40117	Matheson, Will	I am opposed to the gondola, for reasons including but not limited to its violation of the Roadless Rule. The angle stations, towers, snowsheds, and associated clearing of three separate roadless areas in LCC creates social and ecological damage and violates the law. In addition, I do not want to see the inevitable lawsuit that would continue this quagmire if UDOT continues to push ahead despite these issues, wasting time and money while solutions are put on pause.	A32.3A; A32.10G

		<p>I would further like to see UDOT assess the impact of electric buses. UDOT has already adjusted its analysis to consider the possibility of using higher emissions fuels like diesel, so it is striking that it hasn't yet considered alternative fuel options.</p>	
41861	Mathews, Haylee	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Haylee Mathews</p>	A32.3A; A32.3F

39999	Mathiason, Mike	<p>Hi,</p> <p>My name is Mike Mathiason. I used to live at the mouth of LCC for 10 years. I now live down by historic Sandy station. This gondola is going to be a horrible investment for the community (tax payers). This only stops at the ski resorts. It's only going to be useful 25-30 days a year. That's under 10 percent. Why would we change the whole canyon for 25 days ? I have bikes the bike trail in LCC probably 1000 times. This would probably wreck that trail. Please don't allow this to happen. This will wreck the canyon, and cost the taxpayers tons of money for a horrible investment for the community. Please don't allow this to happen.</p>	A32.29VV

40906	Matthews, Audrey	<p>As a newer resident to UT, I was excited about all the outdoor activity SLC had to offer me and my family and our expectations were blown away after spending last summer exploring the Cottonwood Canyons. To learn that Little Cottonwood is at risk of being ruined for the sole reason of supporting two private resorts is shameful and it's even more ridiculous that tax payers are expected to foot the bill for the gondola. As a tax payer, I'd rather seen my tax dollars fund other environmental issues around reducing pollution, better public transit, and for goodness sake can we PLEASE find the public education system better?! Please, do not destroy the beauty little Cottonwood has to offer everyone. Instead of putting it at risk, we should be protecting each and every inch of it.</p>	A32.29VV

53003	Mauer, Maddy	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Maddy Mauer</p>	A32.3A; A32.3F

39383	May, Zachary	<p>UDOT has not adequately explained how this gondola projects accounts for the 2001 Roadless Rule in the canyon as well as the 2003 Revised Forest Plan when it comes to development. This is unacceptable and another way in which UDOT is pushing its agenda despite huge opposition to this project. Use the Common Sense approach to traffic in this canyon, which is NOT the gondola. Signed from a passionate Salt Lake resident.</p>	A32.3A; A32.3F

39827	Mc Ainsh, Michael	<p>As one who likes to hike in the Big and Little Cottonwood Canyons, I am appalled that a gondola, which would be built with taxpayers' dollars and that would only benefit a couple of rich landowner-businesses is being pushed as the only viable way of moving people to those businesses. There are better ways to take people up the mountain that, I'll admit, aren't as glamorous, but will leave the mountains free of the ugly scar that this project will cause if implemented.</p>	A32.29VV
39538	Mc, K	<p>I don't like the gondola but it might be the best option. Whatever happens the people using it needs to pay for it. I think that Alta and Snowbird should put up half the cost of the project. And the road needs to be a toll road for anyone using it.</p>	A32.29VV
45366	McAdoo, Amanda	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. 39408	McAlister, Josh	<p>Hello,</p> <p>As I am sure you were well aware when you made your initial decision, much of the proposed expansion required by construction of a gondola is not permitted under the Roadless Rule. I guess you were hoping no one would notice...</p> <p>1.8 gondola towers, snow sheds, 2 angle stations, and vegetation removal would take place within Inventoried Roadless Areas that exist in Little Cottonwood Canyon. The Forest Plan prohibits, road projects and recreation projects, and as the EIS states these projects are for highway purposes.</p> <p>2. The public comment period reads as though Wilderness Areas are expanding, to the contrary, UDOT and the USFS are proposing to diminish the roadless characteristics of Little Cottonwood Canyon.</p> <p>3. Roadless areas protected under the 2001 Roadless Rule. While the 2003 Revised Forest Plan allowed for some development to take place in certain roadless units: a. it was not in these units and b. not for the purposes of building a gondola, which detracts from, rather than enhances the roadless characteristics of these Inventoried Roadless Areas. These places need to be protected!</p> <p>The choice is simple. Withdraw the gondola from further consideration now.</p> <p>-Josh</p>	A32.3A; A32.3F

41685	McBride, Martina	<p>I'm so confused on why this issue continues to be discussed. It is pretty clear that the majority of the community does not want this gondola. It will not help with the traffic of little cottonwood canyon. If anything, it will increase how many people go up there. Yes some people may use the gondola but the same amount of cars if not more will continue to go up the canyon. What the canyon needs, is a better bus system going up and down like clockwork. If every ten minutes there was a bus going, people would be using them. It would cost significantly less than building this giant contraption into the mountain. Please stop wasting our hard earned taxes and please consider listening to the people. We do NOT want this.</p>	A32.29VV
41702	McBride, Michael	<p>Spanning 8 miles, with 20 towers and 2 angle stations as tall as 262 feet, it would only stop at 2 private ski areas—Snowbird Ski Resort and Alta Ski Area—but would be paid for entirely by Utah taxpayers at an estimated cost of \$1.4 billion. The estimated price per ride ranges wildly, from \$17 to \$200 according to a local news report.</p> <p>Though it would pass through 3 Inventoried Roadless Areas—a designation meant to protect undisturbed areas from road construction and timber harvesting—UDOT claims the gondola is exempt from the Roadless Rule because it's not technically a road, allowing them to push construction forward.</p> <p>The gondola is intended to solve traffic congestion; instead, it could make it worse for all but the select resort users who can afford a ticket:</p> <ul style="list-style-type: none"> - It will put more people in the canyon without improving transit and without studying how many daily visitors the canyon can handle. - It won't stop at non-resort backcountry trailheads, leaving non-resort users to deal with traffic. - It won't operate during active avalanche mitigation. - It will permanently disrupt trailheads, recreation areas and bouldering areas, marring prized views and causing constant noise. - Construction will cause delays and highway closures for at least 5-10 years. - Construction debris will jeopardize a critical watershed supplying most of the Salt Lake Valley's drinking water. <p>These are just a few of the many reasons that most Utahans and nearby local governments oppose the project.</p> <p>UDOT should focus their efforts lower-cost, lower-impact solutions such as carpool incentives, expanded bus service, ect.—solutions that benefit all users without causing irreparable damage.</p> <p>I would lie to suggest focusing in on the the expanded bus services. For a fraction of the cost of the Gondola, UDOT could purchase electric buses that serve the canyons. Expand the areas that these buses serve, not just the limited routes now in service. This will truly mitigate the traffic issues rather than just piling them up in front of the gondola. These buses can also be used all year long and deployed during sepcial events like the NBA All-Star game this last year.</p> <p>The strong push for the gondola make me fee that there are personal/political pressures ensuring that this is seen as the only solution. Who is benefiting from making the taxpayers pay for a gondola that will only serve private businesses? Why are we willing to jepordize the beauty of our canyon? For money? That is the only thing I can come up with that makes sense.</p> <p>Please reconsider and find a solution that will truly resolve the issues at hand!</p>	A32.3A

41354	McCallum, Shannon	<p>Please consider options besides the Gondola to improve transit in LCC. The Gondola is not the most affordable plan, only serves a small and elite community in the Wasatch, and will take years to construct. The Students of the Wasatch recently mapped the support beams and angle stations of the proposed gondola and many of them were proposed to be built in very dangerous avalanche paths. I do not believe the gondola will continue running during high avalanche activity despite what the proposed gondola plan states. Please propose higher wage for bus drivers, more buses, and more frequent bus pickups.</p>	A32.29VV

49792	McCanna, Nathan	<p>To whom it may concern,</p> <p>Please understand induced demand. As soon as the gondola is built, destroying the canyon in the process, the temporary decline in traffic will be filled with people now choosing to go to LCC over BCC and park city because of lesser traffic. This will fill up the canyon again, rendering the gondola useless. We need better public solutions that are accessible to all Utahns, not just those that can afford private resorts. Tax payer money should not fund a project that only benefits private companies.</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. 40979	MCCLOSKEY, JAMES	<p>Concerning the transportation issues in LCC as a current taxpayer I am opposed to a public project that benefits a private resort. Given the projected growth of the state we are even now seeing green spaces completely developed in the valley and it is essential we keep our canyons free of human clutter and commercialism. Roadless areas hold social and ecological values that cannot carry a price. Roadless means just that, no roads for any purpose. A road of any type would damage wildlife habitat and that would diminish the value of the Wasatch. Except for the 9 or 10 days of extreme traffic in the canyon during ski season the gondola solution would be an overkill in my opinion.</p> <p>I urge you to reject the gondola proposal, reject the damage it would do to a place that cannot be improved upon so we can pass on this beautiful state to our children just as we received it from those before us. Thank you for your time.</p>	A32.3A; A32.3G

		Regards, Sarah McCloskey	
40839	McCloy, Marjorie	<p>I believe constructing a gondola in LCC is in direct violation of the Roadless Rule. The Forest Service designated Roadless Areas to prevent road construction and timber harvesting, protecting these areas from construction impacts. White Pine and portions of Twin Peaks and Lone Peak are designated as Inventoried Roadless Areas (IRA); any construction in these areas is a direct violation. Towers will disrupt the ecology and wildlife; roads for ongoing necessary maintenance will prohibit any kind of recovery once the towers are completed. This construction violates both the spirit and the letter of the Roadless Rule.</p> <p>During the EIS process, UDOT failed to asses how constructing a gondola would violate the Roadless Rule, hence this comment period.</p> <p>A gondola would require implementing towers, angle stations, snowsheds, and clearing vegetation in protected IRAs.</p>	A32.3G; A32.3H

		<p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Lauren McConnell</p>	
39729	McCool, Daniel	I am totally opposed to this project. I don't ski at the LCC resorts, but you want to use my tax money to subsidize those ski resorts. This is a huge waste of the taxpayers' money. It will also ruin this scenic canyon.	A32.29VV
50679	McCoola, Marika	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Marika McCoola</p>	A32.3A; A32.3F
55368	McCord, Alyssa	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. 56043	McDonnell, Andrea	<p>To whom it may concern,</p> <p>I have lived in Cottonwood for 35 years and am strongly opposed to the gondola option for little cottonwood canyon. Many Utahns and visitors love the cottonwood canyons for many reasons unrelated to, or in addition to, downhill skiing. For me, this is hiking and photography, as well as protection of the watershed, roadless areas, and wilderness. The gondola option is visually intrusive, if not grotesque, and serves no one but the resorts and their visitors while degrading the environment and the access and enjoyment of those planning to leave a lighter footprint on the land. European resorts with gondolas are typically much larger. This is truly overkill, and much too expensive for too few beneficiaries. Please reject this option that would truly degrade little cottonwood canyon forever.</p> <p>Sincerely, Andrea McDonnell Sent from my iPad</p>	A32.3A

50644	McGowan, Kate	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>OUR TAX DOLLARS SHOULD NOT PAY FOR THIS. IT WILL NOT SOLVE THE PROBLEM.</p> <p>Regards, Kate McGowan</p>	A32.3A; A32.3F

42339	McIntyre, Mary	<p>Hello,</p> <p>I do not agree that an exception should be made for gondola construction in the surrounding protected roadless areas. The gondola would directly violate the Roadless Rule and take away from many of the qualities that I love and need to be protected in Little Cottonwood Canyon: clean water, diverse wildlife, breathtaking views, and endless recreation opportunities.</p> <p>I also believe that if UDOT can adjust its analysis to consider buses using higher emissions fuels like diesel, it should also assess the impact of electric buses. UDOT should expand its analysis to account for sustainable fuel options that exist and more accurately represent our nation and state's shift toward cleaner energy.</p> <p>Thank you, Mary McIntyre</p>	A32.3A; A32.3F; A32.10G
42305	McJames, Kevin	<p>This place is link no where else in the world, and I firmly agree that the affected areas become inventoried roadless areas as they are directly attached to forrest service land and wilderness! To the state legislators: dont you dare put a gondola up little Cottonwood canyon!</p>	A32.3F

		Regards, Rose McKean	
41338	McKee, Dayna	The gondola is ridiculous. It is a handout to resort owners and those who have access to enough capital to be able to recreate in the canyon. It does not allow access to or benefit the majority of our residents. There are plenty of other options, such as public transportation and possibly tolls. The gondola negatively impacts the natural beauty and resources of the canyon. I oppose the gondola.	A32.29VV

40083	Mckeska, Alec	<p>As a Salt Lake resident, I love LCC and the vast recreation opportunities and close access that it provides. With this in mind, I desire an outcome that allows others to enjoy LCC's diverse recreation opportunities for years to come. I feel compelled to take a strong stance AGAINST the gondola.</p> <p>Bearing in mind that the goal of this project is a long term solution to vehicle congestion in the canyon, this project has shown a lack of common sense from the start. For one, if vehicle congestion is truly the problem that this project is tasked with solving, I would think that UDOT should look indiscriminately at BOTH cottonwood canyons. There is a miles-long traffic queue regularly present into BCC - not isolated to weekends and holidays as evidence of this, so apply one massive and expensive "solution" to LCC alone is asinine.</p> <p>Secondly lacking common sense - I firmly believe that people are relatively set in their ways and prefer to drive their own vehicles into the resorts. People like to tailgate, have storage in their cars while skiing, and not have the inconvenience of multiple legs of transportation to ski. In order to reduce vehicle traffic in the canyon people need to be incentivized to change this behavior. Parking reservations don't exist in any form currently at Snowbird, and Alta parking reservations give no incentive for people that fill their car up. Why has a tiered system similar to solitude not been implemented? There is no deterrence from driving in my car alone to the resort, and the gondola does nothing to change this.</p> <p>Lastly, having experience in project finance at a renewable energy company I'd like to point out incongruities that I find in the public messaging for financing this project. With similarities to this project, our team is tasked with raising investor capital for large scale solar projects - a technology (energy production) with a projected cashflow (electric bills) to repay various forms of debt from capital raised at the time of construction. The same methodology is applied here - technology (gondola), projected cashflow (gondola fares). Taxpayers are upset about the potential for footing the bill, and it has been argued that this can be accomplished in other ways, namely from capital investment. This is done by raising money up front based on projected cash flows rather, similar to a tollway or any other large infrastructure project. When raising capital investment for a project of this nature, many assumptions need to be made and private investors need to be comfortable with these assumptions in order to lend capital at a reasonable cost. To name a few assumptions, how much will the gondola cost? How many people will actually choose to ride the gondola vs continuing to drive up the canyon in their personal vehicles? How much will the fare be and how will this impact fare collection? How will severe weather and avalanche control affect usability and fare collection? The assumption of successful capital investment in this project as a diversion from taxpayer funding is gross at best. From my point of view, the intricacies that I know to be involved in raising cost-effective capital for this UNPRECEDENTED project have been projected overconfidently to the public. Because of this I think that taxpayers will either directly or indirectly foot much of the bill. This is absolutely unacceptable given the already clear unfavorable public opinion.</p>	A32.29VV

Because of this I think that taxpayers will either directly or indirectly foot much of the bill. This is absolutely unacceptable given the already clear unfavorable public opinion.</p> <p>I'm an advocate of scalable and common sense solutions. Implement tiered parking reservations and fees at both resorts. Improve bus capacity and park & ride infrastructure. Incentivize people to ski at non-peak times. Create better carpool systems for private vehicles. There are countless common sense ways to reduce private vehicle traffic that have not even been meaningfully attempted.</p> <p>This project is indisputably extremely controversial, expensive, and unprecedented. These should all be major red flags. UDOT is chartered with preserving infrastructure, optimizing mobility, and strengthening the economy. With this I can only hope that the points above are heavily considered. It leads me to question ulterior motives and it is deeply disheartening. I can only ask UDOT to think with more common sense and the diverse public interests in mind as this project is deliberated. Our beautiful canyons deserve no less.</p>

You let us down by letting them destroy American fork canyon don't do this again. This is our forever home not a recreational play land for our destruction more than what's needed for survival. I want this to be a place I am proud to show my one year old daughter as she grows up in this canyon, plays, learns, while still ensuring we are helping clean after and maintain the canyons that give us so much in return. What is the point of all those rangers we have up there and officers that drove through to keep it safe and clean if you're just going to legally let someone absolutely destroy the nature we have been so keen on preserving? For \$? Something so temporary to have your name go down in history as the people who signed away the destruction of our land and possibly drinking water? That's nearly a war crime against your own people, stop letting greed and selfishness blind what truly matters in this life.</p> <p>Regards, Sydney McLaughlin</p>	A32.3A; A32.3F

No one wants this gondola.</p> <p>Regards, Jessica McMillan</p>	A32.3A; A32.3F
39926	McMillan, Lauren	<p>1. The gondola would directly violate the roadless rule and negatively impact wilderness areas. I'm concerned on multiple levels about what this project would do to our precious drinking water. UDOT's proposed gondola directly contrasts the spirit/ intent of the roadless rule and the areas it protects.</p> <p>2. The SB2 bill signed by Gov. Cox should be looked at and should be given a chance, which would require UDOT to issue its record of decision on the ongoing EIS. The community has spoken and wants to expand bus services.</p> <p>Thank you for your attention.</p>	A32.3A; A32.3F
40703	McMillan, Sylvia	<p>I would like to see the actual survey results and proof that a certain percentage of residents are for the gondola. I've yet to talk to one person who is. It is my impression that there is little public support and we are being lied to. This is a project for the few rich that will destroy the natural beauty of our state. You present yourselves as environmentalists but can't build fast enough. The politicians ARE NOT representing the will of the people but only think in terms of growth and more money in their pockets. Look to Wyoming as an example of responsible growth. Stop this nonsense before you kill our environment.</p>	A32.29VV

		<p>Regards, Mairead McNally</p>	
55659	McNamara, Christine	<p>Thank you for your work in trying to come up with transportation alternatives for LCC. We have visited Alta for over 30 years and consider it our heaven on earth. In as much as traffic has gotten worse, and solutions need to be considered, we think that the gondola would dramatically change the world class natural beauty of this special place. Increasing busses, preferably electric, and only allowing carpooling seem like the best choices. Gondola day trippers would need space for boot bags and gear, which does not exist, and would have to be built in a space that is already rather limited. With the snow this year, I doubt if the gondola would have continued to run. It seems like a destructive and expensive proposition that does not provide an obvious solution.</p> <p>We treasure our time at Alta and believe the experience is like no other, and must be preserved. Limiting guests has to be part of the plan and the gondola would not do that. Parking limits and ticket sales can accomplish that.</p> <p>Thanks for your time, Christine McNamara</p> <p>Sent from my iPhone</p>	A32.29VV

40012	McPhie, Jason	<p>No Gondola. This is not a good use of tax dollars. It does not solve the traffic concerns in the canyon. It pushes traffic down the canyon into town. It only serves for profit businesses that can pay for their parking issues themselves. (We love them both).. parking should be at the resort. Public transit busses or private busses and shuttles should be used.</p>	A32.29VV
40525	McPhie, Jason	<p>I do not want gondola towers in protected roadless areas. The gondola would directly violate the Roadless Rule and take away from many of the qualities that I cherish about Little Cottonwood Canyon: clean water, diverse wildlife, breathtaking views, and endless recreation opportunities.</p> <p>If UDOT can adjust its analysis to consider the possibility of using higher emissions fuels like diesel, why can't it also assess the impact of electric buses? UDOT should expand its analysis to account for sustainable fuel options that exist and more accurately represent our nation and state's shift toward cleaner energy.</p> <p>Inventoried roadless areas possess social and ecological values and characteristics that are becoming scarce in our nation's increasingly developed landscape. Protecting air and water quality, biodiversity, and opportunities for personal renewal are qualities of Roadless Areas that I highly value. Conserving Inventoried Roadless Areas leaves a legacy of natural areas for future generations. The proposed gondola system would situate towers, angle stations, snowsheds, and clearing of vegetation within one of the Wasatch's most protected areas, impacting not just one, but three roadless areas in Little Cottonwood Canyon: Twin Peaks, Lone Peak, and White Pine Roadless Areas. Going against everything the 2001 Roadless Rule is intended to do.</p> <p>Building gondola towers in Roadless Areas will greatly impact over 1,200 different plants and animals. How can we as a community help this process to ensure the flora and fauna won't be pushed out of their habitat? Does the "Purpose and Need" of UDOT's preferred alternative of the gondola allow for a shared habitat to continue to thrive or even be restored, when we are building into Roadless Areas?</p> <p>As a person living in Utah, I cannot support a proposal that would reduce acres of land that are classified as "Roadless", let alone know that the taxes being collected each month are going to a project that would permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas. I say no to a gondola in LCC because of the impacts to the Roadless Rule.</p>	A32.3A; A32.3F; A32.10G

42299	McQuay, Diane	<p>I am a 30+ year resident of [REDACTED]. I live just off [REDACTED] Big Cottonwood Canyon. My neighborhood has been severely impacted by the traffic conditions on Ft. Union and Wasatch. The gondola will have very little impact on these issues and I implore you to listen to the majority of the people and stop the gondola from being built. My reasons are: 1) Environmental impact: The destruction of LCC during the construction of the gondola and its towers will have a devastating impact for decades. How many trees and surrounding habitat will be destroyed during construction? That kind of recovery almost never happens. 2) Earthquake faults: Having grown up in California, I know first-hand about earthquakes and one thing we've learned is not to build on top of earthquake faults. I did not see anything in your reports about this issue. Nothing should even be considered, let alone built, without a complete analysis of earthquake danger. 3) Capacity of the Canyons/Ski Resorts: only so many people can be accommodated on a daily basis on the slopes. To pay for itself, an enterprise such as a gondola depends on maximum use which means too many people at the resorts, resulting in less quality experiences and skiers deciding to spend their time and money elsewhere. 4) Cost to Ride: a \$50 round trip (and I think that's a conservative number) will have a large impact on skiers' decisions to take the gondola vs. staying in their cars or riding a much, much cheaper or free bus up the canyon. How many families will be able to afford the gondola? 5) Ft. Union and Wasatch traffic and Big Cottonwood Canyon: Wasatch traffic south of BCC may lessen somewhat, depending on the design of the monstrous parking structure, but there will still be major traffic up BCC, something that has not been addressed at all. 6) Taxpayer money: I do not understand how this whole plan is based on taxpayers footing the bill for a massive amount of money (\$500m won't even come close to what the final amount will be) for the benefit of 2 private ski resorts.</p> <p>Now, my reasons for an enhanced, fully supported bus service: Buses with one dedicated lane (south on Wasatch and up the canyon in the morning and down the canyon and north on Wasatch in the afternoon) make a much more flexible system for moving people quickly and make much, much better use of taxpayer dollars. I don't think that UDOT has ever embraced and supported the use of buses as effectively as it could. With the dedicated lane, buses would not be impeded by auto traffic. If enough buses were used, people would be much more inclined to use them without long wait times. These buses should be in sync with other buses throughout the valley, with TRAX, and with downtown hotels and other hotels throughout the valley, again, reducing or eliminating wait-times for riders. With the one dedicated bus lane, Wasatch should remain a 2-lane street; no widening would be necessary, saving even more taxpayer dollars. They are flexible, adding more as needed on busy days. 2) Cost to Ride: Again, if buses are dedicated to serve the 2 private ski resorts, those resorts should pay their fair share: they should offset the cost, so buses could run for free or at very low cost to riders (another enhancement for riders to use them). 3) Year-round Use: LCC is a year-round destination. The gondola, at present, is designed to be used only in the winter, with no other stations than the 2 ski resorts. Summer buses would be able to stop at all the popular trailheads and the city of Alta itself.</p> <p>Other notes: 1) I saw on the gondola plans that there were trailhead improvements. However, I did not see how and when these would be implemented, nor how they would be financed. If these issues were included in the plan, I apologize - I must have missed them. 2) I noticed "sound walls" to be included on Wasatch. I did not see why these were included. I am very concerned where these would be built. First, one of the gems of Wasatch is the view of the valley one may enjoy while driving/riding. Second, some areas along that stretch include houses close to the street. Will these houses lose some or all of their properties? Will they lose their views with a sound wall in their backyards, therefore losing significant property values?</p> <p>I urge you to reconsider and support an enhanced bus system and abandon the gondola project.</p> <p>Sincerely,</p>	A32.3A; A32.3F

39497	Mecham, Paul	<p>I know you tried to say that I've had my chance but I want to repeat my earlier comments. Please consider them. Please STOP this extremely expensive gondola project. It directly benefits only a very narrow special interest group of citizens. Any indirect benefits to me and other citizens are tenuous and far outweighed by the huge cost to us. If the state feels it must spend my money (and money of other harmed citizens), please spend it on saving the Great Salt lake.</p>	A32.29VV

42259	Mehregan, Brian	<p>The gondola is not the right solution to our problems, please don't waste our money!</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless", let alone know that the taxes being collected each month are going to a project that would permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas. I say no to a gondola in LCC because of the impacts to the Roadless Rule.</p>	A32.3A
41898	Mehregan, Robert	<p>I would like to discuss the Roadless Area Conservation Rule (RACR) that would prohibit the planned gondola construction and maintenance. As far as I understand it, the RACR prohibits road construction and the cutting/removal of timber in these designated zones. There are three roadless areas protected under the RACR in Little Cottonwood Canyon. The plan for the gondola does not mention the need to build roads but rather will use helicopters for construction and maintenance. I have very little faith that excavation, foundation work, and maintenance will all be feasible via helicopter. The point of these RACR protections are to be buffers for wilderness areas. The gondola would intrude and threaten these wild spaces as well as the irreparable damage to the watershed. This plan is not thoroughly vetted and thought out.</p>	A32.3A

40526	Meikle, Cameron	I am against the Little Cottonwood Gondola. Our watersheds are threatened by the building of the Gondola. The current EIS fails to discuss the scope of construction needed to build the Gondola towers. They will impact the three roadless areas within LCC. I strongly believe that this Gondola, if built, will forever negatively affect the beautiful canyon and watershed that is the crown jewel of Salt Lake City.	A32.3A

39331	Meldrum, Dan	Having the gondola parking lot near the mouth of Little Cottonwood Canyon will not reduce the congestion on Wasatch Blvd or 9800 South and people will still wait in line when the canyon is closed. The only way is to move the parking lot for the gondola away from the mouth of LCC at least a mile or two. That will reduce the number of cars on Wasatch and 9800 going to the mouth of LCC. Having the gondola uphill capacity of 1050 per hour and the stated parking lot at 2500 cars with two people per car it will take approximately 5 hours to move 5000 people up the canyon and 5 hours down the canyon. Does this make any sense? Please see a bigger picture solution and consider electric buses in the light of our polluted air. USU is working on electric lines under the road ways to charge electric vehicles allowing electric vehicles to have smaller and lighter batteries which would allow electric vehicles to keep running without charging. 40928	Mendel, Katelyn	<p>Absolutely no on the proposed options for traffic in cottonwood canyons. The impacts on air, water, canyon recreation resources, natural beauty will be permanently damaging. The reports on the negative impact can not be truly known. How will this hurt wildlife? How will this hurt the beauty? How will this hurt local Utahns? What will we be suffering from in 10-100 years from now? This solution is too permanent and hurts everything it touches. The safest way is always the most natural way. This is not a solution. Save and preserve this canyon.</p>	A32.29VV

39613	Merrill, Thorn	<p>Hi. I would like to say that the gondola is not the best option for LCC. I spend multiple days each week throughout the year recreating in LCC. The gondola would ruin climbing areas, hiking/biking trails, impact backcountry skiing access and take away from the natural beauty of the place. I support increasing (not cutting) bus routes, improving park and rides and subsidizing bussing up the canyons. Thank you for your time.</p>	A32.29VV
39912	Merritt, Ted	<p>I do NOT want a gondola!!!</p>	A32.29VV
41240	mershon, scott	<p>As this area is in and around roadless areas, an expansion to the road network should be out of the question, along with the construction of a gondola. Utah would be benefited better by using this kind of money elsewhere. It is time we alter our habits and not our environment.</p>	A32.3A; A32.3G

40056	Metcalf, Steve	<p>Greetings -</p> <p>As this truly monumental snowfall has articulated these past few days (April 2-7, 2023), only a best-in-class gondola system could be employed to meet the emergency needs of roughly 1,000 full-time residents and another 1,000-2,000 tourists.</p> <p>No amount of bus lanes, tolls or traffic rules, currently or in the future, could meet the standard of care required to safely manage and assist whole communities of people completely isolated by snowfall.</p> <p>At this point, we should not be questioning the viability of a gondola in little cottonwood canyon but instead suggesting that there be a parallel gondola in big cottonwood canyon (also closed this week).</p>	A32.29VV

41701	Michalik, Andrew	<p>The gondola project proposal is reckless for a number of reasons, but particularly the underestimation for the impact it will have on the roadless wilderness areas. Claiming that, because it is the construction of a gondola not a road, that the project will not impact or require any roads in these protected areas is absurd. There will certainly need construction roads to haul in supplies and assemble the contents of the gondola. With Little cottonwood canyon being such a narrow canyon, even one road in these areas will make a significant impact on the ecosystem in this canyon. If these designated areas are protected wilderness areas and are roadless sections of land, then there is no justification for building a road through them, period. This whole project is ridiculous and has my unwavering opposition. I will do everything I can to make sure that the gondola development does not come to fruition.</p>	A32.3H

40487	Mifflin, Garrett	<p>I am not in favor of the gondola proposal. In my opinion, it would be a very inefficient use of funds. It is a massively expensive project that will require large sums of money each year to be maintained in safe working condition all to solve a problem that is only significant during 10-20 big powder days each year.</p> <p>I also believe it is in violation of the Roadless Area Rule. Dirt roads would certainly need to be constructed in order to build the towers and those same roads would still be needed after construction for any potential maintenance. Even if not every tower required a service road, a large footprint of forest destruction would be required for each tower. Perhaps that would violate the letter of the law with the Roadless rule but it certainly violates the purpose of the law.</p>	A32.3A; A32.3H

41608	Miklavcic, Hanelle	<p>I'm a Salt Lake City resident who regularly uses Big and Little Cottonwood Canyons for recreation. I'm against the gondola. I don't understand why UDOT is pushing it so hard, especially after the majority negative comments in the previous comment session. Not only does the Gondola disturb more acres in all three IRAs in comparison to the enhanced bus service, it continues to highlight the elite classism that exists in Salt Lake City. The gondola only benefits people who can A) afford to pay the ticket price of the gondola and B) the ski resorts. Why is UDOT so insistent on using taxpayer money to build a gondola that doesn't actually benefit the general public? We should be putting our resources into the enhanced bus service FIRST before ever considering building a gondola -- a gondola, mind you, that the majority of people in Salt Lake City don't want. There is a repetitive negative connotation in the EIS that the enhanced bus service does not stop at trailheads, but that is something can be changed and adjusted in the future. We will never be able to add more stops to a gondola!</p> <p>"Some visitors could, however, experience a negative visual impact due to the presence of the gondola infrastructure." You've got that right. It'll be an eyesore. As mentioned in the report, one potential tower would be located 1,000 feet from Tanners Flat Campground. When I'm camping, I'm there to enjoy nature and the habitat around me, not to stare at the industrial metal of an unwanted gondola. Additionally, the 13 total towers that are be required to for this gondola to be operational would significantly block and disturb the beautiful views that exist in Little Cottonwood Canyon for anyone who chose not to or cannot afford to ride the gondola. Another clear example of the classism surrounding this project.</p> <p>Your EIS focuses mostly on the base of the 13 towers that will be built en route, but there seemed to be less consideration for the wildlife that use the skies. Nesting and hunting grounds for birds will be disturbed. There is no question about that. Not to mention your assessment that the endangered monarch butterfly "would be forced to relocate if milkweed plants are removed". Your assessment that no long-term impacts to sensitive species would occur seems short sighted in all honesty.</p> <p>What would happen when an avalanche occurs in the canyon? That doesn't seem to be discussed. In order for you to be able to run the gondola safely after an avalanche someone would have to inspect the towers affected. That would take considerable time. Perhaps even longer than simply waiting for the roads to be cleared, like a bus would need.</p> <p>Do not move forward with the gondola.</p>	A32.3A; A32.3F; A32.3I

40481	Millar, Laura	<p>I do not want gondola towers in protected roadless areas. The gondola would directly violate the Roadless Rule and take away from many of the qualities that I cherish about Little Cottonwood Canyon: clean water, diverse wildlife, breathtaking views, and endless recreation opportunities.</p> <p>My suggestion is to do what is done at Zion National Park, bus skiers to the resorts. Run buses frequently.</p>	A32.3A; A32.3F

		<p>locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Darnell Miller</p>	
42250	Miller, Edwin	<p>My name is Edwin Miller and I am a resident of Salt Lake City. I recreate frequently in LCC in both the summer and the winter and am strongly opposed to the construction of a gondola in this canyon. While it is true that traffic congestion continues to be an issue in this area, constructing a gondola is not the correct choice. In addition to having massive, irreversible impact on the landscape of LCC, this gondola will be prohibitively expensive. Congestion in LCC is purely due to ski traffic to Alta and Snowbird. Summer users and other winter users are not significant contributors. Thus, it is not a good use of taxpayer money to subsidize a gondola build solely for the benefit of these two private businesses. Additionally, gondola construction will only shift the parking issue to the neighborhoods at the base of LCC, which will see much heavier traffic. Congestion on the surrounding roads near the base of LCC cannot be expected to be significantly decreased, as gondola users will still have to take private vehicles to the base of the gondola. In light of this, I strongly advocate for the implementation of a less permanent, expensive solution to solve this traffic issue. Keep LCC gondola free!</p> <p>To address the updated EIS:</p> <p>Bus service can reasonably be increased without road widening (busses this year struggled with staffing, contributing significantly to congestion).</p> <p>The updated air quality statement does not consider the feasible possibility of the introduction of electric busses into the UTA fleet.</p>	A32.10G

40080	Miller, Jacqueline	<p>Listen, after this winter, it is very clear that if a vehicle can't make it up a road, a person should not be outdoors. At this point tolling with max vehicle entry limits and busing only should be allowed in LLC. It is very clear now that any other method of transportation is to "look cool" and cost billions that could finance traditional public transport, including more efficient buses. Let's face it, in certain weather conditions people should not be outdoors and we should not be asking anyone to be facilitating services during dangerous conditions, especially for two resorts that are not finically contributing and one resort that is still only ski.</p>	A32.29VV

55784	Mingo, Richard	<p>Little Cottonwood EIS Supplemental Analysis Comments</p> <p>April 17, 2023</p> <p>Following publication of the Little Cottonwood Canyon Final EIS, the Forest Service requested that UDOT provide supplemental information and analysis regarding the impacts of the S.R. 210 Project to Inventoried Roadless Areas. In response, UDOT has provided the March 17, 2023, Supplemental Analysis and has invited public review and comment.</p> <p>In addition to being roadless, Inventoried Roadless Areas might also contain, "important environmental values that warrant protection, such as high-quality or undisturbed soil, water, and air resources; sources of public drinking water; diversity of plant and animal communities; habitat for threatened, endangered, proposed, candidate, and sensitive species and those species dependent on large undisturbed areas of land; recreation opportunities." Consequently, Inventoried Roadless Areas may also be considered significant publicly owned properties afforded protection under Section 4(f) of the U.S. Department of Transportation Act of 1966. Section 4(f) provides consideration of impacts on park and recreation lands, wildlife and waterfowl refuges, and historic sites during the development of transportation projects.</p> <p>By letter dated May 11, 2022, from UDOT to the Forest Service, UDOT made a de minimis impact determination for "temporary occupancy" of multiple 4(f) properties under Forest Service administration. A de minimis impact determination is a conclusion that the impacts of a transportation project are</p>	A32.3A; A32.3F

Comment ID	Name (last, first)	Comment	See Responses in Appendix A of the ROD
		<p>considered “generally minor in nature”. The agency responsible for administering the public lands for which a de minimis determination is made must concur with that determination. The Forest Service concurred with UDOT’s de minimis determination for the “temporary occupancy” of Forest System lands on May 15, 2022.</p> <p>It is evident from the Forest Service’s March 17, 2023, request to UDOT to provide supplemental information and analysis regarding the impacts of the project, that the initial assessment of impacts to 4(f) resources was also lacking and that the analysis and conclusion reached if the May 11, 2022, 4(f) determination was based incomplete information. It is therefore also apparent that the 4(f) analysis of impacts on Forest System lands, by necessity, be re-initiated and that concurrence be requested once again from the Forest Service.</p> <p>The May 11, 2022, analysis of 4(f) resources on Forest System lands was not only lacking in detail, it was too narrow in scope as it completely disregarded the potential impact of the proposed project on designated Wilderness Areas within the Inventoried Roadless Areas. The re-analysis of 4(f) impacts to Forest System lands should address impacts to the Lone Peak and Twin Peaks Wilderness Areas located adjacent to the proposed project. Public Law 88-577 (16 U.S.C. 1131-1136) Section2(c)(2) requires properties designated as wilderness to have outstanding opportunities for solitude or a primitive and unconfined type of recreation. Section 4(b) states that wilderness areas shall be devoted to the public purposes of recreational, scenic, scientific, educational, conservation, and historical use. Designated Wilderness Areas therefore provide significant public recreational opportunities and are by definition 4(f) resources.</p> <p>UDOT’s re-analysis of impacts to 4(f) resources should not be constrained to an 80’ wide gondola cable right-of-way. While the footprint of the gondola alignment may not necessarily require permanent use of designated wilderness areas, the alignment is in such close proximity that it severely impacts important features, activities and attributes associated with wilderness, such that it substantially impairs those wilderness qualities - - a constructive use. Constructive use of 4(f) resources, “may include impacts such as noise, access restrictions, vibration, ecological intrusions and visual impacts.”</p> <p>The March 17, 2023, Supplemental Analysis describes impacts to be a, “moderate level of visual impact from the gondola infrastructure” and “some visitors could, however, experience a negative visual impact due to the presence of the gondola infrastructure”. This level of impact is not consistent with the definition of a de minimis impact which are “generally minor in nature”.</p> <p>In summary, the Forest Service has found the FEIS lacking in sufficient detail regarding Inventoried Roadless Areas and has requested UDOT to provide supplemental information. Inventoried Roadless Areas may very well also be considered 4(f) resources. The May 2021 analysis of 4(f) impacts to Forest System Lands for “temporary use” is therefore also lacking sufficient detail and the Forest Service’s concurrence with the de minimis determination was based on the incomplete analysis. The 4(f) analysis was also for temporary use of Forest System lands, not a long-term easement as it is now being described.</p> <p>UDOT should therefore re-initiate the 4(f) analysis and broaden the scope of potential impacts to include visual impacts as required by FHWA guidance. The Forest Service concurrence, or not, with the 4(f)-determination made by UDOT is in and of itself a Federal Action requiring NEPA compliance on the part of the Forest Service. The Forest Service, as the administrator of the public’s Forest System lands, should shine some light on their evaluation of UDOT’s 4(f) analysis, clearly explain the decision before them and provide the public a real opportunity to comment on their decision rather than simply tiering off the incomplete UDOT analysis which buried this critically important4(f) decision of the Forest Service and other agencies deep into Chapter 26 of a multi volume environmental report.</p> <p>Sincerely,</p>

39443	Minor, Nate	<p>A gondola will not solve the problem. It will just cause parking problems at the base of the canyon and back traffic up further into the neighborhoods. An electric bus service could serve the same purpose without widening the road. Just close the road during peak times and run a bus service only at that time. Not a single person I know thinks the gondola is a good idea so clearly this is being pushed by the self interest of those involved with financial gain.</p>	A32.29VV

		Regards, Samantha Missey	
40930	Missy Berkel, Heather	Please DO NOT build the gondola in Little Cottonwood Canyon! This is a pristine watershed that should be "untrammled by man" yet enjoyed by the public. The construction of a gondola will irreversibly impact the canyon negatively and will NOT solve the transportation issues. It will be used by an elite few who visit the privately owned ski areas. PLEASE! Protect Little Cottonwood Canyon from this type of horrendous development.	A32.3I
55404	mistretta, Pio	To whom it may concern, I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area. I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule. I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts. 56071	Mitchell, Baylor	<p>To whom it may concern,</p> <p>As a Salt Lake resident and regular user of the cottonwood canyons, it disgusts me that a project that will make outdoor recreation harder for local and only help the wealthy resort owner is still being considered. I need access to the trailheads and I need the beautiful canyon views without a massive gondola in the middle. I want to be able to reach canyon destinations in a timely manner. The gondola does not solve these issues. I would rather ride a bus or shuttle to the trailheads and resorts than have a gondola in the cottonwoods. Please reject the gondola and do some more brainstorming for a project that will be friendly to the locals and create opportunities for resort visitors and trailhead users.</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. 40922	Mitchell, Becca	<p>Putting a gondola in Little Cottonwood Canyon is not the answer this community is looking for. We should not have to support this initiative with our own tax dollars to support two ski resorts. It obstructs the view, and will add more people to this already stressed canyon. If anything we should be setting restrictions on the number of people allowed up the canyon, promote car pooling with incentives and doing things to improve our bus shuttle system. Again, why are we "Utah locals" responsible to fork over the cash with no added benefit? Our ski resorts our maxing out and the quality is diminishing. Putting in a gondola that goes directly to the resorts encourages more people at the resorts, and will likely negatively affect our experience as locals. There's got to be a better option.</p>	A32.29VV

42102	Mitchell, Stacy	<p>Instead of pushing an "either/or" fallacy, this proposed project needs to be indefinitely paused until a solution with minimal environmental impact is suggested that both reduces congestion and avoids forcing eyesore infrastructure on Utah residents. Furthermore, Utah taxpayer dollars should in no way be used to fund this project that a large majority of us oppose. Snowbird and their cronies can fund this garbage on their own, since it only benefits the resorts. It's insane to use our money to build something that we don't want, and then charge us to use it once it's constructed.</p>	A32.29VV

42340	moench, Brian	<p>Utah Physicians for a Healthy Environment (UPHE) submit these comments in response to the Supplemental Information Report--Assessment of the Roadless Area Conservation Rule for the Final EIS Alternatives, and the Air Quality Supplemental Information Technical Report. We see several errors and inadequacies in these reports.</p> <p>1. Under the 2001 Rule, road types may not be “constructed or reconstructed in IRAs except in specified circumstances which include only two circumstances with possible relevance too Little Cottonwood Canyon.</p> <p>A. “A road is needed to protect health and safety in cases of imminent danger, such as wildfire.” By that standard there is no “imminent danger” to the public from the current road.</p> <p>B. “The Secretary of Agriculture determines that a federal aid highway project is in the public interest or is consistent with the purposes for which the land was reserved or acquired, and there is no alternative route or site.”</p> <p>UDOT cannot credibly argue that the gondola is exempt from the rule because it is technically not a road. The gondola’s purpose is exactly the same as a road, the environmental impacts on the IRAs are similar, especially the construction of the towers, and in terms of degradation of natural vistas probably even worse. Furthermore, UDOT cannot claim there is no “alternative or site” that could accomplish the goals of the gondola.</p> <p>It should be noted that despite these considerations, the gondola is an exclusive means of transportation not available to the public that can’t afford the price of a ticket, or that doesn’t want to focus their enjoyment of the canyon on the two ski resorts that are its drop off points. Nor can the gondola be used as a means of moving anything other than passengers. In other words, the gondola offers all the disadvantages of a road in roadless areas, but with less of the benefits.</p> <p>All the alternatives other than the “No-action” alternative, are not driven by consideration of “public health or safety.” Nor are they a federal-aid highway project “in the public interest.”</p>	A32.3A; A32.3F; A32.3I; A32.10G

		<p>For UDOT to claim that these other alternatives are in the public interest, begs the question, "How has UDOT determined what is in the public interest?" The public interest should be defined as what the public wants. When the overwhelming majority of public comments, and the positions of politicians whose jurisdiction includes Little Cottonwood Canyon, are strongly in opposition to this project, that should define "the public interest" unless UDOT can show some other evidence of having discovered public opinion on the issue. Without that, this project is yet another example of UDOT imposing upon the public, a value system that the public does not agree with. UDOT cannot claim with any credibility, that the public's interest is being served by this project when the primary beneficiaries are two ski resorts, and it is the public that will pay for it, the majority of whom will never visit those ski resorts. The few days of the year that traffic congestion increases air pollution does not justify any of these other alternatives.</p> <p>Given that climate scientists are very clear that the climate crisis will not only continue but accelerate, global temperatures will continue to climb, the long term trend of shorter winters and less snow pack will continue in the Western US (this year being a marked aberration), it is virtually guaranteed that the gondola will become a stranded asset within 10-20 years.</p> <p>2. We disagree with the Forest Service's ranking of the Twin Peaks IRA as being of "medium value" overall. When a natural area like this is so close in proximity to a large metropolitan area, its importance to the public is greater just because its location provides ready access to a high-quality scenic, natural/wilderness type area. That alone should give it a high value. Furthermore, because of its proximity to a large population center, it gets far more visitors than similar areas do further away, which should prompt more aggressive protection rules. For largely the same reason, we disagree with the USFS's ranking of "medium value" for the Lone Peak and White Pine IRA.</p> <p>In the ranking of these areas' assets, USFS ranks the roadless value, "Landscape Character and Integrity," in all cases as "3." For the reasons mentioned above, we strongly disagree with that existing ranking, and strongly disagree with listing that ranking as unchanged, despite acknowledging that the "gondola and snow sheds would introduce elements and/or patterns that would be visually dominant and would create strong contrast compared with other features in the landscape. A high level of impact was assessed for the impacts of the gondola and snow sheds."</p> <p>3. In section 4.1, Methodology, UDOT lists "Landscape character and integrity" as a roadless area value. More specifically that "quality scenery contributes directly to real estate values in nearby communities and residential areas." In fact that mitigates against the gondola, cog rail, and enhanced bus service alternatives because all of them degrade exactly what that high quality scenery provides, the gondola especially so.</p> <p>4. The proposed snow sheds would dramatically degrade the scenic beauty of the canyon, including, obviously obliterating the view of the canyon and the IRAs from within these snow sheds. UDOTs claim that the snow sheds "would not result in a scenic integrity level of Unacceptably Low," is an absurd, arbitrary, and mechanistic assessment of the impairment of the canyon's defining asset. To have the natural beauty of the canyon tarnished and from several vantage points obliterated by these massive snow sheds would seriously degrade the aesthetic value of visiting the canyons, something that all users, including skiers, highly value.</p> <p>5. We disagree with the claims in several instances that water quality would not be impaired in these IRAs. UDOT's report acknowledges that facilitating transportation would increase canyon human visitation and use. But UDOT implies this is merely an issue of possible increased human waste. It is much more than that. Probably the greatest threat to water quality are the PFAS compounds associated with increased human activity, especially introduced with ski and snowboard wax.</p> <p>The EPA just recently made the extraordinary announcement that it was dramatically reducing the water quality standard for PFAS compounds from 70 parts per trillion (ppt) to .02 ppt, a level that is barely even detectable. This means essentially there is no safe level of PFAS exposure, the same conclusion drawn by non-EPA scientists. Although there is movement in the ski industry to move away from PFAS in ski wax, invariably, substitute compounds offered by the chemical industry turn out to be just as toxic, and this cycle has already become evident for multiple substitute chemicals in other products. Also, there is no enforcement mechanism established or even proposed to address the issue.</p> <p>Furthermore, all the alternatives other than the no action alternative involve increasing paving. For example, with the Enhanced Bus Service PPSL Alternative, the report notes an increase of 22 acres of asphalt would be involved, but claims that "would not affect water quality." Multiple toxic compounds will leach into the creek water from the asphalt, especially polycyclic aromatic hydrocarbons (PAHs) many of which are not easily removed by water treatment facilities. There is no threshold that differentiates a safe level of exposure from one that harms public health. Even if the claim that the degradation of water quality would not cause Little Cottonwood Creek to exceed water quality standards is true, that does not mean public health would not suffer. It only speaks to the inadequacy of the water quality standards.</p>	

Comment ID	Name (last, first)	Comment	See Responses in Appendix A of the ROD
		<p>There is nothing in the report that acknowledges that the digging, blasting, and overall land disturbance required for pouring the foundations of the gondola towers could create ongoing water contamination through the same process as acid mine drainage. We see no evidence that the soils in the area have been analyzed for the presence of pyrite. If this iron sulfide is present, then there could be ongoing acid runoff from the towers' foundations.</p> <p>Calcium hydroxide, calcium carbonate, and silicon dioxide can all leach into the soil and water from the concrete, further contaminating the creek. Damage or leaks in the fuel storage tanks for emergency generators could be catastrophic for water quality in the creek.</p> <p>6. In section 5.0, impacts summary of the report, it states, "Environmental Consequences, less than 1% of each of the three IRAs would be affected by any of the action alternatives." This is again an absurd characterization of an environmental impact. That kind of logic could be used to justify placing a Walmart on the top of the Great White Throne in Zions Canyon or a hot dog stand on Rainbow Bridge.</p> <p>7. The scenario conjured up to justify the supplemental air quality report seems like a deliberate attempt to justify any version of these projects other than simply expanding bus service. UDOT's air quality modeling constraints are arbitrary and capricious. By insisting that air quality associated with expanded bus service only needs to be analyzed under a worst-case scenario, with all buses powered by maximum age, 14 year old diesel engines, is clearly stacking the deck in favor of the gondola. Obviously, natural gas, newer diesel engines, and electric buses are all already available, could be used in the near future, and would significantly change the equation for calculating the comparative pollution consequences of the various alternatives. For UDOT to claim that analyzing the air quality consequences under an electric bus scenario is "outside the scope" of their study is blatantly indefensible.</p> <p>We consider these supplemental reports to provide further reasons for abandoning the gondola as the preferred alternative.</p> <p>Dr. Brian Moench President, UPHE</p>	
42415	Moench, Malin	<p>COMMENTS OF MALIN MOENCH ON THE SUPPLEMENTAL INFORMATION REPORT--ASSESSMENT OF THE ROADLESS AREA CONSERVATION RULE FOR THE FINAL EIS ALTERNATIVES, AND THE AIR QUALITY SUPPLEMENTAL INFORMATION TECHNICAL REPORT</p> <p>In section 5.0, impacts summary of the report, it states, "Environmental Consequences, less than 1% of each of the three IRAs would be affected by any of the action alternatives." This is again an absurd characterization of an environmental impact. That kind of logic could be used to justify placing a dozen 12-story radio transmission towers on top of Mount Olympus and pretending it wouldn't significantly affect the majesty of the Wasatch Range from the point of view of the entire population of the of Salt Lake Valley because the footprint of these towers totals less than 1% of the mountain's surface area.</p> <p>The scenario conjured up to justify the supplemental air quality report seems like a deliberate attempt to justify any version of these projects other than simply expanding bus service. UDOT's air quality modeling constraints are arbitrary and capricious. By insisting that air quality associated with expanded bus service only needs to be analyzed under a worst-case scenario, with all buses powered by maximum age, 14 year old diesel engines, is clearly stacking the deck in favor of the gondola. Obviously, natural gas, newer diesel engines, and electric buses are all already available, could be used in the near future, and would significantly change the equation for calculating the comparative pollution consequences of the various alternatives. For UDOT to claim that analyzing the air quality consequences under an electric bus scenario is "outside the scope" of their study is blatantly indefensible.</p> <p>The Utah Department of Transportation (UDOT) has embraced the Gondola B alternative to solving the seasonal traffic congestion problem in Little Cottonwood Canyon. This inclusion should be rescinded in favor of either a tunnel-based alternative or an all-electric bus alternative modeled upon the highly successful Zion Canyon shuttle bus system for solving the congestion problem in Zion National Park's main canyon.</p> <p>As formulated by UDOT, the Gondola B alternative requires 22 unsightly towers, some as high as 20 stories, and connecting cables. They would be as jarring a visible desecration of the canyon as running a cross-country high-voltage transmission line up the canyon would be. It would be visible from almost every location in the canyon and mar forever one of Utah's most majestic landscapes. It would have this impact not only on skiers, but on hikers, climbers, campers, photographers, and families just visiting for the day.</p>	A32.3I; A32.10G

		<p>Because Little Cottonwood Canyon is such a narrow canyon, there would be no way for visitors to escape the constant noise and visual distraction a gondola would create. The historical significance and natural beauty of Little Cottonwood Canyon make it a place worth protecting and preserving. It was sculpted by glaciers over many thousands of years, and its spectacular but delicate beauty makes it one of the most iconic natural creations in our valley. It has been photographed, painted and admired by visitors for centuries. The Gondola B alternative would bring all that to an end.</p> <p>UDOT made this unfortunate choice, and the Wasatch Front Regional Council has accepted that choice, without undertaking even a cursory investigation of the cost and benefits of tunneling, or of a mandatory low-emissions bus-only service as is currently being successfully implemented in Zion Canyon. If UDOT had made such an investigation, it would have found that tunneling could deliver eight-fold more congestion relief at one-fourth the cost, and without disfiguring the canyon, while a low-emission bus-only alternative would deliver congestion relief at one-eighth the economic cost, and one one-hundredth of the environmental and social cost. Failing to investigate these alternatives is arbitrary and capricious, and a fatal flaw in UDOT's Environmental Impact Statement that must be corrected.</p> <p>UDOT/WFRC embrace this uneconomic eyesore without undertaking even a cursory investigation of several cheaper, more effective, and less invasive ways of improving public access to the canyon. One is a low-emissions bus-only service, such as the one that gives the public high-season access to Zion National Park. This free-of-charge system gives five million hikers and sightseers frequent, reliable access to Zion's entire Main Canyon. It is far more convenient than driving and parking private cars, and it does not compromise Zion's awe-inspiring scenery in any way. Private car permits are available where appropriate.</p> <p>Zion's shuttle boards 660 riders per hour from April through November. It elegantly solves a problem that is nearly identical to the one that UDOT is trying to solve in Little Cottonwood Canyon. It would cost \$48.5 million to replace its aging bus fleet with electric buses and the necessary charging stations. Scaling up the new, all-electric bus system by 60% would allow it to match the hourly capacity of UDOT's Gondola B alternative (1,050 rides per hour). The expanded system could accommodate Zion's 6.8 million shuttle riders at an average operating cost of \$1.30 per ride (\$1 .00 operating cost, plus a capital cost of \$0.30).</p> <p>Compare this to UDOT's Gondola B alternative. With capital costs of \$592 million, ski season operating costs of \$7.6 million, and a 30-year useful life, total system costs would be \$820 million (before inflation). This is nearly five times the total cost of Zion Park-style all-electric bus system of equal capacity, but the Little Cottonwood gondola would provide only one-twentieth as many rides as the Zion Park system over its lifetime. If the gondola ticket price covers its costs, few skiers would pay it except, perhaps, during rush hours.</p> <p>Over a ski season, congestion on Highway 210 is limited to weekends and holidays during two early morning and two late afternoon rush hours. Over its 30-year life, a gondola would operate during 3,960 total rush hours (2 hours x 2 hours x 33 days x 30 years). UDOT explicitly states that the sole purpose of the gondola is to avoid congestion on Highway 210. If total lifetime gondola system costs are assigned to the extra rides that it could provide during ski-season rush hours, the cost per ride is \$217. A Zion-style bus-only system could provide those same rides for \$1.30 each.</p> <p>A Zion-style system could solve Little Cottonwood Canyon's congestion problem as effectively as the Gondola B alternative at a tiny fraction of the cost. In addition to dropping resort skiers at Alta and Snowbird resorts, it could drop cross-country skiers and snowshoe hikers at half a dozen way points in between. It could scale up to serve Big Cottonwood Canyon as well, at the same cost per ride. In both canyons, it could eliminate the need for vast parking lots at the base of lifts, allowing that land to revert to alpine meadow.</p> <p>The already low cost of a Zion-style system could be cut by two-thirds if a Cottonwood Canyon transit service simply rented Zion Park's bus fleet. This is feasible because Zion Park doesn't need its bus fleet in its winter offseason, which coincides almost precisely with the Wasatch ski season. Crucially, a Zion-style system could furnish this wide array of benefits without widening Highway 210, ripping up the canyon's delicate landscape, or impaling it with dozens of 20-story towers.</p> <p>UDOT estimates that there are seven days (56 hours) of avalanche delays on Highway 210 each season. Its gondola would avoid more of such delays than a Zion-style system would. However, applying the congestion-avoidance analysis described above, each gondola ride that avoids avalanche delay over the life of the system would cost \$464. A system that costs \$464 per ride compared to one that costs \$1.30 per ride is quite a premium to pay to avoid a week's worth of avalanche delays each season. Few skiers would be willing to pay the difference rather than just ski another canyon on those rare avalanche days.</p> <p>The Gondola B alternative is a high-priced boondoggle that benefits only a few property-owning political insiders. Its functionality is narrow, and the scenic damage it would inflict on Little Cottonwood Canyon would be catastrophic and permanent. The Zion Park approach to easing congestion would solve Little Cottonwood Canyon's congestion problem without any of these drawbacks. It is practical, effective, and environmentally benign, yet UDOT refused to even consider it. This fits the textbook definition of "arbitrary and capricious" administrative decision making—a finding that the courts may ultimately have a chance to confirm.</p>	<p>See Responses in Appendix A of the ROD</p>
49574	Moench, Skye	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p>	<p>A32.3A; A32.3F</p>

39636	Molloy, Rachel	I absolutely do not support the gondola. There are cheaper and more scalable solutions that will not destroy the environment and beautiful view of the canyon. For example, scaling the bus system as needed. If you have a hard time finding bus drivers, pay them more. Other solutions have not even been tested. Rather than having taxpayers pay millions of dollars for this, test scaling the bus system or parking reservations or fees at the entrance of the canyon or all of the above. Do not have taxpayers (most of whom don't support this to begin with) pay millions of dollars for this solution that only benefits the two resorts, Without at least testing these other solutions first. 40127	Moore, Cameron	<p>I am not in favor of building a gondola system. I have read a number of articles, studies, and many other's opinions. It seems that a majority of residents are against a gondola and add to that the extreme cost and significant visual impact should remove a gondola as a potential solution. This is a risky proposition and would be the longest such gondola system in the world. That may introduce technical issues that have been previously not been encountered.</p> <p>Alternatively, widening the road to either to add one more lane as a dedicated bus lane or adding two lanes to provide a dedicated bus lane and a flex lane for additional private vehicle traffic up and down the canyon, will only solve part of the problem. Some of the delay and backup is simply created by vehicles attempting to find adequate parking and having to search or wait for parking. If there was a requirement for the resorts to build parking structures to house at a minimum of 120 percent of the capacity of the resort then the delays could be reduced.</p> <p>In my opinion, the most favorable solution is the construction of a tunnel from the base of the canyon up to the area between the resorts. There are multiple existing tunnels of the needed length or longer, so this has been proven technically possible. In addition, this would not be affected as much by the potential for avalanches or extreme weather. In fact, it would provide an alternative route of travel when avalanches or avalanche remediation closes the surface roads. A tunnel would have the lowest environmental impact. Lastly, the cost of a tunnel appears to be lower than either widening the existing road or building a gondola.</p> <p>Whatever the proposed solution, the final solution should be put before the voters for approval of both the solution and the use of any public funding.</p>	A32.29VV

41016	Morath, Justice	<p>The gondola does nothing to help Big Cottonwood Canyon and will only marginally help traffic in LCC. It will also certainly cost a prohibitive amount for people to use which will further disenfranchise working and minorities away from their rightful public lands. It does nothing to help anyone but well off skiers. It's an overpriced gimmick and a waste of taxpayer money.</p>	A32.29VV

Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Christopher Morgan</p>	A32.3A; A32.3F
52451	Morgan, Corbin	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Corbin Morgan</p>	A32.3A; A32.3F
51699	Morgan, Danielle	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. 39603	Morgan, Dave	<p>We are a democratic society that believes in the right to vote for public officials. This shouldn't be any different. As we were asked to provide input, numerous times even.....but the final & unilateral final say is UDOTs to forge ahead with the gondola. Regardless of the overwhelming public response is "no gondola". What does it take? I just don't get it. It ain't rocket science Y'all. No truly means no here, based on the thousands of legitimate concerns spelled out that oppose the gondola.</p> <p>I'm a lifelong Utah skier and my say & tax dollars do matter. Of all the options I'm much more in favor of widening the road for increased bus traffic. And if the gondola is truly the outcome, let the Bird & Alta foot the bill. Regards DM</p>	A32.29VV

48945	Morrill, Jared	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Jared Morrill</p>	A32.3A; A32.3F

40134	Morris, Dave	<p>PLEASE PLEASE BUILD the Gondola!! We (two of us) spent \$375 in extra lift tickets at Snow Basin because LCC was closed all week. (We had a pass to cover four days at Alta and Snowbird, so their skiing would have been free for us.). (As it is, even with \$375 extra, we still sacrificed two out of four days of skiing.). The cost of NOT having this Gondola is enormous.</p> <p>Enough is enough with the road closures. We need this Gondola yesterday.</p>	A32.29VV

39845	Mortensen, Maya	<p>The gondola would directly violate the 2001 RACR and the wilderness in the LCC area.</p> <p>Whether it's thousands of tons of asphalt/concrete/substrate for building a flat road up miles of protected wilderness in the canyon, or thousands of tons of building material to build a vertical gondola line, the spirit of the law of the RACR is being violated. Additionally, the UDOT's argument that the gondola does not violate the RACR because it does not constitute as a motorized vehicle and any environment destruction is incidental is incorrect.</p> <p>The gondola is, by definition, a vehicle that employs an electric-powered motor not operated upon rails (see Utah Legislature's definition of "motor vehicle" in reference to Title 41-part 42b).</p> <p>Additionally, the "incidental" wildlife habitat destruction includes over 100 boulders that provide rich cultural and sentimental value to the area for climbers and hikers.</p> <p>The gondola violates the RACR and should be discarded as a viable option to the canyon's traffic.</p>	A32.29VV

39987	Moss, Lee	<p>To whom it may concern,</p> <p>I am against building a gondola as a transportation option in Little Cottonwood Canyon. Based on the research that I have done, the gondola option for Little Cottonwood Canyon would directly violate the Roadless Rule and negatively impact wilderness areas. In Little Cottonwood Canyon, White Pine and portions of Twin Peaks and Lone Peak are designated as Inventoried Roadless Areas (IRA). The gondola option would require implementing towers, angle stations, snowsheds, and clearing vegetation in protected IRAs. The \$1 billion+ transportation project within IRAs will negatively impact wilderness areas, inhabiting wildlife, and the watershed and directly contrasts with the spirit of the Roadless Rule and the areas it protects. Thank you for your consideration.</p> <p>Sincerely,</p> <p>Lee Moss </p>	A32.3A

40180	Moyes, Shaun	<p>How could Gondola B possibly be the "best option" when all traffic and idling will still happen as LaCaille is essentially fed from the same three roads as the mouth of the canyon? Traffic jams and idling will be no better. NO ONE WHO PAYS TAXES IN THIS AREA WANT MS THE GONDOLA!!! Regardless of losing an Olympic bid with that canyon.</p> <p>Snow sheds are the only solution that will keep traffic moving and reduce idling. When the resort is full, it's full. When avalanches shut down the road, you will still have issues.</p>	A32.29VV

39765	Mullen, Daniel	I have been visiting Salt Lake City and the Canyons for many years now, and will be moving to SLC in May. The primary reason is access to wilderness and untouched recreational areas in the Canyons. Building a gondola in LCC would irreparably harm the Canyon and it's natural beauty. I do not want a gondola on Utah's roadless areas.	A32.29VV
39595	Mullen, Dennis	I feel the expense of the project does not warrant disrupting the environment for a seasonal pastime. Electric buses, aided by wires inlaid into roadway (USU's ASPIRE program), would be a better alternative.	A32.29VV

43448	Murdock, Eleanor	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Eleanor Murdock</p>	A32.3A; A32.3F

55969	Murphy, Brannon	<p>Inventoried roadless areas possess social and ecological values and characteristics that are becoming scarce in our nation's increasingly developed landscape. Protecting air and water quality, biodiversity, and opportunities for personal renewal are qualities of Roadless Areas that I highly value. Conserving Inventoried Roadless Areas leaves a legacy of natural areas for future generations. The proposed gondola system would situate towers, angle stations, snowsheds, and clearing of vegetation within one of the Wasatch's most protected areas, impacting not just one, but three roadless areas in Little Cottonwood Canyon: Twin Peaks, Lone Peak, and White Pine Roadless Areas. Going against everything the 2001 Roadless Rule is intended to do.</p> <p>Brannon Murphy always has ideas. Have an excellent day.</p>	A32.3A; A32.3F

46930	Murphy, Troy	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Troy Murphy</p>	A32.3A; A32.3F

40912	Murri, William	<p>The gondola decision is taxation and significant destruction of environment against the will of the common citizen. Relatively low usage for very high cost. This is a flawed logic to support a decision that benefits the rich at the cost of the working class.</p> <p>Why make such a significant decision without the direct vote of the tax payers who are the government? This is a legacy decision, leaving a legacy of financial commitment on us the common taxpayer. Please allow us to weigh the facts and make the decision. If not, our trust in UDOT and government will be seriously damaged. Thank you.</p>	A32.29VV

		<p>rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Mackenzie Myers</p>	
41225	Myers, Robert	<p>I do not want gondola towers in protected roadless areas. The gondola would directly violate the Roadless Rule and take away from many of the qualities that I cherish about Little Cottonwood Canyon: clean water, diverse wildlife, breathtaking views, and endless recreation opportunities.</p> <p>If UDOT can adjust its analysis to consider the possibility of using higher emissions fuels like diesel, why can't it also assess the impact of electric buses? UDOT should expand its analysis to account for sustainable fuel options that exist and more accurately represent our nation and state's shift toward cleaner energy.</p> <p>Inventoried roadless areas possess social and ecological values and characteristics that are becoming scarce in our nation's increasingly developed landscape. Protecting air and water quality, biodiversity, and opportunities for personal renewal are qualities of Roadless Areas that I highly value. Conserving Inventoried Roadless Areas leaves a legacy of natural areas for future generations. The proposed gondola system would situate towers, angle stations, snowsheds, and clearing of vegetation within one of the Wasatch's most protected areas, impacting not just one, but three roadless areas in Little Cottonwood Canyon: Twin Peaks, Lone Peak, and White Pine Roadless Areas, going against everything the 2001 Roadless Rule is intended to do.</p> <p>Building gondola towers in Roadless Areas will greatly impact over 1,200 different plants and animals. How can we as a community help this process to ensure the flora and fauna won't be pushed out of their habitat? Does the "Purpose and Need" of UDOT's preferred alternative of the gondola allow for a shared habitat to continue to thrive or even be restored, when we are building into Roadless Areas?</p> <p>As a person living in Utah, I cannot support a proposal that would reduce acres of land that are classified as "Roadless", let alone know that the taxes being collected each month are going to a project that would permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas. I say no to a gondola in LCC because of the impacts to the Roadless Rule.</p>	A32.3F; A32.10G

40363	Naso, Joseph	<p>2. I do not want gondola towers in protected roadless areas. The gondola would directly violate the Roadless Rule and take away from many of the qualities that I cherish about Little Cottonwood Canyon: clean water, diverse wildlife, breathtaking views, and endless recreation opportunities The ski resorts should be the ones footing the bill for any improvement in traffic up the canyons, if they want more business, then let them pay for it and not us tax payers who would pay for it and then pay again at the time of using the gondola. a widening of the road for buses is way better and less of an impact on wild life and the eye-sore of a gondola.</p>	A32.29VV
40366	Naso, McKayla	<p>This seems to be all about expanding the amount of people to get up and down the canyons, which spells greed, not improvement. The ski resorts get plenty of business, are they truly wanting tax-payers to pay for it so they could benefit from it? do they honestly think they don't have enough business? All Utah tax payers should have to pay for something they may not want or ever use. come up with a more practical plan than tell the residents they have to pay for something they don't even want. Better yet, if the people who want the Gondola are willing to pay for it and could ride it free because they paid for it, then fine, let that happen, don't be unfair to others just because you want it.</p>	A32.29VV

40545	Navidomskis, Finn	<p>It is well known that the gondola is widely unpopular among local Utahns. Another example of a similar project, a widely unpopular gondola over a large recreation area is British Columbia's Sea To Sky gondola in Squamish. This gondola has been in the news several times since it's construction due to the ongoing opposition of it. In fact, the gondola cable has been intentionally cut twice already. Each time every car on the line plummeted to the ground and cost millions to repair and replace. Since the gondola is so unpopular, could this type of thing happen in Little Cottonwood Canyon? What measure, security and otherwise, will be taken to protect the gondola? It seems necessary that a public investment do this scale should be protected from anything that might damage it. But wouldn't it seem ironic to have to protect the gondola from the people it's meant to serve? I believe that the gondola shouldn't be built, since it is opposed by the majority of people it is meant to help.</p>	A32.29VV
40542	Navidomskis, Finn	<p>According to the Deseret News and Hinckley Institute of Politics, 80% of Utahns oppose the gondola construction in Little Cottonwood Canyon. Moreover, the local community of Cottonwood heights is outspoken in its rejection of the gondola. Yet, with such an overwhelming majority opposed to the gondola, the plans are still going forward. Why is this the case? Why is UDOT ignoring the opinion of its constituents? Especially the opinions of its most impacted community? I believe this is evidence of a deeper problem with our system. The needs and desires of the local population, the people directly funding and directly impacted by the decisions, are being overruled by private interest and lobby groups. This shouldn't be the case. This may sound crazy, but public transportation built by public funding should take into account the needs and desires of the public.</p>	A32.29VV

40535	Navidomskis, Finn	<p>The current Little Cottonwood Gondola plan passes through several Inventoried Roadless Areas. The gondola plan bypasses these restrictions because it's technically not a road. However this fails to consider the impacts of the construction of the gondola. The plan states that the 200+ foot gondola towers could be brought in by helicopter to avoid the need to build roads for construction. But prior to the towers being helicoptered in, there surely needs to be considerable excavation to build the ground anchors and foundations of the massive towers. This type of prep work cannot be done with a helicopter. To build these foundations, there will be excavators and cement trucks that need to access the tower site. This means roads. Perhaps not nicely paved or graveled roads, but clear, flat, and solid enough to drive a truck on- roads. This type of road is just as impactful to the wilderness as a formal road. The damage to the IRA of this gondola's construction will likely be more drastic than the damage of a normal road. I propose the Little Cottonwood's IRAs be expanded to IRGAs (Inventoried Roadless and Gondola-less Areas.) The gondola plan is misguided and short-sighted. No development plan that includes the LCC gondola should be considered further.</p>	A32.3G; A32.3H
40539	Navidomskis, Finn	<p>The watershed of Little Cottonwood canyon is vital for the local ecosystem and for the community downstream. There has always been an effort to protect and conserve this watershed including the banning of dogs and pets from the canyons. Salt Lake County published that the watershed cannot survive the construction of this gondola. Yet plans for this massive construction project move forward anyway. We've spent years protecting this vulnerable watershed, why throw it all away now? The construction of the gondola will cause irreparable damage to the ecosystem and everything that depends on it. Don't destroy it. Don't build the gondola.</p>	A32.29VV
40537	Navidomskis, Finn	<p>The goal of the gondola is to be a transportation solution for the estimated 25 days per year with high traffic. However there are 365 days in a year. The majority of the year there is no skiing, and absolutely no traffic problem. I read a study that said 77% of the canyon users are not going to the resorts at all. Ironically, this "transportation solution" only provides transportation to the resorts. There are no stops throughout the canyon at the various trailheads and outdoor recreation areas separate from the resorts. The gondola is therefore not a "transportation solution" for the majority of canyon users.</p> <p>Even more frustrating, is that these non-resort users will be bearing the brunt of the damages to the canyon. Since the resorts are at the top, the gondola's construction will mainly be in the lower and middle sections of the canyon. That is where the other recreation areas are within the canyon. All of the construction damages, gondola towers, destruction of recreational areas, and loss natural aesthetics will be affecting the 77% of canyon users that don't even benefit from the gondola.</p>	A32.29VV
40543	Navidomskis, Finn	<p>Udot recently announced the cutting of some bus routes and reduction in frequency on other routes that skiers use to access Little Cottonwood Canyon. It seems a bit fishy that this decision was made as Udot is recommending people use public transportation to the resorts and during the comment period of a highly controversial gondola.</p> <p>The official reason these services were reduced is due to a lack of drivers. However I am sure that Udot could hire more than enough drivers to service the canyon all winter for much less than 700 million dollars. If we are okay with such a huge price tag for the gondola, why can't we increase the wage of drivers enough to hire and keep new drivers? There is a cheaper and better solution than the gondola: a revamped and properly funded bus system.</p>	A32.29VV
40538	Navidomskis, Finn	<p>One of the largest unintended consequences of the gondola project is the damage to the climbing resources of little cottonwood canyon. Little Cottonwood canyon is a world famous climbing destination, largely due to its many high quality boulders. Due to the gondola's construction, many of these boulders would be damaged or destroyed. Though UDOT's EIS says the damage to the climbing resource would be minimal, I believe they are misunderstanding and dramatically underestimating the damage that will ensue. The Salt Lake Climbers Alliance estimated that 64 independent boulders would be damaged or destroyed resulting in the loss of 273 unique climbs. This would be a huge loss for the climbing community. These are one of a kind, completely unique boulders that can never be replicated and don't exist anywhere else in the world. This climbing resource is also a tourism attraction for the nearby communities. People come from all over the world to climb on these boulders. Climbing is a rapidly growing sport and industry. Each year, more and more climbers come to Little Cottonwood, and that number will only keep increasing.</p> <p>Due to climate change, the winters in Utah are only expected to become warmer and drier. This will result in shorter ski seasons with less impressive snowfall. One day, The Greatest Snow On Earth, will be gone. When the snow goes away, so will the tourism associated with it. This is not true for the climbing. Climbing will continue to grow as a sport and Little Cottonwood will only become more popular as a climbing destination. As the ski seasons get shorter, the climbing seasons get longer. Why would we sacrifice the boulders, a resource that we can never rebuild and one that will continue to provide recreation forever, to build a gondola that provides access to a resource that is in rapid decline? It is simply a bad investment.</p> <p>Still the boulders of Little Cottonwood Canyon are more than just a tourist attraction. They hold extra value for the locals of the Salt Lake Valley. Many of us have climbed them for years. Some of us learned to climb here, others moved here to climb. All of us love and cherish the boulders and the time we spend climbing them. It would truly be a tragedy to have these unique boulders that countless climbers know and love be destroyed for the profit of private companies.</p>	A32.29VV
40546	Navidomskis, Finn	<p>Dear Utah Department of Transportation,</p> <p>I am writing to express my concern regarding the proposed 1.4 billion dollar gondola project up Little Cottonwood Canyon. As outlined in the Environmental Impact Survey (EIS), this project poses a significant risk to the watershed and roadless wilderness areas.</p> <p>As a taxpayer, I am deeply troubled that my money would be used to fund a project that has the potential to damage such important natural resources. Furthermore, I am skeptical that the gondola will solve the traffic problems it aims to address.</p> <p>I urge you to consider the long-term consequences of this project and prioritize the protection of our environment. There are alternative solutions that can achieve the same goals without the negative impacts on the natural resources and wilderness areas.</p> <p>Please take into account the concerns raised by the public and carefully consider the potential effects of this project on the environment and the surrounding communities.</p>	A32.29VV

		<p>Thank you for your attention to this matter.</p> <p>Sincerely, Finn Navidomskis</p>	
40540	Navidomskis, Finn	<p>The gondola is not an effective public access solution firstly because it does not provide equal access to people in different social and economic standings. Riding the gondola requires transportation to the loading area. Most people will use their car to do so, but this isn't an option for everyone. For example a recent study shows Utah Latinos have about half the access to a personal automobile. How will these people to get to the gondola then? The bus? It wouldn't make sense for them to ride the bus to the canyon, just to get off the bus and pay to ride a gondola. They should just continue up the canyon on the bus. The gondola is therefore not an public transportation solution since many people will still be relying on the bus system.</p>	A32.29VV
40541	Navidomskis, Finn	<p>The gondola is not a valid solution to the traffic problem because it does not give access to the parts of the canyon most people go to, and it still requires transportation to the bottom of the canyon.</p> <p>77% of canyon users do not go to the resorts at the top. Instead, the majority of people are accessing the many hiking trailheads, bike trails climbing areas, and river recreation areas. The gondola does not provide access to any of these areas, and is therefore not a transportation solution to the majority of canyon users.</p> <p>Another reason the gondola does not solve the traffic problem is that it still requires everyone to drive to the bottom of the canyon. The EIS says that there won't be a reduction to cars driving to Snowbird and Alta. The same number of people will drive, but some additional people will take the gondola. Anyone who access the cottonwoods during a high traffic time knows the problem starts way before the canyon. Wasatch Boulevard is often backed up all the way to I-215. This would still be the case with the gondola solution. The problem will even be exacerbated by the additional people who are driving to LCC just to take the gondola. The gondola will do nothing to solve the traffic problem in the Cottonwoods</p>	A32.29VV
40536	Navidomskis, Finn	<p>The gondola is being advertised as a "traffic solution." However the EIS says that the gondola will not decrease traffic in the canyon. The effect of the gondola is only to increase the number of people who reach the resorts. It is therefore not a solution to the problem, and should not be advertised as such. This increase in people at the resorts only benefits the resort companies. Why would the people of Utah pay for the most expensive gondola in the world when it won't reduce traffic and will only increase profits to two private companies. Since the these companies are the only ones who benefit, they should be the ones to pay. Us Utahns have other uses for our tax dollars. Other roads to fix, schools to fund, and a real homelessness problem that needs more public funding. It would be irresponsible and unethical to spend so many tax dollars to make a couple private companies richer.</p>	A32.29VV
40544	Navidomskis, Finn	<p>11. The EIS says there won't be any impact to the watershed from the gondola construction project. However I find that hard to believe due to the scale of the project. Additionally, there are no precautions outlined in the EIS that will be taken during the construction of the project. Since such a large portion of the population of Utah is reliant on that watershed, it seems extremely risky to plan such a large construction project running the entire length of the drainage. How will the danger to the watershed be mitigated?</p>	A32.29VV
53712	navratil, Philip	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Philip navratil</p>	A32.3A; A32.3F

40729	Nebeker, Kinde	<p>When I first saw the computer simulation of the gondola towers, I felt sick to my stomach. My immediate thought was "those towers are ugly, intrusive and what about all that undisturbed land underneath them?"</p> <p>I understand that UDOT's interpretation of the 2001 Roadless Conservation Rule in relationship to the gondola project seeks to disregard the intention of RACR — to protect the scenic and natural beauty of roadless areas by limiting development and human activity — by taking the position that the gondola is not a road. I disagree. The gondola is a road in the sky, to get to Alta and Snowbird. It's a road that is expensive, exclusive, and very ugly.</p>	A32.3G

41837	Nelson, Chase	<p>I am concerned on many fronts. First being that the way avalanche control is mitigated in LCC is primarily by mobile and fixed artillery and mortar systems. These mortar and artillery platforms will be sending explosive rounds above the gondola in the case of Mt Superior. Also rounds will be shot from the road on the mobile UDOT mortar platforms which will be below the Gondola. How is this risk mitigated in the case of a short round or accident? As short/over rounds do occur by accident what is UDOTs plan for the gondola and using artillery/mortar systems safely with passengers in a gondola?</p> <p>Next:</p> <ol style="list-style-type: none"> 1. Inventoried Roadless Areas act as a buffer for designated wilderness areas. Any incursion into these areas threatens the wilderness space. The narrow nature of this canyon means that the development of any infrastructure in the roadless areas will have a visual or residual impact on the wilderness experience as well as that in the inventoried roadless areas. Construction should not take place within the Roadless Areas. 2. I do not want gondola towers in protected roadless areas. The gondola would directly violate the Roadless Rule and take away from many of the qualities that I cherish about Little Cottonwood Canyon: clean water, diverse wildlife, breathtaking views, and endless recreation opportunities. 3 3. The construction of towers in the canyon will cause irreputable damage to the canyon ecosystem. Helicopters will not be capable of foundation excavation as suggested by UDOT. There will be a need for access roads during construction and subsequent maintenance activity as well as in anticipation of emergency evacuation procedures. Research shows that wire rope systems are not infallible and there will come a time when evacuation will be required. 4. If UDOT can adjust its analysis to consider the possibility of using higher emissions fuels like diesel, why can't it also assess the impact of electric buses? UDOT should expand its analysis to account for sustainable fuel options that exist and more accurately represent our nation and state's shift toward cleaner energy. Electric buses are a proven technology, came to Utah 5 years ago (YouTube video) and traveled to the all the major ski resorts in Utah. Last year the 3rd generation technology bus demonstrated its ability to navigate all the major resorts in. the Wasatch Front. UDOT is presenting data on a "worst case scenario" (which will make the bus option look bad). Why won't UDOT generate a "best case scenario" using currently available proven electric bus technology? 5. The scenic nature of LCC will be forever destroyed by 22 towers averaging 200', 5 of which will have flashing lights on top per FCC & FAA requirements. That is almost 3 towers every mile. They will dominate the landscape being visible to visitors even when the highway is out of sight. Given their close proximity the towers will be visible from within designated Wilderness Areas, 200' towers, regardless of color, blend into nothing. This is a designated Utah State Scenic Byway and is visited because of its unique beauty. 6. Inventoried roadless areas possess social and ecological values and characteristics that are becoming scarce in our nation's increasingly developed landscape. Protecting air and water quality, biodiversity, and opportunities for personal renewal are qualities of 	A32.3A; A32.3F; A32.3I; A32.3H; A32.10G

Comment ID	Name (last, first)	Comment	See Responses in Appendix A of the ROD
		<p>Roadless Areas that I highly value. Conserving Inventoried Roadless Areas leaves a legacy of natural areas for future generations. The proposed gondola system would situate towers, angle stations, snowsheds, and clearing of vegetation within one of the Wasatch's most protected areas, impacting not just one, but three roadless areas in Little Cottonwood Canyon: Twin Peaks, Lone Peak, and White Pine Roadless Areas. Going against everything the 2001 Roadless Rule is intended to do.</p> <p>7. With an angle station ¼ from the Tanner Flat Camp Ground noise from the transfer station (drive motors, decoupling & reconnecting procedures) will be new noise pollution introduced into the camping environment additional to that which might be currently experienced . Camping and picnicking will be negatively impacted.</p> <p>8. UDOT fails to note significant impacts on USFS land, omitting the impacts of construction, paving, and new road construction on federal land in inventoried roadless areas, including an EPA superfund site. Given these errors and omissions in the UDOT NEPA process, I urge the USFS to conduct its own EIS and issue its own ROD to accurately represent and prevent these impacts to federal land and inventoried roadless areas. The USFS ROD needs to recommend against a gondola constructed in Little Cottonwood Canyon.</p> <p>9. Building gondola towers in Roadless Areas will greatly impact over 1,200 different plants and animals. How can we as a community help this process to ensure the flora and fauna won't be pushed out of their habitat? Does the "Purpose and Need" of UDOT's preferred alternative of the gondola allow for a shared habitat to continue to thrive or even be restored, when we are building into Roadless Areas?</p> <p>10. As a person living in Utah, I cannot support a proposal that would reduce acres of land that are classified as "Roadless", let alone know that the taxes being collected each month are going to a project that would permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas. I say no to a gondola in LCC because of the impacts to the Roadless Rule.</p>	
54868	Nelson, Courtney	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule. There would need to be access (ie: roads) to both build and access the gondola for maintenance or emergency.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>The majority has been against the gondola for every open comment. Having more comment periods only suggests that the majority is being ignored. Just because UDOT and the ski resorts don't like the answer, doesn't mean let's ask again. No means NO. Respect the voices, the people, and Little Cottonwood Canyon.</p> <p>Regards, Courtney Nelson</p>	A32.3H A32.3A; A32.3F
51874	Nelson, Danielle	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. 42298	Nelson, Jim	<p>Upon hearing and further researching the proposed plans, I am in direct opposition to this, as to how I believe the structures will affect the roadless areas. I learned that Twin Peaks and Loan Peak are two of the roadless areas that would be most affected, and threatening the integrity of them would also threaten so many other benefits that come as a result of their presence, including the quality of water. After assessing the entire plan, the massive investment does not seem to have a promised benefit that will outweigh these, among a multitude of other factors.</p>	A32.3F

42414	Nelson, Nathan	<p>subject: Public Comment on UDOT's Proposed Gondola in Little Cottonwood Canyon To: Utah Department of Transportation (UDOT) Dear Sir/Madam,</p> <p>I am writing to express my opposition to UDOT's proposal to construct a gondola through the scenic Little Cottonwood Canyon, which includes three Identified Roadless Areas (IRAs). I believe this project constitutes a significant violation of the Congressional Roadless Areas Conservation Act of 2001, adopted by the US Forest Service (USFS) as the Roadless Area Conservation Rule (RACR) of 2001 and 2005. Title 23 U.S. Code § 101 Definitions and declarations of policy: Section (a) (11) Highway, part (B) defines a "Highway" as a "right-of-way." U.S. Title 49 Subtitle B/Chapter III/Subchapter B/Part 390/Subpart A/ § 390.5T Definitions: "Highway means any road, street, or way, whether on public or private property, open to public travel." The proposed gondola is clearly a "right-of-way" and a "way" and therefore is a highway under Title 23 and under Title 49. A "Highway" is synonymous with a "public road" per the Federal Motor Carrier Safety Administration's directive: FMCSA-RG-390.5T-Q026, issued 4 April 1997. As a highway or public road, the gondola itself falls under the Congressional Roadless Areas Conservation Act of 2001, adopted by the US Forest Service (USFS) as the RACR Rule of 2001 and 2005. Given these definitions, it is clear that the proposed gondola is a "right-of-way" and a "way" and therefore a highway under both Title 23 and Title 49. As a highway or public road, the gondola is subject to the Congressional Roadless Areas Conservation Act of 2001 and the RACR Rule of 2001 and 2005. UDOT has acknowledged the validity of the three IRAs in Little Cottonwood Canyon by not challenging their designation in the State of Utah's petition filed in 2019 in response to the 2005 Rule (RACR). These IRAs, identified administratively by the Forest Service (FS), must be managed according to roadless rules, which limit timber harvesting and road building. UDOT's final environmental impact statement (FEIS) does not assess the gondola itself as a new 8-mile-long highway crossing all three IRAs in Little Cottonwood Canyon. This omission and error in the NEPA process and the initial FEIS, along with the supplementary report on RACR-related impacts, necessitate further evaluation by the US Forest Service. The USFS should conduct its own accurate assessment of the impacts of the gondola across all three IRAs in Little Cottonwood Canyon, as well as its effects on adjacent National Wilderness Areas with regard to visual and noise pollution. The assessment the Forest Service is alleged to have performed as a partner with UDOT on UDOT's EIS is legally and fundamentally deficient. I believe the USFS is required to execute its own environmental impact statement (EIS) and issue its own Record of Decision (ROD), adhering to Federal definitions of highways, public roads, and the 2001 Roadless Area Conservation Rule and Act. With the above noted impossibility of pursuing a gondola project through the canyon, I strongly urge UDOT to stop wasting taxpayer money and public resources on this ill-advised boondoggle, regardless of the private interests that request otherwise (i.e. Gondola Works). The public is against the project for what feels like innumerable reasons and as an extension of the public voice, our Utah Department of Transportation should drop the proposed gondola project and seek alternative solutions that prioritize the preservation of Little Cottonwood Canyon from new roads and unnecessary and destructive construction projects. Sincerely, Nathan Nelson Utah Resident</p>	A32.3I; A32.3F; A32.3G
49779	Nelson, Nic	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Nic Nelson</p>	A32.3A; A32.3F

41560	Nelson, Scott	<p>I am aware there is a lot of local opposition to the LCC gondola ski area access. However, as a out of state skier who has been to the Salt Lake City area 3 times this past winter it is painfully obvious that an access solution other than the road need to be constructed in Little Cottonwood Canyon. The snow conditions this past spring should remind locals that alternative transportation is needed when the canyon is closed for multiple days in a row due to avalanche danger on the highway. While visiting the area this winter I was repeatedly unable to access the ski area I planned to visit that day due to road closures.</p>	A32.29VV

39310	Neumann, Itay	<p>Listen to the words that came out of your mouth on the youtube videos you shared: The road is closed on average of 56 hours (!) a year, and that justifies billions in a project none of the residents are interested in? Furthermore, every time the road is closed, LCC is in interlodge, what benefit would that bring? I am appalled that despite so much public rejection, you are moving on with this dire project. The power of the government emanates from it's constituents agreement to be governed. None of us agree to build a gondola in LCC, what gives you the permission to decide we are wrong and to it despite the disapproval?</p>	A32.29VV

50648	newhart, danielle	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, danielle newhart</p>	A32.3A; A32.3F

39419	Nichol, Kevin	<p>It was very helpful to look at the project from a different perspective, i.e. the RACR impacts. However, it only confirmed and strengthened the concept that the gondola has the lowest impact on the broadest set of environmental areas of all of the alternatives. The ONLY area where the gondola has a higher environmental impact is on the viewshed (and I still contend that the enhanced bus with widening for bus lanes would completely change the view and character of the drive). The gondola is also the ONLY alternative that meets the long-term purpose and need and is the ONLY option that could continue to operate while avalanches are being cleared from the roadway, as we have seen often this year. As such, the gondola is rightly identified as the preferred alternative in the EIS. It should be implemented, despite vocal opposition by a minority of canyon users.</p>	A32.29VV
53289	Nicholas, Grace	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Grace Nicholas</p>	A32.3A; A32.3F

39625	Nichols, Jonathon	<p>Along with the majority of Utahns, I am firmly opposed to the gondola and I implore UDOT to consider other alternatives to mitigate traffic in the canyon. The gondola will destroy many climbing resources and will destroy the natural beauty of the canyon that many users, not just skiers and snowboarders, enjoy year round. This amounts to a handout to two private organizations that are the root cause of these traffic issues, that only occur a handful of times per year.</p>	A32.29VV
40991	Nichols, Kirk	<p>Thank you for this opportunity to comment on the inadequacies of the LCC-EIS, Roadless Rule:</p> <p>Inventoried Roadless Areas (IRA) Little Cottonwood Canyon – Environmental Impact Statement (LCC-EIS)</p> <p>The main purpose of the law creating Inventoried Roadless Areas is that the roadless areas be free of timber cutting and free of the mechanization of roads. Roads are rationally interpreted to include cars on cables. Neither the towers, nor the cables with cable-cars are permitted in an inventoried roadless area any more than chairlifts are permitted in a Wilderness Area. The Forest Plan for the Uinta/Wasatch/Cache National Forest has been deliberated for decades and since 2001 has included the IRAs in Little Cottonwood Canyon. Altering the IRAs in the Forest Plan makes a mockery of the decades of planning. The better Forest Service minds, without the pressure and duress of the Utah Legislature through U-DOT, created the IRAs through a deliberative process. The IRAs were meant to be permanent and not just a temporary designation holding the forest for some future road, timber sale, or cable cars and towers at the whim of the legislature and U-DOT.</p> <p>The Little Cottonwood Environmental Impact Statement (LCC-EIS) is flawed not only in failing to study the Inventoried Roadless Areas, but also in failing to:</p> <ol style="list-style-type: none"> 1. Write the actual purpose statement of the road which is to deliver more people to the forest. 2. Failed to create a study area that is large enough to capture the problem of congestion which starts well outside the narrow study area of only the SR-210 highway. 3. Failed to study the latent demand already existing in the valley that will overwhelm any system that does not include limits, reservations, and metered entry. 4. The LCC-EIS failed to study the environmental impacts of all the people once they step or ski off SR-210. 5. The LCC-EIS failed to study connected, cumulative, and similar impacts and actions with a Programmatic – EIS before initiating the LCC project EIS. The entire Wasatch Front and Back require a connected and cumulative, Programmatic EIS. 6. Failed to study the increase in congestion that their solution of large parking lots within the congested area will exacerbate. 7. Because of these failures to study required issues, the LCC-EIS failed to create alternative solutions to the congestion in Little Cottonwood Canyon as required by NEPA. <p>This supplemental study of the Roadless Rule is just the start of the supplemental studies required for an adequate EIS of the traffic congestion in the central Wasatch Mountains.</p> <p>Kirk Nichols Central Wasatch Commission Stakeholders Council member Big Cottonwood Community Council member President and Watermaster of the Evergreen HOA, Brighton, Utah Associate Professor, University of Utah</p>	A32.3A; A32.3F; A32.3G
40958	Nichols, Martin	<p>-The purpose of the 2001 and 2005 Roadless Area Rulings (RACR) is to protect the two National Wilderness Areas that parallel the proposed gondola site. The USFS needs to do its own environmental assessment to verify compliance by UDOT. To consider a local waiver without such assessment or to ignore the RACR is illegal and irresponsible. The USFS needs to avoid any further litigation related to its compliance with the RACR.</p> <p>- Construction of the proposed gondola would have a material negative impact on the wildlife, views, clean water and public recreational benefits in the Roadless Areas protected by the RACR. The towers would be an eyesore and create noise pollution (noise pollution will double according to UDOT's FEIS) along almost the entire Roadless Area corridor.</p>	A32.3A; A32.3F; A32.3I

Comment ID	Name (last, first)	Comment	See Responses in Appendix A of the ROD
		<p>- The UDOT environmental assessment is dated and incomplete:</p> <p>(i) It does not account for the next generation of proven electric buses, and instead assumes that diesel buses would be utilized in future transport alternatives.</p> <p>(ii) It does not include the impact of the gondola construction plans to potentially excavate an EPA superfund site that may be contaminated with lead and arsenic.</p>	
44899	Nichols, Melissa	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. 		Regards, Paul Nicholson	
39847	Nicholson, Rosemary	As a frequent LCC user I think the gondola is wreckless. It is not going to adequately solve the transportation problems and will create an eyesore as well as major disruption to native habitat and animals. I think further environmental evaluation should be done as well as research on the gondola and how it will solve traffic issues in inclement weather and high wind. I also think a socio economic review of how it will impact lower income, POC, and marginalized people in SLC as it seems to only serve the ski resorts which are financially inaccessible to many. 40130	Niederauer, Stefan	Looking through the additional info, it is apparent that UDOT does not make objective assessments when comparing different transportation solutions in LCC. Rating the visual impact of the proposed Gondola solution equivalent to that of bus alternatives is intellectually dishonest, which is highly evident when examining the mitigation of impact to visual resources (section 6.5) that overwhelmingly addresses concerns with a Gondola-based solution. The methodology imposed by UDOT for the analysis is far from data-driven and highly subjective in nature, allowing for bias skewing of results that confirm UDOT's previous decision to recommend the Gondola. Overall, I have lost my confidence that UDOT objectively analyzes alternative solutions in this process or has any care for public opinion. Please do not destroy the beauty of LCC by implementing the Gondola.	A32.3I
42762	Nield, Carly	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Carly Nield</p>	A32.3A; A32.3F

40094	NIELSEN, DELENA	HEY LISTEN UDOT. You cant mess with the roadless areas or that national forest areas. Those are protected for a reason. Thats a super slippery slope making adjustments or acceptions here or there. Preservation of our watershed is number 1. That means not developing unstable terrain which all of that is. I would rather not have more mud slides from human incompetence. Thank you and have a lovely day. Delena	A32.3A

39413	Nielsen, Jonathan	<p>8 gondola towers, snow sheds, 2 angle stations, and vegetation removal would take place within Inventoried Roadless Areas that exist in Little Cottonwood Canyon. The Forest Plan prohibits, road projects and recreation projects, and as the EIS states these projects are for highway purposes.</p> <p>The public comment period reads as though Wilderness Areas are expanding, to the contrary, UDOT and the USFS are proposing to diminish the roadless characteristics of Little Cottonwood Canyon.</p> <p>Roadless areas protected under the 2001 Roadless Rule. While the 2003 Revised Forest Plan allowed for some development to take place in certain roadless units: a. it was not in these units and b. not for the purposes of building a gondola, which detracts from, rather than enhances the roadless characteristics of these Inventoried Roadless Areas. These places need to be protected!</p> <p>Roadless Rule boundaries must be upheld over building gondola towers.</p>	A32.3A; A32.3G

50458	Nielsen, Michael	<p>To whom it may concern,</p> <p>Below is a generic email opposing the project of adding a gondola in little cottonwood canyon. I fully agree with it but wanted to add a personal message. My biggest issue is the funding for the project. It will purely help two private ski resorts, and cost upwards of 1 billion dollars last I heard. It is unfair to put this large of a tax burden on the people of the state when the vast majority of them do not use the canyon. In my view that is a huge and disgraceful miss-use of OUR money. If the people want it, let the people who use it pay for it. If it will help the ski resorts, let them come together to pay for it. If this is built with tax payer dollars, I do not personally know one person who will not oppose anyone in a publicly held office next them they're up for election.</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. 40654	Niemeyer, Zach	I strongly oppose the gondola being built in little cottonwood canyon. Building the gondola would require the use of heavy machinery in roadless areas. Maintaining these permanent structures would further require access roads and trails that would reduce the beauty of the canyon. This does not comply with the goals of conserving roadless areas in the national forest. Again, I strongly oppose building a gondola in little cottonwood canyon.	A32.3H

41448	NILSEN, Jeff	<p>I moved to Utah in 1975 and have been living [REDACTED] for just over 24 years near [REDACTED]. I ski and average of 75-80 times a year (over 110 this year), 99% of which is in LCC. I have been up and down that canyon thousands of times. In the last 5 years the traffic has become impossible and UDOT has finally decided that something needs to be done. Although the Mayor of Sandy City says that 80% (absolute exaggeration) of the residents of Sandy oppose the gondola, I do not know of a single neighbor of mine that is opposed to it, although a few do not care either way, the rest are in favor of it. I see many mention corporate greed but the LCC ski resorts stand to gain nothing in terms of revenue and could care less if the gondola is the ultimate choice. They have been experiencing record profits for the last 4-5 years and the gondola won't change their revenue at all. UDOT never has and never will operate as a profit center. It cost \$220 million to build a 6 mile light-rail to the airport and I have never used it as I have not been to the airport since it was built, but many people do use it as it is very affordable. It's considered progress, much like the idea of building a gondola up LCC for the greater good. It is about time. I welcome it and so do many of the locals and tourists that frequent the canyon.</p>	A32.29VV

39495	Nischalke, Mark	<p>No to gondola. I believe a gondola would permanently denigrate the majestic scenery of the mountains and canyon for little gain. I believe there are less invasive and lower cost methods to control traffic, such as, tolls or limit hours of travel for private vehicles, and incentivize use of public transportation. The resorts in LCC should also be actively engaged in promoting alternative transportation.</p>	A32.29VV
42981	Nisley, David	<p>To whom it may concern,</p> <p>The proposed gondola project in Little Cottonwood Canyon is classist, greedy, short-sighted, and absolutely awful for the environment and people who truly love the Utah lands. I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. 		locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts. Regards, Jennifer Nissenbaum	
41288	Nistler, Justin	Inventoried roadless areas possess social and ecological values and characteristics that are becoming scarce in our nation's increasingly developed landscape. Protecting air and water quality, biodiversity, and opportunities for personal renewal are qualities of Roadless Areas that I highly value. Conserving Inventoried Roadless Areas leaves a legacy of natural areas for future generations. The proposed gondola system would situate towers, angle stations, snowsheds, and clearing of vegetation within one of the Wasatch's most protected areas, impacting not just one, but three roadless areas in Little Cottonwood Canyon: Twin Peaks, Lone Peak, and White Pine Roadless Areas. Going against everything the 2001 Roadless Rule is intended to do. It is also incredibly frustrating that the gondola would serve two private ski resorts using tax payer money while not providing any access to other public recreation areas.	A32.3A; A32.3F
41066	Nitchman, Lee	After looking at the EIS air quality supplemental report, the assumption of adding 14yr old diesel busses to the air shed of SL County is flawed. The air pollution impacts need to be assessed across SL Co. as additional busses added to UTA's SL Co operations are projected to be electric and CNG (UTA's Capital Improvement Plan). The EIS air quality report appears to be skewing the impacts of additional busses in LCC by constraining the model. Increasing the number of busses UTA is operating in LCC adds to the total number of busses UTA operates in SL Co.. As per UTA's Capital Improvement Plan, UTA plans on purchasing electric and CNG busses for increases in the SL Co. fleet. An increased demand for busses in LCC will pull existing UTA diesel busses from the SL Valley which will be replaced with cleaner electric and CNG busses operating in the Valley. In looking at the whole SL Co. air shed and not just a constrained LCC air shed, the impacts of reduced LCC traffic jams and increased LCC bus transit will most likely improve SL County's air quantity. Should the model be taken one step further and include Utah's coal powered electricity generation plants powering the gondola, I would suspect the air quality impacts between alternatives are similar.	A32.10G
41092	Nitta, Avery	To whom it may concern, I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area. I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule. I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts. Regards, Avery Nitta	A32.3A; A32.3F

Regards, Haley Nitta	A32.3A; A32.3F
42208	Nitta, Kent	I am against the gondola in LCC. LCC is home to a massive amount of recreational activities that a gondola would be intruding upon. Growing up in Utah and spending my time up the canyon climbing, hiking and doing other outdoor activities has been and continues to be some of my favorite times in life. I hope that as you read these comments you will take into consideration how the residents of Utah feel towards the proposed actions.	A32.29VV

40879	Noble, Chris	<p>I oppose the proposal to build a gondola up Little Cottonwood Canyon for the following reasons:</p> <p>First, the gondola would violate the Roadless Rule. It will damage, threaten, or destroy the primary qualities the rule was created to protect: clean water, wildlife habitat, natural landscapes, and diverse recreation activities.</p> <p>Secondly, a gondola would have far more visual impact, and be far more expensive in the long run, than any other possible transportation alternative.</p> <p>Third, why would anyone build a gondola at enormous public expense in order to benefit two private and seasonal businesses, while at the same time adversely affecting the experience of the tens of thousands of annual visitors who are not resort skiers and who use the canyon on a year-round basis?</p> <p>Finally, as your own polling has shown no one except Snowbird, Alta, and the developers working with them want this project. It is not a transportation solution it is a real estate scam posing as a public works project</p>	A32.3A; A32.3F; A32.3I
41688	Noble, Erin	<p>NO GONDOLA! Please find a solution for all users of the canyon. Do not sacrifice Recreation areas of many people for the benefit of those that only use the ski resorts.</p>	A32.29VV

39577	North, Matt	I can't believe this is even still being discussed. Little Cottonwood Canyon is a box canyon--there's no outlet on the other side. It is too narrow, too steep, and far, far too precious of a natural resource for either "traffic solution" that the billionaires are pushing for. The gondola should not be built. It shouldn't even be discussed anymore. The road should not be widened. On peak days and powder days, no private vehicles should be allowed in the canyon. Patrons of Alta and Snowbird must be required to board busses at intermodal parking hubs dispersed throughout Salt Lake County. This should be the only skier/boarder transportation allowed in the canyon on peak days and powder days. Problem solved, canyon un-destroyed.	A32.29VV

40298	Northrop, Clay	<p>By now it's been made very clear, very publicly, that the gondola won't make a significant improvement to the traffic situation in LCC. What it will do is cost a fortune, destroy the scenic qualities of the canyon, pollute the creek, and likely become an unused relic. Beyond that, it is proposed to be built in 3 federally protected roadless areas - the gondola certainly shouldn't qualify for any kind of exception to the prohibition of road construction in these areas. Very few people support this gondola, even those of us who wait in traffic or choose not to ski because of the traffic. Please abandon this project. It is a transparent gift to a few parties, at the expense of the public and LCC. Thank you for considering my input.</p>	A32.29VV

The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>Regards, Nathan Norton</p>	A32.3A; A32.3F

41367	Noteboom, Graham	<p>I am writing to express my strong opposition to the proposed gondola in Little Cottonwood Canyon. As a resident of the area and an avid outdoor enthusiast, I believe that such a project would have detrimental impacts on the natural environment and the surrounding communities.</p> <p>First and foremost, the gondola would cause significant environmental damage to the fragile ecosystem of the canyon. The construction and operation of the gondola would require extensive clearing of trees and vegetation, which would disrupt the habitat of many species of wildlife. Additionally, the increased traffic and tourism that the gondola would bring would lead to further degradation of the area's natural resources.</p> <p>Furthermore, the proposed gondola would have a negative impact on the local economy and the communities that rely on the canyon for their livelihoods. The construction and operation of the gondola would require a significant investment of public funds, which could be better spent on more sustainable and community-oriented projects. Additionally, the influx of tourists that the gondola would bring would lead to increased traffic congestion and a strain on local infrastructure, which would ultimately detract from the quality of life for residents and visitors alike.</p> <p>In light of these concerns, I urge you to reconsider the proposed gondola project in Little Cottonwood Canyon. Instead, I believe that we should focus our efforts on promoting sustainable tourism practices and investing in community-based projects that will benefit the local environment and economy in the long term.</p> <p>Thank you for your attention to this matter.</p>	A32.29VV

41584	Nummerdor, Jennifer	<p>The gondola is arguably the worst solution for Little Cottonwood Canyon for a variety of reasons, many of which are not addressed in the final EIS summary.</p> <p>This last winter brought historic avalanches which caused many closures of the 210, and slid in paths where the gondola posts are planned for the future. (Is this even accounted for in the 7 million dollars per year in operating costs for Gondola B?) UDOT crew members have unnecessarily put their lives on the line to clear these slides, and there are far better solutions than the gondola, which will still be impacted by avalanches and heavy winds.</p> <p>Other national parks have created a "bus-only" system which tourists and locals alike could benefit from. The current bus system is underfunded, and abysmal on busy days. It's a frequent occurrence that wait times are 2-3x more than estimated. Ski resorts must be compelled to (at least partially) fund this increased service, since they are the ones who stand to benefit the most.</p> <p>The gondola is a fiscally irresponsible decision, and is akin to treating a paper cut with a whole-limb amputation. There are at least 5 other, much better options which haven't even been tried yet! Not to mention the fact that this particular solution only benefits such a small portion of the recreation that occurs in LCC, and would impact every other type very negatively. We need to start implementing solutions incrementally and not jump to the most extreme, terrible option from the gate.</p> <p>This proposal is thinly-veiled corporate welfare for Alta, Snowbird, and Doppelmayer USA, who has been trying to break into the gondola-as-mainstream-transportation market for</p>	A32.29VV

		<p>quite some time now. The gondola is wildly unpopular with almost everyone who lives here, and it is exhausting that our voices continue to go unheard.</p> <p>As someone who lives here, we should really be asking ourselves if the goal is to fit more people into these already fragile places, and whether we're willing to destroy the landscape, animals, and beauty that these canyons have so graciously provided us with.</p>

		<p>resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I strongly suggest you further look into lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p> <p>I understand that congestion in LCC is an issue, but a gondola is simply not the answer. LCC is too special of a place to be scarred like this. Please look into ways of making the existing infrastructure work better, rather than proposing such a destructive option like a gondola. Why not expand the existing UTA bus service so that it can be used by more people and be more reliable? That seems like it would be cheaper, easier, more convenient for everyone, and wouldn't involve further scarring a place that is so special to many (and is a federally designated Wilderness in places). Please, you know what the people think. Listen to us.</p> <p>Regards, Gunnar Nurme</p>	
41083	Nuttall, Ezra	<p>The gondola is a terrible idea. The only option that makes any sense is to increase bussing on the existing road and limit the number of cars allowed. If more busses are needed than what UTA can provide then the resorts should provide their own shuttles. This is not a problem that UDOT should be spending millions of dollars on. It only benefits the resorts. The skiers' experience will only be worse by having more people on the slopes.</p>	A32.29VV

		<p>I beg you not to pass the gondola... yet. I'm not strongly opposed to the possibility of the gondola, but I'll be extremely frustrated if the gondola passes before we try other options first.</p> <p>I'm deeply concerned about the neighborhoods that surround the future base off the gondola. Not only will all of the traffic problems be shifted to their neighborhoods, but also it will be a horrible eye sore and destroy some of their privacy.</p> <p>I do not believe the gondola will significantly improve traffic. PLEASE vote against the gondola.</p> <p>Regards, April Oaks</p>	
42407	Oaks, April	<p>I'm not completely against the gondola, but I will be very frustrated if the gondola goes in before we try other options first. Please please NO gondola for now. What a horrible invasion it will be to the neighborhoods surrounding the base. All the canyon traffic will be shifted to them! Plus they lose so much privacy.</p> <p>I'm starting a scholarship and giving out prizes for people who help contribute to ideas that will IMMEDIATELY improve transportation in the 2023-2024 ski season. Give us a chance to try other options first!</p>	A32.29VV

47333	Obrien, Brandi	<p>To whom it may concern,</p> <p>The canyons in close proximity to the city is why so many of us live here. This is one of our favorites and a gondola would completely deface it, and not actually solve any of the traffic issues. The ski resorts are just trying to cram as many people in as possible and tax payers should not be on the hook for that. It also makes the resorts less enjoyable! Sometimes not everyone fits! That's ok!!!!</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. 39346	OBRIEN, RUSSELL	<p>I read through the EIS reports. I do not believe that there is accurate representation for the impact the cog rail and gondola will have on the environment, and certainly does not represent the visual impact this will have on the natural landscape and beauty of the canyon! In addition, given the rate of inflation we're experiencing, the true costs are not accurately represented, nor are the costs for self-sustaining ridership. Government (public) transportation is highly subsidized and I've seen nothing about the ridership costs for the gondola or rail - are we supposed to pay the \$1B+ building costs and support ridership costs? This is crazy given that this represents such a small amount of our population skiing in winter, and being in the midst of a perpetual draught - this year has been an exception to the cycle AND there is no business justification to investing so much money based on an exception year.</p>	A32.29VV
40047	O'Brien, S	<p>Inventoried Roadless Areas are, by definition, "undeveloped areas". It is irrelevant whether motor vehicles will operate on the route or not. Undeveloped is undeveloped and pillars, stanchions, sheds, even clearing trees/foliage, violates the requirement that undeveloped areas remain undeveloped.</p> <p>Go ruin someone else' canyon.</p>	A32.3A; A32.3G

40131	O'Connell, Spencer	<p>This gondola will simply move traffic down into neighborhoods and create more congestion in the city. We should not be paying 500 million in taxpayer dollars for a gondola that exclusively benefits two private businesses. Also as was seen this season it is highly likely that there will be periods the gondola is unable to operate which is one of its primary selling point. This should not be a government funded project as it will only benefit alta and snowbird. Also this does nothing for backcountry skiers and will most likely result in more backcountry closures than now as udot will not people skiing above their gondola towers if they are in slide paths.</p>	A32.29VV
51087	OConnor, Anne	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. 40966	Oland, Leah	<p>I do NOT support a gondola in a protected roadless area. My main issue with the project is the impact on the breathtaking views in LCC. Our area is being increasingly developed and the ecological values of LCC are very important to the population who are having to deal with a more urban environment. Personal renewal is a real thing that is needed for us and for future generations and it happens due to an ability to enjoy Natural areas. I can not support a proposal that will impact three roadless areas in LCC. It is against everything the Roadless Rule is meant to do.</p> <p>In addition, the analysis of higher emission fuels should be combined with other alternatives like electric buses. Our state and nation are moving to cleaner energy and that should be reflected in UDOT's plan.</p>	A32.3A; A32.3I; A32.10G

Comment ID	Name (last, first)	Comment	See Responses in Appendix A of the ROD
		<p>I understand this is a difficult issue but in a few weeks this years amazing ski season will be over and people will be able to enjoy LCC as the natural wonder that it is. I am a skier but I believe it is important to remember that LCC is more that Snowbird and Alta.</p>

This is my hard working taxes going to pay for a ridiculous gondola that services a skiing only resort. I mean, how has this gone so far. The 1.4b atrocity will ruin little cotton wood canyon for two ski resorts. The gondola won't run during avalanche mitigation, so how is this going to fix anything? It won't. And it's using my tax dollars for a VERY small group of people that don't live here year round. I oppose this gondola to the fullest extent and buses need to be run more frequently and carpooling must be enforced.</p> <p>Regards, Sean oliver</p>

39347	Olsen, Cory	<p>Your gondola plan is seriously flawed. First it is NOT wanted or needed. Second, the cars reaching the base station will still block and jam up Wasatch Blvd. The most logical solution to this is to create bus hubs (the gravel pit is suggested) and force skiers to bus up the canyon. No private vehicles except employees and service/emergency vehicles. This would not require a road widening. You have performed tests with electric buses which will work as will CNG buses. Lets be smart about this and use the taxpayer monies in a responsible manner. NO GONDOLA!!</p>	A32.29VV

40014	Olsen, Tasia	<p>After reviewing the latest proposals being considered, I would like to make a few comments and observations. Putting a gondola which only serves little cottonwood canyon does nothing to decrease the amount of traffic along Wasatch Blvd. the same number of cars would still be stopped in all directions from the north, south and west trying to get to the limited number of parking stalls at the mouth of little cottonwood to access the gondola. Not to mention that big cottonwood canyon would not benefit at all and the traffic would still be backed up in all directions to get up that canyon. The only logical solution is to turn the gravel pit into a park and ride lot for bus passengers, only allow bus traffic (preferably electric) up the canyons. Exceptions for homeowners, employees and overnight resort guests, with special passes for their purchase. I live across from Bell Canyon and have been unable to get to work, school, doctor appointments due to the ski traffic blocking Wasatch Blvd. all winter. This will not change by spending millions on a noisy, environmentally harmful gondola. Please scrap the gondola.</p>	A32.10G A32.29VV

39614	OLSON, CARL	<p>My argument for the Gondola is that it must be much more than just a method to ship skiers to the resorts at the top of Little Cottonwood Canyon. It must include multiple capabilities that include several stops along the way for other purposes like hikers, future hotels in the canyon, public services, site seers, etc. I know many will complain that it will destroy the natural canyon views, however that damage is minimal. The Gondola creates a much more usable approach for varying interests and types of visitors. The argument against the Gondola reminds me of Lake Powell. In the 60 years since the completion of Glen Canyon Dam the lake has provided close to 1 billion day visits from users, tourists and the like. Had the Dam not been built how many visitors would have tried the 90-mile trek through the canyon over the last 60 years. To me those unwilling to share the potential of the canyon with others are selfish and short sighted. The world and our canyons are not what it was when I first skied Brighton and Alta 70 years ago.</p>	A32.29VV

42239	Olson, Patrick	<p>I oppose this development due to the drastic impacts to nature along this corridor and the unequal access this gondola will provide.</p> <p>There are far better and less impactful solutions that should be considered.</p> <p>Thanks, Patrick</p>	A32.29VV
55249	Olson, Tanner	<p>To whom it may concern,</p> <p>I oppose the Little Cottonwood Canyon Gondola project and urge you to consider lower cost and more effective alternatives to reducing traffic congestion in the canyon. The gondola will not improve traffic congestion. Instead, it will permanently alter Twin Peaks, Lone Peak, and White Pine Roadless Areas, threaten our critical watershed, destroy popular rock climbing areas, and disrupt running, backcountry skiing and hiking in the area.</p> <p>I cannot support a proposal that would reduce acres of land that are classified as "Roadless," let alone support taxation for a project that would fail to improve canyon access for non-resort users while benefiting a slim few. Claiming that the gondola is exempt from the "Roadless Rule" because it's not technically a road is a willful misinterpretation of the spirit of the rule.</p> <p>I support lower-cost solutions that utilize our existing infrastructure, such as carpool incentives (ex. occupancy-based tolling), year-round enhanced bus service with stops at multiple locations and more frequent service at peak times, enforcement of the traction law, and mandatory parking reservations at ski resorts.</p>	A32.3A; A32.3F

40989	Oltman, Meagan	<p>Please consider:</p> <p>The first report addresses the fact that the gondola would be built within three federally protected Roadless Areas (Twin Peaks, Lone Peak, and White Pine roadless areas). Road construction is typically prohibited in these areas to protect air, water, wildlife, and recreation opportunities. The gondola should not qualify as an exception.</p> <p>The second report makes changes to the air quality analysis, most notably, the assumption that all buses would be diesel powered. If UDOT can adjust its analysis to consider the possibility of using higher emissions fuels like diesel, why can't UDOT also assess the impact of electric buses?</p> <p>No canyon destruction, no gondola, no catering to ski resorts.</p>	A32.3A; A32.10G
