorts and the already privileged user group who can afford to ski there. The gondola will also threaten the world class rock climbing routes that exist throughout the canyon. Please do not approve the gondola construction.</p>
33856	Lisa Fuller	<p>I understand that the traffic in Little Cottonwood in the winter has become an insane problem, but the traffic exists so everyone can enjoy nature and the joy of skiing at the well-known resorts of Alta and Snowbird. Well, for climbers Little Cottonwood bouldering is literally world famous, honestly. Climbers throughout Europe come to Salt Lake City just to climb at LCC and then travel to the Canyon Lands to climb there. While climbing is not as mainstream as skiing, it would be a travesty to destroy the beauty of the Canyon itself just to get people past it and up to the resorts! Instead of putting MORE infrastructure on top of existing infrastructure, wouldn't it be more reasonable to get people to park at the bottom only let busses up the already existing road?</p>
33857	Anne Cannon	<p>I do not feel the UTA's choice of the gondola to be in the best interest of all persons using the canyon. I do believe there are less expensiveLess invasive, alternatives that should take priority over the gondola.</p>
33858	jake Nicholson	<p>Dear DOT, Lease consider the following.</p> <ol style="list-style-type: none"> 1. Lower the seed limit on SR 210 through Cottonwood Heights. All other "neighborhood roads are 35-40, NOT a dangerous 50! 2. Redesign with a calming parkway feel , like Wasatch extension. We do not need more cars by 2050, we need alternative transport methods. Ie: electric busses bike and pedestrian friendly. 3. NO Gondola <p>There will still be traffic backups to a parking base. Hubs need to be more numerous and smaller. Gravel pit too. Will forever change LCC. Benefits only Snowbird and Alta. That should be financially responsible, NOT the taxpayer who never goes up there. A gondola does not benefit any other parts of LCC except ski resorts. Electric busses, tolling, snow sheds, must be the answer. Thanks for considering by ideas.</p>
33859	Van Fudge	<p>DO NOT BUILD THE GONDOLA! Months ago I submitted a comment in favor, but after more consideration and learning more of the costs associated, I now realize a gondola will not reduce traffic, destroy the natural environment, and benefit two private ski areas at huge expense to Utah tax payer.</p>

33860	Stacy Higbee	Force everyone to ride a better,safer and more efficient bus service. No special exceptions for skiers to drive up. Gondola would be next option. Widening the road is the worst solution and, I think, has the most destructive environmental impact. Thank you
33861	Tallie Casucci	As a Utah voter and taxpayer, I do not support the gondola option. It is financially irresponsible. This option does not serve disperse recreation users like myself, who visit the canyon all year-round. Furthermore, the gondola option perpetuates inequalities by only serving the more affluent resort skiers for ~3 months of the year. I support other traffic mitigation efforts, such as tolling with a free expanded bus service with stops at all trailheads and access points, similar to Zion National Park's system. UDOT should work with the disperse recreation user groups, especially those from marginalized communities, to understand their yearlong recreational and nature-based pursuits. Specifically, please utilize the expertise of the Salt Lake Climbers Alliance, Color the Wasatch, and Salt Lake Area Queer Climbers (SLAQC), to understand climbers' perspectives, our rich history, and the cultural significance of climbing in Little Cottonwood Canyon. Little Cottonwood Canyon is so beautiful and the key reason why I live in Utah. Thank you for opportunity to submit my comment opposing the gondola.
33862	David Smith	No!
33863	Patrick M Lang	This thievery. Plain and simple. There is no need for this gondola. Enriching yourself by stealing out of other's pockets is a crime against humanity. I hope this fails and I hope all who are involved in this fraud are ran out of Utah.
33864	Ann Marie Christensen	No gondola. Phased approach more sensible and equitable. Burden of cost and minor inconveniences of alternate transportation should be borne by those using the canyons in the winter, not all the taxpayers.
33865	Ernst Susan	I say NO to the gondola
33866	Robert Jordan	<p>A gondola is a bad idea because it won't decrease auto traffic while destroying the natural wilderness environment for the benefit of just two large corporations. This project is not in the public good, but rather, is a corporate boondoggle designed to benefit just two privately held companies at taxpayer expense.</p> <p>Scalable bus service is the best option to address canyon transportation.</p>
35357	Kaesi Johansen	<p>I am a resident living at the mouth of Little Cottonwood Canyon and have a front row seat to the traffic congestion on Powder days. Two years ago Snowbird required skiers to have parking reservations before they came to ski. Last year Snowbird discontinued this practice and Alta implemented it. I noticed a marked decrease in the number of days where traffic congestion pinned me into my subdivision. Before we spend a billion dollars on a gondola, we need to require both ski resorts to require a parking reservation before you come to ski. Then we should have traffic engineers put together a report on the number of days that traffic congestion was intolerable. This should be done in full transparency and made available to all citizens of Utah. It is my assertion that such a common sense practice would eliminate the need to have a Gondola. If there are only 10 or 12 days a year where traffic is intolerable, that's just part of the experience to ski the greatest snow on earth. No need to put in a Gondola for 10 bad traffic days a year. I am a University of Utah football fan. Try going to a home game sometime. Traffic is just as bad or worse as it is in Little Cottonwood Canyon, yet we all acknowledge that it would be silly to put in a mass transit system just for the games. Its just part of going to the game and I'm ok with it. I find ways to adapt. Skiers need to do the same.</p> <p>Additionally, Snowbird and Alta currently sell all day and half day tickets. They should be required to offer ski passes in time increments and prices in an effort to incentivize skiers to use the resort at different periods during the day and thus reducing one or two big rushes to get to the resort. I know many older skiers who would be great with a 2 hour or 10 run pass. This would be easy and very low cost and may be very effective at spreading out traffic during the day as opposed to all coming in the morning.</p> <p>Kevin Johansen</p>
33867	eric lingwall	I am for a gondola as I am a native Utahn. The amount of traffic on the canyon really has made me less motivated to go up the canyon. I tend to drive more finding the less crowded canyons. Driving more which ups my ratio of getting into an accident, using more gas, more cars in the canyons means less parking, more idiots that can't drive in the first place are now threatening wildlife and cyclists. The less vehicles in our canyons the better. Don't let the east side bully your decisions.
38662	Anonymous	Hi, I'm calling in regards to the gondola plan and all the rock climbing places sending out notices to everybody oppose it, but I like the plan. I don't listen to all these Tree Huggers. Go ahead and go ahead and build the gondola, good job, bye-bye.
33868	Sophie Morton	The gondola will ruin the natural beauty of little cottonwood for hikers, climbers, and other recreational users in a weak attempt to mitigate traffic by providing services to ski resorts(which only serves on group of outdoor users). Using an eco-friendly shuttle system (similar to Zion) would allow the opportunity for a variety of outdoor enthusiasts to explore this canyon without creating an eye sore and permanently altering the natural landscape of this canyon.
33869	Kent Morris	The gondola only serves the ski resorts which have an uncertain future. I recommend reservations/tolls to limit traffic in the canyon. Do not implement gondolas.
33870	Bruce Becker	No Gondola. No road widening More busses. Implement toll.

33871	Kate Novak	<p>I have been living in Utah and enjoying the Cottonwood Canyons for 25 years. The traffic situation has gotten increasingly difficult and must be addressed immediately with workable solutions without added infrastructure construction in Little Cottonwood Canyon. I am completely opposed to the gondola preferred alternative for the following reasons:</p> <ul style="list-style-type: none"> -the gondola only assists with travel to the ski areas and will not help with traffic for other canyon uses -the impacts at the mouth of the canyon and beyond with gondola construction (including the LCC climbing routes that will be destroyed) -the length of time to construct a gondola when we need a solution now (yesterday really) -the lack of more simple efforts to help with traffic such as increasing bus service, tolling, increasing parking areas at the mouth, carpool incentives -a fancy gondola that only serves ski areas is narrow sighted and not in the greater interest of our community <p>Thank you UDOT and partners for spending the time to review comments from the public. My closing comment is that this EIS needs to be a dual canyon EIS and asses the entire issue with both canyons (Big and Little Cottonwood). This is a huge issue for the entire Salt Lake Valley and it's narrow cited to only look at Little Cottonwood and only push forward a gondola- we need a more comprehensive EIS and an immediate feasible solution- NO GONDOLA please!! We need buses, tolling, and parking at the mouth of both canyons!!!</p>
35359	Debbie Miller	<p>I oppose the gondola options in any form. They will destroy the natural beauty of the area with the addition of poles, cables and the damage caused in building them.</p> <p>1) You people claim to be concerned about the environment. This does not stop the need for fossil fuels as coal drives energy here. This is a similar problem to other "green" measures. Windmills made with fossil fuel energy are fairly soon discarded and not recyclable so they lay waste.</p> <p>2) You claim to be believers in climate change and that this will help the problem. If you are correct, heavy snows will be rare in the coming decades so building this is like the money spent for flooding from the Great Salt Lake in Governor Bangerter's administration.</p> <p>3) Taxpayers should not have to pay for this idea which is primarily to benefit privately held ski resorts in order to bring in more skiers. We do not have the money currently to do this and in times of such inflation especially, money could be better spent. Hey, here's an idea: return it to the citizens who are struggling to put food on the table. Stop spending our money like there's no tomorrow. Today things are bad, but tomorrow they are going to be very bleak. It's time to plan for the greater famines to come.</p> <p>4) This will not primarily benefit Utahns. Only the well-off can even afford to ski. I say that from experience, having learned to ski at age 9, but unable to do so after age 19 because of the cost. Public transportation is already unaffordable to many of us so buses aren't even utilized as they might be. We have bigger concerns that affect more people. Subsidizing the elite businesses should not be the job of the taxpayers. If they can't afford to build it, this should nix the project outright.</p> <p>5) Most citizens (those who pay the bill) are opposed, yet you and our governor don't care about that. This appears to be a mere formality you must go through to check off the box before you do whatever you want. Salt Lake County Council opinion should hold a lot of weight here.</p> <p>At the very least, delay this atrocity. Should prosperity ever return, look at it again, but do so with all the factors in place and don't talk out of both sides of your mouth. Look at other alternatives. Climate concerns go beyond creating this additional transportation.</p> <p>~ Debbie Miller Bountiful, Utah</p>
33872	Craig Schriber	I am wholeheartedly against the gondola plan.
33873	Bret Smith	<p>Love the gondola. This is a benefit for everyone in the state for many reasons. I would use a gondola just to see the beauty and not need to keep my eyes on the road. This is the best option as there is much less pollution. Even if you run EVs there is pollution from making the power even if it is in the form of replacing batteries and solar panels or turbine blades. Gondolas are the best option and will be amazing!!</p>
33874	Dr. Fulvia Franco	<p>I am completely opposed to the gondola being built in Little Cottonwood Canyon for the following reasons:</p> <ol style="list-style-type: none"> 1. It destroys much of the beauty and natural habitat of the canyon 2. The cost to build is a burden being forced on taxpayers for the self-serving interests of the ski Resorts 3. It doesn't provide access to The canyon as it only stops at Snowbird and Alta 4. UTA needs to invest in other options such as widening the road and increasing the number of buses 5. It will restrict access to families who like to drive up the canyon to hike, climb, snowshoe, and have picnics in the summer. <p>As I said, I do not support the gondola proposal at all. Dr. Fulvia Franco</p>
33875	John Cary	<p>I am opposed to the gondola solution proposed. I am a backcountry skier and do not use the resorts. I would not benefit from a gondola. The visual impairment of the canyon is not what I want to see. There are better options. Use a bus shuttle system. It should not be funded by taxpayers to only benefit the resorts and those they serve. Please do not build the gondola!</p>

ID	Full Name	Comment
33876	Cliff Curry	<p>OCT. 13, 2022</p> <p>Alta Lodge appreciates the opportunity to comment on the UDOT Little Cottonwood Canyon Final EIS.</p> <p>Alta Lodge</p> <p>Alta Lodge was established in Alta in 1940, and has been owned and operated by the Levitt family since 1959. Alta Lodge provides fine lodging and dining, winter and summer, to over 15,000 visitors annually. Alta Lodge guests are Utah residents and out-of-state and international visitors, all of whom travel to the Lodge on SR 210. As employees and residents, our staff are daily travelers on SR 210. Alta Lodge is a long-term stakeholder in the Alta community and SR 210.</p> <p>The Current Preferred Alternative Gondola B</p> <p>The current preferred alternative, Gondola B, would not meet the project purposes and would create undue environmental impacts, including construction and visual impacts.</p> <p>The proposed massive aerial Gondola B would be:</p> <ul style="list-style-type: none"> •slow - by requiring over 20 minutes more travel time than the Enhanced Bus/Roadway Widening alternative, it would detract from rather than serve the project purpose of mobility •woefully inadequate to meet the project purposes - at best it would move the pitifully small number of 1050 people per hour •visually obstructive - it would create high visual environmental impacts •narrow in function •severely limited and inflexible in points of ingress and egress •intrusive and out of scale to the Alta community •the subject of many years of protracted litigation over environmental impacts, property rights and purported rights of eminent domain. <p>The ski resorts are great, we love them, and we can all see that an aerial tramway would serve the purposes of the ski resorts; however, that is not UDOT's mission. The mission is to serve the citizens and the travelers. Gondola B would not do that.</p> <p>Phased Implementation Solutions - Faster, Cheaper and Better</p>
33877	Alison Hopkin	<p>I do not think a gondola should be built period. The canyon and watershed should be protected! But this is taxpayers putting up the funding for TWO resorts only, who will benefit immensely! I do not believe any tax money should be used in such a wasteful project that will only benefit very few actual Utah taxpayers. Expand bus service, use tolls, timed entry, anything but a huge expensive mess of the proposed gondola.</p>
33878	Del Draper	<p>Del Draper</p> <p>October 14, 2022</p> <p>Utah Department of Transportation, Et. Al. Re: Little Cottonwood Canyon EIS Comments on Little Cottonwood Canyon EIS Identity of Commenter</p> <p>I am 71 years old and have had a family cabin at Alta since 1961. Over the decades I have driven up and down the canyon literally thousands of times and I am very familiar with traffic patterns in the Canyon. I am an avid skier and ski all Utah resorts. I both use the bus and drive my own car when I go skiing.</p> <p>General Comments on the Gondola option</p> <p>What a bad choice. What an expensive boondoggle. This is a monumental error similar to the pumps to drain the Great Salt Lake. Just like those pumps, there are many factors that suggest the Gondola will not work and is not sustainable. These include:</p> <ol style="list-style-type: none"> 1)If you have to take a bus to get to the base of the Gondola, it would be much faster to stay on a bus that was going up the canyon. Other than taking the Gondola one time as a novelty most skiers will not use it. 2)It is unclear how much it will cost to take the Gondola. If it is cheaper to drive up and park at the resorts, or to take the bus to the resort, then people will not use the Gondola. 3)The Gondola is not flexible. One huge investment that can not be redeployed in the way the busses could. <p>The Gondola is also terrible inequitable</p> <ol style="list-style-type: none"> 1)It is ridiculous to spend \$500 million of public money to benefit two privately owned resorts a few days of the year. If the Gondola is really a viable solution, the resorts should pay for it. 2)Only something like 8% of those living along the Wasatch front ski. Why should they be pay to benefit the few who can afford to ski? <p>UDOT should instead move incrementally. What is the impact on Canyon traffic if tolling is introduced? Try it and see before building a Gondola. What is the impact if Wasatch Blvd. is upgraded so that busses can pass cars stuck in a traffic jam? Try it and see before building a Gondola. What is the impact of a Buses First program that restricts cars until after 10:00 AM on weekends and on powder days? Try it and see, and only after that knowledge is gained spend the money on the Gondola.</p> <p>UDOT has defined the scope of the EIS too narrowly. The question is not just how to provide better mobility and reliability</p>
33879	Izzy S	<p>No gondola! The views down LCC are some of my favorite in the world and it would be devastating to lose that. Why not expand busing?</p>

ID	Full Name	Comment
33880	Stephen Brace	<p>So many unanswered questions.</p> <p>The gondola does not seem to be a comprehensive plan. It wants to use taxpayer money to benefit two private corporations. Since the benefactor are the corporations, they should pay for all of it. It serves them more than the general public. It feels like the public is getting fleeced.</p> <p>Parking at the gondola base will be an issue. Currently, parking for bus use is a problem. Parking before you get to the canyon needs to be addressed first. Regional parking hubs?</p> <p>Is there a plan with funding from the resorts if said gondola plan fails? Who pays for deconstruction and revegetation?</p> <p>Both resorts in LCC need to have a real time parking reservation system. Make your reservation, scan to get into the lot and scan to get out so the public knows what is available as well as UDOT. Parking would be free but to access the canyon is fee based. Fees go to UDOT for staffing and road maintenance. UDOT would be the gate keeper at the mouth. There are transportation headaches in PC, BCC and LCC year round. A comprehensive plan that includes all three areas should be on the radar. NOT a gondola in LCC. The investment would have to be from all resorts and taxpayers.</p>
33881	Abigail Moyes	<p>My name is Abigail Moyes and I've lived in the Salt Lake Valley for 26 years. Little Cottonwood Canyon is an oasis loved by all that come in contact with it. My love for LCC has grown in the years that my family has grown. I have experienced so much healing from postpartum depression, loss of family members, and feelings of not being enough in Little Cottonwood Canyon. I've also been able to raise a generation of nature loving and nature respecting individuals within the majestic walls of LCC.</p> <p>The camaraderie between fellow hikers/nature enthusiasts in LCC is a nod to who we are as Utahns. Kind, helpful, and adventurous. I know that canyon is special to so many others.</p> <p>While new traffic and safety solutions are needed in this canyon, the gondola is not the answer. First and foremost, the communities directly impacted by this project are firmly against the idea. It is seems disrespectful and irresponsible use of taxpayer dollars for something that is unwanted.</p> <p>Second, this gondola largely benefits a handful of businesses, while hurting those it is meant to serve. I was especially disappointed to learn this. This action is not a good representation of who Utahns are or what we stand for.</p> <p>And lastly, (though I promise I could continue on this topic) the steel skyscraper towers will ruin the iconic views of our LCC. I know this is me playing on some serious rhetoric, but do you want the destruction of God's creation on your hands? And while doing that, having thousands of upset and heart broken tax payers? Our canyons are world renowned for a reason. Let's keep it that way. Please, don't go forward with this gondola.</p>
33882	Gary Helmer	<p>The gondola is best option for the Canyon. More environmentally sound than other options.</p>
33883	Janet Buchanan	<p>Absolutely against this. Using my hard earned taxpayer money to pay for a gondola that benefits 2 ski resorts is a travesty. Not to mention the negative environmental impact. An emphatic NO.</p>
33884	Greg Hewitt	<p>The gondola is unneeded and a waste of taxpayer money. There are only a few days per year when canyon traffic is unworkable. UDOT could easily restrict traffic or implement a toll on those days. Besides those few days, people are not going to want to pay \$35+ to take a gondola up the canyon when they can drive up the canyon for free. Thus, the gondola will barely be used except for the busiest days. Yet it will permanently alter the landscape and significantly affect outdoor recreation. Large amounts of historic rock climbing will be destroyed. And the gondola will ruin views for the many hikers, skiers, snowshoers, and other outdoor enthusiasts, who venture into nature to escape the city. For these reasons, and many more, UDOT should not construct a gondola up Little Cottonwood Canyon.</p>
33885	Eric Buckel	<p>I am for the Gondola.. Last winter when there was an avalanche, people had to wait it out at the resort.. The Gondola ensures people can get out of the canyon if needed.. Some people say its an eyesore, well i say to them, then tear down the snowbird lift to the mountaintop and walk up!</p> <p>I am for the gondola.</p>
33886	Nick Terry	<p>I fell in love with Little Cottonwood Canyon in 2011 when I moved to Salt Lake City from Seattle, WA. The natural beauty, steep terrain, and unparalleled snow conditions that bless the central Wasatch are what made me keep returning to Utah each ski season until I permanently settled in Salt Lake in 2020. The influx of people who have relocated to Salt Lake in the recent years has definitely warranted a solution for the winter-time ski traffic, but personally I do not think that building the world's longest gondola is the best option. Truthfully, the biggest priority should be to stop the Great Salt Lake from shrinking. If we do not, and the lake dries up, then the world-class skiing that Utah is famous for will not exist and the landscape will be plagued with a \$550 million dollar eyesore.</p> <p>Instead of the gondola, I think that bus lanes should be added, bus services should be improved, and private vehicles should be tolled. There should be an emphasis on using a fleet of electric buses and even private passenger vehicles that are emission-free should be rewarded with a reduced toll. I understand the extreme weather and avalanche conditions in the canyon and I get why there is a push for an above-ground transportation solution, but it would be more reasonable to start with less invasive options. For example, there could be snow sheds built in the avalanche paths that would divert the snow and keep the road free of debris.</p> <p>Something else that I have noticed with resolving the transportation issue is that skiing and snowboarding is a very gear-intensive sport and without a personal vehicle with you at the resort, it becomes very inconvenient to manage all of your gear. Alta and Snowbird both need to massively expand their day-use areas and provide way more space for people to have lockers, eat their own food, and be able to escape the elements. Thank you UDOT for allowing the public to voice their opinion on this issue. I hope there is a better solution that we can come up with that is agreeable for not just the winter-time crowds but for everyone who loves Little Cottonwood Canyon, no matter what their choice of recreation is.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35361	Kaesi Johansen	<p>I am a resident living at the mouth of Little Cottonwood Canyon, but even if I didn't live here I would be concerned with the overall cost of a project that benefits only two resorts and the developers at the expense of taxpayers.</p> <p>The addition of the Ikon Pass several years ago compounded traffic problems. Traffic seemed much improved over the past couple of winters with the implementation of reserved parking at Snowbird the first year and then Alta the second year. What steps are the resorts taking to solve this problem? I feel that Snowbird and Alta should be part of the solution to the traffic issues rather than looking to taxpayers to pad their pockets without having to put any skin in the game. The resorts should be footing the bill for the gondola. Traffic for University of Utah and BYU football games is ridiculous too -- is our next move going to be adding gondolas to those locations as well? I feel that our money would be better spent improving mass transit along the entire Wasatch Front to benefit the greatest number, rather than "improving?" a projected 50 days a year for skiers trying to reach an already over-crowded resort. I have often heard comments that resort users only get to ski down half the mountain before they have to stand in line for the next chair lift up. What's next? Turning over more land to the resorts for their expansion to accommodate the increased number of users? The future of Little Cottonwood Canyon is at stake with this decision.</p> <p>I lived in Cottonwood Heights for twenty years and moved to the mouth of Little Cottonwood around 5 years ago. The year round winds at the mouth of Little Cottonwood Canyon are much more severe and noticeable than we had in Cottonwood Heights. Last winter my neighbor's weather station clocked winds gusting to 80-90 miles per hour on several occasions. We lost shingles and mature trees along with sustaining other wind damage. I recognize that the Snowbird Tram is on a peak but it is often closed for wind. How realistic is it that the gondola will be reliable and safe with the wind we receive in the canyon and surrounding areas. What wind speeds are safe for the gondola and how often do wind speeds in the canyon and LaCaille areas exceed that level? Will the gondola also need to shut down following winds for safety inspection? How many of those 50 projected days will be taken away because of wind and safety inspection? Has a study been published regarding wind issues?</p> <p>I'm also concerned with bringing the additional traffic to the base of the gondola at LaCaille. I feel that the congestion that we are trying to alleviate will not be solved with the number of cars coming and going. The gondola option is only solving the traffic problem for the few miles up Little Cottonwood Canyon. The rest of SR210, Wasatch Blvd, 9400 South and surrounding areas will find no relief from the traffic congestion. Dispersing traffic throughout the valley and using bus service/mass transit will alleviate this issue. Of course this option would not be as appealing for the developers at LaCaille and it appears that they are the ones driving this gondola option.</p>
33887	Carson Keim	<p>Regarding the 2500 parking spaces, what visual impact will be involved with that structure? Will it tower above North Little Cottonwood Canyon? We don't want the worlds largest gondola, I mean eyesore, in our town. Here's an idea, just limit the amount of ski lift tickets per day. There goes the traffic problem. Your idea only makes the two ski resorts richer I swear you are doing some shady scandal with them. They have PLENTY OF MONEY</p>
33888	Susan Birtcher	<p>I was born in Las Vegas, NV, in 1952, while my dad served in the Air Force. Both my parents were born and raised in the Salt Lake Area. Riverton and Bingham Canyon. Upon his discharge, we moved back to Midvale. My parents built their first and only home in 1957, on [REDACTED]. I love that Canyon! In the 1970's skiing was considered expensive but not out of reach. My dad and youngest sister skied every Sunday. My dad was not a wealthy man, he worked on KCC as a electrician. But now, everything has changed. Greed has taken over, only the very wealthy can afford the "Greatest Snow On Earth". So let them pay the price. Ruin our canyon for generations to come just so the elite won't be inconvenienced for less than 2 months? Ridiculous! I beg you to not let this project be accepted. Please think of the majority of the residents of this great state of Utah who want to preserve this beautiful and pristine canyon for everyone forever. Sincerely, Susan Birtcher</p>
33889	Jessica Callister	<p>We as tax payers don't want to pay for this. If the private resorts pay for it sure. But I am not paying for something I don't agree with. I'd rather have the city and state use my tax dollars for teachers, & first responders.</p>
33890	Jessica Callister	<p>How is this going to affect the accessibility community?</p>
33891	Emily Stevens	<p>I don't support this.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33892	Evan Tobin	<p>I am extremely disappointed in the Final EIS as released on August 31, 2022. I made several submissions during the public comment period but some questions were ignored or not answered completely. One comment was completely ignored because it was submitted during the extended comment, it looked like most comments during the extension were ignored. The extension was publicity only, totally useless.</p> <p>While comments from entities such as Save our Canyons, the Town of Alta, Cottonwood Heights and others were specifically named, comments from individuals like myself were answered in broad generalities or not at all. Some of my comments were addressed and clumped in with the comments of others. Topics like modern solutions being proposed by companies like "The Boring Company", such as tunneling were dismissed outright. Other comments I made regarding running busses later in the day to reduce the traffic at the busiest times were never even addressed. They commented that busses might run till 7pm for the gondola, but never addressed that I suggested busses should run till 10 or 11 at night so people shouldn't be pressured to rush down the canyon. Apres Ski is something that people like and want, but the current bus schedule stops at 6pm, it's part of the problem! I'm not just talking about drinking in bars, there are after ski programs run by both Alta Community Enrichment(the Alta Arts Council) and Snowbird, like films, lectures, workshops, classes and more that people can't attend if they use the busses with the current schedules. People could stay up canyon and have dinner before heading down if busses ran later. Park City's free busses don't stop at 6pm, they have a real transportation system!</p> <p>I have read the huge volume of pages of response to comments in the EIS and I am appalled by how dismissive UDOT was of important issues and responded only with "outside the scope" or "not under the control of UDOT"; yet UDOT made broad statements over issues which they clearly do not have control over and have now further shown how biased and self serving this EIS document is.</p> <p>UDOT clearly states they don't even know who would run or manage the gondola after they build this monstrosity for almost a billion dollars! They claim they will have contractual control, yet they also make claims the busses will run every 5 minutes between the mobility hubs and the gondola. This is not under their control as made painfully clear by the fact that they said the "phased implementation" would include more frequent busses and UTA has just announced cancellation of major LCC bus routes and cutting the frequency of the remaining routes in half, not increasing them as UDOT claimed. This entire EIS is a sham. People were finally utilizing busses with the moderately enhanced schedules last year and it really helped traffic along with the parking reservation systems at the resorts. Now with UTA cutting service, we will take 2 steps backward. UDOT pointed out in the comments that a distributed shuttle system proposed by commenters was a valid alternative but</p>
33893	Travis Cook	No gondola. Change traffic patterns. Add more busses. Have Alta and snowbird do shuttles
33894	John Hoffman	I am against the Gondola in LCC. There is no way this will help our ski experience or our canyon experience. I would suggest direct buss routes from parts of the valley that pick up in various spots and go directly to the resorts without stops. This would help all of the traffic in the whole valley especially around the mouths of the canyons and that east side.
33895	Cindy Hulet	I am opposed to the Gondola Project in Little Cottonwood. I use the canyon at least weekly in the summer and winter for hiking and snowshoeing. I do not ski. The gondola will only benefit skiers. It is very expensive and will impact the beautiful canyon and recreation areas (I am also a climber). I would prefer a toll for the canyon and bussing to ski resorts. Thank you for your consideration! Cindy
33896	Karen Abele	No to the gondola
33897	Nelli Crofts	Please reconsider the Gandola, there are other alternatives that need more consideration such as buses going up to the ski resorts. You could use a similar take of Zion Canyon Shuttle see link: https://www.nps.gov/zion/planyourvisit/zion-canyon-shuttle-system.htm . It is a great way to give access to not only ski resorts but other stops on the way to the resorts. The Gandola only serves the ski community and mainly the business. It should think of everyone. Traffic does get bad so why not shuttles throughout the year and closing the road during high times.

33898	Sara Mantlik	<p>Dear UDOT,</p> <p>Thank you for compiling the detailed EIS report that clearly lists out the main options and an overall review of how the analysis and impact study was conducted.</p> <p>The main concern with the final EIS proposal is the very narrow focused scope of the project being the evaluation of options being considered to improving the mobility and reliability of transportation on S.R. 210 overall for winter ski traffic. The problem regarding mobility and reliability is now becoming a matter year-round and impacts S.R. 190. Seeking scope expansion to cover recreation users for the 2.1m users as listed in section 1.1.2.1 for S.R. 210 and the additional users for S.R. 190</p> <p>My first suggestion is to expand the Scope of purpose statement to include improving the mobility and reliability of transportation in S.R. 210 during year round peak periods.</p> <p>As an avid snowboarder, hiker and mountain biker, I want to see a long-term solution that also addresses areas I use in the canyon such as the red pine trailhead and all throughout big cottonwood canyon (S.R. 190).</p> <p>When considering the current scope of the Final EIS statement - My recommendation is enhanced bus service without road expansion in S.R. 210 is the best solution moving forward as it is a scalable solution that minimizes permanent environmental impact in S.R. 210. Per page 2-142 of the Final EIS the cost of phase implementation is \$110 Million with a \$7 million operating budget. This solution can be implemented with out permanently changing the landscape. This solution has a 54 minute proposed transit concept which is one minute shorter than the Gondola B alternative as recommend by UDOT.</p> <p>Per page 2-89 Final EIS statement</p> <p>The gondola would not operate if artillery is being used for avalanche mitigation since the artillery shells would pass over the gondola towers and cable (up to six times per year with snow sheds in place). As soon as the avalanche mitigation using artillery is completed, the gondola would begin to operate even if S.R. 210 is closed to remove snow from the avalanche mitigation. Some of the gondola towers and parts of the alignment would be within an area where there might be artillery shell fragments. The gondola cabins would not be on the cable within the fragmentation zone when artillery is being used (gondola cabins can be stored at the nearest station). After avalanche mitigation using artillery is completed, the cables would be inspected by cameras and magnetic imaging devices, and the towers would be inspected by video, to ensure that no damage has occurred. To reduce the need for avalanche mitigation using artillery, snow sheds have been included with Gondola Alternative A (see Section 2.6.4.4, Avalanche Mitigation Alternatives). (This applies for Gondola B) Snow sheds could reduce the need for avalanche mitigation using artillery by 80%</p> <p>This demonstrates that the Gondola B alternative does not solve the problem of moving people during avalanche mitigation and if the cables were determined that they needed repair this could potentially shut down the gondola for the season. It is fiscally irresponsible for UDOT to recommend moving forward with a \$550 Million dollar construction project that will require the \$110 Million cost of the enhanced bussing to bridge the time gap. That brings the total of the Gondola system</p>
33899	Janice Gerritsen	<p>I totally agree with Mayor Wilson's comments. The gondola is too expensive to just serve 2 ski resorts; it will ruin the beauty of the Little Cottonwood Canyon; one would still need to take the bus or park a car to get to the gondola.</p>
35364	Roger H Reese	<p>A really bad idea. Don't spend all that taxpayer money, and tear up the environment just to aid 2 companies for a few weeks a year.</p>
33900	Tom Seeley	<p>This gondola project does nothing to solve the traffic problem in our canyons. Cars will still need to navigate to the base of the canyons which is where the problems truly exist. This gondola idea looks like a tax payer funded pet project for Snowbird and Alta. If they want it, they can pay for it and maintain it. Build a train, run more busses. These are real solutions.</p>
33901	Daniel Haskell	<p>Thought for our watershed! The impact of the Great Salt Lake and it's connection to our beautiful wasatch front clearly predicts the ski resorts future! We the people need to save our salty lake so the for profit ski resorts can fund their own traffic problem. This money should go to the lake! Thank You</p> <p>Daniel Haskell</p>
33902	Peggy DeVeney	<p>The current proposal of a gondola system is not the right solution to alleviate traffic is an ever more congested Little Cottonwood Canyon. The money spent on this multi-year until it is complete boondoggle will not reduce traffic in the canyon. The money would be better spent on building a larger parking structure at the mouth of the canyon and then increasing busses up and down the canyon.</p>
33903	Babak Gilbert	<p>Absolutely NO on the gondola. Don't ruin an entire canyon just for the benefit of two privately owned resorts that'll make use of it a few months out of the year. This will be the biggest waste of taxpayer money just to benefit two resorts. You should be ashamed of yourselves if you allow this to pass.</p>
33904	Brian Derouin	<p>The speeds that are being experienced on Route 210 beginning at Fort Union Boulevard and going South are unacceptable. There is no reason for vehicles to be travelling through that intersection at 50-60 miles per hour. As Southbound cars approach that intersection, that would be a perfect place to reduce the speed limit to 35 miles per hour.</p> <p>The distance from Fort Union Boulevard to the High T intersection is approximately 2 miles. Reducing the speed from Fort Union Boulevard to that intersection from 50 MPH to 35 MPH would add 60 seconds of travel time. Given the delays getting up the canyon, arriving at a backup of traffic 60 seconds later would not make a difference. Surely that is a small sacrifice in order to maintain safety in these neighborhoods.</p> <p>Other things that should be addressed on Route 210 are:</p> <ul style="list-style-type: none"> •The merge sign for Northbound traffic just beyond the High T intersection is confusing. It shows traffic from the High T merging into the left-hand lane but ignores the fact that the right-hand lane disappears and that traffic has to merge into the left-hand lane. •The "Your Speed Is" sign for Northbound traffic approaching the High T intersection is located where there is no change in the 50 MPH speed limit. It should be located further North just before Kings Hill Drive where the speed is supposed to drop to 40 MPH and where there is a blind intersection. •Speeds in that stretch of road should be monitored and enforced. I have lived here for almost 40 years and travel Wasatch Boulevard almost daily. In that time, I have yet to see a vehicle pulled over for speeding or seen the use of radar to control speeds.
33905	Ashley Witham	<p>Please do not go through with this. Let nature be nature.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33906	Robert Waldrop	We don't need the tourist attraction. We have the religious circus for that. Climbers, hikers, bikers, backcountry skiers are really going to be affected by this thing. We don't all resort ski. It's gonna look hideous. A monument to the pathetic bending of these in power to their greed, in sacrifice of the most beautiful, valuable resource we have.
33907	Anthony Brown	I am opposed to the capital expenditure for a gondola. You need to come up with another viable and fiscally responsible option. NO on building a gondola.
33908	Laura Orides	Putting a gondola in little cottonwood, while it may be convenient for skiers and snowboarders, totally disregards and negatively impacts all the other people who try to enjoy the canyon. It is not the most beneficial move for Utah, the environment, or the people, it is the most beneficial move for the big money makers up the canyon. If UDOT cares about the people, they will not move forward with the gondola construction.
33909	Sarah Jean Hoggan	For Big Cottonwood Canyon residents, I suggest that during the tolling period residents be allowed to apply for two license plates that will be exempt. Since the tolling will be done electronically, a computer can cross reference the exempt license plates from receiving a toll bill.
35365	Barbara Campbell	<p>My husband and I are adamantly opposed to a gondola in Little Cottonwood Canyon. The environmental impact alone is upsetting and the elitist benefit to the ski resorts does nothing to benefit the Utah population at large.</p> <p>Allowing only buses on the road during key ski times is an appropriate alternative. One of your spokespersons said the gondolas would transport fewer skiers but deliver them faster than the buses do. This is not a selling point. The time differential between the gondola and the bus is not significant.</p> <p>I send this email with a heavy heart knowing you are going to do what you please regardless of the wishes of the voters. However, I do want to go on the record as being opposed to the gondola. Developers always win in this state anyway!</p> <p>Barbara's iPad</p>
33910	Rhianna James	<p>The selection of the gondola as the solution to a relatively infrequent problem is the wrong choice, for a number of reasons.</p> <p>Firstly, I am not a resort skier, but I still frequently use the Cottonwood Canyons for other outdoor recreation opportunities (cross country skiing, climbing, hiking, trail running, etc.). The gondola will not stop at trailheads, and as such would be an ineffective solution for a substantial portion of the use within the canyons.</p> <p>Secondly, only two private entities will benefit from the installation of a gondola: two ski resorts. They are not hurting for money and should not be given a subsidy provided by the taxpayers. Tangentially related to that, it is one of the most expensive options evaluated in the EIS. Although it may be one of the cheaper ones to maintain on a yearly basis, projects such as this always go over budget during the construction phase, and I have no doubt that this will cost the taxpayer substantially more than expected.</p> <p>Thirdly, it will be a hassle to use, especially for resort guests with baggage. Most gondolas do not have substantial luggage storage, and I expect these ones will be no different. Additionally, it will likely cost money to park, and each gondola ride will require a ticket, which will cost money, and will be an expensive addition to a family outing to the ski resort. Additionally, the average travel time is listed at 43 minutes, but that does not include boarding time, wait time, etc. I suspect many people will not use it because of the additional time and hassle.</p> <p>Fourthly, the gondola will result in environmental degradation that will never be corrected. The views of the canyon will be forever tarnished by electric cables and the running of machinery, rather than the sound of water and pristine-looking views. Additionally, the construction of the gondola would render many popular, world-class climbing areas inaccessible for years, if not forever. Little Cottonwood Canyon is a premier destination for climbing, and it would be a crime to lose such access.</p> <p>Finally, and perhaps most importantly, is this solution increases the disparity between marginalized peoples' and wealthy peoples' abilities to access recreation in the canyon. By implementing a gondola, it removes easy access to backcountry options that are more economically feasible for many people and prioritizes wealthy peoples' access to the ski resorts. This is the opposite of what we should be doing.</p> <p>For all of these reasons, I am against the construction of the gondola. There are a number of solutions that I think could be implemented in tandem to reduce traffic while maintaining access: tolls on all cars going up canyon, except for ones that have four people in them; expanded bus access and cheap fare; and required parking reservations at the ski resorts, so that they could only take as many people as can comfortably park in their lots. I believe all of these would be better for both the canyon and the taxpayer.</p>
33911	Sammie Nazzise	No gondola! Talk about ruining the beautiful of the canyon not to mention the huge traffic jam at the bottom of the canyon.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33912	Michael Osterman	<p>I'm a skier and rock climber in LCC and I, along with everyone I personally know who also uses the canyon for these activities, am absolutely opposed to the construction of a gondola.</p> <p>The "red snake" is a very predictable problem limited to maybe 20 days in winter out of the entire year when a great powder day falls on a weekend. Spening \$600M (at the low end) to ostensibly fix such a temporary issue is a terrible public investment and seems a pretty poor idea on its face for any public works project even if it did benefit the general public in some way (which this gondola certainly would not).</p> <p>Assuming a gondola actually alleviates traffic on those days is itself doubtful depending on how much a ticket costs to ride the thing; the proposed \$37 fee having been removed from the Gondola Works website makes it difficult to know. What is certain is that the only ones who'll benefit are the private ski resorts and interests who own the land at the base of the canyon (Snowbird and former legislators among them). That's not to mention the permanent scarring of the canyon required to build it and the fact that it'll be a permanent eyesore. Is there really no better use of public funds? I'd like to see investment in public transit throughout the valley that'd actually serve a year-round purpose and help alleviate road traffic for commuters generally, not this project which seems so baldly tailored to line the pockets of already wealthy businesses and individuals.</p> <p>Maybe even more fundamental of a problem is the issue of skier congestion at the resorts in the first place. Lines for lifts on the busiest days can easily exceed 45 minutes as is. Even were we to assume the gondola is the most efficient way of moving people up canyon, the bottleneck would just shift to the slopes. If the resorts could teleport people up from the base they'd still have a real estate problem. It seems to me the resorts either entertain some fantasy that they can expand endlessly or they're aware of the issues related to increased attendance and still want to cram in as many paying customers as possible anyways.</p> <p>So if construction of a gondola doesn't benefit skiers or the general population, what justification can there be for it? Just the drivel presented in the Gondola Works ads as flimsy guise to distract from the truth that it's a cynical and short-sighted money grab on the part of the interested parties. I realize contractors and developers have a lot of pull in Utah politics, but I beg UDOT not to cave to those interests and permanently deface what is one of the most beautiful canyons in the state.</p>
33913	Angelika Daws	Awesome post.
38673	Anonymous	Don't toll our access to the canyons ??
33914	Mariah smeeding	please do not build this gondola.
33915	Ryan Moss	<p>Given all the research and consideration of different view points driven by safety and environmental impact being so heavily weighed in this recommendation for a gondola, I believe it makes the most sense to approve the project. I fully support the project and the validation presented.</p> <p>Ryan Moss</p>
33916	Harold Cole	I just can't understand how if the needs of most people in northern Utah were listed by seriousness and the benefit from half a billion dollars examined that a limited interest sport would outweigh homelessness, gun violence, medical/dental care of the uninsured and special needs of our new immigrants. That inappropriate use of dollars makes no sense. Even saving money for the time when Utah will pay a greater portion of the medicaid costs now being paid with federal funds would be more appropriate. Harold Cole, MD
33917	William Carter	I think the gondola is a big mistake. It prioritizes private business access (the ski resorts) over public use of lands and other alternatives that would reduce car traffic in LCWC. I understand the appeal but it will permanently blight the canyon landscape (think... European ski resorts) and isn't proven as a viable way of getting traffic under control in the first place. The focus should be on decreasing car traffic with incentives to carpool, tolls, and better bus access. Currently buses (like the gondola) don't stop at trailheads where hikers or backcountry skiers can access public land. There are main mitigation strategies that haven't been tried - a gondola is a last resort and is too "permanent" a solution for this beautiful canyon.

ID	Full Name	Comment
33918	Victoria Garaycochea	<p>I am writing to you about UDOT's proposed transportation alternatives in Little Cottonwood Canyon and the risk they pose to non-resort users, such as climbers. UDOT has identified two preferred transportation alternatives to mitigate winter-time traffic issues: a gondola or widening the road for additional bus-only lanes. I am advocating for a less impactful alternative: expanded bus service that is fiscally sound and would serve all canyon users year-round.</p> <p>UDOT's proposals for transportation focus only on ski resort users. There are many other users of Little Cottonwood Canyon who enjoy climbing, running, biking, and hiking. UDOT fails to remember these users.</p> <p>The proposals for a gondola or widening the road are both very expensive (\$500 million). There are more cost effective solutions such as having a more comprehensive bus service that would also protect the canyon's beauty.</p> <p>The UDOT proposals will only help mitigate traffic at the busiest time of winter, while having a more comprehensive bus service would help traffic throughout the whole year.</p> <p>My family moved to the Wasatch front in 2021 because of the accessibility to climbing, hiking, and camping. One does not need to have a gym membership or travel hundreds of miles to experience world class bouldering and climbing in Little Cottonwood Canyon. The canyon's climbing is very accessible to people who might not have the privileges to afford more expensive extracurricular activities in the ski resorts. Also, the pure beauty found in Little Cottonwood Canyon is so special to the Wasatch front. It would be tragic if this canyon were to be negatively impacted for the sake of one user group's busiest time of the year. Please keep Little Cottonwoods nature unharmed.</p>
33919	Nora Johnson	<p>I am opposed to the gondola!!! I am a backcountry and resort skier and I want to preserve access to other parts of the canyon other than the ski resorts. They should implement tolling and rapid bus service instead (maybe electric busses). It would be so expensive to have to pay for parking, the gondola, and then the ski resort for families.</p>
33920	Afton Bunker	<p>There will be too much traffic near the mouth of the canyon because of it. It will also ruin the beauty of the canyon. The canyon will get too crowded. The gondola is NOT a good idea whatsoever.</p>
33921	Tamie Graves	<p>I completely disagree with the plan to go ahead with the gondola. It will only benefit a small amount of people going up the canyon to ski, it is too expensive and there are much better alternative solutions ie electric buses. Even residents of the canyon don't want this permanent fixture and would rather continue to deal with traffic. Just because gondolas are common in Europe doesn't mean it's the right solution to our problem in Utah. Please use common sense, long term thinking to solve this issue.</p>
35372	Aleen Fuelling	<p>PLEASE DO NOT build the gondola or widen the road in Little Cottonwood Canyon. Use more buses, a fee or alternating days for use. The taxpayers do not want to pay for this. The only ones who want the gondola/road widening are the ski resorts and the people who bought property at the mouth of the canyon hoping to make a lot of money off the projects. WHY doesn't UDOT worry more about the safety of the freeways/highways. It's so hard to see the lines for the lanes especially when it rains or snows. Can't you use reflective paint or in road reflectors? Please take a look and let the public know what can be done to improve this.</p> <p>Aleen Fuelling</p>
33922	Lorrie Belcher	<p>Since we're in a drought where does UDOT plan to get the water to run the gondola. We're in a drought We're in a drought We're in a drought</p>
33923	Jeff Mikaelian	<p>At least there is no funding for the "preferred " alternative. Again, half a billion to increase the profit for 38 days of two private businesses. I have commuted up the canyon for over 40 yrs, and avalanche delays are rare. When the avy danger is that high, the ski slopes are closed due to danger, so what's the rush. Phasing in things is better. The Tolling sounds complicated and very expensive. \$25 to \$30! And the Gov handling it expensive to tax payers. The resorts are the problem and should be the ones handling the bulk of the solution. As they are starting to do, they charge for parking to encourage car pooling. If only tolling those cars going above Entry 1, then the resorts charging parking would be the simplest solution. No complicated fee structure at the bottom of the canyon. UDOT is touting safety, and all, when the problem, as stated in the EIS, is getting more people to the resort on weekends. They also know as soon as they 30% of cars off the road. That many more will take there place. End result is that already crowded weekend skiing will be even less enjoyable then it is now. Sad but true, the Canyons are being loved to death</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33924	Hannah Peters	I am against the preferred alternative of Gondola B an in favor of the Enhanced Bus alternative for a few reasons. First, I do not believe the gondola will actually improve travel times in LCC a compared to the Enhanced Bus. In the Alternatives Impact Summary, UDOT states that the average travel time (any mode) with the Enhanced Bus alternative would be 46 minutes and the bus time would be 54 minutes. With the Gondola B alternative, the average travel time (any mode) would be 43 minutes (only 3 minutes less) and the gondola travel time would be 55 minutes (1 minutes more than the bus). However the gondola comes with a price tag of \$550 million while the enhanced bus solution would cost \$355 million. That's a difference of almost \$200 million for no discernible difference in travel times. Furthermore, the gondola would only stop at two locations in LCC: Snowbird and Alta, 2 privately owned resorts. Under this solution, UDOT is proposing to spend \$550 million public taxpayer dollars on access to two private resorts that account for only 23% of LCC visitors throughout the year. While the buses currently only stop at the resorts, the route could be adjusted to provide access to trailheads throughout the canyon and could be expanded to provide year-round access. Finally, I am concerned about the environmental impacts of building the gondola in LCC which is a fragile ecosystem and essential watershed for our city. On average, 90% of Salt Lake City's water supply comes from the Wasatch including LCC. The construction of 22 gondola towers in such a fragile and essential environment could have a massive negative impact on the creek we depend on. Meanwhile, the Enhanced Bus solution would require no further construction, nor would it impacts the views that bring people to LCC. According to UDOT's evaluation criteria, the stated goals of the chosen solution are to improve mobility in 2050 and improve reliability and safety in 2050. Other top considerations include impacts to natural resources and the built environment and cost. According to these criteria, I do not believe the gondola is the best solution for LCC. The gondola would offer little improvement to mobility in LCC compared to the enhance bus solution while causing much greater impact to the natural resources and at greater cost to the taxpayers. For these reasons, I suggest UDOT reevaluate the alternatives an implement the Enhanced Bus solution.
33925	Hans Hjelde	Hello- I'm in favor of the Gondola proposal. I have lived in Utah for 25 years and think it's a no brainer. It's the best way to get cars off the rd and have access year round. Thanks
33926	Nikki Smith	I am writing in opposition to the Gondola. There are many other less expensive, and less destructive ways to support the growing number of skiers in Little Cottonwood Canyon.
33927	Mark Handy	No no no. If the ski resorts need it, they should pay for it. Plus the Fact the with global warming , this will just be a temporary fix while scaring the Canyon for many more years than that. Why not limit the number of skiers per day?
35373	EDDIE CLARIDGE	With the announcement of a REDUCTION of bus service to LCC & lack of funding for the phase in plan & gondola this effort seems like a waste of money, not to mention an exercise in futility!
33928	Julia Disney	I am a resident and homeowner in Salt Lake County, as well as a frequent enjoyer of LCC. I strongly encourage UDOT to reconsider their proposal of a gondola. Increased public transit as well as tolling for use of the canyon (especially for ski resort-specific traffic) would be a much less invasive means of managing traffic, preserving the beauty of our canyon as well as providing a means of revenue to support maintenance of the road and toll. A gondola will not only destroy the natural beauty of the canyon but is also jumping over so many less aggressive solutions.
33929	James McGauley	Josh -- UDOT's data does not support the need to expand Wasatch Blvd or to construct a gondola/garage complex as described in the final EIS report. You know this is true because we discussed some of these details in my meeting with you, Terry Warner of HDR and Jon Nepstad and Chris Bender of Fehr & Peers on September 15, 2022 in HDR's office. The flawed data needs to be examined in great detail before any changes are initiated. Respectfully, but disappointed /James McGauley
33930	Ronaldt Aguilar	You can never trust your local government, you will mess up the natural beauty of Little Cottonwood with this monstrosity
33931	Angelico Ramirez	Please dont do anything. I havent been to little cottonwood yet but it is on my bucket list on places to climb
33932	Daniel Gonsalves	Please do not add another attraction, or gondola, to little cottonwood canyon! It is already packed with little to no parking because of the natural beauty. Leave it the way it is please!
33933	Ethan Romer	Please do NOT build a gondola. The truth is that LCC has a carrying capacity, and building a gondola won't change that. The best way to reduce traffic is to charge a higher price. Basic economics--a higher price results in a lower quantity demanded, solving the problem of congestion. Also, a lot of use in the canyon is from backcountry travelers. I exclusively backcountry ski and a gondola that only caters to ski resorts won't help one bit. Finally, the most important piece--this will cause irrevocable harm to the environment. The answer is not more, but rather, less.
35377	Lillian Trettin	A huge price tag for little overall benefit! Bus service makes a great deal more sense. We visit often, have family living in SLC. They are also opposed to preferred alternative. Lillian Trettin 
33934	Ben Fox-Shapiro	Please do not build the gondola. The way it is proposed, it will take way too much time to ride the gondola up the canyon compared to driving and no one will use it, resulting in a big, expensive eyesore that will sit unused most of the time.
33935	Margaret Hatch	Please DON'T do this boondoggle for the ski resorts that will hurt the rest of the population--and I'm a skier!
33936	Amy Steenblik	I really enjoy the mountains and rock climbing in the area. If a gondola was put in, it would ruin the experience and cost way to much money. We the people should have a say in what our tax dollars are getting used for.
33937	Betty Barnett	The gondola should not be publicly funded, then restricted to only those who can afford it. This is not a solution! It is once again catering to the wealthy and I am completely against it.
33938	Justin Lee	I support the gondola due to its ability to be automated, carbon neutral, cost neutral to the alternative, and for the appeal of a large scale public works project that is unique.
33939	Suzanne Johnson	Please don't ruin our canyon. We should not be subsidising big business.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33940	Nancy Tanner	I drove up Little Cottonwood Canyon a couple of days ago. What a gorgeous canyon to drive and experience. I stopped multiple times on the drive up and down. Viewed Beautiful trees, awe inspiring slopes and the flowing creek. The raw nature of the canyon is biblical. It's a place I feel close to our maker. I cried as I thought of the destruction that will take place with the installation of huge towers going up a narrow canyon with access roads to each of those towers. Such destruction of our nature. I wish there were those persons in power that loved the beauty in nature.
33941	Emily Augason	While change is inevitable, this is not the solution. I grew up climbing this canyon as well as visiting snowbird. We have a time share at snowbird and live in sandy. Who says world class skiing is more important than world class climbing? That's simply and opinion. Think of other options: local annual passes allowing entry to the canyon, limited weekly entry, etc. there are options that don't affect the beauty of the canyon. It's world class for a reason and adding easier access for the public ruins that. Look at national parks- preserving the land while allowing people to experience it. Controlling the amount of people will in turn keep the canyon preserved.
33942	Andrea Farasopoulos	This gondola is only benefitting the ski resorts. They should be the ones to be paying for it, not taxpayers. I will literally never use the gondola yet I will be helping to pay for it. Force the ski resorts to pay for it, or figure out something that isn't on taxpayer dime.
33943	Luke Diamond	I am against the LLC Gondola project. I am a Utah voter and I ski, mountain bike and rock climb in Little Cottonwood Canyon. I would like to see the money going into this project used for a better way to solve the transportation problem such as improving the bus system, promoting carpooling. Thank you, UDOT for getting to the bottom of this. I hope Utah's voice is heard.
33944	thomas loken	I am against the gondola option. Main reason; gondola will just be stopping at two ski resorts. I believe mass transit (buses) stopping at multiple sites and during the entire calendar year is a better option.
33945	Marybeth Cannon	I am opposed to the funding and building of a gondola in Little Cottonwood Canyon. The gondola solution to congestion in our beautiful canyons will not be solved by a billion dollar taxpayer funded gondola in Little Cottonwood Canyon only. I believe that this is not a wise solution financially or environmentally and would be disproportionate in its cost vs benefit for every taxpayer. Let's try more common sense solutions that could benefit both Big and Little Cottonwood canyons and not be a tax burden to non-skiers. Thank you. Marybeth Cannon
33946	Nancy Kessel	If this was truly for the public's benefit, the gondola wouldn't drop riders off only at the resorts. Put the environment and public before blatant greed, please.
33947	Michael Kempt	Pro Gondola. Greenest option, safest for avalanche paths. Upper canyon is already littered with cables for recreational purposes. However, ski areas should subsidize cost if it delivers customers only to their doors. There are no accommodations for B/C skiers/hikers/etc
33948	Noah Lebsack	I do not support the gondola. I believe that there are better alternatives that would better suit LCC.
33949	Josi R	I wish that UDOT would listen to public comment and consider environments impact over listening to money of big resorts. There are many others options that a gondola that impacts the environment, the views, the animals living in the canyon and so much more!
33950	Jandi Eyre	No. Stop taking away climbing areas. Stop destroying gorgeous wild areas. We don't want or need it.
33951	Peter Hines	Dear UDOT, I do not support the proposed Gondola project in LCC. I think it is an overkill and too expensive non-solution for the problem at hand that will mainly only benefits Alta/Snowbird and will create a permanent eye-sore in the canyon. Being a native Utahn (Murray) I'm an avid outdoorsman and regularly visit the Wasatch Mountains to hike and ski including Little Cottonwood Canyon. I'm well aware of the overcrowding and the traffic problems in the canyons and LCC which is particularly acute on powder days; however, I think there are other solutions that can address the problem that are much more cost effective and less environmentally impactful then a ugly gondola defacing the natural beauty of LCC. Feel free to contact me directly for additional commentary. Peter Hines,
33952	Tracy Thomson	I am a resident of Draper Utah. I frequent Big and Little Cottonwood Canyons. I am strongly opposed to the idea of a Gondola spanning the length of Little Cottonwood Canyon.
33953	Tasha Jensen	I am strongly opposed to the proposed gondola. There are much cheaper options that wouldn't destroy habitat and would serve more than the wealthy
33954	Gaylord Bartholoma	Trashing of the Canyon is not a viable alternative to anything. Once this kind of activity starts, it will become a beacon for destruction of all our beautiful mountainous beauty and outdoor activities. The answer is quite simple. The ski resorts do not own the mountain and cow-towing to their supposed needs is not in keeping with any consideration for the people who live and enjoy these mountains.
33955	Sherri Fabert	I would like to voice my opposition to the proposed "Gondola B with phasing" preferred alternative to improving transportation in Little Cottonwood Canyon. This decision has negative consequences for the people near Wasatch Blvd. and to all the citizens who will be responsible for paying for this alternative. There will be a direct impact on traffic and adjacent residential city neighborhoods and the price tag is too high to ask the people to pay for the benefit of the few (those entities which will benefit from the gondola). The cost will be passed on to the taxpayer who in most cases won't be using the gondola. I believe either making a dedicated bus lane to move people up the canyon or limiting the number of people who can access the canyon at any given time are better alternatives for all.
33956	Jo Savage	Please don't put this irreversible monstrosity in our canyon!!! We don't want it. There are other solutions. We should be leaving places better than we found it. Not destroying them for profit. Please don't do this.
33957	Robert Andrews	I have been riding the bus up to Snowbird about 60 to 100 days each year for the last 10 years. Please do not do the gondola - one of the stupidist options ever. It should be investigated for corruption of those developers and supporters. Please restrict cars (by added parking expense, etc) and upgrade bus service (free, electric buses). Thank you.

ID	Full Name	Comment
33958	Shawn LaMar	I favor a gondola option. The price tag seems quite steep though. If it were run at max capacity during the ski season for 20 years, that's 10.3M round-trip rides, and about \$54 per r/t. (Based on 36 ppl, every 2 minutes, uploading for 4 hours for 120 days--typical ski season--for 20 year.) Adding maintenance costs and reality it won't run at max capacity, the total per rider cost is likely in the \$70 range. I know that's unlikely the fare because of funding sources, but it is a hefty cost.
33959	Bruce Tremper	<p>1. Who pays for the gondola? This should be the central question Utah taxpayers need answered before UDOT even asks the public for feedback on the project. The gondola services Snowbird and Alta. Period. Also, according to the EIS, the gondola would only run in winter. Thus, the gondola does not serve the public who access the many backcountry trailheads in Little Cottonwood Canyon, nor the public that use the canyon in summer. Therefore, the two resorts and their hotels should pay for the gondola, not the taxpayers of Utah. It seems like a scheme for private interests to externalize costs of transportation to their facilities. If the gondola is the preferred alternative, I'm not even sure why UDOT is taking the lead on this project since UDOT does not design or build gondolas, plus the gondola serves only two ski areas and the associated hotels. For instance, in Telluride, Colorado, where a similar gondola transportation system has successfully operated for some years, it was funded by the Telluride Mountain Village Association via a tax on real estate transfers plus a tax on lift tickets.</p> <p>2. I may not oppose tax money spent on the gondola if it was part of a greater transportation solution for the entire central Wasatch including both Cottonwood Canyons, Salt Lake City and Park City. I have spent a lot of time in Europe where trains almost always connect resorts and communities with a similar setup as the central Wasatch. The original EIS did not even consider the cheaper train options and it only evaluated the most expensive, impractical and environmentally destructive train option.</p> <p>3. I very much approve of the phased plan to first implement tolls and enhanced bus service, all before a gondola is built. These measures would likely solve most of the problems, which would eliminate the need for a gondola.</p> <p>4. There is a lot of misinformation being circulated about the avalanche safety advantages of the gondola. Yes, the gondola would eliminate almost all avalanche hazards for gondola ski area passengers, but LCC would still need a road for trucks, service vehicles and public accessing backcountry trailheads. Snow sheds would help solve most of the avalanche problems on the road and I strongly approve spending taxpayer dollars on snowsheds, which should have been built many years ago.</p> <p>5. Any bus service should also include stops at all backcountry trailheads, both summer and winter. As I recall from previous surveys, public use of the Cottonwood Canyons is equally split between summer and winter. We have seen an explosion of people accessing backcountry trailheads during COVID and it has not diminished after COVID. The White Pine trailhead regularly has cars parked along the road for a hundred or more yards up and down the canyon on most days, both summer and winter. This use will not diminish in the future but will almost certainly increase. Therefore, I strongly support expansion of the backcountry trailheads suggested in the EIS Preferred Alternative. This terrain is the gem of the Wasatch and it's the reason so many people are moving to Utah. But what is needed much more than parking expansion are tolls at the bottom of the canyon or parking fees to encourage carpooling, plus regular bus service with stops at backcountry trailheads both summer and winter. In short, taxpayer dollars spent on transportation for Little Cottonwood Canyon should serve all public, not just two ski areas.</p>
33960	Valerie Hoenig	I am against the gondola. It is not efficient. It will only be used in the winter since there are not enough stops to access hiking trails in the spring, summer, and fall. It will interfere with the natural beauty of the canyon.
33961	Raj N	<p>Making irreversible changes to one of the most beautiful places on earth, must only be done after exhausting all other options. Some of those other options, that do not require altering the Little Cottonwood Canyon permanently, include creating incentives for people to carpool, improve bus service, and most importantly, ask the two Ski Resorts to implement policies that will have a direct impact to the way the limited resources are being consumed. Namely, they must be asked to enact policies that discourage single rider cars, limit the number of people on each resort to what the canyon roads can safely handle.</p> <p>Moreover, the main financial investment for any largescale projects must come from the two businesses that stand to gain most from such projects. Ultimately they bear the most responsibility for creating the problems, that are currently faced by the users of Little Cottonwood Canyon, during the select few winter days.</p>
33962	Summer Millican	<p>I moved into the Little Cottonwood neighborhood in 2021, and my home [REDACTED]. Initially, I did not understand the fuss about the gondola, but now I do. Constructing a gondola at the proposed scale to alleviate what is no more than 7-15 days per year of heightened traffic created by a single tourist industry is an overreaction at best. I urge UDOT to fully reject the initial Gondola B decision and instead choose to implement phased and final approaches like tolling and enforced carpooling, for the following reasons:</p> <p>It is utterly unconscionable to spend even a single dollar of public funding on a project that ultimately enriches private businesses like LaCaille, Snowbird, and Alta with winter/ski use only. The vast majority of Utahns will not benefit from the gondola, or even use it.</p> <p>One of my sons (age 8) reacted to the news of the gondola with the following: "Why would I pay to ride the gondola for that long of a trip when I could still just drive up to Snowbird? I bet a lot of people will feel the same way, so traffic won't improve." Clearly, tolling and permits should happen anyway, and they should fully alleviate the problem if managed well.</p> <p>Finally and most importantly, continued research and media reports in the summer of 2022 have shown that Utah's greatest asset and deepest liability are one in the same: the Great Salt Lake. If we lose the lake, we lose our barely breathable air. More importantly, we lose our lake-effect "Greatest Snow on Earth." If we lose our snow, we lose our ski economy. What then? Half a billion or more in wasted state funds for an unused gondola?</p> <p>Please, shift public funding proposals toward public services that solve problems for the actual public. I beg you, do not fund a project that merely enriches the rich. If we truly care about the environmental and economic future of our state, we need to start with saving the Great Salt Lake, which means saving everyone.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33963	Brook McElmurry	I am completely against this pork project that serves very few but costs an enormous amount.
33964	Cole Perschon	<p>The proposed gondola solution does not solve the true problem in our canyons - overcrowding. Transportation is merely an effect of this problem. Worse, adding a gondola, which would forever ravage our canyon's precious natural beauty, would only compound it further. Additionally, Little Cottonwood Canyon ski resorts do not have adequate capacity to meet the increased occupancy and as such wait times for lifts would suffer even more greatly.</p> <p>The only true solution to overcrowding is to limit access during peak seasons.</p>
33965	Sydney Galbraith	<p>Are we actually considering this?!?!? Come on. It's trul about money not about preserving the canyon. The disaster that would be parking lots and facilities at the base of the canyon alone would be a real mess. Where is this coming from. Your public releases really make no sense when one thinks about it. Please no. Don't destroy what we have.</p> <p>Utah Department of Transportation,</p>
33966	Abby Manning	<p>As many other individuals in the general Utah public, I have many concerns regarding the upcoming Little Cottonwood Canyon Gondola Alternative B proposed Environmental Impact Statement (EIS). With the open 45-day public review and comment period from Sept.2 - Oct. 17, 2022, I would like to contribute a fellow opinion.</p> <p>To start, the overall costs of \$592 million to build this gondola is extremely expensive. Like many other Utah taxpayers, I personally would not like my tax dollars to be invested into this machine. I understand that many public transport systems have similar startup expenses, but this system is not one I think worth the investment. I also know that from bill SB277 in 2017 from the Utah State Legislature, \$100 million was dedicated to Zion National Park, Moab, Bear Lake, and Little Cottonwood Canyon. Of that \$100 million, \$66 million has been set aside for Little Cottonwood. I feel this is an unfit ratio and that other areas in Utah, especially Zion National Park, could invest that money better to their public transportation systems.</p> <p>Taking a step away from costs, a gondola up LLC would only increase traffic to the Wasatch Mountains, causing a bigger issue than solving the parking overflow. As Kyle Dunphey noted in his article, The Utah gondola: A timeline, the 8-mile cable system would be the longest aerial ropeway in the world and would become a tourist attraction. The more people packed into the canyon, the more damage our trails, resorts, and environment will receive. Public transportation systems are vital in every city, especially growing cities as a part of smart growth. I understand that a gondola could help reduce emissions from the amount of traffic through the canyon each day, but it will also increase emissions in other ways such as increased amounts of waste, more buildings that will be needed to support the influx of people, etc. Outdoor recreation is very important to our human health, but there is also a line to be drawn to protect nature and not overstep and abuse what we have.</p> <p>With climate change increasing each year, there have been noticeable changes in our Utah winters. Our snowfall levels are lower than ever, and ski resorts have been forced to produce more snow in their resorts than ever before. According to current predicted trends, global warming is not expected to take a turn anytime soon. This means our ski resorts, the main source of gondola needs, face potential risks in the future, and decreased customers. Building a massive cable system when our snow, that attracts gondola riders, is depleting seems unreasonable. With that, many fear that the gondola is just another way to make more money.</p>
33967	Eli Shackelford	Please please please. No Gondola! My family will invest in almost any other solution.
33968	Kathy Johnson	Other alternatives have been made to reduce traffic, save our beautiful canyon. A 2,500 parking lot, millions spent on a gondola is not the answer! I am definitely apprised to a gondola that ruins our beautiful canyon and does not reduce the traffic in the canyon and near by neighborhoods. NO GONDOLA!!
33969	William Vogel	The ugly dollar near billion gondola project is ridiculous. With global warming and dust storms from themed of the late Great Salt Lake will Alta and snowbird even operative in ten years. And the taxpayer funded gondola if built would confirm what the late great Rev. Martin Luther King said: "This country[USA] has socialism for the rich, rugged individualism for the poor"
33970	Diane Edmonds	I strongly object to a gondola being constructed in Little Cottonwood Canyon. It will negatively impact the beauty and environment of the canyon. I hike regularly on the trails in the canyon. I can imagine how the construction will change the nature of those trails all way up the canyon. Diane Edmonds

ID	Full Name	Comment
33971	David R. Penelope L. Smith	<p>Regarding UDOT's Final EIS for Little Cottonwood Canyon and the selection of the Gondola B as the preferred alternative, we have the following comments. First, UDOT is to be commended for:</p> <p>"Recognizing that safety, mobility and reliability are issues on S.R. 210 today, and that it may take years to secure federal, state and/or private funding for full implementation of Gondola B, UDOT is proposing a phased implementation plan starting with components of the Enhanced Bus Service."</p> <p>While this realization and the phased implementation are clearly steps in the right direction, UDOT has still not taken any action with respect to what should have been the starting point for any planning effort for an improved transportation system for Little Cottonwood Canyon (and as UDOT now admits, a transportation system for Big Cottonwood) as changes to Little Cottonwood will inevitably impact Big Cottonwood Canyon. UDOT needs to start with a comprehensive visitor capacity and management plan. Any responsible plan needs to define what the environmentally sustainable carrying capacity of the canyon(s) is and how any proposed actions will impact this capacity. This should be the baseline starting point for the planning process. That we are now over four years into the EIS and UDOT still has no meaningful idea of what the carrying capacity is makes any of their proposals suspect!</p> <p>UDOT phase-in plan states:</p> <p>"The proposed phasing would include increased and improved bus service as described in the Enhanced Bus Service Alternative (with no canyon roadway widening), tolling or restrictions on single occupancy vehicles, and the construction of mobility hubs. UDOT would also proceed with widening and other improvements to Wasatch Boulevard, constructing snow sheds, and implementing trailhead and roadside parking improvements, as funding allows."</p> <p>UDOT fails to include two additional things which can be done immediately and at minimal cost. These are active enforcement of the traction law to insure that private vehicles have adequate snow tires and the reduced private vehicle traffic that is already occurring due to Alta's requirement for weekend parking reservations and Snowbird's charging for parking.</p> <p>UDOT's recent adoption of this phased approach is not only realistic, but also gives UDOT the option of modifying the \$550 million gondola (it is worth keeping in mind that the new prison which had an initial budget of \$1.8 million had an actual cost of over \$4 million), if they find that the above identified incremental changes result in significant traffic reductions. Perhaps UDOT's traffic reduction goals could be accomplished without the monumental expense and major view-shed impacts of some 20 towers each 200 ft. tall!</p> <p>It is worth noting that UDOT has no meaningful data regarding the fare for the gondola. In Chapter 32.2.4 of the final EIS, they state that "the cost of transit [gondola] will be determined after an alternative is selected and more detailed information is available, and adjustments might be made based on experience and otherwise as appropriate." How UDOT can make realistic forecasts on the potential ridership of the gondola without any idea of how much it would cost to ride is baffling at the very least.</p> <p>UDOT does provide a clue to their pricing philosophy however: "the cost of transit fare [gondola] would be substantially</p>
33972	Robert O'Brien	<p>As a Sandy Utah resident and skier (Alta Season Pass) I am against the Godola due to the cost, serves only 2 private ski areas seasonally during peak times, unsightly infrastructure and construction impacts. I favor enhanced bus service during peak season, weekends and holidays.</p>
33973	Lauren Batcheck	<p>Hi there, My name is Lauren Batcheck and I am a resident in SLC proper ([REDACTED]) and registered voter in Utah.</p> <p>As a resident, I'm amongst many other locals who are opposed to the proposed gondola in Little Cottonwood Canyon. I'm a frequent and year-round visitor to LCC and this would destroy the beautiful nature Mother Earth has provided for us in this canyon. Not only will it devastate the irreplaceable local vegetation and habitation but also the scenic views for all visitors. And it creates additional opportunities for safety hazards in the canyon.</p> <p>I'd love to help in any way with alternative solutions, whether increased bus service, mandatory carpooling, tolling, etc. Let's find a better suited solution together!</p> <p>Thank you, UDOT, for helping solve this challenge while also prioritizing the preservation of nature in Utah. It's so important to our lives and generations to come. Appreciate you and your efforts, thank you!!</p> <p>Lauren</p>

ID	Full Name	Comment
35379	Michael Drews	<p>My name is Michael Drews, and I live about 1 mile west of the western end of the proposed Little Cottonwood Canyon gondola.</p> <p>I am writing to express my opposition to this project. My preference would be to leave the transportation options in close to their current state, and not to increase the peak visitation levels in Little Cottonwood Canyon.</p> <p>I have lived in Utah for the past 40 years, and used to greatly enjoy skiing in Little Cottonwood Canyon, especially at Alta. But in those 40 years the price of ski tickets went up by a factor of 10, the slopes got far more crowded, and the traffic got much worse.</p> <p>I've been skiing a few times in the past years, but the high prices and the crowding do not make for an experience that I want to repeat very often.</p> <p>Last season Alta added a parking reservation system, which greatly reduced the traffic issues in LCC on peak days. Snowbird needs to do the same, instead of trying to pack even more people into the canyon.</p> <p>The canyons have too many people using them already. Perhaps UDOT views it as their mission to provide transportation routes for as many people as wish to get to a particular destination, but it's time to limit the canyon usage, not jam more people in a limited and delicate environment.</p> <p>No gondola, no more traffic lanes, more parking reservations and carpooling!</p> <p>Michael Drews</p>
33974	Lisa Bogardus	<p>As a Sandy Utah resident I am opposed to the Gondola due to cost (550 million), unsightly infrastructure (towers, etc.), construction impacts, and only benefits some skiers and it only serves 2 private ski areas on a seasonal peak basis. I would prefer enhanced bus service to address peak needs during weekends, holidays during the winter.</p>
33975	William Vogel	<p>This is a proofread replacement of the comment I submitted within the last hour. The ugly near billion dollar project is ridiculous. With global warming and dust storms from the bed of the late Great Salt Lake will Snowbird and Alta ski resorts even be operative in ten years? And the taxpayer funded gondola if built would confirm what the late great Rev. Martin Luther King once said: "This country {USA} has socialism for the rich, rugged individualism for the poor."</p>
35385	Syd ArtlsLife 68	<p>It will ruin the Canyon. The extra infrastructure you're going to need is worse than widening the road. The price to ride the gondola on top of ski tickets, is going to be out of reach for most skiers. This is just about UDOT doing whatever they want. I don't know anyone that wants the Gondola.</p>
35382	Syd ArtlsLife 68	<p>NO GONDOLA! YOU WILL RUIN THE CANYON. PLUS WE DONT NEED MORE PEOPLE UP THERE SKIING!</p>
33976	Jane Hudson	<p>I am wholeheartedly against the Gondola proposal.</p> <p>I live in Millcreek, and recreate in the Wasatch Mountains almost every day (year round). I love the Wasatch and feel that we all need to work hard to preserve its beauty.</p> <p>The current traffic problem only happens less than <15 days a year. Throughout the EIS, the transportation problems are projected to get worse with population growth. Sections 1.3, 1.4.1.2, and 1.4.2.2 (just to name a few) discuss this growth and the related problems. The gondola is not only an eye sore, but will cause major impacts to the canyon (i.e. destroying world class bouldering areas and various ecosystems). We need to put real effort into trying to expand the bus system or try another option like tolling. The gondola parking lot will be almost a mile from the gondola station, it won't be free to ride, it's slower than driving and is less convenient (especially for groups and families). People will not use it.</p> <p>It only serves a portion of canyon users, only those going to resorts and the resorts themselves. There is no disincentive to drive so people will continue to do so.</p> <p>I find it extraordinarily irresponsible to ignore the obvious need to examine the level of visitation that this fragile resource can handle without damage. The EIS simply waves off this point in S.12 by saying "The Forest Service acknowledges that, in the future, management might be needed to limit resource impacts from user visitation in Little Cottonwood Canyon. Specific visitor capacities are not being considered by the USDA Forest Service at this time.</p> <p>"If we weigh the growth impacts in this equation so heavily that we are willing to spend \$600M to \$1B of taxpayer money for a "future" problem (right now it's <15 days a year) ... how can we not ask the Forest Service to "consider visitor capacities?" It is negligent and irresponsible not to do so. We cannot simply blame the Forest Service and wave this away as a "noted" but "ignored" concern!</p> <p>I am adamantly opposed to this proposed alternative and demand that all other options that be tried and exhausted FIRST before building a \$600M gondola that will destroy the canyon. It's too expensive. It's too invasive. It will likely encourage rather than discourage car traffic. And ... it won't solve the powder-day traffic problem, there will just be lines of cars waiting to enter the rapidly-filled gondola parking lot. There will be no difference to the users of 9400 S and Wasatch Blvd (and surrounding neighborhoods) on those days.</p> <p>This also does not help the traffic congestion is any other canyon, namely Big Cottonwood Canyon. I implore you to give buying a real lot and make an effort to improve the bus system. That is a scalable and more sustainable option that has</p>
33977	Leisha Nolen	<p>Installing a gondola in LCC will not serve the SLC region well. This approach is fun and attractive to tourists who simply want to get to the resorts but for people who live in the valley this is not effective. Many people travel up canyon to a variety of locations. This gondola will not help them and therefor will not affect traffic . If the true intent is to decrease road traffic a bus that can stop at different locations is significantly more appropriate.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
33978	Cort Keller	I don't support a gondola solution. I support a fee based ticket scheduling solution with daily allocations in addition to advanced tickets.
33979	Stephanie Howells Howells	Just stop trying to over populate and ruin Utah more. We do not need a gondola. Close the canyon for entry when its full. As cars leave allow that many up. All this building going on is turning Utah into California. TO WHOM IT MAY CONCERN,
33980	Samuel Nichols	<p>As a member of the Cottonwood Heights community, a homeowner, and tax-paying citizen I stand firmly against the proposition of a gondola to service Little Cottonwood canyon.</p> <p>As someone who has enjoyed this special space all my life through skiing, climbing, hiking, and mountain biking the proposition of a gondola has an overwhelmingly negative impact on these activities and more. As a climber who finds this canyon to be a reprieve and would classify the walls as world-class climbing, a gondola would destroy the escape and serenity this space offers to climbers. This is not only a visual pain being proposed but a risk to climbers, you cannot have distractions while you are engaged in this albeit risky, but beautiful activity. Onlookers from gondola cars could shout and distract climbers risking their lives. The proposed towers would be far too close to the climber's trails and walls for them to be deemed safe to climb. Additionally, the noise pollution this project would create will be detrimental to all recreation, residents, and wildlife within the canyon. The privacy and seclusion of homeowners within the canyon and recreation should be considered. A gondola destroys all privacy.</p> <p>Increasing the footprint of humans in this canyon from the ground and above in the form of gondola towers and stations will destroy an incredibly unique ecosystem that has taken thousands of years to develop. In the last decade traffic through this canyon has increased greatly. While this is a sign of people showing love for the great outdoors and this unique landscape, a gondola will exacerbate the traffic of people into this canyon.</p> <p>The community of Cottonwood Heights will be bearing a significant financial load if the gondola is approved, all in the name of shuttling people to the ski resorts that are increasing their prices year after year. The gondola may reduce vehicular traffic on roadways but the ski resorts stand to profit from this at an alarming level with no apparent skin in the game financially. This is not okay, if the resorts cannot manage the current crowds of visitors to their resorts in a meaningful manner, what makes us think they can handle more?</p> <p>There are thousands of Cottonwood Heights citizens standing against a gondola, including our community leaders as stated in the city paper for October 2022. These leaders are elected by the people for the people. Listen to our leaders' stances as they represent the citizens of our community! If we destroy this landscape we will be unable to recover it. This is a place that should be shared with generations beyond those alive today. A gondola and greed stand to destroy this. We cannot allow this!</p> <p>While a solution to the over increasing traffic of Little Cottonwood canyon is not easy, we must find innovative ways to</p>
33981	Amaris Hanson	While I agree that the current situation in LCC is not sustainable. I am against a gondola. A gondola that only stops at the ski resorts does nothing to aide people who utilize the many other recreations areas in LCC. We need a solution that will serve everyone in everyone season.
33982	Jeremy Leonhardt	Bad idea. Sad to cause so much environmental damage to an area to only benefit two resorts. And in the winter only? Sad sad.
33984	Troy Rohovit	NO gondola! Just make a reservation system like the campgrounds.
33985	Jana Stout	I am opposed to the proposal of building a gondola in Little Cottonwood Canyon. I am a skier, hiker, biker and climber and I want to preserve the canyon. I suggest increasing what we already have with buses or shuttles to help reduce traffic in the canyon to the ski areas.
33986	Debbie Hirth	NO gondola!! This is a terrible idea for our environment!
33987	Harold Hirth	Being a retired biology professor this gondola is a terrible idea for the ecosystem in our canyons! I vote NO
33988	Colin Zwiebel	I am glad to see UDOT and committees have put thorough thought into the issue of transportation through Little Cottonwood Canyon. I this the Gondola seems like a sensible direction and I look forward to its construction.
33989	Alyssa Snyder	I oppose the gondola. As a Utah resident, Little Cottonwood Canyon is one of my favorite places in Utah. A gondola will ruin the natural beauty, disrupt the animals, and cost way too much. There are other ways to solve the problems in Little Cotton Wood Canyon. A preferred solution would be to run shuttles up the canyon like they do in Zion National Park. Please do not build the gondola!!

35390	Mark Polish	<p>Gondola comments</p> <p>Mark Polish [REDACTED]</p> <p>I first skied Alta in 1967. Snowbird was built the year I graduated from High School in 1971. Going to the U. took me 8 years to get a 4-year degree because I worked and skied at the Bird. Finally graduating in 1978, broke, no car and no place to live. I hitchhiked up beloved Little Cottonwood Canyon to go for a hike and ponder my future. The beauty of the canyon was and still is a sanctuary. That beautiful summer day the wildflowers were in full bloom in the Albion Basin. I got a job at the Alta Lodge washing dishes and eventually as a dispatcher for the Town of Alta. I learned a lot from that job about the road problems and avalanches. In 1982 I became an EMT and got a job with the Alta Ski Patrol. 40 years later I'm still here and still passionate about this canyon. That is the reason I'm writing to express my concerns about the proposed Gondola. Bad idea. Really bad idea. I know what it takes to build lifts. Blasting, heavy equipment, terrain changes and overall permanent degradation of the environment. Little Cottonwood Canyon would be changed forever. We are called to be caretakers of the environment, not destroyers. This is not the best option. I'm told the gondola would only reduce 30% of cars in the canyon. Not a good solution. The increased traffic between Big and Little Cottonwood canyons along Wasatch Blvd. would be catastrophic. Residents like myself will not accept it. I am willing to talk about alternative solutions. I have driven the canyon for 50 years. Thank you for taking the time to read this.</p> <p>Sincerely, Mark Polish</p>
33990	Peter Hathaway	<p>Countries like Switzerland have been at this a long time and have proven solutions. Electric trains are clearly the best solution, just expensive to build. Let's go for a train and obtain matching federal funding to make it happen.</p>
33991	Margaret Matlin	<p>I am in favor of the busing plan. An enlarged parking facility at the bus loading area below the canyon, smaller buses (clean energy engines if possible), running frequently with a stop or two between the bottom and Snowbird will have far less negative impact than construction of a tram or gondola. The gondola will serve 2 expensive ski resorts, period. The bus model will provide services to people whose destination is not a ski resort. Thank you.</p>
33992	Patrick Fenton	<p>Hi there!</p> <p>I'm an avid hiker and outdoorsman and feel so grateful to have access to such gorgeous trails and natural landscapes living in SLC. Little Cottonwood Canyon has some of the best trails and scenery in the area and I would hate to see our local natural landscape be destroyed by the construction of this gondola. Having access to nature is a right for all of us, regardless of our economic status. Why not take the Zion NP approach and create a small shuttle system that stops at trailheads throughout the canyon to eliminate traffic and parking lot erosion? Part of sustainability is using what you already have to make things work. Use the roads already established, and find a more creative solution that allows us all to afford Utah's beautiful outdoor scenery.</p> <p>This endeavor is far too destructive to trails, natural landscape (both in the short term construction and long term placement), and climbing routes. It's far too expensive to implement and maintain.</p> <p>Protect our canyons for the long haul!</p>
33993	Brent Allsop	<p>I'm a resident of Sandy. I'm for the phased approach that ends with the gondola once nothing else works.</p>
33994	Karina Kofford	<p>I am opposed to the LLC Gondola project. I am a Utah voter and think the Gondola project will only serve a small user group of ski resorts. The Gondola project may permanently destroy trails, crags, and views and will not serve climbers, hikers, or other canyon users. It will not alleviate traffic at trailheads throughout the canyon. Other alternatives to the Gondola, like increased bus service or tolling, would be a better solution. Thank you for working on this traffic issue and for representing the community.</p>
33995	Jani Holder	<p>Please do not decimate our canyon with a gondola. The gondola serves 2 resorts - not the people who use and respect the majority of the land - whereas a bus system (with limitations on personal driving) could serve all of us.</p>
33996	Jake Treadwell	<p>Thank you for doing the right thing. The gondola is the only thing that makes sense. Rubber tired vehicles don't need to be on the road. UTA can't handle the road. You guys are doing the right thing</p>
33997	Ann-Kathrin Breuning	<p>While I understand that something needs to happen, building a gondola is not the solution. It's expensive and hurts the environment. There are many better options but the simplest is closing the road for cars and increase the number of buses.</p>
33998	Sharon Jacobsen	<p>I am very much opposed to the idea of a gondola as the transportation! I would rather see buses carry the biggest crowds up.</p>
33999	Nicole Child	<p>No no no Try tolls We will fight this until the end UDOT</p>
34000	Jennifer Mabey	<p>The gondola is not the best option.</p>
34001	Janet Lott	<p>Please don't build the gondola. I would rather pay fees to access the canyons rather than see a monstrosity which doesn't belong in nature.</p>

ID	Full Name	Comment
34002	Eric Lindekugel	<p>To whom it may concern:</p> <p>I am writing because I am concerned that the decision to install a gondola up Little Cottonwood Canyon (LLC) is a very expensive endeavor to mitigate traffic congestion in the canyon, and am convinced that it will not actually address the traffic problem. I believe this because as a frequent user of LCC, in both Summer and Winter, a gondola will be excruciatingly slow to move people up the canyon and will encourage people to drive in spite of the gondola. I also have a strong resistance to having my tax dollars fund a non-solution, when the real benefactors to this will be Alta and Snowbird. As an avid trail user I can say the gondola is a non-starter for me because this would not transport me to trail heads.</p> <p>I would like to see more research into tolling, carpools, and a more frequent and cheap bus service be considered as an alternative. These solutions have been proven to be very effective at mitigating traffic, see Mill Creek management as an example. At the very least these alternatives could be evaluated with a trial period, and at minimal expense as compared to building a gondola where there is essentially no turning back once started. It is for this reason that I believe building a gondola sooner rather than later is somewhat short sighted. I can see no downside to trying these other alternatives first. I would ask that you please not build the gondola until there is more data to support this decision.</p> <p>Thank you.</p>
34003	Janna Harrell	<p>Please reconsider your decision. Lower impact, better alternatives exist. Improving public transportation and parking outside of the canyon at hubs where frequent buses run is a much better, less costly, less wasteful and destructive option. Additionally, a toll road would also encourage car pooling. I visit Little Cottonwood frequently to climb, bike, and back country ski. The gondola harms and negatively impacts these activities. Causing so much harm to the rest of the canyon for two private companies is insane. For much of the year very few people would ride the gondola. It makes no sense. Please don't destroy the canyon. We cannot recreate the boulders you will crush and the view of the gondola, towers, and lines will pollute the canyon forever. Please chose a less destructive option.</p>
34004	Ben Breinholt	<p>Please reject the wasteful gondola plan, and consider a more rational plan that will actually solve our canyon problem.</p>
34005	Tim Wagner	<p>Just say no to gondolas that only serve rich skiers and tourists. I am in the canyon every week and sometimes there is no where to park at trailheads. How will this help that issue? I want to climb on boulders you will destroy or close access to, how will this help the thousands of climbers worldwide that love the climbing in Little Cottonwood. Please widen the population you are purporting to help and consider better solutions that do more than serving ski resorts and rich tourists. Better public transportation that serves trailheads and toll roads will do much more to reduce traffic than godawful boxes hanging from wires blocking the view. Please don't destroy our canyon.</p>
34006	Logan Hastings	<p>I am opposed to a gondola in Little Cottonwood Canyon, and I am frustrated with UDOT's ability to synthesize the input of the community in such a watershed decision (pun intended). 14,000 comments were submitted. Salt Lake County, Salt Lake City, Sandy, and the Town of Alta all rejected this idea on behalf of their constituents. And the best solution you could come up with to these oppositions was a phased approach leading up to gondola construction. If the end goal was to simply reduce canyon traffic, you would not have immediately cut back the bus service to LCC after this decision. Unfortunately, it seems like UDOT's priorities have been skewed by the private interests of the ski industry at the expense of the ecosystem, year-round recreation opportunities, and open space in LCC and at the mouth. I support the original bus alternative and hope that when using the phased approach, we can give a wholehearted attempt at making our existing infrastructure and transit systems work to alleviate traffic in Little Cottonwood Canyon.</p>
34007	Angelo Chachas	<p>Little cottonwood gondola is the worst solution to a difficult problem. Huge impact on the canyon. The ski resorts need to get away from an unlimited growth mindset. There are only so many people that can be accommodated in the canyons on a given day. The answer is not to figure out how many people can we pack in and how fast can we get them there.</p>
34009	Jeff Faught	<p>In weighing out the pros and cons of possible options, I am in favor of the Gondola being the best way to go. It is the only option that has the greatest impact on reducing vehicle traffic in the canyon. Expanded bus service does not change the current situation of the delays during big storms that require road closures for avalanche work. None of the options are ideal but I agree with Udot as the Gondola being the best one.</p>
35394	Rebecca Hatch	<p>To whom it may concern: Please be fiscally responsible with taxpayer money and do not use it to fund the gondola. The canyon traffic can be mitigated with other viable solutions that do not require such a large sum of money. Thank you -- Becky Hatch</p>
34010	Dolly Peach	<p>The gondola is a BAD idea!! Please, toll the road, get bus lanes for those who don't want to pay the toll. Give the electric buses whistle stops for those who want to access the backcountry. Build snow sheds for avalanches.</p>
34011	Samantha Harris	<p>The gondola does not meet the needs of all recreational users. Expanded base parking and more frequent buses would be better for all. The gondola only benefits the ski resorts and does not account for all of the rock climbers, boulderers, back country skiers, snow shoers and hikers. Listen to all constituent groups.</p>
34012	Andrew Paradis	<p>I am against building a gondola in Little Cottonwood Canyon. This is a massive public subsidy of two private businesses that simply have too many customers. There are many other better uses of public funds such as improving the education system, water conservation, or even other public transit that would be more frequently used.</p> <p>Crowding in the canyons could be largely reduced simply by limiting the number of customers Alta and Snowbird can have at any time. This approach is widely used to for example, limit the number of customers in a movie theater can have at any time and ensure safety in the event of a fire.</p>
34013	Chase Didas	<p>You're going to take away hiking spots, climbing spots, and fishing spots my family has been using since before I was born. This truly only benefits big resorts, and is a complete cash grab. If you care about Utahns you will not proceed with the gondola.</p>
34014	Robin Smith	<p>No gondola</p>
34015	Stephen Maeger	<p>Please no Gondo, road widening nor Snow sheds. Use money for in enhanced bus service and smaller shuttles. Where is the water coming from for the infrastructure? Just say NO.</p>

ID	Full Name	Comment
34016	Mike Marker	•The FEIS omits the possible positive impact of phased, immediately implementable common sense actions (tolling, parking reservations, enforced traction devices, prohibition of on-highway parking, etc.) on the original congestion problem as a way to solve the problem without the need for a gondola.
34017	Mike Marker	•UDOT neglects to assess the heavy metal contamination at the gondola base (superfund site), so the FEIS is not thorough in evaluating the gondola's environmental impact. FEIS says they will assess the nature of contamination AFTER construction starts. As such cost projections identified are not reliable.
34018	Mike Marker	•UDOT fails to address the earthquake risk for Gondola B even though they previously determined there is a high risk of a substantial earthquake
34019	Eric Smith	I am an active hiker, mountain climber, rock climber and skier. I love the idea of a tram and do not feel at all like ironworks detract from the beauty of the canyon. Beyond solving congestion, It will also make that beauty more accessible to a broader range of people.
34020	Mike Marker	•The FEIS fails to mention forest fire risk, or research the possibility of it, in LCC and the potential environmental impacts of the gondola with respect to forest fires. Also, UDOT neglects to evaluate the safety and reliability for the gondola and passengers with respect to forest fires.
34021	Nancy Hanson	<p>UDOT's preferred alternative of a gondola in Little Cottonwood Canyon is over a half a million-dollar (in today's cost estimates) payoff to resorts that will forever damage one of our beloved local canyons.</p> <p>The gondola will service only 2 private businesses: Snowbird and Alta. It is no surprise to learn that Snowbird quietly purchased property at the site of the tram hub. Could it be they had access to information beyond that of other Utahns? This decision reeks of deceitful squandering of taxpayer money for the benefit of entities involved. There are clearly other needs within the state for which funding will not be available due to this boondoggle.</p> <p>In summation:</p> <ol style="list-style-type: none"> 1)It will not meet any transportation needs of Utahns outside of the Wasatch, nor will it provide anything but frustration and condemnation for those who use the canyon regularly (in my case, 5 days/week) but never spend time at resorts. 2)The gondola will service only the resorts and only during the ski season, so much of the canyon will continue to require vehicle and/or bus access. 3)The gondola therefore represents an additional requirement of on-going maintenance costs beyond the roadway. 4)The gondola as the preferred option introduces excessive infrastructure without significant impact to the goal of traffic congestion. 5)The longest gondola in the world, newly opened, is only 5.5 miles. Utah taxpayers are being asked to pay for an 8-mile gondola, with little to no UDOT experience in this area. 6)The gondola likely would be a "sexy attraction" for out of state skiers that could increase usage of the canyon, benefiting Alta and Snowbird at the expense of the canyon ecosystem and Utah taxpayers. 7)It offers no model or solution for excessive traffic in Big Cottonwood or Millcreek Canyons. 8)It does not take into consideration changes in our climate and the decline of the Great Salt Lake ecosystem. Both may negatively impact the use of and subsequent traffic to the ski resorts, even the very viability of those ski resorts (and perhaps sooner than the gondola can be built and put to use). 9)Most significantly, it will degrade and forever change the character of a beloved canyon. <p>The cost of building, maintaining, and operating a gondola is excessive, serves too few Utahns, and results in too little traffic remediation. In contrast, the impact to the pristine beauty of the canyon is incalculable destructive.</p> <p>Alternatives solutions need to be utilized and problem-solved prior to such a drastic intrusion that benefits so few.</p>
34022	Mike Marker	•UDOT erred in not considering electric buses incorrectly stating current technology cannot handle cold and steep grades. Electric buses are used servicing Colorado ski resorts. Energy consumption of current EB technology is more favorable than that of the gondola and lifetime costs more favorable than those cited in the FEIS.
34023	Mike Marker	•There are inconsistencies with projected costs within the FEIS (Life Cycle Cost Analysis Volume vs. other parts of the FEIS). Such makes it difficult to intelligent assess and evaluate the recommendation.
34024	Mike Marker	•The FEIS reports the gondola to cost \$550M, but does not include the \$110M costs of the temporary bus system included in the gondola plan falsely representing the true cost of the gondola making the gondola appear more affordable than UDOT estimates.

ID	Full Name	Comment
34025	Walter Li	<p>My concerns are:</p> <p>Total cost is too expensive.</p> <p>Yearly operating and maintenance cost after install is way too high. And would it be cost effective to run it all year around?</p> <p>Cost per passenger to ride the gondola will make skiers conclude it's still cheaper and more convenient for them to carpool.</p> <p>Each and every gondola tower's pulley wheels/shocks and hardware lubrication will undoubtedly drip/spray petroleum based liquids/gels to the ground below and straight into the Little Cottonwood watershed. If you've ever skied under chair/gondola/tram towers and had your nice ski jacket and pants spattered with the grease/oil from above, you won't do that again unless you absolutely have to. The UDEQ and environmentalists are already worried about a few cars each year going into the creek and the gasoline/grease and lube contaminating the stream water. So with just the sheer number of gondola towers running a whole ski season and the rest of the year could equal more than a few tanker cars full of petroleum/lubrication product.</p> <p>My greatest fear is the Gondola Construction entity of oversight board, developers, contractors, etc will be made up of the same original Trax/light rail selfish nimrods that had big cost overruns, and made decisions not based on getting everyone the best service. Like they vacated developing bus systems feeding into the light rail and only developing the phases that got them their target date bonuses (like the airport rail line phase.)</p>
34026	Jenna Strom	<p>Please don't ruin this canyon! Its the way it is, and growth has happened. focus on other ways to help utah, like the great slc. so sad</p>
34027	Mike Marker	<p>•FEIS still errs in excluding BCC and 9400 South from the scope of the project. These areas are clearly impacted by this project but the FEIS omits impact assessment. Too much has been determined "Out of Scope" which suggest that a solution has been predetermined.</p>
34028	Mike Marker	<p>•Specific methods to protect the watershed from contamination part from best management practices and are often insufficient</p>
34029	Jason Lukasek	<p>The gondola quite frankly only benefits revenue production for the ski resorts - there is no redeeming public benefit to having it there. If the resort corporations want to perform the necessary environmental studies AND pay for it, then perhaps it could be justified. I think it's criminal to have public taxes sponsor a project that is very clearly benefitting private enterprise. I am strongly against the way this project is being rushed through for approval and the method of how it's being paid for.</p>
34030	Mike Marker	<p>•UDOT errs in not conducting a capacity study of LCC, has no way of knowing what is a sustainable number of canyon visitors yet argues for the need to match increases in valley/state population growth.</p>
34031	Mike Marker	<p>5. Projected costs ignore current inflation that has already added over 14% to all costs between 2020 (the costs given in the FEIS) and the time when the FEIS was released in August 2022. Legislators and taxpayers need to know that the true cost of the Preferred Alternative is now \$755M and increasing daily. The FEIS needs to be corrected in a Supplement to show current costs and should show the projected costs in 2023, if that is the anticipated date funding begins. Without knowing the true costs of the Preferred Alternative, legislators and taxpayers cannot evaluate it or accurately comment on the FEIS.</p>
34032	Mike Marker	<p>6. The Fact Sheets, the Summary Volume (Table S-1, p. S-141), and the Life Cycle Cost Volume of the FEIS provide conflicting and inconsistent estimates of the cost of the Preferred Alternative. For example:</p> <ul style="list-style-type: none"> a. The Fact Sheets state the cost of the parking structure as \$56M while other volumes state it as \$52. b. The Life Cycle Cost Volume states the cost of the Snowsheds as \$72M where other volumes state it as \$86M. c. The Fact Sheets state the cost of just the gondola itself as \$335M while the Life Cycle Cost Volume states the gondola cost as \$285M. d. The Fact Sheets and the Summary Volume (Table S-2) list the cost of the trail parking improvements as \$5.8M, but the Life Cycle Cost Volume lists it as \$12.5M e. The Fact Sheets list a cost of \$0.8M for a sound wall a part of the Preferred Alternative, while the Life Cycle Cost and Summary Volumes do not include it.
34033	Mike Marker	<p>7. By failing to update both their cost estimates and their Net Present Value calculation, UDOT presents a false value for the cost of the preferred alternative. The Life Cycle Cost Volume computes the total cost of the Preferred Alternative using a Net Present Value calculation based on inflation rates of 1.98% from 2019, discount rates of 2.4% from 2020 and capital and O&M costs from 2020. This presents an incorrectly low price for the Preferred Alternative for the following reasons:</p> <ul style="list-style-type: none"> a. Inflation in 2022 at the time the FEIS was released is running at over 8% annually, not 1.98% as used in the FEIS. b. By using an incorrect inflation number from 2019 and an incorrect discount rate from 2020, UDOT incorrectly calculates the annual costs of the gondola in Net Present Value dollars. They show the cost declining year over year because the discount rate they used exceeds the inflation rate. Today, the inflation rate is 2 to 4 times the discount rate and the cost of the gondola now increases substantially every year when calculated as Net Present Value.

ID	Full Name	Comment
34034	Mike Marker	<p>8.The FEIS modified one of the Alternatives, producing a new alternative, Gondola Alternative Option B. This consolidated all parking at the La Caille gondola base station. This resulted in a \$42M reduction in the cost of the original La Caille gondola alternative, resulting from not needing to build mobility hubs and buy buses to reach the base station from the mobility hubs. UDOT applied this change only to the Gondola B option. It in fact applies equally well to but Enhanced Bus and Enhanced Bus with Additional Bus Lane Alternatives. The estimated costs for those alternatives should be shown as \$42M less to provide comparable comparisons with the new Gondola B Alternative. Adjusting for this mistake in the FEIS, the Enhanced Bus Alternative actually costs \$303M and the Enhanced Bus with Additional Lane Alternative \$468M. This makes the Enhanced Bus Alternative \$257M less than the cost of the Preferred Alternative and the Enhanced Bus Alternative 1 minute shorter transit time than the gondola B alternative, even though the gondola costs \$257M more. Failing to adjust the other Alternatives comparably to the change in the Preferred Alternative is negligent and at a minimum needs to be corrected in a FEIS Supplement.</p>
34035	Mike Marker	<p>9.The FEIS falsely states or miscalculates the cost of the 2,500 vehicle parking structure at the Preferred Alternative Base. The FEIS states that 4 to 5 stories would need to be built below ground. For each story built below ground, industry standard, according to one of the larger construction firms in Utah, increase per vehicle by 50-100%. Using \$52M for the estimated cost of this structure is clearly way below industry standards. The cost estimate in the FEIS fails to account for the hazardous lead and arsenic waste mitigation required for the parking structure. The FEIS says that it is highly probable that this contamination exists, yet costs to mitigate it are not included. The EPA 5 year report says the steep slope where the structure will be excavated has probably not been mitigated at all because mitigation was not performed on steep, undeveloped slopes. This not only a serious environmental impact ignored by the FEIS, but also a significant cost-driver that is not included. A supplement to the FEIS is required to address this deficiency.</p>
34036	Mike Marker	<p>10.The FEIS fails to promise a Supplement to the Final EIS, as required by regulation. The FEIS says this is because the new Alternative that is presented does not change the environmental impact of the Alternatives. This is incorrect according to the FEIS's own description of the new Alternative. Given these new environmental impacts introduced for the first time in the FEIS, impacts never presented to the public nor included in the draft EIS, require by regulation an EIS Supplement. Significant changes with an environmental impact from the new Alternative (the Preferred Alternative Gondola Option B) include:</p> <ul style="list-style-type: none"> a.Expanded health hazards, costs, and delays caused by excavating much more and more deeply into an EPA Superfund Site. The FEIS gives no assessment or analysis but does acknowledge the hazard as 'highly likely'. b.The new Alternative eliminates the mobility hubs at Fort Union and 9400 in Sandy and the bus service from those hubs to gondola base per the original alternative in the DEIS and briefed to the public. This places additional traffic on both 9400 and Wasatch, some of which is currently already handled by buses. The FEIS asserts, with no analysis or data to support their assertion, that this additional traffic on Wasatch and 9400 compared to the original Alternative Gondola B (La Caille) will have no additional environmental effect. This assertion needs supporting data and analysis. c.The new La Caille gondola alternative requires mobility hubs, new bus traffic, and new bus stops to be constructed and operated while the gondola is being built. These new structures and addition of new buses, even though only existing for some years, will have environmental impacts in terms of noise, visual appearance, air pollution, and alteration of traffic volumes and patterns. These new impacts of expanded bus service with the new gondola alternative are waived away by the FEIS as insignificant with no data or analysis to support the claim. An EIS Supplement is required to evaluate them. d.The new Preferred Alternative requires one more new traffic light on Wasatch by La Caille and a new access road to be dug from Wasatch past La Caille into west side of the new gondola parking structure. This road will cut through two different EPA Superfund Site areas, excavating terrain that has not been mitigated and exceeding the 18 inches depth of soil where mitigation has occurred. This is yet another significant public health hazard that exists but has not been evaluated or even identified. There are few greater environmental impacts greater than exposing tons of soil and dust contaminated with lead and arsenic. The FEIS design introduces this significant new environmental impact, yet fails to even mention it, much less address it.
34037	jack k	why
34038	Mike Marker	<p>11.The FEIS uses the misleading and misrepresentative phrase "Phase Approach" when describing the new gondola alternative that has been selected. The Life Cycle Cost Volume makes it clear that the gondola will be built immediately if the funds are allocated, and construction will run in parallel with temporary bus service. When the gondola is complete, the FEIS indicates both the mobility hub improvements, the new buses, and the new bus stops will likely be removed. There is nothing 'Phased' in the FEIS approach. The gondola is built as soon as funds are received sufficient to begin. There no intention stated in the FEIS to describe criteria to determine if the initial bus service and tolling is sufficiently reducing traffic to eliminate the justification for the gondola. The term 'phased' or 'phase approach' has been used extensively in the press, by local civic leaders and respondents to the previous DEIS to mean an entirely different approach than what is described in the FEIS. The FEIS appears to be intentionally misleading and misrepresenting the new Alternative to legislators, taxpayers, and the public.</p>
34039	Mike Marker	<p>12.The FEIS states that it will evaluate electric buses in the future - a option for calculating CO2 and other harmful particulate emissions. Without considering low-emission options for buses now, the environmental impact can't be truly assessed. Nor can the cost, given that a study by the U.S. Department of Transportation in 2020 shows that electric buses are cheaper in terms of life cycle costs in many instances. Electric buses are cheaper still since the cost of diesel has risen since the study. The FEIS fails to consider and analyze this important environment impact reduction. It says they will be considered in the future, but buses will not be used in the future in the Preferred Gondola Alternative.</p>
34040	Mike Marker	<p>13.The FEIS continues to not provide any data or analysis to justify its No Action Alternative assessment. Specifically, how much will traffic increase year over year. What data or analysis supports that assumption, if any. The traffic volume projection is the whole basis for comparing all alternatives including the No Action Alternative. Without some basis for this key metric, the FEIS is negligent in comparing the environmental impact.</p>

ID	Full Name	Comment
34041	Mike Marker	<p>14. The FEIS says that LCC Road closures account for 10.8 days a year based on historical data, but that they will account for 10.5 to 21 days in 2050. How could road closures due to avalanche mitigation double by 2050? The FEIS fails to provide a single long-term climate forecast that indicates a doubling of snowfall is likely by 2050. Available, peer-reviewed forecasts show the amount of snowfall has decreased over the past 50 years and will continue to decrease further by 2050, as it has done consistently. A correct forecast of days with road closures with snow sheds should be 4 or less. Furthermore, the time per closure event should decline both because the major chutes will be mitigated by the snow sheds, leaving only the small chutes as potential areas needing to clear. The FEIS acknowledges this fact by showing the closure hours will shrink by a factor of more than 25. That indicates, given long-term snowfall projections, that average closure time will be 2 or less hours per event. Total road closure time for an entire year will be 8 or fewer hours a year. Moreover, the gondola will be closed as well as the road when there is a high avalanche threat, as described in the FEIS. In conclusion, the FEIS selects a \$660M gondola alternative that mitigates avalanche risks and delays less than 8 hours over an entire year - a disturbingly bad cost-benefit trade.</p>
34042	Mike Marker	<p>15. Section 4(f), impacts to public recreation areas, Volume 26: The FEIS incorrectly states that the impact to Tanners Flat Campground by the Gondola Alternative Option B is de minimis. People use a basic-resource campground, situated between two National Wilderness Areas, for the unobstructed views of the environment's beauty as well as for peace, quiet, and solitude. The gondola will move than 1,000 and up to 3,400 people/hour in gondolas directly over the head of campers. Per the FEIS, two gondola towers will rise above the campground on both ends. A gondola transfer station with large operating diesel motors and cable transfer noise will be positioned just west of the campground. The environmental impacts on Tanners Flat include robbing campers of any privacy and solitude, as well as defiling their view and subjecting them to additional noise. The FEIS is negligent in declaring these impacts de minimis - they destroy the very reason for camping in a National Forest amid National Wilderness Areas. The FEIS implicitly acknowledges the substantive nature of these impacts by stating: "users could shift from tent campers to recreational vehicle (RV) campers." This is far from a de minimis impact. The FEIS gives a feel, albeit an attenuated one, for the impact on campers with its image in Volume 17, Appendix 17A.</p>
34043	Mike Marker	<p>16. Section 4(f), impacts to public recreation areas, Volume 26: The FEIS fails to mention the environmental impact to the public recreation area directly across from the proposed gondola base (La Caille). This land was purchase by the Utah Open Lands nonprofit using taxpayer and individual donations for the express purpose of providing public recreation in an open space adjacent to undeveloped National Forest land. The FEIS Preferred Alternative will position a gondola base and a massive parking structure with a new traffic light directly across from and adjacent to this public recreation resource. The Preferred Alternative will move heavy traffic that today piles up in the Canyon down to Little Cottonwood Road adjacent to this Open Space. Traffic will be stalled at the traffic light and at the parking structure waiting to enter it during peak times on peak days. This will completely destroy any privacy and quiet and air quality in the Open Space. The FEIS neglects to even identify it as public recreation area nor consider the impact of the gondola. This is clearly a violation of the Section 4(f) requirements.</p>
34044	Mike Marker	<p>17. Section 4(f) impacts on the Bonneville Shoreline Trail: The FEIS incorrectly states the impacts on this trail to be "de minimis". They assert this by saying "The setting, visual qualities, or aesthetic features are secondary or tangential qualities of the trail but are not the primary features that qualify it for protection under Section 4(f)." They also say the noise is not a factor because they've assessed the noise from a similar tower. But they neglect to account for the noise from the transfer station and its motors and backup generator that will be located adjacent to the trail.</p>
34045	Mike Marker	<p>17. Section 4(f) impacts on the Bonneville Shoreline Trail: The FEIS incorrectly states the impacts on this trail to be "de minimis". They assert this by saying "The setting, visual qualities, or aesthetic features are secondary or tangential qualities of the trail but are not the primary features that qualify it for protection under Section 4(f)." They also say the noise is not a factor because they've assessed the noise from a similar tower. But they neglect to account for the noise from the transfer station and its motors and backup generator that will be located adjacent to the trail.</p>
34046	David Carlson	<p>I oppose the gondola plan. The environmental impact is unacceptable and taxpayer money should not be used when the benefits are entirely to private businesses. They should bear the entire cost.</p>
34047	Steven Seeger	<p>I am against the gondola. It will prevent people from freely accessing little cottonwood canyon. I know that the traffic gets bad, but forcing people to pay to access driving up the canyon isn't a just way to handle the issue, especially when it is a resource and activity for people without a lot of money to experience nature for the cost of a car drive up the canyon.</p>
34048	Mike Marker	<p>18. The FEIS incorrectly asserts the size of the proposed 2,500 vehicle parking structure, stating it to be 6 to 7 stories, with 2 stories above ground. The structure's footprint in the FEIS corresponds exactly to the parking structure design provided by Gondola Works in earlier presentations. The floor plan for this footprint provided by Gondola Works shows that a 2,500 vehicle structure would require at least 10 stories. Furthermore, burying 8 stories below grade would be extremely expensive, as each floor below grade adds 50% to 100% more to the cost of the structure. To meet the FEIS budget of \$52M (also stated as \$56M elsewhere in the FEIS) would require many stories to be built above the grade of the road. The FEIS falsely represents the visual and noise impact of the proposed parking structure for the new Preferred Alternative Gondola Option B.</p>
34049	Mike Marker	<p>19. The FEIS failed to discuss the considerable environmental impact due to construction of their preferred alternative. This impact consists of high noise, visual impairment, monstrous traffic jams and blockages, spreading of hazardous dust and soil, pollution from construction vehicles and helicopters, damage to existing roads and property during construction, and road hazards and risks caused by construction operations. The FEIS says construction will continue for two or more years, inflicting these environmental impacts throughout. None of the substantive risks, hazards, and impacts due to construction of the Preferred Alternative were discussed or analyzed.</p>

ID	Full Name	Comment
34050	Mike Marker	20. The FEIS erred by not including a capacity study for the canyon itself. In 2021 the total number of visitors to BCC and LCC combined was more than that of Zion National Park and roughly equal to that of Yellowstone National Park with a fraction of the land mass. UDOT projects a significant population increase in the state and makes the claim that the canyon can and must accommodate this increase. These claims are being made at the same time that southern Utah National Parks have reported the negative impact of record numbers of visitors to the Parks. These Parks reported damage to their physical resource as well as degradation of the visitor experience. As a result the Parks have been implementing various forms of visitor management to regulate visitation to a sustainable level.
38687	Del Draper	Comments on the Gondola (submitted in the Word format in which they were written)
34051	Robert and Robbie McFarland	<p>We think the Gondola is a poor choice for our canyon. Our reasons are:</p> <ol style="list-style-type: none"> 1. It benefits two ski resorts of out of state owners. It is a huge waste of taxpayer money. Money that could be spent or saved (imagine that!) benefitting more people in the state. 2. The damage to the canyon by building huge towers would be irreversible. 3. We feel that you are influenced by a small group of people who stand to make a significant profit. It smells of corruption. 4. We feel that you are so in love with the gondola that you are unwilling to start with smaller and less expensive ideas. 5. Why does UDOT get to decide this huge project? It is like putting the fox in the henhouse. 7. Cost overruns which are inevitable. 8. UDOT has admitted that this plan will only alleviate 30% of the traffic problems in the canyons. That is a lot of money to spend to only solve such a small amount of the problem. 8. The ski resorts have stated that the ski experience is diminished with more people at the resorts. Another reason for a reservation system. 9. All of the residents in Utah would be paying for a small percentage of elite users, many of whom are out of state. We can't afford to ski so why should we be forced to fund those who do with this project? 10. The future looks bleak for snow. Have you heard of Bangeters pump? <p>Our ideas include 1. parking lots spread around the city to eliminate congestion in Cottonwood Heights and Wasatch Blvd. Why build a massive parking lot in one place? Spread it around. 2. Electric Busses (Wouldn't that be obvious?) 3. Reservation System at the ski resorts</p> <ol style="list-style-type: none"> 4. Tolling those with only one person in the car.
34052	Cassandra Fale	This will tear into the natural beauty and ecosystem that is trying to survive with the already crowded canyon. The cost is at the pockets of tax payers and it is a direct pipeline for a select few. You want it, you pay for it.
34053	Jeff Richards	We do not need a gondola in little cottonwood canyon. Especially since it would only serve such a small user group for a very short time each year. I have been visiting the canyon for over twenty years and I feel it would detract from its natural beauty.
34054	Madalyn Pewtress	I am against the proposition of the gondola in Little Cottonwood Canyon, since it will ruin the world class climbing in the canyon. It also will be a very tall gondola in the canyon, completely ruining the natural beauty of the canyon. Hiking, backing, climbing, snowshoeing, backcountry skiing and snowboarding will all have a large piece of infrastructure hovering over the natural beauty of the canyon. Increasing bus schedules and routes would be a more beneficial solution because it would not permanently destroy the natural beauty of the canyon.

34055	David Andrenyak	<p>October 15, 2022</p> <p>Utah Department of Transportation Little Cottonwood Canyon Draft Transportation Alternatives Environmental Impact Statement, September 2022</p> <p>This letter is in response for comments on the Final Environmental Impact Statement (DEIS) for Little Cottonwood Canyon (LCC) Road and Wasatch Boulevard. I am David Andrenyak and I am a resident of Salt Lake City, Utah for over 30 years. I have been an active hiker, nordic skier, snowshoer, and volunteer in the Central Wasatch Mountains. I respect the beauty of the Central Wasatch and hope that its natural character can be maintained. I recognize the importance of LCC and Big Cottonwood Canyon (BCC) as sources for drinking water used in the Salt Lake Valley. The water quality of LCC and BCC needs to be preserved. I also note increased number of recreation visitors to the Central Wasatch and the need to reduce traffic congestion at corridors such as the Little Cottonwood Canyon (LCC) Road.</p> <p>I oppose the construction and operation of a gondola system as proposed in the Gondola alternative B for the Final Environmental Impact State (September, 2022). A gondola would ruin the beauty of Little Cottonwood Canyon and spoil the experience for LLC visitors. There are many visitors to LCC that seek a natural and primitive outdoor experience. These visitors would be appalled by sights of tall towers, extensive cables, and gondola cars. The gondola system will impact experiences at LCC rock climbing areas and the Tanners Flat campground.</p> <p>Yes, I understand that the main concern of the LCC EIS is to improve mobility and reliability to the LCC ski resorts during peak hours in the winter snow season (LCC DEIS 2.6.2). However, focusing on winter travel improvements to Alta and Snowbird does not address the overall vehicle traffic problems in LCC. Having a mass transit system that only serves one stop at Snowbird and one stop at Alta would not reduce vehicle congestion in LCC. Mass transit solutions should include stops at the White Pine-Red Pine trailhead, Lisa Falls trailhead, Little Cottonwood Trail, and Grizzly Gulch trailheads. Yes, I am smart enough to realize that it would be too expensive and not practical to have gondola stops at trailheads that I listed. That is another reason for not supporting a gondola system in LCC. Also, the proposed gondola system will have only one stop at Snowbird and one stop at Alta. Some resort visitors may not choose to to use the gondola because the gondola stop is not near to where they prefer to ski or visit. For example, visitors that want to ski from the Sunnyside lift at Alta would choose not to use the Gondola because the proposed Gondola stop is near the Alta Lodge area and not near the Sunnyside lift. Another example is Snowbird Octoberfest visitors choose not to use the Gondola because the proposed gondola stop is at By Pass road and not near Snowbird plaza. The Final EIS points out that gondola travel will be safer and more reliable with respect to avalanche and winter weather hazards. Please keep in mind that gondola travel may not be safe during high wind conditions and winter electrical storms (Last season, ski lifts at Solitude had to</p>
34056	Spencer Sears	I say NO to the gondola.
34057	Autumn Mann	NO GONDOLA!!!
34058	Michael Glasgow	I am opposed to spending \$500 MILLION to support 2 corporations! In the winter, which is when the traffic is such a problem, more than 90% of the traffic is people going skiing at Snowbird and Alta. If the parking discussed to be used by the proposed gondola traffic were put in place at the bottom, I believe enough people would car pool or ride busses (which could be provided by the ski areas) the congestion and pollution from all the autos would not be the problem it now is.
34059	Jeff Davis	I am strongly opposed to the Gondola alternatives . Much prefer Enhanced Bus. Would much rather take the savings from Enhanced Bus Service and add limited Bus Service in summer, making stops at certain trailheads. This would still help the ski resorts but serve a much broader population than just skiers.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34060	Dolly Garlo	<p>I am writing, yet again, to oppose the construction of a gondola in Little Cottonwood Canyon, for the following reasons.</p> <p>1.The Environmental Impact Statement (EIS) and process were flawed.</p> <p>a.The Little Cottonwood Canyon gondola project is a boondoggle for private interests. No taxpayer money should be spent on this. It is designed to connect a private commercial venture (LaCaille development) to other private commercial venues (Snowbird and Alta Ski Resorts, primarily, but including the involvement of Dopplemeyer the gondola company, construction interests, marketing consultants and others...), using public tax dollars to pay for private interest ventures. That alone is highly problematic when a majority of affected taxpayers oppose the project. Polls indicate that 80% of Utahns prefer a solution other than building a gondola in Little Cottonwood Canyon. (Deseret News, December 9, 2021).</p> <p>b.Additionally, as for the EIS, the boundaries of the study were too narrowly drawn. They did not consider neighboring Big Cottonwood Canyon, the Park City area ski resorts, and many key transportation routes affecting them all. Skier traffic problems are caused by and should be considered for all the resorts: Alta and Snowbird in Little Cottonwood Canyon, AND Brighton and Solitude in Big Cottonwood Canyon, Park City, Deer Valley, and The Canyons in the Park City area. To truly serve the public interest, finding the best solution should be inclusive and holistic, not limited to one canyon and the private interests wishing to build a project there.</p> <p>c.There needs to be a comprehensive transportation strategy that includes the other canyons, not only Little Cottonwood Canyon. Big Cottonwood Canyon at peak times often surpasses the congestion in Little Cottonwood Canyon. A successful traffic mitigation strategy in one canyon will just push traffic into the neighboring canyon, and will not alleviate impacts on the protected watershed. Additionally, the decision on whether or not to connect Little and Big Cottonwood canyons to the Wasatch Back needs to be made before the interests in any single canyon push their own transportation plan. A piecemeal approach would not only be ineffective for the short-term, it would make long-term comprehensive solutions more difficult to accomplish. THAT should be more of a priority in a skier transportation plan for all resorts, not the private interests of a few in a historically important and environmentally fragile, single canyon.</p> <p>d.Speaking of historical significance, the Forest Service's enabling statute requires it to protect, preserve, and enhance the history of Little Cottonwood Canyon, but the draft EIS fails to acknowledge this history as even being relevant. Honoring that history in LCC would not include the construction of a gondola. A single gondola project in one canyon fails to address the overall environmental impact of the industries involved in interconnected areas of the fragile Wasatch Front and Back.</p> <p>e. All stakeholders have not been included in the process. It has been largely driven by private interests. UDOT and the</p>
34061	Karessa Pewtress	<p>I am against the proposition of the gondola in Little Cottonwood Canyon, since it will ruin the world class climbing in the canyon. It also will be a very tall gondola in the canyon, completely ruining the natural beauty of the canyon. Hiking, backing, climbing, snowshoeing, backcountry skiing and snowboarding will all have a large piece of infrastructure hovering over the natural beauty of the canyon. Increasing bus schedules and routes would be a more beneficial solution because it would not permanently destroy the natural beauty of the canyon.</p>
34062	grace babor	<p>NO TO THE GONDOLA!!!!</p>
34063	Rebecca Brimhall	<p>Zion National Park has a wonderful bus system to deal with large crowds. It seems like an inexpensive, common sense solution that could be instituted in Little Cottonwood Canyon. The gondola is so clearly an attempt by special interest groups to de-fraud the taxpayers of Utah. Please do not let this happen!!</p>
34064	Bess Thompson	<p>No!! Please do not add /install a gondola!!!</p>
34065	Ria Kaddu	<p>Hello, my name is Ria Kaddu and I have grown up and continued to live in Utah. I have been living in Salt Lake City for the past 5 years. I urge the UDOT to not construct the gondola. The gondola would have a destructive environmental impact and alter the look of the canyon year-round in the name of addressing an issue only present during the snow sports season. Increased bussing would have less environmental impact and not alter the look of the canyon. Thank you for your consideration.</p>
34066	Avram Titus	<p>The Honda is a fiscally irresponsible boondoggle. The cost of this project outweighs the potential benefits of slightly improved reliability of access. With a projected cost of \$550 million, UDOT should be responsible for showing how this option is not just better than the alternatives, but \$500 million better (assuming additional bussing alone costs \$50mil a year).</p> <p>I believe the best option factoring in cost would be substantially increased bussing with a plethora of parking options at the base of the canyon.</p>
34067	JOHN CLATWORTHY	<p>This gondola is another grift. In other states it would launch investigations. It's another boondoggle looking for a bunch of suckers to fund it and line the right pockets. Who funded the construction of the Vivint Arena, a public bond initiative?! Nope Larry did because it greatly profited his business. It was him investing in his business.</p> <p>Should every Utahn pay for public transportation to two ski resorts?! Of course not. UTA provides inadequate service to the east bench and this scamdola will require plenty of support from UTA to be effective, and that will add an additional layer of public transportation, adding complexity and probably an hour to the journey each way, not to mention the price of riding the Scamdola. This is just more corporate welfare. I will go to great lengths to avoid ever using it, if this grift goes through, and I hope that it doesn't.</p> <p>The town of Alta is opposed to it for good reasons, and so am I. Alta ski lifts has instituted a parking reservation system that has helped, and limiting parking before 8:00 am should help too. If Snowbird would follow suit, traffic problems would be reduced further, making the gondola more unnecessary. The slopes are overcrowded and the liftlines are already too long to have a quality experience skiing in the LCC on too many days. Don't make it worse.</p>
34068	Helena Hopson	<p>I am an outdoor enthusiast, climber, and skier. I do not support the gondola. I support alternative options. Please don't ruin the beauty and world class climbing of little cottonwood canyon.</p>
34069	Isabelle Paulsen	<p>Don't build the gondola. Keep nature beautiful. The canyon is over crowded but this is not the answer</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34070	Daina Pettit	<p>The gondola option is a solution looking for a problem. There is not a transportation problem. It's a capacity problem at the resorts. Limit the number of skiers and the problem is solved. No taxes. No spending. It becomes Alta and Snowbird's problem.</p> <p>Spending over \$500,000,000.00 for a problem that exists 2 weeks a year for one dead-end road for two resorts, for a tiny number of people is insane. Doing so reeks of corruption and bad judgement.</p> <p>It would be cheaper to fly skiers in for those weeks every year in helicopters than to build and run a gondola.</p>
34071	Leslie Kovach	<p>The LCC EIS needs to be readdressed because it is only looking at an option that is hugely expensive and only benefits 3 businesses which meet the need the privileged few. It does not address the needs of the people who live in the area the people of salt lake who drink the water and wish to recreate in other areas of Little Cottonwood Canyon. But most of all it does not address the needs of the citizens who live along Wasatch Blvd. Wasatch does not need to be expanded to meet the needs of the ski resorts and a perceived need to reduce congestion. Wasatch needs to be redesigned so that all people can travel safely walking on or across the road. Biking and following the traffic requirements which means they need to be with the traffic flow. But most of all reducing speed along Wasatch to reduce accidents. Just in a 12 month period there were 19 accidents near the ft union and Wasatch intersection, with a number of causes, but all are related to a road design which increases speed. Reduce the number of lanes and make it safe for people who live and work on both sides of Wasatch Blvd.</p>
34072	Daina Pettit	<p>The gondola option is a solution looking for a problem. There is not a transportation problem. It's a capacity problem at the resorts. Limit the number of skiers and the problem is solved. No taxes. No spending. It becomes Alta and Snowbird's problem.</p> <p>Spending over \$500,000,000.00 for a problem that exists 2 weeks a year for one dead-end road for two resorts, for a tiny number of people is insane. Doing so reeks of corruption and bad judgement.</p> <p>It would be cheaper to fly skiers in for those weeks every year in helicopters than to build and run a gondola.</p>
34073	Daina Pettit	<p>The gondola option is a solution looking for a problem. There is not a transportation problem. It's a capacity problem at the resorts. Limit the number of skiers and the problem is solved. No taxes. No spending. It becomes Alta and Snowbird's problem.</p> <p>Spending over \$500,000,000.00 for a problem that exists 2 weeks a year for one dead-end road for two resorts, for a tiny number of people is insane. Doing so reeks of corruption and bad judgement.</p> <p>It would be cheaper to fly skiers in for those weeks every year in helicopters than to build and run a gondola.</p>
34074	Judith Engracia	<p>I am a Sandy city homeowner (zip code [REDACTED] Alta and Snowbird refuse to accept that there is an inherent limit to the number of skiers their resorts can accommodate. They insist on expanding their business beyond the capacity limit, beyond what the roads and parking lots can handle. Their greed created this problem, yet they are shifting the cost and the responsibility to the taxpayer. Why do Alta and Snowbird get to reap the financial benefits of a gondola and increased business, while the taxpayer pays for it? Why do private businesses get to shift the cost to taxpayers? The gondola doesn't even serve hikers, climbers, or backcountry skiers. This reeks of corruption and greed. Alta and Snowbird cannot expand to infinity. The gondola won't solve the problem of traffic and parking. Alta and Snowbird need to put a cap on the number of tickets they sell and stop over-advertising. Alta and Snowbird created this problem for themselves, yet they are forcing the entire state to pay for it with the dumbest "solution" ever with this gondola. A gondola not only is an inefficient mode of transportation, but it is also an eyesore that will tear up the canyon. No one wants the gondola except Alta and Snowbird.</p>
34075	Erin A.	<p>I am opposed to the LCC Gondola project. I'm a Utah voter and user of Little Cottonwood Canyon. I am concerned that the huge steel towers and cables will be a visual blight on the esthetics of the currently-beautiful canyon. This is not a viable traffic solution--the gondola will serve only passengers to two ski resorts, Alta and Snowbird (and since Alta doesn't allow snowboarders, the type of passenger the gondola will serve is even further limited).</p> <p>As a climber, hiker, and snowboarder, the gondola will not serve me or other similar canyon users. Nor will it alleviate any traffic at trailheads throughout the canyon. I support alternate solutions (tolling, increased bus service, etc.) that can address the greater issue without permanently destroying our cherished trails, climbing crags, and beautiful views.</p> <p>Thank you for your efforts to accurately represent our community as you help make this important decision.</p>
35397	Erin Adams	<p>Hello,</p> <p>I am opposed to the LCC Gondola project. I'm a Utah voter and user of Little Cottonwood Canyon. 34076	Henry Zing	It is a rare wonder that a short drive from the smoggy, noisy streets of SLC, one can scramble or hike only a short distance and find themselves immersed in a wonderland of clean granite and sheaves of greenery draped across the narrow canyon walls. To have this accessible and serene environment crisscrossed with intrusive cables would be short-sighted and tragic. North America's mountains are not the Alps: We should aim to keep them that way.
34077	Jase Pennock	I am opposed to the gondola as are many other locals. Please explore less destructive options as the beauty of the canyon should be preserved at all costs!
35401	Leslie Davis	<p>Respectfully commenting...</p> <p>Having taxpayers foot the bill for a huge project that is of limited value to the majority of those taxpayers is a governmental boondoggle and not just because it will be unsightly, damaging to the fragile environment and of limited use each year.</p> <p>A more credible activity would be to put money into figuring out what we are going to do when there is no more water in the GSL and there is no more snow in the mountains. When I moved to SLC in 1975, we had FEET of snow in the valley, now we have almost none, even on the benches, and I see no forecasting that bodes well for our lakes, rivers or reservoirs in the future.</p> <p>Here we are in a drought and no limitations have been put on water usage. Please scrap the gondola and its catering to a limited population and concentrate on the truly important water issues staring us in the face.</p> <p>Sincerely, Leslie Davis Holladay, Utah</p>
34078	Julian Barbury	Hello! My name is Julian I have lived in Utah all my life and still spend a huge portion of my time in the cottonwood canyons. A gondola in either of these canyons will only add twords the destruction of these beautiful canyons! Please reconsider the plans to put one in! Thank you and have a good day!
34079	Bonnie Hooper	Please remove the gondola from the little Cottonwood Canyon project. The destruction of the scenic area would be irreversible taxpayers do not need to pay for large corporations to have more elite skiers come in for a few months of the year. As a lifelong taxpayer I do not want to pay for a gondola! NO GONDOLA
34080	Jesse Tomlin	I don't support the LCC gondola, I think the canyon needs to be preserved for public recreation. Climbing etc. a gondola is an unnecessary addition to the canyon that would do more harm than good. I support tolling or more public transportation.
34081	Art James	Raping Little Cottonwood Canyon with a foreign object is not the answer. The damage can never be undone.
34082	George Vargyas	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean" the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium" parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.

ID	Full Name	Comment
34083	Seth Simonds	<p>Earlier proposed solution requires a tolling system to disincent driving and incent the alternative. A toll system is an order of magnitude less expensive, can be implemented quickly, uses existing infrastructure, generates revenue and has to happen regardless. The tolling system should be implemented and it's impacts studied before committing to and outlaying half a billion dollar?</p> <p>Anecdotally, Alta's paid parking and reservation system effectively solved the parking crisis in upper LCC last year save for the acute issues associated with big storm days (there might just be limits imposed by nature that we as humans have to adapt to-crazy, I know). Across several user groups, we piled 5 to a car to go backcountry skiing or resort skiing because one of us had a parking pass-a certificate with 20 dollars of face value. The minimum age and income in these vehicles were 35 and 75k, piling into a car, over 5 dollars per capita. My Alta friends said the resort was pleasant and they could park again. Snowbird, looked like a zoo; the trailheads looked like zoos, we were able to ski the Emmas and Flagstaff, in 2ft, on weekend, with maybe 50 other people on the entire south side of the canyon on a weekend; Alta got to spin their lifts. Last winter I made the fewest trips to LCC in 15 years because of \$20 and planning; the same as I have driven up Millcreek maybe 5 times in 15 years over five dollars, a tough shed, porta potty and 200k in labor cost: Tolling is not some crazy project and the days it was needed traffic would be stopped up at the mouth anyways. You could have a tough shed, it could be portable. Last season was the most I have carpoled to LCC since college.</p> <p>An argument against the toll booth is that it disproportionately affects the poor. Unfortunately, the poor are already disproportionately impacted...by being poor. Access to LCC is not on their list of concerns so this argument is a classic one of trickling up economic value by funding a wealthy user group, with a poorer tax base. The toll might bind on a marginal user groups, like college kids, but this is not a marginalized community. We are subsidizing wealthy people and users by transferring cost to poorer communities and not bearing the burden of our recreation ourselves. Moreover, only a few wealthy user groups benefit: resort skiers at Alta and Snowbird and the resorts. This is why you have seen 15k comments: you are benefiting wealthy people at the expense or cost of other wealthy people: rock climbers, bikers, hikers, back country skiers Wealthy people have time enough to care.</p> <p>The companies have a business model where it behooves them to put as much meat through there sausage factories as possible-the gondola will help their assembly line. They have an obligation to maximize profit, that's fine; but, I think they should pay for the Gondola and we should judge their enthusiasm for the project based on that condition: King Solomon style. My guess is that half a billion dollars of privately funded infrastructure would dampen enthusiasm.</p> <p>Do what's simple, do what's cheap, do what's flexible, take advantage of human behavior. The twilight series was effectively solved over a 5\$ entrance fee, it's not rocket science: people treat things what they worth and if something is free, it gets treated as cheap. We have all the infrastructure we need to solve this problem now and, in the future, when humans are no longer responsible for driving their own cars. That will happen sooner than some big project. Stop gap, until then by taking advantage of market mechanisms. I can guarantee 30% reduction in traffic at \$50 a vehicle. If the goal of all this is to pump more sausage through the factories, then let's call it what it is and assign fair burden to fair benefit. These towers would be</p>
34084	Maya Silver	Please don't ruin the canyon by increasing traffic and destroying beautiful parts of it.
34085	Chelsea Phillippe	<p>I do not support the gondola option. Using public tax dollars for transportation to private businesses is unjust. The gondola solves a fraction of the skier traffic ignoring year round traffic issues, and is NOT adaptable to resolve novel traffic issues that will occur in the future.</p> <p>Enhancing buses as promised, instead of removing them as forecasted, would have been an amazing opportunity for this community to participate in solutions. It's disappointing funds can be raised to study this massive project proposal, but not to pay a living wage to actually employees - bus drivers.</p>
34086	Mark Bosworth	I don't want my tax dollars used to benefit two ski resorts - totally wrong.
34087	Amy Brunvand	<p>I am a resident of Salt Lake City and a skier. I oppose the plan to build a gondola in Little Cottonwood Canyon. Tax payers should not have to foot the bill for a gondola that only goes to ski areas and serves only rich skiers. Building and maintaining lift towers would be a blight on a beautiful canyon. The inflexible base area of a gondola just displaces the parking and traffic problems that already exist. What's more, the overcrowding in LCC is largely caused by irresponsible ski industry overselling of IKON passes. Ski areas can solve that problem without demanding a huge transportation subsidy from the public. For instance, in the 2021/22 season Alta and Snowbird have already shown that parking reservations are an effective way to manage traffic. The goal should not be to haul more and more people up the canyons. Skiing is no fun if you have to wait in 30 minute lift lines and on many days resorts are already packed beyond capacity. Pro-gondola ads attacked the UTA ski bus as inconvenient and dirty, but I ride the UTA bus pretty often and that is just not true. It seems gondola advocates have to tell transparent lies in order to sell their pet project, which gives me no confidence. Salt Lake City and County government both oppose the gondola project as an expensive, environmentally damaging boondoggle that does not address canyon crowding in any meaningful way. A more prosaic solution will ultimately be more flexible and more effective-- LCC ski areas need to implement better parking and crowd management, IKON pass holders need to have black out days and incentives to take the UTA bus, and the Ski Utah tourism agency needs to stop sending out POWDER ALERTS! that draw crowds to the canyons during the worst driving conditions.</p>
34088	Sarah Scheetz	I am with doing the busses and not the gandola. We do not need to disturb the canyon any more. Please please please do not instal the gondola
34089	Lisa Leonard	Once again, the entitled get the lions share. A gondola takes from the less and gives nothing back to the masses. Serving those who have the most already. Common sense choice would benefit the whole. Put them all on busses.
34090	Kendall Seymour	Buses are a much more effective and much less expensive solution for transportation issues in the canyon. Having "the longest gondola in the world," is an idiotic point of pride to gain by ruining the skyline and quiet for an ineffective solution.
34091	Patrick Sweeney	What UDOT says it will do, pending funding for the gondola option, as practical matter makes sense.

ID	Full Name	Comment
34092	Laurie O'Connor	<p>1)A gondola does not solve the problem. It will create an even larger jam-up of people as they try to park at the lower gondola station and then await their turn for the ride up the canyon--huge bottleneck.</p> <p>2)The estimated cost of \$550 million will, inevitably increase. Large projects of this type ALWAYS have cost overruns and end up much higher. You will be asking all Utah taxpayers to pay for something that a very small percentage of them will use. I am a skier, but why should any non-skier, resident of St. George, etc, be asked to pay for something they will not use? This is not a one-time cost, either. Annual operating costs have to be figured in to taxpayer cost.</p> <p>3)There are other, less invasive, lower-cost alternatives to a gondola. More bus service is one, but there has to be a system implemented to make using the bus more attractive and change behaviors. More buses should go hand-in-hand with a tolling system (for both canyons) and parking reservations required at both Alta and Snowbird. My idea for tolling would also include a count of all valid parking spaces in the whole canyon. Install an electronic car-counting system (similar to airport parking garages) at the base. Once the system counts that enough cars have gone through the gates, the gates would lower and not raise again until a certain number of vehicles had passed through on the downward side. Residents and employees would have key cards that would raise the gates for them. This system would work for Big Cottonwood too.</p> <p>4)A gondola, if it has any benefits, only benefits Alta and Snowbird. Your own EIS is Chapter 6, says that a gondola provides an economic benefit to the ski resorts by allowing more users to access... As I said above, a gondola does not benefit the majority of Utah taxpayers being asked to foot the bill, and the gondola is not a solution to the traffic--it creates a new bottle-neck at the mouth of the canyon.</p> <p>5)Public and political opinion is against the gondola, but UDOT does not seem to be listening. UDOT always wants to build, but building is not always the solution to a problem. By the way, widening Wasatch Blvd is a terrible idea. Widening Wasatch creates many safety problems for the hundreds of cyclists and pedestrians using Wasatch. Widening Wasatch would also ruin the ambiance of the residents living along Wasatch, many of whom have lived there for decades.</p>
34093	Monika de St Germain	<p>The gondola is a financially irresponsible choice benefiting primarily private resorts and developers.</p>
34094	Mark Evans	<p>First things first, I vehemently oppose building a gondola in little Cottonwood Canyon!</p> <p>I am an avid outdoor enthusiast, rock climber, mountain biker, skier, hiker, photographer, and I recognize the reason to address traffic congestion during certain times of the winter. I have read through all of this and previous EIS statements and I have yet to find an argument that leads me to believe the gondola is the best choice.</p> <p>One thing I do agree with is building snow sheds in certain avalanche paths, which is some thing we have needed for a long time.</p> <p>Personally, I think the most obvious first choice would be enhanced bus service without road widening. The reasons stated in the most recent EIS disputing enhanced bus service as a viable option are ludicrous. "We won't be able to transport enough people by bus..." "It will cost 'x' amount of money..." Seriously?! I understand that articulated busses won't work in LCC, but what about having multiple busses leave at the same time? The argument that we can't move that many people just shows that someone at UDOT probably has their pockets lined with GondolaWorks money....</p> <p>Possibly close the canyon to all but employee and residential traffic on certain days/times of day and have multiple busses leave the base at frequent intervals during peak times. Make the bud an actual viable option and the only option and we can avoid this expensive PR stunt turning LCC into a theme park that only benefits 2 private ski resorts.</p> <p>I'm having a very hard time not believing that there is blatant corruption somewhere along the line being that the VAST MAJORITY of residents and elected officials oppose the gondola, and yet you still are moving forward with Pugh giving REAL reasons as to why that is the "preferred," option.</p> <p>PLEASE HEAR OUR VOICES! NO NO NO NO NO GONDOLA!!!</p> <p>█ figure it out!!</p> <p>Thank you for reading my rant. I apologize (slightly) for my anger and vulgarity.</p>
34095	Marilyn Hanks	<p>This is a lot of money that benefits few people. A huge benefit to the owners of the ski resorts. There are more ways to spend my tax money that benefit more people. Public transportation still works. Let it be.</p>

ID	Full Name	Comment
34096	Richard Mingo	<p>The National Environmental Policy Act was passed in 1969 with near unanimous support in both houses of Congress, across party lines, and was quickly enacted by President Nixon (oh, those were the days!). And Why Not! The Act simply requires Federal Agencies to prepare an Environmental Report that discloses the environmental impacts of projects they are proposing so decision makers can make informed decisions based on of the consequences of their actions. It also requires that the public be informed and provided an opportunity to be involved in the decision-making process. Informed decisions, public disclosure and opportunity for the public to participate in the decision-making process - brilliant! Unfortunately, in my opinion, UDOT's FEIS isn't quite what Congress had in mind. The document doesn't adequately disclose the impacts of the project and does not provide the necessary information for decision makers to make informed decisions.</p> <p>-The estimated cost of the project will have increased at rates not seen in over 40 years from the costs presented in the FEIS to what they are more likely to be at the time of construction. The costs estimate for all alternatives should be updated, and not by just an across the board indexing. Decision makers and the public need to consider the opportunity cost of this investment within the context of the entire suite of funding decisions that need to be made by the State Legislature. Any decisions by the State Legislature to spend tax dollars on this project should be done with full knowledge and discourse of what other projects and programs they would be forgoing. Therefore, true cost of the alternatives should be updated to current/projected costs and not just indexed across the board. More accurate cost estimates, will lead to better decisions regarding the allocation of our limited tax dollars and knowledge of the opportunity cost of associated with this project. Informed decisions is of course, the ultimate goal of NEPA.</p> <p>-The Environmental Justice discussion in the FEIS does not adequately disclose the fact that the costs of the project fall disproportionately on low and middle income households. Few low- and middle-income families rarely afford can afford a day of skiing at Snowbird or Alta but they will be paying the lion's share of the project through their tax dollars. The same can be said for those Utah residents who live further distance from LCC and don't often choose to ski at LCC resorts. The cost also falls disproportionality and those who simply don't ski or might be physically challenged because of disabilities, age or health. The benefits of this project are enjoyed by a very small minority and typically by those who have more disposable income than most.</p> <p>-The Purpose and Need for the project describes a peaking problem that becomes untenable for only a limited number of days per year. The FEIS didn't formulate other alternatives to address the peaking problem or even the degree to which the peak needs to be addressed. For instance, reservation system, lottery, auctions could all help mitigate congestion on peak days. Simply forecasting and publicizing forecasted traffic delays the day prior, might incentive some people to choose other ski destinations.</p> <p>-The Federal Highway Administration's conclusion, and U.S Forest Services apparent concurrence, that the impacts of the Gondola alternative are de minimis on 4f resources are not supported nor convincing. The entire canyon is essentially a</p>
34097	William Watson	<p>Please do not spoil our canyon with crazy lane widening and a gondola! We don't need Little Cottonwood Canyon to become Provo Canyon.</p> <p>We need to conserve this place by creating a toll system that makes resort users pay their way for using the canyon.</p> <p>We need to do a capacity assessment for the volume of usage that the resorts can reasonably handle. How many more people can reasonably recreate up there anyway?</p> <p>I don't want to spoil the canyon. And I don't want taxpayers to foot the bill for the ski resorts.</p>
34098	Mike Justesen	<p>I'm a life long citizen of Salt Lake City, a resisted voter in Salt Lake county and a tax payer and frequent user of the canyon. I'm opposed to spending hundreds of millions of taxpayer dollar's for the sole benefit of increasing traffic in one canyon for two ski resorts. I think that that amount of money could be better spend on increasing overall public transportation. We don't need to increase access for a few people (tourists) for larger bottom line profit for Alta and Snowbird. If either or both resorts want to fund the gondola or put an extra bus lane in and pay for it that is fine, NO TAX PAYER DOLLARS!!</p>
34099	Hanna Sant	<p>please keep nature wild. id rather introduce a toll road and/or shuttle system vs destroying part of the canyon to install a gondola</p>
34100	We Paxton	<p>We should not be starting with the most expensive, most permanent solution. We should start with what will have the least impact on the canyon and the most likely option to succeed: buses.</p> <p>If people won't take buses, they won't take a gondola. Start with buses first.</p>
34101	Shannon Mullins	<p>I do not think the best solution to the traffic congestion in Little Cottonwood Canyon is to build a gondola. The taxpayers should not be responsible for paying for something for two resorts to financially benefit from when this change will negatively impact this beautiful environment forever. This is an extremely expensive option considering that climate change means we won't even get enough snow to ski in the future. I see this as a temporary problem and those funds will be better put to use by saving the Great Salt Lake since the dust from the low levels cause the snow we do receive to melt more quickly. I've been skiing at those resorts all of my life and it's true that overuse and traffic congestion is a major problem and something that needs to be addressed, but I think there are alternatives that need to be implemented first before pursuing a gondola at such expense and irreversible impact. There should be a fee for canyon access, incentives created for people to use the bus system and make it easier for people to access. I personally prefer to take the bus up the canyon after driving for many years. You see way too many solo drivers headed up the canyon for a few hours. Park and rides don't only need to be at the bottom of the canyon. They can be spread around the city. Why do the resorts only offer expensive full-day passes and half-day that are not that much less expensive so there is no financial reason to not go full-day? I recommend staggering the pass times throughout the day so you get more skiers coming up later and not everyone trying to get up the canyon at the same time in the morning. Lifts are so rapid these days that it's hard for anyone to ski all day long. How about a pass time 10-2, 1-4? Many season pass holders get first lift and leave after a few hours so the parking lot opens up. Use electric busses and charge people more to park. Please do not destroy this amazing canyon by adding a gondola before you really attempt to see how alternatives could reduce the morning congestion.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34102	Ramona Stromness	The proposed gondola will be unsightly and will negatively impact Little Cottonwood Canyon and the area at the base of the canyon. I do not see how the gondola benefits anyone except the ski resorts. If they want it they should bear the full cost of it. Public funds should not be used to benefit a few wealthy companies, particularly with our changing climate where skiing may hardly be possible in the future. Please increase bus service, add electric buses, and make it a toll road so that those who use it pay for it, and so that those who wish to access other parts of the canyon besides the ski resorts can do so. Charging a nominal fee to access Millcreek Canyon has greatly improved the experience for everyone there. Why not try it in Little Cottonwood Canyon? Every city that is directly affected by the traffic up Little Cottonwood Canyon, is against the gondola. So is Salt Lake County. Please go back to the drawing board and look for a different solution to the traffic problems of this canyon.
34103	Kristi Kleinschmit	I am opposed to the gondola solution. UDoT says that they are making a solution for all users, but this solution ruins the canyon view and impacts the environment by th construction necessary to build tower bases in natural areas to prioritize users of the ski resorts. Please don't ruin LCC with this plan.
34104	Ian Hauritz	I am was born and raised in holladay, and have been an avid skier since i was a child. I strongly believe that the gondola is not a proper solution to any of the issues facing transportation to and from little cottonwood resorts. I do not believe that anybody who doesn't already want to take the bus up the canyon would opt to take the gondola instead, and it will only serve to crowd the ski resorts with more people, while not reducing the number of cars in the canyon. A more robust and efficient bus system that is heavily incentivized over driving would be a far cheaper and more effective solution that would serve more people and maintain the beauty of the canyon.
34105	Courtney Anson	<p>I am an outdoor enthusiast, a climber, and your constituent. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction.</p> <p>The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>I hope you will consider opposing the Little Cottonwood Canyon gondola in favor of better solutions.</p>
34106	Lilliana Libeck	NO GONDOLA!!!! Keep Utah and our canyons with the environment and beauty at the center of our decisions, not profit and tourism. We all know it's the right thing to do, it's time to set an example for all future generations that we can do the right thing. More buses, more carpooling, maybe even enforce someone at the bottom of the canyon to monitor the amount of cars in the canyon. There are other solutions, you just have to care about it. Please, care more. This place is my home.
34107	John Stromness	Please reconsider the decision to build a gondola in Little Cottonwood Canyon. This option will put a permanent scar in one of the most beautiful places in our State and will benefit primarily 2 privately owned businesses at taxpayer expense. It benefits the only the ski industry which, with climate change, has a dubious future at best. There are better solutions. Electric buses, tolls, carpooling mandates and other options that will not permanently scar the can you. I have enjoyed the beauty of the Cottonwood Canyons for 72 years. Please rethink this decision and listen to the PEOPLE, not the developers and ski industry who will reap the rewards of this plan.
34108	James Peterson	I think the gondola system would be a great addition to the canyon. I think that it would draw more visitors to the area, not just skiers. I am definitely for the construction of the gondola system.
34109	Leah Jensen	As someone who has grown up in SLC my whole life it is extremely important that we preserve this beautiful canyon and implementing a gondola will not do that.
34110	Anthony Gehring	Please focus on bus routes and car pooling over putting a gondola in the canyon. As not only a huge eye soar it will not help winter activities as these canyons can only hold so many people. Adding more unnecessary people, especially low skill level only makes it more dangerous to those trying to enjoy winter recreation.
34111	Jared Goldberg	I am strongly against the gondola. Please use the alternative options like better bus system and tolling.
34112	Robin Bucaria	<p>Please choose an alternative to a gondola in the canyon. The costs- environmental and financial- outweigh the benefits. How can we justify the expenditure to benefit two private companies? The beauty of the canyon will be impacted, as well as access to climbing areas. I also wonder how much lobbying on the part of ski companies and construction firms has played into this decision.</p> <p>Again, I urge you to stop a gondola in the canyon.</p> <p>Sincerely, Robin Bucaria</p>
34113	Craig Erbach	The environmental impact of this gondola is too great. I worry about impacts to our water supply. Lets do something less invasive and costly.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34114	Ayja Bounous	<p>It's disappointing that UDOT has only been trying to address the canyon transportation issue within the boundaries of LCC. The scope of this transportation issue should be broader and pinpoint where the problems start, not just put a bandaid on the surface issue. I have submitted comments before about how UDOT should be looking at expanding the Trax system down the eastern bench of the Wasatch. Still, I often get a response saying my suggestions are disregarded because they are outside of the scope of the issue when in reality UDOT's scope isn't large enough in the first place to *actually* address transportation issues. Rather than spending taxpayer dollars on a gondola that would only benefit specific people going up this one canyon, why not spend that same taxpayer money to expand Trax-create a line along Foothill Boulevard, across the entrance of Parleys Canyon, and down Wasatch Boulevard to the base of Big Cottonwood and Little Cottonwood. (Then have a highly efficient bus system to take travelers from the stations up the canyons.) Have a connecting line to Sugar House (and eventually add connecting lines along 4500 South that could connect to Murray Station, and another along 9400 South that would connect to the Sandy Station). This would help alleviate traffic problems YEAR-ROUND in so many different ways, including traffic along Foothill Boulevard going to and from the University of Utah. It would not only help solve Wasatch Boulevard traffic on powder days, but provide a valuable public service that would benefit people who don't travel to the mountains. It would cater to hikers, bikers and rock-climbers, and others who enjoy the mountains without going to resorts. It would benefit both Big and Little Cottonwood travelers. It would provide a safe passage for folks to and from the mountains for the Oktoberfest at Snowbird. Rather than supporting a controversial option that would damage our canyon, why not set an example of how public transportation can benefit all citizens while alleviating recreational traffic both inside and outside of the canyon? This solution encompasses the true "scope" of the issue. The gondola does not.</p>
34115	Kyle Flanders	<p>The gondola will drastically change the visual beauty of the canyon and cost far too much to taxpayers. More should be done to explore alternatives that are more reasonable and environmentally sound. Protecting the environment and wildlife in the canyon should be of utmost importance!</p>
34116	Theo Kallaker	<p>A bus system would be preferred to the gondola, to preserve the ecosystems and natural beauty of the canyon. It would also be nice to have a more comprehensive bus system to reach the canyons in SLC...I've lived here for 5 years without a car and find it difficult to reach these natural areas that are so close to me!</p>
34117	Rob Bennett	<p>The gondola option for Little Cottonwood Canyon is ill conceived and exists primarily to benefit land owners at the base of the canyon. These land owners include former members of the Utah legislature and Snowbird ski resort. The gondola would permanently scar the canyon and it's beauty. The occasional traffic problems in the canyon would be better solved by an increase in existing UTA bus service along with enhanced parking facilities in the Salt Lake valley for those riding these buses. Ski resorts can contribute to enticing people to ride buses by expanding their number of ski lockers at the resorts. Also limiting the number of skiers (and snowboarders) per day as per Deer Valleys model. It is not the taxpayers responsibility to promote the endless gluttony of the ski resorts, primarily Snowbird. There is no need to widen State Road 210. No gondola.</p>
34118	Janelle Smith	<p>I do not support the gondola. Please consider other alternatives to ruining our canyon forever. As a skier with a pass in Big Cottonwood canyon for the last 10 years, I understand the traffic problems to be similar between the canyons. My experience has been that on days that I choose to take the bus, they do not start early enough or run often enough to accomodate all the skiers who would like to use them. A simple solution would be to increase parking, timing, and daily start times of buses going up and down the canyons. When I'm able to get on a bus, I actually enjoy it much more than driving up the canyon myself. In fact, If there were more convenient routes throughout the city and I could take the bus straight from my home, even better! I did this a few times when I lived in a different part of town and it was great. Please at least put a pause on this gondola project to allow for other solutions to be tried before spending tax payer money on an decision that will have irreversible impacts. Thank you.</p>
34119	Margaret Dowling	<p>Please don't build a gondola in Little Cottonwood Canyon. Don't use taxpayer money to benefit the ski resort owners with something too stupid for words. don't wreck the environment that way. The money would be better spent in many ways including helping the Great Salt Lake have enough water to create Lake Effect snow. The gondola isn't the answer. Too few days with too many skiers - too many skiers means that many people shouldn't be in the canyon anyway.</p>
34120	LAURA MACVICAR	<p>I don't understand why you don't work on the problem. The problem is not Wasatch boulevard. The problem is Big and Little Cottonwood Canyons. If you create four lanes you are going to cause even more cars packed at the South end where Wasatch and Little cottonwood divide. Creating a pocket of dense pollution for the people that live in that corner.</p> <p>I know it makes people uncomfortable to have to take public transportation. But look at the models that the Grand canyon and Zions have put together. People still go and see the parks. There's no reason why we can't increase the buses and make people ride them up to the resorts. The parking lot would be the only issue. But the quarry by big cottonwood could probably help alleviate that. Then if you have the parking lot there it would drastically reduces the number of cars on Wasatch between the canyons.</p> <p>People will adjust. You don't hear people complaining when they go to Zions or the Grand canyon and they have to ride public transportation. Humans are adaptable we'll figure it out.</p> <p>We do appreciate you taking the time to listen to our comments. Instead of just making a decision and disregarding our opinions.</p> <p>Thank you.</p>
34121	Luanne Coon	<p>No gondola!</p>

ID	Full Name	Comment
34122	Brandon Thomson	<p>I am strongly opposed to either of the gondola solutions. I am in favor of taking less drastic measures that may have an immediate impact on our traffic problems, including: mandatory traction laws from November - April (with actual enforcement!), an increased number of bus routes bringing people from numerous locations around SLC & Summit County to the Canyons (both of them), incentives to encourage users to ride the bus (priority bus lanes), and snow sheds to reduce the impact of avalanches on road closures. I believe the combination of the above will not only increase the reliability of commuting in Little Cottonwood Canyon, but will also encourage a behavioral shift toward carpooling & public transport.</p> <p>I don't possibly understand how redirecting thousands of vehicles from one Canyon (with several parking lots) to a Gondola station (with one parking lot with fewer stalls) will help us reduce any of our traffic woes. Sure, there will be less traffic in LCC, but the wait times to get to the gondola & overall transit times will increase DRAMATICALLY.</p> <p>In addition, I find it appalling that we would be using taxpayer dollars to fund initiatives that support just 2 private businesses. This gondola will not run year round, it will not provide access to public lands, and it will cost our community even more money to partake in an already expensive hobby. If the private resorts want to increase their daily skier counts, then they can fund their own initiatives (private transport) so their heart's desire.</p> <p>UDOT and the private resorts have not even tried the less intrusive, cheaper options yet. To resort to such a drastic change, we will need to understand if other, cheaper, more viable options will or will not work.</p> <p>I beg of you - take the funding, increase the wage for bus drivers (so that we have supply!), create more bus routes that encourage transit from hub-and-spoke locations, and fund a solution that requires 3PMSF tires BEFORE entering the Canyon during designated months (EVERYDAY, ALL DAY).</p>
34123	Jim Dowling	<p>Please do not approve the plan for the gondola up Little Canyon Canyon. This plan will only help the ski resorts and our tax dollars should not be spent on this. I say this as someone who holds a season ski pass. Increased bus service would be a much better way of curbing traffic in the canyon. We also do not need a gondola system ruining the views in our spectacular canyon. I strongly vote no on the proposed gondola!</p>
34124	Fred Larsen	<p>I believe UDOT's selection of the Gondola is the correct choice for the transportation issues in this canyon. I think the environmental impact is much less and cleaner than extensive widening of the road and adding more vehicles. It is also a much better alternative in bad weather.</p>
34125	Tabitha Benney	<p>Please do not move forward on this - we need to preserve this land as long as possible.</p>
34126	Sara Barnett	<p>I've been enjoying little cottonwood canyon since I was 3 years old and learned to ski at snowbird. Since then, I've had a season pass every year. It holds such a special place in my heart for it's true, genuine beauty. I also love to hike, mountain hike and rock climb in LLC outside of winter. The gondola would undoubtedly destroy LLC, it's beauty and all of the recreational opportunities utilized by people near and far. It would serve only the ski resorts, and while I love Snowbird, it's just not right. Please do not build the gondola!</p>
34127	Mary Ellen Segodnia	<p>The gondola is an incredibly expensive & ineffective way to approach the traffic issues in LCC. It only benefits a small portion of canyon users and certainly does not benefit all state citizens, yet will use taxes and state Highway money. It reeks of payoffs and political pay backs. Do not build a gondola.</p>
34128	Shandi Kano	<p>My name is Shandi Kano, a constituent of yours. I live at [REDACTED] I am writing in to ask you to reject the proposed Gondola B as the preferred option to mitigate traffic in LCC.</p> <p>Little Cottonwood is important to me because there was a time when being up that canyon saved my life. I had experienced a nervous breakdown at the Boston Marathon bombings in 2013. I was out east living and working for ESPN and this moment in time forced me into some serious health consequences. Coming back here where I went to school, I found myself more and more drawn into Little. Spending time in that canyon helped my brain heal from trauma, helped my body heal from severe physiological damage and gave hope back to my spirit.</p> <p>Never in my wildest dreams would I ever think I'd be privileged enough to live where I live, to be this close to a place I've loved since the early 2000's. As a runner, a backcountry snowboarder, a lover and appreciator of nature and all it does for us as a society, this is important to me. As a person who endures the winter traffic from my doorstep, I have thought through the process of using the Gondola instead. I thought through what things would be like if actually there was a gondola on those busier days. The truth is, the traffic that stands still just beyond my fence will still be there, however, it will be worse than it already is. Instead of the vehicles trying to get up the canyon, they are vying for one of the limited parking spots at the gondola base (which is right in the middle of a quiet residential neighborhood, which does not feel right). When those spots fill up, the decision is to get back in line to wait to get up canyon, or drive somewhere else to find parking, and then wait for a bus, which will then put you back in traffic to wait for a drop off at the gondola, and then the ride itself, which only serves two, for-profit destinations.</p> <p>According to the following facts from your EIS: 1. The proposed \$600M is coming from the taxpayers of this state. This is not a trivial amount of money that benefits private developers and two ski resorts and resort skiers only, while not benefiting the majority of those who live in this state, yet will pay for this. 2. According to the EIS, the water quality of LCC will be diminished (DEIS 19.2.2.5) The Sandy municipal water district as well as the SLC Dept of public utilities, are both concerned about this as they stated that the your analysis and preparation for the protection of our water is extremely insufficient. Our watershed will be the most vulnerable during construction, which is several years long according to your EIS. Last year, UDOT contracted a company to do work on 215. Concrete ended up in the Millcreek stream. Therefore, UDOT does not have the trust of the public when it comes to the protection of our water sources. Salt Lake Public utilities believes that our water will be impacted and I am disappointed in the response you made to them.</p>
34129	Scott Raney	<p>Please don't put a gondola in Little Cottonwood canyon. It would be a sad day that we tarnish such a beautiful place.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34130	Ashley Anderson	The gondola does not provide equal access to residents and doesn't respond to longterm needs of the area. Sustainable transit solutions must be prioritized: no gondola.
34131	Shane Benhoff	Thanks for listening to us. The gondola is a very large, expensive project and should not be undertaken until other actions are taken, including tolling. Increase bus service and increase tolls to very high prices (50\$) and see how traffic changes. Please try something else instead of jumping to billion dollar conclusions.
34132	Brendan Trieb	The gondola project is not the best decision for the longevity of LCC or for practically solving the traffic problems. It's unsightly and a cash grab driven by the resorts. I full support alternate transportation, but the gondola project is the not the way. Take a page out of Europe's ski resort and alpine towns book, and seriously consider a cogwheel train. In the long term, a train is more efficient, more reliable, more cost effective, and can transport larger numbers of people better. There are reasons why Chamonix and Zermatt keep gondolas and teams relegated to their ski resorts, and lean heavily on trains to get to the towns and resorts themselves. I do not support the LCC gondola project.
34133	Micah Jensen	This canyon means so much to so many. The damage this gondola would cause is lasting and profound. Please protect the Wasatch over the the wealthy seeking more money. Thank you.
34134	David Lattimore	Expensive, invasive and does not solve the traffic and parking issues
34135	Greg Mendiola	I am opposed to the current referred gondola option. I feel it is an extremely expensive way for public to fund a solution that will only benefit two private companies. I think increased bus service should be given a trial before such a massive and and expensive project is undertaken. I have skied at Snowbird for 49 years, and over the last ten have seen alarming decreases in snow pack. Will the resorts even be viable in ten more years. Will the gondola end up just being pumps in the desert?
34136	Matthew Hughes	Perhaps we shouldn't be trying to cram as many people as possible up the canyon. Maybe a permit system would be the best option - do a lottery and those without a permit for the day are out of luck.
34137	Claire Adler	I strongly oppose the construction of the Little Cottonwood Canyon Gondola. Its too expensive, disruptive, unnecessary, and hideous. Why should my taxpayer money fund ski resorts frequented by out-of-state tourists??
34138	Nicole Milavetz	I feel strongly against the construction of a gondola that would destroy a watershed, and place undue pressure on Litte Cottonwood Canyon, which has a finite carrying capacity. Electric buses and a phased approach is the best call for this canyon.
34139	Landon Echols	I am strongly opposed to a gondola in our canyons. It would take away from the natural beauty of the canyon and will not solve the majority of problems with congestion, particularly long term.
34140	Nycha Schlegel	<p>I'm delighted that the gondola alternative from La Caille has emerged as the preferred alternative. The gondola will provide safe transport unencumbered by road conditions and provides a second access to and from the canyon in the event of most emergencies. Starting the gondola from La Caille rather than from the park and ride area is a significantly better alternative inasmuch as it eliminates greatly exacerbated traffic issues on 209 and 210 were the gondola to begin at their intersection. I must say, though, that I continued to be troubled by the financial gain likely accruing to political insiders who have purchased land in the La Caille area.</p> <p>I remain totally opposed to the construction of snow sheds and the berms required to funnel avalanches to the snow shed areas. I can I envision no circumstances that their construction would not significantly alter the beauty of the canyon and would not result in significant harm to the environment of the canyon.</p>
34141	John Davis	<p>As a taxpayer, engineer, and multi-use outdoor recreationalist who frequents Little Cottonwood Canyon, I cannot emphasize enough how opposed I am to the proposed gondola as a transportation solutions vs. other more effective options. First, it is absurd to develop such an expensive project when the benefits of the project as proposed flow primarily to two private businesses. As a public transportation entity, UDOT should consider the broader transportation needs of the public as stewards of public funds. There are a myriad of public resources in the canyon that would not be serviced by the gondola.</p> <p>There are far better options for the canyons, including significantly enhanced bussing that leverages regional connections. Long term, some of the rail solutions proposed by Stadler rail seem far better when viewed in connection with regional connections in the valley and their ability to serve multiple uses year round via whistle stops.</p> <p>Please take stewardship of public resources seriously and invest those resources in transportation solutions that benefit all users of the canyon. Enhanced bussing with tolling at peak times is the best solution at this juncture.</p>

34142	Joel Paterson	<p>UDOT Decision-makers,</p> <p>Choosing the gondola as the preferred alternative during this EIS process is irresponsible. There is a traffic problem in the canyon but the gondola is not a viable solution. Please consider the following: Decision makers need to know what is the visitation capacity of the canyon. Of course, the ski resorts resist a study to determine the carrying capacity because they don't want to limit the number of customers. Ski resorts want to show a growth in skier-days. However, to protect the ecosystem and user experience in the canyon, we need to know how many users the canyon can sustainably accommodate without degrading the experience.</p> <p>Building the gondola will serve only two ski resorts and ignore other users of the canyon. Alta and Snowbird are private businesses that will profit at the expense of tax payers across the State. The vast majority of Utahns do not ski or even visit the canyons but will be paying for improvements that only benefit the resorts. It is a certainty that the resorts will use the gondola as a marketing tool to attract even more out of state skiers.</p> <p>The costs estimated for the construction and maintenance of the gondola are not reliable. Of course, the gondola has not been designed and no reasonable estimate of its cost have been shared. The \$500+ million outlay will certainly prove too little for such a huge project. Of course the cost will rise significantly as the project evolves, but at that time, tax payers will have to cover the exploding budget. UDOT's preferred alternative would represent the longest gondola system in the world. Nobody else has constructed such a long distance gondola because of the extensive cost to construct and maintain far exceeds the cost of other viable alternatives.</p> <p>Many studies show that transit ridership greatly decreases with an increase of mode change. The vast majority of users of the gondola will use three methods of transportation to ride the gondola - a private car to access a bus to access the gondola and then the gondola ride to the resorts. Each change in transportation mode add time, inconvenience and additional personal cost (purchasing tickets). All of this discourages people from using the gondola. Although the gondola may attract more skiers to the resorts, it will not reduce the number of vehicles driving up and down the canyon.</p> <p>Most of the local political entities that are affected by the traffic and tourism generated by activities in Little Cottonwood Canyon support lower cost, common sense alternatives that actually address traffic in the canyon. These alternative have proven records of success and can be done with a fraction of the impact to the environment and visual beauty of the canyon. Improve bus service and encourage ride-sharing. Use tolling and parking reservations and limit the number of users allowed in the canyon at one time.</p>
34143	Danielle Paterson	<p>UDOT Decision-makers,</p> <p>Choosing the gondola as the preferred alternative during this EIS process is irresponsible. 34144	Chris Nukaya	The solution is easy and cheap. During Ski season. All personal vehicles should be banned from the Canyon. Except those that have homes in the Canyon. Busses should stop at White Pine during ski season.
34145	Ciara McGinley	No to the Gondola. It's not the answer. It destroys the view -disrupts migration patterns. Doesn't serve the entire canyon. Is the most expensive and least effective option.
34146	Matthew Showalter	This will not be beneficial for the public. This only benefits special interests.
34147	Christopher Flint	The gondola is way too expensive! There are cheaper options.

34148	Monte Yedlin	With the climate changing and the snow pack diminishing each year, putting up a gondola seems ridiculous. Until, and if the snow pack returns to normal, that is when the gondola or alternative should be considered. As with the Moab gondola, which is rusting away, this will happen with the Little Cottonwood Gondola unless we get more snow. Once this eyesore goes in it would cost a fortune to take it down. Between snow sheds and a low cost phased approach that should be tried first before any money is spent on road widening or a gondola. Please consider!
34149	William Hastings	Do not destroy our shared backyard. It's the communities watershed, playground, place of worship, and play. It's home to life vastly more important than any "benefits," (of which you have not yet shown any). Work for the people, not corporate interest. Run busses, don't destroy what makes my home special.
34150	Britton Kowalk	Busses are already full at peak demand- people love using them. They could be expanded to create greater capacity than the gondola could ever provide, at lower cost, with the ability to grow into the future. The gondola is a non-solution with irreversible negative consequences.
34151	Matthew Markman	The preferred UDOT selection for Little Cottonwood Canyon, fails to address the most important issues facing LCC, Salt Lake City, and Utah, and rather seeks to spend taxpayer money to benefit private businesses (the ski resorts) above other residents of Utah. I am concerned that the Gondola is not well thought out and will permanently impact the fragile ecosystem that is LCC.
34152	Matt Wolfe	I leave in Sandy very near the base of LCC. I think the gondola is a terrible idea. Please reconsider. There are better more cost effective ways.
34153	Monte Yedlin	My main concern with considering the Gondola, which not many have commented on is the roads and area needed to build and maintain the gondola. A large initial area is needed to build and supply materials for the gondola. Also, a permanent access road needs to be built to maintain each gondola tower. That requires cutting into the beautiful canyon.
34154	Patrick Guinn	<p>As a lifetime local and frequent user of Little Cottonwood Canyon I strongly feel that not only should we not be using over half a billion dollars in tax money to build a gondola that would only benefit two private ski resorts, we also should not be destroying the natural beauty of Little Cottonwood Canyon.</p> <p>On the contrary, we should be doing all that we can to preserve the canyon and make the existing infrastructure as efficient as possible. I understand that additional development will be necessary in one way or another, but as stewards of this canyon I think it is irresponsible to build something as intrusive as a gondola that will require construction well outside of the existing footprint of the road and cause the destruction of existing recreation areas, most notably the world class rock climbing in LCC that people travel from all around the world to participate in.</p> <p>We need to invest in flexible means of increasing volume in the canyon. There are only 5-10 days in the winter where traffic is borderline unbearable (and this is coming from someone who skis LCC 50+ days a season, almost exclusively on the weekends when the traffic is at its peak), otherwise the flow of traffic in the canyon is reasonable for the majority of the season. The gondola only has the capability to help alleviate that traffic on a handful of days a year, pretty much entirely in the winter, yet would be a permanent eyesore year round. Since it only has two stops at Alta and Snowbird it would not help other users of the canyon get to trailheads or climbing areas lower in the canyon, which are used both in the summer as well as the winter for ice climbing and backcountry skiing, and would be more of a novelty outside of the winter months. It hasn't convincingly shown that it will have a significant impact on traffic in the winter months with the volume of people it can move and in most cases it would take significantly longer to ride the gondola than it would to drive. It would take some cars off the road in the winter, but it won't change the existing bottleneck at the base of the canyon, if anything it will just shift it more towards the north fork of the canyon road (Wasatch boulevard). The biggest issue with traffic is getting to the mouth of LCC. Once you are past the merge and in the canyon traffic flows smoothly. The gondola won't do anything to help solve the traffic issues caused by the existing travel routes to the mouth of the canyon.</p> <p>Expanded bus service including electric busses that have less of an environmental impact are going to be key for enhancing volume on the existing roads, incentivizing carpooling to keep single passenger vehicles to a minimum, and a toll during the peak use days in the winter season are all flexible solutions that will go a long way toward alleviating the worst traffic issues and days where the pain is most acutely felt. Additionally, there needs to be a better effort to keep vehicles without proper tires off the road on the winter, many of the traffic issues result from crashes and slide offs, which are often caused because cars that are unfit for driving in the snow are allowed on the road on storm days. There also needs to be a stiffer penalty for cars unfit for the road causing traffic issues; if you slide off because your tires aren't fit for the road or you don't have 4 wheel drive/all wheel drive you should face a stiff fine/traffic citation. There needs to be someone checking tires at the mouth of the canyon every day that there is snow on the road. The beautiful part about these</p>
34155	David Lewis	This is very frustrating, that in light of the public pushback, UDOT intends to follow through with the Gondola. I have spent 5 years building the climbing access that was intended to protect the fragile environment only to have that access threatened. Many are against this and believe a better shuttle system from the main parking area is the best way forward. I agree! LCC is a special place and it's amazing to have something so wild so close to a large metropolitan area. Keep it that way and don't let greed cloud your judgment. The Salt Lake Climbers Alliance has spent huge amounts of money to insure that the land is taken care of and the watershed is protected. We don't need or want a gondola. Listen to what the public is saying. Thank you! David Lewis
34156	Becky Peterson	The canyon can only take so many people per day at a time and building a gondola is not going to solve that problem. The traffic is going to build up wherever the bottleneck begins because there are so many people wanting to go to the same place at the same time. There's going to be a line at the gondola also. What data do we have to show that a gondola will really decrease the time it takes for someone to get up the canyon? Many times traffic is slowed during the winter months because people drive with crappy tires or 2-wheel drive or inexperience in the canyon. I think charging people will decrease the numbers of cars going up the canyon because currently there's little incentive not to drive. If busses came more often and weren't so full, people would take them more. Can we try a system where you have to get a pass to drive up the canyon? It looks at your license plate like the bridges in the San Francisco Bay Area. Tax payers should not foot the bill for a gondola and should look at other options before deciding to dramatically change the look of the canyon forever.

34157	Landon McBrayer	<p>Implementation of the Gondola B option would be an utter failure of a representative government for UT. UDOT serves the people of Utah, and the voices of relevant parties are being ignored:</p> <ul style="list-style-type: none"> -80% of Utahns prefer another solution (I.e., oppose the gondola) -The cities that would be most affected negatively by the gondola, Sandy and Cottonwood Heights, have both explicitly voiced opposition to the Gondola--via Sandy mayor Monica Zoltanski and the Cottonwood Heights city council. -Related: the Salt Lake County Council passed a resolution recommending UDOT drop the gondola alternative, and SLC mayor Wilson has voiced strong opposition to the gondola. <p>So, who is it that UDOT is listening to by recommending Gondola B?</p> <p>It looks like the strongest voices in favor of the Gondola: the two private ski areas and their shady subsidiaries (Gondolaworks and LCC Base Property LLC), plus a few corrupt politicians who stand to make massive profits from the Gondola Construction (CW Management founders Neiderhauser and McCandless), are the only voices UDOT is considering.</p> <p>That is a failure of our system of government, and the Gondola will forever be a blight on the state of Utah.</p>
34158	Laura Briefer on behalf of Salt Lake City	<p>October 17, 2022</p> <p>Little Cottonwood EIS c/o HDR 2825 E. Cottonwood Parkway, Suite 200 Cottonwood Heights, Utah 84121</p> <p>Subject: Salt Lake City Comments for the FINAL Little Cottonwood Canyon Environmental Impact Statement (August 2022)</p> <p>To Whomever This May Concern:</p> <p>This letter transmits comments from the Salt Lake City Department of Public Utilities (Salt Lake City, or the City) in response to the Utah Department of Transportation's (UDOT) Little Cottonwood Canyon FINAL Environmental Impact Statement, S.R. 210 - Wasatch Boulevard to Alta, dated August 2022 (LCC FEIS or FEIS). As a cooperating agency, the City appreciates the opportunity to provide input to the LCC FEIS.</p> <p>These comments submitted today are additive to previous comments submitted by the City during this LCC EIS process. For reasons stated in previous input and the comments contained herein, the City supports the phased implementation of components of the Enhanced Bus Service Alternative as well as other operational changes not listed in the LCC FEIS. However, as proposed, the City does not support the selected Gondola B Alternative (Gondola). In fact, the Gondola and road widening alternatives that are considered during the LCC EIS process each represent significant risk to the water resources of the Little Cottonwood Creek watershed given their massive scale of construction and operations. The City supports options with (1) much less physical disturbance of the watershed; and (2) improved scalability and adaptability, both of which would be supported by a phased approach. The City recently adopted a Joint Resolution of the Salt Lake City Mayor and Council supporting a phased approach for transportation solutions and asking to remove the gondola alternatives from consideration.</p> <p>Background and Context - Importance of LCC for Water Supplies</p> <p>The canyon watersheds of the Central Wasatch Mountains, including the Little Cottonwood Creek watershed, provide affordable, reliable, high-quality water resources for over 365,000 people within the City's Designated Water Service Area for its public water supply (FEIS Sections S.12, S.13). The City's service area includes all of Salt Lake City, and portions of Mill Creek, Holladay, Cottonwood Heights, Midvale, Murray, and South Salt Lake (see map of the City's Designated Water Service Area, Salt Lake City Code Section 17.16.005). Population growth projections anticipate the need to supply water</p>
34159	Peter Webster	<p>I am writing to express my opposition to all Gondola options and support for the Enhanced Bus option, either with or without roadway expansion.</p>
34160	Landon McBrayer	<p>The gondola B option would result in an massive eyesore on on of the most beautiful glacial-carved canyons in the nation! That fact alone shows how myopic this project is.</p> <p>A better solution, and one most Utahns have voiced approval of, would be to begin with the projects that were included in other options: widening wasatch blvd, improved bus service, and snow sheds to lessen the road closures that cause delays and back-ups on powder days.</p> <p>Those projects serve as practical solutions that don't result in the permanent environmental damage of having skyscraper-sized towers lining their way up an iconic glacial canyon.</p>

34161	Daniel Kovach	<p>Poor Dave Fields. I almost feel bad for this guy, almost. He's one of the few spokesman "tools" that has been forced to use his own name to append to some of the drivel in support of the "Gondola Solution". I feel bad for a guy who I'm sure really cares for Snowbird and the Little Cottonwood Canyon (like me and folks like me who have gone up and down the canyon since 1981 or even earlier), but is forced to toe the "company line" in order to keep his job.</p> <p>This despite that:</p> <ul style="list-style-type: none"> - The canyon can only take so many folks at one time. The increased pressure on the canyon (through unnecessary construction and increased population) will only act to crash the sewer systems and poison the water supply for millions. But perhaps the proponents of the Gondola won't really care because they'll be well paid off to live elsewhere without a water or a snow problem (everyday heliskiing in the Bugaboos anyone???) - Folks looking outside might see that the drought and climate change are conspiring to remove the problem of excessive snowfall in the canyons (and excessive water in our Less-than-Great Salt Lake and soon-to-no-longer-exist Lake Powell). If we continue down our current path, our Attorney General will force us to remove from the market our "Greatest Snow On Earth" license plates (we don't need the lawsuits). Maybe we can blame Joe Biden for taking away our winters; yeah, that'll help.... <p>Or, maybe we can take the opportunity to embrace the paradigm shift that tolling (on both Canyons) and increased clean energy consistent E-busing (on both Canyons) can bring. Perhaps we could do something for our kids and grandkids that doesn't entail destroying their Earth ???</p> <p>So, I pushed a few buttons, maybe.... But GondolaWorks and their ilk started it by advocating the destruction of one of God's great places to support their own selfish needs.</p> <p>Dan</p> <p>PS: Just how insulting can they be to impugn in their commercials that buses and the people who use them are "trashy"???</p>
34162	Hannah McBrayer	<p>In proposing the Gondola B alternative, UDOT has failed to make a case for how to keep the Gondola from being massively underutilized. Who would want to drive to a base station, drag out all their ski gear, kids in tow, to wait in line to ride for 40 minutes to Alta up the longest gondola in the world, when they could sit in a slow-moving red snake in their own vehicle, with coffee and music, for an hour or so? There are *very* few days of the year when LCC is snarled enough that a majority of skiers/riders would be motivated enough to ride the gondola.</p> <p>One option to incentivize ridership of the gondola would be huge tolls on SR210, but this will just perpetuate inequalities in our state; that is, it would make it cost-prohibitive for lower-income families and individuals to get up the canyon to recreate on our Federal lands.</p>
34163	Tom Cronin	<p>Regarding Environmental Impact, UDOT chose the alternative with the highest visual environmental impact. To me, UDOT should have limited the environmental impact to what we are already familiar with: the roadway. People are not always fond of roadway expansion, but they are used to it. Adding something like the proposed gondola is technically interesting but ultimately it is a very large change to the appearance of the canyon. Multiple towers, cables, gondola cars, etc are not acceptable to me as a hiker. I can tolerate the snow sheds since that can be done in a way that allows vegetation to conceal the shed. The snow sheds are a vast improvement in safety to the road crews and the canyon users. They will also greatly reduce times to open up the canyon on snow days.</p> <p>Regarding the selection of this alternative, I like:</p> <ol style="list-style-type: none"> 1. Phased approach in which some of the non-gondola features will improve travel times 2. Tolls to suppress casual traffic and the skiers that come up canyon for just a few runs 3. Snow sheds <p>I dislike:</p> <ol style="list-style-type: none"> 1. The selection of the gondola technology. This is something that UDOT has no practical experience constructing or operating. While UDOT could learn this, I'd hate to see this need to learn get turned into a bunch of taxpayer funded trips to the Alps. 2. The gondola represents the riskiest alternative. It has to work, it has to be built on time, and it has to be built within budget. If it doesn't, UDOT has nothing else to fall back on. To me it would be preferred to go with technology that UDOT is already familiar with and can accurately estimate capital costs. 3. Are enhanced buses autonomous? Do the \$11M O&M costs assume the need to pay drivers? If so, that is a miss. Autonomous vehicles will be prevalent within 10 years. 4. How will breakdowns of the gondola be managed? How will people be rescued from so many gondolas if there is a major breakdown? It seems it would be better to have 1 bus breakdown than risk the whole system. <p>In summary, the distinguishing column in the comparison of alternatives seems to be O&M costs since performance metrics are good for all of them. The table does not seem to consider this correctly since breakdown costs are not obviously addressed and the gondola option represents the riskiest technology to implement on time for the budgeted cost.</p>
34164	Wit Kan	Please build the gondola!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34165	Anna Jones	Hi! My name is Anna and I am Opposed to the LLC Gondola project , because it will permanently destroy our cherished trails, crags, and views. I am a Utah voter and frequently use LCC for hiking, rock climbing, and back country skiing. I think it is important to persevere the natural beauty of our canyons. The gondola will not serve climbers, hikers, or other canyon users and will not alleviate any traffic at trailheads throughout the canyon. I think that there are other solutions such as tolling, increased bus service, etc. Thank you UDOT for getting to the bottom of this and accurately representing our community.
34166	Megan Van Frank	The gondola plan amounts to a massive public subsidy to private business, is a poor use of public dollars, and a poor decision for the environment. Let's try more "common sense," strategies of incentivizing carpooling and use of public transport before resorting to such invasive infrastructure.
34167	Lyle Campbell Dr.	Please do not put a gondola at all there. There are many compelling reasons not to: very negative impact on the environment, extremely unfortunate impact on the natural beauty and scenery of the canyon, very dubious financial aspects/motives from developers and some public officials. I was born in Utah, am a home owner and resident in SLC and am a long-term user and lover of the canyon. The changes contemplated here break my heart. With projections of the consequences from the Great Salt Lake receding of highly reduced levels of snow at those ski resorts in coming years, the winter clientele that perhaps would want this project are unlikely to be coming, thus just an unfortunate waste, if built.
34168	Barbara Ploshay	The gondola B alternative is the wrong choice for Little Cottonwood Canyon, Utah and the environment. The initial proposed phasing is worth the expense and worth trying. There are so many unanswered questions - so many much less expensive solutions that have not been tried. Why on earth is it a good idea to spend so much money on the gondola without trying those other solutions? Putting in a gondola requires significant infrastructure that can't be easily removed if this solution does not work.
34169	Constance Ward	WATER will be the resource our State esp the Wasatch Front will need desperately in the near future. Don't destroy the water shed to help to private businesses. We need water more than a gondola. Thank you
34170	Mark Schneggenburger	I am a long time Alta/Bird skier. I don't think that Little Cottonwood Canyon is the place for a Gondola, especially at taxpayer expense. Let Alta and Snowbird pay for the problem that they created. Let's look at the ski experience in the canyon as a 55 gal drum. Right now we fill it every day with a garden hose. The gondola will fill it with a firehouse, thereby ruining the ski experience for everybody. By the time it's finished, the nearly \$1 Billion gondola will only be needed for maybe a dozen days per year. Get rid of UTA and establish a more reasonable small shuttle system, build snow sheds on slide paths, institute a toll for high traffic days, widen the road and other solutions are less costly in \$\$\$ and environmental damage. I say "NO," to the Gondola.
34171	Colin Gregersen	I do not support UDOT's decision of Gondola Option B as the preferred alternative for the following reasons. 1. EIS scope is too narrow, excluding transportation solutions for Big Cottonwood Canyon, and therefore doesn't capture the entirety of environmental impacts and costs of transportation solutions in the Central Wasatch. A transportation solution for BCC is needed. The EIS must consider both canyons to be complete. When ignoring transportation issues in BCC, the EIS sets up a piecemeal approach. A piecemeal approach is not consistent with NEPA as I understand it. If Big Cottonwood were included in the EIS, then the taxpayer would see the true costs and environmental impacts of transportation solutions in the Cottonwood Canyons. An example of serious importance is how a gondola up LCC would impact a traffic solution for BCC. A likely and cost-effective solution would be a gondola from upper LCC to upper BCC, over the ridgeline. The public must be made aware that a decision for transportation solutions in LCC will have significant impacts on the future of BCC transportation. 2. Infrastructure impacts these transportation solutions will have on the canyon need to be considered. The bottom line is this: Will increasing the number of people drive further development in the canyon which would irreversibly and negatively impact the reason it is so popular in the first place? This is a fundamental question. Transportation solutions focused on delivering more people to upper LCC cannot be provided without a thorough understanding of the impacts more people will have on the future of the canyon. Basic questions that have not been addressed are as follows: a. Are there enough buildings, power, water, and waste management to handle the increase in users these transportation solutions would create? b. Are there enough bathrooms? c. Will the ski resorts need to expand their resort boundaries to meet the new volumes of users to preserve user experience that was degraded by delivering more people to them? d. Is there enough food and shelter in upper LCC to protect its visitors in predictable weather-related situations that would shut down the gondola? e. Can the town of Alta or Unified Police protect and serve the increases of people who are now enabled to travel there? 3. Overcrowding and its environmental and experiential impacts in upper Little Cottonwood Canyon has not been adequately addressed. I was unable to identify an analysis of the impacts that would result from dramatically increasing the number of people in Little Cottonwood Canyon. Just like the roadway, there is limited space for people in upper Little Cottonwood Canyon. Common sense would dictate there is a limit to the number of people the canyon can support without impacting the environment and the user experience. 4. There is no data to support the EIS conclusion that vehicular traffic will be reduced with any of the alternatives; hence the options evaluated in this EIS are incomplete. I do not agree with the conclusion that people will choose to take the gondola over their car. The gondola transportation option is far less convenient than driving in my opinion. As a pragmatic and enthusiastic skier, I can assure you I will not take the gondola if the road is available to me and UDOT's vehicular traffic numbers are to be believed! I don't think I'm alone in this decision making. Common sense indicates that more dramatic please do NOT build a gondola. implement improved bussing. Between christmas and spring break the canyon could be bus only. create a large parking structure somewhere in your study area and have electric buses looping the canyon all day. thank you
34172	Liz Rocco	please do NOT build a gondola. implement improved bussing. Between christmas and spring break the canyon could be bus only. create a large parking structure somewhere in your study area and have electric buses looping the canyon all day. thank you

ID	Full Name	Comment
34173	Kristin Thompson	<p>I think that the proposed Gondola option is the wrong choice. I was shocked that this was the proposed choice; it seems like a waste of taxpayer money, and one with such a big impact on our canyon, and the most frustrating part is that it will not alleviate the issue.</p> <p>I wrote my comment opposing the gondola option for the past comment period, but I'm writing in again in hopes that UDOT may change its mind before it is too late.</p> <p>The Gondola will only serve two private businesses, and yet the taxpayers are going to have to foot this \$550 million bill to build it. It is not going to solve the traffic issues, but merely push them down the road (onto Wasatch blvd, i15 and into the surrounding neighborhoods). We've seen this at Zion NP where the traffic is backed up miles out of town. This problem has to be fixed with a behavior shift in the ski/snowboard community. We need to prioritize and incentivize public transportation from our own neighborhoods, not just the park and rides.</p> <p>In addition to not actually solving the traffic issue, it won't even be that convenient of a solution time-wise. A 31 minute ride to snowbird from the base is over twice what it would be to drive that on a "normal" day. Who is going to prioritize using the gondola on the days that traffic isn't that bad? Add on the time to park and take the bus from the parking to the base station, and it is likely the same amount of time that it would take to sit in "the red snake".</p> <p>This project was started because we needed to alleviate traffic during the winter months. According to UDOT, there are approximately 50 busy winter days, and within that there are only a few handful of truly awful days, and we are considering wasting this money on a gondola? The other options (tolling and busses) seem so much smarter than this. What benefit does the gondola have the other 8 months of the year?</p> <p>I sincerely hope that UDOT will change their decision on moving forward with the proposed gondola plan.</p>
34174	Scott Woller	I suggest plowing more resource into the gondola and refraining from excessive expenditure on snow sheds over the roads which are of uncertain benefit and will become obsolete./
34175	Mary Ann Vidrine	No gondola!
34176	Ben Williams	I strongly support the development of a gondola in Little Cottonwood Canyon!
35402	Marcus Simon	<p>Hello,</p> <p>I oppose a tram for use in little cottonwood canyon. It's a giant eyesore similar to what has happened in the Alps.</p> <p>There has to be a less intrusive way to help with traffic.</p> <p>Regards,</p> <p>Marcus</p>
34177	Carly Schaub	I am against destroying Little Cottonwood canyon with a gondola. And the ski resorts in little cottonwood canyon should be paying for it. This should not be something that taxpayers foot the bill for, especially when the overwhelming majority, DO NOT WANT a gondola through little cottonwood canyon.
34178	Ashley Osborne	Don't do this. No one wants it. Don't destroy the landscape. That's what people are going for. This is going to destroy rock climbing spots one of the reasons people visit in the first place
34179	Lili Auten	The Gondola will destroy nature and take away the natural beauty of the canyon.
34180	Liam Snihurowych	You people are trying to destroy the canyon. It won't solve the problem it will just change the problem. I'm discuti/ates that you people just do this for money and the pay check rather than the well-being of the native plants and wildlife and the local skiers.
34181	Sam Rushforth	A gondola in LC is ridiculous! The canyon is about more than cramming skiers on the Wasatch!
34182	Michelle Benak	Absolutely no gondola!! This will impact the canyon and all of our homes around it. The thing that is the most frustrating is UDOT/gov't knows public opinion, acts like they are considering and do what they want anyways! this is all about money and politics not what the community wants. Why ask if you are going to do what you want anyways? Money talks.
34183	Scott Olson	No Tram, Road upgrades, more buses, avalanche tunnels.
34184	Brant Bayless	A gondola ruins for everyone the entire canyon's rugged beauty and character while only serving a precious few resort customers. It's a permanent scar on the canyon that doesn't seem like it has any chance to be the savior that AltaBird seems to think it will be. Please just drop it.
34185	Kelly Stevens	I am a lifelong LCC/Wasatch canyons front-country and backcountry user. I am 61 years old and have been recreating in these canyons for fifty years. It is a special place, and difficult but worthy to protect, with such close and easy access to a large population base. There are lots of difficult issues but I adamantly believe a gondola thru the heart of Little Cottonwood Canyon will have an almost 100 percent negative impact. Unless I am an owner of Alta and or Snowbird (I am not), the two business's that can benefit from this huge (largest tramway in the world) exorbitantly expensive (550 million in todays dollars) taxpayer financed eyesore (20 towers, reaching 200'). This is a shortsighted answer that solves little, with long term and irreversible effects. Other much less flashy options have to be the answer.
34186	Gabriela Reithmayr	As a climber and activist for environment I appreciate you trying to make a compromise. However, your compromise still greatly affects the canyon boulders and climbing area in a way that will destroy many loved routes that Utah is known for. I will be going up for a trip to little cottonwood next week, and if this gondola is put in, you will have lost mine and many other outdoor activists money for your economy in staying in Salt Lake City. Please put that into consideration when you are thinking of building a gondola when there are many other ways like the bus system that other resorts like JHMR use in order to keep these highways clear.

34187	Theadora Sakata	<p>Pedestrian overpasses are a terrible idea and difficult to access for people with decreased mobility. At the VERY least, they should be pedestrian and bike underpasses, if not those button-operated crossings with the flashing lights to stop the traffic.</p> <p>Please note that in general, we should not be adding lanes to Wasatch Blvd. This community wants realistic options to not have to drive in the first place. The current plan with the gondola and widening Wasatch does NOT solve the problem.</p>
34188	Scott Olson	No Tram or Gondola, road improvements, avalanche tunnels
34189	Yukio Kachi	The gondola's huge cost would be wasted, for there won't be enough snowfall to keep the ski resorts going, and there won't be enough water to keep snow making.
34190	Robert Kirschner	I'm all for the gondola. Mitigates the avalanche closures, and would be environmentally.
34191	James Forrest	I do not believe this gondola will encourage equitable use of the canyon, not worth my tax dollars, is a money grab, and ignores the wants and needs of the broader LCC community.
34192	Elisabeth Morgan	My vote is against the gondola. I am voting with Mayor Jenny Wilson.
34193	Sienna Pickard	An alternative transportation solution that will not physically impact the natural beauty or current roadway of the Canyon should be researched to the fullest and carried out before other alternatives. This would include expanding bus services throughout the canyon, and requiring the public to carpool or take the bus.
34194	Allison Struiksmma	I do not think the gondola is the best idea for transportation in LCC. As a cottonwood heights resident, I worry about how this will affect our community. I worry about the environmental impact of this gondola. I worry about the loss of climbing areas and the access issues for backcountry skiers. I don't believe that spending half a billion dollars for maybe 50 busy days of the year is worth tax payer dollars. If anything, the ski resorts need to foot the bill. I think it's worth continuing with increased bus service and other resolutions before jumping to such a drastic solution. Please do not go forward with the gondola.
34195	Hank Bates	Just get it over with and build it
34196	Kellie Gerbers	I am not in favor of the gondola option. The gondola will create significant environmental impacts and impact the climbing situation in little Cottonwood Canyon please do not pursue this option.
34197	Bradley Penrod	We do not want a gondola running up Little Cottonwood Canyon. We will not use it and forever alter the view. I don't go to the ski areas, I climb for my powder. Please, WE DO NOT WANT to look at that piece of [REDACTED]
34198	Lehua Kay	I do not approve of this. There are other ways to make a buck, but not at the expense of the environment. I fell in love with Utah because of its beauty. There are many ways to see it's beauty but a gondola is not the way.
34199	Bradley Penrod	We do not want a gondola. My taxes should not support ski areas. I hate ski areas, I climb for my own powder.
34200	David Lorenzen	I do not consent to the confiscation of my property to fund this project.
34201	Justin and Sandra Lee	We are not in favor of the gondola, nor are we in favor of widening Little Cottonwood Canyon. We live just below Wasatch Blvd. between Big and Little Cottonwood Canyons and we feel that the reservation system worked very well to control traffic. Several years, when the big snow it and it was a bluebird day, we would have folks lined up on our street to try to get up Little Cottonwood. This has not happened since the implementation of the reservation system. If we have to choose between two evils, it would be the widening of the canyon road. The gondola is too expensive for the taxpayers.
34202	Elise Serena	Pls don't. We are begging what more do you want from us.
34203	Roberta Lay	<p>What a slap in the face of the taxpayer of which I am one. The benefits of this idea go to the developers, the resorts and no one else.</p> <p>To destroy part of the canyon, displace the flora and fauna that inhabit this area is disgusting, especially in the year 2022 when we are experiencing the poor choices of humans more interested in the almighty dollar. You will not be able to undo damage to these natural areas.</p> <p>Has anyone thought of those less fortunate than you? Those Utahns who pay taxes and have no voice to what the well to do choose for them. How will they and their families afford to pay for a toll to go and see what is in their backyard if they are able? That is really dispicable.</p> <p>To be prohibited unless I pay on top of already paying for a project being shoved down my throat, well that is so disrespectful. The greedy, narcissistic, self absorbed, uncaring of anyone or anything other than lining their own pocket crowd...</p> <p>Karma will get all of you. I pity future generations who will not get to enjoy the lifestyle you all have enjoyed.</p> <p>Do not build this gondola. Pay bus drivers more so you can reinstate or hire more to move tourists/skiers up the mountain road that is already there.</p> <p>Again- I am totally against this project that benefits the wealthy.</p>
34204	Zak Nebeker	I do not think the Gondola is the correct answer for LCC. The mountains are for everyone and this will benefit only a few. It will further the divide between wealthy patrons and average Utahns. As a local, I have seen it get harder for young local people be able to enjoy our beautiful mountains and it only seems to be getting worse. I believe the gondola is another step down this road
34205	B Kari Wade	I am very opposed to the gondola solution for LCC. The cost and impact to the canyon and taxpayers is not acceptable. This should be decided from the majority voice of the people. It is clear that the majority do not want this. The main demand is during the winter months, primarily the months of January and February. The gondola is not needed. Any elected official who votes for the gondola will not get my vote.
34206	Lowell Smoger	I oppose the gondola wholeheartedly. This is a waste of taxpayer money for a problem that exists on a handful of days in the winter time and only serves ski resorts. The money would be better spend on expanding bus service to reach more communities across the valley and allow them access year-round to the canyons. Also, how dare you do this without a capacity study of the canyons.
34207	Blake Hopkins	Please do not mar our children's and grandchildren's canyon by defacing it with a gondola to serve Snowbird. The canyon is too valuable as a scenic wonder. Electric buses and limiting resort use through a lottery system, maybe similar to Grand Canyon River trips, is well worth considering. Thank you, B. B. Hopkins

34208	Everest Arnold	I am against the current proposal of a gondola going in up little cottonwood canyon. I don't believe this would be the best solution for the canyon. I'm not for using tax payers money to support two private ski resorts. I also believe that the majority of people will still commute up the canyon via vehicle. Where would one leave all their belongings they would like to have during a day of skiing. I believe the Ikon passes and these other passes are killing these resorts. I would rather see tolling and use the funds to improve the canyon and preserve the existing infrastructure. Could also implement seasonal passes with a limit on them for tolling. People visiting would have to pay to go up that canyon and help bring money into the state and our public lands. I think there needs to be better patrolling on non 4x4 vehicles going into canyon when there is inclement weather. Stopping vehicles that could cause an issue with bad weather will help prevent accidents and canyon build up. I think there are better solutions for this issue. I think it became an issue when Ikon came out and is attracting all these people to our state for vacation but none of the infrastructure has changed to accommodate larger crowds. People coming in for vacation have plenty of options to get to the resorts. Public transportation, private shuttle companies ie canyon transportation, and ride share companies ie uber and lyft. If they must there is also renting a 4x4 vehicle and having the knowledge to drive in bad conditions. I do not think a gondola is the best solution. I believe there are better solutions and ways to earn money from travelers to help maintain the canyon and surrounding outdoor recreation.
35403	Byron Marchant	Your plan, it appears, goes through Alta (already decided?), my plan doesn't go through any of the resorts. Your plan, it appears, calls for a large parking land use at the base (already decided and totally unnecessary with my plan). Sounds like you've already decided on something (not my plan, lacking bureaucratic avoidance insight). Why did you ask for my suggestions in the first place? I eagerly await your final (obviously decided in advance) proposal. Byron Marchant
34209	Seth Evans	There is no good coming out of a gondola we do not need this if it was going to trailheads that's a different idea but this does not benefit anyone but the resorts
34210	Diane Gourley	We don't need a gondola. Add added busses! The people who want the gondola are real estate moguls pushing for it! The gondola will not serve the people who live here and want to enjoy our beautiful canyons all year long! The gondola will only serve two ski resorts for the ski season. The real estate moguls are really self serving themselves!
34211	Caleb White	This gondola is an absurd, intrusive, ugly, expensive, and unwelcome "solution" to a problem that's started to occur due to the Ikon pass. I'm a resident of Cottonwood Heights, and the LAST thing I want is MORE people up the mountain. Snowbird has gotten completely out of hand with their lift lines and they're planning on increasing access already from Mineral Basin. Alta is still one of the only classist resorts left in the country that won't allow snowboarders, so the gondola (partially funded by my taxpayer dollars) doesn't even aid me in travel to that location. Many people in the valley don't recreate in the mountain anyways, and their taxpayer dollars are funding this boondoggle project. It will be an eyesore, expensive, underutilized, and only aid to the OTHER problem that this gondola opens up - the amount of people already clogging up the lift lines at the resorts. I vote NO to this HORRIBLE idea, and hope that this ridiculous project never sees the light of day and ruins trail running, hiking, and rock climbing in the area.
34212	Sammi Branch	A gondola is so expensive and time/resource consuming to build. Let's start with something that needs less infrastructure first. I have two ideas. 1st idea - try a Toll system like Milcreek. You could start with tolls on weekends and holidays only. Yearly passes could be an options. Expand to tolls every day if needed. All you'd need is some employees and a toll booth. 2nd idea- make the canyon similar to zion national park with bus only access. Run busses constantly. We can start small with bus only access on weekends and holidays and see how it helps. Then can easily expand to bus only all the time If needed. Busses would be free like zion. This takes more since we'd probably need more parking at the mouth + busses and more employees. Resorts could put more lockers in to help ease concerns of people bringing stuff with them to the resorts. Let's try some sensible, cheaper, and easier-to-implement options before we go crazy with an overly expensive project that compromises the canyon!
34213	Delena Nielsen	I have reviewed thoroughly UDOT's information on the matter. Here's my input. This should be put to a local vote and not left to UDOTs interpretation of data. There is some heavy bias on prosperity and money by the entities reviewing information. The public locally here and I am local do not want it. Put it on the Ballot please. Corporations from colorado where they already messed up their mountains shouldnt have full access to expand here for profit on our backs.
34214	Dennis Hager	Wow, I can't believe this is the recommendation. A one hour gondola ride to the resort plus parking etc. For me (and many others I suspect), Alta / Snow Bird will no longer be my place to ski during the peak travel times this solution hopes to address. The staggering cost of this option seems preposterous as a way to address peak issues and avalanche risk.
34215	Valerie May	I do not believe a gondola is an appropriate solution to the traffic problem in the canyon. It will permanently mar the beautiful canyon with towers and cables no matter how hard they try to make in "blend" in. The numerous "pine" tree cell phone towers are a perfect example of that. I also do not want my tax dollars to fund the ski industry. If this gondola is approved I believe the ski resorts, and only the ski resorts, should pay for it. They are the ones that will profit from it, not the state, and not the millions of people that never set foot on a ski hill.
34216	Dennis Gourley	NO GONDOLA UDOT!! The people desiring this are real estate moguls pushing their own agenda!
34217	Edward Gallagher	I do not believe tax payers should be paying for this, Alta and snowbird passes members should pay or another method should be chosen. This only benefits those two resorts and they should have to fund this project. Also I believe less invasive methods should be tried first such as more buses or a toll before resorting to a gondola. If a gondola is installed and does not work for traffic control in the long run the canyon will be ruined from the gondola infrastructure. Please find a less invasive traffic control solution and one that does not have all tax payers pay for something that only helps 2 extremely profitable resorts.
34218	Deb Wagner	NO to the gondola It's a subsidy for the rich
34219	Deb Denbraber	I am opposed to the gondola system. There are environmental and access issues to consider. Please do not move forward with this proposal.
34220	Brian RODRIGUEZ	This gondola business only serves a small purpose, to benefit Snowbird and Alta. This does not serve the public in a beneficial way. I would rather see my tax dollars go to creating better driving routes and safety up the canyon during winter or other forms of public transportation.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34221	Sudha Jayaraman	as a voter living in the Millcreek neighborhood I strongly oppose the gondola. It would be a visual eyesore. It would destroy great places to climb and hike. It would be really expensive. There are far better ways of doing this that would be more sustainable in the long run than building an expensive gondola.
34222	Ali Svoboda	I originally commented for the gondola, however, after seeing how much simply controlling parking at the ski resorts reduced traffic, even on powder days, I do not think it makes sense. Spending more time up LCC this summer also made me realize how useless a gondola would be outside is ski season. As someone who travels up LCC regularly, I will always choose to carpool or take the bus. I hope one of the bus related alternatives is reconsidered, with or without road expansion. I am still in favor of the avalanche mitigation options (snow sheds). Overall, an alternative that costs less and makes incremental improvements seems to make more sense after seeing how much traffic improved by simply controlling parking at the final destinations.
34223	Judith Gooch	It is ridiculous to put a gondola up Little Cottonwood Canyon. Why not use electric buses? It does not destroy more wilderness and is much more flexible. Build a parking structure at the lot at the 7-11 and make people pay a lot to drive up the canyon.
34224	Chad Eggertsen	The gondola won't move enough people to make a difference in traffic and will destroy famous rock climbing spots. The bus options are cheaper and would be of greater benefits to more people year round including better service the the city as well as a safer bike lane
34225	Abbie Helbling	I do not want the gondola installed. It will ruin the natural aspects of the canyon and construction periods will be terrible for hiking/climbing/etc. Views will forever be obstructed and the beauty of the canyon will be negatively impacted forever.
34226	Lynn Bohs	I am disappointed and in complete disagreement with UDOT's decision that a gondola in Little Cottonwood Canyon is the preferred alternative. I am a professional biologist and an avid user of the Wasatch canyons in all seasons. Little Cottonwood Canyon is a treasure and one of the most beautiful places I have ever been. The intrusive gondola would ruin it forever, and for what? To transport people to two ski resorts. Furthermore it is being financed with OUR TAX DOLLARS without a vote or referendum. There are many other solutions to winter traffic congestion in LCC that UDOT itself enumerates in the phased implementation plan. These include improved bus service, snow shed construction, widening the road for all or part of its length, limiting canyon visitors during peak usage times, and implementing fees or tolls. As UDOT explores these alternatives we will get a better idea of what measures are most effective in alleviating the traffic problems. There is no need to construct an expensive and intrusive gondola when other measures have not been tried. The gondola is a terrible and selfish idea that will tragically ruin our beautiful canyon. Please give up on this plan.
34227	Tobin Egger	Tax pay dollars should not be going to a gondola that will ruin the beauty of the canyon.
34228	Nancy Murray	I am extremely opposed to building a gondola up Little Cottonwood canyon. We need better options for transport up Big Cottonwood and to hiking spots in Little Cottonwood. Electric buses would meet this greater need.
34229	Kate Crooker	A tram is a great idea! Especially because we cannot rely on UTA to provide enough busses.
34230	Leah Hunt	█ the gondola. Don't destroy the canyon. I will quite literally move out of the valley if LCC is ruined by this gondola.
34231	Delena Nielsen	Last year UDOT workers dumped concrete into the stream near my apt. All the fish died. As humans we think we can keep altering landscapes and impeding without impacts. But we cant. The more we are present. The more we destroy everything we touch. LCC is a major water source, yet we keep cluttering it for profit. Lets not. I say we end all roads up the canyon at all before its too late. Why weever thought it was okay to continue to expand makes no sense. All construction up there except for absolutely necessary should cease immediately.
34232	Brian Brocoff	Something has to be done. Busses are NOT the answer, as they do not defy gravity and will always be subject to weather. My only concern is capacity on the gondola. It needs to move the needle
34233	Stephen Moyes	Why are we still even considering this? This is not an effective use of taxpayer money. That canyon needs to be preserved and have more limited use to protect it instead of growing and expanding it. We cannot get that canyon back once we dig into it. It's beauty will be gone and obstructed forever. We have the duty to be stewards of the land. Theodore Roosevelt created National Parks to protect our natural resources. Please let's be wise and don't add gondolas and a parking structure. Please please please. We can spend the efforts on protecting our water issues and crises that is upon us. PLEASE DONT BE THE KIND OF GOVERNMENT THAT IS NOT HEARING WHAT THE PEOPLE ARE SAYING! People are fed up with this very kind of bureaucracy that leaves the public feeling steam rolled and loses trust in its own government and giving priority to private interests. This is not what the public wants! I live right by Big Cottonwood Canyon. I would lose pride in where I live seeing this go in.
34234	Delena Nielsen	Here's my concern other then money and how ugly a gondola would be. The community does not want continued growth and use of LCC. If you build a gondola it will only increase capacity. We need to limit capacity and Im sorry that these ski resorts wont be able to expand to their liking.
35405	Stu Hopkins	Busses work. It has been shown effective in Zion and many other constricted canyons across the world including in some nearby Colorado ski resorts. They are cheaper, more flexible (shrink grow service to demand), and can accommodate a no hub strategy. This will removes parking issues at the proposed hub and makes the service much faster and direct for consumers. Close the canyon, allow only busses to enter. It works great in Zion and can be effective here as well. Neither the gondola nor train can flexibly add and remove volume to the extent that a bus system can. If a gondola was built even 5 years ago, there's no way the planning committee would have expected this major influx we are experiencing now. This rapid growth will most likely continue. Only the bus system provides enough flexibility to operate at high and low capacities according to demand. Need more room? Buy more busses -- Stuart
34235	Benjamin Van Ryzin	No to the gondola proposal! Increase bus service. Do not destroy the canyon by adding an eye sore like a gondola.

ID	Full Name	Comment
34236	Libby Biittner	<p>UDOT should continue pursuing enhanced bussing solutions and tolls, should enforce rules that make the canyon less accident prone, and should not proceed with the gondola option in any form. The gondola is not a clear winner from a budgetary perspective (especially when you consider the overruns that are almost certain to occur), will only relocate traffic instead of actually alleviating it, does not meaningfully serve canyon users other than ski resort customers, and will irreversibly disfigure our iconic canyon.</p> <p>I have skied in Little Cottonwood canyon for 30+ years and understand well the traffic problems, but I have also seen how little common-sense action has been taken to mitigate these problems. How many days of gridlock per ski season year could be avoided just by reducing the number of accidents (or other incidents where a tow truck is needed) in the canyon? There needs to be earlier implementation and better regulation of chains/4-wheel drive only, as it is currently far too easy to circumvent that poorly enforced guideline. Delivery trucks should never be in the canyon in peak hours or during storms. Busses need to be better maintained so they don't break down.</p> <p>We have sat in the red snake for many years in the canyon, yet a toll has never been tested. Carpooling has never been meaningfully incentivized. On every weekend powder day, someone gets stuck or goes off the road in their 2-wheel drive car with bald tires and requires rescue. Busses have always been slow, late, crowded, and break down too frequently. These basic wintertime issues need to be addressed before imposing something as drastic as the half billion dollar year-round eyesore (without summertime operations) that the gondola is.</p> <p>What would UDOT's recommendation be if the loud and greedy voices of ski resort executives were removed from the analysis? Snowbird stands to gain too much from the gondola, and it is hard to believe that the UDOT decision has not been unduly influenced by them. Especially when their shady and presumptuous land purchase is considered.</p> <p>Please stop considering options that will visually destroy LCC forever, won't actually fix the congestion, and will give corporations even more power over our ability to recreate in the canyon.</p>
34237	Kiyoshi Young	<p>The gondola only serves the ski resorts. I use the canyon for other than the ski resorts. I'm extremally against the gondola. I'm in support of a 3rd lane for bus only traffic and increase bus service.</p>
34238	Steven Rekuc	<p>Just try the toll first before spending money. That will likely help consolidate people into fewer vehicles and encourage bus use.</p>
34239	Mark Schmele	<p>The public overwhelmingly and viscerally HATES this plan. To ignore them would be an embarrassing and wholly miserable failure on the part of UDOT from top to bottom. The job of public servants is as obvious as the name would suggest, and yet the public is being strongly rebuffed. Consider that what makes these canyons so special is how free from infrastructure they are, while still being very accessible. I, and several other friends of mine very well may leave this state, taking our taxable income with us if gondolas are built.</p>
34240	Brenda Ryan	<p>I am against the gondola. I feel the towers would distract from the natural view and beauty of the canyon. They would also require maintenance roads to build and maintain. I also don't like the idea of one parking structure for all the traffic. We know that while Little Cottonwood is the major problem, Bid Cottonwood has and will continue to have issues with traffic. If we made a few centralized parking areas serviced by busses, it would spread out the traffic congestion.</p> <p>Going along that line of though, my preference is for expanded bus service and road enhancements. This would benefit the buses, people who do want/need to drive up the canyon as well as bicycles which are an increasing problem.</p> <p>The railway would be my 2nd choice as the views would be preserved, but it would still require one central parking area which I think is a mistake.</p> <p>I think the parking areas we already have could be expanded (vertical) to hold more cars without having to make more parking areas footprints.</p> <p>I do think a toll needs to be assessed....maybe incorporated into ski passes- and yes, IKON and other multi-resort pass holders need to pay the same to utilize the canyon. These multi resort pass holders have been a big part of the increased winter traffic.</p> <p>While I do support the expanded bus service as the first choice, I believe it really needs to be expanded in a big way....it has to be easier and quicker. A bus every 15 min. is not enough on busy days or powder days. It needs to be a min. of every 10 min. and really every 5 min. during peak hours (7:30am-10:30 am, and 3:00pm-5:00:pm). Maybe consider express buses that service only Snowbird or only Alta. I also think maybe the addition of avalanche structures in avalance prone areas is a good idea.</p>
34241	Karen rymer	<p>Please do not do this project. As more people flood the canyons there will be more encounters with wildlife and then extermination of these animals'for public safety' look at recent killings of cougars. Impact on watershed and trees will be a continuing decline in the plants and trees population. AND then the financial cost to taxpayers- please do NOT go forward with the gondola plan to benefit a few (money/ business/shareholders) at the expense of nature and taxpayers.</p>

34242	Nate Furman	<p>Greetings,</p> <p>Every day I read another half-dozen news articles about how the effects of climate change are becoming more severe. The changing reality of living on this planet has encouraged me to begin commuting and running errands by bicycle; xeriscape our yard; cut back on eating meat; and cut back on water usage whenever possible.</p> <p>I feel like UDOT must be operating in a climate denial existence. UDOT has the opportunity to create a road-based infrastructure that can accommodate EV traffic; to develop trailhead infrastructure that can accommodate bus traffic; and build a more climate-resilient community.</p> <p>The gondola is a farce. It will not decrease traffic disruptions because Alta and Snowbird will continue to find ways (such as developing Grizzly Gulch) to put more skiers on the mountain.</p> <p>The winter season is becoming shorter and shorter. Within decades a gondola won't have any ski areas to serve. It will stand motionless, creaking in the wind just as the ski towers do each summer, and forever a blight to Cottonwood Canyon, testimony to the folly of man.</p> <p>The gondola serves no other purpose than to make developers wealthier. It should not be funded by tax payers. Please UDOT, start living in the present and planning for the future.</p> <p>Thank you,</p> <p>Nate Furman Cottonwood Heights</p>
34243	Jacob Wright	<p>I am in favor of enhanced bus service routes, not widening of the road nor gondola. But, if the gondola does go through, please add bike racks to the carts and run year round so mountain bikers and backcountry skiers can take it up and ride down LCC all year. Additional bike trails would be cool too.</p> <p>Lastly, please do not toll the upper canyon before enhanced transportation is in place as an alternative to driving. Upper LCC should be accessible to all since it is national forest land. And free access to forest land (with interagency pass) has been critical to my mental health and stress relief, so please don't add a daily fee. The Alta pay to park system is already a step too far. Thank you for reading.</p> <p>-Jake Wright</p>
34244	Aaron Radl	<p>Just in case my lastvcomments aren't reflected on this session, I am imputing the same thing. Why must we give any preference to Alta and the town of Alta when they boycott snowboarding tax payers ? I am against the Gondola . It's for the elite 1% who only want a ski resort for themselves (skiers) totally lame. No one is using the canyons in the summer like they do in the winter, simply more buses, add a toll or season pass for driving in the canyon, all the rich skiers can afford it. The rich complainers wont even use the Gondola, seriously a waste of our tax payers money , my taxes should be for , inclusivity, for all to benefit not just "some" I'm against the Gondola and Alta for not allowing snowboarding yet forcing snowboarders to foot that bill?</p> <p>I own a business along UDOT and UTA routes and roadways and when it snows it's awful for my customers, can I have a gondola installed? Seriously where does the needless spending stop? 500b and that's if it's on time and on. Budget and these things never are . Just look at the state prison, over time and over budget, typical of corruption.</p> <p>I'm not a Robot.</p>
34245	Bryan Bielicki	<p>The little cottonwood canyon gondola is, in my opinion, an awful idea. Not only am I (a Salt Lake City resident) going to have to pay for this in taxes, I won't even use it as I do not ski, same with a high percentage of other Salt Lake City residents. It is a waste of tax payer dollars. Secondly, it will be a scar on the canyon. One of the amazing things about lcc is the skyline and the ridges of the mountains. If a gondola goes in, it will mare what was once a very beautiful canyon with pristine views into a glorified power line. The view will be ruined. PLEASE do not ruin lcc.</p>
34246	Jason Funk	<p>As a resident of Cottonwood Heights as well as a climb and backcountry skier I do not support UDOT's preferred gondola alternative. The unique character of the canyon will be forever diminished if gondola is constructed in LCC. I also support comments made by SLCA that question the assessment made by UDOT, specifically the impacts of the gondola to climbing in the lower canyon. Finally it appears that the EIS did not take into significant account environment justice concerns. I support other traffic mitigation strategies including electric bus service and tolling for peak hours and single occupancy vehicles.</p>
34247	Delena Nielsen	<p>I have a concern that is continuing to not be addressed. Human deposits. LCC capacity is way beyond manageable now. When I run there is poop under so many rocks. I pack mine out like a good girl. Its not just summer. Winter is worse because now were over flooding sewers never intended for this many people to be in our watershed. To increase capacity!!!! Its ridiculous. All sewer lines break at some point but the danger is location. How many millions of people will have no water? In a desert? In the heat? This is a fragile ecosystem and we simply cannot increase capacity. We need to get rid of alot of the crowds already. The mountains should be limited access with reservations. Who cares about 2 ski resorts when so much more is at risk.</p>
34248	Michael Zito	<p>Alternative, less destructive means should be explored first before building structures that will only be in use less than half of the year and solve a problem that only exists on weekends and holidays during the winter.</p>
34249	Janice McCray	<p>I would like to express how adamantly opposed I am to the construction of any type of gondola system in Little Cottonwood Canyon. The idea of defacing this beautiful canyon is beyond sickening. The proposal to permanently scar our unique and beloved canyon will accomplish what, other than to line the pockets of a few while requiring the rest of us to pay for it? At some point, the powers that be in this state need to accept that our canyons and mountains can only accommodate a certain number of people and stop trying to find ways to increase usage of these beautiful and irreplaceable areas. Please continue to work to find alternative solutions to our canyon congestion.</p>

34250	ANNIE PUTMAN	Although I am happy to see the initial focus on improved bussing, and the plan for adding snow sheds to the road, I am disappointed to see that udot is still planning to implement the gondola as it's ultimate transit solution. As was evidenced by the prior EIS, the gondola is wildly unpopular with the majority of canyon users. People see this project as udot being in the pockets of the resorts and not acting in the best interest of the canyon or it's users. The gondola will be extremely expensive, an eyesore, destructive, and only offset a small proportion of canyon traffic. Enhanced bussing, snow sheds, and incentives to carpool are all much better options, and will negate the need for this ill advised, unpopular gondola project. Say no to the gondola!!
34251	John Ackerman	Traffic is not a problem everyday Gondola doesn't help the traffic getting to the mouth of the canyon Should increase the buses in the morning and afternoon Should charge a toll in the canyon to encourage bus riding Should use the money to help year round traffic problems elsewhere Should let the people of Utah vote on this Should just leave the canyon alone
34252	Nic DeSeelhorst	I a resident of SLC, born and raised in Sandy Utah, have lived within the ski industry my whole life. The gondola is unnecessary to support our demands. Alternative options will serve the community just as good if not better. The rapid bus system will actually drive valuable economic resources within cottonwood heights and will allow us to keep world class bouldering and recreation a part of our community.
34253	Matt Nowa	I am a Salk Lake City resident. The gonadal should not be built for environmental impact. Limiting ski resort ticket sales to reduce traffic or expanding on existing bus lines or a toll system to reduce traffic
34254	AARON BROWN	NO GONDOLA - The gondola is too expensive and just moves the parking issue to a new location. The gondola is also too much tax payer money put forth to solve the ski resorts problem. A more flexible solution would be more busses which would also minimize the environmental impact and services be ramped up and ramped back more easily.
34255	Eric Sottile	As a property owner in Little Cottonwood Canyon and a visitor for over 30 years, little has changed to improve the traffic situation. As UDOT explores solutions to mitigate there is much to be considered and while I believe that the options laid out are all viable options. The gondola option appeals in several ways. The long-term removal of the bulk of the vehicles to LCC, which results in multiple positives. The virtual elimination of morning and afternoon traffic jams. The ability to operate in almost all weather conditions, limiting the exposure to avalanche exposure along Hwy 210. Virtually eliminating people being stuck in LCC after a Hwy 210 closure. None of the other options offer these benefits.
34256	Delena Nielsen	Put this choice on the ballot. I dont think for a minute that the people want the Gondola. Stop manipulating the data you have received to pretend it says that. That is lying to the public. Water protections have not been addressed in the past and are still being ignored. Increasing capacity is not an option. Decreasing is the only way to save our water.
34257	Trevor Schlossnagle	You came so close to getting it right, the actual solution is here, quoted from Proposed Phase Implementation: "Recognizing that safety, mobility and reliability are issues on S.R. 210 today, and that it may take years to secure federal, state and/or private funding for full implementation of Gondola B, UDOT is proposing a phased implementation plan starting with components of the Enhanced Bus Service. UDOT does not have funding to implement the proposed preferred alternative. The phased implementation plan will alleviate mobility, reliability and safety concerns that exist today while addressing the long-term transportation need in the canyon. The proposed phasing would include increased and improved bus service as described in the Enhanced Bus Service Alternative (with no canyon roadway widening), tolling or restrictions on single occupancy vehicles, and the construction of mobility hubs. UDOT would also proceed with widening and other improvements to Wasatch Boulevard, constructing snow sheds, and implementing trailhead and roadside parking improvements, as funding allows. These improvements will improve air quality, protect the watershed, and increase the quality of life for residents and canyon users by reducing traffic congestion as private vehicles shift to transit." THIS is the solution, no gondola required. Cheaper, more effective, no eyesore. And in 50 years when the snowpack is dismal and Wasatch skiing is a ghost of its former self, there won't be irreversible damage to the canyon.
34258	Delena Nielsen	Put this choice on the ballot. I dont think for a minute that the people want the Gondola. Stop manipulating the data you have received to pretend it says that. That is lying to the public. Water protections have not been addressed in the past and are still being ignored. Increasing capacity is not an option. Decreasing is the only way to save our water.
34259	Everett Knauss	The gondola is a very expensive and unnecessary solution to a temporary problem that is taxpayer funded but only serves two private businesses and their patrons. I as both a patron and a taxpayer am against the gondola for these reasons. It doesn't help anyone who wants to access the rest of the canyons so the resorts should have to pay to build and operate a gondola if they want one, otherwise traditional roads work better for everyone.
34260	Allie Fredbo	A gondola or train is an extreme, very permanent and unproven solution to a problem that only seasonally effects this roadway. There is widespread public disapproval for this project and yet it will be in some part taxpayer funded. In it extremely likely that DESPITE the construction of this gondola there will be an ongoing need to upgrade/widen or improve this highway. The gondola simply does not adequately address the needs for the users of this canyon. There will continue to be a discrepancy in the demand for access and proposed solution. With this in mind I believe that the funding should go to road improvements, implementation of mandatory tolls, parking reservations, and road occupancy restrictions. These opportunities provide the greatest benefit to a larger user group with a much smaller investment.

34261	Steven Horrocks	<p>As a Salt Lake County native that grew up skiing and hiking in both Cottonwood canyons, currently owns multiple timeshare units at Snowbird's Iron Blossam Lodge, visits Utah multiple times per year, and now lives in Polk County Florida, I can certainly appreciate the emotionally charged opinions surrounding each of the proposed approaches to addressing the population-driven traffic and parking problems in these Wasatch canyons and specifically that in Little Cottonwood Canyon (LCC). However, I'm continually reminded of what my father told me back in the 1970's - the Europeans figured this out long ago with rail transportation. I agree. There will never be enough highway lanes, buses, and parking spaces to accommodate the never-ending sea of mountain-loving people wanting to enjoy all that LCC has to offer. And as much as I was intrigued by the gondola solution, it seems laser focused on solving a traffic and avalanche problem that only occurs during a small part of the year - at an enormous cost. Yes, I appreciate the fact that the gondola solution provides an alternative to automobile and bus transportation, but with only stopping at Snowbird and Alta and primarily focused as a ski season solution, I don't think it goes far enough. Realizing that a full rail solution would be an even more expensive solution, if done correctly it could stop at many of the canyon's most popular sites providing year-round access and changing how we all think about LCC. No, it would not be cheap, and it may be wildly unpopular. But we can't limit the vision of a solution to a problem we will have to live with through our 2022 eyes.</p> <p>More cars, buses, and parking spaces? No. Gondola? Too limited. Rail? Very expensive, but yes.</p>
34262	Allie Fredbo	<p>A gondola or train is an extreme, very permanent and unproven solution to a problem that only seasonally effects this roadway. There is widespread public disapproval for this project and yet it will be in some part taxpayer funded. In it extremely likely that DESPITE the construction of this gondola there will be an ongoing need to upgrade/widen or improve this highway. The gondola simply does not adequately address the needs for the users of this canyon. There will continue to be a discrepancy in the demand for access and proposed solution. With this in mind I believe that the funding should go to road improvements, implementation of mandatory tolls, parking reservations, and road occupancy restrictions. These opportunities provide the greatest benefit to a larger user group with a much smaller investment.</p>
34263	Steven Frederick	<p>Hi submitted a comment earlier, but I have some different points that I would like to make. I think a lot of rock climbers are upset because you are removing boulders that will disrupt the climbing community. All though that is a fair point, I think this is microscopic compared to other reasons this gondola should not go up. Aside from the ecological and environmental damage that it would cause, I want to focus in the amount of money that is being spent to cater to two resorts in the canyon. Money that should be spent on more pressing issues such as the Salt Lake getting even lower and releasing toxic metals into the air, or even the homeless situation we have around the city. This money could be spent on something that will be meaningful to the city, but instead it destroying the very reason people visit and even move to the city. There is a viable option instead of the gondola. We could invest in our transit system for a fraction of the cost. I am firmly against the gondola, and think it would be a grave mistake and would ruin Salt Lakes most precious outdoor locations.</p>
34264	Diane Schnarr	<p>Please use this money for a better transportation purpose. No one wants to ride it, and no one wants to pay for it. Please use electric busses.</p>
34265	Katie Argenta	<p>The voice of the people should win. No gondola. Stop chasing the money. <small>submitted Sunday 10-10-22</small></p>
34266	Brian Vansteenkiste	<p>I'm writing to submit my comment AGAINST the construction of a gondola in Little Cottonwood Canyon.</p> <p>I first visited northern Utah, with an emphasis on snowboarding at Snowbird, less than a week after the 2002 Olympics. I returned in 2003 before moving to Midvale in 2004. I have been here ever since.</p> <p>I moved here for the mountains and for snowboarding and have based my life around both.</p> <p>I bought my 18th consecutive season pass to Snowbird last April, functionally giving Snowbird my money and float 6 months ahead of my seeing value from it. I have done this for 18 years.</p> <p>I own my own home and a commercial building, both in Salt Lake County, and I pay substantial property taxes on both. I also own and run my own business, further contributing to the local economy.</p> <p>Prior to self employment, I worked for a concessionaire year round at Snowbird from 2004-2014.</p> <p>When I was employed (physically) at Snowbird I travelled up (and down) canyon 4-5 days a week.</p> <p>While working up canyon I enjoyed 100 day snowboard seasons; I currently strive for 60 (snowboard) day seasons. I have 20 years experience driving up the canyon at all times of the year.</p> <p>I share all this to characterize myself, my experience with the canyon, and to hopefully give weight to my comments AGAINST the gondola.</p> <p>Many a local group have protested this gondola project. Take a drive down/up lower 210 and around 9400 s back to Wasatch and you'll see the RESIDENTS most affected unfurling numerous banners and putting up signs AGAINST the terrible gondola idea.</p> <p>Add to their ranks politicians, businesses, user groups, environmental organizations and others and you get a picture of an overwhelming sentiment AGAINST this project.</p> <p>SLC Mayor Erin Mendenhall, County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski, Midvale Mayor Marcus Stevenson, the Salt Lake County Council, Wasatch Backcountry Alliance, Friends of Alta, The University of Utah's Students for the Wasatch group, Friends of Little Cottonwood Canyon, the Salt Lake Climber's Alliance, Save our Canyons and others have all publicly expressed their OPPOSITION to this terrible idea.</p> <p>I don't see how publicly funded UDOT can ignore us when you have our elected leaders voicing citizen dissent alongside businesses and those sworn to protect our priceless and irreplaceable environmental resources.</p> <p>We do not want your gondola idea. <small>We do not want to buy this gondola for Powder Corp and Alta Ski Lift Corp</small></p>

34268	William Good	<p>Opposed to the boondoggle gondola option for all the opposition reasons that have been put out.</p> <p>Opposed to making Wasatch Blvd a highspeed mass of asphalt for all the reasons that have been put out.</p> <p>UDOT appears to be just ramming through a decision that has already made. It appears that there are players that have more influence within UDOT than others. Opposition to these projects have been significant from both private citizens as well as local governments, but UDOT keeps marching on with its agenda. Currently, money for bus drivers, busses and workable scheduling can't be found for a pathetic attempt at moving people, but close to a billion-dollar number is being tossed around. Count as fast as you can to 1 billion and see how long it takes.</p>
34269	karsten bench	<p>The gondola is a low volume solution. The only time a cable car system makes sense is where you are dealing with terrain that is not suitable for a road or train. Given there is already a road and bus infrastructure, we should focus on expanding bus service. Also bus services should run in the summer. Anyone who actually thinks a gondola will reduce traffic has not done the basic math and certainly has not investigated the results other cable car systems in dense urban environments globally, re the Metrocable in Medellin. I honestly can't believe this is actually something I have to put in the EIS thing. The gondola should not be on the table, and it should not take experts to figure that out. The amount of money and time being wasted that could be put back into bus services is negligent at best, blatant corruption at worst. You all should be ashamed of yourselves.</p>
34270	Scott Sam	<p>I am against a Gondola</p>
35408	lpduzan lpduzan	<p>Part 2 of Proposal to build a gondola to transport anyone is destructive, inefficient, expensive and incapable with planning for changes in climate and utilizing water resources for our future. This plan serves only a few who will profit from this. The majority of taxpayers do not want this!</p>
34271	Lucas McCoy	<p>Keep your garbage out of OUR canyons No gondola!!!</p>
34272	Connie Brosky	<p>I have been a UTAH resident my whole life. My maiden name is LAYTON. I recently found a 1914 Official Program from an annual Carnival in SLC. Called Wards of the Wizard of the Wasatch naming us Wards of the beauty we live in. This Gondola program is a travesty if it happens! This is irresponsible and will have a legacy of this bad choose on the heads of our generation!!</p>
34273	Ariel Jones	<p>Please please please do not. Look into other options</p>
34274	Joe Snow	<p>I work at Snowbird and the commute up and down little cottonwood canyon is ridiculous on a regular basis! We needed the gondola 5 years ago. There is just not enough space for the amount of people that come up here!</p>
34275	Helena Gaffney	<p>The gondola would significantly limit access to backcountry skiing, climbing, and hiking. It would cause a ton of traffic at the base of the canyon, disturbing residents. It would also cause a ton of noise pollution, disrupting the local wildlife, and require tree cutting, destroying vital ecosystems. The majority of the city is opposed to this project for obvious reasons, so please take that into serious consideration. Thank you.</p>
34276	Sean Smith	<p>Please do not waste my taxes on building a gondola. As a lifelong resident of Holladay/Cottonwood Heights I do not see how a gondola solves and traffic issues. I can only see it moving the bottleneck to wasatch blvd. additionally, it does NOTHING to alleviate traffic in Big Cottonwood. Moving the bottleneck only increases gridlock along wasatch blvd and into surrounding neighborhoods. Starting small with tolls/mandatory carpool, or even actually filtering out two wheel drive cars would be a step in the right direction. Ruining LCC watershed with an eyesore gondola really accomplishes nothing. Please do not ruin Cottonwood Heights area and LCC with a gondola that nobody wants.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34277	Joshua Reich	<p>As someone that grew up in cottonwood heights and Sandy, who frequents little cottonwood canyon I am aware that there is a traffic problem at times in the canyon but am deeply saddened by the idea of putting an invasive gondola that would leave a scar on the canyon that would take away from the beauty and sacredness of the canyon.</p> <p>I think it is ridiculous to believe this is the best and only solution to the few bad traffic days up the canyon, especially when nothing else has been tried. I have a hard time believing that those who want this gondola cannot see how the traffic will still be an issue, it only serves skiers (and only resort skiers at that), and will be a huge tax burden on the state. I am 1000% against the gondola. I know that majority of Utahns are also against the gondola and if the gondola is put into place it will be a monster betrayal of public services to the people they are supposed to represent and serve and will also go down in history as an awful decision motivated by greed and private business.</p> <p>Please pursue other plans, like tolling, increased bussing, make routes for an alta bus and a snowbird bus.</p> <p>I know you've come out and said that the Zion method won't work in LCC and you might be right but a similar version of the Zion method would.</p>
34278	Meg Gardner	I am opposed to the LLC Gondola Project. I am a user of Little Cottonwood Canyon and a future Utah voter. I would support other alternative forms of transportation and am strongly opposed to the gondola.
34279	Janel Mclaskey	We do NOT want this! Make the resorts and/or pass holders liable for the bill if you move forward.
34280	Matthew Palmer	As a small business owner and a large tax payer I cannot see how the gondola would benefit or even help with the traffic in the canyon. It's a waste of my taxes to enrich those people and canyon business who are pushing this through. Udot, do your job and spend our tax dollars wisely! I vote NO to the gondola!
34281	Sam Brody	I'm a season pass holder and against the LCC gondola. We need to focus on conservation rather than exploiting our natural resources and volatile watershed. Getting more people up the canyon is not a sustainable solution; it's a profit grab for the resorts only. It's also highly unethically to pay with taxpayer money when the gondola is not a public good (Salt lake has a housing crisis and you want taxpayers to pay for a gondola!!!). Skiing is an expensive activity, and this proposal does nothing to make it more inclusive and affordable. Plus it doesn't solve the traffic issues getting to the gondola hub/parking. I'm in favor of more public transportation and a canyon toll.
34282	Tyler Macintyre	I would strongly oppose the gondola in the canyon. I don't believe that it will reduce traffic in a way proportional to the capital investment not the destruction of the environment in the canyon, permanently marring a place that should be left for recreation for the next generation. I strongly oppose the gondola.
34283	Derek Braeden	Really disappointed in the narrowmindedness of this entire project in finding a solution. The bus depot or the gondola just moves the bottleneck from the canyon roads themselves to the parking lot and lines to load onto buses or gondolas. No one wants a bottleneck 15-20 minute gondola ride to start or end the day. The only viable long-term solution to move the quantities of people that will need to get up and down the canyon is a train, either above ground or - more environmentally conscious option to return the canyon to a more natural state - underground subway / train. Could be extended to interconnect AI canyons and Park City resorts as well.
34284	Jessica Wilde	I'm strongly opposed to the gondola, particularly when there's no incentive to use it. I think it's so obvious that the reason it's going in is so a few can benefit financially. We all get it. Our comments don't really matter. I am in favor of a toll on heavy traffic days and I'm in favor of anything to encourage more bus use. Absolutely no on the gondola.
34285	Neal Carroll	As a 30+ year tax paying resident of SLC, long time canyon user, Veteran of the Alta Ski Patrol, I am absolutely opposed to the gondola in LCC. This only benefits a small and privileged user group but affects all Citizens of and Visitors to SLC for generations to come. Put in a year round roll; make private vehicle use in the winter illegal; add buses; and above all, out pressure on the ski resorts to figure out how to get people to their ski hill. Please stop the gondola!!
34286	James Hicks	<p>Hello</p> <p>Thank you for the opportunity to comment on the S.R. 210 Project.</p> <p>I have to disagree with moving forward with the Gondola B Alternative. The visual and environmental impact is unacceptable. Two private companies will unfairly benefit from the installation of the Gondola.</p> <p>It is impossible to make a decision of this magnitude without determining the fiscal responsibility beforehand. The project is big enough that it should be decided based on public opinion.</p> <p>Sincerely James Hicks</p> <p>[Redacted Signature]</p>
34287	Natalie Allsop	<p>I am an outdoor enthusiast, a climber, and your constituent. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction.</p> <p>The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>I hope you will consider opposing the Little Cottonwood Canyon gondola in favor of better solutions.</p>

34288	Nathan Kovarik	Do not build the gondola. Will impact the climbing and recreation opportunities. Add more buses and parking for bus lots.
34289	Kraig Kirk	<p>I don't want the Gondola. We don't need the Gondola. I feel the Little Cottonwood Gondola is unfair to Utah taxpayers who would be subsidizing a very expensive project for the benefit of a couple of ski resorts; Alta and Snowbird. I don't like the fact that legislators have bought up land at the base to benefit themselves if the gondola project is built. Little Cottonwood is a beautiful-one-of-a-kind-glacial canyon in the Wasatch and I perceive the gondola towers as ugly protruding obstacles and very Disneyland-theme-park like. Lastly, Wasatch Blvd. widening is all about making it a powder-day-parking lot and a 50 m.p.h freeway the rest of the time; that is my standpoint and observation. Please prove me wrong.</p> <p>I have been skiing for 50 years. I enjoy all the ski resorts including Alta and Snowbird. I recall days when crowds were never a problem except maybe the Christmas holiday which I avoided. Nowadays, the ski resort parking lots become full by 7 a.m. and traffic is backed up for miles especially on powder days. Moving more people up the canyon by car, bus, or gondola will continue to diminish the skiing experience. The large crowds and cost of ski tickets today have already ruined my fun at Alta and Snowbird. A gondola that runs only during winter months would add to already high-volume-skier counts, and would fleece Utah taxpayers is a worthless project and boondoggle. I suspect Mother Nature will put a stop to skiing altogether when snow depth is measured in inches of rainfall.</p> <p>I could get behind having avalanche-snow-sheds along the road and using electric buses to shuttle folks up and down the canyon from Alta and Snowbird. Some ski resorts already charge for parking which seems to limit cars and could be part of the solution. Thanks for letting me comment.</p>
34290	Sean Miller	NO to the Gondola! The "solution" here is more of a problem than the problem. Too expensive to build and ride, capacity is too low, destroys views and recreational opportunities in the canyon, and this is better solved by other alternatives. Carpool encouragement, timed entry, parking fees, etc are all much better solutions that should be more thoroughly tried before the gondola boondoggle. This project reeks of a lack of due consideration for community concerns.
35418	Samantha Madsen	<p>The public has made their opinion quite clearly. The gondola is not wanted, nor accepted by Cottonwood Heights, Sandy, Draper and other surrounding cities.</p> <p>This is nothing more than a sham so the EIS can say they had hearings on the subject. You had hearings but chose not to hear anything said. You're still going to use tax payer dollars to fund, which everyone is against. Shame on UDOT. Another corrupt government agency.</p> <p>Samantha</p>
34291	Margaret Wellik	I do not believe the gondola is a wise or responsible solution to the increased public transportation needs in LCC. There are alternative intermediary solutions that are being ignored. Improvements to the existing bus options in conjunction with personal vehicle tolls would be less invasive to the canyon and could provide greater flexibility. If the busses were increased and improved with storage capacity for skis and snowboards, I believe they would be far more popular. Charter style tour busses with under the bus storage could be much more attractive and could be offered at a higher fee than city busses, but less than personal vehicle tolls + parking. Summer use of the busses and stops at trailheads could also serve the public year round in a manner that's far more flexible to the needs of the public than a gondola
34292	Kjersti Barlow	Please discontinue consideration of the gondola project. Instead, small steps such as a toll booth, or a continuation of LCC employees using public transport/carpool policy seem to be the best approach. The amount of taxpayer money the gondola would require is outrageous, as well as the issue of severe damage to the canyon. Please, please listen to the majority of Utahns--we do not support this project. Thank you!
34293	Margaret Wellik	I do not believe the gondola is a wise or responsible solution to the increased public transportation needs in LCC. There are alternative intermediary solutions that are being ignored. Improvements to the existing bus options in conjunction with personal vehicle tolls would be less invasive to the canyon and could provide greater flexibility. If the busses were increased and improved with storage capacity for skis and snowboards, I believe they would be far more popular. Charter style tour busses with under the bus storage could be much more attractive and could be offered at a higher fee than city busses, but less than personal vehicle tolls + parking. Summer use of the busses and stops at trailheads could also serve the public year round in a manner that's far more flexible to the needs of the public than a gondola
34294	Colby Stetson	A vast majority of Utah residents oppose the gondola. UDOT works for the state. It is absurd and offensive that this is still being considered. Prove that you work for the people of Utah and not a few private interests!
34295	Samantha Madsen	NO GONDOLA. Residents across the many cities of Utah have vociferously expressed opinions AGAINST the gondola. It is not wanted, welcomed or needed. There's no future plan for expansion. It's cost prohibitive. It will destroy the unique and beautiful views of the canyon. NO gondola.
34296	James Knaak	Putting a gondola in is a huge waste of taxpayer money that will only benefit the elite and rich. This will not help the majority of the taxpayers. I am strongly against the gondola as it will also be an eye sore in Little Cottonwood Canyon.
34297	Sammie Nazzise	Please do not destroy our beautiful canyon with this gondola and all that it will do. There are so many different ways to achieve your goal without doing this.

Comments on Little Cottonwood Canyon Final EIS

34298	Evan Johnson	<p>\$1 billion to solve a 30 day traffic problem plus \$1 million a week to run the longest gondola on earth seems luxurious. Rural Utah needs roads. Lagoon canyon rides to Snowbird for \$1 billion seems unneeded. Every canyon along the Wasatch Front is congested. Is every canyon going to get a \$1 UDOT Billion gondola, too? How was this canyon selected so other canyons can apply. The problem in Big Cottonwood is twice as big, no gondola there.</p> <p>No one faults UDOT for solving traffic issues, it's the glaring politics and good ole boy system we all see that's the problem. Perhaps a gondola lottery where many contested canyons applied, and one canyon was selected would tamp down the inside and back room dealings optics associated with this process.</p>
34299	Bonnie Hooper	<p>No gondola absolutely no gondola! why Destroy a Little Cottonwood Canyon for the benefit of a wealthy few Multi million dollar corporation . Do not spend my tax dollars for this gondola . Bus service and large tolls on cars.</p>
34300	Bill Ayers	<p>The proposed gondola suffers from many serious flaws. First it is fiscally irresponsible to burden the taxpayers with this project. It solely serves the ski resorts for only a few weekends a year. Secondly, it does not address the loss of pristine wilderness and dispersed recreation. Never mind the fact the project will take an absorbent amount of time in which the general public and dispersed recreators will be significantly inconvenienced. Lastly, there are viable alternative solutions such as tolls and enhanced bussing services.</p>
34301	Francis Whitby	<p>Stop the gondola! The gondola is a ripoff of public money that benefits special interests, developers, landowners, and politicians who are scamming the public. The bus is fine, just make the road a little better and have more buses and more parking ride lots. GONDOLA=SCAM!!!</p>
34302	Craig Harding	<p>yes on the gondola - will be great for skiers, hikers, bikers, and the environment.</p>
34303	Collin Titus	<p>Hello UDOT folks, hope you're all enjoying the fall and all its scenery up and down our canyons. I'm here to let you know my personal opinion that I also share with so many other salt lake residents on the idea to put a gondola up Little Cottonwood Canyon. As one who has worked up there as much as I recreate I personally do not see the benefits of this being built, the idea that it will fix our traffic issue is just wrong. Yes I acknowledge that the canyon gets crowded and it needs a solution but this one will not solve the problems for the people who ski and ride at Alta and snowbird, I feel that the issue with it being built will only increase users up there, granted everyone should experience the riding up there as it is world class, but with things like the Ikon pass existing I can only imagine that though there occasionally may be less cars in the canyon due to the gondola, the resort experience will become even more stressful and crowded in an era where people are trying to be outside more often. Along with it being a major tourist attraction on its own, I feel that as a taxpayer it is ridiculous to think my money and so many others will be what causes it to be built, there's a lot more I'd rather see my tax dollars go to, such as increases ski serviced busses, snow shelters on our dangerous slide paths, or just fixing the roads more often as needed. Along with these reasons and as someone who runs, hikes and backcountry skis in LCC, the view quality would be diminished by a lot. I often find myself atop grizzly gulch, mount baldy and other peaks looking down canyon in appreciation for what we have, right down to the valley floor, it's hard to imagine myself and others alike will get that same feeling when we look down if there were to be a large structure of metal and cable cars within that view and it disappoints me to think that is a possibility. It's also worth mentioning that the fact that this gondola wouldn't operate for multiple months per year and not be running early enough for canyon employees to get to work before the resorts open on days where it is snowing a lot, that's a big factor for many of my friends and myself, because how else will lift operators, ski patrol and store employees make it up on time if that is their only option? I understand why it is a suggested option for fixing the solution but when it comes down to things, especially like tax payers money we would rather see other options less wanted by the profiting resorts be put in place first. Things such as, finally having an officer checking tires on powder days, increased bus services with incentives for the public to use, snow shelters, and though I don't like to pay to use public lands, tolls. Again, I know there is the issue of cars in the canyon causing congestion and think there are better options before ruining a beautiful canyon, but the gondola will not fix the issue of congestion at the resorts. A vast majority of us local residents ask that UDOT considers the other options before the gondola. Please consider the tax paying residents thoughts before possibly ruining the canyons beauty forever.</p> <p>Thank you. - Collin Titus</p>
34304	Bert Christenson	<p>Yes for the gondola!</p> <p>I'm 90 yrs old, and its getting to hard to hike the Mts much and I stopped skiing several years ago, and I would rather not drive up and down the canyon anymore, but I would defiantly ride the gondola many times for the sight seeing alone!</p>
34305	Paula Hiatt	<p>I am opposed to the gondola plan. I love nature and I think this would damage our natural environment. I do not think it is necessary to widen State Road 210. I think the principals behind the gondola plan are self serving in their motives. I think this plan is a Trojan Horse for commercial development at the mouth of LCC. It is unreasonable to expect the taxpayers to pay for this. Don't tear up Little Cottonwood Canyon, no gondola, no four lane highway.</p>
34306	Mara Green	<p>I am adamantly apposed to the gondola. I think that a bus system should be put in place and that the traffic to the ski resorts should be limited to employees and residents only. I think the bus system should be expanded significantly so that people can get on and off the bus at multiple stops up and down the canyon so that skiers, backcountry skiers, climbers, hikers, etc all have access to the canyon and so that the traffic is extremely limited there. A gondola will only help the ski resort traffic. It won't fix everything else.</p>
34307	SETH ROLLER	<p>I'm tired of the back and forth. The road expansion is asinine and the gondola isn't tolerated by the local wealthy. I also don't believe either option will happen. Put up some snow sheds, parking structures, day use fees and road improvements. Just be done with wasting money and time on more impact statements. Time to get something accomplished when analysis paralysis takes over.</p>
34308	Ed Heinrich	<p>No Gondola. Too expensive. Too invasive. I ride the bus regularly and it works well. Electric busses would be great. Gondola would take too long. None of my Snowbird regular friends plan on waisting time on the gondola. Will gondola be heated and comfortable like the bus? 35 minutes in the cold will be uncomfortable. No gondola with my tax money to benefit private parties.</p>

34309	Liz Ward	I am opposed to a gondola in Little Cottonwood Canyon. It will ruin the canyon. There are better options that will preserve the integrity of the canyon.
34310	Julie Farmer	I am vehemently opposed to the gondola. I think there are other approaches that need to be considered and implemented before such a gigantic project is undertaken. Not only is it the cost to citizens that is upsetting to me but also the cost of the environment. I hope that you will consider other alternatives. Thank you
34311	Steve Westover	The gondola is needed for LCC and every effort should be put in place to ensure the gondola is built in a timely manner
34312	Chris Kirk	<p>I'm writing today to once again stress my concerns about the proposed gondola and Wasatch Blvd road widening.</p> <p>Like many local residents and the local city/county governments I'm opposed to the idea of a gondola as the main solution to Little Cottonwood Canyon (LCC) traffic problems. I feel that this "solution" has been preordained from the start due to political bias and influence of former/current state politicians and a heavy lobby from Alta and Snowbird, who will greatly benefit on this \$500 million + project that will mostly be paid for by the taxpayers. I strongly oppose taxpayer money of this amount to directly benefit just a couple private businesses and local developers without them putting up a significant financial investment as well.</p> <p>Other issues I have with the gondola idea, is that it only serves Alta/Snowbird. What about other popular areas of the canyon (i.e. White pine, Lisa falls, etc.)? I also feel that the large towers and long cables required for the gondola will greatly distract from the natural beauty of the canyon. I've heard next to nothing about the price per ride up the gondola. I'm guessing that it will only be affordable to those who already have the financial means to afford a \$200 ski lift ticket. How is it fair to those taxpayers who cannot afford a ski lift ticket but will be forced to pay for something that they will never use?</p> <p>As for the Wasatch Blvd expansion, I have an even greater concern. I live directly below Wasatch Blvd and travel on it daily. I know very well about the traffic congestion on it. However, I feel that by expanding the road to multiple lanes in each direction makes the road more dangerous. Cars already travel 50+mph on the two lane segment, but down by the gravel pit where it is multi lane I regularly see traffic going freeway speeds. Having multi-lanes I feel will further encourage unsafe speeds on this road and increase the danger for everyone who travels on it. Also, I don't see how it will solve the congestion issue with the road narrowing again to single lanes each way at the La Calle turnoff? On popular ski and powder days this road narrowing will just continue the traffic jams.</p> <p>In the end, I feel that this whole public comment period is just for show and all the suggestions from the public (who a vast majority have opposed the gondola) will be completely ignored by UDOT and the gondola proposal will move forward. It's sad, because there are many other more financially sound solutions to this problem that UDOT and "the powers that be" are passing over and ignoring completely.</p>
35424	Brent Koldewyn	Leave the canyon as is! No gondola!
34313	Karen Baker	No to gondola. Expand bus service with non-gasoline
34314	Quinn Graves	<p>My name is Quinn Graves and I am a lifelong resident of the Wasatch. I grew up on the Wasatch Back and was introduced to the beauty of Little Cottonwood Canyon when I was going to school at the University of Utah. I am a lover of both resort and backcountry skiing, hiking, mountain biking, and trail running. I wholeheartedly believe that building a gondola up Little Cottonwood Canyon will ruin the canyon for present and future generations.</p> <p>First off, we need solutions to the transportation issue NOW, not by 2050. We need a transportation solution that is both scalable and will increase accessibility in LCC. A gondola is neither of these things. The gondola is specifically for already affluent people going to ski at Snowbird and/or Alta. It does not serve many user groups who enjoy LCC such as hikers, climbers, backcountry skiers, bikers, etc. The gondola will continue to exacerbate the already huge issue of lack of access to outdoor spaces by only serving one specific user group. Plus, if roadside parking is not allowed before Snowbird entrance 1, climbers and backcountry skiers will have continued restricted access to popular climbing at the base of the canyon and the White Pine Canyon trailhead.</p> <p>Another important fact to pay attention to is climate change. A review published in the journal Nature in 2021 found that, across the Western United States, snow water equivalent will probably decline by about 25% by 2050 (Siirila-Woodburn et al. 2021). The skiing industry and the snowpack we all rely on for water in the Western United States will be severely impacted by this decline. How does it possibly make sense to implement a gondola that could be totally obsolete by the turn of the century?</p> <p>Other crucial things to assess in the environmental impact statement are protecting the viewshed and watershed in LCC. When I was in college, one of my courses had us volunteer with the Alta Environmental Center. We were told there are many restrictions that buildings and signage must comply with to protect Alta's viewshed. How does a gondola comply with these viewshed rules? A gondola will ruin LCC's stunningly unique viewshed. Who wants to look out at a gondola with towers running up the entirety of the canyon? I know I don't. I also know I don't want the water running out of the mountains into LCC creek to get contaminated by gondola construction. LCC creek provides much of the Salt Lake Valley's water. Since humans are not allowed in streams or lakes in LCC, how could it possibly be okay to have a massive construction project occurring so close to a crucial water source? This seems like an environmental disaster waiting to happen. Gondola construction is destined to pollute this crucial watershed.</p> <p>It is wild to me that UDOT is proposing a transportation "solution," that they don't even have funding to build. \$550 million is an insane amount of money to waste on a "solution" that will only take people to and from ski areas and nowhere else in</p>

ID	Full Name	Comment
34315	JONATHAN STARR	<p>I believe that the proposed Gondola option is the wrong choice. I think it is a waste of taxpayer money with a huge impact on our canyon that will not alleviate the issue.</p> <p>The Gondola will only serve two private businesses, yet the taxpayers are going to have to foot this \$550 million bill to build it. It is not going to solve the traffic issues, but merely push them down the road (onto Wasatch blvd, i15 and into the surrounding neighborhoods). This problem has to be fixed with a behavior shift in the ski/snowboard community. We need to prioritize and incentivize public transportation from our own neighborhoods, not just the park and rides. it won't even be that convenient of a solution time-wise. Who is going to use the gondola on a "non-traffic" day if it takes over twice as long as it would to drive or bus up?</p> <p>I truly hope that UDOT will change their decision on moving forward with the proposed gondola plan.</p>
34316	Robert Wright	<p>Background: I have been a Little Cottonwood Canyon skier and road bicyclist for 40+ years. Since retiring from a 37-year engineering career in 2012, I have been in the canyon, one way or another, almost daily. As a skier, I have ridden the UTA ski bus on approximately 90 percent of my ski days since retiring, which would mean around 600 days in the past 10 seasons. This number would be higher except that I carpooled during the 2021 season due to Covid-19 concerns.</p> <p>I am encouraged that the phased approach is being pursued, but I still believe that the gondola is not the ultimate best solution to the LCC transportation problem. The road will NEVER be eliminated. It seems to me that any reasonable, efficient solution should be road-based. While implementation of a flexible bus-based service would challenge resource management -- bus & driver scheduling -- versus the present static bus service schedule, my sense is that it could provide an overall better, more efficient solution than the gondola.</p> <p>Skier traffic is quite predictable on a calendar basis (e.g., early-season versus mid- and late-season, weekdays versus weekends, holidays, etc.) and, on a more short-term basis, the weather forecast. Why not keep a baseline fixed schedule that runs buses from Trax stations like the present deployment, but then augment the service from the near-canyon transit hubs (e.g., Highland/9400 South) upward on a looping basis in which the buses run only between the resorts and the hubs? More predicted demand, more buses.</p> <p>On a 24/7/365 basis, how many hours will the gondola see usage anywhere near its capacity? How many hours will it even operate? Is it really worth the huge cost for this relatively inflexible solution?</p> <p>Bob Wright Sandy, Utah</p>
34317	Lecia Andrews	<p>I am not in favor of the gondola. That's a lot of money and changing the Canyon for skiers. Whatever you do please keep in mind not all utahns ski. Whatever you do, families need access to nature and tolls will limit that. No solution should exclude the citizens of the county from accessing their canyon.</p>
34318	Judy Donnell	<p>No gondola! It's to be paid for by taxpayers but benefits only Snowbird, Alta, La Caille, Chris McCandless and Wayne Niederhauser.</p> <p>Much better to give similar funding to working on mitigating climate change. Otherwise, there will not be skiing available anywhere in Utah within 30 years. The gondola will end up like the water pumps in the West Desert. Expensive, wasted, useless, ugly.</p>
34319	Lecia Andrews	<p>I am not in favor of the gondola. That's a lot of money and changing the Canyon for skiers. Whatever you do please keep in mind not all utahns ski. Whatever you do, families need access to nature and tolls will limit that. No solution should exclude the citizens of the county from accessing their canyon.</p>
34320	Claire Pokorny	<p>Hello UDOT,</p> <p>I am opposed to the gondola B plan, and any plan involving building a gondola in Little Cottonwood Canyon. The gondola would only benefit people whose aim is to reach the top of the canyon, though there are numerous recreation areas and trailheads that would be negatively impacted by the gondola but see no benefit. A gondola would also only benefit people who could afford to ride. The primary purpose of the gondola is to alleviate busy ski-season traffic primarily over a 1-2 week period and a few weekends. This seems shortsighted and unfair since this project would have incredible detrimental impacts throughout the canyon and on many different recreation activities. Why do we favor a few days of the ski season (that mainly benefit tourists anyway) over hundreds of days of many different activities besides skiing? Please, do not build a gondola in LCC.</p>
34321	Spencer Amundsen	<p>The gondola does not address parking issues anywhere other than at the resorts.</p> <p>Traffic was a big issue back during the Olympics and everyone got worked up. Maybe we should back off and let it settle down.</p> <p>Years ago there was a train up the canyon, why not consider that option again. Maybe even underground?</p>

ID	Full Name	Comment
35440	Doug Doug	<p>Ladies and/or Gentlemen:</p> <p>The reasons I vote no are:</p> <ol style="list-style-type: none"> 1. The gondola will have a single loading point. The location of this loading point is very near the existing traffic problem. Hence there will be little or no benefit to traffic at the mouth of the canyon, which is where the vast majority of the traffic problem occurs. 2. The loading point will have to be extremely well designed or it will cause significant delays in transit time, and because of this very few people will use the gondola. 3. The future of the ski industry is uncertain due to global warming. We need more scalable approaches at this time. 4. I believe the projected \$500,000 cost is on the verge of being a bald-faced lie. I predict it will end up costing well over \$1 billion. 5. The public should not subsidize very expensive infrastructure project which benefits a small group of people and 2 businesses. I am a devout skier (66 days last year), so I am voting against the public subsidizing my favorite activity! <p>I believe the best solution is expanded bus service and expanded parking lots at park and ride lots. I rode the bus up Big Cottonwood (972 route) approximately 55 days/year for 3 out of the last 4 years. Riding the bus is a small hassle and creates a small travel delay. But the benefits outweigh the disadvantages and the vast majority of the time it works very well.</p> <p>The 953 bus route up Little Cottonwood Canyon has provided inferior service with an approximately 90 minute period in the middle of the day with no service (approximately noon to 1:30 PM).</p> <p>I believe there should be a hefty fine (\$1000) for anyone who causes a traffic jam in Big or Little Cottonwood Canyon.</p> <p>Best Regards</p>
34322	Lindsey McGuire	<p>I am submitting my comment as one of the countless voices standing up for little cottonwood canyon during this difficult time. Utah is my home, and LCC is a central, special, irreplaceable part of the community here. I do not believe any drastic, permanent changes to the canyon are helpful solutions to the problems the canyon faces. The people have spoken, and we believe that less invasive options are quite plausible and should be exhausted before further considerations are made. Anyone I know who cares for LCC would be willing to make sacrifices to save the integrity of the canyon, such as carpooling, reservations, bussing or other means of reducing traffic. These alternatives are much more realistic and considerate of the environment and Utah residents. I hope the decisions made can reflect how the people feel.</p>
34323	Lynn Lonardo	<p>If it's not free and available to ALL people, ALL of the time, then it is a NO to the gondola! If we are ALL paying for it, then it shouldn't be for a few rich folks who want to go skiing. Put me down for a BIG FAT NO to the GONDOLA!</p>
34324	Tony Stewart	<p>I do NOT want a gondola running through our national forest. What could be very easily done for a fraction of the cost is having actual enforcement of traction law at the mount of LCC to turn away negligent drivers from entering the canyon in vehicles that cannot handle driving in snowy/icy conditions. Bus service should be EXPANDED for more frequency and longer hours for those that work in LCC or for those that are patrons to the bars and restaurants at Snowbird or TOA will have a means to commute to and from LCC without needing to use their personal vehicle. I cannot stress enough how much I think a gondola would be disastrous and costly to taxpayers whilst it's ultimately only ski resorts that would benefit from the gondola, if it ever got completed in time and budget in the first place.</p>
34325	Patricia Todd	<p>How many homes will you remove using "imminent domaine," for this atrocity...and for the park and ride? How many busses will still be needed to shuttle people between their vehicles at the park and ride to the gondola? Why even bother asking us who pay for the destruction of our canyon to benefit two private ski resorts a couple of weeks each year? Corruption is vogue? Read the comment section on every social media post. 80-90% oppose this. Let's pretend that this comment section matters one single iota what you WILL do regardless of the taxpayers opinions.</p>
34326	Kali Parmley	<p>NO GONDOLA! A gondola is an unsensible transportation method for 90% of the visitors of LCC. You're catering to the ski resorts instead of thinking of the other half of users of that canyon including hikers, bikers, climbers, hunters, and more.</p> <p>Even skiers will choose carpooling over paying a fee to ride a Gondola up the Canyon.</p> <p>Try actually enforcing the traction laws before you spend millions of tax payers dollars to destroy the Canyon with a transportation method no one will use.</p>
34327	Christopher Rivero	<p>I believe the gondola is a huge mistake and will cause damage to the environment and landscape. The best option is buses and congestion tolling.</p>
34328	Joe Nuzzolo	<p>At this time, I believe it is unnecessary to be installing a cable car style transportation system in little cottonwood canyon, to help alleviate canyon road congestion for a few weekends during one of the four seasons. At the expense of state tax payers, this will not solve a problem faced by the majority of utahns and utilizes old technology that would be far out performed in every category from sustainability to pysical performance by an underground rail system. Start by making the existing road safer with snow sheds, continue to encourage the public to carpool and use the busses, and save up to build an underground rail system which will be safer, more efficient and leave no eye sore to canyon recreationalists of all seasons.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34329	John Fakish	<p>A \$600,000,000 investment into a permanent construction that alleviates a problem that occurs 30% of the year makes no sense.</p> <p>WHAT IF IT DOESN'T WORK? What if this whole massive thing gets built - the longest gondola in the world - but in 3 years, the excitement is gone and no locals want to ride it. It ends up taking longer to get onto a gondola than expected, maybe the parking structures are a pain in the neck, maybe it gets expensive to be a user of the parking lot or the gondola, etc. etc.</p> <p>WHAT IF IT DOESN'T WORK?</p>
34330	Liz Smith	<p>As a resident of salt lake, I am against the gondola. This will not ease traffic and will only increase the cost of skiing. Better solutions can be found such as a dedicated buses for each resort which run frequently.</p>
34331	Ari Hobfoll	<p>It is ridiculous that snowbird and Alta are trying to get this gondola from public funds in order to increase the amount of skiers in an already congested resort setting. It is a raping if the natural environment, and a strongly opposed eye sore. Just increase bud service and toll the canyon. This is a special interest project with no support in the community and is a severe over reach by developers.</p>
34332	Brooklynn Williams	<p>I am an outdoor enthusiast, a climber, and your constituent. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction.</p> <p>The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>Not only does this effect climbers and hikers who visit the canyon without interest of the ski resort, but the construction will destroy habitats and undoubtedly present damages to the watershed.</p> <p>I encourage anyone involved in this decision to please consider opposing the Little Cottonwood Canyon gondola in favor of better solutions. There are better solutions.</p>
34333	Pamela Hinrichs	<p>Every piece of land saved is critical for biological diversity of plants and animals. Since this land is going to be disrupted, PLEASE use the LEAST INVASIVE Gondola Alternative B. Thank you.</p>
34334	Benjamin Reece	<p>I own two properties less than a mile from the canyon entrance in Cottonwood Heights. I support the Gondola given the alternatives. We should also toll the canyon. I say this as an avid vintage vehicle driver and skier.</p>
34335	Ellie Strong	<p>The gondola is a ridiculously destructive option. A lot of LCCs appeal is it's natural and unobstructed beauty. This gondola would take away from the "wilderness," feel that many LCC visitors crave. It also further commercializes LCC, and would instead attract more visitors and increase traffic. The gondola would just put a temporary and very expensive bandaid on the problem. The main problem with the gondola is the climbing routes it would destroy. Resort skiers aren't the only users of LCC, and it's a disservice to the public to destroy public land in favor of large corporations. The only people in support of the gondola are Snowbird and Alta, because it directly caters to them and allows them to make more money. Please don't ruin the appeal of LCC in favor of large corporations.</p>
34336	Linda Incardine	<p>I'm in favor.</p>
35430	Phil Casper	<p>Even if snowbird and Alta were paying 100% of this project, I would still be opposed, but from what I have seen they will bear none of the cost. It is insanely expensive. Taxpayers bringing customers right to the doorstep of private businesses makes no sense and is corrupt. The additional traffic at the bottom of the canyon in Sandy create new problems. Please choose a different idea.</p> <p>Force carpooling by charging fees. \$30 for single people \$20 for 2 people \$10 for 3 people Free for cars with 4 or more people.</p> <p>I predict an immediate fix.</p>
34337	Shirley Griffiths	<p>Please do not build a gondola and please do not build a cog rail up Little Cottonwood Canyon.</p>
34338	Cody Martino	<p>Please consider cog rail. I understand the considerable cost compared to other solutions. However, it's time we invest in the future instead of taking the cheapest option. Trains have scale compared to the gondola, and busses are a short term solution. The only way forward is to invest in a rigid public transportation system that Utahns and those who visit can rely on.</p> <p>Also, very easy delivery from Stadler :)</p>
34339	Jessie Anderson	<p>I am opposed to the gondola. It will not help with traffic management and will cause irreparable damage to the canyon. A shuttle service like in Zion national park would make so much more sense.</p>
34340	Kelly Griffitha	<p>Putting a gondola in this canyon does not serve the needs of those who use it most. It is sad to see the obvious misuse of power of a small group who will profit financially totally ignore the public input on this decision. This is truly an example of government at its worst. What a waste of money when simply running more busses solves the problem completely.</p>
34341	Corrine Gale	<p>I am against building a gondola in Little Cottonwood Canyon. I do not want taxpayer dollars wasted subsidizing the ski industry.</p>

ID	Full Name	Comment
34342	Ryley Pabst	I grew up near the mouth of Little Cottonwood and have spent my whole life recreating there. Going through with the gondola would leave a permanent and drastic change to the canyon which we should be trying to protect the natural beauty of. It would be much more logical to try any of the alternatives first before making any decision on the gondola final to truly see if the alternatives will work. I think there is much more flexibility and options by going with an alternative that would also avoid causing any harm to this amazing outdoor resource we have in our home.
34343	Taylor Dankmyer	<p>Those participating in these responses time and time again have been submitting the same comments for multiple years.</p> <p>I simply ask that we build, expand/grow our existing bus infrastructure. It is so much cheaper. It can easily be connected to our existing Public transit around the city. Why can't residents in Sandy, Sugarhouse, the avenues, wherever, take a bus that eventually connects to a canyon bus?</p> <p>We can have the bus eventually stop at trailheads (even if they will *not* in the exist plan, we know this). Gondolas cannot easily stop at trailheads without much higher costs.</p> <p>The bus, ran consistently, can be very reliable and save us a lot of money.</p> <p>As for tolling, i reccomend tolling but that requires that we make the transit option a multi use transit option, not a godola just to ski resorts.</p> <p>It also makes a lot of sense to build up our bus infrastructure first. Give it priority in the canyon (meaning cars have to wait for buses) and run it constantly. Let people see how that can be successful. Then we can discuss larger projects down the line.</p> <p>A gondola is still ugly, permanent, and inflexible when compared to a bus. There is a reason every ski town in the west uses bus rapid transit and not gondolas.</p>
34344	Elizabeth King	We don't want the Gondola- we want streets we can walk on and ride bikes
34345	Dave Coyne	No gondola. A gondola is a limited solution and merely puts the burden on the taxpayer, not the ski resorts that continue to create more issues than solutions. Restrict group passes like the Ikon pass and our traffic issues would be greatly resolved without increase tax burden on local residents.
34346	Lorenz Cushman	The gondola approach is not a holistic solution for the transportation problems in both little and big cottonwood. This is an extreme solution that wrecks havoc on the environment without even assessing all of the traffic concerns. Recreators of both canyons who use all trailheads and parking areas should be considered and advocated for. The gondola solution does not meet the needs of the public it only serves to benefit two cooperate resorts. In addition, this is an extremely expensive solution that will permanently change the landscape of the canyons. Please consider alternatives that advocate for carpooling and public transport.
34347	Aimee Kaczmarek	While there is numerous reasons why this is a terrible decision but how can you justify solely putting the cost on the public?! Especially when it is only benefiting two major ski resorts. This should be put on the ski resorts first then put on the public. Secondly, I still don't understand how this gondola will benefit those who are hoping to ski the canyon during spring, summer or fall? What about the wildlife and the impacts they will see? What about when the gondola stops working, how will it be removed?
34348	Jon Hackmack	No Gondola! It will not solve any issues and will create new issues. It is not worth the money. But the biggest reason I'm against it is it requires destroying the nature in the canyon for only a limited number of people to use. Two ski resorts is not enough reason to build a gondola. Powder days and weekends will always be crowded. That is a population problem not canyon problem.
34349	Dustin Robertson	We need a solution to the traffic. I support doing something. Gondola great it is something do nothing is not and optional
34350	John Swartzwelder	<p>I am an outdoor enthusiast, a skier, hiker, and climber. I am writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines all forms of recreation in the canyon that draw people to live in and visit Utah. Worst of all, it would block canyon users from accessing world class outdoor activities.</p> <p>UDOT's proposed gondola solution markets itself as the "best," solution to reduce the traffic in Little Cottonwood canyon. However, this proposal disregards that the most frequent canyon users do not want the gondola. To successfully reduce the congestion of Little Cottonwood Canyon, it is crucial for UDOT and the EIS to weigh the desires of LCC users more heavily. Above all, the EIS proposal should value the canyon users needs and wants over the developmental goals of the ski resorts and Gondola Works.</p> <p>The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>I hope you will consider opposing the Little Cottonwood Canyon gondola in favor of better solutions.</p>

ID	Full Name	Comment
34351	Kelly Karpinski	<p>First off, I oppose the gondola. It's a tax payer funded subsidy to the ski resorts and will ruin the beauty of the canyon, amongst other things (eg climbing rocks, etc).</p> <p>Second, none of your solutions benefit all users of the canyon. It seems you want to not allow roadside parking, when many backcountry skiing and hiking routes do not have dedicated parking. You need solutions for all routes prior to banning roadside parking.</p> <p>Third, the enhanced bus service is still severely lacking. We need early routes (5,6,7 am). Summer routes too. Select busses also need to service the trailheads.</p> <p>Fourth and final, tolls should never be charged if there isn't an alternative. A single occupant does not have a public way to get to white Pine, for example. It's not always possible to carpool and no bus services this spot, so you shut ppl out of recreating. As long as the toll is above entry 1, and you can avoid the toll by arriving before a public alternative, then fine. You should align this with Alta's timed parking lot opening. If you can't arrive there before the toll goes in, it's not really fare to Alta skiers vs Snowbird skiers.</p>
34352	May Lee	<p>During the winter months in Salt Lake City, prolonged inversions can lead to high levels of fine particulate pollution. UDOT's selection of Gondola Alternative B proposes the expansion of Wasatch Boulevard and the construction of a base parking structure in the Salt Lake Valley.</p> <p>I am curious to know whether UDOT has assessed the environmental impact of an additional 2,500 parked cars starting their ignitions in a parking structure located in the valley during a typical winter inversion on the communities of Sandy and Cottonwood Heights? And what's the impact of those cars driving into these communities? The claim that the environmental impact is equivalent to current levels seems disingenuous. If UDOT works with municipalities and private businesses to manage the traffic in a phased manner by minimizing cars into Little Cottonwood Canyon, fewer cars at the base of LCC would mean an improvement to the air quality in Salt Lake. The construction of the gondola introduces even more cars and detrimental environmental impacts.</p> <p>Additionally, I have a concern that tolling will limit access for lower income citizens to the public lands in Little Cottonwood Canyon. How might UDOT's plans mitigate the barrier to access that tolling would create?</p>
34353	Michael Walterscheid	<p>I am opposed to building the Tram in the Little Cottonwood canyon. I do not want the tax burden of funding this boondoggle.</p>
34354	Matt Conn	<p>Our community does NOT support the gondola. No one does. This would ruin any trust or faith in UDOT</p>
34355	Michael Wessler	<p>This canyon has been a cornerstone of my personal and professional life for the past 15 years, and I would hate to see such rash decisions permanently damage such a widely beloved refuge. A gondola is absolutely NOT the appropriate solution for LCC at this time, and likely never will be. In short, a few major issues with the plan are:</p> <ul style="list-style-type: none"> (1) taxpayer funding of what essentially only benefits private industry, with plans as advertised being incomplete or lacking in transparency, (2) a lack of an honest attempt at roadway improvements or public transportation, including moves that would effectively limit access to public lands for lower-income families, (3) failure to address both summer congestion issues in LCC along with congestion issues in BCC, which are becoming more significant each year, and (4) innumerable other impacts to quality of the experience for those who live in, near, or recreate frequently in the canyons in all seasons. <p>Moving forward with the gondola when existing and relatively affordable options have not been given an honest attempt is wholly irresponsible. For the record, proclaiming that public transportation is insufficient to reduce the traffic problems based on data from 2020-present is laughable. Carpool and bus usage statistics from a multi-year pandemic are invalid and do not represent a system functioning at full capacity. This needs to be given an honest shot in a true post-pandemic situation before considering expensive and permanent alternatives like road widening or a gondola.</p> <p>Even more laughable is UTA cutting bus service in the Cottonwoods in the middle of this 'assessment' period, essentially sabotaging (whether intentional or not) the efforts to increase ridership and reduce single-occupancy-vehicles in the canyons. How is a tolled roadway supposed to work when there is insufficient bus service to balance out the addition of the toll? This will limit access for lower-income families while simultaneously failing to solve the issue at hand.</p> <p>I would support an honest, multi-year assessment period where bus service is substantially increased, park-and-ride infrastructure is expanded to match the increased bus service (today's lots are often full by 7AM), and tolling is used (appropriately) to encourage ridership. Snow sheds in frequent avalanche paths will help mitigate some of the roadway issues the buses would face. Increased plow frequency would mitigate road condition issues even during higher snowfall rate events. Furthermore, the cost of this expanded bus service and snow shedding would come at a fraction of that which the gondola would total out (even at it's unbelievable estimates of 550M when reality is likely well in excess of 1.1B). How</p>
34356	Austin Bourret	<p>This gondola does not benefit me at all. I am a backcountry skier and this will only fill the corporate coffers of Alta and snowbird while packing more people in lift lines, further reducing the user experience. Additionally, it won't decrease canyon traffic because there isn't incentive not to drive. It's also far too expensive. Run dozens of electric busses non stop and incentive people to take them.</p>
34357	Rockwell Rumel	<p>The gondola only serves the resorts. And it comes at great and irreversible cost to countless other recreators.</p>
34358	Jeff Campbell	<p>Worst idea ever. Enriching politicians at the expense of the public</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34359	Ray Anderson	<p>One alternative that should be explored is re-directing access to LCC via additional lifts either from Park City, Deer Valley, American Fork Canyon or Midway.</p> <p>The back-country enthusiasts may not like this too much, but there is plenty of other untouched terrain available to them.</p> <p>By inter-connecting Alta and Snowbird via Big Cottonwood Canyon (and Park City, Deer Valley and Midway), we would not do not reduce the need for a Gondola, but also create a multi-area ski mecca unparalleled worldwide.</p> <p>Two or three lifts from existing access routes may be the best of all worlds.</p> <p>The alternative should at least be evaluated.</p>
34360	Shanlon Vazquez	<p>I realize the transportation in the canyon has to change in some way. If the gondola is chosen as the option, why are you not looking at the best and fastest and able to transport more people than the current proposal. From what I understand the proposed gondola is slow and already seems outdated for the needs the canyon will have in the future.</p>
35462	Bobbie Halverson	<p>UDOT choosing to put in a gondola in Little Cottonwood Canyon was made with much input, I'm sure. The fact is, where is the snow? Where will it be in 5 years, 10 years and beyond? At this point, the carbon dioxide reduction is not happening enough to swing the lack of snow into a place where it was 20 years ago.</p> <p>So, what is the purpose of going forward with the gondola? It has to be from the pressure of politicians who own the ground for the gondola head and the 2 ski resorts in the canyon.</p> <p>You do understand that you are putting into place something that is totally ludicrous to the future of Little Cottonwood Canyon.</p> <p>Pull back, stop the process and give this 5 years. Look at your choice and other choices then. The climate will probably be such that we'll be lucky if there is enough cold to create snow, let alone watch it fall from the sky.</p> <p>Bobbie Halverson </p>
34361	Samantha Worrall	<p>The public absolutely does not want a gondola. The gondola would have a vastly negative impact on the climbing community in an already crowded canyon.</p>
34362	Mel Fagan	<p>I moved to SLC in 2014 and have been using LCC in all seasons ever since, to ski, hike, run, and climb. The gondola is a terrible idea and it should not happen. It's an expensive yet ineffective solution to problems of traffic and over-use. Residents do not want this gondola. It will benefit very few and destroy the sight of our beautiful canyon. We should instead expand existing bus services to reduce congestion in the canyon. I am a Utah voter, and the LLC is one of my favorite places to relax and recreate all year round. I appreciate UDOT's openness to comments and getting a sense of what the community wants. The gondola proposal is so bad that it would be comical if the stakes were not irreparable damage to a beautiful natural place.</p>
34363	Warren Lloyd	<p>I have studied the alternatives and feel strongly that for the health of the Canyon and the valley that it supports we should work for a viable rail solution up the canyon. The gondola is only a partial solution for skier traffic during the ski season, and which is more visually invasive. A train is an expandable option that could ultimately connect Big Cottonwood and Park City.</p>
34364	Bobbie Halverson	<p>Stop the process, wait 5 years and see if we have enough cold to create snow, let alone watch it fall from the sky. The removal of carbon dioxide from the atmosphere is not happening fast enough to turn the drought around. Putting a gondola in Little Cottonwood Canyon will be a laughing joke and you all will scrambling to justify it.</p>
34365	Sydney Larsen	<p>The state needs to be spending that money elsewhere on things like combating climate change, saving the great salt lake, addressing the housing crisis, addressing the ever growing homeless population, education, etc. the list is endless and priorities need to be reevaluated right now. NO GONDOLA.</p>
34366	Richard Hendron	<p>The entire comment process has been extremely interesting. Well done! The best ideas to come forward are the phased approach, with: (1) Needed road modifications, including better road access for residents living at or near the bottom of the canyon; (2) Timed entry at really busy times, (weekends December through March);(3) Tolloed access beginning at the Snowbird entrance; (4) Snow sheds to counteract bad weather access; (5) Publish the 'secret' formula to predict vehicle traffic numbers and canyon load. It should absolutely be public knowledge! This is a publicly funded project.; (6) Move 'protection of canyon beauty' to #3' on the UDOT list of objectives, rather than at the bottom of the list. Its priority should have been much higher, reflecting our community values for the value of our mountains. Thank you very much- Rich Hendron</p>
34367	Jeremy Dimond	<p>Absolutely NO Gondola ! There must be a better, more feasible way. Alta & Snowbird need to bear a significant financial burden to accommodate their resorts. This idea feels like political corruption. Who is in charge and who profits from this nonsense?</p>

ID	Full Name	Comment
34368	Diandra DeWaal	<p>As a life long Wasatch Front and Little Cottonwood resident, I can confidently and firmly say NO to the gondola. It is a costly, inefficient, inconvenient method to alleviate canyon traffic. Not to mention takes away the natural beauty of Little Cottonwood Canyon and turns it into an amusement park ride. All to operate for 3-4 winter months of the year. DO NOT forget that this will NOT benefit hikers, mountain bikers, climbers etc. Who use this canyon year round.</p> <p>Local residents will not use the gondola. There is no incentive. It will only serve out of town visitors, who make up a much smaller portion of regular ski resort visitors.</p> <p>An increased bus service system, designated bus lanes would be more efficient, cost effective, resort friendly, and can be adjusted for seasonal need. The gondola cannot.</p> <p>NO GONDOLA! NO GONDOLA! NO GONDOLA!</p>
34369	Evelyn Zavala Gomez	THIS IS NOT A GOOD IDEA.
34370	Gary West	I oppose both widening the road and I also oppose the gondola projects as proposed. I have lived near LCC and BCC for 55 years. I have been skiing at Snowbird since it opened. I ski at Snowbird 2x a week and the majority of skiers I meet, are ICON PASS users. The PROBLEM is not the traffic, it is the expansion of the ICON pass. Remove the ICON pass and the traffic WILL reduce. Secondly, BCC has the same traffic problem. Why single out LCC and not implement BCC? Because it is not about the traffic, it is about resort and land development. My two alternative options are 1. Eliminate the Icon pass and/or 2. Use the funds to build parking garages at Snowbird and Alta.
34371	Justin Dhondt	No gondola! No road expansion! Close the road to traffic during the winter unless it's for residents or deliveries. etc. Build the parking infrastructure at the base of the canyon and run lots of electric buses up and down the canyon. That would have the least environmental impact and greatly reduce the traffic and parking issues.
34372	Whitney Flygare	I am so thrilled that the gondola was chosen as the best option. As mentioned in the report, it is the only option that actually solves the problems, not to mention the one with the smallest environmental impact. It had been interesting thinking about this since UDOT cut bus services up the canyon because of lack of drivers. The gondola is also one that is the least vulnerable to staffing shortages. I know there are lots of people upset at this idea but it is honestly the only viable one. Thank heavens UDOT made the right decision with this.
34373	Dylan Holt	This is absurd, outlandish and a money grab in the greatest measure. I absolutely vote no gondola.
34374	Ashleigh Hamilton	It is ridiculous that a gondola is a conversation when a robust bus plan would fix the situation. The fact that we can't grab a bus downtown, on the west side or even in sugarhouse and get to the mountain is a joke. No to the gondola.
34375	Jet Tomlinson	Please review to their options. A gondola is inefficient and overkill. Where are cars going to park to use it? 9400 s and highland? How will cars park at the la caille base station? All that will do is create congestion in other areas. As a tax payer, I don't support the gondola. More time and research should be done before reaching this conclusion. Lastly, are thr comments made public for all to review? Greetings,
35482	Mark Barrett	<p>I have some comments and questions about the interpretation of the EISI have a few questions about the EIS that I hope you can explain.</p> <p>Increase in impervious surface</p> <p>Enhanced Bus Service in Peak-period Shoulder Lane Alternative: 35.2-38.8 acres Gondola Alternative B: increase of 22.6-26.2 acres</p> <p>Wildlife habitat impacted</p> <p>Enhanced Bus Service in Peak-period Shoulder Lane Alternative: 44-48 acres Gondola Alternative B: increase of 24-28 acresIn regards to above numbers, are they not talking about acreage beside an existing road vs land in the middle of the canyon? I don't think that you can compare the two as being the same in regard to the ecosystem. It seems it would be less impact to destroy 44 acres of land adjacent to the road than it would to destroy 24 acres of the middle of the canyon.</p> <p>Visual change (primary alternative/supporting element) - Visual change includes landscape character change at key observation points. The visual change is for the primary alternative and supporting elements such as snow sheds.</p> <p>Enhanced Bus Service in Peak-period Shoulder Lane Alternative: Negligible/high Gondola Alternative B: High/high</p> <p>This hits home with my main objection to the gondola. It will permanently affect the natural beauty of this stunning canyon. As I said earlier, because of its small size, the Wasatch is not the Alps. In regard to snow sheds assuming they are necessary could architects not design them to blend in better with the slope</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34376	LaNova Platero	I am fully against this gondola. 20 Years ago, Utah was beautiful all on its own. Then we started building "environmentally friendly," structures and all have been major eyesores. I don't visit the canyon so I can see the mountains scarred with machines. As a snowboarder, skier, hiker, snow shoer, outdoor enthusiast, and tax payer I am asking that this project be rejected and never be considered again. Stop scarring Utah.
34377	Ronald Nolte	I am not in favor of of this proposal. The GondolaB proposal is wasteful of capital resources, elitist in that it reinforces power of the ski resorts, and further concentrates the human impact on the canyon environment to a smaller area of the watershed. Common sense options of more buses that include trailhead stops, demand based road use fees, and other options to reduce peak load to the system and encourage more dispersed use of the canyon.
34378	Judi Short	Building a gondola is a waste of taxpayer money. We may not have enough snow to ski on by the time this built. It is a lot of money to pay to benefit a chosen few. The fee to use the gondola is very high, along with the lift tickets. Are you going to build a giant parking lot for all the cars to park in at the bottom of the hill. Who will benefit from the sale of land for the parking lot, and who will get the parking fees? This is a lot of money (I bet it will be \$1B by the time it is all said and done) to benefit a few. Other visitors to the hiking and canyons may not be able to do that any more, right now it costs them nothing, but if you start attaching fees, again you cut out the average person in our city. Just say no. There are better options, and they don't have to be as glamorous as this silly idea.
35468	Daniel Arellano	Hello, I'm Daniel Arellano. As an active member of our community, I stand with the community to assure there will NOT be a gondola built as an alternative means of transportation. There is a better alternative, increasing pay to drivers. Making the bus driver career more appealing to the community so we have more applicants. Install the millions of dollars we would spend on the gondola and place it in a pension fund for bus drivers. Ensure the safety of a career is more appealing than spending millions on a short term solution. Please consider your community, insure your community by creating these new pensions for bus drivers. Backing our drivers will be the only solution to our problem as a community. My deepest regards Daniel Arellano
34379	Lori Komlos	I strongly oppose the chosen Gondola Alternative B plan because it does not address the option to move people to all parts of the canyon. It seems to cater only to the ski resorts and not help all the traffic that is going up LCC to hike, climb or travel to other places along the road besides the resorts. Also the gondola is HIGH impact visually and will spoil the beauty of the canyon. The phased in approach will be beneficial to get people to ride the bus or carpool and pay tolls. It should include electric buses and reduced tolls for carpooling vehicles. I am a hiker and resort skier but oppose the gondola! Please consider these comments. Thank you.
34380	Collin Sheppard	I do not support the gondola for many reasons. There are much better solutions, such as implementing efficient bus systems to all of the potential recreation sites in the canyon, or creating an efficient ride share system. Even the possibility of an automated transit system to reduce operations costs and allow for year round implementation. These can all be ramped up in peak season and utilized at lower capacity throughout the year. A fee or ban on personal vehicles or vehicles with fewer than X passengers should be implemented IN COMBINATION with the improved transit to ensure it is utilized. This will minimize traffic, accidents, AND keep the canyon beautiful, all with a much lower CAPEX. The gondola will be a primary voting issue for me and the majority of my friends.
34381	Arielle Gulley	I oppose UDOT's preferred alternative: Gondola B (From La Caille). As evidenced by the original public comments for S.R. 210 Draft EIS, I, and most the public, strongly oppose building a Gondola in Little Cottonwood Canyon, and support an enhanced bus service, tolling, and other restrictions be implemented before any new construction is considered. In UDOT's executive summary for the Final EIS, UDOT claims there is "support for gondola and bus alternatives.," While this is true, it misconstrues the overarching message from the 13,443 public comments UDOT received. While UDOT's 258-page public comment response is quite comprehensive, it failed to statistically summarize major themes of the public's wishes. Because UDOT's 258-page public comment response sufficiently documents all the reasons the gondola is a bad idea, there is no reason to expand on that here. Rather, I call on UDOT to present a statistical summary of the major themes from the original public comments and act in accordance with the majority themes, that is: enhanced bus service, restrictions to single occupancy traffic, and no gondola in Little Cottonwood Canyon. Thank you for your careful consideration!
34382	Spencer Galt	I believe the best solution to the traffic problem is the gondola B proposal. Significantly, avalanche danger would least impact this option for canyon travel.
34383	mary Voelker	I am not in favor of the gondola
34384	Lorena Bush	Initially I commented to be in for the gondola because I had this futuristic idea of gondolas connecting all around the state as the main mass transportation alternative. However, after reading more about the plan, it sounds like the way how the landscape would be transformed in order to make the gondola possible would really add visual pollution and ruin some of the local climbing hubs in the canyon. The price to sustain the gondola will be an expensive alternative for the tax payers and it'll still have limitations for regular users like me. The plan apparently will mainly benefit those private investors that want to turn the gondola parking lots into shopping centers/hotels which doesn't sound like a good alternative for residents. With all of those issues I believe before trying to make such a drastic change in the canyon, we should try a less transforming approach. Now, I would like to try low fare electric buses that are scheduled more frequently. At the same time if there is a charge to go up the canyon (that is more expensive than riding the bus), that'll be a good incentive for people to use the mass transportation alternative. Thank you for your hard work, I hope you can make most people happy!

34385	Amy Posey	The proposed gondola would not solve any transportation issue up the canyon- it just shifts where traffic would be. As a local who's been skiing that canyon for 20 years- a gondola would ruin the natural beauty of the canyon. LOCALS DON'T WANT THE GONDOLA. And we don't want our taxes paying for it.
34386	Steven Glaser	<p>Original Comment: 2.2.2.1, 4th Paragraph. The phrase 'Level 2 resources' is used here, but they are not defined.</p> <p>UDOT Response: The commenter mentioned a specific section and paragraph, but UDOT could not find this reference. However, Table 2.2-2, Level 2 Screening Criteria (Impacts), of the Draft Environmental Impact Statement (EIS) lists the resources considered in the screening process.</p> <p>Follow-up Comment: Here is the original Draft EIS text in its entirety. The phrase 'Level 2 resources' is in the next-to-last sentence of the last paragraph.</p> <p>2.2.2.1 Improve Mobility on Wasatch Boulevard Improving mobility on S.R. 210 in 2050 involves meeting two different needs: improving mobility for commuter traffic during the weekday on Wasatch Boulevard and improving mobility for the winter ski traffic on S.R. 210 along the entire corridor from Fort Union Boulevard to the town of Alta. The screening criteria for weekday commuter traffic on Wasatch Boulevard are different than for winter ski traffic since the roadway travel demand varies by each type of traffic.</p> <p>Because the criteria are different, the alternatives screening process for Wasatch Boulevard in particular was conducted separately from and prior to the alternatives screening process for S.R. 210 overall (see Section 2.2.2.2, Improve Mobility on S.R. 210 from Fort Union Boulevard to Alta). The mobility benefits provided by the Wasatch Boulevard alternatives that passed Level 1 and Level 2 screening were considered part of the baseline conditions when evaluating how to improve mobility on S.R. 210 overall (see Section 2.2.2.2). For more details about the Wasatch Boulevard screening results, see Appendix 2A, Draft Alternatives Development and Screening Report June 8, 2020.</p> <p>Table 2.2-3 shows the alternatives considered for Wasatch Boulevard and the screening results. As shown in the table, only the Imbalanced-lane Alternative and the Five-lane Alternative passed the screening process. Both alternatives met UDOT's level of service goal of LOS D or better. With the Imbalanced-lane Alternative, the level of service on Wasatch Boulevard would be LOS C in 2050, and with the Five-lane Alternative, the level of service would be LOS B or C. With all of the other alternatives, segments of Wasatch Boulevard would operate at a level of service of LOS F.</p> <p>The footprints and impact lines for the Imbalanced-lane Alternative and the Five-lane Alternative are similar, are mostly within UDOT's existing right of way, and would not have substantially different impacts to any of the Level 2 resources considered. Because the two alternatives would have similar levels of impacts and costs, the Level 2 screening analysis did not give UDOT a reason to eliminate either alternative.</p> <p>Original Comment: 2.2.4, Gondola Alternative B, Travel Reliability. It was stated in a local newspaper that gondola will be stopped whenever avalanche control work is performed to ensure no damage to the system before restarting. What if there is damage? What is the contingency for getting people off? What will happen to traffic on what is undoubtedly a superb powder day? What is the maximum length of time for getting the gondola system up and running again? Days? Weeks? The rest of the ski season? What are the implications for travel reliability of the gondola system? This does not appear to have been addressed in the EIS.</p>
34387	Ingrid Niesen	I oppose the gondola, it will destroy the canyon. Disrupt the wildlife, environment and natural beauty of LCC.
34388	Greg Shipley	The proposed "solution," is clearly only beneficial to the government and corporate entities and has no regard for the impact on the environment or the desires of the majority of the populous that is against the gondola
34389	Steven Henke	I am very concerned and disappointed with UDOT's support for the Gondola. This is not a worthwhile use of taxpayers funds. It also does not support my needs in the canyon. I would love to use public transit year round in the canyons if they were to stop at trailheads...the gondola only supports ski resorts. It may address some air pollution but better options exist that would be cheaper. I do not want to see or pay for a gondola. You received 14,000 comments several months back, what was the public consensus? What are you hiding? This is alarming and not a well thought out plan. SLC may not have snow in 30 years, why are you planning to spend millions of money for something that does not last and will not be if it the majority of locals. Locals who both use and don't use the canyon? Please rethink your solution. You have come to the wrong conclusion.
34390	Joana Koiller	<p>Hello,</p> <p>I live in Salt Lake and am an avid user of Little Cottonwood Canyon, as a climber and skier.</p> <p>I am vehemently opposed to the Gondola proposal.</p> <ol style="list-style-type: none"> 1. The gondola would destroy the boulders in Salt Lake and impact the ecosystem. 2. I believe there are alternatives such as expanded bus lines and a parking reservation for Snowbird. I am a passholder at Alta and the parking reservation helped a lot. 3. The money spent on building a Gondola is better spent saving the Great Salt Lake - the most pressing environmental issue.
34391	Nancy Hoole Taylor	A gondola in Little Cottonwood Canyon will severely impact its precious environment, and the great granite boulders that are loved by so many. Please preserve the canyons beauty.
34392	Anil Seth	I strongly oppose the gondola plan. A frequent busing + tolling approach seems like the most feasible and least impactful way of addressing issues in the canyons. Paying for the gondola with taxpayer money is not acceptable -- Snowbird and Alta are the only real beneficiaries, and if they want it built (as they've been lobbying for), they should pay for it.
34393	vernorrison	The gondola is not cost effective nor provide the transportation for the amount of people wanting use it. Just get a snow cat it carries the same amount people and can pick them up from the airport
34394	Blake Bishop	The Gondola seems like the most inefficient and most expensive way we could solve the problem. A simple larger parking lot with more buses would be much cheaper and actually solve the traffic problems.
34395	Kitty Coley	The gondola does nothing to limit the number of vehicles allowed up the canyon so it does nothing for controlling the congestion. It does nothing to preserve the value of the Wasatch Mountains, nor the fragile watershed, environment and wildlife we all care about.

ID	Full Name	Comment
34396	Amber Stratford	<p>No gondola. 90% of your target audience does not want it. As a result, it will not actually reduce traffic and will instead be a massive waste of resources and a permanent scar on our canyon. There are too many better uses of nearly 1 billion dollars that our tax dollars can go towards. Why are the taxpayers being made to pay for a burden the ski resorts have created? There is a simple solution to this problem: LIMIT TICKET SALES. If the ski resorts are unwilling, that's their problem if their customers complain of long wait times in the canyon. We the tax payer should not have to solve the problems of greedy corporations. If they simply limited tickets sales or improved their parking structures, we could eliminate most, if not all, congestion in the canyon. Furthermore, you yourself (UDOT) recently mentioned that the canyon is only highly congested a mere 50 days out of the year. Why are we expending all this money and time on an issue that has no effect on the other 300 days? Implementing a toll and improving busing are perfect improvements. You are an organization that is funded and paid for by the people. Your actions need to reflect as much. A gondola only serves the resorts, not the people. We need a more equal solution to our air problem than jumping to a flashy gondola. More economical alternatives such as improved busing and tolls need to be implemented and thoroughly tested before we jump to 1 billion dollar gondolas. Please listen to us. WE DO NOT WANT A GONDOLA. WE WILL NOT USE YOUR GONDOLA. Do better. For us and the generations to come. Thank you.</p>
34397	Mark Gardiner	<p>A gondola is NOT the answer to traffic congestion in places of natural splendor that attract ever more visitors. If a gondola were proposed for Zion or Arches National Parks would there be objections? YES. A new road needed to construct and maintain the gondola defiles the natural beauty while limiting the ability to stop anywhere but the gondola terminus at (surprise) Snowbird. It will be a conveyor belt to that place of business.</p> <p>The solution to congestion is a distributed scalable network of electric van and bus service, much as we have now. Buses and vans that can be used elsewhere as needed. What benefit would a gondola in LCC provide to BCC or Park City access? Buses and vans offer more flexibility. Do you notice that Amazon does not make deliveries by gondola? A gondola of necessity has a single point of access and terminus. Those points will be the site of traffic congestion and further construction. All that will be achieved by finally building a gondola is to move the traffic jam from one place to another. People will still drive and the road will be just as crowded as it currently is. To encourage the use of the gondola it will be necessary to make driving more expensive than taking the gondola. That could be a lot.</p> <p>Pricing is one thing that receives little public discussion. Snowbird's charge to take a scenic ride on the tram is a benchmark for pricing. Given inflation the cost to park at the gondola base or take the bus to the gondola base plus the cost of the ride to Snowbird could easily exceed \$100/person before adding on whatever incidental prices Snowbird charges for lift access, rentals, lessons, and food. Let's pencil that out to see who would be priced out of the canyon. The gondola "solution," can be likened to the old story of building a boat in your basement. By the time the boat is built it can't be extricated without first tearing down the house. Little Cottonwood Canyon is our spiritual house, our source of clean water. Who will protect it from us and from massive short-sighted development. Who will pay and who benefits? I oppose construction of the gondola, even if Snowbird were paying for it rather than the taxpayer. To what better use could six billion dollars be put that might have greater public benefit? Money spent on this boondoggle can't be spent for schools, parks, housing, water conservation, air pollution abatement, or anything else.</p>
34398	Gabrielle Longchamp	<p>As a recreational climber, skier, hiker, running, biker and professional ski patroller and bike patroller local to the area I do not support the construction of the gondola .</p>
34399	Kelsey Adkins	<p>I'm Kelsey Adkins, a registered voter who lives in Cottonwood Heights. I am strongly against the proposed plan to build a gondola. I have a deep, and close relationship to Little Cottonwood Canyon; I go into the canyon to recreate on average 3-4 times a week. I'm involved in backcountry skiing, resort skiing, hiking year round, and rock climbing in the spring, summer, and fall.</p> <p>If the gondola is built it will have a grave impact on not only my experience, but the experience of everyone else who goes into the canyon, the wildlife in the canyon and neighboring canyons (since they travel between canyons), and have far-reaching effects on anyone in the valley who drinks the water from the LCC watershed, as well as tax payers' who don't even go into the canyon.</p> <p>I'm very concerned that impact study on the wildlife was woefully inadequate. There are several animal and plant species which live in the areas where the gondola towers will be built whose habitat will be greatly affected, including some species that are sensitive or endangered, including the boreal toad. The noise impact you conducted was inadequate, and studies have shown that the noise from the gears alone is enough to change the habits of birds, affect bats' ability to use echolocation to hunt and feed, and reduce the numbers of insects and amphibians as well. The effects on the entire ecosystem are far-reaching, since insects, amphibians, birds, and bats, are all part of a larger food web that will ultimately have effects on larger mammals including deer, coyote, and mountain lion just to name a few. Studies have shown that when these larger mammals are stressed due to a change in their food sources or scarcity of food resources, there is increase incidence of human-wildlife contact and issues.</p> <p>I am also concerned about the effects of the gondola on the watershed, both during construction as well as afterward. More than one municipality has commented about this, so it's apparent that the impact on the watershed was glossed over and not thoroughly considered.</p> <p>As a passionate climber I want it to be known that the climbing experience is SO MUCH MORE than simply me interacting with the rock immediately in front of me. I climb to that I can be present in the moment with my surroundings in nature. That includes the sounds, the sights and views from the base of the climb, the middle, or the top of the climb. It includes the hike to and from the base of a climb. I climb to be connected with the natural world, not simply to get from point A to B. Gondola towers and a gondola passing through the areas where I frequently climb in lower LCC will gravely detract from this experience for me, other climbers, and future generations of climbers. As climbers, we are often the best advocates for land conservation and stewardship. It is concerning that by diminishing the climbing experience for us climbers, you risk</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34400	Don Eggert	<p>I am extremely opposed to the "Gondola A" and "Gondola B" alternatives because they would create significant visual impacts and would only serve the existing alpine ski resorts. Any new transportation solution should benefit all canyon users, including hikers, cyclists, and back-country skiers. Over the next couple decades, these uses will become much more important than resort skiing as global warming shortens the ski season.</p> <p>I support the "Enhanced bus with roadway widening for peak-period" alternative. However, a much more cost-effective and environmentally-friendly alternative would be to increase bus availability on the existing road and to restrict personal vehicle use in the canyon similar to how Zion National Park has successfully managed their canyon transportation.</p>
34401	Clarissa Seebohm	<p>It seems like UDOT is unwilling to consider other alternatives that don't drastically change a canyon many people use and love. Has UDOT considered the impact of construction time? The gondola solution is by far the most invasive and expensive. It would be best to exhaust all other options first. At this time, I oppose a gondola in LCC.</p>
34402	Kathleen Liuzzi	<p>No to the gondola!!! The proposal will allow it to be built at the taxpayers' expense yet the only ones who will benefit are the ski resorts. The plan does nothing to address traffic congestion or limiting the number of vehicles. It does nothing to preserve the Wasatch Mountains, the fragile watershed, and wildlife. We do not need a gondola!! Figure out a way to control traffic in the Canyon instead.</p>
34403	Chris Ross	<p>The Gondola is a horrible idea and waste of money and taxpayer money too. Follow the money and you will probably find corruption. A better solution is to buy a fleet of solar, hydrogen or battery powered buses to shuttle people (hikers, climbers, skiers, etc.) up and down the canyon and on the half-hour. You can probably replace this bus fleet 5-10 times before you reach 1/2 the cost of a gondola.</p>
34404	Taylor Ruiz	<p>I do not want our tax dollars to be spent on this and watch the ski resorts benefit from our tax dollars being spent.</p>
34405	John Logan	<p>The gondola and busses do not address the problem. People want to drive not ride. The best solution would be parking garages at Snowbird and Alta, built with revenue bonds and paid for by parking fees. There really is only a road driving problem a few times a winter and buses have the same problem. Give people what they want not the far-fetched current plans.</p>
34406	Jeffery Troyer	<p>I am a lifelong resident and canyon employee. We need to get the cars out of the canyon, widening the road won't help when a bus goes sideways across the road in a snowstorm. Gondola/tolls/vehicle restrictions/buses</p>
34407	Caroline Gleich	<p>I am a lifelong resident and canyon employee. We need to get the cars out of the canyon, widening the road won't help when a bus goes sideways across the road in a snowstorm. Gondola/tolls/vehicle restrictions/buses</p>
34408	Landon Poague	<p>The gondola is the worst option for the communities that recreate in the canyons and only serves to enrich a small amount of special interests. Tolls, and dedicated bus lanes with avalanche covers would serve the resorts as well as the backcountry skiing community while preserving unique climbing routes in LCC as well as preserving the beauty of the canyons. Vote no on the gondola PLEASE!</p>
35486	Beat Von Allmen	<p>This is a stunning final statement.</p> <ol style="list-style-type: none"> 1. What is the philosophy of choosing a 30 year life cycle and disclosing: While the initial Gondola construction cost is the third highest of the alternatives, the overall 30-year life cycle cost is the lowest. - A much longer life cycle is applicable to warrant sustainability of a new system. Rail is most favorable over a longer life cycle, but seems to be systematically eliminated. 2. Why has the UDOT LCC EIS, ignored an outrageous esthetic 3S Gondola impact outside the highway corridor, while an unrealistic alignment for a rail system inside the same corridor was imposed? 3. Is it fair to assuming that the overall environmental impact of one lane of highway construction is less than building one independent single rail? 4. Finally, the world's largest 3S gondola promotion is made without a guideline for serving multiple users and without other common guidelines applied normally in a National Forest, i.e. esthetics? 5. Or, is this a final distraction in case the bus is not popular, to fall back on widening the highway and/or building massive avalanche sheds little by little, as funding allows, and ignoring any life cycle cost consideration at all? 6. Maybe it was a bad idea to ask UDOT to provide the LCC EIS?
34409	Kate Gardiner	<p>I am opposed to putting a gondola in Little Cottonwood Canyon.</p>
34410	Tammy Spicer	<p>No this only benefits a few (upper income) those who are traveling to ski the resorts will financially benefit other populations in Utah will not. This is misuse of taxpayer funds if it is used to pay for this. Find another solution</p>
34411	Chong Zhang	<p>I am absolutely against the gondola proposal. The capacity of the mountain including the sky resorts is limited, and it will be saturated eventually (if not already!!) regardless of how efficiently you can move people up the canyon. Bringing more people up only makes the ski area crowded and makes it less fun for everyone. I suggest using a lottery to control the number of people going up. Zion NP did this for the Angel's landing hike. Though the trail is less accessible now, whoever does get to go can enjoy it a lot more. The resorts already make so much money anyway, being greedy and trying to make more actually brings unexpected and undesirable outcomes. Believe me or not, a long, rotating structure parallel to the canyon is bad Fengshui. Gondolas should be oriented somewhat from the canyon road and up the ridge line (vertical to the canyon road, not parallel to the canyon road!). I believe enough have been said about the impact on the environment and the view, and the high cost which the taxpayers should not pay. So, the better options will be using a lottery/reservation system to limit the number of people, or increase bus service. Please don't build a gondola against the majority of people's will, which also brings bad luck.</p>
34412	Nellie Morgan	<p>As a former Silver Fork Cabin owner I am against the gondola. Too expensive, only serving Little Cottonwood Canyon, can provide extra traffic solutions at less cost, leave the beautiful canyon views alone, limit what ski run companies want that cost city/Utah population, save canyon beauty, hiking access, and nature wildlife.</p>
34413	Don Krafft	<p>The gondola in Little Cottonwood Canyon is a progressive solution that will serve us for years and really make Utah stand out as a terrific ski destination.</p>

ID	Full Name	Comment
34414	Nancy Peterson	<p>Has UDOT even taken into consideration the capacity of Little Cottonwood Canyon? When Utah hosted the 2002 Winter Olympics Little Cottonwood Canyon was considered "Too Fragile" to host any of the events. But yet here we are willing to carve into our "Fragile Canyon" to put 40 foot towers all the way up the canyon. Sandy City improved the Bell Canyon trailhead, now there are easily 200 people that populate that trail. It's not even an enjoyable hike anymore. We used to enjoy watching mountain goats roam over the side of the mountain every spring. Now with 200 plus hikers all over that trail, the goats are gone. They have left for quieter slopes. Digging into Little Canyon will have the same impact. Consequences that are unseen until it's too late.</p> <p>And what of the tax payers? Have we no say how our hard earned dollars will be spent? I do not wish to spend my tax dollars benefitting two privately owned companies! I own my own business, UDOT isn't spending millions of dollars giving my customers a scenic route to my business! What of rural Utah Taxpayers? Are they willing to give up infrastructure dollars? Sacrificed to an expensive toy that only the very rich get to enjoy? I think our tax dollars are better spent on roads and bridges that are in need or repair. Not to mention a water system that doesn't meet the growing population of our state. But the biggest concern of all is that Utah Taxpayers don't want it. I see it on comment boards all over social media, after Gondola articles in the local newspapers and other media, and most of all to people that I interact with in my daily travels. THE PEOPLE DON'T WANT TO PAY FOR THIS! And UDOT deafly keeps pushing the agenda down our throats as if we're unintelligent and uninformed! Last October I was part of 200 other concerned Utahs on capital hill asking our legislators to do a forensic audit of our elections after we learned that Zuckerberg had infused several million dollars into our elections. Do you know what our elected officials told us? "Utah Taxpayers wouldn't pay for it"!!! And yet they seem to think we will want to pay for this over preserving our liberties!!!</p> <p>Let's call this what it really is, a Crony Capitalist money grab and every tax payer sees it! Two once elected officials in city and state government who are well connected, turned business partners with the tax payer as the "investor"! This is corruption at the state level and no-one is fooled!</p>
34415	Matthew Clark	<p>The costs of this project are far too high for the number of residents it would benefit. If initial cost estimates are 500 Million then we can expect the final cost to be north of a billion dollars for something that serves the ski industry. Meanwhile there a countless miles of bad roads around Salt Lake County.</p> <p>You should be limiting vehicle traffic and using electric powered buses instead of this undertaking. If Alta and Snowbird want it, and they admit they are the destination for 87% of the traffic, then they should foot the bill, not the taxpayers of Utah.</p> <p>Thanks for considering my comment.</p>
34416	Madeleine French	<p>I do not want to gondola, I think it's going to be too much money, impact the canyon, and it's irresponsible to consider that before even trying to expand bussing. Consider getting rid of the IKON pass, that would alleviate so much of the canyon traffic!</p>
34417	Jan Strong	<p>I live at the base of little Cottonwood Please no gondola A fleet of small vans like at zions would be awesome Please please no exclusive and damaging gondola Once we got used to Zion park bus vans- it was great People adapt NO Gondola</p>
34418	Virginia Rothstein	<p>I am in favor of electric bus service in the canyon to serve a year-round variety of users. (The bus service from various locations to the Olympic sites was a huge success and moved a remarkable number of people very conveniently.) The electric bus has proved its efficiency and versatility. I am opposed to the gondola for its expense, its pollution, its greater time to effect, its limited venues of service in the canyon.</p>
34419	Cristiane Marcela Muller Del Fiol	<p>I am opposed to the gondola solution because it is a big investment that will benefit just a privileged number of people and just for a limited time (Winter). Besides, there is no way to know if people will really use the gondola and we will have to look at it forever while hiking, skiing, climbing, etc. Additionally, I believe that the gondola is just a temporary solution until it gets crowded again.</p> <p>I think increasing the number of buses plus the implementation of paid parking lot at all ski resorts could be a more reasonable solution to avoid traffic and pollution. Zion National Park for example, limits the entrance of cars into the park for so many years and it is the only way to give everyone a chance to see nature without crowding the place. There are too many people wanting to ski in Little Cottonwood Canyon so why not limiting the numbers of cars going up to the canyon during ski season? If you cannot park your car at the bottom parking lot (I suggest putting the number of slots available), just take a bus instead.</p> <p>As a lover and a big user of Little Cottonwood Canyon I want to thank you UDOT for your effort and for listening to us!</p>
34420	Megan Sieverts	<p>Please protect Little Cottonwood Canyon, by not placing invasive infrastructure for corporate welfare like the gondola extra lanes or any kind of train. It's laughable that representatives from the CWC say that this if for everyone in Utah to recreate. Most Utahns do not ski. However, 60% of Utahns do rely on that drinking water.</p> <p>Put steep tolls in place to force people to take buses. With global warming Utah might not be home to the greatest snow on earth for long. Do the right thing and protect our natural resources, like drinking water. Don't try to cram as many people as possible in the canyon to make Alta and Snowbird more money.</p>
34421	Stefan Brems	<p>The Gondola is not the proper answer to traffic issues in Little Cottonwood Canyon. I urge you, as strongly as possible, to select an option that has a smaller impact on this spectacular canyon's vistas. The best solution of all is a train, that can eventually pass through to Big Cottenwood Canyon, and eventually Park City.</p> <p>Please reconsider a cogwheel train system, like that proposed by Stadler USA, in lieu of the Gondola.</p>
34422	Beata Price-Huish	<p>The gondola would be extremely harmful to our community and the environment. It will be a grave mistake to place a gondola up little cottonwood canyon. The people who actually live by the cottonwoods do not want the gondola. Be better, think of a less harmful solution.</p>
34423	Jessica Scheetz	<p>I would like the state and county to put pressure on the ski resorts. They are the ones creating this issue mainly because they're included on the Ikon Pass. They have made money in the past before the Ikon, so I'm wondering why the urgency to commit to Ikon. The only logical explanation is greed.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34424	Alex Anderson	The gondola is a bad idea. Historically, the 2002 Olympics, this canyon was found to be too fragile to handle an infrastructure like this one. If this is to satisfy private companies and developers this is so wrong. The Utah tax payers should not have to fill the already silver lined pockets of these corporations. Tourism benefits Utah, but it should not come at the price tag that this gondola costs. The gondola costs more than money. It costs access to climbing, hiking, and back country skiing. It could cost us our water supply. It costs us in wilderness we can never recover. This will potentially take homes and properties of residents. It's fiscally irresponsible. Let's join together and come up with a much better idea.
34425	Kail Smith	The gondola will cause more problems then it will solve! And that's how you know it's not a solution.
34426	Sofia Tuttle	As a local & year-round enjoyer of LCC, I am firmly against the gondola. Using tax dollars for an expensive, environmentally costly, and unsightly gondola that serves only two private companies is unwise and unethical. Tax money should be put towards transportation options that are equitable to all canyon-goers, while preserving the natural environment.
34427	Joyce Baron	I support the decision to use the gondola as part of the solution of canyon access.
34428	Kenzie Foulger	NO GONDOLA!!! Keep the mountains, trails, climbing, and nature the way it is!
34429	Shane Charlebois	The biggest detail to keep in the fore front is respecting the locals who live around here. The fact that they pay taxes here and call this home puts them in a different category. Lumping locals with out of town visitors is not right. As far as the tolling options go: Tolling in Millcreek canyon did lead to an improvement of that canyon. That being said, implementing a "one fee for all" up little cottonwood canyon in NOT the way to go. Set a reasonable cost (similar to Millcreek cayon - \$50/annual) and have an option for an annual, and day passes for locals. Out of town people should have a reasonably higher rate, for obvious reasons (they can be checked by IDs). If people have seasons passes they should get a serious discounted pass for driving the canyon. If there is a toll it will clearly need separate lanes. the 'fast pass' lane for people with passes, and a normal toll lane for people purchasing them. The traffic clogging that will go on due to this tolling will be next level. That goes in to the question of where does that money from tolls go and how far down Wasatch blvd will you need to widen the road? The present scenario of cutting bus times and access up the canyons is a direct indication that that is not a reliable option. Please keep local access a reality.
34430	Benjamin McIntosh	Hello UDOT, I am commenting on this issue because I believe the gondola is not an acceptable option for Little Cottonwood Canyon. Please review the comment listed by the Salt Lake Climbers Alliance. I could reiterate these points in my own words but I believe the Salt Lake Climbers Alliance has clearly outlined all the issues I would make. I encourage the use of tolling and the use of an eclectic bus system for the traffic problems in the canyon. I spend a lot of my time rock climbing and bouldering in the canyon and would not like to see the damage it would bring to the landscape. Thank you for taking to time to review these comments and I hope that you come to the conclusion that there is a more fiscally responsible and better alternative than the gondola. -Ben
34431	Glen Spencer	I have had an Alta season pass on and off for over 30 years. This gondola proposal is clearly a taxpayer funded subsidy that will drive the growth of skier days at Snowbird and Alta plain and line corporate pockets. Building a gondola solves a problem that doesn't really exist, except on a few powder days a year. Ski areas have already solved most of the traffic problems in LCC by limiting parking over the past few years. This is a crazy idea.
34432	Julie Jones	Please do not put a gondola in our canyon. Have electric buses that make stops ann pick ups at trailheads and resorts. Thank you
34433	Scott Silvers	No gondola. Too much impact and investment for only the ski industry.
34434	marypat paxton	To Whom It May Concern, I say "NO" to the Gondola because: The Gondola is NOT solving the issue of high traffic or congestion in LCC. The Gondola is NOT solving the issue of poorly-equipped vehicles in LCC. The Gondola is NOT solving the issue of too little parking in LCC. The Gondola is NOT solving the issue of inexperienced drivers in LCC. I say "NO" to the Gondola because: I do not want to have my taxpayer money wasted on an expensive toy for the tourists. I do not want to ruin the beauty and nature of LCC for a few politicians and their short-sighted boondoggle. I think that it would only shift the problems (noted above) to Cottonwood Heights. What can be tried?-- Enforce the tire restrictions!!!-- Heavily fine the drivers who are causing accidents.-- Designate 2 lanes exclusively Uphill at 6:30 to 8:30 am.-- To encourage more users of the bus, have buses that are designed for skier/snowboarder travel. (racks, bins, slots, etc for the equipment) Thank you for reading this to the end. Marypat
34435	Randall Lindberg	I am not sure what the best solutions for the Canyon traffic is, but I definitely don't think the gondola is the right solution. Thanks
34436	Rebecca Johnson	I don't think Alta and Snowbird should force tax payers to pay for a gondola to benefit them. Why aren't they bearing a burden of the costs? I like to go up the canyon to do multiple activities and feel like the canyon's congestion started with their incorporation of the IKON pass so now everyone goes up there and we all are suffering but Alta and Snowbird are benefiting. It seems very one sided. Plus, has anyone seen the eye sore gondola in Moab?!!

ID	Full Name	Comment
34437	Jacob Allen	<p>Hello, I am not in favor of the gondola option in Little Cottonwood Canyon for the following reasons: 1. Tax payers should not be responsible to pay for an option that clearly only benefits two ski resorts. Much of the traffic is caused by unbounded increase in ski resort usage. Why are they not responsible for the solution? 2. The gondola will completely ruin a priceless view of the canyon. Once the gondola is erected, it will not be taken down even if it stops being used. Similar to the gondola in Moab. 3. The option does not benefit anyone but resort skiers. It will not stop at other popular locations to help with traffics for other uses like backcountry skiing, hiking, or climbing. 4. The relatively small area of the canyon hosts a fragile ecosystem that is already under stress from increased usage. Building the gondola will cause damage to the environment. Adding more structures to the canyon is not the way to protect it. 5. The new structures will damage world-class climbing.</p> <p>I should not have to pay for a solution that only serves to help ski resorts make money. Other options should be considered that take into account my concerns above. For instance, could a shuttle option be pursued? One that uses electric shuttles with different stops along the canyon. There could be different shuttle lines including a ski express line, one that gives access to lower canyon stops and another for upper canyon stops. The shuttle option could run on the existing road and could be electric powered. This option would be similar to the shuttle system at Zion national park. I'm not naive in thinking that this option would not impact the environment at all but it would be a much better alternative to a gondola that only serves the ski industry rather than the tax payers in this community.</p> <p>Thank you, Jacob Allen</p>
34438	RON HARDY	<p>please build the gondola. uta cannot be trusted to provide reliable transportation. i am a season passholder at snowbird and have been for over 20 years.</p>
34439	Samantha Poague	<p>The gondola is not beneficial for multiple reasons. It only benefits a few (ski resorts), is an eye sore, and will destroy unique climbing areas in the canyon. Bus/shuttle services (like Zions national park) is a better option and can provide more opportunities for those that recreate I'm the canyon..</p>
34440	Jade Fischer	<p>Please consider halting the proposed implementation of the gondola until a proper consensus of the local community and public majority has their voices heard. Our community works as a team and we should not be moving forward with this proposal until all alternatives have been considered.</p>
34441	Gregg Royer	<p>As a frequent visitor, I have been reading about pros and cons of the gondola. I believe it should be built. Better for safety, environment. Reliable, lower long term price.</p>
35494	Lynne McKenna	<p>Please listen to the thousands of Utahns who love the majesty of the Cottonwood Canyons, which will be ruined if the incredibly invasive, expensive Gondola is constructed.</p> <p>Only a small number of UTAHNS, those who ski, will benefit from a transportation solution which will only deliver passengers to Alta and Snowbird, and only operate during ski season. Many Utah skiers, myself included, would rather see clean energy buses, road tolls, with lower cost tolls for locals, and a limit to the number of Icon and Epic pass-holders, (primarily from our of state!) who are allowed at the resorts each day.</p> <p>Improved bus alternatives, discount fees for car pools, charges for parking and other solutions abound. The massive cost to Utah taxpayers, for a project that will primarily benefit rich ski resorts, is unacceptable. Please pursue more reasonably priced solutions, and redirect other tax money to solve much more pressing issues, like affordable housing, childhood hunger, homelessness, and the demise of the Great Salt Lake.</p> <p>Please make decisions that improve the canyon experience, and benefit all Utah taxpayers, rather than Alta and Snowbird shareholders!</p> <p>Thank you, Lynne McKenna</p>

34442	Robert Shaw	<p>Thanks for taking the time to hear a proposal for a possible solution to the little cottonwood canyon traffic issues. I have lived at the mouth of little cottonwood canyon for more than ten years and I deeply care for the area. I understand the desire to mitigate the winter dangers, medical evacuations and ever increasing traffic that exists in the resort areas in particular the little cottonwood canyon. I have been following the news about the gondola project being proposed and I have some concerns. The gondola carries an enormous price tag (taxpayer funded) and will likely sit idle the majority of the year. The project may suffer further from adverse weather conditions including high wind often associated with our worst traffic days. Passengers may become stuck on the gondola during these times creating a greater problem. I think adding a tollbooth, tire checks and greater carpool incentives would have a meaningful impact for a fraction of the price. These solutions also have their limitations. It looks like a great opportunity to look at other solutions for our state. Federal funding could be utilized for a more innovative project. I propose having tunnels connecting the airport as well as other strategically located access hubs with all six major ski resort areas in the Wasatch. Access to other recreational areas within the Wasatch front could also be addressed. The tunnels should only allow electric self driving vehicles to be controlled by UDOT. With a number of strategic access points Utah could become a world leader in resort area access. The tunnels would provide uninterrupted access to all major economic areas as well as medical evacuation and less impactful goods transportation. Under UDOT's control the system could tremendously reduce the carbon footprint for accessing our recreation areas. Greater access from the valley will allow all resort areas including Park City to economically benefit not just Snowbird and Alta. The Boring company claims to be able to tunnel at a cost of 10 million per mile. I'm sure it would be higher through our tough granite but still very possible. Along with additional infrastructure projects the cost could be in competition with the gondola projects ever increasing estimate while providing considerably more access to all major Wasatch recreational areas. Medical evacuations would be tremendously improved with a link to a hospital. This is a project that could save lives and be a tremendous economic advantage for our area. I think we could showcase Utah as a technology and recreational access leader by looking into future not past innovations.</p> <p>Best, Robert Shaw</p>
34443	Tanner Hunt	<p>My name is Tanner Hunt and I oppose the gondola project in Little Cottonwood Canyon. I am a Utah voter and a user of little cottonwood canyon. I would support other solutions such as tolling and increased bussing services. I want to thank UDOT for considering our community and listening to our opinions.</p>
34444	Kathleen Whitmore	<p>For the following reasons I strongly disapprove of constructing a gondola in Little Cottonwood Canyon:</p> <p>Little Cottonwood Canyon is an iconic treasure that must be preserved in its natural state for the benefit of our generation and those that follow.</p> <p>It is far more reasonable that we work together to modify our methods and modes of access to the protected wonders that lie within LCC than to irrevocably alter and deface the canyon in an effort to unclog skier congestion during peak ski demand.</p> <p>Once this costly gondola has been built and sadly forever scarred our magnificent canyon, how can we be assured that those most impacted by the ski traffic and congestion will be willing, or can afford to use it. The gondola will actually benefit such a small segment of our population. At what capacity must these gondola cabins be filled to ensure the operation of the gondola will not continue to create a pocket of additional debt that the public must fill - year round.</p> <p>Significant improvements have already been seen by local skiers who have taken advantage of reserved parking options for season pass holders. Electric buses utilized on a year-round basis with transit hubs located away from the mouth of the canyon would greatly decrease concern over automobile emissions and congestion. The resorts can do more to contribute by offering enticements to their users.</p> <p>Enhancing the 2000 East/Highland corridor would help ease Wasatch congestion and take some vehicle pressure from Wasatch. 2000 East and 9400 would be a far better hub placement for the electric buses than utilizing the site currently proposed for the gondola parking lot. Years back, there had been talk of completing the 2000 East corridor between the years 2010 and 2020.</p> <p>Please no widening of the LCC highway other than what may prove to be needed for snow sheds.</p> <p>As the Great Salt Lake is withering, so may our snow base benefit of "Lake-Effect snow."</p> <p>We must preserve and protect for now and the future. Let us work together to modify our access times and modes of transport rather than act as short-sided, self-serving and false-stewards of this treasure.</p> <p>Kathleen Whitmore Sandy UT</p>

ID	Full Name	Comment
34445	Sarah Doody	<p>I am writing to formally oppose the Gondola B option, given it would not stop at trailheads, thus, not being an inclusive solution. Furthermore, the unknown costs - not only for the gondola but for parking at the gondola parking lots - is of great concern.</p> <p>I would like to propose some alternative solutions for consideration.</p> <p>1) Alternate the flow of traffic up LCC. In the mornings, have specific hours when all lanes would be used for uphill traffic only and vice versa in the afternoons. Or, install traffic lights to allow staggered uphill and downhill traffic depending on volume.</p> <p>2) Actually ENFORCE the traction laws. Not once in the winter of 2021 / 2022 did I see anyone monitoring traction law rules at the bottom of LCC.</p> <p>3) Make the bus easier to ride without parking at the bottom of LCC and surrounding areas. In major cities with subway systems, there are "local" and "express" trains. The buses would be more appealing if there were "express" options from locations such as downtown SLC. If I could get on an express bus in Sugarhouse that went directly to Alta / Snowbird, it would be much more appealing than driving my car to a park and ride and HOPING there's a spot available.</p> <p>I urge to consider these options because in comparison to a gondola, they are cheaper and you could start testing "express" style bus options potentially this winter.</p>
34446	Julie Maughan	<p>I am against the gondola and feel we need to go back to the drawing board to consider more sensible alternatives. I am part of the demographic that the gondola would theoretically support. I recreate in LCC year round. I snowboard at Snowbird, learned to ski at Alta when I was young, and enjoy hiking and camping in LCC during the summer. I am concerned about our air quality and congestion in LCC. However, I don't believe the gondola is a good solution.</p> <p>My concerns include the following:</p> <ul style="list-style-type: none"> - The visual impact to our gorgeous, glacial canyon. Towers and cables will forever change the look and feel of the canyon. Currently it can feel like you're a world away from the city when you're up in the canyons. - The cost, and that who benefits the most is two ski resorts. This feels like a very generous gift to Snowbird and Alta, supported by taxpayers, some of whom rarely recreate up LCC. And it is an overly generous gift because it is so expensive. - That we may be solving for a winter traffic issue that will be short lived. The ski season has already gotten shorter and more unpredictable. Who knows how many good snow years we have left. If the Great Salt Lake dries up we may not have enough snow to justify a gondola. -The impact to the ski resort experience. The ski resorts already see crowds with long lines. Their development opportunities are limited. If I understand correctly the gondola would move over 1,000 people per hour. If it starts moving at 8am that's over 4,000 extra people by a 1pm lunch time. Where will those extra people go once they make it to the top of LCC? Will hour long waits for ski lifts be the norm? Count me out at that point. - I'm concerned that we haven't tried less drastic measures first, such as more frequent bus service using the existing road, or enacting tolls. Or building parking garages at park and ride lots at the mouths of the canyons and around the valley to make it easier to ride the bus or carpool. Currently it can be tricky to find a parking spot for the ski bus. - The cost. Worth repeating when we have so many other needs in Utah, especially as the economy take a downward turn. <p>Please make the wise decision to reconsider the gondola. Thank you for your consideration.</p>
34447	Beth Chardack	<p>I strongly oppose the Gondola B Alternative based on its price, its permanence, its use of public funds to support two private businesses, and its inflexibility. It seems clear that there are better uses of public monies, and that building in some flexibility into the option would be a smarter alternative (I.e., smart, electric buses). Thank you.</p>
34448	Heather Welch	<p>I am appalled that this project is going through. It absolutely does not serve the people of the community... but once again serves special interest groups. So sad ?</p>
34449	Sean Abel	<p>This gondola idea is the biggest travesty. Please don't destroy the canyon just to satisfy corporate greed. There are better more cost effective solutions to canyon traffic</p>
34450	Callista Pearson	<p>I do NOT support the gondola. There are better ways to use tax payer money to reduce and improve traffic and usage of the canyon.</p>
34451	Kevin Wilson	<p>I drive all the way from Calgary, Alberta several times a year just to climb in this beautiful canyon. Please don't ruin it with a gondola when there are other options. I will gladly park and take a bus up to the bouldering areas, or the ski areas when I come down to ski. I have been climbing in Cottonwood and the surrounding areas for almost thirty years and I plan to come down for thirty more IF it doesn't get ruined. I know many other Canandians who feel the same way.</p>
34452	Mike Pappalardo	<p>Please do not implement a gondola- the toll is a much better alternative.</p>
34453	Katie Barnard	<p>I believe constructing a gondola is too dramatic of a solution without first trying and implementing alternatives that do not have such a significant cost and potentially irreversible damage to a beautiful natural resource. I believe tolling, additional bus/shuttle service, or entirety bus/shuttle service would be options to implement and only AFTER those are proven to be unsuccessful should a gondola be constructed.</p> <p>I believe this is also extremely shortsighted considering the project will exist and impact the canyon in ALL seasons, even though winter is the only season with such high traffic as to need an alternate solution.</p> <p>I do not think a gondola is the right solution for our community at this time.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34454	Elise Hinman	<p>I represent a hiker, climber, and snowshoer in Little Cottonwood Canyon. I do not agree with the preferred alternative to build a gondola in Little Cottonwood Canyon. Please try less invasive options like increased bus service or a toll or a lottery before building a gondola. Let's face it: traffic often comes with powder days and those will likely come less and less often with climate change. It doesn't make sense to build a gondola that only really has utility on these few winter days. I do not want my taxpayer dollars going to this invasive, gluttonous, wasteful project. Please try other options first. Please. Thank you for your consideration.</p>
34455	Elizabeth Opie	<p>Hi there!</p> <p>I am strongly opposed to the gondola. Implementing this change is fiscally and environmentally responsible. Besides the gondola being a complete eye sore, it will destroy hundreds of climbs, take years to build (thus creating even more traffic issues) and cost millions of dollars so that a handful of days a year people won't have to wait an extra 40 minutes to ski. It's absolutely insane that anyone in their right mind thinks this is an appropriate way to use tax dollars. Not only that, if the gondola somehow helped to increase the number of people who can go ski, the resorts can't handle the volume.</p> <p>Lastly, for more information on why this should never come into fruition, please see the Salt Like Climber Coalition's report on the issue.</p> <p>NO GONDOLA.</p>
34456	Paul Runyon	<p>Oct. 16, 2022, Hello; I believe the gondola choice by UDOT is premature, overly expensive and will be a boondoggle for UDOT and the state. There are other means to lessen traffic in Little Cottonwood Canyon, including more mass transit (as mentioned in an editorial by the President of Snowbird in the Salt Lake Tribune today), as well as improving safety measures on the road with avalanche sheds. I strongly believe you have neglected an underground tunnel option as well, which could be a fraction of the cost of the gondola or road widening measures, would make traffic exponentially safer and could be accomplished with minimal environmental impact upon the canyon surface. I feel betrayed UDOT has not taken a stronger look at this option. This gondola is highly supported by the ski resorts because they already have a successful business relationship with the lift manufacturer. To me this reeks of collusion.</p>
34457	Craig Weir	<p>The current views in Little Cottonwood Canyon are of National Park quality and should be preserved. Because of the environment and water quality issues it would create, the gondola route should not be located in Little Cottonwood Canyon at all. If there is even a need for one, it should be routed from the other side of the mountain from Summit and/or Wasatch County(s). The construction impacts of the new roads required to access the tower bases for their construction and maintenance is huge. Construction of a gondola will do irreparable harm to Little Cottonwood Canyon and creek. I know, I've witnessed the impacts, I worked constructing and maintaining roads on Forest Service lands for about 40 years. High elevation roads impacts are completely different than any other roads. The amount of sediment discharged into the streams every spring when the mountain snowpack melts is confounding. The Forest Service used the best science available in design, construction and maintenance of roads to minimize their impacts. The amount of soil each spring melt off cycle removed from the road, carried off and deposited into the streams was eye popping and disturbing to witness. Every foot of road is permanently damaging to the surrounding riparian environment, the closer to the stream it is, the more impact it has. The first couple of years after construction is off the charts for the amount of sediment a road discharges. The resorts are already operating at capacity. The gondola will not create more area in which to recreate it will in fact destroy some recreation areas currently being enjoyed. It will not improve the experience for anyone. It is a costly ill-conceived idea that would be best forgotten. Use more buses in the winter and limit the number of private cars allowed in the canyon each day. If the canyon is shut down for a day or two each winter no big deal it deserves the rest. The existing road, SR 210, is causing enough environmental damage to the fragile canyon watershed already. Build the parking lot you have planned and use any remaining tax dollars for bigger, better and more busses. Construct a new information sign and a convenient turnaround at the current gate for those days when the canyon reaches its capacity. Implement an online reservation system to accommodate winter access needs.</p> <p>Craig Weir</p> 

ID	Full Name	Comment
35506	Dennis Struble	<p>EIS,</p> <p>I am opposed to both building and running a gondola in Little Cottonwood Canyon.</p> <p>The process of installing gondola towers would almost certainly negatively impact the water transported within this canyon's watershed. And then, worse, once installed, the gondola would permanently and significantly degrade the viewshed of perhaps the most popular canyon in the Wasatch.</p> <p>Certainly S.R. 210 is a busy highway. And further the road does close a few times each winter. Nevertheless my wife and I are able to ski at Alta two to three morning each week all season. As I know all users of Alta and Snowbird are also aware, we are well aware of the S.R. 210 access issues. But all of us accept these issues as a necessary burden to access our beloved ski areas.</p> <p>We do not want nor need an enormous mechanical intrusion that would permanently deface our canyon.</p> <p>Please accept the vast majority of private citizen preferences and local government preferences that do not want and will fight continuously this gondola.</p> <p>Dennis Struble </p>
34458	Joshua Fisher	<p>I am against the gondola project, which is nothing more than a handout to a private business that will forever scar the beauty of our canyon. There are far better ways to use our tax dollars, and I will be sure to vote against any politician who supports this project.</p>
34459	Ken Margetts	<p>As an avid hiker and skier, I am concerned on many levels about the gondola proposal. My primary concern is the impracticality of the system. It will be impossible for a gondola to efficiently deliver the volume of skiers necessary to make a meaningful difference to canyon congestion. The gondola will serve only the ski resorts and not reduce traffic for hiking and other activities. The gondola system will also permanently destroy the aesthetics of the canyon for everyone. The gondola should be the option of last choice.</p>
34460	Nels Nichols	<p>I do not want the gondola.</p> <p>I don't want the eye sore, and I don't believe it will reduce traffic - there will be just as much traffic, just more people at the resorts as the latent population now accesses the canyon. The gondola will not serve the local community who wants to visit places other than the resorts, and given that, I think that the ski resorts should be paying for this, not taxpayers. I believe enhanced bus service and properly policed parkrides at the bottom would serve us better, perhaps with a Trax line to the base of the mountain to disperse sources of parking. I would also consider having an hour in the morning when both lanes are for uphill traffic, and an hour in the afternoon when both lanes are for downhill traffic.</p> <p>We are not Switzerland, we do not want to be Switzerland. No gondola, please.</p>
34461	Nicholas Baker	<p>Spending this amount of money to serve two private businesses for 4 months a year is a absolute waste of money. Both the ski resorts, the canyons, and the local people would be better served spend that money to keep the GSL from drying up.</p>
35513	vivian dowsett	<p>There are so many considerations in contemplating the impact of building a gondola up LCC.</p> <ul style="list-style-type: none"> -Who are the true beneficiaries? -How will the canyon be ravaged by construction, concrete, construction trucks up and down the road, road widening, access areas to each gondola support pole, etc - Where will electricity come from to run it? Water is a scarce resource here in the desert - what about noise and dust pollution? - Endangered or not, wildlife will be severely impacted with temporary/permanent loss of habitat. Which might bring more larger animals into developed areas and the resultant fear and panic reaction. We've already imposed ourselves on their territory. Gondola will definitely upset the ecosystem in more than one way. Sad ? <p>Please consider ALL the ramifications of this project which benefits and enriches the few. There must be less invasive ways to control Canyon traffic.</p> <p>Vivian Dowsett Interiors</p>
34462	Daniel Cortsen	<p>Bus alternatives would be the better solution.</p> <p>UDOT's own summary notes that a bus alternative is needed in the interim.</p> <p>Bus is the only scaleable alternative.</p> <p>Bus is the only adaptable alternative</p> <p>It seems to make best sense to apply a bus alternative now and perhaps re-evaluate in five or ten years. Gondola and cog rail make little sense when considering adapability, especially when an enhanced bus service is needed regardless.</p>

ID	Full Name	Comment
34463	Jacqueline Sundstrand	I am against the proposed implementation of a gondola, as are 80% of Utahns. LCC is a natural wonder and my jaw drops when I think about how it will be destroyed and defaced by this proposal. Not to mention the absurd price tag of \$500m is expected to be picked up by taxpayers, many of whom do not ski, to mostly benefit two private businesses. If the ski resorts have the money to secretly buy a plot of land to build the gondola base, do they not have money to help provide drivers/shuttles for an improved bus system? Also, the ski season on average is shrinking. In ten years or less the need for a gondola will be obsolete, but by then we will have already destroyed the facade of LCC and our dwindling water supply. Feels like \$500m in taxpayer revenue would be better spent trying to solve other issues to help secure a better future for all of us, rather than a select few. We can do better. I appreciate you trying to help solve this problem, but highly caution against taking haaty action before all environmental and systemic issues are thoroughly evaluated.
34464	Hannah Fobert	I think this one is a no brainer. The bus system has so much potential for growth, all the while a much less invasive solution than an overhanging gondola. If you love LCC, please think and make the right decision.
34465	Kirk Stueber	I am not in favor of the Gondola option as it adds tremendous cost, just shifts the traffic jam down below the canyon, and will produce gashes into the middle of a national Forrest. Natural gas or electric commuter bussing at increased frequency rates and tolling of car lanes to reduce traffic flow may not be popular with those who want ease of unlimited access but our canyons belong to more than the wealth my who can purchase unlimited ski and gondola passes. We are tired of developers and the wealthy monopolizing all that remains of our beautiful creation.
34466	Kylie Bytendorp	The cog rail is obviously the best choice, can move the most people, can run separately from the road so won't be impacted by traffic, and won't change the visual aesthetic of the canyon. We do not want a gondola, it would destroy the aesthetic of the canyon and likely would lead to a gondola through backcountry terrain which would destroy pristine backcountry skiing. Funding for this should come from snowbird and Alta. They are the private businesses that are causing the traffic problems, they need to pay for the solutions, not tax payers. Tax payers should be paying for access to trailheads and keeping trails pristine, not private businesses.
34467	Sam Burdick	The gondola is such a bad idea it is terrifying that our elected officials would let the idea come this far
34468	Daniel Swan	A gondola would be a waste of money and destructive to the canyon.
34469	Jessica Kunzer-Pearson	<p>I have been a Utah resident since my family moved to Salt Lake City in 1996 and all of that time has been deeply connected to the ski industry and Little Cottonwood Canyon. I have always been a passionate and regular skier, biker, and hiker. I served as the Ski Utah Director of Communications from 2007-2012. My mother was employed by Snowbird for 16 years.</p> <p>That said, I am very familiar with the transportation issues that have always existed in Little Cottonwood Canyon due to its natural avalanche hazard as well as those that have developed due to an increase in canyon use by locals and visitors.</p> <p>I have been following the need for improved transportation for more than 20 years but there are several logistical and moral reasons which make me adamantly OPPOSED to the gondola as that solution. Logistically, the gondola is not a comprehensive solution and will result in a poor user experience for a single user group. Morally, the gondola is an egregious misuse of Utah taxpayer dollars and will permanently mar the natural beauty of Little Cottonwood Canyon. The following paragraphs examine these points.</p> <p>Although the gondola is a solution designed only for Little Cottonwood Canyon, traffic is not unique to the Canyon. Other options such as buses, tolls, parking reservation systems and incentives can be applied to other high-traffic canyons such as Big Cottonwood and Millcreek. Furthermore, their use can be adjusted to demand projections throughout the year. Anyone who has tried to see summer flowers or autumn leaves in the canyons understands the need for year-round support. Furthermore, overflow cars parked outside of the White Pine trailhead in Little Cottonwood, the S-turns in Big Cottonwood, and many places in Millcreek present a huge safety issue with hikers walking on the highway alongside vehicle traffic. The gondola will do nothing to help these issues.</p> <p>Second, the user experience for most destination and local visitors will be very poor-unless you have a reservation at the new hotels which will be built and highly-priced at the LaCaille development. Riding the gondola will require users to drive and park in one central location (that is currently highly residential), purchase gondola access, get in a line for the gondola, and ride the gondola all while managing their gear and families. Can you imagine this process with small children in tow? I cannot. Upon arrival, where can people put their belongings? Will they need to pay for expensive gear storage? Must you wear your ski boots the whole time you are riding the gondola? What if you wanted to bring extra mittens, socks, snacks, or goggle-lenses? And at the end of the day, how long of a line will people have to wait in before they begin the journey back down?</p> <p>It would have to be virtually impossible to get up the canyon via car for anyone to think the gondola was a better solution than driving. And on the days when it is impossible, that is likely caused by avalanche concerns. When avalanche danger is</p>
34470	Stacie Gaia	While I appreciate the time and work that was put into this final EIS, I was disappointed to see that the gondola B was determined to be the preferred alternative despite the numerous comments against this option. Many of my previous comments in the first public comment period were addressed in this final report indicating I am not the only one with specific concerns. However, the report does not adequately address these. The biggest concern I have (as well as pretty much anyone I talk to) is that taxpayers are paying instead of ski resorts. Build more parking structures and have ski resorts pay for shuttles which are less cumbersome than busses. In addition, the gondola does nothing to address other user groups and because of this, many will still need to drive up the canyon. Further, shuttles and busses can alleviate summer traffic which has also become ridiculous with roadside parking expanding miles around trailheads. Generally, to install large towers for a gondola requires further destruction of the environment not to mention the yearly maintenance. Has evacuation measures been considered and how this would work? There are just too many negatives associated with a gondola all for the benefit of 2 ski resorts. Despite the false television ads, busses are used right now (and are not the dirty busses depicted in these ads). The lines are just too long and there are no accommodations for families once they arrive at the resorts since lockers are limited and expensive. Consider year round bus service and shuttles. This is a much better alternative than a taxpayer funded gondola gift to the ski resorts.

ID	Full Name	Comment
34471	Richard Spedden	The gondola is a short-sighted and inflexible option for the canyons. It has the state paying for something which is specifically directed towards supporting special interests. The difference between a gondola and no gondola will not significantly impact the business prospects for either Alta or Snowbird. Those two entities can exist based on limited private vehicles and electric busses. The advantage of the busses is that such a technology can evolve. A gondola is a static technology and Park City just demonstrated that those things eventually get abandoned. The visual impact on the canyon is irreparable. The supporters of the gondola called snowsheds unattractive concrete structures - that is ridiculous, we all know that the roofs of those will get natural vegetation and a snow-shredded area will blend in far better than one that isn't. Incidentally, there is a precedent for snow sheds in the canyon, the rail line leading to the Emma Mine starting from around where the Alta Lodge is today was in a snowshed. Electric bus service can be modified to meet demand, particularly on weekends, a gondola is fixed in its capacity, so most times it will be running empty. I like many others bicycle in the canyon, please spend the money on the road, not obstructing the views on one of the most scenic routes in the country.
34472	Joshua Hammett	This is not about air quality. This about taxpayers paying for the rich to get richer. The advent of electric vehicles over the next decade will lesson the pollution then a Gondola. If we are talking from a strict air quality and environment standpoint. Making better roads and better access for the non-elite is what I would hope is done with my tax money. Solving problems that don't really exist for a product that can't deliver is the gondola. It will exasperate issues in weather when it can't run and payers are stuck on one side or the other. Filling the canyon with people in the harshened conditions.
34473	David Rabiger	I am a near lifetime 50+ years skier, both resort and back country skier. The fresh deep powder days were delightful but were mostly good fortune. A half billion+ dollars is a high price for taxpayers to pay for a small percent of the general population that only serves access to Alta and Snowbird. The trams would also be a permanent visual blemish to the canyon view. Traffic congestion could be controlled simply by controlling parking space at Alta and Snowbird.
34474	Ann Galt	Thank you for your comprehensive review and recommendations. I favor enhanced bus service with no roadway changes. Parking below is an issue. Perhaps, in addition, extend bus service and parking farther north on Wasatch Blvd or in that general area.
34475	Patrick DeWaal	Dave Fields is sitting in bed with all the other corrupt rich pricks who want to destroy our home, for their own benefit. Snowbird had already lost its love among the locals. We don't care about tourists coming to OUR mountains. But that's all our ski resorts have turned to money instead of preserving our beautiful canyons. No gondola should ever be allowed in our canyons. If the state approves this deal, every single person involved in the deal should be arrested for corruption. State leaders should resign for not listening to the people that voted them in, and their bank accounts need to be monitored. If this isn't an inside deal, I don't know what is. Utah's ski resorts have been ruined. The Epic and ikon passes have destroyed our sport, our passion. Stand up for Utah, protect her, and oust the corrupt that try to ruin her!
34476	Caroline Berlin	The gondola proposal is appalling. It will destroy countless classic climbing problems that people enjoy every day. It will be useful for as many years as the canyon still get skiable snow and with the way we are treating planet, that could very well be in my lifetime. It only serves the ski area ownerships pockets. Stop trying to solve a problem by creating an even larger one. No gondola.
34477	Tanya Meegan	I am absolutely against the gondola for a number of reasons. First it is an enormous amount of taxpayer money that only has impact for one canyon. Big Cottonwood canyon is perhaps more heavily impacted with traffic since Ikon, yet the gondola will not provide a solution to that at all. Second, the gondola only is a traffic solution for two resorts in the canyon. It does not address overcrowding in the white pine area. I am a longtime pass holder of the LCC resorts and have noticed a much better traffic pattern with the implementation of reserved parking by the resorts. Other solutions like increased bus service and no single rider vehicles up the canyon should also be explored more fully before using tax payer money for a problem that exists relatively few days of the year. Finally, the impact on the watershed is unknown and dangerous for all of the residence of the essay has front.

34478	Zachary Niemeyer	<p>I am not in favor of your preferred alternative. The gondola does not address the needs adequately. The stated purpose of the EIS is to analyze an integrated transportation system that increases the reliability, mobility, and safety for all users on S.R. 210 from Fort Union Blvd. to the Town of Alta. The EIS identified that a gondola from La Caille would be the best alternative. This is contrary to the stated goals.</p> <p>First, the reliability of a gondola would not be better than a bus alternative. When the canyon is shut down due to heavy snow, the gondola would not be able to run as the need to use explosives would prohibit the gondola from being run. In addition to this, the gondola may need maintenance and would not be available during this time. If something were to break during the winter, it may be significantly more difficult to repair than a bus.</p> <p>Secondly, the mobility of people would not be improved with the gondola. The average time to the resorts would be lower on the gondola than the bus. The only improvement would be the average time it takes for people to drive. This is the most egregious data. The gondola would take on average 55 minutes from base to resort. The bus without roadway improvements would take 54 minutes. This means that taxpayers would be paying \$200 million dollars more for a slower alternative. This estimate may also be on the low end as inflation has drastically increased all costs since the EIS started. These are the issues I have with the conclusions from the EIS.</p> <p>The gondola itself has additional issues that were not addressed. This is a taxpayer funded project and it only stops at two private resorts. This means that two private entities will benefit from significant expenditures from the public. This is absolutely not acceptable. Additionally, the local political entities have all stated their displeasure with this alternative. Cottonwood Heights, Sandy, Salt Lake City, and Salt Lake County have all stated that this alternative is not their preferred alternative. The gondola is also not an easy solution to implement. It will cause significant changes to the environment as the towers and access roads are built. It will have significant visual impacts on the canyon. It will be a permanent solution that may not work well. It is like putting all of your eggs in one basket and assuming that our projections for 30 years in the future will be correct.</p> <p>In addition to these problems, I have issues with the manner in which the EIS was conducted. Little Cottonwood Canyon can only support so many people at the resorts, as overcrowding is currently happening. Resorts are implementing limits on the number of tickets because of this. The assumption that more people will visit the resorts may not be true. The EIS also ignores possible climate changes that may limit the amount of snow at the resorts. This could also reduce the number of days that a gondola would help traffic. The issues that the EIS hopes to alleviate are only minor issues on a small number of days throughout the year. This means that a large, permanent, expensive project is only going to affect people positively on a small number of days, while negatively affecting the environment and ambiance of the canyon all other days. The gondola would also push traffic problems into neighborhoods around La Caille.</p> <p>Overall, a bussing solution would be much easier to implement, and could be experimented with. The traffic using the bus would only need to reach the bus station at the gravel pit, which is close to the highway. The bus would not affect the environment if hydrogen powered buses or electric buses were used. This solution could be phased to increase service on</p>
34479	Zach Niemeyer	<p>I am not in favor of your preferred alternative. The gondola does not address the needs adequately. 35514	Marilyn Bown	<p>I have appreciated the accessibility & beauty of Little Cottonwood Canyon since 1978, including hiking, sightseeing, & skiing there. Like my husband Joel Bown who's actively utilized the Canyon since 1963, I totally oppose a gondola in historic Little Cottonwood Canyon.</p> <p>I too support Mayor Jenny Wilson's list (see below) for implementation but say "no, never to a gondola."</p> <p>Respectfully, Marilyn Nowell-Bown</p> <p>Sent from Mail for Windows</p> <ol style="list-style-type: none"> 1. Enhanced electric buses with higher frequency and improved reliability, together with strategically placed mobility hubs; 2. Tolling infrastructure; 3. Parking management technologies and policies, such as ski parking reservations, micro-transit, and rideshare programs; 4. Multi-passenger vehicle incentives; and <p>Traction device requirements with expanded inspection hours and enforcement.</p>
34480	Janet Houtz	<p>Please consider that if at one point a gondola system is built it will change everything about Little Cottonwood Canyon. It cannot be undone (without great expense) once it is built. Buses can always be added or taken away. Tolls...those are for the rich...think about the general public...a trip to the local mountains should not cost anything. Lastly, it continues to cross my mind...is a gondola earthquake safe? Please do not destroy our beautiful canyons with structures...they look out of place. Let's keep the natural look in our local canyons.</p> <p>Here and thank you for your time.</p>
34481	Jim Fairchild	<p>I hope you will read this and read everyone else's opinion and ideas that call on common sense, not a hidden agenda, to create an effective solution to deal with the continued population in the Canyon.</p> <p>There is overwhelming opposition to the Gondola by Canyon locals. How can you push this through with so much opposition? How can this not be put to a vote?</p> <p>Without being rude, it seems like it's time for "no more Mr. Niceguy.". What UDOT is backing lacks vision, an understanding of the Canyon, and smacks of developer greed and backdoor deals.</p> <p>Whats in for UDOT?- whose pocket are you in? - it's not hard to see that common sense low impact solutions with the Canyons best interest in mind are not at the top of your agenda.</p> <p>How can UDOT think that the educated public isn't aware of the names Neiderhauser and McCandless and what kind of slant that their association with this project adds to the Gondola proposition?</p> <p>Is there any need to even discuss this?...I guess so! I really feel that UDOT should be ashamed of themselves and the forces that are driving your organization and this project;</p> <p>Snowbird, Alta, and the obvious spin off development by your hidden partners that will take place at the Mouth are the sole beneficiaries of this project in Little Cottonwood.</p> <p>The general public foots the bill and the Canyon suffers irreparable harm to increase ski resort and private interest profits. Please stop embarrassing your organization and the State by trying to say different.</p> <p>Serious traffic problems in the Canyon is only a problem 15 to 20 days a year-you want to forever alter our Canyon for 15 to 20 days a year?</p> <p>I live above the firestation and have for 35 years.. I ski most every day,...we are living the life here, we know the details.</p> <p>I would like to use an analogy at this point.</p> <p>We have a friend who lives a couple of blocks off the beach in Laguna CA.</p> <p>During the summer season (LCC equivalent of the winter season), tourists mob their areas and make stupid moves all day long, every day.</p> <p>Parking is tough, crowds are high, and their neighborhood takes a hit. But guess what, nobody is moving, and the town isn't making any dramatic moves to find a "solution,"</p> <p>WHY?,</p> <p>Because they understand that this summer crunch is 3 month deal, and then they get their life and typical routine back for the next 9 months.</p> <p>If a resident at or near the Mouth of the Canyon can't handle the 20 days a year that traffic is an actual issue, then simply</p>
34482	Lindsey clegg	Simple no gondola.
34483	Jonah Phillips	NO GONDOLA. YOUR STUPID IF YOU DO
34484	Brian Smith	<p>I would like to voice my opposition to the selected alternative of the gondola. I think the negative visual impacts of this alternative far out weight its presented benefits, which are dubious based on the current evaluation. I think the problem can be addressed much more effectively by implementing a combination of increased bus service, requiring the resorts to implement a reservation system for parking, encouraging car pooling and constructing snow sheds to mitigate avalanche closures. Combined all of these options, based on information in the EIS, would arguably be just as good if not better better than the selected alternative, and would not have the immense visual impact of the gondola on the canyon. I am also concerned that the cost for riding the gondola is not presented in EIS and that the gondola does not address other users/access points in the canyon (e.g., backcountry skiers). I encourage UDOT to reject the selection of this alternative and seek other options that will not have such negative visual impact and only service the resorts.</p>

ID	Full Name	Comment
34485	Thomas Newhall	Although I originally wrote a letter strongly in support of building a gondola in Little Cottonwood Canyon, when I saw the latest draft of the EIS I had to pause to reconsider the reality of having a huge gondola running up the whole canyon. What would it really look like? Is this really a viable solution? What about the objection that this is merely serving the interests of Snowbird and Alta? Still, after recovering from the shock of realizing that I might just get exactly what I wanted, I still think the Gondola is the right way to go, for the environment and for the future of recreation in the canyon. Even though it seems like a bold, radical, and unusual solution, that is just what we need to keep the canyon safe and usable for everyone. Building a gondola is clearly the way forward.
34486	Chase Meredith	Build the gondola! Way better than busses, free up the canyon road and put people on an aerial ropeway!!
34487	Lora Nichols	Please do not allow this gondola to be built. ait only adds more strain on those of us who live here.
34488	William Hoge	I completely support the Gondola B decision. It is a good plan for the future. I have been skiing Little Cottonwood Canyon for over sixty years and use the canyon for hiking in the summer. Back in the day of pit toilets, single chair Collins, rustic lodges and a very bumpy, rocky road into the Albion Basin. The Ted Johnson Memorial Sewer made a huge impact on the increased use of the canyon for the last 51 years. The Gondola B alternative is the best solution for the next 50 years.
34489	Jeffrey Hardin	I am a local physician living here in Salt Lake City for decades now. I frequently recreate in Little Cottonwood Canyon and this proposed tram will destroy the beauty of the canyon and only benefit Alta and Snowbird. This will forever destroy this canyon and I suspect cause people to consider moving away from Utah in search of places to live that actually value their natural spaces. Do not approve this tram, this is not what the people of Utah want! Jeffrey Hardin
34490	Alisha Schlichter	I would like to submit my formal opposition to the Little Cottonwood Gondola plan. I am a registered voter, a Sandy resident of over 20 years, a Snowbird season pass holder, a UTA ski bus user, and a year round hiker in the Little Cottonwood area. My greatest opposition to the gondola plan is the impact it would have to the natural beauty of the canyon. Little Cottonwood is a gorgeous year round destination- not just in the winter for skiing. A gondola would be destructive to the canyon, and an incredible eyesore. My second opposition to the gondola is that I feel it is completely unnecessary. Over the past few years the resorts have been able to implement changes such as parking reservations that have greatly alleviated the traffic issues. The ski bus is a fantastic resource that could be greatly improved to encourage use to make the gondola not needed. It is also truly only a few days a year where the avalanches are an issue- certainly not enough to warrant the expense and destruction of our canyon. I would propose channeling this money to improving the bus system with more frequent intervals during peak times- so the fear of not being able to catch a bus is alleviated). If a canyon fee is necessary to support this and encourage ski bus use this could be implemented with an improved service so that it actually works. Please keep this overly expensive, eyesore that serves only a limited population for a brief period of the year out of our canyon, and move forward with a different proposal that makes more sense. Thank you, Alisha Schlichter
34491	Annika Stacey	I fear this gondola and the fees to enter the canyon will ruin the culture in the canyon. As a local it would be extremely frustrating to pay to enter a canyon that has been my backyard for my entire life. I am all for improving air quality, but people will still drive their cars anyway. I fear this whole ordeal is going to further commercialize one of the most beautiful canyons in the country. It should be left as it is.
34492	Rudy Chavira	1st of all, udot trying to push their proposal by adds showing filthy bushes is embarrassing, my wife and I have taken busses skiing and have never seen them littered like that, this gondola idea, is only going to limit people with money to get up canyon, and then charging 40.00 a car is ridiculous. I am totally opposed to the gondola it will impact the canyon, and ruin the rock climbing community.
34493	Kordell Black	Preserve the nature people are coming to see.
34494	Sean Berry	I'm submitting this comment today because I'm very concerned with the current plan and the potential impact that it could have to a canyon that I have learned to love. While the alternative options provided are a good start there are many other options that could be used to enhance these such as charging the toll to single occupant vehicles only in order to promote carpooling, building another park and ride at the base with bus access, and adding addition bus routes to more locations. There are so many better solutions that use the current corridor instead of permanently altering the canyon for the service of private ski resorts using taxpayer dollars. The Gondola is the worst option in so many ways. Not only would it forever alter the canyon and destroy the natural beauty of it, it would cause a myriad of other issues. For one the gondola is not even funded yet and if history tells us anything it would cost far more than the outlined budget putting further burden on taxpayers. I also don't believe that it would reduce traffic but rather increase the amount of people that visit the canyon overall. It serves only these private ski resorts and no other public areas which turns this project into a publicly funded project for only the benefit of the owners of the resorts. This can also not be said enough that it would destroy a significant amount of natural beauty in the canyon and cause damage to a protected watershed with the building of new road for access and the pylons of the gondola itself. The public opinion is clear on this. The gondola is not the way and the funds can be used in far better ways such as increasing driver pay to attract more drivers and funneling the money into more public transport rather than cutting ski buses like the UTA just did. That is a clear attempt to engineer a crisis in order to make the gondola a more attractive solution. Do the right thing and do away with the gondola idea.
34495	erik hanson	No
34496	erik hanson	And no.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34497	erik hanson	Please, no gondola.
34498	Earlene Russell	As a life long local I enjoy an occasional drive up to Alta in the winter and summer. I am a widow that is 73 years old, on a limited income. I also own a timeshare at Ironblosam and we go up the week covering Sept 10th. I don't feel the toll is justified for locals who want to enjoy God's nature to have to pay to visit the canyon and pay again through extra taxes, etc. If you make travel and parking so expensive, many of us won't be able to enjoy what we've always had for free. Please, please make special allowances for locals and utah residents. I ask that you don't cater to the rich and private enterprises. Consider us little guys. Thank you.
34499	Linda Hoge	I agree that Plan B is a great alternative for the future of the canyon travel as the population of the Salt Lake valley grows. It gives hikers access to the trails below the ski areas and would speed travel for skiers with less impact on the ecosystem then widening the road. I sincerely hope this plan is instituted!!
34500	Krista Kern	Dear EIS reviewing committee, I have never understood, whether the existing road would be in operation if the Gondola was built? Will people choose to use the road although the Gondola is in operation? because of affordability and because of convenience? I feel a multi effort plan with tolls, parking passes at Snowbird, and a proper bus operational system during peak season could avoid this huge project. Closing the road as they have in Big Cottonwood right now for alternative road passing would also help during peak seasons. This huge project is not necessary~it is non essential. LCC is not capable of accommodating every person who feels entitled to a fresh powder day. It is a gift for us all to be shared on occasional use, pending conditions. I am saddened, but not surprised by the politics at may with this effort. Utah people are standing up, please hear their voices. This is absurd, especially considering it is only truly of high use 3/12 or 1/4 of the year... seriously explore your options with proper busing as Park City has done. I waited 45 minutes for a bus at Alta on a Peak day for a ride down last year and that was my last time doing it. Why do you not offer more buses? I live in Granite and would take the bus on a regular basis if they were offered on a regular schedule. Use that money for other causes... there are so many!! Keep Utah Great. I am a native with a UT birth certificate- Honor your locals, hear our voices!! Thank you. Krista Kern
34501	Carolyn Rice	I am against the gondola in our beautiful canyon, it will destroy the natural vistas and draw even more crowds than the trails and ski resorts can and should handle. Please consider a complete re-evaluation after the phased implementation of improved bus routes. With electric buses, more frequent trips, app tracking, and perhaps VIP seat reservations for increased fee. We should evaluate its positive impact on traffic and pollution without altering our beautiful and fragile canyon resource.
34502	Jordan Herman	It is clearer now more than ever that the majority of taxpayers do not want to fund an excessively expensive gondola that mainly serves to rake in profits for ski resorts, while at the same time doing truly nothing to limit vehicle congestion in the canyon in the first place, thus, not achieving the goal of reducing vehicle congestion in LCC which led to the idea of constructing the gondola in the first place. Moreover, the gondola does nothing to preserve the value of the Wasatch Mountains, or the fragile watershed, environment, and wildlife that we all care about. We must explore common sense, lower-cost, and lower-impact solutions before "resorting," to the gondola. Please hear us! Sincerely, Dr. Jordan Herman
34503	Kael Weston	I've run twice for public office in Utah - as the Democratic candidate in Utah's 2nd Congressional District in 2020 & as the former presumptive Democratic nominee for US Senate this year. A majority of the voters I spoke with oppose the gondola & instead support alternatives. Like them, I do not believe this is wise use of public funds for private & narrow benefits to a small % of Utahns. Buses are better. The public trust doctrine is a high standard - if the gondola were on the ballot, I'm convinced Utah voters would vote to oppose it. Keep that democratic check in mind as you review where the public is on this critical issue of great public concern. Thank you.
34504	Sam Piper	Greetings, I spent 4 years living, working, climbing and skiing in the central Wasatch and I am strongly opposed to the UDOT LCC Gondola project. As a frequent visitor these days I still care deeply for that canyon and know that it is clear that there are less impactful and far less expensive ways of mitigating the traffic hazard in the canyon. Please please please reconsider this project. Thank you, Sam Piper
34505	TARYNN RICHARDS	A significant increase in busses makes a lot more sense to me. The busses should be free to encourage ridership.
34506	Michael Pittman	It seems like myself, as well as the vast majority of our neighbors, have submitted comments MULTIPLE times expressing our opinion AGAINST the Gondola. Thus far it would definitely appear that UDOT is really only requesting public comments to appear to be impartial when, in reality, UDOT has already made up its mind many months/years ago to support the Gondola plan. I, like most people with whom I have spoken, believe there are many better options including, but not limited to, the following: first, the avalanche "tunnels" would mitigate the vast majority of the shut downs during winter due to avalanches so those should happen regardless of anything else, and they are very affordable compared to the Gondola; second, require carpools during the peak travel hours (both summer and winter); third, install a ranger station and charge fees (just like happens in Millcreek Canyon); forth, add additional buses during the peak travel times. ALL of these options are drastically cheaper than the Gondola. Additionally, virtually all of them require little to no permanent changes so if they do not provide enough positive impact, other options, like the Gondola, could be pursued. The Gondola option is flawed in many ways, primary of which is the cost, both to build it and the cost to use it. None of the people I have asked say they would be willing to pay \$30+ just to ride the Gondola. Likewise, no one I know thinks that tax payers should pay for the Gondola that primarily benefits the owners of the two private ski resorts.
34507	niko george	this is clearly profits over nature. the canyons do not need more industrialization. i say NO to gondola/expansion.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34508	Mike Scarpulla	Like everything mechanical, The gondola will break down periodically. There will then be no way to carry the same number of people. You can't just run another cable up to start going again. Busses on the other hand can be switched out when broken and surge capacity can be easily added for busy weekends and holidays. The capacity can be dynamically adjusted even hour by hour. The gondola is a boondoggle and will ruin the wilderness of the canyon while improving the road and adding busses is incremental.
34509	Susi Hauser	<p>I am one of the citizens who preferred the train option. Electric trains are relatively quiet, can be part of a larger city wide transportation system, and once built don't pollute the air or water. Unfortunately, the committee only evaluated the most expensive and environmentally impactful train route and determined that it would be among other reasons too expensive. I think that is a shame.</p> <p>Between the two choices of a gondola or expanded lanes and bus service, I preferred the bus option. I really resent the gondola option as this only serves the ski areas and, therefore, they should be the one paying for it. Telluride, Colorado, has a similar gondola transport system that is paid for through a surcharge or tax on ski lift passes and from hotel/real estate taxes or fees. While the EIS video states that there isn't a current funding source for the gondola, I want to make perfectly clear that I don't want one cent of taxpayer money building a gondola. Huge public investments should benefit many types of users not one exclusive group. Furthermore, the gondola will forever ruin the incredible vistas in Little Cottonwood Canyon.</p> <p>As far as tolls (canyon passes) and carpooling as ways to reduce canyon traffic, I am all for it. I like the idea that tolling would only happen on the high use days so that lower income groups are not priced out of the canyon. I also think that snow sheds in the most dangerous avalanche terrain is a sensible idea. And, of course, the expanded trailheads are a necessity and long overdue.</p>

34511	Micki Harris	James McGauley and I been working on your data that supports widening on Wasatch Blvd. We have found and have confirmed your data to be flawed with Fehr and Peers. The engineers of Fehr and Peers (traffic engineers that conducted the traffic study on Wasatch) admitted that their data was incorrect in recent meetings we had with them in September 2022. Their projections are off and are nowhere near the numbers you're projecting for commuters in 2050. I would like NEPA and the EIS team to re-address this and begin a new study before it goes any further. The numbers are not there and there is no need to expand Wasatch. However, there is need to look into the accidents with cyclists, runners and cars. Safety improvements would be warranted and a priority to prevent any future fatalities and serious injury. I can get you a list of people to who have been injured if you need testimony. I encourage you to redesign a road to put forth less MPH and a road that would protect citizens who commute in alternative ways (not just cars).
34512	Nikki Zyp	As an avid hiker and skier in Big and Little Cottonwood Canyons I am very concerned about the potential of a gondola in Little Cottonwood. I am worried that we are jumping to the solution that most impacts the canyons visually and really only serves those skiing at two resorts. We need to find ways to increase transportation without unnecessarily marring the beauty of the canyon. Increased bus services and tolls seem like a good first option. If that doesn't work then considering larger more permanent changes may be what we need to do. But we should first try somethings that have minimal impact. Please don't start off with a gondola! It's expensive and ugly. Thank you.
34513	Lori Mertz	The gondola is a terrible idea. I am opposed. It will shred the canyon eco & environmentally. And, I DO NOT WANT TO PAY FOR IT!!!! I - and many to most citizens will not benefit from it, yet you expect us to pay for it. Who benefits? The ski resorts. If they want to pay for this scar, let them propose a smaller solution. Again, I am adamantly AGAINST the gondola!!!!
34514	Nicholas George	I do not support the gondola. It look and sounds just like a tax credit for the ski resorts. If you want to truly do something that helps then it would need to be a tram or something that will also have multiple stops that allows people to use it throughout the canyon and throughout the year. And if parking is needed then it should be at the gravel pit or closer to the freeway and not in the middle of a neighborhood

34515	Chris Rogers	<p>The gondola is not a good answer for what to do in the canyon. Especially not with public funds, when it will mainly serve to help ski resorts and the corporations that own them. The canyon is a beautiful natural resource that should be protected, not another expendable resource to be used up to line the pockets of a few. Approving the gondola will affect access and use of the canyon in many detrimental ways, like some of the below:</p> <ul style="list-style-type: none"> - Access to climbing areas will be compromised during years of construction. - Destruction and/or removal of irreplaceable and historic world-class climbing and views. - Not an equitable solution and perpetuates environmental marginalization and injustice in the Wasatch Front.
34516	Sylvia Bogusz	<p>I am an outdoor enthusiast, a climber, and your constituent. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction.</p> <p>The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>I hope you will consider opposing the Little Cottonwood Canyon gondola in favor of better solutions.</p>
34517	Paul Gaia	<p>Against the Gondola! This proposal will only serve the ski resorts that the gondola will stop at. This is wrong to burden the tax payers and the canyon with this short sided solution. A better solution is to have the resorts provide shuttle service to their destination with increased parking at the mouth of the canyon. I am a tax payer in Salt Lake and frequent user of the canyons. I have lived in SL for 54 years and I am adamantly opposed to this solution!</p>
34518	Victoria Gorman	<p>I agree with Mayor Wilson!</p> <p>Enhanced electric buses with higher frequency and improved reliability, together with strategically placed mobility hubs; Tolling infrastructure; Parking management technologies and policies, such as ski parking reservations, micro-transit, and rideshare programs; Multi-passenger vehicle incentives; and Traction device requirements with expanded inspection hours and enforcement.</p> <p>NO GONDOLA!</p>
34519	Stephen Judd	<p>210 billion of taxpayer money, snowbird and Alta won't pay a dime. The mountains are already overloaded with people without a stupid gondola.</p>
34520	Matheson Harris	<p>According to your Fehr and Peers Study, we have found it to be inaccurate and Fehr and Peers can attest to that. I am calling for a new traffic study to be done. I believe the projection of cars for 2050 to be flawed. We should be seeing those numbers increase from your 2018 study and now that we are nearing 2023, they are nowhere near that increased percent. The study is flawed and the numbers were inaccurate. If your numbers are unable to prove the increase than, Wasatch Blvd does not need to be expanded.</p> <p>Another issue with Wasatch BLVD: I am commuter cyclist who rides to work every day and I have taken care to ride as far right as I can to avoid collisions with cars who are impeding and encroaching on the bike lane constantly. I feel as a cyclist I have a right to commute and to do it safely. We need to take measures to curb distracted driving or put in a barrier so my life is not another statistic. Make improvements to Wasatch Blvd, not expand it.</p> <p>Thank you Mat Harris</p>
34521	Tanner Josey	<p>Little Cottonwood Canyon certainly needs help. The amount of traffic in the winter is unsustainable. The issues that the canyon faces are also issues that are occurring in Big Cottonwood Canyon, yet there is no talk of a gondola project there. If there could be a unified collaboration with the cities of Sandy, Cottonwood Heights, and Salt Lake City, as well as UDOT less destructive strategies could be implemented. The gondola in Little Cottonwood Canyon is a solution to a problem that not only costs over \$500 million but one that serves the private ski resorts. The traffic issues should be solved using least impactful solutions. Enhanced bus systems need to be implemented, car pooling needs to be a priority, and avalanche control needs to be thought about carefully. Please don't build the gondola because it will not solve the issues it claims to be solving. The natural beauty and the incredible access to world class recreation needs to be valued, protected and ultimately be the basis of the solutions presented. The environment in the canyon is worth protecting.</p> <p>Sincerely, Tanner Josey</p>

34522	Cheryl Pirozzi	I am incredibly dismayed about UDOT's misguided decision to pursue an expensive and environmentally destructive gondola to exclusively benefit the ski industry against the wishes of a majority of Utahns and the good of the state and our local natural resources. This would be a huge mistake. I am a physician serving the local community for the past 16 years. I moved to Utah for the natural beauty and accessible wilderness and have remained here in great part due to the climbing and hiking in Little Cottonwood Canyon. It is priceless and irreplaceable and my favorite place to be. In my profession I regularly recruit physicians to come to Utah and a large number are drawn to the rock climbing and accessible hiking and trail running of Little Cottonwood. Losing this resource to a destructive gondola construction will not only harm those of us who live here and love Little Cottonwood, it will have negative consequences in recruiting talent and resources to our state. I ask 1) that you effectively fund expanded bus service in Little Cottonwood this winter so that we can actually demonstrate that this is an effective and much less costly and destructive alternative and 2) that you listen to the people of Utah and environmental experts who recommend against a gondola in Little Cottonwood Canyon, and not only to the money and power of the ski industry. Do not destroy Little Cottonwood Canyon. It is not worth it and cannot be undone.
34523	Connor Kuhn	The Cottonwood ski resorts don't need more tourists. Please stop bowing to the requests of the resort shareholders instead of locals. UDOT should care about protecting and preserving the beauty of the canyons for the people of Utah.
34524	Mary Zimmerman	I am against construction of a gondola, and in favor of electric buses, a center lane for transit, and snow sheds.
34525	Samuel Bloom	This proposal is short sighted and adequate attempts should be made to mitigate traffic before any construction in the canyon takes place. Do not build the gondola!
34526	Jannine Hogan	Please do Not build a gondola!! Spending tax dollars to help two ski areas is waist full and not considering the limitations of helping out the core problem of Little Cottonwood Canyon. LCC is also used by hikers, and climbers and campers and picnickers, which will not benefit from this costly decision of a gondola!! If Snowbird and Alta want a gondola, then they should pay and build it themselves. The gondola is only for skiers, which are a select group of people. Affordable Bus fair should replace cars traveling up LCC to ski. Or cars with 4 people can travel up to the ski area. The gondola is a ridiculous solution to a problem that can be solved with infrastructure we already have in place. Make the bus service affordable \$2.50 each direction, and have the busses scheduled every 15 minutes during high use times of the day. Thank you, jannine hogan
34527	Stephanie Hudson	I'm adamantly opposed to the gondola solution for Little Cottonwood Canyon. It seems to me a massive waste of money for a small percentage of the population (resort skiers). I live near the canyon and have first-hand experience with traffic problems. As I have analyzed the proposal in the EIS, I think that there is a good chance that this will make the traffic problems worse not better. Also, I believe that the long travel time and multiple transfer scenario will actually incentivize people to drive cars rather than take the gondola. As a taxpayer and business owner, I strongly object to this expensive solution that burdens us and our businesses and only benefits Snowbird and Alta. Finally, I love the beauty of this canyon and believe that the gondola towers would dramatically degrade the beauty of this special place.
34528	Sienna Chilcutt	Hi there and thanks for reading. My name is Sienna. I grew up in South Jordan and have been skiing Alta since I was 4 years old. I've seen the increased activity in LCC over the past 10 or so years (since I was 13) and have wondered what would happen to our canyon with this increased activity. When I heard about the gondola plan, I was devastated. I understand the increased traffic in the canyon. I've sat through it hundreds of times. The gondola is not the answer. There is only so much room for skiers up canyon. The size of the resorts will not grow despite increased skier traffic up canyon, which the gondola would enable. Alternative solutions need to be achieved, for example, parking reservations at both Snowbird and Alta decreased canyon traffic substantially in the last two seasons. A toll booth would be a better solution than the gondola, with the idea that canyon employees and/ or season pass holders would pay less than people purchasing day passes or with multi-resort passes. Or, even better, the canyon police could receive increased funding to be able to sit at the bottom of the canyon and enforce the 4 wheel drive requirement. Additionally, the officer could plan for storm afternoons by enforcing the traffic law in the morning even though the road is clear. How often to we allow 2 wheel drive vehicles with horrible tires up the canyon in the morning, only to have a 3 hour delay in the afternoon because the storm moves in and that 2 wheel drive vehicle is being towed out of the snow bank? Pretty often. I got the UDOT approved vehicle sticker last season. How many times was it checked? Zero. The gondola isn't the answer. It's a sure way to ruin the vibe of Alta and Snowbird. How am I supposed to ski fast eat a** if there's a gondola in my way.
34529	Alicia fuller	A gondola would be sick. Especially if we host the Olympics again. As an employee i love the idea of a reliable transportation system. People need to stop gate keeping the canyon

34530	Donald Abbott	<p>Money talks so the decision seems to have been made. FACTS: Storm (high winds) close all lifts. Chairlifts, Gondolas and Trams are unsafe to operate under extreme wind and icing conditions. Those who are touting otherwise are scammers. Follow the money trail and you will see who stands to benefit financially from this "Sounds Too Good to be true Gondola" scheme. In secret, Snowbird purchased land at the mouth of LCC for loading the Tram and Snowbird approved reduced SKI BUS SERVICE this year in order to get people pissed off with UTA's Ski Bus Service. All done to promote Snowbird's Gondola scheme.</p> <p>How to solve the traffic problem on S.R. 210 is quite simple: 1) Encourage skiers to Ride UTA by raising Parking Fees at Alta and Snowbird. 2) Parking Fees MUST be shared with UTA to pay for increased ski bus services. 3) On POWDER days ALWAYS have a police escort leading buses to the mouth of LCC. (People will flock to UTA's buses.) 4) Add more buses (they could leave every five or ten minutes). 5) UTA's Ski Bus Service must ALWAYS originate and terminate at a TRAX station (Park & Ride in Historic Sandy). UTA should NEVER leave a TRAX patron w/o Ski Bus Service. 6) Moreover, with the above suggestions S.R. 210 would not need to be widened. The above suggestions are the cheapest and would have the least impact on the environment.</p> <p>Respectively submitted, Donald V. Abbott -- Past Director of Space Programs Fairchild Aerospace Corp., RETIRED.</p>
34531	Danielle Poirier	<p>As a resident of Utah for the past 18 years (both the Wasatch back and front), I want to express my concerns with moving forward with the gondola proposal. I am an avid resort skiers, backcountry skier, hiker, and climber. I have followed and researched the UDOT LCC EIS in depth and feel strongly that the gondola is not a proven solution- rather a development opportunity that will benefit few at the expense of many. I, along with the majority of locals, would like to see common-sense solutions implemented (and truly given enough resources to succeed) before we cause irreversible degradation to a gem (both economic and environmental) of Utah. It would be reckless to move forward with a gondola for the following reasons: 1) The EIS was insufficient in scope. It didn't take Big Cottonwood Canyon, impacts from 9400 South, Parleys or the Wasatch Back into account--the surrounding canyons and roads need to be looked at in their entirety. 2) Watershed impacts were not sufficiently studied or considered 3) Alternatives were not presented or explored sufficiently. 4) Current traffic patterns were not systematically or rigorously analyzed. 5) Cost estimates of the gondola were not rigorously analyzed.</p> <p>I agree with UDOT that a preferred solution will represent a summary of key concerns expressed within the public comments that were received and processed: EQUITABLE PUBLIC ACCESS to dispersed recreation, OVERCROWDING, VISUAL IMPACTS, WATER QUALITY IMPACTS, AND YEAR-ROUND ACCESS for a majority of visitors. The proposed solution does not address these aspects. Below is a list of issues that we see with UDOT choosing Gondola Alternative B as its preferred alternative:</p> <p>Dispersed Use - It is well known that the White Pine trailhead is wildly popular year-round, with cars parking up and down the highway for up to a mile in either direction at all times of the year. This not only forces people to be far from their intended destination, it also creates a significant safety hazard along the state highway. The argument that UDOT uses for not stopping at White Pine is that there will be less traffic on the highway due to the gondola, thereby enabling White Pine users to drive to the lot is a red herring argument. WBA does not think that vehicle traffic will be abated enough (if at all) by the gondola to justify this conclusion. Backcountry users - like resort patrons - want to be able to use public transit in lieu of their own vehicles to access the canyon, but that is not possible under the current proposal. UDOT claims to have "Consideration of all canyon users, not just resort visitors," but by only having resort terminals and not operating year-round it's clear that this is disingenuous at best.</p> <p>Economic benefit - The EIS states: "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." WBA does not feel that enriching two private entities is UDOT's mission or responsibility and that applying taxpayer dollars to that is a reckless use of public funds. Meanwhile, it should be noted that the latest Snowsports Industries of America (SIA) participation numbers (2021-22) show a nearly 6% decrease in resort skiers and a</p>
34532	Chris Steinman	<p>The gondola and accompanying parking garages must not be pursued for Little Cottonwood Canyon, ever. The best alternative is to charge Canyon entrance fees based on number of occupants per private vehicle AND increased public bus transportation.</p>
34533	Zane Wesley	<p>How is it the majority of the people in the affected communities disagree with all the preferred "solutions," and somehow they are still being talked about as the plan going forward? Why is UDOT in charge of local roads? Where are the solutions discussed such as a toll? Or even better a toll that locals get at a substantially discounted rate where the tourists would pay full toll or take public transportation. This would limit the bulk of the congestion during the busy months without destroying the natural surroundings or widening the road. The solutions being discussed serve only the contractees and do very little for the local community.</p>
34534	M S	<p>No gondola!</p>

Comments on Little Cottonwood Canyon Final EIS

34535	Jimmy Collinson	<p>Hello, My name is Jimmy Collinson I've written comments every time to date. I've been a ski patrolman and snow safety worker in the LCC for 42 years. Definitely have some opinions. My last two that I hope you consider are these: 1) The gondola oughta come outta Summit Co. That's where the amenities are and the snow won't be in ? years. Hit the top of BCC on the way to LCC. 30 % of the bald tires and red snake originates in Summit Co. We oughta be spinning bull wheels not bald tires. 2) If we do go with the LCC for the gondola then we should be securing the room for 8,000 parking stalls for the future, not the paltry # now suggested. Thank you, Jimmy</p>
34536	David Gluckman	<p>By continuing to allow private transportation up the canyon combined with long travel times, the gondola fundamentally will not change public behavior and solve the transportation problem in LCC. Considering the environmental impacts, losses of recreation areas, and damages to the raw, outdoor spaces of Little Cottonwood Canyon, the gondola initiative is an EMBARRASSING way to spend an obscene amount of tax dollars.</p>
34537	Cheryl Leonard	<p>I'm against the gondola. Developers are going to get rich from this idea while the taxpayers pay yet again, with no end in sight as it will have to be maintained. Why not follow Park City's lead and use electric buses. Cheryl Leonard</p>
34538	Andrea Santurro	<p>I don't believe for a moment that the Gondola is the least impactful of the solution. I believe it us just the solution favored by the ski resorts who have the most money. The gondola is ugly and it will ruin for ever the canyon. How about the Hikers? Will the gondolas stop at every beloved hiking spot? So it will only serves the skiers. What about the summer? Just stop all the traffic in and out the canyon except residents and resorts guests and everybody will get a bus. Busses will run every 5 to 7 minutes and stop at all major hiking spots. Maybe couple of express busses that that you straight up to the ski runs. Why the gondol has to be financed hy the tax payers? Let the resorts pay for it if they think is a great idea.</p>
34539	Gay Lynn Bennion	<p>I represent both Big and Little Cottonwood Canyon in the Utah House of Representatives. As I have conducted a listening tour through our district this summer and met with thousands of my neighbors at their doors, I can confidently state that I represent our district in the following comments. With my constituents, I am opposed to Gondola B. I have heard that the EIS was never intended to be a popularity poll, but the views of the people who live in and around the canyons should be given high consideration. The FEIS doesn't address goals of the Central Wasatch Commission Pillars statement, it doesn't spend tax dollars in ways that benefit all Utahns, and it doesn't protect the iconic beauty of Little Cottonwood Canyon. As a district, we support the Pillars Statement issued by the Central Wasatch Commission in 2021. "The opinion considers visitor use capacity, watershed protection, traffic demand management and parking strategies, a year-round transit service, and integration into the broader regional transportation network, as well as the overall and long-term goal of protection of critical areas in the Central Wasatch Mountains through federal legislation, the Central Wasatch National Conservation and Recreation Area Act (CWNCRA)." The FEIS fails to adequately address traffic demand management and parking strategies, year-round transit service and integration into the broader regional transportation network, as well as the overall and long-term goal of protection of critical areas in the Central Wasatch Mountains. The FEIS fails to take account of improvements to traffic flow with parking reservation system at Alta Ski Resort. The 2,500 parking structure at the base station would exacerbate traffic flow along S.R. 210 rather than reduce the traffic, which could be achieved through transit hubs, which are now under study by Central Wasatch Commission. It fails to provide a depiction of the impacts to the viewshed in Alta itself. The supporting structures would require illumination at night, according to FAA, forever changing another unique characteristic of the pristine nature of the canyon. It would disturb 0.63 acres of an archaeological site and has no clarification for the site of a new bus stop. There is no plan to provide facilities needed to absorb the thousands of people disembarking from the gondola, ignoring obvious further development to accommodate this change in flow of users. It is not scalable or flexible, which is a high priority given the lower accumulations of snow the area is experiencing, and would permanently scar and negatively impact the beautiful area it is intended to service. The people of Utah will not adequately benefit from the more than \$500 million (in 2020 dollars) which will specifically benefit two ski resorts and the tiny percentage of Utahns who ski there. The problem it addresses involves 20-40 high usage snow days in the winter, but the visual impact would be felt by all users of the canyons year-round. The FEIS also doesn't adequately address the superfund site which will be impacted and will potentially require costly mitigation where the parking structure would be sited. I join Margaret Bourke of Alta in her request for immediate steps to: 1. Enact for LCC winter-long vehicle traction mandates for all-wheel or four-wheel drive vehicles with appropriate winter tires.</p>
34540	Sarah Pickell	<p>As a Holladay local, I strongly oppose the proposed gondola. There are estimated to be fewer than 30 days a year where existing transportation assets don't currently adequately serve user needs. The obvious, and far less costly and environmentally damaging, option is to simply control access numbers. Alta proved this last season with reserved parking. If Snowbird did the same, the probably is all but solved. Maybe add some buses and route options and we have something that will work for years to come with investing >1/2 billion dollars and damaging the canyon irreparably. Please do the prudent thing and stop this horrendous project now.</p>
34541	Radisa Peric	<p>This is big no to the gondola! People do not want gondloa in our city! No gondola in our canyon. Half a billion of dollars of raxpayers money for Snowbird is ridiculous. We need to spend that money on Great Salt lake or in 20 years there will be no skiing. Do a toll road. More electric busses. Linit tisket sale but gondola is beyond ridiculous</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34542	Nancy Lombardo	I am completely opposed to the gondola. It will serve only the ski areas, and will be a garish eyesore in Little Cottonwood Canyon. I am in favor of clean powered buses which would stop at the trailheads, and serve a wider scope of canyon recreation. I am also in favor of charging fees for cars based on number of occupants, with higher fees for fewer people. The gondola will ruin the canyon, making it into a disney-like spectacle. Please do not build a gondola.
34543	Zachary Mallender	No gondola!!!
34544	Christopher Stango	There are about 30 days per year when Little Cottonwood Canyon is congested. This is a small problem that does not require a \$500M+ tax-payer funded solution. I have no interest in paying for a giant chair lift to two private businesses. Even if the gondola helped reduce traffic on those 30 days per year, it would be useless 90% of the year. There is so much more that can be done with that money to address the incredible growth the valley is seeing. We're talking about spending half a billion dollars of public money to benefit the wealthy and a couple private interests. Use the public's money on projects on the west side of town. Do something about traffic in town that happens every day of the week, not just 30 days per year. In addition, the climbing community is enormous in Salt Lake. As non-climbers, you may not realize the destruction you would be causing and the history you would be removing. You should think about all users of the canyon and not just the skiers and resorts when making this decision. There is overwhelming feedback from the public condemning this decision. I'm conflicted about leaving comments because I feel like it's just a formality at this point. With the amount of push back on this from residents, I thought this idea was dead but it looks like you're going to try to spend our money on this anyway despite the fact that so many people don't want this. Consider listening to us if you want us to trust you with our money in the future.
34545	John Oungst	I want to voice my opinion in opposition to the proposal put forth by the EIS and UDOT. Salt Lake does not want a gondola!!!
34546	Lisa Hamann	I do NOT support a gondola for the following reasons: 1. exorbitant costs associated with construction, maintenance, and fees to park and ride 2. High level of visual impact 3. Current and forecasted snow drought (the gondola only provides service to ski resorts). I believe Utah's money can be spent more wisely on drought mitigation. 4. Lack of service to hiking trails 5. Cost vs. benefit ("potentially" 50 days in a year during winter months) ADDITIONAL CONCERNS: 6. Concern for cyclists' safety on Wasatch. No additional protection is proposed. 7. Will the speed limit decrease or stay the same? 8. Any plans for additional traffic signals on Wasatch in order for neighborhood cars to merge onto Wasatch? Thank you.
34547	Martin Nichols	The EIS surrounding canyons and roads need to be looked at in their entirety. Also the Watershed impacts were not sufficiently studied or considered Nor were alternatives presented or explored sufficiently. Such as a toll system and e buses. Also, cost estimates of the gondola were not fully analyzed and presented.
34548	Victoria Williams	I am an outdoor enthusiast, a climber, and your constituent. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective. Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction. The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered. I hope you will consider opposing the Little Cottonwood Canyon gondola in favor of better solutions.
34549	Tiffany Cortes	Support for bus alternatives, no to the gondola.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34550	William Whitmore	<p>I am submitting this to voice my objection to the Little Cottonwood Canyon gondola. I am against the gondola for several reasons.</p> <p>We have lived a couple miles from the base of the canyon for 29 years. We have hiked, skied and snowshoed all of those years. Our routine for heading up the canyon is to leave early and avoid the traffic and crowds on the canyon road as well as the canyon's trails and slopes. Early arrival at Albion Basin ensures parking and less crowded trails. This holds true for the many trailheads along the canyons. Other cars traveling at the same time show that others feel the same way. Many cars carry a number of passengers indicating carpooling. This is what locals do. We know our canyon, traffic patterns and trail activity and we adjust.</p> <p>Most of our recreation occurs in the non-winter months on hiking trails and Albion Basin. When hiking in Albion Basin, the lift poles are everywhere, but we know we're hiking at a ski resort. Hiking on other trails offers an activity in a pristine and natural environment. No poles or signs of civilization - just natural beauty, quiet and one-with-nature. The entire landscape on the trails and looking out over the beautiful canyon from those trails is natural.</p> <p>This brings me to my objection to the gondola. The gondola is graffiti. It is defacing our canyon. It is not necessary because there are other solutions that will not put an amusement park ride up our canyon. Tourists will accept it because it's what tourists expect when visiting a vacation spot - gondolas and high-speed lifts. This is not a solution for those of us who enjoy our canyon year-round. It's just not the right solution at all.</p> <p>As a long-time resident, I understand that improvement for traffic flow would be welcome, but defacing our beautiful canyon by erecting an entire gondola system is not the answer. It's killing a fly with a shotgun. Please do the hard work and find the right solution. A gondola is not it. Please find a solution that does not deface our beautiful canyon.</p>
34551	Jenny Hatch	<p>No to the overpriced gondola that only benefits private companies at taxpayers expense. Come fix the pot holes in our streets. Run more buses. Have a bus only lane , and enforce this. Enforce traction laws. Many less expensive methods to improve transportation without scaring this natural resource permanently for the private few.</p>
34552	Ulrich Brunhart	<p>I am against the gondola option. A phased approach, with incentives for mass transit use, makes much more sense. Capacity limits, both vehicular and total number of people, must be determined.</p> <p>The toll must be for the whole canyon, top to bottom, not just the resort areas. The toll to enter the canyons should be everyday of the year (just like Millcreek), with part of this fee going to the Forest Service and the rest going to UDOT/UTA. This would allow the forest Service to maintain and upgrade badly needed facilities and to provide Ranger services, and provide funding to UTA to provide reliable, timely and dependable transit. Simply "spreading out the congestion" with a sometime toll is not a solution.</p> <p>The ultimate goal should be to make the canyons as car free as possible. This will require transit hubs in the valley with good connections to valley wide transit, as well as adequate parking.</p> <p>Finally, funding MUST be allocated to increase bus service in the canyons. The recent announcement by UTA cutting service by 50% to the ski areas is a major move backwards.</p> <p>Let's move forward, start to solve our transportation issues, and protect our canyons. Thank you.</p>
34553	Terri Bingle	<p>The cons outweigh the pros. *The infrastructure *The animals *the beauty of the canyon *The fact that only a few people will actually use something so expensive but the whole state pays for it? *The individual cost of riding and parking adds to the overall cost of a ski day. Too expensive. *I believe the novelty will wear off and the ridership won't make it worth it. *I believe this idea was brought forth by some rich people to make them richer at the expense of the all of Utah people. (Snowbird secretly bought the property at the bottom?) I just came up with this list in the last five minutes. I know there are many other cons.</p> <p>PLEASE DON'T RUIN OUR SMALL CANYON. I know this kind of thing has worked in other area, but I believe our small canyon could not survive the damage it will do. There are so many other alternatives that could be tried first. *toll at the bottom of the canyon *reservations like they are doing now. *effective bus routes. (I have seen buses pass by stops where people are waiting and not stop. Marked as going up the canyon and very few people on the bus). PLEASE DON'T RUIN OUR CANYON JUST TO MAKE THE RICH RICHER.</p>
34554	Anita Gordon	<p>No gondola. 80% of Utah residents oppose this option. Please listen to us.</p>

ID	Full Name	Comment
34555	Daren Cottle	<p>Thank you for the opportunity to comment on the final EIS recommendations for improving traffic conditions in LCC. Visiting and recreating in LCC is one of the great pleasures of my life. At times in the winter, traffic can be a mess, but UDOT's preferred alternative to improve canyon traffic on these specific days will do irreparable to the canyon and only serve a few private businesses. I appreciate UDOT's sincere efforts to fulfill their charge from the Utah State Legislature to improve winter traffic in LCC. However, the desired alternative is an expensive boondoggle that bypasses trying common sense alternatives that are far less expense or damaging to the canyon. In addition, these businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Some of my concerns with the Gondola include:</p> <ul style="list-style-type: none"> -Permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall that will forever scar LCC,"s one of a kind scenery. -The "clean," the gondola will be will power by COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). -The gondolas base station with 2,500 "premium," parking spots will just create new traffic issues on Wasatch Blvd as people vie for the coveted spots. Once those are filled, traffic problems will be pushed fuller into the valley to bus stops. -The cost to ride the gondola and potential long waits in line at peak times will likely mean auto traffic in the canyon will not be significantly reduced. -Because the gondola only stops at Snowbird and Alta, non-resort canyon users will likely continue to drive in the canyon in the winter. -It's difficult to see significant usage of the gondola in the summer, so I assume it will be an idle eye sore most of the summer months. -Finally, the estimated \$600 million cost of the gondola is by UDOT's own admission, an overly optimistic price tag. Similar to the Utah State Prison relocation, the half a billion price tag will be double, if not more if it's actually built. Spending that kind of money on a project to objectively benefit a handful of private businesses in a specific industry seems folly at best. <p>Rather, than jump into this expensive eye sore, let's first try less expenses solutions that already exist. These options include:</p> <ul style="list-style-type: none"> -Parking reservations. These work! Look at how these reduced weekend traffic at Snowbird in 2021 and Alta Ski Lifts this year. This is a NO COST option that really moves the needle.
34556	JoAnn Cottle	<p>Thank you for the opportunity to comment on the final EIS recommendations for improving traffic conditions in LCC. Visiting and recreating in LCC is one of the great pleasures of my life. At times in the winter, traffic can be a mess, but UDOT's preferred alternative to improve canyon traffic on these specific days will do irreparable to the canyon and only serve a few private businesses. I appreciate UDOT's sincere efforts to fulfill their charge from the Utah State Legislature to improve winter traffic in LCC. However, the desired alternative is an expensive boondoggle that bypasses trying common sense alternatives that are far less expense or damaging to the canyon. In addition, these businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. 34557	Craig Gordon	<p>Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll.</p> <p>We have seen parking reservations work throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon.</p>
34558	Kristin Blanchard	<p>Please please please do not spend my hard earned taxes on this stupid gondola. There is no feasible way this boondoggle can fulfill the needs of the traffic in the canyon. Any other assertion is foolish.</p>
34559	KERRIE TURVEY	<p>Please don't continue promoting the canyons as a place for the wealthy and destroying our sight lines and ability to explore freely.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34560	Patrick Hunt	The gondola would be a huge environmental peoblem and it's really solving the problem of overcrowding. Please install a system like Zion with busses to not ruin the scenery of the canyon.
34561	Mark Smith	Sandy had a vote on this last year and the majority said no. Why were we led to believe our bite counted? And why UDOT thinks thus is a non destructive solution? Is it going to be ADA accessible and free for disabled people?
34562	Corinne Sroykum	Property taxes are already killing us. We don't want to pay for a Gondola! More buses makes the most sense
34563	Pat Neves	No gondola
34564	Natalie F	Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered. The proposal has unacceptable impacts on Little Cottonwood Canyon's iconic natural character. The gondola equals the destruction and removal of irreplaceable natural landscape and views. The gondola is designed to serve only ski resort users, ignoring dispersed use recreators and other year-round canyon users. The gondola is fiscally irresponsible, with half a \$ billion in initial construction costs, alone. The gondola is not an equitable solution and perpetuates environmental marginalization and injustice in the Wasatch Front.
34565	Rachel Bills	I do NOT support the gondola. It's a lot of money to spend on a solution that doesn't help with year round traffic and public access to the canyon. It does not include transport to trailheads and other areas of the canyon the people use all year long. The ski resorts are the only ones that benefit from a gondola. A bus system, designated bus lane, avalanche sheds and increased parking at the base of the canyon are the best solutions for year round accessibility for everyone.
34566	Ryan Brainard	I live in cottonwood heights. And I do not agree with public funding supporting transportation to a private resort. That would be as backwards as using tax money to subsidize uber service to the ski resorts. Or building a public bridge over to Oquirrh mountains to facilitate traffic to the tooele race track. In summary, let patrons of the resort pay for thier own transport
34567	Tony Aadland	I am opposed to the construction of a gondola in LCC. I believe that it is not an effective solution and will only benefit the ski areas. I instead propose that we increase busses and shuttles to the ski areas and add incentives to ride them. We should have more options for park and ride areas so people will want to ride the bus.
34568	Clark Brimhall	I do not want to have the gondola project for Little Cottonwood Canyon carried out. I do not believe taxpayers should pay for the project if it is carried out. The ski resorts and those using the gondolas should pay for it, if it is constructed. I believe the plan of providing additional buses would be far better than to construct the gondola system. Again, the majority of the cost for the bus system should be paid by the Snowbird and Alta ski resorts. I am concerned about the damage to the environment that would be caused by the construction of the gondola system, as well as the unpleasant aesthetics of it. If the aspect of global warming is to be considered, the gondolas will have a limited service life. My suggestion would be to start with providing additional parking at the property recently acquired by the Snowbird resort and to then increase the bus service. Thank you for your consideration on this matter.
34569	Dawn Bates	Many of the projects that the State and/or private citizens and companies think are a great idea are only a great idea because money can be made, not because it's necessarily a good idea. Economic growth is important but not the most important. One of the reasons my husband and I made Sandy our home 43 years ago was because it was close to the canyons and afforded us an inexpensive form of recreation for our family of 5 children. We camped at Spruces and Redman, hiked the trails and enjoyed Cottonwood Creek and all the beautiful scenery that the Canyons afford. I don't know what the statistics are as to how many Sandy (and other surrounding cities) citizens ski, but feel that this project is targeted to those who come from out of state, not local skiers. Sometimes it's better to underdevelop, keep nature the way it is and just not focus on \$\$\$\$. The State of Utah is going to overdevelop to the point where it's citizens will not be interested in living here anymore. Consider less invasive solutions to the traffic issues and please don't TOLL us out of being able to afford enjoying our own canyons.
35520	Lisa Hamann	Hello. I submitted a comment via the project website; however, I was unable to provide support for my comments/concerns about spending an exorbitant amount of funds on a gondola that will only service the ski resorts and during winter months. According to NOA and NIDIS (see attached) "Regions that receive a great deal of their precipitation in the form of snow face a number of challenges when snow droughts occur. The impacts of snow drought are often widespread, affecting ecosystems, reservoir levels and operations, water resource management, tourism, and winter recreation.." "In a changing climate, it is predicted that rare snow drought events-those that may have historically occurred once in 500 years-will happen with increasing frequency. Climate models predict that the likelihood of snow droughts extending for two years when they emerge in the western United States may increase from 7 to 42 percent by 2078. Further, the frequency with which four-year-long snow droughts will occur is projected to increase from 0.25 to 25 percent between 2050 and 2078.." Utah should consider spending its funds on water conservation and preservation, rather than constructing a gondola. Thank you. Lisa Hamann

34570	Jim Steenburgh	<p>I am writing to express support for the phased pursuit of an enhanced bus option for Little Cottonwood Canyon and opposition to the gondola.</p> <p>I have lived in the Salt Lake Valley for 27 years and ski in the central Wasatch 30-50 days a year. Sadly, there has never been adequate bus transit in the canyons due in part to the lack of large transit hubs in locations that make sense for most canyon users. Enhanced busses with mobility hubs appear scaleable and fiscally responsible. Road expansion could ultimately be pursued.</p> <p>My opposition to the gondola reflects costs, lack of information concerning funding, lack of information concerning how much it will cost to ride, poor access to the canyon other than at Snowbird and Alta, and environmental impacts (visibility, loss of bouldering terrain, etc.).</p> <p>Some of these concerns are addressable, others not (for example, visibility impacts are largely not addressable except to avoid building the gondola). In the case of the former, a well designed gondola would include an access hub at the angle station, with new trails constructed to connect with White Pine and Red Pine Canyons for use in winter and summer. Such a hub would also allow for one way hiking to or from Snowbird in the mid canyon and in the lower canyon to the lower gondola station. Such capabilities are commonly integrated into cablecar systems in the European Alps and should be part of the design for any gondola solution in Little Cottonwood Canyon.</p> <p>Others require more information to be provided to taxpayers and canyon users. As much as mountain railways and cablecars in the Alps are to be admired, they are often expensive to build and to ride. For example, a round-trip ticket on the tri-cable Eiger Express between Grindelwald and the Eigergletscher Station in Switzerland, is 64 CHF (also 64 USD at current exchange rates). This gondola is similar in design to the one proposed for Little Cottonwood, but half the length. Will Little Cottonwood become a playground simply for the well off? I hope not.</p> <p>Sincerely, Jim Steenburgh</p>
34571	Pat Neves	No gondola
34572	Matt Neves	Definitely against this as a resident of cottonwood heights. This will make taxes go up and destroy the nature around us.
34573	Emmet Murray	NO GONDOLA in little cottonwood canyon. Use the proposed tax revenue on electric busses, wages for drivers, and expand bus service. I will not stand to see little cottonwood desecrated by a gondola funded by the tax payer for the benefit of corporations and the greed of the wealthy. Thank you for the opportunity to comment.
34574	Kurt Hegmann	<p>There are many elements to examine. Durability over decades, functionality/ease of use and environmental impact are probably the most important concerns as no solution is cheap. As well, it should be noted that each aspect of dysfunction, individually and in aggregate, puts pressures on people to use cars.</p> <p>Examining these in no particular order: Durability with Bus is by far the lowest, Tram moderate, and Train is highest where rail lines last a long time tho eventually need replacement.</p> <p>Pollution is highest with buses (both from car tires + lesser component of exhaust driving to the canyon mouths/lots and the buses themselves), moderate with tram (primarily car tires driving to the parking lots but less from the in-canyon perspective) and lowest with trains (less driving to reach a nearer/dispersed parking lot). Other pollutants track similarly.</p> <p>Parking lots buildout is high with the buses and trams but least with the trains.</p> <p>Traffic jams are high with either the gravel pit parking structure for buses and/or probably are even higher with the LaCaille lot for the tram, but dispersed if not negligible for train where the many parking lots are distributed closer to people and buses become more viable to go to the trains.</p> <p>Carrying capacity (including carrying the most people at the 0800-0900 starting times) is lowest for buses, moderate for tram but best for train.</p> <p>The ability to get people in/out of the transit mode is an under recognized, but major issue as it is by far slowest with buses (i.e., annoyingly slow one at a time, and pace set by the slowest person to get up/down stairs who can be wearing ski boots) while it is moderate for trams and fastest for trains (large doors open, and divulge large numbers who quickly go around the slow ones).</p> <p>Ability to access hiking areas is moderate with buses, impossible with the trams and highest with 30-60s whistle stop train stops which can be varied by time of the year/seasonal demand (ala Zermatt, CH, to which IMO decision makers should take a paid trip to allow for a better understanding).</p> <p>The ability to eliminate/reduce rental cars is poor to negligible with buses or the tram option, but is high with a train where</p>
34575	Anne Barr	No...please look at other traffic options. Charge more for the Epic/ Icon passes to fund busses. One way lanes during morning and afternoon heavy traffic.
34576	Sarah Davis	Please do not build the gondola. An enhanced bus system can move more people for far less money and helps everyone, not just the wealthy.

ID	Full Name	Comment
34577	Lynn Cameron	<p>I have skied at Snowbird for many years with unlimited season passes; nevertheless, I don't think the taxpayers of Utah should have to pay for a gondola which seems to solely benefit Snowbird & Alta. There are possible cheaper alternatives - a fleet of vans and/or more buses to shuttle skiers, or a toll such as at Millcreek Canyon. I can't imagine that a road toll will be any more onerous than paying to ride a gondola. Maybe Snowbird and Alta should consider limiting the number of skiers they allow such as at Deer Valley. In addition UDOT could mandate that people have to carpool or take a bus.</p>
34578	Tyler Roelfsema	<p>The gondola does not seem to be the right answer to our issues in little cottonwood canyon. As others have mentioned, the sheer cost of it should make us look at other less expensive options. It's especially frustrating that the funding is coming from tax payers which will benefit 2 entities up that canyon who don't seem to be willing to provide services of their own. The destruction of many iconic climbing routes and the natural aesthetic of the canyon is another concern. Right at the time of this decision, UTA is reducing service up the canyon which is the opposite of what should be happening. Other options should be explored before settling on this massive project.</p>
34579	Ben Ricketts	<p>The gondola alternative is the wrong choice for Little Cottonwood Canyon, Utah and the environment. The initial proposed phasing is worth the expense and worth trying.</p> <p>There are so many unanswered questions - so many much less expensive solutions that have not been tried. Why on earth is it a good idea to spend so much money on the gondola without trying those other solutions? Putting in a gondola requires significant infrastructure that can't be easily removed if this solution does not work.</p> <p>The initial phasing is a great way to tackle the problem in a more cost-effective and environmentally friendly way.</p> <p>Enhanced busing without the road widening seems like a no-brainer. Provide more options for public transportation. More buses = more opportunity for riding public transportation = fewer long lines and packed buses. Let's make it EASIER to take the bus. And if we are using buses, why not make them electric which is even more environmentally friendly? Several of our local leaders tested out electric buses and found they worked great up and down the canyon.</p> <p>If we are using enhanced busing, make it easier for riders with 'express' buses to Alta, 'express' buses to Snowbird and 'local' buses to stop at popular trailheads.</p> <p>Tolling will affect people's decisions to drive up the canyon and the funds can be used for road maintenance, avalanche control, sustaining the tolling system, etc. Tolling works in Millcreek Canyon - why not Big and Little Cottonwood Canyon too?</p> <p>Parking reservations at BOTH Snowbird and Alta are a great idea. If you don't have a parking reservation, you won't drive up the canyon! This is a proved solution!</p> <p>Enforcement of the traction law is also a no-brainer. Only allow vehicles up the canyon with the proper tires and AWD. This should be enforced leading up to a storm as well to reduce the numbers of cars slipping and sliding and getting into accidents.</p> <p>The addition of permanent infrastructure (20+ towers) makes me sick to my stomach. How can we even comprehend such a choice that would impact the land, the watershed and the views? We need to preserve the landscape AND the beauty and wonder of LCC. Building the gondola towers will permanently destroy the views. That infrastructure cannot be easily removed.</p>
34580	Ashley Bingham	<p>Thank you for considering comments before making a final decision. As a life long user of LCC, I am concerned about the current gondola proposal. It seems to be and extremely expensive endeavor that won't actually solve the problem.</p> <p>Some of my specific concerns are:</p> <ul style="list-style-type: none"> ↯ Permanent infrastructure that will forever scar LCC,"s one of a kind scenery. ↯ The "clean," the gondola will be powered by COAL-fired power from RMP. ↯ The gondolas base station with 2,500 "premium," parking spots will just create new traffic issues on Wasatch Blvd. ↯ Because the gondola only stops at Snowbird and Alta, non-resort canyon users will likely continue to drive in the canyon in the winter. <p>Instead of the gondola I would urge you to please consider more common sense, much less expensive solutions like:</p> <ul style="list-style-type: none"> ↯ Parking reservations. These work! Look at how these reduced weekend traffic at Snowbird in 2021 and Alta Ski Lifts this year. ↯ An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users. ↯ Tolling at peak times to further reduce traffic. This simple process has been effective in other Utah canyons and states. <p>I urge you to hit the pause button and reconsider the current plan.</p> <p>Thank you.</p>
34581	Drew Weston	<p>I am strongly opposed to the gondola. The impact of such action will damage the natural beauty of the canyon and the wasatch front. Impacts to climbing will be far greater than just removing boulders. It will damage the community and future generations ability to access what we have had the pleasure to. The damage far out ways any benefit. Please do not continue with this proposed "fix,".</p>

ID	Full Name	Comment
34582	Harriet Wallis	<p>1)A gondola does not solve the problem. It will create a hug bottleneck as people jam up to park at the loading station and then jam up again as they wait to ride up the canyon.</p> <p>2) Bad health idea. A Gondola system will force people to be together and breathe on each other -- such as in a pandemic.</p> <p>3)Construction costs and overrun costs always go up. It's wrong to force Utah taxpayers to pay for something that a small percentage of them will use. I ski, but why should any non-skier, resident of St. George, etc, be asked to pay for something they won't use? This is not a one-time cost, either.</p> <p>4) Annual operating costs have not been figured into taxpayer cost.</p> <p>5)There are less invasive, lower-cost alternatives to a gondola. A toll system (for both canyons) plus parking reservations should be required at both Alta and Snowbird.</p> <p>Toll system: Count of all valid parking spaces in the canyon. Install an electronic car-counting system (similar to airport parking garages) at the base. Once the system counts that enough cars have gone through the gates, the gates would lower and not raise again until a certain number of vehicles had passed through on the downward side.</p> <p>Residents and employees would have key cards that would raise the gates for them. This system would work for Big Cottonwood too.</p> <p>6)A gondola only benefits 2 commercial businesses -- Alta and Snowbird -- that are on National Forest Service land. A gondola will prevent access to public land by making it too costly to use.</p> <p>7)Public and political opinion is against the gondola, but UDOT refuses to listen.</p> <p>8) STOP the GONDOLA!</p>
34583	Jane Hudson	<p>I am wholeheartedly against the Gondola proposal.</p> <p>I live in Millcreek, and recreate in the Wasatch Mountains almost every day (year round). I love the Wasatch and feel that we all need to work hard to preserve its beauty. .Ä®</p> <p>.Ä®The current traffic problem only happens less than <15 days a year. Throughout the EIS, the transportation problems are projected to get worse with population growth. Sections 1.3, 1.4.1.2, and 1.4.2.2 (just to name a few) discuss this growth and the related problems. .Ä®</p> <p>.Ä®The gondola is not only an eye sore, but will cause major impacts to the canyon (i.e. destroying world class bouldering areas and various ecosystems). We need to put real effort into trying to expand the bus system or try another option like tolling. The gondola parking lot will be almost a mile from the gondola station, it's expensive to ride, it's slower than driving and is less convenient (especially for groups and families). People will not use it.</p> <p>It only serves a portion of canyon users, only those going to resorts and the resorts themselves. There is no disincentive to drive so people will continue to do so. .Ä®</p> <p>.Ä®I find it extraordinarily irresponsible to ignore the obvious need to examine the level of visitation that this fragile resource can handle without damage. The EIS simply waves off this point in S.12 by saying "The Forest Service acknowledges that, in the future, management might be needed to limit resource impacts from user visitation in Little Cottonwood Canyon. Specific visitor capacities are not being considered by the USDA Forest Service at this time." .Ä®</p> <p>.Ä®If we weigh the growth impacts in this equation so heavily that we are willing to spend \$600M to \$1B of taxpayer money for a "future" problem (right now it's <15 days a year) ... how can we not ask the Forest Service to "consider visitor capacities?" It is negligent and irresponsible not to do so. We cannot simply blame the Forest Service and wave this away as a "noted" but "ignored" concern! .Ä®</p> <p>.Ä®I am adamantly opposed to this proposed alternative and demand that all other options that be tried and exhausted FIRST before building a \$600M gondola that will destroy the canyon. .Ä®</p>
34584	Zoe Moskwa	<p>.Ä®It's too expensive. It's too invasive. It will likely encourage rather than discourage car traffic. And... it won't solve the</p> <p>I do not want a gondola in LCC. I think it will take away from the natural beauty and spectacular views. The length of time the construction will take along with the ugly construction and traffic will be a disaster for the recreational hub. I do not approve!!!</p>
34585	Joan Plaehn	<p>No Gondola!</p>
34586	Ed and kristen Iversen	<p>We have yet to see convincing arguments that this alternative, serving ski resorts, is the best alternative to the transportation needs. Taxpayers absolutely should not pay for this boondoggle. If we have that much money, let's put it into far more important things!!!</p>
34587	Ian Buchta	<p>The gondola offers very little that investing in more buses and putting a toll on the road wouldn't solve. It is a terrible choice environmentally, will ruin the view, and is a terrible use of taxpayer dollars.</p> <p>These views are my own.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34588	Dimitri Cocorinis	<p>I am AGAINST the Gondola. Costing \$550,000,000. to a \$1,000,000,000 is too expensive to help two ski resorts. We can control the traffic with a better bus system and better roads. If the resorts want the Gondola you should be required that they pay their pro rata share of canyon cars usage. They wouldn't want it them. As backcountry skier i could not get off along the way... Duh ! Fix the canyon for everyone. I don't understand why you would consider putting a Gondola through a world class climbing area. Bad on you. The on going maintenance for the tram towers spells destruction to the flora and fauna of the canyon. Look at what goes on around the Snowbird tram towers... ugly stuff. No Gondola is the way to improve the beauty of Little Cottonwood Canyon.</p>
34589	Addie Gadde	<p>How much Indigenous consolation has gone into the planning of this project? This seems like a highly invasive development that serves a select population during a short period of the year. If the project is for profit, how are you making it equitable? What stakeholders and community representatives have you engaged with?</p>
34590	Vikki Nelson	<p>Please no Gondola. What is needed are other possibilities like improved busses, toll, more busses. A limit of cars entering the canyon... as a tax payer it makes no sense a costly unsightly options when simpler solutions have not been tried</p>
34591	Quaid Harding	<p>Don't build a gondola it is a waste of tax payers money. And a burden on the environment.</p>
34592	Chad Whittaker	<p>I'm against the proposed gondola in little cottonwood canyon. UDOT has not provided compelling evidence that it will solve any transportation problems in the canyon. The gondola is obviously a government handout to private businesses such as Snowbird, Alta, and those who stand to profit at the base. The gondola is useless as driving up canyon will always be an easier option for users. A gondola will destroy the scenic value of the canyon and rob users of the very beauty they go to the canyon to experience. The gondola is a terrible idea and should be forgotten. It is not a valid transportation option and a waste of valuable public funds. The public is overwhelmingly opposed and it is deplorable that UDOT is ignoring the people who pay your salary. Stop the gondola.</p>
34593	Rachel Sanders	<p>I'm writing in opposition of the proposed Little Cottonwood Canyon gondola to Alta and Snowbird. It has been clear from reading comments, attending public events, and being a member of the skiing and climbing communities that the vast majority of people who recreate within the canyon are also opposed to the gondola. This highly intrusive, environmentally insensitive proposal to mitigate traffic issues is not only a hugely expensive and inefficient solution, but it is likely irreversible in the event that it proves to be even more destructive to the canyon's ecosystem and wildlife than expected.</p> <p>If we are looking for a solution that addresses traffic congestion and pollution, we ought to look for a solution that truly serves the communities that utilize the canyons, not a select group of people. This is also a blatantly inappropriate use of taxpayer dollars, especially given that funds are not currently being utilized to fairly pay and retain bus drivers on existing routes of the canyon.</p> <p>As a resident of Salt Lake City, frequent visitor to the Cottonwood Canyons, and voter in Utah, I will certainly be paying attention to who is continuing to steer this project forward and which of our elected officials are opposed/in support of this project, and use that information to inform my future votes. If you care about future recreation within the canyon, the opinions of taxpayers, efficiently spending funds, and protecting our already fragile canyon ecosystems, you will abandon the gondola and look for common-sense alternate solutions to traffic mitigation that better serve our community.</p>
34594	Nicole Weaver	<p>The public has overwhelmingly spoken - no to the gondola! For every reason you will read in every other comment.</p>
34595	Erin Ward	<p>The gondola is a terrible idea. Leave nature how it is!!! Yea traffic is an issue but it's doable. We have been going this long without it, why do we need it now? Keep nature how it is. Don't ruin it with a gondola that can cause more problems then solve it. All the money IS NOT worth it.</p>
34596	MICHAEL PECK	<p>Please do not go forward with the gondola, and please follow the advise of experts, not the proposals of profiteers.</p>
34597	Angela Folsom	<p>I am against the gondola. It will ruin the natural beauty of our canyons and the price for it is fiscally irresponsible.</p>
34598	Patricia Wesson	<p>The gondola benefits only two entities, Both revenue ski resorts. Since they are high revenue entities why should this project be paid for my taxpayers? Most of us can't even afford to ski! Not to mention the ever severe reality of climate change. How many more years are there of viable skiing? Thus is a short sighted, self-serving move by UDOT and definitely Snowbird Resort.</p>
34599	Erica Bradshaw	<p>I do not support the gondola, I support people taking the bus up the canyons.</p>
34600	Stephen McQuide	<p>I am a winter resident of Murray, here for the unsurpassed skiing. I am in favor of the gondola. They seem to work fine in the Alps, and will find acceptance here.</p>
34601	Jade Velazquez	<p>I stand wholly against the widening of Wasatch boulevard. I am within walking distance of the Blvd and I agree it's very dangerous for pedestrians and bikers and needs improvement but that does not include widening or a fast speed. We need it to be walkable and accessible for pedestrians</p>
34602	Anna Gorham	<p>There are so many better options than the gondola. More busses. Make people take the bus. Try something before permanently deciding to build the gondola. Really think through the idea more.</p>
34603	Kara Ngu	<p>The Gondola will do ni good for the community and traffic to come in future season. This with UTA running and private vehicles running that is already damaging our environment so stop the building of the go dams because it will do more harm than good.</p>
34604	Alex Johncock	<p>Not a single one of the locals that I've spoken with, including myself want this project done. Please consider the desires of those that are most effected by this project, and not those of the tourists and businesses.</p>

34605	Colleen Nipkow	<p>I am writing to let you know that I oppose the idea of a gondola in Little Cottonwood Canyon, and below are my reasons:</p> <ul style="list-style-type: none"> - I do not agree with Utah taxpayers footing the \$550 million bill for the benefit of two private businesses only, that will only operate during the heart of ski season. UDOT's EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts.," [Ch. 6] - 80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll. Sandy Mayor Monica Zoltanski, Salt Lake County Mayor Jenny Wilson and many other elected officials agree. - I believe we should preserve the beauty of LCC. Building more than 20 towers reaching 200 feet tall through the heart of LCC would destroy the canyon's natural beauty and destroy popular climbing and hiking areas. With no trailhead or backcountry access, the gondola is far from a solution that benefits all LCC's users throughout the year. - Most Americans prefer convenience, and will not choose to use the gondola if you first need to take a bus to the base station and then have to ride the gondola 31 minutes to Snowbird or 37 minutes to Alta. And then do it all again at the end of the day. People will just drive instead. - Have you seen the traffic in LCC the past two weekends? Why don't we have buses that run in both LCC and BCC during the summer that stop at popular trailheads to reduce traffic year-round? - As a resident of Cottonwood Heights, I am concerned that the gondola will not solve traffic issues. Instead, it will push traffic out of LCC onto Wasatch Blvd, I-215 and surrounding neighborhoods in the Cottonwood Heights community. <p>Thank you for considering my comments, and please do not build the gondola in Little Cottonwood Canyon.</p> <p>Thank you.</p> <p>Colleen Nipkow, resident of Cottonwood Heights, Utah</p>
34606	Christian Lenhart	<p>Please make absolutely sure that tolling and enhanced bus service are given a fair chance before resorting to a gondola. Building enormous towers and other infrastructure in the canyons should be an option of last resort.</p>
34607	Brice Coffey	<p>We should not be using a sizable amount of tax payer money for service solely to private companies, not to mention ruining the view of the canyon.</p>
34608	Ellie Meyer	<p>Please do not build the gondola. The negative impacts far outweigh the positive.</p>
34609	Meggan Wilson	<p>Absolutely ridiculous proposal. This is nothing more than complete elitism at play. If LCC folks want to turn it into a posh getaway, then let them figure out the financials. To pass this as something beneficial to the masses is a complete abuse of funds and the position of leadership. It is wasting money and does not provide a valuable solution(s).</p>
34610	Emily Sabo	<p>I am deeply disturbed that an option so clearly detrimental to the environment and a huge tax payer burden would even have been considered let alone chosen as a preferred alternative.</p> <p>I again propose no amendments to the road itself (outside of normal upkeep). All issues can be resolved most readily by a free bus system (run at very high frequency) and an extremely high toll (for resort maintenance vehicles, property owners etc). These buses would run all year, stop at places along the route.</p> <p>This would allow for increasing access for the future as well as increased profit for resorts. The key is decreasing traffic in the canyon, not turning the canyon into a thoroughfare used only to serve the resorts and little to no need to construct new infrastructure.</p>
34611	Veronica Hanson	<p>- The SR-210 EIS Traffic Study by Fehr & Peers, May 2019 (revised July 2019) which covers the segment from Fort Union to the 210/North Little Cottonwood Rd. junction.- The Draft Vehicle Mobility Analysis for the LCC EIS, April 3, 2020 which deals with the segment beyond the 210/North Little Cottonwood Rd junction.- The La Caille Station Traffic Study by Hales Engineering, September 18, 2020 which describes the road design modifications used in the Final EIS This data needs to be reexamined in detail before any of the proposed projects are initiated.</p>
34612	Marvin Mitchell	<p>The gondola is the worst solution and due to its ridiculous nature it will fail to achieve the goals while removing the natural beauty people will not give up the comfort of their cars and the traffic will continue while Utah subsidizes the ski areas with tax payer dollars. Personally I won't visit Utah and will sell all of my interest in accommodations in the canyon if this gondola is constructed. It will be the final knife in the back of the ever degrading quality of the wasatch front. Having lived there in the 80s I can't believe how the state has managed to destroy itself. But it's always the money in the end and greed wins and the earth loses. Pave paradise</p>
34613	Kristen Harmston	<p>Please do not install a gondola. It is not worth the money and disruption to wildlife. It is a horrible idea to do all that just to get people to two ski resorts. No one I know wants this. Please do not do this to the canyon!</p>
34614	caroline johnston	<p>The gondola is a huge waste of money. It doesn't do anything to prevent traffic up the canyon. We should look at spending our taxpayers money on worthwhile investments such as saving the Great Salt Lake and improving public transportation.</p>
34615	Hannah Rutherford	<p>This is a bad idea all around</p>

34616	Karen Kelley	<p>As a retired physician and former employee at the Snowbird Ski Resort clinic, as well as season pass holder, I must voice my opposition to the Gondola proposal. Little Cottonwood Canyon is a limited and valuable resource for outdoor recreation, and we must address the potential overuse of this canyon, not only in winter months, but with the year round use that has only been exacerbated by the pandemic and many more people "discovering," the convenient outdoor activities that abound. Before spending massive tax payer funds for either proposal, more cost effective strategies for travel in the canyons must be explored. I count myself fortunate to have skied (both resort and back-country), hiked, climbed (both rock and ice) snow-shoed, and biked in the canyon for 45 years. I would love to see simple expanded bus service, with buses that stop at popular areas along the canyon, that is provided year round. Incentives to encourage utilization of buses could include a pass/toll system to drive up the canyon, and well as to park. Millcreek canyon has successfully engaged in a toll booth/pass system, and locals should be given a discount for such a pass. The gondola will primarily serve the wealthy and out of town visitors, as well as Epic and Icon pass holders, but there is a limit to the number of people that can enjoy a quality experience at the ever more crowded ski resorts.</p> <p>Touting the gondola system as an option that would by-pass avalanche concerns is simply not accurate. When avalanche danger is high, the resorts themselves face limitations and interlodge prohibits skiing during those times. Avalanche snow sheds also would not help alleviate those conditions at the resorts themselves. High winds would also limit the gondola operation. Please consider other users than resort skiers, as well as resort skiers who also appreciate the unique nature of LCC, utilizing opportunities year round, and respecting when the choice may just be patience for the whims of weather. Companies and individuals relocating to Utah list the outdoor opportunities as one of the main reasons for choosing our state. Let's preserve those experiences for them and future generations, and limit forever altering our landscapes without a full evaluation of alternatives. I believe the simple enhanced bus service that has been left off the final two choices is an option that has not been effectively trialed.</p> <p>Thank you for your time and consideration,</p>
34617	Daniel Hudson	<p>I live very near to Little Cottonwood Canyon and I am against the gondola proposal. Primarily, I don't think it solves the traffic issue at all. There is no disincentive to still drive up the canyon, especially since it would be cheaper, more convenient and faster than taking the gondola. It would also only be able to ferry a tiny fraction of the amount of canyon goers on busy days. I think the only people who would use the gondola are tourists and extremely casual wealthy resort skiers and these people are not the ones all rushing up the canyon causing traffic.</p> <p>It would also be a very expensive and disruptive project that we likely wouldn't see completed for years. This seems an unacceptable waste of time and money when there are far cheaper and more effective solutions: a much expanded, and free (or very cheap) bus system combined with tolling the canyon road and some strategically placed snow sheds to help with avalanche-prone stretches of road.</p> <p>Another issue is that a wide variety of people use the canyon and only some of them are going to a ski resort. Back country skiers, climbers, etc aren't served at all by the gondola.</p>
34618	Judd Ricks	<p>this will ruin little cottonwood canyon for locals and visitors alike. please protect utah's wild lands! Don't do it!!!!</p>
34619	Tim Garrett	<p>I am opposed to building the gondola in LCC. Increased bus service combined with improved avalanche mitigation practices offer a more cost-effective approach that maintains the character of a regional gem. Regards Tim Garrett</p>
34620	Ben Ricketts	<p>I appreciate the changes made from the initial EIS to the Final EIS. Taking into account lower canyon trailhead parking is commendable, as well as the improvements to Wasatch Boulevard. As a Cottonwood Heights resident I support these changes to Little Cottonwood Canyon.</p> <p>However, adding a Gondola is a massive leap that should not even be considered until it is determined that other solutions do not fix the problem. Ideas, like tolling and requiring parking reservations at all resorts in Little Cottonwood and Big Cottonwood Canyons could completely fix the traffic issues when combined with more buses, tolling, and snow sheds.</p> <p>It has been my experience that requiring parking reservations had the single biggest impact on improving traffic in Little Cottonwood Canyon that I have seen in the 18 years I have lived in the area. It's been my experience that 30% to 50% of the skiers that drive up and down Little Cottonwood Canyon do not want to be driving up the canyon at 7:00am - 9:00am but have to try to get up that early to compete for parking spots.</p> <p>When these skiers know they have a reserved spot, many choose to wait until much later in the morning. This has the effect of spreading out the traffic surge over a larger time period reducing peak traffic congestion and those who do not have a parking reservation would learn to not drive up the Canyon, but instead automatically get pushed to using buses. Further reducing traffic in the Canyons.</p> <p>Again, please continue to attack other alternatives before jumping to the conclusion that a massive gondola is the best alternative to support two private businesses</p>
34621	Lorenzo Vascotto	<p>The dot should be ashamed of themselves. They have systematically reduced bus service for years. There used to be buses direct to Alta, now one has to spend 25 minutes going through snowbird. No wonder more people drive. Dot has also closed parking lots. Whether one is in favor or against the gondola the dot should be providing much better bus service to mitigate traffic, either short term or long term. I would bet with good bus service and a toll for cars going up, traffic would be significantly reduce. I have been skiing Alta for 30 years, I moved to utah to ski Alta. The dot is self serving in their partisan favor of the gondola or they are playing politics. Only 20 % of locals ski, why should our tax dollars pay to line corporate pockets. If the resorts want the gondola they should pay for it. If the government pay, meaning tax payers, it is just another sign of big corporations having politicians in their pockets. One billion dollars of tax payers money to increase corporate taxes and only used 14 weeks a year. The economics don't make rational sense.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34622	Melissa Willes	I'm not against a gondola, but I am against taxes funding this. It should be funded by the ski resorts, they are the ones who will ultimately benefit.
34623	Julie Walkingshaw	I love this canyon. In the 1970's as a teenager it was where I went to find myself and be with nature. So many treasured memories. I want others, especially the future generations, to know it like I do. Do your best and choose wisely. Thank you. It is precious.
34624	Emily Pitsch	I believe UDOT should release data/models showing that commuter traffic is improved on Wasatch Boulevard by widening the road from Fort Union to the fork of Wasatch Boulevard and SR210. Assuming most commuters are not entering LCC, but are continuing on Wasatch Boulevard, the sudden narrowing of the road would cause a backup on Wasatch Boulevard. That assumption is using UDOT's assumptions that road widening will improve traffic. I believe, because of this widening Wasatch Boulevard does not accomplish UDOT's "primary objective" to "substantially improve roadway safety, reliability, and mobility..." in regards to "decreased mobility on Wasatch Boulevard from commuter traffic. If widening Wasatch Boulevard does accomplish the traffic goal, I believe UDOT needs to further support that by releasing a model.
34625	Whitaker Morgan	Why are we utilizing tax funds to service two private business in the recreation industry? A portion of these funds could be utilized to maintain or improve the existing bus transportation system. The most recent announcement that bus service would be reduced this winter due to a lack of drivers/funding is a prime example. Put more funds towards education and pay teachers a living wage. I am an avid skier and mountaineer and do not want to see the canyon turned into a resort monopoly. I am also a resident in cottonwood heights (near wasatch) and can speak first hand to the fact that something needs to be done, just not a gondola.
34626	Angelina Miller	UDOT should consider another alternative to the gondola that will benefit more of the residents of the valley and make the traffic in the canyons better in order to improve our air quality. The best alternative for this could be a phased bus approach (ideally electric) before continuing with the gondola plan.
34627	Kat Lapp	I have been a resident in Salt Lake City for 5 years now. I enjoy skiing, climbing, and hiking in our canyons. I love our canyons, and the traffic they are both facing needs a solution - the gondola is not it. Our watershed, our tax payer money, and our local community do not benefit from this project. Salt Lakes ski resorts are violating public land under the guise of tourism and access.
34628	Julie Sanders	I am a SLC resident who enjoys visiting Little Cottonwood Canyon. I am not in favor of the gondola. I have ridden in gondolas in Europe. They are huge and take up lots of space. Aesthetically it will detract from the natural beauty of the canyon. I cannot figure out how it will load and unload passengers to and from Snowbird/Alta in a timely manner. At best, you would add at least an hour to your ski day by using the gondola. In addition to the cost of a ski pass, locals and visitors would have to pay for the cost of a gondola ticket and parking at the base of the canyon. This makes skiing extremely costly, which will affect who uses the resorts and the bottom line for the resort itself. What about the rest of the year after the ski season is over? Hikers and bikers won't use it. Traffic congestion will continue. This idea does not solve the problem at hand. UDOT is making a canyon visit unaffordable and a good part of the state's revenue depends on the tourist trade. I as a SLC resident don't want to pay for a poorly thought out idea that benefits the minority of our population. I suspect this is a done deal and no matter how many anti gondola comments there are that this will go through. Someone (who owns the parking lot land?) will make a mint of money off a bad and expensive idea.
34629	Brooke Rasina	The proposed gondola will not only create noise and visual pollution, but cause non-reversible damage to the canyon itself. It will destroy classic boulders, take away parking from other canyon users, and do nothing to solve traffic issues. The gondola will only service the ski resorts, making it not useful to a large majority of the canyon users. This also means that it will really only be used around 20 days out of the year. This is a very costly option that does nothing but lines the pockets of the ski resorts. It negatively impacts all other users of the canyon and does nothing to improve their experience, decrease traffic, or decrease pollution. Please consider less impactful options that will actually benefit all users of the canyon - i.e. increased bus services, etc.
34630	Naamah Barkley	No more environmental degradation for the sake of greed.
34631	Nicole Cordingley	<p>A gondola is a poor choice for Little Cottonwood Canyon.</p> <ul style="list-style-type: none"> - A gondola would negatively impact traffic throughout cottonwood heights and bring traffic backups closer to the city and commuters <ul style="list-style-type: none"> - Lcc and bcc traffic on a busy ski day already backs up to the belt route and wasatch blvd. By moving skiers' destination closer to the city the traffic will have a much bigger impact on all commuters - BCC will bear an increased vehicle use impact. - BCC traffic will also add to city and belt route congestion, as BCC users will be impacted by traffic for a base at the mouth of LCC - Congestion for parking for the gondola will shift traffic problems closer to city <ul style="list-style-type: none"> - Currently it is just skiers bothering other skiers - A gondola would permanently damage the pristine beauty of little cottonwood canyon - A toll would encourage carpooling and reduce some of the highest-impact traffic - rental cars with bad tires (most likely to cause an accident delay) - A waste of money - implementing a better shuttle system would be cheaper and more effective and is the favored option of regular canyon users
34632	Nick Benoit	I am not in favor of the Gondola. Primarily due to it's inflexibility to solve traffic issues outside of peak winter traffic. It is clear spending time in little cottonwood in the summer that traffic and parking issues are present at all times of year. I am in favor of enhanced bussing due it its far superior flexibility.

34633	Aaron Dekeyzer	<p>The "phased approach" is advocated for by overwhelming numbers in our community and a majority elected officials. There are no good arguments against the phased approach, other than it is not one of the two final alternatives. This makes me question what consideration it received, and how it was eliminated.</p> <p>I also wonder how it was that this whole process was kicked off. There were political insiders who knew they could personally benefit from this process, like our former state senate president, who passed SB71 to allow for tolling.</p> <p>I also want to know how common it is for a third party group like Gondola Works to be as involved as they are in an EIS. The amount of marketing and advertising they have subjected our community to is staggering. Why do this if it is not a popularity contest?</p> <p>Representative Bennion and Senator Anderegg have called for an audit, and as far as I know nothing has happened. It will be critical for the audit timeline to go back far enough so that we may understand how the original 100 million dollars was appropriated to create the original need for the project. Also, I believe that GRAMMA requests for communications between February 24, 2020 to September 3, 2021 are important because this is the timeframe that the gondola base station land was under contract. There would have been a number of communications to assess the risk of purchasing such a parcel as the EIS was less than a year underway. It seems that the political insiders and developers knew the gondola would be chosen before it was because of the land purchase timeline.</p> <p>This process is corrupt, and while it may not be illegal, it stinks to high heaven. It is so sad and unfortunate that two former politicians/developers and two ski resorts will benefit from taxpayer dollars against the wishes of the community. This is wrong.</p> <p>It seems that it is too late to turn back or select neither of the alternatives. I would just hope that decisionmakers at UDOT understand just how detrimental this decision will be on the community they are supposed to serve.</p>
34634	Kelly WAde	<p>as a resident since 1953 what emergency plans are been included if a severe wind storm comes in? bad weather, what are the tax ramifications, Parking for amount of skiers. snowboarders have been considered or put in place if plan passes? i recommend a holding period until all and every option has been thought of including NO INCREASE IN taxes. everyone is being taxes be on comfort!</p>
34635	Matthew Monosson	<p>The gondola is not the correct option to fix the problem of the canyon. It is a money grab by corrupt people who don't care about little cottonwood canyon. Please please please listen to the residents of salt lake and find another option</p>
34636	Tanner Jones	<p>Build that Gondola!</p>
34637	Julie Sanders	<p>I am not in favor of a gondola. It makes more sense to me to widen the road and buy more busses that are energy efficient (natural gas, electric). Busses can be used in other parts of the valley when not in use in the winter in the canyons. Busses can depart from different parts of the valley, not just at the base of the canyon. This would cut down on car congestion. This idea does not pad peoples pockets and is energy efficient and is usable for everyone. Long term it is probably less costly, too. UDot seems to not want to consider anything other than what they want to do...why? local mayors are against the idea! And at what cost to the taxpayer? and who is really benefitting? Not the consumer, not the wildlife, just whomever is making money off of the project.</p>
34638	Colleen Daley	<p>I think that there are other alternatives than changing the face of the mountains. It is hard as a group to see other alternatives when you have been massaging one proposal for four years. This happens with people long on the board such as planning commissions. I have witnessed that a lot in Utah and other states. Have you approached the U of U. Gain some original insight from environmental engineers and activists. There has to be a better 21st century approach. This will contribute to the precious quality of life in Utah disintegrating. No parking, all bussing...NO GONDOLA and minimal widening of road.</p> <p>Thank You</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34639	John Ryan	<p>To begin, I believe that the UDOT operations in all Wasatch Canyons need to be rolled into a new, separate Utah State Department, independent from UDOT, with its own staff and budget. For the last decade, or so, the department has struggled to keep up with the nuances of demands that each canyon is challenged with. To me, it seems that the highway department can't effectively manage these unique geological and environmental features amidst heavy human demand and the ongoing seasonal demands presented by extreme winter weather every year. It's just too much to handle under the UDOT structure at present. UDOT has lost its ability to manage traffic in any canyon.</p> <p>Beyond that, I oppose the construction of a gondola in Little Cottonwood Canyon for the following reasons:</p> <p>Construction of the gondola will destroy sensitive habitats all along Little Cottonwood Creek.</p> <p>Nothing in the plan delineates how the cost of the project will be funded. Taxpayer-funded, corporate welfare is not an option.</p> <p>Revive One Wasatch as a functional option by spreading access to Big and Little across numerous terminals in the Wasatch Front and Back.</p> <p>A gondola would be necessarily subject to extreme and unsafe weather conditions that could threaten the lives of airborne travelers in an emergency, apart from hazards presented by human error and mechanical failures posed by stranding people 225 feet in the air.</p> <p>The gondola will add travelers to the canyon well beyond the current census, increasing on-slope risks at Snowbird and Alta which invariably will increase the liability for each area operator—all apart from the added environmental pressures of increased usership on an extremely sensitive ecosystem.</p> <p>The gondola will do nothing to alleviate congestion on SR210, nor will it allow access equally to all users, such as climbers and back-country skiers.</p> <p>The gondola will necessarily diminish the experience of ALL users by adding an unsustainable amount of visitors for the benefit of the operators only, not for the citizens of Utah or visitors.</p>
34640	Colleen Burns	No gondola, stop trying to ruin Mother Nature even more
34641	Jim Tschabrun	I've been a skier my entire life - coaching for the US Ski Team is what brought me to UT in 2006. Even so, this Gondola does not make sense. To subsidize the resorts makes no sense, especially when so many of the canyons users and the water from it have nothing to do with skiing. Eliminating trails and climbing areas that bring tourism without costing taxpayers any money makes no sense. I don't understand why we would entertain the gondola option, especially as our winters get shorter and the lake that provides so much of the snow is at record low levels. Thanks
34642	Eliza Cowie	<p>Don't use air quality as an excuse for bad public policy.</p> <p>My name is Eliza Cowie, I am a Salt Lake resident and spend my day job as the policy director for o2 Utah, a Salt Lake based environmental nonprofit focused on addressing Wasatch Front air quality issues through transportation, building standards, industrial emitters and elections. In my free time, I frequent Little Cottonwood Canyon most days of the week, especially during the ski season. My concerns with this proposal are both deeply professional and personal.</p> <p>I write today to urge UDOT to reconsider their stance on Gondola B as the preferred alternative in Little Cottonwood Canyon. In their original Environmental Impact Statement, UDOT noted that Gondola B will "improve air quality, protect the watershed, and increase the quality of life for residents and canyon users by reducing traffic congestion," as well as reduce in-canyon emissions by 56%. However, this proposal does little to directly address air quality, especially as it relates to transportation emissions, and will cost Utahns over \$550 Million to just get off the ground. This proposal retracted a provision that would include public transportation to parking areas, in lieu of 1,000 more parking spaces, and its end stage does little to restrict cars going up the canyon. As our friends at Save Our Canyons stated, by widening the road and simply adding a gondola, UDOT is encouraging more cars to go up the canyon, not less.</p> <p>UDOT's purpose in studying the gondola was addressing skier traffic. It wasn't to ask what was best for Little Cottonwood. And it wasn't to solve the Wasatch Front's air quality challenges. If Utah wants to address air quality, let's spend the cost of the gondola-\$550 million-on real transportation solutions with broad benefits, like an emissions-free FrontRunner. But don't use air quality as an excuse for bad public policy.</p>
34643	J C	No gondola. Doesn't make fiscal sense. Doesn't have enough capacity. We should focus on reducing capacity not increasing it. Stupid idea. If you implement a gondola you are incompetent.
34644	Brooke Larson	Do not do this to our canyon. I am 22 years old and have visited lcc for its hiking and beauty at least once a year since birth. Do not ruins its views and legacy for those who have visited it already. Please seek more effective solutions. This gondola does not serve the public like me it has only private interests in mind. This solution will only cost the public more money and make skiing more expensive and hard to access as well as make the mountain more difficult to access in general. Please pursue other options, invest in true advances in busing public transportation, that will save our mountains NOT THIS GONDOLA.
34645	Thomas Rathke	All the reasons still hold true that we mentioned in my first comment that the Gondola is necessary. We really like the Gondola B alternative because anything that involves more vehicles is off the table for us. We can no longer tolerate the traffic in Little Cottonwood Canyon so we avoid it and the businesses in the Alta/Snowbird areas. Increasing bus service goes against our feeling that vehicular traffic must be reduced at all costs. If it works great for the Alps, it's great for here.

ID	Full Name	Comment
34646	Chris Adams	<p>The Wasatch Backcountry Alliance (WBA) is a local SLC nonprofit representing the interests of thousands of backcountry - and resort - users both locally and nationally as they pertain to the preservation of the famous non-resort terrain in the Tri-Canyon area. We have paid very close attention to the LCC EIS transportation process, and this is our formal comment.</p> <p>WBA agrees with UDOT that a preferred solution will represent a summary of key concerns expressed within the public comments that were received and processed: EQUITABLE PUBLIC ACCESS to dispersed recreation, OVERCROWDING, VISUAL IMPACTS, WATER QUALITY IMPACTS, AND YEAR-ROUND ACCESS for a majority of visitors. The proposed solution does not address these aspects - below is a list of issues that we see with UDOT choosing Gondola Alternative B as its preferred alternative:</p> <p>Dispersed Use - UDOT claims to have "Consideration of all canyon users, not just resort visitors," but by only having resort terminals and not operating year-round it's clear that this is disingenuous at best. It is well known that the White Pine trailhead is wildly popular year-round, with cars parking up and down the highway for up to a mile in either direction at all times of the year. This not only forces people to be far from their intended destination, it also creates a significant safety hazard along the state highway. The argument that UDOT uses for not stopping at White Pine is that there will be less traffic on the highway due to the gondola, thereby enabling White Pine users to drive to the lot is a red herring. WBA does not think that vehicle traffic will be abated enough (if at all) by the gondola to justify this conclusion. Backcountry users - like resort patrons - want to be able to use public transit in lieu of their own vehicles to access the canyon, but that is not possible under the current proposal.</p> <p>Economic Benefit - The EIS states: "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." WBA does not feel that enriching two private entities is UDOT's mission or responsibility and that applying taxpayer dollars to that end is a reckless use of public funds. Meanwhile, it should be noted that the latest Snowsports Industries of America participation numbers (2021-22) show a nearly 6% decrease in resort skiers and a 96% increase in backcountry skiers. Furthermore, data from the National Ski Area Association likewise indicates that participation in resort skiing has remained essentially flat for the last 30 years. More broadly accessible, dispersed activities such as backcountry skiing, snowboard touring, nordic skiing and snowshoeing on the other hand are among the fastest growing segments of the snowsports industry. And yet these increasingly popular activities, which should be made accessible to a majority of visitors to LCC, are fundamentally ignored by this proposal.</p> <p>Expense - The initial cost proposed by UDOT for the gondola was \$550M. This was pre-inflationary times, so even in the last year that figure will have risen to \$600M, if not significantly higher (which WBA suspects to be the case). Even if the cost has only increased by \$50M, that means that every single person in Utah is "paying" \$200 each to have what is</p>
34647	Stephanie Burdick	<p>Oppose the gondola. This should not be a focus of taxpayer funds. I support efforts to ensure all zip codes in salt lake county have access to recreational opportunities. This is a clear situation of government picking winners and losers. The ski resorts should take on 90% of the costs associated with mostly tourists accessing their business.</p>
34648	Tyler Cruickshank	<p>I'm a 20+ year resident of SLC. I know longer ski in LCC because of the traffic. It's not worth it.</p> <p>Having said that, the gondola is a half billion dollars that would be far better spent in other areas of our community not as a tourist attraction for the two ski resorts.</p> <p>I really dont see how this is so complicated. Establish a Zion Nat Park shuttle system. Done (although I know parking is still an issue). Oh, and build snow sheds for the avalanche paths.</p> <p>If the decision is to toll the road then it would really need to be an EZ Pass type drive through system vs a toll booth. That would be a nightmare.</p> <p>At the end of the day though, the days of old are gone. it's just the way it is.</p>
34649	Jeffrey Christensen	<p>I'm a resident of Salt Lake City. This tram project is a terrible idea. I have data from snowbird and Alta that indicates on a busy day there are more than 8500 skiers and snowboarders going up and down the canyon in a single day. The team can only transport 1000 people per hour. It would take 8.5 hours to transport all those guests up the canyon and 8.5 hours to transfer all those guests down the canyon. If all of those guests try to leave at 4:00am you would not get home until 1:30am. This is a terribly inefficient form of transportation. Please do not waste my taxpayer money to build such an atrocity!</p>
34650	Sonya Stoklosa	<ol style="list-style-type: none"> 1) The EIS was not adequate in scope. The canyons and roads in the vicinity need to be looked at in total. Big Cottonwood Canyon, impacts from 9400 South, Parleys or the Wasatch Back were not taken into account in the EIS. 2) Watershed effects were not adequately considered or studied. 3) Viable alternatives explored or presented. 4) Current traffic patterns were not analyzed systematically or rigorously. 5) The cost structures of the gondola were not analyzed rigorously.
34651	Dallis Christensen	<p>No doubt we need a good solution for transportation up our canyons. A Gondola isn't good solution. It's a giant bottleneck and will ultimately be a waist of public money. DO NOT BUILD A GONDOLA It is not a solution</p>
34652	Nancy Dahill	<p>The proposed Gondola, no matter how novel, does not substantially address the tragic problems of little Cottonwood Canyon.</p>
34653	Jim Pennock	<p>There are lots of rock climbing access trail in that area that MUST be maintained. If the gondola is going to stop access to the climbing sights then another solution for the canyon must be found. Don't ruin the canyon thinking you are saving it.</p>
34654	Donald K Stepan	<p>I still think the Gondola is the best resolution of traffic in Little Cottonwood Canyon. A bus resolution WILL NOT solve the traffic problem, but instead will just add to it. The buses will get hung up in traffic just like every other vehicle trying to get up and down the canyon.</p>

34655	John Evans	I do not support the creation of a gondola in Little Cottonwood Canyon. This would create everlasting changes to character and visual beauty of the canyon that would impact the canyon year-round. While the functionality of the gondola only is really achieved a dozen or more weekends in the winter season. This is not an appropriate trade-off. Summer and mid week visitors should not be made to suffer the sight of the gondola in the canyon to benefit a small sub set of the canyon's weekend, winter visitors. Alternatives that emphasize busses, carpooling, tolls, and limits to the total number of canyon visitors allowed should be implemented first and their impact assessed before embarking on something as permanent as the gondola.
34656	James-Erik Schow	The footprint of a gondola is significant and offensive to the beauty of our state. Use existing infrastructure and have an express bus.
34657	Joseph Anderson	I strongly support the gondola option. I understand that the other option would be to widen the Little Cottonwood Canyon Road and we would destroy 80 acres in the canyon for this project. Along with destroying 80 acres there are other concerns that come along. One is that that road is treacherous in the winter do to avalanches, icy roads and packed snow on the roads. All we would need is one bus to slide off the road and that would end up being a major scandal. Plus, with other environmental concerns are more pollution from many more buses that would need to ferry people up and down the canyon. I have heard that electric buses have been mentioned. How many EV buses would we need? I'm sure these buses can't run all day on one charge. Would they actually work on these icy roads?
34658	Liz Harris	I am against the building of the gondola and the expansion of wasatch blvd. This will only increase traffic in an already busy area and will not be good for the local wildlife.
34659	spencer jacobs	<p>Widening the road with a 3rd, dedicated bus lane (busses only), and increased bus capacity (paid for by the resorts), and a few snow sheds in the critical avalanche terrain, is the option that makes the most sense. Snowsheds can be covered with natural ground cover and vegetation, providing a safe, natural land bridge for wildlife, while also increasing the beauty of the canyon.</p> <p>A slight widening of the road will not ruin or disturb too many bouldering spots, and will not destroy any of the world class climbing in little cottonwood.</p> <p>A gondola is a TERRIBLE choice for so many reasons:</p> <ol style="list-style-type: none"> 1. It will not reduce traffic/cars in the canyon or approach roads. It will actually make traffice at the mouth of the canyon(s) and surrounding streets words. 2. It's a total tourist attraction farce-we don't need more tourists. EVERYONE already knows about the prime snow conditions, terrain and convenience of winter recreation in Utah. People are coming here regardless. Too many. The gondola isn't going to fix that. 3. It's claimed that it will get more people to the resorts. It's ONLY taking people to the resorts. The resorts should pay for it in its entirety (if it were to be built-which it shouldn't). Taxes should NOT be used for a gondola that the majority of taxpayers would not use. 4. Unsafe for Climbers to be on routes while having a huge gondola passing by at eye level. 5. Makes zero sense to spend that much money on a solution that only would benefit and/or bypass avalanche mitigation on only a handful of days, and only in the winter.
34660	Marshall Baillie	<p>The gondola spends public funds for private entity makes no sense. Let Snowbird and Alta pay for the gondola</p> <p>Use busses</p> <p>Make more parking in the valley, then bus folks up</p> <p>Plan for heavy flow days, use the weather forecast, use historical traffic data</p>
34661	Greta Sommerfeld	<p>Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging.</p> <p>They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses.</p> <p>The Utah Transportation EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts.," [Ch. 6]</p>

ID	Full Name	Comment
34662	Catherine King	<p>October 12, 2022</p> <p>Catherine & William King </p> <p>Little Cottonwood Canyon EIS c/o HDR 2825 E Cottonwood Parkway, Suite 200 Cottonwood Heights, UT 84121 littlecottonwoodeis@utah.gov</p> <p>To whom it may concern: We are strenuously opposed to the proposed use of a gondola in Little Cottonwood Canyon for three reasons.</p> <p>It would have a huge negative environmental impact on everything in Little Cottonwood Canyon (LCC). Making it possible to pack more people into the canyon will cause more harm. In the long run, it would be ineffectual due to the low carrying capacity of the gondola. Hauling 900 people per hour out of more than 21,000 during peak hours won't make much of a dent, a very poor cost benefit ratio. Spending \$500,000,000 of taxpayer money to subsidize only the two ski resorts and not the rest of the canyon is unethical. Why should two private resorts receive these taxpayer subsidies?</p> <p>The number of private vehicles going up LCC should be capped daily at pre-2019 levels. The use and encouragement of carpooling, tolling, bus rapid transit and a reservation system or even on just a "first come, first serve," should take priority in managing the traffic in LCC to solve the problem. The gondola won't begin to solve the problem.</p> <p>Thank you for the opportunity to make comments. Sincerely, Catherine and William King</p>
34663	Greta Sommerfeld	<p>The gondola ignores local public & political opinion.</p> <p>80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll.</p> <p>Salt Lake County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski and many other elected officials agree.</p> <p>"Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions. Parking hubs in the valley, electric busing with regular routes, carpooling and tolling, reservations, common-sense solutions that are fiscally sound," Wilson said at the Truth About the Proposed Gondola event in June.</p> <p>With no trailhead or backcountry access, the gondola is far from a solution that benefits all of LCC's users throughout the year.</p>
34664	Elena Hadjicharalam	<p>No gondola, please. It would change the aesthetics, it's WILDLY expensive and the installation would hurt the the environment.</p>
34665	Jed Hill	<p>As a Utah resident and Little Cottonwood Canyon outdoor user I'm 100% opposed to the proposed gondola and wish to see it removed as a option for transit.</p> <p>Jed Hill Taylorsville, Utah</p>
35525	Steve Sabin	<p>I am in favor of the gondola option. Just came back from Switzerland and they have gondolas everywhere and they have done it without damaging the environment and it is such an efficient way of transferring many people- with minimal impact. Steve sabin</p>
34666	Karen Platis	<p>I strongly oppose building a gondola in Big Cottonwood Canyon to accommodate skier who frequent two ski areas, using taxpayer money. I have skied for many years at both Alta and Snowbird and understand the frustration of parking there. However, I fear the "solution," of a gondola will cause more harm than good. With climate change I believe we will be lucky to have 30 more years of a ski industry in Utah. And having a gondola will not address the harm to the environment in an already fragile canyon. I hope UDOT will decide against this boondoggle and waste of taxpayers money. Money better spent in saving the Great Salt Lake, not lining the pocket of a couple of ski resorts.</p>
34667	Kameron Harper	<p>Stop subsidizing private companies with public tax dollars to aid in the long-term money mongering if Snowbird. The Gondola is not the right way.</p>
34668	kathryn wright	<p>I am opposed to a gondola in Little Cottonwood Canyon. I am in favor of enhanced bus service and a toll to use the canyon.</p>
34669	Jim Dahle	<p>Every time I explain the options and their pluses and minuses to anyone, they reply, "Well the gondola is stupid, why are they even considering that?" The only people who want it either don't understand the issues or have a conflict of interest.</p>

ID	Full Name	Comment
34670	Quinn Weber	<p>My family and I are vehemently opposed to the Little Cottonwood Canyon gondola project.</p> <p>Please protect the canyon and the Wasatch range from this abhorrent project idea.</p> <p>There are better solutions to the Little Cottonwood Canyon traffic congestion situation.</p> <p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean," the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium," parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world class climbing areas. Rather, let's use solutions that already exist.</p>
34671	Roman Takasaki	<p>After reviewing the proposed modes of transportation in LCC I am very against a gondola. I feel it would permanently spoil the beauty of the canyon. A dedicated bus service would accomplish the same goals at much less cost.</p>
34672	Robert Wheat	<p>I along with the majority of the Utah population do not support the Gondola option for Little Cottonwood Canyon. The State should not be responsible financially for adding infrastructure that only supports the resorts. If the resorts want a gondola, they should propose it and pay for it.</p> <p>A gondola in Little Cottonwood Canyon is against most canyon users' desire to improve transportation within the canyon. Additional bus lanes and avalanche tunnels can better meet the canyon needs and also allow for stops at various trailheads along the route to improve overall canyon use in both summer and winter.</p> <p>Please do not continue to pursue an ugly gondola within Little Cottonwood Canyon that the public has repeatedly spoken against at all public hearings and comment periods.</p>
34673	Robert Flores	<p>The gondola is not the best alternative. It would have unacceptable detrimental effects on multiple aspects of the canyon and important uses of the canyon. I have been a regular visitor to the canyon for over 50 years. I have regularly skied at Alta (beginning since before Snowbird was opened) and I regularly visit the canyon for hiking, snowshoeing, XC and backcountry skiing. I have visited other areas around the world where gondolas are in place, including Switzerland and Austria, and have experienced the negative effects that gondolas have had there. A gondola in LCC would greatly detract from the wild quality of the canyon from the canyon mouth to the western boundary of Snowbird, through all seasons, which is especially of concern for the periods when the resorts are not open for skiing (the majority of each year). I am very skeptical about the economic viability of the gondola as compared to the other alternatives. Although the traffic in the canyon has dramatically increased over the past several years, even in non-skiing periods, it seems very clear that at least for the next 10-15 years, the traffic levels that might result in sufficient demand for economical daily operation of a gondola will occur only during peak ski season, and only on weekends during most of the ski season. The gondola machinery will sit idle for the majority of days of each year.</p> <p>Improved bus service during high demand periods, including some road widening and dedicated "very high HOV," lanes would be a better approach to plan on for these next 10-15 years.</p> <p>My thanks to everyone involved in seeking best solutions to the very complex issues. As the remaining decisions are made, please place a very high value on preserving the "wild," qualities of the beloved canyon and mountain environments. For me and many others those qualities are the core of the benefits of living on the Wasatch Front.</p>
34674	Elissa Mccullough	<p>This proposal would detract from the accessibility and function of the canyon. Access to specific hikes, rock climbing routes, camping locations, etc... would be lost. Families with small children, wheelchairs, and elderly people would lose access to several locations because they would be too far from gondola stops. You would provide access only to a targeted and limited audience of healthy, active, young community members.</p> <p>The traffic concern is a very real problem, and we appreciate your willingness to tackle this. However, the solution should not limit the old and the young's chances to enjoy the beauty of the earth.</p>

ID	Full Name	Comment
34675	Erin Gruber	No to the gondola! I am a Cottonwood Heights resident and we do not need a gondola. Everyone knows that this will not solve the (supposed) traffic issue and only stands to enrich the owners of private companies but will be paid by public funds. There are other, more viable, more common sense options. NO TO THE GONDOLA! Of course, it won't matter what we the people want, because UDOT doesn't care about those things, and are too busy helping out their little buddies who stand to make money off of this gondola at the expense of everyone else. NO TO THE GONDOLA!!
34676	Matt McLaren	<p>I am strongly opposed to UDOT's preferred Gondola alternative B as a solution for decreasing congestion in LCC. There are better low cost solutions which have either not been tested or fully implemented.</p> <p>Some of these lower cost solutions include but are not limited to a toll on all non-resident personal vehicles entering LCC - not just above entry 1. Duplicate Solitude's usage of a sliding scale with an inverse relationship between the price of the toll and the amount of people in the toll paying vehicle. This would also encourage car-pooling. Payment of a toll would grant that vehicle the right to park in any legal parking spot in LCC and is not tied to the purchase of a ski pass. All funds generated from tolls would be used to mitigate the cost to taxpayers for avalanche path snowsheds, enhanced bus service, traction enforcement and improved trailhead parking and facilities.</p> <p>In addition, implement a toll seasons pass option, with the opportunity to purchase a LCC parking seasons pass predicated on having a UDOT Cottonwood Canyon sticker and qualifying 4x4 or AWD vehicle. Grant these qualifying vehicles the ability to bypass the toll station/traction enforcement line.</p> <p>While on the subject of snow tires, how about enforcing snow tire/traction laws with the same vim and vigor alcohol laws are enforced in Utah? It is a low cost high benefit solution which keeps non winter worthy cars off the highway.</p> <p>As a former resident of the [REDACTED] neighborhood in Cottonwood Heights, dealing with powder day traffic is a known entity and an accepted cost of living there. The direction of travel for the vast amount of trips being made by neighborhood residents is the opposite direction of ski traffic. This is an inconvenience you learn to plan around. Cottonwood Heights residents and government have opposed both the widening of Wasatch Boulevard and the gondola. They accept the tradeoff between occasional traffic backing up into the neighborhoods compared to the permanent negative impact of widening Wasatch Boulevard and building a gondola.</p> <p>The gondola is not a cost effective solution, particularly when better congestion mitigation solutions outlined above have not been fully implemented. It's obvious the cost estimate of the La Caille gondola solution (\$391 million) would end up costing at least 2-3x that amount given current inflationary pressure and significantly higher borrowing costs. The visual impact to LCC is unacceptable and degrees of magnitude worse than the visual impact snowsheds and a 3rd lane for buses would represent. A gondola cannot run during interlude restrictions or during avalanche mitigation efforts. If a gondola is truly needed as a secondary emergency egress, why not run one over the ridge to BCC, or Summit or Wasatch counties? As currently constituted, the LCC gondola offload points are fixed and limited to just Snowbird and Alta. Buses have a ton more flexibility. For example the BCC bus stops at the Spruces Campground. Finally, the idea of gondola sponsorships earning \$4m million annually is laughable.</p>
34677	Jackson Yip	A gondola in Little Cottonwood Canyon is a waste of taxpayer dollars to serve corporations over citizens. Please do not build a gondola
34678	Rose Gacnik-Flores	Absolutely NO on the proposed gondola!! Thank you for the opportunity to comment.
34679	Adam Payton	The gondola "solution" to the little cottonwood traffic problems has to be one of the dumbest ideas for addressing the issues at hand. It would be an expensive eye-sore built exclusively to cater to a select group of individuals. There are numerous significantly better alternatives, including those already outline as part of this proposal, such as expanding busing and tolling (heavily) for single occupancy vehicles. Build a large parking area, buy some buses, and restrict vehicle access. We don't use gondolas to get kids to school for good reasons, and we sure don't need one to get skiers up a canyon with a perfectly good road in it.
34680	Marie Guarascio	Not a fan of proposal
34681	Ann Bradshaw	Yes there is a problem with traffic going up LCC. The gondola is the worst way to solve this problem. The only people that support it will benefit from it financially. This is a terrible idea and extremely expensive for a hand full of powder days in the winter. It will take to long to get people up the canyon so no one will use it. We need to solve the problem of the great salt lake way before even thinking about the traffic up the canyon. I am angry that any would think that the gondola is good in any way. Please do not move forward with this plan. Ann Bradshaw
34682	Emily Woodruff	I am opposed to a gondola in Little Cottonwood Canyon. The gondola is a poor solution to the traffic congestion in Little Cottonwood because it will only serve a select group of people going to the ski resorts and it will impede the use of the canyon for other activities (i.e., climbing, hiking). An enhanced bus service would be a much better solution, using the road that already exists in the canyon. Additionally, as a Utah resident and voter, I am concerned about the initial construction cost of the gondola, given that it is only serving the ski resorts.
34683	Ted Merritt	I do NOT want or support a gondola. I also do not want to or support widening the road. Make LCC AND BCC both toll roads and use the revenue to expand bus service and make it free. CHECK TIRES AGAIN!!! There are SO many ways traffic can be improved without spending half a billion tax payer dollars so Snowbird and Alta can make more money... SHAMEFUL
34684	Bob Silver	NO GONDOLA!!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34685	Emily Pitsch	<p>I believe further analysis needs to be done with regards to the gondola and natural disasters. In the initial planning documents from UDOT, they state there is a high probability of a significant earthquake on the Wasatch Fault by 2050 and even ruled out a gondola plan because of the proximity to the gondola. However UDOT has not analyzed the impacts of the gondola by an earthquake and safety and environmental impacts the gondola would present in the case of an earthquake.</p> <p>The FEIS also does not evaluate, or even mention, the impacts a gondola would have to the environment in the case of a forest fire or how a forest fire would impact safety.</p> <p>These omissions raise questions of safety in non-extraordinary situations such as post-artillery fire. The FEIS states pre-artillery fire cabins will be removed from the "danger zone" and post-fire cables inspected by magnetic imaging devices and cameras and towers inspected by cameras (pg. 2-89). I am wondering if these techniques standard for gondola systems, or a solution to the unique circumstances of having a gondola beneath an artillery-fire zone. And if the latter, how confident UDOT is in these methods ensuring safety for the potentially hundreds of gondola passengers that could be on the system at one time.</p>
34686	Tom Wolf	How DARE you propose sending all of our money so Snowbird's owners can get richer. NO to the gondola!
34687	Carly Smith	Please choose the option for expanding the bus service! Rock climbing areas and the beauty of the canyons will be destroyed with the gondola. Please limit cars in both canyons and focus on the buses.
34688	Hugh Paik	I oppose the gondola project. I'll take a bus from now on.
34689	Herb Smith	The gondola just isn't necessary. Busses work great in Zion and tolls work great in Millcreek. Please listen to the people, not business interests... Thanks
34690	Robert Westover	NO Gondola! It's a rip-off of the taxpayers.
34691	Jeremy Clerkman	PLEASE don't put the permanent eye sore that would be the gondola in LCC for the rest of time... I favor ANY alternative over the gondola.
34692	Kathleen Nilsen	I prefer option B, the cost to the community will be less and those who use it could pay a fee.
34693	Fraser Nelson	NO NO NO to the gondola!
34694	Carrie Goldsworthy	Utah and the resort need to look for alternatives. When will it be learned that developing natural spaces to bring more people and cars is not in the best interest of the planet or the taxpayers?! DON'T BUILD A GONDOLA!
34695	Fred Swanson	As a long-time user of National Forest lands in Little Cottonwood Canyon, I oppose construction of a gondola transit system designed to serve the ski industry and real estate developers at the expense of watershed values, scenic beauty, and wildlife habitat. The Wasatch National Forest was originally set aside to safeguard watershed quality in lands that had been ravaged by mining, logging, and sheep grazing. It does not serve the public interest to spend tax dollars to speed wealthy visitors to two ski resorts. Please give all possible attention to solutions that emphasize mass transit, including bus service that accommodates hikers and snowshoers who make up a significant proportion of canyon users. Thank you.
34696	Kristopher Zyp	I don't believe a gondola is in the overall, long-term best interest of the Little Cottonwood and our community. It is an invasive project for the interest of select group of users during certain times, while degrading the canyon for indefinite future generations for other uses. I believe we would be best served by large tolls during busy/peak times that can fund less invasive infrastructure (like avalanche sheds) and public transportation improvements, and this would leave a far greater legacy of preservation and honoring the natural beauty of the canyon for future generations (than large towers).
34697	Daniel Fankhauser	Decisions regarding outdoor recreation access ought to center on environmental preservation. The expanded bus service is therefore the most desirable option to improve transportational capacity of the canyon during peak periods without further disrupting the recreational area unnecessarily for the other 315 days of the year. The other proposals, while valid solutions for increasing canyon access during the 50 expected ski days, present drawbacks that are vastly incongruent with their benefits and thus should be considered irreconcilable and difficult to justify. Sincerely, an optimistic local
34698	Jerome Stasny	Thank you. A gondola will not in any way relieve congestion. It will only compound it at the base of the canyon. A gondola only provides access for the elite to travel away from the many good people of SLC and surrounding areas. My wife and I take the bus to Alta. It is inexpensive and actually expedient. It would be best to add bus service on the 209. Repair, and enhance the road for smoother travel. Update parking for all season use. During winter months, tighten controls over vehicles not suitable for driving on winding mountain roads in the snow. Ditch the gondola. And tell the former State Senator land developer and the guy that owns the French Restaurant at the base of the canyon where the gondola would start, to politely and kindly, "go pound sand".
34699	Michele Evans	<p>I do not support the gondola option. It will forever change the visual nature of the canyon. The gondola option will make all of us suffer this huge change, year round for a few high traffic days in the winter and Snowbird's Octoberfest.</p> <p>I do support the expanded bus and implementing tolls with car pooling scaled rates on these high traffic days. Any option needs multi-level parking for any kind of mass transit pick up/ drop off points for the canyons. Please don't put in a gondola!!!</p> <p>Thank you, Michele</p>
34700	Lorien Kuster	I do not support the gondola in Little Cottonwood Canyon. If there are recreational activities and resources there already, they should be preserved, not destroyed. Climbing and hiking trails should be safe and left untouched.
34701	David Oliva	I'm am a resident and strongly oppose the gondola for LCC. There are numerous other options for traffic that would not cost as much or have the same negative impact on the canyon. I vote and do not want my tax dollars funding transportation that only goes to the for profit resorts. Any addde transportation up the canyon should serve as many of the canyon users as possible. Not just funnel them to corporate owned entities.

ID	Full Name	Comment
38675	Anonymous	<p>No to Gondolas in our LC canyon</p> <p>There are other low-cost solutions That could benefit both Big & Little C canyons</p> <p>Like parking reservations, carpooling, reduced UTA fares, more buses, digital signs for # of parking spaces</p> <p>Why should we destroy our beautiful LC canyon? Why should the taxpayers pay for basically 2 private businesses to benefit?</p> <p>There's more to do in LC canyon, away from using a Gondola .. hiking, camping, rock climbing, lg families, sm children, etc. How accessible would a Gondola be for handicapped, wheelchairs, strollers, etc?</p> <p>No to Gondolas</p>
34702	Benjamin Jordan	<p>So we get to pay to ride a gondola OR pay a toll to drive & to park OR pay to ride transit? And you wonder why people who live in lower income communities don't visit the canyons much. There's no equity in these alternatives, just corporate welfare for the rich. Support market economics and make the resorts pay for this.</p>
34703	John Merkle	<p>This project is tragic to the beautiful nature of the canyon that took over 10,000 years to create. The idea that it's non-invasive is false. You're bringing in 100,000 tons of metal and cable INTO nature. That's invasive. The canyon currently only suffers bumper to bumper traffic 25-30 days out of the year and those days typically being weekends during the high season ski months (January- March). Not worth it. This idea is wasteful and I don't support this.</p>
35530	Jim Parker	<p>I am a frequent visitor to Little Cottonwood Canyon for hiking, skiing and recreation. It's about 2 1/2 miles from my house and I average visiting at least one or two times a month throughout the year.</p> <p>My concern is the traffic and parking logistics impact at the 9400 South and Wasatch Blvd intersection and general area around it. Widening Wasatch is a great idea, but I worry if it's going to be enough to prevent major traffic jams on 94th and surrounding areas.</p> <p>Perhaps this has been considered, but I expect problems depending on traffic patterns at different times of the year. Would also hope that hiking access to the canyon is not impaired by prohibitive tolls and/or user fees.</p> <p>Would also hope that zoning will continue to prevent commercial and retail at the mouth of this canyon. If allowed, I would expect it to worsen the congestion in this area further.</p> <p>Thank you for considering my feedback.</p>
34704	Brian Bass	<p>I am disappointed in UDOT's recommendation for a gondola service through Little Cottonwood Canyon. I do not believe this is a good solution for many reasons.</p> <p>First and foremost, Alta and Snowbird are not the main attractions of Little Cottonwood Canyon. The canyon itself is the main attraction. According to An Estimation of Visitor Use in Little Cottonwood, Big Cottonwood, and Millcreek Canyons prepared by the Utah State University Institute of Outdoor Recreation and Tourism in 2016, only 22.8% of vehicles using the canyon throughout the year were visiting the ski resorts. Hiking, sightseeing, camping, rock climbing, mountain biking, and backcountry skiing account for a far larger share of canyon usership through the course of the year, and yet none of these recreationists will experience benefit from a gondola. In fact, they will see a diminished experience as some current trails and recreation areas will be destroyed by the gondola towers, and the viewshed of other recreation areas will be negatively impacted.</p> <p>Next, I do not believe the gondola will work well to reduce traffic issues. Most people currently prefer to use their own cars over public transportation to the ski resorts, and by far the most common reason I see for this online is that "they 'need' their cars at the resort, so they can have their ice chest, change of clothes, etc... right there at the resort. If they were to take the bus, they wouldn't be able to carry all this stuff to the resort.," The gondola does not solve this problem, and therefore I only see people using it in large numbers once the canyon is already backed up. Therefore, the gondola might not actually reduce any congestion, it will only force more people into the resorts, creating longer lift lines, causing more on-mountain accidents and injuries, and diminishing the customer skiing experience.</p> <p>Traffic congestion is also not an issue 90% of the year. There is no congestion in the summers or winter weekdays. Even weekends when it hasn't snowed in a while see very little traffic congestion. It is debatable how urgent some kind of traffic congestion solution is and rushing into an irreversible half-billion dollar project seems rushed.</p> <p>But if a traffic congestion solution is to be implemented, there are many reasons not to choose the gondola right away. The first is cost, as the gondola alternative is far more expensive than other options that could be explored first. The gondola alternative was estimated at \$550 Million dollars in 2020, which would be equivalent to about \$600 Million now. Looking at our big project history, the Salt Lake Airport construction was initially estimated to cost \$1.8 Billion and now estimates are upward of \$4.1 Billion. The longest gondola in the world right now stands at just under 9 km. At 8 miles long, this would make the LCC gondola over 33% longer than the world's longest gondola. A construction project of this unprecedented magnitude would bring many unknowns, almost certainly causing the gondola budget to creep upward over time.</p> <p>Right here in Utah we have a perfect example of what is known to reduce traffic congestion, as we have seen Zion National</p>

ID	Full Name	Comment
34705	Colleen Rock	<p>I am writing in opposition to UDOT's recent announcement that the Gondola (Alternative B) is the preferred transportation solution for Little Cottonwood Canyon. It makes little logical sense to undertake the extensive, tax-payer funded construction of a gondola prior to implementing simpler, most cost-effective solutions such as enhanced bussing, consistent enforcement of traction laws, road tolling, and parking reservations. We have seen parking reservations work throughout the Wasatch in the last few years, and tolling has proven to be an effective solution in Millcreek Canyon.</p> <p>The gondola is not a convenient solution and will not solve traffic issues. A ski day in Little Cottonwood Canyon will consist of parking off-site (or paying a premium for one of the limited parking spots near the base), taking a bus to the base station then riding the gondola 31 minutes to Snowbird or 37 minutes to Alta. And then doing it all in reverse order at the end of the day. As cars attempt to access the gondola station rather than the canyon, traffic will be pushed out of Little Cottonwood Canyon and onto Wasatch Blvd, I-215 and surrounding neighborhoods in the Cottonwood Heights community. How is this a solution rather than just a new mess?</p> <p>While these points alone make it clear that the selection of this \$550 million+ eyesore is completely premature, they say nothing of the fact that taxpayers will be primarily footing the bill for an infrastructure project that is benefiting just two private business within the canyon, as well as the real estate developers who are licking their lips and rubbing their hands in anticipation of the windfall they will experience with their plans for the bottom of the canyon. With no trailhead or backcountry access, the gondola is far from a solution that benefits all of Little Cottonwood's users throughout the year. What a gimmick!</p> <p>Utahns do not want a gondola! Eighty percent of us said so according to a Deseret News/Hinckley Institute of Politics poll. Little Cottonwood Canyon is a true treasure of our local environment and we are investing in preserving its beauty. Stop ignoring public input and take a more tempered approach to development within this special location.</p>
34706	Pat Neves	<p>I am absolutely opposed to the gondola. The fact that you expect tax payers to fund almost a billion dollars for a monstrosity that only benefits snowbird and alta mind boggling. A better and more robust bus service is the way to go. The current buses are always packed and difficult to get on. We, the people, should not be letting snowbird off the hook for finding their portion. Say no to this boondoggle.</p>
34707	Rajive Ganguli	<p>Our preference is no action. Any improvement just increases impact. If action must be taken, we like the UDOT preferred options. It meets our requirements. It will be enjoyable to take the Gondola. We prefer that over the buses.</p>
35537	Allison Stephens	<p>Dear UDOT,</p> <p>My name is Allison Stephens and I live near [REDACTED] As a resident, I have major concerns regarding the passing of the EIS Gondola Solution.</p> <p>Firstly, I'm concerned about the worsened traffic congestion and lack of access to the canyon during the construction of the project. This could go on indefinitely, as construction inevitably takes longer than what is projected. Further delays could result from supply or funding shortages. Another potential impact to whether the project ultimately gets finished is if it were to span a change in elected officials. Public objection and voting persuasion could heavily influence future public funding for incomplete construction. This would likely leave irreversible damage due to abandoned construction and vandalism. If more money was forked out for deconstruction, there are hazards with that too.</p> <p>Secondly, as a registered voter, it is very upsetting to me that so much public money, money that should benefit the greater population, would be dumped into something that is purely recreational and mostly benefitting a small, elite community. It's even more upsetting to me that proposal discussions and decisions on which 'solutions' to focus on were held without the public's knowledge or say. Utah has bigger issues to solve (i.e. food disparities, water shortages, air quality, the housing crisis, education and healthcare needs). The funds that have been designated to address transportation issues were meant to analyze the entire state- rather than use the entirety for one road. These other issues have seen nowhere near the amount of money at its disposal as this project would get.</p> <p>Thirdly, as a Registered Nurse, and parent of a Wildlife Biologist, I'm concerned with the implications on human health in general and our wildlife population in the canyon, that would be associated with risks of potential construction spills into rivers and added sediment and waste into the watershed. The noise, pollution, destruction, and physical footprint from a gondola will disturb and deter existing wildlife-creating susceptibilities for new problems in the canyon and surrounding areas (i.e more predatory animals into residential areas).</p> <p>Fourthly, even if the Gondola project were to be completed, there will be periods of it being unusable due to general maintenance of materials, icing, avalanches, monitoring, vandals and further construction needs for erosion and flooding changes that would compromise the safety of the structure. When it is fully operable, I don't see it solving the traffic issues we are seeing now. A gondola also has less options for stops, thereby forcing riders to less destination points along the way and at a higher fee. This is not ideal.</p> <p>A gondola on such a large scale and dependent on so many factors for it to even be operable is a precarious and foolish decision. Given all of the concerns I've listed, I strongly urge you to remove the gondola from consideration.</p> <p>Shuttle and electric buses are a comfortable, yet cheaper alternative in rider fair, cost for the buses and operation. They would shorten commute time in comparison with the Gondola. It gives more options for parking (without relying on structures near the mouth of the canyon) and more options for stops along the way. It also allows for more flexibility with maintenance (i.e. if one bus is out, the whole system isn't shut down) and for usage in other areas during off seasons.</p>
34708	Beth Blackburn	<p>I don't see why we would put in a gondola-which can never be undone when we really haven't tried any other solutions... once gondola construction starts, that canyon will never be the same. I don't understand why we can't be a little more conservative and try out some other solutions first. Seems like a few people stand to make a lot of money off this project. Typical. Profits over common sense and profit at the expense of the environment.</p>
34709	Chantal Papillon	<p>I am opposed to UDOT's 2500 parking stall garage located within my neighborhood and foothill gateway to Little Cottonwood Canyon. To widen roadways and induce traffic and its associated danger, noise and air pollution into Utah's prized canyon area is unacceptable.</p>

ID	Full Name	Comment
34710	Bonnie Bass	<p>I am strongly opposed to the recommendation to implement gondola service through Little Cottonwood Canyon.</p> <p>I am a regular user of both Big and Little Cottonwood Canyons, visiting approximately 40 weekends a year in additions to occasional weeknights. I have rarely encountered traffic in the canyons since traffic congestion is not an issue for most of the year, or even for most of the day on snow days. A gondola is a permanent, expensive, and environmentally destructive structure that is overkill for the scale of the problem.</p> <p>I am also concerned that the gondola will not actually reduce canyon traffic. A gondola ticket will be expensive. Unless subsidized by the ski resort, in the best case scenario a gondola ride will cost around \$40 a person (based on current gondola sightseeing tickets at our resorts). This is not a feasible cost for a family with kids to pay in addition to ski passes, so families or groups that would otherwise carpool will continue to use their cars. I fear that once the novelty of the gondola wears off, it will be purely a tourist attraction and not used by season pass holders and others who routinely use the canyon. This is not acceptable for a project of this magnitude. In order to be successful, any solution implemented for traffic control needs to be cost-effective and convenient for the user.</p> <p>I agree with some forms of the suggested alternative such as implementing tolling and vehicle occupancy restrictions. My suggestion would be to have the resorts reserve out their parking spaces ahead of time. Anyone without a reserved parking space would then be required to take the bus to the resort. This would do far more to reduce congestion than a gondola. Recreationists that do take their cars into the canyon should then be charged a toll, which could be used to offset the costs of the buses and other more impactful capital improvements like parking lot construction for trails that don't have them, or improvements to existing lots like trash can installation. This combination of buses and tolling would do far more to reduce congestion than a gondola would, and at a lower cost. It could also be implemented immediately, rather than after a long, expensive, and irreversible construction project, all while preserving the natural beauty of Little Cottonwood Canyon.</p>
34711	Matthew Shepherd	<p>I live on [REDACTED] I work at Alta. I see traffic congestion on Wasatch to be the worst symptom of LCC traffic problems. Covid had a positive effect on parking, and resort crowds by compelling local agencies and entities to create parking policies, and enforce existing. The intended goal was social distancing, the defacto result was fewer cars. When the parking wasn't available people didn't come. An organic limit was reached. Every proposed solution to LCC traffic is basically a bigger funnel to fill a small bottle. Everyone who is currently driving to Alta/Snowbird will still have to drive to the mouth of the canyon to ride the Gondola. If the Gondola costs more than driving then it places skiing even further out of reach of local families, all of whom are already contributing to the huge cost. I've personally watched the effect climate change has had on skiing. More ice, more avalanches, and less skiable terrain. Skiing is a diminishing resource, but everyone in authority seems intent on milking it for all they can rather than preserving the delicate mountain ecosystem. And those who have lived near the mountains are being trampled for the benefit of those who live far away. And with the local ownership of businesses and real estate vanishing, the revenue which skiing generates is also going away from here. I don't see how the gondola will help any of the problems for which it is the proposed solution. I have watched several of my good friends move away from Cottonwood area to escape the frantic atmosphere. This project will cost so many so much, and only seems to benefit the people who are involved. My entire livelihood, and Recreation/leisure time revolve around little cottonwood Canyon and the outdoors of Utah. I don't know a single person who supports the Gondola proposal. Salt Lake City is one of the greatest places in the world to live. The wishes and well being of her residents should be our guiding principle Thank you for this opportunity to share my thoughts</p>
34712	shorla hunsaker	<p>No to Gondolas in Little Cottonwood Canyon. Why should taxpayers pay for 2 private business. Who else benefits, after destroying the beauty of our canyon? There are other low-cost solutions that could benefit both Big & Little C canyons .. reduced bus fares, more buses, parking reservations, carpooling incentives, digital sign with parking space info No to Gondolas!!!!!!!!!!</p>
34713	Andrea and Louis Barrows	<p>We are writing in strong opposition to the building of a Gondola in Little Cottonwood Canyon, as a solution to the future transportation concerns. We are not in support of UDOT's preferred Gondola alternative B. We are residents of Salt Lake City, we ski and hike, and we believe in protecting the watershed and canyon environment. This past winter, the majority of the canyon's transportation and parking problems, were solved by requiring parking reservations at the ski resorts. We do not need to build fixed infrastructure in the form of a Gondola, costing the public millions dollars. A Gondola is short sited; it will create a permanent eyesore in the canyon and potential irreversible environmental damage. It is not scalable and does not allow for public access to the entire canyon. It serves only the users of Alta and Snowbird resorts. We do not need to increase the daily number of people accessing the canyons rather we need to carefully address year round public access. A more thoughtful solution, addressing ALL canyon use, with an emphasis on changing expectations, needs to be found. We strongly oppose spending public money on a drastic plan that does not benefit of the majority of the canyon users and Utah taxpayers. Sincerely, Andrea and Louis Barrows</p>
34714	Kerry Faulkner	<p>NO GONDOLA I THINK COMPREHENSIVE BUS SERVICE IS THE BETTER ANSWER. NON SKIERS SEE NO BENEFIT FROM A GONDOLA THAT I CAN SEE. WE'RE NOT GOING TO HAVE ENOUGH SNOW FOR SKIING LONG ENOUGH INTO THE FUTURE TO MAKE A GONDOLA THE SMART THING FOR ALL CANYON USERS NO GONDOLA</p>
34715	Chantal Papillon	<p>A Gondola doesn't solve the problem and will destroy the canyon for ever!! Please think twice!</p>
34716	Nicholas Burr	<p>The gondola is is Whack. I love the boulders. little cottonwood is so pretty without a gondola. Additionally your EIS references the gondola increasing canyon capacity which is a stupid idea. dm me on instagram for more thoughts @itsmenickfromschool</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34717	Kirby Barth	I do not believe that building a gondola in the LCC will improve the quality of transportation or natural beauty in the canyon and is NOT the solution for providing more, pollution-free access to the wilderness. Extra busses with bathrooms and express lanes for public busses will do more to improve the visitation of the canyon than a gondola would.
34718	Caroline Brophy	I would like to oppose the Gondola. A new solution needs to be discussed.
34719	Chantal Papillon	The decision is made on false/incomplete datas and without having try other more sustainable solutions. It's too much, too fast!!!
35543	Taylor Davis	<p>Gondola is a great idea but please have the ski resorts pay for some of it and include a free ride to their pass holders on the Gondola. If you have to pay for the gondola ride in addition to the resort fees many will still not use it and just battle the traffic. There needs to be some kind of thing to motivate commuters to use the gondola if it has a fee.</p> <p>Another simple option is to prohibit all car traffic (except for people working or living in the canyon and then simply provide free bus transit up and down the canyon for anyone that needs to travel up and down. I'm not sure what this would cost but it seems to be a simple solution however the cost of buses drivers and fuel may make this option costly. I assume this has already been thrown out there.</p> <p>I support the gondola option but the ski resorts and skiers should be the ones to pay for it rather than the other 80% of the population that never travel in the canyon during winter.</p> <p>-- Taylor Davis USA [REDACTED]</p>
34720	joshua graber	Hello, I am concerned that if the gondola does go in, it will not allow alcohol to be permitted for carry up canyon and that will yield low usage in favor of driving individual cars so that tailgating may take place. The gondola will not be as successful as intended. Please do not select the gondola.
34721	Ann Peterson	Please do not put a Gondola up LCC. Smaller, electric powered busses that would be able to stop at trailheads would be preferable. Price tag for residents (tax payers) is way too high for Gondola.
34722	Julia Mulhern	Please don't build a gondola. It's unjust to use tax payer money to benefit specific businesses.
34723	Matthew Glasgow	I reject the premise that there are no better or alternative options than the gondola. There is so much more to LCC than the resorts at the top. Having grown up in canyon, it would be heartbreaking to watch it change so drastically from the beautiful place it is just for 30 days worth of traffic mitigation per year.
34724	Chantal Papillon	I don't want my taxes used to pay a gondola that will serve two private businesses.
34725	Jared Lee	I want to add my voice to other Utahns who wish to preserve the priceless natural beauty of LCC. I support alternative methods to reduce traffic and recreational impact to the canyons. The gondola only serves the interests of private ski resorts and will prove to be a costly irreversible blunder and a stain on utah. PLEASE do not move forward with this.
34726	Chantal Papillon	It is so disappointing that UDOT was unable to come up with a solution that will serve ALL users of the canyons.
34727	LeeAnn Ehrhart	I support the gondola over the bus option but still think the train is a better solution. While I generally like the gondola concept (and it would be a beautiful ride up, especially in the fall) there are many concerns. One is cost, it must be competitive to driving in a car. Another are the climbing boulders at the mouth of the canyon, this area should be protected. The gondola should also run year round and have access to trail heads.
34728	Alison Moore	I am absolutely opposed to the gondola for MANY reasons, most of them the obvious that have already been stated so I will just mention that which influences me most: environmental concerns and tax payer cost. I am not convinced that this will help in any way other than excluding a large part of the population who, like me, simply cannot afford the gondola by tax or by ride. The bus I can afford and happily take the bus to ski, the bus that every time I go it is FULL. Find another way. The gondola is NOT the way.
34729	Chantal Papillon	We all know that private interests are in play in this decision and that's what make me so upset about it. The canyons are not your personal property and you can't do whatever you want with it. People don't want a gondola, don't want a 5000 stalls parking lot, another hotel or whatever store will grow at the base. People want a solution that won't destroy the canyon and the surrounding of the mouth of the canyons for ever. We are in an era of preservation, not destruction. Be of our time!
34730	Jason Perry	Today is the last day to submit a comment to UDOT for the LCC gondola. There are so many better options! -the money could go to better use (the people that depend on taxes) -UDOT is catering to private interests -there's going to be a heavy tax on the road (non skiers will have to pay) like \$50!! -gondola tickets will be costly making skiing even more elitist - the canyon is a watershed that supplies water to almost a million people (the water isn't stored so if there's a construction mishap it'll effect the supply within 24hrs) -views -more people on the hills more danger and more environmental degradation Please don't do this
34731	Ryan Kapes	No gondola is necessary to accommodate traffic if increased bus service, tolls, and a new park and ride at the bcc gravel pit are implemented. Traffic is only exceptionally bad about 15 day per year, not to mention that the gondola doesn't adequately serve backcountry skiing trailheads and isn't being paid for by the for profit ski resorts. If the ski resorts were paying at least half of the bill, it might be reasonable.
34732	David Eckels	A large part of what makes LCC so special is the variety of outdoor activities available so close to the SLC metro area: resort and backcountry skiing, rock climbing, hiking, biking, snowshoeing, picnicking and more. I worry that the proposed gondola will only really benefit and effectively serve the resort visitors, and locals who backcountry tour, hike, and climb will be negatively impacted. In addition, canyon transportation is a peak demand problem. People go up at about the same time in the am and depart about the same time in the pm. Thinking solely from the resort perspective I don't see how a fixed throughput gondola serves this use case well. I think closing the canyon to private vehicles and implementing a robust peak-optimized electric bus service would have the least visual and economic impact while best serving the peak needs as well as users whose destination is a trailhead rather than a resort.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34733	Anthony Balynas	Although the Final EIS is a phased approach, I still DO NOT support the proposed implementation of a gondola. Although the report addresses commenters' concerns, a quantitative analysis would more accurately depict the public's stance. Despite the analysis, it still seems like a sugar-coated solution. Generally, I feel that the review was designed to only echo the concerns and not represent them in decision making (It is important to note that the process established by the National Environmental Policy Act (NEPA) is not based on vote-counting. The public involvement efforts of NEPA are intended to gather information and ideas from the public on the proposed action and alternatives, and on the impact assessment and other information in the Draft EIS, in order to ensure that the Final EIS is as accurate, informative, and useful as possible. Analysis of public comments and, as appropriate, modification of the EIS results in a better document and helps the decision-maker make better decisions, not simply count up pros and cons or yes or no votes on a particular alternative or issue.) It's a tough issue, and although the EIS committee appears to be diligent in many ways, a gondola is such a permanent infrastructure and inappropriate use of tax-payer dollars. The public deserves to know who the private players are in this project and how they will personally benefit financially. Utah tax-dollars should at most pay for a fraction of the proposed project, and Alta and Snowbird resorts should be responsible for the vast majority of expenses. I am very disappointed with the final EIS decision, as are the vast majority of canyon users. There will be more public outcry, there will be protests, and litigation will likely follow if the public does not feel like their opinions were genuinely taken into consideration.
34734	Jan Pazzi	I oppose the construction of the gondola. There are other viable alternatives for the few months that traffic is impacted to the ski resorts. Additional bus times and the use of electric buses are better alternatives. Traffic in the canyons will increase since our population continues to grow but the cost and environmental impact of the gondola does not make sense.
34735	Steven Sellers	I support the gondola. To not have an alternate route up the canyon when roads are dangerous seems irresponsible to me.
34736	Fatima Mahmoud	Save Little Cottonwood! Don't build the gondola! Climbers love cottonwood!
34737	Jan Coleman	There are low-cost solutions that will reduce canyon traffic congestion that can be implemented this ski season. These alternative solutions have been effective around the nation, including: <ul style="list-style-type: none"> - parking reservations, - priority parking for carpooling, - reduced fare UTA ski buses all season long, - regulated hitchhiking at the designated pick up/drop off spots, - digital signs at the base of the canyons indicating number of parking spaces available. <p>While the Gondola would only serve Little Cottonwood Canyon, these solutions can address congestion in both Big & Little Cottonwood Canyons!</p>
34738	Christianna Johnson	I am completely opposed to the long-term plan to construct a gondola with taxpayer money. However, I do support the other initial steps, including: increased and improved bus service as described in the Enhanced Bus Service Alternative (with no canyon roadway widening), tolling or restrictions on single occupancy vehicles, and the construction of mobility hubs. I believe these commonsense actions will prove effective enough that a gondola is not needed at all. Thank you for your consideration. NO GONDOLA! YES TO BUSES!
34739	Kate Waller	I'm all for it. I'm not sure why people are not. But I think it's a good idea.
34740	Mike Bates	I am for the gondola in Little Cottonwood Canyon. I think it would provide an attractive alternative for people to explore the area for all seasons. The alternative for more buses has been implemented and has not helped out with traffic. I have personally been stuck on several busses during peak season and sitting in a pack buss elbow to elbow for an hour our more is a horrible experience. One other alternative I would like to see is making it possible for the TRAX to run up the canyon? Thanks
34741	Nate Stott	No gondola
34742	Students for The Was	I encourage a phased approach involving electric buses before obtaining funds and building a gondola.

ID	Full Name	Comment
35550	Jane Hudson	<p>UDOT,</p> <p>I am wholeheartedly against the Gondola proposal.</p> <p>I live in Millcreek, and recreate in the Wasatch Mountains almost every day (year round). I love the Wasatch and feel that we all need to work hard to preserve its beauty.</p> <p>The gondola is not only an eye sore, but will cause major impacts to the canyon (i.e. destroying world class bouldering areas and various ecosystems). We need to put real effort into trying to expand the bus system or try another option like tolling. The gondola parking lot will be almost a mile from the gondola station, it's expensive to ride, it's slower than driving and is less convenient (especially for groups and families). People will not use it.</p> <p>It only serves a portion of canyon users, only those going to resorts and the resorts themselves. There is no disincentive to drive so people will continue to do so.</p> <p>The current traffic problem only happens less than <15 days a year. Throughout the EIS, the transportation problems are projected to get worse with population growth. Sections 1.3, 1.4.1.2, and 1.4.2.2 (just to name a few) discuss this growth and the related problems.</p> <p>I find it extraordinarily irresponsible to ignore the obvious need to examine the level of visitation that this fragile resource can handle without damage. The EIS simply waves off this point in S.12 by saying "The Forest Service acknowledges that, in the future, management might be needed to limit resource impacts from user visitation in Little Cottonwood Canyon. Specific visitor capacities are not being considered by the USDA Forest Service at this time."</p> <p>If we weigh the growth impacts in this equation so heavily that we are willing to spend \$600M to \$1B of taxpayer money for a "future" problem...how can we not ask the Forest Service to "consider visitor capacities?" It is negligent and irresponsible not to do so. We cannot simply blame the Forest Service and wave this away as a "noted" but "ignored" concern!</p> <p>I am adamantly opposed to this proposed alternative and demand that all other options that be tried and exhausted FIRST before building a \$600M gondola that will destroy the canyon and the ecosystem it supports.</p>
34743	Anya Korfine	<p>It's too expensive. It's too invasive. It will likely encourage rather than discourage car traffic. And, it won't solve the</p> <p>As a student currently studying the EIS and NEPA process it is disappointing and upsetting to see an established organization such as UDOT write such a poorly organized, and insufficient EIS. After reading the EIS thoroughly it is clear UDOT did NOT carefully consider all viable options and purely picked the option they deemed would make them the most money with little to no regard for the entirety of the Salt Lake Valley community. I have a few questions, if the Gondola is going to be paid for BY taxpayers, will it be free to ride? How will the construction of the Gondola impact canyon traffic during the construction period? How does UDOT plan to address the fact that in the EIS they wrote it clearly states that the Gondola will not improve canyon congestion? How will the construction of the Gondola impact water quality as Little Cottonwood Canyon is a watershed?</p> <p>Please remember that the majority of the Salt Lake community does not want this Gondola.</p>
34744	Anthony Balynas	<p>Although the Final EIS provides rationale for the phased implementation of a gondola, I DO NOT support this decision and am extremely disappointed with the committee's inclusion of the publics' concerns into the decision making process. The report should also include a quantitative component to the comment summaries, paired with the categorical approach. In 32.1-2, it seems like the EIS sets the stage to grossly disassociate public opinion from the decision making process. Utah tax-payer dollars would be inappropriate to fund this project and the resorts should be primarily responsible for all construct, operating, and maintenance costs. There should be full-disclosure of all private parties involved that will profit from the gondola project.</p>
34745	Jen Young	<p>I am hearing that the traffic studies to justify the road changes on Wasatch and the gondola are flawed and need to be redone, re-examined. I am requesting that another study be done.</p>
34746	Ben Sorensen	<p>I think that there should not be a gondola put in in little cottonwood canyon.</p>

ID	Full Name	Comment
34747	Eric Kraan	<p>It is my intent for this comment to become part of the record that will be reviewed by a variety of authorities and provide a record of rational concerns about the environmental impact of UDOT's preferred option.</p> <p>The Gondola B option will severely impact the local community, dividing a neighborhood with an unnecessary roadway expansion, and adding massive parking facilities in a location already littered with an overabundance of parking lots.</p> <p>Dissecting communities with high-speed, multi-lane highways goes against what Utah's Governor Cox has publicly stated previously. Similarly, it is also against the policy goals of the Biden administration, as stated by secretary Pete Buttigieg as part of the new National Roadway Safety Strategy.</p> <p>It is for these reasons, that the Gondola B option, may solve the questions posed by the Utah state legislature, but fail to be good at Urban Planning, foster good community building, and increase roadway safety concerns when compared to the US DOT's Safe System Approach.</p> <p>The proposed Gondola will add a massive 2500 parking structure at the south end of Cottonwood Heights. Parking this many cars will require a facility just as large as the one at the Salt Lake International Airport; but, because it will need to fit inside a smaller area, it will probably need to be constructed as a 10-stories high building.</p> <p>On top of this, the State Legislature already appropriated \$13 million dollars in 2017 to secure land at the Gravel Pit near Big Cottonwood Canyon to build another massive parking garage, 2.2 miles away, on the north end of the city. Please note that an underground parking facility was recently constructed at the northernmost end of SR 210, as part of a new multi-use facility also owned by the McCandless and Niederhauser corporation. The parking facility was intended to be a PAID facility, but because of the overabundance of free parking in the area has required management to offer the parking for free. Such foolish over-supply of parking will simply overrun the city and transform "The City Between the Canyons" into "The Parking Lot Between the Canyons".</p> <p>Before the unveiling of the Gondola B solution in 2020 (a full 2 years after the start of the EIS), the full premise for a traffic solution was to capture morning recreational traffic exiting the I-215 headed south at the "Gravel pit" before the flow of cars collides with commuter traffic headed north from Draper and Sandy, and the reverse scenario in the evening. There is even a proposal for a Rapid Bus system at Highland Dr and 9400 south that would move commuter traffic more efficiently and reduce future commuter traffic pressure on Wasatch blvd. The benefits of this plan would have been:</p> <p>1) Securing safe egress and ingress to neighborhoods along Wasatch Blvd between these two canyons.</p>
34748	Anthony Balyнас	<p>Although the Final EIS provides rationale for the phased implementation of a gondola, I DO NOT support this decision and am extremely disappointed with the committee's inclusion of the public's concerns into the decision making process. The report should also include a quantitative component to the comment summaries, paired with the categorical approach. In 32.1-2, it seems like the EIS sets the stage to grossly disassociate public opinion from the decision making process. Utah tax-payer dollars would be inappropriate to fund this project and the resorts should be primarily responsible for all construct, operating, and maintenance costs. There should be full-disclosure of all private parties involved that will profit from the gondola project.</p>
35560	Susan Parker	<p>To Whom it may concern:</p> <p>A gondola in 1 canyon is not the answer to protect our canyons, open space and neighborhoods.</p> <p>I believe both cottonwood canyons need to be evaluated while looking at traffic flow. The goal should be to assist visitors to all resorts equally and safely. It should also consider our wildlife and birds of prey. With that being said, I feel that the issues we face now are nothing new compared to the last 25 years. We need to focus on sustainability, and not making profits. Carpools should be rewarded and have extra benefits. An area should be established where those can ride share up and down the canyons. Weekend tolls can be established for those not ride sharing. That money received can go to improve each canyon or even to create a 3rd lane for shuttles, carpools, etc.</p> <p>This is a time to truly listen to the people and the councils and work with others to create the best option. Thank you.</p> <p>Susan Parker</p>
35558	joe day	<p>All I can say again and again is this. Snowbird and Alta bring the majority of the people up the canyon, Snowbird year round, Alta mostly in the Winter but they are bringing more people up the canyon every Summer, with less profit I suppose. They are the ones causing the problem, and profiting from it. There for I feel they should be responsible to fix it, and pay the costs involved to get the masses to their product efficiently.</p> <p>As a backcountry user I don't want a gondola at the mouth to take me to a resort. There have been no talks of Service for the human-powered crowd that I am aware of.</p> <p>So now it sounds like their will be a toll someday to access my National Forest, because the ski resorts have bought so much traffic to the area it has hit critical mass.</p> <p>Just my 2 cents.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34749	Ray Diehl	<p>It is my opinion that the proposed Little Cottonwood Canyon gondola would lead to other development activities and would hasten the destruction of natural beauty in the canyon and negatively impact summer canyon experiences for Wasatch Front residents. I also have concerns about the level of public funding required for the proposed gondola - which will benefit a relatively small percentage of Utahns.</p> <p>For example, many years ago there was discussion of an inter-connect system that would connect the Alta and Brighton areas with a gondola. This idea was scrapped with many of the arguments against it based on the negative impacts a gondola would have on currently undeveloped areas of Little and Big Cottonwood Canyons. It is logical to assume that if a gondola is built in Little Cottonwood Canyon then the inter-connect proposal would likely arise again along with its related destruction of more wild and undeveloped areas.</p> <p>I have ridden multiple gondolas in both the United States and Canada. Generally the gondolas are surrounded by maintenance roads and/or areas that have been cleared of trees for skiing. The maintenance roads allow access for maintaining gondola towers and also provide access routes for rescuing gondola riders in case of a breakdown. While the initial gondola proposal may not include maintenance roads, I think there is a high likelihood that they may be added in the future and further erode the canyon's scenic and habitat values.</p> <p>And while the current proposal is geared primarily for winter transport, it is not hard to imagine that if built it may eventually be used for summer transport as well. Both Big and Little Cottonwood canyons see heavy summer usage currently. One proposal someone has floated is to have a shuttle run between the Snowbird gondola station and the White Pine/Red trailhead should the gondola be operated during the summer months.</p> <p>On the surface this is a great idea. But thinking back to a public hearing I attended when Snowbird development was first proposed, there was a great deal of discussion about whether White Pine Canyon would be included in the resort's boundaries. Luckily it was not - and it has been preserved as a popular summer hiking area without tree clearing, lift towers or other development. But I could easily see a time when someone may suggest that it would be easier to service that area if it was a part of the resort. Since Snowbird has already expanded over the ridge from its original developed area into Mineral Basin, and expansion up canyon is blocked by Alta, it is not unreasonable to suspect that down canyon expansion might be proposed in the future. If this were to occur, then the scenic beauty and undeveloped nature of White Pine Canyon would be at risk once again.</p> <p>I am also concerned about funding for the proposed canyon gondola project. Not only is it a very expensive proposition, but its direct benefits are limited to a relatively small segment of Utah's population - particularly if it is limited to winter-only use. The Cottonwood Canyons are a gem for the people of the Wasatch Front. Very few large metropolitan areas have relatively undeveloped canyon and mountain areas within such easy reach of their residents for both winter and summer recreation. The canyons are under constant threat of over-development which may destroy much of the natural beauty found within them. The proposed Little Cottonwood Canyon is a threat to both the canyon's beauty and the recreational value for current and future generations of Wasatch Front residents.</p>
34750	Murali Palanganathan	<p>We live in [REDACTED] subdivision. We strongly oppose the idea and construction of a Gondola system in Little Cottonwood Canyon. The Little Cottonwood Canyon is a unique and beautiful canyon, providing magnificent vistas with everchanging characteristics for every season throughout the year. Therefore, construction of any overhead structure, especially a massive gondola system will forever tarnish and damage the visual natural beauty, ecosystem, and character of Little Cottonwood Canyon. It is also irresponsible to create such a massive environmental impact and to forever change the unique landscape. Moreover, we understand the supporting structures for parking and roads will be through our community and property. Such a change will have a devastating impact on our family, as we have invested on our property with the primary objective of being closer to the mountains and natural ecosystem. Once again, my family and I strongly oppose the construction of the Gondola system. Instead, we request you to evaluate alternate options including electric powered road trains to address the needs of the future.</p>
34751	Matylda Blaszcak	<p>As a lifelong Utah resident and frequent Little Cottonwood visitor, I oppose the gondola. I feel that the gondola would be a poor use of tax payers' money as many Utah residents, particularly those living in and around the Little Cottonwood area, do not support the gondola. I also fear for its environmental impacts as big projects like this can have detrimental effects on the environment. This is especially important for Little Cottonwood's watershed. Finally, I believe that there are more sustainable options that have far more public support. Such as the continued development of bus routes.</p>
34752	Lina Miller	<p>The UDOT proposal to build a gondola will use taxpayer money to pay for a tourist attraction that will only benefit private businesses and not give back to the Utah economy as much as proposed because the other infrastructure in the canyons is not ready to support that much influx of tourism.</p>
34753	Terri Goodall	<p>The gondola is not the best solution to traffic in the canyon and would be an eyesore in the canyon. It would mainly benefit a couple of private ski resorts and some of their customers. I am a skier and would prefer adding a bus lane if possible. That would be a less costly solution that would be available year-round.</p>
34754	Angelina Miller	<p>The gondola will be harmful to the natural environment and micro biomes in the canyon with the towers that will have to be placed. In addition to this it will destroy many of the established climbing routes that benefit the Utah economy. UDOT should consider a phased approach bus system instead of the gondola</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35570	Anthony Balynas	<p>Hi,</p> <p>I tried 3 times to submit my comment through the website, but did not receive a confirmation for any one of them...so here is my comment:</p> <p>"Although the Final EIS is a phased approach, I still DO NOT support the proposed implementation of a gondola. Although the report addresses commenters' concerns, a quantitative analysis would more accurately depict the public's stance. Despite the analysis, it still seems like a sugar-coated solution. Generally, I feel that the review was designed to only echo the concerns and not represent them in decision making ("It is important to note that the process established by the National Environmental Policy Act (NEPA) is not based on vote-counting. The public involvement efforts of NEPA are intended to gather information and ideas from the public on the proposed action and alternatives, and on the impact assessment and other information in the Draft EIS, in order to ensure that the Final EIS is as accurate, informative, and useful as possible. Analysis of public comments and, as appropriate, modification of the EIS results in a better document and helps the decision-maker make better decisions, not simply count up pros and cons or yes or no votes on a particular alternative or issue.") It's a tough issue, and although the EIS committee appears to be diligent in many ways, a gondola is such a permanent infrastructure and inappropriate use of tax-payer dollars. The public deserves to know who the private players are in this project and how they will personally benefit financially. Utah tax-dollars should at most pay for a fraction of the proposed project, and Alta and Snowbird resorts should be responsible for the vast majority of expenses. I am very disappointed with the final EIS decision, as are the vast majority of canyon users. There will be more public outcry, there will be protests, and litigation will likely follow if the public does not feel like their opinions were genuinely taken into consideration."</p> <p>Thanks, Anthony Balynas [REDACTED] [REDACTED]</p>
34755	Gina Lundstrom	<p>NO to gondola. Bigger No to eliminating buses. Stop the \$ power play & use common sense. Weather, wind, pandemics, all will stop gondola. More buses, more enforcement and strict rental car policies requiring 4x4. Transit center where hideous gravel pit is- Apres ski. If anything, trains, covered for avi protection like europe. Or more buses- only residents some employees have driving access</p>
34756	Ash Arati	<p>I am a resident of Holladay, UT and frequent the canyons. The alternative traffic proposal is extremely shortsighted because it does not address the MAJORITY of YEAR ROUND traffic. The proposal does not alleviate any of the personal traffic to trailheads which is the majority of load on the canyon.</p> <p>Also, by providing a direct transport to a concentrated portion of the canyon, UPSTREAM, you are concentrating the human footprint and impact that could have unintentional impacts downstream.</p> <p>Driving traffic to a small portion of the canyon upstream will have much more impact than designing a solution that will allow natural distribution of the human load across 100% of the canyon at multiple trailheads.</p> <p>Business problem: Traffic, air pollution, load on infrastructure, etc.</p> <p>What is the cost of implementing a strategy that will only address 1/4 of the CURRENT STATE year round load? What is the environmental impact of concentrating traffic to areas upstream? What are you doing to address traffic and recreational interest that occurs year round, long term, across the rest of the canyon?</p> <p>There are multiple recreational interests the canyon provides, and limiting access to the resorts does not consider 90% of the population that uses the other areas. Increases impact and human traffic on one small area.</p>
34757	Dalton Daley	<p>There are so many better options! -the money could go to better use (the people that depend on taxes) -catering to private interests -there's going to be a heavy tax on the road (non skiers will have to pay) -gondola tickets will be costly making skiing even more elitist -the canyon is a watershed that supplies water to almost a million people (the water isn't stored so if there's a construction mishap it'll effect the supply within 24hrs) -views -more people on the hills more danger and more environmental degradation</p>
34758	Andrei Kachurin	<p>No gondolas please. Need extra lane for electric bus with multiple canyon stops to hike different trails</p>
34759	Mark Paterson	<p>Gondola is the right solution .</p>
34760	Shawna Paterson	<p>Gondola is a workable and reasonable solution</p>
35576	Emily Hilding	<p>Please please please NO!!! Little Cottonwood Canyon is a treasure. Please don't destroy it to line the pockets of greedy corporations and politicians. This is not how I want my tax dollars spent!</p> <p>Emily Hilding</p>
34761	des dixon	<p>stupidest [REDACTED] ever</p>
34762	Shelby Johnson	<p>please do not harm mother nature, it's land, and the animals roaming it to make room for consumerism purposes. Ski resorts are not more important than the nature that existed first.</p>
34763	April Radford	<p>I'd like to inquire as to how exactly this infrastructure will help folks access other valuable and popular areas in the canyon (i.e. climbing, hiking, etc. sites that are not at ski resorts).</p> <p>I am also curious as to how this infrastructure could be implemented equitably when it will charge a hefty fee from anyone who chooses to utilize it.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34764	Amanda S	The public does not want a gondola! It's outrageous that so many comments were ignored the first time around. Do better.
34765	Rhonda McKenna	I am not a fan of the idea of a gondola. I don't want my tax dollars subsidizing an expensive sport that promotes tearing up the mountains of Utah. Buses can be used.
34766	Kinzey Brice	NO GONDOLA IN LITTLE COTTONWOOD CANYON
34767	Marin Hamill	DO NOT BUOLD A GONDOLA. You are only going to ruin the canyon. Haven't people ruined enough? Let's keep the canyon the same and run more busses!!! I have lived here my whole life and I would be devastated if you ruin a Beautiful canyon when there are othe resolutions that don't require you to modify the canyon. You will only benefit the corporate ski resorts. Please do not put in a gondola. Please please please!!
34768	Dennis Christensen	Really concerned with the approach taken to jump ahead a spend \$500B + without giving other options a try. Why would we jump into funding programs for the ski resorts? This eliminates thought on providing options for the many other canyon users? Would like to see the committee test out the bus option, and also the toll option (time based?) before jumping in to subsidize the ski resorts.
34769	Ruedigar Matthes	The gondola serves a very limited purpose: getting people to the ski resort. We need a less invasive solution than the gondola. We need a solution that is less beholden to corporate interests. I am opposed to the gondola. Please consider another option.
34770	April M Love	<p>I suspect that our public comments have been solicited just so that UDOT can say that they did ask for comments, but go ahead with their plans regardless of how the public input goes.</p> <ol style="list-style-type: none"> 1.The gondola project will limit transport to those without disabilities, since the issue of accessibility has not been addressed. The assumption is that able-bodied skiers will be the only people using the gondola. 2.The cost of the ticket to travel up the canyon by the gondola is not mentioned. I'm guessing that the one-way ticket will be somewhere around \$45-\$50. 3.The beauty of Little Cottonwood Canyon will be permanently defaced. 4.Destruction of the watershed, on which the Salt Lake Valley relies. 5.Traffic delays and crowds foreseeable at the gondola base will cause many prospective users to drive instead. 6.Better and much cheaper alternatives exist that UDOT has not considered. One would be to implement alternate day access depending on whether a vehicle's license plate number is even or odd. Another would be mandatory carpooling enabled by an app (similar to Uber's) to match drivers and riders who would meet at a designated place near the bottom of the canyon. It's understandable, although not in the public's interest, that the ski resorts would object to such arrangements for fear they would reduce the number of skier days. 7.Despite alternatives to the "gondola solution,," these more feasible, more reasonably priced alternatives are being ignored. My thought is "follow the money,," The scent of graft and lining the pockets of those involved in the "planning," ramming the gondola option down the throats of Utah taxpayers. 8.Whether it's the cost of construction, potential threat to the watershed, special interests backing the project, equity issues, carrying capacity of the canyon or some combination of all five, canyon users ranging from their early teens to late 70s voiced their opposition to the gondola and support for the resolution.
34771	Lori Stetson	I'm in favor of the gondola. Tourism is a large revenue factor in the valley and the gondola has less environmental impact than widening the roads and adding additional buses. It also eliminates the avalanche control traffic issues and is forward thinking for the future. It could potentially be connected with Brighton/Solitude and eventually Park City. This would benefit all three areas for traffic and enable tourists to expand their trips- creating additional funding streams throughout all three areas. Definitely a great idea.
34772	Jennifer Johnston	Ladies and Gentlemen, I strongly urge UDOT to implement more cost-effective solutions to the traffic problem in the canyon instead of the proposed gondola. I am a life-long resident of Salt Lake and skier in both Cottonwood Canyons. I have found riding the ski bus to be a generally positive experience made challenging only by the size of the parking lots at the mouth of the canyons. This challenge would exist for a gondola as well. The Salt Lake Chamber is hosting an event on the challenges to Utah's ski industry posed by global warming. A very expensive gondola that would be used for shorter and shorter periods each year seems like the worst use of our tax dollars. Thank you for your consideration.
34773	Marin Hamill	The solution is a bus system. No modifications to the canyons required. There should be a bus every 5-10 min during the morning/ closing time and then every 15 min throughout the day. Keep the road the same. Do not destroy anymore animal homes. Do not destroy our canyon. Make people take the bus! Make it accessible! People will be stoked to save on gas and have a safe ride up and down the canyon. I know for a fact I would be stoked to ride the bus every time I would save gas money and not worry about sliding around on a snowy day. Please don't ruin the canyon and use what we already have. Busses are the solution.

ID	Full Name	Comment
34774	Trent Duncan	<p>Dear UDOT,</p> <p>Thank you for accepting public comments on the Little Cottonwood Canyon Final EIS and Draft Record of Decision. As a resident of Salt Lake County and a frequent user of Little Cottonwood Canyon during all seasons of the year, I would like to express my opposition to the preferred alternative, which includes construction of a gondola from a base station near the mouth of Little Cottonwood Canyon to its terminus at Alta, Utah. I also oppose any alternative that would widen the road in canyon. Prior to implementing either of these alternatives, UDOT should work with local communities, Alta and Snowbird ski resorts, the U.S. Forest Service, and non-governmental organizations representing a variety of users to implement prudent and cost effective measures that specifically address traffic and safety issues. As part of any solution, UDOT should move forward with construction of snow sheds, improved shoulders with bike lanes, restrictions on road side parking, and trailhead improvements. Regarding the preferred alternative, I urge you to consider the following:</p> <p>1)Local Input should be a primary factor taken into consideration in the decision-making process. While Alta and Snowbird are destination resorts, year-around traffic congestion in Little Cottonwood Canyon is primarily the result of local use. Residents of Salt Lake County are the primary users of Little Cottonwood Canyon and are disproportionately impacted by UDOT's decision. The majority of residents in the County have also expressed clear and unequivocal opposition to the construction of the gondola. Cottonwood Heights, Sandy City, Salt Lake City, and Salt Lake County have passed resolutions opposing the project. Not a single community in Salt Lake County has voiced support the gondola. It would be inconsistent with Utah values for UDOT to approve the gondola when it directly contradicts the will of local residents who are the primary users of the canyon are disproportionately impacted by current traffic problems.</p> <p>2)The gondola does not benefit all canyon users. Any transportation solution adopted should benefit all recreation users and provide year-round benefit. A gondola that transports people directly to Snowbird and Alta harms rather than benefits climbers, back country skiers, cyclists, hikers and other users. While other aspects of UDOTs preferred alternative (e.g., improved parking at trailheads and snowsheds) would have broad public benefit, the gondola only addressed the needs of a limited number of resort skiers. Of particular concern, construction of a gondola does not provide access to a single trailhead in the canyon or address traffic associated summer and winter recreation use of areas such as Lisa Falls and White Pine trailhead, which provides access to the White Pine, Red Pine, Maybird, and Hogum drainages.</p> <p>3)The cost of the gondola outweighs benefits and should be not be covered by tax payers. The estimated cost for construction of the gondola is approximately \$550 million. Given the current labor market, supply chain issues, and inflation, these costs are likely an underestimate. Prior to making any decision UDOT should update its cost estimates to account for changed conditions. Utah tax payers should not shoulder the cost of a gondola, especially when traffic issues are primarily limited to morning and evening hours on powder days, weekends and holidays days during peak ski season. The costs are of the gondola are unreasonable given that the primary concern is traffic jams that occur approximately 120</p>
34775	Ben Hase	<p>This gondola will not be successful but will ruin the revenue for the resorts.</p>
34776	Keslee Green	<p>The gondola will not solve any issues. Not only will it be incredibly inconvenient during construction, when finished many people won't use it because it costs money so it won't be worth it. It would only service the resorts, so the people that only go up the canyon to its sites won't use it. The climbing, biking, and outdoor community will be left without the incredible natural features, and the environment would be negatively impacted. There are other options to fix the traffic issues, and this is not a good one.</p>
34777	Michele Karg	<p>I retract my support for the gondola in Little Cottonwood Canyon. I oppose a gondola-based solution in any form. I support increasing buses and increasing parking lots in the Salt Lake Valley. The gondola is not favorable for the majority of people. The gondola is a scam. A gondola disrespects the land and disrespects residents of Utah. It's too expensive and it's not the best solution. Do not scam Utah residents. Do not deface Little Cottonwood Canyon.</p>
34778	Cynthia Lodding	<p>Well, after reading through the website I definitely feel like I have more questions than answers. I do not feel that you have offered the public enough specifics to support this decision. The proposal itself is astronomical in cost, and there are no suggestions as to how it will be funded short or long term. If the phasing part of the implementation involves increased busing and parking, why is this not optimized as the solution?</p> <p>The gondola, to run only for the ski season, is an eye sore to a beautiful place that locals and tourists alike enjoy year round.</p> <p>I do not think that tax payers should bear any of this burden if this solely delivers passengers to private ski areas. In wintertime. To ski.</p> <p>A 35 person gondola is more consistent with a tram. Are there seats? Will there be air filtration and circulation like there is on a bus? Again, very little detail.</p> <p>It is so hard to imagine that there is public support for this option when across the board in conversations with people in my social circle, work circle, and people I take care of in a walk-in clinic think the idea is ridiculous.</p> <p>Anyway, I do not feel that there are enough specifics provided to the community, and I do not think that there is enough transparency with how this will be funded. I think that a "solution" of this architectural and financial magnitude should not be limited to only the ski season, and only to private ski resorts. Overall, I absolutely am against this option. I do not think this represents the needs and best interests of this community.</p>
34779	Jane Canfield	<p>No no no please no!! My son works at snowbird and has a very difficult time getting there! He only gets paid 12\$ an hour and can't even afford to pay one penny per trip up the canyon!!</p>
34780	Ruedigar Matthes	<p>The gondola serves a very limited purpose: getting people to the ski resort. We need a less invasive solution than the gondola. We need a solution that is less beholden to corporate interests. I am opposed to the gondola. Please consider another option.</p>

ID	Full Name	Comment
34781	Dana Ochs	<p>I am opposed to the gondola solution in Little Cottonwood Canyon. I speak for the majority of Utahns when I say this. 60% of Utahs are against the gondola in Little Cottonwood Canyon (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Gondola Works claim that preservation is important and is part of the reason for this gondola, but Little Cottonwood Canyon is home to historical and world class rock climbs and boulders. The installation of this gondola would be the permanent erasure of these recreation areas that people all over the world travel to visit. I encourage you to consider the destruction you would be causing to what beautiful natural landscapes we are responsible for protecting.</p> <p>Gondola Works boasts about how "clean" the gondola would be, but omits the mention of where the electricity to power it is coming from: coal-fired power from Rocky Mountain Power. The Great Salt Lake is already shrinking and these coal burning plants guzzle water in addition to polluting CO2 into the atmosphere (https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/).</p> <p>Consider, also, the traffic that would be caused during the construction of the towers required for such a gondola. If it would be constructed similar to how I've personally seen construction in the Cottonwoods and Millcreek canyons, it might be under construction for years. You may argue that it is a small price to pay for lasting traffic relief but the gondola is not a lasting solution. It is a bandaid fix. The gondola would not eliminate the traffic, but push it somewhere else. Traffic would be pushed onto Wasatch Boulevard and 215 as people make their way to park and rides or parking garages (of which more would need to be constructed as well).</p> <p>With all of that being said, in the best case scenario, where every person who wants to ski in LCC access the resorts via the gondola, what makes you think people would use it? If people don't use the busses now, there is no incentive for them to use the gondola instead. The traffic problems may not be shifted, but remain entirely the same.</p> <p>Instead, consider incentives to encourage people to carpool and reduce traffic:</p> <ol style="list-style-type: none"> 1) Parking reservations have worked, historically. For example, look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2) An enhanced system of regional natural gas and/or electric busses that run directly to the ski areas. This should also include smaller vehicles to provide access to other trailheads for backcountry skiers, snowshoers, or people wanting to recreate in areas of LCC that do not directly benefit the ski resorts. This would also require paying bus drivers a wage that encourages them to come to work. If it is out of budget to pay bus drivers aptly, I seriously wonder where the money for this gondola is coming from.
34782	Lee Walker	<p>Your process should be audited. The public is not involved except to ratify choices made by a few politicians, real estate developers and contractors. And the choices never included an opportunity to "just say no". Were your experts in house and asked to look at all olptions? Or hired as "Yes men". The salesman of gondolas certainly will earn a big commission. Post covid people don't want to live in high rise condos above street level storefronts. There is no place for 2 story houses with yards and kids on bicycles crossing the corridor road to visit friends in the neighborhood. 30 miles per hour and scenic/historic byway is a much better status for the residents and skiers whose favorite blizzard road conditions do not allow 55 mph. 0 mph is what everybody hates, and would be facilitated by snow plowing, traffic control, and closing the road to all but local residents when the parking lots are full. Alta resort knows how many parking places it has and sells ski passes in advance accordingly. That helped immediately because Alta has the best powder and no snowboards to cut it up.</p> <p>Once the Alta powder hounds knew they didn't need to line up at 6AM the rest of the skiers didn't need to compete with them. Simple common sense could handle the problem for enough years for a graceful well thought out plan. Snow plowing, safety inspections, traffic control, not allowing parking on the road in the residential area, by diverting traffic at the High T sign down to Sandy's skier parking lot to wait. When that is obviously about to happen, close the Road at the north entrance and post it on the freeway signs. People could go to breakfast or another ski resort.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34783	Alexis Jones	<p>I believe the proposed gondola is a terrible idea for several reasons. First, it will not solve the issue of traffic in Little Cottonwood Canyon. Since no one is being forced to take the Gondola, and it would likely entail a high fee to use anyways, people are far more likely to continue driving their cars. In addition, the gondola only supports stops at the two ski resorts in Little Cottonwood Canyon, whereas traffic in the canyon is not solely due to skiers/snowboarders, but rather all canyon users - e.g., hiker, backcountry skiers, snowshoers, etc. Since there are no other stops throughout the canyon, such canyon users cannot use the gondola as a transportation option. Therefore, the end result is that the privately owned ski resorts will benefit unjustly from public resources, and the gondola will not solve the problem it seeks to address. Second, the gondola is the most extreme option and therefore other more reversible and practical solutions should be considered and prioritized over a gondola. The gondola option jumps to the far end of possible solutions. The bus system in the EIS final draft is a more practical option for long term longevity, but still does not create certainty of solving the problem. Rather, an even more practical solution is to consider the approach adopted in Zion National Park of a mandatory shuttle system for certain months out of the year. This would force people to take public transportation, because cars wouldn't be allowed up the canyon certain days/times of the year. This system could be easily modified based on the actual problematic days/times of the year, without creating an eyesore year round. Shuttle could stop at multiple locations, and to the extent skiers are worried that extra stops will take too long, some shuttles could be express to the ski resorts specifically without any added stops. In the meantime, all other canyon users could utilize the shuttles to their other desired locations. This approach acknowledges that not all users of the canyon are skiers/snowboarders. This approach could be further modified to allow users accessing the canyon before or after peak use times to drive cars, while those arriving later are mandatorily required to take the shuttle. This would be a cheaper solution than the gondola and one that could be implemented practically and a solution that has been tested by a Utah locale already. The gondola is the most expensive option and would likely cost at least double the quote. In addition, this would be one of the longest gondolas in the world, which seems like an impractical place to test out such technology - in a watershed and primary drinking water source and fragile environmental habitat and ecological system. It does not make logical sense to jump to such an extreme solution, when there are far more practical and easily reversible systems, that account for the increase of traffic in the winters, but does not affect the activities of those seeking the beauty of nature in the summer (e.g., bus system, mandatory shuttles, etc.). In addition, the gondola stands throughout the canyon would provide a huge impact on the ecology/water/wildlife in the canyon. A much bigger disturbance than mandatory shuttling. In fact, mandatory shuttling would likely improve the environment for wild animals at a fragile time of year (winter where they are expending more energy) because of the lessened number of vehicle disturbances on the road. The people of Salt Lake City do not want a gondola and it does not serve to benefit them. It serves purely to benefit the interests of private ski resorts and out-of-staters, who should really not be the ones dictating the policy that the locals have to live with in perpetuity.</p>
34784	Michael Glasgow	<p>I commented yesterday, and have an additional comment. Make the road a toll road, with a substantial fee. [At least \$25 per axle] for personal vehicles, including RV's. Commercial buses of 30 passengers or more, including any owned by the resorts, and commercial delivery trucks, including trucks with any type construction materials, delivering in the canyon should be exempt from the tolls. Any tourists lodging at facilities in the canyon, should be required to pay the tolls! All buses should be required to be ADA Compliant to be allowed to waive toll fees. And bus schedules should allow for the 2 minute availability during peak times, and should be available during the hours that the proposed gondola would be operated. Impose the toll fees year round.</p>
34785	Bella Mckenzie	<p>Do not build this please</p>
34786	Katherine Bennett	<p>I very much support the gondola. As someone who has had to continue to get up earlier and earlier to ski, only to find the traffic unbearable, I think a gondola would be a huge win. Not to mention improve the safety of those traveling up and down the canyon- those winter roads are treacherous! Finally, reducing the people that are driving in the canyon is better for the environment and wildlife protection. For those who are strongly opposed to the gondola I have not heard any good reasons except "looks," which frankly is short sighted and selfish. I encourage UDOT to build the gondola!</p> <p>Thank you, Katherine Bennett</p>
34787	JANE LARSON	<p>Hello, I am a long time resident of Salt lake City. I was born here and have spent most of my life here. I have always enjoyed our amazing canyons and will never grow tired of their beauty and accessibility. I am not a skier but my husband is. He shares the woes of traveling up the canyon in the winter to ski his favorite Snowbird. I know there are challenges to the crowded canyons and getting to the ski resorts. The gondola is not the answer. I can see that the gondola would be favorable to the ski resorts so of course they would support this idea. But there are many other users of the canyon and this is really only benefitting the ski resorts. The plan HAS to include all users. It makes me sick to think of the beauty of that canyon ruined by those huge towers to support the gondola. It is not the view that anyone wants to have in that canyon. The traffic will only get worse by people trying to avoid the delays at the base to get up the canyon. To spend that kind of money is unthinkable when climate change is at our doorstep, forever changing our snow, I'm afraid. It will take many years to build this gondola and by the time it is ready to go, we may not even have the snow that we once were world famous for. It would be completely irresponsible to spend that kind of money on something that is not a sure thing. I know we need to solve this problem but wouldn't sooner than later be the desire?! I think limiting vehicles and using electric vehicles to transport people would be better, more sustainable actions. We can come up with much better solutions that the gondola. It just does not make sense. Thank you.</p>
34788	Isaac Carver	<p>The canyon's national beauty would be ruined by a big bustling gondola. Its not worth the trouble and the traffic problem can be solved by implementing more buses and driving safer. Me and everyone around me do not support it.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34789	Paul Bruno	<p>I have lived in Cottonwood Heights since 1994 just east of Wasatch Blvd between Big and Little Cottonwood Canyons. Since that time I have experienced the transformation of Wasatch Blvd. from a pedestrian-friendly street into a racetrack. I actually used to pull my young daughters in a wagon down the shoulder of Wasatch Blvd. to visit a stable that used to be located on the west side of the road across from the fire station. One would be insane to attempt that simple act these days.</p> <p>While I am totally against the building of a gondola to transport skiers up Little Cottonwood Canyon during the few days of the year that traffic cannot quickly flow up the canyon due to weather conditions, I'm incredibly dismayed at the thought of turning Wasatch Blvd into a virtual expressway. There are days when we take our lives into our hands trying to access Wasatch Blvd. while threading north and southbound traffic going well over 60 miles per hour.</p> <p>Wasatch Blvd. should be a showcase entry route into the world-class canyons that locals and visitors hold dear. It should have bike lanes and shoulders with sidewalks adorned with native trees and shrubs. It should have an enforced speed limit of 25 miles per hour as well as curves to slow traffic down. If a bus lane is necessary, so be it. But that added lane should not come at the expense of the beautification of Wasatch Blvd. or the reduction of the speed limit.</p> <p>And under no circumstances should unsightly concrete sound barrier walls be erected along Wasatch Blvd. Those walls reinforce the idea that the street is an expressway and encourage speeding.</p> <p>In closing, do not destroy one of the most beautiful and beloved canyons in North America simply so some skiers are not inconvenienced on days of heavy snowfall. Nobody in my family skies and out of the 100+ friends that I'm on a first-name basis with, only two of those folks ski ~ and both are opposed to the gondola. And for god's sake, do not expand Wasatch Blvd. just to make it convenient for the handful of people that want to ride a gondola to the ski resorts.</p> <p>And on a final note, if over time, ten times as many people want to access the canyon as the number that currently wishes to do so, would your mandate be to accommodate that demand? At some point, we need to curb access to the canyon so that it is not "loved" to death.</p>
34790	Kellie Betancourt	<p>I am for the gondola. As long as there are no long term impacts to the watershed, the gondola is the best option for the environment and it is a solution that has been proven to be successful in other countries.</p>
34791	Maia Hernandez	<p>The gondola is going to significantly alter the natural landscape of one of SLC's most popular canyons. A toll on the road and/or more accessible UTA buses would achieve the same goals for the canyon, without ruining parts of the canyon that add to its popularity for locals. Please please please reconsider - the consequences of this construction far outweigh the proposed benefits.</p>
34792	David Porter	<p>As someone who has skied extensively in Little Cottonwood since 1996, I am strongly against this proposal. Firstly, it will forever change the natural beauty of the already stressed Canyon, Secondly, it will merely create another traffic issue while not mitigating the original issue. Thirdly, it's expensive and saddles tax payers with a cost for infrastructure that only benefits two resorts. Finally, this proposal stems from desires of an elite few, not from the desires of the vast majority of LCC constituents. There are far less invasive and reasonable solutions to canyon congestion than the Gondola. Please reconsider.</p>
34793	Raj Reddy	<p>The gondola is a disgrace to Utah and the Salt Lake Valley. DO NOT INSTALL IT</p>
34794	Bhuvana Murali	<p>I oppose the gondola build in this greenery neighborhood</p>
34795	Susie Strong	<p>My name is Susie Strong and I am commenting to let you know I do not support the gondola project. I am a Utah voter, a resident of Salt Lake County, a member of a family who has owned a home in [REDACTED] since 1920, and a frequent visitor to the canyon. I appreciate UDOT looking in to traffic solutions for the canyon and the time that you have spent on this.</p> <p>I would like to see UDOT implement alternate solutions such as tolling and increased bus service. Please try these options before building a gondola. Why not try these things first before jumping to the gondola?</p> <p>There are some things that can be done better to help with traffic but even then I don't believe the goal should be to get unlimited amounts of people up the canyon at all times. It simply cannot hold that many people. The traffic helps provide a natural funnel to the canyon capacity.</p> <p>Another consideration is that locals will not pay to use the gondola. I have heard that it will be \$35 per person. I would never choose to pay for my family of 6 to use the gondola and I know many, many families would be in the same situation. And the gondola only seems to serve the ski resorts. What about the rest of the canyon?</p> <p>I would like to see UDOT implement the other solutions like more bus service and tolling and evaluate their success before building a gondola. It is the responsible thing to do, fiscally and environmentally.</p> <p>Thank you.</p> <p>Susie Strong</p>
34796	Karlie Fitzgerald	<p>Please don't build the gondola in little cottonwood canyon. Please revisit the alternative options.</p>
34797	Patrick Park	<p>I am opposed to the gondola option. How does the ski resorts who are the only benefit from this excessive taxpayer expense not contribute</p>
34798	Manya Murali	<p>I am a little cottonwood resident. Implementing the gondola would not only damage the wildlife around the area but also be a great nuisance to me and my fellow neighbors to have it run below our homes. This doesn't seem like an environmentally apt option and is destroying the area it's going to be implemented in and ruining the beauty of the canyon. None of us want the gondola!!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34799	Taylor Bell	I currently disagree with the gondola proposal. I am concerned about it's overall environmental impact relative to other solutions as well as the lack of public support I am witnessing.
34800	Sam Barco	Please do not allow this to be built. I do not believe it will improve the canyon, and instead will lead to more crowding without improving the road or parking. Additionally I do not think tax money should be used unless it will be free to the public. It also bypasses many great parts of the canyon and would not be useable for transportation to these locations. Thank you for reevaluating this plan.
34801	Lexi Griffiths	I am STRONGLY OPPOSED to the gondola in little cottonwood canyon. There are so many more activities the canyon offers besides skiing. Incredible hiking, world class bouldering and climbing, backcountry skiing and ice climbing, mountain biking... and the gondola does nothin but negatively impact every single one of them. Not to mention the watershed. A gondola will take away from the natural beauty of the canyon and restrict access for so many. All to fill the pockets of 2 private resorts, one of which doesn't even allow snowboarding. It will create a much larger traffic problem all along wasatch blvd between BCC & LCC with cars lined up to park in yet another awful structure. If we as taxpayers are expected to pay over \$500 million I would really like to see that money going towards something of much greater importance, like the great salt lake. If that lake dries up our mountains will lose all the lake-effect snow that makes utah skiing so incredible with the "greatest snow on earth,". I don't see why we can't ever just leave nature alone, undeveloped and undisturbed. Please please PLEASE do not ruin the space that we go to for peace and solace with a tourist attraction that will forever ruin the natural beauty of little cottonwood canyon.
34802	Samantha Base	I invite you to go for a hike in the canyon
34803	Tory Peters	The gondola is a nonsense solution to a very real problem. To put the entire canyon at risk for the profit of two corporations is nonsensical.
34804	Candace Williams	I feel the gondola will be an eyesore to the beauty of the canyon and disrupt the local wildlife. I also don't want to pay for snowbirds parking problem and their desire to pack more people in their resort. If they would like to bring more people to their resort let them pay for the gondola. This is not a Sandy City problem. Sandy City residents should not be paying for the gondola. If this project is approved this will be the most irresponsible use of taxpayer money by our local Utah government.
34805	Allyson Dopp	I ski at Alta 100+ days a year. The gondola is not a reasonable response to the traffic problems. I will rarely if ever take the gondola because it is much less convenient. Altas parking reservations made the traffic and driving up sooooo much better. The gondola is not worth the cost to the public and the loss of the natural beauty and access to climbing. This is a terrible solution and will not make anything better.
34806	Jeff Prove	Will UDOT cry if the gondola is not built? There will be many mourning the canyon if it is.
34807	Meredith Ackerson	I strongly support the alternative solution of a enhanced bus system. The gondola would not serve my needs in the canyon as a bat country skier, hiker, and climber. I strongly urge you to hear the voice of the Salt Lake City Council and Salt Lake County's agreement and alignment to vote against the gondola. The people have spoken and 80% of the Salt Lake and Utah population is in opposition of the gondola. The enhanced bus system would provide opportunity for incremental implementation that would allow the community to see benefits consistently one at a time, starting with a simple enhanced bus system, then perhaps tolling, then perhaps if still needed a widened road/bus lane. There are many "Common sense" alternatives that should be thoroughly pursued before considering a \$550 million project of taxpayer dollars that start and end on private land and private businesses. additionally, any profit from the gondola would likely go towards operating the gondola, whereas profit from a paid bus system or tolling could go back to our public lands. additionally, as an enhanced bus system is grown it could also begin to service the needs of big Cottonwood Canyon and other greater Salt Lake area needs as well. There is no expansion plan for a gondola. I strongly oppose a gondola and stand with the Salt Lake County and Salt Lake City opposition and VOTE to the gondola. I urge you to listen to what the people want, listen to save our canyons, listen to friends of little Cottonwood Canyon, say NO to the gondola.
34808	Rochelle Dickson	I do not want a gondola in little cottonwood canyon. It would be so hideous. Snowbird, alta and Brighton should make a multi level parking garage to fix the parking problem and toll \$1 out of the canyon on even days of the month like Millcreek canyon does
34809	Jordi Ferrv©	Just went climbing here, it's beautiful. It would be a shame for the gondola to ruin this raw beauty
34810	Alex Thurgood	This is will not be good. I hope this plan does not go forward
34811	Megan Rielly	We encourage you to pursue a phased approach involving busses (electric) before obtaining funding and constructing a gondola. This would change Utah as we know it.
34812	James Larson	I do not support the building of a gondola to transport people to the ski resorts. I am a long time skier of Snowbird and I know first hand the traffic issues facing this amazing canyon. It is a short-sighted idea to spend \$500 million dollars on something that will take years to build. Not only do we need solutions right now but it is also a concern that climate change will have a tremendous impact on our snow pack making it a moot point because this problem may not even exist at that point. What a waste of money! We need to limit vehicles and people going up the canyon. It is really quite a simple answer. This will preserve our view and save millions of dollars. Thank you.
34813	Sarah Allred	I am concerned that the gondola only caters to those using the ski resort and doesn't give a viable option to people accessing other parts of the canyon. Using the large amount of resources to build something that can only be used by people who can afford to ski ignores the large amount of people who use the canyon for other reasons.
34814	Brodie Mead	I moved to Salt Lake City 7 years ago for school at the University of Utah, but falling in love with Little Cottonwood Canyon was what kept me around. The idea of putting a gondola up the canyon breaks my heart. I live here for the beauty and nature, not to participate in a theme park. If this gondola actually goes through, I will move away from Salt Lake city and this state. There are a lot of developments that have popped up in the short time I've been here, and this will be the final straw. I look forward to using the even less frequent bus system this winter to get to Snowbird, just to prove that there are other options for this canyon, as there always have been.

35579	Carleton DeTar	<p>We are long-term residents of Salt Lake City and avid outdoor recreationists, particularly in the Wasatch mountains. Here are our brief comments about the final EIS.</p> <p>The EIS is deficient because it lacks an analysis of the optimum maximum carrying capacity of Alta and Snowbirds. We expected to see results of a survey asking skiers on peak days whether they were happy with the current crowding on the slopes. Knowing the ideal number of skiers per day would provide the basis for determining the cost-effectiveness of the various alternatives considered. The EIS appears to assume that with the population in the valley growing, the need for transportation to the ski slopes will continue to increase with no regard to the quality of experience that may result from an increase.</p> <p>A gondola will severely degrade the visual experience of those who do not ride it. The final recommendation does not give this consideration sufficient weight. Why?</p> <p>A gondola does not solve the problem of year-round trailhead congestion, since it can't stop at the many popular trailheads and it is unlikely to run frequently outside the ski season.</p> <p>Buses are far more versatile. The bus alternative was inflated to include extensive road widening. This, in our opinion, is unnecessary -- limited widening to make room for stops should be sufficient. Toning down the bus alternative would make it much preferable to the gondola.</p> <p>Vehicle tolls should be instituted and set high enough that the bus alternative becomes preferred. That will solve the congestion problem.</p> <p>Thank you for the opportunity to comment on the Final EIS.</p> <p>Carleton DeTar Laurel Casjens</p>
34815	Jennifer Hartssock	<p>This gondola is a blatant attempt to cram even more skiers/boarders into the resorts at the canyon. It's goal is to bring more revenue to the resorts, not protect the canyon and the environment. It's a disingenuous proposal. Make the resorts have parking reservations. Or paid parking. At the same time increase bussing. Offer discounts or bonuses to carpoolers. No one wants this gondola.</p>
34816	Megan Jacques	<p>PLEASE DO NOT GO FORWARD WITH THIS AT THIS TIME. I think this 1,000% needs more study, public feedback, and HONEST INFORMATION about the impacts. This is going to destroy a beautiful canyon and I really believe MOST PEOPLE ARE NOT IN FAVOR OF THIS. I really think public opinion should make this decision but I feel like it's DEFINITELY NOT going to be made by what the public (who actually uses it and knows what they want and SHOULD HAVE MORE OF A SAY THAN ANYONE) but by what UDOT "THINKS," will be best or what they've been paid off to think.</p>
34817	Sara Charboneau	<p>I would like to comment against the gondola! The ski resorts should not be allowed to dictate what happens to the public land. This will effect so many cool things including wildlife, the backcountry and recreational use. Please don't put in the gondola!</p>
34818	Mark Levin	<p>On the Gondola - General</p> <p>I am the Owner of a residence at Alta, and the gondola system will likely be very visible on the hill above my home and property, nevertheless, I strongly support the gondola alternative, but with some comments and suggested modifications to the current preferred alternative. Some other thoughts regarding the gondola are below:</p> <ul style="list-style-type: none"> -Suggest that the gondola be free, such as the one linking Telluride and Mountain Village in Colorado. That will go a long way toward getting people to leave their cars down below. -The gondola will avoid essentially all avalanche risk for its riders. Any vehicle driving in the canyon is at risk, even with mitigation measures. Often, the highest risk is late on a heavy snowfall day, when there is a lot of new snow loading and mitigation can't be initiated until the skiers are down the canyon, yet thousands are stuck in slow or nearly stopped traffic under loaded avalanche chutes. -The gondola should be operated well into the evening hours, especially on weekends. -Evacuation personnel for the gondola will become an important consideration <p>Tolling and Vehicle Limits</p> <ul style="list-style-type: none"> -I am against tolling, as it further stratifies the skiing experience to the wealthier classes, and the survival of the sport we love requires diversifying the skier group and encouraging more young people from all backgrounds to become skiers. -As we learned during Covid, de facto vehicle limits as a result of having a system of ski area morning parking reservations required on peak demand days are likely going to be much more directly effective than tolls, and more fair to all guests who prefer to drive up to ski, and the administrative cost is carried by the ski areas, not the taxpayers. -Any tolling, or other highway access limitation system, will need to include special consideration for residents, owners and others that have to regularly travel up SH-210 to live or work; manage or maintain rental properties; repair, maintenance and delivery service personnel; Alta and Snowbird area business employees, and others who are part of the functional needs of the community. A possible solution for those who regularly have to go up the canyon for these purposes might be an annually requalified permit system, using RFID chipped photo IDs that are not tied to a particular vehicle, as well as business-associated RFID chips. Another system would have to be worked out for occasional occupational traffic, such as repairmen and contractors, etc.. <p>Financial Viability of Alternatives</p> <p>Any investment of public funds by the taxpayers needs to have an economic study and not present value analysis against</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34819	Nancy Hardy	<p>Why is UDOT opposed to trying a 'common sense' solution for people to get up Little Cottonwood Canyon? It makes NO sense to not try common sense! The simple and much less expensive solution is providing more busses/shuttles directly to the ski resorts, and busses that make stops at popular destinations along the canyon, year round! Keep the canyon beautiful. Keep it simple (park, and ride a bus). Lower the speed on Wasatch Blvd. to 35mph, build some bike lanes on both sides (separate from the road), create walking paths. Build a flex lane in the middle of the 2 lanes. YES to common sense, NO to Gondola!</p>
34820	Gabiella sanzo	<p>Why would there still even be a chance of continuing on with the gondola plan with this amount of backlash from the community?</p>
34821	Japheth McGee	<p>We should not be afraid of new innovative projects. The Gondola is a clearly innovative project. The gondola would be an amazing draw for the canyon and allow people to get a beautiful view of the canyon they would otherwise miss. Build the gondola.</p>
34822	Brett Perez	<p>I love the idea of a gondola. I believe the ski resorts should pay for it. If taxpayers money goes to it residents should have discounted rates to ride year round.</p>
34823	Gabiella sanzo	<p>What would the avalanche mitigation look like with a gondola?</p>
34824	Gabiella sanzo	<p>In a few generations from now, there won't even be skiing due to global warming. Why even build a long term gondola when there will be no use for in a couple hundred years?</p>
34825	Robert Douglass	<p>The Final EIS fails to provide data or analysis to justify the description of the outcome of its No Action Alternative or any other Alternative. Specifically, The EIS provides no data, no analysis, nor rationale for its presumed traffic increase by 2050. What data or analysis supports that EIS core assumption, if any? The traffic volume projection is the fundamental basis for comparing all alternatives including the No Action Alternative. The traffic volume projection for 2050 is the primary basis for needing a major transportation project. Without some basis for this key metric and key justification, the Final EIS is negligent in assessing the environmental impact. There are several facts and forecasts as well as historical data that indicate that the projected traffic in 2050 is significantly overstated in the EIS. The EIS projections are contradicted by UDOT's own traffic data for Little Cottonwood Canyon, SR-210. Traffic is likely to decrease not increase based on historical trends. UDOT's traffic data, provided through the Central Wasatch Commission, shows that for the ski seasons from 1989-1990 through 2011-2012 traffic DECREASED by 9% overall, decreased by 0.18% on average per year, and decrease by 0.8% median per year. This is in direct opposition to the Final EIS projection of ski resort traffic in Little Cottonwood Canyon in 2050. The EIS presents no data nor any analysis supporting its core assumption of traffic increases by 2050. Without that data and analysis in the EIS to support the single most important design metric and project rationale in the EIS for proposing and comparing alternatives, especially the No-Action Alternative, neither the public nor the legislature can evaluate the alternatives' benefits versus their cost or meaningfully compare them to one another. The environmental impact assessment in the EIS is fundamentally flawed because it is based on an inaccurate traffic projection for LCC skier visits.</p>
34826	Gabiella sanzo	<p>Why can we not work on renovating the interior of the busses to make them more compatible for skiers with lots of gear and a place to sit?</p>
34827	Elizabeth Dewitz	<p>It is completely irresponsible to have taxpayers fund this proposal that benefits private business! Furthermore it would cause irreparable damage to the canyon with access and maintenance roads on top of the unsightly towers, cables and cars ! Toll booths or bus only options with a reasonable ride fee is the best option for the canyons and the locals that use, support and would need to fund any improvements.</p>
34828	Natalie Petersen	<p>PLEASE reconsider the gondola alternative to solve traffic congestion in Little Cottonwood Canyon. To achieve the goal of 30% reduction in traffic in the canyon, other options could be implemented with less cost, less negative environmental impact, and nondiscriminatory service to all Utah citizens. For example, carpooling incentivized through a lessened toll for multiple passengers in private vehicles, increased bussing, and a parking fee at ski areas, could all be implemented. Specific reasons the gondola is not the best alternative: 1. It will cut through the wilderness of Little Cottonwood Canyon, destroying natural habitats. Additionally, there's new evidence (from Hawk Watch International) that the gondola would kill and injure birds during night migrations through the canyon. 2. It is likely to be expensive to ride the gondola - preventing most people from using it, and therefore not alleviating traffic congestion. 3. The gondola alternative would benefit the privileged - those making money from its development and those wealthy enough to use it. This alternative does not adequately consider all of Utah's citizens, particularly the underprivileged. 4. It only services two sites. People would continue using cars to access other places in the canyon. 5. It won't run in the summer. 6. It's paid for by taxpayers but only benefits a few: Snowbird, Alta, La Callie, The Tree Farm, Chris McCandless, Wayne Niederhauser, and those wealthy enough to ride it. 7. It's taken from transportation money meant for the entire state of Utah. ,Ã© Thank you for considering solutions that are more fiscally, environmentally & socially responsible.</p>
34829	Gabiella sanzo	<p>How are you going to monitor the construction to make sure no debris gets into our watershed? How will you hold those liable for damages to the watershed because of construction?</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34830	Taylor Meadows	<p>To all concerned,</p> <p>I thank you for reading my comments and giving the people that love and use Little Cottonwood Canyon a platform to share their voice.</p> <p>I also thank you for efforts to begin experimenting with low-cost, low-impact solutions to congestion and overcrowding in LCC. During the first round of public comments, I strongly voiced that other solutions NEED to be fully tested before committing to massive projects like the gondola. I stand by my previous statement and urge UDOT to favor non-invasive, low-cost solutions to surge congestion on select days of the year in LCC.</p> <p>I am, however, very disheartened to know that my voice was disregarded in the last round of public commenting. Once again I raise my voice in strong opposition to the proposed gondola for Little Cottonwood Canyon. I will expound on several points why the gondola is NOT the right solution for Little Cottonwood Canyon.</p> <p>First, as I alluded to above, the gondola is in direct opposition to the voice of the people. LCC belongs to the people of this state and county that contribute tax dollars for its maintenance, protection, and care. The voice of the people matters when it comes to the management of this canyon as well. Per a Hinckley institute poll, 80% of Utahns OPPOSE the gondola. No gondola IS the voice of the people. Additionally, political opinion is being disregarded. Salt Lake County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski, and the majority of the Salt Lake County Council, among others, have carried the voice of their constituents in opposing and condemning the gondola. The voice of the people must not be ignored.</p> <p>Second, the gondola is a tax-payer's responsibility, while the benefit goes to private ski resorts. Little is known to the public what financial burden is placed on the benefactors of this proposal. All indicators thus far suggest very little while, we, the Utah taxpayers, will foot the bill whether we ski on powder days at Snowbird and Alta or not.</p> <p>Third, the gondola comes with an unfathomably large sticker price when it is only intended to help alleviate congestion for a select number of days. The stress and frustration of powder-day and weekend traffic in the canyon is a real problem, but 30-50 days out of 365 doesn't warrant an estimated \$550 million dollar, multi-year project. If we are only fighting congestion problems 10-15% of the year, why do we need to spend hundreds of millions of dollars to try to address it? Many estimates suggest that the price tag could be substantially more than estimated as well. The potential benefits of the gondola to Utah taxpayers do not outweigh its impressive costs.</p> <p>Fourth, the gondola is a tourist attraction with no practical value for locals that will pay for it. The gondola as proposed does</p>
34831	Steve Gourley	<p>This transportation option is not a solution. It is a stunt for ski resort tourism. I recreate in all the canyons and this solution only supports paying ski resort customers. It does not work for me. I recreate much lower in the canyon and no option exists for us. The cost is too high both visually and fiscally. There are better options.</p>
34832	TAD Turgeon	<p>The draft and final EIS is not acceptable due to the corrupt nature of the relationship between the parties requesting public funds for a private investment project. UDOT funds shall be spent solely to benefit the people of Utah and not business. The only acceptable option is required bussing the has been demonstrated effective at Zion National Park. A gondola awarded to a private development group is a misuse of public funds</p>
34833	Gabiella sanzo	<p>Improves busses would be way cheaper and more accessible to the community versus an expensive gondola that will only accommodate tourists, private companies, and other people in power?</p>
34834	Robert Douglass	<p>The environmental impact assessment in the EIS is fundamentally flawed because it is based on an inaccurate traffic projection for LCC skier visits. The EIS appears to imply that increased population supports a projected traffic increase in LCC by 2050 of approximately 47%. Data from the National Ski Area Association indicates that the number of skier visits to a resort in a season is correlated significantly only with the amount of snowfall a resort receives in a year and is not significantly correlated with local population growth. The EIS predicted traffic volume for 2050 is the key design metric for all Alternatives and is the key metric for evaluating the environmental impact of all Alternatives. It is the key metric justifying the LCC Project. Because the EIS contradicts skier-visit growth trends for LCC provided by the Ski Industry and because the EIS fails to provide any data and analysis to support its highly divergent prediction for skier traffic in 2050, the EIS is fundamentally flawed. The public and legislators cannot assess the value versus the cost of the alternatives based on flawed traffic projections.</p>

35585	Emily Lindner	<p>Dear UDOT,</p> <p>I urge UDOT to reconsider the gondola B option as the preferred alternative for LCC. The preparation of the EIS document is thorough and extensive and I appreciate the time you are taking to evaluate different options to determine what best serves the needs of the Utah community and environment in Little Cottonwood Canyon. Here is a little about me and why I am invested in this conversation - I am a 27 year old Utah taxpayer; I play and enjoy the Wasatch canyons for climbing, skiing, hiking, and biking; I work with underserved, low-income, minority groups in SLC to have better access and education to resources in their community; and I studied environmental sciences. I recognize you are sifting through thousands of public comments, and my hope is that you hear our concerns about the gondola project moving forward.</p> <p>This project costs a LOT of money and affects Utah taxpayers. The gondola is infrastructure that permanently changes LCC landscape and ecosystem services. The gondola is designed to serve only ski resort users and tourists, and ignores other local recreational users. The gondola will also create a larger socio-economic gap in the Salt Lake Valley. These are issues we cannot ignore. These are issues that will not be solved by the construction of a gondola. These are issues that will continue to bring frustration to those who's voices are left unheard to those with money and power.</p> <p>Climate change and clean air in Utah will not be solved with the construction of a gondola in a canyon that can see the brown cloud from above. What is UDOT doing to reduce the amount of private cars emitting greenhouse gases in the valley? How are taxpayers being invited to be part of that change that doesn't negatively impact their wallet or access to goods and services? What other solutions exist to incentivize the community to change the way we think and act when it comes to transportation?</p> <p>It makes me deeply sad to think about LCC changing. I moved to Utah about 3 years ago from Montana and I remember when I drove up Little Cottonwood Canyon for the first time to go on a hike. I was in awe! I couldn't stop thinking about how beautiful, unique, big, and pristine the canyon was. I continued to stare and wonder about what these mountains offered. The mountains have always been a place of refuge for me. A place where you can hear the animals moving through the brush, the water rushing over rock, snow painting the peaks and melting into wildflowers. I know each person may have their reasons for being in the mountains, but for me it's to get away from the noise of the city and people. A gondola would change that. I gondola would be a constant reminder that civilization cannot be escaped in Utah. A gondola would always be in the view, it would take away natural beauty EVERY day of the year.</p> <p>I urge you, UDOT, to reconsider your plan. You have power in decision. You have power in what the outcome is. You have power to positively impact this community. You have power to make a difference. There's alternatives that have not been</p>
34835	Gabiella sanzo	<p>Why are you allowing for more people to overpopulate our lands than it's meant for? These places are being loved to death and a gondola would only make things worse.</p>
34836	Joshua Figgins	<p>My name is Joshua Figgins. I am a resident of Sandy. I am opposed to the gondola idea. I am a Utah voter and a frequent user of Little Cottonwood Canyon.</p> <p>I understand that the canyon has major traffic issues that need to be addressed, but I do not believe that a gondola is an appropriate solution. The gondola is incredibly expensive. That is a lot of money that is really only going to help those with lots of money who can afford to go skiing. If we can find a way to raise half a million dollars on an infrastructure project like this I feel that it can be used somewhere with a much bigger impact that benefits all of the Salt Lake area, and not just those that can afford to go skiing at the resorts.</p> <p>Little Cottonwood Canyon is absolutely beautiful and is used for so much more recreation than just skiing. The gondola is going to displace many climbing routes. That is awful because this canyon is home to so much world class climbing. The canyon has some of the most stunning views in all of Utah. It provides a feeling of solitude and peace that a Gondola now interrupts. The Gondola isn't even useful for all canyon users. It seems to only benefit Snowbird and Alta during the ski season. It does not help all the other canyon users during winter.</p> <p>The times that traffic is really bad is only during snow storms. I do not feel that spending over half a million dollars for a solution that is only needed for maybe 20 days of the year is a good idea. Again if we are going to be spending money to fix traffic issues in the Salt Lake area I think that money should go to somewhere that will benefit all residents for a lot more than just 20 days of the year.</p> <p>Another issue I have with the Gondola is that it doesn't seem to reduce the amount of cars that will be driving up the canyon. In the last document stating UDOTs plan, it still expected the same amount of cars to be going up the canyon after the gondola is built. Therefore the gondola doesn't seem to erase the traffic issue on snow days, but just allows more people to make it up the canyon.</p> <p>I support the idea of an improved busing system. I don't support a massive road expansion. I think that is overly expensive and causes a lot of environmental damage as well. I do think that there could be a lot more incentives to get people to ride the bus. The buses can be designed a lot better for skiers. They can allow for easier gear handling and comfort. I think that the bus stations can be more inviting and provide a comfortable place where people are happy to wait for a bus.</p> <p>My idea would be to create a hybrid bus passing lanes up the canyon. There are probably places on the canyon road where it would make sense to build an extra lane for buses. This could be in areas that aren't destructive to current recreation, are cheaper to build a road, and requires less infrastructure to mitigate avalanches. You could just build one extra lane that buses can use going up in the morning and at some point during the day they can switch so that the buses use the same lane to go down in the afternoon when traffic starts getting bad going down. I think this would work great because it would motivate people to take the bus because the bus would have opportunities to pass slow traffic going up the canyon. It wouldn't be a bus only lane the whole way up, but at strategic locations to minimize canyon damage and allow for buses to pass slow traffic occasionally.</p>

34837	Brooke Jacques	<p>I feel like this process was done SO SKETCHY and definitely NOT AT ALL considering what the ACTUAL PUBLIC AND PEOPLE WHO LIVE HERE WANT.</p> <p>This decision FROM the beginning was swayed to what is best for the people traveling here and not people in Utah WHO ARE PAYING FOR THIS.</p> <p>This is absolute [REDACTED] that this is the chosen alternative when the IMPACTS to the beautiful canyon and residents haven't been explained.</p> <p>THIS DECISION IS [REDACTED] It's TERRIBLE.</p> <p>IT IS TERRIBLE FOR THE CANYON, THE WILDLIFE, and RESIDENTS OF UTAH.</p> <p>Y'all are acting like this is going to be a good thing for Utah but it's not. Rich people are not going to be impacted AT ALL or change their ways. This is going to make it harder for UTAH residents to access the canyon. THIS IS A TERRIBLE ALTERNATIVE SELECTION AND SHOULD NOT HAVE BEEN SELECTED.</p> <p>IM FLABBERGASTED THIS HAS MADE IT THIS FAR. It was the WORST and I feel like there's money changing hands. This is DEFINITELY NOT the best for the public but I also don't believe it holds any safety benefits or whatever</p>
34838	Lauren Call Watkins	<p>Please reconsider the proposal for a gondola up little cottonwood. The canyon itself is not owned nor built solely for the ski resorts, yet a gondola would only serve the resorts and mar the natural landscape for decades to come. I hope the city is able to find solutions that are scalable, can provide access year round the resources of the canyon, and have less of a visual footprint. I also cannot imagine a gondola really limiting traffic and travel time substantially. The lines at the beginning and end of the day, along with traffic at those times would be horrendous and really limit peoples ability to quickly and easily access the resorts. Solutions that could be beneficial would include scaling the bus system with more frequent service up the canyon, snow sheds, tolling - with the option for annual passes, etc. Please do not make us spend millions in tax dollars only to put in a system that the average person could not afford to use regularly. I don't want to be priced out of accessing the natural places that drew me to Utah in the first place.</p>
34839	Gabiella sanzo	<p>Do the people of St. George, for example, know that their tax payer money is going into the gondola to benefit few companies 300 miles north? How do they feel about this gondola?</p>
34840	Branden Michelkamp	<p>I'm completely against the gondola and do not want my tax payer dollars being spent on a carnival ride for snowbird and Alta. We all know Snowbird is behind this with their shady under the table purchase of the land at the base. Please please please do not ruin the climbing and backcountry skiing experience in the cottonwoods. There are soooo many cheaper alternatives we can try first, like buses and tolls.</p>
34841	Robert Douglass	<p>On peak skier days, such as a holiday or powder day, both Alta and Snowbird ski resorts are at capacity for parking. On-road-parking augments the number of skiers than can visit. If UDOT removes on-road-parking, as proposed in the EIS alternatives (except no-action), then the number of vehicles on peak days at the resorts will decline somewhat. Moreover, the number of vehicles at the resort cannot increase beyond their current maximum parking capacity (minus the on-road-parking spaces). That capacity is already achieved on every peak day. The conclusion that follows is that traffic on peak days cannot increase beyond what it already is. There simply is no parking for any additional traffic on peak days or on the 30th highest volume hour. The EIS projection of a substantial increase in traffic by 2050 is not possible without new parking and the EIS proposes to reduce parking spaces, not increase them. Traffic volume could be capped by initiating a vehicle counter at Snowbird Entry 1. All additional traffic could then be diverted to buses or alternate ski areas by highway signs posted in the mouth of Little Cottonwood Canyon and at the Big Cottonwood Canyon and at 9400 S. at the current mobility hubs. The signs would become illuminated when the resorts are full and the upper Canyon is closed to any new traffic. With this simple change achievable for a trivial cost, UDOT could limit the no-action Alternative to the current traffic volume for peak days. The no-action option needs to be modified to reflect this fact. The EIS is negligent in comparing alternatives that falsely assume traffic will increase by almost 50% on peak days by 2050. It will not increase at all above the present levels without additional parking at the resorts.</p>
34842	Erinn Geyer	<p>I do not support the proposed gondola solution! Please anything that's less invasive to the environment. Thank you!</p>
34843	John Lloyd	<p>There are a number of questions that have not been answered by the proposal for the Gondola. There does not seem to be any discussion about what the cost will be to ride the Gondola. If you are going to entice the general population to use the Gondola then the Round trip cost for the Gondola needs to be low such as the cost of riding one of the UTA buses up the canyon. A resident of Utah should be able to receive the lowest cost available because they have helped fund the Gondola through taxes. Out of State users could pay the higher cost such as what the Hotel industry charges. Will the Gondola be operational all year round? I would estimate that it would be more costly to shut down the Gondola for 6 months of the year during the summer. Increased maintenance costs would occur if you were to shut it down in the Spring and then restart the Gondola in the Fall every year. The local population will not use the Gondola if the cost to use it is much greater than it would be to drive their own vehicles. At today's gasoline prices that would be in the order of \$10 to \$15.00 per round trip. Their needs to be a no cost option for those that need to service equipment up Little Cottonwood Canyon. I maintain a non profit communications system that is located up this canyon and I would hope that additional fees will not be added on to this system from new tolls or fees to travel up and down this canyon. Hopefully this can remain in effect through out the year. Any new toll or fee will only increase these costs to the public. There needs to be a procedure put in place before hand to waive these future tolls or fees to make sure that they are implemented. Have you investigated the addition of one or more additional drop off and entry stations on the route up the canyon? It would be beneficial to add these stations to let additional users of the canyon be able to get on and off at multiple locations. The Gondola should be extended all the way up to Alta. This addition will serve the Alta Ski Area. Why was this addition not contemplated in the first draft? You need to look at the costs of adding a new length of Gondola from Big Cottonwood Canyon to Little Cottonwood Canyon along Wasatch Boulevard. It seems that there may be more room for a Parking Garage at the entry of Big Cottonwood Canyon. You could scale back the huge parking garage near La Caille by making a larger one at the entry of Big Cottonwood Canyon and then adding a new section of a Gondola between these Canyons. This will reduce traffic and congestion on Wasatch Boulevard by those who use the Gondola.</p>
34844	Katelyn Anderton	<p>We can handle the gondola but the thought of having to pay a toll each time we want to access our own canyon is heartbreaking to us. Please remove the tolling options. It's already getting unbearably expensive to live here. Don't toll our access to nature or our ability to use the canyon as part of our mental health strategy.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34845	Courtland Howell	It is unlikely to solve the problem (traffic) it seeks to address because why would people take a public transportation Gondola when the won't even ride the public transportation bus.
34846	JEFFREY CRAMER	The gondola is widely criticized as too costly, ineffective and unwanted. How is it that a project is disliked by so many and shown to be ineffective in providing relief in traffic get approved? I believe and there is some evidence supporting that this is being pushed by rich individuals who believe they know best and do not care what the majority want. If this is the case and with majority of the public not wanting this, it should be scrapped and the project reevaluated for better solutions
34847	Anna Armstrong	I am a Utah voter and regularly enjoy hiking in Little Cottonwood Canyon. I'm concerned that allowing the construction of a gondola system would forever impact the look and feel of the beautiful canyon. It true that traffic and parking is a consistent problem in the canyon, but I firmly support exploring other alternatives. I would be happy to pay tolls or other fees in order to use the canyon if that helped support developing parking areas. Increased bus service or bus service from carpool lots near the entrance of the canyon might also be an option. We love our beautiful Wasatch Front and we want to keep it as unspoiled and wild as possible. Stringing a gondola system throughout the canyon would not only be destructive in terms of the construction impact, but would also have a negative impact on the aesthetics and wildness of the canyon. Please reconsider your plans for this transportation system and protect the natural beauty of Little Cottonwood Canyon.
34848	John Lloyd	There are a number of questions that have not been answered by the proposal for the Gondola. There does not seem to be any discussion about what the cost will be to ride the Gondola. If you are going to entice the general population to use the Gondola then the Round trip cost for the Gondola needs to be low such as the cost of riding one of the UTA buses up the canyon. A resident of Utah should be able to receive the lowest cost available because they have helped fund the Gondola through taxes. Out of State users could pay the higher cost such as what the Hotel industry charges. Will the Gondola be operational all year round? I would estimate that it would be more costly to shut down the Gondola for 6 months of the year during the summer. Increased maintenance costs would occur if you were to shut it down in the Spring and then restart the Gondola in the Fall every year. The local population will not use the Gondola if the cost to use it is much greater than it would be to drive their own vehicles. At today's gasoline prices that would be in the order of \$10 to \$15.00 per round trip. Their needs to be a no cost option for those that need to service equipment up Little Cottonwood Canyon. I maintain a non profit communications system that is located up this canyon and I would hope that additional fees will not be added on to this system from new tolls or fees to travel up and down this canyon. Hopefully this can remain in effect through out the year. Any new toll or fee will only increase these costs to the public. There needs to be a procedure put in place before hand to waive these future tolls or fees to make sure that they are implemented. Have you investigated the addition of one or more additional drop off and entry stations on the route up the canyon? It would be beneficial to add these stations to let additional users of the canyon be able to get on and off at multiple locations. The Gondola should be extended all the way up to Alta. This addition will serve the Alta Ski Area. Why was this addition not contemplated in the first draft? You need to look at the costs of adding a new length of Gondola from Big Cottonwood Canyon to Little Cottonwood Canyon along Wasatch Boulevard. It seems that their may be more room for a Parking Garage at the entry of Big Cottonwood Canyon. You could scale back the huge parking garage near La Caille by making a larger one at the entry of Big Cottonwood Canyon and then adding a new section of a Gondola between these Canyons. This will reduce traffic and congestion on Wasatch Boulevard by those who use the Gondola.
34849	Charlene Colton	I am against the building the gondola. It will do more damage than good to the environment. It only caters to the ski resorts. It doesn't give access throughout the canyon for other canyon user: hikers, climbers, camping. Please consider other solutions before destroying popular hiking/climbing areas.
34850	Mary Roalstad	I do not believe that a gondola is the best option for alleviating traffic issues in Little Cottonwood Canyon. Other than obvious visual implications to the landscape, this development will have far reaching effects on wildlife and the natural life cycles of the canyon. More so than an additional lane, or additional parking options at the base of the canyon, the Gondola option will bring excess visitors to LCC with addressing capacity limitations. This development will only benefit resorts and does not service backcountry skiing, common trailheads, or other types of outdoor recreation. This means a gondola would use taxpayer dollars to benefit only a select few with economic means to purchase ski passes. I believe this is an inequitable and highly impactful solution that needs further consideration.
34851	Grainne Keogh	Save LCC. No gondola!!!!!!
34852	Robert Douglass	The Final EIS failed to properly incorporate any of the leading climate prediction models or incorporate recent decadal trends in the snowfall in the West that show that snowfall is declining in the West and has been since the 1980s. Peer-reviewed forecasts of declining snowfall in the West in general and in LCC specifically will lead to declines in skier-visit-days in the Wasatch. Park City commissioned a study of potential climate impacts on skier days by 2050. The study concluded that Park City will lose somewhere between 200,000 and 600,000 skier-visitor-days by 2050. The EIS ignored both the historical, data-documented historical trends and the best climate prediction models; instead, the EIS assumed without data or rationale that there would be no impact on skier-visit-days in LCC due to declining snowpack. In fact, the EIS predicts that road-closure days for a no-snowsheds option may double by 2050. This conclusion can only be made presupposing a doubling of snowfall by 2050. The EIS traffic assumptions are based on flawed projections of skier visits through 2050 that ignore declining snowfall, and therefore the environmental impacts are based on flawed projections of traffic in the Canyon. As a result, all environmental impact assessments in the EIS are flawed. Ignoring both historical data and leading climate predictions means the EIS is based on flawed science and engineering. Ignoring this data and research amounts to negligence in the environmental impact assessment contained in the EIS.

35586	Linda Dunn	<p>I am appreciative of the extensive efforts to explore all possible options to the traffic issues in Little Cottonwood Canyon. These concerns are not exclusive to this canyon and should be considered for all the canyons in the Wasatch at some level.</p> <p>I am in agreement of all the phased in efforts being evaluated and considered for implementation, such as tolling, enhanced bus service, parking fees. I think these efforts will greatly mitigate the existing problems. I am NOT in favor of the gondola and infrastructure. As a lifetime local, avid skier, summer hiker and climber, I am against the visual impact of the gondola, as well as its cost, maintenance and usability concerns. Please do not commit to the gondola, until you determine that these other efforts are not adequate in this canyon and others, to reduce effectively the increased traffic concerns.</p> <p>Sincere thanks for your efforts and consideration.</p> <p>Linda Dunn Mt. Olympus resident</p>
34853	Chris Young	How about a monorail instead? You can move more people faster and it's much safer than a gondola.
34854	Spencer Ewing	No, the plan should not continue
34855	Liv Stromme	<p>I strongly support the alternative solution of a enhanced bus system. The gondola would not serve my needs in the canyon as a bat country skier, hiker, and climber. I strongly urge you to hear the voice of the Salt Lake City Council and Salt Lake County's agreement and alignment to vote against the gondola. The people have spoken and 80% of the Salt Lake and Utah population is in opposition of the gondola. The enhanced bus system would provide opportunity for incremental implementation that would allow the community to see benefits consistently one at a time, starting with a simple enhanced bus system, then perhaps tolling, then perhaps if still needed a widened road/bus lane. There are many "Common sense" alternatives that should be thoroughly pursued before considering a \$550 million project of taxpayer dollars that start and end on private land and private businesses. additionally, any profit from the gondola would likely go towards operating the gondola, whereas profit from a paid bus system or tolling could go back to our public lands. additionally, as an enhanced bus system is grown it could also begin to service the needs of big Cottonwood Canyon and other greater Salt Lake area needs as well. There is no expansion plan for a gondola. I strongly oppose a gondola and stand with the Salt Lake County and Salt Lake City opposition and VOTE to the gondola. I urge you to listen to what the people want, listen to save our canyons, listen to friends of little Cottonwood Canyon, say NO to the gondola.</p>
34856	Robert Douglass	<p>The EIS ignores Ski Industry historical data and future projections of snow-sports participation in the United States. The National Ski Area Association (NSAA) shows that snow-sports visits declined by 2.4% in the last decade (https://nsaa.org/webdocs/Media_Public/IndustryStats/active_US_participants_1996-97_2019-20.pdf). They indicate that the Rocky Mountain Region is following this same declining trend for ski-visits. The NSAA predicts that due to demographics, with Baby Boomers leaving skiing faster Millennials are entering the sport, that the number of skier visits will continue to decline through 2050. The EIS predicted traffic volume increases by 2050 as the key design metric for all Alternatives and as the key metric for evaluating the environmental impact for all Alternatives. The assumed increase in skier traffic is the primary basis for initiating all alternatives, except the no-action alternative. Because the EIS contradicts skier-visit growth trends for LCC provided by the Ski Industry and because the EIS fails to provide any data and analysis to supports its highly divergent prediction for skier traffic in 2050, the EIS is fundamentally flawed. The public and legislators cannot assess the value versus the cost of the alternatives based on flawed traffic projections.</p>
34857	Brigid Wilson	I'm against it. Too expensive, only benefit the ski resorts/skiers, not environmentally friendly, so many others.
34858	Sofia Thoms	<p>A gondola is a very poor solution. It would essentially be like putting a bandaid on an amputation. Its not going to solve traffic. People are still going to drive up the canyon or drive to the gondola. Putting in a gondola threatens the water shed, to instal it there will be damage done to the canyons. Sides of the hills will be torn down and trashed in to the river. This is will pollute the water shed with toxins and dirt. Are you willing to pollute Salt Lakes very limited water supply? What's the solution for that? What about human and environmental health? Watershed aside the gondola will ruin the natural skyline of the canyon. That intrinsic value is a commodity that all Utahans have the right to. It's not something a privatized company should be able to ruin. Additionally the gondola threatens wildlife and plants in the canyons. Putting in the gondola will destroy habitat and push wildlife out. This "band-aid solution," is a huge environmental problem that I do not believe is being considered or taken seriously enough.</p>
34859	Brian Roadifer	<p>My comment in regards to adding a gondola up Little Cottonwood Canyon would be that there should be more stops up the canyon and not only at the ski resorts. The stops should be along popular hiking spots to help alleviate traffic during peak summer season. Right now the gondola seems only useful during peak winter ski season to the benefit of the resorts and not to the public that goes into the canyon during the summer months. Also if you are going to roll out a toll road, you should make it free for those that live in the canyon. Thank you.</p>
34860	Collin Clark	<p>After researching this gondola project more it seems that the overall cost and environmental impact far outweigh the possible benefits associated with its construction. I would much rather taxpayer dollars be used to improve the bus service up the canyon instead of building a gondola.</p>
34861	Robert Douglass	<p>The Final EIS failed to provide any traffic data or analysis supporting their 2050 30th-highest traffic hour design criterion - a criterion fundamental to the impact analysis of every alternative considered. Because the EIS used the 30th highest traffic volume criterion for a road with a highly skewed traffic pattern, their design provides improvements for less than 1% of total traffic use. For a typical highway, improvements designed for the 30th busiest hour provide improved traffic flow for approximately 25% of the total traffic. For a typical highway, such as Wasatch Boulevard, the 30th highest traffic hour is a valid criterion. Little Cottonwood is not a typical highway and has a highly skewed traffic pattern that does not resemble a typical highway throughout the year. Using a flawed design criterion for the highly skewed traffic pattern of LCC results in the EIS presenting a set of alternatives that all (other than no-action) represent a huge waste of taxpayer money to benefit only 1% of the total traffic time in LCC. Given that the EIS evaluation is based on a flawed traffic criterion as well as flawed traffic volume projections, the EIS evaluation of alternative impacts is invalid, and the assessment is negligent.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35588	Anna Armstrong	<p>Hello!</p> <p>I am a Utah voter and regularly enjoy hiking in Little Cottonwood Canyon. I'm concerned that allowing the construction of a gondola system would forever impact the look and feel of the beautiful canyon. It is true that traffic and parking is a consistent problem in the canyon, but I firmly support exploring other alternatives. I would be happy to pay tolls or other fees in order to use the canyon if that helped maintain and develop parking areas. Increased bus service or bus service from carpool lots near the entrance of the canyon might also be an option.</p> <p>We Utahns love our beautiful Wasatch Front and we want to keep it as unspoiled and wild as possible. Stringing a gondola system throughout the canyon would not only be destructive in terms of the construction impact, but would also have a negative impact on the aesthetics and wildness of the canyon. Please reconsider your plans for this transportation system and protect the natural beauty of Little Cottonwood Canyon.</p> <p>Thank you for your kind consideration.</p> <p>Sincerely yours, Anna Armstrong 844 Lakeview, Stansbury Park 84074</p>
34862	Utah Jerry	<p>The gondola makes no sense from a traffic perspective as it will just cause massive delays at the "parking garage" and with the buses(lol) from other parking lots to the gondola. The gondola also ruins the views and has the ability to overrun the canyon. Right now we have gridlock or turn people back which shows the carrying capacity of LCC. The gondola makes it possible to blow through that threshold.</p> <ol style="list-style-type: none"> 1.) Add tolling(for resort skiers). I think a 3ppl+ car should not pay toll as that encourages carpooling/less cars in the canyon. 2.) Build snow sheds over major avalanche paths to mitigate road delays on major mornings 3.) Enforce snow tires through a sticker program. Every car that travels up the canyon between November 1 - April 30 will be required to have an M+S sticker. Stickers will be checked on major traction control days and afternoons when it begins to snow. Cars without stickers will be ticketed(like speeding) with the money to pay enforcement and to help with annual road maintenance. 4.) Open the other lots in lower LCC(Grit Mill/Gate Buttress) so there is at least a little more parking available for carpooling.
34863	Kayla Holt	<p>It is not wanted by locals, other forms like the zion national park bus service havent been tested, and it supports private ski resorts at public cost.</p>
34864	Robert Douglass	<p>The final EIS failed to take into consideration the scalability of bus options. Their environmental impact is only gradually felt over 30 years as the number of buses increases with skier demand. If traffic does not increase as assumed by the EIS, and it is likely not to so increase, then the bus options will have even less environmental impact than stated in the EIS. Even if traffic increases as the EIS projects, the EIS still fails to take into account the reduced environmental impact associated with the bus Alternatives over a 30-year span. In contrast to the bus alternatives, the gondola has its full environmental impact immediately and throughout its 30 years of operation. Its impact cannot be scaled or reduced after it is completed. The environmental impact of road options needs to be prorated as bus traffic increases to the final 2050 level. The assessments of the bus alternatives are fundamentally flawed in the EIS because the EIS fails to prorate the environmental impact of buses over their 30 years of gradual introduction.</p>
34865	Tania Awalegaonkar	<p>I support enhancing bus routes and parking rather than a gondola. The gondola will only serve to assist the rich, and is privately owned, which is unethical for a form of public transport and social service. It will absolutely ruin the beautiful view of the valley. The absurd amount of money that is being spent on this could be used much better to enhance the systems we already have.</p>
34866	Gwen Springmeyer	<p>Little Cottonwood Canyon is a National Treasure. World-class skiing, both alpine and touring, spectacular hiking trails, suburb camping, and unmatched bouldering and climbing. Why would you blemish that to serve just one of the activities - alpine skiing? This gondola would not serve the others who recreate there, and it would destroy the unique bouldering and climbing at the mouth of the canyon.</p> <p>Who supports this? The resort owners do. The developers do. They support it for financial gain. But those of us who recreate there will not see a gain of any kind. The towers and gondolas will be a scar, a blemish that will mar the beauty forever. The 2,500 parking spaces near the mouth of Little Cottonwood Canyon will be another scar.</p> <p>For the past 40 years, I have had a season past at either Snowbird or Alta but I don't want to travel to a ski resort on a gondola. I support rideshare and parking reservation programs and would also support a toll to enter the canyon. I believe there is much that can be done to use more buses during peak periods.</p> <p>The ski season in Utah lasts for five months if we are lucky. About 22 weekends out of 52. Not even half. Traffic is not a problem on winter weekdays or summer days. Yet it is proposed to spend \$550 million just for those 22 weekend days. There are many other ways to spend that \$550 million in a county struggling with homelessness and affordable housing. Please do not do this to our National Treasure just to line the pockets of a few.</p>
34867	Cole Peck	<p>I support common sense alternatives to the gondola, such as increased and more regular bussing, tolling, and traction enforcement. Moderate expansion of canyon infrastructure seems appropriate. I do not support a gondola of this scale in the canyon and hope that legislators will listen to the public opinion.</p>
34868	Ella Gregory	<p>I am against the gondola solution for Little Cottonwood Canyon. In favor of other less invasive, cost efficient, and environmentally friendly solutions such as tolls, ride sharing, etc.</p>

ID	Full Name	Comment
34869	Darwin Moore	<p>October 10, 2022</p> <p>Dear UDOT Final EIS Committee:</p> <p>I am writing to express my extreme disapproval of the UDOT Preferred Gondola Alternative B plan. I am a Utah Citizen, lifelong Utah resident living in the Wasatch Front (Sandy). I also have strong ties to Rural Utah. My entire family and I are also avid skiers who spend most of our ski days at the Little Cottonwood ski resorts - Alta and Snowbird.</p> <p>It is my hope this letter will help provide the information you need see how the Gondola plan will not resolve the Canyon transportation concerns, will be a major tax burden, very few Utahns will benefit and it will permanently scar the majestic beauty of this unique fragile Canyon.</p> <p>Classic Taxation without Representation:</p> <ul style="list-style-type: none"> -Estimated initial Gondola costs/taxes - \$560M, based on costs from four years ago. -Considering high inflation, recent estimates place the initial cost at \$1 Billion. -Annual maintenance costs are estimated to be \$10.4M. -2021 Deseret News Poll showed 80% of Salt Lake Residents oppose the Gondola. -This Gondola proposal is projected to benefit only 2-3% of the Utah population. However, the entire Utah State population will be taxed to pay for it. -Why tax those who don't want or need it? <p>How Serious Is The Traffic Problem:</p> <ul style="list-style-type: none"> -UDOT estimates 10-15 winter days per year with congestion and long ski resort commute times. Residents at the Canyon mouth monitored traffic for the 2021/2022 ski season at 6-10 days. -Most major events (concerts, football games, Jazz games, Stadium of Fire, etc..) traffic is expected and travel time accordingly adjusted. The same should be true for ski resort commutes. -It is unreasonable to spend millions/billions of dollars to address an issue that occurs only 15 days a year. <p>The Gondola Does Not Provide A Reasonable Solution:</p> <ul style="list-style-type: none"> -UDOT stated the Gondolas could transport between 960 and 1,050 people per hour. -Alta and Snowbird estimate 14,000 to 15,000 skiers and employees commute to their resorts on winter days. -Most skiers commute to the resorts between 7:30 and 9:30am, 2 hours. -Only 2,000 of up to 15,000 would be transported during these 2 morning hours. It would take 5 hours (7:00am to Noon) to transport 5,000 skiers. Then it would take 5 hours to Gondola them back to
34870	Krista Olson	<p>I don't think the Gondola is a good option because it only serves one season. How would that be cost effective and helpful for all season? I think the extra bus that would serve for the Winter season, to then turn that lane into an extra bike lane so bikers during the Spring, Summer, and Fall months would be more beneficial.</p> <p>Plus the extra lane could be served at trailheads to provide safer parking for vehicles to park.</p> <p>We need a solution to provide better access to the canyons for every season.</p> <p>I have turned to using the public transportation due to the extreme amount of traffic going up the canyons.</p> <p>I understand the concern with buses going up during heavy snowfall and the road condition, but even with the gondola during high winds would prevent the gondola from serving the public.</p> <p>I just don't think the gondola is truly the best option for every season to fully serve the community at large.</p>
34871	Emilie Rice	<p>The greater Salt Lake area provides a wonderful, convenient way for city dwellers and visitors alike to escape the city and interact with the nearby outdoors as well as wilderness areas year-round. Unfortunately this has created crowding. The gondola proposition as it stands is ineffective, and poses a greater threat than a benefit to the outdoors community for the aesthetic and environmental damage it poses to Little Cottonwood Canyon. It will only serve two ski resorts and operate only a fraction of the year. Recall this suggested route cuts through Little Cottonwood Canyon, a world famous climbing area, posing a threat to the rock climbing community. As a rock climber, I am sad to see that the climbing scene in Salt Lake in danger of becoming urbanized with a gondola as that defeats the reason many of us climb outdoors. As a skier, I feel a gondola makes little sense especially for tourists or families with kids to conveniently enjoy a full day on the mountain due to long gondola lines, wait times, and increased walking time from the parking area to the gondola-that is not skiing as it should be and isn't the ski experience I would want for my own children as it would do little to make my kids look forward to going skiing. An alternate route for the gondola must be considered that considers the interests of all the summer and winter outdoor sports if the gondola is truly the only environmental and economical solution to minimize crowding. If the gondola is merely to alleviate traffic on powder days, perhaps more blackout dates or lottery tickets and capped entries/ ticket sales should be considered for those anticipated high traffic days at Alta and Snowbird.</p>
34872	Robert Douglass	<p>The EIS failed to provide toll and gondola ticket costs or any basis that might be used to set them: what will taxpayers and/or riders pay? Without modeling expected traffic patterns under various pricing schemes, UDOT has no basis for predicting what portion of traffic will ride the gondola vs drive, and therefore the EIS has no basis for estimating how many skiers will simply ski elsewhere where there is no additional transportation cost. Modeling and analyzing the effect of pricing strategies is essential to understand what traffic patterns will result. Without that analysis, the EIS cannot possibly assert how the various alternatives will affect traffic flows and what environmental impact the LCC project might have on traffic in BCC and in Sandy. The latter two areas are explicitly excluded from the EIS assessment, even though all alternatives will have a significant impact on these areas. It is negligent to ignore significant environmental impacts by defining them to be outside the scope of your study.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34873	Grace Liu	Hello, I'm Grace Liu, and I oppose the LCC gondola project. I'm a Utah voter and user of LCC as a cyclist and hiker, and I don't support a gondola that will primarily serve ski resorts. The project would need to adjust its priorities and change its messaging for me to support it. Instead, I would support other solutions such as tolling in the canyon, improved bus service, etc. Thank you to UDOT for soliciting voter input and hopefully taking it into account.
34874	Elizabeth Porter	UDOT should not move forward with the construction of a gondola through little cottonwood canyon. Not only would this gondola cost an exuberant amount of money, but the gondola would cause irrevocable harm to the natural land that Utahans and visitors from all over the world cherish. Disrupting the natural landscape will impact native wild life, and impact the ways in which the public can safely and equitably access the canyon. There are better steps toward creating a more environmentally friendly approach to the canyon that does not disrupt the physical or visual landscape as it exists today.
34875	Cory Thomas	Please no gondolas. The superior solution is to limit ticket sales.
34876	Robert Douglass	The EIS failed to assess the environmental impact of the preferred alternative on Sandy and Draper traffic, especially commuter traffic. Per the EIS, 40% of traffic comes up 9400 S. and Wasatch from the South and West. Eliminating buses based at the 9400 S. mobility hub will make traffic significantly worse for the 40% of the traffic from the south and west. The EIS excluded from consideration of environmental impact approaches to LCC from Sandy and Draper as an explicit term of the LCC project and the EIS. It is negligent to exclude 40% of the traffic impact from a transit project in developing an assessment of the project's environmental impact.
34877	Carolyn Luther	The gondola is a horrible idea. It will destroy the beauty of Little cottonwood canyon. The issue that needs to be solved is less cars up the canyon. When I have visited other ski areas, there are remote parking lots and people take buses to the resorts. This needs to be prioritized as the way for people to access the areas. It would be better to build parking structures to accommodate cars in the Old Mill area or for people staying in downtown hotels to have better bus routes to meet with the ski buses.
34878	Utah Jerry	One other comment. Does UDOT have a study that would show the supply chain management of the Gondola and Cars in the canyon? Would be interesting to see the proposed movement of people around the canyon given the Gondola's limited capacity and the peak timing of people moving in the canyons. I am sure it will be enjoyable to wait in 0 degree temps at 430pm for 3 hours at Alta to get to the bottom of the canyon to wait another hour for a bus to take you to the 6200 Lot.
34879	Caitlin Snow	I'm against this gondola. I think it will be harmful for the environment and animals. I've personally never experienced an issue with traffic that horrible in this canyon. I think we should allow the land to stay how it is so we can all continue to enjoy the life and beauty of our canyon.
34880	Jake Dean	I strongly oppose the implementation of a gondola in Little Cottonwood Canyon. I have been a resident of the Salt Lake Valley my whole life and strongly value LCC. A gondola will impact the aesthetics of the canyon tremendously. I believe we should try less invasive solutions first like tolling, more buses or carpool incentives. I think it is wrong for tax payers to foot the bill for a gondola when Snowbird and Alta profit heavily and many Utah residents don't even ski. Please consider alternate solutions and preserve the beauty of Little Conttonwood Canyon. Thank you, Jake
34881	Robert Douglass	The EIS failed to assess the environmental impact of the preferred gondola Option B Alternative on Big Cottonwood Canyon traffic, especially skier traffic. To an appreciable extent, skier traffic is fungible. If crowds or costs rise at one ski resort, ski traffic will shift to other resorts. Increasing the cost and travel times for Little Cottonwood Canyon will shift some traffic to the ski resorts in Big Cottonwood Canyon. The EIS and LCC Project specifically excluded Big Cottonwood Canyon from consideration of environmental impacts. However, decisions taken and alternatives selected in LCC will impact the environment in BCC. The EIS is negligent in not considering ski traffic in both canyons because both canyons suffer varying environmental impacts from the alternatives considered.
34882	Sarah Paul	Please do not make the gondola and mess up the beautiful canyon thank you!
34883	Madeline Nelson	I do not support the proposed gondola initiative in little cottonwood. This would cause an immense amount of destruction to the canyon and its inhabitants (the trees, creatures, etc). I do support the alternatives like tolling, parking reservations, and ride share options to help alleviate some of the traffic and destruction that comes from it.
34884	Lauren Head	I oppose building the gondola in little cottonwood. I support ride sharing/increased public transportation and parking reservations.
34885	trey Roeseler	A gondola would be terrible for the natural beauty, local wildlife system, and local community. Probably a bad idea. However, it would make yall a ton of money and be kinda nice for traffic reduction.
34886	robert Douglass	The EIS failed to assess the environmental impact of the preferred gondola Option B Alternative on Big Cottonwood Canyon traffic, especially skier traffic. To an appreciable extent, skier traffic is fungible. If crowds or costs rise at one ski resort, ski traffic will shift to other resorts. Increasing the cost and travel times for Little Cottonwood Canyon will shift some traffic to the ski resorts in Big Cottonwood Canyon. The EIS and LCC Project specifically excluded Big Cottonwood Canyon from consideration of environmental impacts. However, decisions taken and alternatives selected in LCC will impact the environment in BCC. The EIS is negligent in not considering ski traffic in both canyons because both canyons suffer varying environmental impacts from the alternatives considered.
34887	Brynne Petty	My name is Brynne Petty and I strongly disagree with the proposal to build a gondola up Little Cottonwood Canyon. I grew up visiting little cottonwood canyon and cherish the trails, breathtaking views, and rock climbing spots. As a Utah voter, I believe that we should preserve this land and keep it accessible to everyone. An alternative that I believe would be affective is an increased bus service so that everyone has unrestricted access up and down the canyon anytime they want. Thank you for your time and commitment to helping improve the roads of Utah.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34888	Sabrina Humphrey	I drove up LCC every Saturday for years since I was a little girl with my parents to go skiing on Saturdays. I always loved the drive and looking at the beautiful scenery. This gondola would take so much beauty away from the canyon, and it's completely unnecessary. Please don't put up the gondola. I want to be able to drive my kids up the canyon to go skiing and enjoy nature without such a big eyesore.
34889	Tonya Seipel	The world is on a warming trend, with or without man's help. In 20 years it is predicted there will not be enough snow to ski at the PC resorts, but PC will have a large supply of skiers. Is it logical to build a western slope tram, to have all the PC skiers travel Down the hill to a western slope tram, or build the tram to snowbird from the Eastern slope. Forget about the canyon environmental impact, what is more logical. Is anyone on this committee old enough to remember the GSL pumping project? By the way, those pumps are still maintain yearly, for the great return of our snow pack. Build the tram, but build it were the skiers are.
34890	Cameron Diehl	While I appreciate the phased concept, I oppose a gondola now and in the future. Once a gondola is built, LCC becomes a magnet for additional development that would negatively impact the watershed and the remaining wilderness areas. Before the massive taxpayer investment to solely benefit privately owned ski resorts, let's invest in a vigorous bus or shuttle service and implement tolling and paid parking. A gondola also would not serve summer hiking trailheads or areas beyond the ski resorts but would be a year-round scar on the landscape and fundamentally change the canyons forever. We should not prioritize the ski resorts during winter weekends over all other uses year-round and that's what the gondola would do. Let's implement the initial phases successfully so that we never get to the gondola.
34891	Michelle Shuman	The buses are highly utilized as is; let's fund it enough to expand bus access beyond the immediate neighborhoods. There have been so many times that I have packed in like sardines or waited long periods of time to leave the canyon at the end of the day...and this year that will be even worse with UDOT's cuts! Even a toll like Millcreek is a much lower cost investment with smaller impact that can yield positive financial results. Furthermore, the gondola fails to take into account all the other uses of the canyon such as backcountry access and residents. Our current infrastructure can meet the needs of those populations too if only it is funded enough to provide more buses servicing a broader area.
34892	Tristan Broadbent	No gondola. Think of the animals that you are impacting. Humans are not the only creatures that live in the canyon. Give a voice to those that can't speak. Investigate the gondola scheme, whose pockets were going to be filled if that passed. Think for the future, the world. Not the quick money for a few corrupt officials.
34893	Ryan Hurst	<p>A gondola is not the correct solution to solve the traffic in Little Cottonwood Canyon.</p> <p>This is an absurd amount of money to spend when only few will benefit from it. The biggest benefactors are Alta, Snowbird, and whoever is paid to build it. The general public are not the ones benefiting from this project.</p> <p>Things I'd rather see done with half a billion dollars. Proper bike infrastructure. 1000 homes for the homeless. Give every single person in Utah \$158.</p> <p>More buses, less cars, no gondolas.</p>
34894	Benjamin Bytheway	Please do not put in the gondola. It is a bad idea and it will not make traffic better. No one will use it.
34895	Robert Douglass	<p>The Final EIS erred by not including a capacity study for the canyon itself. All environmental impacts on LCC arise from human visits. No assessment of a project's environmental impact can be complete and accurate without assessing the impact of additional visitation allowed by any changes created in Canyon usage by the EIS alternatives. The southern Utah National Parks have reported the negative impact of record numbers of visitors to the Parks. These Parks reported damage to their physical resource as well as degradation of the visitor experience. As a result, the Parks have been implementing various forms of visitor management to regulate visitation to a sustainable level. In 2021 the total number of visitors to BCC and LCC combined was more than that of Zion National Park and roughly equal to that of Yellowstone National Park with a fraction of the land mass. UDOT projects a significant population increase in the State and makes the claim that the Canyon can and must accommodate this increase. No EIS Alternative considered the positive impact of limiting visitation in the Canyon to an acceptable and sustainable number. The EIS failed to assess the environmental impact of projects that allowed 47% more traffic in the Canyon due to increased visitor use. The EIS did not even attempt to determine what a sustainable visitor rate per year would be. Yet, the primary environmental impact on the Canyon is predominantly driven by human visits. UDOT in its role as a transportation agency does not have the charter to consider an area's capacity to sustain growth. However, UDOT in the role of the NEPA lead for an Environmental Impact Study of potential projects in Little Cottonwood Canyon does have a primary mission of determining the impact and what is an acceptable impact of projects they create that support unconstrained growth in Canyon use. The EIS is negligent in not considering the impact of ever-growing visitation and not considering alternatives that would limit unbounded growth in human visits or at least analyze the impact of such growth. Assessing the impact of supporting a 47% increase in vehicle usage by 2050 is central to a valid EIS and the NEPA process.</p>

ID	Full Name	Comment
34896	Robert Douglass	<p>The FEIS failed to discuss the considerable environmental impact due to the construction of the preferred alternative. This impact consists of high noise, visual impairment, monstrous traffic jams and blockages, spreading of hazardous dust and soil, pollution from construction vehicles and helicopters, damage to existing roads and property during construction, and road hazards and risks caused by construction operations. The Final EIS says construction will continue for two or more years, inflicting these environmental impacts throughout. Environmental impacts due to construction are of special concern to public health given that dust and soil disturbed and released during construction in Superfund Sites will release lead and arsenic poisoning into the air and water supplies endangering both residents of Salt Lake Valley and passing motorists. The EIS admitted that testing and assessment of these risks were not part of the environmental impact study of the gondola alternatives that would create these risks, even though they may be among the greatest environmental impact from a human health standpoint. Furthermore, if tests of lead and arsenic contamination at EPA Superfund Sites prove positive as expected, the EIS states that they are likely to be further construction delays and expense, increasing construction impacts. None of the substantive risks, hazards, and impacts due to construction of the Preferred Alternative were discussed or analyzed amounting to negligence in completing the NEPA process. This failure can only be addressed by conducting the appropriate tests and revising the EIS in a supplement to detail the risks, include the additional costs, and include the additional construction risks and time. The addition of temporary bus service will also add construction delays and environmental impacts to the gondola option B alternative by adding more construction to the alternative for temporary mobility hubs, buses, and bus stops. These are substantive impacts newly introduced by the new, modified gondola B alternative, yet not discussed in the Final EIS. They demand an EIS Supplement per NEPA regulations.</p>
34897	Robert Douglass	<p>The Final EIS fails to promise a Supplement to the Final EIS, as required by NEPA regulation when a new or modified alternative presents additional environmental impacts. The Final EIS states that no supplement is needed because the new Alternative that is presented does not change the environmental impact of the Alternatives. Failing to produce a Supplement to the EIS is a failure to comply with NEPA process because the new modified alternative creates significant new environmental impacts. These impacts are clear in the EIS, but the EIS states they are minimal when they are not, as made clear by the FEIS's own description of the new, modified preferred alternative. Given these new environmental impacts introduced for the first time in the Final EIS and never presented to the public nor included in the draft EIS, these impacts require by regulation an EIS Supplement. Specific, significant impacts of the new, modified alternative introduced in the Final EIS are detailed in separate comments to UDOT.</p>
34898	taylor Emma	<p>When I moved to Utah four years ago to go to school I found myself in awe of how easy it was to disappear from life, to drive 20 minutes from my home and to be able to completely disconnect. To get to listen to the birds, to smell the trees, to look up and see the Milky Way. Little Cottonwood has become an escape from me to go run, climb, and fish after classes or on the weekends. It's turned into an essential place for me to stay sane in a stressful world that we live in, adding a gondola to this serene escape would completely destroy the magic and appeal to it. There would be constant noise of construction or operation, the climbing spots that have become home and fostered so many amazing memories will be blown up, gone forever and unusable for the future generation. The "world class," little Cottonwood Canyon would be destroyed in the efforts to construct a way to get more people up canyon more efficiently everyday. I urge you to use the money that would go towards a gondola to try other easier solutions first. Pay bus drivers more and add more buses as a first step. Every time I've ridden the bus it's been so crammed with people it's hardly worth it. Make the buses a pleasant experience, and then see how much they get utilized. Try something less permanent before you go and destroy one of Utah's best attractions.</p>
34899	Tiffany Do	<p>Little Cottonwood Canyon is home to many, from plants to animals to even people who enjoy the landscape for what it has to offer. However, building a gondola destroys the nature of Little Cottonwood. You're disrupting the habitats of organisms living there. You're also taking away precious areas for climbers. Utah is known for winter tourism BUT it is also well known for its landscape and other outdoor recreation such as climbing. Your decision may benefit the ski resorts but you are harming all other aspects of the area. The tax payers money going into this decision but it seems as though the corporation are getting the benefits, not the people. If you want a holistic view of what people want, then you need to consider those that use the area for other recreation, not just those utilizing it for winter sport. You need to look at more than just who will use the gondola. You need to look at who is affected by it. Many people will experience a loss if a gondola created. I believe utilizing other resources such as improved bus system is not only better in an environmental impact perspective but also better for other recreational uses. Other alternatives that are less problematic in funding, environmental, and year-round tourism/usage should have been recognized in place of the gondola.</p>
34900	Robert Douglass	<p>The Final EIS uses the misleading and misrepresentative phrase "Phased Approach," when describing the new gondola alternative that has been selected as the preferred alternative. The Life Cycle Cost Volume, 2i, makes it clear that the gondola will be built immediately if the funds are allocated, and construction will run in parallel with temporary bus service. When the gondola is complete, the Final EIS indicates both the mobility hub improvements, the new buses, and the new bus stops will likely be removed. There is nothing 'Phased' in the Final EIS approach. The gondola is built as soon as funds are received that are sufficient to begin. There are no stated intentions in the Final EIS to describe criteria to determine if the initial bus service and tolling are sufficiently reducing traffic to eliminate the justification for the gondola. In the answers to the questions in EIS Volume 32, it states that tolling will not be tried until the gondola option is completed, so there is no opportunity to see if the improved bus service plus tolling provides a 30% reduction in traffic without the gondola. The term 'phased approach' has been used extensively in the press and by local civic leaders, such as the Mayors of Salt Lake City, Salt Lake County, and Sandy City to mean an entirely different approach than what is described in the Final EIS. The Final EIS appears to be intentionally misleading and misrepresenting the new preferred Alternative to legislators, taxpayers, and the public. More importantly, the final EIS misses the opportunity to determine if faster, cheaper measures can effect the desired traffic reduction without a \$755M gondola project.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34901	Melanie Roundy	I am strongly opposed to the gondola and have studied the various options since it was announced. I think it is narrowly focused to benefit 2 ski resorts and government officials who would benefit financially such as from the La Caille property. As more details emerge the gondola would be too expensive, require taxpayers who never used it to pay for it, cause irreparable damage to the canyon, and not solve the problems of a few days in the winter. Tolls, carpooling, and busing are far more obvious options. Please do not let a few people with questionable motives make this decision against the desires of the majority.
34902	Nick Johnson	I am strongly against the gondola. Maybe a system like in Zion?
34903	Robert Douglass	The Fact Sheets, the Summary Volume (Table S-1, p. S-141), and the Life Cycle Cost Volume (Appendix 2i) state the estimated cost of the preferred alternative as approximately \$550M. This intentionally or unintentionally omits the additional \$110M cost for temporary bus service as the gondola is being built (Summary Volume, p. S-25). This cost is only incurred by the Gondola Option B (La Caille) Alternative and is not incurred by any other Alternative in the EIS. The cost of the Gondola Option B (La Caille) Alternative, the preferred Alternative, is therefore erroneously stated. The actual cost of the preferred alternative under the EIS assumptions is not \$550M but \$660M. The EIS needs to be revised or supplemented to reflect the true cost of the alternative.
34904	Clayton Sweeten	Skeptical of gondola still. Doesn't seem like it would reduce any carbon footprint. Surely any cars alleviated by the gondola would be replaced by people choosing to drive the canyon anyway. Especially as the valley continues to become more populated. At most it would just put more people on the ski resorts. Also gondola only benefits two private business. And actively harms the climbing community. Towers on/near boulders etc. . . Even with the different tower placement (which I'm having a hard time finding the exact map of) a permanent alteration to the canyon in service of the private ski resorts just doesn't make sense to me. More busses. Toll. Lottery even. All seem more logical.
34905	Jill Hays	I have lived in the Millcreek area my whole life. I have skied at Snowbird most of my life, I'm 44. I love Snowbird, but I'm concerned that they have zero skin in the game and yet have the most to gain. Over the last several years, ski passed have continued to be more expensive. We have to pay to park. Parking passes sell out in weeks, but to people who aren't from Utah. I realize we need travelers, but I am concerned that Little Cottonwood Canyon is going to be taken from it's locals who have grown up spending their summers and winters up those amazing mountains. I worried about water? Has that been truly thought about? I know we are concerned about clean air, but water seems pretty important for Utahns. I worry that the gondola will tear down more trees. Do we not think about the long term damage? I this really beneficial to Utahns? Especially those who never go up Little Cottonwood, but they get to pay for it with their taxes? Seems shady. Again, why is Snowbird or Alta not helping with the cost? I really hope there is thoughtful consideration of these concerns. Thank you.
34906	Darlene Neth	Hello, to whom it may concern. I am writing you to inform you of my concerns regarding the gondola. We must keep our canyons natural and preserve them in it's natural state. For the sake of humanity, please don't do things for the money, we deserve to have access and rights to our canyon. There is so much beauty in nature and we do not need to intervene and creating more man made chaos on our land. Please, consider NO to the gondola. We deserve to have our world class climbing, trails. routes and to not punish mother nature anymore.
34907	Robert Douglass	The costs of the preferred alternative were estimated using 2020 dollars. The Final EIS failed to correct the projected costs to represent the actual costs today that would include inflation since the estimates were produced. The EIS ignores inflation since 2020 even though it has already added over 14% to all costs given in 2020 dollars. Inflation in construction costs is likely higher still than the 14+% average inflation. Using average price inflation, the cost of the gondola in 2022 is now not \$660M, but \$755,000,000. Legislators, the public, and taxpayers need to know the true cost of the Preferred Alternative before they can comment on the final EIS in an informed manner. The EIS needs to be supplemented or revised to reflect not just the current projected cost, but the projected cost at the time construction will begin. Although UDOT does not know when funds will be allocated, projecting a cost based on 2023 or 2024 dollars would provide a much more accurate picture of the cost of the preferred alternative. The current cost estimates are grossly out of date. Without knowing accurate, up-to-date cost estimates for the Preferred Alternative, legislators and taxpayers cannot evaluate it or accurately comment on the EIS.
34908	Seth Hendy	Please don't put up a gondola until we have a sustainable solution
34909	Robert Douglass	The Fact Sheets, the Summary Volume (Table S-1, p. S-141), and the Life Cycle Cost Appendix (Vol 2i) of the final EIS provide conflicting and inconsistent estimates of the cost of the Preferred Alternative. For example: a.The Fact Sheets state the cost of the parking structure as \$56M while other places in the EIS state it as \$52M. b.The Life Cycle Cost Volume states the cost of the Snowsheds as \$72M where other volumes state it as \$86M. c.The Fact Sheets state the cost of just the gondola itself as \$335M while the Life Cycle Cost Volume states the gondola cost as \$285M. d.The Fact Sheets and the Summary Volume (Table S-2) list the cost of the trail parking improvements as \$5.8M, but the Life Cycle Cost Volume lists it as \$12.5M e.The Fact Sheets list a cost of \$0.8M for a sound wall as a part of the Preferred Alternative, while the Life Cycle Cost Appendix, 2i, and Summary Volumes do not include it. The legislators, public, and taxpayers cannot provide informed comments on the final EIS given that the cost estimates are inconsistent across the EIS. What is the correct cost estimate? The EIS needs to be revised or extended with a supplement to provide a single consistent cost estimate and cost breakdown before the public can effectively comment and assess the impact of the preferred option.
34910	Robert Douglass	The cost estimates for the preferred alternative failed to include the cost of a new access road to the gondola parking structure, introduced for the first time in the Final EIS. This road cuts directly across un-remediated areas of the Flagstaff EPA Super Fund Site. The cost will be considerable given that the path of the roadway and any construction access will need to be tested, evaluated, and most likely remediated before construction begins.

ID	Full Name	Comment
34911	Alice Colwell	<p>As an avid skier and hiker I have experienced great times in both of the Cottonwood Canyons although primarily in LCC. The cost of skiing has continued to rise relentlessly especially with the advent of Paying for parking as well as for passes, equipment, clothing and other gear. When paid parking started at Solitude I took the bus only to discover that I had to pay 10-20.00 per day to store everything I brought with me for the day. I opted to use my car as a base of operations instead which defeated the prime objective of reducing cars in the Canyon. Solutions for Canyon need to restrict constant increase in user costs. I am most definitely opposed to the Gondola as well as a daily cost of driving in the Cayons.</p>
34912	Gessel Gabriella	<p>Irreversible & Rushed Decision</p> <p>There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws.</p> <p>We have seen parking reservations work throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon.</p> <p>As Salt Lake County Mayor Jenny Wilson said, these are "common-sense solutions that are fiscally sound."</p> <p>Tax-Payer-Funded, Serving Private Resorts</p> <p>Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging.</p> <p>They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses.</p> <p>UDOT's EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts." [Ch. 6]</p> <p>Ignoring Local Public & Political Opinion</p> <p>80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll.</p> <p>Salt Lake County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski and many other elected officials agree.</p> <p>"Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions. Parking hubs in the valley, electric busing with regular routes, carpooling and tolling, reservations, common sense solutions that are fiscally</p>
34913	Robert Douglass	<p>The lifecycle cost estimates contained within Appendix 2i use badly out-of-date and now highly inaccurate financial data based on 2020 construction and operating costs. The Final EIS uses incorrect inflation and cost of money factors that are vastly different in 2022 than the 2020 ones used. The EIS shows the net present value cost of operating the preferred alternative as decreasing over time as the cost of money exceeds the inflation rate using 2020 rates. This relationship is exactly reversed now, significantly and substantially raising the costs of operation in net-present-value terms. The EIS needs a supplement providing current, accurate and consistent costs for all alternatives, but especially for the preferred alternative.</p>
34914	Miranda Galbraith	<p>My name is Miranda Galbraith and I'm a student at the University of Utah. I decided to transfer to the U of Utah last year from the east coast after learning about the beautiful landscape and more than anything, the mountains. I'm an avid outdoor recreator and am pursuing a major in Parks, Recreation, and Tourism so nature is both my place to have fun and work. I worked up Little Cottonwood Canyon last winter, this past summer, and will again this winter at both Alta and Snowbird. I'm undoubtedly in love with this canyon. The views up LCC are unmatched, my breath is taken away every single time. A gondola would destroy this natural wonder of a canyon. As a photographer, it's disturbing to think about the picturesque scene being destroyed. Above ALL, I recreate in this canyon along with so many others. LCC is home to world class skiing and climbing and top tier hikes, biking trails, and even ice climbing. It draws in people from all over the world to come explore and express themselves through outdoor recreation. Placing a gondola in this canyon would destroy the opportunity to recreate with a nature experience. Placing a gondola in this canyon would limit accessibility for those who want to recreate, but might not have the means to, creating another obstacle for them to try and get around. Placing a gondola in this canyon would jeopardize our main water source for the valley. Widening the road is not the right choice either. Enhancing the bus system would be the best step to reduce traffic up LCC and increase accessibility. As someone who relies on the bus to get me up and down the canyon in the winter, it's disappointing to see you CUT bus routes instead of ADD more. I moved to Utah, to Salt Lake City, for the mountains. Please don't destroy them.</p> <p>So my question to you, UDOT, is this: Why aren't you asking for funds to increase wage for bus drivers, electric buses, better plow coverage, enhanced routes, better park and ride lots, etc and instead asking for an ungodly amount of money for the gondola? Won't the cost be much less than taxing everyone in Utah for the rest of their lives on the maintenance of a gondola they won't even step foot on? As a concerned recreator and a member of the young generation, I hope you can see that we won't stop fighting until the gondola proposal goes away.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34915	Robert Douglass	The Draft and Final EIS failed to establish toll and gondola ticket prices or consider a range of price options. The result is that the public cannot effectively comment on the EIS because it is not clear how much Utah taxpayers are being asked to pay and how much will be paid by revenues. Without projected revenue data, the State Legislators have no basis for considering revenue bonds vs general obligation bonds vs funding directly through tax appropriations. Selecting a payment method can add millions of dollars to the ultimate cost to the State and the taxpayers. Without having estimates of ticket and toll revenue, it cannot be determined if the project can be paid for with revenue bonds versus tax dollars. This is a critical piece of assessing the cost versus the benefits of all of the alternatives but it especially applies to the gondola and cog railway alternatives.
34916	Jann Levitre	100% support the gondola.
34917	Robert Douglass	The FEIS modified one of the Alternatives, producing a new, modified alternative, Gondola Option B (La Caille) Alternative. This consolidated all parking at the La Caille gondola base station. This resulted in a \$42M reduction in the cost of the original La Caille gondola alternative, resulting from not needing to build mobility hubs and buy buses to reach the base station from the mobility hubs. UDOT applied this change only to the Gondola B option. It in fact applies equally well to both Enhanced Bus and Enhanced Bus with Additional Express Lane Alternatives. The estimated costs for those alternatives should be shown as something on the order of \$42M less to provide comparable comparisons with the new Gondola B Alternative. Adjusting for this mistake in the FEIS, the Enhanced Bus Alternative costs approximately \$303M and the Enhanced Bus with Additional Lane Alternative \$468M. This makes the Enhanced Bus Alternative \$257M less than the cost of the Preferred Alternative and the Enhanced Bus Alternative is 1-minute shorter transit time than the gondola option B alternative. Failing to adjust the other Alternatives comparably to the change in the Preferred Alternative is negligent and at a minimum needs to be corrected in an EIS Supplement.
34918	David Iltis	<p>As a former resident of Alta, and long time visitor to Little Cottonwood Canyon, I am appalled at the idea of a gondola marring the landscape, the view shed, and wildlife habitat.</p> <p>Please remove the gondola from consideration ever. The canyon is so much more than a playground for skiers and so much more than the ski areas.</p> <p>Please do proceed with expanding the park and ride lots, especially those near the mouth of LCC, as they are woefully inadequate and have not enough effect on how many people can ride the bus.</p> <p>Please do proceed with more frequent bus service that will help to draw people out of their cars. Please combine this with a toll on those days when the bus services the canyon, and make the bus cheaper than the toll.</p> <p>The gondola is nothing more than a giveaway of taxpayer money to 2 ski areas, both of which have become so expensive that the average Utahn can barely afford to ride the lifts. They certainly don't need any more of our money. They already enjoy the use of public lands for private profit. It's not a good idea to give them public money to get private customers to and from the resort.</p> <p>A better option would be if instead of packing more people up to the resorts is if they limited the number of skiers each day. This would solve many of the issues. Canyon traffic is not a daily issue, but rather is really bad only a few weekends a year.</p> <p>Adding more capacity to the canyon by adding a gondola will not reduce traffic. The principle of induced demand is such that with more capacity in the system, more people will find their way to the resorts, both via gondola and via the roadway. To repeat so it's clear, the gondola will not solve any traffic issues, it will only end up increasing the number of users in the canyon. Then what? We will have the same traffic issues, a destroyed view shed, and \$550 million given to the ski resorts.</p> <p>Additionally, Wasatch Blvd should not become a superhighway to the resorts. The people of Cottonwood Heights and Sandy deserve better. They have spoken loudly, but as per usual, UDOT does not listen to the needs of the local communities that it serves.</p> <p>Please UDOT, do better. You seem to be relying on old ways of thinking, and as a result, you put out awful solutions. Stick to the basics: increased park and ride capacity, increased bus service, parking fees at the resorts, and limiting the number</p>
34919	Kira Sincock	Implementing a gondola in Little Cottonwood Canyon will be a disruption to the natural beauty that the canyon offers. While this is a potential solution for traffic and overcrowding, the canyon would benefit from alternative forms of transportation such as a better bus system, before making an expensive and irreversible change to the landscape itself. Countless locals and tourists alike flock to these canyons to escape into nature, and to disrupt the environment in this way would put a damper on the scenery and likely tourism as a whole, which is something that Utah thrives off of. Additionally, while the gondola may aid in traffic up the canyon, there will still be a considerable amount of traffic in the surrounding area to load onto the gondola. Essentially, the traffic and parking issue will just be placed elsewhere, which doesn't necessarily solve the problem. I am against the implementation of a gondola in Little Cottonwood Canyon.
34920	Janine Wood	The environmental impact and cost of the gondola are detrimental to our city and people. Using the extraordinary amount of taxpayer dollars to benefit only the small percentage of people who will use the gondola is unconscionable. The gondola is the worst possible solution to the canyon traffic problem and should be scrapped.

ID	Full Name	Comment
34921	Robert Douglass	<p>The Final EIS selects the Gondola Option B Alternative as the preferred alternative primarily or exclusively because it provides better reliability for transportation in LCC. However, the EIS provides no clear definition of reliability or how it is measured or evaluated. It provides no historical data on the reliability of cable-operated lifts or 3S lifts. All lifts operating in LCC and elsewhere in Utah have downtime due to maintenance, repair, power disruptions, high winds, thunder and lightning, as well as unforeseen events. The proposed gondola Option B alternative will be the longest by far of any cable-supported lift on earth. It will be 40% longer than the next longest 3S lift and it will be operating in far more challenging terrain and climate. The proposed Little Cottonwood Canyon 3S lift will consist of 4 different 3S lifts that need to operate in each synchrony with separate drive systems, cables, transfer points, backup generators, and auxiliary fuel storage. Therefore, the proposed gondola is not only the longest by far; it would be the most complex by far. There is no historical reliability data for such a complex set of lift mechanisms in such a challenging environment. Cable supported lifts are subject to all sorts of accidents, such as the detachment of a cabin on an Italian tram in the past two years and the halting of the Sandia tram due to icing last year. Nevertheless, the EIS fails to provide any historical data for any other lift of any type, length, or complexity. It fails to provide any analysis supporting its claim of higher reliability over any other alternative. In addition to the downtime that exists for all cable-supported lifts, the proposed LCC gondola is subject to a number of additional factors that could cause hours to days to years of downtime. Specifically, earthquake, fire, and special weather conditions within LCC and the difficulty of access to the towers. The EIS presents a gondola design that does not have access roads to many of the towers, instead emplacing many towers with helicopter operations. Maintenance and repair of the gondola, its towers, cabins, and cables around numerous inaccessible towers will require costly and time-consuming further helicopter operations on a routine basis. Scheduling helicopter operations on the gondola for things like maintenance, repair, and rescue will add additional downtime to the proposed gondola Option B Alternative that is not accounted for in the EIS.</p> <p>For all these reasons, the reliability of the preferred gondola Option B Alternative is questionable and unknown as presented in the EIS. Yet, the EIS cites reliability as the prime reason for selecting the gondola Option B Alternative as preferred. The EIS is flawed and negligent in failing to provide any data, analysis, quantitative argument, or even qualitative discussion on why the EIS could assert greater reliability for its preferred gondola Option B Alternative. Given that the selection of the preferred alternative is based on an unsupported assumption in the EIS, the EIS cannot present an accurate comparison of the environmental impacts of the various alternatives. The EIS is flawed, negligent in its diligence, and requires a supplement to address this issue.</p>
34922	Thomas Whittaker	<p>No to the gondola! This option would absolutely ruin the canyon.</p>
34923	Caleb Norman	<p>For all of the items that have been proposed to be introduced around the same time as the gondola implementation, they begin to beg the question, "why would an LCC gondola need to be implemented in the first place, especially when the added measures would work so well on their own?" This is especially important to consider when we examine the current situation and find that it has not been optimized for lowering traffic at any truly significant level.</p> <p>The gondola would only impact a [1] of the current traffic rate up LCC , with no effect on BCC traffic, which has arguably been worse. These effects drop even more during the summer periods when vehicle speeds are higher on clear roads and the gondola usage will plummet.</p> <p>A solution is needed that can be adaptable at the peak and low volume portions of the season, and something that can work well year-round for both canyons. Most/all of these suggestions have been brought up to some degree, but a recommendation to implement all of them together needs to be prioritized.</p> <ul style="list-style-type: none"> -Build strategically placed avalanche tunnels on both canyon roads. -Drastically increase the rate of buses per hour for both canyons, and increase parking infrastructure options for each canyon to work with the bussing and possible carpooling options. -Incentivize those who insist on still driving to carpool via free canyon passes and parking. -The availability of the free canyon passes and parking could be further restricted to vehicles with snow tires on storm days, if need be. -Toll and charge parking to those who are not carpooling and bussing. -These changes could be adjusted during the summer as needed. -Ignore <p>The sum of nearly all of the proposals that UDOT have brought up to supplement or help introduce the Gondola via 'phasing' would function far better than either the current situation, or the Gondola itself. In fact, proposing a Gondola to solve the problems in either canyon is irrelevant to the actual issue of traffic overflow. Yes it might be profitable for the Gondola Works coalition, but at what cost to the paying SLC residents who may not even ski, and only one of the two crowded canyons? Additionally, as a lifelong skier and avid user of LCC's resources, it seems clear that the proposal of a gondola installation simply serves as a trojan horse to eventually interconnect multiple ski resorts, a'la European ski resorts. If the groundwork allowed to be laid for this likely long-term outcome, we will greatly risk overrunning the very special mountains we are blessed with, losing their beauty in the process.</p> <p>[1] "Little Cottonwood Canyon Environmental Impact Statement," September 2022 and the Gondolaworks.com website. Calculations:</p>

Comments on Little Cottonwood Canyon Final EIS

34924	Alyssa Florack-Hess	While I understand the appeal of the gondola (its roughly equivalent cost to the other alternatives and attractiveness to the ski resorts as the primary cause of winter traffic), it feels like an unfair gimmick to build this monstrosity with public resources. This gondola clearly benefits the ski resorts the most, and thus it seems that they should be the ones paying for it. In addition, this is an incredibly high-risk venture - literally putting all of our eggs in one basket with such a massive price tag. With climate change and tempermental ski resort executives, I fear UDOT could invest so much in a gondola, only to have it become completely useless in a couple decades (thinking of the gondola that sits empty in Moab). While I appreciate UDOT's idea to begin by phasing in parts of the Enhanced Bus Service plan, it seems like it should just commit to a detailed plan using these strategies rather than hope that we'll somehow find \$500 million to do something completely different. Rather than putting all our eggs in the basket of building twenty towers as tall as skyscrapers all over one of the most beautiful canyons around, we should invest in many small and coordinated changes (like those discussed in the Enhanced Bus Service Program) that allow us to have a diverse arsenal, avoiding any boondoggle that may become useless, that have a lower price tag and result in less environmental devastation to the canyon overall.
34925	Miriam Gersdorf	Do NOT build this Gondola. It's cost is ridiculous and only serves a very small portion of the population and only serves to enrich the ski resorts. It won't service any trailheads or run in the summer so very little true impact. It only serves to shuttle more people to the ski resorts. It will not lessen traffic in the canyon. And after paying to build it, we'd still have to pay huge fees to actually use it. The towers are an eyesore. Run buses in the canyon. No cars period unless you've booked lodging. It's been a very effective solution for the national parks.
34926	Heather Wade	I oppose the building of the gondola. Please look into better solutions for everyone else that don't go into the canyons just to ski.
34927	Deidra Augade	Please do not approve this gondola. I'm a lifelong Sandy resident and this will not solve the transportation problems in the canyon and will absolutely destroy our canyon and surrounding areas. This is big business coming in and disregarding what is best for the people who live here. Please, let's figure out another option!!
34928	Lydia Salmond	The majority of the community does NOT WANT the gondola! It would have significant environmental and recreational impacts. Many world-class bouldering and sport climbing areas would be unusable or severely impacted by the gondola. Enhanced busses, and more parking near the base of the canyon. Have busses every 5 minutes if needed during peak time.
34929	Jillian Shiembob	Hello, thank for you your updates on this project. I can understand a lot of viewpoints on this project, but several questions continue to weigh on my mind that I am not sure have been considered for the big picture or the long run. Regarding big picture: is it tax payer responsibility to pay to improve road access to 2 privately owned businesses that many taxpayers are priced out of being able to use? Given the problem exists primarily on weekends and holidays (perhaps 25% of the time) for 3 months out of the year (25% of the year), again, how prudent is it to spend taxpayer dollars on this project? I love winter and I want more of it, and truly hope in 20 years that I am wrong, but as we trend toward a warmer climate, how do we see winter sporting resorts viability? This is a massive project, and a gondola would permanently alter the canyon, perhaps long after high capacity access needs at peak hours Almaty be needed at the resorts? I would love for Snowbird and Alta to move to reservation systems for all parking lots and types for the high demand times. This did help quite a bit this last season. And as far buses, work with the local schools to utilize their parking lots for shuttles. Have separate buses for Snowbird and separate buses for Alta. This would encourage more people to take the nurses if they were direct and more frequent. Thank you!
34930	Susan Lee	Please do not build a gondola!
34931	Tim Williams	NO GONDOLA!!! Please listen to Utah resident: we overwhelmingly do not want a gondola!!! Literally any other solution would be preferable.
35591	george chapman	1 The citizens of this State have a right to access for recreation in our Wasatch Canyons without restrictions of tolling. Tolling may be appropriate for ski resorts but anyone else shouldn't be limited by financial abilities. The problem is a couple of days a year, mainly due to avalanche control stopping traffic. 2 Avalanche control will also stop the gondola. The appropriate and fiscally responsible action would be building the snow sheds (which UDOT estimated to be less than \$100 million first and see if that solves most of the problem. That can be paid for by the federal government Infrastructure Bill. Recommending the most expensive and decades long construction plan is questionable when the snow sheds can be built in less than 5 years. 3 Taxpayers are not a bottomless barrel of money, whether State or federal. This project will significantly increase borrowing at the State and federal level. Again, that is fiscally irresponsible. 4 When it becomes obvious that one of the most respected leaders of our State is going to financially benefit, his name will be mud. He deserves better. 5 We have asked for years to have the legislature pay for weekend bus service to prove that it will be used. Until then, there is no proof that the "if we build it, they will come" theory will work whether it is bus or gondola. 6 If the half billion dollar project, which could easily approach a billion, is not financially sustainable, Utah or any other taxpayers, should have protection against further encumbrance. Otherwise it would be like UTOPIA, against recommendations, used an interest rate swap that resulted in taxpayers paying \$50 million more a year on their project. These are my comments on the EIS. I am against any big LCC project until snow sheds are built first. George Chapman [REDACTED] SLC
34932	Shane Closser	Against it

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34933	Harry Hood	It's hard to feel good in the hood when our views on little cottonwood are so thoroughly misunderstood. Or are we being ignored because Snowbird is bored even as their profits have soared? We said no the first time; not on our dime. Yet, here we are with "no gondola," favored by far. Will you listen to us or pander to big business? Not building a gondola should be swell; crony-capitalists can go to...
34934	Leigh Maple	No gondola please!!!
34935	Heather Angell	Please don't.
34936	Jocelyn Young-Hyma	No Gondola. It only benefits the ski resorts and won't actually make the environmental impact it's intended to make. People only have access Snowbird and Alta but not other locations in LCC. It would be a catastrophe to build it find out it doesn't work and then have it there as an eye sore as well as disruption to nature. Try other alternatives like busses, tolling, etc but include stops on the way to hiking locations so that it will be utilized by more people and actually make the environmental impact this is intended to make with such a big change.
34937	Eric Johnson	No gondola. A gondola would be far less efficient, and far more expensive, and far more damaging to the environment, than other options, eg, expanded bus service. The gondola will irreparably harm the canyon's beauty.
34938	Whitney Ogden	Ruining our canyon to benefit two private companies and a small population of the valley with taxpayers money is beyond asinine. This would cause irreversible damage to our ecosystem for what purpose?? Please don't ruin our canyon -there are alternative solutions that are way less impactful on the environment and way less costly. Rethink before you can't turn back.
34939	Cooper Gangi	Do not do this to our beautiful environment!!!! Just add more buses
34940	Courtney Stegerwald	Resorts need to fund partial gondola cost. Toll road. Carpool incentives Both resorts paid parking fri-sun. Widen Wasatch
34941	Lee Walker	I bought my house on a steep slope between [redacted] in 1994. I loved the beauty of the area and the fact it had ski apartment on the lower level, a very common thing in the area. But I did not know that, and thought it might be a good thing if I needed live in help in my old age. I was not expected to live 3 days when I was born. My parents took me home from the hospital and took loving care of me and I thrived. I loved this home. It was in the county at the time, and they plowed the snow excellently. It wasn't until Cottonwood Heights was incorporated about 2005 that the city dropped the contract with the county, and contracted with a Colorado company who brought about 14 lighter snow plows an the new mayor's son in law to run the service. It was awful and people complained that it never got any better up against the mountain. The city broke the contract and announced the were taking it in house, buying a fleet of new plows, to be managed by the mayor's son in law. Still horrible. At some point it was announced that UDOT owned the road and would not allow Cottonwood Heights to plow it. Or manage it. And there sftarted to be talk of going for federal DOTfunds for some big project to improve transportation into the canyon because it was a threat to peoples health and safety to have the Road gridlocked for up to 6 hours at a time with idling engines pumping out pollution. I knew there was federal funds for up to 80 per cent of costs but the city of CH needed to want it, and put up some money. The fed tax dollars was construction only, not maintenance of infrastructure like power, sewer. It never got through and should not now.
34942	Brian Hays	The Gondola is a mistake. It is a massive visual impact that can never be undone. It costs \$550+ million dollars. This is money that should be spent on Utahs water crisis (put all irrigation into pipes not in ditches). We don't need more people at the ski resorts they are already full enough. The parking and road capacity actually acts as a good limit to the carrying capacity of the resorts. Carpooling and buses are a much better option. Inter lodge is a worldwide phenomenon why take that away for the few lucky people that experience it. Do not destroy the visual beauty of Little Cottonwood with an ugly and irreversible gondola.
34943	Kelly Kline	<p>I have lived in Cottonwood Heights since 1971. Our canyons are unique and we need to care for them. Common-sense solutions will carry us for the next 50 years. The gondola will mostly serve skiers and resorts. What about our snowshoers and ice climbers? What about families going for a summer or winter hike? Our taxes should not be covering the expense for a gondola that lines the resorts' pockets. I am in favor of a toll at the mouth of the canyon. I am in and out of Little Cottonwood Canyon and Big Cottonwood Canyon as well, several times each year. I will gladly pay a toll. There could be a family pass for Utah residents to receive X-number of Canyon visits each year, then they need to pay the toll. Bus service with a dedicated lane will keep people moving in the canyon, even when individual cars are stuck in traffic. Yes, adding lanes to the highway will impact area, but not in as dramatic a way, AND it encourages year-round use. Not just winter resort use. The ski resorts need to provide parking for their customers. If they want them there, they can provide parking or restrict the number of people on the mountain each day. The problem of hiring and retaining operators of buses, ski resort personnel, etc are all issues that intersect with UTA's ability to pay operators a wage that will encourage them to be trained for the special ski buses. This problem is connected to the pandemic fallout and the niche it plays in our economy. Canyon/Ski bus service runs all year. It will run on 30 minute intervals this coming year.</p> <p>We must support the demand on the canyon in the best way for the environment, for the public that uses the canyon year-round, and most equitably for the taxpayers. Legislators and UDOT need to do what is best for Salt Lake County and its residents; not try to compete with other resorts and countries to seem more polished and stylish. The gondola runs people long distances through the canyon, not short vertical distances to the top of a peak. That is a significant difference that needs to be considered.</p> <p>Please reconsider your preference for the gondola and think long term, what is best for the local community. We love our canyons and need to treat them as the unique gift they are. Gondolas DO NOT serve our canyons and residents in the best way possible.</p> <p>Thank you for letting me express my feelings on this.</p>
34944	Kim Wittman	I'm not in favor of the gondola proposal. It is very disruptive to the ecosystem and way to much money to build and maintain. Utah has one of the worst public transit systems in the nation and this is an opportunity to build better public transit. It is very disappointing that you are reducing the bus schedule this year and is why people don't trust this process. The company I work for hires thousands of people in this state every year and I know it is possible to hire people if you put in the effort.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34945	Amy Cutting	I am opposed to the LCC gondola as the preferred long term solution for dealing with transportation issues in the canyon. There are far less costly and more inclusive alternatives for all citizens, beyond skiers, that should be fully utilized before this enormous misuse of taxpayer funds should be committed.
34946	Nancy Camp	No gondola serving only those who can afford to ski. It is not equitable to the local population as a whole. It will not alleviate parking problems on the sides of road because those people are not going to the resorts.
34947	Gloria Leonard	Please NO GONDOLA. Our canyon is beautiful. Please do not spoil it with a gondola.
34948	Bekah Newman	Please do NOT put in the gondola! It will ruin the natural beauty of LCC. It will not be an effective way to reduce congestion in the canyon. It will create more problems. It will not improve access to other parts of LCC. It will be a waste and a blight all summer long. It will not ease environmental impact from cars/traffic all year. It will increase the traffic and problems in BCC. Please implement buses, tolls, and car volume limits instead. This will help both canyons reduce cars, traffic, and lack of parking issues. This fall peeping season was a perfect example of the need for car reduction policies throughout the year and for improved access to trailheads for everyone up and down the canyons. No single occupancy cars and increased year round buses would improve access for hikers, skiers, bikers, and sightseers while reducing emissions and traffic. Please no gondola!
34949	Nicholas Ingalls	As part of the climber, hiker, and skier user groups of the canyon, I absolutely oppose both widening of the existing roads and any installation of a gondola in the canyon. Our public lands are sensitive, limited resources and should be maintained through permitting, not over development.
34950	Antonio Le	There's only one way to go to the gondola! Our population is only to get larger. There is no other way!!!
34951	Antonio Le	I don't want to spend two hours in traffic on a powder day. The gondola is the only way. Go Gondola!
34952	Arleen Barrell	Hi I am not for the gondola up Little Cottonwood Canyon. I do not think taxpayers of Utah should pay for this as it only services Snowbird and Alta ski resorts. I do not think that we have tried any of the other solutions. I am in favor of many of the other solutions proposed. <ol style="list-style-type: none"> 1. Enhanced busing subsidize by ski resorts who charge for parking. 2. Fee for traveling up the Cottonwood Canyon. 3. Traction devices throughout the winter. That would mean people need snow tires to be in the canyons or in forced on the day it snows. Even if it snows in the afternoon people would be ticketed for not having snow tires. 3. Snow plows at the top of the canyons. 4. Enhanced busing using electric and smaller buses during non-busy times. 5. Using license plate and have even odd days during high traffic days Friday Saturday Sunday, holidays 5. Ridesharing 6. Parking garage in the valley that would pick up skiers. <p>We have a small canyon the gondola would ruin the natural beauty of little Cottonwood Canyon. At some point human people will have to be restricted in our canyons. reservation systems implemented in the national parks have enhanced the experience for all involved. We need to protect our natural beauty and watershed. I vote no for the gondola. Arleen</p>
34953	Ginny Cunningham	As someone who grew up in Little Cottonwood Canyon and seen the changes of traffic volume over the years, I understand there needs to be a change, however I do not believe that means as drastic of a change as a gondola would have on the canyon. Although it would assist with the air, it is unnecessary for our canyon. For others it works great, for LCC it's doesn't do what us who recreate need it to do. A gondola that doesn't stop along the way and might just create more traffic at the base of the canyon and parking lots. I truly believe if we were to increase bus services and charge for private vehicles we would see an improvement in our congested canyon, and we wouldn't be making a permanent installment in the serenity of the mountains we all cherish so much. Please don't put a detrimental footprint on Little Cottonwood Canyon. The gondola is unnecessary and there are alternatives (increasing busses that have been around for decades and charging a toll for private vehicles). Salt Lake City has spoken... please listen to us. No Gondola.
34954	John Straub	Horrible plan, Cottonwood Heights resident against the gondola. Uploading will be slow and have lines but downloading everyone off the resorts at 4pm will be horrendous. plus the homes you are dragging the gondola over are all extremely wealthy people who are going to tie this up in court since they don't want this going over their backyards.
34955	Susan Beck	Why is part of this canyon for sale. Why is it being used to make money for individuals. The most important function of our canyons is to provide this community with water. The second is to provide respite from a hectic world. We are obligated to make choices that keep it healthy. Gondolas do not contribute to that goal.
34956	Nick Cordell	Please put the gondola in. It will make it so much easier to get to and from the ski resorts. Please put it in
34957	Kira Hamblin	More buses, less gondola. LCC should have busses all year round going up both lcc and bcc.

34958	Beth Enos	<p>We need safety improvements to Wasatch Blvd. In the State Route 210 stretch Ft. Union south 2.6 miles there are eleven intersecting neighborhoods. I live in one of these and have seen three cars fly off Wasatch into neighbors yards- these home have small children who play in the yards! Of all other State Routes in Utah, the majority of state routes have a posted speed of 35mph or a maximum of 40mph. Strava cycling reports that this stretch is highly utilized by cyclists. With post-Covid levels of distracted, impaired and speeding motorists and the acceptance, as is stated in the U.S. Department of Transportation's "Safe Systems Approach", roadways through residential areas must take into account human error. NACTO studies show that T-bone motorist to motorist collisions, which is likely when motorists are entering and exiting from side roads at speeds of over 35mph are usually fatal. It has become very dangerous for me (and my 16 yr old son new driver) to try and exit our neighborhood onto Wasatch due to the high-speed drivers) The SR 210 stretch is no place for a posted speed of 50mph. UDOT needs to analyze and report on why SR 210 is treated differently from the majority of other State Routes.</p> <p>∑ Since the installation of the "High-T intersection" where SR 210/Wasatch Blvd splits just north of the La Caille Restaurant, bullet bikers, HOGs and unmuffled cars can see the green light as they drive southbound from Golden Hills Avenue. There begins, for many, an unbridled gunning for speed. the noise from these high-speed drivers and motor cycles in neighborhoods is unacceptable. This also occurs as motorists leave the Ft. Union intersection. In 2022, CHPD have clocked speeds as high as 72mph. These cars exit Wasatch into neighborhoods going over 55 MPH. With the average speed measuring 48mph, we know that many drivers are well in excess of 50mph in this area where people live and try to sleep, and cyclists, pedestrians, children and motorists from adjoining neighborhoods attempting to cross or turn left or right through this fast moving traffic are endangered. UDOT needs to run updated traffic analysis of the dangerous areas including Ft. Union/SR 210, 1/4 mile stretch south of Ft. Union/SR 210, the 3500 East and south for 1/2 mile (including Kings Hill Drive), the 1 mile area in and around Golden Hills Avenue/High T intersection.</p> <p>∑ The problems of SR 210 Ft. Union to 1/4 mile south of High T Intersection need immediate improvement not expansion.</p> <p>∑ We believe your 2050 data may be flawed and does not support the widening of Wasatch Blvd and the building of the gondola. We need to treat this as the residential area that it is and slow down the traffic. I have seen two bicycles hit by cars in just two years! We need to preserve this road for everyone and reduce the accidents by reducing the speed limit.</p>
34959	John Curtis	A gondola can only move 1000 people per hour, you need to move 10,000 people per hour. The gondola will be a billion dollar eyesore....
34960	Michelle Jackson	Please NO Gondola.
34961	Alec Gonos	<p>Spending \$550 million on a gondola seems like an excessive misuse of public funds given the looming environmental issues currently facing Utah. As a skier and boarder who spends a good amount of time in LCC, I am happy to see UDOT attempt to solve the often times frustrating issue of canyon traffic on weekend mornings. However, a publicly funded gondola that serves two privately held resorts that pull in millions of dollars each year seems like a conflict of interest. If the state has so much money to spend, why don't we use it to save the Great Salt Lake, incentivize water saving measures, or address the often terrible air quality. I love this city, and while traffic is annoying, it doesn't threaten our very existence.</p> <p>Start addressing canyon traffic with more frequent bussing and a canyon toll that incentivizes car-pooling. Reward those with a full car by not tolling them as much, reward locals who paid the tax money for these projects. Charge tourists and out of town visitors and cars with single passengers. Maybe...\$25 for a 1 individual in a car, \$20 for 2, \$15 for 3, and \$10 for 4+. Cut five dollars off that price with a valid Utah license. Reward those of us who moved here or never left here due to the vast natural spaces and attractions this state offers. You would likely half canyon traffic almost immediately, or at the very least make enough money to eventually build Snowbird and Alta's pet project.</p>
34962	Nicole Selfridge	Please NO Gondola.
34963	Leslie Kovach	<p>The data that UDOT is using in its Final EIS as the basis for its recommendations to widen Wasatch Blvd. and to construct a gondola is flawed. It does not support either initiative.</p> <p>The relevant documents are:</p> <ul style="list-style-type: none"> - The SR-210 EIS Traffic Study by Fehr & Peers, May 2019 (revised July 2019) which covers the segment from Fort Union to the 210/North Little Cottonwood Rd. junction - The Draft Vehicle Mobility Analysis for the LCC EIS, April 3, 2020 which deals with the segment beyond the 210/North Little Cottonwood Rd junction - The La Caille Station Traffic Study by Hales Engineering, September 18, 2020 which describes the road design modifications used in the Final EIS <p>This data needs to be reexamined in detail before any of the proposed projects are initiated.</p>
34964	THERESA SOFAREL	I absolutely 100% oppose the gondola. To address the congestion on SR210, please focus on increased parking, and number of buses servicing SR210, prioritize buses over cars, install snow bridges and incentivize carpooling.
34965	Sebastian Garcia	Please do not do this. I would rather sit in traffic and be temporarily inconvenienced than have one of Utah's treasure's permanently marred by a gondola. Please keep LCC as untouched as possible.
34966	Sachiko Fluharty	I am against Gondola

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34967	Nichole Emery	I oppose the building of the gondola. It is not the appropriate solution for the canyon. The unique and beautiful views that Little Cottonwood provides should be preserved, not exploited for a one-trick project like a gondola. The watershed from the canyon is also vital to our community and regularly protected. Climate change is reducing our water and affecting the snowpack levels making the watershed even more valuable. Doing a vanity project like this is a threat to that vital water source, plus it wastes tax dollars on something extremely expensive with little point to it. Tax dollars should go to preserving the canyon since it provides joy, water, beauty, and nature to the humans and a proper home to the abundant wildlife of the area. Plus the community around Little Cottonwood have already and repeatedly spoken out against this project and used their voting to oppose this during the Sandy mayor race. We will continue to speak out and vote against it. It's not wanted.
34968	Kirk Huffaker	I strongly encourage UDOT to revisit the preferred alternative. It does not serve the widest constituency for the investment, in my opinion. In addition, it will adversely effect the natural and scenic viewshed of the canyon in a greater way than surface transportation options. It will also impact the serene enjoyment of hiking, biking, and climbing in the lower canyon by increasing congestion and traffic at the mouth. Some alternative surface transportation options it appears have not been widely considered in addition to the alternatives discussed such as limiting the number of cars each day plus tolls. Please do not proceed with the preferred alternative for the gondola.
34969	Kim Ludlow	We already aren't doing anything to help the environment in Utah and the impact this will have is the opposite of what needs to be happening! It will not alleviate traffic in general but will ruin one of the most beautiful canyons in Utah, destroying acres upon acres of trees and wildlife habitats. Money could be put to such better use. Think outside the box!
34970	Steve Santora	No to a gondola
34971	Robert Weyher	I am a Utah native an a avid skier since 1958 since I learned to ski in the two Cottowoid Canyons. Over the many decades since then, the quality of any expeience in either Big ir Little Cottonwood Canyons has completely eroded. I support UDOT's alternative to Build the Gondola and parking at the mouth of the canyon. Cars have no place in euther Canyon. Please Save our unique and majestic Wasatch Mountians by Building the Gondola.
34972	Kyle Deans	The Gondola is the right choice for the canyon transportation issues. Someone said the top operator would travel up the canyon each morning, I assume that isn't the case, as that defeats the purpose of avoiding avalanches. The top operator needs to stay at the top. There should be times during the year, other than ski season that it also operates, such as October Fest.
34973	Dan Love	This is a ridiculous option that benefits private industry paid for with Taxpayer dollars. If a Gondola is wanted it should be privately funded by the entities who will financially benefit, both at the base and the resorts. Maybe the solution is our canyons don't need increased access and capacity.
34974	Ray Morris	I think it is a great idea. Not only will it reduce traffic it will reduce our air pollution
34975	judy shelby	NO to the gondola
34976	Chantal Papillon	Other sustainable solutions exist: toll, carpool, enhanced and reliable bus and shuttles, etc. We should try other things before destroying the canyon forever.
34977	Chantal Papillon	Did you know that there is no planet B? When people like you will have destroyed all Nature, then it will be over.
34978	Ashley Whiting	Please do not do this. This is a gorgeous, quiet place to enjoy nature with my family. We love to see other hiking, biking, birding, etc there. A gondola would ruin this place. People WILL ruin this place if you take them to the sky above it. Please conserve this space. My children should be able to enjoy it the same way I did. Please please please don't do the is.
34979	Chantal Papillon	The widening of Wasatch Blvd doesn't help to solve the problem in LCC. It only serves the gondola project which in turn, doesn't serve the population but only a small amount of people who called themselves skiers.
34980	John Good	For the record I am 100% against the gondola option. I have worked and recreated in LCC for 27 years and do not want the canyon ruined. A first step in reducing at least winter traffic is getting Snowbird and Alta off discount ski passes like Ikon.
38617	Dawna Pratt	Mailed comment
38618	Anne Zeigler	Mailed comment
34981	Erin Cottle	I'm writing in opposition to the Gondola proposed for Little Cottonwood Canyon. There are less expensive, less invasive, solutions to the traffic problem in LCC. A gondola is large, will be ugly, and will disrupt the beautiful mountain skyline. I would prefer UDOT to invest in more low emission busses and more park and ride parking lots. We could treat LCC like Zion canyon and only allow busses, for example. We don't need an expensive gondola that will look terrible and only moderately help the traffic. One additional suggestion: reserved parking and/or paid parking at the top of the canyon could encourage more canyon uses to take the bus.
34982	Steve Gerner	I am strongly opposed to the preferred alternative (tram installation) to dealing with highway congestion in Little Cottonwood Canyon (LCC). The use of taxpayers dollars to fund a project that only benefits two private businesses is totally unacceptable. The changes in the LCC viewscape and environmental impacts of construction are also unacceptable.
34983	L Holz	I am opposed to gondola and do not think taxpayer money should go to it. It really only benefits ski resorts at no cost to them and would ruin the beauty
34984	john becking	the gondola only moves 1050 people per hour. Over 10,000 want to on first chair by 9am on a powder day. The gondola does almost nothing to help this. You still have the same problem as before. A waste of my tax dollars. Why should the public fund the ski areas ?
34985	Devan Pollington	No Gondola!!!!!!

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
34986	Rory Bernhard	I completely disagree with the proposed plan of installing a gondola to provide access up Little Cottonwood Canyon. First of all, I don't know why the tax payers should have to pay to provide the resorts with an increased revenue stream. This is unexceptable. Secondly, the disastrous blight of this piece of infrastructure will forever mar the beautiful canyon. In the interest of sustainability and protection of lands, we shouldn't be trying to figure out how to shoe horn more people into a canyon. LCC is not a clown car and the profit driven interests of private ski resorts and money hungry politicians should be more than enough to shut the entire project down.
34987	Teesh Murray	I am against the gondola. Seems like there are alternatives to get more people into the canyon than focusing on 2 ski resorts. Let's make sure to be inclusive of all users for the canyon. Backcountry skiers/boarders should be able to use the transit and stop at popular backcountry trails. A gondola will ruin the aesthetic of the canyon.
34988	Braden Morris	As a licensed Civil Engineer it is my opinion that the long term solution for the canyon is the use of a gondola as the major transportation system up and down the canyon.
34989	Michael Pirozzi	I strongly oppose the gondola option as it is an environmentally impactful and expensive solution for a problem that exists on a small number of days. Less impactful and expensive options like expanded bus services should be employed.
34990	Mark LeBlanc	UDOT has stated publicly that the traffic problem is primarily due to people driving to the ski resorts and that is why the gondola would not make stops at other trailheads or run during the summertime. This is irrefutable evidence that we don't have a traffic problem. We have a resort problem, and the resorts should pay for the solution. I ski at these resorts, I ski in the backcountry and I recreate probably 250+ days a year in LCC as a rock climber, trail runner, etc.. There is no reason for the taxpayers to subsidize the ski resorts. The resorts already discriminate against the middle class taxpayers by setting prices far too high for middle class families to be able to afford to go skiing. Alta also discriminates against snowboarders. Both Alta and snowbird operate on US forest service land that is technically owned by the taxpayers and yet they serve such a small percentage of those taxpayers. This isn't ethical. And I say that while being in a position to buy a ski pass every year. Resort users "race," to the resorts on powder days to be the first to ski fresh powder. They do this because powder skiing at a resort is a unicorn. It barely exists anymore. Powder lasts 20 minutes after 9am before it's all skied out. You think these people will get on a 45 minute gondola ride? No way. Here's my proposition. If the gondola is built, resort skiers should be forced to use it. If you are going to the resorts you MUST take the gondola. No driving allowed for those people. Leave the road open for residents, workers and backcountry users. Or better yet, make the resorts pay for the gondola. They won't. They want a freebie from the government (taxpayers). You work for us. All of you are employed by taxpayers. You must listen. The vast majority of taxpayers do not want ti subsidize greedy corporations who have pillaged the land for profit.
34991	Kate Cooper	I'm writing to express opposition to implementing Gondola Alternative B. It's evident that by choosing this alternative UDOT has not only decided to ignore the wishes of the public who are overwhelmingly opposed to a gondola, but have also ignored the harmful ecological impacts that such a project would have. Utah is experiencing the impacts of climate change at a faster rate than other parts of the world. Maintaining water security should be the top priority for the state. Alternative B threatens water security by building large-scale infrastructure through Salt Lake City's watershed. The only beneficiaries of this project are the private companies who stand to profit at the public's expense and skiers/snowboarders. As climate change shortens the ski season in Utah, the need for a gondola will become superfluous. I strongly urge UDOT to not move ahead with the construction of a gondola and instead revisit alternatives, like mandatory shuttles run by electric vehicles.
34992	Rakellah Leonard	As a community member of Millcreek, we pay a premium to live near the canyons because they are beautiful, magnificent and a great escape. By building a gondola, not only will it attract larger crowds, be a complete eye sore and cost tax payers billions of dollars, it will also contribute financially only massive ski resorts. Is this really the investment we want to make in our beautiful state? I haven't spoken to one person who wants this and sees the benefits. Please consider what the people want.

ID	Full Name	Comment
34993	Natalie Richards	<p>There are far too many issues with the gondola proposal to make this a legitimate solution. Just based on the Instagram post alone, outlining the "things to keep in mind:"</p> <ol style="list-style-type: none"> 1. Personal vehicles are still allowed in the canyon under any of the proposed solutions? So we would basically be spending half a billion dollars to build a gondola no one would use because it's less convenient than having their own car up the canyon (use the current bus alternative as an example of this). Which means this is not a solution to the existing avalanche hazard problem nor the air quality problem, as cars would continue to be stacked up under slide paths and the UDOT would still have to actively mitigate the road with other expensive and time consuming tools. Not to mention the fact that an open road plus a gondola would just shovel even more people up the canyon at an increasingly unsustainable rate for the environment, for the ski resorts, and for the TOA. 2. Tolls/gondola ride fees: who profits off of this after you take half a billion dollars of tax payer money? Is the company operating the gondola taking a share of the profits? The owner of the land where the base terminal was built? The ski areas? The answer to this question needs to be transparent and the only right answer is that these dollars go directly back to the tax payers. 3. "Potentially operate in the summer?," As evidenced by recent Oktoberfest traffic, summer is now just as chaotic and dangerous a season on highway 210 as winter. Again, if tax payers are fronting the costs for this gondola, there is absolutely no reason the winter seasonal businesses should be the sole profiteers from this "solution." <p>In summary, the only way this gondola works is if it is open year round, and residents and service vehicles are the only vehicles allowed on the highway, and that is IF the highway is open. This allows the avalanche mitigation crews to only open the road when it is truly feasible and plows to maintain it less, which would help cut back on costs to potentially *slightly* offset the major expense of this gondola. I also think that if ski resorts are going to be the main beneficiaries of a system like this (since it does not stop at trailheads), they need to front a larger portion of the cost, if not all of it. And UDOT absolutely NEEDS to be transparent and tell us: into whose pockets will supposed tolls go?</p> <p>The above is my opinion as an Alta skier and frequent driver of Highway 210. Below is my opinion as a full time, year round resident of the Town of Alta, which I have been since 2018:</p> <p>The current proposed gondola line goes directly over my home in [REDACTED]. This will decrease my property value and interrupt my quiet mountain life with the hum of very large cables overhead, constantly. If this gondola is to be the solution (which, as outlined above, needs a lot of work in its current form to be one), the route needs to be seriously reconsidered to disrupt as few town residents as possible.</p>
34994	Burke Weir	<p>Please consider the mouth of LCC as the starting point for this project... An Information kiosk run by Udot, Forest service, Ski resorts, Water people and local governments would be housed here at the base station... Add a temporary dog kennel, a snack bar and gift shop, Bus shelter and a "Chain on zone" managed by volunteers when chains/4x4 are required to enter the canyon... Tourist and locals might need help installing "traction control devices" volunteers should be certified and work for tips to get this done correctly. Past here make room for a "Casual commute zone going up" riders stand by the "Snowbird 6 miles" sign and get picked up going to Snowbird... Skiers going to Alta stand by the "Alta 8 miles" sign and get picked up going to Alta... This is where a pedestrian overpass could connect to the "Safe tire chain removal area" and a Bus shelter... Combining the 2 parking lots at the mouth of LCC and having the speed limit be 20mph from here all the way to Alta and back down to the mouth of LCC would make this possible... With this prime location private parties will team up with local governments to build commuter Gondolas... "Southtown to LCC", "fashion place to LCC", "BCC to LCC" add safe bike/ pedestrian trails to the mouth of LCC... "Wasatch bike boulevard!" Get people to walk bike Uber casual commute Busalternative to one car, one rider, one canyon driver,... not sustainable...</p>
34995	John Dignard	<p>I feel the gondola is the safest, economical, and best option for the cottonwoods. Europe is a prime example.. it just works!!</p>

ID	Full Name	Comment
34996	Jason Keith	<p>October 17, 2022</p> <p>Little Cottonwood Canyon EIS Utah Department of Transportation C/o HDR 2825 E Cottonwood Parkway, Suite 200 Cottonwood Heights, UT 84121</p> <p>RE: American Mountain Guides Association Comments to Little Cottonwood Canyon Final Environmental Impact Statement</p> <p>UDOT Planners,</p> <p>The American Mountain Guides Association (AMGA) welcomes this opportunity to submit comments to the Little Cottonwood Canyon (LCC) Final Environmental Impact Statement (FEIS). In 2018 the Utah Department of Transportation (UDOT)-in partnership with Utah Transit Authority (UTA) and the U.S. Department of Agriculture Forest Service-began an EIS for LCC to provide an "integrated transportation system that improves the reliability, mobility and safety for residents, visitors, and commuters who use S.R. 210.," UDOT has identified its preferred Alternative B that would construct a gondola from a base station at La Caille up Little Cottonwood Canyon to Snowbird and Alta ski areas. AMGA opposes this proposal as it fails to address the transportation needs of all users throughout the canyon, in particular dispersed recreational users, and would destroy or otherwise impair the natural qualities and valuable climbing resources found in the canyon</p> <p>American Mountain Guides Association The American Mountain Guides Association is a 501(c)(3) educational non-profit organization that provides training and certification for climbing instructors, mountain guides, and ski guides throughout the United States. Founded in 1979, the AMGA has trained over 13,000 climbing and skiing guides who provide outdoor experiences for the general public that emphasize safety, stewardship, and education. As the American representative to the International Federation of Mountain Guide Associations (IFMGA), the AMGA institutes international standards for the mountain guiding profession in the United States and serves as an educational body for land managers, guide services, outdoor clubs, and other recreation stakeholders. The advocacy arm of the AMGA supports sustainable use of public lands, facilitates stewardship projects, and works in cooperation with guides and land managers to promote best practices and preserve access to areas utilized by the guided public. Please also see our comments to UDOT's Draft EIS dated September 3, 2021. Little Cottonwood Canyon is an exceptionally important resource for climbers, guides and the guided public. Climbing guides and guide companies that are permitted in Little Cottonwood Canyon-either on private or US Forest Service lands-include: Utah Mountain Adventures, Red River Adventures, The Mountain Guides, Primal Backcountry Pros, Aspect Adventures</p>
34997	Hanelle Miklavcic	<p>Building a gondola up Little Cottonwood Canyon is the most ridiculous thing I've ever heard. I have lived in Utah for over 25 years. I was born and raised here. The beauty of Little Cottonwood Canyon is unmatched. It is one of the many stunning and accessible places I love to frequent in both winter and summer. I do not want the gondola built. The money going towards this project that only benefits rich people and the ski resorts would be much better served by adding resources for better and more frequent public transit options up the canyon. If you truly want to reduce traffic in the canyon, offer more free shuttles, with faster pick up times and people will use them! Please don't destroy the beauty and delicate ecosystems of Little Cottonwood Canyon!</p>
35593	Donte Jones	<p>Hello My name is Donte Jones and I am a home owner in Sandy Utah. I live less than 10 minutes from little cottonwood and I go up into the canyon very often to hike and enjoy nature. The canyon is so beautiful and peaceful and the building of this gondola will negatively impact the experience of the canyon greatly. The pure existence of the gondola will permanently change the canyon for the residence who love and frequent the canyon. I would much rather pay a fee to use the canyon and pay for more bud services to allow for people to get from the bottom to the top. I would happily contribute to keeping our canyon beautiful rather than building this monstrosity. Please help keep our state beautiful and natural. Seeing this built would break the hearts of so many people. Thank you for reading this and considering my opinion. --</p>
34998	Jane Bryner	<p>No gondola</p>
34999	Darin Poulson	<p>This is a gigantic waste of taxpayer money, a clear cash grab for a very small group of people, and a blatant disregard for the will of the people who are footing the bill. It is a certainty that it will overrun on costs and schedule. Those who support are those who stand to gain wealth from no-bid contracts for shoddy work that funnel money to their friend's or family business for kickbacks. We know that certain council members fall into this category. The gondola will be a blight on the canyon and ruin the pristine beauty of the entire area in favor of commercial ventures. A huge reason we enjoy the canyons is because they are NOT like the valley. Paving service roads and maintenance buildings and huge towers is NOT the way.</p> <p>Require ski resort people to take an electric bus so that those hiking and enjoying their public lands can do so without 4 hours of traffic. The electric buses can charge themselves on the descent and require very little infrastructure and can be upgraded more easily and economically.</p> <p>The community has already spoken regarding this. It should not have to be continually reinforced that you not ignore us for personal financial gain at our expense.</p>
35000	Erin Bowers	<p>I firmly believe that a gondola is not the answer to the traffic problem in LCC. It would only serve to move the line downhill, further impacting residents who live where the proposed gondola station would be built. Other solutions must be studied, investigated and tried as have been suggested but surely there are more to research in Europe, for instance, and in other areas that have mitigated similar issues successfully. The conglomerate passes have contributed largely to the problem and should be heavily scrutinized and revised on usage. Locals need to be considered with priority, particularly local residents who will be closely and heavily impacted by the base station. The gondola is simply ugly and exorbitant in cost when our snowfall is dramatically diminishing along with the Great Salt Lake's lake effect which poses serious additional questions. The resorts care only for \$\$, not the wishes of the people who have lived and loved the canyon for over 60 years, like me. Please do not build this horrible eyesore of a gondola!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35001	Shane Jimenez	The general public of the salt lake valley, the same ones that use LCC on a daily or weekly basis are not in support of the gondola. Nor support growing the canyon in anyway. We don't need more people at the resorts. They have a capacity, as do the parking lots. The objective should not be thousands of people per hour. It should be limiting the number to a cap allowed in the canyon. Not bolster the amount of people. The ski slopes can not accommodate more people. So why are we trying to put more bodies up that canyon. Toll it, carpool benefits, and bus lanes.
35002	Chelsea Damon	I would like to see less permanently invasive options explored before pursuing the gondola system. The fact that it will only stop at resorts is incredibly off putting to hikers like myself. I would much rather see a year round mandatory shuttle service on certain days (similar to Zion). I live in Holladay two streets from one of the shuttle stops and see first hand how many Canyon users are willing to utilize this valuable service. I would much rather taxpayer money be allocated to the bus transport than experimentation with one of the worlds largest gondolas.
35003	Nate Minor	The canyons are already crowded enough with the available transportation options. If we put more people up the canyon it will take away from the primary reason people go to the canyons and that is to be in Mother Nature. Let the canyon tell us in its own way there are enough people. The traffic problem is not just only the canyon, it's also Wasatch Blvd. A gondola will just move the bottleneck to Wasatch Blvd. As a life long resident I personally not spoken to one single person who is for the gondola. It will completely ruin the quarry trail in the canyon which gets used year round and not just a few powder days out of the year.
35004	Diana Vanuiter	No to the gondolas! Visual impact is pollution .money to build it is ridiculous.
35005	Laura Dziubyk	I agree with keeping the traffic down in the canyons; however, you can't just toll everyone to enter the canyons. This will make it less enjoyable for people, less of a desired place to live, and a hassle for travelers. I should be able to enjoy my hikes without paying to hike. Instead of creating a toll, you need to make public transportation easier and more accessible. You can also maybe create a parking pass, which is \$10 a year per household so it is more affordable. I hike because it's free, I can't afford to pay addition entry fees into a free activity. Tolls create political patronage and discourage the needs for improvement. You're making people not want to go to the canyons. Fix your public transportation, road quality, and parking issues instead of deterring people away by taking our money.
35006	Jill Bruneau	Please invest in buses rather than the gondola. This will give better access to minorities and prevent watershed issues, wildlife habitat destruction and allow those of us that use the canyon for other activities than skiing access
35007	D Rasmussen	No to the Gondola!!! There is more use in the canyon than just Alta & Snowbird. The ski traffic is from December to the end of March. What a waste of money for a few months. You are still going to have traffic going to the rest of the canyon below the resorts. The gondola is not going to help with traffic. It is a big waste of money. It will disrupt the natural beauty and look of the canyon. If you can't get more people riding buses what makes you think they are going to ride a gondola. People won't be able to afford the cost of the gondola and will still be driving up the canyon. Why don't you try a toll charge to encourage carpooling. Please don't ruin our beautiful canyon with a gondola. Again, say No to the gondola!!
35008	Jody Woods	Please reconsider the gondola. I have recreated and own a property in LCC for 44 years. I feel the paid parking helped the situation greatly last season. This is only a problem for several weekends over the course of a few months. The gondola is way too impactful to the environment and home owners. We need snow sheds like in Europe so the road can stay open more and perhaps dedicated lane switching/road improvements/maybe some areas widened. I feel the parking at the bottom will not be sufficient and the time it takes for the gondola to get people up the hill will make the whole process too time consuming and people will still choose to drive, which won't help the problem. I feel the gondola may rarely be used in the spring/summer/fall months. That would be a huge waste to have it running and not used. Please, please, reconsider!!! Thank you
35009	Natalie Case	NO GONDOLA!! This will ruin our canyons. Come up with a better solution. Nobody wants the gondola. NO GONDOLA NO GONDOLA NO GONDOLA!!!!
35010	Brandon Riley	I'm for a gondola. Get the vehicles out of the canyon.
35011	Cam Spotten	I think the gondola is greener option. Build it.
35012	Patrick Gee	I write to encourage UDOT to reject the Gondola solution for LCC. The negative aesthetic and physical impact to LCC greatly outweigh its benefits as a solution option. Thank you.
35013	BEVERLY ASHBY	The gondola is a terrible idea. There are better less expensive options. I have been a skier at Snowbird for decades and I do not support the gondola!
35014	Andrea Ostwald	No gondola! Won't serve the needs of Utahns. There are better solutions like increase of busses and lockers at the resorts. Let's stop doing things for big corporations and actually listen to the public!

ID	Full Name	Comment
35015	George Chapman	<p>1 The citizens of this State have a right to access for recreation in our Wasatch Canyons without restrictions of tolling. Tolling may be appropriate for ski resorts but anyone else shouldn't be limited by financial abilities. The problem is a couple of days a year, mainly due to avalanche control stopping traffic.</p> <p>2 Avalanche control will also stop the gondola. The appropriate and fiscally responsible action would be building the snow sheds (which UDOT estimated to be less than \$100 million first and see if that solves most of the problem. That can be paid for by the federal government Infrastructure Bill. Recommending the most expensive and decades long construction plan is questionable when the snow sheds can be built in less than 5 years.</p> <p>3 Taxpayers are not a bottomless barrel of money, whether State or federal. This project will significantly increase borrowing at the State and federal level. Again, that is fiscally irresponsible.</p> <p>4 When it becomes obvious that one of the most respected leaders of our State is going to financially benefit, his name will be mud. He deserves better.</p> <p>5 We have asked for years to have the legislature pay for weekend bus service to prove that it will be used. Until then, there is no proof that the "if we build it, they will come" theory will work whether it is bus or gondola.</p> <p>6 If the half billion dollar project, which could easily approach a billion, is not financially sustainable, Utah or any other taxpayers, should have protection against further encumbrance. Otherwise it would be like UTOPIA, against recommendations, used an interest rate swap that resulted in taxpayers paying \$50 million more a year on their project.</p> <p>These are my comments on the EIS. I am against any big LCC project until snow sheds are built first. George Chapman [REDACTED] SLC</p>
35016	John Forney	I am opposed to the Gondola. This is the worst possible solution to the traffic congestion
35017	Charles Johnson	Little Cottonwood traffic is only a problem a few days a year. Spending up to \$1 BILLION to solve a problem that the ski resorts could do on their own is an unreasonable burden on taxpayers. Buses, carpooling or a toll would solve the problem at no cost to the general public. A gondola or any other improvements to LCC is an unwarranted expense that only benefits the resorts and the skiing public. Just say NO.
35018	Jack Taylor	LCC is a beautiful place. Adding infrastructure has no added benefit. Please keep this place as simple as possible. Adding a gondola is a net negative, not a net positive.
35019	Darin Monsen	Absolutely not. This is a defacement of a beautiful canyon. I refuse to pay more on taxes so the rich can benefit from less traffic.
35020	Elizabeth Miklavcic	I am against the gondola. Please do not ruin our beautiful canyon.
35021	Dustin Case	The tax payers have spoken and we don't want the gondola. It's [REDACTED] that you have made your mind up regardless of what the people think. The people that stand to gain the most should be the ones paying for it. Being a snowboarder I can't even use one of the resorts. [REDACTED] the gondola
35022	Tom Wharton	The gondola only makes sense to reduce the constant traffic congestion and added pollution that that area creates as folks travel to the resort trying to park. I fully support the effort to bring the gondola service to this area. I lived in Europe for 15 years and gondolas are positioned all over Europe supporting ski resorts and highly populated tourist areas, they have been proven to reduce congestion and provide an enjoyable ride to the resort so make it happen and people will soon realize the benefits it provides.
35023	Christopher Wolsey	Im definitely a YES for the Gondola. I live in Sandy City near downtown. I feel the Gondola is by far a better option to keep automobile emissions out of our canyons as well as it having an allure factor to bring more out of state visitors to our resorts and in particular, to stay in Sandy City whose master plan for yhe Cairns district, falls in line with the Gondola project.
35024	Daniel Munger	<p>I am submitting this comment in strong opposition to the construction of the gondola. I believe it is unnecessary, incredible expensive, burdensome to taxpayers and local neighborhoods, and will not solve the problem. Not only am I opposed to the gondola for those reasons, I believe it will permanently scar the nature and views of Little Cottonwood canyon.</p> <p>Residents and tourists alike visit the Cottonwoods to enjoy the scenic views and pristine nature that the canyons have to offer. The gondola will harm both residents and tourists looking for that experience.</p> <p>For a fraction of the cost, a robust and world-class bus system could be implemented. Showcasing the best that Utah has to offer in terms of public transportation. Please consider making a permanent investment in a bus system that can solve the congestion problems.</p> <p>NO GONDOLA!!!</p>

35025	Matthew Lisko	<p>This idea is dumb. Think of the line that will be just to get to the top. In theory it sounds whimsical and at best its a marketing ploy to make people think its a convenient way to make it to the top. When you have people waiting two hours just to load this lift, they will stop using it and look for less gimmicky ways to the top. If the roadway not being able to accommodate the traffic is the issue that will still be the issue once this lift is built. What about the drunk unruly people who will mix with family's and destroy a family out two and from. Also what about the fact that if you get a large enough group of pot heads to load all at one time, they will all bake the cabin out on the ride. Put people to work either build a monorail that will eventually loop lcc and bcc. make it one way to start with double tracks at stops and back county stops allowing express options to pass to the top. Then let the mountains build out to these other stops with lifts that will increase overall skiable terrain and access. when they ski out of the hill, they have the option to get on new lifts of take the monorail to a new lift area without traversing. This is how i see the public is served best. allowing them a route up the canyon protected from wind, bypassing avalanches and in the long-term creating a sustainable future for the future while allowing the mountains to grow and expand lift serviced terrain. although it would take some time to become a reality it would be a much quicker and reliable alternative to what you are proposing. If Disney land could build a monorail 30 years ago, I'm baffled by how this couldn't become a real mode of transportation. Eventually you could have parking on both ends in slc and north along the highways. once this is in motion continue to plan to make it a loop to both canyons. Work with every ski hill to develop stops that would create new base areas with lift access to more terrain. Also, God forbid in the event of an accident you can more quickly and effectively transport those injured or those needed to respond much fast and with less chance of being hung up from weather or accidents on the roadway.</p>
35026	Michael Tomer	<p>I like the Gondola B option as I feel it will provide the most relief to the roads, and the best user experience.</p>
35027	Mackenzie Carter	<p>As a lifelong resident and someone who often goes up little cottonwood canyon I have to add my comments. This gondola project does not make financial, environmental or practical sense. First- financial, to build something to this size and cost is going to greatly tax the residents, whom I might add are against it. It does not make sense to charge people for parking, a gondola ride and who know what else will be tied in with it. And the cost to build the project will continue to affect those of us who do not support it for years to come. 2- environmental. We have a wonderful opportunity to live and share these mountains with each other and the animals and ecosystems within. Why would we disrupt a system that has been in place for 100s and 1000s of years. The environmental impact of building a project like this would be greater than adding additional green buses in the winter time. The ecosystem and animal habitats should not be impacted by men any further. They were here first and deserve to be left alone. Don't ruin the beauty of our home. 3- practical. This is the most impractical option. First and for most this is seen as a "winter solution," for a few bad snow days that may or may not happen to ease the traffic. But guess what, what good will this gondola be in the spring, summer, and fall for all the hikers, bikers, and people staying at the resorts. You can't go up the entire canyon if you want to hike in Albion or down below by tanners flat. It doesn't make sense to have a gondola that only has one stop. Instead a bus system with additional stops would be more beneficial. And with green technology more environmentally friendly. It's not practical to have people park far away, then have them bussed to the gondola and then they gotta go all the way up. This is only meant for those bad days of snow (which unfortunately are far and few between these dayw) and it genuinely does not help 3/4 seasons of the year. It's impractical. Think of the long term effects and the practicality of something that may only be beneficial for 1/2 a winter season if that a year. Listen to the people who will actually be impacted by this. I love the beauty of this canyon and would hate for it to be ruined. Think of other solutions and we know there were other ones that were more practical and reasonable with added benefits throughout the year. I believe most of us would rather pay a toll up the canyon then have to see that and waste our tax money on a gondola. First and first most, let's keep Utah beautiful.</p>
35028	Janice Brittain	<p>I don't want to pay for a gondola in Little Cottonwood Canyon to benefit a few people with deep pockets for a few months of the year. This project makes no sense and is a waste of taxpayer dollars.</p>
35029	Gavin Kraft	<p>This is the dumbest idea I have heard. Literally isn't going to benefit anyone besides the rich. This is going to drive away more locals and I hope that the whole idea fails and the company loses all of their money and regrets the entire idea. People are getting greedy and that's what going to make you crash.</p>
35030	Noah Wetzel	<p>yes</p>
35031	Kathleen Nicholson	<p>DOT,</p> <p>I am writing to plead to you to change the speed limit to 35 m.p.h. from Big Cottonwood to Little Cottonwood Canyon. As a resident of the [redacted] subdivision. I fear for the lives of my neighbors and family. The entrance to Golden Hills Avenue is just north of the High T where Wasatch turns into two lanes. Sadly, it's referred to as "the suicide lane," in our neighborhood. Speed kills, please lower the speed limit and come up a better solution than widening Wasatch Blvd. that makes it safe for pedestrians, bikers, and cars accessing the Golden Hills subdivision.</p> <p>I support an enhanced bus service over a gondola. We need to protect our canyon, not with a gondola which would serve a few at the taxpayers expense and forever change the landscape of LCC, and impact wild life.</p>
35032	Josh Benton	<p>The gondola would be a disaster both environmentally and to the recreational opportunities in LCC. Additionally, the gondola would an eyesore that would further degrade the experience of all canyon users. Improving and increasing transit options is by far the more effective solution. Buses are infinitely scalable, and by discouraging single-occupant or low-occupant individual vehicle travel through a toll or increased enforcement of the traction law, congestion would become a problem of the past. There is no public support for the gondola, and if this plan goes through, it will be a disgrace to UDOT and the state of Utah as a whole.</p>
35033	Stephanie A	<p>I completely oppose the building of this gondola. Please don't use my tax payer money to build this. If you really want to reduce air pollution, focus on Kennecott. The state of Utah actually advocated for Kennecott's expansion a few years back. Kennecott made SLC the 7th most toxic city in the US. If you really want to reduce the transportation problem in the canyon, have more frequent FREE buses. Try it for one year and see the results before building something made for tourists and not the local community who it affects most.</p>

ID	Full Name	Comment
35034	Shannon Legge	<p>I am strongly against a destructive and expensive gondola in LCC. I am very concerned this gondola will only stop at the 2 resorts, and will take space away from other activities like climbing, biking, back country hiking/skiing, and other sports. This is a very expensive transit system, that primarily benefits ski resorts, and takes away access of this national forest from the people of salt lake and tourists. There are other alternatives to pursue before this option. I support bus-only travel during certain periods like Zions NP, I support tolling which encourages visitors to carpool and has shown to be effective across tollways in the Midwest for 20+ years. Please listen to the thousands of residents who are against the gondola, it is not the solution that is right for our community right now.</p>
35035	Noah Wetzel	<p>I strongly believe that a Gondola won't solve much, besides move the congestion to wasatch Blvd and the Gondola Terminal area, instead of having the congestion within the canyon. Sure that alleviates liability of road side incidents with avalanches, but from a canyon aesthetic viewpoint, and most importantly tax payers dollars... there are better ways to move forward.</p> <p>Years ago, Alta season passes were once on a lottery system, and tickets (to my knowledge) were capped. With that said, I believe that some areas can handle only so much, and the LCC is certainly one of those areas. The reality is, LCC is a small canyon, and the increased use must either move towards limiting use, or heading in the completely opposite direction. The Gondola would be the completely opposite direction, which, if installed, would only put more and move people up in the canyon. Now, Alta and Snowbird are in a position where they must build new lifts to accommodate the increase in users. Sure, it sounds exciting, but y'all must think long and hard to ensure the right decision will be made. There's no going back on this one, you are in charge of the aesthetic within the canyon, of deciding the outcome which we all will see, within one of the most iconic canyons in the west. It's up to you to decide the fate of it's future, a move that cannot be retracted or modified. If you look at any highly trafficked area, it all leads to either more growth, or permitting...because areas that are extremely beautiful can only handle so much.</p> <p>I strongly believe snow sheds along the roadway, and an increase in public transportation would solve these issues. I've skied at Alta and Snowbird since 2007, and for a couple years I took the bus entirely. For those of you who point to the numbers of bus users, you must understand why those numbers aren't as high as they could be, why those numbers aren't even at capacity. The answer points to our current state of the red snake. Anyone that knows Little Cottonwood, isn't going to voluntarily take the bus on a big snow day, because they know they'll be standing the entire way up and down the canyon...for hours! No one in their right mind would subject themselves to that torture. However, if you focused some of that absurd amount of tax payers dollars (or even better yet, make the resorts pay for some of it since they are profiting from it and the work of their employees which they barely compensate)...to improve the infrastructure at the base areas (such as rental and season rental locker rooms, bathrooms, actual transit centers, perhaps parking garages, and finally improve parking areas in the canyon and add snow-sheds and most importantly an increased number of buses... I'm pretty confident the issues would be solved. I know personally, that even if their were lockers at the mountain where I could store my gear for the season it would change the current total of bus users (thus allowing skiers/snowboarders to hop on the bus with ease, without the need to corral their gear to ensure it doesn't fall on someone.</p> <p>Long story short, you can't rely on the numbers you currently know, because the current infrastructure works against the efficiencies of the current transportation system. If you focus on snowsheds, improved infrastructure at the base area, trailhead improvements, and increased buses... you would see all the difference you need.</p>
35036	Mallory Philliber	<p>I am opposed to the building of a gondola in Little Cottonwood Canyon and would rather see a more efficient and effective busing system be phased in. The proposed gondola is ridiculously expensive and I believe that tax-payer money should be spent on a more effective bus route system. Buses are a cheaper, simpler, less disruptive option that can benefit more local taxpayers than the gondola will.</p>
35037	Jackie Stinehelfer	<p>To build such a massive vast structure would be doing the canyon, and the earth a great injustice. When having to spend a gross amount to construct a project just for revenue, we truly are sending the Earth the wrong message. We need to start with a problem that is tangible (transportation) rather than start a much larger one. The Great Salt Lake is desperate. And we the people can't do what's right without our leaders. (Or we would) what will we tell our grandchildren? And what will they tell theirs? The we, us, right now had the opportunity to fix this catastrophe? But we didn't? We chose to build a massive project just to create revenue, to entertain the vast amount of new residents of Utah, and it's many out of state tourists. I beg you all to make the right decision. Fix transportation, help heal The Great Salt Lake and preserve on of the most beautiful canyons in the world.</p>
35038	Maximilliam Valdes	<p>As a resident of the state of Utah, I am completely against the gondola. The gondola would be a mistake from a civil, financial and environmental perspective. I support extended bus services.</p>
35039	Victoria Schlaepfer	<p>Irreversible damage for a temporary problem. We all know that traffic demand has peaked in Little Cottonwood Canyon. There is no way to deny it. However, to what extremes are we going to allow humans to go to fix what is potentially a very temporary problem? As climate change continues to effect our precipitation and droughts only get worse, ski resorts and their related recreation are only guaranteed to generate customers for another 15 or so years. At the time when winters are no longer producing the snow that we all know and love, we will see a dramatic decrease in traffic in the canyon. Additionally, I think we have to ask why humans continue to think that we have the ultimate control over undeveloped land and continue to build on it. The beauty of cottonwood canyon will be overshadowed by a gondola and the gondola will be unable to be taken down without significant damage to the natural ecosystem. At some point, we have to realize that we can't build our way out of all our problems. I would encourage UDOT to further explore the tolling option and work cooperatively with the resorts to help ensure only a limited number of cars can come up the canyon.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35040	Tate Denna	<p>I would like to "cast my vote," on the proposed Little Cottonwood Canyon gondola solution.</p> <p>I am in strong opposition to the proposal of using a gondola to solve the traffic issues up the canyon for a variety of reasons of which I will specify a few in particular.</p> <p>First, why in the world would state taxpayers pay such an enormous bill that almost exclusively benefits two private companies.</p> <p>It's awful rational when considering the MANY other needs the state faces that could that money to better use. For example, that same money could go towards drought measures that would far better protect Little Cottonwood Canyon long term than a Gondola could ever dream of.</p> <p>Second, the proposal and decision making process reeks of manipulation and secret glad-handing.</p> <p>It has been highly publicized that the comment period collected the highest response in UDOT history.</p> <p>Based on news article comment threads. I'm going to confidently guess those were largely in opposition to the gondola. Yet, even after 14,000 comments, UDOT still recommended it as the best course of action.</p> <p>Then I heard Snowbird quietly purchased the land that would host the parking structure at the mouth of the canyon and it was clear to me that the public would be fleeced by this entire scheme.</p> <p>Third, The Gondola only serves one user group. Leaving out all other canyon recreaters, including myself. Again, only supporting the customer base of two private companies, yet every single one of use will be held footing the bill.</p> <p>Fourth, I don't care about making a record of the longest gondola in the US. It would come at the cost of the most awful visual scar in the canyon that we can comprehend.</p> <p>Instead, there are a litany of simple, far less expensive solutions that when combined could offer some measurable improvement without the monolithic mistake of this gondola.</p>
35041	Mallory Philliber	<p>I am opposed to the building of a gondola in Little Cottonwood Canyon and would rather see a more efficient and effective busing system be phased in. More buses will not harm the viewshed or the watershed. The extremely tall gondola will ruin the gorgeous natural views of LCC for all recreationalists. The construction period for such a project has huge potential to harm SLC's already fragile watershed.</p>
35042	Steven Jorgensen	<p>I would prefer all efforts and monies be spent for the Gondola solution first. Then phase in the other solutions gradually.</p>
35043	Darrell Amy	<p>No I don't want more taxes for us to pay for skiers</p>
35044	Brent Clayton	<p>Bad idea, I don't want my tax dollars subsidizing ski resorts.</p>
35045	Paula Soto	<p>For the love of God. Please don't destroy our canyon. This has been our home for 27 years. This cannot possibly be in the best interest of the land, wildlife, or the people. Charge the ski resorts, not the tax payers, cap admission. This is absolutely ridiculous that we are still having to submit these, it has been over a year! We are BEGGING you. NO GONDOLA.</p>
35046	Isaac Wilson	<p>The gondola will not only be an eyesore In the Canyon but it'll also ruin The environment As construction And continue maintenance of the Gondola will require more Construction access points and damage more land. I'm firmly against anything that's will Disturb the Canyon more other than having a road up the Canyon. More clean energy buses would and a toll system during the winter would reduce environmental impact.</p>
35047	Frederick Kidston	<p>Dear Sirs</p> <p>I think it is irresponsible to think of charging property owners for accessing their property in Big Cottonwood Canyon. Passes for property owners and businesses can be made available such as in Millcreek Canyon. Additionally the tole booth should be placed at the mouth of the canyon to reduce the possibilities of people driving partway up the canyon and then deciding not to pay the access fee. If the tole booth is at the mouth of the canyon it will be easier to develop parking for bus riders. Our cabin has 5 off road parking so why should I or my guests be penalized. We pay higher taxes and receive less services than anywhere else in the county and now you want to restrict and/or penalize us. This could only encourage long time litigation. Yes we need to stop loving our canyons to death. But you must find a method to encourage non property owners, non business patrons and their service providers to use the bus. If you are charging \$25-30 per vehicle you will certainly have the funds to screen those entering the canyon and allowing those with passes to enter unimpeded. Thank you</p>
35048	Mike Yang	<p>This gondola will destroy so many things for so little reward. The same amount of money (probably less) could be used for electric buses / paying drivers more.</p>
35049	Kalen Griffin	<p>I oppose a \$550 million gondola up Little Cottonwood Canyon. I believe a gondola would be taking away from the beauty and access that LCC has to offer. I do not think that it would solve our parking/traffic issues because more people would be waiting on either end of the gondola. This would only make LCC more exclusive and I truly believe it should be open to all especially since it's public land that's leased privately. The gondola benefits two private corporations that do business on this land but eliminates the access to backcountry skiing trailheads and winter adventuring access. Part of the draw for me to move to SLC was the access to the backcountry in LCC from the road.</p> <p>Implementing more money into a bus lane with more busses running constantly would be a better use of money and resources and continue to maintain the provided public access, while a gondola would eliminate that. Please go back to the drawing board. Please let's think about this further. No gondola.</p>
35050	Xarek Lyman	<p>Have a bus station at the bottom of the canyon, just anything except the gondola.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35051	Jessi Wight	In general, I think we as a society need to take bigger risks when investing in infrastructure that will serve generations. However, after reviewing the considerations for this project I can't support it. An investment like this should address the whole problem and serve the majority of the population who uses the canyon. The gondola would only benefit certain businesses and their patrons. It would be a grossly irresponsible use of funds.
35052	Tyson Whitney	Your plan for a massive gondola is a really destructive and pocket padding plan. More busses and a designated buss lane added to an already existing road would be the more common sense solution, but I get it. You only want money, Money is made up, nature is real. You fool
35053	AMY CAIRN	I am opposed to the gondola in LLC. It is way too expensive, will have huge impact on the natural environment, and people will not use it. Ski resorts need to find a solution they pay for to accomadate their skiers. Not every user in LCC is a skier.
35054	Larry Wier	This will only benefit Alta and snowbird. Add more busses.
35055	Melissa Flowe	Less gondola more bus. Fix what we have in place instead of throwing a big shiny bandaid on it
35056	Lisa A Harris	I am sad about the visual impact of the tram, but it seems like a good transportation option. I was unable to find information about the impact of noise from the tram.
35057	Ravi Sharma	I am very worried about the environmental and financial impact associated with the proposed model. I think this would be detrimental to the climbing and hiking community's ability to access recreation spaces. This is also a method that only serves one aspect of recreation while ignoring other access points in the canyon. I would prefer to see a shutdown of private vehicles and an priority if buses/shuttles akin to Zion National Park.
35058	Morgan Zevnik	How is the gondola beneficial for those who are paying for it but live in parts of the state unaffected by tourism and don't have the means to get to the gondola?
35059	JoAnnBus ser Clayton	Bus services would be more equable. This is an elitist plan for the rich.
35060	Shauna Edson	The gondola proposal only takes into consideration ski resort users and ignores the myriad other users in the canyon. It in an inequitable solution for Canyon users.
35061	Chris Adams	<p>Hello there. I want to thank you for all of the time and effort that you have put into the EIS process. Unfortunately, despite all of that that time and effort, I do not think you have come up with a common sense solution that is going to address the traffic issues that are at the base of the EIS. I also do not think that the preferred solution will lead to equitable public access to dispersed recreation, and will result in overcrowding of LCC, with permanent visual and water quality impacts with a solution that does not provide year-round use or access for visitors.</p> <p>The EIS states: "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts.," I do not think that enriching two private entities is UDOT's mission or responsibility and that applying taxpayer dollars to that end is a reckless use of public funds. Meanwhile, it should be noted that the latest Snowsports Industries of America participation numbers (2021-22) show a nearly 6% decrease in resort skiers and a 96% increase in backcountry skiers. Furthermore, data from the National Ski Area Association likewise indicates that participation in resort skiing has remained essentially flat for the last 30 years. More broadly accessible, dispersed activities such as backcountry skiing, snowboard touring, nordic skiing and snowshoeing on the other hand are among the fastest growing segments of the snowsports industry. And yet these increasingly popular activities, which should be made accessible to a majority of visitors to LCC, are fundamentally ignored by this proposal.</p> <p>UDOT claims to have "Consideration of all canyon users, not just resort visitors," but by only having resort terminals and not operating year-round it's clear that this is disingenuous at best. It is well known that the White Pine trailhead is wildly popular year-round, with cars parking up and down the highway for up to a mile in either direction at all times of the year. This not only forces people to be far from their intended destination, it also creates a significant safety hazard along the state highway. The argument that UDOT uses for not stopping at White Pine is that there will be less traffic on the highway due to the gondola, thereby enabling White Pine users to drive to the lot. If the goal is to reduce vehicle use in the canyon, it makes sense to have the gondola stop at the busiest trailhead to allow people to use it, rather than force them to continue driving their cars.</p> <p>As currently proposed, the gondola will only run from December through April. This is despite the fact that traffic in LCC between June and October is effectively at the same level as the winter, with Snowbird actually parking more cars for their Oktoberfest celebration than they do on winter powder days. Relegating the gondola to winter use only confirms that this is NOT a public transit option and is instead a wholly-taxpayer-funded chairlift to benefit two private ski areas. Plus you will have to drive to the gondola and potentially take a bus to the La Caille station, which seems onerous and burdensome to anyone who has tried to get their kids ready to ski with one transition, let alone two or three. I think that alone will be enough for many people to remain in the comfort of their own private vehicles rather than ride a gondola with 30 strangers.</p>
35062	Emily Allen	I do not support the gondola. Increasing busing and carpool incentives is my preferred alternative.
35063	Katherine Grace	The gondola would make an enormous impact on the actual environment in Little Cottonwood while only serving skiiers and resort visitors. If UDOT can't actually afford to build this without external funding, then this option should be taken off the table. Improved bus service to the different trailheads would make a lot more sense for people who use Little Cottonwood for activities other than skiing. I'd much rather pay a toll and/or hop on a bus than burden residents with taxes. The people who use the canyon should be the ones paying for improvements.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35064	John Maack	<p>I am opposed to a gondola in Little Cottonwood Canyon. This canyon is one of the wonders of the world in its unique pristine state that it is. Please leave it that way. Very few residents are in favor of this and the majority not. It's time to listen to the residents and not big corporations. This is our canyon not the ski resorts. This would be a massively expensive project that only benefits two ski resorts for 3 months of the year. This will not solve transportation issues in the canyon will permanently damage the extraordinary beauty of the canyon. It's obvious with no plan for mid mountain stop that this is only to benefit the ski resorts and not to solve transportation concerns.</p> <p>In the final EIS, there are preferred alternative has proposed a phased implementation plan with components of enhanced Bus Service. I do support some of this plan. I support an increased bus service without any road expansion, year round. And to implement tolling for private vehicle. And limit private vehicle usage. I do not agree that EIS conclusion, that visitors will not use the bus in the summer. If vehicle use in LCC and the other Central Wasatch transportation corridors is restricted, visitors will be required to take the bus. This project would be a win for the ski resorts and a loss for Utah residence. I close with this quote:</p> <p>If the land could speak the land would weep for all the pain it has witnessed us cause ourselves. The land would tell us there is a better way to be if you would just listen to me. I'm a part of you not apart from you so let's do this thing together. The land would say I am the common ground that can allow you to communicate across your seeming differences. So use me in that way, I offer myself up respectfully.</p> <p>Quoted by Baratunde Rafiq Thurston</p> <p>Thank you for the considerations to my comments, John Maack</p>
35065	Ethan Kovnick	<p>I am against the new gondola construction in the valley. It is only designed for profit and is developing on a beautiful space.</p>
35066	Mallory Philliber	<p>I am opposed to the building of a gondola in Little Cottonwood Canyon and would rather see a more efficient and effective busing system be phased in. The gondola seems to be more of a tourist attraction than actual public transportation, which is what LCC needs. The gondola will not reduce traffic on the road as much as an effective bus system could. The road will continue to be a problem, with the added complication of a gondola. There still has been no carrying capacity study done for LCC so with the added strain of road and gondola traffic, the canyon could be harmed.</p>
35067	Mallory Philliber	<p>I am opposed to the building of a gondola in Little Cottonwood Canyon and would rather see a more efficient and effective busing system be phased in. There have been thousands of comments submitted on this issue, local opinion is overwhelmingly opposed to the construction of a gondola. Taxpayers are saying not to spend their money this way. If the gondola is passed by the legislature it would be in blatant disregard to the wants and needs of those who voted them into office.</p>
35602	Diana Anderson	<p>My husband and I are opposed to the Gondola proposal for Little Cottonwood Canyon:</p> <ol style="list-style-type: none"> 1- Cost for taxpayers 2- Environmental impact 3-Esthetic impact 4-Snowbird and Alta should pay for the gondola but really the number of users/skiers should be capped and parking improved at the resorts and at base of canyon to make bus riding easier and more appealing 5- Having all skiers, users and employees parking at the base of the canyon to use the gondola is going to impact neighborhoods all along Wasatch Blvd more than it already does. 6- who knows if we will have snow in 10-15 years? Ruining the canyon for more people to use it, is short sighted and limited, not to mention extraordinarily expensive. We need to think of long term environmental impact and preservation for ourselves and future generations. Access should be limited or capped for long term sustainability. <p>Thank you-</p> <p>-Diana & Mike Anderson</p>
35068	Mallory Philliber	<p>I am opposed to the building of a gondola in Little Cottonwood Canyon and would rather see a more efficient and effective busing system be phased in. The proposed electric gondola would emit more harmful CO2 than a more effective, scalable bus system. Since the gondola is powered by the Utah grid, more CO2 emissions will come from charging the gondola than peak traffic emissions from cars and buses. Buses can also be made electric will simple solar chargers, and electric buses have successfully driven the canyon roads.</p>
35069	Kamee Groethe	<p>STRONGLY OPPOSED - not interested in having this come into the canyon. There are other options to reduce traffic. Those afraid of heights will never get on one. Prices will be to high.</p>

ID	Full Name	Comment
35070	Tom Diegel	<p>My name is Tom Diegel, and I have lived in Salt Lake City and recreated in Little Cottonwood Canyon for 25 years and visited prior to that consistently since the mid-80's. I have spent a lot of time in Europe's mountains - including this past summer - and have seen and ridden on a wide array of gondolas and cog railways. I appreciate that UDOT recognizes that bus-oriented and tolling solutions are good short term options, but it's clear that the goal is gondola, as soon as funds are available. I was initially mildly in favor of the LCC gondola, but have since become strongly against it, for a variety of reasons:</p> <p>Seasonality - I do not have to tell UDOT that LCC receives a LOT of traffic outside the ski season. During its Oktoberfest Snowbird consistently parks more cars per day than it ever does on winter powder weekends. Just as SkiLink was weakly portrayed as a "transportation solution," the LCC gondola - by limiting its use to winter - is clearly also not a transportation solution but a taxpayer-financed chairlift. To say that the gondola is intended to address the acute nature of winter mornings and afternoons is to ignore that the SL Valley and the Cottonwoods need transportation solutions year round.</p> <p>Dispersed use - I also do not have to tell UDOT that the White Pine lot in particular and the other roadside parking areas get a lot of use with an increasing trend. UDOT claims that by "taking cars off the road," the traffic on the highway will be alleviated, but this does nothing to address the parking there, and also ignores the fact that dispersed users would also like to have enhanced transportation solutions, and the new White Pine lot design does not come close to addressing the parking demands there. Not addressing dispersed users (trailheads in addition to the resorts) does not address the EIS goals of "improving air quality," (continuing to encourage SOV's), "improving safety," (less parking=more roadside parking), and "increasing the quality of life for residents and canyon users by reducing traffic congestion as private vehicles shift to transit," (no options).</p> <p>Inconsistent funding goals - as noted above, I appreciate that UDOT recognizes the needs and desires of the community to improve dispersed use parking lots, bus, tolling, etc. but it seems that there's only one pot of money, and based on the EIS UDOT is clearly targeting the gondola, which is financially challenging, and therefore is disincentivized to provide complete funding and effort to the alternatives.</p> <p>Partnerships - While UDOT and UTA are both state agencies, historically there is little coordination between them, and this season is a perfect example of that because UTA is cutting service, even as the enhanced service initiated two seasons ago was widely seen as successful. There is not an obvious funding mechanism to "do it all," and history does not suggest that dramatically-increased level of partnership between UDOT and UTA will occur.</p> <p>Reliability - Avalanche mitigation is a huge deal in LCC, and UDOT has no plans to curtail use of the howitzer/anti-personnel bombs that are integral to that. From what I can see in the EIS, the only acknowledgement of avalanche mitigation is snowsheds, however, there is nothing in the EIS that addresses gondola operation in conjunction with over-line howitzer use.</p> <p>Expense - I understand that public works are expensive, and things like freeways, bridges, and other major infrastructure are necessary to address the needs of a mobile community. However, at a proposed price tag of \$550M this is pushing</p>
35071	Alex Burlison	<p>NO ONE WANTS THE GONDOLA. Please listen to the people. This is OUR canyon</p>
35072	Peri Kinder	<p>I think a gondola in LCC is a terrible solution. In fact, it's not even a solution, it's just an expensive form of transportation to get wealthy people to ski resorts. With the high costs of ski passes, an additional gondola charge is ridiculous and prices people out of skiing. Maybe that's the point. I urge you to invest that \$500 million into something that benefits all canyon visitors. Not just skiers.</p>
35073	David Haak	<p>The support of the gondola "solution" is quite possibly the dumbest and most blatant example of a willingness to try and defraud taxpayers for private corporation benefit. Towers that destroy the canyon, and only service two private entities that in reality, will not be able to offer natural snow based activities in the next decade is just simply not the best solution to traffic woes in LCC. Backcountry access is already being whittled away piece by piece through private greed, and this would be the last nail in the coffin for access to Grizzly Gulch and many other public lands in the canyon. Consider this comment my vehement opposition to one of the dumbest ideas to come about in the Wasatch in the 40 years I have lived here.</p>
35074	Jen Moses	<p>Strong NO to the gondola in LCC. Protect the watershed and preserve the canyon.</p>
35075	Mallory Philliber	<p>I am opposed to the building of a gondola in Little Cottonwood Canyon and would rather see a more efficient and effective busing system be phased in. The proposed gondola will require a complicated system of park-and-rides, shuttle buses, and increased traffic on Wasatch Blvd. Which will greatly increase traffic at the mouth of the canyons and inconvenience the local community. A better busing system can take traffic strain away from the mouth of the canyons by picking up passengers anywhere in the valley.</p>
35076	Michelle Todd	<p>I am against the Gondola. It is a shame to do that to our canyon. We need to limit traffic and use a bus system like Zions National Park. I have sat in traffic on Wasatch Blvd. I am more than happy to do it to save the Canyon.</p>
35077	Emily Walker	<p>As a SLC local, I do not support this decision. I moved to salt lake for the climbing in the canyons and if you destroy little, we will likely be moving to an area where we can have a beautiful local crag again!</p>
35078	Aspen Christensen	<p>I do NOT support the Gondola plan for Little Cottonwood Canyon. The Gondola plan will have a massive negative effect on my enjoyment of the canyon visually. I spend my time in the canyon trying to escape the hustle and bustle of the city and an enormous gondola will negatively effect my user experience in the canyon. Additionally given the plan laid out by the EIS the traffic issues which occur on a few days of the year will not be solved by the plan. People are unlikely to be motivated to incur additional cost and inconvenience to take the gondola if the road remains open. I suggest a reservation system paired with bus transportation would do a better job at solving the traffic issues.</p>
35079	Connor Klosterman	<p>I do not support the gondola. I think it is irresponsible management to invest such enormous amounts of money into a destructive and irreversible project before trying any other solutions. This is the nuclear option, but it is the option you are choosing before we try anything else. We need to invest in minimal impact public transportation first, like the bus system. Please reconsider the destructive nature and irresponsible spending of the gondola plan.</p>
35080	Mallory Philliber	<p>I am opposed to the building of a gondola in Little Cottonwood Canyon and would rather see a more efficient and effective busing system be phased in. Both LCC and BCC have a tremendous traffic issue with visitors to ski resorts, trailheads, climbing approaches, campgrounds, and backcountry ski locations. Both canyons could benefit from a more comprehensive busing system. The proposed gondola will only serve LCC, which could have unintended consequences concerning traffic problems in BCC.</p>

35081	Kevin Brewer	My main concerns are that a Gondola would serve a small subset of users, mainly those who will be able to afford the Gondola, while having negligible impact on the problem of traffic in LITTLE COTTONWOOD CANYON. Surely, buses can accommodate many more users than the proposed Gondola and can be implemented quickly and affordably while providing access to all. Gondola sounds like a solution for those who will be able to afford it while buses can provide equitable access to the mountains for all users, regardless of their income. There is not a simple solution to the overuse LITTLE COTTONWOOD CANYON experiences but the gondola does NOT seem a viable solution that is cost effective let alone as an effective solution to the congestion in the canyon.
35082	andrew butz	you will just run into a bigger issue. just make just make it a limited amount of tickets. you can not throw snow bombs over and that close to the gondola.
35083	Justin Hoelzl	Cog rail would be least invasive, most practical, move most people, and protect the beauty of the canyons
35084	Kelcey Duhm	I Oppose the gondola. This is not the option that we the people want.

35085	Warren Scott	I am making this comment in opposition of the proposed Gondola. There are any reasons to oppose the Gondola but I will start with one- and likely my most compelling reason. This Gondola will be funded through Udot and local taxpayers. The only benefactors of this system are private companies and people who do not live and pay taxes in the area. The publicly funded gondola will then only benefit private companies. In addition to that, the resorts then charge season pass holders for their passes as well as a ride up the gondola. In essence, the public is paying for the gondola three times, while the only people to benefit are resort executives. This type of mental gymnastics is unfair, wrong and takes advantage of taxpayers.
35086	Denise Keenan	I completely disagree with the installation of Gondola B in LCC. This is too costly. Monies for this build/operation would better serve ALL the residents of SLC/Utah if: 1) electric buses were utilized; 2) bus frequency was increased on weekends year-round; 3) Tolling was initiated for those not using bus service or carpooling (3+ in vehicle); 4) Annual LCC pass purchase was encouraged; 5) A Rideshare program was available for those entering/exiting LCC solo; 6) Parking areas (negotiating existing lots - avoid more build) for bus parking were increased throughout the city/region in strategic locations. Additionally, Gondola B will destroy the canyon beauty FOREVER, without an option for reversal. UDOT needs to deal with transportation problems in the canyon in all seasons. That is the function of UDOT. It is not to be involved in supporting ski resorts. UDOT needs to implement less expensive and likely reductions in 30% vehicle traffic on winter weekends - as this is ALL that the Gondola B will affect. Thank you for reading and listening to my citizen voice. Denise
35087	Lewis Coleman	We are against the gondola due to the environmental impact and cost involved.
35088	Christine Noble	Against gondola which benefits only ski resorts, mainly during winter. With global warming, skiing/snow will become increasingly sparse. Gondolas could end up like pumps at Great Salt Lake in future. Since ski resorts are not paying and taxpayers are, lower cost alternatives like electric buses and more parking lots should be used first.
35089	Julian Brown	The gondola would subsidize the bottom line of the ski resorts at the cost of the tax payer. Ignoring the fact that this would do nothing to help with congestion since nobody would use the gondola just like nobody uses the buses, the fact that this backwards project would millions of taxpayer dollars for an eyesore that will help nobody but the Alta and Snowbird executives while Utah undergoes an environmental crisis is emblematic of the regressionist ideals of UDOT and the greater Utah government as a whole. If you care about congestion, make the bus system useable and enforce the traction laws, otherwise just admit that this has nothing to do with the experience of the skiers and everything to do with making rich people richer.
35090	Jennifer Hall	By adding new lanes, you are inviting tourists from out of state who are probably renting a car without snow tires to drive up the canyon and cause accidents. Why would you want to encourage tourists with no driving experience in the canyons to drive in adverse winter conditions?
35605	Dave Egelund	My wife and I both see the gondola as the better plan. 1. It is avalanche proof. Resorts won't lose revenue if a road is closed, and less vehicles to get caught in an avalanche. 2. Less traffic on the road. Isn't that the whole idea? 3. Revenue year round. How many people, local and tourists will want to ride the worlds longest gondola, just to ride it? Increased revenue to local businesses also. 4. Safety. Less chances of slide offs or head on collisions. More buses, diesel or electric are not the answer in our eyes. Dave and Angela Egelund
35091	Ian Hamilton	A gondola does not serve our whole community it serves the elite and barely and elite tourists. Little Cottonwood Canyon is more than a ski area, its climbing and hiking and the gondola put so much of that at risk for years. This is not a solution. Better traffic management and buses is a solution. Do not use tax money to build this gondola. The people demand representation that actually makes choices based on their wants and needs.
35092	Mallory Philliber	I am opposed to the building of a gondola in Little Cottonwood Canyon and would rather see a more efficient and effective busing system be phased in. UTA recently cited a lack of drivers to be the reason the ski buses were cut. In this phased approach, driver salary could be raised, more lines and buses could be utilized to make the buses more convenient for both drivers and passengers, and newer, greener buses could be bought to incentivize safer working conditions and that would still all be cheaper than the proposed gondola. Let's truly phase in better buses, rather than cutting them by more than half.
35093	Bryce Ipson	I would prefer to see a less environmental impact like enhanced bus services. One this will save the canyon from being subjected to construction but also cut down on the amount of vehicles driving up and down the canyon.

ID	Full Name	Comment
35094	Erika Bated	<p>As a Utah resident I am strongly against the Little Cottonwood Gondola Project. In this comment I will outline the potential negative affects the gondola could have as well as some alternatives to consider before the start of a large project such as a gondola.</p> <p>To start off, some negative affects a gondola project will have include: Environmental: - noise pollution during construction for wildlife that call LCC home. - habitat encroachment during and after construction on wildlife. - Construction will inevitably seep into the water in the canyon, which is a water shed. - The gondola placement will negatively impact little cottonwood creek which is public land. - There is critical habitat in little cottonwood canyon, once critical habitat is destroyed or altered the wildlife (plants included) that rely on the critical habitat will also suffer.</p> <p>Recreational: - During the construction of the gondola, there will be limited access to the entire canyon. Climbers, fisherman, hikers, bird watchers, and so many more hobbies will be interrupted during this construction. - After the construction, there will still be limited access to recreation activities as well as interrupted beauty by the gondola. - The gondola will not service other activities, only skiing. This is not helpful for the people on vacation with many bags. It also is not inclusive for other recreation users.</p> <p>With all of that being said, I am in favor of widening the road with enhanced bus service and limited access via cars. Think Zion National Park style. I am also in favor of tolling during peak seasons, where residents, employees and busses get a barcode to put on their window and have a lane to drive up through where a gate opens and the other lane(s) are tolled or have a guest system in place. This also provides more jobs whereas the gondola takes away jobs and takes taxpayer money.</p> <p>Thank you for taking this comment into consideration.</p>
35095	Matt Sullivan	<p>October 17, 2022</p> <p>I'm fully against for the gondola in Little Cottonwood Canyon for a variety of reasons. Of up most importance, the cost is far too expensive and for taxpayers to take on that burden. This is a very unwise direction take considering how careful and prudent the State of Utah is with their budget and cost state-wide. We're so budget conscious where education and other needs are not fully met, and now the State wants to spend over 500,000,000.00 dollars on a gondola? There is no common and economic sense in this. It only serves the ski resorts and those who have enough money to pay for that costly sport while the Utah taxpayers pick up the tab and cost to pander to the upper class and those who have recreational money to part with. It also only serves out-of-state tourists who MAY use the gondola, but in reality, they'll use rental vehicles to drive up the canyon and haul up all their ski wear and gear for their week's stay at Snowbird. The cost for ordinary Utah citizens who live on a tight budget can't afford the gondola costs of a ticket and is far too far out of range for the unbelievable cost to build a gondola. The gondola ruins the spectacular beauty of the Little Cottonwood Canyon landscape with this mechanical cube hanging in the air obstructing the view we have always enjoyed in all four seasons. It scars the scenic view. Parking lot. If you're interested in less environmental impacts, creating a massive parking lot runs the opposite and causes greater storm water runoff runs counter. Storm water runoff is a problem that would not go away and impacts wildlife. More surface water management will be a constant problem.</p> <p>Solutions Bring about electric bus services, and make it more available during the ski season. Make the fees discounted or free, and allow buses to have priority to cars and include a bus lane in parts of the road where feasible and safe. For summer, offer the same, and even make services free. Yes, this would be paid by taxpayers, but they at least would get the benefit of a free bus service; and it wouldn't be a service just for skiers. It would be for all Utah citizens.</p> <p>For those wanting to drive up the canyon, have a toll booth with a fee. That will incentivize some to take the free bus up the canyon.</p> <p>Offer discount to carpooling and vans with 7 passengers or greater. Even at all these suggestions of better bus services and free or discounted fees and toll booths, those are far minimal than the ridiculous cost of a gondola that'll really only serve a select class of people and many from out-of-state. It's not our job to provide some fancy transportation system that really will serve so few and still result in low impact of reducing road traffic. We all know that.</p>
35096	Julia Stegvik	<p>As a Salt Lake County resident and avid user of Little Cottonwood Canyon, I am strongly opposed to the Gondola as a solution to the traffic problem I'm Little Cottonwood Canyon. How will this gondola benefit all recreational users if it's destinations are only to two ski resorts? Where will the fees that are collected to ride the Gondola go? This is not the solution.</p>
35097	Evelyn Gruter	<p>My household don't want to see a gondola going up our beautiful canyon. And we don't want our taxes used to build something that will destroy the trees that now exist and could possibly hurt our drinking water. The gondola will only benefit a few. We're also concerned about the cost, which will make it more and more expensive to ski.</p>

ID	Full Name	Comment
35098	Luke Sherman	<p>I am an economist and data scientist with an additional degree in public policy. I am writing to oppose the methods and conclusions UDOT's FEIS for Little Cottonwood Canyon. I would like to emphasize the following six issues that are insufficiently addressed by the FEIS as of October 2022:</p> <p>Issues:</p> <ol style="list-style-type: none"> 1.UDOT is missing an opportunity to evaluate the benefits of enhanced bus service. UDOT has already determined that they should increase bus service in the interim period before gondola funding and construction is able to take place. Prior to moving forward with the gondola project, UDOT should plan for a retrospective analysis of enhanced bus service to asses whether and how it has met constituent needs. A retrospective analysis is greatly superior to a prospective analysis and the opportunity to glean new insights from this interim experiment should not be overlooked. 2.UDOT is ignoring the impacts of the lengthy construction process. During the construction of the gondola there will be years of substantial delays in accessing the canyons, combined with visual disturbances. The enhanced bus service without road widening will not have the same delays due to lengthy construction. 3.Climate change will substantially impact tourism in the Wasatch and blunt the benefits of the gondola. Snow accumulation in the Wasatch and the number of skiable days are expected to decrease dramatically with a changing climate (Musselman et al., 2021). This will have large impacts on the number of peak winter travel days and has the potential to greatly affect the net benefits of reducing congestion during these periods. Because there is uncertainty around this impact, it may be superior to select projects that involve less capital investment. 4.The FEIS does not address congestion at the Alta and Snowbird ski lifts, which will partially offset demand. In the long term, the gondola options will dramatically increase access to the Alta and Snowbird resorts. However, this increase in demand for skiing at Alta and Snowbird will also result in longer wait times and congestion at the resorts themselves, especially on peak winter travel days. Longer wait times at Alta and Snowbird will necessarily result in other adjacent resorts (Brighton, Solitude, Park City, Deer Valley, etc) becoming more desirable. The FEIS suggests that the gondola alternatives, in particular, will increase tourism. If congestion at the resorts is not addressed, however, peak winter skiers will seek out alternatives to avoid longer wait times at the resorts. This may substantially limit ridership on the gondola during the peak periods when it stands to hold the most benefits. Increased tourism may instead result in spillover congestion in BCC and at other resorts. Senate Bill 277 calls on UDOT to address congestion, but the FEIS does not explicitly address how the spillover congestion effects of additional tourism nor they address congestion at the Alta and Snowbird resorts themselves.
35616	karen platis	<p>This should have said Little Cottonwood Canyon!</p> <p>Comment: I strongly oppose building a gondola in Big Cottonwood Canyon to accommodate skier who frequent two ski areas, using taxpayer money. I have skied for many years at both Alta and Snowbird and understand the frustration of parking there. However, I fear the "solution," of a gondola will cause more harm than good. With climate change I believe we will be lucky to have 30 more years of a ski industry in Utah. And having a gondola will not address the harm to the environment in an already fragile canyon. I hope UDOT will decide against this boondoggle and waste of taxpayers money. Money better spent in saving the Great Salt Lake, not lining the pocket of a couple of ski resorts.</p>
35099	Richard McFadzean	<p>I support the Gondola Alternative B (Starting at La Caille).</p> <p>I am not a fan of adding tolls to Little and Big Cottonwood Canyons, but I understand there needs to be incentives to get canyon goers to use the preferred alternatives. A toll system adds cost and administration to both the users and to the operators of the system and I'd prefer to avoid these costs. I'd prefer to see other alternatives employed to limit access during crowded periods.</p> <p>I also believe some users deserve priority, for example, homeowners and employees working in the canyons.</p> <p>I don't care for the bus alternatives.</p> <p>I have a concern about the phased implementation proposed. I believe every effort should be made to get to the final configuration as quickly as possible. This will reduce costs and minimize the confusion associated with changes during the course of the project.</p> <p>I hope our local politicians will not get more clout than the public. I've been concerned that a number of our politicians don't support the proposed alternative. I understand you need to work with our elected officials, but I hope you won't let sway you away from the preferred alternative after your comprehensive analysis. In Utah, this concerns me.</p> <p>Finally, I have a concern for making access to the canyons affordable, particularly to middle and low income individuals. The canyons should be accessible to all and I'm increasingly concerned that some of the activities currently offered in our canyons are getting too costly for individuals with more limited means. Skiing, in particular, is getting so expensive that many cannot enjoy the sport.</p> <p>I'd also like to see the resort owners in Little Cottonwood Canyon participate in the financing of the project, both it's initial capital costs and for some of the costs associated with operating the system.</p> <p>Thanks for doing a comprehensive analysis and for sharing the results of you study with the public. Nice job!</p>
35100	Jeff Moore	<p>Publicly funding a transportation option that directly benefits two businesses is ridiculous. Widening the road is ridiculous. Unfortunately tolling is the best answer.</p>

35101	Nannette Mnchey	The gondola solution for solving the congestion driving up the canyons is an expensive, limited solution. It primarily serves the ski resort owners. The gondola isn't planned to stop in other locations. I access the various trailheads, but the gondola isn't going to be serving those areas. We need a solution for the people, not private corporations. The people of Utah have many needs. Paying for gondolas for private corporations isn't serving the majority of Utah people. The damage to the canyon and limited use at the expense of the people is a poor solution. Do better.
35102	Erica Haake	<p>I am an outdoor enthusiast, a climber, and your constituent. I'm writing today to oppose the plan to build a gondola in Little Cottonwood Canyon. Transportation infrastructure that physically and permanently alter the canyon should only be considered after less impactful options have been implemented and shown not to be effective.</p> <p>Little Cottonwood Canyon is a special place. Building a gondola through it would compromise its iconic natural character and aesthetics. It undermines climbing and other forms of dispersed outdoor recreation that draw people to live in and visit Utah. And it would block climbers from accessing world-class climbing areas there through years of construction.</p> <p>The gondola is a fiscally irresponsible project. Regional expanded electric bus and shuttle service coupled with tolling and other traffic mitigation strategies must be tried in earnest that include dispersed recreation transit needs before any permanent landscape changes are considered.</p> <p>I hope you will consider opposing the Little Cottonwood Canyon gondola in favor of better solutions. Please for the sake of all outdoor lovers and enthusiasts, do not go through with the gondala. I would be absolutely devastated to see such a beautiful canyon ruined by a gondola.</p>
35103	Kody Gubler	There has not been enough non invasive effort done to try and remedy the traffic situation for us to permanently alter the landscape of Little Cottonwood Canyon with a gondola. This is a rushed decision without taking the necessary steps to try to fix the issue in a way that isn't so invasive.
35104	Lauren Pandolfi	I am very against a gondola that will have a negative impact on the environment and climbing access. I also think it would be such an eye sore. I spent quite a bit of time touring, hiking, and climbing in LCC and the gondola would have a very negative impact on my experience.
35105	Spencer Wilbur	DONT PUT IN A GONDOLA. Keep the canyon open for it's already capable and money bearing uses. Uses that are available via the current road, such as skiing, climbing, biking, and hiking. Y'all are making money off these activities, don't jeopardize the joy people get out of this canyon for more selfish greed.
35106	Shar Schubach	As an outdoor lover, I believe there are reasonable, earth-friendly, and cost efficient solutions to the transportation issue in Utah's Little Cottonwood Canyon that DOES NOT involve a gondola system. I stand with Save Our Canyons and many others as I oppose the plans to spend \$600M of tax-payers money to install the invasive machinery. I support Salt Lake County's alternative common-sense solutions including tolling, rideshare programs, parking reservations, micro-transit, incentives and traction requirements.
35107	Devin Vernick	<p>UDOT...please seriously consider common-sense solutions that have the potential to solve the traffic problem. These strategies include enhanced electric buses with higher frequency and improved reliability and strategically placed mobility hubs. Tolling infrastructure, and parking management technologies and policies... such as ski parking reservations, micro-transit, and rideshare programs. Multi-passenger vehicle incentives, traction device requirements with expanded inspection hours, and enforcement.</p> <p>UDOT, please be rational and let go of this ridiculous gondola!</p>
35108	Meredith Vernick	<p>UDOT...please seriously consider common-sense solutions that have the potential to solve the traffic problem. These strategies include enhanced electric buses with higher frequency and improved reliability and strategically placed mobility hubs. Tolling infrastructure, and parking management technologies and policies... such as ski parking reservations, micro-transit, and rideshare programs. Multi-passenger vehicle incentives, traction device requirements with expanded inspection hours, and enforcement.</p> <p>UDOT, please be rational and let go of this ridiculous gondola!</p>
35109	Katrina Le	The proposed gondola up Little Cottonwood Canyon is the furthest thing from a solution. If anything, a gondola up Little Cottonwood Canyon would destroy so much of what makes Little Cottonwood Canyon wonderful. As someone who has lived in the Salt Lake Valley my entire life, I never knew what Little Cottonwood Canyon had to offer until I was in college. I didn't grow up loving the outdoors. As immigrants who risked their lives coming to this country, my family created a sense of fear around the outdoors because they were scared for my safety. However, I started climbing in college and it was love at first try. I remember the first time I ever touched an outdoor boulder. My first time bouldering outside was in Little Cottonwood Canyon. Sure, I couldn't do anything at the time. Nonetheless, I loved it. To know that so much of the climbing will be destroyed with a gondola breaks my heart. Not only would the gondola destroy so much of what Little Cottonwood has to offer, but it would further limit access for those who can't afford to pay for a gondola to go up the canyon to ski. This gondola only serves the ski resorts. As a beginner skier, I understand the need to get to a resort. However, there are much better, less intrusive ways to get to a resort while creating a better flow of traffic. Plus, many folks enjoy the backcountry. The gondola would limit access to the wonderful backcountry skiing the canyon has to offer. The gondola only benefits the resorts even though it would use precious taxpayer money. If our taxpayer money is going to be used, use it for something the people would want, not what the owners of Snowbird and Alta want. If our local community is paying for the gondola, why can't it serve the local community? The local community doesn't want a gondola.

ID	Full Name	Comment
35110	Jonathan Cohen	<p>I stand strongly against the construction of the gondola. The visual and ecological impact on the canyon will be irreversible. Not only will the gondola primarily serve the private businesses at the top of the canyon (ski resorts) but it does not consider the needs of all other users of the canyon. Backcountry users, skiers, climbers hikers and others will not benefit from the gondola service and will likely create larger access issues for most of the incredible places between the top and bottom of the gondola.</p> <p>The road expansion has equally destructive side effects and so many beautiful and important places will be permanently destroyed to do so. Trail heads and historically significant climbing will be destroyed if the road expansion is constructed.</p> <p>I urge the people to take a look at other more effective options that do not have such destructive and small serving impacts.</p>
35611	Michael Riggle	<p>A comment on the proposed gondola in Little Cottonwood. The canyon is a rare treasure in this state and the West. To visually despoil that beauty with an industrial looking device is unacceptable. There are many other reasonable alternatives to feed the resorts.</p> <p>NO GONDOLA</p> <p>Mike Riggle Sandy, Ut</p>
35111	Patricia Porter	NO ! on gondola. Who can afford tickets for this ! Only the rich. Not everyday folks.
35112	Brian Anderson	A gondola isn't going to solve the traffic issue in the cottonwoods. What the canyon needs in a system of stoplights to filter traffic and keep vehicles moving.
35113	Wendy Atkinson	I think the gondola could be a good idea. My concern is who should pay for it. It seems it will be used for a specific group and not for the whole of the state of Utah. If it was funded by private or by those who benefit most, then I would be for it. It's a very expensive price tag to put on taxpayers.
35114	FRED UNGERER	The gondola would be a huge waste of money to serve a very small percentage of the population, mostly the wealthy and rich resort owners. If the resorts want a gondola they should pay for it!
35115	Betty Sullivan	I am absolutely against the gondola. Other alternatives have not even been reviewed before pushing this project. I'm saying absolutely NO!!!
35116	Maxwell Rose	A gondola in the canyon is not a good idea. It would only benefit the two ski resorts in the area with so much cost to tax payers and other parts of the canyon. Tax payer dollars should not be used to bail out these private companies in the canyons. Also, the canyons are used for so much more than just resort skiing and the constriction and use of a gondola this size would ruin much of what makes the cottonwoods great.
35117	Austin O'Shura	Please rethink alternative ideas with less of an impact. If you are a skier/boarder you know as well as I do, gondolas do not operate in the wind. To this common sense logic, the gondola would never operate during LCC's heaviest traffic periods. This is a money grab for a select few individuals at the cost of a million individuals. When are we going to break this American tradition? Salt Lake City is getting ruined by greedy developers, don't let this happen to our cherished Little Cottonwood Canyon. We can not go A-Z but we can try A-C. There are plenty of realistic solutions, implement one. The gondola is not a resolution, it is a developers(Snowbird including) treasure chest.
35118	Daniel LEVETAN	I am in favor of a Gondola solution
35119	Marcie Leek	I have lived in Salt Lake City, Utah my whole life. I am strongly against the proposed Gondola construction. A busing system similar to Zion's National Park would be better and not ruin our landscape. I also don't believe tax payers should be placed with the bill, when it only benefits the ski resorts. The ski resort need to be responsible for pay and not ruining the landscape.
35120	Aaron Mast	A gondola in LLC will not address the problems and will have a massive environmental impact on the canyon while only catering to a couple of businesses less than half of the year.
35121	Mike Christensen	I am very much against the gondola plan in the canyon.
35122	Abby Zenger	I, like most Utah residents, DO NOT SUPPORT the gondola being built. It will destroy the canyon, and disrupt canyon access for years. Stop displacing nature to try and make more money. It's sickening.
35123	Carl Alcorn	We are very much against the proposal to build the gondola in the canyon. It is too costly and will be inconvenient to use.
35124	Jessika Pavloff-Duffy	I am in favor of the gondola project and would like it to go through. Other cities have similar gondolas that I have experienced and I think Utah state should also try a gondola. There are other ways than driving.
35125	Brad Wright	<p>The real solution to the traffic problem is simple and relatively cheap: make all the parking at the resorts paid and reservation only.</p> <p>I'm opposed to the gondola for one obvious reason: IT WON'T FIX THE PROBLEM. Instead it will exacerbate traffic jams at the base of the canyon. And when crowds pile up at the base of the gondola and there is any easing of traffic in the canyon, people will respond by driving up the canyon. The inevitable outcome is traffic jams at the gondola and in the canyon, at least on powder days.</p> <p>Make all resort parking charged and reserved and watch the crowds melt away!</p>
35126	Kate Johnson	<p>Here is my comment, it is in opposition to the gondola, in favor of the common sense phased approach. No to the gondola. No to road widening. No to taxpayers picking up the massive tab for private development.</p> <p>There's a better way. We can achieve 30% reduction in cars with enhanced bus service, carpooling, reservations and tolling and resort buy-in.</p> <p>Protect our watershed. Protect our majestic Little Cottonwood Canyon.</p>
35127	Sarah Kastelic	Terrible idea. So expensive, and ridership is going to be so minimal. And widening roads and giant parking structures aside- what is the point of this in summer? I don't understand how it's even gotten this far.
35128	Gary Green	The trams would be fun and beautiful to ride ... but ... I believe they would attract more people to an already OVER visited sensitive area. So, in my 2nd thought opinion > I'm against the Trams!

35129	Ethan Hanna	As lovers of the outdoors and advocates for sustainability, we believe there are reasonable, earth-friendly, and cost-efficient solutions to the transportation issues in Utah's Little Cottonwood Canyon that DOES NOT involve a gondola system. We stand with Save Our Canyons and many others as we oppose the plans to spend \$600M of taxpayer's money to install the invasive machinery. We support salt lake county's alternative common-sense solutions including tolling, rideshare programs, parking reservations, micro-transit, incentives, and traction requirements.
35130	Ryan Murphy	Hello, I would like to express my concern for putting in a gondola in little cottonwood canyon. First off I really don't see if changing the traffic situation at all. There is still going to be a bottleneck. Putting in the gondola will just move that further down the canyon. Also where will all these cars park? Will there be two ski resorts worth of parking now down at the bottom of the canyon? Lets not forget that Big cottonwood traffic is not being adressed at all, and since probably more than half of the people going to little cottonwood drive past big, traffic will still be miserable there. This is an issue that needs to be addressed citywide, ideally with reliable public transportation. The last and most important thing is that putting up large gondola towers will take away so much natural beauty from the canyon. It is a wild and beautiful place and needs to be protected not exploited. The gondola in not forward thinking, it is a bandaid on a bullet hole at best. With the gondola only serving two private businesses, how could we ruin so much natural beauty just to serve these businesses. They do not own the canyon. I hope that you will see all that is wrong with this project and use logical thinking to make the best and most obvious decision. NO GONDOLA! Thanks for your time, Ryan Murphy
35131	Brent Ludlow	I'm opposed to the gondola, to much money for what it offers. When storms hit-and-run wind is bad the tram at snowbird stops and so will this. It will have to be Subsidized by all of our taxes Just for a few people And the 2 Ski resorts that will benefit from it The canyons are overloaded now And can't handle any more capacity. Resorts in Canada have electric busses that are specially made for mountains And during peak times that is the only transportation up the mountain And the busses have priority To get up the mountain
35132	Brett Campbell	I live at [REDACTED] for 7 years now. Much of my recreation is in both Cottonwood Canyons. I completely support the Gondola B proposal. The research shows that this would be the safest and environmentally sound strategy. Opposition appears to want no change. I think funding could be an issue, but could be resolved through private-public collaboration. If funding is expected to take a long-time, the establishment of a toll-booth would get the process started as well.
35133	Rex Stanworth	I am not a skier but love the mountains! I would never consider driving up the mountain during ski season because of the traffic and danger!! I Would consider taking the gondola for a scenic ride. This opens the mountains to many seniors who cannot enjoy the winter weather. I have ridden a gondola in the summer in the Caribbean and it was awesome. It was a great tourist attraction. It was as fun and exciting. You can ride a bus in the city. You can ride the canyon in the new proposed gondola and see and enjoy the canyon. Can't have views from a bus! Please build the gondola. Give us a real tourist opportunity that will highlight our beautiful canyons and mountains
35134	Warren Johnson	I would have thought we had learned our lesson with provo canyon. Putting a gondola up a canyon in Utah is paramount to mass suicide. How many times did snow wipe out the Bridal Veil Falls gondola? Just saying, as a people we never learn from our mistakes. And I'm sure the same will happen concerning this little canyon ride. Just wondering if the engineers in charge of this project grew up in Utah and are aware of how extreme the weather here can be.
35135	Sam Pelletier	The proposed gondola solution doesn't carry enough passengers for peak times, 8am-10am and 3-5pm, to justify the exorbitant cost. Speaking of cost, Snowbird and Alta seem to be major beneficiaries to this arrangement and should be subsidizing some of the cost so that the taxpayers in the state of Utah aren't solely responsible given a majority vote of the taxpayers would have this plan denied. Also, a 2,500 car parking lot at the base of the gondola is not enough. Finally, I'm disappointed in how much this feels like an inside job given who owns the land for the base of the gondola project and the money spent by resorts on lobbying the state to approve this project.
35136	Jeremy Putnam	I think it's clear that the overwhelming opinion is to not have a gondola in little cottonwood. Why should the DOT be responsible for two commercial resorts? Hold Alta and Snowbird accountable and provide electric busses as public transport and close the canyons to cars on snow days. Adding a gondola to the canyon would not only disrupt the nature there, but would set a precedent to trample on protected land. Just this once please do not let greed get in the way. We are so lucky to have a beautiful area like little cottonwood and we should keep it this way. If you want to spend money, put it into the salt lake and prevent a natural disaster.
35137	Katie Johnson	Please do not add a Gondola to LCC. Both LCC and BCC need a better transportation system implemented year round. Traffic has gotten out of control. There needs to be a solution that helps people get to trail heads and tourist attractions, and not just Snowbird and Alta. Thanks, Katie
35138	Jeremy Putnam	I think it's clear that the overwhelming opinion is to not have a gondola in little cottonwood. Why should the DOT be responsible for two commercial resorts? Hold Alta and Snowbird accountable and provide electric busses as public transport and close the canyons to cars on snow days. Adding a gondola to the canyon would not only disrupt the nature there, but would set a precedent to trample on protected land. Just this once please do not let greed get in the way. We are so lucky to have a beautiful area like little cottonwood and we should keep it this way. If you want to spend money, put it into the salt lake and prevent a natural disaster.

35139	Aden Parker	The gondola has no place in Little Cottonwood. Please at least make an effort at minimal impact alternatives first, such as an enhanced busing schedule. It will get the job done much better than a gondola. The gondola is far from the best option, please listen to the community.
35140	Andrea Rodriguez	<p>UDOT's preferred alternative to ease traffic congestion in Little Cottonwood Canyon (LCC) to build a gondola at a cost of over \$500 million, funded by Utah taxpayers, is short-sighted and is NOT the answer to this problem.</p> <p>While UDOT has established criteria that the preferred alternative must benefit all users of the canyon, a gondola would only benefit Alta and Snowbird patrons. It would also benefit the owners of these resorts with a huge public subsidy.</p> <p>It is highly possible that traffic delays and crowds at the base of the gondola base will cause many people to drive anyway, minimizing UDOT's stated goal of the gondola.</p> <p>The natural beauty of the canyon which attracts many visitors from all over the world would be permanently diminished for all future visitors, including those who do not benefit from the gondola. In addition, there are nearby wilderness areas that will be adversely impacted by gondola construction and permanent changes to wildlife habitat.</p> <p>Better and less expensive alternatives exist that UDOT has not considered for managing access to LCC. There are many ways this could be done, including requiring mandatory carpooling or implementing a reservation system or alternate day access depending on whether a vehicle's license plate number is even or odd.</p> <p>Today the ski industry is very important to our economy and their voice is loud. However, it is ridiculously short-sighted to spend half a billion dollars of public funds to benefit only this vocal industry when its importance will likely diminish. We will likely experience reduced snowpack caused by climate change as well as ever increasing costs of skiing.</p> <p>The only reasonable way to manage the increasing use of LCC is to limit the number of visitors, and it must be done in an equitable way.</p> <p>-Andrea Rodriguez, Holladay UT</p>
35141	Stephen Linscomb	With global warming with in five years there will be no snow. You will have spent billions of dollars on the gondalo that will only be good for site seeing. I am against spending that much of tax payer money on this project. This will be like the prison you say five million but you know the cost will be in the billions.
35142	Chris Stonebraker	I vote no to the gondola proposition. It does nothing to solve transportation issues and destroys access to the rest of the canyon. This a very bad idea.
35143	Ronda McCoy	<p>Plus, the gondola will not run when howitzers are active during avalanche mitigation in the lower canyon from Lisa Falls to Monte Cristo.</p> <p>And we can't even think of an argument for the gondola to be operating for the other eight months of the year.</p> <p>Preserving the Beauty of LCC</p> <p>Little Cottonwood Canyon is a true treasure of our local environment and attracts skiers, climbers and hikers from around the world to enjoy its beauty.</p> <p>Constructing more than 20 towers reaching 200 feet tall and stretching eight miles through the heart of LCC would destroy the canyon's natural beauty.</p> <p>Altering the canyon's footprint will also destroy popular climbing and hiking areas including Alpenboch Loop Trail.</p> <p>Push Traffic onto Wasatch Blvd.</p> <p>The gondola will not solve traffic issues.</p> <p>It will simply push traffic out of Little Cottonwood Canyon onto Wasatch Blvd, I-215 and surrounding neighborhoods in the Cottonwood Heights community.</p>
35144	Patricia Becnel	Thank you for all your work but I oppose a gondola. Not only will it damage the canyon but it is not fair to burden tax payers with the expense especially when it will not benefit everyone who uses the canyon. By the time UDOT gathers the money to build. Our snow pack is predicted to be in decline and the chances of having an incomplete structure marring the mountainside is great. The gondola is a toy for the wealthy and there are many other more equitable solutions that have been proposed . No to the gondola.
35145	Jack Downs	Hello, I live in Salt Lake City and frequently use the canyon for hiking, climbing, and snowboarding. I am strongly opposed to the Gondola. This will scar the canyon and cause irreversible damage. Almost always these man-made creations are looked back on with disgust at what we did to nature, whether it be dams, pipelines, or transportation. We should be focused on minimizing our impact to nature in the canyon. I'm extremely disappointed we have not attempted better bussing options first. Its ridiculous we are considering moving forward with this project based on studies but haven't moved forward with better bussing. This project will only serve a select few and harm many other residents enjoyment of the canyon.

ID	Full Name	Comment
35146	Michael Gilbert	<p>As a backcountry enthusiast, I agree with UDOT that a preferred solution will represent a summary of key concerns expressed within the public comments that were received and processed: EQUITABLE PUBLIC ACCESS to dispersed recreation, OVERCROWDING, VISUAL IMPACTS, WATER QUALITY IMPACTS, AND YEAR-ROUND ACCESS for a majority of visitors. The proposed solution does not address these aspects - below is a list of issues that I see with UDOT choosing Gondola Alternative B as its preferred alternative:</p> <p>Dispersed Use - UDOT claims to have "Consideration of all canyon users, not just resort visitors," but by only having resort terminals and not operating year-round it's clear that this is disingenuous at best. It is well known that the White Pine trailhead is wildly popular year-round, with cars parking up and down the highway for up to a mile in either direction at all times of the year. This not only forces people to be far from their intended destination, it also creates a significant safety hazard along the state highway. The argument that UDOT uses for not stopping at White Pine is that there will be less traffic on the highway due to the gondola, thereby enabling White Pine users to drive to the lot is a red herring. WBA does not think that vehicle traffic will be abated enough (if at all) by the gondola to justify this conclusion. Backcountry users - like resort patrons - want to be able to use public transit in lieu of their own vehicles to access the canyon, but that is not possible under the current proposal.</p> <p>Economic Benefit - The EIS states: "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts.," I do not feel that enriching two private entities is UDOT's mission or responsibility and that applying taxpayer dollars to that end is a reckless use of public funds. Meanwhile, it should be noted that the latest Snowsports Industries of America participation numbers (2021-22) show a nearly 6% decrease in resort skiers and a 96% increase in backcountry skiers. Furthermore, data from the National Ski Area Association likewise indicates that participation in resort skiing has remained essentially flat for the last 30 years. More broadly accessible, dispersed activities such as backcountry skiing, snowboard touring, nordic skiing and snowshoeing on the other hand are among the fastest growing segments of the snowsports industry. And yet these increasingly popular activities, which should be made accessible to a majority of visitors to LCC, are fundamentally ignored by this proposal.</p> <p>Expense - The initial cost proposed by UDOT for the gondola was \$550M. This was pre-inflationary times, so even in the last year that figure will have risen to \$600M, if not significantly higher. Even if the cost has only increased by \$50M, that means that every single person in Utah is "paying," \$200 each to have what is effectively the most expensive chairlift in history installed for the benefit of two businesses (and auxiliary businesses). Any benefit associated with the proposed gondola will likely never be realized by the many Utahns who don't ski and/or live in other areas of the state, despite them paying for it.</p>
35147	Desirae Patchett	<p>I think instead of putting this money into one mode of transportation there needs to be more free and public transportation inner city and between the different Utah city's and that includes going up and down the mountains to the different trailheads and to the different resorts. Make transportation easier to access and more efficient all around instead of ruining the land with these huge gondolas that only serve one purpose. It is a waste of time and resources for transportation funds and is more damaging than helpful to have gondolas that go from one location straight to the resorts because that doesn't solve the whole situation.</p> <p>Note: this is a re-submission to edit on October 17, 2022 to a prior comment.</p>
35148	Caleb Norman	<p>For all of the items that have been proposed to be introduced around the same time as the gondola implementation, they begin to beg the question, "why would a gondola up LCC need to be implemented in the first place, especially when the added measures would work so well on their own?" This is especially important to consider when we examine the current situation and find that it has not been optimized for lowering traffic at any truly significant level.</p> <p>The gondola would only impact the current traffic rate up LCC by around 28% [1,2], with no effect on BCC traffic, which has arguably been worse. While this figure may sound nice, improvements to the traffic would likely need to be several multiples of its current state in order to satisfy the long term demand the canyons will grow into. These effects drop even more during the summer periods when vehicle speeds are higher on clear roads and the typical gondola usage plummet. A solution is needed that can be adaptable at the peak and low volume portions of the season, and something that can work well year-round for both canyons. Most/all of these suggestions have been brought up to some degree, but a recommendation to implement all of them together needs to be prioritized.</p> <ul style="list-style-type: none"> -Build strategically placed avalanche tunnels on both canyon roads. -Drastically increase the rate of buses per hour for both canyons, and increase the parking infrastructure options for each to work with the bussing and possible carpooling options. -Incentivize those who insist on still driving to carpool via free canyon passes and parking. -The availability of the free canyon passes and parking could be further restricted to vehicles with snow tires on storm days, if need be. -Toll and charge parking to those who are not carpooling and bussing. -These changes could be adjusted during the summer as needed. <p>The sum of even a handful of the proposals UDOT have presented to supplement or help introduce the Gondola via 'phasing' would function far better than either the current situation, or the Gondola itself. In fact, proposing a Gondola to solve the problems in either canyon is irrelevant to the actual issue of traffic overflow. Yes it might be profitable for the Gondola Works coalition, but at what cost to the paying SLC residents who may not even ski, and only one of the two crowded canyons? Additionally, as a lifelong skier and avid user of LCC's resources, it seems clear that the proposal of a gondola installation simply serves as a trojan horse to eventually interconnect all the Cottonwood and Park City ski resorts, a la many European ski areas. If the groundwork is allowed to be laid for this possible long-term outcome, we will greatly risk overrunning the incredible mountains we have been blessed with, losing their beauty in the process.</p> <p>References:</p>
38663	Anonymous	<p>No to the gondola. Why should I pay for something that I'm not even going to use?</p>

Comments on Little Cottonwood Canyon Final EIS

35149	Fisher Goodwin	<p>Hi my name is Fisher Goodwin, I live in Midvale, Utah near the Mouth of BCC.</p> <p>I have been volunteering and climbing in the Cottonwoods since I moved here 3 years ago. Even in the short time I have been here the Canyon has seen a lot of work and an incredible amount of congestion with the different events and seasons.</p> <p>After this last Ski season and the changes that Alta has made to its reservation system and how large an impact that small consideration made. It is obvious that investment into more of these conservative and common sense solutions need to be mandated and funded to make the canyons an accessible place for all that use it, not the few.</p> <p>It's a convenient time to end this comment period here in the fall and see the majesty of these places as wilderness. It may not be something we can appreciate after this season.</p> <p>I hope that this can be resolved in a way that is truly good for the people it intends to serve.</p>
35150	Conrad Klooster	<p>Please do not put in a Gondola. Access to hiking, climbing, and outdoor recreation that is free and does not benefit the ski resorts will be compromised and greatly diminished from years of construction on the gondola. The gondola would destroy and remove world class climbing that I love. The gondola is not an equitable solution and it only benefits the ski resorts and perpetuates marginalization and environmental injustice. I use the ski resorts and I do not want this gondola. Please don't destroy our mountains forever for the greed that backs this gondola project. Care about people and the earth more than money. Do not destroy our natural beauty and resources.</p> <p>A much much better option to control traffic in the winter would be to enforce carpooling and enhanced bus schedule that makes stops at other places besides the resort so that backcountry users are encouraged to ride the bus as well. Doing nothing about the traffic is a better option than a gondola even, because it doesn't destroy views and terrain that we'll never get back.</p>
35151	Tess Carlson	<p>Please don't build the gondola! It will destroy so much of little cottonwoods beauty and make it targeted more at the wealthy tourists and less at the loyal locals. Buses would be such a better idea!</p>
35152	Melissa Palma	<p>No gondola! Enforce resorts limiting ticket sales</p>
35153	Matthew Norton	<p>I live at the base of the canyon, and am in favor of the gondola. Being a life long skier, I view the towers and gondolas as simply a part of a mountain experience, not an eyesore. I'm interested in eliminating the massive lines of cars that accumulate on snow days, and having a clean and quiet solution to getting up the canyon. I also view the gondola as one more reason for tourists to visit Utah (and that is a good thing for our economy).</p>
38677	Anonymous	<p>Shutting down and limiting the number of ski busses this season is going to create traffic problems and create a back experience for tourism this year. Please reconsider limiting and closing ski bus lines.</p>
35154	Zach Allen	<p>Let's try more busses before making irreversible changes to LCC. Especially as the gondola will only service resort skiers/boarder in the wintertime.</p>
38664	Anna	<p>Hey there, my name is Anna and I just had kind of a specific question about the gondola be and what access there will be to existing trailheads that aren't the resorts. So yeah. I look forward to hearing back from you. My number is [REDACTED]</p> <p>Thank you.</p>
35155	Troy McClure	<p>Gondolas make me sad</p>
35156	Brian Hyer	<p>I am opposed to the gondola project. The tax payers of Utah should not be funding a project that benefits Snowbird and Alta. Also the number of days per winter that the canyon traffic is overloaded is not enough to warrant the expense and impact of the gondola. This project is a boondoggle like the pumps for the grt salt lake built the 1980's.</p>
35157	Marley Hill-Filben	<p>The proposed gondola in LCC is an abomination. My community of hikers, climbers, bikers, and both backcountry and resort skiers are adamantly opposed to this gondola. It would limit access to an amazing resource, nature. We need places we can go where we don't see massive towers and thick cables. Not only if you are wealthy. Why not try one of the many other options that would cause less ecological damage first? It is environmental racism to only cater to those who can afford to downhill ski, as one of those people I would like to encourage and support marginalized groups to access the mountains and the activities that everyone deserves to enjoy.</p>
35158	Carl Spikner	<p>I support the gondola</p>
35159	Brian Bouck	<p>Don't ruin our canyon with a tram, put light rail up the bottom of the canyon to the ski resorts, there was a railroad there for over 100 years and leave the road just as it is for everyone else.</p>
35160	Maggie Kasten	<p>I disagree that a gondola is the best strategy to deal with canyon traffic. Enhancing busses and parking for canyon use around the valley would be a better approach. It could be implemented in shorter time and less expense.</p>
35161	Louisa Giles	<p>Building a gondola in our beautiful Little Cottonwood Canyon is not the answer. The cost is enormous. The sensible thing to do is to implement a timed entry system. Save a lot of money and give it a try. It works in Arches and Zions National Park. Building all those gondola towers will affect the beauty of the canyon and just put even more people on the already crowded slopes. Please consider all the alternative transportation modes and don't waste a whole lot more of taxpayer money.</p>
35162	Travis Morrison	<p>I do NOT approve the proposed solution for the gondola. I believe the solution will only serve the ski resorts and be another scar in LCC. The cost to tax payers alone will be to high prior to exploring other, more accessible, and cheaper options, like increased carpooling and busing. Please do not use my tax dollars on the silly, expensive project.</p>

35164	Colby Ashcroft	<p>Dear UDOT,</p> <p>Thank you for accepting public comments on the Little Cottonwood Canyon Final EIS and Draft Record of Decision. As a resident of Salt Lake County and a frequent user of Little Cottonwood Canyon during all seasons of the year, I would like to express my opposition to the preferred alternative, which includes construction of a gondola from a base station near the mouth of Little Cottonwood Canyon to its terminus at Alta, Utah. I also oppose any alternative that would widen the road in canyon. Prior to implementing either of these alternatives, UDOT should work with local communities, Alta and Snowbird ski resorts, the U.S. Forest Service, and non-governmental organizations representing a variety of users to implement prudent and cost effective measures that specifically address traffic and safety issues. As part of any solution, UDOT should move forward with construction of snow sheds, improved shoulders with bike lanes, restrictions on road side parking, and trailhead improvements. Regarding the preferred alternative, I urge you to consider the following:</p> <p>1) Local Input should be a primary factor taken into consideration in the decision-making process. While Alta and Snowbird are destination resorts, year-around traffic congestion in Little Cottonwood Canyon is primarily the result of local use. Residents of Salt Lake County are the primary users of Little Cottonwood Canyon and are disproportionately impacted by UDOT's decision. The majority of residents in the County have also expressed clear and unequivocal opposition to the construction of the gondola. Cottonwood Heights, Sandy City, Salt Lake City, and Salt Lake County have passed resolutions opposing the project. Not a single community in Salt Lake County has voiced support the gondola. It would be inconsistent with Utah values for UDOT to approve the gondola when it directly contradicts the will of local residents who are the primary users of the canyon are disproportionately impacted by current traffic problems.</p> <p>2) The gondola does not benefit all canyon users. Any transportation solution adopted should benefit all recreation users and provide year-round benefit. A gondola that transports people directly to Snowbird and Alta harms rather than benefits climbers, back country skiers, cyclists, hikers and other users. While other aspects of UDOT's preferred alternative (e.g., improved parking at trailheads and snowsheds) would have broad public benefit, the gondola only addressed the needs of a limited number of resort skiers. Of particular concern, construction of a gondola does not provide access to a single trailhead in the canyon or address traffic associated summer and winter recreation use of areas such as Lisa Falls and White Pine trailhead, which provides access to the White Pine, Red Pine, Maybird, and Hogum drainages.</p> <p>3) The cost of the gondola outweighs benefits and should be not be covered by tax payers. The estimated cost for construction of the gondola is approximately \$550 million. Given the current</p>
35165	William Fullmer	<p>The building in the Canyon benefits the Ski Resorts ONLY! Do NOT put Gondolas in our canyons! Why should I pay? Let the ski resorts cover all expenses. They can deal with the damage & expense, for maybe 4-5 months of the skiing season.</p>
35166	Jenna Vick	<p>Boooooooooo!!! So many better ways to spend taxpayers money</p>
35167	Sarah Whitmer	<p>Say no to the gondola!</p>
35168	Heidi Fairchild	<p>I oppose the gondola. It is offensive to me that it is even be considered in a place so beautiful and also so small. This is not like the wide expanses in Europe. It would ruin the aesthetic of the canyon not to mention harm many places in the canyon where the construction is done for the enormous towers. the huge bill for this falls on the tax payers who do not want it and all to benefit 2 ski resorts and developers. Instead of reducing traffic, it will bring more traffic, congestion, pollution, and development. There is not one skier I know that would use the gondola or pay to get on it. Use this money to fund UTA for better bus service since all of a sudden it seems they can't provide that either. Interesting timing that they are cutting out skier routes this winter. It reeks of corruption. Hear our community! We do not want or need the gondola. We can do better. We can improve transportation, parking, and Wasatch Blvd to limit traffic not bring more in. Wasatch Blvd south of 9400 south has a lovely median and is 35 mph. Make Wasatch Blvd between Fort Union and 9400 South a 35mph zone, make it beautiful, an entrance to what we have in our Canyons. A place people will visit and remember for the nature, not the development of it.</p>
35171	Christopher Rudzinski	<p>Bad things will happen if you install this monstrosity of an idea. My out of state friends whom also ski, said it would be a absolute disaster to the environment and a total eye sore. Please do the right thing and keep our canyons sacred. Or else...</p>
35172	David Lyman	<p>I am in favor of the gondola option.</p>
35173	Paul White	<p>NO GONDOLA!!!!</p>
35175	Liam Fleming	<p>Please do not put in the gondola up little cottonwood canyon. I do not want to see my tax dollars go to support something that is only going to benefit Alta, Snowbird, and tourists. What about the Salt Lake locals? A gondola is not only going to disrupt the canyons ecosystems but it's going to destroy some of the best bouldering in the country.</p>
35177	Jon Hansen	<p>I am against the implementation of a gondola in Little Cottonwood Canyon I urge UDOT to seek other solutions that are less costly and more equitable.</p>
35178	Mary Stevens	<p>Please listen to Utahns and do not saddle us with the bill and eyesore of the gondola. We do not want this!!!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35179	Evelyn Lees	<p>I am opposed to a gondola in Little Cottonwood Canyon. It would destroy an environmentally beautiful, unique and fragile area, and has the potential to effect our important water quality. I feel it is the wrong use of tax dollars, whether federal, state or local, and maintenance will continue to be expensive long into the future.</p> <p>If the main focus is to reduce winter resort ski traffic during peak hours, there are many other ideas that should be tried first, with the resorts taking the lead in solving the problem they have created. Many of the ideas may also be useful for Big Cottonwood's similar traffic problem.</p> <p>Have BOTH Alta and Snowbird have reserved parking/paid parking for the next couple winters, and see the results.</p> <p>Alta and Snowbird should both try timed ski reservations, monitored via their lift gates. People reserve a ski pass starting time on designated heavy traffic days, loaded onto their day pass or season pass. For example, their ski pass becomes active those days at 9am, 10am, or 11 am, spreading out the uphill traffic.</p> <p>Passes could also have an ending time - such as a 9 am to 2 pm pass, 10 am to 3 pm pass, etc, which might help spread out the downhill traffic, too.</p> <p>Express busses, that go directly from valley parking lots to each resort, especially Alta and Brighton, without additional stops. Would serve backcountry tourers in addition to resort skiers. There was an Alta express years ago, that was awesome.</p> <p>Increased bussing, including small busses.</p> <p>Yes, there is a traffic problem in both Cottonwoods, but a gondola in Little Cottonwood is the wrong solution. Efforts to try other ideas should intensify and be tried.</p>
35180	louis-philippe Corbeil	<p>The gondola is not a good option since it is design to provide a single destination owned by a private ski resort more people. The canyon have a lot more than this ski hills: the trails, explore, rockclimb is the beauty of this place for year long. We need to protect the environment, access to the mountain and outdoor.</p>
35181	Paula Lee	<p>A gondola is not the right solution for Little Cottonwood Canyon. It will be a blight on the landscape and is far too expensive.</p>
35182	Marley Pankratz	<p>I do not support the building of a gondola in LCC. I think it should be further considered the impacts the gondola will have on existing recreation and accessibility, while only addressing the transportation concerns in regards to the resorts. The canyon is busy and crowded because there are recreation opportunities throughout. Back country skiers, mountain bikers, climbers, hikers, etc all access the canyon not directly related to the resort and are all incredibly popular activities in the area and drive a lot of the traffic through the canyon. The gondola is focused on the winter transportation issues, and only slightly considered the summer traffic, which some days can be just as busy and more spread out through the entire canyon.</p> <p>I think there should be an alternative that focuses on solving the all around traffic issue and not just as related to the ski resorts. I think implementing a better bussing situation is the best scenario that currently exists. It would provide year-round relief for the traffic and could be adjusted as demand for specific areas changes seasonally, ie some of the more popular trail systems in the summer and the ski resorts in the winter. This solution allows all users of the canyon to access the transportation alternative rather than just those making their way to the resorts. This could also potentially relive congestion at the base of LCC because you could stage multiple pick ups and routes with the buses with several parking lots instead of one meeting place. This solution still has negative impacts of its own and is not a perfect solution. The road infrastructure would absolutely need to continue to be addressed and the parking situation still is a problem. There are environmental concerns as relation to emissions and of course the question of it users are willing to use the bus to access the canyon. I believe that all these problems are solvable and have less over all impact than the gondola. With effective campaigns it would be easy to change the attitude around riding an bus and motivate users to take it. Buses are more efficient than cars going up the canyon, and with the gondola there would still be a large amount of users accessing the canyon via car. UTA is also overall transitioning to more sustainable buses including electric ones.</p> <p>Another advantage to continuing in the direction of the bus solution for LCC instead of the gondola, is that the bus is not permanent. If it doesn't work or needed to be adjusted, it would be totally feasible to do so. The gondola is a permanent feature that could prove to be inadequate in addressing the situation but cannot be reversed.</p>
35183	Maya Parsons	<p>The residents of Salt Lake City do not want a gondola. The gondola will destroy the natural beauty of the canyon and wont actually fix the problems of little cottonwood canyon. We need more bus routes, expansion of the wasatch, and carpooling to be more enforced. Also, gondola a \$660 MILLION dollar purchase is astronomical compared to the \$65 million dollars needed to save the Great Salt Lake. The priorities need to go toward the Great Salt Lake which will benefit our health and our environment, where the gondola is going to attract tourism. It is time to think about what is morally right and not what will get more tourism. We have all seen towns that wer prefect, and then tourism got introduced and they became so busy, hectic, and lost the touch of solitude and community. Please do not build a gondola.</p>
35185	Jim Conner	<p>How much is snowbird paying you?? Business interests ruling over the will of the people is everything wrong with this country. SHAME ON YOU!! NO GONDOLA!!! LISTEN TO YOUR CONSTITUENTS!!!!</p>
35186	Gene Bauman	<p>Please take my comment as a no go for a gondola in Little Cottonwood canyon. Using a half of a billion dollars or more as a benefit for ver few people. This is a terrible waste of taxpayer money. No gondolas paid for by the public.</p>
35187	Elias Black	<p>NO GONDOLA</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
38621	Gleed Toombes	Add my name to the long list who oppose a gondola in Little Cottonwood canyon. Beyond my personal interests, the idea is a complete betrayal to the people of Utah and the value of the Wasatch mountains. The research from abundant reliable sources go on to explain how crazy a choice like this is. Two ski resorts can only handle so many people and they both agreed to that with the US Forest Service. Transportation is your job not the bottom line for commercial interests and politicians who want it their way. Sincerely, Gleed
35189	louis-philippe Corbeil	I think the design should not be based on the single use of ski resort.
35190	James Johnson	This is the single most abusive project to the environment which is actually disguised as a project intended to "save" the canyon! Five of the seven days ea. week in the winter only the canyon is not busy. In fact, it's closer to a ghost town during the week. Only on three day holiday weekends is this even an issue! That literally means that, out of 365 days each year approx 20 days are cause for this drastic "solution", non-solution. Its unsightly, incredibly costly, a burden on tax payers and local residents! The real reason this is being pushed is for monetary gain for the companies and the individuals involved! Please don't do this to our beautiful, natural, monument! Save it, preserve it, protect God's creation.
35191	Mike Skinner	Please please PLEASE Listen to the people and do not build a gondola!!! Any other solution would be better...
35193	louis-philippe Corbeil	Other alternative could be taken such as a shuffle that would be available in the peak ski season and let's say included in the price of the ski pass.
35195	Buck Bailey	I think the gondola is the best solution environmentally having traveled throughout Europe, gondolas are a very effective mode of transport with the least impact to the environment. Build the gondola.
35196	Lucy Cheung	<p>The gondola provides no additional service during the summer months. The ski season is typically only 3 to 4 months - why choose such a destructive, interruptive option?</p> <p>With current green house gas emissions, there is estimated to be significantly less snow in Utah in the next 30 years. That will decrease ski traffic significantly. Is the gondola really a sustainable option? To spend billions of dollars and destroy the natural beauty of little cottonwood canyon?</p> <p>When climbing in Little Cottonwood, there is this incredible sense of being connected to nature. I feel like I am deeply immersed in the trees, with the babbling creek nearby. I don't want people hovering by in gondola cars and disrupting my climbing experience.</p> <p>The School Room is such a CLASSIC climb in little cottonwood - it will be forever ruined with the gondola obstructing the beautiful views of little cottonwood.</p> <p>Please consider alternative and less destructive options that would have no impact on the climbing community. We only have once chance to do it right - nature is fragile. Please hear the stake holders.</p>
35198	Bernard Adams	The proposed gondola is a serious mistake. it will cause significant damage to the environment and disrupt animal habitats
35200	Sophie Harlam	<p>There is simply no reason to invest \$550 million in a permanent project with so many unanswered questions.</p> <p>If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws.</p> <p>We have seen parking reservations work throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon.</p> <p>As Salt Lake County Mayor Jenny Wilson said, these are "common-sense solutions that are fiscally sound."</p>
35201	Sophie Harlam	<p>Why are Utah taxpayers footing the \$550 million bill for a problem two private businesses created and for a solution that will only benefit those two businesses?</p> <p>As we know, resort executives stand to gain the most from a gondola and have been behind the majority of pro-gondola messaging.</p> <p>They view the gondola as a tax-payer-funded marketing ploy to increase visitation to their businesses.</p> <p>UDOT's EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts.," [Ch. 6]</p>
35202	Sophie Harlam	<p>80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll.</p> <p>Salt Lake County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski and many other elected officials agree.</p> <p>"Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions. Parking hubs in the valley, electric busing with regular routes, carpooling and tolling, reservations, common-sense solutions that are fiscally sound,," Wilson said at the Truth About the Proposed Gondola event in June.</p> <p>With no trailhead or backcountry access, the gondola is far from a solution that benefits all of LCC's users throughout the year.</p>

ID	Full Name	Comment
35203	Sophie Harlam	<p>If the gondola is built, your ski day will consist of parking off-site (or paying a premium for one of the limited parking spots near the base), taking a bus to the base station then riding the gondola 31 minutes to Snowbird or 37 minutes to Alta.</p> <p>And then doing it all in reverse order at the end of the day.</p> <p>How can it be assured the gondola will be used and actually reduce cars in the canyon?</p> <p>For the gondola strategy to be effective, there will need to be a major change in public habits.</p> <p>With no plan by UDOT to limit cars (it is our understanding they plan to implement bussing until the gondola is built but not continue the program afterward) or any analysis of demand, the original issue of traffic is not being solved. It will simply funnel more visitors to the resorts.</p>
35204	Marshall Berndt	<p>The entire outdoor community is clearly and obviously against this. The community that uses and cares for the area the gondola will be in. What is making anyone move forward with an obviously bad plan that is opposed by the majority of the people that will utilize it.</p>
35206	Susan Clement	<p>I agree with the thoughts and stance of WBA. I'm an avid backcountry user in LCC/BCC and other surrounding areas of the wasatch and Utah. I do not think a gondola is the answe and believe there are better wash that will protect our environment and watershed while making the canyons more accessible to all users at all times of year</p> <p>OCTOBER 17, 2022 WASATCH BACKCOUNTRY ALLIANCE'S LCC EIS COMMENT</p> <p>The Wasatch Backcountry Alliance (WBA) is a local SLC nonprofit representing the interests of thousands of backcountry - and resort - users both locally and nationally as they pertain to the preservation of the famous non-resort terrain in the Tri-Canyon area. We have paid very close attention to the LCC EIS transportation process, and this is our formal comment.</p> <p>WBA agrees with UDOT that a preferred solution will represent a summary of key concerns expressed within the public comments that were received and processed: EQUITABLE PUBLIC ACCESS to dispersed recreation, OVERCROWDING, VISUAL IMPACTS, WATER QUALITY IMPACTS, AND YEAR-ROUND ACCESS for a majority of visitors. The proposed solution does not address these aspects - below is a list of issues that we see with UDOT choosing Gondola Alternative B as its preferred alternative:</p> <p>Dispersed Use - UDOT claims to have "Consideration of all canyon users, not just resort visitors," but by only having resort terminals and not operating year-round it's clear that this is disingenuous at best. It is well known that the White Pine trailhead is wildly popular year-round, with cars parking up and down the highway for up to a mile in either direction at all times of the year. This not only forces people to be far from their intended destination, it also creates a significant safety hazard along the state highway. The argument that UDOT uses for not stopping at White Pine is that there will be less traffic on the highway due to the gondola, thereby enabling White Pine users to drive to the lot is a red herring. WBA does not think that vehicle traffic will be abated enough (if at all) by the gondola to justify this conclusion. Backcountry users - like resort patrons - want to be able to use public transit in lieu of their own vehicles to access the canyon, but that is not possible under the current proposal.</p> <p>Economic Benefit - The EIS states: "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts.," WBA does not feel that enriching two private entities is UDOT's mission or responsibility and that applying taxpayer dollars to that end is a reckless use of public funds. Meanwhile, it should be noted that the latest Snowsports Industries of America participation numbers (2021-22) show a nearly 6% decrease in resort skiers and a 96% increase in backcountry skiers. Furthermore, data from the National Ski Area Association likewise indicates that participation in resort skiing has remained essentially flat for the last 30 years. More broadly accessible, dispersed activities such as backcountry skiing, snowboard touring, nordic skiing and snowshoeing on the other hand are among the fastest growing segments of the snowsports industry. And yet these increasingly popular activities, which should be made</p>
35207	Sophie Harlam	<p>If those invested in the gondola are so interested in preserving Little Cottonwood Canyon, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support.</p> <p>As our friends at Students for the Wasatch pointed out, if the gondola is implemented, the number of cars visiting resorts will remain the same while skier visits will increase by 20%, per UDOT's EIS.</p> <p>The EIS states, "The [gondola] would provide an economic benefit to the ski resorts by allowing more users to access the resorts.," [Ch. 6]</p>

ID	Full Name	Comment
35208	Troy Fitzgerald	<p>Dear UDOT,</p> <p>My name is Troy Fitzgerald and as a resident of Salt Lake City and frequent user of Little Cottonwood Canyon. I'm writing about the proposed transportation alternatives in Little Cottonwood Canyon and the risk they pose to non-resort users, such as climbers, hikers, backcountry skiers, etc... UDOT has identified two preferred transportation alternatives to mitigate winter-time traffic issues: a gondola or widening the road for additional bus-only lanes. I am advocating for a less impactful alternative: expanded bus service that is fiscally responsible and would serve all canyon users year-round, coupled with other traffic mitigation measures such as tolling.</p> <p>First, the transportation proposals are only a partial solution, and seem to only be serving the resort users in the canyon. Little Cottonwood Canyon is popular with many user groups, including hikers, runners, mountain bikers, and climbers to name just a few. The proposals are short-sighted and do not stop at trailheads or other parking areas, ignoring other groups.</p> <p>Second, Both of the proposals come with initial construction cost estimates of over \$500 million. There are more fiscally responsible options. Not only would an expanded bus service be less impactful to the landscape, it would use existing infrastructure and would cost less to implement.</p> <p>Third, the proposals are aimed only at mitigating wintertime traffic in Little Cottonwood Canyon, even though the canyon is popular in all seasons. A year-round expanded bus service would address traffic problems throughout the year.</p> <p>Last of all, I am a multipurpose user of Little Cottonwood Canyon that includes skiing, but I do not appreciate the transportation proposals only serving those traveling to the ski resorts, leaving most all other canyon users behind. In addition, the proposals threaten world-class climbing resources. The road widening alternative would eliminate a large number of boulders that are used for climbing and the gondola alternative would really ruin the climbing experience that not only I have been enjoying in Little Cottonwood Canyon for over 20 years, but for everyone. The gondola would have a huge negative impact on the pristine alpine views enjoyed by all in the canyon.</p> <p>Rock climbing has occurred in Little Cottonwood Canyon since the 1960s and its development has played a major role not only in my life, but also the global climbing community. It is unacceptable to remove a single recreation group's access at the benefit of private industry on public land. Less impactful options exist and should be implemented before making permanent changes to the canyon.</p>
35209	Sophie Harlam	<p>The proposed budget to build the gondola comes in at approximately \$550 million. But many estimate that number would ultimately come in closer to \$1 billion.</p> <p>We know projects of this size tend to go way over budget. Our new airport (which could use a gondola from Terminal B) was budgeted for \$1.8 billion and ended up costing more than \$4 billion.</p> <p>If the gondola is built, it would cost \$10.6 million annually just to operate. Plus, UDOT estimates an additional \$12.5 million in capital costs, expected by 2037, followed by \$16.5 million by 2051, according to the Deseret News.</p>
35210	Jonathan Duncan	<p>I am writing to express my strong objections to the proposed Little Cottonwood Canyon gondola project. Frankly, I am surprised and disappointed this proposal has gotten this far. The real weight of what is at stake here struck me a couple weeks ago while I was hiking down from Red Pine Lake with my family. I looked down over the majestic U-shaped valley below, and I was flooded with all kinds of memories of growing up exploring this canyon, hiking its trails, skiing the backcountry, photographing the wild flowers. I tried to imagine the impact of an amusement-park style "ride," transecting the length of this magnificent space.</p> <p>Gifford Pinchot, the first director of what became the US Forest Service, once explained the best use of our precious national forests. He explained how they should be managed to ensure the "greatest good, for the greatest number.," What this proposal essentially amounts to is a half billion dollar, tax payer funded resort amenity. All the other uses of this priceless landscape are complete locked out of any added value. UDOT must also be sensitive to the "class," dimension here. This "transportation," project only serves the rich elite who can afford to pay \$220 a day for the luxury of resort skiing. That is just so out of touch, it strikes me as unconscionable.</p> <p>I sincerely hope that a more rational transportation plan can be put together; a plan that doesn't permanently alter the aesthetics and enjoyment of a landscape held dear to the lives of so many. Little Cottonwood Canyon is not simply a playground for affluent resort skiers for the four months of winter. It is much, much more than that. We need to preserve what we have in this canyon for all the generations to come.</p>
35211	Sophie Harlam	<p>How many days per winter are you in a complete standstill in Little Cottonwood Canyon? No doubt the red snake is real. But real enough for an expensive, permanent gondola?</p> <p>Plus, the gondola will not run when howitzers are active during avalanche mitigation in the lower canyon from Lisa Falls to Monte Cristo.</p> <p>And we can't even think of an argument for the gondola to be operating for the other eight months of the year.</p>
35212	Nic Van Dyken	<p>For the record, I want to let it be known to my elected representatives that I adamantly oppose the building of the Gondola in Little Cottonwood Canyon.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35213	Sophie Harlam	<p>Little Cottonwood Canyon is a true treasure of our local environment and attracts skiers, climbers and hikers from around the world to enjoy its beauty.</p> <p>Constructing more than 20 towers reaching 200 feet tall and stretching eight miles through the heart of LCC would destroy the canyon's natural beauty.</p> <p>Altering the canyon's footprint will also destroy popular climbing and hiking areas including Alpenboch Loop Trail.</p>
35215	Michael Tingey	<p>I am a former Sandy City Planning Commissioner. I was the chairman of the commission for 5 of my 9 years. I strongly oppose the Gondola option for Little Cottonwood Canyon for these reasons:</p> <p>1- The \$550,000,000 estimated cost like most other giant government projects is likely vastly underestimated. I refer you to the TRAX proposal we were given in the beginning. It was supposed to be self-sustaining, which has never happened. The cost per ride was to be \$1.25 which never worked. The ridership is constantly under estimate. I also refer you to other big projects - The Big Dig in Boston, The bullet train in California, and many others.</p> <p>2- The winter traffic congestion is only a 4-5 month problem that can be solved less expensively with alternative options. I fully support a Natural Gas bus option. Natural Gas is clean and abundant. It is also reliable. A fleet of 15-20 buses that charge a \$5.00 round trip fee would be far less intrusive, but still clean.</p> <p>3- A bus system will provide service to intermediate stops for property owners in the canyon. A Gondola will not handle this nearly as well, if at all.</p> <p>4- As a person who loves the view inside the canyons it is my opinion that a string of gondola cars will degrade the beauty of the canyon far more than the current roadway and vehicle & Bus traffic.</p> <p>5- I believe a sticker system for canyon property owners is a good idea to all them access to the canyon and to their property.</p> <p>6- I believe the canyons are for all, not just for the rich. I therefore am against toll booths in Big or Little Cottonwood Canyons.</p> <p>I respectfully urge rejection of the expensive and unsightly gondola option. We can do better and at a lower cost.</p> <p>Thank you for your consideration!</p>
35216	Sophie Harlam	<p>The gondola will not solve traffic issues.</p> <p>It will simply push traffic out of Little Cottonwood Canyon onto Wasatch Blvd, I-215 and surrounding neighborhoods in the Cottonwood Heights community.</p>
35217	Melanie Ogden	<p>I am against the gondola. It is expensive and there are much better ways to spend money in the SL valley (great salt lake & pollution). Zion National Park has adopted the use of shuttle buses on busy days, we should push to do the same. It also seems very corrupt to build a gondola with tax payer (public) money but then only have stops at private businesses.</p>
38665	James Teton	<p>This is James Teton. I tried submitting a comment on the EIS form. However, the captcha validation failed and yet there was no captcha graphic at all on the page. So I wanted to let you all know. I do not favor the gondola, especially since it's a subsidy for a seasonal recreation in a season that's going to get shorter and shorter with the climate change getting warmer and warmer. Stick to more practical solutions. My number here is [REDACTED] Thank you.</p>
35218	Marsha Adams	<p>Access to nature "in the least obstructive nature" represents respect for nature. A gondola will require an adequate park lot/structure to access one base station. However, buses can provide many locations from where individuals can access them along a route. Why not:</p> <ol style="list-style-type: none"> 1) create the park and ride locations which will be needed for any public transportation idea. 2) allow buses only on the canyon roads during high morning and evening peak times. <p>I do not agree to spending so much money to create a gondola before we attempt to resolve transportation problems using existing resources.</p>
35219	Stefanie Thorpe	<p>Access to climbing and hiking areas will be compromised during years of construction, destruction and removal of irreplaceable and historic world class climbing and views will occur, and this is NOT an equitable solution and perpetuates environmental marginalization and injustice in the Wasatch front. Please don't just do this for money think of the environment and the people.</p>
35221	Peggy Bernal	<p>I feel that the impact of putting the gondola up the canyon is a bad idea. It will costs millions and will take trees and the beauty of the canyon away. There must be a better way to move traffic up the canyon</p>
35222	Chase Nelson	<p>I am completely against the Gondola proposed solution and the enhanced bus system. The problem starts with the ski resorts, let them implement solutions first. Then implement common sense solutions that do not permanently destroy our canyon and cost tax payer dollars.</p>
35223	Rachel Fixsen	<p>I support alternatives that involve minimal impacts to the canyon. It makes sense to try enhancing bus service first, and see how that works, before spending a huge amount of money and permanently altering the canyon. The canyon's value hinges on balancing access with preserving its natural state as much as possible. I believe a gondola is tipping the balance toward over-development. The gondola option also has unacceptable impacts to irreplaceable boulders. To someone who doesn't climb, one boulder may seem very like another, but to climbers, the specific routes and problems on Little Cottonwood boulders have been treasured for decades. Please consider collecting data on the efficacy of enhanced bus service, incentivized by a toll for private vehicles, before proceeding with a higher-impact solution.</p>
35224	Zach Medlin	<p>No to the gondola. Less invasive and less permanent solutions first. I am a back country skier and tax payer. I do not want infrastructure that singularly supports two private businesses.</p>
35226	Andrew Chrysler	<p>The gondola decision is rushed and incorrect. This is a taxpayer give away to large industry and private interests. It ignores local opinion, and is likely to be detrimental to classic Wasatch pursuits such as backcountry skiing at mid-canyon trailheads.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35228	Nick Jackson	The gondola is expensive, unnecessary, and amounts to a giant handout to Snowbird and Alta at the expense of the watershed, the canyon's natural beauty, non-resort users, and the central Wasatch as a whole. UTA should shelve the gondola option and seek less expensive and less destructive solutions first.
35230	Cliff Beattie	I'm firmly opposed to the use of a gondola in Little Cottonwood Canyon. I am a resident of Cottonwood Heights, but would oppose the gondola choice no matter where I live. It would only serve the users of the ski resorts, not those who wish to access other parts of the canyon. It would also destroy the open view, both up and down canyon, of the mountain vista or view of the Salt Lake valley. I would much rather see improvements to the existing road (such as adding an additional lane with that lane being an "UP" lane in the morning and a "DOWN" lane in the afternoon) (also snow roofs in appropriate areas); use of reduced or zero emission bus service; tolling for private vehicles during peak traffic times; and other improvements that could be added incrementally and at a more affordable cost.
38593	Reid Rhoades	Mailed comment
35232	Abby Bossart	Traffic in the canyon is being created by the ski resorts. Make the ski resorts limit parking and have the ski resorts pay for their own shuttle buses up the canyon. We don't need the massive eye sore of a gondola destroying the canyon. It isn't even going to be needed for most of the year!
35233	Byron Harvison	As a climber and skier I am opposed to the proposed gondola. The impact in terms of construction, visually, and the fact that it won't take the population pressure off of LCC in a significant manner is why I oppose.
35236	Eric Shmookler	No gondola. What an eyesore. And I want to access backcountry trailheads halfway up the canyon, for which there will be no stops. [REDACTED] and learn some common sense. Dedicated bus lanes and buses are the answer.
35237	Matthew Moore	I am a Sandy resident that lives in the [REDACTED] census designated place [REDACTED]. While I do not object to the Gondola alternative and will use it if constructed, I remain concerned about a potential allocation of significant and ongoing state funds that benefit private business while failing to broaden access to local, state, and federal recreation roads and lands located on the western side of the valley, the central portion of the San Rafael swell, the congestion throughout Moab, and the limited UDOT funding going to further bus, trax, and frontrunner enhancements. In addition, the gondola option likewise will not improve the extremely dangerous road conditions caused by congested parking along the state road 210, whether it's the Tanners area or along the Snowbird and Alta access points. Snowbird and Alta should be pressured, influenced, (or volunteer), to enhance their own parking infrastructure to further reduce state road burdens. IN addition, enforcement of the parking laws (2 feet within the line) to enhance safety, visibility, and traffic flow must be part of any and all solutions.
35239	Alek Konkol	Hello. I am from salt lake and an avid skier and hiker in little cottonwood canyon. I would like to express my belief that the gondola will ruin the beauty and grace of the canyon. Instead of spending millions of dollars on infrastructure that purely serves the private ski resorts at the top, let's focus on implementing bus transit. We need more busses, more routes, more connections, and more frequency. The road in little cottonwood is already there, let's use it for public transit. Make driving the last resort for people and make bus service the first choice.
35240	Joyce Mletschnig	This is a problem created by Alta and snowbird resorts. They should limit how many people park or ski at their resorts. This is not a Utah problem.
35241	Alyssa Sumner	NO GONDOLA! We have many other alternatives that will support the canyon. Increase bus usage, build snow sheds to help manage avalanche closures. Proposed alternatives are cheaper, better for the environment, support other forms of recreation. The gondola only supports 2 private businesses.
35243	Diane and William Stahly	We are writing opposition to the proposed Gondola up LCC for the following reasons: -It is an inordinately expensive solution (500M+) to a modest problem. Traffic jams occur in the canyon a few (10-12 last year) powder morning each ski season. Parking reservations at the ski areas helped last season. Fees to drive up the canyon on those high impact days has been proposed and should be tried. - the canyon is already crowded. How many people can you cram into one 8 mile box canyon before you ruin the experience and environment for everyone. - Snowbird General Manager, Dave Fields, stated in his op-ed in the SL Tribune that the Gondola is similar to the TRAX and Frontrunner projects 30 years ago. Those projects serve millions in their daily lives. The Gondola will, at best, serve a few thousand people on winter snowy mornings at enormous public cost. Diane and Bill Stahly Alta
35245	Kevin Kukla	I am taking time out of my day to write this because I am concerned with the direction UDOT is heading. The gondola, as I'm sure you know, is massively unpopular among locals, and for good reason. While there is without a doubt a large issue with traffic in LCC, a gondola is not the solution. First off, the fact that the project is taxpayer funded, while mostly benefiting the ski resorts, is already a red flag, and that's before accounting for how unpopular the idea is. One of the main reasons it is so unpopular is due to the impact it would have on the natural beauty of the canyon, tarnishing the view for all who recreate there. Additionally, the massive amount of money could better be allocated to finding drivers for UDOT ski busses which have been slashed this season. We should be expanding public transit coverage that all can utilize, not just catering to resort users. I say this as an avid skier and resort-goer, and also someone who utilizes the several trails up and down the canyon. I urge UDOT to listen to your fellow Utahns and respect the will of the people by seeking an alternative to the gondola proposal. Thank you

ID	Full Name	Comment
35246	Lindsay Anderson	Please do not implement the gondola option in LCC. It does not solve the problem of congestion if cars are still allowed up the canyon. Given the option to wait in traffic for 50 min to get to the resort but have my vehicle to store gear/ transport children is still going to win over a 50 min ride in a gondola with no bathroom. This option is so biased and only serves the for-profit resorts. It does not help users get to other places in the canyon and in fact not only degrades the visual resource, but it removes climbing resources and extremely disrupts the way the rest of the users see and interact with the canyon. Please do not cater to these resorts, one of which (Alta) discriminates against half of winter resort users(snowboarders). Utahns should not have to pay for this! This is so much money for such a tiny fraction of users, none of which will be here in ten years if we do not save the lake. Save the lake first, utilize funds to create a better public transit system to the canyons from the city and utilize a regular bus schedule up the canyon. People will use it if there are enough of them and they can get to them easily. I strongly disapprove of the gondola option.
35247	Vincent Coley	This costly gondola endeavor will cost Utah Taxpayers a large sum of money and will only support a tenth of one percent of the states population, the ski industry along with shorter winter ski seasons will become obsolete in 30 years. I have skied Alta for the last 55 years and Do Not support this Gondola! a fleet of smaller Busses running on Natural gas is a viable alternative solution.
35248	Taylor Frederickson	No gondola
35249	Sam Raber	I do not support the construction of the gondola with or without tax payer funds. Instead, I would prefer resort specific bus routes to make park and riding more feasible while decreasing individual passenger vehicles in the canyon. Thank you.
35250	Catherine Turnbull	To Whom it May Concern, I would like it to be noted that I am AGAINST the proposed gondola for Little Cottonwood Canyon. As a condominium owner, I would be greatly affected by the proposed gondola traveling right over my property. The proposed gondola will do nothing to actually solve the traffic problems in Little Cottonwood Canyon. There are far more sensible solutions to solving the congestion issues in the Canyon on selected days when overcrowding is truly a problem. I urge you to stop the focus on the gondola and concentrate on real solutions that would be effective. The gondola is an expensive proposition that will not solve the problem. Sincerely, Catherine Turnbull
35251	Karla Reading	Please do NOT approve the gondola. It may be "sexy" but it's the most expensive, least effective way to accomodate the public.
35254	Mike Carlsen	Why would you use my tax dollars to build a gondola to a private entity? If it is half billion dollars and there are five million people in Utah that is that's 100 dollars for every man, woman, and child with no benefit too 99% of the public. How could you justify such an expenditure for so few let the ski resorts pay too get the people too the resort.
35255	Michael Jones	No to a gondola! The ski industry has stepped too far into extorting a boondoggle that will scar our precious canyon. Our needs and money should be spent on serious environmental and infrastructure needs. Possible downturns in the ski industry due to drought and looming recession. We need to be more long sighted when spending \$500,000,000 to enrich the already gloated ski industry.
35256	Chapman Cox	We do not want the gondola. I do not know a single local who would approve. Instead of using that number of tax dollars, I suggest combining efforts with the ski resorts that you are benefiting to raise money for hybrid buses like the U has and work on providing better parking space for carpooling combined with new bus systems.
35258	Ian Jones	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean," the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium," parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.

35259	Claire Parsons	<p>My name is Claire Parsons and I moved to northern Utah three years ago. I've been heavily involved in conservation efforts across the greater and central Wasatch since 2019. I am a botanist and recreationalist. I spend many hours a week working in the mountains as well as enjoying the public land access the Wasatch mountains have to offer. I have the opportunity to work with various stakeholders across the Salt Lake City Valley that are determined to protect the watershed, migration corridors, endemic plant species, and creating equitable access opportunities for the population.</p> <p>I am grateful that UDOT has taken the time to research alternatives to solve the transportation issues in Little Cottonwood Canyon (SR 210) and that an EIS process was administered. Thank you for taking the time to begin analyzing this issue. As someone who does not ski at private resorts, I cannot wrap my mind around why UDOT would be supporting a project that solely funds Alta and Snowbird patrons? The gondola is only stopping at Alta and Snowbird. If the gondola is backing their visitors, why is this a citizen funded project?</p> <p>Additionally, how was the scope of this project approved to be so narrow? A project that wants to alleviate single vehicle traffic in the canyon but a project that is being built only for resort visitors? What about the other 9 months out of the year when Little Cottonwood is slammed? Or in the winter when backcountry trailheads are at capacity?</p> <p>Here is a consolidated list of questions and concerns about the preferred gondola alternative.</p> <ol style="list-style-type: none"> 1. The gondola is STATIC. Once built, it is what it is. A gondola system cannot evolve with a growing population. Common sense solutions can. Busing, affordable tolling during peak visitation periods, establishing transportation hubs, and so on. These solutions can also scale back if visitation was to ever lessen. With a population that is destined to continue growing, how will a gondola system that only serves TWO locations - Alta and Snowbird - cater to the transportation needs of the valley? 2. The proposed gondola is estimated to improve mobility by 30%. That is it. How can one reason spending over \$550 million to hardly solve the issue? Not to mention the \$550 million was projected in 2018. What is the new estimated cost of the gondola project as of October 2022? 3. Parking for the gondola does not exist yet which means more parking lots will need to be developed at the mouth of Little Cottonwood Canyon to serve patrons. Where do you see these parking lots going? How many acres will the parking lots or garages take up in addition to the footprint of the gondola? <p>The gondola runs only in the winter... we experience transportation issues year-round. Will UDOT facilitate another evaluation project that expands the need and scope of the project beyond servicing only Alta and Snowbird patrons?</p> <ol style="list-style-type: none"> 4. The gondola is fully funded by taxpayers meaning that the majority of the state that does not ski at the private ski resorts in Little Cottonwood Canyon will be required to contribute to this project. Why is this being seen as the lead funding
35260	Sarah Cummings	<p>the group of businesses and individuals who stand in the way of the use of Utah's natural resources and the Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. 35262	Noah Swanson	<p>The gondola and rail solutions are horrible and will forever alter and destroy the beauty of the canyon. Please don't listen to a few rich people who want public funds to enhance their business. Please listen to 80% of Utahns</p> <p>https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah</p>

ID	Full Name	Comment
35263	Chris El-Deiry	<p>I fully support enhanced bus service as the EIS preferred alternative.</p> <p>I am in full opposition to the Gondola B project.</p> <p>I am a local resident to the Cottonwood Heights and Holladay areas, and have been visiting Little Cottonwood Canyon for near 15 years, and am active in the canyon during all seasons.</p> <p>Additionally: -I fully support tolling for vehicles of Canyon non-residents. -I fully support a phased implementation to reduce stress on the local communities directly affected by a transition to better infrastructure and transportation management. -I fully support that consideration of ALL canyon users be the priority, not just those of resort visitors. -I fully support that keeping existing recreation opportunities intact (climbing zones, trails, etc.) be placed as a priority. -I believe that focusing on keeping what we have intact and utilizing enhanced bus service (while helping communities adapt habits through incentives) will be a much more acceptable and attainable approach to managing growth in an effective manner, as opposed to the proposed cost + timeline + long term effects of the Gondola project.</p> <p>Only when you step away from Salt Lake City and visit other areas do you realize what a gem Little Cottonwood Canyon is. We cannot afford, as local communities and a State, to get this wrong by wasting time/money/community support and ultimately the viability and natural beauty of the Canyon environment itself, implementing a project that is not supported by the majority population.</p>
35265	Haley Bento	<p>Please do not put up this giant, expensive piece of infrastructure that will only benefit the resorts. This has absolutely no use in the majority of the year. Those of us that live in the area near the bottom of the canyon do not welcome this infrastructure and increase of traffic to our neighborhoods. I do not want my tax dollars going to this. As a skier in little cottonwood canyon, I think this will absolutely kill the resort experience as these resorts are already overcrowded and getting more people up there is not the answer. Further, when conditions are bad and the road is prone to closures, the absolute last thing we need is more people up there. This will cause me to stop skiing little cottonwood canyon resorts where my family have been skiing for 50 years. This makes me so sad to see it getting to this point. Please switch to more busses, few systems for driving up the canyon and improving parking in the canyon.</p>
35266	Daniel Shannon	<p>Please don't install the gondola it's not what the people want and will do damage to the ecosystem.</p>
35268	John Unterhalter	<p>I greatly appreciate the thoroughness of the EIS conducted and that UDOT ultimately selected the alternative that best meets current and future needs. Do not give in to short-sightedness.</p>
35269	Cj murray	<p>Logical thinking would put this on the ballot for a vote. UDOT should also look at this as a whole to support all outdoor activities, not focus on one corporate interest. Climbing, BC skiing, MTBing, hiking to name a few are being left out of the conversation. Improved parking at the mouth of the canyons, bus stops at trailheads throughout the year. Improved roads and snow sheds in high avalanche areas to start. Yearly passes to enter the canyon and daily tolls that fluctuate during high traffic days.</p> <p>There is no reason to skip progressive steps to ruin the beauty of our recreational areas to support a sport for a few months a year. THIS LAND is world renowned for multiple activities and will be lost forever if the gondola is constructed.</p>
35270	Robin Stevens	<p>I oppose the Gondola. We need to do something. That I agree on. The Gondola would be an awful eye sore. How is the safety of it during strong winds? Thats a lot of people and skis in it. What about health of everyone packed in. (flu and Covid). You would need more locker spaces in the resorts for the people who don't want to haul them. And yes fees to go up the canyon. Do me, that is a good start. Limit the number of cars. When it maxes out. Not allowed up. Period! More transit/ shuttles. No EXPENSIVE GONDOLA. Keep the environment beautiful.</p>
35271	Alexis Lee	<p>My name is Alexis Lee, and I am a constituent of UDOT and a registered voter. It is very important to me that you DENY the FEIS Gondola solution in Little Cottonwood Canyon. I am a sustainability professional, and while I understand that the operational emissions from the gondola will be similar to buses, this analysis has failed to take into account the embodied carbon emissions of construction- which often make up over half of all emissions of a project. Therefore I find that this solution will be more polluting and damaging to our environment in Utah. Further, I am a hiker and backcountry skier, and I do not believe that the gondola meets the needs of all users like myself. Thank you for your time and attention to this issue. Kindly,</p> <p>Alexis Lee</p>
35272	Amanda Martin	<p>I was born and raised in Sandy Utah I currently live in Cottonwood Heights I am for a gondola. The canyon is not something that can be enjoyed on my weekends off cuz it is so congested and awful to commute through</p>
35273	Brittany Parks	<p>I am a SLC voter, skier and I am against the gondola. I prefer the more year-round solution of tolls and mandatory busing for day skiers during peak days to resorts, with residential or overnight stay exemptions. This is an unconscienable amount of money to spend to benefit two resorts, meanwhile our Great Salt Lake is drying up and poisoning us all. We are blessed to have an incredible public transit system here in SLC, with direct access to the base of the canyon. Enhancing that would benefit all users year round, rather than just a few of us skiers on powder days. Additionally, with lifts existing in the Mineral Basin, why would the resorts simply not build a parking lot/access point on that side of the mountain, allowing increased utility year round and closer access for many? Thanks for taking the time to read through all of these remarks and listening to your constituents.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35275	Kate Ithurralde	<p>The gondola is the worst idea I have ever heard! It is the most laziest solution to the issue. It is like putting a Band-Aid on a broken leg. It does nothing to solve the main issue. The only thing the gondola does is ruin the canyon for future generations. How dare you even consider such an barbaric concept. Here is what has to be done. If anyone, a rancher of a ski resort is renting land from the federal government, they should not be able to make a profit from the land they are renting from me and you! All ski resorts who do not own the land need to become a non-profit organizations, so they are not focused on profit. I work at a Theater, we cap the number of people who can enter the theater based on the number of seats in that Theater. The ski resorts need to cap their use based on the canyon, my canyon's capacity. This capacity includes the canyon road. The ski resorts need a transparent reservation system, where everyone knows how many skiers are to be expected on that day. If Arches National Park can make a reservation system and limit the visitors so can Alta and Snowbird. I know creating a reservation system for the ski resorts is not in your control but I just wanted to mention this because there are way better solutions than ruining the canyon with a horrendous gondola.</p> <p>I am a voter, I am a tax payer and I very apposed to the gondola.</p>
35276	Margaret Vallejo	<p>The Gondola is a terrible option for the canyon. It will degrade the natural environment through construction, and damage a multi-recreational use space. This plan solely benefits the ski resorts, not the land itself or other people who use the canyon for hiking, climbing, or site seeing. This is a thinly veiled attempt of trying to conflate capitalism for environmentalism.</p>
35280	James Martin	<p>The Gondola is the best long-term solution. Over time, the canyon will continue to get increased use and the traditional bus/car combo will overload the system. This alternative makes sense from a cost and eco-friendly consideration.</p>
35281	Abby Gaston	<p>The community has made it quite clear that this gondola is not wanted at all. Please do not ignore us.</p>
35283	David Church	<p>What has become abundantly clear to me from the responses to the first round of public comment is that UDOT is not willing to consider the public's disdain for marring the beauty of Little Cottonwood Canyon with a gondola that will forever change the landscape only to serve two ski areas for a fraction of the year. Responses to the comments were clear, UDOT doesn't favor the other alternatives because they don't fully address peak demand on the busiest weekends during ski season to just two resorts. Let's be reasonable, does it make sense to burden our beloved canyon with such imposing infrastructure to serve what boils down to a handful of days per year? Does it make sense that all that money, investment, and obtrusiveness just sit idly by in the summer and fall months, with no thought of how to improve service to the canyon in the non-peak months, and to provide equitable access to the canyon? As taxpayers, our money should be going to infrastructure and services that equitably improve access to the canyons at all times of the year, and to all portions of the canyon, not just to solely benefit two profitable ski areas. I firmly believe UDOT needs to take a step back and look at this problem with a wider lens of the entire Big and Little Cottonwood Canyon system. I think if anything, last year proved that small adjustments can make a big difference in overall demand and delays in the canyon. As Alta started requiring parking permits on the weekends, traffic in Little Cottonwood Canyon became much more manageable and easier to navigate, meanwhile, the shift away from Little Cottonwood Canyon made for more demand and delays in Big Cottonwood Canyon. I firmly believe if UDOT imposed a tolling system on both canyons, and provided access to good alternatives like bussing from an expanded transportation hub, we would see decreased vehicle demand on the canyons. The bottom line is this: even if the gondola looks the best on paper for the requirements - the people don't want it, and we want UDOT to support alternatives even if they come up a little short of the requirement.</p>
35284	Julia Fox	<p>As an avid hiker and lover of the natural beauty of our canyons, I absolutely oppose this gondola.</p>
35285	Mark Lentz	<p>I absolutely oppose corporate welfare that benefits two resorts, both catering to non-Utah tourists, than any other alternative. If Snowbird's Dave Fields wishes to have a gondola, he can apply to build it himself. There is no reason Utah taxpayers should foot the bill for a luxury experience for out-of-state tourists. This is all that the gondola is; it is not a solution to crowding. A few out-of-town elites will ride above the still-crowded highways if they are able to pay a toll that will likely keep any normal, local skiers and employees from using it. Moreover, less destructive, intermediate forms of reducing crowding such as paid parking, canyon tolls, better enforcement of vehicle requirements have not even been attempted. Critically, this boondoggle implies that resort skiing is the only use of the canyons. Climbing will be severely impacted, the experience of hikers will be adversely affected, and backcountry skiing - a much greener alternative to resort skiing - will be further undermined by the gondola. Finally, nearly all of the residents of neighborhoods bordering the gondola construction absolutely oppose it. This project is a corrupt attempt by two resorts and a few crooked politicians to line their pockets. I and the Utah majority absolutely oppose this project. Represent the will of the people or face the electorate and an end to your careers.</p>
35287	Alan Snyder	<p>The proposed Gondola is NOT going to improve the quality of transportation in Little Cottonwood Canyon or remedy the congestion UDOT is attempting to respond too. The Gondola option is another in a long series of grand schemes which benefits few and which externalizes the costs to the taxpayers. If UDOT jams this project through, which is the "Utah Way", let the benefactors pay for it. Little Cottonwood Canyon will be forever destroyed.</p> <p>Cottonwood Heights City opposes it, many grassroot organizations oppose it. Why is UDOT so hell-bent on going ahead with it?</p> <p>Here's a less radical notion... take \$100 million from the taxpayers as bribe money to the 100 people who will actually benefit and skip all the "construction"....</p>
35292	Jacob Harrington	<p>Why are we spending over 600 million dollars of taxpayer dollars to build a gondola that only benefits two privately owned businesses when we are currently faced with a potential environmental time bomb that is the ever drying up Great Salt Lake. Furthermore if we can spend all that money to build a gondola, why can't we use taxpayer money to help with the homeless population in Salt Lake City. We need to enhance the bus service by offering higher wages to drivers and increase the number of buses available and then ban private vehicles on busy weekends. I feel that this is a much more cost efficient option compared to the gondola. Thank you!</p>
35294	Erica Gardner	<p>Please do NOT build the gondola!! The negative impact and the exorbitant pricetag do not justify its massive construction! I believe the Toll fee is the best way to minimize traffic up the canyon. Thank you!</p>

ID	Full Name	Comment
35295	Robert Riolo	<p>Response:</p> <p>I understand this is a complex problem, but I feel that the solution is not to go ahead with the Gondola proposal.</p> <ol style="list-style-type: none"> 1. The cost is staggering, and likely to far surpass the numbers now being used. 2. I live in Wasatch Resort and get to see road traffic each day. There are a limited number of days, mostly around winter holidays, when the Gondola is necessary. 3. Most skiers, because of the cost and time associated with the Gondola don't expect to be using it. 4. The project benefits mostly Snowbird/Alta and not the residents, and this is clearly not the will or preference of the people. <p>Thank you,</p> <p>Robert Riolo</p>
35297	Dwight Butler	<p>I believe the transportation solution should benefit all users in both Big and Little Cottonwood Canyons. Electric busses with multiple pick up and drop offs at trail heads could meet the needs of all diverse users of the canyons. Adding avalanche sheds and considering a third lane for busses would allow slow moving car users to switch to the bus. Being faster with no parking fees would convince many. The gondola would move the congestion to its base and only serve 2 privately owned ski areas. I can't blame them. Who wouldn't want a publicly funded delivery system to your business? Some busses could go directly to the ski areas and others could make stops at various trail heads as needed. This would be a year round solution that serves All User!</p>
35298	Jenalee James	<p>The gondola is a horrible idea that will have severely poor effects on the beauty of little cottonwood canyon- a place that I've been visiting since a young child and is very special to me. It is perfect in its natural way. Want to prevent the ski traffic? Provide better bus systems. A gondola will ruin our natural piece of beauty that so many of us locals love and enjoy for all types of recreation- not just skiing. Please rethink doing this. It is a terrible idea that so many people are against. This would pain so many and break their hearts to see our mountains ruined with the technology we try to escape when we go there.</p>
35300	Steve Augade	<p>DO NOT BUILD A GONDOLA!!! I support a hybrid of snow sheds and enhanced transit and even a toll gate if we can avoid the incredible high cost and eye sore if a gondola. This gondola will go down in history as even a bigger failure and waste of tax payer money than the Great Salt Lake pumps.</p>
35301	David DuBois	<p>It looks like whomever compiled the EIS information did a good job at researching all of the alternatives. The gondola option continues to gain my support. What a great way to access the ski areas!</p>
35302	Ethan Taft	<p>We all know winters are getting shorter and drier. A gondola is not a good solution, especially when all Utah taxpayers will be asked to foot the 1 billion dollar price tag, even though most Utahns can't afford to ski anyway. Let snowbird and Alta pay for it if they really want it.</p>
35304	Warren Miterko	<p>I can't believe this is even a real consideration. Destroying the beauty of LCC in this public to private cash transfer while not even addressing the problem single occupant vehicles. The conflict of interest involved with this idea's proponents alone should shelve it. Utah continues to be a shining pinnacle of corruption in the West. To be fair, ignoring the will of the public really is "The Utah Way."</p>
35306	ANNA MOORE	<p>In reviewing the EIS, I find that the goals of environmental protection, equity, travel reliability, and user experience are NOT met by Gondola B.</p> <p>Environmental:</p> <p>It is painfully ironic that UDOT finds it acceptable to ask for \$550 million for skier traffic- when the entire Salt Lake Valley is teetering on environmental collapse if the Great Salt Lake disappears.</p> <p>*How can a skier gondola warrant \$550 million, when last year, the state only allocated \$40 million for a Great Salt Lake watershed enhancement?</p> <p>*If (when) the Great Salt Lake dries up, there will be no lake effect snow, no skier tourism and the gargantuan gondola will be an eyesore and testament to the city's shortsighted ignorance.</p> <p>*It's also important to remember- the traffic issues facing LCC are only for 50 days each winter... Proving this investment is outrageous.</p> <p>Also, the claim that the 100-213 foot towers will not affect the watershed seems ingenuine.</p> <p>*How deep will the base supports for the gondola towers go?</p> <p>*What are the methods to keep concrete and construction waste from spilling into the watershed?</p> <p>Equity:</p> <p>The EIS should be more explicit about the user cost of the gondola. Current models project that Snowbird would charge \$25 for patrons to PARK their vehicles at the gondola base station and another \$25 per person to RIDE to the gondola up the canyon. That's \$50 on top of a \$130 day pass. I'm curious who would actually utilize the gondola service if this is the case.</p> <p>*But the real question should be, who will be benefiting (profiting) from the gondola?</p> <p>How convenient that Snowbird owns the land for the base station and now UDOT's plan includes an additional 1000 parking spots at that station.</p> <p>Not to mention- Snowbird started the organization "Gondola Works," that has fed pro-gondola propaganda for the past years.</p> <p>Honestly, the proposed gondola appears to be less of a way to mitigate pollution and traffic, and more of a corporate monopoly on access to LCC.</p> <p>*Why does Gondola Works refuse to share their finances with the public?</p> <p>*Why -after 14,000+ public comments- (a majority in opposition of the gondola)- is UDOT still clinging to this option?</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35307	Tracy Schmidt	I am not in support of the Gondola option. I feel the only long term solution is restricting the amount of folks who can go up the canyon on any day.
35310	Nat Gillot	<p>A gondola in the canyon would not be an optimal, efficient, or cost effective measure in alleviating traffic in Big Cottonwood canyon. As a year-round resident who hikes and skis in the canyon, I would be much more inclined to take the bus up the road were it more frequent and timely (nobody wants to be left stranded at the resort at the end of their day because they chose to take public transportation).</p> <p>Not only would the gondola be an eyesore in our beautiful canyon, it would also have devastating environmental impacts, thus denaturing the very thing visitors look forward to. Please consider a more environmentally friendly, efficient, and sensible alternative to this Goliath-sized measure.</p>
38344	Tom Prosek	<p>Little Cottonwood Canyon Draft EIS comment will include the following: Personal introduction; Concerns; Alternatives; Conclusion.</p> <p>Introduction: Have recreated in Little Cottonwood Canyon beginning in 1973 and working there since 1978. Currently a Trustee for Salt Lake County Service Area #3 and working seasonally at Alta Ski Area.</p> <p>Concerns: Widening the road or building a gondola would ultimately put more byproducts into Little Cottonwood Creek and deteriorate the quality of the watershed. The preferred alternatives focus on transporting a maximum number of people up and down Little Cottonwood Canyon. Utah State University is currently conducting research on how many people can use Little Cottonwood Canyon at one time, with results expected in about a year. This information would be a good starting point for any alternative transportation proposal. The preferred alternatives only provide transportation to the ski resorts, anyone seeking a different form of recreation would need to drive.</p> <p>Alternatives: Use existing infrastructure- better bus service; tolling; reversible lanes. Alone or in combination, these could be implemented in a timely manner with little environmental impact.</p> <p>Conclusion: Cannot support any alternative that would deteriorate the quality of the watershed or does not start with the premise that there is a limit on the number of people that can use Little Cottonwood Canyon at one time. Therefore, I cannot support either of the preferred alternatives.</p> <p>Tom Prosek</p>
35312	Thomas Milbank	I respectfully submit my opposition to the gondola option currently proposed in the Little Cottonwood Canyon EIS. I am not persuaded by the reasoning offered to support the option and believe the proposal to be both misguided and short-sighted. I believe it more likely that a gondola would serve only a select few well, inescapably blemish the canyon, and squander funds intended for a forward-thinking, community-serving solution. I expect any gondola built today would simply be removed later, after proving a mistake in hindsight, compounding the damage wrought to the public treasury and lands.
35313	Aaron Gonzalez	I oppose the gondola project because (1) it costs too much and (2) will destroy the gorgeous beauty that is Little Cottonwood Canyon. I'd much prefer Mayor Jenny Wilson's electric bus transportation plan as the best eco-friendly solution for Little Cottonwood Canyon. I hope you'll reconsider the gondola plan and go with Mayor Wilson's plan instead. -Aaron
35315	claire ott	I would like to know more about why a gondola is looking to be the best option. I see it as a way to attempt to improve conditions for just one aspect and community that utilizes LCC at a great expense to others. A gondola would be an extremely permanent transportation option that would likely end up changing the landscape and culture of the canyon forever. There has to be a better, less nuclear option that still addresses the transportation concerns and I would ask that more time is given to seeking and considering those options.

35317	Robert Douglass	<p>The EIS asserts that the preferred Alternative, Gondola Option B, is more reliable than road-based alternatives. There is no data, analysis, or even qualitative argument supporting this incorrect assumption. The EIS implies that the gondola provides a reliable alternative means of transport during events that may shut the road. Those events can be characterized by extreme weather (e.g., tornado), fire, earthquake, road-accident, landslides or rock falls, and avalanche closures (actual or high-risk). Last year the Sandia Tram froze and stopped trapping its passengers for the night until a darling rope-rescue could be effected. The year before that a cable-supported cabin's brakes failed, and it rolled back down the mountain at high speed eventually detaching, falling, and killing all but one of its passengers. Accidents do happen and they cause lifts to be closed for days to months while repairs and inspections and improvements are installed. It is not clear that a gondola provides a meaningful, significant, safe, and reliable alternative to transit by road for any of these conditions. The reliability of the road versus the world's largest, most complex gondola can be compared for each of these events:</p> <p>a. Weather extreme enough to close the road (e.g., a tornado or extreme fire danger) would also close the gondola. b. A forest fire in the Canyon would close both the road and the gondola. c. Earthquakes and landslides or rockfalls offer equal danger to both the road and the gondola. For example, major rockfalls of truck-sized boulders have occurred and rolled directly over the location of the first transfer station and some of the towers. It is likely that it would take far longer to repair earthquake damage to the complex mechanisms of the gondola than to repair any road damage from landslides, rockfalls, or earthquakes. The gondola offers no additional safety or reliability in these cases. d. Traffic accidents can and have closed the LCC road briefly in the past. However, these are quickly cleared and any disruption in transport on the road would need to be compared quantitatively with all the events such as maintenance, repair, lighting, etc, that close the cable lifts in the Canyon. No clear reliability advantage for the gondola appears to exist with respect to rare traffic accident closures. e. Avalanches and avalanche risks routinely close the road for 10.8 days a year on average per the EIS. However, all alternatives, except the no-action one, include snowsheds. The snowsheds will reduce the closure times to a negligible few hours a year. Because the snowsheds cover the largest, most common avalanche chutes, the road will be closed only during the very largest snowstorms. During such times, the gondola will be closed because interlodge restrictions will be in effect and the gondola cannot be safely loaded or unloaded at the ski resorts, according to the EIS. Additionally, many of the hours of road closure occur prior to 7 AM during which time the gondola is not operational. For these reasons, there will be very few hours or perhaps no hours in which the gondola is operational and the road closed because of avalanche debris or risk. The net result is that the EIS proposes spending \$755M (\$550M by 2020 EIS accounting +\$110M for temporary buses) on a solution that will provide more reliable transportation than the road only 1 to 4 hours a year, if at all. An extraordinary cost for such a small benefit for very few Utahns. Stationing a permanent flight-for-life helicopter and crew at the ski resorts during any road closure would be far more cost effective and reliable than the EIS preferred option.</p>
35319	Robin Steinman	<p>To whom it may concern, First of all I am very concerned that I have to write a letter again and that the voice of the people were not heard. There are so many negatives in even contemplating putting a gondola up little! #1 The view shed would forever be lost. #2 The cost of this monstrosity would forever be the taxpayers burden supporting two ski resorts. #3 You are telling us that this is to keep the traffic down in the canyon but at the same time trying to get even more people up to the resorts than possible now. The skiers are already complaining that the resorts are getting to crowded. We have yearly out of town guest that ski all over the US and love the accessibility that Utah offers. When chair lift conversation on occasion with out of towners they were mostly appalled by the idea of a gondola an more and more skiers on the mountain. #4 The fact that you are trying to lesson the traffic burden and yet still route the many to the base of the canyon is just plain wrong. There should be dispersed hubs whichever final decision is made. That would also help with air pollution.#5 I have heard it said while listening to one of the CWC meetings that gondola tickets would be about \$35 a piece and if they did decide to run it in the summer that it would be a nice tourist attraction. I do not see that as affordable for most locals as in all Utahns, especially with their family. Maybe they could save up to take the family once a year but not what they would have otherwise. #6 Widening Wasatch and huge parking garages so close to neighborhoods has so many negatives, both as a gathering of traffic centrally and increased air pollution to the area. I do see there are many other solutions to be tried before a gondola is even considered. More buses that would go straight up to the resorts from dispersed hubs. Tolling and even one bus lane that would only run busses uphill at certain times in the a.m. and downhill in the p.m. Please listen to the people of Utah. Robin Steinman</p>
35321	Kristi Arroyo	<p>No gondola! It's invasive and was proposed with the ski resorts in mind. Tax payers want expanded bus services and focus on protecting the Great Salt Lake, the people, and our winters!!</p>
35322	JEFFERSON MCKENZIE	<p>The gondola option would interfere unnecessarily with the view shed and would add taxes for all to benefit few.</p>
35324	Kimberly Reynolds	<p>I do not support the gondola in LCC, there is no reason to invest \$550 million in a permanent project with so many unanswered questions. I think other options would be more environmentally sound and cost-effective such as enhanced busses, tolling, reservations and enforcement of traction laws.</p> <p>We have seen parking reservations work throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon.</p> <p>Please support the local comments and stop the gondola project, is expensive and destructive.</p>
35326	Megan Lovell	<p>I don't think a Gondola is the ultimate or best solution for the problem and the process of buliding will make traffic worse before better. I think there are better ways to handle it. Like bus services, having the cars that do go up pay a toll, ride share incentives and keeping resorts responsible through limited ticket sales. Plus the gondola would not stop for people to get to trail heads. It is only to cater to the resorts. It's not practical.</p>

ID	Full Name	Comment
35327	Robert Douglass	<p>Avalanches and avalanche risks routinely close the road for 10.8 days a year on average per the EIS. However, the EIS assumes that closure days and hours would fall in a range from approximately today's average to 2x today's average. No historical data nor respected snowfall forecast for 2050 shows that snowfall will double by 2050. Rather forecasts and historical snowfall data suggest that snowfall and the number of closure days will drop measurably by 2050. The EIS range is inconsistent with the best scientific research and consistent with government snowfall trends from at least the 1980s. The range is likely to be a maximum of 10.8 days and a minimum well below that. For all Alternatives (except no-action), the EIS proposes snowsheds that would reduce the number of closure days to 4-6 per the EIS. Because the upper end is predicated on a doubling of snowfall by 2050, it is incorrect. The maximum closure days with snowsheds is likely to be 4 with 2 hours per closure. The EIS shows fewer hours per closure with snow sheds and that is a reasonable assumption given that the large avalanche chutes will be mitigated. Only the minor avalanche chutes will still pose an avalanche danger and they do so much less frequently than the major ones. Moreover, when they do slide, they will provide much less snow to cover the road than the major chutes which today account for the vast majority of road avalanche clearance and risk, per the EIS. The net result is that road closures will only occur during and after the very largest snowstorms. During most if not all of the 8 hours a year that the shuts and the road is being mitigated and cleared, the gondola will be closed because of the risk to the gondola itself and because interlodge restrictions will make it impossible to safely load or unload the gondola at the ski resorts. Additionally, because much of the road closure hours occur before 7am, there will be even fewer hours during which the gondola might be operational while the road is closed. The net result is that the EIS proposes spending \$755M (\$550M + \$110M by 2020 EIS accounting) on a solution that will provide more reliable transportation than the road only 1 to 4 hours a year, if at all. An extraordinary cost for such a small benefit for a very few Utahns. Stationing a permanent flight-for-life helicopter and crew at the ski resorts during any road closure would be far more cost effective and reliable than the EIS preferred option. Failure of the EIS to provide an analysis or even qualitative discussion of how the gondola B Option could be significantly more reliable than the road is negligent. The road may well be more reliable than the gondola.</p>
35328	Jill Leo	<p>Anything this big MUST be a ballot measure. UDOT cannot make the final call based solely on public comment, they do not have our best interest in mind. PLEASE put this to a vote.</p>
35329	Bridget Farfel	<p>I do not support this gondola and hope public comment is actually taken into consideration. First, it is an incredibly expensive project, paid for by tax payers, that really only benefits 2 resorts. I also have serious concerns about the environmental impact on LCC. Why don't we try a few other, less expensive and less invasive options first?</p>
35331	Mitchell Jensen	<p>No gondola or rail in our canyons! Buses and tolls only please.</p>
35334	Robert Douglass	<p>The EIS fails to assess, analyze, quantify, or even discuss in a qualitative way the relative safety merits of the various alternatives. For example, the enhanced bus with express lane alternative provides considerable additional safety for the residents and visitors in Alta and Snowbird, because it allows more emergency, firefighting, and rescue equipment to be moved to the top of the Canyon and throughout the Canyon more quickly than a gondola or cog railway. The gondola will be uniquely exposed to high fire and earthquake damage, endangering not only the mechanism, but also anyone on it or operating it. Yet, the EIS fails to discuss such safety impacts. The proposed gondola B alternative will be the longest, by far, cable-supported lift on earth. It will be 40% longer than the next longest lift and it will be operating in far more challenging terrain and climate. The LCC 3S lift consists of effectively 4 different 3S lifts that need to operate in synchrony with separate drive systems, cables, transfer points, backup generators, and auxiliary fuel storage. So, the proposed gondola is not only the longest by far, it would also be the most complex by far. The safety risks imposed by operating such a large, complex, and vulnerable mechanism in such a challenging environment and climate pose significant safety risks beyond fire, landslides, and earthquakes. The EIS is delinquent in discussing and analyzing such safety risks and factors. A proper environmental impact assessment is not possible without addressing these safety issues in detail. Asserting that one alternative or the other is safer, without a detailed analysis demonstrating and supporting that assertion, is negligent.</p>
35335	Peggy Babcock	<p>I am completely against the gondola. The price is too high. It is paid for by everyone and serves mainly the ski industry and those who ski. I'm sure the price to ride a gondola would also be very high. It serves only the rich. I prefer the enhanced bus service and increased parking.</p>

ID	Full Name	Comment
35336	Nicole Ginley-Hidinger	<p>The Gondola is an inequitable solution that negatively impacts lower-income residents.</p> <p>Dear Utah Department of Transportation,</p> <p>Choosing to build the Gondola in Little Cottonwood Canyon is simply the wrong solution.</p> <p>1. You are choosing to implement fees to access our public lands There is public land past the Snowbird gates that should remain accessible to all. Implementing a fee to use this area makes it so not everyone can afford to visit the lands that we are already paying to access through taxes.</p> <p>2. The gondola only benefits the resorts The gondola solution only benefits Alta and Snowbird, which are corporations whose main goal is to get the most people on the mountain. It won't stop at any trailheads and still requires people to drive to the base of the canyon to park. I also strongly believe that my tax payer money shouldn't go to benefiting the needs of the resorts, who if they want a gondola should pay for it themselves.</p> <p>3. You are making residents pay 3 different times for the gondola As a Salt Lake County and Utah resident, I pay taxes every time I go to the gas pump, or the store, or receive my paycheck. As an avid skier, I also choose to pay for a season pass every year. If the gondola is built, I will then have to pay a fee, that will add up over the year, to either ride the gondola or drive to a trailhead. Therefore, I personally am paying 3 times to build a gondola I don't even want.</p> <p>4. You are making it clear that if you have money, you have a better chance to ski Currently, if you wake up early, you can navigate the canyon easily, even on the deepest of days. It's the great equalizer as no matter your yearly income, it depends on your commitment to getting out of bed in the dark and waiting in line at the gate that dictates if you get first turns. The proposed method of charging cars that go up the canyon sends a clear message that you prioritize people who have money and believe they deserve a greater chance to ski. Everyone else should wait in line in the cold. This is disgustingly inequitable.</p> <p>I hope you re-evaluate your decision to build a gondola up Little Cottonwood Canyon and begin to think of a more equitable solution that benefits low-income residents instead of decreasing access to public lands and increasing the number of fees and taxes.</p>
35338	Hiram Maynez	<p>An article I read recently paraphrased what I wish to convey, "Don't you think the canyon deserves a little more time for us to get it right,," Salt Lake County Mayor Jenny Wilson stated. "Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions."</p> <p>The gondola is not a fair transportation solution as it ignores all other dispersed use of the canyon. It would be expensive, it would only serve the ski resorts (during a specific time of the year that would only benefit revenue for the resorts, & NOT the resort user experience), and it would permanently destroy a beautiful canyon.</p> <p>I say do better. I say no to this gondola proposal and yes to more common sense solutions. The community has spoken, please listen.</p>

ID	Full Name	Comment
35339	Nanci Bockelie	<p>I write to register my opposition to the Gondola alternative. It is too costly, involves too much destruction within Little Cottonwood Canyon (the Canyon), and does not serve enough Canyon users. With only limited parking at the gondola base and limited stops at the ski areas, the Gondola alternative will not remove enough cars from the Canyon to resolve safety issues. It will also require too many transfers and wait time for it to be a workable alternative for most people. The Enhanced Bus Lane alternative is better, and if these are the only two solutions, I would choose the Enhanced Bus Lane alternative.</p> <p>However, neither of the proposed solutions truly address and resolve the issues in the Canyon. The Enhanced Bus Lane option requires too much new road construction and provides too little parking for in-Canyon users without giving them any alternative way to reach their destinations.</p> <p>A better solution exists that will address all the traffic issues in the Canyon, save the taxpayers multiple millions of dollars and avoid the environmental issues inherent in both the proposed road widening for the Enhanced Bus Lane and the Gondola proposal. That solution? Combine enhanced bus service (more enhanced than proposed) with tolling and permitting systems to greatly restrict the number of private cars in the Canyon - a "Better Bus Alternative."</p> <p>To solve a problem, one must first define the problem. The EIS purports to define the transportation problem broadly to improve "reliability, mobility and safety for all users on S.R. 210,," (emphasis added); however, both the Enhanced Bus Lane and Gondola alternatives provide transportation only for people going to the ski areas. Neither of these solutions addresses the users of in-Canyon recreational areas such as White Pine, the Great White Icicle, Lisa Falls and Tanner's Flats. Nor does the current planning address parking congestion in the summer. In fact, the proposed solutions anticipate reduced in-Canyon parking, without adding any public transportation options for in-Canyon users.</p> <p>In addition, neither the Gondola nor the Enhanced Bus Lanes includes any proposal to reduce the total number of cars in the Canyon. While traffic congestion on a handful of winter weekends grabs headlines and causes headaches far beyond the Canyon mouth, it is only a symptom of the main problem: too many cars in the Canyon all year long. By failing to address the burgeoning road use, both the proposed solutions guarantee that the costs and problems associated with the road will still exist even after we have spent millions of dollars of taxpayer money.</p> <p>Both proposed alternatives will also create new environmental impacts of the construction and maintenance needed to bring any of the proposals to fruition. In short, the slender benefits of the proposed alternatives, particularly the Gondola, do not justify the massive amounts of public spending, or environmental upheaval in a pristine and fragile environment that they will require.</p> <p>By adding a tolling system and permit plan, a Better Bus Alternative will ensure that people will get to the ski areas faster and more safely than the other alternatives. A Better Bus Alternative will also address these other ancillary problems:</p> <ul style="list-style-type: none"> -Lack of sufficient parking at high volume recreation areas outside the ski areas in both summer and winter, resulting in many cars parking along Route 210.
35342	Zeppelin Zeerip	<p>I am strongly opposed to the development of a gondola in Little Cottonwood Canyon. This gondola serves only to benefit the ski resorts, does not access backcountry trailhead, cannot accommodate nearly enough passengers for peak canyon traffic, and will forever ruin the sanctity of the canyon. I support increased bus routes and building a parking lot at the base to accommodate increased bus usage. Thank you.</p>
35344	Dylan Gifford	<p>Please please please do not build a gondola it makes no sense and there are better ways to move people efficiently through the canyon.</p>
35345	Taylor Sanderson	<p>The gondola will not solve winter traffic issues. Too expensive from tax payers that only benefits snowbird/Alta. There are simpler, more logical stepped solutions that won't destroy the canyon.</p>
35346	Mary Ann Vascotto	<p>I am a long time skier at Alta, a home owner in Sandy UT, and a licensed Engineer with over 30 years of experience. I love Little Cottonwood Canyon and am happy to do my part for the environment. Although a gondola might be a lovely way to get up to my favorite place, the financial price is obscene and way to self serving for us skiers and especially the resorts! From my engineering experience, I understand the whole process of sifting through options and coming to the optimal solution for all! Somehow in this case the UDOT process got derailed. The gondola is a ridiculous solution to a problem of traffic that only occurs a few days during a 14 week season. To alleviate the issue UDOT needs to restore a bus schedule with frequent runs and dedicated buses to each of the 2 resorts - Alta & Snowbird. This will make the buses much more appealing. If that by itself does not alleviate the issue, UDOT should impose at toll for private cars accessing the canyon. Those funds collected should be used to keep improving the bus system. Also as a further deterrent, private cars could be postponed to a later start time up the hill. This is a skier problem and the solution should come from skiers, not the general Utah public. Please restore better bus service this season and throw out the gondola option.</p>
35347	Henry Barth	<p>Build the gondola.</p>
35349	Chelsea Simmons	<p>I am not in favor of a gondola. It will physically and visually destroy the canyon and only service the resorts and close proximity surrounding areas. It will also destroy some of the best bouldering in the valley. I am in favor of a bus system, similar to what has been executed in Zion and I personally would be willing to pay for a pass for access. I would also support the costs for additional snow control guns/road bridges needed to eventually help decrease road closures from avalanches (although this could be done at a later phase). This is also a solution that could also work for BCC.</p>
35350	Sarah McDonald	<p>Utterly ridiculous to implement this gondola plan. Your corruption is as plain as day, implementing tolls and decreasing bus rides. The world looks down upon the likes of one who would destroy natural beauty for the sake of a fortune you will not hold on to for long.</p>
35351	Nathan White	<p>NO on the Gondola. It would be so ugly, ruin the aesthetic of the canyon and cost a lot more than projected. It is a crony project being pushed by developers who want to have private benefit at public cost. I strongly oppose.</p>
35352	Kari Stoddard	<p>I strongly suggest you to pursue the solution on electric buses instead of starting to gain funding for the gondola. The bus system will be much faster and less expensive in solving the solution of over crowded canyons than building a goldola. The gondola would also decrease tourism in the summer by literally destroying exquisite trails, views, and climbing areas.</p>

ID	Full Name	Comment
35353	Tara Morin	<p>I am writing to strongly oppose the Utah Department of Transportation's (UDOT) Gondola Alternative B plan.</p> <p>The massive 200-foot gondola comes with an even more massive \$600 million price tag, paid for by Utah residents to benefit wealthy ski resorts. This proposed solution to congestion is nothing more than corporate welfare. The casualties of this bad decision will be the watershed and pristine environment of Little Cottonwood Canyon.</p> <p>There are many reasons I oppose the Gondola Alternative B project, specifically:</p> <ol style="list-style-type: none"> 1. The gondola is too expensive and Utah taxpayers are picking up the bill: UDOT is funding a \$600 million project that should be paid for by the private multi-million dollar corporations that stand to benefit from it. Only 2-3% of Utah residents ski Snowbird and Alta on weekends, but every Utah citizen will pay approximately \$175 just to build the gondola, not to mention the steep operating costs. For a family of four, that is \$700 for a method of transportation they will likely never use. This is corporate welfare and I don't believe these wealthy companies need Utah families to pay so they can profit. 2. The gondola poses a tremendous risk to the environment and vital watershed in Little Cottonwood Canyon: With a proposed 19 towers up to 262 feet tall running through the canyon, the gondola will irreversibly change the landscape we all know and love. It will also risk contamination of the Little Cottonwood Canyon watershed, which is responsible for providing swaths of vital water in Salt Lake Valley. 3. The gondola will not improve traffic congestion in Little Cottonwood Canyon: The Little Cottonwood EIS specifically states that UDOT does not anticipate traffic volumes will decrease with their proposed gondola alternative. As stated in EIS 8.4.3.2, "daily traffic volumes would be similar to the existing conditions in 2020.," The proposed gondola fails to serve its intended purpose of reducing traffic congestion. <p>I am not alone in my objections. Myself, along with 80% of Utahans oppose the building of a gondola in Little Cottonwood Canyon. I urge you to consider alternatives that are less costly and less damaging to the landscape.</p>
35355	Daniel Barron	<p>Let's build a road specifically for bus-use only - no gondola!</p>
35356	Benjamin Wood	<p>The costs are too significant (\$550M +) and the impact way too large on the canyon to proceed with the gondola. This clearly benefits only the resorts and is being paid for with UT tax dollars which is unacceptable. It also does not adequately address safety and emissions concerns - it just congests them further at the base of the canyon. Tolling (like Millcreek) and traction enforcement would be a better solution. I also think that the significant biking community has not been fairly considered. Please drop the gondola option in favor of something that will not destroy the natural beauty of the canyon, will help to reduce emissions all months of the year, and more holistically addresses traffic along Wasatch Blvd in a way that protects our neighborhoods and cyclists (curbs to protect biking lanes, lower speeds, do NOT accommodate more traffic by more asphalt, etc.).</p>
38345	Derek Newman	<p>Boooo</p>
35358	Greg Holzkamp	<p>I'm opposed to this. Taxpayer money to support 2 resorts. Plus, all this for the 15 days of good snow crowds. If the roads are to crowded close the road to all but locals. The skiers just have to suck it up and I'm a skier</p>
35360	Katey Blumenthal	<p>I am against building the gondola. It will not deliver more skiers to resorts than buses. It puts an undo burden on tax payers to support a problem that ski resorts creates and need to solve themselves. It will ruin recreation for climbers, trail runners, hikers, and mountain bikers throughout the canyon. I am concerned about the construction impact on our watershed and ecology. Why not work on multipronged solutions with lower impact first? The gondola will forever scar our already abused canyons. The gondola is sure to be a failed solution.</p>
35362	Haylee Johansen	<p>As a lifetime resident of Utah I do not support the decision to build a Gondola. I've skied up that canyon, biked up that canyon, and my family lives [redacted]. The Gondola would be expensive, and benefit real estate developers more than it would benefit the skiers. I agree with this article that starting with much less invasive action would not only appease the locals but benefit other causes such as air quality. https://www.sltrib.com/opinion/commentary/2022/10/13/sara-mitchell-electric-buses-are/</p> <p>Please do not build the Gondola.</p>
35363	Todd Beck	<p>You absolutely cannot destroy the cottonwoods for this gondola especially with the decreasing snow volume. It's not a valuable investment because snow tourism is gonna die when there's no more snow. Our govt needs to make a comprehensive investment into the future of our natural resources in Utah and act for the future generations of our people. The gondola is a cash grab.</p>
35366	Katya Stockton	<p>We DO NOT need a gondola in this canyon. You will be ruining one of the most beautiful places in Utah. There are pristine nature spots that would be ruined with this. Do not do it</p>
35367	Daniel Dean	<p>I am strongly opposed to the proposed gondola. Alta's parking reservation system had a very noticeable effect on LCC traffic in the 2021/2022 ski season and clearly demonstrated that UDOT's goal of a 30% reduction in canyon vehicles can be accomplished through ski resort parking policies, increased lift ticket and season pass prices at ski resorts, tolling, and improvements to the existing bus system.</p> <p>Secondly, the removal of satellite bus service to the proposed gondola base station in the final EIS is a terrible change. This will force a large number of vehicles onto Wasatch Boulevard that currently are able to avoid Wasatch Boulevard entirely. We should be providing more options for people to park-and-ride before ever reaching Wasatch Boulevard, but the final EIS does the opposite.</p> <p>Finally, a huge, huge part of the current reliability problem is UPD/UDOT's failure to enforce existing traction laws. The vast majority of accidents and slide-offs are due to 2WD vehicles and/or vehicles with poor tires. Tractor-trailers and other large commercial vehicles are even common sights in LCC when 4x4 restrictions are in effect. It is absolutely insane that these existing laws are not enforced.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35368	Erin Mullaly	Please consider other alternatives to the gondola. I do not believe it will decrease traffic through the canyons (especially for people like me who mostly use the canyon in non winter months). I think providing more bussing, and a reservation system at the resorts will help mitigate the amount of traffic in the canyon during the busiest days. I am against putting in a gondola, spending taxpayer money on it, and further eroding some of the last natural spaces left in Sandy. Please consider other options first, as the entire community will be paying, but only a few will benefit.
35369	Liz Dean	<p>I am strongly opposed to the proposed gondola. Alta's parking reservation system had a very noticeable effect on LCC traffic in the 2021/2022 ski season and clearly demonstrated that UDOT's goal of a 30% reduction in canyon vehicles can be accomplished through ski resort parking policies, increased lift ticket and season pass prices at ski resorts, tolling, and improvements to the existing bus system.</p> <p>Secondly, the removal of satellite bus service to the proposed gondola base station in the final EIS is a terrible change. Tractor-trailers and other large commercial vehicles are even common sights in LCC when 4x4 restrictions are in effect. It is absolutely insane that these existing laws are not enforced.</p>
35370	Bailee Morgan	Both Little and Bug Cottonwood Canyon have transportation needs that are not being met currently. Unfortunately, the proposed gondola does not resolve majority of those issues. Logically, the parking lot for the gondola will be just as busy as the parking lot for the ski resorts, which will cause increased traffic in the residential areas along Wasatch BLVD. Moreover, the public will not have the option of the gondola for majority of the year, and this traffic issues will still be a major concern for 9+ months of the year. As the ski season continues to shorten due to changes in weather conditions, namely impacted by the lack of water in the Great Salt Lake, the gondola will simply become a symbol of waste and greed. I encourage a solution that helps more citizens, both canyons, and leaves funding available for addressing the real concerns of our community and environment.
35371	Dan Dean	<p>I am strongly opposed to the proposed gondola. Alta's parking reservation system had a very noticeable effect on LCC traffic in the 2021/2022 ski season and clearly demonstrated that UDOT's goal of a 30% reduction in canyon vehicles can be accomplished through ski resort parking policies, increased lift ticket and season pass prices at ski resorts, tolling, and improvements to the existing bus system.</p> <p>Secondly, the removal of satellite bus service to the proposed gondola base station in the final EIS is a terrible change. Tractor-trailers and other large commercial vehicles are even common sights in LCC when 4x4 restrictions are in effect. It is absolutely insane that these existing laws are not enforced.</p>
35374	Corinne Doerner	<p>A billion-dollar gondola, or in other words, a glorified bus in the air, is truly one of the worst options proposed to improve transportation in Little Cottonwood Canyon. This amount of time and money should be put toward improving bus services, running buses more frequently, and limiting the number of personal vehicles entering the canyon. In this (common-sense) bus-improvement alternative, UDOT would actually be able to improve transportation in a way that is affordable and feasible for those wanting to access the canyon.</p> <p>Gondola Alternative B will ruin the reasons that people enjoy being in Little Cottonwood Canyon. It is extremely invasive and will destroy vast amounts of scenery, nature, and wildlife in the canyon. Please listen to everyone voicing an opinion against the absurd "Gondola Alternative B" plan and think pragmatically about the solutions to improve transportation in Little Cottonwood Canyon.</p>
35375	Pauline Reisner	I request that the gondola alternative B be eliminated. In my opinion, a gondola in LCC is ill-favored because it would destroy the natural beauty of the canyon. Plus the economic value of the gondola would benefit only a few individuals, and the two ski resorts. The major cost of construction and maintenance would be carried by tax payers. Eighty percent have indicated that they are not in favor of a gondola. Please do not ignore the wishes of so many citizens. I recommend ALTERNATIVE thinking for the problem of congested traffic in LCC as well as Wasatch Boulevard. Please reduce the speed limit on Wasatch. I've live here for 6 years and have see it patrolled 3-4 times. It is unsafe for everyone. We need to make that road safer for residents of the area. Thank you for being responsible citizens.
35376	Connor Genter	I do not support the use of tax dollars to support 2 private ski resorts. Classic example of cooperate welfare. The construction of a Gondola is excessive. Use an easier solution such as tolls for single rider cars, extra bussing.
35378	Anne Evans	WHY? 80% of residence don't want it. Locals will not be using it yet our tax dollars are paying for it. It will ruin the beauty of LCC. We should be looking at less costly alternatives first. Disgusted with the whole process - to many people in the pockets of those that want this & will make money off it!

ID	Full Name	Comment
35380	Melinda Almquist	<p>I am against the gondola. It will ruin the canyon for how little it will get used annually. People use the entire road all year long, they will drive. The gondola does not benefit all.</p> <p>I am a 3 decade skier at Alta with some in my family having season passes. I have had a season pass for the last 3 years. I along with many skiers from Alta that I have spoken with don't believe we will be using the gondola. It will be a hassle with parking, cost, schedules, cramming in with people shuffling about and the wait. For many years we wait for the bustle to die down and then drive up the canyon or take the bus.</p> <p>I know that a plan for more buses, snow sheds, widening the road and tolls has got to be better for the environment, the people and the esthetics of the canyon.</p> <p>We the people should be able to vote at the polls when their tax dollars are going to be spent.</p> <p>Private entities will only benefit from the gondola. Please Do Not build this gondola.</p> <p>Thank you.</p>
35381	Megan Sieverts	<p>Please leave Little Cottonwood Canyon alone. Put a huge toll on it to force people to take the bus. If Alta and Snowbird take a hit oh well. Tourism is bigger than skiing. People come here for climbing, hiking, and backpacking too. We should not be engaging in corporate welfare that also endangers our water supply and tears up this gorgeous natural space. I hope all of the dirty developers pushing this crap lose. The residents of Utah do not want this. Don't make them pay for it and don't do it. We don't need a gondola, train, or extra lanes. We need to protect our natural spaces.</p>
35383	Jillian Stone	<p>The gondola has no place in LCC! the environmental impacts alone make our hard work to protect the watershed obsolete. Furthermore, this option does nothing to help the traffic within BCC, which is often way worse than that in LCC. Please rethink this initiative!</p>
35384	Andy Larson	<p>NO GONDOLA Waste of taxpayer money and time and shows the corruption of the city council and its representatives</p>
35386	Marcus Sulskis	<p>The Gondola will not make parking OR transportation up the canyon any easier. Instead it will cause the tax payers more money and only benefit the ski resorts. If we were to spend half a billion dollars for "public transportation," up the canyon, we need a solution that will allow access to other areas of the canyon for summer activities.</p>
35387	John Brand	<p>The gondola does not seem to be the best option in this scenario. It seems to not be as efficient as other options (such as public transportation) and would destroy much of the canyon.</p>
35388	Jackie Jenkins	<p>I have been watching this approval process closely, [REDACTED] [REDACTED] When we were in Switzerland last spring we were able to ride a gondola made by the same company that is proposed in the GondolaB EIS alternative. I was very impressed by this efficient, quiet, comfortable and clean alternative. I understand why this is the preferred alternative to move the greatest number of people up the mountain with the least environmental impact while still allowing access to the mountain by private vehicle by using tolls for impact fees.</p>
35389	Carter Bondurant	<p>No gondola. Locals hate it. Our home is not a tourism playground. NO gondola</p>
35391	R Beers	<p>There's no need to ruin the aesthetic of the entire canyon to satisfy the greed of the resort owners</p>
35392	Robert Douglass	<p>In an earlier document (2018), UDOT stated that there was a high probability of a major earthquake on the Wasatch Fault by 2050. The Utah State Legislature funded a recent study of earthquake risk along the Wasatch Fault conducted by the Earthquake Engineering and Research Institute of the Society of Earthquake Engineers. The report states that the probability of a magnitude 6.75 quake on the Wasatch Fault by 2050 is essentially a coin flip (47%). There is a reasonable probability of earthquakes of much larger magnitudes as well. Documents by the USGS and FEMA confirm this finding. UDOT's earlier report specified that the ground could shift vertically (upward on the LCC side) by 3 to 10 feet or more. As a consequence, UDOT proposed moving the gondola base from inside the fault to the currently proposed La Caille location (gondola B Alternative), a few hundred meters from the fault. A few hundred meters from the fault likely provide little attenuation to vertical ground movement at the La Caille gondola base. A vertical displacement of the Teller Lift in Colorado demonstrated that even a few feet of vertical shifts are catastrophic for cable lifts and the people on them. The FEIS fails to even mention, much less address, the risk of earthquakes for any part of the gondola or its base station, even though UDOT previously assessed it as high risk and experience demonstrates that it is potentially catastrophic to both the lift and any people on it. Because the Wasatch Fault nearby the gondola base is a strike-dip or vertical-block fault, the earthquake motion near the fault at the gondola base and first tower at 232 feet will be a vertical rise. Further up the Canyon, the fault's motion will become more horizontal and result in significant shaking. While there are proven means to mitigate shaking due to an earthquake, they are expensive, and the EIS omits any accounting for such mitigation in its gondola Option B Alternative cost data. Even more importantly, at the gondola base and for the first few towers and transfer hub, it is highly likely that the predominant movement will be vertical. There are no effective engineering measures to mitigate a 3-to-10-foot vertical movement of a 232-foot gondola tower. The EIS provides no acknowledgment of this formidable risk to the gondola structure and passengers, much less incorporates the cost for either vertical or horizontal mitigation, if vertical mitigation is even possible. A major quake, like the one expected could destroy the ongoing viability of the gondola, requiring the entire structure to be torn down and replaced. The EIS needs to be rewritten or supplemented with a volume that addresses earthquake risk and mitigation both in terms of engineering challenges and costs and in terms of risk to human life. The EIS is negligent in addressing this critical and major environmental impact.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35393	Alisa Tank	I do not agree that the gondola is the best method for providing canyon access to the largest majority of people. It will only serve those going to ski resorts during winter months, when in reality people use the canyon and its backcountry trails year round. I do not use the ski resorts but recreate often in LCC, so the gondola would be of no use to me except to be an eyesore. It would not solve the problem for me and any other backcountry skiers or hikers the majority of the time. There are only traffic problems in LCC a handful of days throughout the year, and permanently changing the landscape and visual scapes in the canyon to remedy this is not necessary. Please listen to the people who live here and are against the gondola instead of a few developers and ski resorts who stand to make money off of it. The canyon is our public land and we should have a say in how it is used. Other, less-invasive alternatives such as buses and tolling should be tried first before something so large and permanent is installed.
35395	Andrew Briefer	<p>How many people can the upper Little Cottonwood Canyon accomodate without damage to sensitive and endangered species, soil erosion, negative impacts to water quality and supply, sewerage and user experience? No built infrastructure will remedy the traffic problem until we define acceptable endpoints, which the current process has failed to do.</p> <p>How will increasing the cost to travel in LCC impact traffic and natural resources in Big Cottonwood Canyon and Parleys? Planning for one canyon without consideration of regional needs will cause new, and exacerbate, existing problems with traffic and user impacts.</p> <p>Is the "phased approach" one in which, if the enhanced bus service meets the traffic mitigation goals, the decision to further pursue the gondola will be terminated? It looks like the first phases are not being evaluated to determine whether they will be sufficient and are only being used as a fig leaf to placate those who want to see if a less expensive and less impactful option can resolve the traffic.</p> <p>Half a billion dollars can do a lot of traffic mitigation and air quality improvements in areas of clear public benefit while a gondola serves well-heeled developers and private companies. What is the public benefit of spending this kind of public money here?</p>
35396	Keith Motley	I oppose the gondola solution as presented. It only serves the two ski resorts, a taxpayer funded subsidy, without providing services to other users of the canyon. Also, I fear it will be the first step towards the installing another ski resort boondoggle, the interconnecting gondolas to link all the ski resorts giving park city visitors access to the cottonwood canyons. Just improve the bus system and roadways without the gondola.
35398	Christopher Burchett	Please don't ruin this beautiful Canyon with a Disney ride. I support alternative solutions. Tolls(when needed) and more public transportation are better solutions
35399	Bennett Johnson	Though I appreciate the work UDOT has put into this project, I do not feel this is the best way to spend taxpayer dollars. The use of state funds to provide a service which only benefits Snowbird, Alta, and Skiers is concerning. I would more strongly support increased tolling and busing. I know UDOT plans a phased approach with this and would encourage them to stick with this approach.
35400	Raquel Kammerer	As a taxpayer in Utah I oppose the construction of the proposed gondola in Little Cottonwood Canyon. I have lived in Salt Lake County my entire life, and am astonished by the growth here in the past 60+ years. While growth is inevitable, bad decisions don't need to be. I question why the decision for canyon access hasn't been predicated by the maximum number of people the canyon can handle? There is no doubt the gondola decision is a rich person choice at the expense of all taxpayers. Not only is this corporate welfare to satisfy the greed of Snowbird/Alta & Niederhauser/McCandless CW Management, gondola installation will cause immense damage to the beautiful canyon. Along with the installation causing severe/irreparable marring of the canyon, trash dropped from the gondola cars will be impossible to collect and will further erode the precious watershed. We live in very divided times. The gondola decision will only exasperate the division between the haves and have-nots. Isn't it time we worked to provide life equity for all?
35404	John Unger	A. Please don't install the gondola in LCC nor the centralized parking lot near the mouth of the canyon. B. Recommend flexible bus service in peak ski season as primary alternative. C. Along with the bus optional service - charge cars a fee: 1 person pays more than a car with multiple occupants as they would pay a lower fee per car. D. During peak travel times use a one way lane access allowing all lanes for travel up or down.
35406	Abigail Roberson	<p>Please, listen to the people. The residents of Utah Do Not want the Gondola to be built. This is a massive decision that will costs millions of dollars. UDOT did not go through the appropriate channels to gather all of the necessary materials to make an informed decision. UDOT was charged with finding a solution to the traffic problem, which the gondola would solve. But UDOT is not qualified to make a final decision without weighing in the environmental effects of putting a massive infrastructure in a water shed canyon.</p> <p>In short, UDOT needs to rescind the Gondola release and focus on a solution that will best serve the community, the environment and the tax payers.</p>
35407	John Fuller	The gondola is an example of corporate greed (Snowbird and Alta) and is not required. I drive up canyon 100 times a year and there are approximately 10 powder days when traffic is awful.. I can choose to sit in line or stay home.

ID	Full Name	Comment
35409	Robert Douglass	<p>Both the US Forest Service and an independent risk assessment organization rate the probability of a forest fire in Little Cottonwood Canyon as high by 2050 and very high for the lower and upper Canyon. The risk of fire in Little Cottonwood Canyon is assessed as 84% higher than the risk for the rest of Salt Lake County. Parley's Canyon to the north of Little Cottonwood Canyon and Alpine/Timpanogos Canyon immediately to the south of LCC have both burned in the last decade. The fire danger is higher now than previously and likely higher than at any time in the last 1,200 years according to recent research on the current drought in Utah. The EIS preferred gondola Option B Alternative will increase the fire risk and potential damage. Adding more high-power lines, high-power electric motors, and diesel generators at the base and angle stations provides new opportunities to spark fires in LCC. The large diesel fuel-storage tanks by each of the angle stations and base greatly increase the potential for accelerating local fires into widespread catastrophes. People in gondolas are also a source of forest fires as was demonstrated by a forest fire in Aspen started by a cigarette tossed from a gondola there. The EIS fails to address the environmental impacts of their preferred gondola alternative with respect to forest fires. A forest fire could destroy the gondola or render it inoperable for months or even permanently. A fast-moving forest fire could endanger or roast gondola passengers when they could not be immediately evacuated. The gondola cannot supplement the road to support the movement of equipment, rescue, and firefighting equipment, supplies, and crews to where they are needed in the Canyon. The road can. It is more reliable, safer, and more valuable than a gondola in the face of this major risk of a forest fire in LCC. The EIS fails to even identify this risk and certainly doesn't talk about its potential environmental impact on safety and reliability for the gondola and its passengers. The EIS needs to be modified with a supplement analyzing this risk to the gondola structure and riders. Without a supplement addressing this risk for each alternative, the EIS is negligent.</p>
35410	David Brugger	<p>We fully support the gondola in Little Cottonwood Canyon. Buses have never worked and won't work in the future.</p>
35411	Amanda Maxwell	<p>Don't pave paradise. No gondola</p>
35412	Can Cinbis	<p>I live in Utah, vote in Utah and a recreational user of LCC. It is a beautiful place that gives me joy to visit throughout the year as a hiker and a skier. I oppose the gondola option which is very expensive solution that will dilute the beauty of the canyon and will have limited use. I believe resources can be used to resolve other more critical issues Utah faces. I also believe there are cheaper, alternative solutions to the issues such as increased public transportain option using buses maybe smaller, cheaper, and more frequent minivan shuttles. Tolling or limiting access to the private cars will also help during increased demand days. If the road is closed for a few days during the season due to avalanche, so be it. It is not worth spending billions to gain a few days back. Return on investment is not reassuring.</p>
35413	Christina Peacock	<p>This is an absolute horrible proposal. This will ruin the beauty of one of Utah's canyons and the cost alone will once again fall on the taxpayers. Maybe the multi million dollar ski resorts could help provide more carpool options such as providing bus routes. UTA is feeling the sting of short staffing, as so many industries are. Don't put up a gondola in my backyard!!!</p>
35414	Todd Hawkins	<p>This is DISGUSTING! How much money/trips/gifts have UTA employees taken from the ski resorts or the organizations they setup? Is that public information? Does that have to be disclosed?</p>
35415	Rudy Ramos	<p>I am opposed to a gondola at this time. I support a phased approach.</p>
35416	Amber Sletten	<p>I'm against this development because it will impact the natural beauty of the canyon and be a huge financial burden to benefit a private company.</p>
35417	Zoe Zeerip	<p>I oppose the LLC gondola and support more bussing</p>
35419	Alec Getzloff	<p>As an all-season canyon user, I oppose the proposed gondola project. The gondola would contribute to canyon crowding by bringing more people into the canyon and would not offer a viable solution. It's accessed points would only service private interests and would overall diminish the quality of user experience (which is why we use the canyon, correct?). This project is neither near or far sighted: it does not offer an immediate solution nor does it consider the impact of climate change on the future of winter recreation in the Wasatch, while forever changing the landscape/ view scape of the canyon. I propose revisited bussing options with a toll system in place for private vehicles in peak hours / seasons. The burden of parking availability for ski resorts should fall on the shoulders of said interests. Regulating traffic from this perspective would elevate the user experience and preserve the canyon.</p>
35420	Wes Morin	<p>I am writing to strongly oppose the Utah Department of Transportation's (UDOT) Gondola Alternative B plan.</p> <p>The massive 200-foot gondola comes with an even more massive \$600 million price tag, paid for by Utah residents to benefit wealthy ski resorts. This proposed solution to congestion is nothing more than corporate welfare. The casualties of this bad decision will be the watershed and pristine environment of Little Cottonwood Canyon.</p> <p>There are many reasons I oppose the Gondola Alternative B project, specifically:</p> <ol style="list-style-type: none"> 1. The gondola is too expensive and Utah taxpayers are picking up the bill: UDOT is funding a \$600 million project that should be paid for by the private multi-million dollar corporations that stand to benefit from it. Only 2-3% of Utah residents ski Snowbird and Alta on weekends, but every Utah citizen will pay approximately \$175 just to build the gondola, not to mention the steep operating costs. For a family of four, that is \$700 for a method of transportation they will likely never use. This is corporate welfare and I don't believe these wealthy companies need Utah families to pay so they can profit. 2. The gondola poses a tremendous risk to the environment and vital watershed in Little Cottonwood Canyon: With a proposed 19 towers up to 262 feet tall running through the canyon, the gondola will irreversibly change the landscape we all know and love. It will also risk contamination of the Little Cottonwood Canyon watershed, which is responsible for providing swaths of vital water in Salt Lake Valley. 3. The gondola will not improve traffic congestion in Little Cottonwood Canyon: The Little Cottonwood EIS specifically states that UDOT does not anticipate traffic volumes will decrease with their proposed gondola alternative. As stated in EIS 8.4.3.2, "daily traffic volumes would be similar to the existing conditions in 2020.," The proposed gondola fails to serve its intended purpose of reducing traffic congestion. <p>I am not alone in my objections. Myself, along with 80% of Utahans oppose the building of a gondola in Little Cottonwood Canyon. I urge you to consider alternatives that are less costly and less damaging to the landscape.</p>

35421	Rory Schnyder	Don't understand why we would settle on a solution the the people it is meant to benefit are so against. The gondola will not fix this issue and will only create more problems. There are so many simple improvements that could be made to the bus system that is already in place. The gondola is so clearly meant for politicians and corporations to profit and not serve the best interest of the people who love & use the canyon
35422	Roberta Lopez	No Gondola!
35423	Martin Irwin	I do not like the optics of a Gondalla going into the canyon , nor do I like the idea of paying over 50 dollars for the trip up to snowbird before I even get to ski!!!
35425	Jen Scott	The gondola makes NO sense. We must keep and improve the road anyway. No to the Gondola!!
35426	Ross Riches	NO to the gondola. This only benefits the ski resorts so let them pay for the solution, not the tax payer.
35427	Rebecca Hunt	The worst idea ever! May be good for snowbird. But not a good way to spend tax dollars. It will eventually hurt the canyon. Terrible shame on Snowbird. Shame on Udot.
35428	Matt Reed	The issue for the Canyon is so easily resolved with a parking structure and 200 busses. We don't need to destroy the beauty of the canyon with an ugly unnecessary gondola that won't solve any long term traffic issues but will line the pockets of the insiders who have lobbied our local officials effectively. Common sense says build parking structures and bus hubs and we won't have any traffic issues going forward. 5-10 minute intervals for busses solves everything.
35429	Michael Lund	I would like to voice my opposition to a gondola being constructed in Little Cottonwood Canyon. While I support the goal of reducing traffic in the canyon I do not believe the gondola is the correct solution. It will cost an enormous amount of taxpayer money and primarily benefit the resorts. I would rather look at some type of fee structure similar to Millcreek along with increased bussing options. Thank you for your time.
35431	Jenny Cazier	I do not want to spend taxpayer money on a gondola. I feel that the ski resorts should pay for it themselves since they will be the main group that profits from it.
35432	Danielle Larson	Please do not pursue the installation of a gondola. This is not a solution to the challenges we're experiencing. There are solutions that will be far less impactful, and far more effective than an extraordinarily expensive gondola. Thank you for your consideration!
35433	Angela Schmith	While I understand the money those canyons bring in for out of state, I would still like to see a free option or a discount for residents, be it Sandy or Utah, so that we can continue to enjoy the benefit of living in Sandy and the ease of going up the canyon.Thank you
35434	Doug Jenson	I strongly oppose the gondola option in Little Cottonwood Canyon. Please do not proceed with this option and do something else to ease traffic congestion in the canyon.
35435	Christine Skidmore	I am opposed to the gondola. I live at the mouth of the canyon and prefer adding public transportation alternatives for the busiest times of the year.
35436	Kelley Bollinger	We love the idea of the gondolas. We have seen how little the impact is in Switzerland, but how they are able to hand huge amounts of people. If you stay with buses, the roads will need to be widened and additional buses will be needed. There is already a problem in getting enough bus drivers. Gondolas are the only way to go.
35437	James Lewis	Do not build the gondola- it only benefits the ski resort and park city development
35438	Shauna Heap	NO GONDOLA!!! Please please no.
35439	Margo Watson	I prefer buses that have two combined rather than gondola that could damage environment more and be too expensive for average citizen
35441	Claudia Santos	I'm not a supporter of the gondola after all the information that I read about the impact to our environment and the construction that is required to build the towers.
35442	Marti Fronce	I am strongly opposed to the use of taxpayer funds to benefit sku resorts who cater to a limited segment of the population. Count me out on the gondola! Find a better solution that is not all about special interest and corporate business.
35443	Eleanor Mika	This is going to impact the canyon and community negatively. It will bring more traffic to an already overrun area and destroy the natural beauty. There are other alternatives that are less impactful.
35444	Matt Chamberlain	I am opposed to the gondola. It is too expensive and will not solve the issues in the canyon (on top of that, it will distract from the natural beauty of the canyon). EV busses with mandatory commuter requirements could be one option. Only those with hotel reservations allowed to park at the resorts.
35445	Alexandria Cantrell	NO GONDOLA Up the ski bus services-pay bus drivers more so we can have ski bus lines for 953 and more busses for the route. Run more busses on weekends, not less. Have a bus that only goes up and down the canyon to the resorts on weekends. For the toll, it needs to be something that doesn't keep out the average middle class person-it can't gatekeep folks. \$20 is fine. Employees shouldn't have to pay either. We already don't have enough transportation and snowbird employee shuttles are already full most of the time. There needs to be a park and ride at the mouth of the canyon. Add a bus stop at the park and ride at the mouth. Open the parking lot on the south side of the road and add a bus stop on the south side of the road. Build a bridge to connect the 2 lots. Still not as expensive as a gondola. NO GONDOLA.

35446	Jake Van Hecke	<p>This decision is a perfect example of public opinion taking a back-seat to corporate interests. The public, overwhelmingly, does not want the gondola as a solution to the traffic problem in Little Cottonwood Canyon. It's a part-time solution, a tourist attraction, and a gimmick. Canyon-goers need a real solution to traffic, and the decision to choose the gondola as a solution is irresponsible, because it ignores the Utah public in favor of the ski resorts input, it will take years to build, and it will cost half a billion dollars at least.</p> <p>To argue that increased buses would not decrease traffic by that much is true. However, only building a \$500 million dollar gondola will do the same thing as adding more busses. You need to educate the public. You need to limit car traffic in the canyons. You need to subsidize the bus system. You need to add facilities to make riding the bus with ski gear easier. Buses, and encouraging public transportation by educating the riders and making it easier to take a bus, are the solution. The gondola is like trying to kill a house fly with a machine gun.</p> <p>The gondola might reduce traffic by 30%; it might reduce traffic by 3%, just like more buses. Buses can be removed from a canyon; gondolas cannot. Buses are the answer, but we need to focus on solving the pains that taking the bus to resorts brings. People use the canyons to recreate. Equip the buses with ski racks and bike racks. Build public lockers at the resorts, so people can keep their belongings safe. Build lodges at the base for bus users to wait at. Limit individual car traffic up the canyons. Just like HOV lanes, fine people for driving up alone during ski season.</p>
35447	Charlie Cannon	<p>Last year, as a 21 year old, I paid \$102,000 in state taxes to Utah. You have no idea how hard I worked for that. Now, a few executives are ignoring the will of the people environmentally, and also are going to spend 5,000X that on a stupid gondola nobody asked for. I'm a skier, I go up 50 times per year at least, and can attest there is 0 need for a gondola. Stop this madness. Listen to the people.</p>
35448	John Bennett	<p>For days with excess traffic, a reservation system and varying tolls depending on the historic traffic patterns would be preferable to a gondola system. As a taxpayer, I have no interest in subsidizing a gondola system. With the projected cost of the system, there is no way the proposed fares would cover much more than the operating cost. If this was a business, it would need to pay for itself or it would not be built.</p>
35449	Bradley Hunter	<p>I worry that a gondola solution is exclusionary and will allow wealthier Utahns to access the canyon at the initial expense of taxpayers. A bussing solution appears to be fairer to the state as a whole. I believe a gondola solution should be funded by the ski resorts who will benefit the most.</p> <p>Additionally, I did not see a specific stop at Red/White Pine which needs to be a choice for both backcountry skiing and hiking. In the Summer months, that area seems to draw more people than the resorts. Any solution to traffic in the canyon should accommodate Red/White Pine</p>
35450	Melanie Liston	<p>My family is adamantly opposed to a gondola being placed in Little Cottonwood Canyon!</p>
35451	James Morgan	<p>Gondola</p>
35452	Charlene Despain	<p>We need to continue using the bus service when the parking lots are full. Do not destroy the canyon with the tram. It is too costly and really just serves the ski resorts not the general public.</p>
35453	Craig Lofgreen	<p>I am strongly opposed to the gondola proposal.</p>
35454	Kevin Heyman	<p>I support the construction of a gondola in Little Cottonwood Canyon.</p>
35455	Julian Lena	<p>The gondola is NOT the answer. I believe a tolling system would be the least harmful to the canyon and a great starting point for reducing traffic without the cost and destruction of LCC</p>
35456	Larry Tippetts	<p>I am opposed to building a tram up Little Cottonwood Canyon. Taxpayers should not be required to financially support skiers and hikers.</p>
35457	Cathi Coleman	<p>No gondola. Let resorts and skiers pay for extra buses. High fees for private vehicles. UDOT doesn't care what we think. Someone is going to make a lot of \$\$\$</p>
35458	Carol Funk	<p>Please do not pursue the Gondola. I love our canyons and spend time in them often. Every large park I have been to uses shuttle service to address congestion on high traffic days. And requires that individuals shuttle in ... no one wants a solution that would be in place on days when it is not needed. No one wants a solution that would interfere with the canyon, destroy any part of the canyon, or limit visibility of the beauty of the canyon. Please, please do not construct a gondola but come up with a solution that functions on an as-needed basis -- there is no reason to develop a solution on a permanent basis to a problem that only exists during a limited time of the year. A gondola or extra busing lane are unacceptable solutions because both interfere with the beauty and enjoyment of the canyon and neither proves a true solution. Barring auto traffic into a canyon on busy days and providing shuttles/busses is the only solution that has proven workable in similar situations, on an as-needed basis, preserving the beauty of the outdoor places we love.</p>
35459	Sage Madsen	<p>We are on our hands and knees, I will literally beg you. Do not install a gondola</p>
35460	Brendon Haywood	<p>I do not believe the the gondola is the best option at this point of time. I would like to see a bus only option implemented similar to how Zion national park operates.</p>
35461	Donna Keith	<p>I worked up Little Cottonwood canyon for 22 years and when I left working up there in 2004 the traffic was getting bad. The canyon is a beautiful one and I think putting a Gondola would be great. UTA could never get enough buses to make it work as good as a Gondola. If the canyon closes due to Avalanche danger at least you would have the Gondola to get the guests out who need to and bring up guests who just arrived to enjoy the skiing. Also the mountains will benefit because the resorts can open more terrain because they have enough skiers to compact the snow to decrease avalanche danger in the resort.</p>
35463	Steve Wilcox	<p>As a resident of Sandy I would prefer an expanded bus schedule for the canyon. I am strongly opposed to the gondola option.</p>
35464	Nita Orgill	<p>We are against the gondola.</p>
35465	Mark Dinwoodey	<p>How about a hydrogen train up LCC that tunnels to BCC and then on to Park City. This would be expensive but a phased approach would spread out cost and attract monies from the feds and would benefit SO many more than JUST those going to Alta and Snowbird. Money spent on a gondola is a ton of expense for such a limited scope...it could instead be a good down payment on something truly amazing!</p>

35466	Shane Thomas	<p>Hello UDOT. I am concerned with many facets of this project. 1) The cost of the gondola project is huge to the taxpayers and really only benefits either Snowbird or Alta by adding an additional way for more people to get to their resorts. People will still drive there and park. So, in reality, there will be more people up at the resorts from driving and now delivered by the gondola, so overcrowding the canyon isn't really fixed at all. 2) Ruining the beautiful view down the canyon with huge towers. 3) No ability to stop anywhere else along the canyon other than at the resorts. What about getting off at White Pine, where parking is always crazy year-round? Or anywhere else to avoid driving up there? Well, that is not currently an option. Delivering people to the resorts is all this is doing. 4) Bus service was recently reduced for the canyons. Why not allocate some of this \$500+ to adding special busses, routes, and parking areas to service the canyons? Make them more frequent, etc.</p> <p>I really hope that you look at this more thoroughly and don't rush into spending money to spend money and not really fix the problem that is there.</p> <p>Thank you, -Shane Thomas</p>
35467	Jameson Hawkins	<p>My wife and I are Sandy residences. We personally believe there is a business agenda here more than a solution for daily traffic. I don't live near the mouth of the canyon, but I believe this will adversely impact those who have lived near the mouth of the canyon. Many of those homeowners have lived their for decades. Great example of this being an agenda, seems the comments of the "Gondola," are hidden in the the comments above. Seems there should be more open public discussion, especially from this homeowners that would have the Gondolla in their backyards. I am not here to say whether or not you should move forward, but rather, as public officials, make sure you have considered all options before making a decision.</p> <p>Thank you!</p>
35469	Kim Karras	<p>As a resident of Sandy, I have the wonderful opportunity of visiting Little Cottonwood canyon multiple times a month all year long. I love the beauty, solitude, and grandeur of this canyon. I enjoy having a place of refuge. I enjoy having a place to take my children where they can experience the awe of nature.</p> <p>That being said, I am strongly opposed to the proposed gondola. I am concerned that the construction will destroy the beauty of the canyon - and that the damage will be difficult to reverse. I also feel that the proposal is too expensive and that there are simpler, more cost-effective solutions to this problem.</p> <p>Please preserve the beauty of this amazing canyon!!!!!!</p>
35470	Pam Brinkman	<p>I am definitely against the gondola option for Little Cottonwood Canyon. I have live at the mouth of the canyon for 42 years and would not support a gondola. I want access to my beautiful surroundings without any structure invading the beauty of the canyon. I also love that I can drive through the canyon all year round and hike, picnic, and surround myself with its beauty. Please don't put a gondola in my backyard. Thank you for your consideration</p>
35471	Annie Storch	<p>Rather than rip up the canyon with a half-a-billion-dollar price tag, let's invest in common-sense solutions. Parking hubs in the valley, electric busing with regular routes, carpooling and tolling, reservations, common-sense solutions that are fiscally sound.</p>
35472	Ross Murray	<p>The only way to stop the emission of CO2 gas is for a gondola</p>
35473	Malorie Laukat	<p>For those who do not use the slopes in the winter, it's imperative that we have a solution that solves summer congestion as well. The canyon is used year round, but this discussion seems almost completely focused on winter traffic.</p>
35474	Jillyn Spencer	<p>I'm a Salt Lake resident and I OPPOSE the gondola. I think UDOT should invest in other options that will keep the canyons accessible for all. The gondola seems like it will benefit resorts, but not residents who visit the canyon, including the non resort areas. It also seems like there are some serious conflicts of interest, where some businesses stand to make huge profits at the expense of Salt Lake residents. The canyon bongs to all of us. It shouldn't be exploited for money.</p>
35475	Donald McOmie	<p>I don't want to pay for a gondola that I will never ride. It has been years since I've been up Little Cottonwood Canyon.</p>
35476	Grace Jansen	<p>I am not in favor of the gondola project up LCC. I have lived in Sandy my entire life and have cherished LCC growing up here. Not only am I an avid skier, but I have a love for the nature and wildlife within the canyon. The gondola is not what we want because it will number 1) only benefit the resorts and landowners that the gondola lies on, number 2) it will not reduce car traffic and will attract even more people to the already overused area, number 3) the costs are not justifiable for the cause. I would love to keep the canyon as local as possible and not attract millions of tourists. Not only will this overcrowd resorts and other areas, but it will not reach the goal of relieving traffic in the canyon. There are better ways to solve the traffic issue such as expanded parking at resorts, improved buses and introduced electric buses, adding a bus lane, monitoring 4x4 requirements more closely, controlling when traffic can go up and down the canyon during ski season, and so much more. No other options have even been tested, so the gondola seems like it is a very serious and intense solution to a problem that has many more less expensive and less harmful solutions. Please take this comment into consideration and do not move forward with the gondola!!</p>
35477	Scott Drysdale	<p>This by far is the best option to put gondolas in the canyon. You have the least amount of effect on the landscape of the Canyon. For long term we will not need to add additional buses in the future because demand increases. This would provide a year round attraction for tourists and would impact the need to destroy our canyon by widening the road. I'm not sure why someone would be against a system that would provide the least amount of damage to the aesthetics of the canyon.</p>
35478	Jason Cotting	<p>I am against the construction of the Gondola in Little Cottonwood Canyon. Please use another option. I believe a single bus hub with a large parking garage that services both big and little cottonwood canyons with adequate bus scheduled would be a better option option</p>
35479	Shane Kershaw	<p>No matter what happens just please make whatever scope of work open to competitive bidding. Cost plus % would be wise. No \$5k loads of \$300 worth of road base.</p>
35480	Jonathan Pope	<p>Don't put a gondola in little cottonwood canyon</p>
35481	Philip Gutry	<p>Hi. I have thought about this further and think the option to widen road with bus travel (perhaps electric buses), paid parking would alleviate impacts. Particularly important for families where need to bring gear, change of clothes, food. Hard to lug this up on gondola. Paid parking very much changes behavior and can help finance road improvements and buses.</p>
35483	Denis Lyons	<p>The gondola would be good for canyon users and the state economy.</p>

35484	Dr. Michael Meru	As a long time resident of Sandy and Draper, as well as weekly user of Little Cottonwood Canyon, a gondola in this precious resource would be an irreversible tragedy. I've always thought my city, county, and leaders had us as the residents of this place as their number one priority, not the already super wealthy resort owners. This canyon is special. Hikers, climbers, mountain bikers, backpackers, skiers, snowboarders, ice climbers, etc... come from all around the world not only to participate in their respective sports, but to witness the majesty of the canyon. Please, I beg of you, do not destroy it with a gondola. Sincerely, Dr. Michael Meru
35485	Bob Birrell	Here are my red flags: 1. UDOT does not have the funding for the \$550 million dollar price tag. So who is going to pay for this? Surely I don't want to pay for longer lift lines at two resorts. 2. There is no timeline on how long the project will take, considering they still need money, land approval, etc.. 3. \$550 million to help alleviate traffic for 4 months per year. Holy crap, I would rather spend this money on raising teacher's wages! 4. Just widen the road and add some more parking at Snowbird and Alta, that is a much better solution.
35487	Baylee Kindig	Literally no one except those benefitting off of construction cost want this garbage. Capitalism will ruin what makes our canyons great. Creating a gondola through the canyon will cause irreversible damage to the landscape and wildlife. Leave it alone. Make busses nicer and more appealing. It will be must cheaper than a stupid gondola that literally no one is going to take!
35488	Nancy Wilhite	I vote against the gondola solution. I love and value our canyons and feel that another solution should be considered!
35489	Ivan Utrera	This absolutely is the best alternative for the canyon. The lowest environmental impact and most efficient way to move people safely up and down the canyon. It has worked very successfully in the town of Breckenridge, CO for many years now. It should work well here.
35490	Heather Meier	This is disheartening that altering the natural beauty of this canyon can even be a notion or option. You will never get another canyon formed to replace the one you destroy with wider roads or a gondola. Reign back on the traffic flow. Incorporate more busses. Have odd and even days. Be respectful and responsible in preserving the natural beauty of the earth for generations to come! I am completely against UDot doing anything up this canyon!!
35491	Janice Hawkins	The drive is beautiful and safe, if you drive responsibly. Considering the amount of traffic there are very few accidents. Please do not disturb the beauty of this Canyon by installing a Gondola or any other way of destroying the beauty. My vote is No.
35492	Darla Fuller	If people won't take the bus, what makes you think a gondola is going to make a difference?? That's a ridiculous amount of money (\$1/2 billion) to spend for a very few days of the winter when it's a powder day and there's a lot of traffic. As a long-time resident of Cottonwood Heights I think this is a very expensive and unnecessary means of transportation and it seems to me that the only ones that are going to benefit from it are Alta and Snowbird and it's simply corporate greed. I vote a resounding NOOOO to the gondola.
35493	Ted Bollinger	Gondola transportation is the only reasonable alternative. I just came back from Grindelwald, Switzerland and it is the least impact on the environment and the best way to solve the transportation issue. The thin cables, open frame towers, and 26 person sit down cars have very little impact on the mountain views. It also almost eliminates the weather, traffic, and congestion problems.
35705	Eric Sorensen	Please see the attached comments from the Metropolitan Water District of Salt Lake & Sandy regarding the LCC Final EIS. Please contact me with any questions. Thanks,
35495	Jared Wehrli	I am opposed to installing a gondola in the canyon. While unique and exciting I believe it would be destructive to the peace and beauty of the canyon. Sometimes change is not a good thing.
35496	Vance Twitchell	Hi UDOT, I know you have put a huge effort into this EIS and I respect your decision on your preferred option. I also agree that less impactful alternative methods should be implemented prior to a decision to move forward with the gondola option (more bus service, tolling on peak hours, carpool benefits, etc.) My hope is that we will see better results than expected with these alternative solutions and never need to build the gondola. I love recreating in LCC like many in our valley and hope to preserve and even improve it's natural state. Please continue the plan to implement the less impactful traffic mitigation efforts prior to a decision to build the gondola. Best Regards, Vance Twitchell, P.E.
35497	Catherine Rogerd	Please APPROVE THE GONDOLA for transportation up Little Cottonwood Canyon. I believe this will be the best option because it would provide far less environmental damage to the canyon & it would carry more people up the canyon than buses.
35498	Reed Madsen	This is the best way to relieve the over crowded canyon highway. It's not cheap but it's better than widening the existing road and over time will prove to be a genius idea. Please approve this gondola .
35499	Jan Brown	It is not worth destroying our canyons for peoples greed to make money!
35500	Richard Parry	Build the gondola. It is definitely the best option.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35501	Stacey Closser	<p>HI, This comment is to voice a concern I have about the gondola. Specifically, security measures that are being taken. As a woman, riding in an elevator for two minutes with strangers can be fraught. I can't imagine riding in a gondola with a stranger for a full hour with no way to exit. Couple that with the fact that it is boarding in a public place vs. a resort that only lets those with ski passes aboard (which inevitably limits ridership). What rules and regulations are in place to safeguard riders (esp. kids/women)?</p> <p>Also, I understand that the gondola may not be operational all year round, it'd be nice to not have dangling gondola cars in the canyon during those times. Is there a way to store them at the loading stations when not in use? Thank you</p>
35502	Brian Thompson	<p>In order for this to not be a taxpayer giveaway to snowbird and alta, it needs to service red/white pine etc. Also please ensure tolls are minimal or non existent during low demand days and times. Finally, all proceeds should go to canyon and public lands maintenance not the general fund.</p>
35503	Todd Hammond	<p>I am not in favor of the gondola and the impacts that it will have to the canyon. I've been climbing the boulders in the canyon for most of my life and would be heartbroken to see any of them destroyed by gondola construction.</p> <p>I would be in favor of expanded bus service year-round with stops all along the way as many of the trailheads seem to be frequently overflowing with parked vehicles.</p>
35504	Alan Walbeck	<p>I am an advocate for providing access to the beauties our canyons have to offer. With populations increasing, changes must necessarily be made. I'm not completely against the option to widen the road, but it is less of a general solution on snow days (where only a 4wd can go up). Plus, I think a gondola ride would be an enjoyable way to experience the canyon that we haven't seen before from the road. For those reasons, I'm in full support for the creation of an affordable (don't tax us twice) gondola solution we can use to enjoy the canyons.</p>
35505	Lawrence Mauck	<p>Gondola is not cost effective or efficient. It will benefit only two ski resorts, both privately owned. Ski areas are at capacity now; bringing more individuals and creating longer lines makes no sense. Negative impact to what is left of the serenity of the canyon.</p>
35507	Parker DANIELS	<p>DO NOT use tax payer money to deliver customers to 2 private entities that profit hundreds of millions per year off ticket sales. There has to be a better way to do this that provides access to all areas of the canyon and not just the ski resorts.</p>
35508	Marci Vasic	<p>I strongly oppose this project and hope that you will listen to the will of the majority of the people who also oppose the project and that you will not go forward with it.</p>
38346	Mary Norris	<p>Please do not put in a gondola. It will be an expensive and destructive eyesore and will not be used. Increased bus schedule and tolls would work much better and might actually decrease the traffic. I am tired of the politicians getting rich on their insider information and then ruining our landscape. Tax payers should not have to foot the bill for skiers from out of town. Let them go to Park City and Colorado.</p>
35509	Michael Roderick	<p>I 100% support the creative use of the Gondola as a means to reduce canyon traffic. If any of you have been to Switzerland or France and see how they manage traffic to the ski resorts , you would undoubtedly support the gondola idea. Many European ski resorts do not allow cars into the resort. You can only get there via gondola. It is a peaceful creative experience riding the gondola up to the resorts. We all need to do whatever we can to eliminate global warming. This is a positive step in the right direction.</p>
35510	Max Bothwell	<p>Do not build this gondola. Not only is it bad for the environment but it is also disturbing the nature of the mountain range. Mountains are supposed to be raw and rugged not commercialized.</p>
35511	Sean Upton	<p>On July 29, 2021, a UDOT contractor dumped concrete into Millcreek. Regardless of any systems "on paper", no significant deterrents exist to prevent similar spills from gondola pier development in Little Cottonwood Canyon. It will happen, there will be a slap on the wrist and claims of improvement, and we'll be back to doing the same thing over again, polluting our waterways. I'm downstream; I drink this water, and strongly object to the reckless selection of a "lifestyle grift" of a point-to-point gondola that capacity estimates have determined will only alleviate a small minority of peak traffic.</p> <p>Additionally, UDOT has failed to evaluate both capital and operating costs of a gondola systems against a combined implementation of all-electric bus and congestion quota/charging model for automobile traffic. I'm firmly against this billion dollar boondoggle, and firmly against UDOT leaders granting multi-million dollar favors to a variety of "friends" in the development community and executives in leisure/hospitality pushing this at the expense of our watershed.</p> <p>Mark me as a firm no - and be clear that the majority of residents of Sandy, Utah feel likewise.</p>
35512	Joe Feldman	<p>Please reconsider the gondola for little cottonwood canyon. This option is shortsighted and destructive. A gondola would serve a fraction of Little Cottonwood users and its impact to the landscape of the canyon should be a non-starter. The extremely short timeframe in which the gondola would be effective can be accomplished through less destructive options. Overall, the gondola option will forever change the experience of canyon users 250+ days out of the year.</p>
35515	Christina Di	<p>The gondola will NOT solve the congestion problem in Little Cottonwood. It is irresponsible to use taxpayer dollars to fund a gondola that services only private ski resorts. Focus on less extreme and more accessible solutions first.</p>

ID	Full Name	Comment
35516	Robert Magara	<p>I'm against building the LCC Gondola. As a Sandy, UT resident I don't think tax payers should be funding a project that only benefits two private organizations. The cost estimates for the LCC Gondola are extraordinarily high and will balloon once the project gets started especially considering inflation. The user experience will be bad for skiers. You'll have to wait in traffic to get to the one parking garage, wait on line to park at La Calle (there's not enough spots), wait on line for a gondola, take a very long gondola ride, and then wait to ride the ski lift to ski for the day. The commute time will even be longer if you bus to La Calle. The entire commute process will take hours before skiers can even make their first turn. I'm afraid this awful user experience that requires waiting in line all day will turn skiers away from visiting our destinations and the economic benefits will suffer from the loss of customers. Skiers will choose other destinations that are easier to get to and ease of access is what makes skiing in SLC great. The experience for season pass holders will also be awful. There won't be an easy opportunity to go to the mountain before or after work to take a few runs and many locals will choose to drive over the gondola to avoid this issue making the gondola obsolete on most days. These long wait times commuting to the mountain will become an all day ordeal and a gondola may only benefit those staying at the resort. I'm in favor of increasing buses and bus ports from more locations around the valley that will spread the traffic out and allow for better scheduling. Electric buses could also be phased in like Park City is already doing. Stops could be added outside the resorts for other canyon users. The Canyon Sticker program should be enforced where all vehicles in the canyon are equipped for driving in heavy snow. Storms can happen at any time during the day so all vehicles need to be properly equipped at all times. One of the main causes of backups caused by ill fitted vehicles. Any rental cars entering the canyon should also be required to have a valid sticker. A toll booth like EZ Pass could be installed that checks for a valid sticker and a paid toll could be added. However, season pass holders and/or UT residents should get free access to the canyon. Lastly, the gondola will be an eye sore for the canyon and ruin the natural beauty of LCC. There also seems to be some political corruption involved with the parking location at La Calle and the push for building the gondola that should be investigated.</p> <p>Don't build the Gondola!</p>
35517	Kyle Hortin	<p>I think the Gondola plan is the wrong plan for the traveling public that doesn't necessarily only want to go to the ski resorts.</p> <p>WAY to expensive</p> <p>Overhead lines and towers will be visible throughout the canyon (no escaping them)</p> <p>Most days there is no traffic problem. Why put in an expensive solution that's only needed a few hours most days, and isn't needed at all on most summer days.</p> <p>Requiring paking reservations would fix the need to rush to be first up the canyon, and would limit the number of drivers to the number of parking spaces (which is not huge)</p> <p>Limiting the number of drivers to the number of parking spaces would eliminate the problem by limiting drivers to the spaces available, and would spread those drivers over the day (because they don't have to rush to be there first to get a parking place).</p> <p>Don't ruin the views in the canyon for ALL people, every day, every hour, for a problem that occurs only a few days and only when too many people try to get to the resorts at the same time.</p> <p>More buses and more lanes where needed would be a much better solution IMO</p>
35518	Isabel Santiago	<p>I think there are less expensive and less invasive options to try before such a big project that only helps the ski resorts. The traffic problem is mostly if not only during ski season. It doesn't make sense to to build a gondola that won't be use most of the year. Is the UDOT in the knowledge that the forest service is considering to start a fee system in Little Cottonwood canyon? Completely against this solution. Buses that actually stop along the canyon not just the resorts would be better all year round.</p>
35519	Alex Brown	<p>I am a 15-year resident of Sandy and a regular visitor to the Little Cottonwood Canyon area (primarily to hike and picnic) and do NOT want the current gondola proposal to proceed. It is too costly, only caters to skiers (not hikers like me), and will permanently impact the canyon in a negative way (in my opinion).</p>

Comments on Little Cottonwood Canyon Final EIS

35521	Michael Brown	<p>In moving forward to address the increasingly impactful problem of traffic congestion in little cottonwood canyon, I believe it is essential to take as many actionable steps as possible prior to making the costly investment in constructing the currently identified preferred alternative Gondola B. We currently have infrastructure that allows for increased bus service, and it would be wise to utilize this to the maximum degree possible - thereby alleviating traffic issues in the short term while also providing an opportunity for real world analysis of how increased bus service can function to address the problem.</p> <p>As things stand, the bus service for the canyon has much to be improved. The route times are spaced out too far to be convenient, buses are highly crowded during peak use, and the buses do not provide any amenities relevant to their specific use in transporting passengers to access skiing/snowboarding in the winter. The current use of the term 'ski bus' frankly feels like a misnomer. To be accredited with this title the vehicles should have basic attributes such as ski racks and storage for boots/equipment. By increasing bus frequency and also adding basic functionality to the buses that would make them more comfortable and effective towards their purpose we can greatly improve their appeal to travelers and subsequently help remove personal vehicles from the roadways.</p> <p>Simply put - lets provide good buses that have sufficient space and are on a reasonably frequent time table and see how the public responds before we take the step forward to building a gondola. By doing so, we will have done our due diligence, and also established a system that can work in parallel with the gondola if we do reach the point when that plan is implemented.</p> <p>Within this I think it is also essential to move forward in the construction of avalanche snowsheds. These are going to be needed regardless of the chosen alternative to alleviate impacts of avalanches on traffic patterns. In my opinion, the wisest course of action would be to construct these in a manner that would accommodate the enhanced bus with roadway widening alternative - thereby affording flexibility for potential implementation of that plan in the future.</p> <p>Lastly, I understand that the gondola b has been chosen by UDOT as the preferred alternative, I strongly urge the reconsideration of this plan following the implementation of the increased bus services. I believe a trial period of increased bus service in tandem with the construction of snow sheds is likely to show us that buses are a simple and effective solution to the problem at hand. In addition to avoiding the highly controversial visual impacts inherent to the gondola, the enhanced bus service with roadway widening would provide the fastest travel time while also allowing scalability as traffic patterns and demand fluctuate throughout the future.</p> <p>Thank you for your consideration,</p>
35522	Douglas Christensen	<p>I live in Sandy. I support the bus alternative. I do not support the gondola. I do not believe that taxing Sandy residents for a ForProfit endeavored such as the gondola is fair or ethical.</p>
35523	Angela McFarland	<p>Vote YES for the GONDOLA! The gondola system proves successful: just look at Switzerland and Italy. Gondolas prove accessible to all; citizens and tourists feel part of the community, enables everyone to enjoy the mountains and their beauty. I don't ski, but I'm willing to pay taxes for the gondola. It will be a huge improvement toward easing traffic and reducing accidents, as well as improving access for those who ski/don't ski. It's an equal-citizen-opportunity. Even if I don't use the gondola regularly, I'm willing to pay taxes for it...let's not move backwards in progress. We need to keep up; use Europe as an example, and get on with getting on in the 21st century.</p>
35524	Christine Perry	NO GONDOLA
35526	GB Knaub	NO to tram option
35527	Steven Smith	Gondola would be a financial sinkhole. Don't make the canyon a pay to use. Widen lanes increase parking
35528	Rob Magara	<p>I'm against building the LCC Gondola. As a Sandy, UT resident I don't think tax payers should be funding a project that only benefits two private organizations. The cost estimates for the LCC Gondola are extraordinarily high and will balloon once the project gets started especially considering inflation. The user experience will be bad for skiers. You'll have to wait in traffic to get to the one parking garage, wait on line to park at La Calle (there's not enough spots), wait on line for a gondola, take a very long gondola ride, and then wait to ride the ski lift to ski for the day. The commute time will even be longer if you bus to La Calle. The entire commute process will take hours before skiers can even make their first turn. I'm afraid this awful user experience that requires waiting in line all day will turn skiers away from visiting our destinations and the economic benefits will suffer from the loss of customers. Skiers will choose other destinations that are easier to get to and ease of access is what makes skiing in SLC great. The experience for season pass holders will also be awful. There won't be an easy opportunity to go to the mountain before or after work to take a few runs and many locals will choose to drive over the gondola to avoid this issue making the gondola obsolete on most days. These long wait times commuting to the mountain will become an all day ordeal and a gondola may only benefit those staying at the resort. I'm in favor of increasing buses and bus ports from more locations around the valley that will spread the traffic out and allow for better scheduling. Electric buses could also be phased in like Park City is already doing. Stops could be added outside the resorts for other canyon users. The Canyon Sticker program should be enforced where all vehicles in the canyon are equipped for driving in heavy snow. Storms can happen at any time during the day so all vehicles need to be properly equipped at all times. One of the main causes of backups caused by ill fitted vehicles. Any rental cars entering the canyon should also be required to have a valid sticker. A toll booth like EZ Pass could be installed that checks for a valid sticker and a paid toll could be added. However, season pass holders and/or UT residents should get free access to the canyon. Lastly, the gondola will be an eye sore for the canyon and ruin the natural beauty of LCC. There also seems to be some political corruption involved with the parking location at La Calle and the push for building the gondola that should be investigated.</p> <p>Don't build the Gondola!</p>

Comments on Little Cottonwood Canyon Final EIS

38347	C. Vince Sellers	<p>Opponents of the gondola make the argument that a better bus system will solve the traffic problems in LCC. However, they ignore the fact that PEOPLE HATE BUSES! That is just a reality. I live very close to the bus parking lot and never take it. I don't understand the routes, there is never a place to park and the bus is uncomfortable. I live at the entrance of the canyons and the traffic to go up the canyons to see the leaves has been crazy. I believe the gondola could help improve traffic during the fall and in the summer in addition to ski season.</p> <p>Millions of tourists come to Utah to visit the national parks in southern Utah. Why not make a marketing push to have them fly into SLC, take a day to ride the gondola up LCC before jumping on a motor coach down to the big 5 parks? I think we could have the gondola used for much more than skiing.</p>
35529	Warren Majerus	<p>Why has nobody discussed a reversible center lane? This lane would allow 2 lanes all the way up in the am and 2 lanes down in the pm with minimal new road widening required.</p>
35531	mark gilbert	<p>NO gondola , please! Electric or Natl. gas powered buses with HIGH parking rates at ski resort!</p>
35532	Jonathan Barth	<p>Seems like a good idea. But, it will really benefit privately owned ski resorts. A huge cost to tax payers, environmental damage from construction, and permanent loss of habitat.</p>
35533	Charles Hansen	<p>It's clear based on the EIS in its current form that the gondola was oversold as a solution to LCC congestion. This plan should not even consider a gondola until other options have been fully implemented including tolls and paid parking at the resorts. There has not been a serious effort to make the bus system a viable option as there needs to be more busses and better parking options to limit travel times and give the system optimal flexibility for seasonal demand. I would love to utilize the bus system more but as a working recreational user of the canyon I need to have both reliable and timely transportation which enhanced buses would bring for both canyons. There will be little cost savings or reduced travel times for the general public based on this plan it's looking more like a vanity project with significant political weight behind it from those who look to profit most from the project.</p>
35534	Charles Sellers	<p>Opponents of the gondola make the argument that a better bus system will solve the traffic problems in LCC. However, they ignore the fact that PEOPLE HATE BUSES! That is just a reality. I live very close to the bus parking lot and never take it. I don't understand the routes, there is never a place to park and the bus is uncomfortable. I live at the entrance of the canyons and the traffic to go up the canyons to see the leaves has been crazy. I believe the gondola could help improve traffic during the fall and in the summer in addition to ski season.</p> <p>Millions of tourists come to Utah to visit the national parks in southern Utah. Why not make a marketing push to have them fly into SLC, take a day to ride the gondola up LCC before jumping on a motor coach down to the big 5 parks? I think we could have the gondola used for much more than skiing.</p>
35535	Lisa Herron McKinney	<p>Please do NOT build a gondola. This would be extremely costly to residents when a very small percentage would use it. The damage to the environment, scarring of the beautiful Wasatch Front should be not be an option. Please look into the bus enhancement.</p>
35536	Elizabeth Lucas	<p>I would strongly prefer to avoid a gondola, which will permanently change the canyon and likely not provide a permanent solution. I live [redacted] and would rather have to pay a toll to drive up, have a ticketing system, in addition to an option like electric buses to relieve congestion, for those not wanting to wait for a "spot" to drive up or wanting to pay a toll. I would be happy for the electric buses to be covered by the cost of the toll, and if that was insufficient for it to be subsidized by taxes.</p>
35538	Jonathan Barth	<p>Seems like a good idea. But, it will really benefit privately owned ski resorts. A huge cost to tax payers, environmental damage from construction, and permanent loss of habitat.</p>
35539	Robert Douglass	<p>The EIS states in several places that one of the reasons for preferring the Gondola is because it adds increased safety over road alternatives. The EIS provides no data, no analysis, and no discussion of why this statement is correct. Over 300 people have died in cable-served transport in recent years. Two years ago, approximately a dozen passengers died when a ropeway cabin's brake failed, and it slid back down the steel ropeway eventually detaching and crashing to the ground. Only one occupant, a young boy, survived. Last winter (2022), more than a dozen passengers on the last ride down from the Sandia Mountain ski resort came close to dying of exposure when they were trapped in the cabin overnight, suspended in the air after the cabin froze to the ropeway at a tower. A daring rescue when morning came prevented any deaths. One person was killed and many were injured when the cable on the Teller lift in Keystone Colorado shifted a few feet vertically. The ropeway oscillated like a rubber band throwing passengers into the air and on the ground. The towers on the proposed preferred gondola option are at a minimum one-hundred feet higher than the Teller lift. A vertical shift caused by movement on the Wasatch fault, an event judged to have a 47% probability by 2050, would likely kill all passengers on the proposed LCC gondola in the lower Canyon. It would also disable the LCC lift for months if not permanently. People are injured and die on gondolas. The EIS is negligent for not quantitatively assessing the risk in its evaluation of the gondola alternatives while asserting with no data that the gondola option B is safer.</p>

35540	Yu-Jan Chen	<p>I live at [REDACTED]. I can see that most of the traffic starts on Saturday morning and mostly on the powder day. With all the options including gondola, buses will not help with the congestion at the top. The Lift lines will stay the same no matter what options.</p> <p>We should significantly provide subsidize funding to push people to come up on the weekday or after 1PM on the weekend.</p> <p>We always go on on Saturday or Sunday afternoon after 1PM and the uphill traffic is good but downhill traffic is the same.</p> <p>If we do this for Little Cottonwood, are we going to do the same for Big Cottonwood in the near future. If we are going to do it, should we consider both canyons. Maybe a Gondola in between Little and Big Cottonwood and then split at the top: One for SnowBird/Alta and one for Solititue/Brighton.</p> <p>Regards, Yu-Jan Terry Chen</p>
35541	Aaron Anderstrom	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean," the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium," parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.
35542	David Lindsay	<p>I do not want the gondola. Too expensive, unnecessary, and environmentally irresponsible. No. No. No. Please listen to the people who live in and around Little Cottonwood Canyon about this - we do not want the gondola. Granola - yes. Gondola - no.</p>
35544	Jessie Merchant	<p>Please don't build a gondola. The canyon is beautiful and a gondola would destroy it. Create a bus lane or restrict cars going up the canyon.</p>
35545	Taube Dixon	<p>This gondola is a very unwise proposal. Serves very little purpose for the area, except adding dollars to taxes that could be spent on more urgent needs. Also, it is very ugly.</p>
35546	Laura Lee Adams	<p>I completely support the Gondola option. Sandy Utah</p>
35547	Shekhar Upadhyay	<p>#NAME?</p>
35548	Daniel Heister	<p>No Gondola, it will ruin the aesthetics of little cottonwood canyon. How about limiting the number of people at the resorts. The gondola will ruin many rock climbing areas. Have it udot, the state and sk in resorts way and soon locals won't be able to enjoy the canyon. The gondola caters to the rich and people from out of state, yet tax payers will have to pay.</p>
35549	Dany Tremblay	<p>My wife and I support UDOT's Engineering based analysis and conclusions. We live within close proximity of the entrance to this canyon.</p>
35551	Emily Ingram	<p>This gondola will only serve and increase access for winter ski pass holders. This does not support backcountry skiers, snowshoers, hikers, or any other users that have NOT purchased a ski pass. In an area seeing massive amounts of development, this project will directly contribute to habitat fragmentation, degradation of wildlife resources, and the destruction of the shrinking natural environment untouched by human encroachment. This will not serve the broader public and will destroy wildlife habitat and climbing access. This project should not be supported by salt lake metro government agencies and should not receive funding.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35552	Larry Mullenax	I have been an avid user of little and big cottonwood canyons. Being a little bit long in the tooth, I'm fully aware of the negative impact on the canyons from the large number of winter time visitors that have had on the canyons. While I am fully supportive that something must be done, I do not support the construction and annual operating cost associated with the Gondola project. To be clear NO to the gondolas. I personally do not believe that it is appropriate for taxpayer money to be spent for transportation on behalf of private corporations so visitors can visit Oktoberfest. And or any number of the events they host that do not drive visitors from outside of the state if Utah.
35553	sandhya narasipura	We as a generation should make an extra attempt to keep our resources for future generations. For the benefit of few greedy money making folks, why should an entire generation suffer? There are alternatives that have worked and we should use that. We already have water shortage across the globe. Knowing that why are we contaminating our water resources by this new initiative. Think of all your children, grand children and envision how they will live and may be it will make a difference in your decision to abandon this.
35554	Megan Dahl	Please do not build the gondola. As a resident of Sandy, I strongly oppose the gondola and the taxes I will have to pay for this. Please consider bussing or other transportation options.
35555	LAWRENCE DUNN	I'm in favor of the Gondola option. I'm a meteorologist, the gondola is the only option that will have any impact on traffic and safety during heavy snow events, much more so than buses and road expansion, although these would help. The heavy snow events are the primary cause of the worst traffic congestion and the gondola would help the most of all the considered options.
35556	Craig Barr	I agree something needs to be done but I don't believe the Gondola is the correct answer. While new technologies are available over time and better solutions are near. Add all the bussing needed to get the skiers up the mountain. Perhaps even a lite rail to get the skiers to the parking and slopes, I just don't believe the Gondola is the end all answer.
35557	Linda Price	I am not in favor of the gondola on any level. Buses and tuned entry with some added lanes are a much better alternative.
35559	Steven Hansen	I disagree with putting in a gondola in Little Cottonwood Canyon. The return (economic, natural disruption, and facilitation) does not justify nor support the governmental funds proposed to be spent on the project. The only benefits are two ski resorts that need to resolve the issues on their own and not waste tax payers money.
35561	Steve Rollins	do the gondola
35562	Alison Jacobson	While improving mass transit options and tolling would be positive means to address canyon access, a gondola is counterintuitive to protecting the canyon. It would ruin the aesthetics of the canyon, which is why many people go there. It also would create new problems with traffic and parking at the base of the canyon. I would much rather see more natural gas or electric buses serve the canyon.
35563	Jack Hurty	This comment is being submitted in opposition to the preferred alternative plan, the Gondola. UDOT's own analysis has the gondola as one of the most expensive options to implement without delivering on the project's objectives more effectively than either of the Enhanced Bus service options. Specifically, the Enhanced Bus with PPSL option provides identical traffic backup with substantially better travel times and lower visual impact while spending \$40 million less. The gondola is not the most pragmatic choice and is opposed by the community. It does not make sense to continue to pursue this while better options remain on the table.
35564	Debbie Strong	NOOO on a tram
35565	Sheila DEPUTY	My husband and I live right at the mouth of little cottonwood canyon. We think the best option is the gondola. We know it won't be finished for many years. But we hope to see it finished in our lives. Get busy!! Thank you all that have worked on this.
35566	Jeffrey Gishen	<p>I was happy to see that UDOT chose Gondola B as the preferred alternative in the LCC FEIS; it was far better than the Enhanced Bus Service with PPSL. I say this to avoid misinterpretation of my more negative comments about the initial, pre-gondola phase in the FEIS.</p> <p>UDOT was very thorough in the FEIS in its analysis of the preferred alternative. In contrast, the choices proposed for the initial, pre-gondola phase seemed superficial and almost glib. Good suggestions for improving traffic flow on the LCC road were dismissed with insufficient reasons stated.</p> <p>As one example of this, I would cite Mike Maughan's comment (DEIS comment #13320). The final section of this comment, "Interim Solutions," has a half dozen excellent suggestions on how to improve traffic flow on the LCC road. None of those suggestions made it into the FEIS.</p> <p>As another example, in section 32.2.4 of the FEIS (p. 32-65), UDOT responded to comments about enforcing the traction law by stating "It would not be possible to ban two-wheel-drive vehicles since the only method of verification would be to stop vehicles for inspection, which creates additional congestion." First of all, on the busy, snowstorm days when 4x4 is necessary, traffic is usually stop-and-go in the canyon anyway; inspections will not add to the travel time. Secondly, if it is impossible to stop vehicles to ensure that they meet the traction law, why does UDOT have a Cottonwood Canyons sticker program? There would be no problem going up the canyon without a sticker. Is UDOT telling us that their own sticker program is a waste of time?</p> <p>Tolling and the timing of avalanche control also needed more thorough analysis in the FEIS, but they are more complicated issues, so I will submit separate comments on each of them.</p>
35567	Aaron Atkinson	Recognizing bus drivers are limited, even the transition plan to the pre-determined and business-aligned gondola is fraught with ineptitude and troubles. There would be less resistance and impact with a train that would and could more easily tie into existing UTA infrastructure. The gondola is a proposal pushed by ski-centric marketing that can't see other options as more aligned and viable with local use and interests that service more than the ski resorts.
35568	Paige Petersen	This is a very expensive solution to the problem; there are other solutions that are more fiscally responsible, more accessible to all Salt Lake County residents, and does not change the landscape of the canyon. Please review this solution further and examine other solutions.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35569	William Frazier	I have been skiing Little Cottonwood canyon for 40 years. I understand the logic arguments for and against building a gondola in the canyon. However, when it comes to the outdoors there is more that influences our decisions than logic. There is a spiritual and emotional connection we have to the outdoors. Building a gondola would deteriorate that connection with Little Cottonwood canyon. I would hope to appeal to your emotional connection and stop from building the gondola. It will destroy the beauty lies in the canyon. It will be an eyesore forever. Please don't build a gondola.
35571	Kirby Croyle	No gondola needed. Tolling, timed vehicle permits, busses, tram / one way temporary extension to three lanes to access required parking .
35572	Farrah Edwards	As it stands, I am strongly against a gondola in the canyon. I feel like this ends up being a gift from regular taxpayers, (including the poorest renters,) to the wealthiest people in America (who can afford to ski, build multi-million dollar complexes, and afford vacations in Utah.) I believe that a better, and more egalitarian approach would be to use the gravel pit at the base of Big Cottonwood Canyon as a transportation hub to serve both Big and Little Cottonwood Canyons. Furthermore, I support restriction or elimination of single occupancy vehicles in the Canyons, in favor of REGULAR, RELIABLE bus services in both summer and winter. Creating snow sheds at avalanche sites and taking non-resident vehicles off the canyon road will dramatically improve the safety and efficiency of Canyon road use. Finally, the resorts should work with the transit organizations to make bringing luggage and equipment easier. Season ski passes should automatically be provided with a ski locker so that using public transit is less of a chore. Honestly, we can do better than the current plan and a lot of the adjustment that needs to be made is in attitude - if you want to access our world-class skiing, Oktoberfest drinking and hiking, you will have to ride the bus, along side of us.
35573	Chris Demiris	I feel that the gondola options completely ignore the fact that the gondola itself will increase use of the canyon as a tourist draw in and of itself, and may end up not reducing canyon traffic at all, instead simply increase overall canyon use. Additionally, since the gondola serves only the ski resorts, they should be paying for construction and upkeep. It seems to me like tolls and increased bus service would be obvious to try first since they would have the least visual and environmental impact.
35574	Kam Jones	Please do not build a gondola! It will ruin the natural mountain views and obstruct nature's beauty. Let's consider better bus systems and rolls first!
35575	Brian Rasmussen	Having worked in the transit industry for several years as a marketing & communications professional, there always seems to be opposition to viable transit solutions. But as soon as the transit project is completed, everyone says. "Why did we not build this sooner?" Such will be the case with the Gondola in Little Cottonwood. It is the best transit solution. Let's get beyond the "Not-in-my-backyard" thinking. Please embrace it and let's get building it... Now!
35577	Josiah Bradfield	I appreciate the efforts of everyone on trying to reduce traffic in little cottonwood, but this is not the answer. It doesn't really solve anything. I think that more busses and/or a fee station would really help more.
35578	Jody Hadfield	I am AGAINST the Gondola. It is a lot of tax payer money to really only serve the ski resorts. There are other ways to help improve traffic in the canyon.
35580	Lindsay Higbee	Seems like the majority of us are very much opposed to this. I'm not sure it does much good to add my voice to the throng, but here I am. Please don't do this. The people don't want it. The animals don't want it. There are many other solutions. No to the gondola.
35581	Bruce Burkhart	Please pay attention to what people want and not what special interests want. We do not need some high price thing that very few people are going to use. A gondola would only be used a short time of the year but damage the beautiful Canyon and be out of price range for most people.
35582	Joe Christensen	The gondola proposal at face value seems like a permanent eye soar in the canyon for a 3 month problem...ski season. UTA has hundreds of what I call "ghose buses" running around the valley each day that could be used during ski season to solution for the traffic congestion. It takes both vehicles not equipped for winter conditions AND drivers who are not skilled to drive in these conditions off the road and allows them to safely make their way to and from the resorts without risk. Cars that do belong up the canyon should be required to have a reservation day/time and not allowed up without it. A gondola will scar the landscape, be costly to operate and maintain, and it/when the next round of pandemic occurs, it will be shut down and not used. People will then simply clog the canyon in their cars. A reservation system seems most appropriate. Don't have a reservation? Take the bus.
35583	Jeffrey Gishen	<p>The timing of UDOT avalanche control activities in LCC has been a major cause of winter traffic problems in the canyon. DEIS comments from disparate sources (e.g., #13328, #13320) have noted the advantages of completing avalanche control earlier in the morning, and statements to this effect have appeared on social media even prior to the EIS process. In the FEIS UDOT maintains that doing avalanche control earlier in the morning is impossible and, in so doing, they may be missing an opportunity to improve traffic flow in the canyon even prior to implementation of the gondola.</p> <p>The essence of the reasoning in the FEIS for not doing avalanche control earlier in the morning, as I understand it, is 1) UDOT does not want to fire artillery in the dark, and alternatively 2) they claim that necessary placement of Remote Avalanche Control (RAC) devices in the wilderness areas above the LCC road would violate Federal law.</p> <p>Regarding the first reason above, the time of sunrise varies with the time of year. Why are morning LCC avalanche control activities always scheduled to end at 8:00 am, regardless of the time of sunrise? Can they not start earlier when the days are longer?</p> <p>Regarding the second reason above, UDOT acknowledges that the use of artillery for avalanche control may soon be illegal due to Federal mandate, without saying how canyon road avalanches would be controlled when that happens. Wouldn't UDOT have to seek approval for RAC's in the wilderness areas above the canyon road at that time? I understand that approval for such use of RAC's may require new legislation granting a legal exception for the Salt Lake Twins Wilderness. That is not an easy process, which is all the more reason to start immediately.</p>

ID	Full Name	Comment
35584	Jason Hall	<p>The permanent visual impact a gondola would have on the canyon is untenable. The gondola is horribly expensive and only serves a subset of canyon users - those heading to the private resorts. Gondolas are not transportation solutions. Start with less expensive, more realistic solutions - namely much more investment in busing and tolling. The thought of permanently altering our beautiful canyon with a gondola is distressing.</p>
35587	Robert Douglass	<p>The Final EIS failed to show how road closure time could possibly increase by a factor of 2x for the high estimate by 2050 when no historical trends nor long-range snow forecasts predict an increase in snowfall. Historical records and the primary long-range forecasts predict declining snowfall through 2050 and beyond. The minimum road closer hours for 2050 given by the EIS should be less than the average today, based on published, peer-reviewed historical trends and long-term precipitation forecasts. Maximum closure hours should be the same as experienced today or fewer if historical trends and the most respected forecasts are used. The EIS implies that increased traffic may be responsible for more road closures. This reasoning defies physics. Avalanches and avalanche risk is in no way correlated with the amount of traffic on a given roadway. The EIS's neglect of both historical trends and leading forecasts is negligent. The EIS needs to correct their road closure estimates in a supplement or justify the ones they assume with documented historical data and referenced scientific forecasts supporting a published analysis of their numbers.</p>
35589	Sherron Lund	<p>IMO-This is a high cost per ride option that will not help with congestion in the canyon. The average person or local will not pay \$35 a ride when a bus is so much cheaper. This is 100% for the tourist aspect and benefits only the ski resorts. Listen to locals, not money and special interest. NO GONDOLA</p>
35590	Jennifer Hoffee	<p>NO GONDOLA! Using a tremendous amount of tax payer money to benefit private businesses and politicians is incomprehensible! The gondola does nothing to help recreators get to trails, climbing, camping, picnics. It only helps the ski resorts! THIS IS WRONG. Let Alta and Snowbird pay! There should be no padding the pockets of Chris McCandless and Wayne Niederhauser either. We are very aware of what's happening here!</p>
35592	John Bridge	<p>I am opposed to the gondola going up the canyon. There are other solutions that can be implemented that are not as costly as spending a half billion dollars and destroying one of our natural resources. This serves two ski resorts snowbird and Alta. That money could be better spent elsewhere rather than serving the ski industry.</p>
35594	Chris Feeney	<p>Does seem like anyone likes the idea of a gondola</p>
35595	Tim Dutter	<p>As a dedicated user of Little Cottonwood Canyon, whether that be backcountry skiing or climbing, I am wholeheartedly opposed to running a gondola up this incredible canyon. BETTER ALTERNATIVES EXIST. Implementing a tolling feature, improving the bus service, anything but what amounts to a costly tourist attraction that most benefits Snowbird and Alta and harms the Utah taxpayer. Moreover, this is a solution to an issue that, at most, greatly impacts 15 days out of the season where snow falls and canyon traffic and accidents skyrocket. A remedy to this does not justify the use of a significantly impactful gondola. Please listen to the voices of the people that love this canyon and use it as a respite and place to grow and challenge themselves.</p>
35596	Liz Shelnutt	<p>As a community member who enjoys skiing and all activities in the canyons, I will not use the gondola system projected to be installed in the canyon as a protest to the hurt it will cause to our beautiful nature in the canyons. You will be destroying the very thing that brings people to the canyons. Trails, trees, habitats, river beds, rock faces, mountains, etc, will all be impacted negatively. The large mechanics that are necessary to pull off such an elaborate system will deter people's viewing of the beautiful creation we are surrounded by. How ugly you will be making our beautiful canyon. It will not help people arrive to the places of activity any sooner, and I fail to see how anyone would choose to use the system over driving or bussing to places, because it is no more convenient. I have 4 children and there is no logistical way I can imagine that would entice me to lug me and my children and all our gear onto a suspended cube that will hang by a cable. I say no to the gondola.</p>
35597	Adam Clayton	<p>I'd recommend an assessment of the frequency of breakdowns of similar tram/gondola systems at least nationally. When these systems fail, it results in backups in the canyon on two fronts and potentially leaves people stranded up the canyon and unable to return home. Seems like a better solution would be a lottery style permitting system during period of peak traffic up the canyon. With exceptions provided for people with paid reservations at a resort hotel.</p>
35598	Ashley McDougal	<p>Adding a gondola to this beautiful canyon is going to do nothing but put more money into the hands of the ski resorts. There is no doubt that even with efforts not to, the watershed will be affected by this, native animals that call this canyon home will be negatively affected and that the gondola will most likely only serve the middle and upper class due to the toll. This gondola is not for the general public and their tax dollars should not be used to spearhead this project, especially when they have been vocally against it since the beginning. Take this opportunity to show Utahns that we are ACTUALLY grateful for this land we get to live on and that we want to not only keep it alive but nourish it to thrive. Months of construction is going to do nothing but damage this environment.</p>

35599	Jeffrey Gishen	<p>The tolling solution proposed in the LCC FEIS seems destined to be ineffective. The proposal states that tolling would only be applied on "busy," winter days. The FEIS does not define "busy," winter days but, presumably, they would be the snowstorm days, when more people travel up the canyon to ski and road conditions are terrible. A tolling gantry would be located near Snowbird Entry 1, using either license plate recognition or electronic transponders to identify cars to be tolled.</p> <p>Let's think about this. On the busy winter days defined above, by the time vehicles reach Snowbird Entry 1, license plates are covered with snow and hence not readable from the gantry. License plate scanning has been used successfully in the Alta parking lots, but that involves parked cars and an attendant who can get out of his scanning truck to brush snow off of plates, when necessary; that is not possible from the gantry.</p> <p>A tolling gantry at the base of the canyon would work somewhat better for license plate scanning, simply because the snowfall at the base of the canyon is lighter and less frequent. Still, not a perfect solution.</p> <p>A tolling gantry that uses electronic transponders could work, but that creates other problems. How do you identify the cars that do not have a transponder, but drive up the canyon anyway?</p> <p>UDOT can go ahead with the tolling plan as they described it in the FEIS, but whether it is effective will soon become apparent. When the number of cars tolled on a "busy," day is significantly less than the number of parking spaces taken, we'll know that it did not work.</p>
35600	Chase Raymond	<p>I would love to see a fleet of electric busses that run at a more reasonable schedule. This would be a lower cost and impact than the gondola.</p> <p>If the busses run and a more regular schedule, people will ride them more.</p> <p>If drivers are the issue, you could pay them \$100K a year and pay 50 drivers for 50 years and still pay less than the gondola.</p>
35601	Katie Tatton	<p>Please don't make a gondola the only way to get up the canyon. It's not right that taxpayers should foot the bill for the ski hills. Locals will be priced out of visiting the canyons year round.</p>
35603	raegen thomas	<p>protect our canyons</p>
35604	Barbara Moore	<p>I support the Gondola Alternative B project</p>
35606	Kyle Brady	<p>Gondola is a Horrible idea. Doesn't address the real issue. The resorts don't get unlimited guest. They may have to cap their daily uphill and it might not be the number that they want. Public users of the canyons get [REDACTED] in this option. Shame on udot.</p>
35607	Roman Samul	<p>I'm a home owner at the mouth of Little Cottonwood Canyon. I do NOT want a gondola. I greatly prefer a cog rail which connects to Trax and goes to Park City, as well as Brighton and Snowbird. It could be used to commute to/from anywhere in the valley, or even anywhere in the Front Runner service area. This is much better than a limited use gondola. And studies have shown that over time the cog rail is cheaper. Not to mention we can likely get the federal government to pay for most of it especially while we're trying to get another Olympic bid.</p>
35608	Lynda Le Cheminant	<p>I think to phase in the plan is wise. Let's see how the first options--busses and road widening--can help. If it takes years to get the funding for a gondola, then let's use these first and reevaluate. But at that point, the cost will not be at \$550 million. Costs always go up and as a tax payer, I'm not willing to foot that bill that will only help for a few days a year and go in the pockets of past legislators who bought land in anticipation of the project.</p>
35609	Eileen Santiago	<p>No Gondola!</p>
35610	Katherine Marek	<p>Less invasive alternatives should be pursued before an exorbitant gondola.</p>
35612	Clayton Shaw	<p>I do not support the gondola option for Little Cottonwood Canyon.</p> <p>The canyon is a very important watershed for the valley, and construction on a gondola of this size will surely have negative impacts on that ecosystem. As someone who cares deeply about the environment, I do not support the gondola.</p> <p>Additionally, this gondola only benefits the ski resorts in the canyon and those that ski there. Such an expensive project for Utah taxpayers should not only benefit a select few. I don't ski at either resort, and recreate in the canyon via other trailheads. As a Utah taxpayer and backcountry skier, I do not support the gondola.</p> <p>Finally, construction of the gondola will result in the destruction of many classic bouldering problems along the road. These problems have great significance to the climbing community. As a climber, I do not support the gondola.</p> <p>Less impactful options exist and should be explored.</p>
35613	James Kipp	<p>Do we really need more infrastructure and spending towards an undoubtedly very expensive gondola up LCC? How will this help traffic in BCC which is just as bad? There's already plenty of resort space up both canyons, and we don't need to make the entire section of the Wasatch a resort. More bus capability and tolls during peak traffic hours is a much better and more scalable system. There are larger other greater environmental concerns that this level of infrastructure and effort could be put towards.</p>
35614	Fusheng Wu	<p>I would support building gondola because this will cause the least destruction to the environment.</p>
35615	Logan Bentley	<p>No gondola!! Infrastructure that will taint the canyon that only serves the ski resorts yet is paid by the tax payers is a terrible idea. Let's try low hanging fruit solutions first like bussing or tolling solutions before we do something so drastic like putting a gondola of that size in the canyon.</p>

ID	Full Name	Comment
35617	Heather Matheson	<p>Dear UDOT,</p> <p>I'm an active user of Little Cottonwood Canyon and have been since I was 5 years old learning to ski at Alta. Today I still love skiing at the resorts but also have ventured into the backcountry skiing and hiking & trail running in the summertime. LCC is a special place and truly a beautiful escape for me and everyone who enjoys spending time there. I fully support solving our traffic and congestion challenges however the announced Gondola B does not do this.</p> <p>We all need to change our habits getting up the canyon. I try to carpool as much as I can. But spending lots of tax payer money on an expensive gondola is not the solution and not going to the solution I and everyone need. It will not be convenient unless a much larger parking structure is build right next to the loading station. I know going with my family having to take a car, bus and gondola is just not an option. The parking reservations have actually made it really easy and more flexible solutions like that should be attempted before an expensive gondola.</p> <p>Alternatively if a more robust electric bus system like Park City we're put in place that would provide more flexibility for families and those going up to trailheads in the canyon (I don't always go to the resorts).</p> <p>I really charish the natural beauty of the canyon as do so many Utahns. The Gondola would permanently destroy this when there are other more flexible common sense solutions, particularly when we're only talking about busy weekend days in the winter. I and others enjoy the canyon year round and don't want the Gondola ruining that experience (I ski at Alta too!) It also won't reduce the traffic enough to make it worth destroying the natural beauty. Preserving what natural beauty we have is an economic driver to attract skiers from all over to our state. The Gondola doesn't provide any trailhead access and nothing has been proposed with the Gondola Plan</p> <p>I also still worry about our watershed. Climate change is clearly creating new drought challenges and any disruptive efforts near our water should be a cause for concern and further research which hasn't been provided with the latest EIS.</p> <p>I also worry about traffic along Wasatch Blvd to get to the Gondola base. A thorough study of how this would back but had not been shown especially if it's a snowy day and avalanche danger.</p> <p>Clearly it's going to take time to even get funding for a gondola when right now a robust busing system could be implemented and have the flexibility to adapt to being efficient when demand is higher. Using electric buses like Park City could also help reduce emissions in the canyon especially on bad inversion air days.</p>
35618	Melodie Jacobsen	Please Do Not approve this Monstrosity of a Gondola! Please say NO! Insanity Run Amok.
35619	Hugh Ferguson	Final comment. Bottom line is we need to figure out a maximum amount of people that the canyon can hold. I think it is already approaching max for keep the integrity of the natural surroundings and the experience for visitors. I think the ski areas would like to keep adding to the number of people up the canyon to understandably maximize revenue. At some point it has to stop. A gondola would just add to the congestion in the upper canyon and do nothing to alleviate traffic traffic on highway 210. In my opinion it would increase traffic on 210 because the added congestion at the base terminal of the gondola would push up the canyon and down wasatch both directions.
35620	Gregory Lewis	No Gondola!
35621	stephanie kagen	i just think we need to explore other options before doing something very permanent like the gondola. This will only serve the ski resorts. Looking at climate change, how long will we even be able to recreate in the wasatch during winter? by the time the gondola is finished, we may not even have a winter to play in. Who is paying for this? Not IKON passholders, the tax payers. This is not fair. This will not reduce the number of cars in the canyon.
35622	Kevin Delvie	Listen to the overwhelming voice of SL residents - no Gondola! My extreme worry is that the Gondola solution stands to majorly benefit for profit corporations instead of meeting the needs of the Salt Lake residents or tourists. Additional worries of mine are that congestion will only be moved down canyon, creating a bottle neck we are already familiar with. We should incentivize public transit, and integrate it with the existing transit systems. A highly expensive and invasive gondola system does not meet the needs of our particular problem, and the scar on the landscape is of additional concern.
35623	Sarah dunn	I'm against the gondola. Not a good idea
35624	Malinka Andersen	Those who use the canyon and or resorts, as well as the resorts themselves should pay for this project. Those who do not use the canyon should not be made to pay for the project. It should be a pay for use type system in my opinion whether that's residents, visitors, etc. Not the taxpayers in general.
35625	Brett Pozolinski	The gondola is not a solution to LCC. Stop the gondola and the defacing of LCC. As a backcountry skier, we already have seen these resorts take away street parking and now they want transportation to their resorts. this will ruin the ski environment in LCC.
35626	Kelly Erickson	I am totally against the gondola. The mountains should be preserved for generations, it can never be undone. widen the road, enforce carpooling, do whatever is necessary to make it work. The traffic, congestion and pollution will be unbearable. Dick Bass would be disgusted. Wrong for Utah, wrong for nature. Limit the number of skiers and people attending Octoberfest.
35627	Robert Douglass	The Final EIS failed to show how road closure time could possibly increase by a factor of 2x for the high estimate by 2050 when no historical trends nor long-range snow forecasts predict an increase in snowfall. Historical records and the primary long-range forecasts predict declining snowfall through 2050 and beyond. The minimum road-closure hours for 2050 given by the EIS should be less than the average today, based on published, peer-reviewed historical trends and long-term precipitation forecasts. Maximum closure hours should be the same as experienced today or fewer if historical trends and the most respected forecasts are used. The EIS implies that increased traffic may be responsible for more road closures. This reasoning defies physics. Avalanches and avalanche risk is in no way correlated with the amount of traffic on a given roadway. The EIS's neglect of both historical trends and leading forecasts is negligent. The EIS needs to correct their road closure estimates in a supplement or justify the ones they assume with documented historical data and referenced scientific forecasts supporting a published analysis of their numbers.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35628	Neil York	Given what may or may not happen with climate change and population growth, Enhanced Bus Service makes the most sense because it would have the least environmental impact. Long-term planners ought to read 'The Irony of Victory,' Chapter 15 of Roderick Nash's classic study, "Wilderness and the American Mind" (5th ed., 2014; orig. ed., 1967), which warns that the outdoors are endangered as much by those who profess to love them as by those who do not care.
35629	Nico DeWaal	No gondola. Please. Traffic is bad enough. The resorts are [redacted] us over with their parking situation. We need more freedoms on ways to get there than less. Gondola will be too slow and is so ugly. I hate it. Don't do this.
35630	Deborah Carter	Create a toll fee for this canyon & everyone traveling up the canyon is quickly charged a \$3-\$5 fee from a pass toll locked on their windshield. Boston has this for all their bridges & it's awesome & will cut down on senseless traffic when a fee is added.
35631	Brett Pozolinski	No gondola. They have taken away road parking for us backcountry skiers and now they want this. This is not a solution!!
35632	Andrea Boyle	The beneficiary of this Gondola is the Ski Resorts at taxpayers expense. They need to pony up!
35633	Sarah Ellias	Hello, I am very strongly against the installation of the gondola. It would impact the natural beauty of LCC, cause harm to SLC's watershed, and only benefit the private ski resorts at the cost of our taxpayers.
35634	Michele Hunt	NO GONDOLA!!! Added cost to this activity which already is pricey will stop a lot of people from learning or enjoying. Stay with the buses. Certainly worked well back in the day. Not everything needs to be instant access either!!!!
35635	Chris Benda	I am a resident of Sandy who lives off of Wasatch. We are a skiing family. We have noticed a great increase in traffic on Wasatch and the canyon. I am OPPOSED to the gondola! I feel there has not been enough research in other options - bussing for out of town visitors, passes for locals, etc. I am OPPOSED to paying for the gondola for Snowbirds profit. It will only attract more traffic to the area. Our valley is at capacity. Please reconsider the gondola.
35636	Sheri Montgomery	This gondola proposal just doesn't make sense. I am highly opposed to building it and the giant parking garage. It won't alleviate the traffic problem and will destroy the beauty of the canyon. And then there's the outrageous cost when it only benefits a few. I know there needs to be a change but we should try less invasive and less costly changes first!! There have been some fabulous ideas I've read online and in Nextdoor. Don't do it! The people are speaking loud and clear!!!
35637	Shannon OGrady	I am against the LCC gondola proposal because it is fiscally irresponsible, threatens a pristine wilderness and will significantly and negatively impact world-class Little Cottonwood climbing. To jump to such a devastating solution to serve the interests of the ski industry is absolutely ridiculous. There are less impactful solutions, such as increased bus service, that should be implemented as a first step toward addressing LCC winter traffic.
35638	Tammy Anstee	No gondola please!!!
35639	Connie Osborne	Consideration of all canyon users, not just resort visitors Keep existing recreation opportunities intact
35640	Gregory Fenton	I am 100% against the gondola. With rising cost of everything, the budge will be blown quickly and we'll be paying upwards of \$1B for this thing. And it's only going to support 2 private businesses. We can't even enjoy it year round. This is fiscally irresponsible and should NOT be done.
35641	David Quinney	Bring on the gondola! All of the other options presented are a band-aid for our problems at best and will not be any cheaper in the long run. We have world class natural resources in our backyard, and the interstate/international traffic to this canyon is only going to keep growing. We should invest now in proven methods to handle the crowds and do it right on the first try.
35642	Andrew Lovegrove	I hope that this is a data and economically driven decision. Yes there are many critical parameters like access and pollution and wear and tear on canyon. I have skied and recreated in LLC and BCC for 35+ years. The Utah valley has grown exponentially, and the canyons remain the same. The canyon and mouth of the canyon will be ruined if a parking lot is built. Home properties will be severely damaged. If the gondola is the best answer then I wonder what will happen when the gondola stops for tech/mech issues and the people (kids especially) have to pee...good luck with that! If the canyon is so worth protecting then I ask why the LDS church was able to extract massive tons of precious granite to build their conf center...?!? Answers: make people pay to go up canyon. Make it fair to all and not the ones who have all \$\$\$\$. Use buses like Zion. No one is talking about Big Cottonwood Canyon congestion, which is equally as bad.
35643	Brook Williams	DONT GO THROUGH WITH THIS!!!! Our canyons do NOT NEED THIS.
35644	Stephen Snell	The final EIS, the proposed gondola, is not in the best interest of the users of Little Cottonwood Canyon. The choice between the road widening and the gondola seems to be a manufactured choice, as increased public transportation and restriction of private vehicles has not been tested and could provide an ideal alternative that would allow the current infrastructure to work just fine. Creating a massive, expensive infrastructure plan that destroys the recreational areas of other user groups before figuring out whether the plan is even necessary is outrageous! Please consider alternatives OTHER THAN the gondola or the road widening, as these options are really only going to have their benefits realized on a few weekends of the year when traffic is at its worst. The proposed plan seems to me to only reflect the interests of the ski areas and perhaps some politicians, not the interests of the residents of Salt Lake City or even the tourists that come to visit.
35645	Melissa Meru	I do NOT support the proposed gondola. Please DO NOT do this.
35646	Chad Lehman	THE TAXPAYER SHOULD NOT BE FOOTING THE BILL FOR THIS. EITHER IT SHOULD BE FULLY FUNDED BY ALTA & SNOWBIRD, OR IT SHOULD NOT BE FUNDED. PERIOD.
35647	Trevor Nelson	The gondola serves only business interests. If you really wanted to fix this problem, you'd ban parking at the ski resorts, build a bunch of parking structures in the Cottonwood heights Holliday and Sandy area and invest in frequent public transport. Destroying the natural beauty of little Cottonwood in favor of short term profits for two ski resorts is unfathomable. An army of busses on a NYC subway frequency is the answer to both canyons's woes.
35648	Sam Baldrige	I am opposed to a gondola option.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35649	Kyle Smith	<p>A gondola in Little Cottonwood Canyon is absolutely the wrong choice. Its installation would destroy hiking and climbing resources along with irreversibly changing the serene views of the canyon by adding constant machinery up and down the canyon. The gondola serves a single user group of the canyon, and will benefit private corporations. It complete ignores other users of the canyon and will not relieve traffic up and down the canyon.</p> <p>Visiting Little Cottonwood Canyon is one of the main reasons that I enjoy visiting Salt Lake City - with the destruction this gondola will cause, it's unlikely I would be inclined to visit very often or ever again. Please consider other non-structure options like bus services during peak ski season. There is absolutely no reason to destroy the canyon with a horrible gondola.</p>
35650	Aaron London	<p>UDOT needs to go back to the drawing board. The preferred solution serves less than 3% of the population who pay for it while attempting to impose a standard of transportation entirely inapplicable to a box canyon in avalanche prone mountainous terrain. As a non-resort user of LCC year round the gondola fails entirely to meet my transportation and access needs. What good does an A grade level of transportation do me when UDOT will restrict parking in the canyon so that I cannot park when I attempt to arrive at my destination? What good does doubling the transportation infrastructure in LCC do me when the end result will be unmanaged overcrowding and increased development pressure in LCC to the point that the experience of LCC is so destroyed that there's no point in going there anymore? What good does sinking half a billion dollars of taxpayer money into 8 miles of transportation infrastructure for a few months of the year do me as a Utah resident who reasonably expects transportation improvements across the entire state and in fact right next door in Big Cottonwood Canyon where the very same problems are faced today and remain unaddressed by UDOT? What will BCC cost, another 500M on top of LCC? The EIS fails to convince me that unlike every time a lane is added to I-15 it just fills up immediately. There is nothing in the EIS that demonstrates that the 30% reduction in traffic on SR210 will be achieved. There is no mention of induced demand, which is ridiculously unacceptable from any contemporary transportation analysis. Because there very same problems plague BCC today, there is no discussion in the EIS that the LCC preferred alternative will need to be immediately extended to BCC, which represents a segmented expansion and is not consistent with NEPA. Simply put, if UDOT won't build a gondola on I-15 to deal with stand-still rush hour traffic then it shouldn't build one in LCC. Use the same tools at your disposal now for managing rush hour traffic on I-15 in both LCC and BCC. Last season UDOT, in its very own podcast discussing the new HAWK at Cardiff, stated that despite complaints from travelers the HAWK improved downhill traffic flow for the season. UDOT should meter uphill traffic with lights at the bottom of both canyons with one lane for UTA buses and microtransit vans and the other for cars. The LCC resorts switching to reserved parking has already proven we can achieve the 30% traffic reduction today through easy, low-cost, common-sense solutions that require participation from all canyon users but also benefit all canyon users. Work with the BCC resorts to implement parking reservation systems. Work with the resorts and UTA to bring about a solution now, today, this season that benefits all canyon users for a fraction of the cost without forcing Utah tax payers to pay for an A grade of transportation for just resort skiers. Finally the EIS uses a deeply flawed climate analysis. As Utah's climate changes to resemble that of Arizona of the next decade plus, the number of days that SR210 will be fully closed due to avalanches does not increase. Do Arizonan's need a gondola to access skiing in the few remaining places where skiing is viable in Arizona? No, of course not. During the proposed operational lifetime of the preferred alternative for LCC, resort skiing will be deeply impacted and very likely no longer commercially viable. The last thing we need now is to spend 500M plus on a gondola for winter use only when our winters in the future will be radically different from what we experience today.</p>
35651	Jeff Cooke	<p>I live near the mouth of the canyon, and we do NOT need nor want a gondola. This is an expensive and useless waste of taxpayer money.</p>
35652	Emily Carter	<p>Please don't build this gondola</p>
35653	Michael Call	<p>I grew up in Salt Lake City, at the foot of mount olympus. I learned to climb and ski and snowboard in the canyons nearby, mostly in Little Cottonwood. I strongly oppose the gondola as it will forever take away the serenity and peace that the canyon offers anyone who goes there, all to assist skiers in the highest income brackets and only for a few weeks a year during peak ski season. The destruction of the canyon and its views is the worst idea i've heard for alleviating traffic. This is illogical, insanely expensive and serving the resorts only. Mountain bikers, hikers, road bikers, climbers, and backcountry skiers all use the canyon year round, and all of their experiences will be negatively affected by this gondola.</p>
35654	Hannah Young	<p>The UDOT's gondola proposal for Little Cottonwood Canyon will negatively impact outdoor recreation in LCC, and will disproportionately affect already marginalized communities trying to access the outdoors. The gondola will destroy LCC's natural character aesthetic and world-class climbing areas during and after construction. These views and climbing areas are irreplaceable. The construction will disrupt both the natural visuals and sounds of the canyon, making it difficult to enjoy outdoor recreation in LCC. The gondola is fiscally irresponsible and only benefits skiiers. Not everyone skis. There are more economically and ecologically responsible solutions to the problem of transportation to the ski resorts, such as benefits for ridesharing and increasing accessible public transportation. The gondola will destroy a significant portion of the Wasatch and it is unacceptable.</p>
35655	Phil Baggett	<p>Please be sensible with our tax dollars. Charge for parking up top and have busing be free first and see how that goes. Gondola is not most sensible start at solving the problem. Gondola would only be a joy ride and not a transportation solution; it's a ridiculous solution. We find the UDOT EIS limited scope/alternatives disheartening</p>
35656	Zach Robinson	<p>Please no gondola. The gondola will have long lasting physical impacts on the canyon, and it will ██████████ Close the canyon to all vehicle traffic, and run busses like in Zion Canyon all year long.</p>
35657	Brandon Collett	<p>As an avid snowboarder in both Canyons for the last 15 years, I beg you not to build the Gondola. The traffic is definitely a huge problem but there are many options to try: tolls, more buses, carpooling. Our watershed and the canyon is too precious for this disaster of a gondola. The fact is, it is too expensive and will not help much. The irreversible damage caused would be tragic and an eye sore. Us skiers want to participate in other alternatives but the Gondola is not the answer.</p>
35658	Frank Zdravec	<p>The gondola is an inappropriate, expensive, and incomplete solution to LCC end user transportation. It will permanently mar the LCC landscape and improve access to a limited number of users at an exorbitant expense to taxpayers.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35659	Robert Douglass	The Final EIS acknowledges that the La Caille gondola base and parking structures are on and adjacent to an EPA Superfund Site that UDOT says has "a high probability of contamination," with lead and arsenic. They say that if contaminated, it would add cost and time to the construction of the gondola. They state that they did not test or assess the degree of contamination but will do so after construction begins on the gondola. To fail to address one of the most important environmental impacts of the gondola alternative that was selected in the Final EIS is negligent on the part of the EIS. EPA's 2nd and 1st 5-year reports make it clear that areas with steep slopes and trees, such as the parking structure site, were not remediated at all. Because the EIS did not assess and incorporate this significant public health hazard and the added engineering costs into the final EIS or the draft EIS, the EIS process misrepresents the likely time and cost to construct the gondola and leaves an important public health risk unaddressed. The sites for the gondola base and parking structure need to be tested and analyzed. Engineering plans and cost estimates need to be updated to reflect costs due to remediation. The public needs to be informed of any health risks that will be imposed both during construction and during ongoing operation. Failing to test and assess this risk as well as its cost and timing considerations is negligent on the part of the EIS.
35660	Bijan Norouzi	Probably my voice doesn't matter and people making profit from this project would gain. But it's a big mistake to create gondola in a little cotton wood canyon. Instead of wasting people's money- better ways to solve this problem.
35661	Pat Spackman	I am against the tram. The damage to the canyon would be unrepairable and there are better ways to limit traffic and use public buses or private transportation services. Our canyon are too beautiful to be subjected to large equipment tearing into the mountains and would need to have upkeep roads also. And it would be a tax burden to people who wouldn't even use it. I vote no!
35662	Linda Metke	I am a canyon hiker, skier, camper, leaf peeper, and have been a rock-climber and trail-runner (back in the day). I prefer Plan B. I've used the skier's bus and am willing to pay a toll to use LCC road, either annually-like we do for Millcreek-or on a per-use basis. The cost of a Gondola to access only Alta and Snowbird AND complete the additional road improvements seems too much for the public to bear, especially since so many in our community do not go up-canyon at all. Linda Metke
35663	Trishekl Triop	Please No Gondola! Find another way to get skiers up the canyon for these few months. Save the beauty of the canyon and the foothills heading up.
35664	Andrew Stitt	I support the gondola option if implemented in an environmentally sustainable fashion. The car/parking situation at Alta/Snowbird is not working well and is even worse on snow days. Let's reduce car traffic and pollution in the canyon and work to improve the experience for all parties.
35665	David Hopper	I disapprove of spending \$500 million of TAXPAYER MONEY on EITHER alternative that benefits such a small segment of our population and greatly benefits several PRIVATE BUSINESSES! People who insist on driving up a crowded canyon in peak times know what they are getting into. Traffic in the canyon could GREATLY be impacted by selective tolling during peak times and by increased bus service in peak hours. These options could be implemented quickly and inexpensively.
35666	Milo Kluger	The gondola would cause more harm then anything beneficial. I completely [REDACTED] this project and condemn it to hell. There are other options we may do to fix the issue at hand but a gondola is possibly the most stupid idea yet
35667	Leonid Balitskiy	Gondola is NOT a solution for the LCC at all. Neither from technical, ecological, or financial perspective. You cannot make plans based on the old techniques. All transportation is switching to ELECTRIC. Buses included. And when comparisons and considerations was made - it was assumed for diesel buses. Which would NOT be the case anymore. New electric buses are much more economical and require NO maintenance. So, the economic numbers would be completely different as well as ecological impact. The gondola will destroy the beautiful views forever and will affect natural habitats. While the road was there for more than hundred years, and the ecology is settled already for the existing road in some way. Third: why the whole people of Utah must pay to the thing that will ONLY benefit very certain group? (gondola will only serve skiers and will NOT work for hikers, campers, climbers). If ski resort wants it - they must finance it completely. 80-85 percent of residents in SLC valley do NOT want it. As a resident of Sandy, I am very concerned as have not seen how any document in EIS that explains how new parking for 2400 cars will affect traffic in Sandy and Cottonwood Heights (most negatively), will affect crime levels in the area, and emissions exhausts. Also, projects like gondola are very stiff and any error in planning or engineering will cause the ballooning of the costs, while the system will remain dysfunctional. While buses or other phased approaches are FLEXIBLE. Like you can easily move bus stops, sell buses, repurpose to other DOT needs. With gondola all those things are impossible. If something goes wrong it will remain the grand monument of stupidity (like the gondola near Moab, UT) or will be consuming more and more taxpayers money. The road was there and will be there for rest of the times and we shall use all benefits of that. Thank you for reading. Sincerely, Leonid Balitskiy
35668	Richard Ross	Recognizing that there are limited options because of the geography of the canyon, and out of the options put forth, I would choose the gondola B. It actually solves the main problem which is weather-related congestion. My main concern, as with many others, is the funding. I know funding hasn't been studied or identified yet, but it seems like the main beneficiaries of any of the solutions are the ski resorts and their patrons so they should bear a majority of the cost.
35669	Richard Dropek	We oppose the proposed gondola solution. It serves two business entities with public money. It transports a select group of skiers during winter months. It will be a visual eyesore to our beautiful canyon. We support a reservation schedule system that controls canyon access at peak use periods. This canyon supplies water to downstream users. More people equals more e-coli pollution to the stream.
35670	Jeff Brown	Respectfully, no gondola, please. I expect it to be over budget, take years longer than planned, and run similar to our existing poor roads and freeways, buses, and other public transport. Not to mention the scar in the canyon.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35671	Mary Jane Keleher	First - I do agree that something needs to be done about the congestion in LCC during the winter months. And I think that the preferred alternative may be the best option though it will definitely detract from the beautiful views up and in the Canyon. However, I want to stress again that though the ski resorts do bring in revenues, the other non-ski users of the canyon should have just as much right to access and use of the canyon as the resort users. I am fine with paying a small toll (during winter) to drive my car but if I do pay a toll I want to be fairly certain that I can find a place to park at one of the many trailheads along LCC. I am not a skier but I am an avid hiker and snowshoe-er. Trailhead parking improvements should be a top priority not just a sub-alternative and the improvements should be sufficient enough to meet parking demand if no road-side parking will be permitted. I am not sure what is meant by "no roadside parking within .25 mile". .25 miles from what? The ski resorts? The trailheads? Having access to the canyons is my #1 reason for living in Sandy Utah. Not having access for year-round outdoor activities would greatly reduce any reason for continuing to live here.
35672	Ben Young	I can get from my house to Snowbird in 20 minutes, even with some traffic. If a gondola takes 50-55 minutes from the mouth of Little Cottonwood to do the same, I would rather have my own car and deal with increased traffic, and probably still get there faster. Either find a way to make a gondola more enticing (faster!) or find another way.
35673	Scott Hall	The most practical solution is glaring. Obvious, IMO. Make the canyon(s) roads ONE (1) WAY TRAFFIC UP ALL LANES (except for emergency scenarios) from 0700-0900 And one way traffic down canyon from 1600-1800 Problem practically solved. QED This is a low cost solution and there are many functioning examples of this worldwide. Simple, easy, convenient and effective. And eliminates the "good ol' boys club," of criminal money grubbing special interest political favor doing family/friend nepotism practices that are well known and frequently proven.
35674	Sean Meegan	Please skip gondola and bus fighting - just restrict single occupancy vehicles from LCC between 7a and 12p every Saturday Sunday and Holiday and on weekday mornings where NWS official 6 AM snow report is 6 inches or more at top of LCC.
35675	Jacquelyn Wallenberg	I believe the gondola would not benefit the people of Utah. The environmental aspects and budget is too expensive for the citizens and I don't think this would help make things better.
35676	Sean Meegan	Please skip gondola and bus fighting - just restrict single occupancy vehicles from LCC between 7a and 12p every Saturday Sunday and Holiday and on weekday mornings where NWS official 6 AM snow report is 6 inches or more at top of LCC.
35677	Lily Ratliff	No gondola!! Let's improve public transit and set a toll at peak driving times on weekend mornings.
35678	Lorraine Kocik	Our household is totally against the gondola. The state has more pressing concerns. Using the money allocated to the gondola to find and implement a solution to the disappearing Salt Lake is beneficial to ALL Utahns, not just those who ski and recreate in one of the many canyons. AND if the money can only be used by UDOT - there is certainly enough roadwork and maintenance the money could be used for.
35679	Sean Meegan	Please skip gondola and bus fighting - just restrict single occupancy vehicles from LCC between 7a and 12p every Saturday Sunday and Holiday and on weekday mornings where NWS official 6 AM snow report is 6 inches or more at top of LCC.
35680	Sean Meegan	Please skip gondola and bus fighting - just restrict single occupancy vehicles from LCC between 7a and 12p every Saturday Sunday and Holiday and on weekday mornings where NWS official 6 AM snow report is 6 inches or more at top of LCC.
35681	Sean Meegan	Please skip gondola and bus fighting - just restrict single occupancy vehicles from LCC between 7a and 12p every Saturday Sunday and Holiday and on weekday mornings where NWS official 6 AM snow report is 6 inches or more at top of LCC.
35682	Robert Ferguson	You're going to ruin the natural beauty of this canyon and not solve the issue because your calculations on capacity are wrong. You'll have huge lines and people deciding to drive because of it.
35683	Sean Meegan	Please skip gondola and bus fighting - just restrict single occupancy vehicles from LCC between 7a and 12p every Saturday Sunday and Holiday and on weekday mornings where NWS official 6 AM snow report is 6 inches or more at top of LCC.
35684	Robert Douglass	The Final EIS acknowledges that the second angle station/transfer hub resides next to a former smelter location that has "a high probability of contamination," with lead and arsenic. Because the locale was not anticipated to be involved in any future development, EPA never previously tested the site nor designated it as a Superfund Site and therefore never remediated the site. The EIS says the site will be tested and analyzed during gondola construction. If it is contaminated, as the EIS says is expected, it would add cost and time to the construction of the gondola. To fail to test and assess one of the most important environmental impacts of the gondola alternative as part of an environmental impact assessment is a gross violation of the public trust and the NEPA process. Before the public can effectively comment on the EIS, the site needs to be tested, analyzed, incorporated into engineering plans and cost estimates, and provided as a risk assessment for public health both during construction and ongoing operation. The EIS needs a supplement or revision to include this testing and analysis.
35685	Catherine Gerhardt	The gondola would require removal/would destroy several areas in the canyon with established boulders. This would be devastating for boulders, particularly for local SLC climbers. Also, the construction required for be gondola would limit/remove access for climbers for years. The gondola is not the solution. Additional busing and rolling should be implemented for several ski seasons to gather further data before the gondola should be seriously considered. Further, the gondola proposal would use public tax dollars (as a taxpayer in Salt Lake City, I would not approve of this use of my taxes). If this project is to proceed (which locals do not want) it would at least need to be funded entirely by the ski resorts who will be the only party to benefit from the gondolas. If the gondola is to proceed, it would at least need to run during "off season," for the ski resorts so that locals can benefit for hiking, mountain biking, climbing, camping, etc.

35686	Sean Meegan	Please skip gondola and bus fighting - just restrict single occupancy vehicles from LCC between 7a and 12p every Saturday Sunday and Holiday and on weekday mornings where NWS official 6 AM snow report is 6 inches or more at top of LCC.
35687	Joanne Dangerfield	I look forward to riding a quiet gondola up the canyon. Our family rode a gondola in the Daintree in Australia and really loved the experience. Peaceful and beautiful ride.
35688	Shaunna Brugger	We fully support the gondola solution for little cottonwood canyon. Busses have never worked and are not a viable solution for the future.
35689	Paul Jensen	In favor of the Gondola B. Cuts down on automobile emissions.
35690	Mary Chamberlain	I VEHEMENTLY oppose the installation of a gondola system in Little Cottonwood Canyon! To install such a thing would cause irreparable damage to the mountain. I would rather pay for a pass, pay a toll, ride a shuttle bus, have limited days I could drive the canyon, ride an electronic bike or any other method of transportation to access hiking trails rather than seeing the destruction & devastation that the construction & installation of the proposed gondola would cause to the beauty & serenity of the canyon. The gondola cannot be the only alternative to 'traffic during the ski season.' I drive in the canyons in the summer 90% of the time to escape noise, construction, buildings, metal, etc. These mountains are my sanctuary. Turning this canyon into a construction zone for years & years at an exorbitant expense while destroying nature for the sake of less traffic during the ski season is not justified. It would be a tragedy to destroy the beauty of this canyon for the generations that follow us. I 100% oppose the gondola.
35691	Sean Meegan	Please skip gondola and bus fighting - just restrict single occupancy vehicles from LCC between 7a and 12p every Saturday Sunday and Holiday and on weekday mornings where NWS official 6 AM snow report is 6 inches or more at top of LCC.
35692	Nikki Meehan	I am for the gondola , I think it's a great idea!
35693	Ben Timms	The gondola idea was a bad one from the start. Needlessly expensive, elitist and just shocking to see that you've chosen the WORST of the available options. The train is a much better idea by every measurement.
35694	Marty Fried	I am adamantly opposed to the gondola for Little Cottonwood Cannon for the following reasons: 1. It will likely cost more than \$525-550,000. Many people put the actual cost at over a billion dollars just the way the new prison cost almost double the original price. 2. It will likely lose money in that the average person will not be able to afford it. 3. It is a taxpayer funded gift for two businesses. 4. Buses can stop anywhere along the route, serving hikers as well as skiers. 5. A separate bus lane is unnecessary. 6. The gondola towers and their cables will be a horrible eyesore.
35695	Doug Lloyd	It will be too costly and super congested at peak times no on gondola
35696	Ross Mitchell	Don't destroy this beautiful canyon and hinder peoples options when it comes to staying physically active. This canyon provides a place for climbers, outdoor enthusiasts to stay active while spending little money. Obviously for some, money is more important.
35697	Virginia Winegar	As a family who ski this canyon over 40 years--I do NOT want a gondola placed in the canyon. I feel it taxes the entire community and benefits only those like La Caille, Snowbird and Alta. The gondola will not stop at many other snowshoeing spots or hiking areas. I am positive if we look at UDOTS financing and the way they lay roads down just to dig them up again because of poor planning with development we could finance a better road and bus system. Moreover, wires and poles will FOREVER ruin the beautiful vistas of our canyons that we SHOULD PROTECT!
35698	Chris Connelly	I've spent the last 20 years recreating in little cottonwood canyon. The wasatch is shrinking as more and more people make Utah their home. I understand adjustments need to be made to accommodate the pressure the canyon gets from all the visitors every year in the winter. In order to preserve the natural beauty of the canyon, I believe it would be important to at least attempt some less permanent alternatives to solving this problem before something like a gondola is built.
35699	Royd Nelson	I am in favor of the gondola approach, provided a non-toll option is available for other wanting to use the canyon for purposes other than going to the ski resorts. The gondola should relieve the traffic by removing most of the ski resort traffic from the high way.
35700	Laura Hernandez	I write this today with a heavy heart and tears in my eyes to see that we have stooped to the level we're this is even a actual discussion we need to have. The fact that we haven't settle on a decision and there is so much fight back should be answer enough to understand the people Vote NO to the gondola! We can not devalue or put a price point on something many cherish, call sacred and hands down one of the most breathtaking canyons around. The gondola can not be the right and only answer. This seems like a quick and easy fix for a payout for the tourist, big developers and the resorts. Leaving the rest of us who call it home and make use of its beauty year round what this canyon actually has to offer to sort through the shambles of what will be left after such a destructive construction site. I leave a list of some of my views points below in hopes that other feel the same and share other views that will show you why we as the LOCALS will not cave and sell out to the highest bidders! VOTE NO TO THE GONDOLA!! * How would one access all of the middle points of recreation the canyon has to offer(not just Alta/snowbird) * How long is this going to take, the construction alone would worsen the traffic until completion. * Why can't we find other ways to spend \$550 million dollars into making sure the wasatch will still get snow in the next 40 years! * Destroying all the ecosystems of all plants/animals that's okay a major roll in our day to days. * Putting the money towards others alternatives! Like helping UTA with buses/shuttles, tolls, parking structures. * What's is the maintenance going to look like. In one of the most active avalanche canyons what are the plans if there is severe damage and or how to respond to a stuck cart! * The gondola will only create more traffic for it gives false hope that it will speed up one's time to get up the canyon. I'm reality's you are going to be creating nothing massive and unbelievably long long line.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35701	Charles Piper	What should taxpayer pay for it? Not a skier. Let the resorts pay for it. Too expensive and screws up the environment.
35702	Niki Jalali	This is going to cause very serious consequences to both the environment and the canyon. This is a decision that is not taking into account 80% of the general public who does not support this action.
35703	Kevin Landgren	no! The gondola is the worst idea ever. Don't ruin our canyon.
35704	Carol Kent	Can't agree with a gondola. It will be priced extremely high to build to benefit only the wealthy few in a small niche of winter recreation businesses. It will not be reasonable in cost or use by the local community, but only those in the community who are wealthy. It will be one huge eyesore in the canyon & of no benefit to those who live in the canyon.
35706	Debra Wetzel	I am opposed to the gondola. Please try other traffic solutions before such a drastic change to the beauty of our canyon!
35707	dennis devine	A gondola is not the right answer. Add more frequent electric bus service, a toll in each direction, with a reduced rate for those who carpool and increase the cost of parking at the resorts.
35708	Brian O'Reilly	I have skied at Alta and Snowbird for the last 50 years. The thought that we would put the gondola in the canyon it's just unconscionable. The solution in my view is to increase the buses, make the buses free fare and charge a daily fee just like they do in Millcreek Canyon for those who want to drive.
35709	Bruce Steinke	I am STRONGLY against using any funding that comes from coffers into which I have or will in the future pay any form of taxation. The gondola will mostly benefit 2 entities, the ski resorts. I would gain nothing for my share of payment. What percentage of tax paying residents would actually benefit? If snow slides are a problem for drivers, build a few snow sheds as needed - much cheaper than a gondola.
35710	Jo Anne Clay	<p>Utah DOT identified the Gondola Alternative B with phased in implementation as the best way to improve transportation in the canyon. I do not agree and am disappointed with this choice for the following reasons.</p> <ol style="list-style-type: none"> 1. The Gondola will operate in the winter during the ski season and will have two stops, Alta and Snowbird ski hills. It will not address traffic needs during the other 8 month of the year. Clearly, the Gondola option only supports the two ski resorts. 2. Using tax dollars that support two ski resorts and the land owners at the base of the canyon is a miss use of our tax dollars that benefit three private entities. Our tax dollars should be used to support the needs of the general public who use the canyon for a variety of recreational activities. 3. No where in the proposal address the disadvantages of the Gondola that will make it unattractive for the public. <ol style="list-style-type: none"> a. The ride is estimated to be 45 minutes one way. People are reluctant to use the existing bus service because they need to carry their equipment and the time to catch the bus each way. The gondola will require inconvenience to carry ski equipment and the time to get to the ski resorts is lengthy. I wonder how easily handicap people will be able to access the gondola. b. The cost of riding the gondola is not disclosed. Cost can be a detriment to individuals and families who pay a high price for seasons tickets or day passes. Many local people will be resistant to use the gondola to ski at the resorts. I will end up not skiing because of the cost and inconvenience. c. The gondola will impact the beauty and esthetics of the canyon and will impact the safety of the water during construction. It will be an eyesore to those who enjoy the canyon during the whole year. d. Traffic will continue to back up on Wasatch as people enter and leave the proposed parking lot for the gondola. 4. UDOT considered the plan's ability to substantially improve transportation-related safety, reliability, and mobility for all users on S.R. 210. The problem with the Gondola Proposal is that it benefits only 2 user groups, ski resorts and people skiing at the resorts. Please note that the public that goes skiing multiple times during the season who do not stay at the resort will be resistant to using the gondola regularly. Traffic and safety are addressed only during the ski season. <p>I support alternative ways to improve traffic and safety along S. R. 210 and some of these alternatives have been utilized to improve traffic flow.</p> <ol style="list-style-type: none"> 1. Ski resorts require reservations to park on site. I live along Wasatch between the two canyons and have noticed a dramatic reduction of traffic along Wasatch when this policy was implemented. 2. Maintain 1 lane of traffic each direction with a center left turn lane for side streets. In addition to these three defined lanes, a separated bike lane needs to be built for bikers and hikers who use the street for transportation and recreation. The 3' lane next to the road is not safe. 3. I have noticed that many of the parking lots for people who use the bus during the ski season are full. Communication needs to be developed to let skiers identify where they can park. To reduce inconvenience of local skiers using the bus, more lockers need to be available at the resorts.

35712	Ashton Pelley	<p>the gondola will be detrimental for the canyon and the people of Utah for many reasons. Starting with the canyon, it will make a construction zone of our watershed, allowing possibilities for contamination, affecting every Utahn and visitor who wants clean water to drink. The gondola will damage many of our recreational areas, including climbing areas, hiking and biking trails and precious nature that many come to enjoy. The actual gondola will not alleviate traffic in the canyon, its goal is just to shovel more people into an already over crowded canyon. More effective solutions would be electric buses with mobility hubs, paid parking on busy days at resorts, and tolling for canyon driving.</p> <p>I really hope that the fate of the canyon can lie in the hands of the people who actually care about and recreate in the canyon and not "Gondola Works," and those who invest.</p>
35713	Maddie cook	<p>Please please consider other options. Increase busses don't take them away. This could effect so much of the canyon and the wildlife. No gondola!!!!</p>
35714	Mark Harshany	<p>I now know the pain of Edward Abbey. This proposal is egregious. Progressive elimination of all the beautiful things. No to the gondola</p>
35715	Whit Gardner	<p>NO to the Gondola!! Please!!</p>
35716	Robert Douglass	<p>Section 4(f) impacts to public recreation areas, Volume 26: The FEIS fails to mention the environmental impact on the public recreation area directly across from the proposed gondola base (La Caille). This land was purchased by the Utah Open Lands nonprofit using taxpayer and individual donations for the express purpose of providing public recreation in an open space adjacent to undeveloped National Forest land. The land is listed as belonging to the town of Cottonwood Heights per the Salt Lake County parcel database and is therefore clearly public land. The stated intention of the public purchase of the land was to retain it as open space for public recreation. It clearly falls under the definition of a "public recreation area," of Section 4(f). The Final EIS Preferred Alternative will position a gondola base and a massive parking structure possibly with a new traffic light directly across from and adjacent to this public recreation resource. The Preferred Alternative will move heavy traffic that today piles up in the Canyon down to Little Cottonwood Road adjacent to this Open Space. Traffic will be stalled at the traffic light and at the parking structure waiting to enter it during peak times on peak days. This will destroy any privacy and quiet and air quality in the Open Space. The Final EIS neglects to even identify this area as being the public recreation area it is, and does not consider the impact of the gondola. This is clearly a violation of Section 4(f) requirements.</p>
35717	Jesus Garcia	<p>Pro gondola so long as it supports the demand to push people up the canyon quickly and effectively.</p>
35718	Matthew Miller	<p>The gondola project should not move forward. The total cost of ownership and permanent environmental impact will become a burden on each citizen while only a fraction will get the benefit. Please stop this project.</p>
35719	Sandra Tanner	<p>I am opposed to the building of a gondola in Little Cottonwood Canyon. The Salt Lake County leaders have made alternative proposals. Please take their recommendations.</p>
35720	Lauren Thomas	<p>We don't need an eye sore, or the tax payers to fund this project. Also we don't need thousands more ppl at the resorts. A solution needs to be discussed that's less impact and will address traffic in both LCC and BCC</p>
35721	Chalis Benda	<p>No to the gondola! UDOT needs to exhaust all other options before. (more buses, toll into the canyon, etc). The gondola will only benefit the two resorts in that canyon. Little Cottonwood canyon will be destroyed and never be the same. It not only is for skiers - it is for hikers, climbers, photographers, etc. It is universal in its beauty. The gondola will take years and years to complete, wont there be congestion then? Taxpayers will be funding this. As one, I do not want to be taxed on something that I will never take/benefit from.</p> <p>You are making the wrong decision. Exhaust all other options before. THIS IS WRONG.</p>
35722	Diane Naylor	<p>Please consider the pleas of the vast majority of taxpayers and residents...let's creatively solve the problem of LCC transportation without resorting to the gondola plan. It seems it would do little to solve the issues for access to the entire canyon and would leave an irreversible scar on both the canyon itself and the public treasury. My vote is NO to the gondola. Thank you.</p>

ID	Full Name	Comment
35723	Elizabeth Cloward	<p>the gondola will be detrimental for the canyon and the people of Utah for many reasons. Starting with the canyon, it will make a construction zone of our watershed, allowing possibilities for contamination, affecting every Utahn and visitor who wants clean water to drink. The gondola will damage many of our recreational areas, including climbing areas, hiking and biking trails and precious nature that many come to enjoy. The actual gondola will not alleviate traffic in the canyon, its goal is just to shovel more people into an already over crowded canyon.</p> <p>The gondola would only service the ski resorts, so it is impractical for anyone who recreates anywhere other than the resorts. It is funded by taxpayer dollars, but no one wants it.</p> <p>More effective solutions would be electric buses with mobility hubs, paid parking on busy days at resorts, and tolling for canyon driving.</p> <p>I really hope that the fate of the canyon can lie in the hands of the people who actually care about and recreate in the canyon and not "Gondola Works," and those who invest.</p> <p>Our natural beauty should not be put at risk for a tourist attraction that won't help locals at all.</p>
35724	Nathan Sutherland	<p>As I was driving in the Red Snake yesterday, I was thinking about the gondola and what I wanted to say. I could mention how it is a horrible idea, how it would ruin the canyon, or how it is just ploy of nepotism; realistically though, it just is not the best solution. UDOT looked at ideas the included widening the road, putting in the worlds biggest gondola, or a train. However, from the public eye it seems they overlooked the cheapest and most efficient option. Buying a big fleet of buses, and running them every five minutes during peak hours. Hell, you could make the fair free and give everybody a meal on their way up and it would still be significantly less expensive.</p> <p>I understand that buses don't address the issue of road closure due to avalanche. As a property owner in Alta, I can honestly say; big deal. We are talking about a "remote wilderness" in which UDOT should take it on the shoulder and tell people that it is alright if they can't get to 1 of the very few businesses up there for a day or two. Unfortunately, this would take UDOT choosing the harder right over the easier wrong and telling these private corporations that they can't be the sole beneficiary of massive amounts of tax payer money.</p>
35725	Stacie Petersen	<p>Please do NOT implement the gondola option!!!! This is a huge response to a problem on a few days for a few people. There MUST be a better solution to the overcrowding problem. Reservations, parking fees, more busses on heavy traffic days are examples of solutions that can be utilized only on days when they are needed as well as clawed back if the need evolves and is no longer necessary. This is a stretch that has huge costs, huge ramifications and will permanently change the landscape of this beautiful canyon. I love to ski but you will ruin this canyon by doing this. Please ... find another way!!!!</p>
35726	Valerie Macris	<p>I am against the gondola as I believe it invades the landscape and permanently alters the canyon. Busing is a better option - even if it requires some widening of the road.</p>
35727	Alex Ogilvie	<p>I am strongly against building a gondola. I think it's a very poor use of taxpayer money and vastly irresponsible.</p>
35728	Kevin Wise	<p>As a lover of the outdoors and an advocate for sustainability, I know there are reasonable, planet-friendly, and cost-efficient solutions to the transportation issues in Little Cottonwood Canyon that DO NOT involve a gondola. I stand with many others when I oppose the plans to spend \$500-600 million of taxpayer money to install a gondola that will destroy the beauty of the Canyon and remove or destroy many classic climbing boulders. I support Salt Lake County's other common sense solutions including tolling, electric buses, rideshare programs, parking reservations, microtransit, incentives, and traction requirements.</p>
35729	Terry Schlichter	<p>Little Cottonwood Canyon is a local Treasure. Cutting a service road for a gondola is a horrible idea. A gondola with towers, cables and a service road would greatly detract from the beauty of the canyon. It would also drive wildlife away from their habitat along the creek. Humans have encroached into the wild and overdeveloped the Wasatch too much as it is already adds stress the local wildlife. I use the resorts and canyons often. I think the only option to alleviate traffic is a toll on busy days. I also don't want to see the bottom of the canyon become a parking garage. Leave our canyon alone. This is not UDOTs canyon, nor the development group from snowbird and Altas canyon, this is my canyon and everyone else who uses and loves the canyon. The future of the canyon should be decided by the people that live here and pay taxes. Not UDoT, developers or lobbyists. NO GONDOLA, NO ROAD EXPANSION. NO TAXPAYER FUNDS FOR ANY PROJECT IN LCC. SNOWBIRD SHOULD PAY FOR ANY PROJECT. Toll booth is the best option for the busiest days -E Sandy resident</p>
35730	James Bean	<p>I am going on record as being against the Gondola I any way, shape or form. The devastation to the canyon will be permanent. If the Gondola is approved it should be 100% paid for by the resorts and developers</p>
35731	Irene Yoon	<p>Please-the gondola is SO UNPOPULAR. PLEASE do not do this. Visually, environmentally, and logistically, the idea is really repulsive and short sighted. Please, NO gondola.</p>
35732	Larry West	<p>I have been skiing at Snowbird as a regular season pass holder for the past 28 years. I have skied no less than 45 days each season, and some seasons as many as 90+ days. I also worked as a Snowbird employee for four years from 1994-1998. From my vast experience of driving up and down the canyon there is only a concerning traffic and parking issue in the canyon on 20-30 ski days per season. The gondola is an unnecessary and costly solution to a rather minimal and seasonal problem. If this gondola is built it will have drastically negative and permanent impacts on the beauty and ecology of the canyon. The whole idea is fueled by greed in my opinion, and from my economic analysis will be a failure. I have a degree in economics from the University of Utah, and I am and have been a licensed professional in finance for the past 24 years. This gondola plan should be halted immediately.</p>
35733	Dennis Bennion	<p>This is the dumbest thing that I have ever heard of. No wait lets pump water from the coast to save the Great Salt Lake. Both are equally stupid ideas. Just widen the road and let the ski resorts deal with the parking at their resort. Or close them down altogether.</p>
35734	Patricia Standriff	<p>No Gondola! With climate change projections we won't even have enough snow for skiing in the next 10-20 years so the point will be moot.</p>
35735	Ernest Simons	<p>We do NOT need the gondola! This can be fixed with the bus system. The only days that are congested with traffic are the weekend mornings. If die hard people want drive to be up there at the opening then they just need to leave earlier than 8 am. The worst times are 8:15 to 10:15. Locals know when to go up on snow days and it is very random. I'm in the construction business and this doesn't constitute a big job for a gondola. Thanks</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35736	Alfred Kessi	A cable car is not the solution. Too slow and too cumbersome to get to it. I suggest to widen the road and build avalanche protection 1/2 tunnels like in Switzerland, where I grew up. Then provide more parking in Alta and Snow Bird. Yesterday at the Oktoberfest, there were an incredible amount of cars.
38348	Robert and Ida Wilson	Dear Committee, I am not in favor of the Gondola idea for Little Cottonwood Canyon because: Gondola Cost is too cost-prohibitive. The Gondola Idea would be serving only the rich & wealthy patrons The Gondola would prevent the everyday public from enjoying access to the canyon. The Trailheads & campgrounds need vehicles to access The Gondola Environmental Impact on the Canyon is bad for future generations. The only real problem with Little Cottonwood Canyon is a crowd on "powder days" during the Holiday weekends and occasional avalanche danger, which access is controlled at the gates. Robert Wilson
35737	V Meltzer	prefer having more bus options rather than gondola
35738	Victor Wolder	I have a way to pay for it 100% without ANY public Tax Dollars! I just need a meeting!
35739	Alexandra Berardy	I DO NOT support the proposed gondola. Please DO NOT do it.
35740	Tahlia Walbrecht	Please don't build this gondola. Don't ruin the natural rock and beauty of this canyon for a "mode of transportation," that won't serve majority of canyon goers.
35741	Maren Bayles	Please don't destroy little cottonwood. You can't get back what you destroy. You'll be unnecessarily impacting natural habitats, our watershed, ecosystems, and public recreation/enjoyment.
35742	Jordan Berardy	I DO NOT support the proposed gondola. Please DO NOT do it.
35743	Judith Simmons-Kissell	Please do not build a gondola up Little Cottonwood Canyon. Find other solutions to relieve the traffic up this canyon and Big Cottonwood.
35744	Kristina Keene	PLEASE DO NOT put in a gondola. I am very much in favor of turning the road up into LCC into a toll road, limiting the number of vehicles in the canyon at once, and increasing bus runs as a first step before doing something as drastic as installing a gondola that is unlikely to reduce traffic in the canyon and will be an eyesore.
35745	William Small	The gondola seems to be a development scheme to enrich the few like Chris McCandless and is completely overkill for bad traffic 15-20 days/year. The massive destruction of the landscape to install the towers and access roads will ruin the natural beauty of the canyon, and only benefits the ski resorts. What would taxpayers pay billions to make the resorts even more crowded when most never even go up the canyon to ski or otherwise. More buses would solve the issue for millions/billions less. Revoke lkon pass access to Alta and Snowbird. That's how the problem began. It was never crowded before that!
35746	Lesele Rose	There is absolutely No reason for taxpayers to shell out any money just to support the 2 very successful businesses that will profit from UTA expansion up the canyon. If Snowbird and Alta want to improve transportation, they can invest their money into smart solutions. Don't waste taxpayers money!
35747	Alisha Wardell	I DO NOT support the proposed gandola ! Please DO NOT do it!
35748	Marissa Sullivan	My last comments was on a logical basis for why this is a horrible plan. I guess this one will be more of a personal appeal even though it won't matter. As a SLC transplant, I may be considered part of the problem by some, but I find myself extraordinarily lucky to have gotten a job offer and been able to move out here. Coming from a bland midwestern town with the highest elevation being 200ft about sea level, I do not take the beauty of the Wasatch Front for granted. Heading up little cottonwood last week to boulder, even after 50 odd trips up that canyon, I was in awe of the stunning cliffs in contrast with the beginning fall colors. To mar this natural gem of beauty and recreation with what should be a last ditch solution to a problem that is honestly only present on the odd weekend powder day (by which the number seems to dwindle each year) is heartbreaking. An an Alta passholder, if people have to wait in traffic so that this canyon isn't obliterated, then we have to wait in traffic. Instead of gutting the bus service due to "budget," reasons, can we not increase the bus service and expand the park and ride lots? I thought Alta's parking system worked great- can Snowbird not adopt something similar? I can only imagine how much of a nightmare traffic and parking will be at the gondola station. But those have been "considered," and the gondola was somehow still recommended. Please reconsider this absolute travesty.
35749	Vonda DeStigter	Please-tolls! No gondola.
35750	Reilly Fenton	All other options should forefront the gondola. Try every other avenue before you forever change the shape of skiing in LCC. A costly gondola inserted before trying other avenues only values the interest of shareholders for the resort, not locals or the environment. Please listen to long term Utah residents and indigenous voices on this matter- we overwhelmingly do not want a gondola!
35751	Pam Funk	This Alternative B does not address the fact that avalanche danger will still impact transportation up the canyon during certain times. The cost, the unsightly snow sheds, the travesty of putting this maintenance cost on future residents, also considering earthquake zones in the area. This is a huge mistake. The EIS does not begin to cover the problems the gondola project will encompass. Increase electric busses in designated lanes for peak traffic times- makes sense.
35752	Fred Priwo	Electric buses that run frequently through peak times. Some minimal widening of the road so there are spots to park buses/cars if issues arise. No consoles \$\$\$.
35753	Carl Merino	The idea of a gondola traversing little cottonwood canyon is absurd and is only money driven by the investors in the gondola concept. The number of gondolas to move adequate numbers of people would be extensive, and would become very intrusive on the beauty of the canyon. This would be a permanent and large scale solution to a problem that only exists during certain and limited times of people either going to or leaving the ski resorts in the morning or afternoon. I have had ski passes to Snowbird and Alta for years and there is only about 2 hours on Saturday and Sunday during the ski season when the traffic becomes very bad. This only occurs during December, January, and February, or roughly 12 weekends or 24 days out of the year, that simply does not justify destroying the beauty of the canyon so a former state legislator can cash in!

ID	Full Name	Comment
35754	Hannah Zander	The last thing we need in little cottonwood canyon is a gondola. We need to implement a year long solution that would benefit more Utahns than skiers/snowboarders. Public transit should be public. A cog rail would be the best thing for the canyon. Switzerland does this well.
35755	Ed Manuell	<p>With this gondola system having only two stops at Alta and Snowbird, those two companies should pay for it instead of the Utah taxpayers. The cost is much too high to the taxpayer and not being levied on the beneficiary companies.</p> <p>Also, no one has addressed the safety of the system and similar ones today. For example, rumor has it that one of the new gondolas at Snowbird was dropped this past summer. What happened there? Is this new proposed one similar? Why was that incident not on the news?</p> <p>Having people pay for parking at the resorts appeared to decrease the traffic in the canyon last year. Maybe a toll during the ski season would be effective as well.</p>
35756	Maura Hahnenberger	<p>This project states "Ultimately, the partners seek to deliver transportation options that meet the needs of the community while preserving the value of the Wasatch Mountains."</p> <p>Definitively the Gondola option does not fulfill these goals as stated by the project. I am writing in opposition to the Gondola option for Little Cottonwood Canyon. Enhanced buses would much better meet the needs of the community and provide flexibility for future challenges.</p> <p>Does the Gondola meet the needs of the community? No, the gondola is expensive to build and run, and will be expensive for riders. The gondola would be extremely time consuming to ride due to difficulties with regional connectivity (that buses currently have). The Gondola would only serve winter time ski resort recreators and would not have any flexibility to serve other canyon users. The gondola would do nothing to address the current and ongoing avalanche hazard to the Little Cottonwood Canyon road. The gondola is opposed by Salt Lake County and the local canyon communities.</p> <p>Does the Gondola preserve the value of the Wasatch Mountains? No, the gondola would have an extremely large footprint at the base station and top station. It would be a huge eyesore in the entire canyon and fundamentally alter forever the character of Little Cottonwood Canyon. It would destroy climbing and hiking resources throughout the canyon. In addition to visual pollution, it would also increase noise pollution through the entire canyon.</p> <p>The enhanced bus option is much preferred due to its flexibility for meeting future travel needs in winter and summer for a variety of canyon users.</p> <p>Thank you, Maura Hahnenberger, PhD Sandy Hills Resident</p>
35757	Luke Harris	Gondola is a bad idea!! As an active user of LCC all-year round i am vehemently opposed to the idea of installing a gondola. Its wayyy too expensive of an option especially for tax payers to be footing something that benefits the ski resorts, if the resorts want it then they should pay for it. It also is entirely too invasive/damaging to the canyon; LCC has such a natural beauty and it would be a shame to have it ruined by a huge gondola going down the middle of it. I believe short term mitigation options are described in the proposal are enough to solve the problem long term and before a long term option is funded/decided/implemented the short term options should have a chance to play out. In short, no gondola ever and resorts should pay for whatever option is choose not tax payers

35758	Eric Albers	<p>I am deeply disappointed to hear that the gondola is the preferred transportation alternative for Little Cottonwood Canyon. This decision was based on a flawed analysis that ignored public input, chose the alternative which is objectively the worst at addressing congestion (per UDOT's own analysis), and is by far the most expensive. The Western United States is rife a history of public land fraud, gargantuan infrastructure investment for the benefit of the few, and fragrant violation of the public trust. If the gondola is constructed, it will be added to this list, and serve as a case study in western governmental lunacy.</p> <p>Wilderness Values Designated wilderness is incredibly important both ecologically and socially for the Wasatch Front. This is becoming more apparent with an increasing population. A cherry-stem for Highway 210 and other private in-holdings in Little Cottonwood Canyon already diminish the wilderness qualities of the adjacent Twin Peak and Lone Peak Wilderness areas. Adding a gondola to the mix would be a blow significantly worse than the others mentioned. I go to these wild places to seek solitude. The gondola will DESTROY that.</p> <p>Despised by Utahns Please do not shove this decision down our throats. Utahns do not want it. The Hinkley Institute recently found that only 20% of Utahns support a gondola. The other 80% are adamantly opposed to this alternative. What will the rural Utah farmer think when he hears that the state is subsidizing two of the richest ski resorts with tax payer money. What will the fiscal conservative think? This will draw ire from people of all political leanings. If you choose this alternative, prepare for a firestorm of outrage from the public.</p> <p>My Story I spend a minimum of three days each week in the central Wasatch, much of which is spent in Little Cottonwood Canyon. Even though I am an avid snowboarder, I don't Ride at Alta (clearly) or even at Snowbird. This Gondola will not benefit me. Additionally, I spend countless hours in the canyon back-country touring, climbing, running, and hiking. Not only would the gondola not service me in these activities, it would actively detract from the experience I go to the canyon seeking.</p> <p>I beg you not to proceed with this alternative. It will forever destroy Little Cottonwood Canyon.</p> <p>Sincerely, Eric Albers</p>
35759	Amy Loverin	<p>Please do not move forward with the gondola. It will alter the experience of the canyons in a negative way. Access to climbing areas will be compromised along with years of constructions. The gondola perpetuates inequities, environmental marginalization, and injustice. Tax payers should not be funding a limiting mode of transportation. There are better solutions such as parking structures with e-busses which provide for more flexibility and less environmental impact while increasing accessibility for all. Listen to the people please!</p>
35760	Christine Barker	<p>I oppose the proposed gondola for the following reasons: -It only benefits a small portion of the population for a limited number of days per year. -It only services ski resorts since it does not stop anywhere else. -There are less impactful and less obtrusive methods that would benefit canyon access year round -Taxpayers should not fund a project that benefits and enhances the operations of private commercial entities UDOT is unfairly influencing the evaluation of proposed phasing by eliminating some of the existing ski bus routes</p>
35761	lynne meixell	<p>A gondola is an expensive solution. I prefer busses and multi-vehicle cars</p>
35762	karen keeley	<p>I am against the gondola. I think it is foolish to put up a permanent structure without trying less invasive alternatives first - like an expanded bus service or a toll or reservation system to drive up Little.</p>
35763	GARY CASH	<p>I feel this whole project has been forced onto the local residents In a high speed, overwhelming way, before a regular citizens have a chance to read thousands of documents with comments only available by reference residents in a 45 day span. Stop the project completely. Project was thrown at the citizens in such a short time that they can't organize fast enough to fight BIG MONEY and Political interests. You use environmental impact statement Avenue and OK to go ahead with the project. Just because you can go ahead and not break any environmental rule doesn't mean you should build it. I live on little Cottonwood Road, there is no line painted down the center with one lane going in each direction, not wide enough to even allow left turn lane. First you need to prepare Road all the way around the intersection of Little Cottonwood Road and Wasatch Dr. STOP FAST TRACKING, STOP THE BIAS BUILT INTO THE WAY YOU'RE DOING THIS PROJECT. Even bias in the way you are collecting comments from the public by the format of the comment box only allowing two "6 character," words per line. The project proponents have unlimited financial resources to advertising, billboards and Media, what is a resident doesn't have the resources to fight the big push of money and politics. Because of Covid, inflation, high interest rates and gas prices, We the residents are in a weakened state and can't properly fight such aggressive politically driven campaign. STOP THE PROJECT, SLOW DOWN THE PUSH, Just because you can build it doesn't mean you should.</p>
35764	Mackenzie Freeman	<p>No to the gondola</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35765	Doug Beattie	I feel strongly that a gondola in Little Cottonwood canyon would be a very bad idea. What would happen if an avalanche took out a tower? How long would it take to rescue people from gondolas if for any reason they got stopped and could not move. It is one thing to have persons turned back either down or back up the canyon to safety with only a few caught in a situation, but don't strand the whole group of those on a non-movable gondola system. I think the ad showing a dirty bus versus a clean gondola is only propaganda to convince stupid people that the gondola is a better way to travel. Don't insult us with such ads. I'd prefer to simply leave travel the way it is with possibly more buses to make it easier for those who are concerned about parking or road conditions to have that choice. Do NOT consider a gondola system. The only thing a gondola system will help is to put money into a few developers/investors pockets.
35766	Makenna Gilson	I do not support the proposed gondola! Please please do not do it. It will ruin that canyon!
35767	Mark Hammond	Please go through with the gondola! The benefits to the environment far outweigh the costs. Listen to the silent majority. We desperately need this gondola if we want breathable air.
35768	Scott Jackson	I'm a Utah voter and often use Little Cottonwood Canyon. I'm opposed to the gondola because I feel it only benefits private businesses and their customers, but damages public resources. I would be supportive of other solutions (improved bus system or tolling).
35769	Kurt Kohler	Not interest in the Gondola. To much tax payer money to support the ski resorts Does not help hikers or bikers Perhaps we simply have to many skiers Maybe free parking for full cars and an App built by UDOT that helps us carpool
35770	Linda Whitmore	I have lived near the mouth of the canyon for over 60 years. Why ruin it year round for the locals? Traffic is only a problem a few days of the year. Those powder days. The rest of the time the traffic is fine. Perhaps the ski resorts can limit the number of guests they have like other resorts do around the world. To limit traffic. Which is the most economical solution to us tax payers. Second Chris Macandless will directly gain financially if it goes through so of course he is for it. I am strongly against the gondola!!
35771	Paul Longhurst	I am opposed to the construction of a gondola for several reasons: <ul style="list-style-type: none"> - The gondola will only provide transportation to the ski resorts, providing exclusive benefit to those resorts. There are other destinations in the canyon that will not be served by this proposal. - Major traffic disruptions and impact to the "La Caille" area. "Old Wasatch" does not have enough capacity to serve the traffic influx a new base station would create, thereby causing massive roadwork and other infrastructure changes at taxpayer expense. - The gondola will be highly disruptive to the natural beauty of the canyon. - Expanded bus service and parking reservations at the ski resorts are two excellent ways to address congestion on the roads without requiring additional infrastructure investment.
35772	Paul Jones	I'm in favor of the gondola, provided costs can be kept in check.
35773	Steve Somers	I am supportive of the proposed gondola. Of all the options proposed to increase travel efficiency up the canyon, I believe this is the best and least environmentally impactful option. We need to increase efficiency up the canyon, this is good solution without adding more traffic on the the road.
35774	Tyler Knibbe	I do not believe the gondola is the best use of our tax money. Prioritize building both transit hubs, and buying more electric buses. The roadway does not need to be widened. Efficient public transportation where the buses use a bus lane to reach the base of the canyon is the only way to get people out of their vehicles. Buses go up the canyon first on closure mornings and get first tracks! Once people see it happening they will ride the bus. Thank you for your efforts Tyler Knibbe
35775	Cindy Albert	Opposed to the gondola. Let Utah stay in its original beauty. We don't have the snow to support this piece of equipment or the eye sore it will bring to our residents. Leave our canyon alone
35776	James Youngberg	Point 1 Most recreational resources have inherent maximum capacities. As these natural limits are approached, the experience associated with such resources naturally degrades. The public's enjoyment such resources is naturally limited-either in quality or in the number of visitors. We see this process at work in many of our national parks as well as in the use of rivers and hiking and mountain biking trails. Zions Canyon is a good example where demand for the canyon eventually could not be responsibly satisfied by building wider roads and/or more visitor facilities. Rather, bus-only access for the main canyon and a reservation system for back-country trails were implemented several years ago, limiting use of the resource. Many of us bemoan reduced availability of scenic wonders, whitewater experiences, backpacking trails, and camping resources we once freely enjoyed, but this is the inevitable result of growing demand for a finite resource. The Big and Little Cottonwood canyons are such resources. Demand is already beyond the stage where the user experience has begun to degrade significantly. Attempts to expand the capacity of the resource (wider roads, a gondola, helicopter access, expanded busing, etc) cannot forestall the inevitable need to limit access. It's time to consider limits on the number of patrons using the commercial portions of the resource, enforcing such limits by community-mandated reservation-only access. Point 2 Currently-proposed remedies for relieving congestion in the Big and Little Cottonwood canyons impose significant funding requirements on very many whom seldom use the resorts and hence will derive no benefit from their tax dollars. On the other hand, the disproportionate beneficiaries of these expenditures include many out-of-state patrons, the resorts themselves, and a small number of related businesses (principally accommodations and restaurants). If the resorts were publicly operated, then publicly-funded approaches to the congestion problem they have created might be reasonable, but they are not. As things stand, both new infrastructure and its on-going maintenance and operation should be funded by those who will benefit directly, not the public. That this is probably an impassible obstacle to such development should be a clear signal to those who hold the public purse strings.
35777	Kim Baker	Please make a bus lane
35778	Ryan Rittgers	From everyone I have talked to at the U, myself included, the decision is unanimous that the gondola unnecessarily obstructs and devalues the beauty of the canyon.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35779	Robert Douglass	<p>Section 4(f) impacts to public recreation areas, Volume 26: The FEIS incorrectly states that the impact to Tanners Flat Campground by the Gondola Alternative Option B is de minimis. People use Tanners Flat as a basic-resource campground. It is situated between two National Wilderness Areas and is valued by recreationists for the unobstructed views of the environment's beauty but especially for the peace, quiet, and solitude the location provides. The campground is heavily visited and is especially inviting for tent camping. The gondola will move more than 1,000 people and up to 3,400 people per hour in gondola cabins directly over the head of campers. Per the Final EIS, two gondola towers will rise over 100 feet above the campground on both ends. A gondola angle station with large operating motors with diesel backup generators and the noise of cable transfer mechanisms will be positioned just west of the campground. The environmental impacts on Tanners Flat include robbing campers of any privacy and solitude, as well as defiling their view and subjecting them to additional noise. The FEIS is negligent in declaring these impacts as de minimis - they destroy the very reason for camping in a National Forest amid National Wilderness Areas. The Final EIS implicitly acknowledges the substantive nature of these impacts by cynically stating: „Äusers could shift from tent camping to recreational vehicle (RV) camping.„Ä This is far from a de minimis impact. The FEIS gives a feel, albeit an attenuated one, for the impact on campers with its image in Volume 17, Appendix 17A, KOP 9, page 39:</p> <p>The Final EIS (Volume 17A_KOP_Bus_Gondola Figure KOP 9, page 39) asserts the gondola passing directly over Tanner's Flat Campground is a 'de minimis' impact on campers. Note the EIS shows a cable car that has already passed over the campsite and is at some distance, apparently attempting to minimize what is a substantial impact on this public recreation area. It is clearly shown in the EIS figure that the gondola will rob campers of all privacy and solitude. It also adds 50dB to the road noise, effectively doubling the noise impact.</p>
35780	Michael Fairbanks	I support the gondola.
35781	Eric Chabot	<p>The gondola is a terrible waste of public resources and could cause more congestion problems than it solves. It's a boondoggle! We need to try common sense, revenue-generating solutions (tolling!) before we go spending millions on dollars of public resources on a project that will permanently alter the canyon year-round and only benefit a relatively small number of resort skiers (and for-profit businesses) a few days each year.</p> <p>Please abandon this foolish and wasteful project.</p>
35782	Barbara Roberts	I hope they put something in like this. The cars are ruined the canyon and makes it unpleasant to drive up them. Way too many vehicles. Many places in Switzerland do not allow cars up to places like Zermatt . . The have trains and cog tracks to whom it may concern.
35783	Stephanie Tobey	<p>I am writing to voice my concern over your plan to build a gondola to provide service to the ski resorts in Little Cottonwood Canyon. I believe that it will create more traffic issues than it will solve.</p> <p>I have lived in Cottonwood Heights for 47 years. In fact, my home is [redacted] of Big Cottonwood Canyon ([redacted]) and I must use Fort Union Blvd. every day in order to drive to work downtown. In fact, Fort Union is the only way for me to get anywhere north of my home.</p> <p>In the winter, it is not uncommon to have traffic backed up for miles with skiers and snowboarders anxious to make the first tracks on freshly fallen snow. Traffic will back up all the way down Wasatch Blvd. to the freeway, with more cars stopped on I-215 clear back to 4500 S. Drivers also back up traffic on Ft. Union to 3000 E. and then down the hill to 6200 S. As there is not a stop light along Ft. Union between 3000 E. and Wasatch Blvd., it can take up to 20 minutes for me to get out of my neighborhood and on my way to work. What is worse, cars have discovered that they can try and cut through my neighborhood to access the newly built Canyon Centre Pkwy and then turn south on Wasatch Blvd. They speed through the neighborhood to beat others that might have the same idea, without much regard for the residents and their children that might be playing in the neighborhood.</p> <p>For those that do wish to use the park-and-ride lots, they find that they fill up quickly, and then decide that the best thing to do is park along Ft. Union, which then puts them at risk of getting parking tickets or causing more traffic issues.</p> <p>In addition to the traffic headaches, having that many cars on the road means that many of them idle while waiting to go up the canyons. This idling increases emissions, which worsens air quality for all that live in Salt Lake County.</p> <p>I believe the gondola will only entice skiers to continue to drive to the mouth of the canyons. While it may cut down on traffic up Little Cottonwood Canyon, it will only exacerbate the current situation of too many cars that are on the road. It does nothing to address the bigger issue of lack of park-and-ride lots, sketchy public transit, and too many cars competing for limited parking spaces at the resorts. The gondola will benefit two resorts that have not done much to help alleviate the situation. Therefore, if they want this so badly, then they should pay for it. It does not provide a public benefit, as only those that can afford the hefty cost of skiing and snowboarding will use it.</p> <p>I think that a better solution to address the overall problem is to bring UTA, community leaders, residents, and representative from the resorts together to come up with a solution that will benefit all. This should include unpopular</p>
35784	Eric Jerome	I echo the sentiments of the SLCA and highly oppose the gondola. I strongly support the use of improved bus services, carpooling, and other less invasive and costly alternatives to the gondola that are in service of all user groups. This would irrevocably alter the climbing and other recreational activities in the canyon, wiping away and alienating my local and traveling climbers and recreationalists. This history of climbing in this canyon is incredibly important and its preservation is paramount. Please do not move forward with the gondola or road widening alternatives. Thank you.
35785	James Whitmore	Leave it the way it is! 8 days of snow powder days doesn't warrant changing everyone's world
35786	Karen Brown	I like the Gondola solution as long as the Ski Area owners pay their share.
35787	Randy Larsen	Do not put the gondola in the canyon. It will spoil it. It will cost \$1 billion. No! No! No [redacted] gondola!

35788	Dustin Bay	The gondola is an innovative solution that will create opportunities for Utah as a whole. The vocal minority will loudly proclaim how terrible it is to try something new. They should be ignored. The gondola will have minimal environmental impacts and will be cost efficient and a tourist attraction.
35789	Garrett Wilson	I do not want a gondola spoiling the majesty of the canyon. I do not ski, but I frequently use the canyon for family recreation and hiking. I do not want to be tolled to access the canyon simply because the traffic due to the ski resorts is causing issues. Let those who go to the ski resort take a bus, but do not punish the recreationalist hiker due to the skiers.
35790	Juan Peon-Baker	The gondola is widely opposed by our entire community and would effectively destroy one of our most important natural and financial resources. It's a horrible decision that should not be made. NO GONDOLA!!!
35791	Kim Cloward	Don't ruin our canyon for the benefit of the ski resorts. The cost to build and the ride is prohibitive for most. Gondola will not keep cars from driving to hikes, camping, picnics. This is a ridiculous option when they haven't even tried tolling for use or annual passes for usage. Just don't ruin our canyon view. I look up LCC from my front door...beautiful as is!!
35792	Josh Donegan	In the uncertain and rapidly changing face of climate change, I believe that a more robust and less costly to taxpayers solution should be evaluated. Once the gondola is built, the snow line moves up to 9000' feet and the private beneficiaries (Snowbird, Alta) abandon the Wasatch, the taxpayers will still be left with the burden of this useless infrastructure. Similarly, in order to construct this massive effort, summer recreation in the canyon will be stressful and nearly impossible for residents for several long years. In my professional opinion (civil engineer), we should toll at the mouth of the canyon and check for proper equipment (4WD, snow tires) during peak winter seasons. No private vehicles (Buses only) on peak capacity days (holidays and powder weekends) between 7 a.m. and 3 p.m. This should apply to both LCC and BCC. We are simply shifting the issues to BCC by narrowing the focus on LCC with this effort.
35793	Robert Douglass	<p>Section 4(f) impacts to public recreation areas, Volume 26: The FEIS incorrectly states that the impact to Tanners Flat Campground by the Gondola Alternative Option B is de minimis. People use Tanners Flat as a basic-resource campground. It is situated between two National Wilderness Areas and is valued by recreationists for the unobstructed views of the environment's beauty but especially for the peace, quiet, and solitude the location provides. The campground is heavily visited and is especially inviting for tent camping. The gondola will move more than 1,000 people and up to 3,400 people per hour in gondola cabins directly over the head of campers. Per the Final EIS, two gondola towers will rise over 100 feet above the campground on both ends. A gondola angle station with large operating motors with diesel backup generators and the noise of cable transfer mechanisms will be positioned just west of the campground. The environmental impacts on Tanners Flat include robbing campers of any privacy and solitude, as well as defiling their view and subjecting them to additional noise. The FEIS is negligent in declaring these impacts as de minimis - they destroy the very reason for camping in a National Forest amid National Wilderness Areas. The Final EIS implicitly acknowledges the substantive nature of these impacts by cynically stating: „Users could shift from tent camping to recreational vehicle (RV) camping.„ This is far from a de minimis impact. The FEIS gives a feel, albeit an attenuated one, for the impact on campers with its image in Volume 17, Appendix 17A, KOP 9, page 39:</p> <p><Figure KOP 9 from EIS V17A, page 39 goes here></p> <p>The Final EIS (Volume 17A_KOP_Bus_Gondola Figure KOP 9, page 39) asserts the gondola passing directly over Tanner's Flat Campground is a 'de minimis' impact on campers. Note the EIS shows a cable car that has already passed over the campsite and is at some distance, apparently attempting to minimize what is a substantial impact on this public recreation area. It is clearly shown in the EIS figure that the gondola</p>
35794	Jesse Williams	<p>As a property owner and resident of Salt Lake City, and a regular visitor to Little Cottonwood Canyon for work and recreation. I do not support the Gondola option as a long-term solution. I feel that this solution is not pragmatic, nor practical or able to be implemented in the near-term, nor to the benefit of the overall public, as it will only service users wanting access to two ski resorts. There must be more reasonable, scalable and practical solutions.</p> <p>I think the phasing plan calls attention to more realistic and near-term solutions- providing more public transportation, including bus service to and from much larger parking facilities (that would also have to be built to service a gondola), providing adaptable access to public lands at several points of entry, and implementing tolling systems to manage the increasing levels of use the canyon receives.</p> <p>I visit the canyon much less than I used to because it's simply not worth the hassle.</p>
35795	Neshamah Weiss	The gondola is a terrible idea driven by money and greed. It would not be creating more public or accessible access. It does not benefit utahs diverse ecosystems or the canyon. Do not build it.

Comments on Little Cottonwood Canyon Final EIS

35796	Ronald Schwartz	<p>Utah DOT identified the Gondola Alternative B with phased in implementation as the best way to improve transportation in the canyon. I do not agree and am disappointed with this choice. The traffic gets backed up on S.R. 210 during the ski season on powder days and on some weekends. The proposal is very expensive to solve this problem of traffic delays that occur during 3 months of the year. Traffic the last couple of years improved when the resorts used a reservation system to park on-site. This is a proven method and inexpensive.</p> <p>The biggest problem on S.R. 210 is that the road is not safe for all users. People who ride bikes and walk or run along the road are not safe due to high speeds along the road and the narrow bike lane. If UDOT were serious about making the road safe lowering the speed limit and widening the bike lane should be top priority.</p> <p>I do not like our tax dollars being used to support two resorts and private landowners. I am handicap and no longer ski. I do like to visit the canyons and find it difficult to enjoy it due to accessibility issues. The resorts have only a few handicap parking spots which are always full during the winter and I cannot ride the bus. There are tolls to enter the national forest. Parking to access the trails along S.R. 210 do not meet my needs. I do enjoy the ride up the canyon and building a gondola will impact the beauty and esthetics of the canyon that I enjoy.</p> <p>I support alternative ways to improve traffic and safety along S. R. 210 and some of these alternatives have been utilized to improve traffic flow.</p> <p>1.Ski resorts require reservations to park on site. I live along Wasatch between the two canyons and have noticed a dramatic reduction of traffic along Wasatch when this policy was implemented.</p> <p>2.Maintain 1 lane of traffic each direction with a center left turn lane for side streets. In addition to these three defined lanes, a separated bike lane needs to be built for bikers and hikers who use the street for transportation and recreation.</p>
35797	Marsha Calder	<p>It is clear to anyone with common sense that the Gondola will not solve any problems. While it might be a moneymaker for the resorts and the developers it will cost the tax payers and it will be so expensive to ride that only the wealthy will use it while the common tax payers foot the cost of building and maintaining it.</p> <p>Why don't you just use a parking reservation system like they do at the national parks? Anyone without a reservation to park or drive up the canyon would have to ride the bus. That would be a simple, much less expensive way to control the traffic on the very busy ski days as well as the busy summer days. And it would give equal access to the canyon for all people, not just those who can afford the expensive gondola ticket.</p>
35798	Steven Boyer	<p>To whom it may concern,</p> <p>Please do not implement any gondola plans. The costs are astronomical financially, but unbelievably worse when we consider the visual damage and the permanent defacing of the canyon walls that the gondola would incur.</p> <p>We ought instead to implement strict bus usage requirements in the canyons. Many places in the country require that license plates ending in a certain number or letter only go on certain days. We could try that option. We could try tolling vehicles to further incentivize would-be drivers to ascend the canyon in a UTA bus. There are so many options that are far superior to permanently destroying the canyon with a gondola.</p> <p>Furthermore, while initial costs are estimated at \$550 million, and winter operations at \$3 million per year, those costs will only go up year after year.</p> <p>Please, do not build a gondola! Preserve our beautiful canyons.</p> <p>Sincerely, Steven Boyer</p>
35799	Nathan Hopkins	<p>As someone who accesses the canyon multiple times per week on average throughout the non-snow season, I do not want taxpayer money going to a project that will mainly benefit private companies that are already over-inflated while also hurting beautiful public land that drew me to the area.</p> <p>I believe it would be a travesty to put a gondola right through the middle of the canyon destroying the natural and serene views while only accessing the private resorts. This resolution is only meant to appease the resorts and their constituents while negatively impacting everyone else who visits the public land.</p> <p>Unfortunately, I beg that you do not go through with the gondola.</p> <p>- A concerned citizen</p>
35800	Nathan Hernday	<p>Implementing no solution and suffering through continued canyon congestion would be more acceptable than the destruction, eye sore, and cost of a gondola</p>
35801	Sissy Zeigler	<p>I'm utterly opposed to the idea of a gondola for LCC. The cost is ridiculous and the impact on the environment is no better than current status quo. We should stick with clean air transportation and charge cars individually to go up the canyon.</p>
35802	Brittany Knuth	<p>Hi, I am a resident of Salt Lake City and feel that the gondola is not a practical solution to the problems in LCC. The choice to implement the gondola seems very rushed especially when other alternatives such as enforcing winter-long traction laws, implementing a plow station at the top of the canyon, and improving the bus system have not been tested out. The gondola is a big decision that will cause irreversible damage and stress on LCC.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35803	Robert Brough	I would like to add my voice in strong opposition to the gondola proposal for Little Cottonwood Canyon. As I lifelong resident of Salt Lake County I am concerned with the overuse and crowding in our canyons however, the proposed gondola simply doesn't address the problem at all. It is too costly, will forever ruin the beauty of that canyon and will do nothing to reduce congestion. I think that widening the road would be more cost-effective as far as traffic congestion but the problem of overuse is still not being addressed. Toll roads geared to encourage carpooling might help but I think the most overlooked idea is a reservation system similar to that used by the state parks and National Forest Service, and currently being used in Big Cottonwood for the campgrounds in the canyon. Yes, I grew up in a time when I could just drive up the canyon in the afternoon after university classes and ski and it saddens me that those days are over but the reality of living in a county with over a million people in it dictates this course. Please do not waste the tax dollars of people state-wide to solve a local problem. Thank you.
35804	Curt Cross	The Gondola would be a complete waste of taxpayer \$, it will not reduce congestion on the highway in a measurable way, and tax \$ should not be spent on a transportation method that will only benefit 2 private ski resorts. If the resorts want this let them pay for it themselves.
35805	Paul Hudson	<p>I do not feel represented in the "What Controversial Issues were identified during the EIS process" section of the S.12 section of the Final EIS.</p> <p>I know that many comments were received during the Draft EIS period identifying that the gondola proposal does not serve any canyon users other than resort skiers. The final EIS "controversial issues" section correctly identifies that climbing boulders is an issue, however, it says nothing about other dispersed users like myself. As a backcountry skier and a heavy summer bike, run, and hike user of the canyon, this expensive proposal not only does nothing to benefit me but also diminishes my experience.</p> <p>This proposal has a detrimental impact on all dispersed users, not just the bouldering community.</p> <p>I am adamantly opposed to this gondola proposal.</p>
35806	Doug Birrell	I do not want to see towers and gondolas going through the canyon obscuring part of the mountain side. These things never go as planned or cost what they say they will. They never stay on budget. I do not want to see the public being tax for other peoples recreational purposes. I am retired and pretty much live on a fixed income and everybody always wants to have a part of that.
35807	scott petrick	Totally opposed to gondola
35808	Carlos Perez	<p>I'm against building a Gondola as a form of easing the LCC congestion. First of all, we're not considering the increased traffic the Gondola would create for the Cottonwood Heights and Sandy districts. Regarding the parking for the gondola. Also, we would face a great shortage of parking space. Imagine all of the bus stops being in the same parking area... Let's be real, the gondola project is a business scheme proposed by a few for the prosperity of the few and paid for by the State taxpayer...</p> <p>Thoughts; why haven't we consider cutting a second lane above the existing road instead of a wider road or high retaining walls?</p> <p>Or building more multi-level parking along with bus services.</p> <p>Why would UDOT, this year, a pivotal year on said topic have a shortage of bus drivers? If there is a shortage, why not pay them more. After all, UDOT is not blinking at spending 590 Million above what it would coast to maintain it...</p>
35809	Teresa Schofield	NO to the gondola! A far better solution is to add a BUS-HOV vehicle lane for winter use. The wider road could be used as a bike and pedestrian lane during the other three seasons! Regardless, the ski resorts need to pay for this very specific project that benefits TWO OVERPRICED RESORTS!
35810	Larry Hawkins	We need the gondola, already can't get bus drivers. It's the most effective way to transport people
35811	Barbara Polich	The proposal seems ski resort centric, and does not adequately provide solutions for those that use the canyon for other than skiing. The gondola is an incredible subsidy to the resorts at its current proposed cost. Think adequate parking at the canyon base should be the first solution. Am opposed to the gondola as being proposed for these reasons.
35812	Julie Stout	I don't want a gondola up the canyon. I don't see it benefiting enough people and it will take away from the beauty of the canyon.

ID	Full Name	Comment
35813	Jared Hargrave	<p>As a long-time skier of Little Cottonwood Canyon, both at resorts and in the backcountry, I am totally against a gondola in LCC. Here's why:</p> <p>My first concern is that the gondola would serve only one type of canyon user: resort skiers and snowboarders. There are many other recreationists that use the canyon such as backcountry skiers, snowshoers, fly fishers, rock climbers, mountain bikers, hikers and more. But the gondola will only have stops at Snowbird and Alta. Therefore, the gondola is not a canyon transportation solution at all. It is only a way to get more skiers to the resorts, which only benefits the resorts. The gondola is nothing more than an expensive gift to the ski resorts, funded by tax payers.</p> <p>Second, the Little Cottonwood Canyon gondola would be an eyesore. The Draft EIS shows gondola towers would reach up to 230 feet in the air. To put that in perspective, the 13-story Cliff Lodge at Snowbird is 157 feet tall. Just imagine a row of 20 towers, taller than the Cliff Lodge, lined up through the bottom of the canyon. This would destroy the viewshed and urbanize one of the Wasatch Mountain's most treasured canyons.</p> <p>My third issue with the gondola is that the towers would threaten world-class rock climbing and bouldering routes in Little Cottonwood Canyon. The gondola tower's placements could possibly destroy the boulders near the mouth of the canyon, as well as trail access to the crags. I've spent many days on those routes and would be devastated to lose them.</p> <p>Fourth, a gondola only serves Little Cottonwood Canyon. But neighboring Big Cottonwood Canyon has traffic issues that are nearly as bad. UDOT is not taking traffic going to Solitude and Brighton into consideration here. I feel like any transportation plan UDOT puts forth should encompass the entire Tri-Canyon area to alleviate all resort traffic. Enhanced bus service is something that can be employed in both LCC and BCC.</p> <p>Finally, gondolas are an easy target for sabotage. Just look at what happened to the Sea to Sky Gondola in British Columbia. Vandals cut the cable not once, but twice in six months. Both instances destroyed the cabins as they crashed to the ground, costing between \$5 million and \$10 million in damages. Who's to say the same can't happen here? A cut cable would end UDOT's "transportation solution," real quick, and for as long as it would take to repair (again at taxpayer's expense).</p> <p>I prefer the enhanced bus service option. However, I do not support widening the road. Adding another lane would cause as much, if not more environmental damage to the canyon and would also likely take out the aforementioned bouldering spots. A better option is to explore ways to decrease single-rider cars in the canyon. Making S.R. 210 a toll road is one way to do this. There could be a graduated level of rates, single passenger vehicles would pay a much higher cost than vehicles with</p>
35814	Jacob Weise	<p>As a frequent user of the canyons, I find the gondola to NOT be a good solution to the canyon. Vehicle capacity requirements, tolling, better buying, and other low impact solutions should be considered. As a skier and climber I regularly use trailheads all throughout the canyon, not just go to Snowbird and Alta. LCC is an incredible place and the Gondola makes no sense. The Gonda would alleviate problems on a few super busy days during the winter and not be useful during the majority of the year. Please for the sake of all future users consider less impact full and expensive solutions.</p>
35815	Robert Douglass	<p>Section 4(f) impacts on the Bonneville Shoreline Trail: The Final EIS incorrectly states the impacts on this trail, an important public recreation area per Section 4(f) definitions, to be "de minimis." They assert this by saying "The setting, visual qualities, or aesthetic features are secondary or tangential qualities of the trail but are not the primary features that qualify it for protection under Section 4(f)." To the contrary, the setting, visual qualities and aesthetic features of the Trail are its primary qualities and the only qualities that distinguish it from other most other trails along the Salt Lake Valley. This section of the Trail crosses the Cottonwood Heights Open Space public recreation area and will be directly adjacent to a National Wilderness Area. The EIS also says the noise is not a factor because they've assessed the noise from a similar tower. But the Trail will also be subjected to the noise of the gondola base, thousands of cars parking and idling at the base, and the motors and backup generators of an angle station adjacent to the trail. The EIS dismissed the noise impact on the trail by saying it is equivalent to the road, but the gondola adds its noise to the road noise, effectively doubling the noise pollution on the trail. The EIS is incorrect and negligent in asserting a 'de minimus' impact because it neglects to account for the noise from the gondola base, its 2,500-vehicle parking structure, traffic and pollution from vehicles along the road waiting to enter the parking structure along with hundreds of idling cars, and the transfer station and its motors and backup generator that will be located adjacent to the trail.</p>
35816	Daniel Dearden	<p>I am a rock climber, bicycle rider, hiker and skier. I spend a lot of time in little cottonwood canyon. I am in favor of the gondola and options as currently proposed by the UDOT.</p>
35817	Troy Bowcutt	<p>I would like to voice my strong support for the proposed gondola system. Done properly, the gondola will enhance traffic flow regardless of weather conditions and provide secondary access to the canyon. Secondary access is vitally needed during the many times a year that the canyon goes in to "inter-lodge" or the roadway is shut down. These systems are well done in other areas (Europe) and can be done to enhance the natural condition rather than take away form it.</p>
35818	Don Stevens	<p>I am opposed to a gondola in LCC that is longer than anything that has ever been built in the world, so it is bound to be a debacle, just like our prison relocation and the inland port fiasco. There are 15 vehicle tunnels in the world that are longer than need for LCC, but that alternative was rejected out of hand based in inadequate research. So sad! And this only benefits the resorts. https://www.sltrib.com/opinion/commentary/2022/07/28/peter-dahlberg-tunnel-alta/</p>
35819	Christopher Seibert	<p>I am a long time Sandy resident. At one time I had tepid approval of the gondola. I am now firmly against it. Its arrival seems to be a foregone conclusion. If what I am hearing about the involvement of state legislature members and the construction companies for the gondola is true, then the solution for our canyons has just become another money grab. Also, recent studies have shown the Big and Little Cottonwood congestion only occurs 20-25 times a year. Is the gondola really the answer if this is true?</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35820	Jeff Parker	<p>I am an avid skier and I ski 80+ days at either Alta or Snowbird and a number of days in the backcountry up Little Cottonwood Canyon. I have see the population growth and I have witnessed the canyons getting more and more crowded each and every year. So I would agree that something needs to be done but the reason why we all love LCC is because of the beauty of the canyon. Putting up multiple 200 foot towers in the canyon will take a way from the natural beauty of the canyon. I also feel that this will just increase the number of people trying to visit the canyon. In addition to all the skiers and snowboards that have not choice but to take the gondola you are also going to have thousands of people using the gondola as a tourist attraction which is further going to add to the congestion.</p> <p>I honestly feel that snowsheds, tolling and added bus service is the best alternative.</p> <p>Why spend billions of dollars on something that will only be a benefit 5-10 times a year but be an eye sore 365 days a year. This is clearly something that is going to only fill the pockets of a select few and is being funded by tax payers. I strongly oppose this idea and feel confident that there are better solutions (as mentioned above) for all of us to enjoy.</p>
35821	Foram Vora	No Gondola
35822	Logan Julian	<p>I want to express my overall dissatisfaction in the option UDOT has chosen. The gondola does NOT help the public, but it gives the resorts more revenue at taxpayer expense. It also creates a large eye sore while looking down/up canyon. The gondola does not help elevate traffic if you are not going to Alta or Snowbird.</p> <p>I was very disappointed when the gondola was chosen. As a recreationalist, this does not help me get up canyon to White Pine TH or to grizzly gulch. If I wanted to backcountry ski. Will Alta pass holders get to ride the gondola for free like they park for free now on leased land? There are far too many questions over the gondola. My fear is this is a money grab for a lot of stakeholders and was done in poor faith. The SL Trib article showing snowbird purchased land under a different LLC is very concerning and clearly was not made in good faith.</p> <p>I was a little surprised how expensive tolling would be for the roll out. That is fine as I would rather pay the 20-30 dollars to the state instead of Alta which restricts people from actively riding the lifts. Will there be a year pass available similar to Millcreek? What about busy summer days? How does the gondola help that? Does it just sit idling and people in cars watch it collect dust? Again, the gondola is NOT a solution and is a way to increase profit to a very small select few. The Wasatch of old is gone and now it is all money hungry people. This is a sad time to live here, and I do not think a commonsense solution will be found.</p>
35823	Diana Xiaowen Yang	I am against the LCC Gondola project. It will waste mony without any improvement for the traffice. The best solution is to improve the current bus system. If there are still traffice jam then it means the canyon only can handle so much. So be it. It is not there to satisfy everyone whoeven wants to go and whenever they want to go.
35824	Lisa Hazel	<p>The idea of a gondola is a terrible. I do not like the idea of destroying the view of Little Cottonwood Canyon to bring in more profit for Snowbird and Alta. The gondola will also be horrible for wildlife habitat and health as well as water quality. We live in a part of the world that gives us fantastic water quality. The gondola will cost millions of dollars to destroy Salt Lake City's watershed that makes it possible for us to enjoy mountain spring water from our tap. For these reasons, it continues to be time to put nature, water quality, and wildlife habitat above profit and skip out completely on the gondola.</p> <p>Additionally, I want to see Wasatch Blvd have the same width it has now with lower sped. To make safety first, people must be first and to do this we must continue to implement road diets and low speeds. I want to see UDOT progress to a road diet on Wasatch Blvd with a 30 mph speed limit. Reflect the healthy choices our planet needs us to make; skip out on the gondola and implement a road diet and a lower speed limit of 30 on Wasatch Blvd without widening the street.</p>
35825	Stephen Leeflang	My view has remained consistent with prior comments, namely I am opposed to the Gondola, primarily. A multitude of reasons as previously stated, but primarily due to the fact I don't want to see it. I would gladly welcome expanded bus service for my own personal use, especially if improvements can be made to parking at the mouth of the canyon.
35826	Brady Taylor	The gondola is a huge waste of money! It's an investment of tax dollars that will only benefit the resort. It will harm the canyon, and will not achieve the desired result of reducing traffic! The gondola SHOULD NOT happen! There are better ways to achieve this goal.
35827	Robert Volker	<p>The gondola does not solve the vehicle congestion problem for peak usage days in Little Cottonwood Canyon. What it will do is shift the problem from the ski resort parking lots and canyon to the loading terminal at the base of the canyon at an enormous cost in public and ecological damage to the canyon.</p> <p>Moreover, the gondola is an inflexible system with an expected life span of fifty years or more. The nearly permanent nature of the gondola infrastructure, towers, and loading and unloading terminals, is fixed and inflexible to any desirable short term changes or corrections. Whereas a mass transit solution in the form of a much more flexible system, such as buses, can be changed in an infinite number of ways, including technology enhancements, over the expected life span of the gondola. The bus alternative is superior to the gondola because the public investment can evolve over time whereas the gondola is, hereto, inflexible -you've got to get it right the first time, no changes with an enormous upfront expense.</p> <p>Most importantly, the gondola towers in the canyon will do imprable harm to the nature and character of the canyon. The gondola towers alone will harm and destroy sensitive and loved areas within the canyon. The bus alternative can use the existing road without additional destruction to the small and delicate canyon environment.</p> <p>I strongly object to the gondola as a transportation plan for Little Cottonwood Canyon.</p>
35828	William Conrod	If the state of Utah were to appropriate a half billion taxpayer dollars for a gondola to convenience well off skiers, the state has a moral obligation to spend an equal amount on the homeless. A half billion of public funding for skiers, many of whom are non-residents, is not chump change. The argument can be made that skiers pay more tax than the poor, but I am talking about a basic moral obligation to help those less well off, besides the effect people living on the street or in parks have on society. What would Jesus say?

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35829	Sudhan Kanitkar	I OPPOSE the gondola. A gondola is expensive to build. It will not have as many stops as people would prefer. It will not have the flexibility of stops that a bus would provide. More buses/less cars in the canyon will be my preference.
35830	Sam Watson	I think the gondola is misguided. Growing up in SLC and seeing the change and crowding occurring in LCC and the greater Wasatch, I think the gondola is a grab for more attention and tourism dollars. Fewer cars in the canyon is the solution, via tolls or negative incentives to drive up the canyon.
35831	Lauren Price	We need a revamped bus system and potential tolls during peak hours!!! NO GONDOLA!
35832	Gabriella Balcells	<p>DO NOT build a gondola! It will affect the canyon's beauty, wildlife, rock climbing, ecosystem, hiking, etc. LCC is unmatched in its unique beauty and nature and too precious to be more damaged than it already is.</p> <p>I almost never see the traction law enforced, which would drastically decrease the number of cars traveling up the canyon on the most crowded days. Enforcing use of the sticker system would prevent unsafe vehicles from driving in hazardous conditions. Instead of trying to get more people in the canyon to increase revenue, instead raise lift prices and/or remove Snowbird and Alta from the Ikon. Raise parking pass prices or enforce carpooling in some way. Solitude's method of charging less for parking for cars that carpool seems to be pretty effective.</p> <p>Additionally, improving the bus system would encourage more people to use it. The reasons I don't use the bus are: because the time spent waiting is usually very long and it can be hard to find parking in the valley lots. If you're advertising that the gondola trams could be there every 2 minutes, why can't the buses pick up every 5-10 minutes? More buses would help solve this problem. Also, adding more parking lots in the valley would increase use of it. Maybe incentivize use of the bus systems by offering 50% off a beer at one of the bars, or a free cookie at one of the cafes at the resorts. Something to get people using the bus to realize how convenient it is!</p> <p>Once we introduce a gondola to the canyon, we can never undo the damage. We should try very hard to fix the issue in less destructive ways before considering this option.</p>
35833	Jennifer Cook	<p>NO GONDOLA! Why are Utah taxpayers footing the \$550 million bill for a problem *two private businesses* created and for a solution that will ONLY benefit those two businesses? If common sense could prevail, we would implement cost-effective and environmentally-friendly options such as enhanced busses, tolling, reservations and enforcement of traction laws. Parking reservations have worked throughout the Wasatch in the last few years. Tolling has proven to be an effective solution in Millcreek Canyon. 80% of Utahns oppose the gondola, according to a Deseret News/Hinckley Institute of Politics poll. Salt Lake County Mayor Jenny Wilson, Sandy Mayor Monica Zoltanski and many other elected officials agree. If the gondola is built, your ski day will consist of parking off-site (or paying a premium for one of the limited parking spots near the base), taking a bus to the base station then riding the gondola 31 minutes to Snowbird or 37 minutes to Alta. And then doing it all in reverse order at the end of the day. NO THANK YOU! Students for the Wasatch pointed out if the gondola is implemented, the number of cars visiting resorts will remain the same while skier visits will increase by 20%, per UDOT's EIS. How many days per winter are you in a complete standstill in Little Cottonwood Canyon? No doubt the red snake is real. But real enough for an expensive, permanent gondola? Plus, the gondola will NOT run when howitzers are active during avalanche mitigation in the lower canyon from Lisa Falls to Monte Cristo.</p> <p>And I can't think of an argument for the gondola to be operating for the other eight months of the year??!!</p>
35834	Ken Perko	Why would you not try an actually effective bussing system? I believe constructing a gondola is a ridiculous solution to a small problem that does not impact many people. Try busses first!
35835	Rollin Grimmatt	I oppose the gondola alternative plan. This proposed plan only serves one user base of the canyon, at the detriment of all other users. Less impactful options ought to be considered and implemented before a gondola is built, permanently altering the experience in the canyon. Specifically for climbers, this proposed plan will negatively affect the world class bouldering, while adding an eyesore for all other roped climbers on the canyon walls.
35836	Emily Lutz	I don't not believe a gondola is the best solution to traffic problems in the canyons. First of all this only helps Little Cottonwood traffic not Big Cottonwood. Tax payers should not be paying for something that only benefits 2 resorts and not all users of the canyons. Offering reduced or free parking rates for having more people per car has encouraged me to carpool more efficiently. I would also take the bus if more parking were available on busy days and there were a convenient place to store shoes etc, because no one wants to wear ski boots/helmets on a bus. Current bus connections from the city take 3x as long as driving myself to the mouth of the canyon. It would be great to see express ski bus connections from park and ride locations. Examples: Wasatch Blvd and 39th s, I-15 & 90th s, so not all parking has to be at the base of the canyon.
35837	Leslie motley	I oppose the gondola as it only serves people going to Snowbird and Alta. There are no proposed stops along the way for xcountriy skiers, hikers, etc. It will be a terrible eyesore and the proposal has it not being used in the summer. Charge people to drive up canyon, with a pass, put in electric and/or high speed buses and keep the canyon beautiful!!!!

35838	Caleb Shuler	I am a local Sandy resident and have been working in the ski industry for over seven years. The gondola is an elitist non-solution that will not have any positive impacts on the air quality or traffic issues plaguing Big and Little Cottonwood Canyon. The GondolaWorks campaign has been a dishonest and forceful organized effort to further commercialize a national treasure. Along with being one of the most beautiful scenic areas Utah has to offer, Little Cottonwood Canyon is home to the world's largest organism, the LCC Aspen tree. Destroying any part of this tree for commercial gain is a disgusting action that will leave its mark on the legislature as environmental enemies for generations to come. We have seen a reservation system working in several national parks as crowds have increased, and in Zion national park there are clear positives to a bus-only system in the peak season. We could easily avoid much of the cost of these programs while keeping the canyons accessible to locals of all economic status by switching to a bus-only system in Big and Little Cottonwood. Stop using taxpayer dollars to fund horrible infrastructure projects that don't benefit anyone but the corporations in the ski industry and the developers in the legislature. We need so many more public transportation solutions around our county and state, don't waste our time and money destroying something everyone loves.
35839	Skyler Metz	Please do not put a gondola up in LCC. Please have two bus lines 1 to trail heads 1 to resorts. Please roll the roads in both LCC and BCC. Please do not apply permanent fixtures to our landscape.
35840	Leslie Moss	No reason to give the UTAH tax payers, especially those that only use the canyons (which is a small portion of the tax payers) a large tax which will effect the landscape.
35841	Max Ferguson	<p>I am a resident at the powder ridge condos up in Alta. As a resident, our family has concerns regarding this proposal; namely the system of tolling to be implemented, as well as this proposed gondola. As a resident, and someone who will be permanently stuck with whatever solution is decided on, I should have my opinion heard.</p> <p>My largest concern is with the impact of building an enormous gondola up the entirety of little cottonwood canyon. This metal contraption would no doubt be a blight, visually and environmentally, on the rather pristine environment that has been upheld. Regardless of how little the impact is, there is no doubt there will be a negative impact from this. I believe at any negative impact to environment, we should heartily reconsider.</p> <p>Beyond this point of environment, us resident must also consider the financial burden of these decisions. The two largest factors that come to mind are the decrease in property value as well as the cost of tolls.</p> <p>It goes without saying, adding such a visual blight to the canyon, would absolutely negatively effect our properties value, which is an important consideration here. The other large financial impact I foresee is this toll. I believe it is a good concept to help incentivize mass transportation (such as bussing) however we tend to traverse the canyon regularly, and I believe paying such a toll starts to look a lot like a tax for continuing to live here. We have been here since the 90s. I believe adding yet another cost of living is detrimental to those of us who love our place in nature.</p> <p>Please reconsider this project.</p>
35842	Roberta Fletcher	I am opposed to building a gondola through our canyons. It would destroy plant and animal habitat and disrupt canyon wildlife. A better solution would be the use of electric buses, parking fees, tolls during peak canyon use, and car pooling.
35843	Rebecca Sweeney	Please listen to the majority and do not build a gondola. Also, a toll for the Cottonwood Canyon Roads...what the hell
35844	Rebekah Jones	I live in the Granite area, and strongly oppose the Gondola. Please consider an alternative plan
35845	Nancy Swinyard	The gondola is an exceedingly expensive solution to a problem that occurs in LCC few days a year. Perhaps as many as 20 days, but certainly no more, are congested as people try to go up the canyon. There would be a huge impact to the natural beauty of the canyon by building the gondola and its towers in the canyon. It's "hub", with hotels, restaurants, and an ugly parking structure in the mouth of the canyon would be an eyesore. This proposal is mainly going to enrich the already wealthy owners of the properties in the canyon. It is telling that the citizens of the cities at the mouth of the canyon are vocally against the gondola. Citizens have begged for a reservation system, tied to more frequent buses for the canyon. Please listen to the people who live in the zone that will be most impacted by this project going forward.
35846	Mariah Christensen	This is a solution for a problem that doesn't truly exist: I am an avid skier (season passholder), climber, and biker and use Little Cottonwood Canyon all the time. There are approximately 3 (or maybe if we're lucky and it's a good snow year 5 or 6) days a year where the traffic is actually impossibly backed up. Otherwise it is fine. Resorts on their own have implemented new parking policies that combat the parking issue, and this ridiculously expensive gondola will do nothing but mar the canyon and line the resorts' pockets with out-of-town money while making Utah that much more difficult for actual Utahans to enjoy. I have used the gondolas in Europe extensively, and they are nothing like this. A single, gargantuan gondola going all the way up the canyon will irrevocably damage this canyon--unlike in Switzerland and other countries with many passable peaks near each other where gondolas can run up the face of a mountain, this gondola would effectively ruin Little Cottonwood Canyon and its beauty, not to mention punishing those who use the canyon for all manner of activities beyond skiing (of which there are many). Huge waste and irreversible loss to the entire state of Utah.
35847	Carol Simon	I am completely against the gondola due to the huge cost and limited improvement to traffic. I'm sure that even after it is completed, many locals won't be able to afford to ride it. As a middle income family, we have already been priced out of skiing. No one is addressing how much each person riding this gondola will have to pay, in addition to extremely expensive ski tickets already. This is clearly NOT designed for Utah locals. However, they will be picking up the entire cost!!!! Vote NO please!!!
35848	Erin Grosso	I am STRONGLY against the gondola being built. This will have such a negative impact on the watersheds which is critical to our water supply. To build this gondola and further risk our already critically low water supply is insane. There are better sustainable and eco friendly solutions.
35849	Preston Motes	Other methods should be tried before approving the gondola. The extreme cost of the gondola should not be borne by taxpayers. The gondola only benefits skiers and the resorts. Hikers and other recreationalist get nothing.

35850	Bruce Mortensen	The Gandola will be an eyesore and destroy the natural beauty of the canyon. It will be a benefit only to out of state visitors and the for profit ski resorts and impose undue taxation on Utah citizens. Construction impositions will be horrendous for those trying to enjoy the canyons for three seasons over several years. Traffic and monster parking lots at the canyon will be a permanent problem. Only a few contractors and former politician developers will be enriched
35851	T Jackson	Please do not ruin the beauty of our mountains
35852	David Flint	The Gondola is a terrible idea. As far as I can tell the only folks who are in favor of the Gondola are the folks who will receive a cut of the loot involved. Everyone I have spoken to in Sandy has said to me that they do not want the Gondola and they would not use the gondola which makes the entire concept a complete waste of valuable time and resources. Please stop the madness and listen to the people rather than the \$\$\$\$. Regards David Flint
35853	Raymond Gillette	This should NOT be happening. This area means so much to so many outdoor enthusiasts. It would ruin the land and access. Please reconsider.
35854	Gwen Christopherson	I am baffled that the gondola was identified as the best solution to the traffic problem in Little Cottonwood. I'm baffled that it would even be considered at such a gaudy cost when there are so many better uses of that money in the Salt Lake Valley, like water conservation efforts, in the face of a shrinking Great Salt Lake that could leave all of northern Utah uninhabitable. If you care about the environmental impact of this project, consider the materials needed to build the gondola. Where are they coming from? What amount of fossil fuels was used in their extraction, processing and transportation? Whose Indigenous tribal land was stolen and exploited in that process? A far more reasonable solution would be to increase busing services to and in the canyon during peak seasons and limit car access. Zion's National Park is a prime success story, having implemented a similar system. This dissolves the need for any major construction in the canyon or at the base of the canyon which would disturb wildlife and further alter the unceded ancestral homeland of Ute, Piute, Goshute, and Shoshone peoples. Increasing access to public transportation throughout the valley is clearly the most equitable solution to this problem. Not only does it reduce parking and traffic issues, but it gives Salt Lake valley residents without cars much needed access to the outdoors. This could be a chance to make a profound impact on public health and make a statement about our relationship to land. Please prioritize the well-being and the health of Utahns and the folks who have been the most marginalized and restricted from the beautiful nature that our canyons have to offer.
35855	Diana Juhlin	The gondola will serve mostly 2 large ski areas but all the tax payers will pay for it. The few who can afford to ski will get the benefit paid by many. I have not seen published any financial resources to be made available by the 2 large ski areas benefiting from the Gondola. Where is their Åskin in the game.Å. A gondola with greatly impact the beauty of the canyon. People compare this to gondolas in the Swiss alps but those gondolas are in wide canyons and valleys. The Swiss gondolas are not in narrow canyons with rock and vegetation beauty on both sides. Gondola is a solution for the wealthy to ski.
35856	Jeffery Sloan	Seems like the gondola is a 2 billion dollar proposal for a 200 million dollar problem...who profits? They should pay, not me and my view.
35857	Hannah Peterson	I don't want this project to happen, it's damaging for the environment and for the use of the land by public, not private/capitalist, uses.
35858	Meghan Pollard	Little Cottonwood Canyon is the reason I live in Salt Lake City. Its serenity, community, and space is unlike anything I've seen and I'm thankful to call the 17 miles between the slopes home. The Cottonwoods give Salt Lake City its spark, its the reason thousands of mountain enthusiasts visit our community, and the reason that many of us choose to plant roots here. Constructing a gondola would extinguish the spark, it'd ruin the community developed at the base of the canyon, anger travelers, and establish distrust in those who grew up calling the canyon their home. A bus system, similar to the system utilized at Zion National Park, is a wonderful solution.
35859	Makaylee Curley	Don't waste out tax money on the gondola. Ski resorts can limit how many can ski. They are packing their slopes for \$\$\$\$. Not fair that we locals pay the price for the most expensive way to regulate traffic. Besides when it's all said and done only the Elite will be able to afford to use it.
38349	Susan Foster	No gondola ! Not a fair tax on the community. Most folks dont ski. Widen the road for much less money, or have folks use busses during peak times.
35860	Olivia Levinson	This should not be coming from tax dollars especially to profit a private business. This is also going to environmentally alter the area of the cottonwoods and I completely disagree with it.
35861	Kim Davison	The Cottonwoods are so special to Salt Lake City, it's the reason thousands of mountain enthusiasts visit our community, and the reason many of us chose to plant roots here. Constructing a gondola would extinguish be detrimental, ruining the community developed at the base of the canyon, anger travelers, and establish distrust in those who grew up calling the canyon their home. A bus system, similar to the system utilized at Zion National Park, is a wonderful solution.
35862	Brii Staker	the gondola in the canyon is honestly a horrible idea. it will absolutely ruin the beautiful views the canyon has as well as destroy parts of the land. growing up 10 minutes from the base of the canyon i can say i have spent a huge majority of my free time up LCC it's absolutely breath taking and the gondola will ruin the nature of the canyon
35863	Jay Poulsen	I hope this plan goes forward. Having a gondola would be a great option for summer and winter travel in the canyon. It would be awesome to eventually have one up big cottonwood as well.
35864	dagny donohue	Please save our little cottonwood canyon and prevent the negative implications on the environment that would occur if the gondola were to be built. Tearing up the canyon is not the solution given the state of our current climate

35865	Jeff Kenney	<p>Hi,</p> <p>While I appreciate UDOT seeking feedback, I am sick and tired of talking about this gondola. I am AGAINST the gondola option. No gondola, no cog, for all the reasons that have already been stated.</p> <p>This project is too narrow in scope, not addressing Big Cottonwood, which whatever is done in Little will have an impact upon. It seems like summer was just thrown in there as an option, but not studied as so many people drive up to trailheads in the summer.</p> <p>This mostly benefits Snowbird and Alta, but they don't pay a portion of the costs/share the risk if it fails or isn't used, which is likely considering people just want to drive and a gondola has multiple stops/transfers and takes more time than driving.</p>
35866	Carrie Bellante	<p>Please don't build the Gondola. It will ruin so many beautiful trees and plants and animals homes. Also there are so many better solutions for the traffic. Increase busses and allow shuttling only up the canyon similar to how Zion national park runs.</p>
35867	Jefferson Beifuss	<p>The gondola option is awful, serving only the wealthy ski areas, while trashing the natural beauty of the canyon with towers, cables and cable cars. Even a 3rd bus lane would not be as visually disturbing as this option. Please find another way and consider all the potential users of the canyon, not just the wealthy, connected ones.</p>
35868	Daniel Buehner	<p>I have lived in UT my entire life, I feel very strongly about not putting in the gondola as it will disrupt the wildlife, the amazing climbing, hiking and will not be as effective as having better group transportation. We need more busses going up the mountain to reduce traffic. What good is the gondola gonna do? I know I'm not the only one who feels strongly about not putting in the gondola. Please listen and re-consider. Thank you. Dan</p>
35869	Kyle Ellsworth	<p>The gondola approach seems to have a high impact in terms of the visibility and beauty of the canyon. As a father with children, the automobile is still the primary choice to access the canyon. During the high-peak times, we have chosen to ski in the afternoons when driving to Alta is not a challenge. It is not unusual for society to focus on the peak-capacity times when things are naturally overburdened. The road are currently sufficient for the demand. For morning skiers, the bus is a great alternative. Also, it seems that ski areas should just sell out eventually. Thus, improving roads up the canyons is the most practical approach that seems the least burdensome approach. Please do not change the view in the canyon with a man-made gondola.</p>
35870	Matt Pizza	<p>Please do not do this! As Salt Lake City continues to grow our canyons in the Wasatch Range are our only escape from the hustle and bustle of the now crowded city. We as Salt Lake City residents have been blessed with some amazing wild lands to recreate on so close to the city, please don't bring the infrastructure of the city into our wild places. More and more land is being eaten up by urban sprawl, please don't intentionally and unnecessarily create more sprawl into one of the most serene and beautiful places in the valley.</p>
35871	Cam Snyder	<p>Don't go against the eis. Terrible use of tax payer dollars to benefit private organizations operating on public land. Upgrade the bus system, which the gondola will rely on during weather events is a better and more sustainable use of tax payer money</p>
35872	Ronald Barness	<p>I have been a resident of Salt Lake County since 1975. I currently work in the development of large-scale utility solar energy projects in Utah. I currently have four projects, 500+ MW (\$1+bn) apiece, in various stages of development in Utah, Montana and Washington State.</p> <p>I am opposed to UDOT's gondola preferred solution for the following reasons:</p> <ol style="list-style-type: none"> 1-Economic benefits: enriching two private entities is UDOT's mission or responsibility and that applying taxpayer dollars to that end is a reckless use of public funds 2-Expense: From my experience working in the utility scale solar sector, \$500m is lowball, so I call [REDACTED] on that. Even if it could be built for \$500m, that it is a unwise use of public funds to build a taxpayer funded chairlift for two for-profit ski resorts in a rapidly growing state with many other transportation needs. 3-Unknowns: There are too many unknowns about the preferred choice gondola such as how much it will cost, what sort of traffic congestion issues will it bring to the mouth of the canyon, seasonality, impacts on gondola from avalanche control and whether Utah will have a winter ski season in another decade because of climate change. <p>My work in the solar energy sector is about finding the right places to construct industrial-scale solar facilities that are far away from highly recognized world-class mountain and desert landscapes such as Little Cottonwood Canyon. Building a gondola up the middle of Little Cottonwood Canyon would be forever destructive to the wildlife habitat and to the mountain vistas which we value and enjoy.</p> <p>I urge UDOT give up the proposed Little Cottonwood Canyon gondola. Let's implement the less-expensive, less-intrusive pragmatic solutions such as tolling (especially in high-impact days), promotion of carpooling, and expanded bus service that would serve all canyon user groups. There are much more effective and immediate solutions available to us than the permanent construction of a industrial-scale gondola in the canyon.</p> <p>Sincerely,</p> <p>RON BARNESSE [REDACTED] [REDACTED] M [REDACTED]</p>
35873	Annie Duong	<p>Please save our boulders.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35874	Andrew Carson	<p>I am very disappointed with the gondola plan. On a recent visit to Zion National Park, I was extremely impressed by their bus system. I believe that we MUST try the least impactful transportation option first, rather than spending more to build permanent infrastructure that would only be accessible by wealthy individuals and only serve two locations in the canyon.</p> <p>I am a resident of Salt Lake County and Salt Lake City, and I agree with both the city and county council resolutions opposing the gondola option.</p>
35875	Rick Nofsinger	<p>Go with the gondola. I believe it is the fastest and least destructive of the options in moving people up and down the canyon.</p>
35876	Bronti DeRoche	<p>I am a Salt Lake Resident and am concerned about the construction of the Gondola in LCC. That canyon sees a lot of use and the wildlife and watershed are greatly impacted because of this. With the construction of a gondola, the watershed will be further impacted and wildlife will be pushed outside this canyon. I think further time and consideration need to be allotted to this issue before anything is decided. Placing a toll at the base of the canyon and funding more busses seem to be a less drastic option that can be initiated in the near future.</p>
35877	Jake Benda	<p>I grew up at the base of Little Cottonwood, spending much of my winters traveling to Snowbird. There is no question that outdoor recreation has seen a dramatic increase in the number of participants. From my observations of those traveling in the canyon, myself included, many are single passenger vehicles. We do this because it is convenient. This needs to change. Please encourage public transport and carpooling before venturing down a large endeavor such as building a gondola. Who knows, maybe the simple steps could encourage the way people look at caring for the earth.</p>
35878	Steven Fitt	<p>Since the planned gondola will stop only at the two ski resorts, why is it still marketed as a plan for better access to the canyon? Most of what my family does in the canyon cannot be accessed by the planned gondola because our most common activities are not at the top!</p> <p>Since the gondola serves only the two resorts, why aren't they paying for it? As long as it is not funded by taxpayers, I fully support the gondola. If it is funded through taxes, I strongly vote 'no'!</p>
35879	Joe Jensen	<p>It seems redundant but necessary to reiterate the financial and environmental disaster building a gondola in our national treasure of Little Cottonwood Canyon would be. As residents of this area for 30 years, we would relocate our home if this goes through. It would be a travesty of the highest degree. The fact that this plan is even being considered as an option is madness. Big business vs. the voice of the people, raping the landscape and homeowners for profit. Please DO NOT go forward with this asinine plan.</p>
35880	Ellen Lucas	<p>After reviewing the EIS Fact Sheets, I find the Enhanced Bus Service the most palatable. I am opposed to any gondola and/or any large development at the mouth of or in the canyon. We have insufficient water and electrical resources to support any increased development. And, the most sadly disturbing element of all the plans, in my opinion, is that the widening of Wasatch Blvd has evidently been designated as integral to any of the plans without negotiation. This action plus all the sound walls will permanently ruin this lovely, scenic road and turn it into an echoing tunnel like all the other newer UDOT roads. It is essential that Wasatch Blvd is left the way it is right now.</p>
35881	Kim Bloom	<p>I live at the bottom of Little Cottonwood Canyon and am against the gondola. It only benefits the resorts and wealthy visitors to those resorts. Locals will not pay to still drive to the bottom, to park, and ride the gondola. Electric busses are a much more practical solution....or retrofitting the existing railroad tracks for a Trax-style train. This is the rich getting richer on our tax-payer dollars.</p>
35882	Peter Jensen	<p>The gondola is a bad idea for Utah citizens. It will cost us a lot of money for Alta and Snowbird will be the ones getting most of the benefit. It will also ruin the natural beauty and many classic climbing spots in the canyon. Consider trying less drastic measures like charging a fee for vehicles going up canyon. Improving the bus system or improving the flow of the canyon by improving the road. Please don't give money to greedy developers. Please don't ruin skiing for the people that truly love it so that it's easier for tourists to pack the resorts full of people.</p>
35883	Breton Day	<p>I think the enhanced bus service makes the most sense for LCC. I can tell that UDOT has considered so many facets of each of the alternative plans and presented the information in an easy to digest format. I prefer the enhanced bus service without road expansion as it leaves the canyon without high visual impact. I also like the flexibility that bus service can offer. Busses can be added or removed as needs change, stops can also be added or removed, while a gondola is a permanent fixture. If a gondola is chosen going forward, as a climber I hope there is a plan to disturb as few boulders as possible and to not limit access to bouldering and climbing.</p>
35884	Donna Anderson	<p>In favor of Gondola B, Thanks for asking!</p>
35885	Tanya Pead	<p>Please do not build a gondola up Little Cottonwood Canyon. Without stops at major hiking trailheads, the gondola only serves the 2 ski resorts. Widening the road to accommodate electric buses and cyclists would be a better use of taxpayer money. Additionally, a toll to drive the canyon would help offset some of the costs and would deter a portion of drivers. A gondola serves developers and commercial entities not the general public.</p>
35886	Sophie Silverstone	<p>Please no gondola! I believe the problem with our city and our canyons is over-use, overpopulation, and over capacity, not that there is not adequate enough transportation. Transportation wouldn't be an issue if we addressed the root of the matter: over capacity past the point of being able to sustain the environment and our quality of life. The Great Salt Lake levels lowering is another indicator that the salt lake valley is headed for scarcity of many kinds if we keep overpopulating this area in this manner, reducing the lake's main tributaries by building housing developments that draw from the Bear River and others. The number of cancer patients in our area who flock to Huntsman Cancer Institute because of the amount of pollution from industry in the west side of the city, and now the toxic dust from the drying lake-bed and other environmental issues this valley faces, are other indicators that our quality of life is flagging as a result of poorly-planned industry and growth plans for this Valley. The only beneficiaries are the corporations, the ski resorts, and the government entities that do better with the increase in customers, while the environment, and the constituents (who overpay and have to deal with the increase in crowds) loses. By making a gondola seem to fix the problem of overcapacity, we all will be putting a bandaid on the bigger issue: overuse. By expanding the capacity and efficiency of moving people up and down the canyon, we increase the amount of water, waste removal, trash collection and other needs that put pressure on the environment. I'm opposed because if we're overcapacity, a permitting system or some other method of responding to this problem of overpopulation and overuse needs to be the priority, as opposed to spending a huge amount of time and money on something that enables the problem to get worse.</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35887	Wanda Hendricks	I am opposed as this project would impact wildlife and impose too much destruction to surrounding areas of natural canyon.
35888	Suzanna Graff	Unless you close the roads completely, people will still drive up the canyon. Therefore, air quality and watershed will not be better protected. The years of construction in the canyons will make it even more congested and polluted. The Gondola will be very expensive for many locals to go into the canyon and will really only cater to the sky crowds. Going into a recession we don't need the expense for our city or state. Then private investors will want to make their money back causing it to be expensive to use. It will take away from the aesthetic beauty of our mountains in the valley. Please don't put in the Gondola.
35889	Tate Denna	<p>I like to express my disappointment or and opposition to the recent recommendation for the LCC gondola project.</p> <p>My list of reasons is long and far reaching. Perhaps aggravated by the purported extensive research and evaluation process yet still coming to what must be the worst and most expensive option that could be proposed.</p> <p>Two things in particular of high on that list.</p> <p>One, that fact that this is marketed as a solution to the LCC traffic problems is at best false. Traffic problems are real in the canyon, but they are not limited to the handful of powder days each year. Traffic is an issue all year. October is one of the busiest months of the year with Oktoberfest and the fall colors. Hordes of people make the trek up the canyons.</p> <p>The gondola as proposed would only be operational during the winter months. Leaving the busy warmer seasons right back to square one with the original issue at hand.</p> <p>If it was decided that the window could be extended to warmer seasons, the monumental shortcoming would remain, the gondola is only intended to serve the two primary private businesses located at the top of the canyon.</p> <p>Bypassing the 8 miles of recreation spots in between. Still making it a gigantic, expensive, useless eyesore.</p> <p>My second reason is this. LCC is not unique in its traffic issues. Just as severe is BCC next door.</p> <p>No mention has been made of those issues? Is it because the two private businesses located at the top of that canyon are not forcing the issue through a corrupt process?</p> <p>Are we going to have to build another horrifically expensive chair lift to those two resorts in the near future as well?</p> <p>Or will the awful decision be made to bridge over the mountain ridge and extend the LCC line into BCC?</p> <p>Bottom line, the gondola is not a solution. It does not solve the traffic problem. Nothing has been said of the rider cost. Who's to say people will want to pay the cost? Or instead opt to just drive themselves up the canyon?</p> <p>It's been stated that avalanche work will shut down the gondola anyway. Those are generally the days with the worst "red snow" anyway. So again, the gondola will be useless in solving the problem it was created for.</p>
35890	Aimee Eskew	I am deeply opposed to the Gondola, it will be ugly and it will detract from the canyon's natural beauty. The gondola would only be used by a small percentage of Utah residents and it is not for EVERY Utah resident as not every Utah resident skis, myself included. I do not want to be hiking up there and have to look at an ugly, out of place gondola instead of the gorgeous greenery and natural sounds and smells of the canyon. I can imagine a very loud electrical hum reverberating throughout the canyon as the gondola goes back and forth between the parking lot at the bottom and the two resorts at the top, which is what I consider to be noise pollution. Please put the kabosh on this plan and come up with something that would benefit ALL of Utah taxpayers. Thank you.
35891	Evan Vautour	Please do. It put a gondola or train in you need to stop exploiting our free lands and limit snowbird and Alta and if that means also making people pay to use canyon that's better then ruining this pure and beautiful canyon no to gondola no to trains more buses that stop at trailheads and hold multimillion dollar ski resorts accountable
35892	James Coburn	The gondola is a rushed and complex project in which the EIA doesn't cover the full extent of harm that the Gondola represents. Nor does any of these decisions seem to show the full benefits of other options. This is a money grab for a developer in pure form and this project shouldn't go through without more transparency and diligence. No to the gondola
35893	Sandy Araujo	I have only lived in Utah for 9 years coming from the suburbs of Chicago. We bought a home in Riverton west of Mountain View Corridor. We loved the fact that there were open fields and wildlife. That is pretty much gone now because of all of the new developments in the area. Its a shame to get rid of just natural land. I think if the gondola is installed in the canyon, it would just take away from the beauty of the mountains. Can't we just leave nature alone? It would be a shame if the mountains would be changed forever. PLEASE NO GONDOLA
35894	Ann Marie ANDERSON	That kind of Money should not be spent by UDOT for the benefit of only the few that can afford to go skiing (and for the benefit of the ski resorts owners). Use that money to ease congestion for the entire Salt Lake County area.
35895	Phil Craig	We need the Gondola

35896	Leslie Petersen	<p>I oppose the Gondola for many reasons and believe in in the Enhanced Bus Service Alternative as the best solution for Little Cottonwood and for Utah tax payers. Little Cottonwood is one of the most beautiful canyons in the world. The enhanced bus alternative will not impact the visual beauty and the environmental impact of huge towers going up the canyon. Beyond the visual and environmental impact, the tax payers would pay billions for a bad solution that only benefits Alta and Snowbird and those with enough financial means to afford such transport to the resorts. I've also heard that the gondola would only be open during ski season. So an unsightly gondola that small percentage of the Utah population would actually use that only runs 4-6 months of the year is not the solution for Utah or Utah taxpayers.</p> <p>Please do the right thing for all of Utah.</p> <p>Leslie Petersen</p>
35897	andy gaither	<p>i oppose the gondola.</p> <p>it will be extremely expensive and only serve the ski areas. the reality is LCC will remain gridlocked with a goldola, people do not only travel to the resorts. the gondola also requires additional bussing. it will take longer to drive, bus and then gondola up the mountain. the many steps will not encourage people to take the gondola.</p> <p>It is fiscally irresponsible for UDOT to recommend moving forward with a \$550 Million dollar construction project that will still require the \$110 Million cost of the enhanced bussing to bridge the time gap. That brings the total of the Gondola system to a baseline of \$650 Million not adjusting for price changes between 2020 and 2025 or later when the construction would begin.</p> <p>The enhanced bus system can be rolled out in smaller phases and tested/proven method while it is initiated. Per UDOT statements they acknowledge that the current SKI bus system frequently reaches max capacity and there is an issue with lack of parking based on current infrastructure. During Free Fare February 2022. Page 7 of the UTA_ Free Fare February 2022 final release statement shows an increase of 14% for weekly riders. People will take the bus when you make it convenient and affordable. udot should move forward with enhanced bussing</p>
35898	G Taylor	<p>I cannot believe this is even being considered with all the needs on itah for the homeless, disabled and elderly. Transportation for disabled and elderly is deplorable. Az with half the money and 3 times the people is light years ahead of Utah in helping their people. How in hood conscience can you consider blowing over 1/2 BILLION DOLLARS ON A GONDOLA FOR SKIERS when others are suffering so. Liberals own you.</p>
35899	Debbie Cornwell	<p>I am against this project.</p>
35900	Christopher Young	<p>Building the Gondola up little cottonwood canyon would be a tragedy. It would negatively impact the experience of all users of the canyons, hikers, climbers, bikers and even many resort users. I know someone like myself who does all of the activities above would be very unhappy using the gondola to alleviate traffic as it would ruin the nature and serenity of the canyon. Little cottonwood canyon is a amazing piece of nature and there is nothing else quite like it in the world. We do not need to destroy this irreplaceable mountain by building the gondola. The building of the gondola would negatively impact the visual and auditory experience of canyon users and only serves a small subset of the population for a few months out of the year. Building the gondola would also cause the closing and destruction of boulders and trails directly destroying others activities in the canyon. There are plenty of options to solve traffic issues in the canyon without building the gondola. Increased bus services, with the possibility of adding a bus only lane. The addition of tolls, or make the canyon only assessable to private vehicles who have received a permit. Places like little cottonwood canyon are truly unique pieces of nature and should not be destroyed just to reduce traffic up to ski resorts for a few busy days out of the year.</p>
35901	Magnus Tveit	<p>I believe that a gondola would be a waste of money for tax payers, even more so if you have to pay to use it. As a college student I would rather drive up the canyon in traffic then pay to ride the gondola. I think a great alternative is a massive flet of electric busses as well as a toll for private cars. The toll should be at the canyon and should go to the Forest Service and UDOT. This will be way more effective then paying the ski resorts to park at the resort.</p>
35902	Tom Gledhill	<p>Definitely the tram. A wider road will only create more fuel immissions</p>
35903	Franklin Wareham	<p>Please do not use \$550 million of my tax money for the benefit of a bunch of preferred skiers. Let them pay for bus service from a parking lot somewhere at the bottom of the canyon.</p>
35904	HEATHER VAN DUK	<p>Locals have been very clear they do not want a gondola, and favor other alternatives, such as expanded bus service. It will ruin the natural scenic views, destroy classic, beloved rock climbing areas, and infuriatingly cost a fortune to fund travel to take people only to private ski resorts. This does not serve other users of the canyon at all (eg hikers, climbers, bikers, backcountry skiers, etc). Why are our, the locals', wishes being so blatantly disregarded?</p>
35905	Mary Metcalf	<p>I am strongly opposed to the gondola. It will be an eyesore, cost a lot of money, not stop along the way at places I like to hike, only stop at specific ski entrances, and building it will destroy the environment of LCC, not matter how careful one is.</p> <p>And a solution is really only necessary a few days a year - maybe 10 or 14?</p> <p>And it will just shift the traffic/stopped cars further into Sandy, along Wasatch, and Little Cottonwood Heights while people wait to get into a parking garage (which will also be ugly and cost \$).</p> <p>A toll for powder days, or all winter, plus fee-based parking at Snowbird and Alta should really be tried first- cheaper for the state, can be implemented almost immediately, fee based parking worked pretty darn well during 2021-22!</p> <p>Please NO GONDOLA.</p> <p>Mary Metcalf, Sandy resident/taxpayer</p>
35906	Caitlin Eckert	<p>Not a good idea!! It will hurt the locals, it will bring more attraction because tourists will want to ride the .Augondola that goes in the mountains,À I don't think it will solve the issue of over crowded canyons. Personal experience gone through the winter and summer and I did not experience any heavy traffic.</p>

38350	jeffrey kenney	<p>Hi,</p> <p>I am writing again as I'm not certain if my comment was received as there was no confirmation page/email.</p> <p>While I appreciate UDOT seeking feedback, I am sick and tired of talking/thinking about this gondola. I am AGAINST the gondola or cog.</p> <p>I appreciate the phased approach and I still fail to see UDOT address the impact this will have on Big Cottonwood. Furthermore why are we going to run a gondola to Alta/Snowbird for the summer. So much more of the canyon is used throughout the summer. Why are the tax payers footing the bill potentially for these two resorts' gain while they share in no risk/bill?</p> <p>I vote for a pilot of the enhanced bus with out road widening as it requires the least capital and let's us real time assess people's willingness to use the bus first. If they're not going to use a bus, they aren't going to use a Gondola that takes more time.</p> <p>Thank you,</p> <p>Jeff Kenney</p>
35907	Jayson Critchfield	<p>Do it. Put in a gondola</p> <p>Dear UDOT,</p>
35908	Jake Eiting	<p>My name is Jake Eiting and I am a SLC resident. I am writing to you in opposition of the proposed transportation alternative, the gondola.</p> <p>I believe the proposed gondola B option laid out in the FEIS is the wrong decision.</p> <p>Firstly, the cost of building a gondola in LCC is an irresponsible use of tax payer money. It is easy to see how a project of this scope, with inflation, delays, material and labor shortages could easily top the scales at 1 billion dollars. UDOT should absolutely not use that amount of money to cater to a select few utahns, tourists, and to line the pockets of Alta and Snowbird. Absolutely not.</p> <p>Secondly, a reduction of 30% personal vehicles could be achieved in a much, much cheaper and simpler way. One such example, increase the number of travelers per vehicle on S.R. 210. Carpooling could easily cut the number of vehicles entering the canyon by half and open up space for more buses which carry dozens of people. The gondola option does not solve the vehicle issue. It allows 2500 cars to park at the base but then what? The parking fills up and folks drive up the canyon anyway. The gondola option does not eliminate vehicles from entering the study area and is a very poor option.</p> <p>Thirdly, the public has spoken! I have spent many nights reading through the comments and the responses to the draft EIS provided by UDOT in volume 6 of the FEIS. It is obvious to me that the public is against the gondola option. I also attended the Salt Lake County Council meeting on Oct. 4th, 2022 in which the Council voted in favor of supporting common sense solutions and not supporting the gondola option. The public presence at that meeting was huge and not a single member of the public who spoke in front of the council was pro-gondola. Everyone was against the gondola. Including the Salt Lake City mayor.</p> <p>Lastly, and most importantly, we need to address the environmental legacy of this upcoming decision. Beyond the obvious destruction of one of Utahs greatest view sheds, the gondola represents many dangers to the hydrology and ecology of LCC. One only needs to look back in history to see the folly in large scale projects taking place in such important natural spaces. Glen canyon dam is a recent example. It was a project of immense destruction to one of the world's great canyons and now it's on the precipice of being obsolete as we continue to encounter drought conditions. I worry, sometimes awake at night, that the gondola would be a similar folly. Us humans are great at justifying these types of acts even though the negative impacts to the environment, our fragile and dwindling watershed, the plants and animals that we rely on, are staring us right in the face.</p>
35909	Andrew Rappl	<p>I am all for the gondola if it has a bar in each gondola cabin.</p>
35910	Cynthia Houston	<p>I think it's best to restrict cars and have travelers make reservations. This is what they are doing on Kauai at the North Shore. Look into it. They are trying to save nature.</p>
35911	Jackie Tripp	<p>No gondola. For all the reasons that have been posted. Wouldn't our tax money be better spent on bigger problems then helping wealthy corporations.</p>
35912	Pramoda Nallur	<p>As a longtime resident of Sandy and a person who loves the Little Cottonwood Canyon, I am against introducing Gondolas. The Gondolas will forever change the way the mountains look and will stand out like a sore, man-made structure that defiles nature's awesome creation. Gondolas will not make transportation any convenient either. Neither does it have to become a money-making venture for vested business interests at the expense of natural beauty. More harm will be done to the environment due to its construction and will become another burden on energy consumption.</p> <p>For all these reasons, I vote for rejection of the Gondola project.</p> <p>Thanks.</p>

35913	Judith Webb	<p>. No gondola! . Gondola will be a huge burden on tax payers including those that don't ski or hike or utilize the canyons. . It is a rushed decision and irreversible. . LCC is a natural treasure, one of God's crowned jewels. If we allow a little to be despoiled, all will be despoiled eventually. . Wasatch Boulevard should not be widened. . It needs to be pedestrian friendly. . Make walking paths on east and west side. . Have protected bicycle paths. Utah's infrastructure needs to be focused on. We need to focus on our traffic. People run red lights drive 90 mph on our highways without penalty. Building Unsightly gondola towers And parking structures, widening Wasatch Boulevard will definitely increase visitation and stress in Little Cottonwood Canyon. Please listen to us!</p>
35914	Jack Arnott	<p>If the project is viable economically, then those that benefit from it should easily be able to pay for it. As proposed it is the worst combination of socialism and capitalism, privatizing the gains and socializing the losses.</p>
35915	Nolan Ingersoll	<p>There are many concerning aspects of the preferred Gondola B proposal, and I will differ to the Wasatch Backcountry Alliance's official statement as a summary of my concerns. I believe their response outlines very succinctly the main issues that my friend, family, the greater outdoor community and Salt Lake City residents have expressed, including the SLC and SLCO governments.</p> <p>One point I would like to emphasize is the clear and obvious financial benefit this provides to the ski resort with no financial input from the companies that are benefit. The small scope of this solution (LLC only, resort only, winter only) leaves so much of the Wasatch unserved by this solution.</p> <p>Please consider lower impact solutions that serve more of the Wasatch and more of the community.</p>
35916	Lily Halvorson	<p>I am not in favor of a gondola. This will only benefit wealthy resort users and will not benefit all canyon users. I want a solution that will not casue any harm to the canyon. I think a tolling system, or increased busses and larger park and ride areas would be a better solution.</p>
35917	Morgan Tadge	<p>I do not support the gondola being built in little cottonwood canyon. Little cotton wood canyon is one of my favorites climbing spots and building the gondola will take away many of the boulders I love to climb on. If the gondola is built it would leave me very sad and angry.</p>
35918	Keith Reidford	<p>I am NOT in favor of the installation of the gondola in LCC. The use of tax dollars to benefit so few while only minimally decreasing canyon traffic is absurd. The clear solution is to limit canyon access, not try to increase it. Imposing ticket/pass sales limits on resorts is the only way to make visible change in canyon traffic.</p>
35919	Nolan Ingersoll	<p>There are many concerning aspects of the preferred Gondola B proposal, and I will differ to the Wasatch Backcountry Alliance's official statement as a summary of my concerns. I believe their response outlines very succinctly the main issues that my friend, family, the greater outdoor community and Salt Lake City residents have expressed, including the SLC and SLCO governments.</p> <p>One point I would like to emphasize is the clear and obvious financial benefit this provides to the ski resort with no financial input from the companies that are benefit. The small scope of this solution (LLC only, resort only, winter only) leaves so much of the Wasatch unserved by this solution.</p> <p>Please consider lower impact solutions that serve more of the Wasatch and more of the community.</p>
35920	Phillip Symons	<p>Please do not build the gondola. Please do not destroy Little Cottonwood for greed. A gondola will not fix the problem. It will only ruin this beautiful canyon.</p>
35921	Co Newman	<p>The Gondola would diminish congestion and pollution from more buses and cars, plus save the natural beauty of the canyon without widening the road.</p>
35922	Dianna Berrett	<p>The gondola is not necessary. There are less invasive ways to address this problem, which have been spoken about at length throughout this process, so I will not list them here. Additionally, it is 100% wrong to expect the taxpayers to foot the bill for some thing that will benefit gondola private interest parties and two privately owned ski resorts. It is unfathomable that this is even a topic of conversation and shows a great lack of integrity within the state.</p>
35923	Shirley Pryor	<p>Yes on Gondolas! I have waited in to many lines of idling cars as we try to go up the canyon. Let the hikers fight for those small parking spots. We want to get to the top and see the resorts and enjoy the amenities and beautiful view! Many many other canyons and countries use the Gondolas. Let's get with it and have one too! Summer and winter will be more accessable for everyone old and young.</p>

35924	Alanja Oliver	<p>The group of businesses and individuals who stand to gain the most financially if a gondola is built in Little Cottonwood Canyon (LCC) is at it again. Gondola Works has released yet another slick video, along with a series of broadcast ads, billboards and sponsored content, to try to convince Utahns a gondola is the best LCC transportation solution.</p> <p>Unfortunately, their claims about sustainability, clean energy use and LCC preservation are misleading and confusing. Don't forget, 80 percent of Utahns are against a gondola in LCC (https://www.deseret.com/utah/2021/12/9/22822405/poll-little-cottonwood-canyon-bus-system-favored-over-gondola-udot-alta-snowbird-ski-resort-utah).</p> <p>Tellingly, there is much that the video, and overall campaign, does NOT say:</p> <ol style="list-style-type: none"> 1. If preservation is so important, how does building more permanent infrastructure that includes 20+ towers, 10 of which are at least 200 feet tall, help preserve the beauty and wonder of LCC? 2. GW consistently points out how "clean" the gondola will be, but they conveniently do not mention the electricity source that will power it - COAL-fired power from RMP. (Read more about water usage related to coal power from The Salt Lake Tribune here: https://www.sltrib.com/news/environment/2022/05/01/utahs-drought-persists/). 3. GW also conveniently omits the fact that you will have to drive your polluting vehicle to a bus terminal, unless you are elite enough to have one of the 2,500 "premium" parking spots at the base station, which will create new traffic issues on Wasatch Blvd as people vie for the coveted spots. <p>If Gondola Works is so interested in preserving LCC, the first thing they should do is support a capacity/visitor management study to better understand how many visitors LCC can support. Then the best solutions can be implemented, regardless of whether it is their solution or not.</p> <p>I agree with GW that we do not need to add a third lane to LCC, which would add more concrete, impact LCC creek and the world-class climbing areas. Rather, let's use solutions that already exist:</p> <ol style="list-style-type: none"> 1. Parking reservations work! Look at how they worked for Snowbird in 2021 and Alta Ski Lifts this year. 2. An enhanced system of regional natural gas and/or electric buses that run directly to the ski areas. This should include smaller vans that stop at trailheads for dispersed users.
35925	Shelly Bullock	<p>I would love to see the Gondola at LCC. It is a very European way to get up the mountain. Keep the vehicles parked in a designated area instead of driving up/down the canyon. Avalance sheds, widening the roads, and extra buses don't sound environmentally friendly to me. Plus the revenue that can be generated during the summer & fall for those who would like a scenic ride would help pay for the Gondola.</p>
35926	Kasey O'Killion	<p>I support a scalable approach (both increase and decrease) to the traffic situation in Little Cottonwood Canyon. For that reason, I support an increase in bussing, as well as tolling at LCC. A gondola, while interesting and with certain benefits over bussing, does not solve the true issue of encouraging folks to get out of their private vehicles. I have lived near LCC my entire life, and have had a Snowbird pass every year for the past 30 years. I love skiing the Bird and am very fond of taking the bus to do so. It's longer, but beats driving up the canyon.</p> <p>I also use the canyon all summer, be it for hiking, or more likely for me, road cycling. I think traffic in the canyon is an issue all year, not just peak winter days. The gondola, as proposed, does not alleviate traffic conditions during peak "off-season" times.</p> <p>Please reconsider your stance supporting the gondola, it is to brash too soon, and will cost too much, not just in tax dollars, but in damages to LCC, one of the most precious gems of the Wasatch.</p>
35927	Samuel Heinith	<p>I would like to voice my opposition to the Gondola plan. I am a recent transplant to SLC and access to Little Cottonwood Canyon for rock climbing was part of what brought me here. I am aware and agree that currently the canyon has too much car traffic in it and I support the proposal to add a toll to the canyon, especially if it can be implemented using electronic toll collection. I do not support the gondola plan because I think it will do little to help the traffic situation, especially in the off-season when the gondola will not be running. I think it would be worth it to trial a tolling system, especially during peak use times, like weekends or during ski season, before going ahead with the costly and inflexible gondola system.</p> <p>Thanks, Samuel Heinith</p>
35928	Amy Horton	<p>Do not build the gondola its a waste of taxpayers money!</p>
35929	Donald Lee	<p>The traffic this weekend was horrific and dangerous. A cable car alternative to escape is needed.</p>
35930	Nola Peshkin	<p>I vehemently oppose the gondola proposal in Little Cottonwood Canyon. The gondola is not only impractical, but also will not solve the congestion and traffic issues in the canyon. The gondola is a tourist attraction, not a transit solution. Instead, practical and effective solutions such as smart bussing, tolls, and tire traction regulations should be implemented. Jumping straight to a \$600M construction (and ecological destruction) project is silly, childish, and not a solution. Additionally, we in Utah already struggle with water as a precious resource, and by scarring our landscape and watershed with a giant gondola construction project, this problem will only grow worse. NO to the gondola. It is clear that the majority of residents in the Salt Lake Valley say no - so why won't you listen???</p>
35931	Zackary Walter	<p>Please do not destroy Utahs natural beauty with a tram/gondola!</p>
35932	Adam Bowes	<p>I am strongly in favor of the gondola! It provides a safe, affordable, and well though out experiance for local SLC residents to access the canyon!</p>
35933	Emily Carson	<p>Protect the Canyon!</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35934	John Ludlum	<p>Dear Sir or Madam:</p> <p>I am opposed to the Gondola as the solution to the traffic congestion problems for Little Cottonwood Canyon because:</p> <ul style="list-style-type: none"> - the gondola is grossly underestimated for cost at 500 million and will be much closer to 1B when completed according to outside experts; - Lower cost alternatives are available in the form of bus transit which can be done with non-polluting electric vehicles; - the political process for the gondola has been utterly corrupt with Snowbird and Wayne Niederhauser trading in land parcels needed for the project long before formal approval is disclosed to the public, and the project has every appearance of being fixed to ensure that taxpayer money is spent for the benefit of 2 very profitable private companies and their paid legislators; and - the gondola is not even proposed to make stops at popular summer use sites, stops which don't need to be used in the winter, but showing that the benefit of this project is not for traffic reduction but for Snowbird and Alta's profits. <p>It is amazing how little expectation there is that even the overwhelming citizen opposition, supported by local politicians like Salt Lake County, will have any effect when a project like this to funnel taxpayer dollars to private interests is being crammed down by the state legislature.</p> <p>Sincerely yours, John Ludlum</p>
35935	Evan Vautour	Please no gondola or train improve bus routes allow bus stops at trailheads limit multimillion dollar ski companies ticket sales put a toll in but allow a year pass that's reasonable 500-800 dollars stop exploiting our free space and canyons
35936	Tamee Burkholder	I'm looking forward to the gondola. I'm pleased with the idea and plans.
35937	Addison Scanlon	Canyons are public lands.
35938	Madison Eyre	No to the Gondola. Please keep the foot traffic down as much as we can in our beautiful mountains. We don't need this. Thank you.
35939	Rebecca Brim	<p>After reading all the IG posts answering questions regarding the options- I STILL DO NOT support the gondola. Please don't. I know that the businesses lose money when LCC is closed but the gondola is too invasive, too impactful to the area and creates a very high suspicion regarding who's funding this decision. Such a huge, invasive "solution" merely to keep 2 business growing that give nothing back to the community and reek of greed. Why? Why all this for them? The resorts need to have ownership in the problem and also need to change their practices to help crowd and traffic control. Staggered start times, cap tickets sold in a day, set capacity limits, reservations- I don't know, but they really need to own their part in this problem. Can you seek out companies like IKON for funding to increase the number of buses used or start another canyon shuttle service for the valley if UTA can't do it?</p> <p>I think tolling the road is a great idea but how do you propose to do this at Snowbird Entry 1 without causing even further delays? Prepay and scan a QR code on your phone?</p> <p>Also, regarding Wasatch- something HAS to be done for residents that live East of Wasatch between mouth of LCC and the 1st light at 3500 East. My mom has several hours in the morning and afternoon (especially during winter) where she cannot get out of her neighborhood (lives on [REDACTED])</p>
35940	Richard Gallacher	NO GONDOLA! The people do not want a gondola in LC canyon. We cant afford to pay for it! Leave the canyon exactly the way it is!
35941	Jordan Turnbow	There is a grocery store (former Smith's Market Place) at 9400 S and Highland Dr. That has been vacant for years. There is plentiful parking and and the store could be used as an extension of the resorts where people can park their cars and be a staging area to catch buses up the canyon. People riding the bus up would get beneficial treatment on the ski lifts over those who choose to drive up the canyon. Problem solved, it'll cost you the lease of an all but abandoned building and the leasehold improvements, increase the prices of homes in the area (as opposed to decreasing them) and solve the supposed traffic issues in the canyon without having to significantly change infrastructure or placate the wealthy home owners that don't want a gondola ruining their views and allowing the general public to peek into their backyards and homes.
35942	Lee Knowles	100% AGAINST a Gondola. Lifelong LLC user and Cottonwood Heights / Sandy Resident.
35943	Eric Ward	I do not want any of the proposed plans to move forward. Please leave LLC alone and don't destroy it by adding a Giant eye sore and destroying several recreational spots along the canyon walls. It would negatively impact the natural beauty of the canyon and destroy many climbing, hiking, and other recreational areas. I would leave the canyon alone for now. The single road naturally preserves the canyon by limiting the number of people in it. Try limiting cars, or ticket sales to reduce congestion. I also don't think that adding a fee into the canyon is a good idea. The fact that you have to impose a fee to get people to use your new alternative, should be a good sign that people don't want it.
35944	Brian Bradley	I support the gondola ??
35945	Oscar Christoph	Public lands shouldn't be defiled for private interests. Disgraceful
35946	Ryan Wirth	Hello, I'd like to see more efficient infrastructure options that do not include a low capacity gondola that only serves the top of the canyon. A better option could include changing the road to a one way at a time system in segments (similar to temporary lights at construction sites that limit to one lane) and putting a high capacity train (with avalanche barriers) in the secondary lane, putting stops at each trail head and running 24/7. The train pass system would also help SARS identify when and where missing persons would have gotten off the train.
35947	Lauren Jacobsen	I believe the bus system is the best action at this time. I am a skier and a hiker, so I explore our canyons often. A very well organized bus system could serve everyone that uses the canyons. You can have two routes going up the canyons. One bus route would go straight up to the ski resorts. The other bus route makes stops at the biking, hiking, climbing, snow shoeing, etc. locations. Have pull outs for the buses to stop at to have people enter and exit the bus. Many of our national parks do this. It can be hard at first, but in the long run it is best. I actually love the different bus systems that I have used while exploring our parks. There is absolutely no reason to use our tax dollars for something that will not be used by everyone in Utah. Please use those dollars for teachers, police, firefighters. Use the money where it is NEEDED, not wanted, but the small portion of people.

ID	Full Name	Comment
35948	Keenan Peters	I live in salt lake city and have skied in little cotton wood all my life. I do not think that the gondola is the right option for little cottonwood canyon. I think the 600 million or more of tax payer money that this will cost will mostly go to benefit the resorts and not help address the problem of other canyon users. I think that an increased bus system with more parking will better serve little cottonwood users now and in the future. There is the problem with the lack of bus drivers. I think this can be address by paying drivers more.
35949	Monica Calmes	I do not want the gondola in the canyon. The cost is too great and the benefit is not there. It would only benefit to put more people in the canyon without benefit to the residents in the area. NO GONDOLA
35950	Jenson Jiang	35 capacity every 2 mins with the big number of investment cost is a BIG NO to me.
35951	Angie Parkin	The best choice is an environmental choice! After so much thought and research looking at all the options, the most sound option is the one that will have the least negative impact to the environment, that would be the gondola. Thank you for listening to the public!
35952	Quinn Parker	I am against the gondola. The normal family isn't going to be able to afford to ride it, winter or summer. Why aren't the resorts paying for it? They are the benefactors?
35953	Nolan Paini	Putting a gondola in LCC that will only benefit private businesses, at the taxpayers expense, is a terrible idea. If it only benefits Alta and Snowbird, then they should pay for it. Also, if for some reason the gondola does go through, then it should stop at every trailhead so that backcountry skiers, snowshoers, and hikers also benefit from this expensive option. In my opinion, we should try less invasive measures first like increased bus service.
35954	Addie Morrow	Please do not build the gondola
35955	Mikell Bova	<p>I am writing in opposition to UDOT's preferred alternative: LCC Gondola.</p> <p>First, I don't believe the gondola will be sufficient in addressing the traffic issue. It does nothing to alleviate traffic in Cottonwood Heights since parking will only be provided at the base of the gondola so people will still have to drive on Wasatch Blvd to board the gondola. Moreover, it doubles drive time so I don't think people will use it even if you toll LCC. Skiing is an expensive sport; I don't think many skiers will flinch at paying \$5-20 to drive up the canyon if it saves them an hour. The gondola will only serve to pack more people into the mountains which are already at capacity as evident by long lift lines at Alta and Snowbird every weekend day and holiday.</p> <p>Second, it will be insufficient during the summer when traffic can still be bad as it doesn't serve the most popular summer trailheads, which also routinely fill up during the winter.</p> <p>Third, it won't be able to run during bad weather or during high avalanche danger which sort of defeats the purpose. Whereas, snow sleds over the road at crucial slide paths would be more effective in protecting motorists and safely moving people up and down the canyon.</p> <p>Lastly, it also ruins habitats and areas of high recreational use which would be detrimental to the outdoor community and the environment of LCC.</p> <p>I proposed an enhanced year-round bus system in both little and big cottonwood canyon, an additional bus only lane, and snow sleds to help protect the road from avalanche dangers.</p>
35956	Mikell Bova	<p>I am writing in opposition to UDOT's preferred alternative: LCC Gondola.</p> <p>First, I don't believe the gondola will be sufficient in addressing the traffic issue. It does nothing to alleviate traffic in Cottonwood Heights since parking will only be provided at the base of the gondola so people will still have to drive on Wasatch Blvd to board the gondola. Moreover, it doubles drive time so I don't think people will use it even if you toll LCC. Skiing is an expensive sport; I don't think many skiers will flinch at paying \$5-20 to drive up the canyon if it saves them an hour.</p> <p>Second, it will be insufficient during the summer when traffic can still be bad as it doesn't serve the most popular summer trailheads, which also routinely fill up during the winter.</p> <p>Third, it won't be able to run during bad weather or during high avalanche danger which sort of defeats the purpose. Whereas, snow sleds over slide paths would be more effective in protecting motorists and safely moving people up and down the canyon.</p> <p>Lastly, it also ruins habitat and areas of high recreational use which would be detrimental to the outdoor community and the environment of LCC.</p> <p>I proposed an enhanced year-round bus system in both little and big cottonwood canyon, an additional bus only lane, and snow sleds to help protect the road from avalanche dangers.</p>
35957	Shawn Player	<p>Greetings,</p> <p>I live south of Little Cottonwood Canyon, so the gondola will have an impact on me directly. I'm not going to go on and on with the same arguments against the gondola that so many other have stated here. I simply have a plea; I beg you to listen to us. The people who will be impacted by, and forced to pay for something we don't want. Please look out for the citizens who have spoken out about the gondola, not the business interests of others. Please, I beg you, we simply don't want you to force this upon us. We want you to listen to us.</p> <p>Thank you.</p>
35958	Emily Viehl	I do not support the gondola. It does not solve the transportation issues in the canyon and it would be incredibly destructive and expensive. I am in support of an increased bus service. The buses would not have significant visual impacts and would be able to service everyone who recreates in the canyon. The gondola doesn't make any sense. I'm not sure why it is still be considered.
35959	Joseph Torreano	Do not build the gondola. Using public funds the primarily help two private businesses one of which who operates on public lands is a bad idea. I should not be paying to mark alta and snowbird more money. Do not build the gondola. Thank you.

35960	Megan Vincent	Why not limit access to the canyon, preserve nature, and force people to use a park-and-ride to gain access to the ski resorts in peak season. Versus damaging wildlife habitat, interfering with natural landscaping and so much other unnecessary construction.
35961	Allison Conner	Please do not implement a toll. If too many cars are driving up the canyon, the ski resorts should handle a reservation system. It should be free to enjoy our public lands. It should be free to access our canyons. The road is paid for via tax dollars; extra fees are unfair and favor the wealthy. Access should be equal. I also prefer the cog train to the gondola option. Bus service is an okay option, but doesnt work for people who experience motion sickness nor those who want to either do a scenic drive or go hiking, snowshoeing, etc.
35962	Kanda Lindhardt	Waste of money, and no need.
35963	Robert Seeley	Don't deface the canyon for a lousy dollar! The uncluttered beauty is worth far more!
35964	Louis Patten	Hello, Thank you for taking the time to consider my comments. As a homeowner in Salt Lake, and an avid skier, I am not in favor of the gondola solution. This traffic problem has been brought by ski resorts shifting to multi-resort passes and a lack of responsibly limiting the number of daily visitors to the resorts. There should be a study done on a proper capacity and institute daily limits.
35965	Mimi Andrews	Hello, I am submitting my comment against the proposed gondola in Little Cottonwood Canyon. I believe a gondola would completely ruin the natural beauty of LCC, while completely avoiding the issue of congestion in the canyon. The gondola would only service the ski resorts and neglects the fact that the canyon has many non-resort visitors all year round. The gondola would only increase the amount of people in the canyons, but would not solve the issue of car traffic. We also have an environmental catastrophe on our hands with the Great Salt Lake drying up. If the lake dries up there will be no snow for the ski resorts to profit off anyways. If the ski resorts want the gondola, they should be the ones paying for it, not the tax payers.
35966	Michael Johnson	I am a long time resident and user of LCC. I am strongly against the gondola. It does not address the combination of needs for the canyon and appears to only help the businesses of Alta and snowbird. I support broader options such as toll road and expanded bus for busy times.
38666	Lauren Jacobson	Hi, my name is Lauren Jacobson. I live in Sandy. I'm just calling about the gondola and I was told that calling you guys to say leave your comments and stuff like that. I really am against the gondola. I'm a skier. So I understand this kind of stuff in the all the congestion and all that kind of stuff going up the canyons, but no there are many ways that we could spend our tax dollars for everyone in Utah. Not just for a little few bus system work, so you can check out all the national parks that we have. They have great bus systems that works very well. This is just it's ridiculous to have the gondola for just the very few and all the damage that's going to do to our canyons, which is not we just do not want that and all the no. Anyway, Lauren Jacobson, live in Sandy [REDACTED] Again, my phone number is [REDACTED] I know that there's a better way than the gondola. And I know that we are smart enough to figure it out. All right. Thanks. Bye.
35967	David Carroll	I have recreated in Little Cottonwood Canyon year around for over thirty-four years. Without doubt the problems of transportation particularly within and in the approach to the canyon have exponentially worsened during that time. I doubt anyone with either a long term or even a short experience of conditions would disagree. However, there is deep and divisive disagreement, particularly locally, on which mitigative strategy make the most sense. I categorically do not support the UDOT selected gondola B alternative. I can only assume from the outcome that the Environmental Impact Statement process has been manipulated, at least in its later phase, to make the gondola alternative an inevitability. However well-intentioned initially, this NEPA process became a vehicle to rationalize a bad decision dressed up in jargon and served with a large helping of pseudo-analysis. In reality I think it was a politically driven decision made in back rooms and heavily influenced by a self-interested powerful few. Only a very selective reading of the Purpose and Need statement enabled making the gondola appear to be the best final choice. The Purpose and Need statement placed a priority above all others on the goals of Safety, Reliability, and Mobility for all users - commuter, recreation, and tourism. This is presumably year around since seasonality is not expressly mentioned. Other values for the Canyon like its natural resources, watershed, diverse uses, and the scale of Little Cottonwood Canyon (viewshed?) were considered, but of course "considered" made them secondary to the three primary goals. The statement did not rank the beneficiaries, was not explicitly seasonal, and the enumerated "other" considerations (like watershed) were secondary. The EIS team weighted its interpretation of how best to achieve the three primary goals to favor their preferred alternative, the gondola B without adequately demonstrating the unequivocal superiority of that alternative and why the tradeoffs were balanced by the purported gains from the alternative. In other words, the EIS failed in demonstrating why achieving those three goals at a high cost to a locally beloved area was a weighted decision that fully recognizes the broader public interests. Lastly, this choice will be expensive, is unproven, and even fails the test of serving all of the users (commuter, recreation, and tourism) the Purpose and Needs statement articulated. The public clearly values Little Cottonwood Canyon aesthetically. In its short length the scale and drama of peaks and canyon walls are superlative. Its length to height ratio and relatively straight path contributes much to the drama of its appearance. Installing an imposing, sterile, industrial looking, monstrosity of twenty plus towers and cables, half of the towers over 200 feet tall, will forever degrade this iconic viewshed. Achieving Safety is of course of critical concern, but Reliability and Mobility in this context are more matters of convenience in getting to destinations - in this case only two locations that exist primarily for lift serviced winter recreation and the financial gain of the two companies that own them. Sacrificing the canyon viewshed, especially when reasonable less-invasive alternatives exist, is unconscionable and a perversion of the fair evaluative process the public was led to expect.
35968	Greg Daussin	No to the gondola. No giant parking lot at Wasatch Blvd. Make them ride buses from existing parking throughout the valley. Make the ski resorts foot the bill for everything. It's their business that's driving the problem.
35969	Jonathan Webber	I estimate operating cost at \$20/person which will require an access charge for autos

35970	Colin Ferguson	A gondola will irreparably harm the aesthetics and environment of LCC to relieve traffic congestion during a fraction of the year. I do support the steps in the initial phasing process (enhanced bus service, snow sheds, tolling, Wasatch Blvd widening) which seem like they would go along way to addressing the current problems.
35971	Edouard Saget	Please - no gondola in the middle of that canyon. There are other ways. Tunnels for one which protects the views, the noise and the constant avalanche control should be considered. Such as found everywhere in Europe. They don't use gondola for mass transit!!
35972	Chris Webb	We want the most cost effective option.
35973	Kiana Wong	I vote NO to the installation and changes proposed. Do not create any further destruction of nature to our canyon and environment.
35974	James Arrowsmith	I don't believe the taxpayers of Utah should have to pay to improve transportation to the ski resorts. Ski resorts should implement a reservation system.
35975	Robert Turner	I am completely opposed to a gondola up little Cottonwood Canyon. For one thing, it will be an eyesore. But the main reason is because it will benefit only Snowbird and Alta. Since they will be receiving the benefits, they are the ones that should pay for it, not the taxpayers of Utah. Do not, do not, do not spend taxpayer money on this gondola project.
35976	Dejan Eskic	Against. This project needs to be reevaluated. Spending this much money to benefit just one business is irresponsible use of taxpayer money. If Snowbird wants a gondola then they should pay for it or we need to have multiple stops along the way because the traffic and parking issues existing throughout the canyon and not just at Snowbird.
35977	Zac Watne	<p>much to say here regarding the decision to go ahead with the gondola project for Little Cottonwood Canyon (LCC) - I am very much against it - though there are a couple of key points I would like to highlight.</p> <p>#1: There are many ways to address the problem prior to building a gondola, including the important step of creating a bus depot (where the parking for the gondola is planned to be) and testing out various bus options before any additional steps are taken. The depot could range from one extreme, shutting down public access to the canyon for several months/weeks/days per year - save residents/workers (e.g. Zion NP), to simply enhancing the bus boarding/unboarding process via the depot. Buses also have the additional benefit of being able to service far more places in the canyon (e.g., trailheads - not everyone wants to go to Snowbird or Alta) and if the buses are electric - which has been proven to work in the canyon - then the environmental impact is lower.</p> <p>#2: While you cannot place a price on this, the aesthetic loss of value within the canyon itself is worth noting. Currently the sightlines, the contours of the granite walls near the mouth of the canyon and the unobstructed views up the various gulches and forks (Tanner's Gulch, White Pine Fork, Red Pine Fork, etc.) are highly valued by those of us who utilize the canyon year-round. The varied gondola towers, cables, and cars would permanently scar the canyon and the natural feeling currently cherished throughout the canyon would be lost.</p> <p>#3: One underlying assumption behind building a gondola is the thought that far fewer cars will drive up the canyon in the winter (part of the environmental impact study). That is a questionable assumption at best. Yes, some will decide to take the gondola up rather than driving - particularly during storms...this of course assuming the gondola itself isn't shut down due to high winds during said storms. Given the projected travel time for the gondola it will be faster to travel via personal vehicle, which will be especially true if some cars are removed via the gondola. Meaning the same number of cars will use the canyon, and more people in total would be up the canyon with gondola usage - which highlights yet another ignored issue: what is the tipping point for usage in LCC? The failure to address this critical issue is point #4.</p> <p>#5: The fact that the public is footing the bill for a solution that will only run 6(ish) months out of the year, and one that will only benefit two entities, is concerning to say the least. Make it a shared expense between UDOT, Snowbird, and Alta and the public could stomach the costs more. Nothing has been stated to indicate this has been discussed.</p> <p>#6: The increased traffic wherever the gondola is built (currently slated for the land purchased by LCC Base Property LLC, which of course is owned by Cummings family - who also own Snowbird) will be severe even on good days. Between the entry areas for Snowbird and Alta there are currently five places where cars can gain access to those resorts. Even if there are two entry points for the gondola base station the strain felt on high snow days will be immense. Getting into and then</p>
35978	Ben Wasser	We all know already that this is just a money grab by the resorts, a way for them to pack more people onto the slopes and stuff their fat pockets with our money. This will do nothing to ease the traffic or congestion. In no way does this benefit the community, only helps the rich get richer while destroying one of the most beautiful places in the country. Moving forward with this project is essentially dropping a nuclear bomb on the local public. Peoples biking, hiking, climbing, and skiing spots will all be disrupted and it will drive us away to make room for big money tourists from California and Texas. Its already a problem plaguing much of salt lake and the rest of Utah and this project will end up an ultimate accelerant.
35979	Rachelle Puckett	I do not approve of the gondola. Exploring a better bus system should be tried before the gondola.

Between the entry areas for Snowbird and Alta there are currently five places where cars can gain access to those resorts. Even if there are two entry points for the gondola base station the strain felt on high snow days will be immense. Getting into and then I am fundamentally against a gondola for many reasons including: 1) it only benefits Snowbird and Alta, not all the others using the canyon. If Alta and Snowbird want this, they can pay for it themselves and furthermore, it will make skiing horrible. You are just shifting the problem up this mountain. The lifts can only support so many people. 2) Spending half a billion dollars for just a few Saturdays are year makes no sense. I skied Alta many Saturdays and Sundays last year and traffic was hardly a problem. Because Alta limited the parking, it dramatically reduced the congestion in the canyon. So I consider this a total waste of tax payer money. 3) Buses are used everywhere in the world and solve congestion problems like this. If you make busing more convenient and make driving a car with only 1 or 2 people in it more expensive, people will respond to incentives and stop driving. There is a much cheaper way to solve this problem. Limit the parking at Alta and Snowbird and mandate a minimum of 3 people for every car that goes up the canyon unless they want to pay \$100. You will be amazed at how quick people change behavior.</p> <p>I think we are all forgetting that this is public land and is for the people, not the corporations of Alta and Snowbird. Do what is right for the people.</p>
35981	Scott Lalor	<p>I am opposed to the gondola. Ruining the beautiful view with a man-made structure would be a travesty. There have to be better alternatives than that.</p> <p>Please, please do not do this. Don't irreversibly harm this beautiful place because of greedy resort owners. WE WANT BUSES!!!!</p> <p>The Gondola proposal is not good for the community or visitors of Little Cottonwood Canyon. Road travel is not restricted during a majority of the year and parking capacity at Snowbird/Alta already result in busy mountains for recreation.</p> <p>The gondola is not a truly sustainable solution. It is a classist attempt to allow those with money greater access to the natural beauty of the canyon. Regular shuttle buses, especially electric, would be a much better solution to this problem. No gondola.</p> <p>I am opposed to the construction of a Gondola in the Cottonwoods. Not only will this damage the environment, impact wildlife, and lead to a terrible eye-sore in place of some of the worlds most spectacular views and vistas. It is a poor job at finding a solution for the traffic and use that builds within the cottonwoods at peak hours. Building on a renewed bus system and incentivizing car pooling in a huge way is the long term solution for maintaining the integrity of the Cottonwoods, don't make a play for tourism to drive money to resorts. Make a decision for the residents of the state who have spent countless years in their "backyards".</p> <p>I am in favor of the gondola. The construction may impact the wildlife to an extent, but no more than the hundreds of cars that go up there. It will decrease the car traffic and is a cleaner alternative. Thank you.</p> <p>This is a terrible idea and will destroy historic climbing and hiking in little cottonwood. The canyon is know for its authentic utah experience and this will inhibit that by diluting the experience with tourism while destroying history.</p> <p>Gondola is a bad use of public funds and public lands destruction just to make snowbird rich. Put a tollbooth at the bottom to charge 10\$ after 8am (unless carpooling) and traffic will decrease by a lot/make money</p> <p>Very much against this proposal. This is clearly a chance to pander to a select few and mostly outside of our community. Leave this canyon alone. It's not a developers playground and there are other ways to solve the issue of traffic during the summer and winter.</p>
35982	Janae Ricks	I am opposed to the gondola. Ruining the beautiful view with a man-made structure would be a travesty. There have to be better alternatives than that.
35983	Anna Jacobsen	Please, please do not do this. Don't irreversibly harm this beautiful place because of greedy resort owners. WE WANT BUSES!!!!
35984	Matt Taylor	The Gondola proposal is not good for the community or visitors of Little Cottonwood Canyon. Road travel is not restricted during a majority of the year and parking capacity at Snowbird/Alta already result in busy mountains for recreation.
35985	Logan Wangsgard	The gondola is not a truly sustainable solution. It is a classist attempt to allow those with money greater access to the natural beauty of the canyon. Regular shuttle buses, especially electric, would be a much better solution to this problem. No gondola.
35986	Tyler Thunell	I am opposed to the construction of a Gondola in the Cottonwoods. Not only will this damage the environment, impact wildlife, and lead to a terrible eye-sore in place of some of the worlds most spectacular views and vistas. It is a poor job at finding a solution for the traffic and use that builds within the cottonwoods at peak hours. Building on a renewed bus system and incentivizing car pooling in a huge way is the long term solution for maintaining the integrity of the Cottonwoods, don't make a play for tourism to drive money to resorts. Make a decision for the residents of the state who have spent countless years in their "backyards".
35987	Aften Fairbanks	I am in favor of the gondola. The construction may impact the wildlife to an extent, but no more than the hundreds of cars that go up there. It will decrease the car traffic and is a cleaner alternative. Thank you.
35988	Chris Guambri	This is a terrible idea and will destroy historic climbing and hiking in little cottonwood. The canyon is know for its authentic utah experience and this will inhibit that by diluting the experience with tourism while destroying history.
35989	Clay Wilkes	Gondola is a bad use of public funds and public lands destruction just to make snowbird rich. Put a tollbooth at the bottom to charge 10\$ after 8am (unless carpooling) and traffic will decrease by a lot/make money
35990	Tatiana Subbotin	Very much against this proposal. This is clearly a chance to pander to a select few and mostly outside of our community. Leave this canyon alone. It's not a developers playground and there are other ways to solve the issue of traffic during the summer and winter.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
35991	Kris Altice	My family lives on Little Cottonwood Rd near Wasatch intersection and probably are affected by the ski traffic more than most people. My son commuted to Alta for four years. I think we know more than UDOT about what's happening. The gondola is pointless- the choke points are the resorts themselves and everyone rushing for first snow. All the gondola will do is cause a major traffic jam trying to park there instead- and create wealth for Snowbird and debt for us taxpayers. It's a bad idea pushed by those few who will get rich from it. Just like UTA and Inland Port- the politicians and politically connected stick their snouts in the trough as soon as the legislature gets their share first. Stop this insanity!
35992	Bree Berrie Rounds	I am a longtime Sandy resident who loves the mountains, and to boulder - we need a less invasive option BEFORE spending millions on the gondola.
35993	Nicole Poland	I am not in favor of the gondola. Primarily it will interrupt the natural beauty of the canyon. How safe is it in wind and storms? Will there actually be enough people to ride it to change the private cars in the canyon? I use the canyon for many other activities than skiing. I would like to see the road widened (include bike safety lanes) and bus stops at trail heads along the way. I'm also in favor with implementing fees as needed.
35994	Alex Chamberland	Let's give the bus system a real shot before tearing up the canyon for an eye sore that only benefits the resorts!
35995	Abby Hutchings	I am personally opposed to the gondola as the solution to the current issue of traffic in Little Cottonwood Canyon for many reasons. First, I do not believe it will actually solve the current issue. People are unlikely to take a public transportation gondola, when they are already not taking the bus. Second, this is an extreme solution that is very expensive, and it is spending the tax payers money. Utah has a lot of serious environmental issues, and this should not take priority over the more pressing issues of water conservation and the Great Salt Lake. Third, there are other solutions that have not even been tested before jumping to a solution that will change the landscape of the canyon forever. Implement a transportation system like Zion National Park, or provide more funding towards the bus system to make it better than it is. Fourth, the gondola solution seems to fit the agenda of the wealthy and not the majority. The people of Salt Lake have voiced their concerns and do not agree with this. The gondola will serve only 2 resorts and only run for part of the year. That is an expensive project for only serving two resorts and running for part of the year. Please hear the voice of the people and reconsider this project. Please recognize that there are other options.
35996	CYNTHIA MECKLEN	The data that UDOT is using in its Final EIS as the basis for its recommendations to widen Wasatch Blvd. and to construct a gondola is flawed. It does not support either initiative. The relevant documents are: - The SR-210 EIS Traffic Study by Fehr & Peers, May 2019 (revised July 2019) which covers the segment from Fort Union to the 210/North Little Cottonwood Rd. junction - The Draft Vehicle Mobility Analysis for the LCC EIS, April 3, 2020 which deals with the segment beyond the 210/North Little Cottonwood Rd junction - The La Caille Station Traffic Study by Hales Engineering, September 18, 2020 which describes the road design modifications used in the Final EIS This data needs to be reexamined in detail before any of the proposed projects are initiated.
35997	Lauren Echo	Unfortunately, the ski industry is fleeing due to climate change and the impact it has on snow. Putting billions of dollars into a gondola that may only get use for 10 more years in the ski industry is irresponsible. Not to mention the environmental damages it would cost our canyon. Little Cottonwood Canyon is a wonder and putting in a gondola without exhausting other modes of transportation makes it blatant that the gondolas only agenda is to make more money.
35998	Emma Campbell	It makes no sense that my tax payer \$\$ go to something that the million dollar ski resorts will benefit from. THEY should be the ones paying for this, not the residents of SLC.
35999	Brian Dixon	It seems HIGHLY foolish to build a gondola. Spending the millions of dollars that a gondola system will cost only benefits two ski resorts. The people that live close to the resorts reject the idea. I believe that other solutions including resort appointments like the system used by Arches National Park, a better bus system, and incentivized remote parking, will be more effective and much more cost-conscious. The commercials mistakenly dump on riding the bus and that is ridiculous...especially since the TRAAX system operates busses. Electric busses can be environmentally-conscious too.
36000	Denise Peterson	As a resident of Sandy I'm in opposition to the Gondola.
36001	Shannon Melchior	A gondola simply is not the answer. All the issues and comments verify that a gondola is overall a poor choice. I have made previous comments explaining alternative ideas that would work and contribute to the solution of traffic up the canyon. A gondola is not how leaders should be spending an exorbitant amount of taxpayers' money.
36002	Wendy Roberts	No Gondola please! Too expensive and too ugly. I doubt it would be well used because of the time involved to ride it. Enhance bus system. Put a toll on the road.
36003	Aly schwenke	We do not approve of our tax dollars being involved whatsoever in this SUPER expensive & invasive project that would forever change a beautiful landmark area Utah can be proud of now. Other solutions need to be seriously considered for the sake of our future generations never knowing the majesty of this canyon as it is.
36004	Megan Dahl	Please do not build the gondola. As a resident of Sandy, I strongly oppose the gondola and the taxes I will have to pay for this. Please consider bussing or other transportation options.
36005	Joseph Thurman	I will not use public transportation if I have to use the bus. The gondola will be clean, beautiful, and not affected by car accidents or avalanches. I am very excited to see it passed
36006	Dennis Edmonds	I oppose the gondola. The towers and needed access roads will do a tremendous amount of damage to the canyon environment. Additionally it seems unfair for taxpayers to subsidize the ski resorts to the tune of between \$500 million and \$1 billion dollars. The resorts would profit from the gondola. No one else would. So the resorts should shoulder the financial burden incurred in the construction of the gondola.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36007	Kevin Cisney	<p>This is extremely short sighted. Sure, the ski industry will benefit financially, for a few years. Until we no longer get snow in the winter (we've been breaking record high temps every year for like a decade now, at an accelerating rate). Then the snow will disappear and we'll be stuck with the bill.</p> <p>The answer is very clearly buses. Not a gondola. No bailout for the dying ski industry! They can ride buses like the rest of us.</p>
36008	David Newsome	<p>I still believe a gondola instead of widening the roads is the best option, but it would have to run year round, to help with our tourist economy. I've traveled a bit and your always looking for interesting things to do. A ride up the canyon would be a winner.</p>
36009	Bruce Jenkins	<p>Bore a tunnel to an open central stations under the mountain between the recreation sites. Have out tunnels leading to recreation areas from the central station. At the head of the main tunnel between both canyons a built multistory parking with a top floor park and extend both trax and bus service to this main location.</p>
36010	Hannah Anderson	<p>Do NOT support</p>
36011	Ally Blanton	<p>Please think about generations to come and the threat this gondola poses to a water shed so crucial and valuable to a state where our water source is not abundant as is. This gondola in no way provides an environmentally sustainable solution and it is unethical to pitch it as such, especially because skiers and traffic are not restricted to using the gondola instead of driving up the canyon. This is solely for the purpose of ensuring the profitability of 2 privately owned resorts, because Dave Fields made a reckless financial decision to allow the partnering of snowbird and Alta with Alterra, and now he's scrambling to net that lost revenue. If this wasn't for the sole interest of Snowbird, Snowbird wouldn't have quietly purchased the land the base of the gondola is to be built on. The people see it. We're not stupid. Please, I beg, please do not destroy such a beautiful canyon and deplete our water supply for the financial interest of one ski resort. PLEASE THINK ABOUT GENERATIONS TO COME.</p>
36012	Brian Cabe	<p>As a long time (35 year plus) user of Little Cottonwood Canyon participating in hiking, climbing and skiing, I would like to state my opposition to the gondola.</p> <p>I ski an average of 40 days a year and hike and climb in Little Cottonwood more than that. Even on high traffic days, the commute in a vehicle will take less time and be more convenient than a gondola. Folks unwilling to ride the bus as an alternative will not ride a gondola for the same reasons.</p> <p>With reserved and paid parking implemented by the ski areas, the traffic in the canyons has already been moderated and a gondola just doesn't solve any traffic or parking problems.</p> <p>The goldola won't be used, won't pay for itself and is an unnecessary mode of transportation ruining the beautiful view shed of the canyon. Waste of money in my honest opinion.</p> <p>Thanks for the opportunity to comment. A big "NO" to the gondola for me.</p>
36013	Maria Andersen	<p>Why can't we just add a flexible middle lane that can be uphill traffic in the mornings and downhill in the evenings?</p>
36014	Lauren Nelson	<p>The proposal to build a gondola that only supports the listed resorts is a huge oversight. It will only destroy world renowned formations and take years to complete leaving the canyon as a construction zone for far too long. It also doesn't solve the issue of car traffic since not everyone will use the gondola to go to resorts. The drive to bring more people into the canyon will also harm the watershed. As a citizen of Salt Lake County I DO NOT support this transportation proposal to build a gondola.</p>
36015	Andrew Melchior	<p>I was born in raised in the mouth of Little Cottonwood Canyon. The Gondola is NOT what the people want. This is not the best solution and I hope an alternative solution can be implemented. Even just requiring parking reservations at Alta last year really helped limited the traffic. Please do not proceed with the Gondola.</p>
36016	David Young	<p>I would like to more thoroughly research alternatives to both the enhanced bus and gondola ideas. But, between those two, I would vote for the gondola.</p>
36017	Rian Jensen	<p>I am a lifelong Sandy resident who has lived at the base of LCC for almost 50 years. I regularly access the canyon, typically skiing 50 to 60 days a year and hiking another 25 or 30.</p> <p>I oppose the gondola. I am for less intrusive and more cost effective measures being tried first, and not being tried just as you wait for money to fund the gondola.</p> <p>Something your plan does not address is the idea of putting canyon restrictions in place November 15 to April 15. I support no cars entering the canyon on any day between these dates unless they have four-wheel-drive and chains or snow tires. Many incidents of congestion in the canyon are created by poorly equipped cars and drivers. Buses will always be an option for people who don't have a car meeting this criteria.</p> <p>I also support a reasonable Canyon toll, carpooling and an enhanced bus service.</p> <p>Another idea is not addressed in your plan is having municipalities, Sandy in Cottonwood Heights, law enforcement present at the critical intersections leading to the canyon. This would be a little Cottonwood Road and Wasatch and the north side of the Canyon Road near Danish road. It would only be several hours on the morning of busy weekend and powder days.</p> <p>Please, please do not proceed with the gondola. You do not have the backing of the community and canyon users, and it is an expensive measure primarily benefiting ski resorts. In addition, the resorts cannot currently handle the capacity.</p> <p>Thank you-</p>
36018	Emma Cole	<p>There are better solutions to the problem than a permanent structure that will forever change the landscape and environment of the Wasatch Valley. Explore these deeper.</p>

36019	Carter Hardy	Please protect our environment and our beautiful landscape! We need to find options that will protect our environment and help more people enjoy it.
36020	Robert Hickey	<p>Hello,</p> <p>Thank you for the opportunity to comment.</p> <p>I love to ski, but the traffic and parking congestion that I have experienced in recent years trying to access the resorts in Little Cottonwood Canyon (LCC) has really made me question if I want to continue skiing in LCC and enjoy the sport I love.</p> <p>To alleviate this traffic and associated negative environmental impacts, I fully support the Gondola Alternative B as proposed and look forward to its expeditious construction.</p> <p>Thank you, Rob Hickey Sandy, UT</p>
36021	Hana Goralski	NO GONDOLA. There are better options.
36022	Joshua Noriega	I think it's a fabulous idea and I can't wait for it to come to life.
36023	Julie Madsen	No to the gondola. The use of taxpayer money to benefit a few developers and ski resorts is not for the greater good. There are other solutions!
36024	Sean Flynn	<p>As an avid trail runner, hiker, skier, father, and resident Millcreek, Utah I am writing to express my opposition to Gondola B as the preferred alternative to improve transportation in Little Cottonwood Canyon (LCC). I fail to understand how the Gondola will help improve year-round access to the natural beauty of LCC and worry that the construction required for this project will significantly damage or ruin aspects of the canyon. I recognize and understand that any project aimed at reducing congestion in LCC will require construction of some kind, and that there will be damage associated with any project. The construction necessary to build the Gondola appears to be particularly aggressive given the amount of blasting and heavy machine that will be required in backcountry settings. Further, the Gondola appears to serve a small and select group - patrons of Snowbird and Alta Ski Resorts. This reality is concerning for several reasons. First, the cost associated with ski resort activities significantly limits who has access to these resources. Given our current economic climate, it is likely that the only people who will be able to take advantage of the Gondola are upper middle class and upper-class individuals, many of whom will travel to the resorts from out of state. However, the burden on paying for the Gondola will fall to the Utah taxpayer, many of whom will never set foot on the Gondola. Second, the addition of the Gondola does nothing to address congestion in the canyon that occurs outside of the ski season. The number of people using LCC for hiking, climbing, or simply enjoying its beauty has increased substantially and will continue to grow with the expanding population of Salt Lake City. Given this reality, I am strongly in favor of proposals that include a combination of expanded busing, permitting, and tolling. Finally, due to climate change, ski seasons are likely to get shorter in the future, limiting the utility of the Gondola to ferry skiers and snowboarders up LCC. It seems unreasonable to invest \$550 million into a project that is directly linked to a ski industry that will be modified by our changing climate. The drying of the Great Salt Lake will undoubtedly have a long-term effect on the amount and quality of snow we have in the Cottonwood Canyons. If Snowbird and Alta care so much about the Gondola, then they should pay for it out of their own revenue. The people of Utah should not subsidize their profits.</p> <p>In summary, I agree that something must be done to address the number of people and vehicle traffic in LCC. I prefer a data-drive approach that considers a combination of expanded busing, permitting, and tolls with a keen eye on equity and service to all people that enjoy LCC. I do not believe the implementation of Gondola Alternative B will benefit the people of Utah.</p> <p>-Sean Flynn, Millcreek, Utah</p>

36025	Steve Teerlink	<p>In my mind, I think we have three options:</p> <p>Widen the road for increased automobile traffic,</p> <p>Create a bus lane For transit traffic, or</p> <p>Build a gondola.</p> <p>Due to the fact that most people who ski in Utah from out of state, do not know how to drive safely in a rental car on a canyon road in the snow, it makes no sense to widen the road. I've lived in Utah my whole life, and I don't like driving down the canyon when it is snow packed after a big snowstorm.</p> <p>The road would still need to be widened to allow an extra lane for bus transit, so I would think the environmentalists would hate that more than a gondola.</p> <p>But eliminating the idea of a gondola, is about as absurd as eliminating the tram that goes all the way up the mountain to the top of Snowbird!! Not only would it be a much more efficient way to transport a lot of people, but it would also be a way to attract tourists to visit the sites during the summer. Seems like a much more safe and economical route.</p> <p>There were a lot of people who were strongly against Trax in Salt Lake City when it was first proposed, but look how it has flourished and has paid for itself!!</p> <p>A gondola is a lot less intrusive to the environment than widening the road. I think we need to look at that again.</p> <p>Like Trax, a gondola would pay for itself.</p> <p>Steve Teerlink</p>
38622	Julia Geisler	<p>Dear UDOT Project Team:</p> <p>I submitted comments online to UDOT, however the formatting in your comment box does not allow linking pdf documents with hyperlinks and what not. Please find attached the Salt Lake Climbers Alliance's comments on the UDOT LCC FEIS. Please confirm receipt.</p> <p>The SLCA remains committed to advocating and stewarding Wasatch climbing resources and working with the agencies to that end.</p> <p>Kind Regards,</p>
36026	William Van Berckelaer	<p>I've grown up in LCC since the day I was born. Mainly focusing on my climbing and making sure that the next generation is able to experience this elegant canyon the way I was able to growing up. This gondola will only be the downfall. Destroying many world class boulders for future and current climbers. This will also cut access to a lot of edge cutting routes. The environmental impact will be severe. Destroying many homes of nature itself. There will not be enough care put back into the canyon from anyone who is for this gondola. The only people who will take care of this canyon if this gondola is out in is people like myself and the surrounding community of outdoor enthusiasts, climbers, hikers, alpinists, skiers, boarders, etc. Please think before you decide to go through with this. This will only cause destruction. You'll be the people responsible for this. I'm sure you will re think you're decision. Don't destroy our home since this is a easy way to decrease transportation. In the end it'll only be regret.</p> <p>Sincerely, William Van Berckelaer Local: est 2000</p>
36027	Don Trowbridge	<p>I feel that the proposed tram is too expensive and will significantly affect the canyon environment. Increased bus service, especially electric buses would have less impact on the canyon even if it involved adding a bus only lane since the main road is already there. Since the primary advantage is getting skier traffic up canyon in the winter, the ski areas should bear a large chunk of the cost for any solution.</p>
36028	Nancy Stirling	<p>No gondola. Make it a toll road with annual passes for locals. Additional buses won't help if it's still gridlock. Limit the number of vehicles at a time so the ski resorts can step up and provide their own shuttles</p>
36029	Bethann Martin	<p>I am strongly opposed to the gondola proposal. Making a huge taxpayer funded expenditure which benefits the ski resorts, which are for profit, should not be allowed. The problem you are seeking to solve is not worth billions of taxpayer money, especially at a time of inflation and recession. Other ways to address the occasional traffic backups are cheaper, faster and address more than just the issue of ski resort traffic. Please don't do this. It is not wanted, needed or fair to taxpayers.</p>
36030	Tyson Jacobsen	<p>We should learn from the economic failures of boondoggles like the high speed rail in California, bankrupt toll roads in San Diego, or the Great Park fiasco in Irvine. Building a moderate to high fee based project that targets high income tourists evidences a lack of insight into high income mindsets. Convenience, perceived safety and appearances will keep the wealthy continuing to valet their vehicles at the resorts, while value conscious locals will skip the high fees and inconvenience of a gondola. The role of government is to protect the rights and livelihoods of the civilians, this does neither. Let the private sector fund and take the risks not the local population who derives zero benefit</p>
36031	Betsy Ford	<p>I do not believe a gondola is he best course to help alleviate congestion in the canyon. At the price and cost of it, I believe with time there are more efficient less expensive but just as impactful, ways to help with this situation. What happens with the rest of the year that it is not utilized at full capacity for more than 1/2 the canyon that is open for hikes or picnics or anything else. Not everyone that goes up that canyon skis and during ski season it is not enough to offset the cost.</p>

Comments on Little Cottonwood Canyon Final EIS

36032	Nicole Tenzer	No to the gondola. Run more buses. I've skied at snowbird for 12 years and have never had a problem driving up or parking. I will stop skiing in LCC if the gondola is built.
36033	Andrew Michalik	The construction of this gondola is going to create serious environmental impacts with the potential of not even reducing traffic in the canyon. The multiple years of construction that are required for this project are going to disrupt the health of Little Cottonwood Canyon, an already delicate environment. Hauling heavy machinery and supplies up the canyon is going to condense the roads and the digging sites to put the posts in are going to ruin what makes little cottonwood so special. Also, there is no guarantee that the construction of the gondola is going to even reduce traffic in the canyon, especially if they charge people to ride it. People will still have the same option to drive up the canyon and will not want to pay for the gondola. This project is only going to get more people in the canyon and put more stress on the ecosystem there. This project is absurd and is also ridiculous that it is being paid for with tax payer dollars. If UDOT really cared about a project to benefit the people of Salt Lake City they would take that money and do something to help the Great Salt Lake.
36034	Mackenzie Davis	Why not do a bus shuttle system like in Zion's? Reduce the pollution and traffic, don't have to build the parking and waste so much of the beauty of the canyon making the roads wider. Please consider this as an option. There would be growing pains for people used to driving up, but nothing that a little getting used to wouldn't solve. The alternative is much worse in my opinion.
36035	Andrew Watt	Seems like we have bigger problems like water, education and feeding some many hungry children Let's spend time and energy working on those. Why damage one of our great outdoor treasures. Use of buses for skiers and hikers
36036	Nicole Warner	This is outrageous!! This is not the solution to this problem. You want to destroy the beauty of a magnificent canyon by adding a man made structure throughout the entirety of it!? How does that make sense? People hike and climb in that canyon to escape the man made world and connect with nature. How can they do that when all they see is a massive gondola going through the entire canyon. If parking is the problem then fix that problem in a way that makes sense. Increase the bus schedule with more buses and options for people to get up the canyon. Build a bigger parking lot at the base of the canyon to accommodate more options for carpooling. Limit the amount of people that can take a car up the canyon. Don't destroy a beautiful place like this. This is not the solution to a problem that could easily be resolved in other ways.
36037	Jennifer Seltzer Stitt	I've submitted a comment before today, but the more I hear, the less I like the Gondola. Count this as a second vote (consistent with my first comment) in the "no way" column. I love these mountains. They are the reasons I am here. I support reducing congestion. UDOT isn't helping reduce traffic through recent actions to limit the number of ski buses, not expanding parking options, not closing the canyons to skiers and running shuttles from parking lots to resort (a solution used by many other resorts). Instead you are limiting access in the short run, potentially, by placing a toll on mountain access (which, if you look at skiing demographics, is already accessed at lower levels by historically minoritized communities) and , in the long run, essentially cutting down trees, destroying habitat, reducing the wildness of our wild mountains. You can do better than this. We can do better than this. Thank you for your consideration.
36038	Joseph Naso	Hello, I'd like to say there's a lot of Utah residents who don't use the canyon and wouldn't be using the Gondola, so why should we be paying to have it installed? Also, why should we pay to use if our taxes payed to have it installed? There's only a handful of people that will benefit from it, not to mention we're getting less and less water each year, if this did get installed, (which I hope it doesn't) what happens when there isn't enough water to keep the ski resorts open and running? What then? Talk about a waste of money, you might get 5-7 years of good use out of it at best. This isn't like it used to be when you could go skiing on the 4th of July. Cant you see the cycle we're in? It just doesn't make sense to put it in now. Mabe back in the 70s, but not now. you'd be wasting our tax dollars, with no intentions of giving Utah residents free use of it, even though we would be paying for it. Wed be paying for it to get installed, and we'd be charged to use it too. This shows me that all you care about is getting it installed, at our expense. No benefits of being a Utah resident. I think it's quite obvious that greed is the core of what's driving this to be a reality.
36039	Janet Jorgensen	Please don't tear up a large swath of the canyon to benefit two ski resorts at the expense of every other canyon user. Ski traffic mitigation is the responsibility of the ski resort leadership and should begin outside of the canyon. Ski resorts need to fund their own transportation solutions that encourage their customers to begin the resort experience outside of the canyon. Expecting the state who already built and maintains the roads to also provide, at enormous impact and cost, alternative access to the resorts via gondola is ridiculous.
36040	Jacob Ostler	Hello, I am against the construction of the gondola. I want to reduce traffic, this seems like a terrible way. I want to keep the canyon beautiful, this would obstruct so many views. I also don't want the constant construction that would hurt wildlife, create more traffic, and create constant noise and destroy environment. The giant lot at the bottom that this would require would also cause bottlenecks and not be a good choice. Please don't let this get constructed. Don't destroy natural Utah for profit
36041	Jack DaUnton	As an avid backcountry skier, I strongly oppose the implementation of a gondola transportation system
36042	JEFF KRUCKENBER	Long Time User of Little Cottonwood Canyon. Make SR 210 a Toll Road. \$ 10 per Vehicle \$ 350 Annual Pass Places cost for Future Improvements and Maintenance on ALL Canyon Users.
36043	Cesira Irish	I drive up Little Cottonwood Canyon this past weekend to see the fall colors, the drive up is beautiful, breath taking. It is a state treasure. Building the gondola will ruin this. It will turn the natural beauty into wires and towers . This is just one small reason if many that the gondola should not be built
36044	Julia Partain	Please, don't burden the people of Sandy and Cottonwood Heights with this fiasco...

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36045	Ashley LaPoint	<p>The UDOT plans for the gondola aren't for the benefit of public transportation, sustainability, or traffic control. The gondola only benefits the resorts and harms the people of Salt Lake in terms of taxes, ruining the canyon views, and also won't be reliable in extreme weather conditions. If UDOT wanted to effectively cut down traffic in the canyon they would invest in a shuttle system of vehicles that have 4 or all wheel drive, they would pay drivers a livable, high wage for their efforts, and they would have a registration system to limit 2-wheel drive vehicles driving up the canyon on harsh condition days. Bus lines have been canceled for the upcoming ski season and therefore voids the comments by UDOT that speak to having tried every measure possible to alleviate the current situation. There are so many people who use the canyon beyond the resorts. Would there be multiple stops for these people to hike, snowshoe, cross country ski, boulder, etc to be dropped off at their desired locations? If there are multiple stops how would that add to the timing of the gondola from parking lot to resort? How would the gondola function in regards to high winds in the canyon given the height of the towers? How does this project benefit Utah's overall lack of public transportation for impoverished communities that actually need to utilize these services? The budget for this project is absurd given the lack of public transportation for the greater Salt Lake community especially in a valley that is constantly worrying about air quality with signs above the highway that encourage you to "Drive Less This Week" except there aren't other time valuable or safe options. We live in a community that loves to bike and yet we don't have safe bike lanes or laws that favor bikers' safety. There are so many ways to better use this money to benefit our environment, our population that utilizes that little public transit we have, and our skiers and snowboarders who call Alta and Snowbird home. This project is a waste of taxpayers money, an eyesore in one of 3 canyons in the Salt Lake Wasatch, and a copout solution when other more feasible options have not fully been explored. I hope you seriously reconsider this project because your community is asking that of you.</p>
36046	Julie Bigelow	<p>This whole thing is very ill conceived.</p> <p>Environmental issues, fowl issues, cost issues, destroying the beauty of the canyon, doesn't stop where anyone other than skiers want to stop, cost cost cost.</p> <p>Why isn't there a referendum where folks who live here get to vote. Who is making these decisions? Why don't you trust the adults here to be able to decide what is best for them. Remember majority rules?</p> <p>Incase you couldn't tell, I am very much against the gondola!</p> <p>Please do not destroy our canyon(s)</p>
36047	Alexis Friedman	.
36048	Danielle Mariott	<p>A gondola is NOT a common sense solution. As a cottonwood heights resident, taxpayer, and as a mountain recreationist-I am not in support of a gondola.</p> <p>Mitigating traffic on high capacity ski days is not solved by a gondola that cannot run during avy mitigation.</p> <p>It will be too expensive to ride.</p> <p>It will take LONGER to get up the canyon.</p> <p>It will forever change the landscape and will remove classic climbing areas for future generations.</p> <p>The construction will take a considerable amount of time.</p> <p>The only people who stand to profit from this are land developers and Alta and Snowbird.</p> <p>The resorts are already crowded, getting more people to them also is not the answer.</p> <p>The simple math is that it doesn't add up. And I personally don't want my tax dollars going to a gondola that literally solves none of the problems, but padding developer pockets and ruining the canyon landscape and supports canyon overcrowding on only the days that are already plagued by overcrowding.</p> <p>I'd rather see a more reason expansion of bus service. We are jumping from the frying pan straight into the fire with a gondola.</p>
36049	Brendan Kawakami	<p>Something absolutely needs to be done to relieve traffic congestion in Little Cottonwood Canyon but a gondola is NOT the answer. It is too expensive and too exclusive of a project to be beneficial to the overall citizen. Not a single taxpayer dollar should be spent on something that solely enriches the wealthy corporations that own the resorts this would benefit. Limit vehicle access, incentivize use of public transit and promote use of the area without overburdening the environment or the infrastructure</p>
36050	Gary Martin	<p>I am a longtime Sandy resident and strongly OPPOSE the proposed Gondola B project. The cost is to many and benefits to relatively few. Also would permanently damage the canyon aesthetically.</p>
36051	Diane Forster-Burke	<p>There are 2 different projects that UDOT wants to accomplish (the gondola and the widening of Wasatch Blvd) and I strongly oppose both.</p> <p>There is no reason to widen Wasatch as the traffic that we currently have from commuters is not likely to increase as there is not any more large tracks of land to develop in Draper. People who live in the valley to the west of I 15 are not going to come this far east to go north to the I 215. Even people who will live at the old prison site will not come this far east.</p> <p>Widening Wasatch to 5 lanes will only cause drivers to speed on this road where I live. We need to slow the speed and take measures to reduce the speed and noise.</p> <p>The only significant traffic on Wasatch and the road to BCC is in the mornings on fresh powder days when the canyon (LCC) has been closed for avalanche control. This number of days are easily less than 25. People can wait for their space in line. With climate change, we will have fewer days of fresh powder.</p> <p>It makes no sense to spend \$550 million (and higher) to finance the patrons at 2 ski resorts. It will do nothing for BCC and nothing for hikers, bicyclists.</p> <p>Stop these insane expensive measures!!!!</p>
36052	Karen Hoggan	<p>It seems irresponsible to spend this kind of money on a gondola when we have an an environmental crisis coming with the GSL drying up. Use the money for that. We can solve the canyon problem less expensively.</p>
36053	Peter Smith	<p>I work on the rail side at UTA and understand the maintenance of rail and switches in snowy conditions; and I say the Gondola is the most feasible and sensible solution for getting up and down the mountain.</p>
36054	Chris Rupper	<p>I support the gondola. It will be good for businesses and the environment.</p>
36055	Jann Penney	<p>Gondola B</p>

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36056	MARK DIMOND	I have no interest in riding a Gondola to the LLC ski resorts. I've been a season passholder for resorts in LLC since 2000. I've read the case for the Gondola and it doesn't pass the common sense bar. Frankly I didn't think that the traffic was much of a problem last year, but I only ski some 40 days a year.
36057	Andy Hoffmann	As a ski fanatic and hiker, I'm against building a gondola up Little Cottonwood Canyon. It's too great of an expense that serves too few people. Those who have made arguments for the gondola have offered good reasons only for the ski areas; otherwise their arguments ring hollow. We can do better for a lot less money.
36058	Jan Roberts	I have lived on [REDACTED] for 25 years. I experience first hand the traffic backlog on powder days trying to get up the canyon. This is NOT a problem. It only happens approximately 5-10 times an entire ski season and this ABSOLUTELY does NOT require us spending billions of dollars to fix it! Government WASTES money on special interest projects every day and the gondola is a special interest project where private businesses and private business individuals would be the only benefactors of taxpayers hard earned money. NONE of my long term neighbors that live on Little Cottonwood Road want the gondola, everyone I talk to are against it completely!!!! UDOT doesn't seem to care about the actual people that deal with this so-called problem every year, they clearly want to proceed with the gondola project because they are being heavily lobbied to do the gondola project. What officials at UDOT are going to personally benefit from this project?????????
36059	Jon Low	I am a Sandy resident and DO NOT support the LCC Gondola Project. My family and I use the trails and climbing areas on a regular basis and I feel that the gondola would have a negative impact on the natural beauty, ecology, and climbing areas in little cottonwood canyon. Please consider other options to reduce ski resort traffic, such as increased bussing, or at least allot more time to explore different options. Thank you for allowing the community to have a voice in this decision. -Jon
36060	Ava Curtis	Gondolas would destroy the views of our canyon and damage wildlife habitat. Instead the best transportation solution would be having fast and easy buses. Don't build a gondola. Save our canyons.
36061	Steve Furlong	No Need for a Gondola. We should implement fees, increase busing, and other options before we dump a billion dollars into this project.
36062	Douglas Hilton	There needs to be more information provided to the citizens such: how much is a round trip going to cost skiers, travel time from pick up to arrival, estimated maintenance costs.
36063	Jessica Bryant	Hello, I am a Cottonwood Heights resident and frequent visitor to Big and Little Cottonwood Canyons. I am opposed to the gondola and would like to see a reconsideration of improving bus transportation instead. It seems the direct effects of the gondola are not being considered- land use and degradation, water supply impact, and forest health. Please do not allow this travesty to move forward in our beautiful mountains.
36064	Jaxton Crockett	No gondola and better bus services
36065	Bowen Martin	No Gondola at all, EVER. As a longtime Sandy resident and snowboarder, the also mountain biker I don't want to see my tax dollars used for this. I dont think we need to spend much at all. Charge a toll on weekends, holidays, discounted for carpools. Charge for parking. Provide more, better bus service, with better park and ride lots. Everyone shouldn't have to pay for something that benefits ski resorts. They address already too crowded anyway. Increasing capacity will ruin it for Utahns.
36066	Sach Combs	I am writing in opposition to UDOT decision to implement the "Gondola Alternative B". Specifically I'm opposed to the Gondola portion of the plan, but in favor of the "Enhanced Bus" elements. I think the overall solution to the traffic issue is bus transportation, and at peak times, mandate the service for all but canyon employees and residents. Again, mandate the service! Making it easy to park, have a high frequency of service, and provide the necessary infrastructure at the resorts (lockers and changing areas). This will provide an immediate solution at a reasonable cost with long term flexibility. Road upgrades will be needed long term regardless of which transportation issue is selected and therefore, these ongoing upgrades can fold in the needs for the enhanced bus service. The gondola is too costly, will inevitably run over budget (even if started today), and has little to no flexibility.
36067	Ric davies	No interest in a Tram or something similar
36068	Cason Searle	A gondola in little cottonwood would be built using public tax dollars and would primarily benefit private businesses (ski resorts). Let's create a solution like tolling and bussing where the public and the forest will benefit from the generated revenue.
36069	Ronald Edge	I am in favor of the gondola. There is already a parking problem in the canyon.
36070	Sid Lanham	The gondola is wrong on so many levels 1) the area residents don't want it, 2) yet we have to pay for it, 3) it won't solve the problem it's meant to solve, 4) it's being forced on a public that votes so be ready for a backlash at the ballot box
36071	Lauren Eisel	As someone whose studied applied economics related to development, and is moving to Utah in a month... this idea is absolutely horrible. It's obvious that no thought about the environment has been put into this plan. It's also obvious that if this plan goes through big business will be prioritized over the people of the state. Please, please, please reconsider doing a different development project that cares more for the environment.
36072	Shawn Sexton	Please DO NOT widen road. As a long time resident of Little Cottonwood, No change is desired, but if one is needed, TRAM option would be preferred. Thank you.
36073	Amy Flowers	The gondola does not address the issues at hand. There are many lower cost solutions that should be implemented before jumping to the gondola solution that will waste billions of dollars while barely addressing the problem. A ticket station at the entrance of the canyon would be far more effective in limiting the amount of traffic up the canyon while incentivizing buses.
36074	David Taylor	I do not want a gondola to scar the serenity, experience, mountainside terrain, or views in Little Cottonwood Canyon. The gondola will not be flexible enough to serve needs of all canyon users. Time using gondola will be time wasted. Funds should go to improving bus service and affordable day lockers at resorts.
36075	Ava Chambers	I have no doubt the gondola will be a negative addition to our environment and not be beneficial for a multitude of reasons. Please preserve our canyon! We don't want this here!

ID	Full Name	Comment
36076	Thomas Wood	Thanks for the opportunity to comment. I am a 36 year resident of Salt Lake County. I am absolutely opposed to the construction of a gondola in Little Cottonwood Canyon. This is one of the most foolish ideas in years for management of the canyon. It is horrifically expensive and will forever damage the scenery of this magnificent canyon. Selected road widening and increased bus service will accomplish the stated goals for far, far less cost in dollars. This entire proposal smacks of insider corruption from opportunists in the Utah legislature, UDOT and industry. There is an astonishing level of hypocrisy that in our supposedly fiscally "conservative" state that this \$1/2 billion idea, financed by taxes, has gotten any traction. But this is consistent with the claims of corruption. Please DROP the idea. Thomas Wood, Sandy, UT Oct 17,2022
36077	Vlad Pascu	Please don't build a gondola up LCC. There are many smaller impact, cheaper alternatives we can try before resorting to it. Increase busses, add toll gate at bottom of canyon. Enforce traction law, build snow sheds to protect the road from avalanches.
36078	Craig Newman	I think that spending \$500 to \$600 Million dollars of taxpayer money for the benefit of two ski resorts is the most irresponsible use of public money possible. Close the canyon to automobiles, widen the road and use more electric buses.
36079	Glen Steenblik	I'm am NOT at all in favor of the Gondola option. Way TOO EXPENSIVE of an option which benefits so few local residents. Consider other options.
36080	Robert Douglass	Section 4(f) Omissions and Errors for Little Cottonwood Creek Trail: The UDOT Final EIS incorrectly assesses as nonexistent or de minimus the considerable impacts of the gondola options on the Little Cottonwood Creek Trail - a trail designated by UDOT as a 'public recreation area' under Section 4(f) in UDOT's Final EIS, Volume 26. The EIS's rationale appears to be that because the gondola does not physically touch the ground on the Little Cottonwood Creek Trail, it has no impact or at most a de minimus impact. That finding is in error. The gondola options have sizable impacts on the Little Cottonwood Creek Trail public recreation area that the Final EIS omits to identify or mitigate. This error and omission in the EIS V26 are not compliant with Section 4(f) regulations. The gondola, Option B, runs parallel to Little Cottonwood Creek Trail for several miles staying within a couple of hundred meters and approaching as close as 20 meters. Over one thousand people in bus-sized cabins will continuously fly over hikers and bikers as they progress down these trails. The view upward will not be blue sky but massive steel ropes and transiting cabins holding up to 35 people. The huge towers supporting the gondola cables will be prominent and visible most of the length of the trail, scarring the views of the Canyon for hikers and bikers. UDOT estimates that an additional noise level of 50db will be imposed on hikers and bikers as they walk or ride. The decibel level will likely be higher in many places where the cabins move directly or nearly directly overhead as well as where gondola cabins pass over towers. The sound will be higher than EIS estimates near the beginning of the trail because of the large electric motor and transfer mechanism at the angle station across from the trailhead. The EIS maintains that the noise impact is de minimus because it is not significantly different from the road. But the noise impact is not in place of the road but in addition to it and positioned almost directly above the trail, so it is significant. It at least doubles the noise heard on the trail. Even more offensive will be the invasion and destruction of privacy and solitude of people using this public recreation area. The whole point of recreating on these trails is to experience the calm, quiet and solitude of a wilderness walk or mountain bike ride along a beautiful mountain stream. The sound of mountain water will compete with the sound of the gondola. The Canyon views will be marred by towering steel tripods up to 232 feet tall and massive steel ropes holding bus-sized cabins. Hikers and mountain bikers will be viewed by more people than if they were walking in downtown Salt Lake City. They will be photographed and video recorded without their consent. The experience will be shattered visually, aurally, and in terms of any feeling of being in nature - this is certainly not a nonexistent impact nor is it remotely de minimis. The EIS's failure to identify and address mitigations for these impacts amounts to serious errors and omissions.
36081	Dylan stone	Just like building extra lanes on highways creates more traffic other than a proper solution to the flow of traffic this gondola will also create that sense of security that there will be less traffic, creating a spiral of more visitors and more pollution, updating already in place public transport, and having a limit on how many people can drive through the canyon is a much better solution.
36082	Jim Rohbock	I've lived at the base of little cottonwood canyon for 39 years. I believe the gondola idea is a terrible one. Construction of this would severely impact the canyon. Expensive, slow, limited capacity of a gondola will not reduce the flow of traffic into the canyon by residents. More buses will motivate more people to ride them in conjunction with a convenient park and ride. The gondola is set to line the pockets of a few enterprising individuals.
36083	Jeff Lachowski	Jumping straight to a gondola in LCC is premature, and does not take an incremental approach which would be prudent with taxpayer dollars that do not benefit all Utahns (how many Utahns never travel up LCC??) Initial efforts should include tolling the canyon. This has been mentioned to be included, but with limited detail and information. Tolling the canyon with enhanced bus service seems to be a much cheaper first step and will likely improve the situation. In addition, parking reservation systems seem to work at the ski resorts. Has a complete capacity/visitor use study been completed for the canyon? This may indicate the dispersion of users to better inform the comparative benefit of the gondola as compared to tolling.
36084	Jarom Decker	Please don't do the gondola.
36085	Zeke Martinez	The impact this gondola will have is only one sided and that is for the ski resorts. The amount of destruction the canyon will endure is unreal. This will negatively affect everyone else that uses the canyon. I grew up playing in this canyon so for the last 40+ years I have seen it change. I understand change but this is unreasonable. I say no to the gondolas.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36086	Robert Douglass	Little Cottonwood Quarry Trail and 4(f) Considerations: The extension of Little Cottonwood Creek Trail is the Quarry Trail, which is not listed as a public recreation area, even though it is designated as a trail on UDOT's own interactive map and is maintained as a trail on public land and hosts hundreds of hikers and mountain bikers a month. The failure of the EIS Volume 26 to include the Quarry Trail as a public recreation area is a serious omission. The trail serves no purpose other than providing recreation on public land. The gondola crosses the Quarry Trail and runs directly over the head of the trail for some distance in the National Forest. Failure to designate Quarry Trail as a public recreation area, even though it qualifies under both UDOT's and Section 4(f) criteria, means that the final EIS is not responsive to Section 4(f).
36087	Aaron McCombs	Please Protect the canyon, you can't build something of this magnitude without having a host of negative impacts on the land, water, and people there for nature.
36088	Jason Michalik	I think installing this gondola is only to appease lazy tourists. Not only do most of the outdoor public in the valley reject this idea, most can already tell that salt lake city is the city with the worst air quality in America. Why focus on a gondola when further upgrades can be implemented for more practical public transportation. Furthermore, installing this gondola would destroy much of the wildlife that is present in the canyon. Why not utilize the road that is already in place rather than creating a larger problem. Please, please please do not install this thing nobody except rich [REDACTED] who visit twice in their life will appreciate this.
36089	Landon Koch	The only thing I would like to see explored other than the gondola is the underground train concept if that is not viable then I say GO FOR THE GONDOLA. But please put more pressure on the resorts to foot the bill.
36090	Roger Carrier	VOTE. No!!! Leave our natural canyons alone!!!
36091	David Blackner	I fear the degradation of the canyon resulting from the installation of the gondola. I also fear its vulnerability to mechanical issues, weather, and even sabotage (recent BC incident). As much as I personally resist the idea, I think increased busing and fees during high use times is a more prudent course. Thank you.
36092	Shawn Watkins	Please don't build this for multiple reason. There are so many other things that those funds can be used toward that will benefit the community is better ways. The construction and commercialization of the canyon will only harm the aesthetic and feel of our wilderness areas, and force those with lower incomes from being able to enjoy these areas as much as those with more money.
36093	Taylor Layton	No to the Gondola! Tax payers should not be subsidizing a gigantic industry, so public dollars going to it is completely a non-starter. Most of the tax payers will get no value from the gondola, so this is basically a wealth transfer to big companies and people wealthy enough to ski often. Also, no to the gondola because it is overkill. Other solutions should be considered that don't scar and forever change our wonderful mountains. Congestion on high traffic days should be dealt with via permitting, additional road public transit, and restrictions on the number of vehicles in the canyon.
36094	Brandon Morgan	Stop trying to cram more people in the canyons at the cost of our environment! This not only effects us as people in our communities but the wildlife and the forest in our canyons as well. Honestly, we should start charging people that enter the canyon to help protect and conserve it. The gondola with do the exact opposite
36095	Mark Krantz	I support the Gondola as the best way to move forward mitigating traffic and protecting Little Cottonwood Canyon.
36096	Robert Douglass	The final EIS issued by UDOT for Little Cottonwood Canyon is negligent in failing to identify the length of publicly owned portions of Little Cottonwood Canyon as a 'public recreation area'. The EIS makes a serious omission and is negligent in failing to identify the length of the publicly owned portions of LCC as a public recreation area. It is further negligent in failing to provide any mitigation to the environmental impacts to the Canyon as a public recreation area per Section 4(f) of federal regulations. The entire length of the publicly owned Little Cottonwood Canyon is a public recreation area per Section 4(f) definitions and intent. It contains numerous maintained and informal trails, campsites, a designated campground, climbing areas, and areas heavily used by the public for backpacking, site seeing, hunting, wildlife photography, hiking, backcountry skiing/boarding, and snowshoeing. These public recreation trails, areas, and activities are called out and discussed at length as recreation areas in numerous books, maps, and websites. These areas sit on top of a key watershed for the Salt Lake Valley, but there is NO other use of the canyon other than public recreational activity. There is no logging, no agriculture, no mining, no grazing - no other use at all presently or in the last half-century other than public recreation. To identify only one small area of the canyon at the mouth as a public recreation area is a gross misstatement of the truth and the intent of the law. The Final EIS fails to address impacts to the length of Cottonwood Canyon caused by the gondola, its towers, its tower bases, and its transfer stations. These impacts include added noise, visual disfigurement of the Canyon, and destruction of the privacy and solitude - existing Canyon qualities that constitute the main value of the Canyon as a public recreation area. The Final EIS errors in identifying this important public recreation area and is negligent in not providing any mitigation for the impacts on the visual environment, noise, and destruction of privacy and solitude for the public in this publicly owned recreation area.
36097	Annabella Zarnegin	We need to approach this issue with a bit of a wider mindset, not just focusing on one ski resort and people with good financial situations. We need to utilize ride-sharing and the public transportation system! A gondola would worsen the state of Little Cottonwood's beauty and environmental stability. Our Great Salt Lake is drying up, we don't Little Cottonwood destroyed too for the sake of a gondola!
36098	Lori Roosendaal	No gondola! Give us the total Cost of maintenance and operation. Never been shown. I wonder why!!
36099	Noah Grage	This is literally destroying the canyon.... So thanks for that
36100	Madelyn Corey	Still don't want a gondola! Ramp up The busses!
38351	Jason Corless	Please do the right thing and don't build a gondola that will ruin the canyon and only put money in the pockets of developers and two ski resorts. Their are better solutions that should be considered.
36101	George Grygar	There are more environmentally sustainable alternatives to the gondola; there are more economically beneficial alternatives to the gondola; there are more access-oriented alternatives to the gondola that serve more than two for profit destinations. Please consider any of the other alternatives available.

ID	Full Name	Comment
36102	Nicholas Hofmann	Despite being a user of the mountains and in particular the resorts which a gondola would server there are many issues that exist with that plan. First and foremost, the gondola would serve primarily as an access point to just the resorts. There are many canyon users that seek to use the canyon beyond the resorts and many that can't afford to utilize the services the resorts provide. That being said, it is unfair to create a solution that serves only those places, it is not equitable, irresponsible, and downright wrong. Next, the gondola would take away from what LCC is at the core. Not only would it diminish the view but destroy climbing areas as well as denaturalize a place that we value for the nature it holds. Finally, the gondola doesn't solve the issues that we see in BCC. LCC is not the only issue that must be addressed, there are multiple canyons. In addition the taxpayers shouldn't have to contribute to the making of something they will never use. Many of my peers only use BCC, why should they pay for something that they don't use? The gondola [REDACTED] don't do it!!!!
36103	Sandra Bauman	I am very much opposed to the proposal to build a gondola in Little Cottonwood canyon. Aside from the scarring to the canyon, the cost is an unfair burden to the vast majority of the public. It benefits the two ski resorts, which are private enterprises, at a tremendous cost to the public. It is not a year round operation, and in fact, as our climate changes still more, what guarantee is there as to how many years Utah can count on being a ski destination? Bus service, and possibly fees for use would be a better and more equitable solution.
36104	Robert Douglass	Alpenbock Loop and Grit Mill. The UDOT final EIS incorrectly assesses as nonexistent or de minimus the considerable impacts of the gondola options on the Alpenbock Loop and Grit Mill - an area designated by UDOT as a 'public recreation area' under Section 4(f) in UDOT LCC EIS. The EIS's rationale appears to be that because the gondola does not physically touch the ground in the Alpenbock Loop and Grit Mill area, it has no impact or at most a de minimus impact. That finding is flatly in error. The gondola options have sizable impacts on this public recreation area. Failure to assess and address mitigation of these considerable impacts means that the EIS is not compliant with Section 4(f) regulations. The gondola, option B, runs immediately over portions of the Alpenbock Loop and Grit Mill public recreation area, according to UDOT's interactive map. The Alpenbock Loop and Grit Mill qualify as a Section 4(f) 'public recreation area' as confirmed by UDOT's EIS and the U.S. Forest Service. It is a popular climbing area and secondarily a hiking trail and camping area, used by hundreds of climbers year-round. This area accesses the vertical silver-white granite walls on the north side of Little Cottonwood Canyon. This is a world-class and world-renown climbing area, popular with both locals and out-of-state visitors. The EIS fails to identify the significant impacts of the gondola alignment on the Alpenbock Loop and Grit Mill - a serious omission. The visual impact of the gondola, option B, is significant. This climbing area is treasured for its spectacular, unspoiled views of one of the most beautiful canyons in America. The only canyon in the Wasatch to be fully glaciated and carved into a stunning U-shaped glacial valley. The gondola options will send over one thousand people per hour riding in bus-sized cabins on the gondola directly over this prime public recreation area. Gondola cabins will descend from over 230 feet high to ground level at a gondola transfer station in the middle of the parking lot and trailhead, then rise from the trailhead to climb over another giant tower as the gondola transects this entire public recreation area. Because of the altitude of the gondola, people on the gondola will be level with and look directly at climbers on the vertical rock faces. Climbers will no longer look south to the spectacular sheer granite walls of Little Cottonwood's Bells Canyon Peaks, but instead, their view will be drawn to the massive steel ropes and transiting cabins holding up to 35 people and to the steel tripods of the nearby supporting towers, over 230 feet tall. The gondola alignment and the huge towers supporting the gondola cables will be prominent and visible throughout the length of the climbing area, marring the views up, down and across the Canyon. As a final visual blow, FAA regulations require that flashing lights be installed on the top of these huge towers, drawing the eyes of everyone in the public recreation area. This is a significant visual impact, altering forever the climbing experience in this public recreation area. In addition to the visual abomination of the gondola, UDOT estimates that additional noise levels of 50db will be imposed on climbers - this noise is on top of the road noise that is already present. The noise impact is not de minimus because it is the same as the road, it is additive to the road noise and significant. It doubles the volume of an already high-noise pollution environment. The decibel level will likely be higher near the trailhead due to the proximity of the angle station and nearby towers due to the noise the cabins make as they transit the tower cable supports, the noise of the motors in the angle station, and the noise of the diesel generators when they are operating. UDOT's Final EIS fails to provide any supporting data or analysis of noise levels for normal operation and omits consideration of the higher noise levels when the transfer station backup generator is in operation. As offensive as the
36105	Dylan Alvarez	After all the feedback, comments, and pushback that UDOT has received against the gondola it is appalling to see that it is still being considered as a solution to the LCC winter traffic issue. I feel like I'm just constantly repeating myself here with the countless reasons why this more destructive, incredibly expensive option is not in the taxpayer's best interest, let alone the vast majority of the LCC user groups. The climbing areas that will be affected, the stunning visuals of the canyon that will be affected, the cost that could be better used elsewhere instead of lining the pockets of corrupt stakeholders and the resorts that will benefit, there are so many reasons to avoid the gondola and move forward with a solution that checks all the boxes needed. MAY I SUGGEST EXPANDED BUS SERVICE. We are not Europe, we are not Chamonix. We don't need a soaring mess of cables through the LCC skyline, we just need a solution that will allow users to access more of LCC while reducing traffic congestion. The gondola will ONLY serve the resorts, while they shoulder none of the cost, whereas a bus has the capability to stop at multiple areas throughout the canyon, expanding travel options for climbers, backcountry skiers, hikers, runners, photographers, cyclists, bird watchers, and literally anyone who wants to enjoy what this beautiful canyon has to offer that does not include the boundaries of Alta or Snowbird. Not to mention the cheaper cost of improving existing services and not starting from scratch with an extravagant, unnecessary solution.
36106	Corby Dall	I do not want the gondola. The limited use of the gondola will not alleviate enough traffic to solve the problem. Lets avoid playing into an almost single beneficiary to solve this problem.
36107	Martha Truss	I think your tolling proposal is excessive and is discriminating. Those who want to avoid paying will try to go up canyon prior to 7am creating problems for ski area parking and for employees getting to work on time. In the last 4 years the early a.m.traffic has got much worse causing g emooes to add 30 or more minutes to their commute. The fee is catering to the wealthy. Skiing is already expensive and now we have to pay for parking as well.

Comments on Little Cottonwood Canyon Final EIS

ID	Full Name	Comment
36108	Richard Winwood	<p>Gondola won't solve any traffic problems. It will cost an obscene amount of taxpayer money to build and to maintain. It will never pay for itself. The only parties benefitting are two private, profitable companies (Snowbird and Alta). The rest of us will be paying the bill for this for decades if not longer. It will scar the beauty of Little Cottonwood Canyon for generations (if not longer).</p> <p>Other solutions should be tried long before a permanent, expensive 'solution' is tried. Better bussing (you want to spend \$600MM+ on a gondola, but can't pay enough to attract enough bus drivers to provide sufficient ski bus service???) . Snow sheds (no brainer...do it!). It may not be a popular idea, but SR210 could be widened in places (not the whole thing) to allow for more up-hill passing lanes. The first up-hill passing lanes begins 4.5 miles up the canyon. It only takes one slow car/truck/bus to clog up the whole canyon in the morning. Make some passing lanes and keep the traffic moving! Parking reservation systems for the ski resorts (tested and works!). What it due to global climate change, we don't really even have much snow in 20 years. Then we have a monstrosity of a gondola sitting there doing nothing...and still costing all of us money EVERY year. NO TO THE GONDOLA!!!</p>
36109	Claudia Morgan	<p>I am opposed to the plan to put gondolas in Little Cottonwood Canyon. Many voices have expressed opposition to the gondolas and I want to add my voice to theirs. I love the beauty and grandeur of Little Cottonwood Canyon. The installation of enormous gondola towers will block the views and disturb the habitat of wildlife all along the canyon. I am not a skier, but I love to hike and camp in these mountains. It is a place of renewal and peace that is found no where else. It is irreplaceable. Once disturbed it will never be the same. We need to preserve these natural wonders for our children and grandchildren to enjoy. The gondola seems to only benefit the skiers and the ski resorts. It doesn't provide access for any other uses of the canyon. The cost of using the gondola plus the cost of skiing would prevent many more Utahns from being able to get out in nature. It just moves the traffic and congestion out of the canyon into the areas surrounding the mouth of the canyon. It is a complicated issue and none of the possible solutions are ideal. The gondola seems like the most harmful idea with the most negative impact on the canyon. Why should the citizens of Utah pay for something that harms the environment and benefits a small population. Please say no to building gondolas in Little Cottonwood Canyon.</p>
36110	Elizabeth Cates	<p>Don't do this! The locals (myself included) do not want this!</p>
36111	Robert Douglass	<p>Lisa Falls Trail: The UDOT Final EIS is in error where it assesses as nonexistent or de minimus the considerable impacts of the gondola options on the Lisa Falls Trail - a trail designated by UDOT as a 'public recreation area' under Section 4(f) in UDOT's EIS. The EIS's rationale appears to be that because the gondola does not physically touch the ground on the Lisa Falls Trail, it has no impact or at most a de minimus impact. That finding is incorrect. The gondola options have sizable impacts on this public recreation area. Failure to assess and address mitigation of these considerable impacts means that the Final EIS is not compliant with Section 4(f) regulations. The gondola, option B, runs immediately south of Lisa Falls Trail, coming within approximately 67 meters of the trailhead. A gondola tower rises well over 100 feet south of the trail within 120 meters, according to UDOT's interactive map. This will bring the gondola cabins level with hikers on much of the trail. The Lisa Falls Trail is maintained as a trail on public land, qualifying as a Section 4(f) 'public recreation area' as confirmed by Volume 26 of the EIS. It is a popular hiking trail, used by hundreds of hikers per month in warmer months. The visual impact of the gondola options is significant. Because over one thousand people in bus-sized cabins on the gondola will be over 100 feet in the air, they will look directly north onto the Lisa Falls trail at the same level as the trail. The gondola passengers will have a good view of the public hiking the trail. The people hiking back down the trail will no longer see the spectacular vistas of the south Canyon wall, but instead, their eye will be drawn to the massive steel ropes and transiting cabins holding up to 35 people and the steel tripod of the nearby supporting tower. The gondola alignment and the huge towers supporting the gondola cables will be prominent and visible the length of the trail, marring the views up and down the Canyon. The EIS estimates that additional noise levels of 50db will be imposed on hikers and bikers as they walk or ride. The decibel level will likely be higher at the trailhead due to the proximity of the tower and the noise the cabins make as they transit the tower cable supports. As offensive as the marred view will be, the invasion and destruction of privacy of people using the public recreation area will be worse. The experience of calm, quiet and solitude of this mountain trail will be gone. Hikers will be watched by more people than if they were walking in a large metropolitan area. They will be photographed and video-recorded without their consent. The experience on this 'Nature' trail will be shattered visually, aurally, and in terms of any feeling of being in nature - this is certainly not a nonexistent impact nor is it remotely de minimis - it is significant. The Final EIS omits proper identification of significant impacts of the gondola on this qualifying public recreation area. The Final EIS does not comply with Section 4(f).</p>
36112	Valjean Bondoc	<p>I hope you g are really making the correct decision and that that those who are benefiting by this i.e. ski resorts are also paying their fair share. Most Utahns will not benefit by this. Please don't damage the natural beauty of this magnificent canyon!</p>

ID	Full Name	Comment
36113	Igor Baveda	<p>Hello, I'd like to start with I imagine there are people, UDOT employees, with degrees and high-paying positions that came up with the gondola decision on their own, with the public opinions taken in place and no external factors such as lobbying to influence your decision. Who am I kidding, right? I'm going to say something that has been repeated probably 80% of the time in the comments.</p> <p>The public does not want a gondola. The public does not want their canyon destroyed with your feat of engineering. The public does not want their climbs and boulders destroyed.</p> <p>I have a high suspicion that the only reason there's a comment period is because of NEPA. If UDOT could, you guys would just bring the bulldozers and yell get out of the way. But, unfortunately to you, and fortunately to us, the taxpayers, you have to go through the NEPA process.</p> <p>What really hurts my brain to understand is the fact that UDOT decided against a pedestrian bridge at Cardiff Fork due to its impact on the viewshed but considers it okay to build the longest gondola in the world in LCC?</p> <p>And as a taxpayer, I really don't see why I should pay for an infrastructure that will benefit 2 private businesses only. And charge people to use the gondola.</p> <p>My apologies in advance for my rather foul mood, but I have no faith that UDOT can come up with a solution that will actually benefit the public.</p> <p>Which begs the question, who will benefit from this?</p> <p>NO GONDOLA.</p>
36114	Erin Capra	<p>Do not build the gondola! It ruins the canyon for many other activities, climbing, fishing, etc. It is way too expensive and other options have not truly been tried. Increased bus service to neighborhoods is a much more sustainable options. It is outrageous that the gondola idea had gone this far. It feels corrupt and like it only profits the already too dominant resorts.</p>
36115	Will Cutting	<p>As a lifelong Utah resident and someone who has benefited from the beauty and tranquility of LCC, I strongly oppose the construction of the gondola. I believe there are better, cleaner, less expensive and less obtrusive options to improve transportation up and down LCC.</p>
36116	Dain CRAIG	<p>I can't believe how short sighted this whole concept is. You are NOT fixing any congestion problems but instead contributing to more congestion with the proposal to widen Wasatch that funnels into a 2 lane canyon rode and/or parking lot focused on a gondola!??? Wasatch Blvd just became Utah's biggest parking lot. As a Cottonwood Heights resident this directly affects our quality of life and property value. Have you considered the trends of years past that when Wasatch is clogged for a variety of reasons, the crowd turns around and heads up Big Cottnwood canyon creating even MORE congestion in that canyon and Wasatch! This is a terrible idea and not sustainable.. all to support ONE ski resort. Shame on UDOT. Shame on all the short-term thinkers that have come up with this idiotic plan that will ultimately cost Salt lake County residence half a billion dollars to build an amusement ride that won't be used or solve any traffic or polution issues. Nice job confusing real the issues with vague or non-exsistent data that has been taken out of context or exaggerated. Maybe take a step back and take a page from the countries that have been using rail for centuries that service multiple resorts and communities on their route at a fraction of what you are suggesting with this gondola and widening wasatch as your one and only solution... oh and toll booth just below Snowbird??? Seriously, that shouldn't cause any slow down at all.. a not-so brilliant plan! NO GONDOLA OR ALTERNATIVE B!!</p>
36117	Tom Sayasith	<p>The gondola is an awful idea. The fact that there is so much public outcry and it is still being selected or highly considered demonstrates those with financial interest influencing the consideration of the gondola. The gondola only satisfies traffic for the resorts and not the rest of the users of the canyon. The UTA busses are well utilized and demonstrates that with more service and better bus infrastructure, more users are willing to use the busses year round.</p> <p>The gondola pollutes the landscape and scenery. The development and maintenance of the gondola will destroy the canyon and require new maintenance roads that is destructive to the current watershed and landscape. The public does not want the gondola.</p>

ID	Full Name	Comment
36118	Noriko Kishi	<p>I do not approve of the LCCEIS decision to implement the Gondola B option.</p> <p>First of all, I do not think any of the options consider the entire community of recreation users in the canyon. All of the options only target benefitting the winter downhill ski community, many of whom are not locals. The options do not address summer usage besides updating parking areas. Wouldn't it be better to think of solutions that also include improving air quality in the summer by providing electric bus shuttles to all the hiking and climbing trailheads as well as the ski resorts? Secondly, I think that the negative visual impact is huge with a gondola! Only to serve those 50 days a year where the traffic is bad? Those of us who love hiking in the canyons would have to see an eye sore all year round. It would greatly diminish the natural outdoor experience for those wanting to get away from the city and man-made objects! The Canyons are a treasure of wilderness so close to the city that need to be preserved for the future generations to enjoy. Having a gondola scarring the view is a travesty to the area.</p> <p>I believe there has to be another way to solve the traffic issues without building a gondola! I much prefer the enhanced bus options especially if they include electric vehicles. The snow sheds are a good idea as well. Why not try the enhanced bus options since they are included in the first part of the gondola option anyway, and then reassess if further action is needed? Why commit now to something that is so costly and invasive to the natural setting in the canyon?</p> <p>I can't help but think that this is a selfish ploy of the ski resorts to increase their own profits, and not a real collaboration to imagine a future of wellbeing for the environment and all the users of the canyons year round.</p>
36119	William Ward	<p>My father established many first ascent climbing routes in Little Cottonwood that are very popular today. The Gondola proposal has the potential to destroy these heritage climbs and outdoor recreational opportunities. As a lifelong resident of Salt Lake County, I strongly oppose any Gondola proposals for two main reasons. First, this only serves the rich and patrons of the Ski resorts. It doesn't address access and congestion for the rest of the canyon. Second (which coincides with my first comment), if this isn't helping the residents of Salt Lake County/Utah gain access to the rest of the canyon, we taxpayers shouldn't have to pay for it. If the Ski resorts want it, make them pay for it with their own money (NO TAX BREAKS)!</p>
36120	Kirkwood Donavin	<p>I honestly think the Gondola is probably the best solution. Except, why aren't the resorts footing much of the bill? A taxpayer funded project that will only benefit the privileged skiing population? That's gross mismanagement of public resources. Build some more low-income housing instead.</p>
36121	Shane Turnbow	<p>No to the gondola</p>
36122	Abbey Ostrander 552	<p>My comment is to stop the gondola as an option in little cotton wood canyon. The traffic up this canyon is not exclusive to winter seasons. Spring and fall months the trail head parking is over flowing creating dangerous situations in parking lots and roads. The gondola does not solve these issues. For it will only be used in winter and only stops will be the ski resorts. A solution should be proposed that will help all people access little and big cottonwood canyon. Tolling and a year round bus service to all the trail heads and resorts should be considered as a solution to both canyons benefiting not only those who are accessing the resorts but also those accessing other parts of the canyons for the vast majority of recreation the canyons have to offer. The building of the gondola doesn't offer solutions to ALL that access this beautiful back yard. The amount of damage, money, the gondola will cause is a waste of tax payers resources when it offers few solutions to the problems faced in the canyons. Please save our beautiful back yard and consider less destructive alternatives. This is the home of so many people, it's a sham for it to be destroyed to line the pocketbooks of 2 ski resorts.</p>
36123	Betsy Hahn	<p>No</p>
36124	William Marsden	<p>I submitted a comment during the initial comment period and will not elaborate on it. I will simply state that I'm a lifelong Utah resident with children and grandchildren living in the Salt Lake Valley and that I'm strongly opposed to the gondola: It is prohibitively expensive; it unduly and permanently impairs the unique natural beauty of Little Cottonwood Canyon; and there are much less costly alternatives to relieve traffic congestion.</p>
36125	Jonni Badger	<p>***Please do not build the Gondola***</p> <p>Last summer I visited Rainbow Bridge. It was a very special experience for me. I was in awe at the beauty and reverence of the land. As we were getting closer to the bridge there were signs posted asking that no visitors approach or walk under the bridge. Rainbow Bridge is viewed as sacred and holy by the Native American people. They saw it for what it was...A beautiful creation. NOT TO BE CHANGED BY MENOR WOMEN!</p> <p>Little Cottonwood Canyon is a beautiful creation. It has been here longer than we can comprehend. Lets not change it. We want the generations to come to be able to enjoy what we have the privilege of enjoying now.</p> <p>The Gondola WILL NOT address the traffic issues of both BIG and LITTLE cottonwood canyons. I've waited hours to make it home from Brighton ski resort which is normally a 30 minute drive. What is the solution for Big Cottonwood Canyon? Lets start with a simpler, less expensive option and go from there. Spend the money on busses, park and rides and salaries for the bus drivers (so we can get more drivers). This will help BOTH canyons with traffic issues.</p> <p>We are in a situation where everyone needs to compromise. The Gondola is not a compromise. It will benefit the ski resorts and investors but cost EVERY Utah taxpaying citizen.</p> <p>Please listen to reason and do not spend our taxpayer dollars the Gondola.</p> <p>Thank you for reading my comment.</p>
36126	Janette Peterson	<p>I am against the Gondola. I am against tolling. This is so much money just for the ski season and ski resorts. Everyone shouldn't have to pay for what a few use. The gondola will sit unneeded and even unused most of the year. It's not a smart solution to the winter ski season problem. It's too expensive. Tolling everyone using the canyon doesn't seem fair when the problem is really only when skiers rush the canyon after it snows. I don't think the average skier will want the slow gondola and will still drive up the canyon. I am against this plan.</p>
36127	Tanner Fre	<p>I am 84. Lived in valley since birth, except for leaving for military, humanitarian work .</p> <p>I have spent thousands of hours in the canyon since 1951. Doing everything. Including. Service in the canyon....</p> <p>Do not do the gondola....it will ruin the canyon, and make almost impossible to go up there for any reason. Except to hit the ski areas. So just to go enjoy that beautiful canyon it's History. You'll miss it. . To FLY to the resorts. Oh. I even ? skied there. Plus the hikes canyon service with scouts my kids etc .</p> <p>Thank you for reading this.. if you want any. Old history. Practical type. Stories. Etc. Let me know</p>

36128	Annie Carlile	Please do not build the gondola! The gondola is not being built with the Utah and Salt Lake community in mind! The environmental impact of blasting through our beautiful canyon for years far outweighs whatever perceived traffic benefit there is. There are many other options!! Utah is so beautiful and deserves to be protected and respected!
